
Renewed weakness in gold was the feature of trading in the bullion market this week while silver ruled distinctly firm. The market opened a shade lower due to scattered realising induced by the previous week's smart recovery. But, while silver gradually improved, gold reacted rather sharply, particularly from mid-week. The divergent trends continued well up to the close today, when silver finished with moderate gains, whereas gold disclosed quite substantial losses.

Gold suffered following reports that the Reserve Bank of India had asked the bullion associations in the different parts of the country to submit data relating to arrivals, offtake and other relevant details of spot gold transactions conducted by their members during the past ten years. Coming close on the heels of fears that the Government might clamp down controls on trading in bullion, this announcement unnerved bulls and induced bears to hammer afresh. With support lacking, the *Margashir* (December) settlement lost ground steadily, from Rs. 124.75 on the 15th to Rs. 121.80 today before closing at Rs. 121.90, as against Rs. 124.65 a week ago. Ready gold, which was done at Rs. 126.20 on the 14th, fell to Rs. 122.40 today and closed Rs. 3.75 lower at Rs. 122.50. The *Bhadrapad* (15th September) went off the board on the 14th at Rs. 125.05, as against Rs. 125.75 on Wednesday last week. The delivery order rate for the *Bhadrapad* settlement was fixed at Rs. 124.50 and the clearing rate for the *Margashir* contract at Rs. 123.75. The daily average arrivals of gold declined by 3,250 tolas to 6,000 tolas. The daily offtake was also lower by 2,000 tolas at 3,500 tolas.

Improvement in silver was attributed to support based on the belief that, in view of the likely official measures against hoarding of gold, buyers' attention would be concentrated in future on the white metal. Traders estimate the present floating stocks of silver in all leading centres at only 2,200 bars. Higher overseas advices, too, contributed to the improvement in prices. The *Margashir* settlement, after being done at Rs. 219.55 from the opening rate of Rs. 220.40, improved gradually to Rs. 222.40 today but eased slightly on realising to close at Rs. 221.40, as against Rs. 220.35 a week ago. The *Bhadrapad* contract ran out on the 15th at Rs. 219.10, as against Rs. 219.20 last week-end. The delivery order rate for *Bhadrapad* was fixed at Rs. 219 and the clearing rate for *Margashir* at Rs. 220.25. Ready silver moved between Rs. 218.55 and Rs. 221.15 before closing at Rs. 220.15, as against Rs. 219.10 a week ago. The average daily arrivals rose from 22 bars to 30 bars, but offtake was stationary at 6 bars.

The dollar price of gold in the London bullion market was steady around $35.12½ to $35.14½ per fine ounce. Ready gold was done at 250s. 11*d.*, as against 250s. 9¾*d.* a week ago. Silver forward rose sharply from 98*d.* to 99¾*d.* and so did the ready price from 97¾*d.* to 99¼*d.* In New York, silver improved from 113 cents to 116 cents.

The following table shows the trend of prices during the week under review:

	19-9-62 (closing)	High	Low	12-9-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	122.50	126.20	122.40	126.25 –
*Bhadrapad**	125.05	126.15	124.80	125.75

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES SPURT

(From Our Own Correspondent)

BOMBAY, 19*th September*

In contrast to the easy trend witnessed last week, the cotton futures market ruled distinctly firm during the week under review. The firmness was influenced by reports of adverse weather and the consequent fear of damage to the crop. Excessive rains in the Punjab, Berar and C.P. tracts prompted large-scale speculative support by bulls while bears too rushed to cover their sales. Consequently, the futures contract, namely I.C.C. March 1963, rallied, the quotation rising steadily from the last week-end rate of Rs. 736 to a peak of Rs. 752 today. The finish was, however, lower at Rs. 748, showing a net loss of Rs. 12 over the week.

The uncertainty about the marketing policy for cotton during the new season and the cotton trade's opposition to the scheme proposed by the Indian Cotton Mills' Federation affected business in the ready section during most part of the week. The absence of official permission for new crop trading and lack of quota for indigenous cotton also restricted business. Nevertheless, needy mills were found to be interested in such qualities as Co2, L.147, Kalyan and 197/3.

A notable development of the week was the emergence of export demand for Bengal *Deshi*. Among foreign cotton, stray business was reported in African and American cotton. Pakistan growths were well favoured. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Ganganagar 548; Kalyan (Anjar) 1,037. Abohar 695.

Pakistan N.T. 31/32" (Superfine) 1,030; Jinja 1,135; B.P. 52 1,235. American on sample 1,297.

The Karachi cotton futures market ruled easy during the week. The January contract declined from Rs. 69.65 to Rs. 69.15. The March contract eased by 45 nP to Rs. 69. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 72.00; Punjab *Deshi* 66.00; 4F Punjab Roller 71.00; S.G. 76; L.S.S. Punjab Roller 72.50; S.G. 77.00 N.T. Roller 86.00 S.G. 92.

Cotton futures in Liverpool receded on scattered commission house selling and liquidation which met with only limited absorption in trade buyings. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing rates:

October 23.25 (23.35); December 23.20 (23.30) September (Sudan) 29.50 (29.50).

In New York, too, the trend of the market was easy. Although trading was thin, prices tended to decline. Uncertainty over the possibility of new farm legislation, providing for a one-price system for cotton, caused turnover to be limited. The October contract receded from 33.71 cents to 33.44 cents. December eased from 33.86 cents to 33.74 cents. March was quoted lower at 34.15 cents, as against 34.21 cents. Spot prices, however, were steady. New York spot rate remained unchanged at 34.95 cents.

TIPPY TEAS STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 13*th September*

A total of 630,000 kgs. was offered in sale No. 36 held on Monday the 10th inst. Quality generally showed little change, but there were a few useful invoices on offer from the Nilgiris. There was good general demand. The best highgrown brokens were often dearer with buyers closely following quality. Others in this category, however, were barely steady. Fannings followed a similar trend. Good mediums were well supported and may be quoted firm to dearer. Medium and low medium brokens met with strong inquiry, some brighter liquoring kinds being irregularly dearer. Fannings grades were better supported than in recent weeks and in some cases appreciated considerably. Plainest descriptions encountered more competition than in the last few sales, particularly fannings grades. Black leaf varieties were a strong feature and sold well. Whole leaf grades may be quoted about steady. Teas of unorthodox manufacture were strong and generally dearer. Leaf grades in this category, however, were again easier. Tippy teas continued strong.

	1962	1961
	Rs.	Rs.
The quotations (per kg.) were:		
Low medium	3.30-4.05	4.20-4.40
Mediums	4.15-4.50	4.25-4.45
Good mediums	4.55-5.70	N.Q.
Nilgiri B.O.P.	4.90-9.00	5.00-7.70

N.Q.=No quotation

The average price realised in sale No. 36 was Rs. 4.22 per kilo as against Rs. 4.00 a week ago and Rs. 4.66 in the corresponding sale last year.

In dust sale No. 36 held today 284,000 kgs. were on offer. There was strong and active demand. Highgrowns were fully firm and sometimes dearer. Good mediums were also strong and irregularly dearer by approximately 20 nP. Low mediums and mediums were dearer by some 20-30 nP, a few invoices sometimes registering further advances. Black, grainy types met with strong support at dearer rates. Unorthodox descriptions followed the general trend of the market and may be quoted firm to dearer.

The average price realised in dust sale No. 36 was Rs. 3.95 per kilo as compared with Rs. 3.70 a week ago and Rs. 4.67 in the corresponding sale last year.

Colombo: Approximately 4½ million lbs. were offered. The market opened to a strong demand.

Best dimbulas were steady, but the lighter liquoring types were slightly easier. B.O.P. fannings in this category were dearer. Uvas met with good demand. Better mediums were steady, whilst others were 5/10 cents easier; B.O.P. fannings were dearer, while lowgrowns were firm to dearer.

London: North Indian and other growths: There was very strong demand in Monday's sale with prices generally dearer for all descriptons, except the plainest.

Ceylon and South Indians: South Indians elicited fair but selective demand at about last rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 37.—643,000 kgs. offered. Good demand. Low medium and medium brokens irregularly firm. Fannings often dearer. Good mediums stronger. Highgrowns barely steady. Unorthodox higher."

REVISION OF ART SILK YARN PRICES

(From Our Own Correspondent)

BOMBAY, 19*th September*

The art silk weaving mills will have to pay higher prices for certain deniers of indigenous yarn with effect from 1st October next, if the Government of India accepts the recommendations made by the high-power committee of spinners and weavers. The price (exclusive of excise duty) of 100 deniers will be increased by 58 nP to Rs. 8.84 per kg. and that of 120 deniers by 25 nP to Rs. 7.89. There will, however, be no change in the price of 150 deniers, while the rate for 300 deniers will be cut by 14 nP to Rs. 6.80. Besides agreeing to pay higher prices, the weaving interests have undertaken to meet the spinners' full requirements of imported pulp through larger exports of fabrics. On their behalf, the spinning mills have assured an increased supply of art silk yarn (0.85 lb., as against 0.75 lb. at present) for every rupee entitlement surrendered by the weaver-exporter at a concession of 49 nP per lb., as well as to make available only first quality yarn of required denier on cones to weavers under the export promotion scheme.

Thanks to the aforesaid reports, art silk yarns tended to move up. Centurys 75D advanced by 55 nP to Rs. 22.55 per kg. National 120D spurted by Rs. 26 to Rs. 16.76 and South India Viscose 150D by 13 nP to Rs. 17.46. National Rayons 150 Bt. cones 1st grade was fully maintained at Rs. 13.20. Centurys 100D, however, encountered selling and dropped 6 nP to Rs. 17.67.

Staple fibre yarns suffered a sharp setback in values, following bull liquidation and bearish advices from consuming centres. 40 x 2 October delivery moved down from Rs. 772 to Rs. 720. December contract receded by Rs. 52 to Rs. 740. Spot Centurys fell by 49 nP to Rs. 7.96. Kohinoors declined by 36 nP to Rs. 9.06.

Cotton yarns ruled firm. 20 counts Gokaks increased by 50 nP to Rs. 24.37 per bundle of 10 lbs. 32 counts Madras gathered 25 nP to Rs. 30. 60 counts Gokaks rose by 50 nP to Rs. 60.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	19-9-1962	12-9-1962
Art silk yarn (per kg.)—	Rs.	Rs.
National Rayon 120	16.76	16.50
Century 75	22.55	22.00
S. I. Viscose 150	13.46	13.33
Staple fibre yarn (40 x 2)—		
October	720.00	772.00
December	740.00	792.00
Kohinoor (per kg.)	9.06	9.42
Century	7.96	8.45
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.50	18.50
32s Madura	30.00	29.75
40s Gokak	36.25	36.50
60s Finlay	69.00	69.00
80s Madura	81.00	81.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

GROUNDNUT RECEDES

(From Our Own Correspondent)

BOMBAY, 19*th September*

Trading in the oilseeds market during the week was characterised by sharp two-way fluctuations. Most seeds and oils firmed up in the earlier sessions, but, towards the close, there was renewed setback on persistent selling, induced mainly by bearish crop reports. The closing prices, however, were still generally higher than those a week ago. Groundnuts, which were pushed up early during the week on account of bull squeeze, lost considerable ground later in the week, following tired bull liquidation. A major bearish factor was the beginning of substantial new crop arrivals from the South. Reports from Gujarat also indicated the possibility of better crop this year than what had been estimated a few weeks ago. Castorseed too made headway initially, but subsequently a part of the gains was lost in the absence of export business in castor oil. Linseed and cottonseeds followed the price pattern of other major seeds.

Groundnut September 1962 contract rose from Rs. 245 to Rs. 252, before winding up the week at Rs. 248. January 1963 contract, which had risen from Rs. 224.12 to Rs. 227.25, fell to Rs. 221.62. Nizam bold closed 25 nP higher at Rs. 48; it had touched Rs. 49.50 earlier. Oil ex-mill lost 15 nP to Rs. 19.25.

Castorseed September 1962 contract closed at Rs. 161.75, as against Rs. 160. March 1963 contract moved up initially from Rs. 163.75 to Rs. 165.25, but declined subsequently to Rs. 164, with a net gain of 25 nP. Ready Madras was higher by a rupee at Rs. 32.50. Oil B.S.S. improved from Rs. 12.90 to Rs. 13.05, before finishing at Rs. 12.95.

Among linseed, March 1963 contract, which rose from Rs. 39.44 to Rs. 40 by Saturday, encountered selling and receded to Rs. 39.37. Bold ready put on Re. 1.25 to Rs. 41. Linseed oil, after rising from Rs. 16.50 to Rs. 17.10, declined to Rs. 16.90.

Cottonseed January 1963 contract finished higher at Rs. 103, as against Rs. 101.75. Both Berar and white picked up 75 nP to Rs. 22.50.

The following table shows the closing prices of oilseeds and oils on Wednesday, 19th September, as compared with those of the two previous weeks:

	19-9-1962	12-9-1962	5-9-1962
Groundnut	Rs.	Rs.	Rs.
September 1962	248.00	245.00	248.50
Groundnut January 1963 ..	221.62	224.12	232.62
Nizam bold	48.00	47.75	49.00
Khandesh quality	48.50	48.00	50.00
Oil ex-mill ready*	19.25	19.40	20.00
Railway receipts*	18.90	19.10	19.65

Kardi seed	28.00	27.50	28.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

RAW JUTE HARDENS

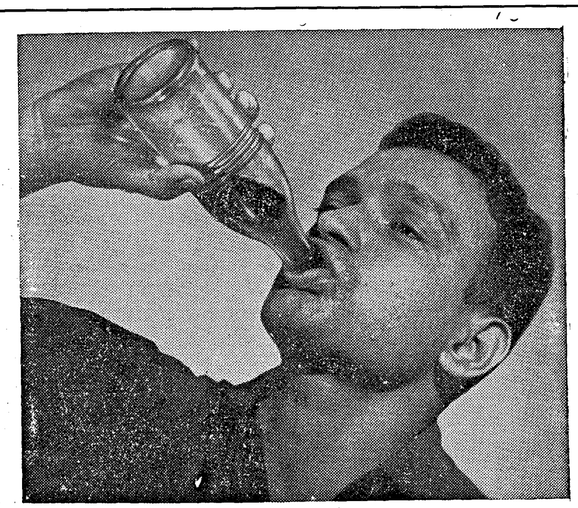
(From Our Own Correspondent)

CALCUTTA, 18*th September*

While fibre prices in the local jute market tended to harden further this week on greater support by mills, the goods section closed lower on balance, as overseas buyers refrained from entering into commitments at higher levels. Further, the output figures for August and the decision of mills to maintain the present rate of high production up to the end of October went in favour of buyers. The total output in the last month at 105,100 tonnes recorded an increase of 1,600 tonnes as compared with the previous month and of 26,800 tonnes as compared with August 1961. The hessian production at 42,000 tonnes added 800 tonnes and the heavy goods output amounted to 49,200 tonnes as against 47,700 tonnes in the previous month. On the other hand, miscellaneous goods produced declined by 600 tonnes to 13,700 tonnes. The month of August began with 86,300 tonnes of goods in stock with mills which means that the total goods available for the month amounted to 191,400 tonnes. Stocks at the end of August being 91,800 tonnes, demand was of the order of 99,600 tonnes, which was 5,500 tonnes lower than the production in the month. Such an analysis also contributed to chilling the market sentiment this week. Although demand for hessian is expected to be maintained at the present high level, the trade is not as hopeful as before about the prospects for sacking goods.

In the absence of the availability of adequate supplies of the superior fibre for hessian production, mills are faced with a difficult situation. That is why both the output and stock of sacking goods are rising month after month. Only those of the overseas inquiries, which are rejected by Pakistan, are being received by the Indian mills. Mills in Pakistan are expected to complete expansion of looms for heavy goods within two years, and it is believed that the output of these additional looms would be equivalent to the present rate of export of sacking goods from India. Of course, by that time, world demand is also expected to increase, as also the quality of Indian fibre, and although the proposed expansion in Pakistan mills should not be considered alarming, such frequent reports are imparting dullness to the Indian market. At the same time, with the sure knowledge that sacking output would leave an unmanageable surplus by the end of this year, overseas buyers have preferred to place orders for meeting their day-to-day requirements only. The Government of India has shown firm indications of their intention to strengthen the competitive position of sacking goods in overseas markets. The Jute Buffer Stock Association has, therefore, been allowed to import 100,000 bales of jute cuttings from Pakistan. The import of such a small quantity of fibre which is this season's first allotment for cuttings, is not expected to affect fibre prices here.

In recent months, the good demand from U.S. for carpet backing cloth has enabled mills in India to install broad looms. The progress in this re-



You can't postpone thirst!

DURING THE HOT DRY MONTHS, Metal Box manufactures crown corks for bottled 'cold drinks' at a rate almost three times the annual average. Similarly, fruits, vegetables and fish have a short canning season dependent on the harvest. Cans and closures, therefore, have to be manufactured and delivered quickly at short notice, to satisfy seasonal expansion in demand, to catch crops before they spoil and to meet strict export shipping deadlines.

This is why manufacturing capacity in the packaging industry must be flexible enough to react almost instantly to calls for increased production. It is also the reason why packaging is a technically complex, mass production industry requiring large investments in men, machinery and raw materials.

Metal Box, pioneer and leader of the packaging industry, can match seasonal fluctuations in demand because it relies on a high degree of mechanisation, sound technology and resourceful engineering.

METAL BOX
pilferproof and protective packaging

IVT/MB 5307A

gard has been satisfactory, as mills have found no difficulty in securing orders for all of their production in this speciality. However, signs are not wanting of possible international competition in this regard, and the supply of this cloth to the U.S. is no longer to remain India's near-monopoly. Pakistan and Jamaica have taken steps to install broad looms, and before long suppliers to the U.S. would increase in number. From the present steady demand, it can be inferred that all production should find an outlet, but indeed there would be price-cutting and the Indian industry should be prepared in this regard, as in the case of sacking and hessian. Although the export bonus scheme and the availability of superior fibre at cheaper rates have given advantages to mills in Pakistan, there are reports that in Pakistan, too, the crop would be damaged due to the floods. Prices in the Narayanganj market have, therefore, been fully steady, and buyers are now eager to obtain their requirements.

Another cause for the comparative strength of the Pakistan market was the keener activity by mills on the apprehension that minimum prices for internal consumption would soon be fixed. Pakistan has already decided to constitute a buffer stock on the same lines as in India. An amount of Rs. 8 crores is to be placed at the disposal of the Jute Marketing Corporation to purchase fibre under the supervision of the Jute Board.

On Tuesday last, genuine business that took place in goods was paltry, and such covering demand as was in evidence was inadequate to maintain prices. Further, the higher levels also induced profit-taking. Thus, ready B. twills eased from Rs. 125.75 to Rs. 124.75 and hessian 40″ 10 oz. from Rs. 56.75 to Rs. 56.50. Covering business was again a feature on Wednesday, but buyers were scarce. Possibly, the higher output figures for August and increased stock at the end of August were taken to indicate a glut in heavy goods in the offing. However, from the present level of demand such pessimism is hardly justifiable; all the same, such an apprehension made weak holders nervous. In the process, ready B. twills eased to Rs. 124.25. On the other hand, hessian 40″ 10 oz. recorded a fractional gain at Rs. 56.65, as it was clear that the output would be lower than demand and that, due to the shortage of the superior fibre, mills would be unable to produce enough hessian. On Thursday, there was only a limited overseas buying, while covering business was also in evidence. B. twills eased to Rs. 124.25 and hessian 40″ 10 oz. to Rs. 56.50. Selling pressure in the futures market developed on Friday with ready B. twills pushed down to Rs. 122.25 and hessian 40″ 10 oz. to Rs. 55.75. Over the week-end, conditions were worse in the absence of interest; B. twills closed as low as Rs. 121.25 and hessian 40″ 10 oz. eased to Rs. 55.70. Keen buying interest was shown yesterday in hessian and the U.S. turned a major buyer. This explains the rise in ready hessian 40″ 10 oz. to Rs. 56. In sympathy, B. twills hardened to Rs. 121.50.

Mills provided active support to the fibre market, with mesta and tossa receiving keen attention. Prices of these good varieties were quoted one rupee a maund higher than the minimum levels. With the fall in the levels of rivers and the recession of flood waters, transport improved. The buffer stock quota of 250,000 maunds will be completed by November only. No immediate delivery is envisaged, as the present arrivals having a considerable moisture are not fit for storage for a longer period. Prices were firm as follows: Daisee bottoms Rs. 33, Assam bottoms Rs. 30 and northern bottoms Rs. 29.50.

FOODGRAINS DECLINE

(From Our Own Correspondent)

HAPUR, *17th September*

A bearish trend was witnessed in the foodgrains market here this week, thanks to good *kharif* crop prospects and the Government's determination to bring down prices.

Wheat dara declined by 67 nP a quintal to be quoted at Rs. 38.85 to Rs. 40.19. The farm produce was quoted between Rs. 40.87 and Rs. 42.87, as against Rs. 40.19 around the time in 1961 and Rs. 46.22 in 1960. Red wheat prices also eased by 67 nP to be quoted at Rs. 37.51. Due to rains, arrivals were poor, averaging 200 to 300 maunds daily, and the stocks were placed around 64,000 maunds. During the week, two wagons of wheat were despatched to Goa. Rice registered easy tendency due to better arrivals from east U.P. in the face of slack demand. Paddy crop prospects improved due to fairly heavy rains. Week-end prices were: Rice *basmati* superior Rs. 85.74 to Rs. 96.45, *sela basmati* Rs. 75.02 to Rs. 85.74, *mainpuri* Rs. 54.92 to Rs. 57.60, *ramajwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *gadda* Rs. 54.92, a quintal.

Gram prices were lower due to slack demand and lower advices from Punjab. Prices declined 67 nP a quintal. The Punjab variety was quoted at Rs. 42.87 and the local produce at Rs. 42.20. Arrivals were negligible, and the stocks declined to 14,000 maunds. Arrivals of new maize were again delayed by the rains, but the prices eased by 67 nP to Re. 1.34 to Rs. 29.47 to Rs. 32.82. *Barley* and *bejhar* prices eased Rs. 2.01 and Re. 1.34, respectively, in the absence of demand. Stocks left were poor. *Jowar* and *guwar* were steady. *Methi* improved owing to the poor stock position. Other coarse grains were quiet. Week-end prices were: Barley Rs. 26.79 to Rs. 27.46, *bejhar* Rs. 26.79 to Rs. 27.46, *maize* Rs. 28.13 to Rs. 29.47, new Rs. 29.47 to Rs. 32.82, methi Rs. 61.62, bajra Rs. 37.51, jowar Rs. 46.89 to Rs. 50.91, *guwar* Rs. 38.85 and oats Rs. 29.47.

Among pulses, peas declined by 67 nP, with Dara quoted between Rs. 30.81 and Rs. 31.48 and farm between Rs. 33.49 and Rs. 34.17. During the week, 18 wagons were loaded to Madras and Goa. Stocks declined to 55,000 maunds. *Arhar* prices eased by Re. 1.34 to Rs. 50.91 and Rs. 56.26. Arrivals were almost *nil* and the stocks left with the trade were poor around 5,000 maunds. *Urd*, *moong* and *masoor* declined owing to small demand. Week-end prices were: *Urd* Rs. 72.34 to Rs. 75.02, *urd dal* Rs. 85.72, *moong* Rs. 48.23 to Rs. 50.91, *moong dal* Rs. 57.60, *masoor* Rs. 42.87 to Rs. 53.58, *masoor dal* Rs. 56.26, *moth* Rs. 40.19, *moth dal* Rs. 48.23, *gram dal* Rs. 48.23, *arhar dal* Rs. 64.30 to Rs. 66.98 and *peas dal Rs.* 36.17, a quintal.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, *17th September*

The Madras kips market ruled steady this week. Arrivals of stocks from the tanneries were of moderate volume and the offtake was slow. Demand from the inland trade was slack. Despite several persistent inquiries for the light weight kips from the importers in the U.K., shippers were finding it difficult to conclude business in bulk; a difference of ½*d.* to 1*d.* per lb. stood in the way. There was good demand for cowcalf fourths in the heavy weights and all grades in lights; but the stocks were small and sellers few. Inquiries for buffcalf were poor. Importers are expected to show in with the start of the new season's raw stocks from next month onwards.

In the tanned skins section, importers were interested in goat skins 5½/6 lbs. and 11/12 lbs. average lower ends and middle class sheep; and the quantities booked were small due to the stiff prices quoted by the E.I. tanners.

ACTIVITIES OF I.M.F.

(Concluded from page 497)

and exchange policies, and stabilisation programmes. The services of the Fund staff have also been made available to certain member-countries to help them in the establishment and reform of central banking arrangements, and of monetary and balance of payments statistics. A number of non-member countries, particularly in Africa, have been assisted in the preparatory work leading to membership in the Fund and in matters relating to the organisation of new monetary and central banking arrangements.

Since 1951 the Fund has operated in Washington training programmes for qualified nationals of member-countries. In 1961-62, the number of participants in the programme was 24.

The Fund continues to maintain close relations, both on the technical level and on matters of broader scope, with other international organisations in related fields of interest, especially with the United Nations and its regional commissions and technical bodies, Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.), Organisation for Economic Co-operation and Development, World Bank, the Bank for International Settlements, and Inter-American Development Bank.

Five new members (Laos, New Zealand, Nepal, Cyprus and Liberia) joined the Fund during the year 1961-62, bringing the total membership to 76. Following the admission of these five members and as a result of payments, by nine members, of annual instalments of increases in their quotas, the aggregate of Fund quotas as on 30th April 1962 stood higher at $15,056.9 million, as against $14,850.7 million a year before. As on 30th April 1962, the Board of Governors had approved terms and conditions for the admission to membership of Senegal, Sierra Leone, Somalia, and Togo. Applications had also been received from the Federal Republic of Cameroon, the Central African Republic, the Republics of Chad, Congo (Brazzaville), Congo (Leopoldville), Dahomey, Gabon, Guinea, the Ivory Coast, Mali, the Niger, and the Upper Volta, and from Jamaica, Kuwait and Tanganyika.

THE UNITED COMMERCIAL BANK LTD.

	1961-62	6,060

R—Revised.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share

Accounts:—Figures in the " Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

S.—The reserves of Straw Products Ltd. include a non-distributable amount of Rs. 63,40,654 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December 1955. §§ Investment at cost.
H.—Clive Row Investment—Dividend for 1959 includes additional dividends of 9 nP for the year ended 31st March 1955 and 37 nP for the year ended 31st March 1956. * Includes bonus.
M.—Managed by the Board of Directors. *N.B.*—Dividends paid since 31st March 1959 are shown as taxable. (k) Investments.
A.—Associated Battery Makers (Eastern) Ltd. The effective dividend for the year 1960 would work out to 16.36 per cent approximate, as the final dividend of 10 per cent was paid on the increased capital of Rs. 118 lakhs whereas the interim dividend of 15 per cent was on a paid-up capital of Rs. 50 lakhs only. X.B. Ex-Bonus.

MARKET GOSSIP

(*Concluded from page 487*)

might have been expected a year ago, particularly with respect to the U.S. dollar. But he felt that the monetary reserves, which, in his opinion, were largely limited to each country's holdings of gold, dollars and pound sterling, should be augmented to finance a growing volume of world trade. Such an increase, he suggested, could be brought about by (*a*) instituting an international monetary reserve guarantee against losses arising from devaluation of currencies and (*b*) encouraging the hard currency countries to hold other countries' currencies in their own reserve funds.

The first part of Mr. Maudling's proposal, though it is interesting, is woolly and it is highly doubtful whether it will find favour with the U.S. and a number of other countries. No one can, of course, discount completely the possibility of a sudden devaluation of even key currencies, although the I.M.F. can be relied upon to continue to provide an effective basis for preventing, as far as possible, such an outcome. But this much is certain that devaluation by one key-currency country will doubtless lead to competitive devaluation by several others. In such a case, an international monetary reserve guarantee against losses arising from devaluation as the one suggested by Mr. Maudling may not be of much help. What is more important is, therefore, greater co-operation among the monetary authorities of the world. Appropriately enough, Mr. Jacobsson said:

"Situations may arise in which different countries have to pursue contrasting but complementary policies, involving a more cautious policy in one country or one group of countries and a more expansionary policy in others. The choice of the right combination of policies should be the subject of common discussion and co-ordination. But the object of all these efforts must be to provide in the individual countries, and thus for the world as a whole, the volume of credit creation required to meet the legitimate needs of growing economies. I cannot help adding that, as monetary confidence increases, and I have every reason to expect that it will, there should be less eagerness on the part of private individuals to hoard gold. One consequence of reduced hoarding would be that more and more of the current gold output, which has been increasing from year to year, would become available for monetary purposes, and this in turn would facilitate the pursuit of appropriate credit policies. Co-operation among monetary authorities does not, of course, mean that gold is discarded as a basis for currencies; it can still play a useful role in the pursuit of credit policies in the framework of a managed gold standard."

The approach of Mr. Jacobsson is, indeed, sensible and quite practical. The leading countries of the free world have to stick together in fair as well as foul weather. There is no other alternative.

Price Control

The need for maximum vigilance in controlling inflationary pressure, particularly in a developing economy, cannot be overemphasised. But the way some of the Central Government Ministers and the Planning Commission are going about tackling the job is questionable. It is certainly undesirable to build up a scare of rising prices, without ascertaining the realities of the price situation, as is being done by Mr. T. T. Krishnamachari. It is true that the price situation became critical during the second Plan period with an increase of as much as 30 per cent in the wholesale prices. In fact, during the last three years of the second Plan (1958-59, 1959-60 and 1960-61), prices persistently followed an upward trend. But, in 1961-62, the first year of the third Plan, the situation had come under control. Over the year, the general index of wholesale prices (monthly average of weekly prices, base 1952-53=100) declined by 3.1 per cent to 123.6, in distinct contrast to an increase of 7.2 per cent in 1960-61, 5.8 per cent in 1959-60 and 6.6 per cent in 1958-59. The price index, which had gone up from 126.2 in early April 1961 to a new high of 130.1 in the middle of July, fell to a low level of 122.6 by the end of December last. In the subsequent three months, the price level hovered around the lower level, the index at the end of March 1962 being no more than 122.9.

From April 1962 onwards, prices once again tended to move up. Thus the general index of wholesale prices rose to 131 in August, as against 125 in April and 124 in the beginning of the year. It should not be forgotten here that the increase in prices during this part of the year is a seasonal phenomenon, as can be seen from the price movements in the past. Over the period January-August 1962, the rise in general index has been about 6 per cent. The price index of food articles group, which has a weightage of about 50 per cent in the aggregate index, accounted for the major part of the increase, such having gone up by 10 per cent during January-August, whereas the rise in the index of manufactures was only 4 per cent and that of industrial raw materials less than 2 per cent. Among food groups, prices of most of the important commodities, except perhaps wheat and tea, have risen. Between January and July, the price index for rice rose by about 12 per cent to 112; this compares with an increase of 9 per cent during the corresponding period in 1961. There has also been a marked increase in the price index of pulses, that is, by 10 per cent to 113 (during January-August). Another notable feature has been the sharp increase in prices of some of the subsidiary foods. In particular, price index of fruits and vegetables rose from 125 to 147 and that of milk and ghee from 119 to 133.

Too much is heard nowadays about the rise in prices of sugar and *gur*, the combined index of which has spurted from 114 in January to 151 in August. But it must be stressed that *gur*, which has a greater weightage than white sugar in this group, accounted for the major part of the increase. Thus, the price index of *gur* jumped up from 108 in January 1962 to as much as 161 by July, or an increase of as much as 50 per cent in seven months. There has been some increase in the price of white sugar, but it is small, the index having gone up by only 7 per cent to 131. In a free market, small fluctuations of this type cannot be ruled out. Those who want to control prices must, therefore, turn to the actual villain, which is *gur*. It is time an enquiry was made to find out the cause of the phenomenal increase in *gur* prices, despite record output of sugarcane. Probably more *gur* is being consumed in illicit distillation of liquor than is commonly believed.

Among other commodities, jute and jute goods, which had declined sharply last year in the wake of better jute crop, have been maintained during this year so far with marginal increases in their prices. It is significant to note here that the impact of the movement of jute prices on the general index is not of much significance. Prices of cotton and cotton textiles also followed this year so far more or less the pattern set by jute and jute goods. The prices of edible oils and oilseeds too rose, but only at a small pace, despite the period under review being the fag-end of the crop year.

Two important conclusions emerge from this review of the recent price situation. One, the increase in prices in recent months may mainly be a seasonal phenomenon and not too exhorbitant to call for any drastic action. When the new crops start moving in, they may, therefore, come down. It is, therefore, better to wait for some more time, before initiating unpopular, expensive controls. Two, the upward trend in prices has been fairly widespread, except in the case of two or three commodities. This only shows that the Planning Commission's latest decision to release stocks of wheat and white sugar (the prices of both have not shown any undue increase) cannot have any significant impact on the price front, though it may ease the position of consumers to some extent. It further suggests that mere control on foodgrains alone will not suffice, so long as the basic causes such as increasing pressure of population and money supply remain as they are.

WEEK'S STOCK EXCHANGE TREND

ADMINISTRATIVE SERVICES

EVEN in that Utopia of ultimate communism where the State, it is supposed, will have completely withered away, there will be need, it is envisaged, for administration of things, if not for administration of men in the sense of managing them. It is not, therefore, surprising that, in the world of today, no country—be it communist or non-communist—is anywhere near divesting the State of even a part of its functions pertaining to law and order, development or welfare. On the contrary, the governing organs of almost every country are being saddled with a multitude of new functions in the context of the "welfare State" or of social and economic planning. The emerging role of government as everybody's Lady Bountiful is thus a universal phenomenon. Those who expect so much from the State must likewise expect to be increasingly administered. They cannot, therefore, grumble, if the ever-increasing development-and-welfare functions of the State have the effect of augmenting the power, as well as the numerical strength, of administrative bureaucracy, especially in its higher echelons. The most they can hope for, in the context of things as they are, is a judicious check on bureaucratic excesses or abuses.

That is by way of introducing the subject matter of this article on Mr. V. T. Krishnamachari's report on Indian and State administrative services and problems of district administration. The report, published by the Planning Commission a few days ago, mentions at the very outset that the strength of the I.A.S. (Indian Administrative Service) cadre rose from 803 in 1948 to 2,147 on 1st January 1962 and that the additional requirements of officers, estimated at 525 upto 1966, will be mainly on account of the increased tempo of social and economic development under the third and fourth Plans. The said number, that is, 525, represents the total gap to be filled by direct recruitment in the next four years. It is composed of 264 recruits to fill the existing gap, 146 in the place of retirements and casualties and 115 to take care of the expected increase. So many additional hands cannot, however, be recruited and trained overnight, for it is a question of selecting candidates of the requisite calibre—a scarce commodity indeed. But shortages of higher administrative personnel for the implementation of development programmes are undoubtedly there, and something has to be done to overcome them.

Mr. Krishnamachari has estimated, in this connection, that, even after recruiting about 100 candidates a year to the I.A.S., as against an annual average of about 50 in the period 1947-59, there would be left a gap of about 125 in the cadre in April 1966. The full effects of even the increase proposed in the rate of annual recruitment will be felt only in the later part of the fourth Plan period. The position will, therefore, continue to be difficult in the intervening period. A solution to this difficulty, in the considered opinion of Mr. Krishnamachari who has carefully assessed the additional requirements by checking and rechecking the relevant figures with the Central and State Governments, can be found by raising the age of superannuation to 58. It may be recalled here that the Second Pay Commission, too, in its report dated 24th August 1959, had made this recommendation. But this was not accepted by the Government. What Mr. Krishnamachari has to say on this question is better quoted *in extenso*:

"The reasons given by the Commission in favour of the proposal appear to me to be strong and I recommend a re examination of the original decision. Pending such re-examination, I recommend the adoption of a more liberal policy in regard to extension of services or re-employment of I.A.S. officers, as this will help materially in tiding over the present difficulties. The orders of Government make a distinction between scientific and technical personnel and members of other services for purposes of extension of service or re-employment mainly on the ground of paucity of trained scientific and technical manpower. As we are now faced with shortages of administrative personnel for the implementation of development programmes, I recommend that I.A.S. officers who are capable of efficient service may be continued in service or re employed on a basis similar to that now adopted for scientific and technical officers."

If the reasons in favour of a superannuation age of 58 (as against 55 at present) are compelling in their logic, as they undoubtedly are, there would be no point in selective extension of service or re-employment of I.A.S. officers due to retire in accordance with the existing rules. After all, thanks to many-sided planning in the last 12 years, officers approaching the age of 55 must have acquired a good deal of experience in diverse development fields. Such experienced senior officers, who are being coveted by employers in the private sector and many of whom are in a position to work for five or ten years after retirement, should not be lost to the Government when they complete 55 years. Raising the age of superannuation to 58, if not to 60, would thus be quite justified. Nobody suggests that India should adopt the high age of compulsory retirement obtaining in several foreign countries—70 in the United States, 70 in Norway, 63 to 66 in Sweden, and 65 in France, Australia, New Zealand, Canada and the United Kingdom. Even in Ceylon, the age for retirement is 60. The Second Pay Commission, it may be recalled, had made out a cogent case for raising the age of superannuation not only on the strength of the age of retirement for civil servants in other countries but also on the strength of India's own vital statistics and the commonly prescribed pensionable ages under social security schemes. Since a single jump from 55 to 60 might reduce the flow of fresh blood into the public services, the Commission had wisely recommended "that the age of superannuation should be 58 for all classes of public servants, including those for whom the retirement age at present is 60, with the reservation, however, that persons already in service may continue upto the age of 60, if they are at present entitled to do so." Now that an experienced administrator of Mr. Krishnamachari's standing has lent his powerful support to this recommendation, the Government would do well to accept it and take a prompt decision.

So much about the I.A.S. As for the State Civil Services, Mr. Krishnamachari has given the finding that there will have to be annual recruitments on a fairly large scale to them if the needs in the coming five years are to be met. And he has also recommended that all State Governments should amend their rules to enable a minimum of 50 per cent of the posts in the State Civil Service Class I and 50 per cent of the posts in the State Civil Service Class II to be recruited by competitive examinations held by the State Public Service Commissions. This recommendation has been specifically made, because direct recruitments in the States have been irregular in the past. It is needless to add that direct recruitment to the extent recommended will at least *partially* restore merit as the basic criterion for filling administrative vacancies in several States—a criterion which has receded to the background in recent years because of some political and caste or communal pulls. The demands of Community Development, Panchayati Raj and Co-operation programmes are such that only men of ability, integrity and broad human sympathies (instead of narrow caste or communal loyalties)

can bring credit to Class I and Class II Services in States.

That brings the subject to the area of district administration about which Mr. Krishnamachari has much to say in the context of the democratic decentralisation under way. Since the proclaimed objective is the "establishment of a well-organised democratic structure of administration within the district for meeting the demands of a welfare State," the State Civil Services at the block and district levels are expected to operate in a new way. They will have, in short, to think less in terms of administrative governance and more in terms of enabling such people's institutions as panchayat samitis and zila parishads to govern themselves. As Mr. Krishnamachari sees it, the block development officers and the technical specialists at the block level should function together as a well-knit team to assist and advise the panchayat samiti in working out technically sound block and village plans and in executing these efficiently and impartially in accordance with the laws and rules. While the State organisation will be responsible for the implementation of projects requiring high technical competence, the district level officials are expected to assist zila parishads and panchayat samitis, as also development and extension officers at the block level, in the preparation of all other plans. They will also supervise the execution of these plans and ensure that essential supplies and services are provided in time and on an adequate scale.

By and large, therefore, the emerging pattern of district administration will be increasingly oriented to development through local self-government. This is a matter of faith and enthusiasm, as also a matter of confidence in the local people—something that is contrary to the general trend of bureaucratic, sometimes even authoritarian, administration in most countries. Whether it will work will depend *not so much* on rules and regulations as on the patient guidance and assistance, rather than governance, expected of the district administrative cadres. It will be vastly more difficult to teach the art of self-government to rural areas in the context of economic development than to teach the three R's or improved agricultural practices.

FEEDING THE WORLD

"ONE of the basic problems facing the world, particularly the greater parts of Asia, Africa and Latin America, over the next decade will still be hunger." This is how the U.N. Secretary-General views the world food problem in his report on *Development Decade* (Proposals for Action). There is no exaggeration whatever in the aforesaid statement. For about one-sixth of the world population—roughly 500 million people—today suffers from insufficient calories, and twice that number from malnutrition or diet deficiencies in terms of vitamins, minerals and proteins. In most of the developing countries, population increased by over 2 per cent per annum in the fifties, while expansion of food supplies was about 2.5-3 per cent; consequently, *per caput* supplies rose by only one per cent per annum. This does not mean that all parts of the world had enough food, for much of the increase in production took place in more developed regions, while the more rapid population growth was in underdeveloped areas. In order to ensure even a marginal improvement in the intake of calories and animal proteins, food supplies in the various regions will have to be stepped up, according to the *Development Decade*, by 45-52 per cent by 1970. This increase in food supplies has to come mainly through an increase in agricultural productivity. This can be accomplished only by the extensive use of scientific methods of land use and modern technology.

It is a moot question whether the requisite degree of improvement in modern techniques will be forthcoming in the developing countries in the next few years. But it is certainly encouraging to find that more and more experts in science and technology all the world over are devoting serious thought to this problem. The International Congress of Food Science and Technology held at London last week is only an instance in point. In our own region, a F.A.O. conference is now in progress at Kuala Lumpur, which was the venue of a meeting of the International Rice Commission only a few days ago. The need for increasing food production was impressively brought out by Dr. B. R. Sen, Director-General of the F.A.O., while inaugurating the F.A.O. regional conference. He made a fervent plea to Asian nations to "make the earth and the sea around us yield their full bounty so that the growing population may be free from hunger and want." At the current rate of growth, world supplies would have to be doubled, according to him, by the end of this century even "to maintain the present inadequate levels of nutrition." Naturally, Dr. Sen called upon Asian nations to devote more attention to agricultural research. It is gratifying to hear from him that the F.A.O. has decided to establish agrarian research and training centres in various Asian countries.

Rice being the basic food for about half of the world population, the deliberations of the Rice Commission have a close bearing on the F.A.O.'s campaign for promoting food production. It may be interesting to note that world production of rice (excluding China and Russia) rose from 78 million tons (in terms of paddy) in 1909 to 130 million tons in 1960. But the increase was due almost wholly to extension of area under rice cultivation and not to any increase in unit acre-yields. Some of the countries like Japan, however, have clearly demonstrated the feasibility of increasing yields by improvement in the techniques of cultivation. At the Kuala Lumpur session, the Commission approved of a six-point plan to help cultivators increase their yield from land. The plan, which lays stress on technological improvements, called upon rice producing countries to: (1) breed varieties with high fertiliser response and wide adaptability, (2) strengthen fundamental research on the use of irrigation in rice breeding, (3) extend and expand current breeding work and improve the exchange of information on such experiments, (4) study and popularise the increased use of fertilisers in rice fields, (5) investigate the "optimum" requirement of water for rice crop, and (6) encourage the design and use of inexpensive farming machinery to cut down "toil and sweat" in rice production, storage and processing. Not content with these recommendations, the Commission also constituted three working parties of experts to

Calorie and Protein Content of Food Supplies in Select Countries

Per capita per day

	Calories	Total protein (grams)	Animal protein (grams)
India	1,990	53	6
Pakistan	2,080	48	7
Ceylon	2,150	47	9
Japan	2,240	68	18
Israel	2,770	83	34
United Arab Republic	2,520	73	12
Argentina	2,950	91	48
Brazil	2,650	67	19
Mexico	2,440	68	20
Canada	3,100	94	62
U.S.	3,120	92	65
U.K.	3,270	87	52
France	2,990	99	53
West Germany ..	2,950	80	42
Denmark	3,330	93	57
Australia	3,260	93	61
New Zealand	3,490	110	75

study the prospects of employing scientific research to remove the obstacles in the way of expanding productivity in developing countries.

Expansion of food production is only one of the measures to increase food supply. Elimination of wastages of food through bad storage and warehousing is equally important. As Dr. A. J. Amos says, in the course of an article in the London *Financial Times*, the annual loss of spoilage of foodgrains in the world now is as much as over 60 million tons, "a quantity sufficient to supply the protein and caloric requirements of over 200 million people." A much more important aspect of increasing food supply is the need for developing non-traditional sources of food. Yeast and algæ, for example, are potential sources of food. According to Dr. Amos, "these are edible and high in protein content and, moreover, can be cultivated speedily; 200 tons of yeast, which has a food value, in terms of protein, equal to that of 500 bullocks, can be produced by a large factory in one week." It is only a few days ago that we heard of a technique developed by a British research institution—the Vegetarian Nutritional Research Centre at Garston—to produce milk from outer cabbage leaves, pea pods and other green stuffs. This Research Centre, it may be noted, is also now collaborating with the Central Food Technological Research Institute in Mysore to produce milk out of groundnuts, cereals and greenstuffs available in India. Such efforts deserve to be encouraged, for they are bound to yield results that will help the world to supplement the traditional sources of staple and subsidiary food. But all these efforts will not be of much avail, unless people are persuaded so to adapt their eating habits as to include the new types of food also in their regular diet.

COMMONWEALTH DISCONCERT

By Our London Correspondent

IF the Prime Ministers' Conference in London has done nothing else, it has, in its immediate aftermath, made quite clear where everybody stands. The British Government is determined to go into the Common Market, because the U.K. is too weak to stay out. The Common Market countries are prepared to have the U.K. in if she wants to, but are not prepared to make any special terms contrary to their own Continental interests. The Commonwealth Premiers are sorry to see it all happen, fear the worst for themselves, will get ready to do the best they can for themselves, but cannot criticise the British Government, because they have no alternative to offer. The British Conservative Party remains divided, but the majority are for Mr. Macmillan's policy, for he says it is the right one. While their new challengers—the Liberal Party—enthusiastically support the idea of Britain into Europe, the Labour Party has been forced off its fence and has declared themselves opposed to entry (except with better and clearly set out terms—which they will not get), though a strong minority want to go in: a minority incidentally consisting of right-wingers and trade unionists.

Here is the substance of British Premier's contention: a lone Britain won't be able to exercise her political influence "in a world of giants." But Mr. Nehru took an opposite view: that the Commonwealth was an extremely flexible body which could discuss questions frankly and yet come to general conclusions. Its very diversity was its strength—and Mr. Macmillan has said much the same thing. Yet, while the British Premier sees no conflict between the Commonwealth Association and the European Association, Mr. Nehru, more sensibly, said it would all depend on how the Common Market developed. But the former African colonies are in no doubt—they intend to refuse association with the Common Market, because they regard the member-countries as "colonial-minded" (not one of them has a good past colonial record) and content to keep the ex-colonies as sources of raw materials. Already, the split in interest is showing and Britain's influence, as leader of the Commonwealth, is likely to decline once she is firmly part of Europe.

On the economic issue, the British Premier has said that Britain needs to become a bigger market for the manufactures of the developing countries (he actually said "newly developed"!) but that she cannot do this, unless she is strong enough economically and she will not be, unless she gets a bigger market for her "sophisticated production"—electronics, nuclear, supersonic and the like. At present, Britain has one-sixth of her exports to the Common Market and three times as much to the Commonwealth and the rest of Europe. Accordingly, Mr. Gaitskell regards the economic advantages and disadvantages of entry as about evenly balanced. But, in addition, if Britain does expand her trade to Europe, will this in fact make her or Europe (for there will be no tariff walls between the member-countries) a better market for Asiatic and African manufacturers? The great danger is surely that just as agriculturally the Common Market countries are inward looking so they will be industrially. A comparison has been made with the vast economic blocs of America and the Soviet Union. But these are perfect examples of inward-looking protectionist economies. Of course, they seek to export their surpluses, but their whole trading attitude has been and is protectionist. Why should the new Europe be any different?

What about the "right conditions" for British entry? There will be *none*—merely hopes and intentions. Britain will go in because, industrially, the Government considers that she will benefit from being part of a larger market and accept the disadvantages of a protectionist food import policy. So even Mr. Macmillan: on corn, meat and dairy produce, we "hope by world agreements to get a marriage market on a fair basis." The crucial words are "hope" and "world agreements." Mr. Heath, the British negotiator, said of India, Pakistan and Ceylon that *he did not know* "when comprehensive trade agreements might be signed between these countries and the enlarged community," but, if agreements were concluded by 1965, a year after British entry, there would be a gap for high tariffs of only a year. Mr. Nehru hopes that no high tariff would be imposed for so short a time. So much for the field of hope—he and the other Commonwealth Premiers are perforce reconciled to seeking salvation in comprehensive trade agreements in lieu of Commonwealth preference.

MARKET GOSSIP

Silver in U.S. Soars

THERE has been a sharp rise of seven cents to 120 cents per fine ounce in silver prices at New York in the past fortnight. Expressed in terms of Indian currency per tola, the rise works out to 14 nP, the actual New York quotation being Rs. 2.35, as against the currently ruling price of Rs. 2.57 in the local market. Never in the history of the New York silver market after 1920 had the price touched 120 cents, a level which shows a rise of 29 cents since the U.S. Treasury stopped its sales of free stocks on 28th November 1961. The sudden jump of seven cents in silver price at New York in an interval of less than fifteen days follows the withdrawal of the Bank of Mexico from the market. This Bank was reported to have recently sold more than half of its stocks aggregating 15 million ounces held a month ago. The Bank resumed sales of silver at New York towards the close of August after an interval of eight months. Mexico, it may be noted here, is the world's largest producer and exporter of silver. Last year (1961), this country produced about 42 million ounces of silver (out of the aggregate free world output of 211 million ounces) and exported 33.5 million ounces, representing almost one-tenth of the total world consumption of 350.7 million ounces.

Will there be a further increase in New York silver prices? This is the question now being discussed by bullion circles the world over. Some are inclined to believe that Mexico's withdrawal would not be deemed sufficient reason for the U.S. Treasury to intervene in the market by selling a part of its 1,863-million-ounce stock, of which some 40 million ounces are "expressly available to maintain an orderly market." Others, however, feel that such an intervention would definitely come. For this section points out that silver is now within 9 cents of its U.S. monetary value of 129 cents and, in the light of recent experience, this cannot be considered a wide gap.

* * * *

In our "London Letter" dated 8th September 1962 and published on page 454 of *Commerce* dated 15th September, it was stated that the price of silver had gone up to 82d. per fine ounce, that is, 2d. above the historic maximum reached in February 1920. The price of silver here should have been 98d. and not 82d. The latest available price of silver in the London market is 102¾d.

I. D. A.

A very important outcome of last week's annual meetings of Fund-Bank at Washington is the wide recognition of the urgent need for replenishing the resources of the International Development Association—I.D.A. for short—so that it could supplement the World Bank's activities effectively in the coming years. Indeed, the meeting approved of a resolution calling on the Executive Directors to consider I.D.A.'s prospective financial requirements and to report back, if possible, before the year-end. It was Mr. Eugene R. Black, President of the World Bank, who took the initiative and pleaded most forcefully for "very substantial additions" to the resources of the I.D.A. Mr. Black made it clear that the momentum of development in underdeveloped countries could be maintained *only* by grants or loans at very long term and very low rates of interest and that the most appropriate multilateral organisation to give such aid was none other than the I.D.A. In order to drive home this fact, he mentioned that, whereas 34 underdeveloped countries had more than doubled their total external debts between 1955 and 1961, their export earnings had risen by just over 15 per cent (*vide* page 547 for details of Mr. Black's speech). Mr. Black's plea was widely endorsed by a number of other delegates, particularly Mr. Maudling of Britain, Dr. Erhard of West Germany and Mr. Morarji Desai of India, as well as by President Kennedy. Dr. Erhard pointed out that the I.D.A. would, in the next few years, need three times the volume of convertible resources as compared with original subscriptions. Mr. Maudling held out the assurance that his country was prepared to play a "substantial role" in replenishing the I.D.A. resources.

While it is gratifying that the member-countries of the World Bank have persuaded themselves to put more funds at the disposal of the I.D.A., the questions now remaining to be decided are: (1) what must be the quantum of additional resources? and (2) how should this extra contribution be shared? The U.S., West Germany and practically all the developing nations want the I.D.A.'s total resources to be augmented from the present level of less than $1,000 million ($917.16 million as on 30th June 1962) to at least 3,000 million. Actually the U.S. has been quite generous in offering to subscribe an additional amount equivalent to the combined share of all the other countries, whereas, at present, its subscription ($320.29 million) accounts for only one-third of the aggregate initial subscriptions ($917.16 million) or a little over 43 per cent of the combined subscriptions ($739.36 million) of 15 Part I members.

The "matching formula" of the U.S. does not, however, seem to have found favour with some of the developed countries, especially Britain, the Netherlands and Belgium. These countries are reported to have stated that they have lost their colonies since 1944, when their World Bank quotas (which subsequently became the basis for fixing the initial I.D.A. quotas also) were drawn up and that they are, therefore, today not as rich as they were then. In their opinion, new subscriptions should not exceed the quantum of original subscriptions. By implication, these countries have thus suggested that the newly rich countries such as West Germany and others in Western Europe should subscribe to the major part of the *additional funds*. The argument does not bear scrutiny. The loss of colonies has meant a deflation only in the political power and not in economic power of the erstwhile colonial nations. If anything, it has added to their economic strength, as the colonies would have been a great liability had they stuck on to them today. Further, judged by their present level of national income, full employment, standard of living and technological advance, Britain, France, the Netherlands and Belgium were never so rich as they are now.

The final decision on the question of enlarging I.D.A.'s resources cannot be delayed long. Most or all of its resources might well be committed by the middle of next year and, unless the I.D.A. receives *new commitment authority before that time*, "a serious hiatus could occur in its operations." Many underdeveloped countries, particularly those having the persistently unfavourable swing in the terms of trade, cannot afford to borrow more and more from the World Bank, because such borrowing entails hard terms in respect of interest and repayment of capital. Nor can they rely largely on the International Finance Corporation which, as is well known, operates on a relatively small scale and its terms of lending are stiffer than those of the World Bank. Further, the I.F.C.'s resources will be available for investment *only* in the private sector and that, too, only in limited quantities. The financial terms attaching to I.D.A. credits, however, admirably suit the underdeveloped countries whose balance of payments prospects would not justify their incurring or continuing to incur external debt entirely on conventional terms. For the I.D.A. credits are free of interest (only a service charge of ¾ per cent is payable) and are returnable over a period of 50 years, with a 10-year period of grace. They are, of course, repayable in foreign exchange, but the terms are liberal. Further, the credits can be obtained for projects which are not merely of economic importance but also of great social value such as education and health. What is more, this form of aid (when professionally equipped and independent of political influence), as Mr. Black very aptly stressed, enables a developing country to draw on the experience of all nations to buy in the cheapest market and to avoid compromising its sovereignty by regulating its affairs at the behest of other countries.

Distress Sale in Cuban Sugar

Export prospects for Indian sugar continue to be none too encouraging, thanks to the persistent weakness of world sugar markets. Raw sugar in London is currently quoted at £25¾ per ton, a drop of £1¼ in just four weeks. The decline in price has followed sales of cheap East European beet sugar and offerings of "second-hand" cane sugar by a Cuban agency to which has lately been resold a part of sugar sold to Russia and communist countries. Russia is said to have sold recently sugar at as low a price as £20-17-6 per ton (for shipment early next year) which is well below the export price of £33-15 (October shipment) quoted by the London sugar firm Messrs. Tate and Lyle. The gap is, indeed, too wide even after taking into account the differences in shipment dates and quality. A portion of the sugar sold by Russia may be Cuban sugar.

Cuba, it may be recalled, has been depending to a considerable extent on the communist countries for the disposal of its sugar crop since the U.S. imposed a blanket ban on imports of Cuban sugar. Out of Cuba's export total of 4.3 million tons in the first seven months of 1962, Russia alone purchased almost two million tons, China being the second biggest buyer with 750,000 tons.

If Cuba has not been able to sell a larger quantity to Russia and other communist countries immediately after the U.S. stopped importing Cuban sugar, Russia had given a firm guarantee to buy whatever Cuba offered—it is because of the sharp setback to the Cuban sugar harvest. The estimated actual production in the 1961-62 season (ended June 1962) was no more than 4.80 million tons, as against 6.77 million tons produced in the previous season. Even as early as in the spring of this year, Cuba had announced a cut in the planned total exports to communist countries from 4.90 million tons to 4.36 million tons. Since (*a*) the 1961-62 crop has already been fully sold (500,000 tons for domestic consumption and 4.3 million tons for export to communist countries), (*b*) the limited stocks are being reduced, and (*c*) the current season's output is expected to be only a little better than in 1961-62, it is considered unlikely that Cuban sugar will be sold "first hand" to the world market in the remaining months of 1962 or next year. This, however, does not mean, according to the *Financial Times*, London, that Cuban sugar will be taken off the world market. For some sugar has been resold to a Cuban agency by the communist buyers and has not been shipped from Cuba at all. This is now being sold "second hand" on the world market. More of this sugar is being shipped to Eastern Europe and partly disposed of by cheap sales to Western Europe.

Economics of the British Press

The British newspaper industry has come in for sharp criticism at the hands of the Royal Commission on the Press (Chairman: Lord Shawcross, Q. C.) which has found it "gravely inefficient" in its production. The high cost of production of British newspapers, in the Commission's view, is not due to the high cost of newsprint or uneconomic distributive arrangements. It is the result of a large wage bill resulting from redundancy of labour in the printing, publishing and transport departments of the newspapers themselves. The Commission was appointed in March 1961 as a sequel to public concern over the growing trend towards concentration in newspaper industry. The takeover of the *Odhams Press* by the *Daily Mirror* and the merger of the *News Chronicle* with the *Daily Mail* had made the public wonder whether there was something wrong with the economics of British newspaper industry. The Commission, with the help of a London firm of management consultants, made a special study of the economic ills of the industry. It found that production was inefficient, due largely to overstaffing in the production and distribution departments and the practice of giving special payments for work that is really part of normal employment. In its view, manpower, including highly paid technical personnel, in the national newspapers was being squandered and that co-operation between managements and men to ensure efficient use of manpower and machinery was inadequate. In the Commission's opinion, some newspapers could conveniently effect a saving of about 34 per cent in manpower employed on production and distribution. It, however, found utilisation of editorial and administrative staff to be fairly good. The Commission's comment on overstaffing in the production and distribution departments of national newspapers (the provisional newspapers in this respect emerge in a more favourable light) is devastating. "There can be no doubt," it says, "that in national newspapers manpower is being squandered; if conditions there were to form a pattern for industries which have no shelter from foreign competition, it would be disastrous to the economy of the nation." It is mentioned that, in four national newspapers, for instance, productive labour alone cost them some £2.4 million a year more than it ought to have done.

The Commission holds both sides of the industry, namely, management and trade unions, responsible for this state of affairs. In order to improve efficiency, it has suggested (1) improved machinery for consultation and negotiation, common standards and conditions in all newspaper offices, (2) unity on the part of employers, and (3) more constructive spirit on both sides of industry and a genuine will to work the consultative machinery.

The Commission has rejected all proposals for modifying the economic forces of competition to assist weaker newspapers. It considers it quite improper to use statutory devices to solve the difficulties of these newspapers on the ground that they would be deliberately discriminatory against papers which were achieving commercial success. It is also opposed to any kind of Government subsidy for the Press. Its argument is that, if the subsidy were available to all newspapers, it would leave their respective competitive positions unchanged. If, on the other hand, the subsidy were discriminatory, "it would involve, in an obvious way, the dangers of governmental interference with the Press which we think would follow from other artificial attempts to regulate the incidence of market forces."

The Commission feels that a newspaper should run on its own steam. Those which are inefficient and which cannot stand on their own feet have no right to exist. It, therefore, sheds no tears for the *News Chronicle*, the failure of which was due not to "an inevitable law of newspaper economics" but to inefficient management and uninspired editorial policy. The Commission does not think that efficiency and diversity could be secured through official spoon-feeding or legislative fiats. Emphasising that there is no way to success but through quality of management and editorial direction both of which cannot be secured by legislation, the Commission declares:

"There is no acceptable legislative or fiscal way of regulating the competitive and economic forces so as to secure a sufficient diversity of newspapers. The only hope of the weaker newspapers is to secure—as some have done in the past—managers and editors of such enterprise and originality as will enable these publications to overcome the economic forces affecting them."

The Commission does not favour wholesale prohibition of all future amalgamation of newspapers. It has, however, suggested the establishment of a Press Amalgamations Court, composed of High Court Judges and lay members, whose consent would have to be obtained for all future purchases of newspapers where the buyer controls or would control aggregate weekly circulations of three million copies. The buyer would have to prove to the satisfaction of the Court "either that the freedom and variety of opinion would not be reduced by the proposed transaction or that these would be more reduced by refusing the transfer than by allowing it." The Commission has also recommended that newspaper undertakings should be prohibited from having a controlling interest, as distinct from an investment interest, in television. Legislation to enforce reform of the Press Council, so that it will have a lay chairman and substantial lay membership, has also been suggested.

T.E.L.Co.

It is reliably learned that the management of T.E.L.Co. has abandoned the idea of issuing convertible debentures, presumably because of the desirability of not having a high debt ratio. It is common knowledge that the authorities in the U.S., from where the Company is hoping to raise a big dollar loan, are highly critical of such ratio and want companies to have a large ratio of equity to the capital employed by them. Accordingly, the Company proposes to raise the additional capital required by it by offering new shares. The surmise in market circles is that the rights issue will be in the proportion of one : five. This will bring the Company about Rs. 1·60 crore. Besides the premium which may be anything between Rs. 75 and Rs. 100 per share. There is, however, plenty of time yet for a final decision to be taken on this issue.

TREND OF SHARES

RECOVERY NEAR CLOSE

(From Our Own Correspondent)

BOMBAY, 27*th September*

STOCK exchanges displayed further weakness initially this week, but recovered rather promisingly from Wednesday, as selling pressure subsided and bears were a bit anxious to cover a part of their short sales and book profits. At close, however, prices were lower over the week, though well above this week's lowest levels, and the tendency was still weak, as confidence was lacking. Turnover increased slightly, but was far from normal.

Several leading counters broke to yet new low levels this week due to renewed bear pressure and virtual absence of support. The border skirmishes at N.E.F.A. and economic uncertainties continued to sway the sentiment which was additionally affected on Monday this week by the annual report of the Central Board of Directors of the Reserve Bank of India containing a caution against recourse to deficit financing during the remaining years of the third Plan and a suggestion that vigorous steps be taken for mopping up the surplus purchasing power in the hands of the people. The Bank Directors' report was viewed by marketmen with some concern, as its observations on raising resources for the Plan were interpreted to be in favour of a further heavy dose of taxation.

Yet another bearish factor that cropped up during the week was the rumoured failure of a couple of brokers in Ahmedabad to honour their commitments. It was feared that, due to intermarket operations, the likely default by the Ahmedabad brokers might also affect the payments position in Bombay.

The prospects of further cuts in imports in the ensuing licensing period, tight money conditions due to a hardening tendency in interest rates, which were clearly reflected in the none-too-low *badla* charges last week in spite of a heavy shake-out in the markets and lack of any incentives accounted for the continued despondency of the markets and virtual absence of support even at the fairly attractive low levels.

Bears were, however, induced to cover some of their sales largely by technical considerations. For, throughout the week, there was clear evidence of absence of any selling otherwise than by the big operators. Further, no sooner did the prominent bear operators stop selling than the markets turned idle and hovered around the low levels. In fact, some of the heavily battered counters like Tata Steel Ordinary, Indian Iron, Hindustan Motors, National Rayon and Telco, to mention a few, did resist fresh bouts of selling at lower levels. Moreover, several market leaders had come too close to the last year's low levels. All these factors induced some precautionary bear-covering. In addition, there was also the fear that the current low levels might tempt the L.I.C. to re-enter the market anytime now.

One redeeming feature of the past one-and-a half month's continuous decline in equities has been the absence of heavy selling by investors. Most of them have steadfastly stuck to their holdings. At the same time, however, they have been markedly restrained in rushing into the market to make fresh purchases, as the picture of industrial profits is not as rosy as it was six months ago. Nonetheless, the odds are in favour of technical rallies in the coming weeks, though much would depend on the quantum of T.I.S.Co.'s equity dividend which is positively expected to be announced next week.

* * * *

Bears on Dalal Street succeeded in keeping the market at bay up to mid-week and even succeeded partially in turning the announcement of the maintenance of the dividend at Rs. 41.25 gross (Rs. 12 interim and Rs. 29.25 final) per share of Rs. 125 each by the Bombay Burmah Trading Corporation on Tuesday as a handle to demoralise the sentiment further. Subsequently, however, the market recovered on all-round buying by the erstwhile sellers and some revival of fresh bull support. Bombay Burmah, in particular, which had been sold down from Rs. 641 on Monday to a new low level of Rs. 622 on Wednesday, rallied to Rs. 634.50 today and closed at Rs. 632.50, as against Rs. 639 a week ago.

Sectionwise, Textiles were again in a bad shape. Sellers predominated, while buyers were scared by the bonus hang-over in the industry in Bombay, fears of lower profit for the industry as a whole for the current year and the uncertainty associated with the outcome of the Tariff Commission's inquiry into fair prices for cotton textiles. Almost all the counters in this section closed with further losses. Standard were down by 30 points at Rs. 810, Century by seven points at Rs. 605.50, National Rayon by Rs. 9.50 at Rs. 469, Kohinoor by Rs. 4.10 at Rs. 296 *ex-div.*, Bombay Dyeing by one point at Rs. 65, Svadeshi by Rs. 6.50 at Rs. 254.50, Finlay by eight points at Rs. 295, Gold Mohur by Rs. 11.50 at Rs. 221 and Mafatlal by 15 points at Rs. 775. Even the offside scrip like New Great declined by Rs. 11 to Rs. 260.

Losses were also widespread in the Miscellaneous section. Indian Dyestuff lost Rs. 12.50 at Rs. 435 and Amar Dye Chem Rs. 7.50 at Rs. 250. Voltas fell from Rs. 258 to Rs. 247 to recover to close at Rs. 252.50, as against Rs. 257.50 a week ago. Telco were down by Re. 1.50 at Rs. 296 and Cooper Engineering by Rs. 4 at Rs. 165.50. Premier Construction receded further by four points to Rs. 141.50. Hindustan Motors closed with a loss of 32 nP at Rs. 18.08, but Premier Automobiles showed a small gain of Re. 1.50 at Rs. 111.

Among Steels, Tata Ordinary disclosed a loss of Re. 1.75 at Rs. 133.25, Indian Iron of 25 nP at Rs. 25 and Mukand Iron of 40 nP at Rs. 23.

Digvijay Cement were weak at Rs. 182, as against Rs. 186 a week ago. Shippings were quiet. Belapur Sugar were down by three points at Rs. 221 and Maharashtra Sugar and Phaltan showed a loss of Re. 1.50 each at Rs. 155 and Rs. 91.50, respectively. In the Cash section, net changes were minor. However, Hindustan Electric moved down further by ten points to Rs. 180, Alembic showed a loss of Rs. 7.50 at Rs. 190 as did Dharamsi Chemical at Rs. 147.50 and Ceat Tyres declined by Rs. 6.25 to Rs. 165. Among new issues, Elecon Engineering lost Rs. 7.50 to close at Rs. 39.50.

* * * *

Leading counters in the forward list showed further losses in Calcutta. Birla Jute were down by 69 nP at Rs. 33.62, Dunlop by 75 nP at Rs. 37.75. G.K.W. by 56 nP at Rs. 36.69 and Orient Paper by 60 nP at Rs. 41.35. Others showed minor variations either way.

Among Cash scrips, Jutes presented a steady front and some shares looked up from the low levels to close with small gains. However, Alliance slipped back by seven points to Rs. 116 and Nuddea by four points to Rs. 57.75. Textiles were quiet, with Bowreah and Cawnpore recording a loss of one point at Rs. 25.75 and Rs. 6.50, respectively. Among Coals, Equitable moved down by Re. 1.31 to Rs. 27 and Ghusick by Rs. 2 to Rs. 12. Braithwaite, in the Engineering section, closed with a rather big loss of Rs. 3.75 at Rs. 32.25 and Escorts slipped back to Rs. 18.37, after having improved in the previous week to Rs. 19.62.

Trading in Chemical shares was featured by a smart recovery in Bengal from Rs. 94.50 to Rs. 101.50. But Alkali faltered to close at Rs. 42.62, as against Rs. 42.75 a week ago. Miscellaneous issues showed generally small losses. Aluminium Corporation declined by 87 nP to Rs. 15.69, Angelo Bros. by 81 nP to Rs. 24.25, Associated Battery by 63 nP to Rs. 28.87 and Jayshree by 57 nP to Rs. 16.62. On the other hand, Dr. Paul were up from Rs. 21.37 to Rs. 23, as were Union Carbide from Rs. 44.50 to Rs. 45.75 and Sen Raleigh from Rs. 18.87 to Rs. 21.25. Among Papers, Indian Paper Pulp were conspicuously weak with a loss of 93 nP at Rs. 18.94. Sugars and Tea shares were quiet.

* * * *

In Madras, Textiles weakened further, with Travancore Rayon declining from Rs. 32.85 to Rs. 31, Madura from Rs. 35 to Rs. 34.75 and S.I. Viscose from Rs. 156 to Rs. 155. Buckingham, as an exception, looked up by two points to Rs. 282. Miscellaneous issues made a mixed show. Aluminium Industries showed a loss of 20 nP at Rs. 24.90, Madras Rubber of 50 nP at Rs. 21.50 and W.I. Products of 50 nP at Rs. 199.50, but Indian Steel Rolling recovered by 70 nP to Rs. 12.50 and Ashok Leyland by 7 nP to Rs. 7.70. Sugars were down; E.I.D. from Rs. 41.83 to Rs. 41.50, Cauvery from Rs. 115.50 to Rs. 115 and Deccan from Rs. 11 to Rs. 10.75. Plantings were steady, with Peermades appreciating by a full one point to Rs. 21.50.

SILVER JUBILEE OF MADRAS STOCK EXCHANGE

"The turnover in our Exchange is very much restricted and this is really disheartening." Thus observed Mr. C. R. Chandrasekariya, President of the Madras Stock Exchange, in his speech at the annual general meeting of the Exchange held on Saturday, the 22nd inst.—a day after the Exchange celebrated its silver jubilee. The celebrations were inaugurated by Mr. H. V. R. Iengar, a former Governor of the Reserve Bank of India and Chairman of the Parry Group of concerns in Madra. It may sound strange that, within a few hours of a pleasant occasion like silver jubilee, the retiring President of the Exchange should have struck an unhappy note. But it was time somebody spoke the truth and somebody wrote about it. For it is greatly disappointing, to say the least, that this 25-year old Exchange should stand the last, activity-wise, among the country's five stock exchanges (the other four being Bombay, Calcutta, Ahmedabad and Delhi), where dealings in both cash and cleared securities is allowed. Actually, in terms of volume of business, Madras can hardly boast to be any better than the Indore and Hyderabad Stock Exchanges, where trading is confined only to cash scrips. This is deplorable because, as Mr. Chandrasekariya pointed out, a wide choice of scrips giving a fairly good return is easily available to any investor from the list of the shares quoted on the Madras Stock Exchange and particularly so when Madras monopolises in shares of almost all the companies in South India.

The President of the Exchange regretted that sometimes even popular scrips in the cleared list could not be bought or sold easily. The main reason for that, he said, was the absence of jobbers in the market. The investors in the market were by and large conservative. 'It is, therefore, necessary," he added, "that our efforts should be in the direction of augmenting the number of members and the introduction of a few jobbers who will help in creating a freer market." Mr. Chandrasekariya said it was necessary that the stock exchanges should advertise the opportunities available for investment in stocks and shares to attract new investors and commended the system of monthly investment plan in vogue on the New York Stock Exchange. He referred, in this connection, to the efforts made by his Exchange by bringing out the *Madras Stock Exchange Year Book* which is in its tenth year of publication. He hoped that, with the acquisition of a building in Second Line Beach in May 1961, the Exchange would be housed in a modern structure.

The bulk of the shares listed on the Madras Stock Exchange are of planting and textile companies. And, according to Mr. Chandrasekariya, it is because of the adverse factors affecting these two industries that the volume of business on the Exchange has shrunk considerably. The controlled price of rubber, the fall in the price of coffee in the world markets and the downward trend in the price of tea, particularly the common tea, the continuing rise in the cost of fertilisers, wages, etc., all had contributed, the President said, to take away the charm of growth in the planting group and to reduce their attraction to investors. He pointed out that textile shares, which were active until recently, had turned dormant because of the present shortage of cotton and the ceiling on the price of yarn, which had led to fears of lower profits for the companies for the current year.

Whatever the limitations on its activity, the Madras Stock Exchange has played a significant part in the recent phase of industrial expansion, particularly in the South, by helping to channel savings into productive investments. It is felt that the establishment of more new industrial units in the South, covering the various basic and ancillary industries, will, in the near future, give the Exchange the fillip it requires "very badly" and increase the activity in the market.

It will be pertinent to jot down here the views of Mr. Chandrasekariya on two subjects which concern all the stock exchanges in the country, namely, the role of the L.I.C. as the largest single investor in shares and the present trend in equities.

With resources of the order of over Rs. 30 crores per annum seeking investment, Mr. Chandrasekariya said, the L.I.C. had acquired shares in almost all the well-known companies listed on all the recognised stock exchanges in the country and also contributed liberally to many of the new issues by underwriting them. He pointed out that the L.I.C. had all along been only a buyer of securities and even when prices improved steeply it did not sell. In this connection, he observed that many felt that the Corporation should sell at least a portion of its share holdings wherever prices soared and help maintain thereby a steady level of prices. He referred to the negligible floating stocks of shares of the good companies and the difficulty of trading in them because of the continuous investments made by the L.I.C. in such shares. He stated, therefore, that the L.I.C. should limit its investments in the existing companies and contribute more liberally to new issues.

In his speech on the occasion of the silver jubilee celebrations Mr. Chandrasekariya traced the history of the Madras Stock Exchange. He said that, out of the 262 companies the shares of which were listed on the Exchange, dealings in the shares of no less than 247 companies were done exclusively on cash basis. Sometimes, the authorities of his Exchange had been dubbed as too rigid, when they followed the rules and regulations strictly, but he averred that, by and large, that had stood the Exchange in good stead in the long run. He observed that to a considerable extent investment in South India shares was made by people in the North and he attributed such preference for the Madras shares to the absence of any violent fluctuations in the Exchange.

Inaugurating the celebrations, Mr. H. V. R. Iengar observed that thanks to a considerable degree of Government regulations, the Indian stock exchanges had played their role well. He pointed out that, in the last ten years, the rise in the index of share prices had amounted to only 31 per cent in the case of India, as against 150 per cent in the U.K., 199 per cent in the U.S., 743 per cent in West Germany and 847 per cent in Japan. Nevertheless, he proposed that a systematic study of the functions of stock exchanges should be made to find out whether they had been discharged properly.

Some significant observations on stock exchanges were made by Mr. S. Narayanaswami of Chitra and Company, the well-known firm of stock brokers in Madras. Mr. Narayanaswami rightly stated that stock markets and speculation were intertwined and that, without a degree of speculative activity, liquidity could not be imparted to any stock market. His suggestion that the subject of stock exchange should form a part of the university curriculum merits serious consideration.

Reports have appeared in a section of the press that the Tariff Commission has already submitted its recommendations to the Government of India relating to cloth and yarn prices. The Indian Cotton Mills' Federation, however, reliably understands that there is no basis for this report and that the matter is still under the consideration of the Commission.

PERSPECTIVES & PROJECTIONS

By Mercator

Businessman as Critic

IN a mixed economy, the businessman in the private sector is inevitably drawn into political controversy since what he has to say on current policies affecting his position and interests will involve criticism of the Government. The style and temper of such criticism have undergone several changes in the last decade; at one stage, when special virtues were claimed for the public sector, the private sector missed no opportunity of publicising the shortcomings of State undertakings. Thereafter, the striking growth of the private sector under the influence of large Plan outlays caused a change of attitude; now, except for a small part of the investment in industry which the private sector may like to have allotted to it, there is little complaint on this score. Businessmen now want the public sector to spend even more than it does today on transport and power, which, of course, must be in addition to the State's inescapable and admitted obligations for agriculture, irrigation, health and education. The efficiency of the public sector in organising and co-ordinating these programmes is now increasingly being questioned but the narrowing of differences in principles of planning is an important development.

In the conference on Transport and Power convened by the F.I.C.C.I. last week, Mr. Jain prefaced his speech with the observation that fault-finding was not his object and it seems to me that Mr Nanda fully reciprocated this attitude with equal candour. He did not omit to point out that, in the alternative third Plan once drawn up by the Federation, it had provided for a total outlay of only Rs. 1,100 crores on transport and communications, as against Rs. 4,000 crores demanded for industries and mining. Such inconsistency weakens the private sector's case and shows it up as shortsighted or concerned only with making debating points; such an impression can hardly advance the private sector's interests. The F.I.C.C.I.'s secretariat work, in preparing points for its spokesmen, is obviously far from perfect, though this organisation has expanded considerably in recent years and has been actively sponsoring conferences of all kinds. It should have been clear to the Federation (as it was to its critics at that time) that the movement of coal and other raw materials and finished goods besides construction material for a Rs. 4,000-crore outlay on industry would be of such dimensions that an equal amount of investment would be required for transport as well as power.

I think a similar tactical mistake was made when Mr. Jain pleaded for the abolition of the electricity duty levied by State Governments on the ground that it added to the total cost to the user. The real issue at the present time is not cost but availability (as some others at the conference stressed) and, while no one can hold a brief for unreasonable increases in the tariff, we have passed the stage when subsidised rates can be demanded as a promotional device. If any such incentive has to be offered at all, it can only be on a selective basis such as, for example, for small industries in industrial estates. The World Bank and I.D.A., which are assisting power schemes, have called for commercial pricing policies which can yield surpluses and the Plan also has assumed resources from this method. Whether the cost of power is pushed up by suitable pricing or by taxes, thers is no question at this stage of mere cheapness, since somebody will ultimately have to pay for it. That electricity for irrigation and rural electrification is charged less and that the share of power cost in multi-purpose projects is "loaded" to reduce the burden on irrigation is not due purely to political reasons, though they also come into the picture and are not wholly irrelevant.

The private sector does not stand to gain much by being prolific with advice which is doubtful economics and is certainly bad public relations, since the States become the favourite whipping boys for all ills. It is not surprising that Mr. Nanda was quite firm in ruling out any relief in this matter but businessmen will do well to show at least occasionally that they are equally interested in the successful completion of States' schemes which also have a direct relation to the smooth operation of industry and for which local resources will have to be found. With rural interests resisting land taxation on the one hand and industrial interests on the other opposing all others (like sales taxes and road transport levies), the situation becomes amusing; the States will become as bald as the bigamous husband whose grey hairs were pulled out by the younger wife while the senior removed the darker ones. The effect of such attitudes will be to harden resistance to even reasonable proposals for modification of the rigours of tax or other policies.

I think businessmen should always take their stand on certain firm economic principles which they consider valid for themselves. For instance, they cannot afford to have one stand on private property when it is a question of compensation for nationalising industry and another equivocal stand when it is a matter of acquiring land for a private industrial purpose at less than market price; similarly, they should not acquiesce in control when it is for supplying raw materials for industry but protest strongly when the consumer demands the same relief. The sugar industry for long agitated against regulation but eventually found it safety in it when production increased and controlled releases of stocks were needed to prevent a steep fall in prices. Dogmatic stands could be avoided with some careful study of long-term needs and it is here that a well organised expert staff on the secretariat of chambers of commerce could help. In a country like Britain, businessmen could enter politics to make their influence felt and in turn also feel the pulse of the public; Tory ranks are full of such men, but, in India, this has not been possible on any large scale for historical and ideological reasons. This has not placed the private sector at a serious disadvantage and the public sector's charms have not been so overwhelmingly attractive as to tempt any but the dogmatic socialists. For the undecided and still indecisive middle, which is numerically large, a consistent stand which shows deep awareness of the social obligations of the private sector should eventually have much appeal.

* * * *

Trends in Newspaper Circulation

Municipal bodies in India have the reputation of not being able to mind their own business; they discuss and pass resolutions on most of the world's problems and often adjourn before they reach their agenda of local maladies. Considering the paucity of comment on the report of the Registrar of Newspapers for 1961, journalists, never known for lack of self-importance, appear to have been struck down with inexplicable shyness or reticence. Is the overall increase of 4.7 per cent (4.6 per cent for dailies alone) in circulation a satisfactory rate in the context of the educational advance, on the one hand, and the rising incomes, on the other? Or is the question a matter of indifference since there is a newsprint shortage anyway and a larger increase in demand cannot be met by printing more copies? The report points out that the rate of increase has been declining from 11.2 in 1959 to 8.3 in 1960 and 4.7 in 1961; some of the decline is apparently attributable to the steps taken to verify publishers' claims of circulation. Curiously enough, there was a decline in circulation of newspapers in Hindi, a language claimed as having the widest measure of popular appeal and the highest number of dailies.

English papers have the largest circulation of 4.7 million and Hindi papers come second with 3.6 million; but, in relation to the much smaller population speaking Tamil and Malayalam, the respective figures of circulation of 2.5 million and 1.2 million show that, to the extent to which the power of the printed word could sway millions, these count for as much in our democracy as Hindi journalism. With high literacy, a volatile people and an exciting political climate, Malayalam papers have been increasing their circulation at a rate next only to those in Telugu.

The importance of periodicals in the country is indicated by the low proportion of circulation of dailies (4.7 million) to the total (18.8 million); Hindi has three times the number of newspapers in English (45) but has only half the latter's circulation; of the eight weekly editions of daily newspapers, seven are in English. But apart from circulation, English newspapers exercise more influence indirectly on the language press by its capacity to disseminate ideas and mould the opinion of those who run the latter. This may be of much greater importance than whether chains or groups actually control the Press; even if they did control 33.2 per cent of the circulation of papers and periodicals in the country, the other two-thirds can be an effective antidote to the effects of close control if they are really independent. In this country, there is nothing comparable to the techniques employed by the newspaper chains in Britain or the U.S.A. or the influence of Sunday editions. Much of it is sober journalism, agency-inspired news, which is well doctored; comment is often timid and respectable and only occasionally peppery when some dear or near interests are affected—which is perhaps as it should be. Contrast this with A. P. Herbert's wailing lines on the British Press, especially the Sunday newspapers:

> How seldom can you find in this maniacal affair,
> A simple piece of news in type that doesn't tear its hair
> You grope about and get, between a bosom and an ad,
> A tragedy so silly that it isn't even sad,
> For bits are in italics, and some other bits in black,
> While *asterisks* and arrows keep the reader on the track,
> Or else, if it is high among the scandals and the shocks,
> It's penned by wriggly borders in a fascinating 'box'.

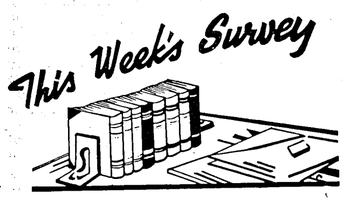
The economics of the newspaper industry have not been studied as carefully as it deserves to be and the reports of the Registrar are hardly any help in this matter. The Press Commission's figures are, perhaps, now quite out of date regarding the total investment and number of persons employed in all branches. Future growth, for which the scope is indeed immense, depends on the willingness to invest on a large scale. With newsprint shortages, difficulty in importing equipment for setting up new units and the advent of sensational journalism which deters the more sober enterprises, some limits on free growth seem inevitable and the only ones who can profit by the present situation are those already well settled and having resources to plough back into expansion and diversification of existing units. It will not be surprising if the next report also shows a rise in circulation of papers held by groups and chains but I shall be the last person to worry as long as there is as much competition and rivalry between them as there are at present. Smallness in this field will be no virtue, since it means, in a daily newspaper, inefficiency and inability to think on the scale in which a modern journal of information and opinion should be conducted.

NEW COMPANY REGISTRATIONS

As compared with the earlier four months of the current year 1962-63, there was a noticeable increase in the number of new registrations during the month of August 1962. According to the reports received in the Research and Statistics Division of the Department of Company Law Administration from the Registrars of Companies in the various States, 158 new companies were registered with a total authorised capital of Rs. 23,20 lakhs in the various States of the Indian Union in that month. In the preceding month, 127 new companies were registered with a total authorised capital of Rs. 19,72 lakhs. In the corresponding month of the preceding year, that is, August 1961, 115 companies with an aggregate authorised capital of Rs. 11,47 lakhs were registered in the country.

The new companies registered during the month under review included 11 giant-sized companies having an authorised capital of Rs. 1 crore and above. Four of these giant-sized companies, namely, Bhaskar Textiles Mills Ltd., Cominco Binani Zinc Ltd., Multimetals Ltd. and National Standard Duncan Ltd. were registered in the State of West Bengal with an authorised capital of Rs. 1 crore, Rs. 3 crores, Rs. 1 crore and Rs. 2 crores, respectively. Another two of these companies, namely, Gopichand Textiles Mills Ltd. and New India Spinning and Weaving Mills Ltd. were registered in the State of Punjab with an authorised capital of Rs. 1 crore each, and one company each was registered in the State of Madras (Facit Asia Ltd. Rs. 1 crore), Mysore (Bellary Spinning and Weaving Company Ltd. Rs. 1 crore), Orissa (Orissa Fisheries Development Corporation Ltd. Rs. 2 crores), Uttar Pradesh (Hind Auto Industries Ltd. Rs. 1 crore), and Delhi (Frick India Ltd. Rs. 1 crore).

Besides these giant-sized companies, the total new registrations during August 1962 included five big-sized companies having an authorised capital of Rs. 50 lakhs and less than Rs. 1 crore. Two of these big-sized companies, namely, Natraj Spinning and Weaving Mills Ltd. and Suryalakshmi Cotton Mills Ltd., were registered in the State of Andhra Pradesh with an authorised capital of Rs. 50 lakhs each. One company, namely, Unichem Laboratories Ltd. (Rs. 75 lakhs), was registered in the State of Maharashtra, and the remaining two companies, namely G.T.N. Textiles Ltd. and Orient Spinning Mills Private Ltd., were registered in the State of Kerala and Orissa respectively with an authorised capital of Rs. 50 lakhs each.



SOME PROBLEMS OF SHIPPING

AS a foreign exchange earner, Indian shipping in overseas trade has fared well—if not too well—since 1955-56. The increase of about Rs. 15 crores—from Rs. 13 crores in 1955-56 to Rs. 28 crores in 1959-60—in the level of foreign exchange earnings by this industry has been due largely to the increase in the quantity of cargo carried—from 1.6 million tons in the former year to 2.6 million tons in the latter. Such expansion in overseas tonnage as was brought about in the second Plan period has rendered all this possible. The results would have been still better if greater expansion and earlier replacement of obsolescent shipping had taken place. But that was not to be. Even the third Plan provision for shipping expansion is known to be inadequate, and the National Shipping Board has, therefore, continuously kept the issue in the forefront.

Both expansion and replacement of old shipping can yet be accelerated if the Board's recommendations regarding loan repayments and development rebate requirements are fully implemented by the Government. A longer period of repayment has, of course, been fixed in respect of the more recent loans—longer than in the case of loans taken between 1953 and 1960. The same principle can very well be applied to the remaining instalments on previous loans. In fact, the National Shipping Board has pleaded for this assistance, and Dr. A. Ramaswami Mudaliar, Chairman, India Steamship Company Ltd., has also forcefully reiterated the plea in his speech at the annual general meeting of the Company held at Calcutta on the 25th instant. As for the development rebate, the present requirement that 75 per cent of the relevant allowances should be provided from the profits before dividend declaration has proved to be a serious handicap to the shipping companies in their efforts to modernise and expand their fleet. That the development rebate, in the circumstances, should be spread over a period of five or six years seems to be a reasonable demand. That would enable the shipping companies to pay some dividend to shareholders. It is unnecessary to add that, unless a reasonable rate of dividend is paid on the existing equity capital, the companies would find it extremely difficult to raise the additional capital required for financing modernisation and expansion.

Another direction in which relief is expected by shipping companies in overseas trade is some judicious allocation of freight between the public-sector shipping corporation and the private-sector companies. Here, happily, a beginning has recently been made by the agreement between the three Indian Lines engaged in the India-U.K.-Continent trade both ways, namely, the Shipping Corporation of India, the Scindia Steam Navigation Company and the India Steamship Company. This agreement provides, on a pooled basis, equal carriage of freight and equal earnings for the three Lines in the Indo-Polish trade, the Indo-German trade, the Indo-Soviet and Indo-Rumanian trade in the Black Sea, and in the trade to the Egyptian and Levantine ports, and Indo-Adriatic trade. It is a happy augury for the future of Indian shipping that the agreement has introduced an element of friendliness and co-operation in the relations between the public-sector shipping corporation and the private shipping concerns.

The problem of freight rates, however, continues to be difficult. It is true that the recent increases in coastal freight rates—by 15 per cent for general cargo and about 10 per cent for coal carryings—would go some way towards relieving the revenue situation of all shipping companies which do some amount of coasting trade or other. But the overseas freight rates in respect of westward voyages have virtually remained the same as in 1957. Only since 1st October 1961 have the rates for eastward voyages been increased. In view of the rising costs of operation, Dr. Ramaswami Mudaliar has pleaded for a farsighted approach on the part of Government, as well as of shippers of any importance, to the question of overseas freight rates. The tendency on the part of the Government to limit the freedom of shipping companies to increase such rates after full discussion at conference meetings is sought to be justified on the ground of export promotion. But the Government, which is also very much interested in the foreign exchange earnings of shipping companies, should see to it that they work without any loss so that they can operate efficiently and expand their services for the transport of goods. As the shipping companies cannot afford to fix such rates as will preclude the transport of goods which is their only function, they can be depended upon to be reasonable. After all, overseas shipping is a highly competitive field with a large surplus tonnage. There cannot, therefore, be much scope for any undue increase in freight rates.

EXPORTS OF PROCESSED FOODS

The establishment of an export promotion council for processed foods is indeed a welcome step. The Council, which was inaugurated by Mr. Manubhai Shah, Union Minister for International Trade, on the 24th instant, will tackle export promotion measures relating to such processed foods as preserved fruits and vegetables, biscuits and confectionery. The total exports of preserved vegetables and their preparations alone amounted to Rs. 73 lakhs in 1961-62 (as compared with Rs. 90 lakhs in 1960-61) and those of preserved fruits and fruit preparations Rs. 10 lakhs (as against Rs. 7 lakhs). Exports of biscuits fetched Rs. 5 lakhs in 1961-62 and confectionery about Rs. 1.5 lakh. As Mr. Shah pointed out, these exports have not been very encouraging, for they account for only a very small proportion of total output. As production is proposed to be stepped up further during the third Plan, it is only appropriate that concerted efforts should be made at this juncture to promote exports.

It is proposed to increase the total output of fruit and vegetable products to as much as 100,000 tons by the end of the third Plan, as compared with the current actual output of only 40,000 tons, and 20,000 tons in the beginning of the second Plan. Similarly, the third Plan target for the output of biscuits is 40,000 tons (as against 24,000 tons in 1960-61) and that for confectionery 25,000 tons (as against 17,000 tons). These figures, it may be noted, relate to the organised sector alone. In view of the planned increase in production, exports are also expected to be stepped up. For exports of fruits and vegetables, the target is 10,000 tons, which means an increase of about three times the present level. Similarly, shipments of biscuits are proposed to be raised ten times to 1,000 tons and those of confectionery from just over 20 tons to as much as 500 tons.

The third Plan export targets are certainly ambitious in the context of current performance. This will call for the utmost possible enterprise and initiative on the part of the new Council. Moreover, as Mr. Shah urged, the manufacturers, too, would have to rise to the occasion. It is to be noted, however, that the industry is suffering from several handicaps like the shortage and high prices of tinplate required for packaging and the exorbitant prices of sugar. There are, of course, a few incentive schemes in operation, granting drawback on duties on tin containers and rebate of excise duty on sugar used by food products meant for exports. These have turned out to be of negligible significance. Unless early measures are taken to make available to the industry tinplate, as also sugar, at international prices to exporters of processed products, India will not be able to compete with similar products exported by such advanced countries as Japan, Australia and the U.K.

COTTON CONTROL

The controversy over the new scheme of cotton distribution proposed by the Indian Cotton Mills' Federation, which has been raging fierce for some time now, is continuing. At a meeting held on Friday, the 21st inst., representatives of the cotton trade and the Federation found themselves unable to resolve the differences in their respective points of view and to evolve a scheme acceptable to mills as well as the trade. The Federation's original scheme envisaged the appointment of nominees in different areas in the country who were required to ensure that every bale of cotton sold to mills was within the statutory ceiling price. The trade opposed this tooth and nail on the ground that it would undermine the very existence of the trade and interfere with the free marketing of cotton. Thereupon, the Federation put forward an alternative scheme. The main features of this scheme are:

Mills will purchase cotton through the normal trade channels but will report these purchases to district controllers chosen for the purpose who will not be connected with the mills' usual dealers. The entire purchase price of the cotton bought will be deposited by the mills with the controllers who will pay 90 per cent of the amount to the seller, take samples from the cotton and send them to the zonal committee for survey. If the sale price agreed upon between the mill and the seller happens to be equal to or lower than the price fixed by the zonal committee in survey, the balance of 10 per cent of the purchase price will be paid to the seller by the controller. If, however, the price fixed in survey is lower than the sale price, the controller will pay to the seller only the price fixed by the survey committee. The balance will be returned to the mills. This procedure will apply to purchase of *kapas* also. The controller will report all such transactions to the Textile Commissioner who will thus be enabled to keep a watch over the total purchases made by each and every mill. At least twenty-five per cent of the cotton purchased by each mill will be compulsorily requisitioned by the regional committee and transferred to other mills in the region at the ceiling price. This stipulation is intended to minimise the risk of mills indulging in malpractices.

This alternative scheme, too, was not acceptable to the trade. Representatives of three leading associations of traders, namely, the East India Cotton Association, the Bombay Cotton Merchants' and Muccadums' Association and the Cotton Buyers' Association put forward a scheme of their own as an alternative to the one evolved by the Indian Cotton Mills' Federation. The trade's scheme is similar to the Federation's scheme in some respects but it is different from it in some significant respects. Two vital points of difference may be mentioned. First, the trade's scheme lays down that no mill, including those having their own ginning and pressing factories, shall buy *kapas*. Secondly, it is also laid down that no mill shall be permitted to hold in stock more than three months' average consumption of cotton, both Indian and foreign. The Federation considers this modified scheme unacceptable. Unless, therefore, one of the parties climbs down a solution will be impossible.

The chief objective of any scheme of distribution control is to ensure uninterrupted supply and equitable distribution of available cotton to mills at prices not in excess of the ceiling. The inability of mills and the trade to agree upon a scheme of distribution that is mutually beneficial is due to the fact that each party looks at the question from the point of view of its own sectional interest. If both mills and the trade sincerely desire that cotton prices should be held within the ceiling, the existing control (comprising the quota system, power for requisitioning cotton, compulsory survey and restrictions on the quantum of cotton that a mill can hold, namely, five months' average consumption) is itself sufficient, provided it is strictly enforced. The difficulty lies in enforcing this control, judiciously, without fear or favour. There is, of course much to be said for a voluntary scheme of distribution, if one can be jointly evolved by the mills and the trade and pursued by them faithfully. But the fact that they are unable to see eye to eye even on the question of evolving a scheme, let alone its working, leaves no alternative to maintaining the *status quo* with all its deficiencies.

TARAPORE ATOMIC POWER STATION

Thanks to the energetic steps taken by the Atomic Energy Commission, the preliminaries pertaining to the proposed atomic power station at Tarapore near Bombay have now reached an advanced stage. As many as seven tenders in all have been received from Canada, France, Britain and the United States for the design and construction of the Tarapore station, and these are claimed to have been carefully scrutinised from the technical, economic and contractual points of view. Of the seven offers, the one from the International General Electric Company (I.G.E.C.) of the United States, according to Dr. H. J. Bhabha, Chairman of the Atomic Energy Commission, has been found most acceptable. Although the Commission has thus announced its preference for the I.G.E.C. offer, some more months will elapse before it is finally accepted. If everything goes well, as Dr. Bhabha hopes it will, satisfactory arrangements may be concluded in the next few months with the United States Government in respect of two major things, namely, (i) financial aid covering the foreign exchange cost (Rs. 32 crores) of the project, and (ii) supply of the fuel raw material, that is, enriched uranium, costing Rs. 1.7 crore to Rs. 2 crores. As soon as an agreement is reached with the U.S. Government on these and other allied matters, a formal agreement between the I.G.E.C. and the Commission will also be concluded.

The American offer, it is worthy of note, covers the design and construction of a 380,000-kilowatt station which, with a gross capacity of 400,000-kilowatts, will be a third bigger than the 300,000-kilowatt station orginally envisaged in the third Plan. What is more, the entire estimated capital outlay of Rs. 48.5 crores (Rs. 42 crores being the tender price, including customs duty and spares, quoted by the I.G.E.C. *plus* Rs. 6.5 crores on account of site development, housing colony, taxes, escalation and contingencies) on the currently planned bigger station is a little less than the originally proposed outlay of Rs. 51 crores on a smaller station. That the capital cost per kilowatt sent out is going to be distinctly less now—Rs. 1,275, as compared with the original estimate of Rs. 1,700 per kilowatt—is the most favourable point about the current proposal. Another favourable point is that the unit cost, that is, cost per kilowatt-hour, of Tarapore nuclear power is expected to be about 3.25 nP—less than the 3.76 nP to 4.07 nP in the case of conventional thermal power in the Western Region which has to draw its coal supplies from the Madhya Pradesh and Bihar-Bengal coalfields. It is claimed or expected that this unit cost, as well as the capital cost per kilowatt, will be less than in the case of the Bradwell and Berkeley nuclear power stations which have been recently commissioned in Britain. The third point in favour of the current proposal is that it is based on boiling water reactors of the kind already in successful operation in the United States and Germany and also being built in Italy and Japan. With such distinct advantages, the Tarapore station, if completed by the end of 1966 according to present schedule, will add immeasurably to the experience of the Atomic Energy Commission which, in due course, will be called upon to build more nuclear power stations—in Rajasthan, South India and elsewhere. And, above all, the Tarapore station, which is expected to supply power in nearly equal proportion to Maharashtra and Gujarat, will, when successfully completed, be a personal triumph for Dr. H. J. Bhabha, the dynamic Chairman of the Atomic Energy Commission.

FOODGRAINS PRICES

The reported move of the Government of India to introduce statutory controls on wholesale trade in foodgrains has caused a flutter in the dovecots of distributive trade. Some of the leading organisations of the trade all over the country have already expressed their grave apprehensions about the proposed controls. In a memorandum submitted to Mr. Gulzarilal Nanda and Mr. S. K. Patil, the Grain and Oilseeds Merchants' Association, Bombay, for instance, has made it clear that controls on distribution of foodgrains by the Government will not be able to ensure distribution at fixed prices, for "market operations are not guided by artificial price fixation, but dictated by the law of demand and supply." The Association is, therefore, on strong grounds when it suggests that, instead of resorting to artificial measures, efforts should be made to increase production and supply larger quantity of foodgrains to fair price shops. The view seems to have been apparently shared by no less a person than Mr. Patil, who observed, at a meeting arranged by the aforesaid Association in Bombay last week-end, that controls were no solution to the rise in prices of foodgrains. A permanent solution to the problem, he emphasised, would come only by increasing agricultural productivity and through diversification of food habits. He stressed that the recent upward trend in prices was seasonal and confined to certain deficit areas like West Bengal and Orissa, where there had been a marked shift in the area under cultivation from rice to commercial crops like jute.

Controls on foodgrains distribution, as the Association rightly says, will only deprive the farmers of a fair return for their produce and retard production. It is a truism to say that declining output will create a vicious circle of scarcity and price rise, which everybody wants to avoid. Experience has shown that controls do not serve the purpose for which they are intended. The fiasco of State Trading in foodgrains introduced during the Second Plan period is still green in public memory. The Association's contention that any move for controls now would be a hasty step is sensible. As the prospects for the next crop (1962-63 season) are better, the present prices "which are somewhat high because of lean season will surely go down" when new crops start arriving in the market. In the meantime, the Government can increase the supply to the market by releasing more out of its stocks of foodgrains. Mr. Patil disclosed, in this connection, that the Government would soon build up a stockpile of four million tons of wheat and two million tons of rice. At present, the Government has a stock of 2.5 million tons of rice and wheat together in the Central reserves. Besides, during the next two years, about eight million tons of wheat are expected from the U.S. under P.L. 480. There is also the possibility of importing more rice from the U.S. If the Government can maintain strategic controls by judicious operation of buffer stocks, there is no meaning in creating a bogus scare of rising prices, which will only lead to a built-in crisis and encourage farmers, traders and consumers to indulge in more hoarding.

It is true that wholesale prices of foodgrains have gone up slightly during the last four or five months (*vide* page 535, *Commerce* dated 22nd September 1962). As will be seen from the table below, rice and jowar have accounted for the major part of the increase in prices of foodgrains. The reason is that production of both these crops was lower in 1961-62.

(Base: 1952-53=100)

	August 1962	Dec. 1961	August 1961	Average 1961-62	Average 1960-61
Cereals	109.5	101.0	124.3	102.0	100.0

All commodities ..	131.1	122.6	127.5	122.9	127.5

* These figures relate to the month of July.

The Association is at pains to establish that the increase in foodgrain prices has been due, at least partly, to an increase in the cost of agricultural production and distribution. It has listed various factors contributing to higher distribution cost, namely, successive additions in tax burdens (sales tax, it may be noted, is levied on foodgrains in certain producing centres), increase in railway freights, transport charges, levy of town duty, cost of packing and labour charges. That the incidence of taxes and freights on foodgrains should be rendered lighter is a reasonable demand. The factors responsible for higher agricultural costs would have to be neutralised by greater agricultural productivity. The programmes for minor irrigation, fuller utilisation of the irrigation potential of the major and medium projects, distribution of fertilisers, production of compost manure, cultivation of green manure crops, distribution of better seeds and improved implements, and so on, are already there. If they are implemented more efficiently and energetically, productivity is bound to go up and that will ultimately restrain the rise in foodgrain prices, provided politicians allow the effect of higher production to be felt on the price front at least to a reasonable extent.

ECONOMIC SITUATION

The Central Board of Directors of the Reserve Bank of India must indeed be complimented for having impressively highlighted, in its latest annual report (for the year ended June 1962), some of the pressing economic problems facing the country, and indicated the lines on which they could be solved. The Board records evidence of strains and stresses arising from fuel-power-transport bottlenecks and deficiencies in technical-managerial skill and organisational ability which have together slowed down rate of economic development. It also records the major role played by deficit financing in the growth of money supply as well as the worsening of the balance of payments position. In doing so, the Board has, of course, not painted any alarmist view of the situation. All that it has done is to emphasise that there is now an urgency for intensifying the efforts to overcome the immediate hazards and pitfalls that have been observed so as to make, on the whole, for a smoother pace of economic growth.

Since the economic fortunes of India are closely linked to the conditions in the agricultural sector, the Reserve Bank Board of Directors has naturally underlined the supreme urgency of the need to pursue intensively the various measures already accepted for raising both production and productivity. Without such an improvement, it will be difficult, nay impossible, to broaden the industrial base internally and to ensure an increasingly larger flow of exports. No less urgent is the need for the adoption of appropriate price policies, including institution of buffer stocks for the principal foodgrains and commercial crops, and simultaneously for the more vigorous execution of agricultural storage and warehousing programmes. The Board has done well to emphasise this fundamental need of the Indian economy today. As for industry, the Board has rightly urged "every effort" to produce indigenously, as far as technically feasible, the raw materials and intermediate products required to reduce dependence on imports. Drawing attention to the growing problem of underutilisation of capacity which has lately been intensified by foreign exchange shortage, it has called for the largest measure of import substitution through research, inventiveness and adaptation. "This need," to quote it, "would be all the greater if untied loans from abroad are not forthcoming on the scale desired."

In regard to export promotion, the Board has not hesitated to point out that the difficulties of exporters have been considered piecemeal from time to time and measures introduced to provide additional assistance or special incentives to facilitate exports. It has certainly struck a note of realism when it observes that what is needed is a comprehensive approach to the entire export problem, with special stress on the all-round increase in productivity. It does admit that business and industry are getting increasingly aware of the need to reduce costs, and there is now a sense of determination about the job. Only it seeks to drive home the fact that cost reduction is not a once-for-all but a continuous operation.

While the promotion of exports remains the long-term and near-term necessity, the gap in payments, as the Board pertinently remarks, can be filled immediately only through adequate foreign assistance. With refreshing candour, it admits that the present foreign exchange difficulties have arisen in some measure from procedural delays involved in the utilisation of external assistance, as also in obtaining reimbursements for the payment for imports against foreign aid. In its considered opinion, efforts need to be directed towards removing the bottlenecks, administrative and others, which make for slower utilisation. Incidentally, the Board suggests that a certain proportion of aid in untied form should improve its general efficacy and provide greater flexibility in the execution of Plans.

The Board is quite forthright in its remarks pertaining to the price situation, as will be seen from the relevant extract from the report quoted below:

"In the context of not merely exports but the health of the economy, the need to hold the price line cannot be overemphasised. The development process involves, almost unavoidably, a certain degree of inflationary pressure in a less developed country. But such pressure has to be contained by suitable policies which would mop up surplus purchasing power. There is an inescapable dilemma here. While the object of development is to raise the living standards particularly of those sections in the community who are at or below subsistence levels, there is equally the need to spread the costs of development so as not to exempt these very sections from the scope of the tax net, if the pace of economic development is not to be retarded. This undoubtedly causes some hardship, but development demands sacrifice from all sections of the community. From this point of view, the mobilisation of substantial resources by taxation becomes an inescapable constituent of our planning. In fact, since savings in the economy are low—a characteristic of less developed economies generally—this method of levying what in substance is forced savings is unavoidable and is preferable to forced savings by deficit financing beyond the limits set by the growth of the economy. The latter is a form of indiscriminate taxation whose incidence is greatest on those least able to bear it. To make a plea for greater tax effort is, of course, not to understate the role of voluntary savings, both institutional and personal, whether through large public borrowing or maximum mobilisation of small savings. In short, the price line will be better held, if the task of financing the Plan expenditure is executed effectively."

As a general statement of principles, these observations are unexceptionable and commonplace. But the stage for such generalisation was over a long time ago. The questions are whether the tax efforts made so far are adequate, whether there is still scope for raising additional taxation, and if so to what extent and in what directions. On these questions, the observations of the Central Board of the Reserve Bank are not as illuminating as could be expected

WHERE ARE THE BUYERS?

TONE OF DESPAIR IN EXPORT MOVES

From Our Special Correspondent

NEW DELHI, 25*th September*

DELHI LETTER

THERE is an element of despair in the shriller notes of recent calls by Ministers for a more intensive drive on the export front. The figures for trading in the first eight months of the year show that there has virtually been no expansion in export dispatches. In January-August 1962, the total exports, including re-exports, were worth Rs. 432.68 crores, scarcely Rs. 4.32 crores more than the performance in the comparable period of last year. Exports stagnated at an annual average of Rs. 613 crores in the five years of the First Plan and in the second Plan the annual average was Rs. 622 crores. The target of Rs. 3,700 crores in the five years of the third Plan works out to an average of Rs. 740 crores per year and Rs. 662 crores of exports (provisional estimates) in 1961-62 were lower than the phased target for the first year of the third Plan. The target for the current Plan year is Rs. 720 crores worth of exports and, in the period April-August, the increase has been Rs. 4.73 crores or less than Rs. 1 crore monthly average.

Increased exports to the Communist countries have more than compensated for the decline this year in the level of exports to Britain and West European countries (see last week's Delhi Letter on page 492). Side by side with efforts to increase trading with East Europe, officials of the Department of International Trade are seeking ways to open up the avenues in the European Economic Community. Soon after the Commonwealth Prime Ministers' conference dispersed, British Prime Minister Macmillan, to the chagrin of officials in Delhi, has poured cold water on some hopes retained by India and Pakistan. In the early stages of the negotiations with the European Six, Mr. Macmillan, as well as Mr. Thorneycroft and Mr. Sandys, declared that Britain's going into Europe would be conditional on appropriate safeguards for the Commonwealth countries which will be affected by the decline in their traditional trade with Britain under the preferential system. Now Mr. Macmillan has made it clear that he will take Britain into Europe whatever the consequences for the Commonwealth colleagues. Both Mr. Nehru and President Ayub Khan had considered the terms which have emerged from Brussels as totally unsatisfactory, but Mr. Macmillan said, in a broadcast last week that the terms which Britain has got for the Asian countries were "on the whole very good terms—very good."

At one time, some hope remained that the uproar of the Commonwealth Prime Ministers would lead to Mr. Macmillan seeking better concessions from Europe. But British negotiators, who have already suffered much humiliation at the hands of the European delegates at the Brussels talks, are in no mood to oblige the Commonwealth partners. Mr. Macmillan in effect has told India and Pakistan that the concessions already achieved are worthwhile and the best they can hope for is the offer of a bilateral trade agreement by 1966. There are no assurances in sight for India, Pakistan and Ceylon between next year, when Britain will enter the Common Market, and 1966 when the trade pact may be negotiated.

Trade With Western Europe

India's adverse balance in trading with Europe was about Rs. 135 crores in 1958-59, Rs. 168 crores in 1959-60, Rs. 201 crores in 1960-61 and about Rs. 130 crores in 1961-62. The total adverse balance in India's world trade was about Rs. 334 crores in 1961-62. In the past few years, the adverse balance with West Germany has been around Rs. 100 crores. In 1961-62, the adverse balance with West Germany was Rs. 97.5 crores, with Italy Rs. 14.3 crores, with the Netherlands Rs. 4.5 crores, with France Rs. 7.9 crores and with Belgium Rs. 5.5 crores.

Special attention to increasing exports to this region will be paid by the Council for Trade with Western Europe, which started functioning earlier this month. Its initial modest aims include the preparation of special commoditywise studies and market surveys. That Indian exporters have been unable to make use of even the limited facilities offered by West Europe in some instances is illustrated by the non-utilisation of a 250,000 new francs quota for 1961 for export of canned fruits into France. Canned fruits were referred to as a prospective export item for West Europe by the Council for Trade with Western Europe at its first meeting.

Inaugurating the Processed Foods Export Promotion Council, Mr. Manubhai Shah, Minister for International Trade, yesterday pointed out that the exports of food products in the last three years were not very heartening. Mr. Shah pointed out that exports of preserved vegetables and fruits in 1961 totalled only Rs. 84 lakhs out of the estimated production worth about Rs. 5 crores. Mr. Shah advised the leading Indian producers in this field to put their heads together in the export drive. Mr. Shah also referred to the disappointing performance of the biscuit and confectionery industry which exported in 1961 only Rs. 7 lakhs worth out of a total production valued at Rs. 8 crores. The incentives for the processed foods industries include a subsidy of Rs. 500 per ton on tin plate used for open top cans for fruit products, condensed milk and meat industries. There is also the rebate of drawback on tin containers at the rate of Rs. 272 per metric ton and of Rs. 106.90 per metric ton on glass containers. Another incentive seeks to compensate for the high level of sugar prices in comparison to world rates.

Exporting Films

The South Indian Films Chamber is to try and start work on subtitling of Indian films for exports. The Export Promotion Committee for Films, which met in New Delhi recently, suggested that a trade delegation should go to West Asia soon and the delegation should also include a leading Indian actor and an actress. It called for the organisation of festivals of Indian films in Tunisia, Morocco, Sudan, Ghana, Nigeria and Ethiopia. The Indian Motion Picture Producers Association and the Film Producers' Guild of India will jointly prepare a scheme for a central agency to look after film export problems. The Committee considered the State Trading Corporation to be the appropriate agency for handling exports of films to countries with whom trade is on a Government-to-Government basis.

Four years after its inception the Film Export Committee is still devoted to a lot of preliminary work. It has brought out a souvenir on the Indian film industry, in English, French, Spanish and Arabic. Another of its booklets, called *Market for Your Films*, gives details of foreign distributors and capacity and number of cinema houses in various countries. Festivals of Indian films were also organised in Cairo and Djakarta. Earnings from exports of Indian films amounted to Rs. 101 lakhs in 1958-59, Rs. 173 lakhs in 1959-60, Rs. 192 lakhs in 1960-61 and Rs. 161 lakhs in 1961-62. These export earnings are insignificant, in view of the fact that India is one of the world's largest film producers and almost 90 per cent of the feature films produced in this country have an export market.

In 1956, 1957 and 1958, India produced 295 feature films and the production was 312 in 1959 and 324 in 1960 and 303 in 1961. The motion picture industry in the country has a capital investment of around Rs. 90 crores and gives employment to more than one lakh people. Nearly half of them are employed in cinema houses which number a little over 4,000. The cinema houses have a total of 140 crore customers every year. The cinema industry is the fourth in respect of wages paid and fifth in the number of people employed.

Threat to Jute Exports

Apart from the tariff walls which will make exports to Europe harder and the continuing fall in exports of cotton textile goods, another big threat to exports is in jute goods. In 1959-60, jute goods exports earned for India Rs. 111.9 crores, as against Rs. 135.1 crores in 1960-61 and Rs. 144.8 crores in 1961-62. The higher jute goods earnings in 1961-62 were despite a fall in the quantity exported, 785,400 tons against 855,600 tons in 1959-60. In the first half of this year, jute goods exports were higher than in any comparable period since 1948. For 1962-63 the Government target for jute goods exports is 850,000 tons to earn around Rs. 140 crores. In order to get a firmer market for specialities, the Government is adopting a liberal policy in licensing the installation of broad looms and granting the necessary foreign exchange quickly. From 500 in 1959, the number of broad looms has been doubled and, in another year, the installed capacity in broad looms is expected to be further doubled.

The Pakistani competition will have its worst impact on Indian jute goods exports in the next few years. In 1961, Pakistan exported about 206,000 tons of jute goods, that is, 18,000 tons more than in 1960. Between 1960 and 1961, Pakistan increased its sales in Australia from 26,000 tons to 34,000 tons while Indian sales fell from 78,000 tons to 51,500 tons. Pakistani sales to Cuba nearly doubled to 22,000 tons, while Indian sales rose from 41,600 tons to 44,100 tons only. In Burma, Pakistani sales increased from 12,785 tons to 17,134 tons, while Indian sales rose only fractionally from 6,200 tons to 7,900 tons. Not so long ago, Burma was buying only Indian jute goods.

The current capacity of the Pakistani jute industry is about 8,000 looms. The Pakistani Jute Inquiry Commission has suggested a higher target of 16,000 looms, while the Pakistan Plan target is 12,000 looms. In 1955, India accounted for 94 per cent of the exports from the subcontinent. In 1961, its share fell to 80.9 per cent and Pakistan's share rose from 5.9 per cent in 1955 to 19.1 per cent. In sacking too, India's share fell from 87.6 per cent in 1957 to 71.6 per cent in 1960. It will be interesting to know how the industry and the Government of India propose to meet the growing competition from Pakistan.

BRITISH FARMING IN THE COMMON MARKET

Britain's Minister of Agriculture, Fisheries and Food, Mr. Christopher Soames, told farmers at Bedford, England, on the 22nd inst. that, if Britain entered the European Economic Community (the Common Market), the present system of agricultural support would gradually be changed to a managed market in which—through levies, tariffs and support buying—the market price for agricultural products would be sustained at a reasonable level. "Such a system, Mr. Soames said, well conceived and properly run, could have many advantages for our farmers over the present one where the bill to the Exchequer and the taxpayer in recent years has been rising at an alarming rate."

In the negotiations so far, the Minister went on, Britain still had lot to agree with the six Common Market countries on the detailed arrangements on how the Community market should be managed for the different commodities. This would be the test in the negotiations ahead, and the Government would have to satisfy itself on the outcome before any decision was taken. Those Commonwealth countries which had a traditional trade with Britain in temperate foodstuffs feared that the system of a managed market could give rise to production in Britain, and in Europe as a whole, expanding at such a pace as seriously to affect the level of their exports to Britain and to Europe. Therefore, in negotiations with the Six, Britain had agreed that if she were to join, the Community would take the initiative in working for international commodity agreements.

The British National Farmers' Union had said that it favoured international commodity agreements even if Britain did not join the Common Market. But there was no doubt that they had been brought much nearer reality by the negotiations in Brussels. The Six had not expressed any intention of working for international agreements until British negotiations with them began. These agreements represented the policy of the Government as a means of preserving the trading interests of the Commonwealth if Britain joined the Common Market.

UNDER SECRETARY TO GOVERNMENT
1 OCT 1962
PUBLIC DEPARTMENT

CHAIRMAN'S STATEMENT

Alind's Sixteenth Annual General Meeting

Production and sales touch new peak levels

MR. S. NARAYANASWAMY REVIEWS ACTIVITIES

Dislocating effect of increased corporate levy
Need for free and adequate flow of aluminium metal
Commissioning of high-tensile steelwire plant
Central Government clearances for "Solidal" project
Export of aluminium conductors

Addressing the Sixteenth Annual General Meeting of the Aluminium Industries *Limited held at the Registered Office*, Kundara, on September 27, 1962, Mr. S. Narayanaswamy, Chairman, said:

The year 1961-'62 has, in several ways, been a memorable year in Alind's history. It has been a year of record turnover, our sales having reached a peak of Rs. 6.17 crores in money value, our production being 62.000 kilometers in bare conductors and 9.86 million core yards of covered conductors. It is perhaps inevitable that such a turnover should produce profits of the order of Rs. 23.16 lakhs enabling the Company, despite higher tax commitments to distribute without much effort, the now familiar 18-per cent dividend on its paid-up capital of Rs. 1 crore, after making appropriate provisions. You will have observed that despite a quantum of development rebate, of which the company was able to avail on its high-tensile steelwire plant, tax provisions have had to be of the order of Rs. 18.20 lakhs. The total tax the company will be paying on its own behalf and on behalf of shareholders by deduction from dividend packets will be of the order of Rs. 23.60 lakhs, which gives you some idea of the suction effect of direct Central taxation on the profits of the Company—distributed and undistributed.

TAX IMPACT

It is interesting to observe that over a three-year period, changes in the pattern of corporate taxation have been such as to add considerably to the burdens of industry. Companies which made reasonable profits exercised prudence in distribution of dividends and ploughed back chunks of residual profits for development in the past, felt that in so fashioning the disposition of their finances, they were achieving a golden mean between distribution on the one hand and the build-up of enhanced earning capacity on the other. I am happy to say that this latter feature has been as welcome to shareholders as the dividend packet itself.

With the stepping up of the Company Tax to 50 per cent and the reduction in development rebate allowance to 20 per cent, the residual profit available for ploughing back has shrunk to levels that are bound to cause concern to all those interested in expansion of industry. The element of internal capital formation involved in ploughed-back profits enabled companies in the past to restrict their additional share issues to a minimum, and apart from this, provided a cushion against the inflationary impact of high-priced plant and machinery involved in latter-day expansion. The incresed corporate levy has the effect of dislocating all medium or long-term managerial programmes of investing retained profits, apart from imposing on the corporate sector as a whole, stresses and strains that will lead to both curtailment of inventories and creation of liquidity problems, compelling the corporate sector to lean more heavily on the banking system—at a time when the banking system itself is not particularly equipped to take on such additional burdens. All told, the pattern of corporate taxation today is not such as to provide incentives for companies taking on the added responsibilities and burdens of expansion. Curiously, the Third-Plan contemplated enhanced installed capacity and diversification of activity by existing industrial units.

EXCISE DUTY

The Finance Act of 1962 has imposed an Excise duty of 5 per cent on finished conductors. As I observed on a previous occasion, the customer pattern in bare conductors being what it is—comprising in the main, Electricity Boards, Project Bodies and State Governments, such Excise duty will only swell projects' bill of costs. All new taxes are meant to augment Plan resources. In this instance, the duty will augment Plan expenditure. In other words, such imposts have financially only a cancelling-out effect, with Excise collection costs thrown in as an addition to the Civil Administration budget.

POWER TARIFF

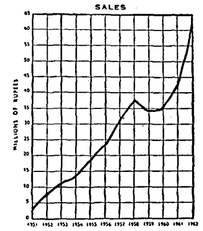
Some time ago, we made representations to the Orissa Government that the rates of power supply to our Hirakud Unit rendered the operations of our Rod Mill uneconomic. We were hoping for some relief in power rates, but far from affording such relief, the Orissa Government have imposed a 15-per cent duty on electric power consumed and this is bound to add to our rod production costs at Hirakud. Your Directors feel that in the circumstances expansion of our activities at Hirakud would be far from purposeful.

ALUMINIUM METAL

I now come to the more crucial problem of raw material. Allocation of raw material to the Company during the current year has been far from satisfactory. In a cycle of stepped-up demand for conductors, any shortfall in aluminium metal supplies, would result in curtailed production of conductors, with which to transmit electricity from hydel or thermal centres of generation in this country of distances—and thus have far-reaching consequences on the pace of electrification. Meagre and perfunctory allocation of aluminium metal, at a time when copper conductor producers have been asked to accept reduced supplies of copper and switch over to aluminium conductor production, is likely to have an unwholesome effect on the morale of the cable industry in India. Until such time as indigenous sources of aluminium supply are able to ensure a free and adequate flow of metal to the cable industry, it would be advisable for Central Government to programme for adequate imports and prompt allocations of such imports to the Conductor industry, in order that the latter may be freed from hesitancies in booking orders. Uncertain deliveries of metal will inhibit production programmes.

EXPANSION SCHEMES

As you are aware, the company has a programme of expanding its Covered Conductor capacity at Kundara and to establish a Covered Conductor unit at Hyderabad. The Company will be trebling its current Covered Conductor capacity before the end of the financial year. Alind Covered Conductors have proved their worth in consuming markets and our increased capacity will help us to meet the increased consumer demand. In respect of the underground cable manufacturing programme known as the "Solidal" project, we have now obtained clearances from Central Government for importing the necessary equipment. We expect to establish the "Solidal" unit before the end of 1963.



ROD ROLLING

Alind has had the privilege of establishing the first Properzi rod-rolling mill in India and of following it up by a modern Properzi unit in Hirakud. The Company has now full command of the technique of rolling rods by the Properzi process, which is now established as the most economic method of producing rod for conductor manufacture. The Company has applied for a licence to enhance rod-rolling capacity from 250 to 600 tons per month. With the step-up of primary metal production within the country, it appears essential that the country should be concurrently equipped to manufacture rod out of ingots, by the economic Properzi process and free the country from dependence on external sources for rod supplies. It is our hope that the small quantum of foreign exchange involved in our programme to augment rod rolling capacity will be weighed by Government against the vastly larger foreign exchange saved by non-import of rod—which is what will be secured by an increase in our rolling capacity. It is hoped that Government will afford us facilities to import the necessary Properzi rod mill unit and ensure larger production of rod by the cheapest and most efficient process.

STEEL PLANT

The performance of our high-tensile steelwire plant commissioned in November 1961 has been fully up to expectations, though we have been battling against inadequate availability of zinc at economic prices. The Japanese technicians who helped us with the erection and smooth commissioning of the plant left Kundara a few weeks ago after satisfying themselves about the efficient operation of the unit.

SWITCH-OVER FROM COPPER

Consequent on slender indigenous supply of copper and our limited foreign exchange resources, Government have decided on asking copper-using cable manufacturers to switch over to aluminium. In view of the large and well-spread bauxite resources of India and the licensing of several primary metal producing units, the production of aluminium is bound to be stepped up substantially in the next three to five years, making available to the conductor industry its full requirements of raw material. There is little doubt that this phased programme of displacing copper by aluminium cables will be implemented satisfactorily.

CABLE STUDY TEAM

Having regard to the spectacular strides taken by the cable industry in India and the increasing importance of maintaining the highest standards of production in the industry, it was very appropriate that the National Productivity Council should have sponsored a tour of U.S.A. and Japan by a Team of Indian Experts, who will visit cable factories in these countries that have made so notable an advance in cable-making techniques on the basis of research carried out over the years. I am happy to say that the National Productivity Council Study Team has paid Aluminium Industries the compliment of appointing the Company's General Manager, Sri V. G. G. Nayar, its accredited leader This, I believe, implies a recognition of the significant role Alind plays in the cable economy of India. The report of this team, when made available, will undoubtedly constitute a valuable addition to the none-too-voluminous literature and know-how on the subject of cable manufacture in India and help the Indian industry as a whole to improve and refine its techniques.

EXPORT

I should not omit to refer to Alind's part in helping export promotion. A few export orders for bare and covered conductors and accessories were received from South East Asian Countries and are in the process of being executed, the first bare conductor reel to be exported having been kindly released by the Kerala Chief Minister earlier this year. I am glad to say these exports are not uneconomic nor are they subsidised, while margins of profit are no doubt modest.

CAPITAL ISSUE

The Company has received Government sanction for a further issue of capital—namely, 3,50,000 shares at a premium of Rs. 3.50 per share. This issue when made will bring our paid-up capital to Rs. 1.35 crores, while adding Rs. 12.25 lakhs to our Share Premium Reserve. Such an issue will relieve the company of pressure on ways-and-means, caused by continuous plough-back of funds into expansions—a process which will become more and more difficult under the new tax dispensation. The company expects to make the capital issue early in 1963, when our expansion projects will get under way.

That about sums up our doing during the years and our plans for the future which I hope will be implemented with the same smoothness and promptitude as our earlier projects. Notwithstanding difficulties I have catalogued already, there is reason to look forward with confidence to a period of augmented and gainful activity for Alind.

N.B.—This does not purport to be a record of the proceedings of the Annual General Meeting.

AMERICAN LETTER

ECONOMIC PULSE NOT SATISFACTORY

JUSTICE DEPARTMENT MAY PROSECUTE BANKING UNDER ANTI-TRUST LAWS

From Our Special Correspondent

NEW YORK, *22nd September*

BUSINESS is still good and should remain so, but Secretary of Commerce Hodges, surveying all indicators, said that the economic pulse is "not entirely satisfactory."

Industrial output in August was unchanged from July on an overall basis. Consumer spending was lagging. August retail sales slipped 0.5 per cent below the July level. Personal income posted its smallest gain in seven months—it gained only $900 million. Steel mills, operating at about 54 per cent of capacity, said that incoming orders were "disappointing."

Pre-tax profits this year are expected to top last year's figures for most U.S. manufacturing companies. This prediction is based on a survey made by the National Industrial Conference Board. Some of the findings are somewhat interesting.

An overwhelming majority of those surveyed predict that their new orders and billings in the second half of this year will surpass those registered last year. Also, more than half of the companies polled plan to increase their capital expenditures this year over 1961. Most companies expect employment to remain stable and many executives forecast a continuation of intense competition and price pressures in their markets for some time to come. In my opinion, this is a very realistic picture.

Specifically, capital outlays are expected to be higher this year for 55 per cent of the firms, with jumps of 50 per cent or more predicted by more than one-fifth of the companies polled. About 38 per cent of the companies expect inventories to be lower at the end of this year than they were in spring, 33 per cent believe they will be higher and the remaining 29 per cent anticipate little change.

Generally speaking, the most favourable expectations are reported by consumer products' manufacturers. Taking all factors into consideration, the business community has optimism.

Steel Controversy

The steel-Government controversy, mentioned in my last despatch, has quieted down. The four steel manufacturers who were asked to testify before Congress finally came to Washington and pleaded with a Senate Sub-committee for exemption from the Congressional order to divulge confidential data on production costs and pricing policies, because publication may jeopardize their competitive position at home and abroad. The steel group got a sympathetic ear from the full Senate Judiciary Committee and it looks at this writing as though the Committee may allow all four companies to ignore the Committee's original subpœna.

But the Government moved against another segment of the metal industry. In Hartford, Connecticut, 11 copper fabricators were indicted by a Federal Grand Jury on charges of conspiring to fix prices for six years. The usual procedure is that, after lengthy and costly litigation, a consent decree is issued and the Department of Justice moves to indict another industry. This is almost routine.

One business the Justice Department has not tackled yet, but would like to prosecute, is banking. The anti-trust philosophy which is part and parcel of U.S. Federal statutes is, of course, price fixing which tends to lessen competition. These laws go back to the second decade of this century, when the Rockefeller oil monopoly was broken up.

U.S. Investments Overseas

U.S. corporations and individuals now hold a record $34,700 million in direct investment abroad. This is more than three times the 1950 total. Last year's rise amounted to $2,000 million over 1960. This was despite the fact that nearly $960 million of direct investments in Cuba were written off because of expropriations by the Castro regime.

At this point, more than one-third of U.S. direct investments outside of the country are in Canada which accounts for about $11,800 million, followed by Great Britain with $3,500 million and Venezuela with $3,000 million, mostly petroleum and mineral properties. Indeed, U.S. foreign investments in oil have outpaced those in other industries during the last 12 years. They now account for 35 per cent of U.S. foreign investment abroad. Manufacturing is now about 34 per cent of the total, mining and smelting 9 per cent, trade 8 per cent and public utilities 6 per cent, against 12 per cent in 1950.

United Nations News

The opening of the General Assembly produced no particular or spectacular news. Abiding by its previous commitments, the U.S. Congress between the House of Representatives and the Senate assured the United Nations of financial support to the extent of $100 million. The measure has been sent to the White House for signature.

It would match the contributions and pledges of all other member-nations which, at this point, are at about $73 million and are anticipated to reach $100 million. This would take care of the $200 million bond issue which became necessary as a result of extraordinary expenditures and the failure of member-nations to contribute their share.

Mr. Adlai E. Stevenson, U.S. Representative to the U.N., said in his formal address at the opening, "our organization has today a deficit of more than $150 million, brought about largely by defaults or delays in payment for peace-keeping operations which have proved as expensive as they were necessary. The emergency plan to meet this deficit through the sale of bonds is good as a stopgap . . . but this is a palliative not a solution . . . this Assembly now faces the compelling obligation of affirming a policy of collective financial responsibility for the policy and actions of the U.N. . . . this session of the Assembly should accept and act upon the advisory opinion of the International Court of Justice as past Assemblies have . . . the financial integrity and independence of the U.N. are at stake."

A new permanent financing plan, he said, should require every member to meet its obligations when an assessment is duly voted; otherwise "we doom our organization to impotence." A good deal of this, of course, is wishful thinking, particularly in view of the crisis here over Cuba which is shaping up as a *casus belli*.—*All Rights Reserved.*

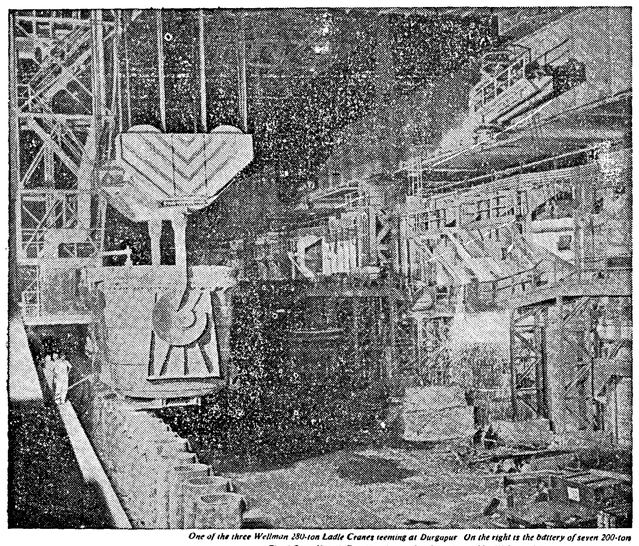
SURVEY

(*Concluded from page 543*)

from this august body. The following quotation from the report will bear out our contention:

'Central and State tax revenues as a proportion of national income rose from about 9.5 per cent at the end of the second Plan to around 10 per cent in 1961-62; the proportion was around 8 per cent at the end of the first Plan. As measured by the ratio of tax revenues to national income, taxation as an instrument for mobilising resources appears to show a slow response, though, in view of the increase in national income during the period, the absolute amounts raised through taxation are considerably large. The proposed increase in assessments on land in a few States would break new ground in the attempt to mobilise tax resources for the Plan. This is a sector of the tax field the obvious potentialities of which deserve to be more fully exploited in the interest of adequate fulfilment of State programme of development."

While the emphasis on taxing the agricultural sector to a greater extent than has been the case so far is quite pertinent and represents a categorical statement, the observations on the other questions are rather vague. It would be helpful to those who have to educate public opinion, if the Directors of the Reserve Bank could be forthright in their remarks on the crucial issues confronting the nation.



One of the three Wellman 280-ton Ladle Cranes teeming at Durgapur On the right is the battery of seven 200-ton Fixed Open Hearth Furnaces designed and constructed by Wellman for Durgapur Steelworks.

WELLMAN INCANDESCENT

OFFER COMPLETE SERVICES IN MECHANICAL HANDLING EQUIPMENT

Wellman Incandescent are backed by the vast resources and technical knowledge of Wellman Smith Owen Engineering Corporation, their collaborators who have more than 50 years experience in pioneering and developing Mechanical Handling Equipment for diverse industries. During this period Wellman Mechanical Handling Equipment have won an enviable reputation for outstanding reliability and service.

Lately, as a member of the ISCON Group, Wellman Smith Owen, collaborators of Wellman Incandescent, designed and supplied 33 cranes including seven 150-ton and three 280-ton Ladle Cranes and two 200-ton Ingot Stripping Cranes, for the Durgapur Steelworks.

Wellman Incandescent are also specialists in Industrial Heat Engineering. They design and erect a very wide range of furnaces, ovens—ferrous or non-ferrous, for use in diverse industries and are now in a position to manufacture the entire range of products which hitherto have been supplied by Wellman Smith Owen and Incandescent Heat Company.

AIDING UNDERDEVELOPED COUNTRIES

MR. BLACK LAYS EMPHASIS ON MULTILATERAL AID

[In our last issue, vide page 487, we made a brief review of the Fund-Bank annual meetings at Washington. Since then, we have received the full text of the speech of Mr. Eugene R. Black, President of the World Bank. The main themes of his speech pertain to some long-range considerations that affect the prospects for economic growth in the less developed countries and the urgent need for enlarging I.D.A.'s resources. While developing these themes, Mr. Black dwelt at length on the desirability of extending more and more multilateral aid to underdeveloped countries, as opposed to bilateral aid. Since both the themes are of great interest to this country, as it is to all the other members of the I.M.F. and the World Bank, we are recording here in extenso the relevant portion of Mr. Black's address.—ED.]

IN 1948, when the World Bank made its first development loans, the belief was widely held that, if enough money could be found and channelled into the financing of the more obviously productive projects in a country, economic development would be almost sure to follow. Experience since then has shown both that there are usually internal obstacles to development that no amount of finance alone can overcome, and that the developing countries also face external economic difficulties—namely, adverse factors in their international trade—that affect the amount and kind of aid they need.

One such difficulty is sometimes created by the trade policies of the industrialised countries themselves. Generally speaking, tariffs or quotas do not at present unduly restrict the exports of primary products from the developing countries, but there are manufactured products—notably cotton textiles—where discrimination is an important factor. I feel considerable more anxiety about the effects of trade restrictions in the future, when we ought to be able to hope for rising exports from the developing countries, and especially of the products of their growing manufacturing industries. The new regional economic groupings of countries in Europe and elsewhere are obviously one source of concern to the developing countries. The possibility that the nations within these groupings may surround themselves with high protective barriers, offering discriminatory concessions only to countries with whom they feel special ties, clouds the economic prospects of those who feel they may be excluded. If, however, these groupings adopt liberal trade policies, the underdeveloped countries will have nothing to fear: on the contrary they can be certain of sharing in the prosperity of the group's members.

Terms of Trade

A more serious situation arises from unfavourable movement in the terms of trade of most of the underdeveloped countries. In recent years, the prices of what they buy from the developed countries have continued to rise, while, with very few exceptions, there has been a fall in the prices of what they sell. Clearly, there is no easy way out, since, in almost every case, the recent decline in price reflects a fundamental tendency for production of the commodity concerned to run ahead of world demand for it. Nevertheless, it does seem to me that the industrialised countries ought to recognise that their own balances of payments have benefited from the swing of the terms of trade in their favour. To give you an instance, in one European country whose experience is reasonably typical, this swing was sufficient to make the nation's total import bill in 1961 about 8 per cent less than it would have been had 1956 prices still prevailed. This is one reason—and there are many others—why most of the industrialised countries are today in a much better position to increase their contributions to the international development effort than they were a few years ago.

What with the continuing need for technical assistance, the implications of international trade policies and the performance of the prices of internationally traded commodities, quite sufficient complications have been introduced into that former simple vision which saw an inflow of external capital as the sole prerequisite of economic progress. But one has to go a stage further. Not only must there be more aid, if development is to continue: the aid must often be different in kind as well as greater in amount.

Repaying Capacity

Many countries are finding that their capacity to make effective use of aid is growing faster than their capacity to repay. During the early nineteen-fifties, when external debt was still comparatively small and well-prepared projects were few, most less developed countries could still prudently accept loans at conventional rates of interest and repayable over the conventional period of time. But today, in many cases, a dangerously high proportion of export earnings (the prospects for which are themselves clouded) are mortgaged to future debt service. Our own figures show that, between 1955 and 1961, a group of 34 countries, accounting for some 70 per cent of the population of the underdeveloped world, more than doubled its total external public debt. Yet over the same period, the export earnings of the same group increased by little more than 15 per cent.

If the momentum of development is to be maintained, it can only be by grants or by loans largely at very long term and at very low interest. This is why the International Development Association was brought into existence.

The needs of the poorer countries are great, and they certainly are not likely to diminish over the next few years. At the same time, if foreign aid is to be a real help to the recipient countries, and is not to become an intolerable burden upon the lenders, it must be offered and applied as economically and effectively as possible. I should like to discuss one factor in particular which, I believe, has a great influence on the effectiveness of aid; this is the choice of the channels through which the aid is made available.

Foreign Private Capital

An important part of the capital needs of the less developed countries can and should be met from foreign private sources. But, for reasons that are well known, private capital is not willing to venture into these countries on the scale needed. In particular, capital for direct investment in roads, railroads, and other basic services, or for social investments such as schools or hospitals, is almost unobtainable from private sources on *any* basis.

This means that private capital investment must be supplemented on a large scale, by funds from public sources. The question remains: Are we likely to get the best results if these funds are supplied on a bilateral basis—direct from one Government to another—or should they be channelled through and administered by a multilateral agency?

Realistically, this cannot be a stark choice between two extreme positions—all aid bilateral or all aid multilateral. It is a question of emphasis. Like it or not, bilateral aid is an instrument of foreign policy, and mixed up with cultural ties, regional loyalties and other circumstances extraneous to purely economic considerations. The aid-giving countries are naturally disposed to direct their help especially to those countries whose friendship or stability they particularly value. Nor do I expect them to stop stinting aid to countries they hold in less regard.

Bilateral and Multilateral

But I do believe that the emphasis should and can be changed, away from bilateral and toward multilateral aid. Bilateral aid is usually—and unfortunately, increasingly—tied to purchases of the giver's products. However well intentioned a lending Government, it is vulnerable to pressure from its own commercial interests to help finance the sale of particular goods for projects abroad, whether the projects themselves are well justified or not. And, however sensible the Government of the recipient country, it may have difficulty in resisting offers of finance, even for low-priority projects and on terms that often are not suited either to the circumstances of the country or the requirements of the project.

My most serious criticism of bilateral aid programmes, however, is their susceptibility to political influences, whether overt or otherwise. At its worst, aid is offered or exacted as a price in political bargaining that takes no account of the actual economic requirements of the recipients. But even at best, there is always the risk that political influences may misdirect development aid, since they may bring in considerations that are irrelevant to the real needs. I have known cases where, as a result, a splendid new sports stadium has been built, while the highway system remains primitive; or where the national airport has acquired a strikingly modern terminal building, while parched but fertile land is left without irrigation. Economic priorities are inevitably confused when economic objectivity is lost—and economic objectivity is not easy when aid is influenced by political ends. Moreover, the problem goes deeper than the simple waste of a given amount of money. Aid directed to a Government that is unwilling to meet the real needs of a country has one consequence that is pernicious. The most obvious result of some of the bilateral lending of the past decade has been to make it possible for countries to put off undertaking needed reforms; because well-meant but ill-judged offers of aid have been forthcoming, Governments have been able to postpone such essential but disagreeable tasks as the overhaul of systems of taxation or essential currency reforms.

I doubt, moreover, whether bilateral aid is any more efficient as a method of achieving political ends than as a means of furthering development. My own acquaintance among leaders of the less developed countries does not suggest to me that they are persons who would be easily bent to any foreigner's purposes: they value their own and their countries' independence too highly. In any case, it is clear that aid which is at the mercy of the variable winds of diplomacy offers a poor basis for the rational programming of economic development.

Admittedly, bilateral programmes have been known to work well, avoiding friction, furthering development, and even garnering some political returns as well. And development aid on a multilateral basis has not always been a success. Having said this, however, I would still assert that multilateral aid, when it is professionally equipped and independent of political pressures, offers advantages that bilateral assistance cannot equal.

No Political Influence

The international aid organisations are objective, and are known to be so. They enable a developing country to draw on the experience of all nations; to buy in the cheapest market; and to avoid compromising its sovereignty by regulating its internal affairs at the behest of other countries. An international organisation will make aid available with the sole purpose of helping the country receiving that aid. The Bank, and I.D.A., for example, can apply what should be the real criterion—the practical merits of the particular case. Because they are known to have no ulterior motive, they can exert more influence over the use of a loan than is possible for a bilateral lender: they can insist that the projects for which they lend are established on a sound basis, and—most important—they can make their lending conditional upon commensurate efforts being made by the recipient country itself.

This objectivity provides the chief reason for expecting that aid can be most effective if channelled through an international agency—but there are other reasons. Countries receiving aid from a multilateral organisation to which many nations have contributed, and under international administrations, will be likely to take a more responsible attitude toward the use and repayment of that aid than toward aid received bilaterally. An international organisation can also spread its net more widely than any single country. It can provide advice on all aspects of development planning, based on experience drawn from many nations, including the underdeveloped countries themselves. If offers a framework within which can be put to good use the resources and knowledge of industrialised countries too small to be able to justify the administrative effort needed to mount effective aid programmes of their own. It may, like the Bank, be able to raise development funds on a world-wide scale in the private market. And, in the long run, I am convinced, multilateral aid programmes must exert a much healthier influence than bilateral lending upon international relations as a whole.

I have advanced a number of arguments whose relation to one another may not have seemed very clear. But, in fact, they are all relevant to a single and urgent issue—the future of the International Development Association.

I have argued that more aid is needed; that, in particular, more aid is needed on comparatively easy terms of repayment; and that there are cogent reasons for preferring that

(*Continued on page 576*)

CLOTH OUTPUT AND EXPORTS DECLINE

MILLS CARRY MORE STOCKS

IT would appear from data available so far that the production of mill cloth in the current calendar year (that is, 1962) will be less than that in 1961 and 1960. The quantity of cloth woven in the mills during the first eight months of the year was just 3,363 million yards, as against 3,439 million yards in the corresponding period of 1961. Reasons for the downward trend of output are not far to seek. The raw cotton supply position has continued to be difficult, with prices being pretty high. Moreover, several mills have been finding it difficult to secure the right type and quality of cotton. The cost of other items that enter into production of cloth has also gone up, thanks to the all-round increase in the prices of a number of stores and accessories. The wage bill, too, has been heavier. In several parts of India, as, for instance, Madras State, West Bengal and Gujarat, production was adversely affected by scarcity of power and fuel.

Even at an inflated cost base, the mills may be expected to maintain as high a level of production as possible, provided, of course, they are adequately compensated by higher realisations on sales. The fact, however, is different. Sales realisations of many units have tended to decline, following the voluntary price regulation scheme, on the one side, and reduced offtake, on the other. The actual exports of cloth during the eight months ended August 1962 are estimated at no more than 325 million yards, as against 405 million yards in the same period last year. The offtake for domestic consumption has also been moving at a slow pace: about 375-380 million yards a month, as against 390-395 million yards in the past year. Consequently, the stocks lying with mills have risen. The total of these stocks, as at the close of August 1962, stood at 620 million yards, as against 550 million yards a year before, or an increase of 70 million yards. The increase is accounted for by both unsold cloth and cloth sold but delivery not taken; the former is higher by 43.4 million yards at 286.8 million yards and the latter by 26.6 million yards at 333.5 million yards.

The following table shows the statistical position of mill cloth during the first eight months of 1962 and 1961, as well as during the whole of 1961 and 1960:

(In million yards)

	January-August		Whole of	
	1962*	1961	1961	1960
Opening stocks	593.9	617.3	617.3	410.6
Production	3,363.3	3,439.3	5,141.5	5,052.0
Imports	4.0	4.0	5.0	5.0
Total supply	3,961.2	4,060.6	5,763.8	5,467.6
Exports	324.7	405.0	572.0	692.0
Domestic consumption	3,016.2	3,105.2	4,597.9	4,158.3
Closing stocks	620.3	550.4	593.9	617.3

* Estimates projected on the basis of latest available data.

Despite the comfortable supply position, slackness in offtake and the scheme of voluntary regulation of prices enforced by the Indian Cotton Mills' Federation, cotton textile prices have tended to rise in recent months. The average all-India index of wholesale prices of cotton manufactures (base: 1952-53=100) for the week ended 1st September 1962 was 129.3, as against 127.5 a year before. The index was, however, lower than the average of 130 for the month of June 1962. Evidently, this modest rise in the index number reflects the higher excise duty on certain varieties of cloth. The actual price paid by the consumer must have been much higher. The index number, it is common knowledge, does not fully reflect the prices paid by consumers. For one thing, the cloth produced by powerlooms and handlooms accounts for nearly a third of cloth consumed in the country and the prices of these varieties are not comprehensively taken into account in the calculation of the index number. In computing this number, it may be noted, the authorities take into account 12 items of mill-made cloth, four items of handloom cloth and some items of hosiery goods. The entire range of powerloom goods which constitute the major portion of production in the decentralised sector is not represented in the index number. For another, in many centres, the retail prices of mill-made cloth are higher than the stamped price, as both wholesalers and retailers have been exploiting scarcity of popular varieties.

The total production of mill cloth in the first eight months of 1962, as already noted, was lower by 76 million yards (at 3,363.3 million yards) as compared with the same period last year. The decline occurred although the yarn output registered a rise, the quantity actually spun in the aforesaid period being 1,263.11 million lbs., as against 1,236.89 million lbs. a year before. The trend of mill cloth and yarn output month by month is indicated below:

Month	Cloth (Million yards)		Yarn (Million lbs.)	
	1962	1961	1962	1961
January	436.31	437.24	160.12	155.07
February	390.22	408.02	150.72	145.60
March	416.97	422.38	159.66	151.35
April	412.35	421.45	154.56	150.63
May	422.69	429.67	158.63	152.13
June	418.73	435.27	155.42	150.83
July	431.00	444.68	157.00	165.79
August	428.00	440.56	161.00	165.49
Total—Jan.-August	3,363.27	3,439.27	1,263.11	1,236.89
Whole of 1961	5,141.51	..	1,901.12	..
Whole of 1960	5,052.00	..	1,733.12	..

The decline in mill cloth production in the current year is accounted for by all the categories excepting the upper medium and superfine counts. The figures for the first half of 1962 reveal that the actual fall (over the corresponding half of last year) was 54.86 million yards in lower medium cloth, 18.13 million yards in coarse counts, and 6.46 million yards in fine piecegoods. The production of upper medium cloth was, however, higher by 22.81 million yards and that of superfine categories by 11.68 million yards. This trend is in consonance with the shift in consumer preference for finer varieties of cloth. The table below shows the actual level of output of different categories:

(In million yards)

Categories	January-June		Whole of	
	1962	1961	1961	1960
Coarse	377.38	395.51	864.12	705.29
Medium	1,898.47	1,930.52	3,842.82	3,814.69
of which:				
Lower medium	788.28	843.14	1,670.69	1,739.26
Upper medium	1,110.19	1,087.38	2,172.13	2,075.43
Fine	96.32	102.78	196.11	229.80
Superfine	132.09	120.41	238.46	302.26
Total	2,504.26	2,549.22	5,141.51	5,052.04

Since the beginning of this year, machine activity in the spinning sector has remained at a high pitch, with more spindles being put into effective use. The number of spindles actually worked in the first shift during the month of June 1962 was over 12.32 million, as against 12.03 million in June 1961. Similarly, the spindles run in second and third shifts were high at 12.13 million and 7.94 million, as against 11.87 million and 7.44 million, respectively. The number of looms working, however, was lower at 181,788 in the first shift and 176,929 in the second shift, as against 182,000 and 177,000, respectively, in June 1961.

The mills' performance on the export front continues to be disquieting. The quantity actually shipped in the first eight months of 1962 is estimated at no more than 325 million yards which is well below the 405 million yards shipped in the same period last year. How cloth exports from Bombay Port, through which passes the bulk of the cloth sold for foreign markets, fared in the first eight months of 1962 and 1961 is indicated in the following table:

(In million yards)

Processing sorts	January-August		Whole of	
	1962	1961	1961	1960
Grey	162.70 (12.17)	213.53 (15.82)	295.22 (21.65)	370.71 (27.17)
White	52.95 (4.38)	69.31 (5.03)	98.88 (7.44)	209.74 (8.41)
Coloured	76.56 (7.07)	86.11 (7.81)	127.26 (11.43)	121.31 (10.92)
Total	292.20 (23.61)	368.95 (28.66)	521.36 (40.52)	601.76 (46.49)
Apparel	(0.14)	(0.12)	(0.18)	(0.23)
Other textiles	(4.99)	(4.95)	(7.08)	(7.80)

N.B.—Figures in brackets represent value in crores of rupees.

It is true that the scheme of compulsory textile exports (12½ per cent of the annual turnover in cloth) has been in force since 1st July 1962. Even so, a section of the textile trade does not expect the total exports of cloth from India during the whole of 1962 to exceed 500 million yards, as against the actual shipment of 572 million yards in 1961, 692 million yards in 1960 and 815 million yards in 1959. The estimated shipment of 500 million yards falls considerably short of the third Plan target of 800 million yards and the peak level of exports amounting to 1,120 million yards touched in 1950. The foreign exchange earned from cotton textile exports has steadily declined from Rs. 64.27 crores in 1959-60 to Rs. 57.55 crores in 1960-61 and further to Rs. 48.40 crores in 1961-62. The persistently downward trend of cloth exports has been due to stiffer competition offered by other countries, particularly Japan, Hong Kong, communist China and Spain. Indian textiles are getting priced out in world markets. The situation can be corrected not by compulsion of the type now in force or by means of a more liberal export incentive scheme but by energetic action directed towards reducing production cost and improving quality of piecegoods through speedy rehabilitation and modernisation of mills.

4¾ PER CENT

GUJARAT ELECTRICITY BONDS 1974

FOR Rs. 300 LAKHS

(ISSUED BY GUJARAT ELECTRICITY BOARD)

(Payment of interest and repayment of principal guaranteed by the Government of Gujarat)

ISSUE PRICE: AT PAR

REDEEMABLE AT PAR ON 5th OCTOBER 1974

The bonds will be Trustee Securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act. The bonds will also be eligible for the purposes of advances under Section 17 (4) (a) of the Reserve Bank of India Act, 1934.

Subscriptions will be received in cash or cheques from 3rd October, 1962 but the list will be closed without notice as soon as the total subscriptions amount approximately to Rs. 300 lakhs and in any case not later than the close of business on 6th October, 1962.

Applications will be received at (*a*) the Office of the Financial Adviser and Chief Accounts Officer, Gujarat Electricity Board, Race Course, Baroda, (*b*) the Offices of the Superintending Engineers, Gujarat Electricity Board, Rajkot, Porbandar, Sabarmati and Utran (Surat).

Copies of the Bond prospectus announcing the terms of issue and the application forms are available at the receiving offices mentioned above.

U.K. TEXTILES IN COMMONWEALTH

TRADERS GENERALLY FAVOUR ENTRY INTO COMMON MARKET

From Our Special Correspondent

MANCHESTER, *18th September*

HISTORY has undoubtedly been in the making at the conference of Commonwealth Prime Ministers in London and, whatever the eventual outcome of the deliberations, Britain's industrial future hangs in the balance. The protagonists of Common Market and Commonwealth each have their individual opinions, which are unlikely to be shaken by oratory, but it was surprising that, in a recent public opinion poll taken in Britain, so many of those questioned on such a momentous topic were among the "don't-knows."

MANCHESTER LETTER

Cotton textile traders have their own views on the subject, but, if the statements of company chairmen in this and other industries are to be accepted, the general consensus of opinion would be very much in favour of Britain's participation in Europe. The, anonymous booklet produced by the Cotton Board has gone so far as to describe it as "Lancashire's last chance."

The opposition of the Commonwealth to the project was scarcely unexpected and the Premiers of the countries concerned have made their views crystal clear. At the same time, they should recognise that Britain has to look ahead, taking a long-term view of her industrial future.

It has frequently been suggested in recent years that what has happened to exports of cotton goods from this country will eventually be reflected in numerous other trades. From being a world supplier, Britain now imports a substantial quantity of her domestic textile requirements. Few local traders need any reminder of this situation, but, for those whose memories may be shorter, the accompanying table, showing the volume of cotton cloth exported to the major Commonwealth countries from the United Kingdom over the past 25 years, may serve to indicate how quickly erosion of an industry can take place.

Although South Africa is no longer a member of the Commonwealth, its importance as a market to Lancashire merits its inclusion in the above analysis. The rest of the figures can be left to speak for themselves, but it will be appreciated that some of the pre-war African returns are not strictly comparable with current shipments, due to political changes in the various territories.

Marking Time in Geneva

Coinciding with the top-level discussions in London on Britain's application to join the European Community, equally vital talks affecting the future of world traders in cotton textiles have been preceding in Geneva. Their adjournment until the end of the month leaves many questions still unanswered, but, as the five-year pact on imports is scheduled to begin from 1st October, some definite conclusions must very shortly emerge.

The general pattern of trading in cotton goods envisaged under the arrangement has already been widely publicised. Very broadly, the aim is to provide additional scope for the developing countries, mainly in the Far East, to increase their shipments but in an orderly manner, so that no one particular importing nation should be unduly affected nor would any single section suffer excess pressure from overseas arrivals.

Needless to say, such an arrangement reads well on paper but presents innumerable problems when details have to be drawn up. Most of the countries involved in these negotiations have accepted the terms in principle, but the intentions of the major importers when it comes to accepting more supplies from the underdeveloped areas are awaited with keen interest, especially in Lancashire. The traditional Continental manufacturing countries provide perhaps the chief focal point of attention, but, again, their readiness to absorb more imports is linked with the even more fundamental aspect of the Common Market negotiations.

There is reason to believe that progress has already been made in establishing a basis more favourable to Britain in the course of those discussions which have already taken place. Any shifting of the burden of imports from Lancashire's shoulders would be welcome and a general European acceptance of bigger supplies would ease the situation considerably.

Redundancy Compensation

A further demand for a compensation scheme for Lancashire cotton workers who are thrown out of work by mill closures has been made in Manchester by union leaders. After a meeting of the Legislative Council of the United Textile Factory Workers' Association, which represents 120,000 cotton workers, the President, Alderman Harold Chorlton, said that feeling was very strong on the subject.

Under the Government-sponsored reorganisation scheme, redundant cotton workers were paid compensation, but now, because of the indifference of the Government, employers were not forced to pay compensation at a time when further mill closures were threatened, he said.

The Association wants to see the setting-up of a central organisation for handling compensation claims, and is to approach employers on the subject. Employers' organisations have already rejected the idea, because they say that some firms which decide to close do not have the resources to make compensation payments to their staff.

Cotton Mission

A second team of Lancashire cotton men are visiting Common Market countries on a fact-finding mission. The six-man team comprising five members representing the industry's merchanting, weaving and finishing sections, and one Cotton Board official will visit Belgium and France. The Cotton Board mission will be calling at Brussels, Ghent, Antwerp, Paris, Lille and Strasbourg. The reports of the mission will be included in a survey which the Cotton Board is preparing of textile marketing in the E.E.C.

In a paper presented to the British Association for the Advancement of Science, which held its annual conference in Manchester recently, Mr. Alan Ormerod, Managing Director of Ashton Bros., the big Lancashire cotton firm, predicted the future of the trade, and suggested how its structure should be changed to meet modern needs. He said that the annual yarn and cloth requirements for Lancashire mills, after making adjustments for imports, could be produced on double-shift rings and looms and three-shift finishing equipment on 5,500,000 spindles and 95,000 automatic looms.

Using more astronomical totals, he estimated that to eliminate all non-automatic looms and obsolete plant would cost over £400 million, using existing buildings, but, if replacement of buildings was needed, a further investment of about £260 million would be necessary. In his submission, the whole of the resources of the 1959 Act should have been made available to support re-equipment.

Accepting that the £30-million figure was only a notional amount, which could be exceeded if necessary, Mr. Ormerod suggested that, if £50 million had been made available as a 33⅓ per cent re-equipment grant for technically screened projects and an assurance given not to meddle with importation ceilings during the implementation of the scheme, Lancashire would have been well on the way to technical parity with her competitors.

Iron Hand Needed?

When it comes to outlining big schemes of this kind, with many millions of pounds at stake, to say nothing of the lives and livelihood of many thousands of people, there must come a point at which compulsion takes precedence over the voluntary system. Throughout the series of officially supported measures to contract the trade, the object has been to encourage firms to concentrate or retire from the scene; except in the emergency of wartime, no dictatorial powers have ever been granted to either an individual or even a small committee.

The railways in Britain are now undergoing intense pruning and the nationalised coal mines are being dealt with in like manner. Will the eventual outcome be a Commissar for Cotton? There seems to be no other way of interpreting the views of those who believe that the structure of Lancashire's textile industry must be fundamentally altered. Agreeable mergers between companies which are as independent as their managements and shareholders will allow, can only be settled over a length of time during which the trade is constantly dwindling in size.

On the staffing problem alone, Mr. Ormerod is convinced that the industry is incapable of surviving at its present size as the necessary management material to control the sort of operations he envisages would not be available. "As vertical groupings are desirable," he says, "management and technical personnel with knowledge and experience of the three sections will be essential to integrate and co-ordinate the re-equipment, and subsequently to organise and control it."—*All Rights Reserved.*

INDIA STEAMSHIP COMPANY LIMITED

CHAIRMAN, DR. A. RAMASWAMI MUDALIAR, OPTIMISTIC ABOUT OUTLOOK

SPEECH AT ANNUAL GENERAL MEETING

A NOTE of optimism about the outlook for the India Steamship Company Ltd. was expressed by its Chairman, Dr. A. Ramaswami Mudaliar, in his speech at the Company's Annual General Meeting, held at Calcutta on Tuesday, 25th September 1962. Dr. Mudaliar based his optimism mainly on two "redeeming" factors of recent origin, namely, the increase granted in coastal freight of 15 per cent for general cargo and about 10 per cent for coal carryings and the agreement reached between the Indian and British Lines as members of the India/U.K./Continent Conference pool arrangement to raise the former's pool quota from 30.5 per cent to 39 per cent with effect from September 1962 and to increase the percentage every year by an escalation of one point. Yet another important recent development, the Chairman said, was the agreement reached between the three Indian Lines (the Scindia Steam, the Shipping Corporation and the India Steamship), which are the members of the pool arrangement, to share, on a pooled basis, equal carriage of freight and equal earnings for the three Lines in the Indo-Polish, Indo-German, Indo-Soviet and Indo-Rumanian trades in the Black Sea and in the trade to the Egyptian and Levantine ports and the Indo-Adriatic trade.

The following is the full text of Dr. Mudaliar's speech:

"GENTLEMEN,

"The audited accounts and Directors' report for the period ending March 1962 have been in your possession for some time and, with your permission, I shall take them as read.

Death of Devoted Champion

"I have to refer to the great loss that the Company sustained in the demise of my esteemed friend and colleague, Sir Bijoy Prosad Singh Roy. The place that he had in the public life of India and of Bengal, in particular, can hardly be filled, and your Company has lost a most valued and devoted champion of Indian shipping. May I request you to pass a resolution conveying the deep sense of sorrow of the shareholders of the Company at this great loss and offering our condolences to the members of the bereaved family.

"The Directors' report shows that the freight earned during the year was Rs. 8,97,26,920, as against Rs. 8,63,00,835 in the previous year. The total number of liner voyages during the year was, however, 54 as compared with 49 voyages in 1961, and the number of ports called at was 947, as against 942 in the previous year. In spite of the larger earnings of freight, it is regretted that the year has ended in a loss. It was hoped that when the pooling system was introduced, the Company would show much better results. Though the loss is somewhat less than in the previous year, various factors have combined to make the position less satisfactory than was expected. The number of freight tons carried during the year was 956,332 as compared with 880,070 in the previous year.

Two Adverse Factors

"The earnings reflect two factors. The first is the low rate of freight which continued for goods carried from East to West throughout the year and for goods from West to East during most of the year. The second factor was that the volume of high-freighted cargo had fallen to some extent and the vessels had to carry low-freighted cargo like oilcakes, ore and fertilisers, which swelled the volume of freight tons carried without substantial benefit to the companies concerned. The increase in items of expenditure are due to incremental increases of salary, revision of scales in some cases, and repair and maintenance charges. The insurance charge has also gone up on account of the unfortunate loss sustained by the Company last year of the *Indian Navigator*. The depreciation charges have also gone up as the latest steamer, *Indian Trust*, was throughout the year in service and the full depreciation amount had to be provided for. The picture is admittedly a gloomy one, but I venture to express the belief that it is not of unrelieved gloom, as there are factors which have recently come into existence and redeemed the situation to some extent. These factors will be referred to at the end of my speech.

"The financial results of the working of your Company are not satisfactory, though perhaps slightly less unsatisfactory than those of the previous year. The fact that almost all the shipping companies, both Indian and foreign, have shown either losses or considerably less profit than in the previous year may be noted but does not afford any consolation to your Company. This is particularly so in regard to the companies whose fleets are mainly engaged in the India/U.K./Continent trade.

Same Freight, Higher Costs

"In my last year's report to you, I referred to the fact that the freight rates have not been revised since 1957. During part of the financial year under review, the freight rates Eastward remained the same and were increasd only from 1st October 1961, the consequence being that the result of such increase is recorded only in the voyages of three months of the year. The freight Westwards remains the same virtually as in 1957.

"The costs have, however, been increasing, a state of affairs which cannot long be maintained. The difficulties and delays at ports, the strikes—official and unofficial—in no case justified, have all aggravated to bring about a serious financial situation for all companies. The drafts in the river Hooghly during the year under review have caused a great deal of anxiety to shipping companies. There are only a few days in the month when a ship can carry a load of more than 5,000 tons either to the port or down the river.

"In this state of affairs, the increased rate of dock levies seem to be thoroughly unjustified, particularly when they are meant for providing special amenities to the dock labour staff. In February of this year, the levy amounted to 90 per cent over the normal rate and from 1st April, it is 100 per cent. These matters require careful reconsideration. The remedy lies in either providing for adequate freight rates or for decreasing the costs. It may be stated that more efficient management may also reduce the financial gulf between receipts and expenditure. But the outcry against what has been termed rationalisation of sailings by shipping companies and the demands of shippers of small quantities of freight from almost every port in the country which was hardly ever served by an ocean-going vessel a few years back poses a problem which is not easily soluble, consistent with the principles of efficient management. I place these facts before you and the public not with a view to minimising any shortfall on the part of the management of this or any other company, but to present the picture clearly and unambiguously both to the authorities and the public.

Indian Lines in the Pool

"Last year, I referred to the pooling arrangement that was arrived at, which gave some sort of security to the share of the trade to the Indian flag, and I based my optimistic hope of better results in freight earnings on the fact that undue and unfair competition will be less and perhaps completely eliminated. I must candidly state that the results of the short period prove that some of the most serious abuses have been eliminated in the particular sector that I have referred to. The result would have been far better if the quantity of freight moving, particularly high-value freight, had not fallen during the year.

"I also referred to the fact that the Western Shipping Corporation, a public sector company, has been admitted as a member of the Conference, with the agreement and approval of the two Indian Lines on the India/U.K./Continent route. I emphasised then that this would be the beginning of a harmonious working of the two sectors and that there would be a growing appreciation of the difficulties of shipping in all quarters. A further step has been taken in this direction and negotiations have been carried on by all the three shipping lines, the India Steamship Company, the Scindia Steam Navigation Company and the Shipping Corporation of India, with the United Kingdom Lines, with a veiw to increasing the pool percentage allotment to the Indian Lines as a whole and with a view also eventually to bring about an absolute parity in the India/U.K. trade between the Indian Lines and the British Lines. I hope that the negotiations, which have come to an advanced stage, will shortly result in definite agreements and that all chances of rivalry, as between the Indian Lines and the British Lines, will cease and that this will be fortified by an agreement among the Indian Lines themselves, allotting certain percentages to each of the three companies concerned. These matters have occupied a great deal of the attention and time of your Directors who were resolved to seek a lasting solution for the problems, international and internal, in regard to shipping.

Freight Increases

"I must emphasise that the future of shipping depends largely on a farsighted policy that the shipping companies and the shippers of any importance take in regard to the freight rates of commodities. Whether it is a general increase demanded by the rising costs of shipping companies or an increase in the freight rates of individual commodities, there has recently been a tendency on the part of Governments not merely in India, to limit the freedom that once existed of shipping companies to increase such rates after full discussion at Conference meetings. It cannot be denied that the earning of foreign exchange has become a very serious preoccupation of most Governments, particularly Governments of developing countries. It is also a matter of serious concern for those countries which depend on invisible earnings from shipping for securing a balance of payments position for their countries. Export promotion is an acute problem for many Governments and the Government of India is no exception to it. It is making every effort to increase its exports, to diversify the destinations of such exports, to find new markets and to give incentives or rather to remove disincentives which stand in the way of exports by reasonably efficient units of production in the country. It is a well-known fact that the first obstacle to exports, which a shipper feels he has to encounter, is the rate of freight he has to pay for movement of his goods by road, rail or sea. If only what he produces can, by a miracle, be transported to its ultimate destination without any charge, some at least of the shippers will be most happy. But this is obviously impossible. And if shipping services have to be maintained for the transport of goods, they have also to work certainly without loss and indeed with a little profit. The shipping companies cannot on the one hand afford to fix such rates as will preclude the transport of goods which is their only function, and on the other, carry freight at uneconomic rates. It is therefore necessary to set up agencies which will really find whether the shipper can afford the freight charged or not and whether in fact the export of goods has been prevented or their quantity unduly diminished by freight rates. The profit, which the shipper is making, has also, therefore, to be very carefully considered by the Government and by the shipping companies, before any conclusion can be drawn as to the unreasonableness of a freight rate. It is my hope that these essential economic factors affecting all interests concerned will be given due consideration and freight policies evolved as a result of these considerations.

Official Attitude

"I shall not refer to the port delays that have occurred from time to time and I do not wish to refer to the strike in the Calcutta port which over a period of time seriously affected shipping companies. Nor do I wish to comment on the present rate of development rebate which requires that 75 per cent of the allowances has to be provided from the profits before any dividend can be declared. The National Shipping Board, which is the body responsible for advising the Government in matters of policy, has recently reiterated its recommendation that the development rebate may be spread over a period of years—five or six—a reasonable proposal in my opinion, and I hope the Government will give further consideration to it and give effect to the proposal.

"Apart from expansion of shipping, replacement of old shipping has to be undertaken seriously. New ships have to be built in our shipyards and in foreign yards where necessary, and the development rebate requirements are proving a serious handicap according to the Shipping Board itself.

"There is another matter on which the National Shipping Board has made its recommendations. Recently, the Government has been pleased to order that the instalments on loan received from the Government may be repaid over a longer period than was fixed for loans taken between 1953 and 1960. The National Shipping Board has suggested that the same principle may be applied, that is, payment over a longer period for those instalments on the previous loans which have yet to be paid by shipping companies. I hope that, in fairness to the older applicants, this principle may be accepted.

"There has recently been a change in the Cabinet Minister in charge of Transport. Mr. Jagjivan Ram has replaced Dr. P. Subbarayan as Minister of Transport and Mr. Raj Bahadur continues to be the Minister of Shipping. Both of them are enthusiastic and eager for the promotion of Indian shipping and have helped with support and advice all reasonable demands of shipping. I only hope that their voice will prevail and their recommendations accepted in the ultimate decisions that may be arrived at by the Cabinet of the Union Government. The Secretary to the Ministry of Transport, the Director-General of Shipping, who has since been promoted as an Additional Secretary, the deputy and assistants of the Director-General of Shipping, have all shown a real interest in helping Indian shipping and we have been greatly profited by their advice and assistance. It is not a formal record of thanks that I wish to place before you.

"It would have been noted that the freight earnings of the year are the largest on record, though for reasons already stated the net results are not what we may expect from such earnings. The gross freight earning is an indication of the zealous and devoted services of all your staff, both afloat and ashore. I am personally aware of the exceedingly arduous duties that fell upon them both in consequence of the first year of the working of the pool and as a result of falling freights and low freight rates, and I should like to express the appreciation of the Board for their services. I should also like to convey the thanks of the Company to the shippers, who have extended their continued and firm support to us, and to the brokers and forwarding agents who have shown confidence in us and in the quality of our shipping services.

Redeeming Factors

"Since the above paragraphs were written, I would like to refer to some redeeming factors of recent date which would go to relieve the situation in the current year. The coastal freight has, after prolonged investigation and thorough study, been increased by 15 per cent for general cargo and about 10 per cent for coal carryings. This will benefit all companies, including yours, which do some amount of coastal trade. A second factor, which has been publicised widely, is the fact that the three Indian companies have come to an agreement with the British companies to raise with immediate effect, from 1st September, the pool quota from 30.5 per cent to 39 per cent and to increase that percentage every year by an escalation of one per cent. Though the bulk of the advantage of increased percentage would go to the Shipping Corporation of India, the other two Indian Lines engaged in this trade, your Company and the Scindia Steam Navigation Company, will have a fair advantage in freight earnings.

"The last and most important factor which enables me to feel optimistic, is the agreement that has been come to between the three Indian Lines engaged in the India/U.K./Continent trade both ways, the Shipping Corporation, the Scindia Steam Navigation Company and your Company. The agreement provides, on a pooled basis, equal carriage of freight and equal earnings for the three Lines in the Indo-Polish trade, the Indo-German trade, the Indo-Soviet and Indo-Rumanian trade in the Black Sea, and in the trade to the Egyptian and Levantine ports, and Indo-Adriatic trade. This agreement has great possibilities, both because of the friendly and co-operative atmosphere it has created and of the fact that there is no rivalry and no clash of interests between the three companies.

Need for Fairplay

"I have tried to be severely practical in my estimate of the position, but I would like to state that the Government of India must realise that Indian shipping companies play an important part in foreign exchange earnings and they should have—as I have reason to believe they have—an interest in promoting Indian shipping and enabling them to earn reasonable profits on their ventures. It has to be emphasised that, as against the small voice of Indian shipping companies, the loud and uncontrolled, menacing voice of shippers of small exports sometimes prevails. I hope that shareholders of shipping companies will join with the managements to impress on the Government and the public the need for fairplay as between Indian shipping companies and Indian exporters and importers."

WORLD COTTON PRODUCTION PROSPECTS

RECORD CROP ANTICIPATED

A RECORD high world cotton crop of 42.4 million bales (of 478 lbs. each) during the current season (1962-63) is predicted by the International Cotton Advisory Committee, Washington. This prediction is based on three assumptions: (1) near record yields in the U.S., (2) probability of a further expansion in cotton acreage in many countries, and (3) a return to normal yields in India, U.A.R. and Uganda. The first official estimate of the current season put the U.S. crop at 15.1 million bales, an increase of 800,000 bales over last season's output. The higher production is attributed mainly to the excellent yield prospects in the Central Belt. The estimated yield per acre of 461 lbs. is only slightly less than the record high yield of 466 lbs. per acre in 1958. The September estimate, however, indicated a lower production figure of 14.68 million bales, which is still over 300,000 bales higher than last season's output of 14.3 million bales.

A factor affecting yield prospects in the U.S. this year is the ending of the restrictions on "skip-row" planting. Previously, if less than four rows were skipped, the skip-rows still counted as part of the cotton acreage. This four-row limitation will not apply to the 1962-63 cotton crop. Henceforth, only rows actually planted to cotton will be counted as cotton land in determining compliance with acreage allotment and marketing quotas. As a result, many growers have probably shifted to a two and two pattern (two rows of cotton and two rows left idle or planted to other crops). Because of the narrowness of such skip-rows, it is likely that this land will often be clean cultivated and left idle. On balance, this change in policy on skip-row planting is likely to make for an improvement in average yield.

Elsewhere in the free world, acreage under cotton is expected to rise to a new peak. Although the net increase is modest by comparison with the last season, acreage continues to expand, rather noticeably, in many important cotton-growing areas, particularly Central and South America and the Middle East. Some shift away from cotton, however, is apparent in certain countries, notably the U.A.R. and Mexico, which is attributable to poor yields and to some dissatisfaction among growers over the price trend last season. Equally important in assessing the probable level of production is the yield per acre. A return to normal yields in India, Egypt and Uganda would materially improve the total production potential in these countries and for the world as a whole. On the other hand, chances are that production in some countries, even after taking into account any possible increase in acreage, will be lower than in 1961-62, thanks to a probable decline in yield per acre.

In the U.S.S.R., acreage planted to cotton is lower at 5.6 million acres, as compared with 5.75 million acres in 1961-62 and production is expected to be correspondingly lower. However, in the communist bloc countries as a whole, excluding China, output is expected to be higher at 7.3 million bales, as compared with 7.1 million bales last season. In regard to China, no estimates of production are available, but it is clear that prolonged drought and heavy insect damage have adversely affected production prospects this season as it did during the last season.

The table at the foot of column I gives the estimated acreage, yield per acre and production of cotton in the major producing areas during the current season (1962-63) as compared with the past three seasons.

The analysis of the overall production prospects is supplemented by the Committee by a country-by-country assessment of the production potential. The position in respect of the major free world producing countries other than the U.S. may be summarised as follows:

Mexico: Acreage is believed to be down slightly by comparison with last season. The main reduction has been in Matamoros where poor yields last season caused some to switch to grain sorghums and corn. Acreage is also noticeably smaller in Delicias as a result of some switch to wheat and peanuts, but production in both these regions is expected to be larger than in 1961-62 because of a prospective improvement in yield. Water salinity is given as a factor explaining the reduction in acreage in Mexicali. Preliminary ideas are for a total crop of about 2 million bales or slightly larger than the final 1961-62 outturn.

India: In view of the short supply situation, an all-out effort is being made to increase cotton production in India. The official target for 1962-63 is 4¾ million bales (of 478 lbs. each). This compares with an actual crop of about 3¾ million bales in 1961-62. Though there may be some increase in acreage, the key to production prospects in this country is yield per acre. Additional facilities, such as the allocation of organic fertilisers exclusively for cotton, subsidies for the supply of improved seed, larger supplies of insecticides and other chemicals, agricultural implements, etc. are being made available to cotton farmers. The recent sharp increase in ceiling prices for raw cotton is also expected to offer a strong incentive to higher cotton production this year. Planting in the irrigated areas, which last season amounted to about 13 per cent of the total cotton area, was completed by the beginning of July. Planting in the raingrown areas, however, was delayed by the lateness of the monsoon but recent reports now indicate that fairly heavy rains have fallen in all cotton-growing areas. By mid-July, sowing was completed in the Khandesh, Berar, and Moghlai districts. The critical period seems to be in September and October and until this time, therefore, there can be no real estimate of cotton production.

Pakistan: Planting is now complete in Pakistan and preliminary opinion is that total acreage may turn out to be slightly higher this season. In an effort to maintain and improve yields, the Government introduced last season a "crash" programme on an experimental basis. This has been intensified for the present season and the amount of fertilisers distributed has been increased.

U.A.R.: It was announced some time ago that the maximum permissible acreage that could be planted to cotton in the U.A.R. would be reduced for the 1962-63 season but the extent of the actual reduction in planted acreage has been quite unexpected. According to the first official estimate, planted acreage is down by no less than 17 per cent by comparison with 1961-62 and is at the lowest level since 1954-55. With the exception of Giza 47, acreage of all the major varieties is down sharply this year. The main reason for this has apparently been the abnormally poor yield obtained last season as a result of leaf worm damage, which has caused many farmers to switch to other crops, such as cereals, onions, sugarcane and rice. Leaf worm attacks have been kept well under control this year and the crop is generally reported to be making good progress. Even so, prospects are that production will still be on the low side though noticeably larger than that season. A trade source estimates a total crop of around 1.75 million bales, as against 1,548,000 bales in 1961-62. Picking is already under way in Upper Egypt and early indications concerning yield prospects are very favourable.

INTENSIFYING SUGARCANE DEVELOPMENT

PACKAGE PROGRAMME TO BE LAUNCHED

INASMUCH as sugarcane accounts for almost three-fourths of the actual cost of making sugar (white), any appreciable cut in that cost will not be possible without a reduction in the heavy incidence of cane cost. How such a reduction can be brought about is too well known to bear repetition. Briefly stated, the solution lies in augmenting the productivity of cane lands, so that a larger quantity of sugarcane with richer sucrose-content can be obtained from a given piece of land, instead of through an increase in acreage. Viewed thus, the latest move of the Union Food and Agriculture Ministry to launch shortly a package programme of cane cultivation in selected sugar factory zones in the country, though belated, is to be widely welcomed. The programme, it is said, will lay particular emphasis on the need to demonstrate to farmers how the acre-yields of cane can be stepped up. As a preliminary to the programme, a meeting of cane development officers and other research workers in Uttar Pradesh and Bihar for considering the problems of cane development in the two States and ascertaining the extent of additional help required from the Governments for the implementation of development programmes was held in Lucknow recently at the Indian Institute of Sugarcane Research. Discussions at the meeting covered, among others, reservation of land for cane cultivation on long-term basis, bounding of areas before sowing, rezoning of areas with a view to increasing supply of gate deliveries of cane, improvement in transport facilities, and scheme for cultivation of sugar-beet in suitable areas. The proposal of the U.P. Cane Commissioner that intensive cultivation of sugarcane might be undertaken on 5,000 acres of land in the gate areas of sugar mills was accepted.

Presiding over the meeting, Mr. L. G. Rajwade, Joint Secretary in the Ministry of Food and Agriculture and President of the Indian Central Sugarcane Committee, stressed the importance of raising cane output without extending the area under it, but laid greater emphasis on the quality aspect. Improvement in quality with a view to stepping up the output of sugar per acre, he said, was imperative. He indicated that a survey for assessing the quality of cane in various zones in Uttar Pradesh could be undertaken by the National Sugar Institute, Kanpur, with the help of the State Government. Mr. Rajwade also commended for acceptance the proposal of dividing the factory areas on zonal quality basis for the purpose of distributing the cane price in excess of the minimum on a zonal basis according to quality.

Progress Not Satisfactory

The need for intensifying sugarcane development activity is especially urgent in Uttar Pradesh and Bihar, as it is in these States that the conditions in sugarcane economy continue to be none too encouraging. Even allowing for climatic variations, the per-acre yields and quality of cane grown in U.P. and Bihar are much less than those obtained in other States, as, for instance, Maharashtra. The table below gives the progress actually made in cane cultivation in these three States during the first and second Plan periods.

(Area in '000 acres ; production in '000 tons)

	1960-61	1959-60	1955-56	1950-51
Uttar Pradesh :				
Area	3,289	2,944	2,720	2,505
Production	38,984	32,232	29,403	28,603
Per-acre yield (tons) ..	11.85	11.00	10.81	11.40
Recovery (per cent.) ..	9.53	9.69	9.71	9.81
Bihar :				
Area	458	443	378	4,10
Production	6,927	6,644	2,918	3,086
Per-acre yield (tons) ..	15.12	14.60	7.72	7.50
Recovery (per cent.) ..	9.22	9.43	9.76	10.26
Maharashtra :				
Per-acre yield (tons) ..	28.51	27.50	24.53*	25.70*
Recovery (per cent.) ..	11.65	11.75	11.64*	11.62*
All-India average :				
Per-acre yield (tons) ..	14.83	14.41	12.98	13.20
Recovery (per cent.) ..	9.72	9.52	9.83	10.03

* Figures relate to undivided Bombay State.

It will be seen from the above figures that the rise in sugarcane production in U.P. and Bihar has occurred largely as a result of a substantial increase in acreage and that the recovery per cent is very poor. How else could the position be? Barring a few here and there, the cane growers in these two States have simply not cared to pay any attention to the quality aspect of the cane. Why, after all, should they care? They are assured of a high minimum price per maund of cane supplied to the sugar mills, whatever be the actual sugar that can be obtained from crushing this cane. Even the new scheme for linking cane price to both quantity and quality that will be implemented with effect from the ensuing season is defective, in that the enhanced price of Re. 1.62 per maund is to be paid for cane with a recovery of just 9.8 per cent and not the usual basis of 10 per cent regarded as the norm all these years.

Be that as it may, the urgency of intensifying cane development was impressively highlighted in the course of a resolution adopted at the annual meeting of the Indian Sugar Mills Association's East U.P. Branch held at Gorakhpur a few days ago. The resolution urged the State Government (*a*) to raise the Karaghat Cane Research Station to a full-fledged breeding and research station with sufficient land, staff and equipment to cope with the requirements of East U.P., (*b*) to spend the entire cane purchase tax on intensive development activity in respective factory areas, (*c*) to persuade the Central Government to restore one-third contribution for construction of roads, and (*d*) to make available guaranteed irrigation, as in Maharashtra, to cane growers.

Financial Assistance

In his speech, Mr. V. D. Jhunjhunwala, the retiring President of the Association, dwelt at length on the several handicaps confronting the sugar mills in East U.P. such as poor yield of cane per-acre, erratic cane supplies to factories, freight disadvantage due to distant markets and low cane-crushing capacity of many units. Stating that these handicaps had been responsible for high production cost and low realisation and, consequently, for poor profitability, Mr. Jhunjhunwala called upon the State Government to give all possible encouragement and assistance "to rehabilitate the sugar industry" in East U.P. the economy of which is closely linked to that of the sugar industry. A specific suggestion which he put forward pertained to Government's assistance for rehabilitation. The suggestion merits due consideration. It will be recalled that the Central Wage Board for Sugar Industry had clearly pointed out that most of the sugar plants which had outlived their life were located in East U.P. The Tariff Commission had also asked the industry to approach the Government seeking financial assistance for renovation and modernisation of mills.

Mergers

Another pertinent suggestion of Mr. Jhunjhunwala related to the merger of all small units with a daily cane-crushing capacity of 700-800 tons each with units of 1,500-2,000 tons capacity. He wanted the Government to assist the sugar mills voluntarily to merge, reducing the number of mills in East U.P. from 33 to 10 or 15 units of economic size. Surely, the mergers, together with modernisation scheme, will bring about higher efficiency and reduction in manufacturing cost. The Indian sugar productivity team to Philippines, Hawaii, Louisiana and Puerto Rico has categorically recommended that, wherever possible, efforts should be made to reduce the number of mills by combining two or three units into one unit. The Planning Commission, too, is of the view that economical capacity is 2,000 tons. Apropos this issue of mergers, Mr. C. B. Gupta, Chief Minister of Uttar Pradesh, who inaugurated the meeting, also admitted that the idea appealed to him as a viable economic and rational proposition, but felt that such mergers might result in displacement of labour. He, therefore, proposed that the issue be examined by the high-power committee now reviewing the problems of sugar industry in the State. Incidentally, he assured the sugar industry that this committee would consider the demands of the East U.P. mills sympathetically and evolve schemes for stabilising the industry.

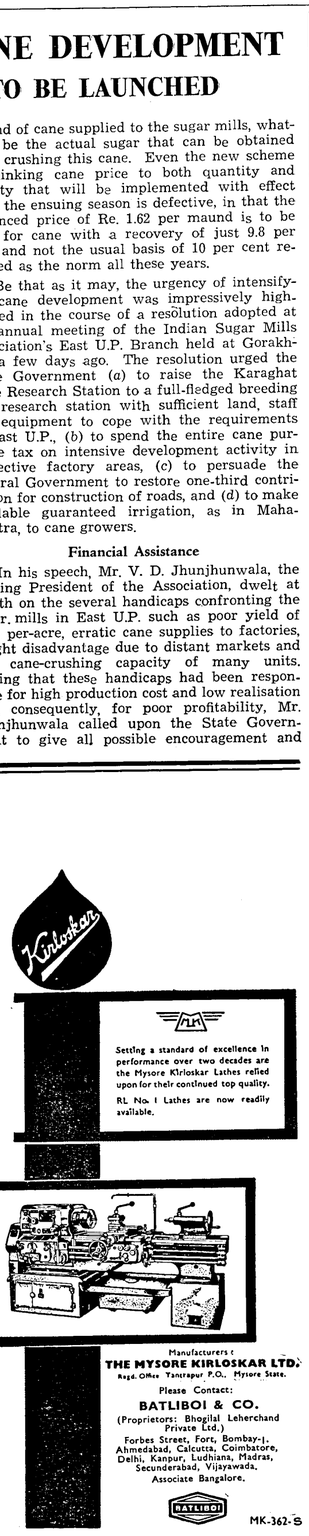
Concerted Effort Wanted

Referring to the difficulties confronting the sugar mills in Eastern districts, Mr. Gupta made it clear that a concerted effort by the State Government, cane growers, sugar millowners and the general taxpayer would be needed "to save the industry from going to the wall." Indeed, he warned that, if the industry now passing through a grave crisis were eliminated in the face of competition from other States, it would leave behind a trail of misery in the Eastern districts the people of which are almost totally dependent on this industry for their livelihood. Proceeding, he said:

"In this predicament, it is no use raking up the past to find out who is more to blame. For one thing, I would not hesitate to say that the sugar industrialists who have the run of the place and earned profits twice or thrice the cost of their factory should have laid something for future contingencies like the present when competition is turning the scale against them. Instead, they took those profits outside the State to Calcutta and Bombay and invested in new enterprises."

Whatever be the validity of the allegation against the sugar millowners made by Mr. Gupta, it is somewhat surprising that he accused the millowners of investing the profits outside the State. If these millowners have invested a large part of their profits outside the State, it may be either because the profitable outlets for investment within the State are limited or because of the absence of adequate Government assistance to the industry. After all, capital flows to regions where it can earn a sufficiently attractive return.

To revert to Mr. Jhunjhunwala's speech. The three suggestions which he made are quite important and deserve attention. One, workload study recommended by the Wage Board should be undertaken with the least possible delay. Two, cane cess-purchase tax collected by the Government must be spent on development of cane. Three, the sugar factory farms must be exempted from ceiling legislation. The farms, as Mr. Jhunjhunwala rightly declared, are mechanised and give better yield and, if these farms are taken over by the Government, the production and productivity may suffer, which will not be in the interest of the State or the country. The sugar factory farms have been a good nucleus for propagating improved varieties and supply of good seed in the past. It is, therefore, desirable, according to Mr. Jhunjhunwala, that a very serious consideration be given to this aspect, so that there is no setback. The matter should be re-examined and the existing Act amended. The Planning Commission has categorically recommended exemption of farms owned by sugar mills.



ROLE OF DEVELOPMENT BANKS

VEHICLE FOR BRINGING TOGETHER CAPITAL, KNOW-HOW AND ENTREPRENEUR

By Mrs. Shirley Boskey

DEVELOPMENT banks are in fashion. During the last 20 years, the number of these institutions in the less developed countries has greatly increased. What is more, they cannot be dismissed as a fad, for their popularity is firmly based upon their demonstrated usefulness as instruments of economic development. Exactly what is a development bank? The versatility of these organisations makes it difficult to define the term with precision, or to describe a "typical" development bank. The label attaches to a wide variety of institutions, differing in ownership, capital structure, and type of activity. Some are public agencies, with funds and management supplied by the Government. Some—considerably fewer but growing in number—are wholly owned and controlled by private investors. Still others are financed and run by Government and private interests in partnership.

Some development banks are concerned solely with the public sector; they have been created to set up and operate Government-owned enterprises or to engage in broad development planning. Other banks, including both Governmental and private institutions, have been made responsible for assistance to the private sector only.

Some development banks deal only with the field of agriculture, some with industry, some with mining; still others range over the entire economy. The geographic scope of the banks' operations may be country-wide or merely regional. The financing operations of some banks are restricted to lending; others may invest in any appropriate form. There are banks which are purely financial institutions and others which may also offer technical assistance or engage in promotional activities.

This diversity among development banks reflects the differing needs of developing countries and the varied political economic and social environments in which the banks operate. The sponsors of a new bank, whether local businessmen or Government officials, must consider carefully the purposes the bank is to serve before deciding how to organise it, what sources to approach for capital, and, at a later stage, what the bank's operational policies shall be.

Common Elements

Despite the variety in characteristics and functions of development banks, some common elements can be discerned. A development bank is a vehicle for bringing together capital, initiative, and technical skills for the purpose of stimulating economic development. The many different approaches which a development bank may take in performing its task are best illustrated by those banks which are created to stimulate the growth of the private industrial sector.

In most developing countries, there is normally a shortage of long-term investment capital; short-term working capital needs can usually be met by the commercial banks. Before the development bank can serve as a source of investment capital, however, it must have funds of its own. These may in principle come from a number of sources: Governmental and private, domestic and foreign.

In some cases, the Government has contributed a bank's entire capital. It may do this, for example, by subscribing to shares, by annual appropriations, or by earmarking a portion of tax revenues. In other instances, the equity (share capital) has been subscribed in whole or part by private investors, individual and institional, such as banks and insurance companies.

The bank's loan capital may be borrowed from the local Government (usually on highly favourable terms permitting repayment over a long period with low or no interest), or may come from foreign national or from international sources such as the U.S. Agency for International Development (A.I.D.), the World Bank (I.B.R.D.), the International Development Association (I.D.A.), or the Inter-American Development Bank. The International Finance Corporation (I.F.C.) is now a potential source of equity capital for development banks.

The Industrial Mining and Development Bank of Iran provides an illustration of the variety of sources from which a development bank's capital funds may originate. Shares in this bank have been purchased both by individuals and institutions. Shareholders include not only Iranians but Belgian, Dutch, French, German, Italian, U.K., and U.S. investors as well. Loan capital has come from the Government of Iran, the U.S. Development Loan Fund, and the World Bank. As this example shows, the very creation of a development bank affords the possibility of marshalling capital from within and outside a country for industrial investment. An infusion of foreign funds not only adds to the country's supply of foreign exchange and provides a point of contact with capital markets in the industrialised countries; it may bring with it the managerial, professional, and technical skills which a developing country so greatly needs.

Terms and Forms of Financing

In deciding upon the terms and the form of its financing, a development bank must take into account a number of factors. These include the source and cost of its own capital, the economic environment, and the preferences and needs of applicant enterprises. Normally, the bank will try to assure that it does not compete with other sources of finance, by restricting assistance to types and maturities of financing which other institutions are not prepared to provide. In contrast to the commercial banks, for example, the development bank normally relies more heavily on an applicant's earnings prospects and the quality of its management than upon its current worth and its ability to put up conventional security.

The willingness to take risks and to combine banking and developmental criteria in making its investment decisions is the hallmark of a development bank. This approach makes the development bank particularly a source of capital for new enterprises. Usually, about half of the enterprises financed by a development bank are new. Since new enterprises find it harder to raise capital, they have greater need of development bank assistance.

In addition, equity financing which most development banks offer, is often the most appropriate kind of financing for new concerns, since, unlike a loan, it imposes no repayment or interest burden. Development banks frequently make equity investments in their own interests. This type of investment affords the development bank an opportunity to share in the profits of a successful and growing concern. The bank thereby acquires a cushion against possible losses on unsuccessful ventures.

Developing countries are not only short of capital for industrial investment; they also lack the financial machinery necessary to divert into industry a substantial portion of such savings as do exist. Through the operations of the development bank, the growth of a capital market mechanism can be encouraged, and there may be developed a greater willingness on the part of owners of capital to invest directly in industrial securities. The equities which the bank itself purchases are a means to this end.

The bank must be prepared to hold the shares in its portfolio until the enterprise has become "seasoned" and has begun to show a profit. Thereafter, it may offer these shares to the public. Each sale increases the supply of marketable securities and broadens existing and potential investor-participation in industry. These portfolio sales also release development bank funds for new investments.

Number of Techniques

Development banks employ a number of other techniques in helping to foster a capital market. For example, they can underwrite new issues of shares or bonds of industrial concerns. Using this technique, instead of financing an enterprise directly, the development bank may agree to purchase whatever part of the issue the enterprise is unable to place elsewhere. Even in the industrialised countries, underwriting is a relatively new financing technique. Only a few development banks have done much in this field. The Industrial Investment and Credit Corporation of India (I.C.I.C.I.) is a notable example.

In other cases, bank officials may offer investors the opportunity to participate in an investment the bank is about to make with its own funds. The Government Development Bank of Puerto Rico and the Industrial Development Corporation of South Africa (I.D.C.) have employed with considerable success this technique of inviting participations.

Finally, a development bank may offer its own bonds or other obligations to the public. This is essentially a means of adding to the bank's own funds through public borrowing, but has the consequence of making the public more familiar with investment techniques and financial instruments. This contributes to a change in attitude toward investment in industrial securities.

A development bank may also introduce or encourage the use of financial instruments utilised in the capital markets of industrialised countries, but not in developing countries, such as convertible debentures, share options, preference shares, and income notes. In some countries use of certain of these instruments has been precluded under prevailing law. The development bank may assume the role not only of educator and innovator but also of legislative lobbyist. This was the experience of I.C.I.C.I. At least one development bank, the Investment Corporation of Nigeria, took an active part in the creation of stock exchange.

Where the business community has been reluctant to investigate new fields or slow to embark on new ventures, the development bank has engaged in promotional activities. For instance, the bank may undertake research or engage in surveys with the object of uncovering investment opportunities. The Pakistan Industrial Credit and Investment Corporation (P.I.C.I.C.) has conducted at its own expense a survey of the potential of a cement industry.

When promising investment opportunities come to the bank's attention, through its own efforts or otherwise, it may try to induce private investors and businessmen to enter the field. If these attempts prove unsuccessful, the bank may even establish an enterprise itself, hoping ultimately to attract private capital partners or purchasers of the bank's entire interest. The I.D.C. (South Africa) and the Puerto Rico Industrial Development Company, for example, set up new enterprises which were later taken over by private investors.

A development bank is only one of a number of instruments of economic development. The simple fact of its establishment will not, in itself, assure a faster growth of the economy in general or of the industrial sector in particular. The full effectiveness of any development bank depends upon co-ordinated action of related institutions and policies. Nevertheless, the potential of a soundly organised development bank is great. It fully justifies the interest which development banks have awakened and the broad support they enjoy.

Notice

ESCORTS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT SHARE certificates in respect of the allotments made on 27th January, 1962 against issue of 5,60,000 Equity and 8,000, 9 per cent (free of Company's tax) Redeemable Cumulative Preference shares as Right capital, are ready for exchange with the Allotment Letters duly discharged, for which individual notices are being sent. Shareholders are requested to please send the Allotment Letters duly discharged to the Registered Office to enable the Company to despatch the certificates.

By Order of the Board,

P. L. JAITLY,
Secretary.

Date, 17th September 1962.

SEPARATION OF AUDIT FROM ACCOUNTS—I

HISTORICAL BACKGROUND OF AN ISSUE THAT IS STILL CURRENT

By A. Premchand

"Reason creates Science. Sentiment and creed shape history."—LE BORN

ONE of the conspicuous features of the organisation of the Indian Audit and Accounts Department is the combination of accounting and auditing duties in the same authority. The combination of these two duties and their inclusion in the range of the activities of the Comptroller and Auditor General have been the subject of many a controversy. Time and again attempts were made to separate the Audit from Accounting; in certain cases, the attempts met with partial success. But, as it is, a large part of the organisation still involves a combination of these duties. The separation of audit from accounts was argued on many counts. What is, however, surprising is that an equal number of arguments were given against the separation. This was the one subject which perhaps witnessed a long and historical controversy. Opinions of the Comptroller and Auditors General after independence differed sharply from one another, while, during the period prior to independence, there was no unanimity of opinion between the Finance Department and the Audit Department.

The separation of audit from accounts is favoured on the grounds that audit should be an independent agency from the accounting agency, as in commercial concerns, that accounting responsibilities should be transferred to the Administrative Departments as in the U.K. and merged with administrative authority and responsibility; that it is not desirable that audit and accounts should be combined together, as it would mean that the auditor is auditing his own accounts, and that the introduction of exchequer control requires the separation of audit from accounts. These arguments have their own validity and so, perhaps, the arguments against it.

Before attempting an analysis of the strength and weakness of these arguments and counter-arguments, we may, in the first instance, trace the attempts made at various stages to separate audit from accounts. It may then be followed by a study of the arguments for and against separation, and an analysis of the techniques used in the separated offices. Thus, the study will be in three parts: (i) history of the attempts, (ii) accounting techniques in the separated offices, and (iii) arguments for and against separation.

The Past and the Present

Almost from the initiation of the work of the Auditor-General, there has been a feeling in support of the separation of audit from accounts. These proposals were either dropped or were forgotten in the flux of time, and, when they were dropped, there were two overwhelming reasons which were against separation—one was the extra cost involved in the maintenance of two sets of officers and another was the feeling that the existence of an independent Auditor-General would undermine the prestige of the then colonial government. The first proposal to separate audit from accounts was made in 1880 by the India Office Committee inquiring into the set up of the Military Accounts Department. The second attempt was made by the Secretary of State himself in 1889, when the question of his powers of control on the Indian Government came up for discussion. In both these attempts, though opinions were expressed regarding the need for an independent audit and, therefore, for a separation of audit from accounts, it was finally dropped, as the authorities concerned did not consider it necessary to have an independent audit, and also for the reason that they were satisfied with the organisational set-up of the combined audit and accounts office machinery. Later, the question came up for an exhaustive review and survey by the Royal Commission on Expenditure in 1896. The Commission, as pointed out earlier, was working against a background and a situation where reduction in expenditure on the Government account was absolutely necessary. It was, therefore, natural that the Commission should have favoured the continuance of the existing set-up. But, before making such a recommendation, the Commission made a study of the dissimilarities that existed between the Comptroller and Auditor-General of the U.K. and the Auditor-General of India. Pointing out these differences, the Commission stated that "for many years the principle of an effective audit was carefully discussed (1866 Act) at home (the U.K.) and the present system was introduced (1866 Act) step by step. The last step made the audit power independent of the executive power. This decision gave the force of law to the principle which Englishmen consider sound. A different principle has been adopted in India." The Commission considered that the need for a "different principle was embedded in the system itself." The Commission was also highly satisfied with the progress of audit as already obtaining, which it considered to be "well organised and effective" and to be more "immediate and direct" in its action in India than in England, and therefore suggested the continuance of the system.

Note: The views presented in the course of the article are the personal views of the author.

Sir Gauntlett's Views

The system continued, as it did earlier, but the question, once again, came up when the 1919 Montford Reforms were under consideration. A full and complete examination of this question was made by Sir Frederick Gauntlett, himself an Auditor-General. While conceding that there should be an independent audit as a part of the new reforms, he observed that the problem of the day was essentially a question of choice, either (i) "to retain one officer with dual functions and to hand over the complete control of the department—the Government and the Finance Department absolving themselves from all responsibility"—or (ii) "to separate the two functions and to have a Comptroller-General who will administer the Department and to have an Auditor-General incharge of Audit." Having regard to the different factors of the situation, Sir Gauntlett, preferred the former course.

The history following this stage has run on the choice made by Sir Gauntlett in 1919, for the provision in the 1919 Act was generally based on his choice. Although the Act made provision, under Article 39, only for an Auditor-General, without specifying his duties, the Government of India later interpreted it to include the accounting functions also. The Government of India's dispatch, dated 19th August 1920, to the Secretary of State read thus: "We consider it to be essential that there should be some officer in India who will be responsible to the Secretary of State in Council for the proper computation and due submission of these accounts, and we are advised that it is not inconsistent with the provisions of the Act to entrust this work to the Auditor-General in addition to his duties in connection with audit proper." Thus another opportunity for separation was allowed to go into oblivion.

The question, however, was reopened by the Inchcape Committee on retrenchment in 1923. As the name itself indicates, it was a committee appointed with the sole purpose of economising expenditure at the Centre. An important factor to be remembered while considering the recommendation of the Inchcape Committee is the fact that the Provincial accounts and audit were (and they are still) being maintained and conducted by the Auditor-General of India through his Accountant-Generals' offices and the extra expenditure incurred in respect of the States was also being borne by the Centre. (In fact, this factor was repeatedly brought to the forefront, as we shall see later.) This presented an opportunity to the Inchcape Committee to suggest that the separation of audit and accounts and the separation of Provincial balances should be considered again. The Committee suggested that, "in view of the constitutional difficulties arising under the Reform Scheme, from the fact that a Provincial Government can require the Audit and Accounts Department to maintain an account for which the Central Government pay, it is desirable to reopen the question of separation of the audit from accounts." The objective behind this suggestion was no more than to relieve the Central Government of a part of the financial burden which it was then shouldering.

During the same period, there was a growing consciousness in the Government in favour of separating audit from accounts and bringing the accounts under the administrative responsibility of the departments. Such a course, it was considered, would be far more effective for the control of expenditure than the then existing system. The chief advocate of these reforms in 1923 was Mr. J. C. E. Jukes of the Finance Department of the Government of India. During this period, he initiated fairly extensive experiments in the separation of audit from accounts and the introduction of "Pay and Accounts Officers under each department or for a group of departments." Simultaneously with these experiments, an impassioned plea for separation came from the Reforms Enquiry Committee, also known as the Muddiman Committee, which, on the basis of the evidence given before them by Mr. Jukes and Sir Frederick Gauntlett, stated, "we are desirous that such administrative steps as are necessary to pave the way for provincial autonomy should be taken and we are, therefore, much interested in the experiments which are now being undertaken to test the feasibility of the separation of accounts from audit and in the examination of the feasibility of separating provincial accounts from the accounts of the Central Government." The Committee also assumed that, "with the separation of audit from accounts, the later function would of course become a provincial subject under the control of the Finance Department.

The combined impact of all these forces working in different spheres was considerable. It led to certain significant developments in two fields: (i) At the Central Government level, it was decided* that the Railway Accounts should be separated from the Auditor-General's control and purview, though the audit would be continued by the Auditor-General and (ii) a scheme for separation of Audit from Accounts was introduced in U.P. The story of the separation of the Railway Finance is not, however, within the scope of this study.

U.P. Experiment

In U.P., the new scheme was first introduced in 1926, as an experimental measure, in the Police and Educational Departments. In that year, a beginning was also made in the East India Railway, as a prelude to the general scheme of separation in Railways of audit from accounts which came into force fully in 1929. The purpose of this experiment in U.P. was to see how a separated accounts system would affect the control of expenditure. Explaining the objective of the scheme, Mr. Jukes, the man behind the scheme, wrote: "Under the ordinary accounting system of India, control of the desired kind is very difficult. In order to exercise it, the controlling officer requires to be in close touch with the progress of his expenditure in the accounts. The accounts are, however, kept by a usually distant Accountant-General whose returns reach the controlling officer many weeks after the incurring of expenditures which they record. Another drawback of the ordinary system is that expert financial advice cannot as a rule be quickly obtained by the controlling officer. It is largely in order to remove these defects that the Pay and Accounts Officers have been instituted." The utility of this system, Mr. Jukes explained, contained in getting up-to-date accounting data. He added: "The Accounts (under the new system) are kept in many instances under the same roof which covers the office of the head of the department and in any case in close proximity to it. The controlling officer is thus in a position to know practically from day to day the progress of expenditure from his grant under the various minor and detailed needs and to secure at the shortest notice any information which is derivable from the accounts. Further, he has the help in the person of the Pay and Accounts Officer, of a Financial Adviser who is an expert in all rules and orders bearing upon expenditure and accounts and can be consulted before any financial commitment is incurred."

Features of the Scheme

The salient features of the scheme introduced in U.P. included the system of centralisation of payments with the various accounting officers and the issue of cheques payable all over India by the latter. This system reduced the importance of exchange accounts and made the watching of the progress of expenditure easier. Under this system, the heads of departments had to see that the amounts voted by the Legislature were not exceeded and that his accounts were compiled and maintained by the Pay and Accounts Officer—a new office created under the scheme. If at any time he had to incur any more expenditure, he had to ask for extra funds which were either allowed to be met by re-appropriation or by a supplementary grant with the approval of the Legislature. The Pay and Accounts Officers were appointed by the Finance Department and were answerable to it. His duties included scrutiny of all claims to money, verification of the rules and regulations before making a disbursement and compilation and consolidation of the accounts. He had also to watch the progress of expenditure, especially during the last four months of the financial year, so that the need for supplementary grants could be verified and, where there was a need, he was to bring it to the notice of the head of the department. However, the controlling officer alone was responsible for the expenditure and where certain expenditure was to be incurred. Contrary to the opinion of the Pay and Accounts Officer the controlling officer was to issue written orders which were to be shown by the Pay and Accounts Officer to the audit office attached to it. But the role of the Pay and Accounts Officer essentially was one of a helping agent and it was only with a view to preventing irregularities that the controlling officers were asked to consult the Pay and Accounts Officers in financial matters. The Pay and Accounts Officers, as envisaged in the scheme, were eventually expected to assume the role of a Financial Adviser.

This scheme proved, according to the Public Accounts Committee, a success in regard to control of expenditure. The Committee recorded its "very favourable impressions" which the new system made on them. As a result of these impressions, the possibility of its extension to other Provinces was discussed in a meeting of the Financial Representatives in 1926. Though the consensus of the general opinion was in favour of the extension of the scheme they wanted to wait further and watch the continued working of the scheme. The Auditor-General also felt that "there has been considerable improvement in financial control" and he had "no doubt that, as new accounts offices gain more experience, the scheme of separation will produce even more valuable results in this direction." Sir Ernest Burdon, however, did not share this opinion. On the basis of this general feeling, the scheme was extended, albeit on an experimental basis, to the North West Frontier Province. Its extension to all the Provinces and all the central offices was, however, beyond question, for it involved large expenditures.

Good Testimonials

The Simon Commission (May 1930) commented wryly on the contemporary scene thus:

"A peculiar feature of the Indian Financial System imposes on him (Auditor-General) a third function—the computation of accounts and their audit are, except in Provinces in which the Secretary of State in Council has declared otherwise, entrusted to the same agency, the Indian Audit Department. The Auditor-General is, therefore, responsible not only for audit but also for the preparation of accounts he audits. The explanation of this anomalous combination of duties (a relic of the highly centralised system of administration, which obtained in India before 1920) lies in the transitional nature of India's constitutional and administrative arrangements. Audit and accounts have already been separated in several departments of the Government of India and in the United Provinces, and the extension of this financial form to other Provinces, which was strongly recommended by the Muddiman Committee of 1924, has been hindered only by consideration of the cost involved."

Notwithstanding these good testimonials, the separation scheme was scheduled for an early demise. The growth of support for the separation scheme was unfortunately moving against a background of economic depression. The Government's considerations, naturally, were diverted more to the counteraction of the economic holocaust. The Secretary of State, therefore, decided that the separation scheme, the abandonment of which was to yield a saving of Rs 3.50 lakhs, might be abolished. Accordingly, the abolition took place and this, once again, led to the establishment of combined audit and accounts offices. The separation of audit, which had been introduced in the Railways and which was already functioning for well over four years by that time was, however, allowed to continue. But the Secretary of State made it plain that the abandonment of the scheme was influenced by considerations of 'economy' alone and that it did not indicate the Government's disapproval of the principle of separation.

The combined offices thus continued since that time until 1955, when a scheme of separation was introduced. Meanwhile, however, there was one development which, though not of great significance from the practical point of view, was important enough from the historical view. This was the development that took place at the time of the consideration of the 1935 Reform. The objective of the Government and public alike during the period was to do all that was possible to make provincial autonomy a reality. This movement resulted in a provision included in the 1935 Act to the effect that Provinces would be free to appoint their own Audit or Accountant-Generals. The Joint Committee on Indian Constitutional Reform (1933-34) stated in this respect thus:

"It is desirable both on grounds of economy and other reasons, that the present centralised system of audit and accounts should be maintained, and it is hoped that the Provinces will realise the advantages of such a course. Nevertheless, it would be difficult to withhold it if an autonomous Province wants to have its own auditing arrangement."

The provision in the 1935 Act, as indicated earlier was not availed of by any Province and thus the accounting arrangements in the Provinces which, together with the centralised accounting system, formed part of the duties of the Auditor-General continued as it were and remained unseparated.

Exchequer Control

The issue of separation received "no attention" from 1936 until the commencement of India's independent Constitution. However, with the implicit inclusion of the "exchequer control" in the duties of the Comptroller and Auditor-General, the question once again came up for consideration. The first Comptroller and Auditor-General of the Indian Republic, who was a strong protagonist of 'separation,' lost no time for voicing his opinions through his Audit Reports* through the Annual Reports of the Ministry of Finance and through the Public Accounts Committee. He was firmly of the opinion that the existing arrangements of the sharing of responsibilities are highly defective. He added: "The separation of audit from accounts and the organisation of the necessary accounting machinery under the administrative departments with a view to removing these serious defects and the enforcement of effective exchequer control are essential and overdue, and I, as the Comptroller and Auditor-General, attach the greatest importance to these reforms being carried out." These arguments received further support from the cases of embezzlements in the Audit Departments itself. The Comptroller and Auditor-General was quick to point out that these cases were "an illustration of the continuance of the ancient practice in this country of imposing upon combined accounts and audit offices the duties of pre-audit and payment at headquarters towns. This practice has been condemned as dangerous and improper times without number by the Auditor-General and Public Accounts Committee."† Almost at the same time, a conference of the Commonwealth Auditors-General came to the conclusion that the system of an Auditor-General making payments or keeping accounts was undesirable.

The combined impact of all these developments was considerable. It was particularly discernible on the Public Accounts Committee, which, on the basis of a forceful plea made by the Comptroller and Auditor-General, recommended that separate accounts offices for various Ministries should be set up. The Committee also stated that maintenance of accounts of the States is not a Union subject and that, therefore, "the acceptance of responsibilities for the maintenance of State accounts by the States themselves is constitutionally right and proper." They recommended that early steps should be taken to separate the Provincial accounts also.

Programme of Separation

The programme of separation, as offered by the Comptroller and Auditor-General, consisted of three stages: (i) The immediate transfer of the work of disbursements of money by the Audit Department at certain capital towns to separate pay and accounts offices established for the purpose; (ii) The separation of accounting functions from audit and the entrustment of the former to the spending Departments; and (iii) following (ii), the introduction of the system of Exchequer issues and control as in the U.K.

These recommendations of the Public Accounts Committee were accepted by the Government, in principle, but the implementation of it had necessarily to be in stages. As the then Finance Minister stated, in the course of a debate in the Lok Sabha, "the question of phasing the change in such a way that it does not dislocate the administration is really the practical issue for consideration, at least so far as the Central Government is concerned . . . the House will realise that such a fundamental change would have to be spread over a period of years and cannot be introduced at once. Thus, despite the acceptance of separation in principle, little or no progress was made. All that was done during the tenure of the first C. and A.-G. was the establishment of separate Payment Offices at State headquarters and, before any further progress could be made, there was a change in the incumbancy of the post of the Comptroller and Auditor-General.

The second Auditor-General was also in favour of the separation of Audit and Accounts and he, too, considered it as essential. He stated: "the malaise of our administration has been this unnatural divorce of authority from responsibility. I feel that the transfer of accounting responsibilities to the Ministries should, therefore, be the first step towards the evolution of an acceptable and logical pattern of administration." With this as the objective, he started consultations with Government for the implementation of the separation programme. A result of these efforts was the introduction, on 1st April 1955, of the Separation Scheme in respect of three selected Ministries—Food, Rehabilitation and the Supply Department of the Ministry of Works, Housing and Supply. The introduction of this scheme in these Ministries was considered to be highly convenient because it had a minimum of dislocation in work, for the transactions of these three departments were conducted until then by a separate Accountant-General. The scheme was later on (1st October 1955) extended to the Lok Sabha and Rajya Sabha offices. In the same year, a limited scheme of separation covering two departments was introduced in West Bengal. A scheme covering only one department was introduced in Saurashtra also in the same year.

(To be continued)

*See Audit Report 1952; Annual Reports of the Ministry of Finance for the years 52-53 and 54-55; Among the P.A.C. Reports see the Third Report 1952-53.

†Audit Report 1952. This point was raised by Purshottom Das Tandon in the House also.

*For arriving at this decision, the recommendations of the Acworth Committee were mainly responsible, the factors mentioned earlier having created the proper atmosphere.

NEW PUBLICATIONS

Techno-Economic Survey of Orissa. Published by the National Council of Applied Economic Research, New Delhi. Pages: 309. Price: Rs. 20.

DEVELOPMENT of backward areas is one of the objectives of our National Plans. Among the backward States Orissa provides a paradoxical picture, with its vast potential of raw materials and mineral resources. Despite this large potential of natural resources, the economy of Orissa does not secure a high *per capita* income and reasonable standards of living for the inhabitants of the State. In 1956-57, the *per capita* income in Orissa was only Rs. 190, as compared with Rs. 294 in all-India; the level of consumption expenditure was low and standards of public health and general education were inferior to those in other States.

The reason for this backwardness is that the exploitation of rich mineral resources is at an early stage even now. Backward technique of production is another characteristic of this early stage of economic development. This is reflected in lower output per worker in every sector in comparison with the average for all India. In agriculture, the net output per worker in 1956-57 was about 83 per cent, in factory industry roughly 70 per cent and in non-factory industry 70 per cent of the all-India averages. For raising *per capita* income in Orissa, therefore, a two-pronged attack on under-utilisation of resources and low per-worker productivity is necessary.

Structurally, according to the N.A.A.E.R.'s survey, Orissa's economy is dependent on agriculture to a greater extent than the economy of the country as a whole and the manufacturing industry is relatively less important. Agricultural productivity both in relation to land and working force is very low, because of relatively low crop yields and the poor harvest price of rice—a crop which covers over 62 per cent of the State's cultivated area. Lack of transport and organised marketing facilities, and backward techniques are mainly responsible for poor yields. Industry in Orissa is dominated to a greater extent by cottage and village type of manufacturing activity than in all India. Agriculture-based industry contributes the major part of total industrial output. But the State is rich in natural resources. Its forests cover 4 per cent of the State's areas (as against 17 per cent in all India) and are a large potential source of industrial raw material. Its mineral deposits, chiefly iron ore, coal, manganese, limestone, fireclay and chromite are among the best in the country.

The establishment of the Rourkela Steel Plant and the development of other mineral-based industries (refractories, ferro-manganese and cement) have no doubt resulted in a large expansion of the State's industrial output in recent years. It is also true that this provides a firm foundation for the industrialisation of the State. But, industrially, Orissa is among the backward States of India. Its share of industrial sector in the total income generated in the State (8 per cent) is much lower than in all India (16.3 per cent). The composition of the factory industry in 1956-57 in Orissa shows that agriculture-based industries were the most important, followed by forest-based industries, while mineral-based industries were relatively unimportant.

Considering the natural resources of Orissa in the context of the pattern of development envisaged for India as a whole, all-India demand trends, and availability of power, water, transport and labour, the Council envisages a 10-year (1961-71) programme for investing Rs. 550 crores in large-scale industry. This would represent 39 per cent of the suggested overall investment of Rs. 1,400 crores over that period, while agriculture, power and mining account for 22 per cent, 13 per cent and 4 per cent respectively. The Council suggests that the additional output expected from this investment is Rs. 146 crores and the additional direct employment about 90,000. Pointing to the estimated 8,000 million tons of iron ore deposits in the State, the Council emphasises that the establishment of mineral-based industries would depend on improved mining methods and techniques, rapid expansion of transport (including the development of Paradip Port) and training of mining labour and upgrading of skills by the Orissa Mining Corporation.

The survey points out that, despite the recent development of mineral-based industries like steel, aluminium and ferro-manganese, the installed capacities in Orissa are very small relative to the available mineral resources. The Council suggests that a large increase in the demand for steel and the products of other mineral-based industries is likely. A considerable expansion in the capacity of steel production, besides that already planned for the Rourkela Steel Plant, is suggested to be achieved by the installation of a new plant at Bonaigarh. In addition, demand and resource considerations indicate the scope for development of ferro-chrome, ferro-silicon, ceramics, and glass manufacture, for which plans have been suggested by the N.C.A.E.R. The by-products of the coke oven plants at Rourkela an later at Bonaigarh can provide the basis for the expansion of the chemical industry. Plants for producing styrene, polystyrene, ammonium sulphate and nitrogenous fertilisers have also been suggested. Engineering industries which form the bulk of metal-based industries are market-oriented and are bound to have a great future in the State.

Of the suggested total investment of Rs. 1,400 crores, it is estimated that the share of the public sector will be Rs. 576 crores. The Council feels, however, that the Orissa Government will be able to raise only Rs. 203.2 crores in the 10-year period, including Rs. 46 crores of additional taxation and Rs. 73 crores of market borrowings. The gap of over Rs. 372 crores will have to be met through Central assistance. These estimates exclude the current outlay under the plans, for which the State has itself to find the resources. Improvement of land taxation and rationalisation of the structure of commercial taxes are some of the suggestions made to augment State's revenue in the next decade.

Regarding agriculture, the Council observes that the main effort should be to bring about a substantial increase in the double-cropped area and a step-up of paddy yields. Propagation of better cultivation practices, application of better seeds, and fertilisers and soil conservation should all help in increasing farm output by 100 per cent. By 1971, according to the Council, the State should be in a position to export two million tons of rice to other States against the current level of 3 lakh tons.

The National Council has also laid great stress on the expansion of medical and health facilities in Orissa. It recommends an expenditure of Rs. 50 crores in the next 10 years to cover various programmes like malaria and filaria control, protected water supply, modern drainage and sanitation, and medical and health facilities. This would bring the *per capita* allocation on public health to the all-India level in 1970-71.

If the Council's Rs. 1,400-crore programme is fully implemented, the State income will grow at the rate of 14 per cent per annum and *per capita* income will double and catch up with the all-India level in 1970-71. The increase in overall productivity will be 250 per cent in factory industry and 50 per cent in other sectors. The survey brings to the fore the potentialities of this backward State in a co-ordinated form and is a welcome addition to the literature on economic planning in our country.

Law and Practice of Banking. By R. M. Mitra. Published by Suneja Book Centre, 24/90 Connaught Circus, New Delhi 1. Pages: 359. Price: Rs. 10.

Commerce is a very highly developed and specialised subject. Commercial laws cover contracts, negotiable instruments, insurance, banking, companies etc. Law and practice of banking is only a small part of the vast field of commercial laws. Knowledge of this subject is essential to all those carrying on the business of banking, employees in those firms and companies carrying on the business of banking, customers and constituents who form the bulk of the business community in every country.

There are very many good books on the subject from the legal point of view, but there are very few good books thereon to help students of the law and practice of banking. Mitra has ventured into this line and it should be said to his credit that he has done his job successfully. Mitra's book will be useful to students as well as to the employees of banks. The book is divided into six chapters. The appendices contain Statutes, Rules, Bankers' Books Evidence Act, etc. But the author would have done well to include a bare text of the Negotiable Instruments Act.

The commentary deals with the origin and development of the system of banking, status of parties and lending by banks, business organisation and the Negotiable Instruments Act. The discussion is written in simple and precise language. A dry subject like this has been made quite interesting. Case law has been referred to wherever necessary, but the author has not provided a table of cases. The commentary is divided into numerous sub-headings, which makes reference to each topic easy. There is no index to the book, and this is a serious drawback in a law book. The author will do well to incorporate an index and a table of cases in his next edition.

Pipework installations

by S&L

We undertake fabrication and installation of pipework, as well as the design work entailed in the engineering of piping systems.

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers, and draughtsmen, many of them trained abroad, now provides,

* fabrication of all types of pressure pipework,
* fabrication of bent boiler tubes, superheater elements and coils for all purposes,
* the installation of piping systems for all pressure and temperature conditions.

Whatever your project—a Steel Plant, Power Station, Paper Mill, Chemical Plant, a single item or a complete installation—call for S & L.

Durgapur Steelworks Gas Piping at Rolling Mills Booster House

The Indian Advertising Year Book 1962. Editors: V. K. Narasimhan and V. K. M. Chari. Publishers: Our India Directories and Publications Private Ltd., 16, Nandanam, Madras 35. Pages: 664. Price: Rs. 25.

The *Year Book* provides a wealth of information on institutions and personalities concerned with the advertising profession in India. The scope of the volume is rather comprehensive, in that, apart from dealing with matters of immediate interest to advertisers, the authors have made a rather detailed study of the structure of, and recent trends in, India's industrial economy, which have a direct relevance to their field of work.

The *Year Book* has been divided into three parts, namely, "Referindia", "Advertisers' Guide" and "Advertisers' Cyclopædia". The first section is devoted to a study of the Indian economy, with particular reference to population, agricultural and industrial patterns, mineral resources and development plans. The authors have done well to make a State-wise study of economic conditions, giving succinct information about important cities and towns in each State, as well as in the Union Territories. This section also contains important details regarding literacy, educational institutions, major industrial units, cinema theatres and newspapers and periodicals in various districts, hill stations, etc., which are of importance to enterprising advertisers and those interested in market research.

The second section seeks to study the impact of the growth in industrial and commercial activities in the third Plan on the advertising profession. A description of the organisations engaged in advertising and publishing and a "Who's Who" in the advertising profession, are added in this part. Now we come to the third section, in which is compiled information on the various forms of advertising media available in the country, including press, transport, outdoor and the like, in sufficient detail. The authors seem to be justified in their claim that the book fills a real gap in the reference literature on Indian Advertising. Some of its sections will also be interesting to students of economics and laymen alike. But there would appear to be room for improvement in the get-up of this useful *Year Book*.

The Bombay Chamber of Commerce and Industry —Directory of Members 1961. Published by Mr. Barker, Secretary, the Bombay Chamber of Commerce and Industry, Mackinnon Mackenzie Building, Ballard Estate, Bombay, 1.

This *Directory*, brought out by the Bombay Chamber of Commerce and Industry as part of the celebration of its 125th anniversary, contains detailed information on the members of the Chamber. A major part of the Directory is covered by particulars about the manufacturing and trading activities of the members of the Chamber. One separate section gives the list of all the members of the Chamber, grouped on the basis of the commodities in which they deal. A small chapter is devoted to a history of the institution, the inception of which dates back to 1836. The authors of the volume claim that the Directory is intended for assisting the export drive. With its beautiful design and get-up, this volume will serve as a handy source of reference for matters relating to a large segment of Bombay commerce and industry.

B.D.I. Germany Supplies, 1961-62 (West German Export Directory). Official Export Register of the Federation of German Industries and the Federation of German Handicraft Organisations. Published by Gemein Schaftsverlag GmbH., P. O. B. 508, Darmstadt, West Germany.

The *B.D.I. Germany Supplies*, the annual publication brought out jointly by the Federation of German Industries and the Federation of German Handicraft Organisations, Bonn, is an authoritative directory of West German export products and exporting firms. The fifth edition of this book, recently published, is divided into three sections. The first section gives a comprehensive list of West German export products and trade marks. In the second section, export goods, their manufacturers and trade marks have been classified according to broad industrial groups. The third section, alphabetical directory, seeks to provide detailed information about exporters of various products, including their postal and telegraphic addresses, telephone numbers and other details of the products in which they deal. All the information is given in four languages, namely, German, French, Spanish and English. The volume will undoubtedly be of great value to those who wish to have business connections with West Germany.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

Chemicals help Industry to bring a better future closer

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Antioxidants improve resistance, prevent early cracking, give increased flexibility

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON
is a Registered Trade Mark

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.

Wakefield House, Sprott Road, Ballard Estate, Bombay-1. Also at: Calcutta, Delhi and Madras.

Monsanto Regd.

POWER SHORTAGE IN EASTERN INDIA

BENGAL CHAMBER OF COMMERCE URGES REMEDIAL STEPS

THE vital Bihar-West Bengal industrial belt has come to be known as the Ruhr of India. In this belt are situated a large proportion of the country's basic industries and those upon which it relies largely for foreign exchange. It contains about 95 per cent of the jute industry, a very large proportion of the coal industry based on the country's best deposits of high grade coals, the larger section of the steel industry and also paper, engineering and a number of other important industries. These industries were relatively well supplied with power in the recent past, and shortages were unknown. But, in the last one or two years, on account of various causes, the power supply position has deteriorated considerably, with the result that production in several industries has been seriously affected.

It has been estimated, in this connection, that the jute industry, which is the biggest single consumer of electricity in Eastern India, lost over four million man-hours and 12,000 tons of production due to power cuts in the period February-June 1961. During the same period, the engineering industry is estimated to have suffered production losses of as much as 10 per cent in the Calcutta industrial area alone. The most serious single effect on this industry has been the disruption of the coal wagon fabrication programme in the private sector units. Electro-chemical plants, which are designed for continuous working, have also been affected by the unsteadiness in the supply of power. In the coal industry, a recent census taken by one colliery in the Raniganj field has revealed the staggering figure of 108 stoppages in the mine due to power failure from 1959 to April 1962. Since power for the majority of collieries in this field is supplied from the Damodar Valley Corporation, the overall loss of output during that period, assuming that other collieries were similarly affected, can be easily figured out. These inadequacies in the availability of power, which have slowed down production in varying degree, are particularly serious in the Calcutta area, about which the Bengal Chamber of Commerce and Industry has the following to say in its latest survey entitled *Electrical Power in Eastern India* 1962:

"In regard to Calcutta, it must be emphasised that there are few expanding urban areas where the possible effect of such a shortage is so considerable, where the strain on the existing generating plant is so great, and where such a long time lag must occur before relief can be expected—and where the demand is continuing to expand at so remarkable a rate.

"In Calcutta, during the second Plan, the private sector was not allowed to undertake a power expansion programme which, in its opinion, was essential for the future of the city. It was anticipated that in its place the public sector would erect the equivalent supply units. Unfortunately, although schemes for the generation of electricity from hydro-electric projects and coal-fired stations in the Damodar Valley were put in hand, these projects have proved to be inadequate. In spite of the fact that the quantity of electricity generated has increased considerably, the increase in consumption has been such that it is not possible to connect freely new industrial loads and avoid pockets of scarcity."

Power Supplies for Calcutta

It is a truism that electric power supply controls the production and expansion of practically every industry. So much so, it is essential that the total amount of power available must at all times exceed the total demand if the industries which it supports are to be successful. The very fact that there is a continuing power shortage in Eastern India proves that power availability is not even keeping pace with power demand. Will this situation be remedied at least by the end of the third Plan? There is no certainty, on present indications, that it will be remedied. On the contrary, the indications are that demand will continue to exceed supply. The Bengal Chamber's survey has referred, in this connection, to the estimated power supplies of 964 M.W. by 1965-66 within West Bengal (excluding the vital area of the D.V.C. and also the West Bengal State Electricity Board's loads in Kharagpur, Midnapur and Purulia and traction loads in Howrah, Belmuri, Purulia, Kharagpur and Kolaghat). The table in column 1 shows the generating plants through which the estimated supplies will be obtained.

Estimated Supplies, 1965-66, in M.W.

	Installed	*Firm*
(a) C.E.S.C.	334	306
(b) Durgapur	210	210
(c) Bandel	332	247
(d) Gouripore	45	24
(e) Darjeeling	2	1.2
	923	788.2
*(f) Additions by W.B.S.E.B.		
(i) Durgapur	75	75
(ii) Katwa	150	75
(iii) Mayurakshi	4	2
	1,152	940.2
Less: 12 per cent auxiliaries and other losses items (b) to (f)	98	76
	1,054	864.2
(g) Imported from D.V.C.	100	100
	1,154	964.2

* The commissioning dates of these installations are still doubtful.

If it is assumed that all the additional plants indicated in the above table will come into operation by 1966, there will be an aggregate supply potential of 964 M.W. But the aggregate power demand, it is estimated, will also have risen to 1,002 M.W. at the minimum. That will mean a shortfall of 38 M.W. which, it is stressed, is the minimum amount by which demand will exceed supply and which makes no allowance for unforeseen breakdowns in generation and transmission equipment. This is a disturbing prospect, indeed, for the Calcutta area.

D.V.C. Industrial Area

As for the position within the D.V.C. industrial area, it is estimated that power demand by 1965-66 will be 178 M.W. in West Bengal territory and 217 M.W. in Bihar territory. In addition, a total demand of 225 M.W. outside the delineated area is expected to be met by the D.V.C. But the saleable capacity of the D.V.C. system by 1965-66, it is estimated, will be 720 M.W. Thus, by the end of the third Plan, adequate supplies of power may be available in the D.V.C. area. But, in the interim period, that is, between now and the end of the third Plan, serious dislocation may be caused in the D.V.C. area too, if adequate supplies are not available on a progressively accelerated basis. It may be noted here that the D.V.C.'s new generating units are expected to be commissioned only during the years 1964 to 1966 and that its Durgapur and Bokaro thermal stations, which have been commissioned after inordinate delay, cannot be said to be operating satisfactorily even today. How the power crisis has arisen in the Calcutta and D.V.C. areas and why remedial steps are urgently required, have been indicated in the Chamber's survey as follows:

"In planning the generating capacity, the demand-supply equation appears, unfortunately, to have been overlooked. While the delay in sanctioning new generating units may have been due to the overlapping of responsibilities for feeding the industrial belts of West Bengal-Bihar between the Damodar Valley Corporation, the State Electricity Boards and the Licensees, the position has become so precarious that even the outage of a single machine in the area reflects adversely on all industries and particularly on basic industries such as jute, coal and engineering. Such defects underline the fact that an adequate margin of safety must be kept by way of spinning reserve, hot reserve, and cold reserve when calculating the total installed capacity required. Unless urgent remedial steps are taken, the adverse effects on production due to breakdowns in generating units are bound to continue."

The present temporary expedient of diverting some power from Rihand and Hirakud to Eastern India will not solve the problem. So some remedial steps are necessary. These, in the considered opinion of the Bengal Chamber of Commerce, are:

"In order to ensure that the requirements of industry are met, surveys of its requirements must be made at frequent intervals, every six months or so, under the auspices of the Central Water and Power Commission.

"To make the best use of the country's resources, maximum use should be made of well-proven equipment and, as far as possible, installations should be standardised in order to simplify maintenance and repair and reduce the quantity of spares necessary.

"In view of the importance of Calcutta and its hinterland to the economy of the country, it is a matter of the utmost urgency that additional generating plant is installed in this area.

"To ensure the efficient working of the new thermal plant at Bandel, immediate steps should be taken to ensure the availability of adequate supplies of coal either by rail or by other means and, as the railways may well experience difficulties in the future, consideration should be given to siting thermal stations in, or close to, the coalfields.

"With these points in mind, it is recommended that very high priority for the utilisation of foreign exchange should be given to the country's electrical power requirements. This is a matter of considerable importance and it is felt that urgent consideration should be given to deferring, if necessary, some other projects in order that the necessary foreign exchange facilities may be made available for power."

It will be seen from the above suggestions that there is no specific plea for encouraging a power expansion programme in the private sector. Perhaps, this is implicit in the general suggestion that additional generating plant should be installed in the Calcutta area as a matter of urgency.

DIESEL-ELECTRIC LOCOMOTIVES IN BRITAIN

British Railways are stated to have the world's largest fleet of diesel locomotives outside North America. Nearly 1,500 main-line diesel-electric and diesel-hydraulic locomotives are now in service, as well as 1,900 diesel shunting engines and more than 4,000 diesel railcars and multiple-unit vehicles. Six years ago, it may be recalled, there were only seven diesel main-liners, 62 railcars and 309 shunters in service. The bulk of the change from steam, however, has been made only in the last four years. Thanks to this change, diesel locomotives and trains have this summer enabled the greatest speed-up in the history of British Railways. More than 200 trains—nearly twice the pre-war number—are averaging speeds in excess of 60 miles an hour.

Two diesel locomotives are now doing the work of upto five steam locomotives. This is because daily they need only refuelling, compared with time-consuming tasks like coaling, watering, ash removal and lighting up, which keep a steam locomotive out of service for at least 10 hours out of the 24. A diesel locomotive is ready at the touch of a button and can be used for 22 hours a day.

Two of Britain's biggest industrial groups, it is further reported, are to collaborate in the manufacture of diesel and electric locomotives. They are Brush Electrical Engineering Company Ltd., a member of the Hawker Siddeley Group, and the General Electric Company, Ltd. Both companies have long experience in the field of traction. The collaboration, the firms say, will provide "an organisation covering every aspect of railway electrification and diesel-powered locomotives." Brush pioneered the manufacture of electric tramway and railway equipment, but has since concentrated on diesel-electric locomotives. G.E.C. has concentrated on straight electric traction. It has also made transmissions and parts for electric locomotives.

KAISER STEEL'S EXPANSION PROGRAMME

The Kaiser Steel Corporation in the United States is just engaged in a $25-million expansion programme to diversify its production and improve quality, service and efficiency. The programme includes expenditures at all the six of Kaiser Steel's major plants and mines.

At the Fontana Steel Mill, the major improvements include equipment to increase production of double reduced thin tin plate, the new product which has gained wide acceptance in the container industry. Other installations include Tocco annealers in the electric weld pipe mill to improve pipe quality; added coil handling capacity and skelp slitting equipment in the hot strip mill to improve efficiency; an 86-inch skin pass mill to upgrade quality and increase capacity in the hot rolled sheet mill; a new machine scarfer, which will automatically condition slabs from the slabbing mill; and an extension of the slab yard.

Now under way at the Corporation's Eagle Mountain Iron Ore Mine in Southern California is a major expansion of facilities which will make it possible for the mine to increase the volume of shipment and reduce costs. The following facilities have also been installed at other locations: a long wall miner at the Company's Sunnyside, Utah, Coal Mine; a 5,000-ton forming press at the Company's Fabricating Division Plant at Fontana, California; machinery to produce automatically welded built-up beams at the Fabricating Division Plant at Montebellow, California; and non-destructive testing equipment at the large diameter pipe facility at Napa, California.

LATEST U.S. WEATHER SATELLITE

America's new Tiros Six weather satellite began sending down excellent quality pictures of weather patterns around the world within hours of launching on the 19th instant. The first pictures were of cloud cover over the Mediterranean Sea and North Africa, taken during Tiros' second pass around the earth.

The new Tiros, originally set for a November launching, was sent up in advance to help Tiros Five hunt hurricanes during the latter part of the season in both the Atlantic and Pacific Oceans. The satellite has an anticipated lifetime of four months. During the first two weeks it will be moving about the earth in the Northern Hemisphere, then moving into the Southern Hemisphere for about 30 days before returning north again.

Tiros (television infra-red observation satellite) vehicles are forerunners of permanent space weather stations. The U.S. hopes to keep two in orbit simultaneously until the more advanced Nimbus satellite is ready in about one year.

NEW PRODUCTS AND PROCESSES

Suspension System for Ceiling Panels

A NEW fully concealed suspension system for ceiling panels, in which every panel is easily demountable, has been developed by an Australian company, Mapco Pty. Limited, of Sydney. The system is claimed to have great simplicity combined with high quality and is also very suitable for combination with exposed ceiling members, in one or two directions. It is known as the "G.C.S." (Goyer Concealed Suspension) system, named after its inventor, Mr. G. Goyer, who is managing director of Mapco. The G.C.S. system consists of bearer members, made of aluminium extrusions running in one direction, and installed normally 2 feet apart. Suspension is provided by ¼ in. galvanised rods. Cadmium plated steel channels are used along the panel edges to avoid sag of the panels. These channels have a spring steel clip at each end, designed to be clipped into the aluminium extrusions used as bearer members for suspension of the panels. A special and very important feature of the system is that at the same time as this "clipping-in" of the panels takes effect, the steel channels along the panel edges lock into a fixed position horizontally with the bearer members, and thereby also act as precision spacers between the bearers. In this way, cross members in the suspension system are eliminated and installation of the panels is fast and easy. Since correct positioning of the panels in both vertical and horizontal direction is predetermined by the design of the system, a first class installation is easily obtained.

Dry Lubricant

In a patent taken out by the English Electric Company, it is stated that a mixture of lead sulphide and colloidal graphite in the ratio of 3:7 by weight provides an effective dry lubricant capable of operating at very high temperatures in a carbon dioxide atmosphere. The mixture can either be brushed or sprayed on to bearing surfaces—a thickness of about 0.0004 inch being the optimum. A film of the mixture has been found to work well in dry carbon dioxide and under vacuum continuously up to 200 degrees C., for limited periods up to 400 degrees C. and in dry air for limited periods up to at least 350 degrees C.

Punch-card Operated Concrete Mixer

The first punch-card operated concrete mixing station in Sweden has recently been taken into use by A-Betong, Strangnas, concrete producers. The plant has cost about Kr. 500,000 ($100,000). The station has a capacity exceeding 400 cu.m. of concrete per day. The weighing of the various mixing materials as well as adding of water are handled automatically by electronic devices with extremely small margins of error. The entire process, which is reported to result in higher and more uniform qualities, can be supervised by one single operator.

New Method of Laying Roofs

A new method of laying roofs of stainless plate has been launched by Rostfria Tak AB, Skara, a roofing enterprise partially owned by and collaborating with Fagersta Bruks AB, the large Central Swedish steelworks. The materials used are 500-mm. wide stainless strips, which are welded on the building site by means of an electric seam welding machine. Since the strips and the joints are completely leakproof, the roof can be designed with the smallest possible slant or even completely flat. Resisting all types of "atmospheric" wear—besides having great strength and impact-resistance—stainless steel roofing is claimed to be particularly suitable in corrosive environments, such as in chemical plants, in smoke-polluted and seaside areas, etc. In order to reduce reflection, the roofing sheet has been subjected to special treatment for giving it a tarnished surface.

Ventilated Jacket for Heat Protection

A ventilated garment, served by an air-cooling unit, has been produced by a British steel firm, United Steel Companies Ltd., Yorkshire. For use in steelworks' crane cabs and other hot surroundings, the jacket, weighing less than 1 lb., is made from "Terylene" sailcloth with a series of ventilation ducts served by a single air intake—a flexible plastics tube. The "coat" has a number of small holes in its outer and inner surfaces which allow a wide distribution of air and gives overall diffusion for the worker's outer garment—such as a boiler suit. The effect is a barrier of cool air insulating the wearer from the surrounding heat. This principle of "dynamic insulation" has been the subject of investigation by a climate and working efficiency unit of Britain's Medical Research Council, working in conjunction with the British Iron and Steel Research Association, and has been shown to be an efficient method of protecting the human body against radiant heat. "Terylene" sailcloth is virtually impervious to air at the pressures involved and, being a woven material, can readily be sewn.

Container and Dispenser for Corrosive Liquids

A combined container and dispenser to meet the requirements of industry for an economical method of handling relatively small quantities of corrosive liquids is now being marketed by a British firm, Turner and Brown Ltd., Lancashire. The unit consists of a circular container made from 18 in. (45.71 cm.) diameter extruded P.V.C. (Polyvinylchloride) tube with a welded plastic base and with a layer of resin-impregnated glass fibre bonded to the outside to give it added rigidity and longer life. A close fitted cover of ⅜ in. (9.52 mm.) P.V.C. can be securely bolted to the tank through a 1½ in. (3.81 cm.) plastic flange welded to the rim of the container. A patent hand pump is in turn bolted to the cover. The pump, which works on the piston and non-return valve principle, is simple and is made entirely of P.V.C. with a minimum of working parts. It is claimed to be completely non-reactive to all the more common liquids used in industry and the hard-wearing nature of P.V.C. enables the piston, cylinder and non-return valve to remain dimensionally accurate for an indefinite period. It requires no servicing other than a rinse when different liquids are dispensed. The pump is capable of delivering a maximum of 11 gallons (50.006 litres) of liquid per minute and by a valve being incorporated in the outflow pipe the flow of liquid can be accurately controlled.

Fibre Glass Filter

Special filters made of glass fibre which can extract particles of 0.3 micron diameters at an efficiency level of 99.9 per cent and at high temperatures, have been developed by a firm in Gloucestershire, Evans Adlard and Co., Ltd. Designed for use where the highest possible filtration efficiency is required, where long life is essential and where humidities of up to 100 per cent exist, the filters can be operated at constant temperatures of 500°C. They have the advantage over esparto grass-based filters of being rot and insect proof, are unaffected by acids, and bacteria will not grow through them. Their efficiency never varies—unlike natural fibres. The filters are already being used in nuclear power stations, where large volumes of absolutely clean air are required. One filter is capable of handling 1,000 cu. ft. (16387.1 cu.m.) of air a minute. The filters are also being used for hospital operating theatres, laboratories, precision engineering and pharmaceutical manufacturing.

Cryosurgery System Control Unit

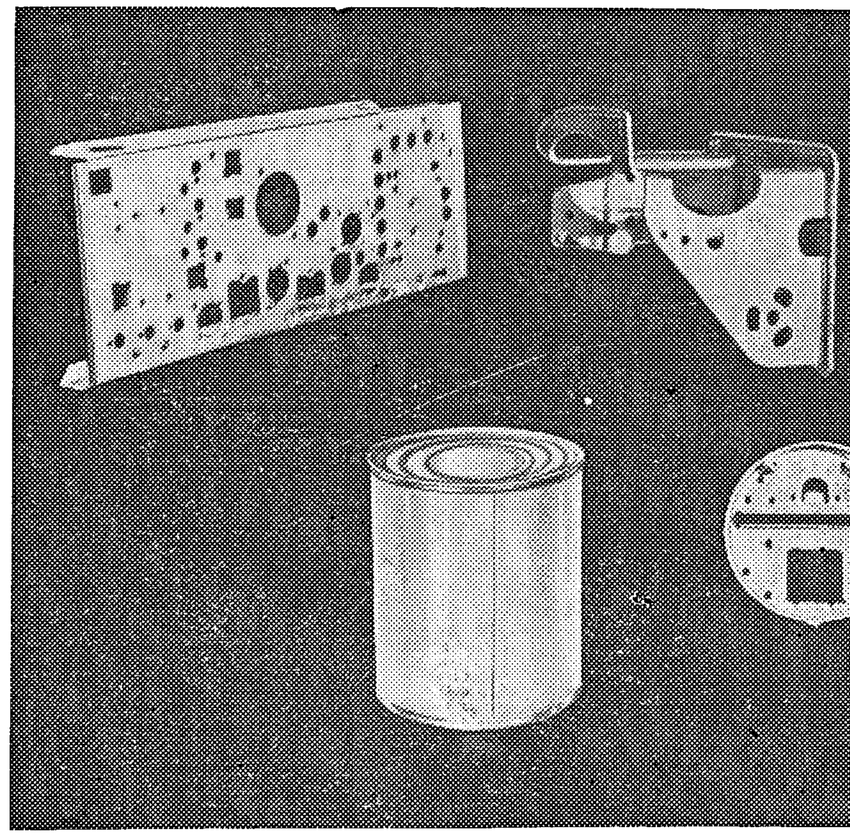
Special equipment for use with the radically new surgical freezing technique developed by Dr. Irving S. Cooper, Director of the Department of Neurosurgery at New York's St. Barnabas Hospital, is now available from Union Carbide Corporation. The Cooper technique makes use of freezing as a surgical tool—at temperatures as low as 100 degrees below zero centigrade (minus 150 degrees Fahrenheit). The control unit made by Union Carbide for the Cooper cryosurgery system regulates the flow of liquid nitrogen, which provides the ultra-low temperature. The nitrogen is delivered through the tip of an insulated instrument known as a cannula—sometimes referred to as the "cold knife." The cannula freezes the affected tissue so that it is destroyed and eventually absorbed in the body. This cryosurgery evolved out of more than 10 years of research by Dr. Cooper on cases of parkinsonism, or "shaking palsy" as it was once known, in which he treated patients successfully in more than 1,400 operations by destroying small localised areas of brain tissue. The key operating features of the cryosurgical control unit include automatic temperature control of the cannula tip to within one degree centigrade of the preselected temperature, continuous monitoring and recording of the temperature, and electronically controlled circuits that permit the neurosurgeon to regulate temperature.

Safety Net

One of the biggest safety nets ever used in Britain is being employed in the construction of the £2¼ million Medway Bridge in Kent. Manufactured by London Spinning Co., London, from lightweight nylon, the net covers more than a quarter of an acre when fully extended. The new bridge carries the 25-mile long M.2 motorway, which will relieve traffic congestion in the Medway towns when it opens in summer, 1963. The safety net has been erected above a railway line which passes between piers five and six on the west bank. Although it has ample strength to catch a man if he should fall, its main purpose is to prevent debris and materials from falling onto the track or trains while the work is going on. The net has a 4 in. mesh and is made from braided nylon cord with a 500-lb. breaking load. This is overlaid with a ¾-in. mesh net made from black bitumen-treated nylon with a 50-lb. breaking load which is designed to catch small particles. Nylon is chosen for its combination of strength and durability with lightness in weight. The netting is 160 ft. by 80 ft. when fully extended and the total weight is about 8½ cwt. A natural fibre net of comparable size and strength would have weighed several times as much and would have presented formidable handling difficulties.

New Loading Platform

A new loading platform which operates through a photo-electric cell is being produced by a London firm, G. Hunter (London) Ltd. When a lorry passes a beam of light the platform or "dock leveller" rises to maximum height. On passing a second beam the platform lowers slowly to fit safely against the lorry tailboard. When the loading or unloading is finished and the lorry is leaving, the reverse action takes place, the platform rising to clear the lorry and then lowering to its original position as an integral part of the loading bay.



What have components to do with a can?

What has a radio or bicycle component to do with a can?

Plenty! It has to do with what engineers term "press tool know-how". Engineering experience in precision drawing and forming of sheet metal for packaging has been extended by Metal Box to the production of vital industrial components.

From clutch-covers to extruded transformer cans, Metal Box serves the radio, automotive and electrical industries with a wide range of precision-made components, all of which were previously imported. These—and the essential can-closing and bottle-sealing machinery manufactured in India by Metal Box—help save over Rs 60 lakhs of valuable foreign exchange every year. And Metal Box machines are exported too.

BONUS FOR BANK EMPLOYEES

DESAI TRIBUNAL LAYS DOWN PRINCIPLES AND CONDITIONS OF ELIGIBILITY

THE fate of the Desai Award on wage scales and other conditions of service of bank staff is still hanging fire. While the Indian Banks' Association has accepted the award in full, the All-India Bank Employees' Association, led by the Communist Party, has denounced the award. It has been trying, albeit unsuccessfully, to persuade the Banks' Association to agree to direct negotiations for ensuring a better deal for bank employees than the one given in the Desai Award. There have also been frequent threats of strike. In this atmosphere of continued discontentment among bank employees, the publication of the second part of the Desai Award relating to bonus has caused little enthusiasm either among bankers or bank employees in the country. In fact, this bonus award has received hardly any notice. The award does not specify the quantum of bonus a bank should pay. Instead, it merely lays down the principles and conditions under which bonus is payable to bank employees, the qualification for eligibility for bonus and the method of computing the same.

One of the preliminary objections raised by the All-India Bank Employees' Association before the Tribunal was that, since all aspects of bonus were being examined by the Bonus Commission, the Desai Tribunal should not entertain a reference relating to bonus and should direct the parties to appear before the Commission and place their views before it, if they so desired. Mr. Justice Desai rejected the plea on the ground that the functions of a Tribunal and a Commission were distinct and separate. He defined the functions of the Tribunal *vis-a-vis* the Commission as follows:

"Merely because a Commission is appointed, a National Tribunal cannot cease to function or reject the reference. One cannot predict and say that the recommendations of the Commission would be incorporated in an Act of Parliament. A National Tribunal has to function within the limits of the industrial law as laid down by the legislature and as set out by the Supreme Court. The reference to this Tribunal relates to certain banking companies and their workmen and this Tribunal has to examine the question of bonus within the limits of the industrial law and within the limits of the terms of reference. It is not open to this Tribunal to direct any parties to appear and place their views before the Bonus Commission. The mere fact that Government has appointed a Bonus Commission would not constitute a valid ground for rejecting the reference, and the demand made in that connection cannot be acceded to."

Rationale of the Reference

The Tribunal also rejected the Bank Employees' contention that the reference was bad in law, because the subject under reference did not constitute a valid industrial dispute under the Industrial Disputes Act, 1947. It was contended on behalf of the employees that there could not be a reference in connection with the general principles governing bonus without there being a reference in connection with the quantum of bonus to be awarded. Dismissing these arguments as untenable, Mr. Justice Desai made the following observations which sums up the rationale of the reference:

"A dispute concerning bonus may relate to the general principles on which bonus can be claimed or be awarded, including the method of computation of bonus, the qualification for eligibility and conditions under which it is payable. It may also relate to the quantum thereof, having regard to the application of those principles to the facts pertaining to a bank or banks in each year. A dispute may relate to either of these matters or both these matters. Where numerous banks are concerned and where the disputes relate both to the general principles and to the quantum of bonus payable by the banks for any particular year or years, it is open to the Government to refer the disputes relating to principles governing bonus applicable for any particular year or years. A similar reference was made by the Government when the Sen Tribunal was appointed and also when the Sastry Tribunal was appointed. In a dispute relating to general principles governing bonus, all the banking companies may be interested, whilst, in a dispute governing the quantum of bonus payable for a particular year, if bonus is payable unitwise, the particular bank concerned alone may be interested, and if bonus is payable by banks classwise, a particular class of banks alone may be interested. It is both lawful and eminently just and convenient that, where general principles relating to bonus are in dispute, all banking companies interested therein should be made parties to one reference. There is no merit in the plea that there cannot be an industrial dispute in connection with the matter referred to this Tribunal "for reasons of vagueness and uncertainty," as alleged. There is no vagueness or uncertainty in the reference. If a dispute concerning principles governing bonus involve a question of national importance and also is of such a nature that industrial establishments situated in more than one State are likely to be interested in, or affected by, such dispute, it can be referred for adjudication by a National Tribunal, without the Tribunal being burdened with a reference relating to the quantum of bonus which may have to be paid as a result of the working out and application of the principles so evolved for particular years by particular banks or a class of banks. In my view, Government had sufficient reason to come to the conclusion that an industrial dispute existed or was apprehended, as stated in the reference, and was empowered and entitled to make the reference."

The terms of reference required that the Tribunal should lay down principles and conditions under which bonus, that is, profit-bonus, as distinct from production bonus, bonus as an implied term of contract, festival bonus or goodwill bonus, would become payable and the qualification for eligibility and the method of computation in connection with such bonus. There was an overriding provision in the terms of reference that this had to be done after taking into account all matters for which provision is necessary by or under any of the Acts applicable to banks or which are usually provided for by banks. The concept of profit bonus and the conditions which have to be satisfied before a bonus demand could be justifiably made have been set down by the Supreme Court in several cases. In Muir Mills case, for instance, the Supreme Court ruled as follows:

"There are two conditions which have to be satisfied before a demand for bonus can be justified and they are: (1) when wages fall short of the living standard and (2) the industry makes huge profits a part of which are due to the contribution which the workmen make in increasing production. As both labour and capital contribute to the earning of the industrial concern, it is fair that labour should derive some benefit, if there is a surplus after meeting prior or necessary charges."

Nature of Bonus

Within the limits set by this definition and the overriding provision contained in the terms of reference, the Tribunal examined the claims of the employees and banks. It rejected the plea of the All-India Bank Employees' Association that bonus is a deferred wage and that workers have a right to claim bonus, when wages fall short of the living standard, irrespective of whether or not the industry made a profit. The contention by one of the banks that the bonus was only ex-gratia payment was also not upheld by the Tribunal. Its line of reasoning was as follows:

"Bonus is neither an ex-gratia payment made by the employer to his workmen nor is to be regarded as a deferred wage. The broad idea underlying this concept is that capital invested by the employer and labour contributed by workmen jointly produce profits of an industry. The two-fold basis of the formula that labour is entitled to claim a share in the trading profits of an industry because it has partially contributed to the same and that labour is entitled to claim that the gap between its actual wage and the living wage should, within reasonable limits, be filled up, has always to be kept in mind. The claim made on behalf of the All-India Bank Employees' Association that so long as a living wage was not obtained, workmen have a right to claim bonus, even in cases where the industry was making a loss, runs counter to the very concept of profit bonus enunciated above. It is implicit in the concept of bonus, which constitutes the subject matter of the reference, that its payment depends upon the making of profit and that, when there is a loss, bonus cannot be claimed."

Bonus and Dividend

The Tribunal also did not accept the plea of the All-India Bank Employees' Association that bonus should be linked to dividend. The grounds adduced by it are as follows:

"Linking of bonus to dividends no doubt provides a simple formula for the award of bonus which would avoid recurring annual disputes. By and large, dividends are declared out of profits, though not necessarily of the same year. There are, however, fundamental objections to doing so. If bonus is linked to dividends, a year would no longer be a self-sufficient unit and payment of bonus given in a year would no longer be a payment made necessarily out of the profits of a particular year and in the making of which all the workmen concerned may have participated. The claim of workmen is liable to be circumvented by devices which may lawfully be adopted. In my view, the linking of bonus to dividend, though attractive at first sight by reason of the simplicity of the application of the formula, is opposed to the concept of bonus so far evolved and may not satisfy the claims of labour based on social justice."

The contention of the Indian Banks' Association that payment of bonus should not be made compulsory in the case of banks, as in the case of other industries, and that it should be left to the good sense of the management of the banks concerned was also rejected by the Tribunal. It conceded that banking industry had peculiar features which marked it out from other industries. Nonetheless, banking was not, the Tribunal maintained, above industrial law and workmen employed in it were not to be treated differently from workmen employed in other industries. The Tribunal advanced the following argument in support of its decision:

"It is an industry which is not above industrial law and workmen employed in it are entitled to the same consideration which the workmen in other industries are entitled to at the hands of Industrial Tribunals. Their needs are the same as those of other workmen and the priciples of social justice are equally applicable to them. If anything, the industry being a key industry, it is more necessary than in the case of other industries that labour should be contented and peace should prevail in the industry and that the reasonable demands of workmen should be met and their just expectations should be fulfilled. The fundamental concept that bonus is required to be paid to bridge the gulf between the actual wage and the living wage where an industry makes large profits is applicable to them. Wages in the banking industry are below the level of the living wage. The industry is prospering and by and large substantial profits are made. The mere fact that the Full Bench formula as evolved may not be fully applicable in view of the fact that a bank is required to set apart a certain percentage of its profits to build up reserves upto a certain limit and is permitted, out of the income of any particular year, to provide for unforeseen liabilities and losses which might be incurred in future years and for other "usual or necessary provisions" without disclosing the same, does not render the claim for bonus nugatory."

Full Bench Formula

After examining the applicability of the Supreme Court's Full Bench formula to the banking industry, the Tribunal came to the conclusion that the "formula cannot, in its entirety, be applied to banking, in view of the special protection afforded to the industry under the Banking Companies Act. The Full Bench formula is not a rigid formula and, even in the peculiar circumstances affecting the banking industry and within the limits set by the terms of reference, may still serve for calculating bonus in the banking industry, if suitably modified and applied and if the available surplus is suitably dealt with."

Prior Charges and Deductions

Mr. Justice Desai has discussed at considerable length the question of arriving at the profit on which the bonus should be based, as well as the considerations that should be borne in mind in determining the workers' share. It is well known that certain allocations have a prior charge on the gross profit. In the case of banks, the published profits nowadays do not generally reveal the amounts set aside for taxation, depreciation, bad and doubtful debts, and secret reserves. The banks have also to set aside under law a specified percentage of their published profit to a statutory reserve. Mr. Desai has observed that, in all these respects, the Tribunal has no choice but to respect the requirements under Sections 17 and 34A of the Banking Companies Act. What in effect this means is that these transfers have a prior claim on the profits of banks. If workers contend that a bank has set aside too much to secret reserve in various ways, their contention can be resolved by the Tribunal only on the basis of the Reserve Bank's decision, for it is only the Reserve Bank that has the final say on the question whether a bank has overprovided for secret reserve. Of the balance of profit available after the transfers to these essential reserves, the capital invested in a bank has to be allowed a fair rate of interest. Mr. Desai has fixed this rate at 6 per cent per annum for the paid-up capital, 4 per cent for non-statutory reserves and 4½ per cent for statutory reserves. He has turned down the suggestion of workers' representatives that for that portion of paid-up capital created by the issue of bonus shares the rate of return should be no more than 2 per cent. His reason is that "there is no reason to differentiate bonus share capital from ordinary share capital." He has allowed the provision for rehabilitation, replacement and modernisation as a prior charge, but turned down the banks' plea for similarly allowing the provision for expansion.

The surplus arrived at on the aforesaid basis has three claimants, namely, (1) industry which claims a share for the purpose of its stability, expansion and other needs, (2) shareholders, who claim a share by way of additional return on capital invested by them, and (3) labour, claiming bonus. As regards (1) Mr. Desai has held that the provision of secret reserves and other statutory reserves are sufficient to take care of the banks' needs for protection, stability and growth. He has, therefore, allowed no share in the divisible profit for this purpose. As regards the claims of shareholders and workers, he says:

"The shareholders would be getting not merely the interest provided for them by way of return on paid-up capital but would benefit by the return provided in connection with reserves used as working capital. Money is the stock in trade of banks and reserves would ordinarily be used as working capital. The building up of reserves is obligatory upto a limit in the banking industry and is further required to be done under the convention sought to be established. The extent of the reserves which have been built up and the return provided thereon would have to be taken into account by tribunals whilst distributing the available surplus. In distributing the available surplus, the reduction in income-tax by reason of the payment of bonus will have to be taken into account. In this connection, however, it will have to be borne in mind that where appropriation for payment of bonus has been made in the balance-sheet and directors' report, the reduction in the amount of tax payable by reason thereof to that extent is generally taken into account by banks whilst making a provision for tax on income. In view of the provisions made as aforesaid under the scheme as evolved, generally speaking, labour in the case of a number of banks will become the *major claimant*. The term labour will cover both workmen and non-workmen."

Ceiling on Bonus

The one-man Tribunal has turned down the suggestion of banks that there should be a ceiling on bonus. Quoting the relevant judgments of the Supreme Court, the Tribunal has held that "it would be inadvisable and inexpedient to put a ceiling in the matter of awarding bonus." In conclusion, it says:

"The formula as evolved in order to satisfy the requirements of law relating to banking companies and the limitations imposed by the necessities of the situation and the terms of the reference is sufficiently elastic to meet the just claims of labour if what is implicity in the formula as evolved is kept in view and given effect to. The Tribunal dealing with the question of bonus for a given year will have to attempt to do justice between the parties without some of the relevant matters being disclosed to the Tribunal. Such a procedure may not appeal to a judicial mind. Non-disclosure of these matters has become necessary for the maintenance of this delicate instrument of credit in the larger interests of the public and the best that is possible will have to be done within the limitations imposed by law and public policy."

So far as the Exchange banks are concerned after bringing out the differences between the Indian banks and Exchange banks in regard to paid-up capital and reserves and after saying that the Tribunal should bear in mind the special considerations conceded by the Reserve Bank for purposes of retaining a part of their profits in India, Mr. Desai has held that his general observation that, in the case of a large number of banks, labour will be the claimant for the major share in the available surplus will not apply and is not intended to apply to the Exchange banks, "One cannot," he says, "predicate and say what the share of labour will be in the available surplus in the case of Exchange banks in any given year."

Eligibility for Bonus

On the question of the qualification for eligibility to bonus, the Desai Tribunal largely agrees with the conditions laid down by the Sastry Tribunal. The main qualifications for eligibility are:

(1) There should be no rule laying down any minimum period of service during the year for which bonus is declared.

(2) An employee will be eligible for bonus, even if he is not in the actual service of the bank on the date when bonus is declared.

(3) An employee who is dismissed for misconduct shall not by reason thereof alone be ineligible for bonus. Any financial damages suffered by the bank will, however, be recoverable against this bonus.

(4) Apprentices would not be eligible for bonus.

(5) Bonus should be paid on a percentage basis, that is to say, a percentage of the basic pay plus allowances, if any, exclusive of overtime.

It will thus be seen that the Desai Tribunal has only laid down the principles to be followed in determining the bonus and not the precise formula for dividing the divisible surplus between a bank and its workers. The Tribunal is very vague when it says that the workers should be the major claimant. What exactly should be the share of the workers in the divisible surplus—51 per cent, or 60 per cent or 70 per cent? There is no answer to this crucial question in the award. So the battle for bonus has not been decided and will go on endlessly. Perhaps, each bank will have to go to a tribunal to determine the dispute, if it fails to reach a mutually satisfactory agreement with its workers.

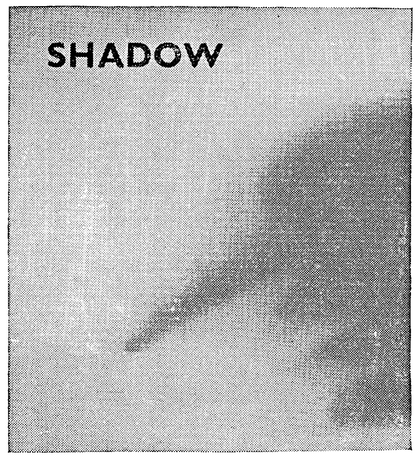
RECEIVED 1 OCT 1962 PUBLIC DEPARTMENT

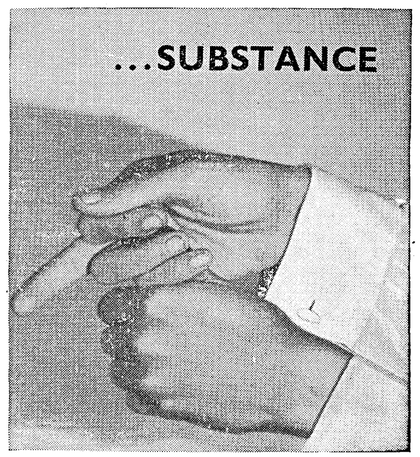
COTTON

(*Concluded from page 552*)

Sudan: Both acreage and yield in Sudan last season were higher than could reasonably be expected. With the completion of Phase III and Part I Phase IV of the Managil Extension, acreage under extra-long staples increased by nearly 50,000 acres. Exceptional flooding of the Tokar Delta and a marked increase in the rain-grown area resulted in a total increase in short-staple acreage of almost 190,000 acres. Conditions during the growing and harvesting periods were almost ideal, infestation and disease were held to a minimum, and yield, accordingly, rose to an all-time record high. Assuming more normal conditions, neither acreage nor yield would be as high as last season. There will, in all probability, be a further increase in extra-long staple acreage with the completion of Final Phase IV of the Managil extension. In American types, although there could be a further expansion in the raingrown areas, Tokar acreage is hardly likely to be as large as in 1961-62. The major factor concerning production prospects this season, however, is yield and, on the assumption of average yields, total production in Sudan would decline to around 750,000 bales, as compared with 900,000 bales in 1961-62. This must not be construed as an actual estimate, however. Yield, and therefore production, can vary widely and about the only thing that can be said at this stage is that the chances are that production will be lower.

The higher world production is, however, likely to be partly offset by the lower carry-over stock at the beginning of the season. Thus, as against an estimated increase in production of 2 million bales, carryover stocks, at 18 million bales (7.7 million bales in the U.S., 8.7 million bales in free-world countries outside the U.S. and 1.6 million bales in the U.S.S.R.), are lower by one million bales, as compared with the stocks brought in. Hence total supply is expected to increase by only one million bales to 60.4 million bales, as compared with 59.4 million bales during the last season. The free world accounts for stocks of the order of 16.4 million bales and production of 35.1 million bales and U.S.S.R., including Eastern Europe, for stocks aggregating 1.6 million bales and production of 7.3 million bales.





Many things cast deceptive shadows.

Your files, for instance. Your notes, ledgers, lists and journals—your records. If you are connected with any kind of operations Control—running a business an office, an army—you have probably been worried by the shadow cast by your records—worried about what they added up to. You probably have to assess situations everyday by leafing through masses of paper—charts, reports, data.

Try Remington Systems. They can be tailored to your business, so that your records and information are not only arranged for easy reference—they provide an automatic *Control* of your operations. They can tell you when to act, even how to act.

And they are simple to use.

RR/9/118

PROGRESS OF PLASTICS INDUSTRY

MANUFACTURERS PLEAD FOR MORE IMPORTS OF RAW MATERIALS

THE plastics industry has made rapid progress during the last decade, despite the non-availability of primary organic raw materials within the country. The moulding powder sector of the industry, in particular, has made great strides enabling the development and diversification of the processing sector. Thus the growth of a wide range of processed goods, such as phenolic laminates, p.v.c. (unsupported sheets) and consumer goods like tooth brushes, fountain pens and spectacle frames, has received considerable stimulus. The recent trends in the growth of installed capacity and production of processed goods are shown in Table I. In the moulding powder sector, the installed capacity at the end of the second Plan actually exceeded the targets originally envisaged by about 2,700 tons to touch 9,463 tons. The output aggregated 12,745 tons, as against only 700 tons in 1955. The progress would have been much more striking but for the scarcity of basic raw materials. Until a few years ago, almost all moulding powders were based on imported intermediates, with the exception of polyethylene derived from ethylene from alcohol. But the situation has now changed perceptibly, with the commissioning of new large units for the manufacture of polystyrene, polyethylene and polyvinyl chloride, during the last few years. Table II shows the recent trends in production and installed capacity of various types of moulding powders.

The industry is likely to receive a big boost, if some of the primary raw materials become indigenously available, as is planned, during the third Plan period. So far only polyethylene, it may be noted, has been based on wholly indigenous raw materials. It is now expected that styrene monomer will also be produced during the third Plan period. Phenol is also expected to be produced in large quantities from the Durgapur Coke Ovens in West Bengal and Basic Chemicals and Intermediates plant to be set up in Maharashtra in the public sector, besides some other units in the private sector. Urea and formaldehyde are also expected to be available indigenously within the next three or four years. If all the third Plan projects go on stream, as scheduled, and the proposed petro-chemical projects of the private sector are also actively encouraged, almost all the major primary raw materials will be produced within the country itself.

Third Plan Targets

The development of domestic sources of raw materials will remove the major hurdle in the way of the industry's progress. The Planning Commission has estimated that, in order to meet fully the domestic demand and exports, production of moulding powders has to be raised by over sevenfold to 74,000 tons, with an installed capacity of 85,000 tons. Licences have already been granted for the establishment of several new units and expansion of existing ones for raising the installed capacity for moulding powders. The third Plan's *Programmes of Industrial Development* gives the list of moulding powder manufacturers who have been licensed for setting up new units and for expansion. This list is reproduced (in Table III) in order to enable the readers to get a clear idea about the growth of the industry.

It will, of course, take time for these units to commence production. So, in the meantime, the plastics industry will continue to face shortage of raw materials, which needs to be eased. It is only appropriate, therefore, that the conference organised by the All-India Plastics Manufacturers' Association in Bombay this week should have devoted special attention to this aspect of the industry's problems. The conference was inaugurated by Mr. S. K. Wankhede, the State Minister for Industries, and presided over by Mr. Lalchand Hirachand. In his welcome speech, Mr. K. K. Mody, Chairman of the Conference, drew pointed attention to the fact that the scarcity of raw materials has deteriorated during the current year. He was particularly concerned about the slash, ranging from 15 to 40 per cent, in the import licences granted to actual users recently, as a result of foreign exchange difficulties. This cut, according to him, affected adversely many units "resulting in dislocation of production." Mr. Mody made a fervant plea to the Government of India to restore the cut in import licences for plastics raw materials. This plea deserves to be considered sympathetically by the Government of India, for the country can ill-afford to starve fast-developing industries like plastics of raw materials. The industry certainly is justified in asking for a share of the untied foreign aid now granted for the import of essential maintenance items.

Shortage of Machinery

Another major difficulty of the plastics industry relates to the non-availability of machinery and equipments. Having chalked out an ambitious programme of development for the industry, involving an additional investment of Rs. 25 crores, it is only proper that the industry's requirements of plant and machinery be met adequately. It is reported that a licence has been granted to a Calcutta firm for putting up a plant to manufacture plastics machinery, in technical collaboration with an Austrian company. This is a welcome development, but it does not relieve the difficulties in the short run. Therefore, for the time being, India has to depend on imported machinery. Mr. Mody was, therefore, on strong grounds when he requested the Government to allow import of machinery and equipments "on a scale that will take into consideration the increase in production of raw materials envisaged in the third Plan." In this connection, it may be recalled that a plastics convention held in Calcutta last month too voiced the grievance of the industry in this respect. The convention called upon the Government to allow the import of prototypes of machines, mother machines and component parts to manufacture such machinery, apart from encouraging the establishment of units within the country in collaboration with reputed foreign firms.

These shortages of raw materials and machinery have not prevented the Government from levying high rates of excise duty. According to Mr. Mody, the incidence of excise levy at 20 per cent *ad valorem* is too heavy. Another point stressed by him relates to the prices of raw materials. He called upon manufacturers of raw materials to reduce prices of their products to a "reasonable level." This, of course, has a close bearing on the cost of production and the prospects for exports. Exports of plastics have been increasing of late, being as much as Rs. 83 lakhs in 1961-62, as against only Rs. 73 lakhs in 1959-60. In order to promote exports, the Calcutta convention last month made certain important suggestions which deserve to be widely known. The suggestions are:

1. Provision should be made for making raw materials, indigenous or imported, available to the manufacturers-exporters at international *c.i.f.* prices to the extent of twice the value of raw material contents in export or 75 per cent of the *f.o.b.* value thereof, whichever is lower, and if the manufacturers-exporters so require, the entire entitlement against export should be allowed to them for import of up-to-date machinery for the manufacture of quality goods for export.

2. Advance allocation of imported or indigenous raw materials at international prices should be made, if there is no entitlement against export or confirmed order in hand in order to enable the firm to explore possibilities of exports of its products, basing prices thereof on the international prices of raw material.

3. There should be no discrimination against exporters dealing with rupee payment countries in respect of the grant of licences for the import of raw matrials under the export promotion special scheme for the manufacture of goods for exports.

4. A liberal import policy on an *ad hoc* basis should be adopted in respect of up-to-date machinery required for manufacturing exportable goods.

5. Shipping companies now charge freight on the basis of weight or volume, whichever is higher. They should be persuaded to charge freight on the basis of weight in respect of plastic goods, which generally are light in weight and cannot bear the charges if made on volume basis.

6. If any change in the customs and excise duty is made, an immediate revision of the drawback rates should also be made. Drawback procedure should be so simplified as to enable exporters to get speedy refund of duty.

7. Costing is an approved method in the plastics industry. Plastic coated packaging material even in case of jute fabrics should be regarded as products of the plastics industry and exports of such packaging material should be recognised as exports of plastic goods to the extent of the value of the plastic content.

8. The present scheme for release of imported polythene granules ex A.C.C.I. stock allows a wastage of only 5 per cent. In the small-scale sector where the plastic products are manufactured by hand-operated machines, the wastage may sometimes go upto 30 per cent. The material should therefore be released, including wastage plus incentive to exporters for exports promotion in the extent of 50 per cent. This imported polythene from A.C.C.I. should be allowed to be released at 150 per cent of the polythene contents in the goods exported or to be exported.

9. Prospective licences for raw materials should be issued to exporters who have obtained repeat business without insisting on the formality of completion of obligation against a previous licence. New licence may, however, contain a clause restricting its usage until after completion of 50 per cent of the previous obligation. This will enable the exporters to be better placed when negotiating fresh business.

10. Merchant exporters should be given a direct incentive against exports made by them.

In view of the emphasis now laid on export promotion, the aforesaid suggestions assume special significance. The Government and the Board of Trade will do well to examine them and help the industry export more.

TABLE I—*Production of Processed Goods*

INDUSTRIAL ESTATES

As many as 1,384 factories are now functioning in 69 industrial estates set up in different parts of the country. These estates employ about 19,000 persons and produce goods worth Rs. 16 crores annually. Almost the entire allocation of Rs. 11.38 crores earmarked under the second Plan for the establishment of estates was made use of during the Plan period. For the third Plan period, a much larger allocation of Rs. 30.2 crores has been made. It is proposed to set up 300 new industrial estates of varying sizes and types to be located as far as possible near small and medium-sized towns. Of special interest is the programme to start a number of such estates in those rural areas where power, water supply and other essential facilities would be readily available. A scheme for setting up industrial estates by private agencies, including co-operative societies, has also been evolved. The establishment of functional industrial estates to meet the special requirements of particular industries, such as automobile ancillaries, light machine tools, radio components, timepieces, clocks and watches, etc., has also been taken in hand.

The establishment of a central agency for tackling the problems connected with exports of Indian films has been recommended by the Export Promotion Committee for Films. The Committee is of the view that, in the case of countries where trade is conducted on a Government-to-Government basis, the State Trading Corporation should undertake this work. A detailed scheme for the central agency is proposed to be prepared by the Indian Motion Picture Producers' Associations and the Film Producers' Guild of India. Among other things, the central agency is expected to take steps to secure full benefits from exports by devising measures to prevent unauthorised export and exhibition of films. It will also study and investigate the potential markets, open sales promotion offices, arrange for theatres for exhibiting films and undertake intensive publicity in various countries.

INDIAN STEEL ROLLING MILLS

LESS RETURN ON HIGHER CAPITAL

IT is from the year ended 31st March 1962 that the Indian Steel Rolling Mills Ltd. (Chairman: Mr. C. R. Ramaswamy, Madras) has really come into its own. For, founded in 1934 to establish a steel re-rolling mill and to manufacture mild steel products, such as rounds, flats and squares from 3/16" to 2" and cotton baling hoops which are in good demand in Madras State, the Company worked with the Tata Iron and Steel Company Ltd. on a profit-sharing basis from April 1940 to March 1961 under an agreement which laid down that T.I.S.Co. would run the Company's factory as contractors and provide it with the necessary billets for rolling. Under the agreement, the Company was given a certain share in Tata Steel's profit and the T.I.S.Co. was given a 50 per cent share in the Company's profit. Since the expiry of the agreement on 1st April 1961, the Company has been managing its affairs itself with the technical assistance and advice from Tata Steel for a fee not exceeding 10 per cent of the Company's net profit.

The results for 1961-62 reflect, therefore, the benefits of direct control and management by the Company of its affairs. During the year, production and sales of steel bars/rods amounted to 26,198 tonnes and 24,849 tonnes, respectively, as against 30,744 tonnes and 30,681 tonnes in the previous accounting period which covered 15 months following a change in the year-end from December to March. On the annual basis, both production and sales during the year were higher as compared with 23,725 tonnes and 23,858 tonnes, respectively, in the calendar year 1960. Since January 1961, production of baling hoops has been stopped. In 1960, it amounted to 515 tonnes and sales thereof stood at 559 tonnes. Production in the wire mill also showed improvement on the annual basis. In 1961-62, 2,767 tonnes of wires were produced and 437 tonnes sold, as against 2,579 tonnes and 390 tonnes in the calendar year 1960. Likewise, production of wire nails improved from 2,046 tonnes to 2,067 tonnes and so did sales thereof from 2,055 tonnes to 2,082 tonnes. The aggregate figures of production and sales in the previous 15-month accounting period were: wires 3,266 tonnes and 565 tonnes, respectively, and wire nails 2,626 tonnes and 2,638 tonnes, respectively.

The sale proceeds for the year amounted to Rs. 162.40 lakhs. After meeting the manufacturing and other expenses, the gross profit works out to Rs. 12.53 lakhs as against Rs. 11.81 lakhs in the previous year. Depreciation has claimed Rs. 2.40 lakhs (Rs. 3.06 lakhs a year before) and taxation Rs. 4.30 lakhs (Rs. 4 lakhs). The net profit at Rs. 5.83 lakhs is higher by Rs. 1.08 lakh. A provision of Rs. 1.01 lakh is made for the technical assistance given by the T.I.S.Co. A sum of Rs. 1.10 lakh has been drawn from reserves, as against nothing in the previous year, and some Rs. 55,000 have been ploughed back as against Rs. 1.20 lakh. The return on the Rs. 10 equity shares has been pruned from 12.5 per cent per annum to 10 per cent per annum, subject to tax, which is, however, on an increased capital of Rs. 48.79 lakhs as against Rs. 23.79 lakhs a year before. The total amount distributed by way of dividend has increased from Rs. 2.97 lakhs to Rs. 4.88 lakhs.

The table below gives an idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March 1962	From 1st January 1960 to 31st March 1961	For the year ended 31st December 1959	1958

† Subject to deduction of tax.

We are told that but for the difficulties in transporting billets by sea from Calcutta to the factory site at Negapatam, the output of bars and rods would have reached a record figure of 30,000 tonnes last year. The transport situation has, however, improved since then and efforts are being made to attain a higher level of production. In this respect, the adaptation of the existing coal-fired furnace to oil, made last year, would prove quite helpful. All the components of a new billet re-heating furnace of a larger capacity, which were ordered last year, have been received and the furnace will be commissioned before the end of the current year. The Company has received proposals from Messrs. Demag, A.G., Germany, for modernising, improving and replacing the worn-out equipments of the 10" and 14" mill and for installing a new four-stand continuous wire rod finishing mill to roll wire rods and hoops. The proposals are said to have been approved by the Government in principle and release of the necessary foreign exchange for the project is said to be under consideration. The work connected with the extension of the crane runway has been completed and has been of great help at the finishing end of the mills. The additional crane ordered last year is expected to be received and installed shortly. To diversify the production in the wire mill plant, it is proposed to increase the output of galvanised wires and tested and special steel wires.

The Company is in a fairly satisfactory financial position. Its paid-up capital of Rs. 53.83 lakhs is made up of Rs. 5 lakhs in preference shares, Rs. 48.79 lakhs in ordinary shares and some Rs. 4,000 being forfeited shares. As against this, reserves and surplus aggregate just Rs. 3.29 lakhs, but this can be explained by the fact that the Company hardly had any opportunity to build up reserves in the past. Secured loans at Rs. 27.92 lakhs represent bank borrowings. Last year, the secured loan liability amounted to Rs. 5.60 lakhs, representing debentures Rs. 5 lakhs and interest accrued thereon Rs. 60,000. Current liabilities and provisions aggregate Rs. 18.81 lakhs as against which are available current assets, loans and advances aggregating Rs. 84.16 lakhs. Investments total some Rs. 9,000. Miscellaneous expenditure of Rs. 30,000 is yet to be written off The gross block, which increased during the year from Rs. 37.44 lakhs to Rs. 40.64 lakhs, has been written down to Rs. 19.30 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 11.80 *cum-div.* On the *ex-div.* basis, they offer a net yield of 6.3 per cent per annum.

(THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS)

INDUSTRIAL FINANCE CORPORATION OF INDIA

INCORPORATED UNDER THE INDUSTRIAL FINANCE CORPORATION ACT, 1948 (XV OF 1948)

ISSUE OF 4½% BONDS, 1974

(Guaranteed by the Central Government under Section 21 (2) of the I.F.C. Act, 1948)

REPAYABLE AT PAR ON THE 28th SEPTEMBER, 1974

Amount of Issue: Rs. 6,00,00,000/-

Issue Price: Rs. 99.50 for every Rs. 100/-

1. The bonds are being issued for augmenting the resources of the Corporation to meet the demands of industries for financial assistance.

2. The bonds are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act and are also eligible for grant of advances to scheduled banks by the Reserve Bank of India. They are on the approved list of securities of the State Bank of India.

3. Applications will be received at the branches of the Reserve Bank of India at Bombay, Calcutta, Madras, New Delhi, Nagpur and Bangalore from the 28th September, 1962 to the 5th October, 1962, both days inclusive, unless the subscription list is closed earlier. Copies of the prospectus and application forms can be had from the above offices of the Reserve Bank of India as also from the Head Office of the Corporation at Reserve Bank Building, 6 Parliament Street, New Delhi, and branches at Liberty Building, 8 Marine Lines, Bombay-1, P 11 Mission Row Extension, Calcutta-1, and 38, White's Road, Royapettah, Madras-14.

4. Interest will be paid half-yearly by the Head Office and the above branches of the Corporation.

5. The Corporation reserves the right to retain subscriptions received up to 10 per cent in excess of the sum of Rs. 6 crores.

6. Arrangements will be made for listing of these Bonds at the Calcutta, Bombay and Madras Stock Exchanges.

7. Brokerage will be paid at the rate of 6 nP per Rs. 100/- to recognized banks and brokers on allotments made in respect of applications for the Bonds bearing their stamp.

K. P. MATHRANI,
Chairman.

NEW DELHI,
Dated: 14*th September*, 1962.

DA-1036 (5)/62

PERIA KARAMALAI TEA

SHARP ALL-ROUND SETBACK

FOLLOWING a perceptible fall in the harvest of tea crop from 2,332,142 kgs. to 2,135,550 kgs. at an all-in-cost of Rs. 3.90 per kg., as against Rs. 3.14 per kg. in the previous year, the Peria Karamalai Tea and Produce Company Ltd. (Managing Agents: Messrs. Peirce Leslie and Company Ltd., Coimbatore) has suffered a sharp all-round setback during the year to 31st March 1962. The setback has been accentuated by a lower average price realised for tea at Rs. 4.60 per kg. as compared with Rs. 4.88 per kg. in the preceding year. Thus, sales proceeds of tea have declined sharply from Rs. 112.90 lakhs to Rs. 97.70 lakhs, which is the lowest level recorded in the past four years. The Company has fared badly in its other items of interest, namely, coffee and cardamom. The coffee crop harvested during the year was 2,139 tonnes, as against 5,907 tonnes during 1960-61. It was, however, valued higher at Rs. 2.20 per point as compared with Re. 1.90 per point in the previous year. The 1960-61 valuation was subsequently revised to Re. 1.95 per point and this increase has been credited in the 1961-62 accounts. The cardamom crop at 602 kgs. turned out to be higher as compared with 416 kgs. in the previous year, but the average price realised was lower at Rs. 10.66 per kg., as against Rs. 15.89 per kg. in 1960-61. Realisations from these two crops have, therefore, come down from Rs. 0.24 lakh to Rs. 0.14 lakh. The total income from sales of crops has fallen from Rs. 113.14 lakhs to Rs. 97.84 lakhs.

The substantial decline in the tea crop has not been accompanied by a fall in production costs. The estate expenditure is actually a little higher at Rs. 62.75 lakhs as compared with Rs. 62.59 lakhs a year before, and there is only a marginal relief in selling expenses amounting to Rs. 12.57 lakhs, as against Rs. 13.89 lakhs, and other expenses at Rs. 1.28 lakh, as against Rs. 3.98 lakhs. Therefore, the gross profit has come down with a bang from Rs. 33.83 lakhs to Rs. 22.29 lakhs; a drop of Rs. 11.54 lakhs. The net profit at Rs. 9.31 lakhs also shows a sizable setback of Rs. 4.21 lakhs. The Directors have drawn Rs. 10 lakhs from reserves, as against nothing in the previous year, presumably to provide for gratuity which has claimed the entire sum. The profit ploughed back is a mere Rs. 26,500 (and that too has been set apart for development rebate reserve), as against Rs. 2.07 lakhs a year before. The shareholders have been the worst hit by the year's setback; the interim dividend of 7.5 per cent per annum, taxable, on the Rs. 2 fully paid equity shares was skipped and the final dividend has been just maintained at 12.5 per cent per annum, subject to tax. The total dividend was raised in the previous year to 20 per cent from 13.5 per cent paid for 1959-60. It will be seen that the return for 1961-62 is even lower than what was paid two years ago.

The comparative table below clearly brings out the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales of tea	97.70	112.90	100.60	106.52

* Subject to deduction of tax.

Mr. J. N. A. Hobbs, Chairman of the Company, has traced, in his statement accompanying the year's accounts, the causes for the drop in the tea crop harvested during the year. He has attributed the fall to the delay in rains which curtailed the April-May crops. Subsequently, the monsoon was severe and suppressed growth of tea plants, resulting in depressed crops between June and August. The rainfall was the highest since 1933-34 and caused many landslips. The prices ruled at a satisfactory level until mid-August, whereafter they declined due to the greatly increased production in North India. In fact, they were extremely low in November and December, though they recovered substantially thereafter.

The crop for 1962-63 is estimated at 2,345,750 kgs. at an all-in cost of Rs. 3.62 per kg. Thanks to favourable weather conditions, the Company got off to an excellent start and, at the end of July last, harvested 962,456 kgs. of tea, that is, 232,519 kgs. more than at the same time last year. This is a record crop for the period. One of the estates of the Company has gone over completely to C.T.C. manufacture. The Company will benefit from this, because the produce has been well received in the market and prices have recorded an increase. Mr. Hobbs has observed that, although tea prices generally have been lower this year on account of the large crops being harvested, the outlook has been firmer recently. He has clearly hinted at further increases in costs as a result of the interim increase in wages recommended by the Tea Wage Board (with effect from 1st December 1961) and the enhanced duties on several articles used by tea factories, such as, plywood, aluminium linings, etc. The wage increase would mean for the Company an additional expenditure of Rs. 1,64,373 per annum. Staff expenses last year totalled Rs. 35.80 lakhs, including Rs. 28.02 lakhs paid by way of salaries, wages and bonus. Nevertheless, Mr. Hobbs has assured the shareholders that every effort would be made to keep down costs wherever possible and hopes that the future working of the Company would show satisfactory results.

The financial position of the Company is fairly satisfactory. It has a paid-up capital of Rs. 57.95 lakhs divided into 2,897,440 ordinary shares of Rs. 2 each, which is supplemented by reserves and surplus aggregating Rs. 21.45 lakhs. Current liabilities and provisions total Rs. 32.56 lakhs and are covered by current assets, loans and advances aggregating Rs. 33.55 lakhs. The gross block expanded during the year by about Rs. 6 lakhs to Rs. 119.36 lakhs and has been written down to Rs. 76 lakhs. Inclusive of capital work-in-progress of Rs. 1.76 lakh, it is shown at Rs. 77.76 lakhs.

At their current market value of Rs. 3.19 *cum-div.*, the Rs. 2 fully paid ordinary shares offer, on the *ex-div.* basis, a yield of about 6 per cent per annum, free of tax.

EAST INDIAN COAL FORGES AHEAD

Reporting substantial improvement further in all the fields (production, sales and profit), the East Indian Coal Company Ltd. (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) has forged ahead during the year ended 30th April 1962. Raisings increased from 1,087,040 tons to 1,219,095 tons and despatches from 1,020,537 tons to 1,184,905 tons. Profits, after deducting the colliery and Calcutta expenditure, shot up from £2.07 lakhs to £3.76 lakhs. After meeting the expenditure made at London and other expenses, including cesses of £18.387, as against £13,388 a year before, the gross profit has gone up from £1.89 lakh to £2.47 lakhs. The provision for depreciation has been more than doubled from £27,219 to £58.836 and that for taxation has been increased threefold from £39 000 to £116,250, of which £114,344 (£37,051 in the previous year) are provided for the liability in India and £1.906 (£1,949) for the liability in the U.K. In spite of such a sharp increase in these essential allocations, the net profit at £1.72 lakh shows a rise of roughly £50,000. Together with £16,220 brought forward from the previous year and £23,125 transferred from reserve for contingencies, the total surplus amounts to £211.557, as against £133.983 a year before. The dividend on the £1 fully paid shares has been raised again to Rs. 2.75 per share, subject to tax, from Rs. 2 per share, to which level it was raised in the previous year from Re. 1 paid in 1959-60. The dividend takes away £49.500, as against £36.000 in 1960-61. Transfers to reserves aggregate £155.823 (£81.763 in the previous year) and comprise £125.000 to general reserve and £30.823 to development rebate reserve. In the previous year, development rebate reserve had got £51.763 and a sum of £20.000 was set apart for sand stowing and development reserve. The carry forward is £6.234.

As such, from the very beginning of the year, production ran slightly behind the planned increase of 20 per cent and it became impossible to make up the shortfall subsequently. Underground mining contributed the most to the increase in production during the year in relation to open cast workings which continued to yield less. Further increases in output are projected for the current year and for the remainder of the third Plan period, involving increased mechanisation and development both in virgin seams and in seams which are already being worked. Increased depreciation charges and the higher costs of working areas at greater distances from shaft bottoms are inevitably adding to the overall cost per ton, but every effort is being made by the management to control costs.

Production during the first three months of the current financial year, although substantially less than planned, has been notably higher than the output during the corresponding period a year ago, and it is expected that the planned increase of 33 per cent will materialise during the year. Irregular and insufficient despatches, resulting in accumulation of stocks at the pit heads, have led to a slight reduction in production for the time being. Continued shortages of explosives and electric power have been further limiting factors. In this connection, the Directors hope that the proposed scheme for the movement of coal by road for short hauls could be implemented on a basis equitable to all consumers. In the absence of the facility of road transport, the Company's collieries in the Mugma field were worked on a restricted scale again last year. With the proposed establishment of electric power generating capacity in the area within the next two or three years, the movement position would improve and so would production.

According to the Directors, the recent increases in the coal price have left it yet well short of the level which is required to yield profits on the scale necessary to amortise the heavy capital expenditure involved in increasing production from what are, after all, wasting assets and, at the same time, making it possible to raise and service some part of the capital required for this purpose, which capital must be raised to support larger borrowings. It is in this context that the Directors have expressed the hope that the recently appointed wage board would not, while considering the industry's ability to pay higher wages, lose sight of the urgent need to increase the industry's profit-margin, for they believe that there is no margin available for increased wage costs and these, if imposed, would have to be fully compensated by increased selling prices.

Following the decision of the Supreme Court, the Sutikdih property of the Company is now being developed by the National Coal Development Corporation. The Company has lodged a claim for compensation. The sand stowing scheme has been delayed further, but the plant is expected to work to full capacity by the end of this year. A considerable quantity of coal was recovered last year from the sealed off areas in the Bararee colliery. Efforts to reopen the No. 3 pit at the Kendwadih colliery continue and would prove fully successful this year. The No. 1 pit at the Jealgora colliery and the No. 1 pit at the Bararee colliery have been brought back into production following the installation of electric winders and work has progressed on the development of the No. 2 pit at Jealgora which is now in production; but the planned output will be attained after nine months. The Company has acquired 86 per cent of the issued capital of the Bhulanbararee Coal Company Ltd. with the object of securing a close link with this adjoining property, so that the maximum immediate and economical use could be made of the sand stowing facilities available while at the same time acquiring at minimum cost the opportunity for further increasing the output of high grade coking coal during the fourth Plan period.

All these developments have meant more capital expenditure. Hence the Directors' decision to issue 144,000 ordinary shares as right shares in the proportion of three new shares for every five shares held at a price of Rs. 22 (£1 13s.) per share, in addition to the recent issue of Rs. 50 lakhs 6.5 per cent debentures. Consent to the issue from the authorities in the U.K. has been received but that from the authorities in India is awaited.

The Company's financial position is sound. Its issued capital of £2.40 lakhs is backed by revenue reserves and surplus aggregating £4.79 lakhs. Capital reserves amount to £0.90 lakh. Current liabilities and provisions total £9.01 lakhs and exceed slightly the current assets of £8.39 lakhs, which include quoted investments of £1.35 lakh, of which £1.23 lakh are quoted in Great Britain and command a market value of £0.90 lakh and the balance of £0.12 lakh are quoted outside Britain and command a market value of £0.11 lakh. The gross block expanded during the year from £7.67 lakhs to £9.79 lakhs. It has been written down to £7.61 lakhs. Capital work-in-progress is valued at £1.08 lakh.

The £1 fully paid shares of the Company are currently quoted in Calcutta at Rs. 52.37 *cum-div.* On the *ex-div.* basis, they offer a net yield of roughly 2 per cent per annum.

AMALGAMATED ELECTRICITY DOES WELL AGAIN

With the ever-increasing demand for electricity for both industrial and domestic uses in the country, the Amalgamated Electricity Company Ltd. (Managing Agents: Messrs. N. C. Javeri and Company, Bombay) has naturally done well again during the year ended 31st March 1962. The revenue from sale of energy has gone up further from Rs. 105.75 lakhs to Rs. 122.51 lakhs. Income from other sources has also turned out to be higher at Rs. 7.09 lakhs, as compared with Rs. 5.49 lakhs a year before. Total earnings at Rs. 129.60 lakhs show a rise of more than Rs. 18 lakhs. For an electricity company, which has no inventory to carry, improvement in sales means improvement in production and, therefore, increase in costs. Amalgamated Electricity spent during the year Rs. 22.72 lakhs (Rs. 18.14 lakhs in the previous year) on the purchase of energy. Rs. 51.91 lakhs (Rs. 44.27 lakhs) on generation of power, and Rs. 15.76 lakhs (Rs. 14.95 lakhs) on distribution and sale of energy. Other expenses at Rs. 3.95 lakhs were a shade lower as compared with Rs. 4.98 lakhs in the previous year.

Despite a general increase in costs, the Company has benefited substantially from higher turnover, inasmuch as the gross profit has risen from Rs. 28.98 lakhs to Rs. 35.34 lakhs. Provision for

Proposed dividends on preference shares	91	91
" " on ordinary shares	2,10	4,73
	(10%)	(22½%)
Carry forward	7	2,48

N.B.—Adjustments include the balance brought forward from the previous year, supplementary dividend in respect of preference shares written back and dividend forfeited.

Extracts from the Directors' report: Jute Mills Division: During the period under review, the jute industry passed through many diversities. On account of drought in the Jute growing belts for the last two consecutive seasons, the crop was insufficient to meet the requirements of the industry. Because of severe shortage of jute, production was curtailed by mills in accordance with the working time agreement of the Indian Jute Mills Association by working on increased number of sealed looms and also on reduced hours. The mills worked 42½ hours a week upto 15th October 1961 when the trading conditions of the industry showed some improvement and the working hours were increased to 45 per week from 16th October 1961 to 31st March 1962. Though the weekly working hours according to the Working Time Agreement were 45 with 12 per cent looms sealed, mills were, in fact, allowed to work 48 hours and unseal as many looms as possible against their accumulated loom hours. The limitation in the power supply every now and then hampered production and the situation further deteriorated due to the failure of the generating plants of electric supply companies.

The working for the first half of the year was adversely affected by a wide disparity between the prices of raw material and finished products. The early arrival of the new crop, however, enabled the industry to turn the corner during the latter half of the year and the mills were able to secure business at reasonable margins. Because of the constant rise in the prices of finished goods during the last year, buyers were reluctant to purchase and as such, consumed their own stocks and created thereby a big vacuum. Consequently the demand from overseas markets was steady and with a view to meet it, the Indian Jute Mills Association allowed its member mills to run their looms to the maximum possible extent. Fortunately the bumper crop during the year 1961-62 not only enabled mills to meet their consumption requirements but left large quantities to be carried over to the next year.

The introduction of excise duty by the Government in its buget for the year 1962-63 at the rate of Rs. 250 and Rs. 125 per metric ton on hessian and all other jute products including sacking, respectively has the effect of increased internal consumption cost.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	36,24,812	Gross block	1,36,20,162
Reserves and surplus	25,02,402	—Depreciation	88,01,742
Other liabilities	1,08,41,688	Net block	48,18,420
		Block-in-progress	13,240

Silk Department: Demand for the silk products maintained a good trend. Efforts are being made to promote exports and in fact, repeated orders received from various countries were executed during the year. On account of foreign exchange shortage, the Government imposed restriction on the import of yarn which has resulted in increased price of the raw materials.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	65,00,000	Gross block	1,61,83,743
Reserves and surplus	93,33,109	—Depreciation	90,90,776
Other liabilities	1,17,24,360	Net block	70,83,067
		Current assets	1,50,87,063
		Investments	55,00,387
		Cash	1,86,052
	Rs. 2,75,57,469		Rs. 2,75,57,469

* Paid-up capital consists of 25,000 6 per cent. cumulative preference shares of Rs. 100 each and 40,000 ordinary shares of Rs. 100 each fully paid. Of the above, 25,000 6 per cent. preference shares and 19,969 ordinary shares are allotted as fully paid up pursuant to a contract without payment being received in cash. 20,000 ordinary shares all allotted as bonus shares by capitalisation of reserves.

Hukumchand Jute Mills Ltd.

(*Managing Agents*: Ramdutt Ramkissendass, Calcutta.)

Annual General Meeting: Held on 27th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	6,14,78	5,80,69
Sale of jute	3,54	5
Closing stocks	1,78,12	1,70,48
Gross profit	40,28	55,18
Transfer to Managing Agents' remuneration	2,70	3,88
" " depreciation	10,39	11,42
" " provision for taxation	9,00	20,40
Net profit	18,19	19,46
Adjustments	1,58	1,64
Appropriations:		
Total available balance	19,77	21,10
Transfer to provision for contingencies	Nil	20
" " development rebate reserve	1,56	45
" " supplementary dividend on preference shares for the previous year	Nil	14
Proposed dividends (taxable) preference	3,64	3,64
" " ordinary	14,00	15,50
	(Rs. 2·00)	(Rs. 2·15)
Carry forward	57	1,62

N.B.—Adjustments include the balance brought down from the previous year only.

Extracts from the Directors' report: The bumper crop during the second half of the year under review led to a gradual fall in raw jute prices and profitable working was restored in November 1961.

Prospects for the current year appear to be bright with the sufficient supplies of raw jute and world offtake of jute goods maintained a high level.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	92,50,000	Gross block	3,30,36,124
Reserves and surplus	40,64,366	—Depreciation	1,99,36,124
Other liabilities	2,37,54,337	Net block	1,31,00,000
		Current assets	2,16,20,413
		Investments	12,33,957
		Cash	11,14,333
	Rs. 3,70,68,703		Rs. 3,70,68,703

* Paid up capital consists of 40,000 7 per cent cumulative preference shares of Rs. 100 each and 7,00,000 equity shares of Rs. 7 50 each. Of the equity shares, 300,000 shares have been treated as fully paid up by way of bonus shares out of general reserve.

Bisra Stone Lime Co., Ltd.

(*Managing Agents*: Messrs. Bird & Co., Calcutta.)

Annual General Meeting: Held on 27th September, 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	2,35,60	1,94,21
Closing stocks	10,59	5,11
Gross block	33,29	33,73
Transfer to Managing Agents' commission	2,12	3,28
" " depreciation	8,07	5,48
" " provision for taxation	11,85	13,28
Net profit	11,25	14,69
Adjustments	59	35
Appropriations:		
Total available balance	11,84	15,04

" " general reserve	2,50	9,00
" " capital reserve	1,12	Nil
Proposed dividends (taxable)	4,00	3,00
	(10%)	(30%)
Carry forward	50	59

N.B.—Adjustments include only the balance brought forward from the last year's account.

Extracts from the Directors' Report: Limestone.—Raisings increased from 1,270.442 tonnes to 1.534,561 tonnes, as compared with the previous year. Sales also rose correspondingly from 1,224,389 tonnes to 1,466,391 tonnes.

Dolomite.—Output at 455,052 and sales at 445.723 tonnes during the year under review were almost at the same level as last year when the output and sales were 446,297 tonnes and 435,193 tonnes respectively. With the expansion of the Steel Industry, a progressive increase in the demand of limestone and dolomite is visualised.

Lime.—Production declined appreciably from 1,031,763 maunds to 548.557 maunds and sales also fell from 893,120 maunds to 692,855 maunds as compared with last year. Owing to the irregular and inadequate supplies of coal for burning lime coupled with the chronic shortage of wagons for disposal of lime, it was decided to close down the kilns with effect from 1st February, 1962.

Expenses.—Increased expenses, due largely to increase in the removal of overburden and high-insoluble stone and the hire of contract transport, resulted in a rise in costs which, however, are expected to be stabilised now that the Company's own fleet of mechanical equipment has been augmented.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	1,22,44,032
Reserves and surplus	28,81,279	—Depreciation	53,39,187
Other liabilities	1,11,00,977	Net block	69,04,845
		Block-in-progress	4,50,905
		Current assets	1,03,39,782
		Investments	95,693
		Cash	2,81,071
	Rs. 1,80,72,256		Rs. 1,80,72,256

* Paid-up capital consists of 4,00,000 ordinary shares of Rs. 10 each. Of the above 35,000 shares have been allotted as fully paid up pursuant to a contract without payment being received in cash and 3,50,000 shares have been allotted as bonus shares by capitalisation of general reserve.

Midland Rubber and Produce Co., Ltd.

(*Managing Agents*: Messrs. A. V. Thomas and Co., Ltd., Alleppey.)

Annual General Meeting: 29 September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sale of tea and rubber	42,85	49,25
Closing stocks	4,09	4,11
Gross profit	10,49	15,84

Transfer to development rebate reserve	3	5
Proposed additional dividend on preference shares for 1959-60	Nil	7
" dividends on cumulative preference shares	1,10	1,10
" on equity shares	5,00	5,06
	(12½%)	(12½%)
Carry forward	5	8

N.B.—Adjustments include the balance brought forward from the previous year and a transfer from dividend equalisation reserve.

Extracts from the Directors' report: Tea.—The decrease in crop was due to adverse weather conditions during the year. On account of unusually severe monsoon there was a sharp drop in output in May and June last year which months are usually heavy yielding. In spite of the better agricultural practices adopted to even out the production throughout the year, this unusual shortfall could not be made up particularly because of increase of pest infection to which the weather conditions were conducive.

The cost of production was Rs. 3.29 per kg. as against an estimate of Rs. 2.75, the increase being due mainly to the shortfall in production.

The average sale price realised during the year amounted to Rs. 4.39 per kg. as against Rs. 4.47 per kg. in the previous year. A portion of the Company's teas was shipped for sale in the U.K. and U.S.A. as usual and the prices realised were satisfactory.

Rubber: It is satisfactory to note that in spite of the sale of Mukampala Estate on 1-9-1961, the total production is over 4,35,000 kgs. With new areas being brought under tapping on Sittar Estate, the total crop in the coming years will be definitely on the upward trend.

The cost of production was Re. 1.83 per kg. as against an estimate of Rs. 2.11 per kg. The estimate included rubber depreciation allowance at 19.84 nP per kg. which, however has not been provided for in the final accounts.

The average sale price during the year was Rs. 3.23 against Rs. 3.35 in the previous year. The reduction is due to the change in procedure of collection of Rubber Cess which is now payable by the manufacturers.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	57,70,000	Gross block	77,14,126
Reserves and surplus	20,94,024	—Depreciation	12,77,095
Other liabilities	18,98,521	Net block	64,37,031
		Current assets	14,90,698
		Investments	1,69,627
		Cash	16,65,189
	Rs. 97,62,545		Rs. 97,62,545

* Paid-up capital consists of 1,72,000 6 per cent. cumulative preference shares of Rs. 10 each and 4,05,000 equity shares of Rs. 10 each. Of the above, 1,35,000 equity shares are allotted as fully paid up by way of bonus shares by capitalisation of Rs. 8,43,500 from share premium account together with Rs. 5,06,500 from general reserve.

Machinery Manufacturers Corporation Ltd.

(*Managing Agents*: Messrs. Mahindra and Mahindra Ltd., Bombay.)

Annual General Meeting: Held on 26th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	1,44,66	1,12,78
Closing stocks	54,18	42,32
Gross profit	34,37	34,41
Transfer to Managing Agents' remuneration	2,32	1,32
" " depreciation	9,61	8,95

" " general reserve	10,00	Nil
" " depreciation in respect of previous years	Nil	15,78
" written off on reduction of capital	Nil	7,33
Proposed dividends (taxable) on preference shares	4,38	Nil
" (taxable) on equity shares	3,51	Nil
	(12½%)	(Nil)
Carry forward	1,28	22

N.B.—Adjustments include the balance brought down from the previous year and a transfer from capital reserve account.

Extracts from the Directors' report: Operation: There was a notable improvement in production and in the despatch and intake of fresh orders as compared to the previous year.

Production of Cards increased to 944 as compared with last year's figure of 777. Despatch figures similarly increased to 910 from 789 in the previous year. Firm orders for 1943 Cards (net figure after cancellation) were secured during the year. No serious interruption was suffered at Sonai Works, but difficulties were experienced in connection with power shortage in Calcutta and interrupted supply of Pig Iron and Coke; the quality of both Pig Iron and Coke was not upto specifications as needed for the manufacture of precision and quality machinery. As anticipated in last year's report there was a substantial drop in the Company's commission receipts in respect of sale of Whitin's equipment. During the year only Rs. 4.45 lakhs of commission was earned as compared to Rs. 10.29 lakhs during the last year. The quantum of sales of Whitin's machinery depends entirely upon the availability of D.L.F. Loans and prompt Licensing by Government, in both of which respects there has been a hold-up during the year. It would not be judicious to forecast the extent or duration of this particular aspect of your Company's trading.

Diversification: Difficulties in the procurement of additional machine tools and the higher utilisation of the factory on Carding engines caused some delay in implementing our programme in respect of speed frames. In the meantime considerable improvement has been made to the original design of the speed frame and subject to the availability of additional machine tools for which licence has now been received, batch production of speed frames may be expected to commence next year. The manufacture of the air cooled diesel engine components commenced from March 1962.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	69,71,335	Gross block	1,57,77,205
Reserves and surplus	17,44,715	—Depreciation	71,84,529
Other liabilities	1,31,07,261	Net block	88,92,676
		Block-in-progress	80,393
		Current assets	1,20,27,953
		Investments	20,300
		Cash	8,02,079
	Rs. 2,18,23,311		Rs. 2,18,23,311

* Paid-up capital consists of 25,000 4½ per cent. tax-free special cumulative preference shares of Rs. 100 each, fully called up, issued to the Government of India, 13,955 4 per cent. tax-free cumulative preference shares of Rs. 100 fully paid and 3,01,216 equity shares of Rs. 10 each.

Ossoor Estates Ltd.

(*Secretaries and Treasurers*: Messrs. Peirce Leslie & Co., Ltd., Mangalore.)

Annual General Meeting—Held on 22nd September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
By coffee crop	3,44	3,91
Gross profit	1,66	1,58
Transfer to Secretaries' remuneration	5	5
,, ,, depreciation	15	16
,, ,, provision for taxation	50	35
Net profit	96	1,02
Adjustments	49	42
Appropriations:		
Total available balance	1,45	1,44
Transfer to proposed dividends (taxable)	98 (15%)	98 (15%)
Carry forward	47	46

N.B.—Adjustments include the balance brought forward from the previous year and excess provision for central income-tax in previous year no longer required.

Extracts from the Directors' report: With the purchase of its entire share capital Sulgodu Estate Ltd., became a wholly owned subsidiary of the Company. The Directors therefore applied to the Mysore High Court for the amalgamation of the Sulgodu Company with Ossoor Estates Ltd., and by virtue of the orders subsequently passed by the High Court all the assets and liabilities of the subsidiary Company are now vested in Ossoor Estates Ltd., and Sulgodu Estate Ltd., stands dissolved from 11th July 1962. No Directors Report of the Subsidiary Company is available as required by the provisions of Section 212 of the Companies Act as the Company was dissolved before its Directors could make such a Report. An application has therefore been made to the Central Government under Section 212 (8) of the Companies Act for exemption in connection with such provision.

Crop and Costs. A total crop of 118.355 metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Rs. 2.30 per point or Rs. 2,905 per metric tonne. A comparative statement of production and costs for the previous 2 years is given below:—

Year	*Crop (metric tonnes)*	*Estate expenditure per metric tonne*	*All-in-cost per metric tonne*
		Rs.	Rs.
1959-60	135.230	1,070	2,225
1960-61	145.996	1,821	1,990
1961-62	118.355	2,213	2,517

A further payment of 2 nP per point has been received on 1959 60 crop making the total for the year Rs. 2.24 per point and this is equivalent to Rs. 2,926 per metric tonne.

The 1960-61 season's crop has been revalued at Rs. 1.95 per point which has so far been received. This is the equivalent of Rs. 2,794 per metric tonne when compared to the valuation of Rs. 1.90 per point or Rs. 2,680 per metric tonne adopted last year.

The 1962 63 crop inclusive of Sulgodu Estate crop has been estimated at 165 metric tonnes and the all-in-cost of production at Rs. 2.517 per metric tonne.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,50,000	Gross block	8,02,791
Reserves and surplus	6,18,175	—Depreciation	98,452
Other liabilities	6,50,863	Net block	7,04,339
		Current assets	3,55,030
		Investments	7,05,258
		Cash	1,54,411
	Rs. 19,19,038		Rs. 19,19,038

* Paid-up capital consists of 3,25,000 ordinary shares of Rs. 2 each fully paid up.

United Breweries Ltd.

(*Chairman*: Vittal Mallya, Esq., Bangalore.)

Annual General Meeting: 29th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	52,95	45,93
Closing stocks	4,09	1,80
Gross profit	33,20	26,06
Transfer to Directors' fees	2	8
,, ,, depreciation	2,63	2,14
,, ,, provision for taxation	14,50	10,00
Net profit	16,05	13,84
Adjustments	1,55	9,19
Appropriations:		
Total available balance	17,60	23,03
Transfer to general reserve	Nil	12,35
,, ,, development rebate reserve	1,40	15
Proposed dividend (taxable) interim (at 2.50)	5,00	3,00
,, ,, final	Nil	7,00
Carry forward	11,20	54

N.B.—Adjustments include balance brought down from the previous year, provision for taxation made in previous years no longer required, etc.

Extracts from the Directors' report: An application has been made to the controller of capital issues for permission to issue bonus shares of the nominal value of Rs. 2,500.000. In view of this proposal and the need to conserve the Company's resources to meet the capital investment programme during the next year, your directors are not recommending the payment of a final dividend for the year and a relatively large balance is being carried forward.

Operations: Both production and sales increased appreciably and this trend continues during the current year.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	25,00,000	Gross block	68,47,267
Reserves and surplus	72,59,844	—Depreciation	23,46,627
Other liabilities	36,83,947	Net block	45,00,640
		Current assets	30,74,582
		Investments	58,58,883
		Cash	9,686
	Rs. 1,34,43,791		Rs. 1,34,43,791

* Paid-up capital consists of 2,50,000 equity shares of Rs. 10 each paid. Of the above, 56,680 shares are allotted as paid up to the extent of Rs. 7.50 per share without payment being received in cash.

Bengal Chemical and Pharmaceutical Works Ltd.

(*Chairman and Managing Director*: Dr. Balindra Nath Ghose, Calcutta.)

Annual General Meeting: Held on 14th August 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	2,12,50	2,08,84
Closing stocks	29,32	26,21
Gross profit	15,30	24,49
Transfer to Managerial remuneration	65	97
,, ,, depreciation	5,49	5,46
,, ,, provision for taxation	5,00	8,50
Net profit	4,16	9,56
Adjustments	3,61	41
Appropriations:		
Total available balance	7,77	9,97
Transfer to provision for taxation for previous year	8	Nil
,, ,, development rebate reserve	22	29
,, ,, general reserve No. 2	Nil	1,00
,, ,, debenture redemption reserve	70	70
Proposed dividends (taxable)	6,70	6,67
Carry forward	6	1,31

N.B.—Adjustments include the balance brought forward from the previous year, an amount transferred from general reserve No. 2 and excess provision of income-tax.

Extracts from the Directors' report: Although the sale of the company registered an increase of over Rs. 4 lakhs, due to increase in cost of raw materials, package, transport and operating expenses the margin of profit was lower than that of the previous year. The company's production was also affected due to non-availability of some of the imported raw materials and coal and also due to shortage of crude coal tar. The directors are of the opinion that the company will be able to tide over these difficulties in course of a short period and as such they have transferred Rs. 2.30 000 from general reserve No. II for the purpose of distribution of dividends.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	78,85,900	Gross block	1,59,19,707
Reserves and surplus	67,64,552	—Depreciation	81,89,070
Other liabilities	89,37,791	Net block	77,30,637
		Current assets	1,37,39,975
		Investments	16,38,091
		Cash	4,87,840
	Rs. 2,35,87,543		Rs. 2,35,87,543

* Paid-up capital consists of 90,000 7¼ per cent. cumulative preference shares of Rs. 10 each, 11,904 4½ per cent. cumulative 2nd preference shares of Rs. 100 each, 21,315 ordinary shares of Rs. 100 each, 11,080 'A' ordinary shares of Rs. 100 each, 22,547 'B' ordinary shares of Rs. 100 each and 3,000 medical ordinary shares of Rs. 100 each.

Notices

THE KHATAU MAKANJI SPINNING AND WEAVING COMPANY, LIMITED

Laxmi Building, 6 Ballard Road, Fort, Bombay

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Eighty-eighth Annual General Meeting of the Shareholders of the Company will be held on Friday the 19th October 1962 at 4.00 p.m., (S.T.), at Laxmi Building, 6, Ballard Road, Fort, Bombay, to transact the business as per the Notice dated the 20th September 1962 sent to the Shareholders of the Company at their registered addresses.

By Order of the Board of Directors,
LALDAS TRIBHOWANDAS,

34, Chowringhee, Calcutta-16

PAYMENT OF DIVIDEND ON PREFERENCE SHARES

IN CONNECTION WITH THE PAYMENT OF the above dividend for the half-year ending 30th September 1962, the Preference Registers of the Company will be closed from the 3rd October 1962 to the 5th October 1962, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES
(INDIA) PRIVATE LIMITED,
Secretaries.

CALCUTTA, *20th September*, 1962.

PARRYS CONFECTIONERY LIMITED

STATEMENT BY CHAIRMAN, MR. H. V. R. IENGAR

FURTHER INCENTIVES FOR EXPORT CALLED FOR

THE inadequacy of the incentives for export provided by the Government to confectionery manufacturers is pinpointed by Mr. H. V. R. Iengar, Chairman of Parrys Confectionery Ltd., Madras in his statement to shareholders circulated along with the Directors' report and statement of accounts of the Company for the year ended 31st March 1962. According to him, the net prices realised on exports, even after taking into account the incentives already provided, are so low that exports entail a heavy loss to the industry. He, therefore, calls for further measures of assistance.

The following is the full text of the Chairman's statement:

"I am this year taking the step of having the speech from the chair printed and sent with the accounts. I hope shareholders will agree that this is a useful innovation.

"My first duty is to record my profound regret that this, the first annual general meeting of the Company over which I shall preside, should be without the presence of the previous Chairman, Mr. C. R. Srinivasan, B.A., who passed away on 29th January 1962.

"It is also my unfortunate duty to record the death, on 24th November 1961, of Mr. H. I. Wonfor, C.B.E., F.C.A., who was a Director of this Company since its inception.

"Both Mr. C. R. Srinivasan and Mr. H. I. Wonfor played a vital part in the development of the Company and in pioneering many new ideas introduced over the years.

"In connection with the accounts, the points of greatest interest to shareholders are probably the rights issue during the year and the very recent bonus issue. The result of the rights issue was to increase the issued share capital to Rs. 15 lakhs; and, in addition, the premium on the rights shares brought in a further Rs. 5 lakhs which has been shown as a reserve under the heading of share premium account. At the Directors' meeting held on 17th August 1962 it was decided that the share premium account should be utilised for issuing bonus shares in the ratio of one bonus share for every existing three shares held.

Higher Dividend

"The interim dividend paid for the year was at the rate of 10 per cent on the share capital of Rs. 15 lakhs while the final dividend, which will be proposed later at this meeting, will be payable on the increased share capital of Rs. 20 lakhs. You will see that the total quantum of dividend proposed for year is larger than in the previous year.

"The net profit after taxation, which includes the provision of Rs. 62,500 for super-tax on the bonus shares, stands at Rs. 5.25 lakhs, as compared with last year's figure of Rs. 5.80 lakhs. From this profit and the "brought forward" of Rs. 1,81,361, appropriations have been made, or are proposed, totalling Rs. 5.50 lakhs. This figure includes an amount of Rs. 50,000 placed to general reserve and Rs. 30,000 transferred to the development rebate reserve. The carry forward to next year stands at Rs. 1,56,302.

Record Sales

"The operations of the Company during the year under review were satisfactory. You will have noted from the report of the Directors that the sales turnover of Rs. 1.34 crores constituted a new record, the increase over the previous year being 14 per cent in value as well as volume. A noteworthy feature is that approximately 50 per cent of the increase in sales occurred in North India. Considering that this is an area away from what has been traditionally considered to be our normal area of operations, this is an encouraging sign and augurs well for the future.

"Yet another encouraging feature of the sales in the year under review is the increased volume achieved from sales of wrapped varieties. In consonance with the steady rise in the living standards of the people, there is undoubtedly more discriminative buying on the part of consumers who attach increasing importance to hygienic packing and quality, and our progress is in keeping with this development.

"During the year, supply of sugar continued to be easier and it was available at lower prices than previously. However, costs of other raw materials, notably items for which we still depend on imports, have been rising with the consequence that we have been forced to make some price increases. I see no prospect in the near future of prices of raw materials coming down. On the other hand, the position has since worsened as, from the beginning of the current financial year, the price of sugar has substantially moved up and new tax levies have added to the cost of tin containers and packing materials. Owing to the rise in price of sugar alone, our costs of production this year will increase by over Rs. 1 lakh. Due to the additional tax levies on tin and aluminium foil, our packing costs will go up by approximately Rs. 0.5 lakh. In addition, our wage bill will rise by Rs. 0.5 lakh. Against this background of rising costs, it becomes specially important that we achieve, higher turnover and, wherever possible, operating economies.

"In response to the Government's call to step up exports to augment the country's foreign exchange earnings, your Company is intensifying its efforts in this direction and will naturally do everything possible to co-operate with Government.

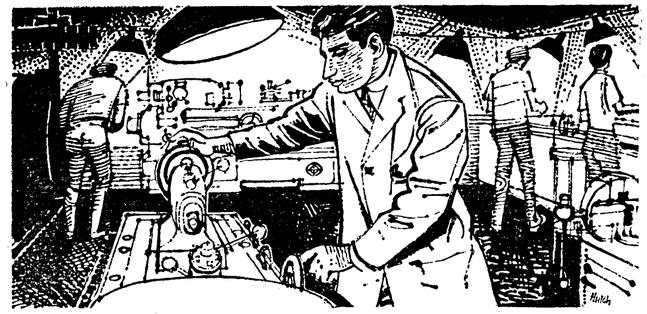
Incentives for Export

"While the industry is grateful to Government for the incentives afforded for export promotion by way of rebates of excise and customs duties, it is pertinent to observe that, even with these incentives, the net prices which can be realised from exports are so low that the resultant loss is still too heavy a burden for the industry to bear. It is therefore necessary to ask for further measures of assistance. The industry is aware that Government have been considering supply of sugar at the international price for manufacture of confectionery for exports, and an early decision on this question will be welcome. Apart from the question of price, the quality of sweets offered for export must stand comparison with those offered by other exporting countries and we have therefore to keep pace with refinements in manufacture, using up-to-date machinery. Owing to the difficult foreign exchange situation obtaining over the last few years, the industry has been facing difficulties in importing machinery required for replacement and rehabilitation. I would urge the authorities to view this problem with sympathy and, if necessary, link the import of machinery with exports, fixing a reasonable ratio between the two.

"During the year under review our relations with staff and labour have been most cordial and I take this opportunity to record our sincere appreciation of the excellent work done by them."

Note: *The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on the 29th September*, 1962.

The World Bank has made two loans of $23 million to Pakistan for the improvement and expansion of the railway systems in West and East Pakistan. The loans, comprising $18.25 million for the Western Railway and $4.75 million for the Eastern Railway, will cover part of the foreign exchange costs of the Railways' programme during the third and fourth year of Pakistan's second Five-year Plan. Nine U.S. private banks are participating in the loans, without the World Bank's guarantee, to the extent of $1,182,000 representing the first two maturities and part of the third maturities of both loans. The two loans are for a term of 20 years and bear interest at the rate of 5½ per cent per annum, including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin on 1st March 1966.



In Factories, Hospitals, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In factories sudden darkness can cause injury and damage to machinery. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual mains failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for factories, hospitals, schools, banks and public places.

KEEPALITE

AUTOMATIC EMERGENCY LIGHTING EQUIPMENT

NEWS IN BRIEF

THE Union Defence Ministry has entered into an agreement with a U.S. firm for the manufacture in India of heavy earth-moving and mining equipment. The manufacture of these items is expected to reduce the imports of a wide range of machinery.

The State Trading Corporation has finalised a barter deal with the U.K. and West Germany for export of 120,000 tons of manganese ore and 24,000 tons of ferro-manganese against import of Rs. 1.75 crore worth of machinery and Rs. 1.75 crore worth of staple cotton fibre.

The Cotton Textiles Export Promotion Council proposes to conduct next month a series of fashion shows in various parts of East Africa, particularly Kampala, Nairobi, Mombasa and Dar-es-Salam. India has been a traditional exporter of cheaper category of textiles to East Africa.

The National Metallurgical Laboratory, Jamshedpur, is understood to have devised a process for replacing the use of zinc by aluminium in galvanising steel sheets and other ferrous products. About 30,000 tons of tin, or about half of its total imports, are now used for purposes of galvanising.

The Employees' Provident Funds Act, 1952, will be made applicable to saw mills, wood seasoning kilns, wood preservation plants, wood workshops and units engaged in the processing or treatment of wood, with effect from 31st October 1962. All establishments employing 20 or more persons will be covered under the scheme.

The wheel and axle plant of the Durgapur Steel Works in West Bengal was inaugurated this week by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries. The plant is claimed to be the largest of its kind in India and will meet the demand of railways for wheel sets. It has a rated capacity of 45,000 wheel sets annually, of which 38,800 will be for broad-gauge.

The foundation-stone of a machine building factory was laid on Monday at Kothrud, near Poona, by Mr. S. L. Kirloskar, Chairman of the Company. Coastal vessels will also be built at the factory which is being set up with American collaboration. The project costing nearly Rs. 3 crores will go into production in 1965, but the assembly of high-power diesel engines will be undertaken from March next year.

The Union Ministry of Food and Agriculture has set up an export promotion division under the charge of a Deputy Secretary with a view to studying export possibilities of agricultural commodities. The division will deal with the work relating to export of food and other agricultural commodities. The study is intended to help boost export of traditional items and also explore possibilities in respect of new commodities.

The Government of India has drawn up a list of 19 industries for which priority is given for importing capital goods. The industries include alloy and special tool steels, steel castings and forgings, heavy structurals (including cranes), railway wagons and other railway equipment, industrial machinery for textiles, jute, tea, mining, washeries, cement and paper making, machine tools on a selective basis, fertilisers, rayon grade pulp, ball bearings, special refractories and trucks and ancillaries.

India's exports in the month of August 1962 were higher at Rs. 63.28 crores, as compared with Rs. 57.41 crores in the previous month and Rs. 60.15 crores in the corresponding month last year. Imports aggregated Rs. 79.76 crores, as against Rs. 75.64 crores and Rs. 77.24 crores, respectively. The deficit in the balance of trade in August 1962 thus amounted to Rs. 16.48 crores, which compared favourably with Rs. 18.23 crores in July 1962 and Rs. 17.09 crores in August 1961.

The Central Government has decided to permit imports of fruits (dried and fresh), asafœtida, cumin seeds and medicinal herbs from Afghanistan on an *ad hoc* basis through approved importers during the present trade agreement period (October 1962 to November 1963). Those who participated in the Indo-Afghan trade in these commodities during the four years ended June 1956 and who had already been registered as approved importers are eligible to apply for licences. Those approved importers, whose names have been de-registered, will not be eligible for any permits. Imports will be allowed within a limited monetary ceiling and, in no case, imports in excess of the ceiling will be allowed.

The Life Insurance Corporation proposes to switch over from calendar year to financial year (April-March) for accounting purposes. In the course of a press release, the Corporation says that the change would have a beneficial effect on its business. The first three months, January to March, are from the point of view of climate and business potentiality, the best months during which the Corporation could achieve maximum mobility. This period of intensive activity would now cover six months from October to March instead of three months, from October to December. The farmers, especially, have cash available during this period and generally more people will be interested in taking out life insurance policies.

A fully automatic lighthouse is now being constructed at East-Point near Visakhapatnam and is expected to go into commission very soon. It will provide night navigation facilities at the port by emitting a revolving red light with an intensity of one lakh candles, with two flashes every 10 seconds. The power will be supplied by a set of 24 batteries, which will switch on and off automatically at scheduled times. Fuel for the generating sets will be provided by two tanks with a capacity of 100 gallons each. The tanks will work on alternate days. The almost only human attention required for this lighthouse will be periodical cleaning and refuelling of the tanks. The total cost of buildings and equipment is Rs. 5 lakhs. The machinery is being assembled for the first time by Indian engineers. The new automatic lighthouse will be the first of its kind in Asia.

The Government of India has nominated Mr. N. N. Chatterjee, Joint Secretary, Ministry of Labour and Employment, as the Chairman of the Advisory Board for Minimum Wages for a period of two years. Mr. H. C. Kothari, Mr. Crombie, Mr. K. S. Smith, Mr. R. M. Agrawal and Dr. Y. S. Parmer will represent employers, while the workers' representatives will be Mr. M. N. Sarmah, Mr. Shantilal Shah, Mr. N. Satyanarayana Reddy, Mr. S. R. Kulkarni, Mr. Jatin Chakravati and Mr. L. K. Shroff. The Labour Commissioners of Rajasthan, Madhya Pradesh, Bengal, and Ahmedabad and Additional Secretary, Department of Industries, Labour and Co-operation, Madras, will also be represented on the Board. The Board, it will be recalled, was constituted in November 1959 by the Union Government for advising the Central and State Governments on all matters relating to wage revision under the Minimum Wages Act, 1948.

The Government of India has issued an order, under Section 2 of the Essential Commodities Act, declaring aluminium utensils an essential commodity. The order empowers the Governments to assume requisite powers under the provisions of the Essential Commodities Act to control the quality of aluminium utensils produced for internal consumption. The order, which *prima facie* declares manufactures and semi-manufactures of non-ferrous metals to be essential commodities, is intended to cover aluminium utensils only at this stage. With the increasing use of aluminium utensils in the country, the question of ensuring the quality of the products has been engaging the attention of the Government. Quality control has already been imposed on aluminium utensils manufactured in the country for export purposes. It is that aluminium utensils manufactured out of sub-standard material constitute a threat to the health of the consumer.

* * * *

From Abroad

Communist China has agreed to buy 33,000 tons of rubber from Ceylon in exchange for 200,000 tons of rice in 1963.

The United Arab Republic has decided to open a trade centre in London to act as a link between British exporters and U.A.R. importers. The Centre will also market U.A.R. products in London.

France and Czechoslovakia have signed a new trade agreement providing for trebling the two-way trade in mechanical equipments during the next three years. France will import Czech machine tools in exchange for capital equipments.

West Germany will extend to Egypt a credit of DM 20 million (about £1.8 million) from aid funds in order to help build a fleet of 56 river freighters. The fleet will be used for carrying 450,000 tons of iron ore annually from Aswan to the German-built steelworks at Helwan.

The foreign trade surplus of West Germany fell to DM 187 million in August, from DM 280 million in July and DM 591 million in August 1961. For the first eight months of 1962 the surplus was distinctly smaller at DM 2,000 million, as compared with DM 4,700 million in the same period last year.

The capital cost of Britain's first ten nuclear power stations will amount to over £500 million, according to the Chairman of the United Kingdom Atomic Energy Authority. Last year, the Authority spent £25 million on all forms of reactor development, and employed some 1,750 fully qualified scientists and engineers.

A new export credit institution, called A B Svensk Exportkredit, to provide such long-term credit to exporters as cannot be given by Government and commercial banks under the present banking law, has been established in Sweden. The Swedish Government and commercial banks have each contributed half of the Kr. 100 million share capital.

Forty-seven items of articles, which were hitherto under open general licence, will require licences for being imported into Ceylon. These items include cheese, fruits and vegetables, cigar, snuff, domestic furniture, waste paper and old paper, perfumery and curios. The new import control order is interpreted as a virtual ban since no licence will be issued to any trader to import them.

PERSONAL

MR. PR. Arunachalam and Mr. V. Rangachari have been elected President and Vice-President, respectively, of the Madras Stock Exchange Ltd. for the year 1962-63.

Mr. Frank A. Southard of the U.S. has been appointed a Deputy Director of the U.N. Special Fund in the place of Mr. H. Merle Cochran, who will retire at the end of next month.

Mr. Y. N. Sukthankar, till recently Governor of Orissa, has been appointed Chairman of the Indian Oil Company *vice* Mr. S. Nijalingappa who has become the Chief Minister of Mysore.

Mr. D. N. Shroff and Mr. Shantilal M. Mehta have been re-elected President and Vice-President, respectively, of the Silk and Art Silk Mills' Research Association for the year 1962-63.

Dr. A. Ramaswami Mudaliar, Chairman, India Steamship Company, Ltd., and Mrs. Sumati Morarjee, Director, Scindia Steam Navigation Company, have been elected Chairman and Vice-Chairman, respectively, of the Indian Coastal Conference.

Mr. T. K. Parameswaran Nambiar, Secretary of the Madras Port Trust, and Mr. S. K. Bhattacharya, Executive Engineer, Calcutta Port Commissioners, have been deputed to participate in a seminar on ports and harbours being organised by the Japanese Government under the Colombo Plan for a month from 3rd October.

Dr. K. N. Raj, Director, Delhi School of Economics, has been named the head of a four-man committee constituted by the Government of India to examine the entire system of planning and distribution of iron and steel. The other members of the Committee are: Dr. Raj Krishna of the Institute of Economic Growth, Delhi, Dr. K. S. Krishnaswamy of the Planning Commission and Mr. C. A. Nair, Department of Iron and Steel, Government of India (Secretary).

Canada's exports of five major foodgrains touched 410.3 million bushels during the year ended July 1962, showing an increase of 4 million bushels over the previous year; the previous record level was 582 million bushels touched in 1952-53. Wheat and wheat flour shipments aggregated 357.8 million bushels, of which the U.K. accounted for 74 million bushels and Communist China for 72 million bushels.

Japan and West Germany have signed a trade protocol under which the mutual trade is expected to increase by about 20 per cent next year. West Germany has agreed to sign a pact on cotton textiles with the former (outside the World agreement) designed to increase the purchase of Japanese cotton textiles by 60 per cent over the next five years. West Germany has also agreed to buy more of other textiles, sewing machines, binoculars, etc. from Japan.

The Government of Egypt has granted a £3-million contract to the Montecatini Chemical Group of Italy for the construction of Egypt's first textile dyestuff plant. The new plant will have a capacity of 700 tons per year and it will meet the entire needs of Egyptian textile industry. The Acne Company of the Montecatini Group will design the new plant and provide technical know-how. The Italian firm will also supply the necessary raw materials.

Britain is sending laboratory equipment worth £1,770 to the Central Drugs Laboratory, Calcutta, under the technical co-operation scheme of the Colombo Plan. The equipment consists of centrifuges, steriliser ovens, compressors and analytical balances. It will be used for the development of Indian national standards for biological and allied drugs, for research and development concerning standardisation of new drugs and multi-drug formulations and to effect improvements in the existing methods of drug analysis.

The International Development Association has extended a credit of $5 million to Tunisia for the building up of secondary and technical schools. The credit is the first made by I.D.A. for education, and is also the first operation in Tunisia by either I.D.A. or the World Bank. The I.D.A. credit is for a term of 50 years. Repayment of the principal will begin on 1st February 1973. Thereafter, 1 per cent of the principal will be repayable annually for ten years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ¾ of 1 per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs.

A working party of the Cocoa Study Group of the U.N. Food and Agriculture Organisation has completed a draft of an international agreement on cocoa. It is based on control of international marketing through sales quotas. It will be considered by the group's executive committee in preparation for a U.N. negotiating conference. The working party examined the implications of a sales-quota system from the standpoint of market operations, regulations and control, and other aspects, and concluded that a sales-quota system did not appear to present insurmountable difficulties. A sales-quota system limits the quantity of produce a producing country may contract for sale now or at a future date, that is, it includes forward selling,

MONEY EASY

(From Our Own Correspondent)

BOMBAY, *26th September*

Signs of the usual slack season are in full evidence again in the short-term money market. Banks are once again flushed with funds, with most of them turning lenders. Inter-bank call money rate, which had gone up to 5 per cent a fortnight ago and come down to 4 per cent, is now as low as 2½ per cent. In Calcutta, the rate has fallen to 3⅛-3⅜ per cent, as compared with 5½-5¾ per cent two weeks before. One of the chief reasons for the extreme easiness of the money market is the arrival of a large amount of money following payment of half-yearly interest on the Central Government's 3 per cent 1986 Conversion loan which fell due on 16th September. Interest payments by the Centre are also due on 1st, 15th and 19th October.

The 91-days' Treasury Bill results are colourless, excepting that the average rate of accepted tenders has slightly declined, from 2.365 per cent per annum to 2.360 per cent per annum. The amount for which tenders were invited was unchanged at Rs. 2 crores and has been kept unchanged at that level for the coming week also. The total amount offered this week was no more than Rs. 2 crores. Apparently, the support for these Bills is still from special sources. 91 days' Intermediate Treasury Bills sold from 19th September 1962 to 22nd September 1962 amounted to Rs. 20 lakhs, as compared with Rs. 75.50 lakhs sold from 12th to 15th September 1962.

The Reserve Bank's statement for the week ended 21st September 1962 shows, as compared with that for the previous week, the following main variations:

Notes in circulation are down by Rs. 21.90 crores. Foreign assets are up by Rs. 1.12 crore at Rs. 95.92 crores. Loans and advances to scheduled banks have shrunk by Rs. 12.40 crores, of which Rs. 7.46 crores are against usance bills, while their cash balances with the Bank are better by Rs. 1.85 crore.

Scheduled banks' borrowings from the Reserve Bank had gone up to a peak of Rs. 42.64 crores, as of 7th September, after the States' borrowing programme. They have come down to Rs. 6.28 crores as of 21st September.

Listless conditions continue to prevail in the Gilt-edged market. The trend is distinctly quiet, with some offerings in the recently floated 4½ per cent 1974 State loans. The Kerala issue has lost Re. 1.50, Mysore 75 nP, Madhya Pradesh Re. 1, Bihar Re. 1, Punjab Re. 1, Rajasthan 50 nP and Orissa 40 nP. Among Central loans, 3½ per cent 1974, 4 per cent 1972, 4 per cent 1973, 3½ per cent 1967 and 3 per cent 1986 Conversion are all down, the fall ranging from 5 nP to 70 nP. The substantial marking down in several State loans issued this year suggests that some of the investors who had supported them to please the State Governments must have been encashing their investments. If they had borrowed from banks for taking up State loans, they might have used the sale proceeds to repay the loans. This, too, could have been one of the reasons for the return of easy money conditions referred to at the outset of this report.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *25th September*

Steady conditions were in evidence in the local metal market this week. Prices improved for a time under the influence of good demand following apprehensions of import cuts. The New Delhi announcement that the import policy for the six months commencing from next month would be framed after the Union Finance Minister's present foreign tour and would be published at the end instead of the beginning of next month added force to the import cut apprehensions. Advices from the London Metal Exchange showed a hardening trend in three months copper, which at £233 a ton reduced the backwardation to £1. The spot metal was firm, but unchanged at £234. A slightly hardening trend was also seen on the New York Commodity Exchange.

The hardening trend in the world price of copper was attributed to the recent cutback in production in the United States, Chile and Rhodesia in an attempt to bring effective demand in line with the aggregate supply. The recognition among producers that this objective has been achieved is indicated in the announcement by the Anaconda Copper Company that no further cutback was proposed in the near future. Anacondas as well as Phelps Dodge, it would be recalled, had recently curtailed production by about 5 per cent. A prominent South African producer, the O'okiep Copper Company, has announced that it has curtailed production by 7 per cent from the beginning of this month. The reason given is accumulation of unsold copper. Statistics made available by the Rhodesian Selection Trust Group show that the Group's production in the year to June 1962 increased. At 78,878 tonnes, the production of the Roan Antelope division for the year to June last was lower by 2,927 tonnes, and Chibulma's output at 16,693 tonnes declined by 2,507 tonnes. However, Mufulira increased output by 12,569 tonnes to 113,805 tonnes. In other words, the overall production of the three mines increased by 7,135 tonnes. In the same year, Antelope's sales declined by 5,658 tonnes to 75,464 tonnes and Chibulma's by 2,176 tonnes to 16,773 tonnes. However, Mufulira's sales rose by 9,073 tonnes to 109,794 tonnes. Thus, overall sales rose by 1,239 tonnes, while production increased by 7,135 tonnes, showing that the output exceeded demand by 5,896 tonnes. Such an analysis also possibly applies to other world producers, and this explains the recent cutback in production.

Following further releases of copper against permits and the issue of D.L.F. licences to established importers, copper scrap received less attention here this week, with users' scrap declining at first from Rs. 548.50 per 100 kgs. to Rs. 546.50. However, soon the basic shortage asserted itself and the price recovered to Rs. 549.25. Due to the acute shortage, tin ruled firm at Rs. 2,448 per 100 kgs. On the London Metal Exchange, spot tin opened at £851½ a ton, and after gaining to £852½, returned to £851½. The inability of the General Services Administration in the United States to release the proposed 200 tons of tin on 12th September following its rejection of all bids was construed here as a hint that the U.S. consumers were in no mood to build up stocks on expectation of a rise in prices. In London, spot zinc opened at £64 a ton and hardened to close at £64½. In Calcutta, the metal was quoted high early at Rs. 290, but since there were liberal releases, the price soon eased to Rs. 280. Virgin lead eased from Rs. 143.75 to Rs. 141.75 per 100 kgs. In London, the spot metal was maintained at £52½ a ton.

BULLION PRICES LOWER

(From Our Own Correspondent)

BOMBAY, *26th September*

The bullion market ruled firm in the first three sessions of the week under review, but developed a sagging tendency on Monday which persisted till the close today. The earlier firmness was due to revival of buying support and short-covering induced by expectations that the Government might not enforce controls on bullion trading in the near future. Consequently, both gold and silver tended to move up. On Monday, however, gold turned distinctly easy following fresh offers from upcountry operators, while silver continued firm. Subsequently, the market presented a quiet trend. Over the week, both the metals disclosed losses.

The daily average offtake of gold was higher at 5,500 tolas, as against 3,500 tolas in the previous week, while arrivals were unaltered at 6,000 tolas per day. About 200 tolas of contraband gold were confiscated by the customs authorities at the Santa Cruz airport on Tuesday the 25th inst. In silver, the daily average offtake as well as arrivals were higher, the former by 2 bars at 8 bars and the latter by 4 bars at 24 bars.

Speaking at a meeting in Bombay this week, Mrs. Tarakeshwari Sinha, Union Deputy Finance Minister, declared that the Government was determined to put down smuggling with a heavy hand. Simultaneously, the Government, she added, also intended to find out ways and means of channelising the hoarded gold in the country into productive investments. She indicated that the Government might enforce, if it became necessary, some sort of strategic controls as distinguished from overall controls.

The *Margashir* (11th December) settlement in gold began the week at Rs. 122.00, as against the previous close of Rs. 121.90, and moved up to touch a high of Rs. 123.70 on Saturday the 22nd inst. The settlement, however, receded thereafter to Rs. 121.30 today before finishing at Rs. 121.60.

Ready gold which commanded a premium of 60 nP over the forward last week-end was quoted at par yesterday but at a discount of 55 nP today. The closing spot rate was Rs. 121.05, as against Rs. 122.50 a week ago, the highest and lowest levels touched being Rs. 125 (Saturday) and Rs. 120.75 (today).

In silver, the *Margashir* (12th December) settlement rose from Rs. 221.40 to Rs. 221.75 in the first three sessions, but drifted downward later and touched Rs. 221 today. The closing was a shade better at Rs. 221.05.

Ready silver fluctuated between Rs. 220.65 and Rs. 219.35 before winding up the week at Rs. 220.05. At this level, the discount under the forward was Re. 1, as against Re. 1.25 on Wednesday last week.

Silver at New York which had gone up from 113 cents to 116 cents last week spurted by a further 2 cents to touch a new 42-year peak of 118 cents yesterday (Tuesday the 25th inst.), following the withdrawal of Mexico as a seller in the silver market. Turnover yesterday amounted to over 500,000 oz. Bullion circles in the U.S. feel that the Mexican withdrawal is unlikely to be deemed sufficient reason for the Treasury to re-enter the market by resuming limited selling. It is recalled that President Kennedy had stated last year that the Treasury would resume selling only if the market became disorderly. Bullish advices from New York lifted up silver prices in the London bullion market to new record levels, ready and forward rising by 2*d.* each to 101½*d.* and 101¾*d.*, respectively. The dollar price of gold in London eased from $35.14¾ to $35.11 per fine ounce. Ready gold also dropped 2½*d.* to 250*s.* 8¾*d.*

The following table shows the trend of prices during the week under review:

	26-9-62 (closing)	High	Low	19-9-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.05	125.00	120.75	122.50
*Margashir**	121.60	123.70	121.30	121.90
Sovereign	94.50	95.50	94.50	95.00
SILVER				
Ready (.996 fine) ..	220.05	220.65	219.35	220.15
Margashir†	221.05	221.75	220.60	221.40
London—				
Gold	250*s.* 8¾*d.*	250*s.* 11¼*d.*	250*s.* 8¾*d.*	250*s.* 11*d.*
Silver Ready ..	101¼*d.*	101¾*d.*	99¼*d.*	99¼*d.*
Silver Forward ..	101¼*d.*	101¾*d.*	99¼*d.*	99¼*d.*
New York—				
Silver	118.00 cents	118.00 cents	116.00 cents	116.00 cents

* 11th December settlement. † 12th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RECEDE

(From Our Own Correspondent)

BOMBAY, *26th September*

Cotton futures ruled easy during the week under review. Values declined on widespread selling by both local and upcountry operators. After last week's hectic rise, which took the Jarilla March 1963 contract to a new peak of Rs. 752.50 on Wednesday, the 19th inst., a reaction was bound to follow. The downward trend was accelerated by reports of favourable weather from the growing areas, especially from Gujarat, where the Vijay crop was expected to start moving as early as by January next. The Jarilla March contract steadily declined from last week's closing rate of Rs. 747.25 to Rs. 739.25 on Monday. The mild recovery witnessed yesterday, which led to the contract rising to Rs. 743.25, proved short-lived. The contract again relapsed to Rs. 737.50 today on renewed selling, although the finish was a shade higher at Rs. 740.

The attention of mills and trade is focussed on weather and crop developments for they virtually determine the trend of futures prices. A prominent cotton firm has estimated the current season's crop at 4.9 million bales of 400 lbs. each, which is 200,000 bales higher than last season's crop. It sums up the crop position, as at the end of August 1962, as follows:

"In the Punjab-U.P.-Rajasthan, the crop got off to a normal start and thrived under favourable weather conditions through early September. In mid-September, there was heavy rainfall throughout the Punjab, causing considerable damage to crops in some areas. Since these rains were followed by clear weather, the overall damage to the cotton crop seems to be negligible. Any further rains from now onwards will, however, damage the crop both quantity and quality-wise.

"In the monsoon-fed tracts of the Oomras, Gujarat and Saurashtra, sowings were delayed by almost a month due to the late arrival of this year's monsoon. Thereafter, the weather conditions were fairly favourable with ample and well-spaced rainfall. So far, the crop is doing fine, but the crop movement might start somewhat later than the normal due to the late sowings. Any further heavy rains from now onwards would retard the crop development further and adversely affect the quality of outturn.

"In the South, the main crop sowings are progressing satisfactorily and well in time. It is feared that the recent very heavy rainfall in the Westerns and Comptahs areas might cause some damage here and there. There is, however, still ample time for the crop to make good, provided weather conditions from now onwards are favourable."

Demand for ready cotton was moderate. The uncertainty about the distribution scheme for the new crop cotton restricted activity. Mills showed interest in such varieties as L.147; Co2, Laxmi, 197/3 and Kalyan.

Export demand centred largely round old crop of Bengal *Deshi* for prompt shipment. Good business was reported in zoda and yellow pickings. Among foreign cotton, American growths attracted the attention of Bombay, Ahmedabad and Southern mills. East African and Sudan cotton were also in demand and a sizable business was put through. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Kalyan (Anjar) 1,040; Dhulia Co2 1,455; B.P. 52 (new) 1,250; Busoge (U.N.U.G.) 1,235; Sudan XG55 1,360.

Cotton futures in Karachi moved narrowly during the week, showing negligible net changes. The January contract was quoted 5 nP higher at Rs. 69.20. The March contract, however, declined from Rs. 69.00 to Rs. 68.70, thanks to selling pressure. *Deshi* prices tended to harden. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 73.50; Punjab *Deshi* 66.00; 4F Punjab Roller 71.00; S.G. 76.00. L.S.S. Punjab Roller 72.50; S.G. 77.00; N.T. Roller 85.15; S.G. 91.15.

Listless conditions prevailed in the Liverpool cotton futures market during the week. Turnover was limited and price movements narrow. Moderate hedging pressure in the forward positions of both the American and American type contract was a feature of trading. The nearby deliveries attracted some support. Sudan contracts were neglected. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing quotations:

October 23.20 (23.25); December 23.15 (23.20); September (Sudan) 29.50 (29.50).

Cotton futures in New York advanced during the week on commission house support and trade covering in 1963 crop months. Selling was, however, pronounced in nearby October which declined from 33.44 cents last week to 33.29 cents. The December delivery rose from 33.74 cents to 33.83 cents and March from 34.15 cents to 34.32 cents. Spot prices were steady with New York spot quoting unchanged at 34.95 cents per lb.

STAPLE FIBRE AND YARN IMPORTS

(From Our Own Correspondent)

BOMBAY, *26th September*

It is reported that the Government of India is contemplating to ask the State Trading Corporation to import about Rs. 2 crores worth of staple fibre yarn from Japan (in exchange for sugar and manganese ore or ferro-manganese) and Rs. 3 crores worth of staple fibre under rupee payment arrangements from East European countries as

well as under D.L.F. The report has not, however, had any marked effect on the market. Actually, spot prices are ruling firm. 40 x 2 Kohinoor has risen by 22 nP to Rs. 9.28 per kg. Centurys are fully maintained at Rs. 7.96 and Citys at Rs. 9.35. Staple fibre yarn forward deliveries have, of course, staged a decline, but the extent of the decline is negligible. October settlement has dropped Rs. 2 to Rs. 718 and December settlement Rs. 4 to Rs. 736.

In the art silk yarn section, 120 deniers indigenous yarns have registered an improvement, presumably due to the upward revision in their prices with effect from 1st October next (*vide* our reference in last week's report). Thus, National Rayons have risen by 18 nP to Rs. 16.94 and S.I. Viscose by 11 nP to Rs. 17.25. Centurys 75 deniers have also advanced by 13 nP to Rs. 22.68. National Rayons 150 Bt. cones 1st grade is fully steady at Rs. 13.20, while 100 deniers Centurys Bt. yarn has declined by 14 nP to Rs. 17.53.

Imports of art silk yarn into the Port of Bombay during the month of August aggregated 855.065 kg., as against 408,390 kg. in the previous month, bringing the total imports for the first eight months of the year to 5,972,848 kg. Imports of synthetic yarn amounted to 383,468 kg., an increase of 182,719 kg. Total import of synthetic yarn for the eight months amounted to 1,832,303 kg.

There has practically been no change in cotton yarn prices. Business put through is limited. The cotton mills in India produced 73 million kg. of cotton yarn during the month of August, as against 71 million kg. in the previous month. Imports of cotton yarn from Bombay port during the same month amounted to 127,522 kg. and those of sewing thread were of the order of 13,948 kg.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	26-9-1962	19-9-1962
	Rs.	Rs.
Art silk yarn **(per kg.)—**		
National Rayon 120D	16.94	16.76
Century 75D	22.68	22.55
S. I. Viscose 150D	13.33	13.46
Staple fibre yarn **(40 x 2)—**		
October (per 90.72 kg.)	718.00	720.00
December (,,)	736.00	740.00
Kohinoor (per kg.)	9.28	9.06
Century	7.96	7.96
Cotton yarn **(per bundle of 10 lbs.)**		
10s Podar	18.50	18.50
20s Modern	24.50	24.50
30s Madura	29.00	29.00
40s Gokak	36.50	36.25
60s Finlay	69.00	69.00
80s Madura	81.00	81.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

TIPPY TEAS STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *20th September*

In sale No. 37 held on the 18th inst., 643,000 kgs. were offered. Quality in general was about maintained. The market met with good demand. Low medium and medium brokens opened irregular to fully firm, but, as the sale progressed, these did not receive the same support and eased by 5 to 10 nP. Corresponding fannings, however, met with strong inquiry and sold at dearer rates. Good mediums were well competed for and sold at rates above last with buyers' emphasis more on fannings. Highgrowns met with useful support, but these were quoted only barely steady and often were lower. Clean black leaf descriptions, particularly fannings, continued strong and realised higher prices. There was strong inquiry for unorthodox descriptions which were dearer, but whole leaf grades under this category were again easier. Whole leaf grades sold at around last rates whilst tippy teas were strong.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.30-4.00	4.00-4.20
Mediums	4.10 4.50	4.20-4.30
Good mediums	4.65-5.70	4.30-4.90

The average price realised in sale No. 37 was Rs. 4.38 per kilo as against Rs. 4.22 a week ago and Rs. 4.63 in the corresponding sale last year.

Offering in dust sale No. 37 held today amounted to 211,000 kgs. The market was strong and active. Low mediums and mediums were well competed for and these were again much dearer, a few lines sometimes advancing by up to 30 nP. Highgrowns were also supported and sold at around last rates. Unorthodox descriptions were fully firm, while clean black grainy descriptions also shared in the upward trend of the market.

The average price realised in dust sale No. 37 was Rs. 4.12 per kilo as compared with Rs. 3.95 a week ago and Rs. 4.46 in the corresponding sale last year.

Colombo: Five million pounds were offered during this week. There was good general demand. Uvas were irregularly dearer. Western brokens were also well supported at firm to dearer rates. Best mediums were dearer whereas others in this category were irregular. Gulf types met with less support and were weak except tippy fannings.

London: North Indian and other growths: In Monday's sale, there was good demand. Best Assams met with good competition and sold well above brokens' valuations, whilst other descriptions were fully firm.

Ceylon and South Indians: 33,066 packages were offered in Tuesday's sale of which 13,908 packages were from South India. There was strong demand for Ceylons which were dearer. South Indians were generally easier except the best which were firm. Plainest declined by 1d. to 2d.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 38: 457,000 kgs. offered. Strong and active demand. Low medium and medium brokens firm. Similar fannings irregular, but often much higher. Good mediums strong. Highgrown brokens dearer. Fannings less demand and easier. Unorthodox steady."

OILSEEDS EASY

(*From Our Own Correspondent*)

BOMBAY, *26th September*

There was a modest decline in values of oils and oilseeds during the week under review. Groundnuts encountered selling, following reports of better crop position in Gujarat and larger arrivals of new crop from Mysore side. Offtake by *vanaspati* manufacturers and crushers were small, as they were awaiting a further fall in prices. But for reports of damage to standing crops in the Punjab and hoarding by a leading operator in the maturing contract, groundnut prices would have fallen sharply. Castorseeds ruled easy in the absence of any encouraging enquiries for castor oil export. Linseed, too, was weak. Cottonseeds tended to move down in sympathy with the bearish trend of the raw cotton market.

Groundnut September 1962 contract fell from Rs. 248 to Rs. 246.50 by Saturday, but picked up some strength subsequently to close at Rs. 247, with a net loss of a rupee. January 1963 contract was initially hammered down from Rs. 221.62 to Rs. 219.87, but, in sympathy with late recovery in the maturing contract, rose to finish at Rs. 22.12. Oil ex-mill and railway receipts shed 10 nP each to Rs. 19.15 and Rs. 18.80, respectively. Oil futures were also weak, the September contract receding by about 15 nP to Rs. 18.60 (per 10 kgs.) and January 1963 contract by 5 nP to Rs. 30.30 (per 16 kgs.). Nizam bo'd declined initially from Rs. 48 to Rs. 47.50, but improved towards the close to Rs. 48.75, with a net gain of 25 nP.

Castorseed March 1963 contract closed on a depressed note at Rs. 162.87, as against Rs. 164. Madras small dropped 38 nP to Rs. 32.12. Kanpur bold softened by 12 nP to Rs. 31. Oil commercial was quiet at Rs. 12.40. But oil B.S.S. picked up 5 nP to Rs. 13.

Linseed September 1962 contract closed lower by 50 nP (over the week) to Rs. 41.50, after fluctuating both ways between Rs. 40.75 and Rs. 42.50. March 1963 contract changed hands at Rs. 39.31, as against Rs. 39.37. Bold ready, however, hardened by 50 nP to Rs. 41.50 and oil by 10 nP to Rs. 17.

Among cottonseeds January 1963 fell by a rupee to Rs. 102. January 1963 was unaltered at Rs. 105.50. White receded by 60 nP to Rs. 21.90. But Berar strengthened by Re. 1.10 to Rs. 22.60.

The following table shows the closing prices of oilseeds and oils on Wednesday, 26th September, as compared with those of the two previous weeks:

	26-9-1962	19-9-1962	12-9-1962
	Rs.	Rs.	Rs.
Groundnut			
September 1962	247.00	248.00	245.00
Groundnut January 1963	222.12	221.62	224.12
Nizam bold	48.75	48.00	47.75
Khandesh quality	48.75	48.00	48.00
Oil ex-mill ready*	19.15	19.25	19.40
Railway receipts*	18.80	18.90	19.10
Castorseed			
September 1962	—	161.75	160.00
Castorseed March 1963	162.87	164.00	163.75
Ready Madras	32.12	32.50	31.50
Ready Kanpur	31.00	31.12	30.25
Oil B.S.S.†	13.00	12.95	12.90
Oil commercial†	12.40	12.40	12.25
Linseed			
September 1962	41.50	42.00	40.00
Bold ready	41.50	41.00	39.75
Oil ready†	17.00	16.90	16.50
Cottonseed September 1962	105.50	105.50	102.00
Cottonseed January 1963	102.00	103.00	101.75
Niger seed	36.75	37.00	37.00
Kardi seed	28.50	28.00	27.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

GOOD EXPORT DEMAND FOR TEA

(*From Our Own Correspondent*)

CALCUTTA, *25th September*

Export demand for tea at yesterday's sales here was good, but weak conditions were in evidence at the internal sales held last week. During the week, forward booking in liners continued to be heavy, but actual shipments to the United Kingdom were comparatively lower, with the result that ships sailed with vacant space. Heavy bookings to the U.K. in the last two months or so are now reflected in the London stocks, which, in the week ended 7th September, amounted to 114 million lbs., almost the same as in the previous week. In that week the average price realised in London sales was higher at 54.74d. a lb., as against 52.57d. in the previous week and 53.56d. in the corresponding period of last year. It should be noted that, in last week's sales in Mincing Lane, North Indian teas were in good demand with best Assams and Dooars being fully firm to dearer. The strong demand during last week's sales at Colombo also is an index of the need in foreign countries to replenish stocks before prices rise further.

The imperative need for incentives with a view to realise the Government's objective of increased exports so that not only the country would earn more foreign exchange but the output target of 900 million lbs. by 1966 would become a reality, was stressed by Mr. B. L. Lahoty, when he recently addressed here the annual meeting of the Bharatiya Cha Parishad. He said that tea had to be sold at more competitive prices in overseas markets. The industry was indeed grateful for the recent reduction in export duty, but Mr. Lahoty relented that this measure had not reduced costs of production, as labour charges, excise duty and freight rates had been increased, and plywood had been made excisable. With increased production the world over, all producing countries are earnestly doing all they can to increase their sales to the U.K. and since, with several levies and the industry's obligations under the Plantations Labour Act, India's cost of production is higher than in other producing countries, such as Ceylon and East Africa, Indian teas in the U.K. auctions are at a price disadvantage. Bearing in mind that the U.K. is India's principal market, the trade would implore the Government to review the industry's position in the U.K. market and grant adequate tax concessions so that Indian tea could be priced competitively.

Mr. Lahoty stressed, at the same time, the need for effective measures to increase internal consumption and also for the revival and intensification of internal propaganda. The trade has been urging this ever since the Tea Board discontinued the internal campaigns. Mr. Lahoty also referred to the tendency for labour to demand increased wages, and he connected this with the growing increase in the number of unemployed depending on tea garden workers. Demand for increased wages is usually related to growing expenditure of workers but seldom to increased productivity, and Mr. Lahoty appropriately cautioned that unless some measures were evolved in this respect, the tea industry would be in for more difficulties in the near future.

Mr. A. S. Bam, Chairman of the Tea Board, whose speech at the above meeting had been already referred to in these columns, readily agreed with the trade's view that Indian tea was losing foreign markets because its prices were higher than those of comparable grades produced in other countries. The trade cannot, however, appreciate his view that this disadvantage should have been removed by the recent duty reduction, since for reasons already stated the industry's cost of production has in fact increased. Mr. Bam announced that the Board would soon undertake extensive sampling surveys, through its cinema-*cum*-tea vans in rural areas in Saudi Arabia, Iraq, the Sudan and Afghanistan.

The industry is grateful to the Government of India for the reported decision of the latter to make available fertilisers to the North Indian gardens at the same prices that are being paid by the South Indian gardens. This will make fertilisers considerably cheaper for the gardens in this part of the country. With this concession, it is stated, the f.o.r. prices of the various fertilisers will be as follows: Rs. 310 per ton for calcium ammonium nitrate, Rs. 400 for ammonium sulphate nitrate, Rs. 354.60 for sulphate of ammonia and Rs. 670 for urea. The retail prices would not exceed Rs. 354, Rs. 435, Rs. 384.60 and Rs. 715, respectively.

Dusts on offer during last week's internal sales totalled 30,367 packages. Although demand was good, prices eased on a wide front. Medium C.T.Cs eased up to 20 nP, but good C.T.Cs were in keen demand. Plain orthodox teas fell by 10 nP to 15 nP, and Assams up to 20 nP. Legg-cut teas, though in good demand, followed the general trend, with the small and powdery teas receiving good attention. The quotations per one kg. in rupees, inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 6.80, medium Assam C.T.C. dust 5.50 to 5.80, legg-cut dust 4.90 to 5.30, medium Assam dust 4.75 to 5.10 and plain orthodox dust 4.10 to 4.50.

Tippy teas were one of the strongest features during yesterday's export sales and prices for these improved. Total offerings were 74,233 packages which met with a fair general demand. However, whole leaf grades were in poor demand and eased. Selected Darjeelings met with good demand, but in others there were liberal withdrawals. Medium C.T.Cs were irregular and eased but some selected lots in the best category were often dearer. Legg-cut teas were about firm at last rates. Good demand was in evidence for plain orthodox teas, and the plainest teas hardened. Orthodox Assams were nearly absorbed at lower rates, but the liquoring B.O.Ps were firm. The quotations per one kg. in rupees, inclusive of excise duty, were: Best Assam C.T.C. fannings 6.60 to 7.40, medium Assam C.T.C. B.P. 5.30 to 5.80, clean plain pekoe 4.10 to 4.50, best Assam C.T.C. B.P. 6.60 to 7.40, medium Assam C.T.C. fannings 5.30 to 5.80, plain fannings 3.85 to 4.20 and plain B.P. 3.80 to 4.10.

JUTE GOODS DECLINE

(*From Our Own Correspondent*)

CALCUTTA, *25th September*

On moderate support, raw jute remained firm, though unchanged, during the week under review. In the goods section, hessian was livelier on reports of increased consumption in the United States and fresh interest shown on behalf of U.S. buyers. However, heavy goods, under the impetus of increasing stocks with mills, eased, and the market-reckoner, B. twills, lost about a rupee over the week. The progressive loss of foreign markets to Pakistan has become a matter of anxiety for mills in India. With the advantages of superior and cheaper fibre, labour less assertive than in India, cheap labour, and with the existence of export incentive schemes, the mills across the border are not only able to provide foreign markets with higher-quality goods but under-cut Indian quotations. At the same time, mills in India have been compelled to increase the production of sacking even while restricting the output

of hessian, in view of limited availability of fibre fit for manufacture of hessian. Consequently, sacking goods in stock with mills have been rising month after month and this, in addition to a depressed foreign demand, is also a cause for the gradual decline in the prices of heavy goods constructions in recent weeks. As such, it is felt that the limit for such adjustment in production as determined by the demand factor for both the main constructions has been reached and that any further increase in stock of heavy goods must be avoided.

The fact that production of sacking goods is outpacing demand is emphasised not only by increased stocks but also by an analysis of despatch figures. The total of despatches of all constructions at 99,900 tonnes in August increased by 3,200 tonnes. Hessian increased from 40,000 to 43,400 tonnes; in other words, the proportion of hessian to total despatches increased impressively from a little over 41 per cent to slightly over 43 per cent. On the other hand, although sacking goods despatched increased in quantity by 1,700 tonnes to 42,300 tonnes, the proportion for August was the same as 42 per cent for July. In other words, although despatches increased in volume, they could not equal production, and thus stocks rose. Since this imbalance is reflected in prices and it affects the competitive capacity of Indian goods, trade circles would suggest early corrective measures. Although it is highly essential that, in the interests of a steady fibre market, mills should continue to operate up to their maximum capacity at present, it is suggested that overseas buyers are refraining from large buying, in view of the present slump conditions in the market. The Pakistan mills are fully booked with orders for three months to come and thus it would not be surprising if Calcutta were to receive a greater volume of business. But this has not been so, since overseas buyers are content to cover for their day-to-day requirements only. In these circumstances, some traders think that demand can be boosted if a small export quota for the inferior fibre is fixed even now, rather than in fact, as was done last year. Towards the end of last season, an export quota of 200,000 bales (inferior fibre) was fixed. East European and other countries have up to now bought 36,000 bales, and the Government has now extended the date for completing the quota up to 31st December. That overseas demand for Indian fibre is poor is explained in that prices are higher than in Pakistan.

Last week, the premium for superior fibre tended to increase. Although the daily arrivals have now increased to about 125,000 maunds from 100,000 maunds a week ago, the proportion of the inferior fibre has only increased. At the same time, with the need for mills to produce as much hessian and specialities as possible, demand for superior fibre has increased. The quality of fibre is generally lower than last year, as floods have delayed cropping and the fully-grown plants deteriorated by standing too long in flood waters. Moisture content is heavy, and mills are finding it difficult to find storage space. Their godowns are already full with last year's fibre and purchases in recent months. Therefore, most of current purchases have to be stored in the open air. With heavy rains for about three days this week, the moisture content in the fibre stored has only increased. The report which referred to the possibility that the State Trading Corporation would soon purchase jute from co-operative societies firmed up conditions in the fibre market as the week progressed. Quotations were unchanged as follows: Northern bottoms Rs. 29.50 a maund, daisee bottoms Rs. 32.50, and Assam bottoms Rs. 30.00. Middles commanded a premium up to Re. 1 a maund. At this premium, mills were reserved, but, at the same time, sellers were disinclined to lower the premium. Mills accorded support sparingly. Sellers were eager for business in white bottoms, prices of which were below the minimum level. There were some purchases towards the fresh quota for buffer stocks.

Conditions in fibre market in Pakistan were firm. Growers were reported to be enthusiastic, since the Government was contemplating to fix minimum prices at grower's level. Minimum prices would now be fixed for *kutcha* bales as well as *pucca* bales; however, these would naturally be related to grower's prices. The minimum prices for bottoms would vary from Rs. 18.25 to Rs. 20.25 a maund. Pakistan cuttings were bought by India at Rs. 80 a bale c.i.f. Calcutta. The U.S. buyers were reported to be showing keen interest in cuttings and an increase in price was thus anticipated.

The report that burlap consumption in the U.S. during August increased to 73 million yards from 67 million yards in July enlivened activity in the goods market during the week. Note was taken that consumption so far this year aggregated 581 million yards, an increase of 71 million yards over the corresponding previous figure. As a result, the monthly average has increased by 9 million yards to 73 million yards. Despite increased consumption, the fact that stocks at the end of August in the U.S. increased by 6 million to 243 million yards was not surprising to trade circles since U.S. buyers have been lifting more fibre. During the current week also, business done with the U.S. was good. Piecegoods deliveries in the U.S. last month were 18.3 million yards, as against 16.9 million yards in August 1961, and bag cut-up 54.5 million, as against 50.3 million yards. Prices in New York burlap market were steady. The market ignored the fact that stocks as compared with August 1961 rose by 26 million to 243 million yards, since last year's stocks were abnormally low in view of the acute shortage for fibre in Calcutta. On Tuesday last, ready hessian 40" 10 oz. here was maintained firm at Rs. 56, following some buying interest shown on behalf of the U.S. There was also covering business. On the other hand, the sacking section was neglected, and ready B. twills eased from Rs. 121.50 to Rs. 121.15. Prices fluctuated widely on Wednesday, but the higher levels were erased due to subsequent selling pressure. Thus B. twills eased to Rs. 120.60 but hessian 40" 10 oz. was fractionally higher at Rs. 56.10. In the latter, there was some overseas business and covering business too. At this stage, the U.K. also showed interest in hessian with the U.S. continuing to buy on Thursday. As a result, hessian 40" 10 oz. improved to Rs. 56.20 and in sympathy B. twills recovered to Rs. 120.65. The report which referred to the possibility that the East India Jute and Hessian Exchange would fix margins to curb speculation was circulating in the market. Conditions eased on Friday, and there was nothing of interest excepting some short-covering. B. twills eased to Rs. 120.35 and hessian 40" 10 oz. to Rs. 56. Over the week-end, hessian 40" 10 oz. was maintained firm at Rs. 56, but in the absence of interest B. twills were forced down to Rs. 120.25. Yesterday, hessian 40" 10 oz. improved to Rs. 56.75, for, although not much interest was shown by overseas buyers, there was good covering demand and keen activity in the futures market. In sympathy, B. twills picked up to Rs. 120.50.

FOODGRAINS REACT AT CLOSE

(*From Our Own Correspondent*)

HAPUR, *24th September*

After recording early gains on support induced by reports of damage to crops in Punjab and U.P. due to heavy rains, foodgrains here turned quiet near the close of this week, thanks to the return of sunny weather. Harvesting of maize is nearly finished and new crop arrivals will soon mount. Paddy, too, is being harvested now. Preparation of land for *rabi* sowings has commenced and due to the recent heavy rains all land used for *kharif* crops will be available for such sowings which are likely to increase.

Wheat prices improved by 67 nP to Rs. 1.94 per quintal on good consumer demand and outside buying, but declined in the week-end on better arrivals. The *dara* quality declined by Rs. 1.34 per quintal to Rs. 40.19 and so did the farm produce to Rs. 42.87. Arrivals averaged 200 maunds daily and local stocks were put around 6400 maunds. Rice prices eased by Re. 1 to Rs. 1.34 on better crop prospects. Arrivals increased and were mostly from East U.P., while demand was slack. Week-end prices were:—Rice *basmati* superior Rs. 85.74 to Rs. 93.77, *sela basmati* Rs. 75.02 to Rs. 85.74, *mangnuri* Rs. 53.58 to Rs. 56.26, *ramajwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *gadda* Rs. 53.58.

Gram prices hardened by 67 nP on firm advices from Punjab as also due to poor stocks. The Punjab variety was quoted at Rs. 43.54 and the local produce at Rs. 42.87. Arrivals were almost *nil* and stocks stationary at 14,000 maunds. Maize prices declined by Re. 1.34 to be quoted between Rs. 29.47 and Rs. 32.15 on better arrivals. Arrivals increased to 300 maunds daily during mid-week, but declined towards the week-end due to inclement weather. Barley and *bejhar* prices were stationary and quoted between Rs. 26.79 and Rs. 27.46 and Rs. 26.79 and Rs. 27.46, respectively, per quintal. *Jowar* ruled steady while *guwar* prices declined sharply by Rs. 2.67 to Rs. 4.01 on good crop prospects and slack demand. Other coarse grains were listless. Week-end prices were: *Jowar* Rs. 43.89 to Rs. 50.91, *guwar* Rs. 33.49 to Rs. 34.83, maize Rs. 28.13 to Rs. 29.47, new Rs. 29.47 to Rs. 32.15, *bajra* Rs. 37.51, *methi* Rs. 61.62 and oats Rs. 29.47 to Rs. 30.14 a quintal.

Among pulses, peas advanced on brisk outside demand. The *dara* quality improved by 67 nP to Rs. 31.48 to Rs. 32.15 and so did the farm quality to Rs. 32.88 to Rs. 84.16. During the week, nine wagons were loaded to Madras. *Arhar* prices also hardened by Rs. 1.34 on better demand against poor stock position to be quoted between Rs. 52.25 and Rs. 56.26. *Urd* and *moong* prices improved by Rs. 2 to Rs. 3 a quintal due to better demand. However, *masoor* and *moth* prices tended to ease, as demand slackened. Week-end prices were:—*Urd* Rs. 77.70, *urd dal* Rs. 88.41, *moong* Rs. 50.91 to Rs. 53.58, *moong dal* Rs. 57.60, *masoor* Rs. 42.87, *malka* Rs. 53.58, *masoor dal* Rs. 55.59, *moth* Rs. 40.19 *moth dal* Rs. 46.89, peas *dal* Rs. 36.17, gram *dal* Rs. 48.23 and *arhar dal* Rs. 66.98 to Rs. 69.66 a quintal.

SUGAR WEAK

(*From Our Own Correspondent*)

HAPUR, *24th September*

Weakness persisted in the sugar market here this week, as mills were anxious sellers due to easy supply position, while demand from the consuming areas of Gujarat, Saurashtra, Rajasthan and Delhi was conspicuously lacking. Spot delivery prices eased by Rs. 2 a quintal. Mill delivery prices also fell heavily. However, some demand at lower prices led to a mild rally in prices later. Week-end prices were: Spot delivery Rs. 105.75 a quintal; mill delivery (D-29) Amroha Rs. 103.15, Dhampur Rs. 103.15, Seohara Rs. 103.15, Meerut Rs. 104.65, (E-29) Simbhaali Rs. 101.49, Dhampur Rs. 102.80 and Bijnore Rs. 102.80.

Expectations of further large releases of sugar for free sale in the open market to meet the forthcoming festival demand kept the Muzaffarnagar sugar market subdued during the week. Prices drifted lower by 25 nP to Rs. 1.50 per quintal. Buyers were hesitant, although mills offered heavy discounts in a bid to clear stocks. Forward deals were few and far between. Delhi, which is a major buyer here, abstained from making fresh commitments in view of the reported formation of a syndicate there. Offtake in the spot section was small. Prices of the D-29 variety of Mansurpur and Deoband were placed at Rs. 107 per quintal. Mansurpur C-29 fetched Rs. 108 per quintal. Week-end prices were:—Saharanpur (D-29) Rs. 106.50; Meerut (D-29) Rs. 104.65; Rohana (B-29) Rs. 107; (C-29) Rs. 105.75; Modinagar (E-29) Rs. 105.16; Seohara (E-29) Rs. 103.15; Dhampur (D-29) Rs. 103.15; Samli (A-29) Rs. 106.50; (B-29) Rs. 107.25; (C-29) Rs. 106.25; Simbhoali (E-29) Rs. 101.49, Panipat (C-29) Rs. 106.50 and Rampur (A-29) Rs. 107.50.

Khandsari prices fell during the week by Rs. 1.34 per quintal on reduced enquiry from Punjab and Rajasthan. The *galawat* quality declined sharply by Rs. 2.68 per quintal in the absence of demand. The non-crystal quality was quoted between Rs. 96.45 and Rs. 104.49 and the crystal variety between Rs. 96.45 and Rs. 101.81 per quintal.

Trading in *gur* was nominal, as stocks were nearly exhausted. *Shakker* prices touched new peak levels due to good demand in the face of poor stocks. Week-end prices were: *Gur* superior Rs. 65.64 and *shakker* Rs. 66.88 to Rs. 72.34. In the Muzaffarnagar market poor buying interest from Rajasthan and Gujarat centres led to a sharp fall in *gur* prices. Demand from the South was at a low ebb in view of the commencement of new crop arrivals there.

Gur futures ruled easy on bear pressure influenced by reports of good rains. *Gur fagun* opened last Monday at Rs. 21.52, touched the highest and the lowest at Rs. 21.65 and Rs. 21.17, respectively, in the mid-session and was quoted today at Rs. 21.22.

KIPS QUIET

(*From Our Own Correspondent*)

MADRAS, *24th September*

The E.I. kips market here was quiet this week. Exporters showed only moderate interest because the price quoted by shippers was above their ideas. Orders with tanners seemed to be enough to cover their tannery output but not the raw stocks awaiting process. Inland demand for the low grade cowhides was poor. There were good inquiries for cowcalf, but buffcalf and buffhides were neglected. The E. I. Tanners have been keenly operating in the new season's buffcalf skins in the Northern markets. These skins have started arriving in the markets, and the prices paid are reported to be unusually high.

Importers in the Continent were interested in the higher selections of goat skins, while sellers tried in vain to sell them these skins together with the lower ends. Patchy sales of tanned goat skins heavy weights fifths and inferior fifths selections were made to the Continent. The market for sheep skins ruled quiet, despite a few transactions in the middle class skins.

The next German tanned skins public auctions were to take place today, when 81,700 goat and 41,800 sheep skins were to be offered for sale.

The following were the ruling prices per lb. in the local market, of all-round parcels:—Tanned cow hides 8/8½ lbs. average Rs. 2 to Rs. 2.06, tanned cow calf 1½/2 lbs. average Rs. 3.70 to Rs. 3.80, tanned buff hides 12/14 lbs. average Re. 1.65 to Re. 1.75, and tanned buff calf 1½/2 lbs. average Rs. 3.25 to Rs. 3.30.

Notice

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

FINAL DIVIDEND FOR THE YEAR ENDED 31st MAY, 1962

AT A MEETING OF THE DIRECTORS held on the 25th September, 1962, the following Final Dividend was recommended for the year ended 31st May, 1962, subject to deduction of Tax under Section 194 of the Income Tax Act 1961.

Rs. 585 per share on the 100 original shares of Rs. 2,500 each.

Rs. 29.25 per share on the 71,400 Old shares of Rs. 125 each.

Rs. 11.70 per share on the 84,000 New shares of Rs. 125 each (Rs. 50 paid up).

This, together with the Interim Dividend paid in June, 1962, will make a total distribution for the year, subject to Income Tax, of:

Rs. 825 per share on the 100 original shares of Rs. 2,500 each.

Rs. 41.25 per share on the 71,400 Old shares of Rs. 125 each.

Rs. 16.50 per share on the 84,000 New shares of Rs. 125 each (Rs. 50 paid up).

Notice is hereby given that the Register of Members and the Transfer Books of the Corporation will be closed from the 15th October 1962 to the 5th November 1962, both days inclusive.

Final Dividend for the year ended 31st May, 1962, if declared, will be made payable to those Shareholders whose names stand on the Share Registers of the Corporation at the close of business on the 13th October, 1962, and to holders of Fractional Certificates after such Fractional Certificates have been exchanged for Bonus Shares in accordance with the prescribed procedure.

By Order of the Board,
WALLACE & COMPANY,
Secretaries & Treasurers.

Registered Office:
9 WALLACE STREET,
BOMBAY 1,
25th September 1962.

TRENDS IN NEW ISSUES

FOREIGN INVESTORS SHY AGAIN?

THE study of capital issues, based on the prospectuses published by companies during the period 1st April 1961 to 31st March 1962, made by Dr. Raj K. Nigam, Director of Research and Statistics, and Mr. S. M. Dugar, Senior Accounts Officer, of the Department of Company Law Administration, Union Ministry of Commerce and Industry, is a very useful analysis of the recent trends in the capital market. Second in the series (the first one related to the period 1st April 1960 to 31st March 1961), the study relates to the methods of promotion of public companies in the country, financing of their project costs, formation expenses, including brokerage and underwriting commission paid by the companies, etc. As against 43 company prospectuses examined in the previous year, 72 company prospectuses have been examined in the latest study. Of the 72 prospectuses, 18 were issued during the first quarter of the period, 19 in the second quarter, 14 in the third quarter and 21 in the last quarter. Although the number of issues covered was larger, the amount of capital raised by them was markedly lower, being only Rs. 23.8 crores, as against Rs. 31.12 crores in the previous year. Nearly two-thirds of this issue was offered to the public in the first and last quarters of the period, the exact amounts being Rs. 7.38 crores and Rs. 7.25 crores, respectively. In the second quarter, the issue to the public aggregated Rs. 4.98 crores and in the third quarter it aggregated Rs. 4.20 crores. It is common knowledge that, generally, the period May to the end of September is reserved for putting through the borrowing programmes of the Central and State Governments, as well as of the Local bodies and public sector undertakings like Electricity Boards and Port Trusts.

Of the 72 prospectuses issued during the year, 30 related to companies registered in the Western region, 18 in the Eastern region, 13 in the Southern region and 11 in the Northern region. Of the total issued capital aggregating Rs. 23.8 crores, about Rs. 11.5 crores related to companies in the Western region and Rs. 5.8 crores to companies in the Eastern region. The companies registered in the Southern region and in the Northern region issued capital to the tune of Rs. 3.3 crores and Rs. 3.2 crores, respectively.

The most striking feature of the capital issues was an increase in the offtake of preference shares from the second quarter onwards. This is attributed by the authors of the study to the passing of the Preference Shares (Dividend Regulation) Act 1960, and the correction of the imbalance created earlier by the Financial Act reducing the net dividend rate on the preference shares. To a certain extent, the improvement in the offtake of preference shares reflected the revival of investors' confidence in these shares, despite limitations to their growth prospects.

About 9.1 per cent, or Rs. 2.16 crores, of the total capital issues of Rs. 23.8 crores was offered in the form of preference shares. Of the amount offered in preference shares, Rs. 22 lakhs were offered in the first quarter (as against Rs. 40 lakhs in the last quarter of 1960-61), Rs. 60 lakhs in the second quarter, Rs. 54 lakhs in the third quarter and Rs. 80 lakhs in the fourth quarter. The proportion of the preference shares issue to the total issue in different quarters was 2.9 per cent in the first quarter (as against 6.1 per cent in the last quarter of 1960-61), 11.9 per cent in the second quarter, 12.9 per cent in the third quarter and 11 per cent in the last quarter.

Of the total capital issues, Rs. 21.64 crores, or 90.9 per cent, were offered in equity shares. The proportion of equity and preference shares to the total was not far different from the pattern (90.3 per cent and 9.7 per cent) noticed in 1960-61. It confirmed the investors' preference for ordinary shares.

The authors of the study have also noted that, while the stock exchange regulations prescribe that 49 per cent of the issued capital has to be compulsorily offered to the public for subscription, the general enthusiasm exhibited by the public, particularly the small investors, encouraged the company promoters to offer a larger proportion of the share capital to the public. As compared with the experience in the previous year, a larger number of issues was reported to have been several times oversubscribed. The study notes that it was this phenomenon of oversubscription that helped the promoters in following the course of putting high amounts of issued capital on sale to the public without risking the success of the issue which, were it to fail, would have seriously affected the reputation and goodwill of the enterprise at a "critical" period.

The share of the public in the total issue of Rs. 23.8 crores amounted to Rs. 14.65 crores, or 61.6 per cent, as against 49.4 per-cent in the previous year. The next important participation came from the promoters, directors, and their friends, who took up Rs. 6.11 crores, or 25.7 per cent. The share of the foreign collaborators, was no more than Rs. 188 lakhs or 7.9 per cent as against roughly Rs. 380 lakhs in 1960-61. The financial institutions, such as the L.I.C., I.C.I.C.I., I.F.C. and the State Financial Corporations, took up Rs. 87 lakhs, or 3.6 per cent. In the previous year (that is, 1960-61), the share of the promoters was 27.3 per cent, of the foreign collaborators 12.1 per cent and of the financial institutions 11.9 per cent. There was an improvement in the offtake of the share capital by the Central and State Governments from 0.3 per cent to 1.2 per cent.

It will thus be seen that there has been a large reduction in the proportion, as well as amount, of share capital taken up by foreign collaborators. The main reason for this reduction, in the opinion of the authors of the study, is a shift in the interest of foreign collaborators to technical collaboration, instead of direct financial participation. In the context of India's forsign exchange position, this is a disquieting trend. It looks as though the difficulties that are being experienced by the industrialists in this country in regard to supply of raw materials, transport and power, as well as India's poor performance on the export front have cumulatively undermined the confidence of foreign investors in India. Evidently, they must be of the view that, with all these difficulties, investments in India may not turn out to be as remunerative as it appears on the surface and that the facilities for remittance of profit may be curtailed.

The study reveals that not only did direct capital participation by foreigners decline but the contribution by foreigners through other forms, namely, loans and credit, also fell. In absolute terms, foreign contributions aggregated Rs. 4.1 crores in a total project cost of Rs. 47 crores, making a percentage to the total of about 10, as against which in the preceding period, about 30 per cent, or Rs. 18.3 crores, of the total project cost of Rs. 61 crores, came from this source.

The financial institutions appear to have opted for more long-term accommodation and less equity participation. This explains the fall in their absorption of equities.

The study discloses that the cost of raising capital was higher at 4.5 per cent of the issued capital from 3.5 per cent in the preceding period. The increase in the cost has been observed to have taken place under the miscellaneous head which includes pre-incorporation expenses, for example, cost of travelling by promoters, initial survey expenses, advertising expenses, etc. The remuneration to promoters was found to have fallen. The percentage cost by way of underwriting commission and brokerage increased from 0.8 to 1.0. The total cost of raising the capital as percentage of the total project cost amounted to 2.4 per cent, as against 1.6 per cent in the previous period. As between the four quarters of the period, the cost of raising capital as related to capital issue and to the total project cost showed a rising trend, with the ratio of cost to the capital issued settling around 5.1 per cent and that of the cost to the project cost around 2.4 per cent in the fourth quarter of the year.

A redeeming feature of the new issues in 1961-62 was that the reliance on debt capital tended to decline to some extent, as evidenced by the hardening of the debt-equity ratio in favour of equity.

COMPANY MATTERS

(Concluded from page 566)

taxation, including the past liability, has been raised sharply to Rs. 8.33 lakhs from a mere Rs. 1.93 lakh in the previous year and that for depreciation is also higher at Rs. 10.59 lakhs, as compared with Rs. 9.25 lakhs. The Managing Agents' remuneration has increased from Rs. 3.70 lakhs to Rs. 4.31 lakhs. In view of these higher allocations, the net profit has dropped by almost Rs. 2 lakhs to Rs. 12.11 lakhs.

Credit obtained on account of past adjustments amounts to some Rs. 83,000, as against Rs. 50,000 a year before. Miscellaneous expenditure of Rs. 38,208 (Rs. 27,142 in the previous year) has been written off and a sum of Rs. 1.24 lakh (Rs. 1.90 lakh) has been set apart for employees' retiring gratuity. Development reserve has got Rs. 1.52 lakh (Rs. 1.92 lakh), tax relief reserve Rs. 24.769 (Rs. 18.958) and other reserves Rs. 1.54 lakh (Rs. 1.29 lakh). The return on the Rs. 10 fully paid equity shares has been maintained at 9 per cent per annum, subject to tax, and it absorbs Rs. 7.68 lakhs. The distribution to preference shareholders takes away Rs. 3.05 lakhs. The carry forward is Rs. 10.73 lakhs, as against Rs. 13.53 lakhs brought in.

The total units of electricity generated (and purchased) by the Company during the year under review amounted to 82,800,971 kilowatt hours, as against 71,295,327 kilowatt hours in the preceding year. The total load increased from 39,355 kw. to 42,657 kw. Consumers numbered 82,594, as against 77,177 a year before. A power set was put into commission at Belgaum. Two more sets have been erected at Aimer and Malegaon and these are under trial. There has, however, been a pressing demand for power at these stations as well as at Bulsar. Negotiations for the purchase of three generating sets of 1,800 b.h.p. each and one of 600 b.h.p. have been finalised, but the import licences for them have still not been received. The financial commitment for these sets and auxiliaries is estimated at about Rs. 15 lakhs, of which Rs. 5 lakhs are expected to be spent this year, the balance being payable in four six-monthly instalments. Transmission lines are being extended to meet the growing demand. It is already known that the solvent extraction plant of the Company went into production about a month ago. Last year, the Company spent about Rs. 10 lakhs on the plant. It will spend Rs. 8 lakhs more this year.

Financially, the Company has run into some sizable indebtedness to outsiders, which can, however, be explained by the commitments on the expansion programme, including the solvent extraction plant. Thus, bank borrowings have increased from Rs. 14.27 lakhs to Rs. 21.02 lakhs, unsecured loans from Rs. 9.25 lakhs to Rs. 10.46 lakhs and the aggregate current liabilities and provisions from Rs. 61.57 lakhs to Rs. 80.63 lakhs. The total indebtedness to outsiders works out to Rs. 112.11 lakhs, as against Rs. 85.09 lakhs in the previous year, and this is not fully covered by current assets, loans and advances aggregating Rs. 58.26 lakhs. Investments amount to Rs. 3.64 lakhs. The paid-up capital of Rs. 130.30 lakhs is backed by reserves and surplus aggregating Rs. 41.84 lakhs. The gross block, which increased during the year from Rs. 258.79 lakhs to Rs. 231.74 lakhs, has been written down to Rs. 202.93 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 10.76 *cum-div*. On the *ex-div*. basis, they offer a net yield of 6.2 per cent per annum.

RS. 300-LAKH LOAN OF GUJARAT ELECTRICITY BOARD

With a view to meeting the growing demand for electricity in Gujarat State, the Gujarat Electricity Board is setting up a new thermal power station at Dhuvaran, with an installed capacity of 254,000 kw. in addition to extending the capacity of the Shapur and Kandla steam stations by 10,000 kw. each. Work on these projects is progressing as per schedule and the Dhuvaran station will be commissioned in 1964 as programmed. These are the major projects of the Board which is to raise, during the third Plan period, the generating capacity of the installations owned by it by 300,000 kw., excluding the 150,000 kw. to be obtained from the proposed Tarapore nuclear power station. The total funds required by the Board for implementing its expansion programme during the Plan period are estimated at Rs. 47 crores, of which the bulk will come from the State Government by way of loans, the balance having to be raised from the Board's internal resources and through public loans.

The Board is, therefore, to float a public loan of Rs. 300 lakhs in bonds carrying interest at the rate of 4.75 per cent per annum. The bonds, which will have a currency of 12 years, are being issued at par. The lists will open on 3rd October next and close on the 6th. The bonds are fully guaranteed by the Government of Gujarat in regard to both interest and principal.

BANKING

(Concluded from page 547)

such aid be made available on a multilateral basis. I.D.A. is a major source of development aid, and the principal international instrument for the provision of aid on lenient terms of repayment. But I.D.A. faces the imminent full commitment of its initial funds.

The facts are set out in the report of the Executive Directors regarding the replenishment of I.D.A.'s resources. I.D.A. now has about $765 million in usable funds, including the very welcome supplementary contribution recently made by Sweden. We estimate that, by mid-1963, most or all of these funds are likely to have been committed. This does not, of course, mean that all of I.D.A.'s funds will actually have been disbursed by then: it is quite certain that they will not; we would not expect to pay out the last of our usable funds until 1965. But unless we can be assured—very soon—that further funds will be available from 1965 onward, I.D.A. will not be able to enter into any new lending commitment after about the middle of next year. This is not a situation that can be ignored and allowed to drift. To do nothing would in itself constitute a decision to bring I.D.A.'s operations to a halt.

If I.D.A. continues to operate at its normal pace, it seems probable that it will, during the current fiscal year, commit something like $500 million. This money will be directed only to high priority developmental purposes, in countries whose capacity to attract and repay loans from conventional sources is limited or non-existent. There is no reason, that I can see, to suppose that the demand for worthwhile credits will be any lower in subsequent years. On the contrary, it is my conviction that the demand will continue to increase, and to increase greatly. Experience has already demonstrated, I believe, that I.D.A. is capable of meeting a very real and important need and, in relation to this need, the original capital of I.D.A. was obviously inadequate. But if it is to meet this need—if it is to become a principal instrument for the development of the poorer countries, and not just a minor gesture of goodwill toward them—it will clearly require a very substantial addition to its resources.

There is one point that I feel should be made clear. The total amount lent by the Bank this year was much greater than in any previous year. But we cannot expect the rate of lending by the Bank to continue to expand in future years. Indeed, it may prove difficult to maintain the Bank's operations at their recent level. Many of the Bank's present member-countries cannot prudently assume further hard debt without jeopardising their future, and, of about 20 new members expected to join the Bank within the next year or two, few will be in a position to service loans from the Bank. It is to I.D.A., not to the Bank, that most of them will have to look for help. The future of I.D.A. is, therefore, the most important issue.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2686 BOMBAY, 6th OCTOBER 1962 PRICE Rs. 2

OUTLOOK FOR EQUITIES

EQUITIES are now at about the lowest level for the current year so far. The Reserve Bank's index number of all-India variable industrial securities stood at 181.4 (Base: 1952-53=100) in the week ended 22nd September, the latest available at the time of writing. Since then, there has been a further, albeit slight, fall in prices. As compared with the peak levels touched in the boom last summer—the Reserve Bank's index touched 195.6 in the week ended 19th May 1962—the loss in value works out to 14.2 points or about 7.3 per cent. As compared with the level (177.9) prevailing a year before, the latest level is no doubt higher by 3.5 points or 2 per cent. But it must be remembered that September 1961 was a period of downward trend for equities due to uncertainties about control on stock exchanges and the contents of the Congress Party's election manifesto. The decline in percentage terms from the peak level of this year may appear to be modest, but it is quite substantial in the case of popular counters in iron and steel, cotton and rayon textiles, chemical, engineering, paper, coal, tea, coffee, sugar and shipping sections. The only section to register an improvement over the level witnessed even during the peak of the boom is electricity. A full picture of the trend can be had from the comparative table published on the next page. It will be noted therefrom that all sections are down as compared not only with the peak levels registered when the boom was at its height in May last but also with those in the first week of the current year. As for the new issues, the fancy premium commanded by several of them has shrunk to negligible levels and has yielded place to a discount in some cases.

Considering that equity values last summer were undeservingly high and the boom had reached unhealthy proportions, the fall suffered by equities in the past three months was quite justified. Those investors who had stuck on to their holdings without booking their profit as well as those who bought afresh at the higher levels have themselves to thank. There were clear indications then that their optimism was that of a gambler on the race-course. Even now one cannot confidently assert that equities as a whole are undervalued, having regard to the current economic and political climate. Here and there one may find scrips that are attractive on their individual merits, but, generally speaking, the vast majority are still so high that the net return on them is not adequate to cover the risks ahead. For an investor of moderate means, equities must go down a little further to merit their attention, though for the very rich individual investors and institutional investors they may appear to be tempting at current levels. But it looks as though these classes of large investors do not have much surplus funds left with them. Big individual investors have all gone in for industries of their own, supplementing their savings with heavy bank borrowings, as they hope to make anything between 10 and 20 per cent per annum in due course of time. As for institutional investors, they have just had to take up, in large junks, new Gilt-edged issues. There are, of course, big speculators who try their fortunes as bulls when equities are pretty low and as bears when they are unduly high. The climate is still unfavourable for them to play the role of bulls. Sentiment has been badly hurt by Government actions, as we shall presently show, and it is difficult for a bull to command a sufficient following. It is common knowledge that no bull can carry the market alone.

The Central Government's Budget for 1962-63, presented by Mr. Morarji Desai in the last week of April, contained heavy taxation. Excise duties on many items were increased and the number of goods that was free from this levy was reduced further. The corporate taxation was raised from 45 per cent to 50 per cent. The increase in Central taxation had been preceded by a rise in railway fares and freights and was soon followed by a rise in taxes on road transport also. And yet the boom on stock exchanges continued, gathering new momentum, for over a month after Mr. Desai's budget. This phenomenon was the combined result of a number of factors. First, the general opinion in stock market circles was that the incidence of higher rate of corporate taxation would be absorbed by better profits through larger turnover. Secondly, one or two first class companies announced bonus shares. And, thirdly, Mr. K. D. Malaviya's initial observations as the Minister for Mines and Fuel were favourable to the private sector and gave rise to high hopes that, in fixation of producers' prices, the Government would be fair to them. Soon they were disillusioned. Although it was the historical crash on Wall Street on 28th May 1962 that pricked the bubble on the Stock Exchanges in this country and set in motion the corrective long overdue, the downward trend was sustained in the past few months by the growing realisation that the assumptions about profit-margins of industries were not tenable. Mr. Malaviya gave but a niggardly increase in the controlled price of coal, thereby belying the earlier optimism. The corporate results of a number of industrial concerns for 1961-62 failed to come up to expectations, most of them disclosing a shrinkage in their profit-margin. And, what was more, the assessment of outlook for the current year was far from promising. The directors' report of almost every company, and/or its chairman's statement, was a song of difficulties. The general theme was high cost of production, heavier taxation, shortage and/or deterioration in the quality of raw materials, inadequate supply of power and fuel, and cuts in the import of components, as well as of plant and machinery, due to foreign exchange scarcity. Most of these handicaps were, of course, there even before. Where they were not in operation, it was clear to discerning eyes that they would be experienced sooner or later. But, in the heat of the boom, they were either ignored or minimised. Once the bullish enthusiasm subsided and sanity returned to the markets, the facts of Indian economic situation began to assert themselves in the calculation of investors and professional operators.

By force of habit, as it were, equities had tended to recover after the collapse of the boom in the first week of June. The Reserve Bank's index number, which had gone down from the peak of 195.6 in the week ended 19th May to a low of 182.8 in the week ended 21st July, recovered by stages to 188 in the week ended 1st September. The subsequent slump, bringing the index down to 181.4 in the week-ended 22nd September, was largely the result of the Government's drastic decision on retention prices of steel. That decision has more than wiped out the 50 per cent recovery that had taken place in equity values after the black (or blue, as Americans call it) Monday, 28th May 1962. In other words, the steel price decision has been responsible for more than half of the fall in equity values from the boom levels of May last. Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, to whom fell the lot of announcing the Government's decision on retention prices, has thus left an indelible mark of his own, quite comparable with that T.T.K. imprinted on the history of stock exchanges in the initial years of the second Plan. Cynics say, as is their wont, that, by hugging the bears on the stock exchanges, Mr. Subramaniam has endeared himself to India's staunch socialist Prime Minister. The Government's decision on steel prices, coupled with Mr. Subramaniam's indictment of the Tariff Commission, has a significance that goes beyond the iron and steel industry. It implies that the Government is out to deflate industrial profits by compelling manufacturers wherever possible not to pass on the full incidence of the increase in their cost of production. It is the realisation of this point that has upset the confidence of investors. The Government can, of course, undo the damage it has already done by suitably amending its decision, but Mr. Subramaniam has banged the door, by reiterating his stand in regard to both steel prices and the Tariff Commission.

The revival of upward trend in general price levels has revived the attacks on capitalists again. The report of Mahalanobis Committee on concentration of economic power and distribution of benefits of two Plans among the people is yet due. Firm steps to hold the price line through physical controls are being discussed. Pleas for extending the public sector's area of operations on the ground that the private sector is lagging behind in implementing the third Plan goals in a number of industries are being vigorously aired. Mr. T. T. Krishnamachari has been hinting, off and on, at the need for placing a ceiling on urban incomes also. One cannot say at this stage as to what will be the outcome of these new veiled, as well as open, attacks on the private sector. If the objective is no more than finding a scapegoat for the failure of the Government's economic policies and programmes, not much harm to investors will follow. If, however, it means preparing the ground for giving another powerful push to socialism, they may suffer perceptibly. Anyway, these are disturbing signs, calling for caution on the part of investors. Meanwhile, the Government of India has started applying stricter terms for the issue of additional capital. It is insisting on high rates of premium for rights issues which means that it can receive a larger amount of tax, if and when the share premium

accounts are capitalised through issue of bonus shares.

More disquieting than the possibility of a recurrence of ideological 'aberrations' are the growing shortage of real resources, the worsening of the malady of high costs, and the disappearance of discontentment among labour. Scarcity of foreign exchange, arising from the failure of exports to expand and the non-availability of adequate foreign aid to cover maintenance imports, is compelling several industries to work below capacity which in turn adds to their per unit cost. Transport facilities are lagging behind the demand and so are the fuel and power supplies. Shortages of cement, steel, and other building materials are retarding the progress of many new units and expansion of existing ones. Scarcity of trained manpower and experienced technical-*cum*-managerial personnel is another handicap. The cost of credit, too, is going up, a disturbing prospect for those industrial projects that are heavily dependent upon borrowings. They will either have to call for additional capital or be prepared to foot a bigger bill of interest charges. Consequently, a number of new units may not be able to fulfil the rosy expectations of the investors who have supplied the capital. It is, therefore, quite possible that several of the new equities may seek still lower levels before regaining the investors' regard and fancy for them. So far as the existing industrial units are concerned, a shrinkage in profit-margins of many of them is clearly discernible.

So much for the general trend. The position of individual industries may vary from one another to some extent and so also that of individual units in the same industry. By increasing production as a result of expansion in capacity, the absolute amount of profit may be higher in certain industries for the current year. A typical instance is cement. Steel, paper, engineering and chemicals may be others. But the improvement may be disproportionately low as compared with the effort and labour put in as well as with the need for building up reserves to take care of modernisation and expansion. It is possible that some units may be in a position to enhance their equity dividends, but it is a moot point whether it will be to the extent anticipated by investors. Of course, over a period of time, the efforts that have been made in recent years and are being vigorously continued will yield results that would sufficiently reward the patience of investors. Only, the difficulties that are now restraining the rate of economic growth have lengthened this interval far beyond the earlier expectations. And, during this interval, there may well be developments, political and economic alike, that may be a source of much concern to investors.

TREND OF EQUITIES

Reserve Bank's Index Numbers (Base 1952-53=100)

	Latest (22-9-62)	Beginning of 1962 (6-1-62)	A year ago (23-9-61)	Approximate highest during peak of boom*

* For equities only. † Basic industrial.

There is, however, one redeeming feature. While the pace of economic growth may be slower than that planned for, there is bound to be some growth and no recession. Accordingly, funds seeking investment will continue to grow and the bulk of them has nowhere to go but into equities. It is true that yields on first class preference shares are still much higher than those on equities and, with growth prospects under discount, the fixed-yielders are likely to receive good attention. But the flow of even a relatively small amount into them will quickly narrow down their attraction. Barring any untoward event, the danger of any further sharp fall in equities is, therefore, less. At the same time, the chances for the re-emergence of a strong bull market are remote, unless there is an unexpected turn for the better in industrial growth and profits.

FORESTS AND INDUSTRIES

FORESTS constitute a renewable resource which is intimately linked with agriculture. How intimate the link is may be seen from the self-defeating experience of people in several parts of India. It is well known that the large tracts of land—in the plains, on undulating ground and in the hills—which have been cleared of forests for the purpose of cultivation have lost their soil fertility and begun to erode after yielding excellent crops for a couple of years or so. The result is that, on these lands, there is now, as Dr. Ram Subhag Singh, Union Minister for Agriculture, so pithily put it in his Convocation Address at the Dehra Dun Forest College on 30th September, "neither forest nor agriculture." But that is not the whole story, for flood incidence, too, has increased as a consequence of excessive deforestation in the hills and mountains from which the rivers originate. Deforestation, especially in the plains, has also been responsible for droughts and reduction in rainfall. Last year's severe floods in Kerala and Madras, for instance, have been attributed to such deforestation, while this year's poor flows of water in those areas are also stated to be due to the same cause.

If, thus, forests are not there to regulate water supplies for agriculture, the result can only be a slow but sure disaster for the latter. Everybody knows in theory that forests protect and promote agriculture, but not everybody takes care, in actual practice, to conserve them or to exploit them in a prudent and scientific manner. Where forests and agriculture are so intimately linked with each other, it stands to reason that the policies pertaining to them must be organically co-ordinated at appropriate points or in appropriate areas. There is need for such co-ordination at those points which call for an integrated programme of forest conservation and soil conservation, afforestation and control of soil erosion. Even in those parts of the plains where soil erosion caused by winds has to be controlled, planting of shelter belts would need to be co-ordinated with agricultural programmes. Rural afforestation—planting of trees for the supply of fuelwood, fodder or green manure and of timber for village industries and housing construction—would likewise have to be co-ordinated with rural development programmes.

Economic growth can also be significantly promoted through such integration of forestry plans or programmes with plans for rural and agricultural development, or with plans for urban and industrial development, inasmuch as forests provide wood and timber for urban housing and raw materials for a variety of industries. But enough attention is not paid to the implementation of these forestry plans in India, as in other developing countries, because less priority is accorded to them than to plans in other sectors. Unless the forestry services make a social evaluation of forests in order to show the importance of forestry, forest industries and forest-based industries to the overall economy, the public authorities cannot be easily persuaded to give the necessary higher priority to the forestry sector. This implies that there should be a strong and well-equipped forestry service. Unfortunately, in India, the forest department is a much neglected arm of agriculture. The fact that in the third Plan an outlay of only Rs. 51 crores for all the five years has been proposed for the various forest development programmes is indicative of the low priority assigned to forests. Incidentally, it may be recalled that currently the forests yield an annual revenue of as much as Rs. 54 crores. The priority is also undoubtedly low in relation to the magnitude of the problem, as recognised by the planners themselves in the following passages:

"In view of India's tropical climate, periodic monsoons, low forest productivity and predominantly agricultural economy, it has been urged that at least a third of the total land area in the country should be under forests. But, as against this, the actual proportion is only 21.8 per cent. Moreover, most of the forests are concentrated in a few States only. . . . There is great need not only for increasing the forest area for the country as a whole but also for more intensive development in areas which are lacking in forest wealth.

"It is estimated that the requirements of industrial wood (including pulp material for paper and rayon), which amount to 4.5 million tons per annum at present, would increase to about 9.5 million tons in 1975. . . . As new plantations take as many as 25 to 30 years to develop, in the ordinary course production may not increase beyond 5.5 million tons by 1975. . . . Due to acute shortage of fuelwood, nearly 400 million tons of cowdung (wet weight) equivalent to 60 million tons of firewood is annually burnt instead of being put in land as manure. The shortage of firewood is anticipated to be about 100 million tons by 1975. . . . As regards minor produce, the present requirement of tanning materials is about 30,000 tons of pure tannin, 30 per cent of which still comes from abroad. . . .

"For several reasons, the average yield of forests in India is extremely low. Large areas of unclassed State forests and the former private forests acquired by Government after the abolition of *zamindari* are under-stocked and require to be rehabilitated. In forests in inaccessible hilly areas a proportion of the timber is lost because of lack of adequate facilities for transportation. Large quantities of inferior woods which could be put to economic use through seasoning and preservation treatment remain only partially utilised. . . . As economic development proceeds and river valley and other projects are undertaken, to an extent forest areas are even apt to diminish. There are obvious difficulties in expanding the area under forests. In the circumstances, the principal objective of forest policy must be to raise productivity progressively and to undertake cultivation of quick-growing species so as to meet the growing requirements of the economy."

That primary objective is a very limited objective as far as the third Plan is concerned. The programme of new plantations—covering 210,000 acres under teak, 40,000 acres under bamboo, 60,000 acres under matchwood, 22,000 acres under wattle, 46,000 acres under fuelwood including casuarina, 300,000 acres under fast growing species of industrial wood and 325,000 acres under miscellaneous trees and amounting in all to a million acres—cannot obviously meet the increasing requirements of industry during the third Plan period even where fast growing species are planted. If, as has been estimated, the country's deficit of industrial wood by 1975 is going to be of the order of 215 million cubic feet (equivalent to four million tons) and if it is assumed that new plantations will take at least 20 years for development, only a small part of that deficit is going to be met by the new plantations of the second and third Plan periods on about 1.5 million acres in all. These plantations can be expected to yield, probably at the average rate of 2.5 tons per acre, mostly after 1975, but by that time the deficit, too, will have increased. Already the prices of timber have gone up so high that steel is relatively cheaper, with the result that one finds it more economical to use steel in the manufacture of furniture for both domestic and office uses.

Is there no hope, then, of increasing the output of industrial wood in other ways from the present level of about 4.5 million tons per annum to at least 9.0 million tons by 1975? There are, of course, some possibilities in this connection. Firstly, the area (300,000 acres according to the third Plan report, but 137,000 acres according to Dr. Ram Subhag Singh) proposed to be planted with fast growing species of industrial wood must be raised to one million acres so that an additional 2.5 million tons could be produced from this source. As this will probably involve an additional outlay of no more than Rs. 5 crores and that, too, mostly in terms of rupee resources, the Union Government should draw up a suitable bigger scheme for Central assistance. Unless this is done, the paper and pulp industries in particular will be thrown into an even graver crisis in the fifth Plan period than at the present time.

Secondly, there would have to be much greater attention to additional yield through reduction in wastage rather than through excessive felling. For instance, considerable wastages, according to the Report (September 1960) of the Tariff Commission on the plywood and tea chests industry, take place for lack of prophylactic treatment of logs immediately after felling. But it is not known whether the Wood Preservation Branch of the Forest Research Institute (Dehra Dun) has by now evolved any widely applicable methods of improving the keeping quality of logs without driage and of preventing wastages due to heart rot, fungus diseases, etc. One direction in which wastages can be reduced is the adoption of improved logging tools and mechanical contrivances. Here, again, the Forest Research Institute should be called upon to complete its research work expeditiously. Above all, there is need, as the third Plan has recognised, for a comprehensive appraisal of the country's forest resources with a view to developing forest-based industries such as rayon, chipboard, particle board, fibreboard, and so on. The provision made in the Plan for such a survey should be expeditiously availed of, for the formulation of a long-term (15-year) programme for planting quick-growing species, for opening up forest regions in the interior and for assessing the economic prospects of forest-based industries can brook no delay. If suitable measures, such as improved transport facilities and wood seasoning and wood utilisation units, are also taken in the light of the proposed survey, the estimated deficit in industrial wood supplies can be substantially met by 1975. Meanwhile, the current tendency among State Governments to part with forest lands increasingly for other purposes would need to be curbed.

MARKET GOSSIP

Margins on Shares

ON Thursday last week, the Governing Board of the Bombay Stock Exchange took a step in retrospect, though in effect it meant taking two steps forward, when it decided at a special meeting to give powers to the President of the Exchange to fix special deposit making-up prices for shares and to revive thereby a system of margins on shares, which was discarded not long ago—from the close of last year to be precise—in favour of the present system of automatic margins. The Board was provoked to take the decision, we are told, by the excessive speculative business in the market at present, which, if unchecked, might lead to a payment crisis. Few would dispute the authority of the Board to act in a situation which it finds would otherwise get out of hand. Indeed, being directly responsible for maintaining a healthy market, the Board is obliged to act promptly to prevent anything that might lead to an unhealthy situation. Prevention is undoubtedly better than cure. It is generally conceded that the Board's action last week was warranted by the circumstances. The main object was to check the slump in shares which, though basically rooted in the prevailing political and economic uncertainties in the country, had been rather accentuated by some excessive speculation. The fact that, soon after it was known that the Board would take some measures to arrest a further fall in values, prices rallied swiftly on heavy covering by big bear operators was sufficient to prove that speculation had been overdone. So far, the Board's decision has not yet been implemented. Only its intention to act was made known and that itself has had some salutary effect.

One can see, however, in the Board's action its preference for the once rejected system of special deposit making-up prices to the system of automatic margins. Does this mean that this latter has failed? If so, why? There is evidence to support the belief that the automatic margin system has not served its purpose. In its form, the margin is automatically attracted by a share, if (*a*) the price rises or falls by 10 per cent over the last making-up price in one settlement, (*b*) the price rises or falls by a further 5 per cent over the making-up price fixed for the application of the margin under (*a*), and (*c*) the price rises or falls by 15 per cent in two consecutive settlements. Experience has shown that this system has not affected the leading speculative shares, as such shares rarely fluctuate by the specified limits during the specified period. On the other hand, only the less active shares, appreciating or falling suddenly on some news pertaining to them, and the small-priced shares because of their being priced small have come under it. Thus, the automatic margin system, while leaving the speculative issues unaffected, has tended to restrain free price variations in the other counters engendered largely by some genuine developments affecting such shares and seldom by a burst of speculative activity.

If the system of automatic margins has not proved effective, it is because of the liberal nature of its terms. If it has acted harshly on certain scrips, it is because these scrips are unfit to be in the forward list. This peculiar feature is confined only to the Bombay Stock Exchange, the forward list of which was drawn up decades ago and contains quite a few counters which deserve to be depromoted to the cash list. In principle, the system of automatic margins is preferable any day to any other, because it has the special advantage of uniform and automatic application to all shares in all the stock exchanges of the country. And that is why the Standing Committee of the Stock Exchange Presidents voted for it last year in preference to the system of special deposit making-up prices, which was in vogue for a couple of years on the Bombay Stock Exchange. Nobody disputes the integrity of the person who operates the latter system. But, certainly, it will be unwise to leave the choice of what margin to be imposed on which share and when only to one person. That is the defect in the system of special deposit making-up prices, and it is a grave one.

The alternative to the system of automatic interim margin is not special deposit making-up prices but a more effective system of automatic margins. Perhaps, the Governing Board of the Bombay Stock Exchange has conveniently ignored this alternative. But it passes one's understanding as to why the Deputy Secretary in charge of the Stock Exchange Division of the Ministry of Finance, who is also the convener of the Standing Committee of the Presidents of the recognised Stock Exchanges, should not have explored the possibility of making the system of automatic margins effective.

The system can be made effective by fixing the percentage of fluctuation, at which the leading speculative shares attract the automatic margins, at a lower level. If necessary, the percentage can vary from scrip to scrip. In the case of highly volatile shares, the percentage can be as low as three to five. The past behaviour of such shares can be the best guide in determining the percentage. At any rate, the system of automatic margins, adopted for the first time in this country, deserves a fair trial before being condemned in favour of a scheme which is most undemocratic and authoritarian.

T. I. S. Co. Dividend

In unofficial dealings in Dalal Street late on Thursday evening, Tata Steel Ordinaries staged a smart rise from Rs. 134-135 to Rs. 139-140. The spurt reflects the pleasant surprise caused by the T.I.S.Co.'s dividend results for 1961-62. Ever since the Government's disappointing decision on the retention prices of steel, there were grave doubts whether the Directors of the Company would maintain the dividend at the previous year's level of Rs. 9.72 plus a bonus of 64 nP, both subject to deduction of tax. The surmise of some was that Tatas might drastically prune the return to shareholders, as they had every justification to do in the light of the Government's raw deal to the Company. A few even suggested that they should actually axe the dividend, in order to teach a lesson to the Government. But Tatas have belied the pessimism of the market and spurned the suggestions that smacked of vindictiveness towards the Government. Not only has the rate of distribution to equity shareholders been maintained, but, significantly enough, the portion that was treated as bonus last year has been merged with the dividend proper. This action represents a slap to pessimists and exceeds the maximum expectation of optimists.

The T.I.S.Co's dividend announcement reflects the solicitude of its management to investors. But it may indirectly strengthen the hands of Mr. C. Subramaniam. He may say that the Company's decision supports the Government's action and belies the Tariff Commission's recommendation that an increase of Rs. 38 per tonne in the retention price was necessary in order to enable the Company to pay, among other things, a reasonable rate of dividend.

The T.I.S.Co.'s Directors have recommended the dividend only as an interim, but that is only a technical device to expedite the payment of dividend that is already overdue, though the accounts for 1961-62 are yet to be finalised because of the delay on the Government's part in announcing the details of retention prices for all the Company's products. They have also made it clear that there would be no more dividend for 1961-62 and that the equity dividend is being paid out of taxed reserves. It remains to be seen whether the maintenance of dividend will be justified by the Company's profits for the year under review, after making allowance for all the prior claims on it and the need for strengthening the reserves. This will be known only when full details of the Company's results are published. Meanwhile, by merging the bonus part of the distribution with the dividend proper, the Directors have implied that they are confident of maintaining the dividend at the current level next year also. The Company's production performance in the first half of 1962-63 has been encouraging enough to support this implication, albeit only weakly. As compared with the corresponding half-year of the previous year, there has been a rise of 6.89 per cent in pig iron, 7.89 per cent in steel ingots and 5.77 per cent in saleable steel production. It is, however, premature to jump to any firm conclusion from these figures about the profit-margin, for one must know to what extent costs have gone up and what would be the retention prices for the current year; these are yet to be decided by the Government.

Nangal Fertilisers

It is a sad commentary on the efficiency of Administration in this country that fertilisers should accumulate in State-owned factories at a time when they are badly needed in farms for increasing agricultural productivity. In one of the largest public sector plants, namely, the Nangal Fertiliser Factory, as much as about 41,000 tons of fertilisers are said to have piled up, as a result of the apathy of State Governments to lift the quotas granted to them. The Nangal factory, it may be noted, has been equipped to produce calcium ammonium nitrate equivalent to 80,000 tons of nitrogen annually. There is, however, no point in condemning State Governments for this development. For calcium ammonium nitrate being relatively new chemical fertiliser, average farmers are apparently not very enthusiastic about using it. It was the duty of the authorities of the Nangal Fertilisers to have educated farmers sufficiently well in advance in the application of this new product by demonstrating to them their utility. This has not been done on an adequate scale. In other words, the authorities concerned have failed to synchronise sales promotion with actual production. This is unbusinesslike, for no competent businessman will launch on an industry of this magnitude without making satisfactory arrangements for selling the product as and when it gets ready for marketing. The Union Minister for Agriculture, Dr. Ram Subhag Singh, observed recently at New Delhi that the number of demonstration farms would be stepped up from about 100,000 at present to 300,000 for popularising Nangal fertilisers. Though belated, this is a step in the right direction. It is, however, amusing to note that the Government has waited for such a long time to realise the need for creating a market for the fertilisers produced in the public sector plants. That the Government should have bungled again in fertiliser business after all its experience with Sindri suggests that it rarely learns from past mistakes. This is not surprising, because, in Government undertakings, there is no continuity of personnel and those in charge of them have no incentives to make them a commercial success.

It is, however, to be hoped that this state of affairs will soon be rectified. Otherwise, the distribution will become an insuperable problem when the ambitious projects for development and expansion of nitrogenous and phosphoric fertilisers envisaged in the third Plan are implemented. It will be necessary for the Government to examine closely why the farmer develops resistance, if any, to new chemicals. Dr. Singh appeared to be of the opinion that farmers, who had been using ammonium sulphate, had become averse to switching over to calcium ammonium nitrate. If this is so, how does he explain the fact that, in the last two or three years, imports of this type of fertiliser have been of the order of 75,000 tons per annum? There is thus reason to believe that the low offtake of fertilisers is not the result of farmers' reluctance alone. The whole machinery for distribution has become obsolete in the present context. The system of sale and distribution of fertilisers, as administered by the Union Ministry of Food and Agriculture, has been found wanting in several respects. It is, therefore, only appropriate that the Government should think of entrusting these responsibilities to private commercial agencies which can do the job efficiently and quickly.

World Cotton Textile Pact

Monday, 1st October 1962, is a notable landmark in the history of world cotton textile trade, for it was on this day that the long-term (five-year) textile agreement came into force, replacing the short-term arrangement which expired on the previous day. The agreement, it will be recalled, was negotiated at the meeting of the G.A.T.T. Cotton Textiles Committee held at Geneva from 29th January to 9th February last. The basic objectives of the long-term agreement are similar to those of the short-term agreement: to help economic expansion and promote development of the less-developed countries by providing larger opportunities for increasing their exchange earnings through the sale in world markets of products they can efficiently manufacture, provided that this trade develops in such a way as to avoid disruptive effects in individual markets and on individual lines of production. How this objective is sought to be achieved through the imposition of certain well-defined obligations on the part of both importing and exporting nations was discussed in detail in our issue of 24th February 1962 (*vide* page 322), so that it is unnecessary to dwell on it again. It is, however, necessary to recall that the long-term agreement combines the following two main principles:

1. The participating countries still maintaining import restrictions on cotton textiles undertake progressively to relax them and to expand, by stages, the access to their markets over the next five years. An "escape clause" from the undertaking to expand access to its markets can be availed of by any country which experiences a *substantial contraction* in its cotton textile industry in recent years and which is already importing a *substantial volume* of cotton textiles particularly from the less-developed countries and Japan.

2. A participating country can limit imports of specified cotton textile products which are now not subject to import restriction, if they cause or threaten to cause disruption in the market of the importing country.

From this brief account, it is difficult to say categorically as to what would be the pattern of world cotton textile trade in the next five years. It may, of course, be reasonably supposed that, in future, the question of "disruption" will not be decided by high-pressure lobbying but by definite and determinable criteria; nor will discriminatory measures be applied as between two countries or groups of countries which are signatories to the agreement. Even so, the fact cannot be disputed that some sort of protectionism has been introduced in markets where imports were free or relatively free hitherto, though, in a few other markets, where some restrictions have been in force, there will be some relaxation subject to successful bilateral negotiations. In other words, there will be keener competition among the textile exporting countries to secure as much of the available markets in the importing countries as possible. It may be mentioned, in passing, that, soon after the last Commonwealth Prime Ministers' Conference, Mr. Harold Macmillan made it clear that it would not be possible for Britain to allow any further increase in its imports of cotton textiles.

Since the preamble of the long-term agreement clearly emphasises that the main objective is to increase the export earnings and promote the development of the less-developed countries and that the approach will be constructive and not restrictive, the prospects for Indian cotton textile exports may be said to have improved. It is particularly gratifying that the six European Common Market countries have agreed to increase gradually their cotton goods imports (from all sources) from 6,300 tons to 12,000 tons over the next five years. What is more, inasmuch as India's exploitation of most of the Continental countries has been at a negligible pace, these countries will not be in a position to take shelter under the escape clause in the agreement.

Will the Indian cotton textile industry be able to take full advantage of the opportunities created by the long-term agreement and step up exports to the maximum extent possible? We wonder. The industry is working today on an inflated cost base; it no longer enjoys the advantages of low-priced cotton and cheap labour. It has not been able to use in full the quota allotted to it by Britain, even though the latter levies no duty on Commonwealth textiles. Considering this and the fact that Japan will make an all-out bid to make full use of the long-term world agreement, the need for immediate, energetic action to enhance the competitive capacity of Indian textiles cannot be stressed too strongly.

Coffee Firmer

World coffee prices have been a little firmer of late, though there is as yet no sign of a strong upward trend. Uganda Robusta coffee (standard grade) is currently quoted in the London market at £7-3-6 (Rs. 96 per cwt., as against £6-6-0 (Rs. 84) at this time last year. The firmer tone of coffee may persist for some time to come, but an appreciable increase in price is very unlikely, the operation of the proposed international coffee agreement notwithstanding. For the world stocks of coffee still lying unsold are pretty heavy in relation to the level of international trade. The total of these stocks is put at over four million

tons, which is about one and a half times as large as annual exports; the bulk of the stocks—3.4 million tons—is accounted for by one country, that is, Brazil. Such huge stocks would have definitely depressed the world coffee markets further but for the attempts to stabilise prices at international levels. Another United Nations Coffee Conference was held in New York on Friday last week whereat the five-year international coffee agreement, evolved at the previous conference (9th July-24th August 1962), was finally approved. The agreement as such will, however, come into force only after declarations of intent to ratify are made by at least 20 exporting countries accounting for 85 per cent of world coffee exports and 10 importing countries representing the same percentage of world imports, the base year for both being 1961-62.

It is still not known whether the Government of India has made up its mind about participating in the world agreement. It is, however, gathered from Press reports that the Government has pleaded for an upward revision in the export quota (20,000 tons) allotted to it and sought an assurance that an agreement will not encroach upon the country's right to regulate output. Only after a reply to these requests is received will the Government, it is said, take a final decision. Meanwhile, it is reported that Guatemala, an important Latin American coffee producer, has refused to join the agreement on the score that its export quota is small. And indications are that the Netherlands, Switzerland, Sweden, Austria, Ethiopia, Nicaragua, Honduras and some other countries may also not participate in the agreement.

Comecon and E.C.M.

The formation of the Common Market in Western Europe and the U.K.'s anxiety to join it have been viewed with understandable discomfiture by Soviet Russia and Eastern Europe. The initial reaction of Russia to the new trade alignments in Western Europe was tinged with anger, and perhaps some cynicism. It was only about three months ago that Premier Khrushchev lashed out against the Common Market at a meeting in Moscow. But since then, according to international observers, there has been a welcome change in the tone of his comments on the Common Market. It would appear that Russia has come round to the view that West European integration is a *fait accompli*. So instead of simply decrying this move, Russia has decided to take up the gauntlet straightaway. Its emerging policy towards the Common Market appears to be twofold. In the first place, Russia has been insisting on organising a world trade conference; this was repeated by the Soviet delegate in the United Nations only a few days ago. While the need for a world conference has been stressed by a large number of non-communist countries also, the Russian idea of setting up a "world-wide non-discriminatory trade organisation" is likely to fall flat in such a conference.

Secondly, Russia and other countries of the Communist bloc have decided to strengthen their own trade bloc, the Council for Mutual Economic Aid, abbreviated to "Comecon," in a bid to strengthen their position *vis-a-vis* the Common Market. The Comecon, it may be recalled, was established as early as in 1948, but its activities have been confined to a limited field. Besides Russia, the other members of this group are East Germany, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria and Outer Mongolia. This group has no common tariff against third countries, unlike in the Six. But tariffs are of no significance so long as the State controls all exports and imports. Further, Comecon is not a free trading area, as each country seeks to balance its trade with each other on a bilateral basis. But, despite all these limitations, the intra-regional trade has increased considerably since the formation of Comecon. Between 1950 and 1961, intra-regional trade among Comecon countries has gone up by 3.5 times. The members have been able to reorient their trade among themselves to a considerable extent. Thus, half of Russia's imports now come from East European associates, which, in turn, transact 37 per cent of their trade with Russia and a further 27 per cent with each other. Another advantage gained by them is that they have been able to promote an element of specialisation in certain fields. Thus Poland and Czechoslovakia have become large exporters of machine tools, whereas such exports from East Germany have declined. But, in diesel motor production, East Germany has become more important, with a decline in the share of Czechoslovakia.

This trend in collective partnership is likely to be developed fast in the coming years. Mr. Khrushchev claims, in an article written in one of the recent issues of *Kommunist*, that communist planners now have the necessary statistical and theoretical equipment to embark on collective policies, particularly in relation to co-ordination of investment. A few other measures are also being conceived by the Comecon in furtherance of its objectives. In the first place, trade among members is proposed to be shifted from bilateral to a multilateral level. A clearing bank on the lines of the European Payments Union is also under contemplation. Secondly, the Comecon has a plan to set up an international communist bank with the object of financing combined projects. Thirdly, a proposal to grant subsidies for encouraging intra-regional trade is also being considered. The move to resort to subsidies apparently reflects the divergence of price levels in the different countries of the bloc. Above all, the communist countries have started feeling that they can withstand the possible adverse effect of the Common Market on their trade only by rallying together under a single trade bloc and consolidating their bonds of association. It thus looks as though the economic integration of Western Europe has only strengthened the hands of Mr. Khrushchev to galvanise East Europe and Russia into a vast single unit.

TREND OF SHARES

IRREGULAR MOVEMENTS

(From Our Own Correspondent)

BOMBAY, *4th October*

THE previous week's recovery in share values did find an extension this week, but it was accompanied with irregular movements, suggesting that confidence continued to be lacking and the tone remained uncertain. Prices rose swiftly at first, but declined abruptly later, and, at close, were just a shade above the week's lowest levels—a bad sign for a promising recovery. Nonetheless, closing prices indicated small gains over the week in a majority of shares. Trading was active, but turnover was still below normal.

Bears were at their game in full strength. If the recovery was caused by some heavy all-round bear covering, the subsequent sudden reaction was also due to renewed pressure from the big bear operators. This buying and selling by prominent operators caused some fast, two-sided and even wide movements in prices. Due to the oversold position of the markets, the recovery was quite brisk and sharp. But, as prices came in the vicinity of the last clearing rates, bears reappeared on the scene, not to cover but to sell afresh. Apart from the strength of technical forces, there was hardly any encouraging development to favour an improvement in values, and that explains why support faltered at higher levels. The uncertainty about the T.I.S.Co. dividend was a major factor largely responsible for the lack of enthusiasm to follow the recovery. Besides, in view of the unresolved economic and political problems, buyers continued to be restrained.

* * * *

Dalal Street was officially open today but operators refrained from transacting any business as a token of protest against the proposed construction of a modern slaughter house at Deonar in Bombay. Late in the evening the T.I.S.Co. announced that the dividend on ordinary shares for the year ended 31st March 1962 was proposed to be maintained at Rs. 7.25 net per share of Rs. 75, as against Rs. 6.80 net per share plus 45 nP cash bonus, making a total of Rs. 7.25 paid in the previous year. Following this announcement, Tata Ordinary, which had closed at Rs. 134 yesterday, were in demand at Rs. 139 to Rs. 140 in the kerb. Apparently, those who had sold heavily in anticipation of a lower dividend, rushed in to cover their short sales in order to restrict their losses. The maintenance of the T.I.S.Co. dividend should help the market to put up a brave show for some time.

During the week, the market staged a smart recovery from Friday to Monday only to react sharply on Wednesday, after having remained closed on Tuesday on account of *Gandhi Jayanti*. The recovery was led by Steels. Tata Ordinary improved from Rs. 131 to Rs. 136 on reports that the Company would not issue any new shares in the near future. Indian Iron jumped up from Rs. 24.72 to Rs. 25.30. Later, Tata Ordinary reacted to Rs. 133.50 and Indian Iron to Rs. 24.96, before closing at Rs. 134 and Rs. 25.05, as against Rs. 133.25 and Rs. 25, respectively, a week ago. Textiles were active and improved quickly, notwithstanding the threat of a strike by a section of workers in the mill industry over the bonus issue. Century, among the leading counters, staged an impressive recovery from Rs. 602 to Rs. 619, before turning lower to close at Rs. 612, as against Rs. 605.50 a week ago. Standard improved from Rs. 805 to Rs. 844 to close at Rs. 825, as against Rs. 810 in the previous week. National Rayon failed to retain the early gains from Rs. 466 to Rs. 480.50 and closed, in fact, one point lower at Rs. 468. Bombay Dyeing also finished 10 nP lower at Rs. 64.90 and Kohinoor were one point down over the week at Rs. 295. Other issues showed, however, small gains.

In the Miscellaneous section, Bombay Burmah improved over the week by five points to Rs. 637.50, T.E.L.Co. by Rs. 5.50 to Rs. 301.50, Hindustan Motors by 17 nP to Rs. 18.25 and West Coast Paper by four points to Rs. 164. Dyes and Chemicals were better, with Indian Dyestuff showing a gain of Rs. 5 at Rs. 440, Amar Dye-Chem of Rs. 7.50 at Rs. 257.50 and Tata Chemicals of 32 nP at Rs. 14.64. A.C.C. reacted from Rs. 158.75 to Rs. 154.75, as against the previous week's closing level of Rs. 156.75, due to the proximity of the book closure. But other cement shares were steady. Electrics, Sugars and Shippings showed small gains. Trading in Cash scrips was highlighted by a spurt of Rs. 28.75 to Rs. 242.50 in Permanent Magnets. Colour Chem also rose sharply by Rs. 8.75 to Rs. 403.75. Others were steady.

* * * *

Excepting Jutes which were easy, values showed small gains in Calcutta. Bally and Dalhousie, among Jutes, showed a loss of five points each at Rs. 288 and Rs. 121, respectively. Barnagore and Budge Budge were down by three points each at Rs. 188 and Rs. 160, respectively. New Central receded from Rs. 14.44 to Rs. 13.87. Birla Jute, in the Forward List, were, however, up from Rs. 33.62 to Rs. 34. Among other cleared shares, Dunlop showed a gain of 44 nP at Rs. 38.19, G.K.W. of 81 nP at Rs. 37.50 and Kesorams, Rohtas and Shree Gopal of 19 nP each at Rs. 25.94, Rs. 14.25 and Rs. 24.94, respectively. The proposed rights issue at a premium of Rs. 15.50 per share brought down Indian Aluminium from Rs. 36.25 to Rs. 35.06. Indian Cable also showed a big loss of Rs. 1.25 at Rs. 36.

In the Cash section, Textiles were well held, with Bharat Commerce showing a gain of 31 nP at Rs. 28.31 and Jayshree of 13 nP at Rs. 16.94. Coal shares were unchanged, except Bengal which showed a fall of ten points at Rs. 341. Engineering shares were in demand and recorded some handsome gains, with Braithwaite, in particular, rising from Rs. 32.25 to Rs. 35 and Jessop from Rs. 22.56 to Rs. 23.06. Miscellaneous issues provided a mixed fare. American Refrigerator were up by two points at Rs. 9.62, Britannia Biscuits by 62 nP at Rs. 45.12 and J.K. Synthetics by 56 nP at Rs. 13.56, but I.W. Products showed a loss of Re. 1.26 at Rs. 32 and Associated Battery of 62 nP at Rs. 28.25. Titaghur Paper were conspicuously firm at Rs. 38.87, as against Rs. 36.25 a week ago. Sugar and Tea shares showed small changes either way.

* * * *

Small gains in Textiles and Miscellaneous issues featured trading in Madras. Both Madura and Travancore Rayon, among the cleared shares, were better; the former improved from Rs. 34.75 to Rs. 35.10 and the latter from Rs. 31 to Rs. 32.10. Carnamore rose from Rs. 126 to Rs. 128 and S.I. Viscose staged a brisk recovery from Rs. 155 to Rs. 159. Mettur Chemicals, in the Miscellaneous section, showed a gain of 25 nP at Rs. 23.60, Dalmia Cement were up by 15 nP at Rs. 14 and F.A.C.Ts improved by 10 nP at Rs. 7.50. However, Travancore Chemicals dropped by 88 nP to Rs. 22.62 and Aluminium Industries by 50 nP to Rs. 24.40. Sugars were quiet, with Cauvery easing from Rs. 115 to Rs. 114.50 and E.I.D. from Rs. 41.50 to Rs. 41.25. Among Plantings, while Nonsuch showed a gain of 38 nP at Rs. 22 and Ouchterlony Valley rose smartly from Rs. 3.63 to Rs. 3.80, Midland fell by 88 nP to Rs. 10.32, Consolidated Coffee by 70 nP to Rs. 17.05 and T.R. and T. by 30 nP to Rs. 8.90.

MADRAS STOCK EXCHANGE SILVER JUBILEE SOUVENIR

It is usual to find that a big event is accompanied with a souvenir to commemorate it. And so the trustees of the Madras Stock Exchange Silver Jubilee Memorial Trust have published a souvenir to mark the silver jubilee of the Exchange, which was celebrated but a few days ago. Richly produced on fine art paper, the publication, edited by Mr. E. R. Krishnamurti, wears a bright get-up which is highlighted quite suggestively by silver coating the cover, and yet it is moderately priced at Rs. 5. It deals not only with the Madras Stock Exchange and its past 25 years, but covers the various aspects of stock markets as a whole, besides agriculture and industry that make up the economy. Penned by eminent persons—who should and do know—in the field of industry, capital market, financial journalism and politics, the thirty and odd articles, which are compiled within the 299 pages of the souvenir, make informative and instructive reading.

It would be appropriate to refer here to the article, "History of the Madras Stock Exchange" by Mr. S. Narayanswamy, whose association with the Exchange dates far back to the period preceding the formation of the Exchange. Mr. Narayanswamy, who now heads Chitra and Company, the well-known firm of stock-brokers in Madras, has given a graphic account of the development and growth of stock market in Madras. In April 1920, Mr. Narayanswamy recalls, the then demure city of Madras had the maiden thrill of a stock exchange functioning in its midst at the elegant Broadway. It had about 100 members on its rolls, of whom 25 were active. It achieved a fair degree of parity with its counterpart in Dalal Street, Bombay, and in Lyons Range, Calcutta, in the brass-throated shouting tempo, though not perhaps in the quantum of business transacted on its floor. In 1923, however, it abruptly closed.

From 1923 to 1937, Madras City got on as well as it could without a stock exchange, though stock-broking firms were functioning and were in fact growing like the green bay tree. There were, however, only three firms functioning—two European and one Indian—until the early and middle thirties, when several new firms commenced stock-broking business. This led to a demand for a stock exchange, and the Madras Stock Exchange Association (Private) Ltd. was registered on 12th August 1937 and inaugurated by Sir William Wright on 4th September 1937. There were seven firms which became the founder-members of the Exchange. About 97 scrips were listed on the Exchange in 1937.

The Madras Stock Exchange, as a reconstituted body fulfilling in detail all the requirements of the Securities Contracts (Regulation) Act, came into existence on 29th April 1957. It was registered as a public company, limited by guarantee. The membership of the Exchange under the Act is individual, and the old anomalies of firm membership and founder-members were swept away. There are 35 members on the rolls of the Exchange and 14 firms comprise them, of which 12 are active today. Out of the 262 companies the shares of which are listed on the Exchange, dealings in shares of no less than 247 companies are done exclusively on cash basis. In conclusion, Mr. Narayanswamy observes that the Madras Stock Exchange has done nothing sensational, has not engineered booms and slumps nor made the Government sit up and notify disapproval. For even today, in the absence of a properly developed jobber community in this market, a broker depends on an opposite number having an opposite order—with rates and quantities that would render transactions possible—to conclude a deal.

PERSPECTIVES & PROJECTIONS

By Mercator

Drift, Drift, Drift . . .

THE annual meeting of the Central Advisory Council of Industries has for long become a ritual. One session for a day in a year with two possible meetings of its standing committee for brief periods may provide no more than a formality of consultation, but, even so, some purposeful discussion of industrial problems will not become possible, unless its present procedure of making set speeches on well-known lines is altered. No one seems to be interested in making a change. Mr. K. C. Reddy's address this year must surely rank as the most doleful ever uttered; it was an unrelieved tale of shortcomings of various kinds in the face of which the Minister and (since he speaks for it) his Government, are helpless. So, we are told that we must accept all the limitations, resign ourselves to the unkind fate that has overtaken us and, perhaps, pray for better times. Power cannot be generated in the private sector except in a limited way and at higher cost; foreign exchange considerations prevent more extensive use of furnace oil even in places where coal cannot reach; and Mr. Reddy is quite certain that he cannot hold out any hope of improvement of the imported categories of steel. And thus he went on to exhaust the rest of his repertory of platitudes about improvisation of imported raw materials, hope for external assistance, inability to measure unused installed capacity in industry and his general preference to keep unutilised capacity rather than import more components. Two policy statements sneaked into this melancholy account; the first was that, in future, additional units will be licensed only when more output cannot be secured through better use of existing capacity and, second, that, consistently with regional dispersal of industry, economies of scale will be kept in view. This, in other words, confirmed what Mr. Subramaniam had stated earlier at Durgapur, that the preference for the small-scale sector will not continue. Capital goods imports will be limited to 21 industries, list of no-licence industries will be enlarged and revocation of unused licences stepped up. No wonder that this retreat all along the line has raised doubts about the wisdom of the Kolar constituency insisting on its elected nominee holding on to his present post and sacrificing other, and possibly more congenial, opportunities.

The piling up of unused licences should, to anyone with some familiarity with the trends, signify the failure of the policy of preferring untried newcomers to those with experience. Yet, almost in the same breath in which Mr. Reddy complained of failures in implementation, he affirmed that the Government would not "hesitate to take any further steps that may be appropriate to prevent undue concentration"; he had the good sense, however, to follow it with the statement that freedom of action is inhibited by the limited number of industrial groups in the country which can effectively undertake large projects. What is the net result of all these many conflicting considerations? We do not know and perhaps the Advisory Council was in no better position to understand it. The impression left is that, when the Plan is running into difficulties for various reasons and some practical measures are needed to pull the economy out of the rut into which it seems to be falling, the Government is singularly lacking in the capacity to take an initiative or provide guidance.

A Hydra-headed Monster in Mysore

Communalism is a monster anywhere, but, in Mysore State, it is hydra-headed. Four times in the last four years, the State High Court has quashed the State Government's orders purporting to lay down some principle of reservation for the backward classes in educational institutions and public services, but again and again the impugned principle has reappeared in another guise. It is difficult to find a parallel case of flagrant violation of both the Constitution and the Courts and it is hardly surprising that the Supreme Court, faced with a fifth order of the Mysore Government which left only less than one-third of the seats in medical and engineering colleges to persons claiming them on the basis of merit, was constrained to observe that it was a fraud on the Constitution. The Constitutional Amendment of 1951 which introduced Article 15(4) was itself designed to protect a certain modified form of communalism in Madras; in retrospect, the wisdom of that step can be questioned. Instead of State Governments making special provision for advancement of the backward classes through provision of special educational facilities, scholarships and other assistance, they have shown their solicitude for the welfare of these classes by reserving the major part of existing facilities for them; even this may be forgiven had not subterfuges been adopted to include among the backward the castes and sects which have a political pull in each State.

In its lucid analysis of the issues in this case, the Supreme Court has pointed out that, by adopting a caste basis, the State Government was left without any guiding principles for the non-Hindu sections which had no caste, that backwardness should be demonstrable in terms of a lower-than-average student representation and, finally, that those other than backward are not without equally strong claims against society for educational and other facilities. The most significant point is that it has been left to a Court to point out that these matters have some relevance to our planning and the training of technical personnel and that considerations of merit could not be wholly ignored as in Mysore. Even if the communal outlook could not be eradicated in the Congress Party at lower levels, its disciplinary control and the general authority of the Centre under planning should have been sufficient to ensure that long-term national interests do not suffer through shortsighted policies of exclusion of merit. It has been the complaint of politicians that Courts tend to adopt narrow, legalistic and property-based concepts while ignoring larger social considerations; but here is a notorious example of the reverse, in which politicians, steeped in their parochial prejudices and partialities are unable to look beyond their noses or visualise conditions in which the population has to put up with substandard doctors or engineers, merely because it is temporarily expedient that some individual should hold office and satisfy his whims. The idea that, in much of social legislation which courts often find it difficult to approve, the Governments (not excluding the Centre) are actuated by the highest motives of national interests which traditional judicial concepts cannot comprehend requires much more proof than is so far available, before it can be accepted. It is possible that the new Ministry in Mysore may give the latest ruling of the Supreme Court greater respect than the previous one gave to the High Court's orders; but there can be no room for wide variations in the principle of equal opportunities for all. There is a case for setting up a special high level body of senior leaders belonging to all groups to define what "special provision" should mean in the context of the problems of each State.

* * * *

Mr. Khrushchev Retracts

Mr. Khrushchev has gone back on his promise of abolition of income-tax in the Soviet Union by 1965. The need for more resources for planning and defence is given as the reason, but, since income-tax contributed only 7½ per cent of the total budgetary resources when Mr. Khrushchev announced his proposal in May 1960, the loss could not have been great. The idea then was to raise the exemption limit year after year (from 50 roubles a month in 1960 to 100 roubles in 1965), to give tax-free incomes in that range and to effect a wage-cut corresponding to the tax at the higher levels to reduce some disparities in incomes. Though income-tax in the Soviet Union had little redistributive significance in the past, a slightly larger take-home pay in the lower groups would undoubtedly have proved a popular measure, provided, of course, the benefit in real terms was not taken away by the other hand through purchase taxes or higher prices.

Even though there is no need to make extravagant promises in a monolithic society which cannot be fulfilled, the people of the Soviet Union have been disappointed so often in matters concerning their living standards that this latest reversal of policy may not cause chagrin. They were in a sense prepared for it by the price increases of last June; except sugar and rayon textiles which were slightly reduced, the Soviet Government raised prices for deliveries of foodstuffs which in turn increased retail prices by about 30 per cent for meat and meat products. One of the reasons given for the step was that there had been an increase of 27 per cent in the workers' real income since 1956; but this, however, is not the reason now given for suspension of the programme of income-tax abolition in the second year.

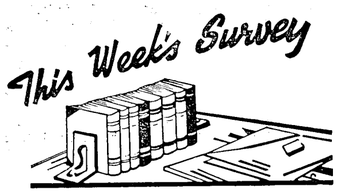
Mr. Khrushchev was, perhaps, in a rash mood when he made the promise in 1960 as part of his challenge to the West in economic competition; he, perhaps, expected Russian citizens to feel that they will be living in a taxless heaven when those in capitalist countries groaned under heavy direct taxation. The Russian counterpart of our Central Board of Revenue, however, cannot be very different from what it is here in its down-to-earth realism about money matters and, gradually, it might have worked its influence on the authorities and persuaded them that revenue was much more important than popularity, especially because of more and more costly space ventures. The Russian income-tax, never very high in its incidence, would be a small price to pay for spacemanship and its glories which have really kept the United States at a disadvantage. Perhaps, the income-tax will also wither away when the Communist State does likewise on the basis of theory; will not the Marxian doctrine of unity of opposites justify retention of the tax while speaking of abolition? Or am I being very irreverent?

* * * *

A Revealing Trend

One of the conclusions of the recent Census Report which may come as a surprise to many of us is that the rate of growth in urban population is about the same as in the first half of this century, not more as many would expect it to be. The recent Census has adopted different criteria for classification of rural and urban areas which affects comparability; consequently, the total number of towns and cities is now 2,690 as against 3,057 in 1951 and while some new areas have been included, some of the older "towns" have been excluded. The report, however, points out that two-thirds of decennial population increase have occurred in cities with a population of over one lakh. The conclusion to be drawn is that these centres absorb much of the investments and prevent a wider distribution of development among other smaller towns. There has been a 50 per cent increase in the number of towns with over one lakh people (from 74 to 107) and a corresponding increase of their total population from 24 to 35 million; of these, seven cities—Bombay, Calcutta, Delhi, Madras, Hyderabad, Ahmedabad and Bangalore—had an increase of 3.3 million. The areas in which priority is obviously required for housing and other amenities are thus indicated but, except in Bombay and to a much smaller extent in Bangalore, these facilities have not been expanding on the scale needed.

The public sector's efforts to disperse heavy industry in new townships have not materially affected the trend towards expansion of manufacturing activity in the big towns. The lesson is that location of industry will follow the availability of facilities, not merely of raw materials, land and transport but also of skilled labour and space for accommodating it without calling for fresh outlay on new housing colonies. The effect of the trend, however, is to create slums such as those seen in Delhi. In one sense, perhaps this must be regarded as a failure of planning and licensing of industry, though, in the present circumstances, the Government may have no practicable alternative. But it could certainly have helped to reduce the congestion and the tensions arising out of it through better control of land speculation, a more vigorous housing policy and adequate advance precautions against the growth of squatters' colonies and slums. If the rate of urbanisation is lower than the rate of population increase, the main objective of planning, namely, reducing dependence on agriculture, may take longer to achieve than at first expected; at the same time, some new pressures may be introduced in the villages due to lack of employment or adequacy of cultivable land.



TOURISM AND HOTEL INDUSTRY

THE reconstituted Tourist Development Council, at its sixth meeting held at Ootacamund on 28th and 29th September, recommended various measures for promoting tourism. Two of these are: (1) integrated development of a few selected tourist centres, and (2) provision of more hotel accommodation to suit the needs of different categories of tourists. On the first, the Council endorsed the decision to set up a technical working group to prepare a model scheme for this purpose in consultation with State Governments. On the second, it recognised that the existing facilities were inadequate for both home and foreign tourists and that due attention should be paid to the question of augmenting hotel accommodation. Of the two, the second needs, in our opinion, prior attention, because availability of adequate hotel accommodation at reasonable rates is one of the chief stumbling blocks in the way of enhancing the tourist attraction of this country. In spite of the existence of many incentives such as tax holiday and loan facilities for hotel industry, there has not been any significant increase in hotel accommodation. Is it because hotel industry is not considered as attractive an avenue of investment as other industries or because the incentives provided are insufficient? With the demand far exceeding supply, hotel industry should prove a profitable field of investment. If the incentives and facilities provided are either insufficient or subject to too many qualifications, there is a case for examining this aspect. The Tourist Development Council does not appear to have considered this question. For it has made no constructive proposal to increase the tempo of hotel construction. Mr. Jagjivan Ram, Union Minister for Transport and Communications, in his speech at the meeting, suggested that the State Governments might consider the desirability of participating financially in the establishment of new hotels. He did not indicate as to what form participation should take, whether it should be participation in equity capital or in debenture capital. The former might raise the issue of a right to have a share in management. Most hoteliers may not relish the idea of associating the Government in management of hotels and may, on that score, refuse the offer to participate in the equity capital. The provision of loans at reasonable rates of interest is the best encouragement that could be given. But hotels have already been made eligible for loans from the Central and State Finance Corporations. This arrangement is far more desirable than direct Government loans to entrepreneurs. One of the reasons why these facilities are not being availed of is that loans to individual entrepreneurs or private limited companies are not viewed with favour. In fact, the tax concessions are available only to public limited companies. But the hotel industry is, by and large, an individual enterprise. Further, the investing public has no fancy for the shares of companies engaged in hotel industry. These are hard facts. Unless they are recognised, the facilities offered by the Government will not yield the results expected in good time. In addition, the Government may allow foreign private capital to put up hotels in centres of great tourist interest, provided their charges are reasonable and suit the pockets of average tourists.

Difficulties in securing suitable sites in big cities like Bombay, Calcutta and Delhi is one of the major hurdles in the way of constructing more hotels. The Minister, therefore, did well to recommend that the State Government should earmark suitable sites in large cities for building hotels. It may be noted that some State Governments have already expressed their willingness to do so. But in actual practice it is found that administrative delays and other procedural difficulties make acquisition of land a long-drawn-out process.

Closely connected with the question of expanding hotel accommodation is the rates to be charged. A common misconception is that what the foreign tourists require is luxury accommodation and that cost is immaterial to them. This might have been the case a quarter of a century ago when most of the tourists were rich people to whom money was no problem. But a distinct change has occurred in the character and composition of tourists. More and more people of moderate means, egged on by a desire to see new lands and new people, are taking to international travel. Their desire is to cover as many centres of tourist attraction as possible with a limited budget. To them cost of accommodation, food and travel are important considerations. What they look for is not costly luxuries but clean and comfortable accommodation and healthy food at reasonable rates. The rates charged by the luxury hotels in this country are unduly high, even according to foreign standards. In fact, it is more a scarcity price than one based on cost considerations. Tourists are being regularly fleeced in cities like Calcutta, Delhi, Bombay and Srinagar. This aspect of the question, too, does not appear to have engaged the serious attention of the Tourist Development Council or the Department of Tourism. The Hotel and Restaurants Convention held at Kashmir last month dwelt at length on shortage of hotel accommodation and the steps necessary to facilitate the construction of more hotels. But the question of a reasonable rate structure for hotels would appear to have escaped its attention too. It is true that the Convention recognised the need for an adequate number of clean hotels, providing reasonable comforts, at moderate cost. But the issue whether the rates charged by existing hotels are reasonable was hardly raised, much less discussed.

Hong Kong and Japan are two countries which have much to offer by way of guidance to our country. Hotel accommodation in Hong Kong has been increasing fast and it is proposed to double hotel rooms from the present 3,500 to 7,000 by 1964. In Japan, the number of hotels and hotel rooms available at present represents a hundred per cent increase over those in 1959. Besides the vast number of inns, the number of registered hotels in the principal cities of Japan is 94 with more than 8,000 rooms. Hotel industry in Japan is included in the list of industries qualified for financial assistance from the Japan Development Bank. Another Asian country which actively encourage hotel industry is Thailand where equipment for new hotels could be imported free of duty if the hotel is classified as a tourist promotion venture.

EXPORT PROMOTION

The main theme of Lala Charat Ram's speech delivered at the annual meeting of the Jay Engineering Works Limited, held at Calcutta last week, pertained to export promotion. Indeed, practically the whole of the speech was devoted to a discussion of this subject. The importance attached thus to the question of exports by Lala Charat Ram has been prompted not so much by the large-scale export business of the Company as by the exigency of circumstances which has brought to the fore the supreme need for a vigorous export drive by the Indian industries as a whole. Without mincing words in the least, Lala Charat Ram declared that it was in the enlightened self-interest of Indian industry itself that it realised "the absolute importance of self-reliance and maximum individual export effort." Every one, he said, must be aware of the country's very difficult foreign exchange situation and its impact on economic development. He was not for any pruning down of the Plan, for continued retardation in the growth of economy would necessarily have an adverse impact on employment opportunities.

The urgency of export promotion stems from two chief considerations, namely, financing of increased current imports not covered by foreign assistance and repayment of loans (as well as interest) obtained from friendly countries in the past few years. The urgency is all the greater because India no longer enjoys the cushion of foreign assets which came in very handy during the first and second Plan periods. But export promotion is an uphill task, what with growing competition in world markets. The competition can be successfully met only through lower price, better quality and improved marketing methods, the three keys to export promotion. This is the lesson which the past few years' experience, with all the incentive schemes in operation, has taught us.

Among the three 'keys' mentioned above, it is price reduction that is the most important. Appropriately enough, Lala Charat Ram said that both management and operating personnel owed a duty towards a constant reduction in cost. But he hastened to add that, as it would be unrealistic to wait for working aggressively for exports till such time as our costs became comparable to those of other countries, sacrifice by the domestic consumer was inevitable. To quote him:

'The selling prices in export markets bear little relationship to the costs of manufacture, even as they do not in the domestic market, and exports will need to be done only at competitive prices, and very often at prices below costs. Almost all countries follow a dual price policy, there being a much lower price for the export market than for the domestic market. The incidence of all export loss has to be borne by the home consumer through increases in domestic prices. There is no escape from this situation."

Prima facie, the argument is quite logical. But Lala Charat Ram must not forget that there is a limit upto which the domestic prices can be raised for the sake of export. Any undue rise in domestic prices is bound to prove a boomerang, for higher prices for domestic consumers will strengthen further the wage-price spiral which is already quite pronounced. What Lala Charat Ram had in mind when he talked of higher domestic prices was, of course, the marginal increase in price. This presupposes that the export losses are shared by Governments (by way of reduced taxes), workers (in the shape of lower bonus), managements of industries (through a cut in remuneration) and investors (through lower dividends). But who is to see that these losses are equitably distributed? The fact is that what appears perfect on paper is not always feasible in actual practice. All this boils down to the hard reality that there is no short-cut to export promotion, when each one of the four claimants to the cake wants the others to make all the sacrifice and when on top of it the politicians butts in with an eye to votes.

There is no gainsaying the fact that the series of bottlenecks hampering production, especially fuel, transport and power shortages, must first be removed. Simultaneously, the export industries must be given all posible encouragement and assistance to rehabilitate their worn-out equipment, modernise their plant and machinery, and rationalise manufacturing processes. The export battle has to be fought and won on the production and distribution fronts. Incentives and persuasion or voluntary and/or statutory scheme of compulsion will only prove to be palliatives. They will, in course of time, turn out to be more expensive, as they will help our ills to become chronic by shielding them for the present. A determined bid to reduce unit cost of production, good marketing organisation, "unflagging heed to quality maintenance," provision of technical service-after-sales, and adequate refinancing facilities, to all of which Lala Charat Ram drew pointed attention, are the only ways in which sustained progress can be made on the export front.

DEMAND FOR ALUMINIUM

Estimates of demand for aluminium in the third Plan period have been frequently revised. A projection made at the beginning of the first Plan estimated the 1965-66 demand at about 50,000 tons. Before the third Plan started, this estimate was revised upwards to 87,000 tons. The Development Wing has now revised the estimate further upwards to 120,000 tons. As aluminium is a versatile metal which can replace other metals and, in addition, generate a number of new uses of its own, the demand for it has been, and continues to be, growing. Particularly, the use of aluminium as a substitute for imported copper in the transmission of high tension and low tension power and in transport and other engineering industries has become increasingly important in recent years. In the opinion of Mr. Lakshmipat Singhania, who addressed the twenty-fourth annual general meeting of the Aluminium Corporation of India Ltd. on the 24th September, the substitution possibilities are so great that, given larger supplies of aluminium, consumption of this metal can be still higher than the Development Wing's recent estimate of 120,000 tons for 1965-66. Indigenous production of aluminium in larger quantities is, therefore, essential. It is even more essential from the point of view of direct savings in foreign exchange, as well as of indirect savings in foreign exchange as a result of replacement of other metals. But larger domestic production on the scale required will not be possible if more and cheaper electric power and sufficient foreign exchange for importing components are not made available to the industry.

These two vital requirements should be met on a high priority basis at least for the licensed projects—namely, the expansion of the Indian Aluminium Company's plants at Alwaye and Hirakud and the three new units—one in U.P., based on Rihand power, one in Maharashtra based on Koyna power and one in Madras based on Mettur power. It is not clear whether the Maharashtra project will materialise in the near future, as the entrepreneur who has been given the licence is believed to be in difficulties. At the moment, a search is on to find a suitable substitute for him. Accordingly, it is doubtful whether the third Plan target will at all be realised in time. In this context, the following observations of Mr. Lakshmipat Singhania are pertinent:

"The rosy picture that was before the country upto last year in respect of production of metal by collaboration with major world producers is now gradually fading out. Some of the licences granted are still in suspense and the progress is either slow or there is no progress at all. This shows lack of interest on the part of those who originally made these schemes. Of course, this also means blocking of licensing for others who might be able to do better and here it is a matter of policy for the Government to decide whether those who have contributed towards this industry should be encouraged or not."

This is one aspect. There is also another aspect. When the expansion of the existing projects, as well as the new units, are completed, only three plants will be having a capacity of 20,000 tons each. This capacity, however, is relatively small for an aluminium plant, for a fairly economic size is known to be 50,000 tons. In view of the expected demand of 120,000 tons by 1965-66, both the Government and the industry should lose no time in exploring the possibilities of expanding at least the existing and newly-completed projects to a more economic size. Such expansion will take less time and involve smaller capital outlays than wholly new projects. As the Government's copper projects are slow in coming up and, in any case, are expected to meet only a small part of the estimated demand for copper, the more practical alternative would be to expand the production of aluminium.

FOUNDRY INDUSTRY

There are now, according to one estimate, as many as 2,000 foundries in the country, with an aggregate installed capacity of 1.4 million tons. While most of these foundries are turning out conventional items like cast iron pans, weights and measures, pipes, municipal and conservancy items, etc., some of them are producing new items like heavy castings for the machine-building industry. This new line of manufacture in the private sector will be increasingly important, for the total public sector capacity that will be available in the foundry/forge shop now under construction at Ranchi and in the foundries attached to the steel plants at Durgapur, Bhilai and Rourkela, the Mining Machinery Plant at Durgapur, the Hindustan Machine Tools, the Chittaranjan Locomotive Works and the railway workshops is expected to be only 139,000 tons of grey iron castings and 153,000 tons of steel castings and forgings. Further capacity, about which no estimate is available, will be created in the public sector either through existing foundry/forges or through independent units for catering to several other public-sector machinery projects included in the third Plan. A substantial part of the entire targeted capacity (1.2 million tons of grey iron castings and 200,000 tons of steel castings and forgings) is to be contributed by the private sector foundries for meeting the requirements of the automobile industry and the industries manufacturing machinery for textile, cement, sugar, paper and other capital goods industries.

As foundry/forge capacity is thus of crucial importance for the machinery manufacturing programmes and the private-sector foundries have been assigned a big role in this field, their problems pertaining to raw materials are much too crucial and pressing to be ignored. Mr. K. Agarwalla, President of the Indian Foundry Association has, therefore, devoted most of his speech, at the Eleventh Annual General Meeting of the Association held on 27th September 1962, to the question of raw materials. Pig iron, the basic raw material of the industry, has been in short supply for the last one year, and its current availability is no more than 600,000 tons, as against the estimated demand of 1.5 million tons per annum. As the total availability of foundry grade pig iron in the third Plan period will go up to only 850,000 tons from the existing sources, namely, Bhilai and Durgapur steel plants and the private sector steel plants, it is a matter of great urgency that either the licensed small or medium-size pig iron plants with low-shaft furnaces (other than the Kalinga Industries Company which has already established a capacity of 30,000 tons per annum) should be encouraged to come up or a fairly big public sector plant be established preferably in Goa, as recently suggested by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries. If the licensed private-sector units are not established at an early date, some short-term remedial measures would be necessary to ease the supply situation. These, according to Mr. Agarwalla, are:

(i) The Railway Ministry should arrange for the regular allotment of scrap to the foundries through the Association.

(ii) Ingot mould from steel plants should be made available to the Association for distribution among foundries.

(iii) The steel plants should be advised to put up machinery for breaking C.I. skull into smaller sizes. Such skull scrap should be made available to the Association for distribution among the foundries.

(iv) One blast furnace in each of the steel plants should be exclusively engaged for production of foundry grade pig iron.

This last suggestion in particular has been made because the steel plants are now insisting on the use of basic pig iron in the manufacture of cast iron products. It is pointed out, in this connection that basic pig iron is suitable only for steel making and not at all suitable for cast iron products. Mr. Agarwalla's suggestion, however, may not be practicable, for it may drastically reduce the supply of pig iron for steel making. Perhaps, a *via media* can be found by requiring two steel plants—one in the public sector and the other in the private sector—to devote one blast furnace each exclusively to the production of foundry grade pig iron. Mr. C. Subramaniam's recent admission that integrated steel plants are not very much interested in producing pig iron for sale has only explained away the difficulty. That is no answer to the problem.

The price of pig iron has also been increased recently by Rs. 25 per metric ton, and this has added to the cost of production in the industry. The fair ex-works retention prices recommended by the Tariff Commission for the period 1st April 1960 to 31st March 1962 ranged only from Rs. 177 to Rs. 203 per tonne for different grades of foundry iron. This represented an average increase of Rs. 3 per tonne, but the Government has allowed an increase of only Rs. 2 per tonne. The prices at which different grades of pig iron are sold to the foundries, like the selling prices of steel, must be much higher than the retention prices. Mr. Agarwalla's plea that the price of pig iron should be reduced seems to be reasonable in the context of inadequate supply of that raw material. If plentiful supplies of pig iron are available, the foundries will be working to capacity and their costs of production will, to that extent, be reduced. They will probably not mind paying the present high prices for pig iron in that situation.

The other vital raw material, namely hard coke, would also have to be supplied to the foundries on the required scale. The facts revealed by a survey conducted by the Foundry Association have shown that foundries in West Bengal have been receiving only 56 per cent of their requirements of hard coke. The corresponding figures for the Western Region, the Southern Region, U.P., Bihar and the Punjab are 69 per cent, 39 per cent, 29 per cent, 23 per cent and 25 per cent, respectively. The figures reveal a very critical state of affairs. No wonder, therefore, that production in the foundry industry has been gravely hampered. Some drastic short-term steps would have to be taken, so that fuller utilisation of installed capacities in the foundry industry can come about at a time when there is acute internal demand for its products, and also growing export demand which is currently of the order of Rs. 30 lakhs per annum, as compared with Rs. 22 lakhs in 1960.

ISCON COMPLETES THE JOB

The public-sector steel plant at Durgapur has, as readers are aware, a built-in capacity for producing one million tons of ingot steel per annum. Its output of ingots is to be processed into various items of saleable steel (800,000 tons) like forging blooms and billets, merchant bar sections, sleepers, billets for re-rolling industry, light and medium sections, and wheels and axles. The capacity of the wheel and axle plant is 50 000 tons per annum. With the formal inauguration of this plant by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, on the 26th September, the entire Durgapur Steel Project, involving an aggregate outlay of about Rs. 200 crores, now stands practically completed. For the completion of the different units of this integrated steel plant according to schedule, the credit goes, in no small measure, to ISCON and its Chairman, Sir Cyril Jones. And the warmth and appreciation in Mr. Subramaniam's tribute to ISCON seems to have stemmed from the knowledge that the Durgapur Steel Plant is a well-designed, well-built and highly efficient plant.

For reaching capacity production which does not seem to be far off, the Durgapur Steel Plant will be engaged in a close race with the Rourkela Plant by next year. Its planned expansion to an aggregate capacity of 1.6 million tons during the rest of the third Plan period may also be expected to get under way very soon, for the member-companies of ISCON are already in the process of tendering for the various parts of the expansion project. There is also the hope that the capacity of the Durgapur Plant which has been laid out for even greater expansion in the future could be increased to more than three million ingot tons per annum, possibly in the fourth Plan period. That ISCON and its member-companies, with the goodwill of the British Government, will rise to the occasion is as good as certain, now that Sir Cyril Jones himself has assured the Union Minister of all possible help in expanding the plant to the level of three million tons.

LABOUR PARTY ON COMMONWEALTH

The outcome of the recent Conference of Commonwealth Prime Ministers at London has been interpreted in European capitals and in the United States as a personal triumph for Mr. Macmillan and a tribute to his diplomacy. But within his own country, the British Prime Minister has to face now increasing opposition to the proposed entry into the European Common Market. The Labour Party's latest policy statement, for instance, is an embarrassing reminder to Mr. Macmillan that the battle on the Common Market front is not yet over, and possibly it has only just begun. In the policy statement, the National Executive Committee of the Labour Party has put forward a set of demands as prior conditions for Britain's entry into the Common Market and has approved of the "wait and see" policy of Mr. Hugh Gaitskell. The Party has strongly urged that, unless its demands are met, Britain should not join the Six. Its major complaint is that the terms provisionally agreed upon for British entry into the Common Market are wholly inadequate. The policy statement makes it clear that, until alternative arrangements like comprehensive trade agreements with Commonwealth countries like India, Pakistan and Ceylon are concluded, the U.K. should not commit itself to entering the Common Market.

The main plank of the Labour Party is that Commonwealth interests should be adequately safeguarded before a final decision is taken by the British Government. Referring to the promise given by the Six for a satisfactory price policy for agricultural products, the Labour Party's statement observes that this gives no guarantee that Commonwealth farmers will continue to have any substantial volume of exports to the U.K. or the Six. It has also expressed its concern that "there is no certainty that India and Pakistan will secure, under the proposed 'comprehensive trade agreements,' easier access to the Common Market to compensate them for the disadvantages they will suffer." The statement, therefore, has emphasised that the talks pertaining to the proposed world commodity agreements, special arrangements for New Zealand and comprehensive trade agreements with India, Pakistan and Ceylon as well as proposals to safeguard the trade of African and Caribbean Commonwealth countries, should be held not after Britain had joined, but should commence here and now. Until these negotiations are brought to a satisfactory conclusion, the present system of Commonwealth preferences, in the opinion of the Labour Party, should remain unimpaired.

The Labour Party's insistence on finalising terms before U.K.'s entry into the Common Market arises from the uncertainty about securing adequate safeguards from the Six. This fear is not unjustified, viewed against the background of tough bargaining involved in the present U.K.-E.E.C. negotiations. The failure of the U.K. to secure adequate terms suggests, according to the Labour Party's policy statement, three important conclusions. These are: First, "in pursuing its present course—with no mandate from the British people—the Government has succeeded in causing a major crisis in Commonwealth affairs." If this is allowed to continue, it may "well damage Commonwealth relations beyond repair." Secondly, the U.K. Government's readiness to surrender on

(*Continued on next page*)

LONDON LETTER

MR. MAUDLING IN THE LION'S DEN

(From Our Own Correspondent)

LONDON, *29th September*

WHEN the British Treasury briefed the new Chancellor of the Exchequer, Mr. Maudling, for his visit to Washington for the annual meeting of the International Monetary Fund, they thought that they were being simply mildly progressive. Apparently, the Americans were afraid that his proposals—in spite of the way in which they had been broadly canvassed beforehand—would be revolutionary and they and the Germans had, it seemed, already made up their minds for no change. In the event, they were also joined by the French. Thus, instead of this meeting of the I.M.F. making any provisions to expand the world's credit base, provisions which would be of special significance to the underdeveloped countries in giving them hope of more capital assistance, we have seen a shut-down on the thought of any change whatsoever.

The American Secretary of the Treasury, Mr. Roosa, and his European counterpart have decided that not only is the dollar perfectly sound, not only has the U.S. no balance of payments problem, but that the existing international credit machinery is adequate and that there is no need to expand the world credit base.

Proposal Outlined

Now all this represents a considerable snub for the British Chancellor and it is as well to see just what he was proposing. In the first place, he pointed out that the I.M.F. had in the past year done more business than ever before. More business means more buying of members' currencies and more selling—a movement away from earlier practice which was largely confined to dealing in dollars. Thus, the Fund is finding an increasingly wider range of currencies acceptable in its dealings. Among those it has helped have been the primary producing countries, twenty-one of which drew the equivalent of $743 million in the year covered by the Report and were left at the end of the period with outstanding drawings of $1,300 million. But the official I.M.F. and American view about all this is that these primary producing countries have really been getting a great deal of help and it is not satisfactory to find them relying upon this help, instead of developing their own exports.

But the British Chancellor's point was to show the extent to which the Fund is handling a wide range of currencies. He also showed that the U.S.A. has begun to follow the British practice in dealing substantially in foreign currencies for the purpose of making international settlements instead of always settling in gold.

Gold Standard Opposed

Mr. Maudling does not regard what has been done as sufficient. He dismissed the idea of any return to the classical gold standard on the grounds that gold output alone could not be relied upon to bring about the necessary increase in the world's money supply. He also found it unsatisfactory that gold should normally be supplemented by the pound and the dollar since each of these currencies, when circulated internationally, represented a debt to the issuing country. He had in mind the liability imposed on the U.K. by large overseas-owned sterling holdings.

After this preamble, he came out with the positive proposition that "we shall have to be prepared to supplement the present international payments arrangements, if we are to make certain that they do not act as a brake upon the possible expansion of world trade and production." It is this proposition which has been shot down.

Mr. Maudling then asked whether the Fund could not "provide the basis of a multilateral system of a more regular and automatic character which would be capable of expansion to the extent necessary at any time." The multilateral system would be the holding by member-countries of acceptable foreign currencies in their accounts with the I.M.F. These holdings would then attract the guaranty that attaches to all holdings in the Fund which is a gold guaranty. "We would hope," said Mr. Maudling, "that such a system would enable world liquidity to be expanded without additional strains on the reserve currencies or avoidable setbacks to their economic growth and, at the same time, without requiring countries whose currencies were temporarily strong to accumulate larger holdings of weaker currencies than they would find tolerable."

Mr. Maudling was expounding the ideas forecast by your Correspondent in an earlier article, that is, that the world credit base should be enlarged by *monetising* currency balances. It would be for the I.M.F. to say which currencies were acceptable. But it is one thing for an international organisation to take the risk, on behalf of members, of holding large quantities of an acceptable, albeit relatively weak, currency and another thing for an individual member to take that risk.

An Example

To take an example of how it is visualised here that Mr. Maudling's scheme would work out: Continental countries might be holding large quantities of sterling and they might wish to dispose of that sterling (what the U.K. would normally see as an outflow of hot money). Under the present system, the U.K. would find itself running to the I.M.F. to buy gold, dollars and other currencies with which to meet the outflow. Under the new proposals, the creditor countries, that is, the holders of sterling, could sell their sterling balances to other countries who could deposit them with the I.M.F., where they would then be covered by a gold guaranty. This would not obviate the U.K. from the necessity of finding currency with which to meet direct demands on itself, but it would mean that every sale of sterling at such a time would not involve a direct drain on the U.K.'s currency resources. This would happen, because any country acquiring sterling (and the same argument applies to any other acceptable currency) could make a deposit of that currency at the I.M.F. and that currency would be as good as gold.

The essence of the matter is that, in international financial transactions, if something is as good as gold then it is gold, and once the world's major currencies are accepted *when they take the form of deposits at the I.M.F.* as being gold, then the world's credit base is expanded by as much.

It is very depressing that the world's rich countries such as America and Germany should turn down such proposals. It means that they are content to operate on the present credit base with all the inhibitions which that implies for countries like the U.K. liable to have their reserves heavily drawn upon and all the inhibitions that follow in extending overseas loans. If the U.K. did not have to be obsessed with the need for maintaining reserves—including the stand-by arrangement it has with the I.M.F.—to meet the possible drains on sterling, how much more liberal could its overseas investment policy not be? The same argument goes for every would-be investing country overseas, but for the moment all such ideas are at a standstill.

SURVEY

(Concluded from previous page)

the Commonwealth issue makes clear to the Six its desperate anxiety to join and that they, for their part, need make no further serious concessions to bring Britain in. Thirdly, "the apparent unwillingness" of the Six themselves to pay due regard to the economic problems of millions of desperately poor people in Asian and African Commonwealth countries, raises most seriously the doubt whether they are basically an inward-looking or an outward-looking community.

It is clear from the policy statement that the Labour Party is not against the U.K.'s entry into the Common Market as such. It is only insisting on adequate safeguards for Commonwealth trade before the U.K. takes a final plunge. There is, however, nothing to suggest that the Labour Party's stand will change the U.K. Government's decision to pursue its efforts to enter the Common Market. It is not inconceivable that seeking the support of the British electorate may also form a part of these efforts.

Kumardhubi the largest single refractory manufacturing unit in the East offers

EARLY DELIVERIES OF SILLIMANITE REFRACTORIES

PIONEERS in the manufacture of Firebricks and Silica bricks, Kumardhubi's venture in the field of Sillimanite has met with unrivalled success. Recent large-scale expansions, harnessed to the most up-to-date equipment and rigid quality control, ensure prompt, early deliveries of Sillimanite Refractories... Refractories indispensible to the Glass, Enamel and Ceramic industries.

KUMARDHUBI SILLIMANITE bricks are ideal for glass furnaces, oil and gas-fired furnaces, roofs of electric furnaces, soaking pits and wherever ability to support heavy loads under extreme temperature variations is essential.

KUMARDHUBI'S MODERNISATION PROGRAMME to meet increasing demands during the Third Five Year Plan assures the nation of a consistent supply of Kumardhubi Sillimanite Refractories—in regular shapes and sizes, or to specification.

TRADE EXPANSION BILL AN ACCOMPLISHED FACT

EUROPEAN CENTRAL BANKS TO DEFEND DOLLAR

THE United States is set to embark on the oldest trading venture since the New World colonists first bartered their tobacco for Mother England's tea. Congress has decided that in order to meet the challenge of rich new markets and aggressive competitors, this country must grant its President sweeping authority to negotiate trade and tariff pacts with foreign nations. To some American traders, such unprecedented power in the hands of the Chief Executive seems a greater threat to their commerce than the raging seas to a Yankee clipper ship. But to many others in the business community, the rewards of a growing world market for their products far outweigh the risks. Even the most ardent protectionists have now conceded that the Administration's trade expansion Bill is all but an accomplished fact. All that remains is for the House and the Senate to work out a few minor differences and for the President to sign the Bill into law. Both the proponents and opponents of the measure have now turned their attention to learning to live with it.

Essentially, the final Bill will give the President the power to eliminate tariffs altogether on some goods and to raise tariffs, withdraw concessions or impose quotas on other imports. The Bill would also provide help for domestic industries hurt by imports, including Federal assistance in the form of wage compensations, technical aid and other benefits. The intent of the legislation is to allow freer trade between the United States and the Free World countries, particularly the European Common Market. But die-hard protectionists like Washington lobbyist O. R. Strackbein "cannot believe the Bill will do what it is held out to do." "It is a great illusion," Mr. Strackbein contends, "to think we will have a booming export market for durable consumer goods in Europe." Proceeding, he argues that as Europe increases its mass production facilities, its productivity rate will be on a par with ours and it will continue to enjoy a wage-productivity advantage over U.S. producers.

Two-edged Sword

Another spokesman for a protectionist group described the Bill as "something like a two-edged sword." Said Richard H. Anthony, Executive Vice-President of the Trade Relations Council: "If it is the Administration's intent to cut down tariffs on our exports, that will be good. But on the backswing, the other edge of the sword could do some damage to domestic industry and to jobs."

Among the industries which feel themselves most likely to be hurt by the tariff cutting provisions of the Bill is the chemical industry. "Now that Congressional approval of the Act appears imminent," commented David H. Dawson, Vice-President of E.I. du Pont de Nemours & Co., Inc., "we hope that the President will exercise his tariff reducing authority with full appreciation of its possible effects on our industry and the nation's balance of payments." Mr. Dawson concedes that the chemical industry has enjoyed an "unusually favourable trade balance," but he warns that the European Common Market countries are catching up fast and "we are now in the process of losing the advantage of size and advanced technology." Meanwhile, the industry will, according to another major chemical producer, attempt to stay competitive by cutting costs, modernising its plants, and spending more money for new product research and development. Other industries likely to be hard-hit by imports have accepted the inevitable with less protest than had been expected. But the textile makers, glass, watch and shoe producers are highly sceptical of claims that trade liberalisation will be the boon to the U.S. industry its supporters envision.

Two of the nation's biggest industries—autos and steel—however, are stoutly in support of freer trade. The car makers have long favoured measures to reduce trade barriers. They point out that tariff walls against U.S. autos are higher now than on auto imports into this country. American-made cars are also kept out of foreign markets by quotas, exchange controls, fuel taxes and other restrictions which their manufacturers hope may now be reduced.

The steel industry's support to the trade Bill is more surprising. For the first time in more than a half century, the United States has become a net importer of steel tonnage and there is no indication that this trend will be reduced. Cheaper foreign steel imports are hurting domestic producers. Nevertheless, the American Iron and Steel Institute, speaking for the industry, has declared that "improved and more permanent governmental machinery should be devised to administer tariffs as well as all other phases of international trade in the best interests of the country."

Key companies in a number of different industries actually lobbied for the Administration's Bill through a non-profit group called the Committee for a National Trade Policy. The Committee included the chiefs of such firms as Gillette Company, International Business Machines Corporation, H.J. Heinz, Lockheed Aircraft, Crown Zellerbach, General Mills, Standard Oil Company (New Jersey), Burroughs Corporation, Ford Motor Company, Gulf Oil and Pillsbury Company.

U.S. Acts to Protect Dollar

The United States monetary authorities, who are neophytes at trading in foreign exchange, are giving European banks lessons in the use of currency dealings to stem speculative excesses. The U.S. foreign exchange operations began in March 1961, when the Treasury started trading. But the major move started in February this year, when the Federal Reserve System took over from the Treasury and bought and sold currencies for quick or future delivery—and "swapped" exchange with other Governments.

It was the first time that any United States agency had made an effort to defend the dollar against waves of speculation as European nations have done for decades. The activity is credited with saving the United States from the unwarranted loss of millions of dollars of gold during the past year. The trading is not designed to aid our structural balance of payments problem but to fight off temporary flights of capital due to short-term, non-recurring factors such as a stock market slump. It has been found that every time dollars move into the possession of foreign businessmen or other individuals, they find their way to European central banks which turn back a part or all to the Treasury in exchange for gold.

But the flow is not two-sided. For, when exchange leaves foreign countries, the foreign Governments do not come to the United States and sell gold to raise reserves. They may go to the International Monetary Fund. There have been only two exceptions—Canada and Switzerland.

One innovation of the Federal Government—so simple that it is hard to believe it had not been done before—has been the development of a *rapport* between Treasuries and central banks of all the countries concerned. The European agencies had never told one another what they were doing and frequently worked against one another unwittingly. But the financial resources of the many countries involved are so great that a co-ordinated effort to thwart unwarranted speculation is more than enough to take care of the excesses.

Another development was the extensive use of foreign exchange contracts calling for future delivery of a currency in exchange for some other at a specified rate. Reversal of the operation prior to expiration date permitted transactions which far exceeded in size the amounts of moneys held. Then the Fed developed "swap" arrangements with foreign countries constituting a reciprocal credit facility under which a central bank agrees to exchange on request its own currency for the currency of the other party. The currencies obtained in any of these manners could be used to conduct spot transactions or to meet forward exchange obligations. These various measures, for the first time ever, permitted the United States to protect its own currency against the speculator. European Governments, however, had long ago set up such an arrangement.—*P. G. Krishnayya's Service.*

ECONOMIC TRENDS IN U.S.

EXCESS INDUSTRIAL CAPACITY

WHILE general business activity (in the U.S.) moved moderately higher during the third quarter, the pace of the business expansion appears to be losing momentum. This fact tends to be obscured at the moment by the higher level of activity in many lines.

Retail sales set a new record in July and almost matched it in August.

The automobile industry is having a very good year.

Construction, after a sag early in the year, moved up to a new high in the summer with total expenditures 8 per cent above a year earlier.

Machinery production is running more than 10 per cent ahead of last year's figures.

Exports moved up in June and July to an annual rate of more than $22 billion.

Steel output, which dropped sharply in the second quarter, has moved up more than seasonally.

These and other reports show that business is very good at the moment, as measured by past standards. And the strength of business during the summer quieted talk of an imminent downturn in business which had led to speculation about a possible tax cut this year. Nevertheless, the trend of business is not as encouraging as recent reports of new highs in many specific areas would imply. By virtually all measures, this has been the weakest recovery of the post-war era. As a result of the slowing of the recovery this year, unemployment has fluctuated around a 5½ per cent rate, and problems of excess capacity have continued to plague many industries.

How the Recent Recovery Compares with Previous Ones
(Per cent change)

	In the recovery since February 1961	*Average change in same number of months for all recoveries since 1921*
Gross national product		
In current prices	+10.2	+15.8
In constant prices	+ 8.5	+11.0

Prices of 500 common stocks..	— 8.4	+32.8

While there are problems of finding individuals with the necessary training and experience to fill many of the job openings which exist, it appears that the sluggish growth of the overall economy in recent years means that the nation has not been making full use of the potential provided by a growing population of working age. The labour force, which is defined as the number of persons seeking employment, has shown little increase in the past year. Population trends would suggest that the labour force might now be a million or more higher than a year ago, if job opportunities had been more plentiful.

A Major Problem

The nation also has unutilised productive capacity. Just how much excess capacity exists is hard to measure—however, a study for the Joint Economic Committee concluded that manufacturing industries were operating at no more than 90 per cent of capacity early this year. Consequently, a major economic problem is to find ways to lift production of goods and services up to the level which could be achieved without inflation.

To achieve full use of the nation's resources in the period ahead would require a greater increase in business expenditures for new plant and equipment than now seems likely. Because of the squeeze on profits, such business investment has lagged in the past two recovery periods. In the first eighteen months of general business expansion following the 1953-54 recession, business capital investment increased over 20 per cent, a rise that was well in line with earlier experience. However, in the past two recovery periods—1958-59 and 1960-61—investment increased only 12 per cent in eighteen months.

The key to full prosperity lies in measures to promote a vigorous expansion in business investment in new plant and equipment. This will require resolute action on the part of business management to control costs as well as measures to reduce the heavy burden of taxation on saving and investment.—*By courtesy: The Chase Manhatten Bank, New York.*

INDUSTRIAL FINANCE CORPORATION OF INDIA

LOANS SANCTIONED AND DISBURSED HIGHEST FOR ANY SINGLE YEAR

MR. K. P. MATHRANI REVIEWS PROGRESS

THE Industrial Finance Corporation of India may now claim to have come of age: This was how Mr. K. P. Mathrani, I.C.S., Chairman of the Corporation, described it when he addressed the Fourteenth Annual General Meeting of the Corporation held at New Delhi on Friday, 28th September 1962. With the discharge of the statutory liability in respect of Central Government subventions, the Corporation, Mr. Mathrani said, had now become an institution depending more and more on its own strength in its task of promoting the industrial development of the country. Referring to the loans sanctioned and disbursed during the year ended 30th June 1962, he stated that they were the highest figures in any single year of working and constituted fresh landmarks in the history of the Corporation. He also referred to the record level of gross income, a further improvement in the position regarding bad and doubtful debts, grant of sub-loans in foreign currencies, underwriting function, enlarging investment portfolio and improvement in resources position. He alluded, too, to the efforts of the Corporation to promote joint financing of large projects in collaboration with other credit institutions and banks which, he said, gathered further momentum during the year 1961-62.

The following is the full text of Mr. Mathrani's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you and placing before you the fourteenth annual report of the Board of Directors and the accounts for the year ended 30th June 1962. The printed copies of the report have been circulated to all the shareholders and I shall, with your permission, take them as read.

"The year under report almost coincides with the first year of the third Five-year Plan. As the lending policies of your Corporation are closely integrated with the country's Five-year Plans, we have, as in the past, made during the year under review, a useful contribution towards the successful implementation of the objectives of the Plan, viz., to create conditions for the maximum production and employment and the development of human resources. Your Corporation has, during the year, sanctioned loans of the order of Rs. 24.45 crores and has disbursed loans of the value of Rs. 10.78 crores. These are the highest figures for loans sanctioned as also disbursed in any single year of the working of the Corporation and thus constitute fresh landmarks in the history of the Corporation.

Gross Income Rises

"The year under review has been another successful year in the life of the Corporation. Our gross income during the year was Rs. 3.04 crores which is the highest figure reached so far and shows an increase of Rs. 5.32 lakhs over that of the previous year. This has been achieved in spite of the fact that the income of the preceding year included a profit of Rs. 22.62 lakhs realised by the Corporation on the sale of its investments, a factor which did not operate during the current year, as no investments were sold by us during the year. Our gross profit, subject to provision for taxation, was Rs. 130.71 lakhs, as against Rs. 139.35 lakhs for the previous year. If the profit on the sale of investments is excluded, the profit for the year under review is higher by Rs. 13.98 lakhs than that for the preceding year. The Corporation has also had to make a larger provision for taxation as a result of the increase in the rate of income-tax from 45 per cent to 50 per cent in the current year.

"As the shareholders are no doubt aware, the Government of India had, during the first eight years of the career of the Corporation, to make subvention of the order of Rs. 53.45 lakhs to enable the Corporation to pay the minimum guaranteed dividend of 2¼ per cent per annum on its share capital of Rs. 5.00 crores. With the progressive improvements in our working results, we have repaid so far a sum of Rs. 35.45 lakhs during the last four years and the balance of subvention outstanding at present is Rs. 18 lakhs. We have decided to repay this amount from the profits of the year under review and thus liquidate finally the Corporation's liability in this behalf—a step which I have no doubt will receive the wholehearted support of the shareholders. With the discharge of this statutory liability, the Corporation may now claim to have come of age—as an institution depending more and more on its own strength in its task of promoting the industrial development of the country.

Tax Relief

"I had mentioned in my speech at the last annual general meeting that, in the Finance Act, 1961, the Government of India had made an amendment to the Income-tax Act, which gave relief to the financial corporations approved by Government by enabling them to claim a rebate in income-tax in respect of the amounts, not exceeding 10 per cent of the total income of each year, transferred by them to a special reserve fund. I am glad to say that the Central Government have approved the Corporation for the purpose of availing itself of the benefit of this rebate from the year ended 30th June 1960. As required under Section 36(1)(viii) of the Income-tax Act, 1961, we have created a special reserve fund and have transferred a sum of Rs. 24.82 lakhs to this account in respect of the accounting years ended 30th June 1960 and 1961 from our general reserve fund. Out of the current year's profits, we have transferred a sum of Rs. 13.21 lakhs to this fund in order to qualify for the maximum admissible rebate in income-tax. The total amount thus transferred to this special reserve fund amounts to Rs. 38.03 lakhs. As a result of these transfers, we have secured a relief to the extent of Rs. 11.84 lakhs in our income-tax assessments for the accounting years 1959-60 and 1960-61. We expect to get a rebate of Rs. 6.60 lakhs in respect of the year under report.

"A review of our loan accounts has shown a further improvement in the position regarding bad and doubtful debts. It is a matter of gratification that not only have there been no accretions to bad debts, but, on the other hand, some of our loan accounts, in regard to which we were anticipating shortfalls, have been fully liquidated and the rest are in the process of being cleared. No additional provision was, therefore, considered necessary by your Directors towards the reserve for bad and doubtful debts, the balance in which now stands at Rs. 14.47 lakhs.

Underwriting

"As a result of our underwriting operations both in respect of preference and equity shares, our investment portfolio has been slowly enlarging and we held, at the end of the year, investments of the paid-up value of Rs. 106.44 lakhs. A majority of the shares held by the Corporation are redeemable cumulative preference shares carrying fixed rates of dividend. The share issues have been underwritten by the Corporation as a part of its promotional activities and the role of the Corporation has been that of a catalytic agent rather than as an investor. We have, however, as a measure of caution, transferred a sum of Rs. 2.00 lakhs to the reserve for depreciation on investments.

"We have transferred a sum of Rs. 26 lakhs out of the net profits for the year under review to the general reserve fund which now stands at Rs. 134.08 lakhs. Our special reserve fund under Section 32-A, to which are credited all the dividends on the shares of the Corporation held by the Central Government and the Reserve Bank of India, now stands at Rs. 41.05 lakhs. The total of the balances now standing in general reserve, the special reserve funds and other reserves comes to Rs. 230.63 lakhs, which may be regarded as a creditable performance.

Share Capital

"I had mentioned at the last annual general meeting that the Board of Directors of the Corporation had under their consideration the issue of further share capital to the extent of Rs. 2 crores carrying a minimum guaranteed dividend of 4 per cent per annum, for which the approval of the Central Government had been obtained. We entered the market in March this year and I am glad to say that the issue was a success and, in fact, the quota reserved for the institutional investors, including the co-operative banks, was oversubscribed. On behalf of the Board of Directors and myself, I should like to thank you all for your response to this issue and to welcome to our fold those investors who have subscribed to our shares for the first time. The dividend on our shares has, in view of the restriction contained in Section 31(2) of the I.F.C. Act, to be limited to the minimum guaranteed by the Central Government, viz. 4 per cent per annum in respect of the recent issue of Rs. 2 crores and 2¼ per cent per annum in respect of the original issue of Rs. 5 crores. I am aware of the feeling of our shareholders in regard to the dividend in respect of our first issue. An alteration of this position, however, requires an amendment to the I.F.C. Act which is under the active consideration of the Government of India. We have set aside a sum of Rs. 13.68 lakhs for the payment of the guaranteed dividend to our shareholders for the year under report. The dividend in respect of the second issue is, in accordance with the terms of the issue, payable from 12th March 1962, that is, the date when the issue was launched on the market.

"The Corporation received during the year 59 loan applications for an aggregate amount of Rs. 31.40 crores, as against 76 applications for an aggregate amount of Rs. 36.86 crores received in the preceding year. The fall in the number of applications could be attributed partly to the restrictions on the import of plant and machinery on deferred payment terms and also the curtailment of the grant of industrial licences for the establishment of new sugar factories. Moreover, during the recent months, we have been advising the parties coming to us for assistance to obtain, as far as practicable, the various statutory permits and clearances such as those relating to the grant of industrial licences, the permission of the Capital Goods Committee and the Foreign Agreements Committee and the consent of the Controller of Capital Issues before making a *formal* application to us. This may also be partially responsible for a fall in the number of applications. But you will appreciate that the revised procedure saves a good deal of infructuous or avoidable labour on the part of our beneficiaries and substantially shortens the period during which applications have to be kept pending. It would, therefore, be of advantage all round in the long run. However, during the intervening period, we continue to have informal discussions with them in order to enable them to submit to us their applications in as complete a form as practicable.

Loans Granted

"Out of the total loans of Rs. 130.27 crores approved by the Corporation during the last 14 years, loans aggregating Rs. 24.09 crores were either declined by the applicant concerns or were not made available to them for various reasons, and loans amounting to Rs. 7.86 crores were pending approval of the Government of India or the A.I.D. The firm commitments of the Corporation for the grant of loans thus aggregate Rs. 98.32 crores, out of which a sum of Rs. 68.14 crores, that is, about 70 per cent of the commitments, was disbursed. These results may be regarded as satisfactory and have been achieved as a result of the various measures which the Corporation has taken from time to time to expedite the attendant formalities on the part of the Corporation prior to the disbursement of the loans. In order to meet the immediate requirements of our borrower concerns, we also continue to grant interim loans in cases where a *prima facie* valid title to their properties has been established and, during the year, we disbursed interim loans to the tune of Rs. 5.73 crores.

"While the loans in rupee still constitute the bulk of our lending operations, the Corporation has also, since last year, been sanctioning sub-loans in foreign currencies. The first dollar loan of 10 million dollars (Rs. 4.76 crores) obtain from the D.L.F. (now merged in A.I.D.) was completely committed early this year. I am glad to say that we have received a second loan of 20 million dollars (Rs. 9.52 crores) from the A.I.D. and a formal agreement in this behalf was executed in June 1962. A sum of 4.8 million dollars (Rs. 2.29 crores) has already been committed from the second loan and I believe that the balance of the loan will be put to fruitful use in the not too distant future. As the first dollar loan was largely and the second dollar loan is completely tied to purchases in the United States, it has been our endeavour to obtain in addition lines of credit from other countries. These efforts have now borne some fruit and we have been sanctioned a line of credit in the West German currency to the extent of 15 million DM (Rs. 1.79 crore) from Kreditanstalt fur Wiederaufbau Frankfurt/Main (German Bank for Reconstruction), out of which a sum of 1.92 million DM (Rs. 22.86 lakhs) has already been committed in the form of sub-loans. I may add that there are indications that an additional loan in the same currency will be available to the Corporation in the near future. The Government of India have also further decided to make an allocation to the Corporation of the yen equivalent of a sum of 2 million U.S. dollars from the yen available with them. Lastly, we have recently been informed of the sanction to I.F.C. of a line of equipment credit in French currency to the extent of 50 million new French francs (Rs. 5 crores) through a French commercial bank and the terms and conditions of the credit are now in the process of negotiation. These you will agree, are welcome developments, as they will go to meet, though to a limited extent, the needs of our borrower concerns in respect of foreign currencies. In view, however, of the fact that, except for the West German loan, these credits are tied to purchases in those countries, the need for a more substantial line of credit in convertible currency for meeting the foreign exchange requirements of industries in the private sector is obvious.

Largest Beneficiary

"Coming to our loan operations, the sugar industry continues to lead the list of loans approved by the Corporation. During the year, we sanctioned loans of the order of Rs. 7.52 crores to 13 sugar mills, of which there were 12 sugar co-operatives. This brings the total amount of loans approved to Rs. 30.4 crores to sugar co-operatives numbering 45 which are distributed all over the country. Besides, the Corporation has sanctioned loans of the order of Rs. 1.02 crore to three co-operative spinning units and one co-operative unit for the manufacture of vegetable oils. The loans approved by the Corporation to co-operative units represent 24.1 per cent of the total loans approved, and is indicative of the high priority given by the Corporation to the development of the co-operative sector. These co-operatives, I am glad to say, have, by and large, shown satisfactory working results.

"Chemical industry, to which loans aggregating Rs. 6.38 crores were sanctioned during the year, has, for the first time, occupied the second place, while the third place is taken by the electric machinery manufacturing industry to which loans of the value of Rs. 3.14 crores were sanctioned. For the first time, the Corporation has sanctioned to a concern in Mahe in Pondicherry for setting up a textile mill a loan of Rs. 35 lakhs, in addition to a guarantee for deferred payments to the extent of Rs. 5.62 lakhs. The Corporation has also for the first time sanctioned a loan of Rs. 1.09 crore to a concern engaged in the production of industrial and medical gases.

"For sometime past, the problem of modernisation and expansion of the coal mining industry in the private sector has been engaging the attention of the Central Government which has been sanctioned a loan of 35 million dollars by the Word Bank for the import of coal mining equipment and spares in order to achieve this purpose. The coal mining projects to be financed out of this credit have been examined by high level screening committees set up by the Government of India, with which our Corporation has been associated. While the foreign exchange requirements of these projects would be met out of the World Bank credit, the rupee finance has to be arranged by the undertakings concerned either from their own resources or through the various institutional channels. In view of the vital nature of this industry in the present context, the Corporation has agreed to assist in this direction and has so far sanctioned loans to three such concerns of an aggregate amount of Rs. 82 lakhs.

Coal Mining Projects

"Although our approach to underwriting has been somewhat cautious, we are continuing to enlarge our activity in this field in order to meet the increasing requests of our clients. In view, however, of the fact that, in most of these cases, the Corporation has sanctioned loans for substantial amounts, the underwriting commitments of the Corporation in respect of such concerns are generally of a token nature. During the year, we had approved 11 proposals for underwriting facilities to the extent of Rs. 62 lakhs in equity shares and Rs. 10.5 lakhs in preference shares. The applications approved cover a wide range of industries such as pottery, china and earthenware, basic industrial chemicals and fertilisers, textiles, metal products, electrical and other machinery, paper and mining. Since December 1956 when the Corporation started underwriting business, we have underwritten 18 issues of capital for an aggregate amount of Rs. 4.92 crores. As a result of amendments to the I.F.C. Act in December 1960, the Corporation has also been authorised to subscribe directly to the stocks and shares of industrial concerns. Having regard to the experience gained by the Corporation in the field of underwriting in the past few years, it is expected that the Corporation will be able to make a fruitful contribution in this direction.

Deferred Payment Guarantees

"There was a reduction in the requests for guarantees of deferred payment arrangements owing to the restrictive policy of Government in this behalf. We approved three applications for such guarantees of the value of Rs. 43.61 lakhs during the year, bringing the total value of guarantees approved by the Corporation to Rs. 27.6 crores.

"The periodical inspections carried out by us and the progress reports received from our borrower concerns have shown that many of them earned sizable profits and 37 such concerns have, during the year, declared, with our prior approval, dividends in excess of 8 per cent. There has been a further reduction in defaults in the repayment of principal and the payment of interest by our loanee concerns. The percentage of defaults in the repayment of principal has declined from 2.34 in 1960-61 to 1.24 in 1961-62, while, in regard to interest, it has come down from 0.25 to 0.18.

Resources

"The resources position of the Corporation continued to be comfortable during the year. The capital outgoings in rupees amounted to Rs. 10.78 crores (inclusive of investments in shares to the extent of Rs. 26 lakhs). We met these commitments from the proceeds of the further issue of share capital of Rs. 2 crores and borrowings from the Government of India to the extent of Rs. 4½ crores, in addition to our own internal resources of the order of Rs. 4.28 crores, inclusive of the repayments of loans due to the Corporation. We did not, therefore, enter the market for a fresh issue of bonds during the year. We have, however, decided to go in for a fresh issue of bonds to the extent of Rs. 6 crores to enable us to strengthen our resources further in order to meet the likely demands of industry during the year. These bonds which are for a period of 12 years will carry rate of interest at 4½ per cent per annum, the issue price being Rs. 99.5. The terms are similar to those on which the State Governments recently floated their loans and are, I believe, sufficiently attractive for the investors. I am sure I can count upon your generous support, as in the previous years, to make the issue a success. It is a matter of coincidence that the issue has been opened to public for subscription from today.

"The rate of interest charged by the Corporation from its borrower concerns had remained constant at 6½ per cent per annum net for the last five years. Our lending rate is, however, dependent on our borrowing rate, as also the general monetary and economic conditions. During the last year, there was a gradual increase in the rates of interest charged by the scheduled banks and we had reached an anomalous position where our rate for medium and long-term loans was lower than that charged by many commercial banks for their short-term loans. Further, the Government of India and the State Governments offered higher yields in respect of their recent issues of public loans as compared to their market flotations in the previous year. This has had its repercussion on the rate at which the Corporation is able to borrow from the market and we have had to offer a rate of 4½ per cent on our bonds as against 4 per cent in 1959. Having regard to these circumstances as also the general economic conditions, the Corporation, after careful consideration, came to the conclusion that an increase of ½ per cent in the rate of interest would be appropriate. Accordingly, the Corporation, with the approval of the Central Government, raised, with effect from 19th July 1962, its rate of interest from 7 per cent per annum to 7½ per cent per annum with the usual rebate of ½ per cent for punctual payments, that is, a net rate of 7 per cent per annum. The Corporation has not, however, made this rate applicable to the concerns which had fully or partially availed themselves of the loans sanctioned to them prior to this date.

Joint Financing

"The Corporation's efforts to promote joint financing of large projects in collaboration with other credit institutions and banks gathered further momentum during the year. In pursuance of this policy, the Corporation convened at Bombay in January 1962 a conference of the representatives of institutional investors like the Life Insurance Corporation of India, the Industrial Credit and Investment Corporation of India Ltd., the State Bank of India and other leading commercial banks, with a view to formulating common approach in regard to joint participation. The proposal received wide support. It was appreciated that such joint participation by different financial institutions would help in establishing healthy practices regarding the scrutiny of applications, coverage of loans and the follow-up operations. Requests in respect of large projects are being processed in the light of these deliberations. In this context, I might mention that international institutions such as the International Finance Corporation, Washington, have also expressed their interest in co-operating with I.F.C. and other Indian institutions in this manner.

"A conference of Development Banks in Asia was held in Bombay towards the end of March 1962 under the auspices of the Industrial Credit and Investment Corporation of India Ltd. to discuss the various problems of development banks. The General Manager and a senior Manager represented the Corporation at the deliberations and I also participated in some of the sessions which, by and large, proved useful and instructive.

"Our relations with the various Chambers of Commerce and with our loanee concerns continue to be cordial. We have nominated more non-officials on the Boards of our loanee concerns and I take this opportunity to thank them on behalf of the Board of Directors for the keen interest they have taken in the work.

Advisory Committees

"During the year, we have reconstituted our Advisory Committees and have enlarged them by nominating some additional members having considerable experience in their respective fields of activity. I should also like to convey on behalf of the Board of Directors our sincere thanks to the members of our Advisory Committees for the able and effective assistance they have given to the Corporation.

"Before concluding, I should like to express the thanks of the Corporation for the assistance and co-operation accorded to us by the United States of America Agency for International Development, with whom our relations have been very cordial and who have recently sanctioned to us a further line of credit of 20 million dollars. Our appreciation is also due to Kreditanstalt fur Wiederaufbau, and also to the French authorities for their agreeing to sanction loans in foreign currencies and we look forward to a period of useful association with them. I should also like to convey my heartfelt thanks to my colleagues on the Board for their valuable co-operation and wise counsels. In particular, I should like to make a reference to Prof. S. K. Basu and Shri G. D. Ambekar who ceased to be Directors of the Corporation from 19th February 1962 and 12th April 1962, respectively. The Corporation benefited much by their active participation and sound advice during their association with it. Finally, I have great pleasure in conveying the thanks of the Board of Directors as well as my own to the General Manager and the entire staff of the Corporation for their loyal and devoted service to the Corporation during the year."

The Economic Development Institute of the World Bank began its eighth course at Washington (D.C.) on the 2nd inst. Twenty-three officials from 19 countries will take part in this year's course which lasts until March next. All the participants hold senior positions in ministries, central banks, planning authorities or other agencies connected with economic development. They have been given leave of absence to attend the course by the agency or Government department concerned, which in each case contributes $1,500 toward the cost of the Institute.

The course is based on a closely interwoven group of seminars, each consisting of several sessions on a major subject. In general, the seminars will deal with economic policy and development, the historical aspects of development, fiscal policy and public finance, monetary policy, international trade and finance, agriculture, industry, social factors in development, and preparation and appraisal of projects. An important part of the current course of study are organised visits to governmental agencies, commercial and financial institutions, industrial and agricultural areas in the United States, and a field trip to Italy where the participants will observe the development programme being carried out in the south by the Cassa per il Mezzogiorno.

INDUSTRIAL FINANCE CORPORATION MAKES NOTABLE PROGRESS

INCOME AT RECORD HIGH—RESOURCES STRONG

THE Rs. 6-crore bond issue of the Industrial Finance Corporation of India, which opened for subscription on Friday last week, met with overwhelming success. The success must be attributed not only to the attractive terms of offer (12-year bonds bearing interest at 4½ per cent issued at a discount of 50 nP), the Central Government guarantee of principal and interest, their eligibility for grant of advances to scheduled banks by the Reserve Bank and the relatively easier money conditions, but also to the satisfactory progress made by the Corporation as a development bank, providing long-term industrial finance. Since its inception fourteen years ago and up to the end of June 1962, the Corporation has sanctioned loans aggregating over Rs. 130 crores to 267 industrial concerns: Rs. 73.81 crores for setting up new units, Rs. 50.97 crores for expanding existing units, Rs. 3.82 crores for modernisation, renovation, etc., of existing units and Rs. 1.68 crore for other purposes such as working capital. The assistance now being rendered by the Corporation to industries consists not merely of loans in rupees, though they still account for the bulk of business, but it also covers grant of sub-loans in foreign currencies, underwriting operations, guarantees of deferred payment arrangements, and financing of industrial projects jointly with other institutions.

The year ended 30th June 1962, in particular, was a successful one. The published gross profit is no doubt less than that for the previous year, but, if regard be had for the fact that, last year, there was a capital profit of Rs. 22.62 lakhs representing profit on sale of investments, the actual gross profit is higher by Rs. 13.98 lakhs than that for 1960-61. Further, the Corporation's activity during the year under review reached a record high level. The total amount of loans actually approved was Rs. 24.45 crores, as against Rs. 21.21 crores in 1960-61 and Rs. 17.91 crores in 1959-60. The number of applications approved was 41, covering 16 industries spread over 13 States and the Union Territory of Pondicherry. This was the first time when the Corporation sanctioned a loan for an industrial concern in Pondicherry (Rs. 35 lakhs to a cotton spinning mill). The loans disbursed by the Corporation during 1961-62 were also a record, Rs. 10.78 crores, as against Rs. 6.62 crores in 1960-61, though the total was well below the loans (Rs. 24.45 crores) actually sanctioned, the gap being of the order of Rs. 13.67 crores. This large gap does not in any way mean a reflection on the efficiency of the Corporation, inasmuch as it was due to several factors over which the Corporation had no control. Besides the usual time lag between the sanction and dispersal of a loan, certain loans or portions of loans, according to the Directors' report, were declined to be availed of by the borrower concerns or were subsequently not made available to the applicants for one or other of six reasons: (*a*) abandonment or postponement by the applicant concern of its scheme; (*b*) revision or amendment by the applicant concern of its scheme, eliminating the need for the loan sanctioned by the Corporation; (*c*) improvement in the financial position of the applicant concern enabling it to meet its requirements from its own resources; (*d*) availability of accommodation from other sources; (*e*) failure to accept, or inability to comply with, the terms and conditions of the loan; and (*f*) adverse developments in the affairs of the applicant concern subsequent to the sanction of the loan.

Actual Loan Commitments

Including the Rs. 10.78 crores disbursed during 1961-62, the aggregate amount of loans disbursed upto 30th June 1962 comes to Rs. 68.14 crores; the loans outstanding as on that date were Rs. 49.62 crores. The actual commitment of the Corporation in respect of loans approved upto 30th June 1962 is indicated below:

(In crores of rupees)

Total loans approved		130.27
Less:		
Amount disbursed	68.14	
Loans declined or not to be made available	24.08	
Loans requiring Government and / or A.I.D. approval	7.86	
		100.08
Net outstanding commitment		30.19

The loans approved by the Corporation, it is stated, represent 44 per cent of the total finance required by the borrowing concerns. The aggregate cost of the schemes was Rs. 291.85 crores. Loans in rupees continued to account for the bulk of the Corporation's lending operations. The amount of loans approved during the year under review, namely, Rs. 24.45 crores, includes dollar sub-loans amounting to Rs. 2.76 crores ($5,787,600) sanctioned to six concerns, two of which were also sanctioned loans in West German currency equivalent to about Rs. 22 lakhs. Three out of these six concerns were also sanctioned rupee loans aggregating Rs. 225.60 lakhs ($5.37 million approximately) require A.I.D. approval, each sub-loan being in excess of $500,000. During the year, the Corporation opened letters of credit aggregating $2,863,175 (Rs. 136.34 lakhs) in favour of the foreign machinery suppliers, out of which the disbursements made during the year amounted to $546,156 (Rs. 26 lakhs).

Underwriting

The Corporation's approach to underwriting, however, continued to be cautious during the year under review. Thus, as against 25 applications for underwriting facilities aggregating Rs. 549.59 lakhs, the Corporation approved of only 11 proposals covering Rs. 72.50 lakhs (Rs. 62.00 lakhs worth of equity shares and Rs. 10.50 lakhs of preference shares), bringing the total amount since underwriting business started in December 1956 to Rs. 4.92 crores. In the course of his speech, Mr. Mathrani expressed the hope that, having regard to the experience gained in the field of underwriting in the past few years, the Corporation would be able to make a fruitful contribution in the direction of subscribing directly to the stocks and shares of industrial concerns.

The activity of the Corporation in regard to guaranteeing of deferred payments in respect of capital goods to be imported from abroad was rather limited. Only three applications for such guarantee of the value of no more than Rs. 43.61 lakhs were approved during the year, bringing the total value of guarantees approved to Rs. 27.6 crores. There was a marked decline in the number of applications for such guarantees and the amounts involved, from 14 and Rs. 18.61 crores to 6 and Rs. 5.09 crores, respectively. This is understandable, because the deferred payments system has fallen into disuse, as the prospects of improvement in the foreign exchange situation in the medium-term period of five to seven years are not bright enough to permit the continued use of this device for overcoming the present foreign exchange shortage.

TABLE A—*Loans Sanctioned*
(In lakhs of rupees)

Manufacturing industry	Upto 30th June 1961	During the year ended 30th June 1962	Total up to the end of June 1962
Food (except beverage)	30,52.00	7,52.00	38,04.00
Textiles	12,14.62	1,90.00	14,04.62
Artificial fibres	4,10.00	70.00	4,80.00
Wood and cork	1,10.92	—	1,10.92
Paper and paper products	13,23.74	15.00	13,38.74
Rubber manufactures	2,22.50	—	2,22.50
Basic industrial chemicals	8,74.55	6,38.00	15,12.55
Vegetable and animal oils and fats	15.50	22.50	38.00
Miscellaneous chemical products	2,02.75	10.00	2,12.75
Glass and glass products	2,50.50	—	2,50.50
Pottery, china and earthenware	2,69.25	13.00	2,82.25
Cement	6,67.00	95.00	7,62.00
Iron and steel	23.00	—	23.00
Non-ferrous metals	3,33.00	—	3,33.00
Metal products (except machinery and transport equipment)	4,00.50	96.00	4,96.50
Machinery (except electrical)	2,12.50	75.00	2,87.50
Electrical machinery, apparatus, appliancies and supplies	2,51.45	3,13.53	5,64.98
Rail-road equipment	1,15.00	—	1,15.00
Motor vehicles and ancillaries	1,77.00	14.00	1,91.00
Bicycles	1,10.50	—	1,10.50
Misc. manufacturing industries	65.05	—	65.05
Electric light and power	82.75	—	82.75
Electricity, gas and steam	—	1,09.28	1,09.28
Coal	20.00	12.00	32.00
Hotel	1,69.00	20.00	1,89.00
Total	105,82.08	24,45.31	130,27.39

TABLE B—*Working Results*
(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Gross earnings	3,04.18	2,98.86	2,50.88	2,03.88
Of which interest earned	2,82.91	2,60.36	2,25.40	2,00.05
Other income	21.27	38.50	25.48	3.83
Interest paid	1,58.80	1,46.76	1,28.22	1,15.75
Staff expenses	9.28	8.33	7.84	6.80
Other expenses	5.25	4.31	5.43	8.13
Gross profit	1,30.85	1,30.46	1,09.39	73.20
Depreciation	0.14	0.11	0.12	0.12
Provision for taxation	57.82	54.60	49.76	37.71
Net profit	72.89	84.75	59.51	35.37
To reserves	39.21*	63.50	38.26	14.12
Reserves for depreciation on investments	2.00	—	—	—
Subvention returned to Government	18.00	10.00	10.00	10.00
To dividend	13.68 (†)	11.25 (21%)	11.25 (21%)	11.25 (21%)
Loans applied for	31,40.42	36,85.62	17,54.10	11,16.57
Loans sanctioned	24,45.31	21,21.34	17,91.74	3,79.00
Loans disbursed	10,78.49	6,62.55	8,40.91	7,47.71
Loans under consideration at the end of the year	12,61.33	14,75.50	7,88.10	11,70.97

* Includes Rs. 13.21 transferred to special reserve fund under 36(i) (viii) of Income-tax Act.

† Guaranteed dividend at 2¼ per cent on Rs. 5 crores for full year and at 4 per cent on Rs. 2 crores for the period from 12th March to 30th June 1962.

States' Share of Loans

The largest beneficiary of the Corporation's loan facility during the year 1961-62 was the sugar industry, the amount sanctioned being Rs. 7.52 crores. Next came the chemical industry with Rs. 6.38 crores, electrical machinery manufacturing industry with Rs. 3.13 crores and textile industry with Rs. 1.90 crore. The industry-wise distribution of loans approved by the Corporation upto 30th June 1962 is indicated in Table A. Of the total loans amounting to Rs. 130.27 crores sanctioned by the Corporation so far, the combined share of industries situated in the Maharashtra State comes to Rs. 24.30 crores. The corresponding shares, in crores of rupees, of industries in other States are: Andhra Pradesh 7.50; Assam 5.83; Bihar 8.68; Gujarat 9.05; Kerala 9.78; Madhya Pradesh 1.04; Madras 14.48; Mysore 8.14; Orissa 5.34; Punjab 6.43; Rajasthan 4.25; Uttar Pradesh 9.69; West Bengal 14.46; Delhi 0.95; Andamans and Nicobar Islands 0.03; Pondicherry 0.35.

The Corporation's experience in regard to repayments is quite encouraging. During the year under review, it received a sum of over Rs. 3.27 crores as repayments of instalments of principal. A sum of over Rs. 2.78 crores was received on account of interest. Since inception, realisation of principal amounted to Rs. 12.39 crores, as against Rs. 12.63 crores due, so that overdues are small being no more than Rs. 24 lakhs. Similarly, Rs. 14.46 crores were received as interest out of Rs. 14.49 crores charged. The amount in default constituted 1.24 per cent of the amount due, as against 2.34 per cent at the end of the previous year. The Corporation did not take over either the management or the possession of any industrial concern. One of the concerns whose premises had previously been taken over and leased out has repaid in full the dues by raising funds from elsewhere.

Earnings

The gross income earned by the Corporation during the year 1961-62 was higher at Rs. 304.18 lakhs, as against Rs. 298.86 lakhs in the previous year. The actual increase thus of Rs. 5.32 lakhs was much less than that (Rs. 47.98 lakhs) in 1960-61. The difference is quite marked even after taking account of the fact that the income in the preceding year (1960-61) included a profit of Rs. 22.62 lakhs on sale of investments, whereas no such sale was effected in the year under review. The interest earned by the Corporation rose by only Rs. 22.55 lakhs, as against the actual increase of Rs. 34.96 lakhs in 1960-61. What is worse, a large part of the improvement in the total income was neutralised by higher interest payments (+Rs. 12.04 lakhs), and larger staff and other expenses, so that the gross profit for the year under review shows a fall of Rs. 8.61 lakhs to Rs. 130.85 lakhs. After providing a larger sum of Rs. 57.82 lakhs (as against Rs. 54.60 lakhs) for taxation on account of the higher rate (50 per cent) corporate tax under the 1962-63 budget, the net profit for 1961-62 stands lower by Rs. 11.86 lakhs at Rs. 72.89 lakhs.

In view of the decline in net profit, the amount transferred to general reserves is much smaller at Rs. 26.00 lakhs, as against Rs. 63.50 lakhs in the previous year. An additional sum of Rs. 13.21 lakhs has been transferred to special reserve fund under Section 36(i)(viii) of the Income-tax Act in order to qualify for the maximum admissible rebate in income-tax. Excluding these transfers and the *ad hoc* provision of Rs. 2.00 lakhs for depreciation on investments, the balance of net profit comes to Rs. 31.68 lakhs, of which Rs. 13.68 lakhs represent distribution to shareholders (guaranteed dividend of 2¼ per cent on Rs. 5 crores paid-up capital for full year and 4 per cent on paid-up capital of Rs. 2 crores for the period from 12th March to 30th June 1962). The remaining Rs. 18 lakhs is proposed to be paid over to the Central Government, being the balance of the Corporation's liability to it on account of subvention (originally amounting to Rs. 53.45

(*Continued on page 615*)

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial resurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

WORLD WOOL SITUATION

OUTPUT TOUCHES ALL-TIME PEAK

ALONG with other natural fibres, raw wool will have to weather stiffer competition from synthetic fibres in the coming years. This is the broad conclusion that emerges from the interesting analysis of the recent trends in world wool economy contained in the latest *Commodity Review* (1962) of the U.N. Food and Agriculture Organisation. Competition between natural and synthetic products, the *Review* points out, appears certain to grow, with consequent downward pressures on prices of the natural commodity and shortfalls in export earnings. Such an outlook need not, however, unduly depress the raw wool growers, because the existence of synthetic substitutes also provides, as the *Review* hastens to add, a floor beneath which prices of natural fibres are unlikely to fall.

The world wool clip during the season ended June 1962 touched an all-time peak of 1,473,000 metric tons, surpassing the previous record of 1,461,000 tons (touched in 1960-61) by 12,000 tons. Almost the whole of this rise was accounted for by the world's five main exporting countries (Australia, New Zealand, South Africa, Argentina and Uruguay), the combined share of which rose from 858,000 tons in 1960-61 to 869,000 tons in 1961-62. The rise more than made good the fall in the Communist countries' production from 302,000 tons to 296,000 tons. The Australian wool clip recovered from the heavy losses of the previous year, in spite of continuing drought in the Northern part of New South Wales and Southern Queensland. The total wool supplies available in the producing countries during 1961-62 were much the same as a year before, since opening stocks were lower.

The accompanying table indicates the world wool supply position during 1961-62 as compared with the three preceding years.

Under the stimulus of rising wool prices, the heavy carryover accumulated in Argentina and Uruguay during 1960 had moved into export trade in the 1960-61 season, and the U.K. had considerably reduced its strategic reserves. The Australian carryover was somewhat higher than in the previous seasons, owing to the introduction of July sales in certain States, but stocks in other producing countries remained unchanged.

Consumption

The aggregate world wool consumption in 1961, according to the F.A.O. *Review*, showed little change from the all-time peak reached under the stimulus of high level of economic activity and of relatively low wool prices in 1960. In the U.S., the dampening effects of recession on the wool textile industry persisted well into 1961, and recovery during the final months was confined to mills using apparel wools; carpet wool usage fell by a further 10 per cent, thus limiting the total U.S. consumption of all wools. U.K. wool textile production was adversely affected by high interest rates, restrictions on wool cloth imports into the U.S. and more intensive competition from fully synthetic fibres, so that mill consumption remained slightly below the already reduced level of 1960. Elsewhere in Western Europe, the slowing down in the rate of general economic expansion and the setting up of new synthetic fibre plants were reflected in static wool consumption in several countries, for example, in Western Germany and the Netherlands; sizable reductions, however, occurred in Italy and the Scandinavian countries.

In Japan, on the other hand, wool consumption greatly exceeded the previous year's level, thanks to the continued buoyancy of the domestic textile market, and to the increase in raw wool imports authorised by the Government; credit restrictions imposed in September 1961 and a fall in exports of wool fabrics to the U.S. did not affect consumption until the end of the year. Mill consumption also increased substantially in Argentina and Uruguay, following a rise in their exports of tops, and in minor consuming countries outside Western Europe. The proportion of virgin wool consumed in woollen and worsted mills remained stable at around 60 per cent and that of man-made fibres at about 13 per cent, but the share of synthetic fibres increased at the expense of rayon. In the Sino-Soviet area, expansion in wool consumption slowed down further owing to heavy sheep losses in the U.S.S.R. and China and to a greater emphasis on man-made fibres in the U.S.S.R. and Eastern Europe.

The slight contraction in world wool consumption did not affect the volume of international trade, which, on the contrary, expanded. With rising prices during the first half of 1961, unsold stocks of South American wools moved to the European Economic Community (with the exception of Italy) and to the United Kingdom in particular. Japanese purchases from Australia also rose very steeply under the combined influence of expanding consumption and a more liberal Government import policy. Japan is now the most important buyer of Australian wool, taking 31 per cent of Australian exports in 1960-61, as compared with the U.K.'s 18 per cent. The U.S., while taking more apparel wools from all sources, reduced imports of carpet wools, notably from South America. Imports into the Sino-Soviet area were lower. In these circumstances, exports from Australia and South Africa declined to the same extent as their 1960-61 clips and New Zealand's carryover stocks increased. Exports from other—mainly carpet wool producing—countries also suffered a setback. The expansion in shipments from South America, however, more than offset any reductions elsewhere.

In the autumn of 1961, wool textile activity in the principal consuming countries showed signs of revival, and prospects for 1962 appear favourable. In the United States, the expansion in military requirements and some increase in inventory accumulation, coupled with rising consumer expenditure, are expected to bring about an 8-10 per cent rise in mill consumption. In Western Europe, any increase in wool usage will probably be more modest, while credit restrictions in Japan may retard further expansion in that country. Assuming a resumption of growth in the Sino-Soviet area, world wool consumption in 1962 is likely to remain at its present high level, or to rise slightly above it.

De-stocking

The current year opened with commercial stocks in consuming countries at their highest level in ten years, but some tendency to de-stock has lately been apparent in Western Europe, and more recently in Japan. This may have contributed to the recent fall in prices, and could continue into the early part of next year. Imports into Western Europe, as well as

OUTLOOK FOR TEXTILE INDUSTRY GLOOMY

INTER-SECTIONAL STRIFE PERSISTS

From Our Special Correspondent

MANCHESTER, 26*th September*

MANCHESTER LETTER

HOPES that the "buying pause," for so long adopted by customers, would have been at least a little relaxed, as our so-called British summer drifts into autumn have not yet been realised. Some weeks provide a little more encouragement for producers and, here and there, demand revives sufficiently to cause a flutter among spinners and weavers who begin to think that brighter days may be just around the corner.

On the whole, however, the rather ragged appearance of the market is not consistent with any sustained sign of buying power and the latest crop of mill closures only serves to re-emphasise the need for concentration of output into the most efficient and well-managed units. Those who have been pessimistically forecasting a fresh wave of curtailment of machine activity in the weeks between now and the year-end are being tempted to shake their heads and make even more gloomy prophecies about the future.

Controversy Persists

Meanwhile, the controversy which rose to a peak during the early days of the Textile Action Group campaign still persists, although it is fortunately no longer so widely publicised. The image presented of Lancashire to readers outside the trade has rarely been a favourable one and its crises and inevitable faults have been magnified far beyond their legitimate bounds.

For this reason, it remains essential that the split in the ranks of the industry should not be allowed to become wider and that efforts should be made to channel the numerous viewpoints into a single approach which might have more probability of gaining the support of the authorities in London. There is reason to believe that Lancashire's case is at present being more favourably considered than on occasions in the past when too many voices have advocated a multitude of remedies, often applicable only to sectional or even individual interests.

This recognition that the various sections of the trade and those who work in them are interdependent is slow to dawn on many of those who have been prompted in the past to "paddle their own canoes." Consultation at all levels is now a regular feature of industrial life in Britain and the Lancashire cotton trade need not be ashamed of its record within the mills. When it comes to dealing with outside organisations, mainly in the political field, inter-sectional strife has shown up far too clearly.

Those who have campaigned all along for more team-work are now redoubling their efforts, as their ultimate end is a virile industry able to provide a future for a mobile and forward-looking labour force. Before this can be achieved, however, differences will have to be composed and the tendency to row over minor details ended.

Achieving an Integrated Industry

The hard-hitting analysis of the Lancashire cotton industry's troubles presented to the recent annual meeting of the British Association for the Advancement of Science, is still one of the talking points in the trade. In a paper that bristled with controversial ideas, Mr. Alan Ormerod—himself a cotton industry leader—put forward a suggestion for hastening the integration of the industry.

This was the suggestion that the "added value tax" already in force in several Continental countries should be used in Britain. Such an impost operates at each transfer of ownership in the course of production, so that, in a horizontal industry, it would be levied between spinning and weaving, weaving and finishing, finishing and making-up, and making-up and wholesaling. The integrated production line would only sustain one tax charge.

Many papers such as that presented by Mr. Ormerod take the easy way out by avoiding details of how their schemes could be adopted in a practical manner. Apart from the provision of some compulsory power to bring a definite and relatively quick conclusion to his ideas, he seems to favour the added value tax as the major incentive to integrate. The textile merchant has no intention of acquiring manufacturing facilities in a capital-intensive industry, he says. On the other hand, the manufacturing sections have a great incentive to integrate forward to secure a commercial base to protect their investment in fixed assets.

More Vertical Units

As merchants are unlikely to offer themselves up, it seems inevitable that the nucleus of vertical development should be large-sized verticals with established marketing organisations. The size of the unit concerned need not be huge in terms of capacity, provided it has the best equipment available, operating on a three-shift basis. Some 5,000 looms and 250,000 spindles, in Mr. Ormerod's view, could, with balanced yarn processing and cloth finishing facilities, produce a turnover of the order of £25 million.

The horizontal combines, he continues, could assist the development of the group by allowing suitable mills to be integrated into firms constituting the horizontal members, while the remaining horizontal spinning and finishing units could service the partial verticals and specialist units. "The section of the industry for which there appears to be no hope of survival," he says, "is the horizontal weavers manufacturing basic products in units of less than 250 looms.

Of the 469 firms in the weaving section, 283 operate less than 250 looms, collectively controlling 28,000 looms, or nearly 17 per cent of the total. "The large majority of these are operating non-automatic looms on single shifts and have no place in the process of verticalisation. Reluctance to capitulate is an admirable characteristic, but the annual cost of survival is going to become prohibitively expensive."

Lack of Good Management

The great impediment to the development of the industry on the lines suggested by Mr. Ormerod is, he says, the dearth of top management capable of organising and controlling the combined operations. This is all the more reason why the present 750 firms in the industry should be drastically reduced and the few existing large combine units or partial verticals expanded. The conditions, he feels, are now absolutely right for introducing graduate production engineers to take key positions within the trade.

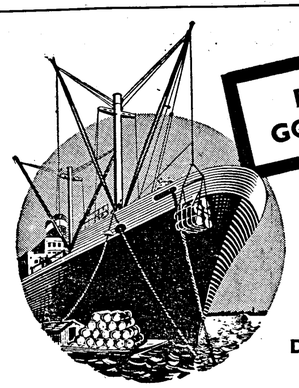
The cotton textile industry was the first to be mechanised, he observes, and it now seems fairly certain that it will be the first to be automated. Many foreign mills which completely re-equipped between 1946 and 1960 are now obsolescent. Many domestic mills now have the opportunity to omit the intermediate stage and proceed to an automated operation, particularly where complete vertical structure is achieved through a narrow range of products. Finally, Mr. Ormerod follows what might be described as "Lancashire's party line" on the question of foreign imports. "The essential prerequisite is a clear statement of policy on Asian imports," he says. "The minimum which should be conceded is a guarantee not to permit further increases and that the total quota should be broken down and assigned to specific categories to stabilise the position for the domestic mills which produce the same products. With this sound basis the reduced industry can then use its third-shift surplus, sold on a marginal cost basis, to attack export markets."

Obituary Notices

Black-bordered obituary notices have been sent to Britain's 630 members of Parliament, including the Prime Minister—announcing the "death" of another Lancashire cotton mill. The announcement sent out by the militant Textile Action Group, which is pledged to fight for the cotton industry's survival, lists the "passing" of 30 other mills since January. It says that 11,000 mill-workers have been made redundant since the start of 1962, and total post-war redundancies now number 163,000.

The printed obituary is headed: "It is with the greatest regret that T.A.G. have to announce the passing of yet another famous name from the textile industry—the Iris Mill at Oldham, with the loss of over 300 operatives. Their names are added to the ever-growing list of those who have gone before." The notice ends with a Latin inscription. Translation: "Those about to die salute you."

Mr. Ken Shorrock, Secretary of T.A.G., said: "We intend to do this periodically just to make everyone aware of the grim situation in our industry."—*All Rights Reserved.*



RED LEAD GOES ABROAD

Red Lead, manufactured by D. Waldie & Co. (Lead Oxides) Ltd. in India, is now being exported to Cambodia and the Far Eastern countries. This makes yet another item for India's export drive to earn valuable foreign exchange.

A proved anticorrosive primer Red Lead has been extensively used by engineers for over 100 years all over the world for protection of metal structures, bridges, ships and buildings from rust and corrosion damage.

STEADY DECLINE IN COMPETITIVE CAPACITY OF INDIAN TEA

OFFICIAL POLICIES NEED CAREFUL APPRAISAL

By A Special Correspondent

TEA has suddenly drawn attention to itself in a climate of near-crisis in our export earnings. It was not only the uninformed but also the officially responsible who had believed that tea as a remnant of the colonial era was finished and Indian export would consist mainly of her vast output of manufactured goods. After 15 years of sobering experience, there is a readiness to look at India's tropical produce which formed the mainstay of her exports for a century, in a new light. The awakening has only begun and, as the first thing at dawn, we may begin with the customary tea.

The Government of India's attitude to tea and other plantation crops in the immediate after-British years was discernible in three strands of policy. Though recoiling from the clamour for nationalisation, there was nevertheless a willingness to tax as hard as possible. Government took full advantage of popular sentiment, as expressed in Parliament, by extending wholesale control over the industry by changing the constitution of the Tea Board and extending its powers. To the physical distance of the industry from New Delhi was added a cold mental distance. The last, though not the result of a formal decision of the Government, was far more difficult to tackle or pin down. It became a pervasive influence blighting the development of a realistic and urgently needed policy for tea.

Perspective

A careful analysis of the origins of policies has its advantages, in that the mistakes can be judged with more detachment and understanding than was possible at the time they were introduced. For nearly ten years, industrial advice was not sought or heeded. India walked out from the International Tea Market Expansion Board, ignored the lapsing of the International Tea Agreement, dismissed repeated pleas for doing propaganda for Indian tea in Britain with complete indifference to long-term consequences, reduced external promotional budgets and favoured a scheme of diversification of markets by concluding barter agreements. The cess on tea, originally intended for export promotion, continued to be collected, but large surpluses were accumulated and credited to the Consolidated Fund of India. Export duties were increased and the incidence of taxes of all kinds was enhanced by the Centre, the States and Local bodies, each vying with the other, for a larger share of the tea cake. The consequences of these policies began to emerge from the welter of impressions and prejudices only with the passing of 1960. But a positive reversal of these policies, a proper understanding of the causes and a recognition of the direction that ought to be taken are matters now tied to the export promotion drive. Perhaps, one way to deal with this change in some order is to note the trends in tea exports over the past decade or so.

From 1904, when India wrested the leadership of the world tea export trade from China, her share of the principal tea-consuming countries were maintained unimpaired till the '30s. After the war-time interruptions to supplies to certain countries and the overall regulation of trade, a period of comparatively free trade in tea began in 1951. In 1953, we finally left the International Tea Market Expansion Board. Table I accompanying this article provides a view of the trends over a nine-year period.

It is interesting to note that, although the U.K. imported only 33 million lbs. less from India in 1961 than in 1953, India's share of the British market dropped from as much as 78.7 per cent in 1953 to as low as 50.7 per cent in 1961. In other words, India failed to keep pace with the increased consumption of tea in each of these markets and, in some cases, actually lost on her share. Out of India's total output, these seven markets accepted 65 per cent of her tea in 1953. In 1961, the corresponding figure was only 44 per cent of the total tea they received and 45 per cent of the total we produced.

Another way to look at these markets and the changes that have occurred in nine years is to show Indian teas received by these countries as a percentage of the total tea imports. This is done in Table II.

Our efforts at diversification have achieved some results and the consumers in the new countries, if allowed to drink pure Indian tea, may develop a preference for it to the eventual benefit of our produce. There has been a three-fold increase in exports to some six countries three of which are producers of tea within their own territories. (*Vide* Table III.)

The share of these markets in India's total production is a small, though a growing one. If most of them pay us by goods in exchange, the value of the gain may not be very much, although the long-term effect may be good. But the gain in these markets do not wholly compensate for the loss in the several traditional markets.

Where do we stand with our chief competitors? Ceylon and East Africa together constitute the principal challengers of India in the world tea trade and will constitute the biggest threat in the next ten years. Their combined output and export may be compared with India's for the nine years. This is done in Table IV.

1955 was a year in which tea was held up on a Government decision banning consignment to London market. Therefore, 1960 must be taken as the last year of India's absolute domination in the world market.

It will be noted that, between 1953 and 1961, whereas India's tea exports had come down sharply from 81.5 per cent of its production to 53.7 per cent, those of Ceylon and East Africa combined had declined only slightly from 96 per cent to 92.4 per cent.

The share of Indian output and export in the total world production and export of tea has gradually been declining, although the pattern from year to year has been somewhat irregular. This will be evident from Table V.

This overall look at the facts give an idea of the significant changes that have occurred in India's tea trade and give some forecast of trends. India's domestic market is a residual consumer and its size is determined by what the export market did not buy from Indian production.

It is a matter requiring careful examination whether the production structure of the industry, the fiscal and industrial policies of the Government or any other factor or a combination of all these were responsible for the changes that have taken place.

Third Plan Target

The third Plan outlines a production target of 900 million lbs. and an export target of 550 million lbs. If achieved, the internal consumption envisaged is of the order of 350 million lbs. or only about 29 million lbs. more than the quantity left over without any visible adverse effect in the domestic market last year. The additional export to be made is about 194 million lbs. over what was actually reached last year. It does not make much sense to throw nearly 200 million more pounds into the pool of world supplies without any gain if it forces world tea prices down to the same extent as the quantity of export is increased. In other words, there must be a positive and effective policy to promote the consumption of the additional supply operative before that supply is made. Whether the recent steps taken by the Government or the Tea Board really constitute the effective measures necessary under the circumstances is not a matter for discussion here although it is of relevance. The fact is that the vital changes required in promotional policies have been introduced only too recently to make any substantial difference, to previously observed trends, in the next three years.

On the other hand, increase in supply is being ensured both by economic necessity forced upon the producers and external stimulus provided by replanting and other assistance. The latter would not have evoked much response but for a prior condition favouring the increase in unit output. Since 1951-52, over 40,000 acres have been replanted and 45,000 new planted, both consisting largely of high-yielding vegetatively propagated plants. At least 60,000 acres of this area will be contributing to the total crop by 1965. Producers who were obtaining under 1,000 lbs. per acre are paying special attention to yield improvement and the combined effect of the crop from the new areas and the increase from the old fields might be a rise in crop by well over 150 million lbs.

The production apparatus of the tea industry is poised for the extra effort needed to raise output with no market in sight to absorb the increased production. Some among the producers have responded to this prospect with a certain amount of caution and some with loyal hopefulness. The question of export earning and the future stability of the tea industry will depend not so much on the fulfilment of the third Plan target but on how well production economy is geared to maintain tea as a cheap beverage and ensure public preference for tea over other beverages. One calls for a proper examination of estate organisation, its productive efficiency and the fiscal burdens affecting production and the other an honest and thorough reappraisal of the promotional apparatus and its effectiveness. Any such quest is bound to be bogged down by built-in inhibitions. A re-examination of the cost structure and operational methods might call for a radical change in labour and staff utilisation and many sacred cows of managerial practices. Labour as well as Government will conceivably be equally adamant not to introduce any reform that will adversely affect employment levels, whatever the consequences of the existing state of affairs in the industry. By this stand on the part of Government and labour, necessary reforms in other directions cannot be forced. The single largest increase in costs in tea can be directly attributed to fiscal exactions of the States and the Centre. Although a lowering of costs will eventually benefit the total economy, the immediate loss of any revenue will not appeal to any of the Governments. A clear-eyed view of India's promotional apparatus or its effectiveness will be an extremely difficult undertaking since the problem is encrusted with thick layers of official mistakes and prejudices.

Labour Economics

Let us first have a look at the economic aspects of the problem raised in plantation organisation and operation. The industry is labour-intensive and the greatest saving in cost can only come from the most efficient use of labour. The setting up of the Wage Board must have done a lot of good in that the employers and labour must have been confronted with the question of labour productivity and efficient uses of resources in the industry much more forcibly than could normally have been possible. As an agricultural operation, tea-growing conditions vary from estate to estate, region to region or even from one field to another in the same estate. For, the condition of the soil, the plants and the efficiency of workers vary from one another. Some variation in labour use has been modified by bush management, shade regulation and changes in pruning cycles. Even so, labour-land ratio cannot be a fixed one and variations in practice have been observed all the way from just over 0.6 to 1.8 labour per acre of bearing tea.

Work patterns on tea estates have been undergoing marked changes and there is no doubt that the process will continue. But a flexible policy regarding labour use is resisted on the ground that employment levels will fall if changes are introduced. Certain operations have gone out of practice and some have become unnecessary due to technological changes. But field operations are less susceptible to clear cut definitions and practices found unnecessary by the more advanced managements may long be continued by others. However, on a group of estates, weed and grass control required 14.67 per cent of the total mandays worked in 1951, but only 12 per cent of the mandays in 1961, though the total mandays worked in all operations increased by 44 per cent. Plucking a larger crop, the mandays on this item went up from 46.34 per cent to 49.19 per cent from 1951 to 1961. Mandays spent on manufacture went up from 5.76 per cent to 6.19 per cent and the total of harvesting and manufacturing increased from 52.10 per cent to 55.88 per cent. The significance of these figures is not in that the bulk of mandays spent is devoted to gathering and processing the crop, but that changes in the pattern of labour use is taking place, work content of each operation is undergoing changes and that this process will continue. Any resistance to such changes will thwart progress in labour productivity and force the industry to remain stagnant and outdated.

Plantation labour are entitled to festival holidays and annual leave with wages, besides sickness and maternity benefit payments at certain rates. The number of mandays entered on

For you...in the CALTEX "STOP-LOSS" Programme

Out of the Caltex Sales Engineer's briefcase comes a sheaf of ideas for cost control through organised lubrication—the Caltex "Stop-loss" Programme.
Start on the programme immediately. You will find that organised lubrication reduces losses in three important directions: production, maintenance and purchasing. The savings will go directly into profits —an average gain of upto 4% safely in the bag.
Ask your Caltex Sales Engineer for information

Company executives can obtain a free copy of this booklet by writing on their official letter-head to their nearest Caltex office.

the rolls in favour of the workers who absented on these various grounds and who were paid for them doubled themselves over a ten-year period. For the group of estates mentioned earlier, the percentage of mandays under the head of unrequited payments increased from 4.4 per cent to 9.9 per cent of the total mandays paid for. Approximately 8 per cent of the industry's wage bill goes towards making unrequited payments.

The wages and salaries bill of the tea industry, inclusive of fringe benefits, range from 46 to 49 per cent of the total cost of production. Wages and salaries alone account for about 36 per cent and fringe benefits for over 10 per cent of the total estate cost. Workers alone account for about 80 per cent of the total wage and salaries bill of the industry. Any lowering of the cost of production must necessarily involve better utilisation of labour and its better application to the other resources employed. When it was realised that manures and fertilisers, crop protection chemicals and other stores and supplies absorb as much as 35 per cent of the estate expenditure, the importance of their efficient application becomes apparent.

The tea industry founded over a century and quarter ago suffers from certain disadvantages from the fact of its early origin. The productive efficiency to which a property may have been raised over a long period of time by skilful management and continuous ploughing back of resources may not be reflected in the paid-up capital. Therefore, a simple comparison of the value of output with the paid-up capital provides the basis for the most erroneous interpretation of tea company performance. But the industry seemingly provides employment at a relatively lower cost per employed person as compared with manufacturing industries. Taking the employed capital as the basis and then related to each worker, the capital outlay per worker in some selected industries for the year 1958 is indicated in Table VI.

For the purpose of comparison, the figures found in the Census of Manufactures of the Central Statistical Organisation were used. The product value per employed person was derived from the same source, but the value for all industries other than tea was taken from the ex-factory price of the product. Based on these figures it is possible to arrive at the output value per rupee of capital employed. For paper and paper board it was Re. 1, for tea it was 76 nP, for cement 61 nP, for soap Rs. 2.29 and for all industries covered by the Census of Manufactures Rs. 1.41. The raw material component of manufacturers' costs helps to reduce the proportion of wages in the total cost to about 11 per cent of the product value. In tea, it was as high as 30 per cent, though these two figures are not strictly comparable. Still the fact that cannot be overlooked is that the total of what can be paid to labour is determined by the size of the output value per worker.

Yield and Size of Operations

The cost of production of tea is greatly influenced by the average yield as well as the size of operations. The share of the variables in the costs are as high as 60 per cent. With the volume of output, there is a 4 per cent gain on every 10 per cent rise in output up to a point. In other words, the cost would fall by 11.9 per cent by a rise in average yield from, say, 1,210 lbs. to 1,510 lbs. per acre. On a current cost of 160 nP per pound, the cost would fall to 141 nP. It has been found that the seasonal variations in price exceed the degree of flexibility in cost by higher yield. This fact must be borne in mind in assuming that cost reductions are possible by a rise in yield. Another equally valid fact to be considered is that the rate of rise of yield of those who have already reached above 1,000-lbs. mark will progressively slow down. The marked rise in yield that has been achieved during the ten years 1950 to 1960 from 765 lbs. to 1,210 lbs. has helped to absorb the increase in per pound cost. But the cost moderating role of higher yields would tend to be less and less effective as more and more producers rise above 1,000 lbs. per acre.

If costs must be held at a reasonable level, it is all important that the major cost factor, namely, the wage and salaries bill accounting for nearly half the total cost must be reduced to a more reasonable proportion of the cost rupee. Materials and supplies which account for about 30 per cent of the total cost must also be used in such a way that it eats up less of the cost rupee. In neither direction is the Government ever helpful whether in the Centre or in the State. The Plantations Labour Act imposes burdens of a kind and range unequalled by the labour law for any other industry in Asia. Having set a high standard during an emotional period of our recent history, costs have not been very carefully considered. Obligations have been laid on the industry by statute for providing a standard of housing, medical care, education for the young and care of the infants that the nation is unlikely to achieve for the rest of the people in the next twenty years. Having fixed such standards by a mixture of the ideals of Welfare Society and socialist zeal, the problem is being dealt with by a disregard for the industry's economy and an excessive zeal of protection for labour, ignoring and condoning defaults. Similarly, the enforcement of taxes is as unsatisfying to the industry as it is to labour.

A house of approved standard for plantation workers, costing about Rs. 1,400 in 1950, now costs as much as Rs. 2,300. There are some 500,000 working families to be housed and the capital outlay involved is about Rs. 115 crores. This figure may be compared with the estimate of the capital invested according to the Plantation Inquiry Commission Report. It says, on page 36, that the total capital invested in the tea industry is Rs. 113 crores. In that case, labour housing, only one of the several amenities laid down under the statute, would involve a capital expenditure exceeding the capital invested in the industry. The Act prescribes one doctor per 1,750 workers, one bed for every 100, one nurse for 1,750 and one estate hospital for each 1,000 of the labour population. Anyone interested in paradoxes may compare these with the reality in India. For the State of Bombay, the number of persons per bed was 4,168.

For fifteen years from 1947, the rationale of Government tea policy must be sought in the attitude which was voiced from time to time in Parliament. But the experience of fifteen years ought to be sufficient to learn that India's most valuable export commodity cannot develop or long remain in its important role without a complete review of assumptions, policy and purpose. One hundred and forty years ago, the Han merchants agitated against the British tea trade. In less than sixty years, Chinese tea dropped from a flood to a trickle in world trade. It is time we looked at free India's tea policy in a comprehensive manner. There is the risk that, in the hurry for raising exports, attention may be concentrated on the more superficial aspects of tea policy.

RAGHUVANSHI MILLS LIMITED

CHAIRMAN, MR. RAVINDRA MAGANLAL, SUGGESTS BUFFER STOCK FOR COTTON

EXPANSION OF SPINDLEAGE ENVISAGED

THE idea of building up a buffer stock for cotton through larger imports was favoured by Mr. Ravindra Maganlal, Chairman of the Raghuvanshi Mills Ltd., in his speech at the Thirty-third Annual General Meeting of the Company held at Bombay on Saturday, 29th September 1962. According to him, a substantial buffer stock will ensure not only a steady supply of cotton to the industry but also make for stability in prices. The Chairman, however, conceded that this was only a temporary solution. The ultimate remedy lay, he said, in increasing internal production and for this there must be awareness at all levels of administration of the need for vigorous action. The following is the full text of Mr. Maganlal's speech:

"DEAR FRIENDS,

"I have great pleasure in extending to you a very cordial welcome to the thirty-third annual general meeting of the Company and I thank you all for attending this meeting.

"You have been in possession of the Directors' report and audited accounts for the year ended 31st March 1962 since some time now and I am sure you have gone through them with interest. With your permission I take them as read.

"Before I turn to other matters I should like to draw your attention to some salient features pertaining to our Company's working. You will notice that the profit, subject to depreciation and taxation for the year under review, is Rs. 26.77 lakhs, as against Rs. 21.70 lakhs last year. This has been achieved in spite of the increasing cost of production. It will be noted that the fixed capital expenditure during the year amounted to Rs. 13.27 lakhs, as against the previous year's figure of Rs. 11.23 lakhs. Similarly, the total turnover has increased from Rs. 1.75 lakh to Rs. 1.89 lakh.

Modernisation—A Continuous Programme

"In view of the accelerated tempo in introduction of new types of machinery and also of improvements in the existing ones, it is necessary to spend large sums of money on machinery from year to year. In short, modernisation has become a continuous programme. Your Board has always borne this fact in mind when recommending disposal of the profits. Admitting that it is essential, in the interests of all concerned, that a substantial portion of the profits earned by the Company be retained to finance cost of modernisation, it is but fair that the shareholders too participate in higher profits with increased earnings of the Company. It will be noted that dividend for the year has been stepped up from Rs. 10.50 to Rs. 12.00 per share.

"To meet the long-felt need of the shareholders to list your Company's shares on the Bombay Stock Exchange, your Managing Agents have recently released for sale 6,000 shares of your Company out of their holdings to fulfil the requirements of the Bombay Stock Exchange. The Company's application is before the Stock Exchange authorities and we can shortly expect to receive their approval for entering your Company's shares for official trading on the Stock Exchange.

Distribution of Cotton

"The control of distribution of cotton, both imported and indigenous, continued during the year. The indigenous crop had fared very badly. The Government was admittedly vigilant to meet any situation and, in spite of the failure of the indigenous crop, at no time serious difficulty was experienced in the working of the industry and in the maintenance of production. The ceiling prices for indigenous cotton for the current year have been increased and I have no doubt that necessary adjustments will also be made in the prices of yarn. It is a general grievance of our farmers that the price of Indian cotton is very cheap, as compared to other commodities and world cotton prices. However, by the recent increase given and looking to the prices of much superior varieties of foreign cotton, it cannot be said that such a position now exists. Scarcity of cotton will be continued to be felt with the increased manufacturing activities envisaged in the third Five-year Plan through which we are now passing.

"With the growing shortage of foreign exchange, procurement of cotton will be also a problem. I believe that, looking to the very favourable prices of foreign long-staple cotton, the Government should consider building up a substantial buffer stock, thus ensuring for our country not only steady supplies of cotton but also a stability in the price factor. Whilst saying this I am aware that this is no solution. Our country cannot afford to continue to spend Rs. 66 crores every year on importation of cotton. The remedy lies in increasing the yield of cotton lint per acre. Our yield per acre is the lowest in the world, being 80 to 90 lbs. per acre, while a number of other countries have a yield which is four to five times as much as ours. There must be awareness at all levels of the administration that this position needs quick action, rectification and improved achievements.

"I have no doubt that in spite of all difficulties, the target laid down for the third Five-year Plan will be achieved. The target will largely keep pace with the anticipated increase in population and leave a little margin for securing progressive rise in the living standard and to increase our exports.

Expansion

"In my last speech, I had made a reference to the advisability of allowing existing units to expand which will mean immediate contribution to the increased production without involving much of time and finance. Your Company has made an application to the Government for permission to install 6,788 additional spindles as partial reinstatement of its pre-fire capacity. If this application is granted, your mills' installed capacity will be 40,000 spindles and the Company's working and capacity to export will undoubtedly be considerably improved.

"The working conditions throughout the year have been satisfactory and the trading conditions quite good. This is mainly due to the sustained large demands from the powerloom and handloom sectors. The recent levy of Central excise duty on yarn, powerloom and on processing has brought medium-sized and large powerloom units some distress. It cannot be denied that this decentralised sector has largely contributed to the economy of the nation by fulfilling the target productions allotted and thus making available to the country cheaper priced fabrics for consumption. It is, therefore, necessary that this sector is properly organised and allowed to play its part in the economy of the textile industry and the country as a whole.

Compulsory Exports

"During the current year, exports have been made obligatory. I am glad to say that your Company has by now fulfilled its obligations and it will be possible for the Company to make even larger exports than its obligation. The U.K.'s entry into the European Common Market appears to be more or less a certainty. What special conditions will apply to India is a point apart from this. It is, therefore, necessary that a country like ours should try to bring down its costs of production so that under adverse conditions too, we can continue our export trade which becomes necessary for balancing our imports for implementing the Plan projects.

"On behalf of the management I have pleasure in recording their deep appreciation of the unstinted co-operation received by them from the staff and the operatives without which it would have been difficult for the Company to achieve the results as shown in the report and the accounts. I thank them all and expect they will continue to give the same co-operation in future.

"I thank you all again, gentlemen, for attending this general meeting of the Company."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Notices

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:
2, INDIA EXCHANGE PLACE, CALCUTTA-1

Issue of new 2,00,000 Ordinary Shares of Rs. 100 each, Rs. 50 per share paid up for cash at a premium of Rs. 25 per share

NOTICE IS HEREBY GIVEN THAT THE time for:

(a) Acceptance by shareholders of the offer of new ordinary shares to which they are entitled.

(b) Renunciation by shareholders of their right to such new ordinary shares in favour of their nominees and the application by such nominees for new ordinary shares renounced in their favour.

(c) Application by shareholders for additional new shares

has been extended by the Board of Directors from 1st October, 1962 to 31st October, 1962.

Shareholders are hereby informed that no further extension of time whatever will be given after the 31st October 1962 and that the shares not applied for will be allotted to the shareholders who have applied for additional shares on an equitable basis with reference to their holdings and that if that is not possible, in the manner approved by the Controller of Capital Issues.

Dated at Calcutta this 29th day of September, 1962.

By Order of the Board of Directors,
R. B. SHAH,
Deputy General Manager.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 15th October to 18th October, 1962, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ended 30th September, 1962, on or after the 1st November 1962, to those Preference Shareholders whose names appear on the Company's Register of Members on the 18th October, 1962, or to their mandatees.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Managing Director,
Managing Agents.

For THE ASSOCIATED CEMENT COS., LTD.,
CEMENT AGENCIES LTD.,
Managing Agents,
R. R. HATTIANGADI,
Managing Director.

28th September, 1962.

TRAVANCORE SUGARS AND CHEMICALS LTD.

STATEMENT BY MR. H. V. R. IENGAR, CHAIRMAN, TO SHAREHOLDERS

TWENTY-FIFTH ANNUAL GENERAL MEETING TO BE HELD ON 24TH OCTOBER 1962

THE view that the sugar position in the country would be stabilised over the next two or three years as a result of lower production and increased exports has been expressed by Mr. H. V. R. Iengar, Chairman of the Travancore Sugars and Chemicals Limited, in his statement circulated to the shareholders of the Company. Mr. Iengar has attributed the unfavourable working results of the Company for the year 1961-62 to a combination of adverse factors over which the Directors had little or no control. He, however, hopes that these adverse factors will not recur, at any rate to the same extent, in the future. Alluding to the Government of India's decision to link the price of cane to its average quality, he states that the Company will not be making any brix bonus. In this connection, he has revealed that the Directors have made what they believe are adequate reserves to cover any additional liability that may fall on the Company under the Government's formula.

The following is the full text of Mr. Iengar's statement:

"GENTLEMEN,

"It is my privilege to have been appointed Chairman of The Travancore Sugars and Chemicals Limited and to have the pleasure of addressing you on the occasion of the twenty-fifth annual general meeting of the Company.

"It is with profound regret that I have to record the death, in November last year, of Mr. H. I. Wonfor, C.B.E., F.C.A., who was Chairman of the Company from 1948 to 1953. Mr. Wonfor's services to industry, and particularly to the sugar industry in South India, will be sorely missed.

"The accounts and Directors' report for the year ended 30th April 1962 will, by the date of the meeting, have been in your hands for the statutory period and, with your permission, I shall take them as read.

Adverse Factors

"The results for the year under review compare unfavourably with those of the previous year, due to a combination of adverse factors over which your Directors have had little or no control. The most important of these factors are the fall in the price of sugar and withdrawal of excise duty rebate on excess sugar production; lower profit margins on spirits and Indian-made foreign liquors; a substantial loss resulting from the closing down of the Pharmaceutical Works; an increase in bank and other interest charges due largely to accumulation of sugar stocks; and finally the additional tax liability both in respect of the current year and the previous years arising from the increase in the rate of corporate taxation effected by the Finance (No. 2) Act, 1962.

"The effect of these adverse factors has been offset to some extent by a lower loss this year on exports of sugar and a reduction in the commission payable to the Kerala State Government consequent upon the termination of the Company's agreement with them, but the net result has been a reduction, in the net profit after taxation, of the order of Rs. 2.50 lakhs.

"Some of the adverse factors referred to above are not of a recurring nature, e.g. the loss due to the closure of the Pharmaceutical Works and the additional provision for taxation, and there are grounds for hoping that the other adverse factors which operated during the current year will not recur, at any rate to the same extent, in the future. In particular, the sugar position in the country generally should become stabilised over the next two or three years as a result of lower production and increased exports.

"For these reasons, your Directors felt justified in recommending a transfer of Rs. 1,50,000 from general reserve to profit and loss account which, together with the net profit of Rs. 46,532 transferred from profit and loss account, will enable the declaration not only of the dividend due on the preference share capital of the Company but also a modest dividend of 5 per cent on the ordinary share capital.

"I regret that, as anticipated in the Chairman's speech last year, we have had to close down the Pharmaceutical Works, the actual closure having taken place on 31st December 1961. Satisfactory arrangements have since been concluded for the sale of the surplus plant, machinery and stores. As a result of reorganisation, consequent on the closure of the Pharmaceutical Works, it became unfortunately necessary to revert some of the regular employees to the seasonal roll, and, in turn, to retrench a few of the seasonal employees.

"During the year under review a greater quantity of cane was crushed than in the previous year, but with a slightly lower recovery. The control of the distribution of sugar passed from Government's hands in September 1961, and sugar was sold in the open market for the last six months of the financial year. As an immediate consequence of decontrol, prices fell and large quantities of Maharashtrian sugar found their way into the Kerala market, but prices have since been stabilised.

"The 1962-63 crushing season commenced on 20th September 1962 and the factory will probably crush 130,000 tonnes cane to produce 11,700 tonnes sugar at a recovery of 9 per cent. The condition of the crop is satisfactory.

"During the period under review, 1,119.7 tonnes were allocated for export and the loss under this heading has been charged in the accounts.

Cane Prices

"The situation regarding the Company's liability in respect of cane payments under the price linking formula is still somewhat obscure. The matter is now under the active consideration of Government and, since the closing of accounts, there have been indications in the Press that a decision will be taken shortly. It appears from these Press reports that the Government formula, perhaps in a modified form, will apply for the four seasons from 1958-59 to 1961-62. As you are aware, we have been paying a brix bonus for cane, and amounts so paid will be deducted from final payments due under the price linking formula. During the course of this year, a brix bonus payment of Rs. 2,10,000 was made in respect of the 1960-61 season, but there will be no brix bonus in future, as the Government have now linked the price of cane to its average quality. We have made what we believe are adequate reserves to cover any additional liability that may fall on us, under Government's formula.

"Because of increased sugar stocks and the difficulties of storage, Government announced a restriction on production in the 1961-62 season amounting to 10 per cent of the previous year's output. This restriction did not apply to units producing below 11,000 tonnes of sugar and your factory was not affected.

"My predecessor referred in his speech last year to the proposal to start a co-operative factory at Pandalam which is only eight miles from Tiruvalla. Our representations to Government against the establishment of this unit within our cane area were not accepted, and work is now proceeding on the construction of a sugar factory at Mangaram. It was our fear that the new factory, situated on the edge of our cane-growing area, was badly located and was likely to interfere with our cane supplies. An agreement has, however, recently been reached between the managements of the two factories and Government by which the cane areas of each factory will be clearly demarcated, and it is hoped that cane supplies of Pamba River Sugar Factory will be adequately protected.

"The new still for the distillery was received during the year under review and has since been erected and brought into production. It is believed that this unit will result in economic working of the distillery.

Labour

"Our relations with labour have been good, in spite of the various difficulties with which we have been confronted. During the year, a referendum was held, in order to decide the representative character of the unions at the factory, and thereby to solve the problem of recognition of unions. I am glad to say that this has now resulted in there being recognised unions representing staff and labour, respectively. The Sugar Wage Board recommendations have been implemented, although it remains to reach final agreement with the unions over the fitment of certain categories.

"In conclusion, I should like to thank all employees of the Company for their co-operation during the year under review, and in particular I would like to pay tribute to the loyal and efficient services of Mr. A. W. Banks, General Manager of the factory, for the past ten years, who retired from service in July of this year."

The above statement is not a report of the proceedings of the annual general meeting which will be held on 24th October 1962.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, the total sugar production in August 1962 was 5,000 metric tons, as against 15,000 tons produced in August last year. The total production for the season 1961-62 upto 31st August 1962 amounted to 2,719,000 tons (including 56,000 tons produced prior to November 1961 for the current season), as against 3,021,000 tons in the corresponding period last season (including 55,000 tons produced prior to November 1960).

The offtake of sugar from factories during the month of August 1962, including 35,000 tons despatched for exports, was 282,000 tons, as against 234,000 tons (including 47,000 tons despatched for exports) during the corresponding period last season. The total despatch upto 31st August 1962 was 2,321,000 tons (including 244,000 tons despatched for exports), as against 1,896,000 tons (including 195,000 tons despatched for exports) by the same period last season.

The total closing stock of sugar with factories on 31st August 1962 was 1,545,000 tons, as against 1,672,000 tons on the same date last season.

THE JAIPUR UDYOG LIMITED

CHAIRMAN, MR. S. P. JAIN, DEFENDS TARIFF COMMISSION

UNECONOMIC PRICE RESTRAINS INDUSTRY'S GROWTH

IN his address to the shareholders of the Jaipur Udyog Ltd., at their Annual General Meeting, held at Sawai Madhopur (Rajasthan) on Tuesday, 25th September 1962, Mr. S. P. Jain, Chairman of the Company, observed that the inadequate growth of the cement industry in the country was largely due to the defects in the fixation of ex-factory prices in 1958. In the latest price fixation, Mr. Jain said, the Government did not think it fit to accept the considered recommendations of an expert body like the Tariff Commission. In the context of the recent controversial statement by Mr. C. Subramaniam, Minister for Heavy Industries and Steel, about the suitability of the Tariff Commission as a price-fixing machinery, Mr. Jain stated that it would not be advisable to eliminate the Commission from the scheme of price fixation. He referred to the need for raising the third Plan production target for cement, in view of the rising demand. He added that the question whether or not the efforts so far made to raise the cement industry's capacity were commensurate was one that required to be considered against the background of the growing demand for the commodity.

The following is the full text of Mr. Jain's speech:

"GENTLEMEN:

"I have pleasure in welcoming you to the annual general meeting of the Company.

"The Directors' report and statement of accounts for the year ended 31st March 1962 are already in your hands and they will have given you all particulars for a proper understanding of the working of the Company during the year.

Improved Production

"The production of clinker and cement improved during the year from 632,899 tonnes and 678,988 tonnes to 669,675 tonnes and 742,298 tonnes, respectively. It will be seen that production registered further improvement as compared to the previous year. It would have been possible to step up production further had other conditions regarding supplies of coal and availability of power and of transport for movement of raw materials been more favourable than they have been. Further, the illegal strike resorted to by the workmen lasting for a fortnight also impeded better results.

Raw Materials and Transport Bottlenecks

"The position regarding the quality of coal and its transport has remained serious throughout the year. The quality of coal supply is of high ash content while the boilers particularly are designed to use better quality of coal. During some periods, coal stocks had gone down so low as to meet only a couple of days' requirements and production naturally had to be curtailed. The coal supply position has improved recently and the Government and Railways are showing greater awareness of the importance of the needs of a basic industry like cement.

"Due to inadequacy of transport facilities, it has not been possible to move the required quantity of limestone from the quarries to the works. On account of operational and other difficulties, the railways have not been able to give us the number of wagons required daily for movement of limestone, with the result that production in the factory has to suffer on account of shortage of limestone which is the most important raw material. Since the railways have not been able to help us even to move the daily quota, the building up of safety stock in the factory, which is necessary to take care of seasonal fluctuations, could not obviously materialise. Besides, the railway freight of Rs. 4 per ton on this basic raw material over a movement of 14 miles distance is very excessive. The representation to the railways in this matter of high freight cost has been without any result. The Company is considering, with a view to reducing the cost on this account, the question of installing an aerial ropeway, or a siding of its own complete with rolling stock, etc. Preliminary surveys and negotiations have been initiated.

Cement Movement

"Transport has also not been sufficiently available to improve the movement of cement at a time when there should be quicker despatches to meet the unsatisfied and growing demand, resulting in the paradoxical situation of the Company being forced to carry heavy stock and the consumers unable to meet their requirements.

"Your Company has also endeavoured to move certain quantity of cement by road to different consuming centres. In this respect, a severe handicap is the higher transport cost involved. Road movement of cement will be largely facilitated, if the freight allowance provided by the State Trading Corporation is sufficient to cover the extra cost for the long haulage.

Insufficient Power

"Sufficient power has not been available to meet the increasing requirements of your plant. Your Company was assured of supply of the required quantity of power when the State received power from Chambal, and we were hoping that by this year our power problem would be very largely solved. However, even though the State has started receiving power from Chambal, our difficulty continues. Recently, the State Government has been good enough to make available to us a small quantity of power for temporary use. We hope that the State authorities will see their way to meet our requirements fully.

Foreign Exchange

"With a view to improving efficiency and achieving economy in production, which is desired as much by Government as by ourselves, we have taken steps for mechanisation of your quarries and installation of handling and other equipments at the works. It will be possible to fabricate certain sections of machinery within the country itself, but it is absolutely essential that the minimum amount of foreign exchange required for importing necessary equipments should be expeditiously sanctioned. Our application for import licence is still pending with the Government for sanction. I am sure, the Government will appreciate that by importing these balancing equipments and improving production, it will be possible to make available more cement to the consumer. The foreign exchange requirement in such case per ton of cement produced is less than that for expansion or new plants and also helps to reduce costs. Therefore, such application should be given a higher priority and viewed with a sense of urgency.

Industry's Development

"It is acknowledged that the existing level of production capacity in the country is not sufficient to meet the rising demand. The Government and the industry are equally anxious that the development of the cement industry should be accelerated and it is towards this objective, I feel, the Governmental policy and action should be directed. The targetted capacity in the third Plan period is 15 million tonnes and the production to be attained is 13 million tonnes. It is now realised that even this target will prove inadequate and requires to be revised upwards judging from the rate at which demand is rising. How far efforts to expand capacity are commensurate with this need is a point for serious thinking. I have my doubts as to whether with the present resources available to the industry under the present policy of taxes and price fixation, the industry would be able to even realise the existing planned target. It is unfortunate that a fully controlled industry like the cement industry has not been able to develop itself to the extent required and considered desirable. It is common knowledge that the lack of development in the last four years has been largely the consequence of 1958 price fixation. In the latest price fixation, the Government did not think it fit to accept the recommendations of an expert body like the Tariff Commission although the latter's proposals to give a reasonable developmental price to the industry were made after a comprehensive study of actual costs. If the Government considers, as has been recently expressed by the Minister for Heavy Industries and Steel, Mr. C. Subramaniam, that a body like the Tariff Commission is not a suitable price-fixation machinery, it is only to be hoped that the Government will evolve a more suitable machinery which will enable a scientific and practical price fixation. I do not feel, however, that it will be advisable to eliminate an independent machinery like the Tariff Commission from the scheme of price fixation.

Escalation for Coal and Freight

"Costs have further increased on account of rise in the price of coal, railway freight, etc., since the last price fixation. The Government of India, in its resolution dated 31st October 1961 announcing the prices, stated that adjustments in prices would be made, whenever called for, by variations consequent on the Governmental action, including escalation for fuel and power. But the Government has so far failed to implement its assurance in this respect. Representations have been made by individual manufacturers and also by the Cement Manufacturers Association and the Minister for Heavy Industries also assured the industry's representatives that early action would be taken in this matter. I hope the Government will fulfil the assurance and announce its decision without further delay, avoiding unnecessary loss to the industry.

"As you are aware, the Company implemented the recommendations of the Wage Board for the cement industry, resulting in considerable increase in wage costs. This will be justified only with simultaneous improvement in productivity. The Government has recently constituted panels for the study of productivity in the industry. I hope the work of these panels will lead to improvement in productivity and reduction in costs.

Abu Road Project

"I would like to mention that the Company had put up to the Government a proposal for setting up a cement plant at Abu Road. This new project, supported by the State Government, has been approved by the Government of India. The completion of the project has, however, to be programmed to synchronise with the availability of power by the middle of 1966 and a good portion of the machinery from indigenous sources.

"I would like to say, before I finish, that the new Minister for Heavy Industries, Mr. C. Subramaniam, is taking active interest in studying the problems of the cement industry. I do hope that the various problems that are halting the industry's development will find a satisfactory solution under his earnest appreciation and timely action.

"Lastly, I would like to take this opportunity to thank workers and members of the staff at all levels and hope that they will continue to work hand in hand with the management for the continued prosperity of the Company and its employees."

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr. F. A. Collett, at the Fiftyfirst Annual General Meeting of the Company on 25th September 1962

Board of Directors

Mr. E. G. Willis retired from the Board on 31st March this year. He originally came to India in 1934 and has been on the Board since 1956, bringing a particular knowledge of the leaf tobacco growing side of the business. He leaves behind many friends both inside and outside the Company, and we wish him a long and happy well-earned retirement in England.

Mr. W. K. Foster was appointed to the Board on 1st October 1961 with particular responsibility for our marketing problems. Mr. Foster has been in the tobacco business all his working life, most of it in Asia. He came to India in 1959 and we have already begun to derive benefit from his experience.

Accounts

When I addressed you a year ago I told you that your Board did not feel justified in increasing selling prices to cover the additional duties imposed by the Finance Act of 1961.

In deciding price policy, it is necessary to strike a balance between the reasonable profitability of the business on the one hand, and the rights and purchasing power of the consumer on the other. Ours is essentially an industry depending on volume, and it is usually sound business to accept a relatively small unit profit for the sake of maintaining a large and increasing volume of sales. The cigarette consumer, particularly in the middle and lower economic ranges, has always shown considerable reluctance to increase his outlay per unit of cigarettes; and in the face of frequent tax increases over the years he has seemed often willing to do without rather than pay more, or at least to have recourse to even cheaper forms of smoking.

The policy of restraint I referred to last year would itself have involved some decrease in the Company's nett profits but we did not at that time envisage that the Finance Minister in his 1962/63 Budget would retroactively increase corporate taxation to 50%. This has reduced the Company's profits by a further Rs. 18 lakhs.

The overall effect of the increase in Customs and Excise Duties and the increase in Corporation Tax has been to reduce the Company's nett profit after tax from last year's figure of Rs. 188 lakhs to Rs. 146 lakhs. In the 1962/63 Budget the Finance Minister imposed still further increases in Excise Duties on tobacco products, estimated to yield him a further Rs. 5 crores per annum. These factors, combined with the normal increases in costs, have swung the balance strongly in favour of a price increase and in April this year your Board felt compelled to increase the selling prices of a number of its leading brands.

You will have seen from the Directors' Report that despite the reduction in nett profits by Rs. 42 lakhs, they recommend maintaining the total dividend at last year's level. This will involve reducing the appropriation to reserves to a figure below that which we normally consider prudent. We feel justified in making this recommendation because the increased prices are expected to restore profits to a more reasonable level. Although there was an initial drop in consumption immediately after the price increase, there are already some signs of recovery in total demand, and we are confident that, unless unforeseen circumstances arise, profits in the current year will be sufficient to enable the Board to maintain the dividend at the same rate and to appropriate an adequate sum to reserves.

Production and Productivity

It has been my practice in previous years to enlarge on a particular aspect of your Company's business, and this year, in which the cigarette factories and the printing factory in Madras have achieved record outputs, it seems appropriate to give special mention to our Production Department.

This department works under certain particular difficulties. Your Company was one of the first to embark on large-scale manufacture in this country, and consequently most of the factories were designed and built a good many years ago. The cigarette industry is at present on the list of those for which major expansion is not allowed. For some years foreign exchange difficulties have restricted the importation of modern machinery, and partly in consequence of this and partly due to the employment situation in India at large, the labour density in our factories is unduly high by international standards.

Nevertheless, over the years we have been able to achieve a fair degree of streamlining and modernisation, one aspect of which is depicted in the photograph in the Annual Report of the Bangalore factory as it is today. In consequence of this our factories are all, without exception, producing more cigarettes today than their original designers could have deemed possible. There is still room for further progress as and when the opportunity arises to acquire fully up-to-date machines.

When the pressure on factories is for maximum volume, it is necessary to pay particular attention to ensuring that the quality of the product does not suffer. This is partly a matter of technique, and we are constantly revising our manufacturing processes in the light of modern developments, either evolved by our own experimentation or borrowed from overseas sources (and in this connection I might mention the valuable technical assistance which we continue to receive from our associates in the United Kingdom). Our own Research Department has played no small part in the development and improvement of indigenous raw materials required in the industry.

New ideas need to be widely understood if they are to be efficiently implemented and to this end we run a regular series of courses and conferences for all levels of management. These courses are complemented by frequent visits by senior members of the Head Office management to the branches. We also send selected members of management overseas for training when availability of foreign exchange permits, to enable them to widen their knowledge and measure their performance against world standards.

At the same time we have been able to intensify the training of the clerical and factory workers themselves, on whose efforts the quality of our products ultimately depends. This training not only makes the day-to-day jobs more interesting to those who do them but is increasingly making it possible for us to bridge the gap between ordinary workers and management and to fill at least junior management posts from the clerk's desk or the factory floor.

I think it is widely recognised that our working conditions and labour amenities are second to none and I can report another year of generally cordial relations with our unions. I should, however, perhaps mention one rather disturbing tendency. This is the trend to a multiplicity of unions within a single factory, based usually on political affiliations, with consequent internal rivalry between them. I do not wish to question the right of workers to belong to the union of their choice, but there is no doubt that this disharmony on the union side can complicate negotiations between the Company and the workers and cause unfortunate delays in the settlement of outstanding differences of opinion.

I am glad to be able to report that our Productivity Payment scheme, now adopted in all our factories, is causing increasing awareness among labour that better work, and improved productivity, are reflected in the pay packet and are ultimately to the advantage of the worker, the manager and the shareholder alike.

I indicated earlier that the Production Department was hampered to some extent, in its task of extracting the optimum output from its existing establishments, by inability at the present time to acquire all the machines it would like to install. It is not always fully understood that it is in the interest, not only of all concerned in our industry, but also of all concerned in the prosperity of the country at large, that existing assets should be utilised to the maximum and kept up-to-date and that resources of manpower should also be so utilised. As consumption in India grows, so must productivity per man-hour increase also, and this calls both for progressive management and for a progressive attitude of mind on the part of the men who work the machines.

Prospects

I said last year that I considered that, provided the various items of increased cost did not outstrip the gains from increased productivity, we might look forward to the future with moderate optimism. I think you will agree that, insofar as the commercial operation of your Company is concerned, that somewhat cautious prophecy has been justified. Our volume of sales has increased considerably, but so has taxation and the cost of many materials which we use. The tobacco trade in India is increasingly competitive but on the whole we are holding our own. I have already discussed the reasons which led us to increase prices, and these price increases have, of course, militated against the steady increase in sales volume to which we look to counteract the ever-growing pressures on profit margins provided by rising costs on the one hand and vigorous competition on the other.

Nevertheless, as I have already indicated, I am confident that, taking all foreseeable factors into account, we shall be able to maintain our present rate of dividend during the current year after making adequate appropriations to reserves.

THE MYSORE PAPER MILLS LIMITED

MR. SHIVANANJAPPA CALLS FOR INCREASE IN PAPER PRICES

EXPANSION PLAN MAKING STEADY PROGRESS

THE need for revising paper prices periodically in order to absorb increasing cost of production was stressed by Mr. M. D. Shivananjappa, I.A.S., Chairman and Managing Director of the Mysore Paper Mills Ltd., at the Twenty-seventh Ordinary General Meeting of the Company held at Bangalore on Wednesday, 26th September 1962. He welcomed the *ad hoc* increase of 6 nP per kg. granted by the Government in June last. Nevertheless, he felt that this increase in prices was not adequate in view of the mounting manufacturing costs. On the question of progress of the Company's expansion scheme, Mr. Shivananjappa disclosed that arrangements had been finalised for importing plant and equipment from the U.K. and West Germany. The installation of the new plant would, he said, be completed by the end of next year.

The following is the full text of Mr. Shivananjappa's speech:

"LADIES AND GENTLEMEN,

"I have very great pleasure to welcome you all to this twenty-seventh ordinary general meeting of the shareholders and particularly those who have become members for the first time by acquisition of new equity shares issued recently. As usual, the report of the Directors and the audited balance-sheet for the year ended 31st March 1962 have been circulated already and, with your permission, I shall take them as read and before requesting your approval to them I would like to review the main features of the year's operations.

"In exercise of the right to appoint a Director on our Board as provided in their agreement with us, the I.F.C.I. have appointed Padmabushan Mr. V. Narahari Rao, C.S.I., C.I.E., retired Comptroller and Auditor-General of India, as a Director on our Board. I welcome him and I am sure his wide knowledge and administrative experience will be of great advantage to the Company.

Production Higher

"I am glad to inform you that production of paper during the year under review was higher than last year by 172 tonnes. However, sales realisation was Rs. 119,30,299, as against Rs. 123,21,728 last year. As indicated in your Directors' report, the slight fall in turnover was due to the manufacturing of large quantities of lower priced paper owing to inadequate supply of wood-pulp due to import restrictions. In this connection, I wish to point out that, with the installation of the recausticising unit, there has been much improvement in the working conditions of the soda recovery plant resulting in smooth operations in the bamboo pulp plant, and this has contributed to increased production and higher efficiency reducing production costs. It is this increased production and higher efficiency that has helped to maintain financial result about the same level as that of last year. Last year, while telling you that the efforts of the paper industry to move the Government of India for a suitable revision of prices had not borne fruit, I expressed the hope that the Government of India would view this question with sympathy. The Indian paper industry as a whole, and more particularly the smaller and unfavourably situated mills like ours which are working on progressively diminishing margins, attach very great importance to the question of increase in the selling prices of paper to correspond with increased costs of labour, materials, chemicals and spare parts which have all risen steeply and continue to rise. I am glad to say that the Government of India have sanctioned an *ad hoc* increase of 6 nP per kg. on all qualities of paper and boards for both Government and civil supplies, effective from 21st June 1962, and have also discontinued the rebate of 4 nP on reels. I should state that this small increase is not adequate in view of the mounting manufacturing costs. However, this slight enhancement will increase our turnover during the running year to some extent. I am grateful to the Government of India for their awareness to industry's needs and I take this opportunity to impress on them the necessity for periodical revisions of prices so as to absorb such increases in costs over which the industry has no control.

"In regard to balance-sheet, I have to mention that provision has been made for depreciation on fixed assets calculated in accordance with the rates allowed for normal depreciation and extra shift allowances as per Income-tax Act, amounting to Rs. 6,67,750, Rs. 50,200 towards development rebate and a further sum of Rs. 50,000 towards retirement gratuity. A provision of Rs. 6,00,000 has been made towards taxation.

Dividend Equalisation Reserve

"In regard to disposal of surplus, namely, Rs. 6,72,432, including carry-over of last year which stood at Rs. 36,664, your Directors have decided to transfer Rs. 87,500 to dividend equalisation reserve, which fund now stands at Rs. 3,12,500. Further, your Directors, after a careful consideration of all relevant factors and having regard to the satisfactory working result, have recommended declaration of dividend at 15 per cent, or Rs. 1.50 nP, subject to deduction of tax, on every share of Rs. 10 each, fully paid up, for the year and proportionate dividend on partly paid-up shares of Rs. 2.50 each for the proportionate period subject to deduction of tax, absorbing Rs. 5,46,500, the balance being carried forward and I am confident these proposals will meet with your approval.

"The Industrial Finance Corporation of India have communicated their approval to our declaration of 15 per cent dividend, subject to tax, in terms of the agreement for which I am grateful to them.

Labour Relations

"I am very happy to inform you that the labour-management relations continue to be cordial. Your Directors have been pleased to sanction a bonus of four months' salary or wages to the employees of the Mysore Paper Mills for the year ended 31st March 1962 and the same has been disbursed. Further, your Directors, in accordance with their policy to provide all necessary amenities to our employees, have taken steps to start a high school of our own to meet the growing needs of our Paper Town.

Expansion Scheme

"You will certainly be interested to hear the progress made since we met last in the implementation of the expansion scheme. It is a matter of gratification to me and to my colleagues on the Board, and I have no doubt it will be to you also, that I am able to report that all agreements and arrangements with the lending institutions for financing the expansion scheme have been completed. In terms of the agreement with the Commonwealth Development Finance Company, Ltd., London, and the Industrial Credit and Investment Corporation of India Ltd., Bombay, and the Industrial Finance Corporation of India, a Debenture Trust Deed has been executed and registered, and the State Bank of Mysore have been appointed trustees who will look after the interests of the three lending institutions.

"Arrangements have been made to secure a complete range of equipments necessary to step up production to 18,000 tons. Contracts have been concluded with Messrs. J. M. Voith, West Germany, original suppliers of our plant and machinery, for the supply of pulp plant with a capacity to produce 10,800 tons of bamboo pulp which together with the present capacity will be sufficient to feed all the three paper machines. Besides, contracts have been concluded with Messrs. Escher Wyss, Ravensburg, Germany, a firm of international repute, for supply of paper machine and stock and chemical preparation plant, with a capacity to manufacture 35/40 tonnes of paper per day of 24 hours. Likewise, contracts have been entered into with the well-known firms of Messrs. Millspaugh, Sheffield, England, for supply of Morden stock-makers, with Messrs. Babcock and Wilcox, London, for supply of boiler and black liquor recovery unit, with Messrs. Ernest Scott and Co., Laven-Fife, Scotland, for supply of standard vacuum evaporators, with Messrs. Masson Scott and Co., Ltd., London, for supply of Duplex super cutter, and with with Messrs. Dorr Oliver Co. Ltd., Surrey, for Save-all filter. The value of the orders placed in U.K. is to the tune of Rs. 58 lakhs and in Germany to the tune of Rs. 66 lakhs and the two loans from C.D.F.C. and I.C.I.C.I. would provide the necessary funds for these purchases. Of the equipments ordered, the first shipment of coal fired boiler has already reached the mills' site and part of soda recovery plant and oil fired boiler are on their way from Madras harbour to Bhadravati. The bulk of the remaining equipments is scheduled to reach the mills at Bhadravati by about June-July 1963. The civil engineering works at the mills are making satisfactory progress.

Import of Equipment

"It is hoped that the work of erection and installation would be completed by the end of 1963 and operations commenced. In August this year, I and our General Manager, Mr. B. K. Swamy, visited the U.K. and Germany for purposes of clarifying and settling certain outstanding matters with C.D.F.C. arranging advance delivery of certain equipment from Germany and to check up drawings and designs of the plant and machinery with a view to ensure that they answered our local requirements. I am happy to say that all outstanding matters have been settled with the C.D.F.C. Messrs. J. M. Voiths of Germany have agreed to advance the date of delivery of pulp plant. We visited several of the workshops in the U.K. and Germany, where our plant and machinery are being manufactured and were happy to see that the work was progressing satisfactorily.

"As you are aware, last year with the consent of the Controller of Capital Issues, Government of India, New Delhi, 10 lakhs equity shares of Rs. 10 each attaching a premium of Rs. 2 per share were offered to the existing shareholders and I am glad to acknowledge that the response was good. At the time of seeking your approval to the increase of authorised capital to Rs. 1 crore and 50 lakhs, I informed you that the amount would be collected as and when necessity for funds arose. In October last, we have collected a sum of Rs. 3 (being the application and allotment money and part of premium) and further calls will be made in the next few months, having regard to the expenditure to be incurred in the implementation of the expansion scheme. I have proposed to fix the dates of the next calls well ahead and publish the same to enable shareholders to arrange for payment as and when the calls fall due. I hope you will agree with me that ample time is being given to the shareholders to make payments without undue strain or stress.

Flood Relief

"A sum of Rs. 1,500 has been contributed towards the Chief Minister's Flood Relief Fund and I hope you will appreciate and approve the same.

"On behalf of the Company, I should express my grateful thanks to the Government of India and the Government of Mysore for their abiding interest in the progress of the Company. On behalf of the Company, I should also express my grateful thanks to the Board of Directors of the C.D.F.C., London, I.C.I.C.I., Bombay, and I.F.C.I., New Delhi, the State Bank of Mysore, and the Canara Banking Corporation Limited, for having rendered valuable aid and assistance in making satisfactory arrangements for financing the scheme of expansion.

"I am grateful to my colleagues on the Board for the uniform courtesy, consideration and valuable guidance I have been receiving. I wish also to express on behalf of the Directors and myself our warm appreciation of the willing and efficient co-operation of our employees.

"Last, but not the least, it is my pleasant duty to thank you all for your support and encouragement in the implementation of the scheme of expansion, and I look forward with confidence for a full measure of support in the years to come.

"Ladies and gentlemen, I now move that the Directors' report and the audited balance-sheet and the profit and loss account for the year ended 31st March 1962 be approved and adopted."

N.B.—*This does not purport to be a report of the proceedings of the shareholders' meeting, a copy of which will be sent to the shareholders separately.*

ALUMINIUM CORPORATION OF INDIA LIMITED

ADDRESS BY MR. LAKSHMIPAT SINGHANIA

INVESTORS DESERVE BETTER DEAL

A COMPREHENSIVE survey of the position and prospects of aluminium industry in India was presented by Mr. Lakshmipat Singhania in his address to the shareholders of the Aluminium Corporation of India Ltd., while presiding over the Twenty-fourth Annual General Meeting of the Company held at Calcutta on 24th September 1962. He said that implementation of the Company's plans for expanding its production to three times its present capacity by having an up-to-date, modern, completely integrated plant was proceeding according to schedule and that it would be finished by the end of next year.

The following is the full text of Mr. Lakshmipat Singhania's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the Twenty-fourth Annual General Meeting of the Corporation. This means that this Corporation which has played a very important role in establishing this basic industry in the country from scratch, has entered its twenty-fifth year—the Silver Jubilee year—of its existence and this is indeed a matter of pride for all of us.

"The annual report and accounts for the year ended 31st March, 1962 have already been circulated to all of you and the Directors in their report have explained most of the salient features of the Company's working during the year and I need not now elaborate on the same except to point out that the production during the year has been slightly higher than last year. But the sales and profits are slightly lower this year due to less despatches during the year and due to rise in cost of production consequent to higher salaries and wages and increased cost of stores, spares and transport charges, whereas the selling prices have not been increased. However, this does not reflect any substantial difference with the working of the last year.

"The graph attached to the balance-sheet will show that the industry of this nature has to carry a very heavy burden of salaries and wages, numerous taxes and excise duties and costly manufacturing charges before the industry and the shareholders can be provided with their share. In a highly capital-intensive industry like this, until and unless the return on sales is higher, it is impracticable to provide the requirements of the industry to enable it to grow by re-employment of the finance which it generates and to create at the same time, confidence in investors to attract more finance. It should not be expected from investors in any industry that they should be the last persons to be thought of and that they should wait for their turn at the last. This means waiting for several years before the investment can have any return. This is not practical economy. Until and unless the invested capital is serviced regularly and suitably, it should not be expected that the capital will be available for steady growth in industry. Unfortunately, in our country, the shareholders are regarded as the last person for consideration.

Impediments

"The industrial expansion in India is taking shape. But the foreign exchange shortage as well as the Government policy for granting licences and delays in execution of public sector projects most needed for the economic growth of the country, non-availability of enough power and transport, all these may have a retarding effect on the present tempo of industrial growth. If, however, the performance of the private sector and their achievements during the two Plan periods are weighed, keeping in view the circumstances under which they have been made to work, then I have no hesitation that they have done much better than was expected.

"I might recall that, before the establishment of this (aluminium) industry in India, consumption was confined to imported metal which was only 1,350 tons in 1940-41. When the industry was established in India, sufficient encouragement in price fixation and adequate returns was not given in the earlier years. Had this encouragement been given, the industry would have presented a different picture today. However, in view of the great importance attached to this basic industry in the industrial development of the country, especially due to non-availability of resources for non-ferrous metals and consequent dependence on imports, it has become essential to review the consumption of aluminium in the country. These changed circumstances have also led to different thinking on the enlargement of this industry from what it was a few years ago, so much so that aluminium industry in India is to be considered as being on the threshold of real expansion.

"In the world aluminium industry, there has been a regular pattern for consumption of aluminium to double itself every decade which means an average growth of 7.5 per cent per year over the previous year. However, in India, at the start of the Five-year Plans, it was thought that consumption of metal would increase at an average of about 4 per cent per year during the first five years and at 18 per cent per year for the next ten years leading to an estimated total consumption of 50,000 tons in 1965-66. However, in actual fact, consumption in this country in 1959, as compared with 1950, has increased by an average rate of about 20 per cent per year and, based on this experience a few years ago, it was visualised that a similar rate of growth will continue during the third Five-year Plan, leading to a final estimated consumption of 87,000 tons in 1965-66. Now, it is being felt by various planning bodies, including the Development Wing, that the estimated consumption in 1965-66 will be about 120,000 tons, which means an increase at the rate of about 32 per cent per year since 1959. I am of the opinion that, provided the metal is available, consumption can be still higher. The contributory circumstances for this revision are several, such as use of aluminium in place of imported copper for transmission of high-tension and low-tension power and more extensive use in transport and other engineering industries. Taking into consideration the versatile nature of aluminium metal, it is the only metal which can replace other metals and, in addition, generate a number of new uses of its own. Thus, in the present circumstances, the production of the metal in the country will not overtake consumption, at least in the near future. From the point of view of industrial development of the country, from the point of view of direct savings in foreign exchange and from the point of view of indirect savings in foreign exchange as a result of replacement of other metals, the production of aluminium in the country in larger quantities, therefore, becomes essential.

Prerequisites for Growth

"This development on a larger scale, according to me, depends basically on two factors—firstly, on the availability of sufficient power at a suitable rate and, secondly, on the availability of initial foreign exchange for importing components of the plants needed for producing the metal. Power is the basic raw material for this industry and its availability at suitable economic rates is the foundation for this industry. The country is passing through a very acute shortage of power and the growth of industrialisation is being seriously hampered, in spite of the fact that the production of power is supposed to have been planned ahead of the requirement of the industry and civic consumption. But, in the present circumstances, it has proved otherwise. The Government will have to give serious consideration to the idea of allowing large consumers of power to produce their own power by offering coal and other facilities. If, however, the Government themselves want to make power available, then sufficient power for electro-metallurgical and electro-chemical industries should be earmarked assuring certainty of power. In large power projects of the Government, this will be low, say 5 to 10 per cent of total capacity and this power should be available to the earmarked industries at economical rates for the calculation of which arguments of equality, etc., should not be advanced.

"As regards foreign exchange, it is often suggested that the industry should also export, besides catering to internal consumption in the country. The idea is no doubt good, attractive, and, in the present foreign exchange situation, important as well. But, if export is to be done, the question is at what cost. It should not be forgotten that aluminium is being produced by very large producers at low costs, that there is keen competition for aluminium market and that there are tariff barriers. If we think of export, then that can be only at a much lower price than cost, because the industry in India does not have the same facilities of cheap power, etc., as other producers do elsewhere in the world, to produce at comparable cost. If the export is done at lower than cost, then it will be necessary either to charge the internal market higher price or to bear the losses. If the industry has to be developed and if the necessary foreign exchange is not available, the industry must no doubt sacrifice by exporting at below cost and utilise such foreign exchange for its development. The whole country will also benefit. Alternatively, the home market must be charged higher prices to equalise the losses on export. This is nothing new and, ultimately, the future expansion will depend on the capacity of the industry to sacrifice and on charging to the home market higher prices.

Problem of Technical Personnel

"I would now like to add a third important factor for the development of this industry, namely, technical knowledge and technical personnel needed to establish and man the industry. What this Corporation has done for developing in this field and what sacrifices it had to make in this by denying any returns to shareholders for over a decade is a matter of history. Suffice it to say that it had to be done in the hard way of experience. Today, foreign technical knowledge and technique can be purchased by paying a price, but it is a matter for consideration as to how far such prices can be offered and as to how much capital has to be serviced in future. This is really a delicate matter and all the pros and cons have to be thoroughly examined. The rosy picture that was before the country upto last year in respect of production of metal by collaboration with major world producers is now gradually fading out. Some of the licences granted are still in suspense and the progress is either slow or there is no progress at all. This shows lack of interest on the part of those who originally made these schemes. Of course, this also means blocking of licensing for others who might be able to do better and here it is a matter of policy for the Government to decide whether those who have contributed towards this industry should be encouraged or not. The question of trained personnel for the industry is also playing a very important role. On the one hand, there is the problem of huge unemployment and, on the other, there is the shortage of most of the personnel needed in technical and non-technical categories. This indicates that there is something wrong somewhere and no proper adjustment has been made between requirement and educational training programme. Training of suitable personnel for a proper industry and for a particular job is a long process and has to be pre-planned by estimating ahead the requirements of the industry. This requires as much thought as planning the establishment of the industry itself. In a developing economy like ours, it does not pay to exploit personnel of a particular unit or industry; instead, own personnel should be trained in a pre-planned programme. Although the Corporation feels pride and pleasure in contributing trained personnel not only to this industry but also to other allied industries, it is definitely distressing to see such personnel forsaking their parental institutions.

"As the Directors have indicated in their report, the first phase of expansion programme has been completed as scheduled, that is, the metal production and the paste plant have gone into production. I take further pride in mentioning that, in this expansion, a good amount of plant has been manufactured indigenously and only essential machinery which has not been manufactured in the country were imported. The plant is most up-to-date in the country and housed in a building technically designed to offer comfortable working condition. The progress of the remaining two phases of expansion is being maintained and it is expected that a completely integrated facility of the expanded plant by trebling the present capacity as well as adding various new lines of aluminium products, starting right from bauxite, including all intermediary process, to the finished goods will be at the country's service by the end of next year.

"Gentlemen, on your behalf, I have to express my thanks to the Managing Agents for the very careful way in which they have been guiding the affairs and the growth of the Corporation all these years. I would also like to express my appreciation of the contribution made by all sections of our employees starting from the humblest worker, the technicians, the management staff and our various customers who have patronised our products."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

MYSORE SPINNING AND MANUFACTURING COMPANY, LTD.

MODERNISATION-EXPANSION PROGRAMME WELL UNDER WAY

CHAIRMAN, MR. N. D. SIRUR'S STATEMENT

THE year 1963-64 would mark the turning point in bringing up the basic textile activity of the Mysore Spinning and Manufacturing Company, Ltd, to a high degree of efficiency and quality of production. A note of optimism to this effect was struck by Mr. N. D. Sirur, Chairman of the Company, in his statement to shareholders presented at the Sixty-ninth Annual General Meeting of the Company held at Bombay on Friday, 28th September 1962. The Company, Mr. Sirur said, had already spent about half the planned expenditure on modernisation and expansion principally on the Company's new processing factory at Rajajinagar in Bangalore. This factory, he added, was now getting into smooth operation and catering to the processing requirements of both Mysore Spinning and its sister mill, the Minerva Mill. He disclosed that the Company was considering the establishment of a joint export house owned by all the three mill companies and Sundatta Food and Fibres Ltd., with a branch in England to begin with, to co-ordinate the export activities of the group.

The following is the full text of Mr. Sirur's statement:

"GENTLEMEN,

"A little over two weeks ago, I returned from a visit to Europe and the United States which, though not directly on your Company's behalf, was intimately connected with its long-standing investment portfolio in the Modern Mills Ltd., Bombay. Some of our older shareholders will remember that Modern Mills was set up in Bombay as a subsidiary of your Company in 1934. In spite of hard beginnings, that Company, with the financial backing of your Company, has since expanded, flourished, and even outstripped your own Company in some respects. Modern Mills is now embarking on a major expansion into the new fields of organic chemicals and cellulosic man-made fibres by setting up a cellulose accetate flake and fibre project.

Modern Mills

"As the parent Company, there has always been a dual loyalty in the desire to participate in the expanding capital of Modern Mills and at the same time meet its own needs of expansion and development. You are aware that the recent amendment to the Companies Act permits a company to take up rights shares offered to it, and your Company will not hesitate to take up such rights shares in Modern Mills whenever it is necessary to do so. However, with a view to broadening the public holding in Modern Mills, your Directors have, over the years, been following a policy of gradual disinvestment and in 1957, the parent-subsidiary relationship was severed.

"At present, your Company's holding is approximately 40 per cent of the equity capital of Modern Mills, and it is now felt by your Directors that the public holding in Modern Mills should be still further increased, particularly in view of their new project. Accordingly, as was done on a similar occasion in 1945, the recent issue of rights shares by Modern Mills to your Company has, in turn, been offered to you, to enable you to participate in the capital of Modern Mills.

"The present issue of Modern Mills has been made for its own textile mill expansion as well as to prepare the ground for its major expansion into the chemical and fibre field next year. On the recommendation of the Government of India, the project is expected to receive, from the United States Government Agency for International Development (A.I.D.), a long-term loan of Rs. 2.38 crores ($5.0 million) to finance the major portion of the foreign exchange component of the project. Meanwhile, all arrangements for technical and financial participation are being firmed up, and necessary permission will be sought by Modern Mills from the Controller of Capital Issues for the issue of further equity rights shares as well as for the issue of equity and preference shares to the foreign participants and the public.

"A total foreign financial participation of approximately Rs. 75 lakhs is anticipated in the capital of Modern Mills, of which approximately Rs. 30 lakhs is proposed to be issued in preference shares to the Hercules Powder Company of Wilmington, Delaware, U.S.A., against the appraised value of key portions of the cellulose acetate flake plant which they are supplying. Hercules Powder Company will also be the principal suppliers of know-how to the Modern Mills' project. Their support has assisted in attracting equally well-known overseas fibre manufacturers to offer Modern Mills equity participation against the subsidiary know-how for the manufacture of acetate rayon fibre from cellulose acetate flake.

"I must, however, add that the stability and standing of your own Company with its background of over half a century has been no small factor in shaping the Modern Mills' project, in which your Company will remain the major Indian participant by virtue of its sizable holding.

Improvement in Activity

"Reverting to your Company's own working, you will notice a steady uptrend in its manufacturing activity. The year 1961-62 represented a considerable improvement on the previous year in both turnover and profit, and the trend continues. The change-over from two shifts to three shifts in the No. 2 spinning block entailed considerable dislocation of work during the first half of the year under report and, by the time the working had settled down, the higher prices that had to be paid for cotton offset, to a certain extent, the economies gained. Although the Company has been following a steady policy of renovating and modernising the spinning department, out of the total of 143 spinning frames, 67 are still to be renovated or replaced.

"Therefore, other than the new waste spinning plant of 1,200 spindles, which will go into production in the beginning of 1963-64, the Company does not contemplate any major expansion in the existing spindlage of over 50,000, since the prime task is to bring up the efficiencies of the existing spindles. The new Whitin combers installed have enabled higher counts to be spun on approximately 25 per cent of the total spindlage principally to feed the weaving shed for production of finer fabrics.

Weaving Department

"In regard to the weaving preparatory department, we have already ordered a Barber Colman spooler and warper which will go into production in the year 1963-64 and contribute substantially to improving the weaving shed efficiency. In regard to the weaving shed itself, out of the 500 plain looms, we have already renovated 130 looms in the period under report, and the process is continuing. Moreover, we have recently received permission to replace 144 old plain looms with new automatic looms and have also arranged to install, in the year 1963-64, 144 new automatic looms under the export promotion scheme. Thus, a total of 288 new automatic looms will be installed, representing nearly half the entire weaving shed.

"It will be seen from the above that the year 1963-64 should mark the turning point in bringing up the basic textile activity of your Company to a high degree of efficiency and quality of production. We have already spent about half the planned expenditure on modernisation and expansion, principally on the Company's new processing factory at Rajajinagar in Bangalore which, in the opinion of your Directors, required first priority. It is now getting into smooth operation and catering to the processing requirements of both your mills and your sister mills, the Minerva Mills Ltd. I dare say that this factory would make the largest single contribution to the prosperity of both the Mills, which so far have been forced to produce grey cloth on a large scale owing to the chronic shortage of water in Bangalore. This problem has now been overcome by pooling the water resources of both mills for use in one processing factory, while, at the same time, setting up modern processing facilities which economise on the use of water.

Exports

"During the current year, your Company has concentrated on exports to a considerable extent, particularly because some of the new processing machinery has been imported under export guarantee. We have appointed a Resident Manager in England, who works on behalf of your Company and its sister companies, and we are endeavouring to establish a closer link with the consumers of Indian cloth, particularly in made-up goods such as towels. The results so far are quite encouraging. We are now considering the establishment of a joint export house owned by all the three Mill Companies and Sundatta Foods and Fibres Ltd., with a branch in England to begin with, to co-ordinate the export activities of the group which at present exports in total nearly Rs. 1 crore worth of goods a year. We hope to make our due contribution to the drive for increased exports.

"Our employee relations have been very satisfactory during the year under report, and I wish to express appreciation on your behalf to the staff and employees at Bangalore as well as at Bombay for their part in improving the Company's working."

MACHINERY MANUFACTURERS CORPORATION

POSITION OF LEADERSHIP IN INDUSTRY ESTABLISHED

GOVERNMENT'S POLICY TOWARDS TEXTILE MACHINERY INDUSTRY INCONSISTENT, SAYS MR. K. C. MAHINDRA

ADDRESSING the shareholders of the Machinery Manufacturers Corporation Ltd., at their Sixteenth Annual General Meeting, held at Bombay on Wednesday, 26th September 1962, Mr. K. C. Mahindra, Chairman, made two important points. One was the inconsistent and vacillating Government policy in regard to imports of textile machinery which adversely affected the growth of the domestic textile machinery industry. And the other was the attainment by the Company of a position of leadership in the textile machinery industry, despite a number of handicaps, including the difficulty in getting adequate supply of indigenous raw materials such as pig iron and coke.

The following is the full text of Mr. Mahindra's speech:

" In welcoming you to this annual general meeting of the Machinery Manufacturers Corporation Ltd., I desire to express my personal satisfaction that I have been able to be present on this occasion. This Company was inaugurated 15 years ago—years of long wait when the patience of most of the shareholders must have been exhausted, even as the resources of the management were strained to the utmost. These have been long and difficult years, and if your Company has now emerged into a relatively stable and progressive manufacturing unit, it has been due as much to your faith in our judgment as to the hard work and toil which everyone connected with the Company has put into this venture.

Services and Sacrifice

"I should also like to avail of this opportunity to recollect the distinguished auspices under which we started—the strong umbrella of encouragement and faith which certain friends of mine, eminent in their own sphere, showed in this pioneering endeavour. Amongst them, I recall the names of Mr. Purshotamdas Thakurdas, our first Chairman, Mr. Homi Mehta, whose name is familiar to everyone in Bombay, and Mr. N. R. Sarkar, who later became Finance Minister in the Government of West Bengal. These friends, no longer with us, contributed considerably to the sustenance of faith in this industry and, they have left vital links of hope in the person of Mr. Mathuradas M. Parekh, Mr. Jal H. Mehta and Mr. D. N. Bhattacherjee, who are now members of your Board. I should also like to mention Mr. Sobha Singh, who is happily still with us and continues to give valuable guidance to the Board.

"You, gentlemen, have shown great patience and even consented to the dilution of your equity in times of distress, in order that the Company may get another chance to start on a clean slate. I am sure you will agree with me that the opportunity so provided to the management has been properly and judiciously availed of, and today both the financial position and future prospects appear to be good.

Review of Progress

"The Directors' report, presented to you with the accounts of the Company for the year ended 31st of March 1962, has briefly told you the story of the year of operation, and I trust that the financial results as shown meet with your commendation. Our order book remains full; production and despatches continue at the same level as in the latter half of 1961-62; considerable renovation has been done in improving the products and the productivity of the works. It will not be out of place to mention that your plant, originally designed for a rated capacity of 50 carding engines per month, is now producing, on the average, 85 units every month, regularly. You will appreciate this factor, when I add that the plant and equipment of the factory is now over 10 years old and requires considerable rehabilitation and replacement. We are engaged in an exhaustive technical study for this purpose. At the same time, keeping in view the cyclical nature of the industry, we are maintaining the pressure for diversification. The speed frame of our own design, which should have been ready by now, is still in the prototype stage for the simple reason that equipment and tooling required for the purpose have not yet been procured, and this because the relative import licences have not been forthcoming. A quota of such licences has recently been received for import from East European countries, and we hope to be able to overcome difficulties through substitution of whatever machinery can be had on tap, and although even then there will be some further delays, we hope to push ahead and add this extra production line in the factory before our next annual meeting. Likewise, detailed work on the engineering of the turret lathe has been completed, and we are awaiting import licences for one or two specialised machine tools which are necessary for the job.

"The main diversification which has been taken in hand is the contract work for castings and machining for diesel engines produced by the Indian National Diesel Engine Company Ltd., which company is an associate of the Managing Agents. Batch line production of diesels is not working satisfactorily yet for lack of a few machine tools needed for the purpose. Here, too, we are hoping to be able to surmount the obstacles before we meet again next year.

Government's Policy

"It is my conviction that your Company should continue to accord priority to this issue of diversification. It will not only be a healthy expansion, but would serve as a cushion to the fluctuations which have characterised the Indian textile industry, particularly in respect of its demand for machinery either for replacement or for expansion purposes. It is also the Company's experience that, over the years the Government has not been able to formulate a consistent policy for the development of the textile machinery industry in the country—possibly policy is influenced by the vagaries of the industry itself, or what is more likely, confusion is created purposely on this issue by the proponents of the consumer trade. We have accordingly witnessed considerable vacillation in the operation of controls which govern the machinery industry. The swings in respect of import policy have almost been as violent as the fortunes of the textile industry itself. Take, for instance, the recent drive for enlarging our export trade. The enthusiasm and the aggression of the new Ministry of International Trade must be welcomed, but it is questionable whether the prescriptions framed for securing these laudable objectives are of the correct dosage, or composed of proper ingredients. Exports of cloth have been on the decline. New mills of as small a spindleage as 12,000 spindles are being encouraged to be set up, with the proviso that their production must be exclusively reserved for export purposes, although it is not stated how and at what price and where these goods will be sent. In order that such mills start operations as expeditiously as possible, the Government announced a couple of months ago that licences for the import of carding engines and ring frames will be granted to actual users in consultation with the Textile Commissioner. Similar liberalisation of import licences in 1957 set back the machinery industry very considerably, and now five years later, when this industry has not only established itself on a sound and firm basis, but proven itself in the matter of quality of its products, the Government has thought fit to encourage import of the two articles which are now being regularly produced in the country and are accepted as equal in performance to that of any imported product. I should add that your Company made a special representation to the Textile Commissioner in this respect, and we have been informed that it is not the Government's intention to grant licences *ad hoc* to all the users, but only where the so-called export mills have to be set up on a pattern which alone will increase the export potentials of the textile business. Then again, with due respect, one may join issue with the Ministry of International Trade, when it is asserted that textiles have been earning a substantial export surplus. Perhaps the study made by the Reserve Bank of India on the balance of payments implications of industrial production respecting the textile industry, which appeared in the Reserve Bank *Bulletin* for March 1962, has not received proper attention of the authorities. This study has come to the conclusion that, over the five years 1956 to 1960, the total foreign exchange earnings from exports of cotton piecegoods, yarn, hosiery and waste cotton, aggregated Rs. 339.6 crores, and that the foreign exchange outlays on the industry amounted to, over the same period, Rs. 429.2 crores, that is, in other words, a deficit in the balance of payment position of Rs. 89.6 crores. Granted that this includes an outlay of Rs. 240.4 crores on raw cotton; but India has not become self-sufficient in the matter of raw cotton. It is also to be added that the foreign exchange outlay on textile machinery during the five years amounted to Rs. 83.6 crores. In this respect, it has been the endeavour of the manufacturers of textile machinery to reduce this import burden as speedily as possible, and I should have thought that the Government will not hastily enact a regulation or introduce a change in the import policy, which will impede the realisation of the object that the country should become independent of imports in respect of textile machinery in as short a time as possible.

"To our shareholders, a matter of immediate concern is the continuation of the satisfactory role which your Company has played in building up a new industry. In spite of past setbacks, through unwitting frequent changes in policies, I maintain that we have now established a position of leadership in this industry—manufacturing a capital product, with indigenous content of 98 per cent in value—import being limited to special steels, aluminium alloys and ball bearings not presently manufactured in this country. Despite the difficulties facing us, in respect of supply of indigenous raw materials like pig iron and coke, particularly from the point of view of quality, an essential for the manufacture of precision capital goods, we are hopeful that the Company will continue to show promising results which will be found satisfactory by the shareholders.

"I should like to conclude by placing on record on your behalf, if you will permit me, the thanks of the management and of the Directors for the ungrudging work and loyalty of your staff throughout the year."

Note:—*This does not purport to be a report of the proceedings of the annual general meeting.*

KIRLOSKAR OIL ENGINES LIMITED

CHAIRMAN CALLS FOR LARGE-SCALE GOVERNMENT AID FOR EXPORT

DIFFICULTIES IN COST REDUCTION

THE difficulties and sacrifices involved in building up an export market were briefly outlined by Mr. S. L. Kirloskar, Chairman of Kirloskar Oil Engines Ltd., Poona, in his speech at the Sixteenth Annual General Meeting of the Company held at Poona on Saturday, 22nd September 1962. Mr. Kirloskar said that, judging from his own Company's experience, export was a long-drawn-out process and a costly venture requiring considerable sacrifice and huge financial investments in the initial stages. But if quick results were desired, he added, large investments and concentrated efforts for sales promotion were called for. No individual manufacturer, with any amount of resources, could afford to make such a huge investment in a short time. It was, therefore, necessary for the Government to come forward and consider export promotion as a project to be financed like any other project in the Plan.

The following is the full text of Mr. Kirloskar's speech:

"LADIES AND GENTLEMEN,

"I am happy to welcome you to this meeting. The report of your Directors and the audited accounts of the Company for the year 1961-62 has been in your hands for some time. With your permission, I shall take them as read.

"You must have noted with satisfaction from the report that your Company has a good account to render for the year under review. We have made a profit of Rs. 77,58,582 after providing for depreciation, remuneration to the Managing Agents and bonus to employees. Adding to this, the balance of the previous year, the accrued dividend on forfeited shares and excess provision for dividend made during the last year, the total comes to Rs. 78,07,636. Your Directors have made recommendations in their report as to how this profit is to be appropriated under various heads.

Production and Sales

"The forecast I had made at the last annual general meeting has been more than fulfilled. The efficient use of production capacity and supplying services played an important part in the better financial results. We produced more and sold more. The results for the year would have been still better had it not been for the two calamities which befell the city of Poona, the unfortunate floods and the failure of electricity due to a serious accident, which cost the Company nearly four weeks' production. The profits, therefore, represent the profits from the production for only eleven months, as against expenses for 12 months.

"In spite of short supply of special steels, tools and the poor quality of coke and pig iron supplied to foundries which make our castings, making the best of the facilities available to us, we have been able to forge ahead and achieve good results for the year.

Development and Expansion

"The Company has made all-round progress in the development and expansion programmes it had taken in hand during the year.

"The production of the recently developed light 3 H.P. engines has been set on smooth lines and these engines are being put in the market in larger numbers.

"Considering the increasing demand for our engines for marine purposes, marinisation of our engines has been engaging our active attention during the year. We have started supplying engines for country craft and fishing boats in increasing numbers. From a recent Press note we understand that the Government of India has decided to purchase 600 marine diesel engines from Japan yen credit for the expansion of machinised fishing. If these engines can be supplied from indigenous manufacture, it would save the country considerable foreign exchange. Judging from the orders that are being received for marine engines, both from the inland and foreign markets, we feel, this will develop into a new line altogether with good prospects.

"The production of M.A.N. engines has, however, not been to our expectation. This is due to the delay in receiving the machinery required for the purpose. On account of the shortage of foreign exchange, the issue of import licences was delayed; it was found that even the licenses granted needed amendments which took considerable time. Consequently, the deliveries of machinery are delayed. We have received some machines which are already installed. Some more are yet to come. However, progressive manufacture of these engines with the resources at hand, is being maintained. I hope to be able to render you a better account regarding the manufacture of these engines next year.

"I had also referred in my report for the last year to our agreement with a French company for the manufacture of air-cooled diesel engines. I am happy to state that, after concluding this agreement and making all the necessary preliminary preparations, we have been able to build the first batch of engines. These engines being modern in design and construction and lighter in weight, are sure to be popular in the market. Further, as the demand for air-cooled engines is growing day by day, we expect a very good response for these engines from the market. There are also good prospects for exporting these engines.

Bearings

"In my last report I had referred to our project for the manufacture of bi-metal bearings and bushes for all kinds of automotive and industrial stationary type engines. We have been manufacturing these from bi-metal strips imported from our British collaborators, Messrs. Glacier Metal Company, Ltd. Therefore, our production was limited to the quantity of metal strips that we could import for the purpose. On account of the shortage of foreign exchange, the Government could not grant us licence for the full quantity of strips needed. This proved a great handicap for the expansion of this line of our manufacture. The only alternative we had was to set up the required machinery in our own factory which would eliminate importing these metal strips. We had, therefore, applied for a licence for importing the necessary machinery of required capacity. On receipt of the machinery, we will be able to go ahead with the production of the bi-metal bearings and bushes on a larger scale. We are sure that we will be able to meet the greater part of the demand for bi-metal bearings and bushes in the country from our production.

"In the meanwhile, the production of these bearings and bushes is going on with the strips that we have been permitted to import and we are progressively manufacturing bearings and bushes suitable for more and more models of automotive and stationary type engines.

Exports Rise

"During the year under review, our export sale has shown an impressive rise over that for the last year. The total export figure reached the appreciable mark of about Rs. 50 lakhs. Kirloskar engines have now satisfied the rigid requirements of overseas markets in regard to quality, prices and delivery and are now becoming increasingly acceptable in many other countries including the industrially advanced countries in Europe and the U.S.A. The demand for our engines is continuously increasing and we are hopeful that we will be able to maintain this pace of progress.

"I would like to take this opportunity to inform you that, with this volume of sale in the overseas market, our exports have now begun to yield a small margin of profit, though it is as yet insignificant and negligible as a profit. I am aware that it may sound incredible when I say that every exporter is obliged to sell his goods at a price considerably lower than the domestic price which may, or may not, cover even his overheads. I would, therefore, urge you to appreciate the implication of my statement, in its proper perspective. When I say that our exports have begun to show profits, I do not mean to say that we are in a position to sell at a price which may be comparable with our domestic price. We still have to and will continue to sell our engines at a price much lower than the domestic price and by such sale we will continue to lose in terms of the profit margin in the domestic market. However, under the policy adopted by us for pricing our products in the different markets according to their absorption and paying capacity, the average price per unit we get on our present volume of sale is just above our costs inclusive of overheads, leaving us a very small margin of profit.

"But to appreciate the full value of this achievement, one has to consider the continued efforts we had to put in for the last decade to push our products in foreign markets, in spite of the stiff sales resistance we had to face there and the magnitude of the financial sacrifice we had to make all these years to build up this export market. Very few are aware that our efforts towards export began in the days when the drive for promotion of export trade was not even conceived. Foreign exchange was no problem then. Export of non-traditional items was considered as impracticable, if not impossible. Yet we started and continued our persistent efforts for well over a decade to introduce our engines in foreign countries and establish a market for them at considerable sacrifice.

Fruits of Enterprise

"I would be failing in my duty if I do not mention here that the advice to start exporting our engines first came from Sir Shri Ram who was then the Chairman of your Company and your Directors readily accepted his advice and sanctioned our export project. We, therefore, owe it to the foresight of our then Chairman, that we started our export programmes years before the importance of this was fully realised by the Government and they launched an export campaign.

"Had we trod the traditional path and restricted our sales to the home market, refraining from introducing our engines in foreign market at sacrificial prices, we could have comfortably added well over half a crore of rupees to our balance-sheets and successfully held in check our competitors in the domestic market.

"However, we consider the financial loss we incurred as a necessary investment for the building up of the export trade. Over and above the financial loss in actual sales, we had to spend large sums on exploratory foreign tours and travels and sales promotion. Thus, the somewhat favourable position which we occupy today, is the result of the huge investment we have made in building up this market, the continuous increase we have made in our production and the adoption of scientific and modern marketing methods for sales promotion in the overseas markets. If our experience can be a guide to those who are concerned with the task of speedy export promotion, I would emphasise that export is a long-drawn-out process and a costly venture requiring considerable sacrifice and huge financial investment in the initial stages. Obviously, therefore, if such results, attainable only after considerable spade-work and sacrifice over a long period, are to be achieved as an emergency measure in a much shorter time, one must be prepared to make an adequately large initial investment and concentrate one's efforts for sales promotion in a short period. No individual manufacturer with any amount of resources can afford to make such a large investment. It is, therefore, necessary for the State to come forward and consider export promotion as a project to be financed like any other project in the planning activity. The State must, therefore, find ways and means and provide the required finance for such export promotion. The exporters on their part must ensure continuous increase in production of quality goods, provide the required manpower and use techniques and marketing methods for achieving the desired results. Minor concessions, insignificant facilities, threats direct or indirect and appeals to patriotism, cannot be substitutes to the proper measures enumerated by me above, that have to be taken by the Government.

Cost Reduction

"There is, also a general feeling that high cost of production is the main hurdle in our export promotion efforts and a substantial reduction in manufacturing cost will help to achieve speedy export promotion. No doubt a reduction in cost would certainly assist in making the prices acceptable or competitive in the overseas market and, to that extent, reduce the amount of sacrifice on the part of the exporter. He is always willing and interested in such reductions; but in the existing circumstances, a manufacturer has little or no control over the factors contributing to the present high cost of production. The rupee is continuously being depreciated; the continuous increase in taxes to meet the rising non-productive administrative expenses of the Government machinery are mounting up year by year and production in the factories is not commensurate with the productivity of the units for want of timely and adequate supply of raw material, and a number of other well-known bottlenecks such as shortage of power, transport, etc. It is, therefore, futile to advise the manufacturers, under these circumstances, and to thrust all responsibility for reduction in cost only on the manufacturers. It is the State that can take effective measures to remove these obstacles and make conditions conducive to a reduction of cost of production.

"Yet, I must point out that even with the reduced cost, there will be no acceleration of the pace of export promotion at the rate we need today. It may, in the long run, help to increase export; but the need of export promotion is immediate. A realistic approach has to be made and a practical attitude adopted by the Government on the lines suggested by me. It cannot be gainsaid that much is being done; but more remains to be done.

Kirloskar Cummins Limited

"You are already aware that the Company, in collaboration with Cummins Engine Company Inc., Columbus, Indiana, U.S.A., promoted Kirloskar Cummins Ltd., a new Company for the manufacture of reputed Cummins engines in India. The new Company has been duly registered. It is, indeed, very gratifying to note that the new Company has been very well received by the public. Its issued capital was subscribed nearly 55 times over. Your Company has a substantial interest in this new Company having invested Rs. 38,25,000 in its capital. Kirloskar Cummins has made a very good start and its activities are progressing as per schedule, from which it can be reasonably expected that it would be able to go into production within a reasonable time.

Subsidiary

"The Company's subsidiary, Messrs. Shivaji Works, Ltd., has had another successful year. As can be seen from its balance-sheets for the last two years, this subsidiary company, too, has been making satisfactory progress. It has been meeting a considerable portion of our requirement of castings. It has taken in hand an ambitious plan of expansion and it is expected that it will be able to show better results for the current year.

Prospects

"You would be expecting from me my forecast of the prospects for the current year. There has been a slackening in the demand for engines in the market for the last two years. However, we have been able to maintain our position in the market and keep up our sales. But during the last two months there has been a seasonal drop in retail sales. I am not unduly perturbed about this. I feel, this is only a temporary phase. Our sales representatives are in constant touch with buyers and are able to form a good judgment of the expected developments in the market. These do not seem to be unsatisfactory and should gradually be reflected in the sales and trading results. I feel confident that we shall be able to lay before you satisfactory results again when we meet in a year's time.

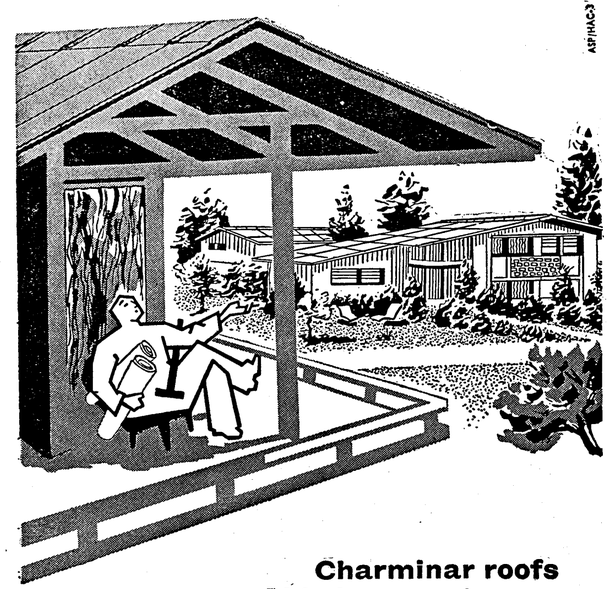
"Such success as we have had in the past, has been largely due to the enthusiasm and loyalty of the staff and able administration by the management. I express my sincere thanks to them for their corporate efforts to achieve these results."

Note: *This does not purport to be the proceedings of the annual general meeting.*

BRITAIN'S WORKING POPULATION

An increase in the working population of Britain to 26,427,000 by the middle of 1972, as compared with 25,442,000, in the middle of this year is forecast by the U.K. Ministry of Labour. It is estimated that there will be 17,424,000 male workers in 1972, as compared with 16,865,000 in 1962, 5,308,000 married women, as compared with 4,464,000, and 3,695,000 single women, as compared with 4,113,000. The estimate for Britain's future population aged 15 and over is 43,311,000 in 1972.

The Ministry of Labour says that various assumptions have had to be made in reaching these figures, one of which is migration. Though figures are not yet available, it is estimated that about 100,000 immigrants arrived in Britain in 1961-62. It is thought that the Commonwealth Immigrants Act will lead to a reduction in these figures to about 50,000 per year in the next few years. Emigration from Britain has decreased recently, but the Ministry assumes the possibility of an increase eventually to other Commonwealth countries.



Charminar roofs add elegance to country bungalows

Light and durable Charminar A.C. Sheets make elegant roofs for country bungalows. They are economical to instal and their supreme quality of resistance to fire and water make them relatively permanent. Order Charminar Sheets for your new country bungalow and be envied by all your friends.

Charminar corrugated and semi-corrugated sheets are available in all important cities and towns.

MARKETING OF PETROLEUM PRODUCTS

PROBLEM OF BRIDGING THE GAP IN TRANSPORT CAPACITY

THE annual *per capita* consumption of petroleum products in India is only about 18 litres, as compared with 3,000 litres in the United States, 730 litres in the U.K., and 238 litres in Japan. The oil distribution system, built up over the years, is geared to cater for this *thin* but *very widely spread* demand in the country. In view of the very long leads dictated by the size of the country, extensive stocking points, with large tankage cover to take care of the long transit times as well as seasonal fluctuations in demand, have been set up as part of this distribution system. Moreover, suitable stocking arrangements have been made for areas completely sealed off by the monsoon. The capital investment required for setting up such a vast supply organisation, with final links with even the remotest villages catering to small quantities, is necessarily a heavy one. Further, heavy investment will have to be continuously made to keep pace with the growing demand for petroleum products. But no estimate of the aggregate investment in the distribution system is available, not even in the paper on "The economics of distribution of petroleum products in India," submitted by Burmah-Shell, the largest distributor of petroleum products in this country, last month to the second symposium on the development of petroleum resources of Asia and the Far East held at Teheran (Iran). Perhaps it would be very difficult, if not impossible, to make such an estimate, because the oil companies are not the only ones in the field of distribution. The enormous part the agency system of distribution plays in India has also to be taken into account in this connection.

Agency System

Oil companies by themselves, it may be noted, could hardly have reached individual consumers in a vast sub-continent like India without the assistance of thousands of independent businessmen as agents or distributors who, in turn, have been dealing with large and small shopkeepers in towns and villages to meet individual consumer requirements. As kerosine alone, which is mostly consumed in millions of households in small towns and villages, accounts for over a fourth of the total demand for petroleum products, the proportion of the trade handled through agents in India represents, according to Burmah-Shell's paper, more than a half of the total trade. Incidentally, it would be interesting to know the pattern of consumption at present and by 1966. The relevant figures are:

Petroleum products	*As per cent. of total consumption*	
	At present	*By* 1966
Kerosine	27	22
Furnace oils	19	24
High speed diesel oil ..	17	20
Motor spirit	12	8
Light diesel oil	9	6
Other products	16	20
Total ..	100	100

The figures for kerosine in the above table show that its relative position in the pattern of demand will have declined from the present 27 per cent to 22 per cent by 1966. But, in absolute terms, the demand for kerosine—a petroleum product of universal consumption—will be much greater than it is now, because the aggregate demand for all petroleum products by 1966, according to the latest estimates, will be 17 to 18 million tons, as against the current annual consumption of 9 million tons. Twenty-two per cent of 17 million tons, to take the lower figure, will represent as much as 3.74 million tons, whereas 27 per cent of 9 million tons at present represents only 2.43 million tons. As the relative position of high speed diesel oil and motor spirit together will remain the same by 1966 as it is now, agents and distributors will continue to handle 50 per cent, or more, of the total trade.

Another aspect of the distribution system pertains to transportation, the relevant features of which are described in the paper prepared by Burmah-Shell. First, all facilities, including refineries, ocean installations and up-country depots are so sited as to effect the maximum possible economy in the use of railway rolling stock and road vehicles, thereby ensuring that internal freight and transit time are minimised. Presently, inland distribution is made from (i) refineries (Digboi in Assam, Burmah-Shell and Esso Standard at Bombay, Caltex at Visakhapatnam, and Nunmati in Assam) and (ii) main installations at Bombay, Calcutta, Madras, Tinsukia, Cochin, Okha, Visakhapatnam and Kandla. Local refineries supply about 70 per cent of the total demand currently. From these refineries and main installations, oil moves up-country mainly by rail. Movement by rail accounted for 71 per cent of supplies in 1956 and 64 per cent in 1961, while "other means" accounted for 29 per cent in the former year and 36 per cent in the latter. The decline in the relative position of railborne traffic has been due to the improved road system and the proved inadequacy of rail capacity. From the figure of 36 per cent under "other means" in 1961 must, however, be deducted 28 per cent represented by supplies made in refinery/port towns which are generally centres of heavy consumption.

Up-country Depots

Secondly, up-country oil depots, which were merely storage sheds before the last war, have themselves become minor installations in the post-war period. There are now more than 500 such oil depots which form extremely useful links in the vast supply organisation. A typical depot now consists of tankage for at least four major products, namely, kerosine, motor spirit, high speed diesel oil and light diesel oil. In certain places, additional products like furnace oil and bitumen are also stored in bulk. The demand for furnace oil is concentrated around main ports, but there is a growing need for it up-country as a gap-filler in the energy requirements of industrial units in the context of coal scarcity. In a few places of high offtake, even lubricants are stored in bulk, because of the obvious economy resulting from the saving of packaging and handling costs. Schemes are also on hand to erect tankage for liquid petroleum gas at centres of large consumption to cut out the deadweight of the empty cylinder returning all the way to the refineries for refill.

Thirdly, from the depots oil moves by road in tanklorries or in packages towards its ultimate destination, namely, the consumer. A few statistics relating to tank lorries and packages will be of interest here as they underscore the size of the distribution facilities currently in use, as also the progress of the Indian economy. In the earlier days, the use of motor transport was restricted to a limited number of cities and larger towns. The bullock-cart was the main means of transport from the railhead onwards. The picture has since changed considerably and today the oil industry employs over 2,500 tanklorries of various capacities for bulk distribution. An equally impressive number of trucks is engaged in carrying packed oil products from main installations and depots to consumers in towns and villages. As for packages, some 38-million 18.5 litre tins are used per annum, mainly for kerosine. Then there are barrels for bitumen and lubricants which currently average 3.5 million per year. These are large requirements, indeed, calling for considerable investment which grows in size every year in response to rising demand.

Transport of Oil

The Burmah-Shell paper has also highlighted a number of other facts and trends pertaining to inland oil transportation. These are:

(i) The railways provide tankwagons for the carriage of oil. At the moment, there are 5,600 broad-gauge and 2,800 metre-gauge tankwagons in commission.

(ii) The railways accord high priority to the movement of petroleum products and, sometimes, even run oil specials and block loads to minimise shunting and handling *en route*.

(iii) An average all-India figure of tankwagon turn-round from main ports is about 12 days. Unfortunately, due to the ever-growing pressure of traffic in general, tankwagon turn-rounds have shown signs of deterioration in recent years. As an illustration of the importance of improving turn-rounds, an improvement of one day or, say, 8 per cent would increase the quantity of product carried, on the basis of 284,400 metric tons average for a month, by 22,750 metric tons. To bridge this quantity by road would mean employment of approximately 225 tanklorries of 5 to 7 metric ton capacity.

(iv) In the peak season, the tankwagon gap is wide, and large quantities have to be sent by road, although, on the basis of freight, road despatches become uneconomic beyond a certain radius. Rail freights in India are based on the 'telescopic' principle and, therefore, for every additional slab of mileage the charge is lower than for the previous slab. There are also different tariff rates for low flashpoint and middle distillates and residual products. For low flashpoint products, the freight is, approximately twice as high as for kerosine, high speed diesel oil, light diesel oil, and so on. Road freights, on the other hand, generally follow a flat schedule and, therefore, except for comparatively short distances, road transport becomes relatively expensive in comparison with rail transport. Currently, road transport is 'competitive' up to a distance of about 180 kilometres in the case of low flashpoint products and about 50 kilometres in respect of middle distillates on the basis of the straight comparison between rail and road freights with trucks of five metric tons payload capacity. Beyond these distances, bridging of supplies by road results in unrecovered freight which has averaged approximately Rs. 30 per ton. With trucks of larger capacity, it is possible to go further by road without incurring loss in freight, but, in most cases, weight restrictions prevent use of vehicles larger than 5 to 7 metric ton capacity. However, as roads improve and bridges and culverts are strengthened, it is hoped that increase in maximum payload will be permitted and road transport will have greater scope.

(v) The switch-over to road opens up the possibility of direct supplies to the agent or the customer, thus reducing handling cost and storage losses *en route*. This is particularly important in the case of expensive products like motor spirit where each bulk breaking operation results in considerable loss through evaporation.

(vi) An important advantage which is gained through the switch-over to roads is the reduction in the stock cover considered necessary to meet trade demands as the transit time is very substantially reduced. For instance, a journey of 600 kilometres by rail may take anything up to seven days, depending upon the density of the traffic and the capacity of the line in question. By road, the distance can be covered in less than two days. The railway booking opportunities are also uncertain and subject to seasonal restrictions. It, therefore, becomes necessary to carry heavier stocks than determined strictly by offtake considerations. Most of the upcountry depot tankage is designed to cover 4 to 6 weeks' requirements. This can be reduced by half or more, if supplies are switched over to road. There is thus inherent saving by way of reduction in the working capital tied up in stocks. Smaller tankage needs also reduce capital expenditure.

(vii) The alternative of supplies by road has another inherent advantage where rail journey involves transhipment from broad-gauge to metre-guage, and *vice versa*. Transhipment entails an extra handling, apart from the need for balancing tankage.

Movement By Road

The oil companies are now feeding a growing number of stations by road directly from the refineries and main installations. But road movement of oil for bridging the current gap in railborne supplies is a rather costly effort. The Burmah-Shell paper, however, recognises that the planned expansion of the railway capacity is more or less fully committed to cater to the heavy traffic on account of the steel plants, heavy machinery works and collieries and that a large part of the future increase in oil traffic will have to be moved by means other than the railways. Road transport is, of course, one of the "other means." But, how can it be made more economic over much longer distances than at present? A judicious combination of the following measures is suggested in this connection.

(i) Removal of inter-State permit restrictions on road transport.

(ii) Use of truck-trailer combination. The cost per ton-mile of a combined unit with a total payload of, say, 20 tons will be less than the average freight rate charged by the railways.

(iii) Reduction in the heavy burden of taxation on road transport.

(iv) Road improvement for materially reducing operating costs.

(v) Liberalised terms under which road operators can borrow capital.

(vi) Better vehicle maintenance and repair facilities.

(vii) Upward revision of current railway freight rates to bring about permanent diversion of some traffic to roads.

The establishment of inland refineries, such as the proposed one at Baroda, may also lead to transfer of oil traffic from rail to road. Another means which could afford relief to the railways is utilisation of minor ports with rail and road connections to the hinterland for establishing bulk depots or minor installations to be fed by small tankers from the main installations. Pipeline transportation is also suggested in the Burmah-Shell paper as a possible means of bulk movement of oil, particularly on six sections (Nunmati-Siliguri, Barauni-Calcutta, Barauni-Allahabad, Bombay-Kalyan, Baroda-Delhi, and Cochin-Bangalore) where oil traffic in density moves over considerable distances before it starts thinning into various directions. It may be noted, in this connection, that the Government is already considering proposals to lay products pipelines from the public-sector refinery at Nunmati to Siliguri and from the public-sector refinery (under construction) at Barauni to Calcutta and Delhi. As the Siliguri-Gauhati railway line, being the only rail link between Assam and the rest of India, is already carrying a very heavy load of vital traffic and is liable to be flooded and breached in seasons of heavy rainfall, the Burmah-Shell paper has strongly supported the proposal for a products pipeline between Nunmati and Siliguri. Likewise, a products pipeline between Barauni and Calcutta and, in the opposite direction, towards Delhi, according to the paper, could release substantial rail capacity to other important traffic. The immense oil transportation problem of the coming years would thus have to be tackled through greater reliance on means other than railways. In conclusion, the Burmah-Shell paper recognises that, while vigorous efforts are being made to tackle the serious gap in transport requirements, the next few years will, indeed, be years of challenge, as the time lag between effort and its fruition is considerable and cannot be eliminated.

SUPER-SONIC CIVIL AIRLINERS

IS THE WORLD READY TO TAKE TO THEM?

By Our Aviation Correspondent

MEETING in Rome, the Fourteenth Assembly of the International Civil Aviation Organisation (I.C.A.O.) is deliberating—amongst other subjects, of course—what policy to adopt towards the introduction of super-sonic flight into air transport. By the time this article is published, the result of those deliberations will probably be known. At present, it is a matter of speculation, but it does seem certain that, whilst the U.S., Britain and France will favour the early development of super-sonic airliners, there will be stiff opposition from a number of other nations—notably, Sweden, Denmark, Canada, and Spain—who hold quite contrary views.

The anti-S.S.T. countries believe that to take air transport into the super-sonic field at this stage is unnecessary, unwise, and fraught with unpredictable consequences. To pursue such a policy will, they insist, adversely affect the progressive development of more important and more useful aeronautical activities. In addition to those States who actively oppose the S.S.T., there are many who would like to avoid the provision of new navigation facilities, extensions to airports, and other costly works. They fear that the introduction of super-sonic airliners will inevitably involve them in heavy expenditure of this nature—and how very right they could be!

Anti-S.S.T. Line

At the same time as I.C.A.O. is debating these issues, the annual general meeting of the International Air Transport Association (I.A.T.A.) is sitting in Dublin. Already, its Director-General, Sir William Hildred, in his opening address, has taken a strong anti-S.S.T. line. Considering the many millions of pounds which development of the S.S.T. will require, are there not, he asks, more immediate and more useful purposes to which this money could be devoted? Sir William, in that regard, specifically mentions development of the V.T.O.L. airliner.

It is only natural, of course, that the airlines oppose an early introduction of super-sonic flight. They have passed—and, indeed, are still passing—through a period of great financial difficulty. Their combined losses for the year 1960-61, which totalled some £50 million, provide a measurable indication of those difficulties. Their financial difficulties are directly attributable to the transition from piston to jet equipment. The introduction of jets has, in fact, been far more costly than was at one time predicted. Further to exacerbate the position, the surplus capacity which the new airliners yielded also exceeded expectations.

Nevertheless, there are now indications of an improvement in the situation. In due course, possibly by 1964, jet re-equipment will bring its own rewards. The industry will return, once again, to the comparative prosperity which it enjoyed, with well proven piston equipment, during the middle half of the nineteen fifties. Only something untoward could now change the course of events and throw the whole financial machinery once again out of gear. And nothing so foreshadows such an event as do current preparations to develop the super-sonic airliner.

On the one hand, then, we have a few of the most aeronautically advanced nations who, on prestige or other grounds, are determined to proceed; on the other, we have many nations, and certainly a preponderant majority of the airlines, who would, to put it no higher, vastly prefer to see the S.S.T. shelved for a decent interval of time. But can progress be muzzled? The outcome, one suggests, is hardly in doubt. Indeed, perhaps the only doubt which remains is the shape which the successful S.S.T. will eventually assume.

In that respect, of course, the fundamental problem to be solved is to design an aircraft which will fly at about twice the speed of sound (Mach 2.2), and yet be able to take-off and land on existing runways. There seem to be three ways to solve this problem. Firstly, there is the compromise solution—to design a wing with sufficient sweep-back to reduce drag to the extent required for super-sonic flight and, at the same time, with sufficient wing-area to provide adequate lift for take-off, landing, and sub-sonic flight at low altitudes.

Such a compromise is the joint Sud-Aviation/British Aircraft Corporation project, the Super Caravelle. This 100 seat, Mach 2.2 airliner will have a very narrow delta wing of ultra-thin section, swept-back to 70 degrees. In the case of a compromise of this kind, the power required for take-off and climb is considerably greater than is required for a sub-sonic jetliner. The actual engines for the Super Caravelle have not yet been selected. The Bristol Siddeley Olympus 593 has, however, been tentatively proposed. Four Bristol Siddeley Olympus, each delivering 30,000 lbs. thrust, will be required.

The Super Caravelle is the fruit of some seven years of research carried out both in France and in England. In addition to wind-tunnel experiments, such experimental aircraft as the Handley Page 115, and the Bristol 188, are providing vital data. The initial cost will, admittedly, be very high, but operating costs, the designers claim, will be lower than those of present sub-sonic jets. There can be no doubt that the Super Caravelle will accomplish what its designers intend. The question remains, however, whether there are not better ways of doing it.

That brings us to the second possible solution. This is to employ vertical lift for take-off and landing and thus to obviate any compromise with the wing. In his design of this nature, Dr. Griffiths of Rolls Royce has, in fact, discarded the wing altogether. His fuselage is shaped like a spear-head and thus offers the optimum shape for trans-sonic flight. The obvious disadvantage of the V.T.O.L. solution is the power—and, consequently, the weight—which would be required to give vertical lift to an aircraft of this size. Although, therefore, vertical lift is being adopted for fighter aircraft—as in the Hawker P. 1127, for example, which, incidentally, was quite the most remarkable aircraft at the Farnborough Air Show—its practicability for the S.S.T. has yet to be proved.

Variable Geometry Wing

The third, and by far the most attractive solution is offered by the "variable geometry" wing. This simply means, of course, a wing the shape or angle of which can be changed in flight. Take-off, landing, and sub-sonic flight can thus be undertaken with a wing suitable for those functions. The necessary alteration of angle can then be made for trans-sonic flight. The difficulty, presumably, is to devise a mechanism which will be 100 per cent efficient, light and yet strong enough to sustain the tremendous forces to which it will be exposed when altering the wing angle in flight.

This, it is claimed, has been done by Dr. Barnes Wallis of Vickers, a very notable and ingenious British designer. His design—The Swallow—permits of take-off with wings outstretched and trans-sonic flight with the same wings swept back to an angle of 70 degrees. The advantages of variable geometry are threefold: firstly, there is no compromise with the wing and, consequently, safer landing and take-off characteristics are assured; secondly, the power required for take-off is reduced to that of the conventional sub-sonic jet; and thirdly as a consequence of the reduced power requirement, fuel consumption is much lower to the obvious benefit of payload, range, and operating economics generally.

WORLD'S SMALLEST NUCLEAR POWER PLANT

The world's smallest nuclear power plant—so compact that one cargo plane can airlift it to a remote area—is now producing electricity in the United States. The unit is the first known direct-cycle nuclear power system. The 15-ton reactor is coupled directly to a 15-ton turbo generator unit. Gas heated in the reactor core drives the turbine. The gas is then returned directly to the core for reheating.

This mobile low-power reactor generated electricity for the first time on 21st September 1962, at the U.S. Atomic Energy Commission's test station in Idaho. The A.E.C. is now developing the prototype for the Defence Department. Potential uses of production models are at remote air force radar stations, army field hospitals and emergency Red Cross stations. The reactors, of course, also have potential civilian uses, for example, at remote scientific stations and power-short villages in various nations.

The unit has a capacity of 300 to 500 kilowatts. It is water-moderated and gas-cooled and, according to A.E.C., "is designed to be started up 12 hours after arrival at a site and moved to a new site 24 hours after shutdown."

NEW PRODUCTS AND PROCESSES

Nylon Toughened by Glass

GLASS fibre, known for some years to give strength to resins, has now been incorporated in nylon by Imperial Chemical Industries Ltd., London. The name given the product is Maranyl A190. The rigidity of this product is more than twice that of the basic nylon 66. The tensile, shear and compressive strengths are 50-100 per cent greater. The linear thermal expansion is a fifth of unfilled nylon. It has greater dimensional stability with changes in temperature. It can be dry-coloured. Maranyl A190 can be used as a substitute for, or an adjunct to, some metal parts. Possible applications include the housings of electrical equipment, handles, hinges, and the rollers for metal diecastings.

P.V.C. Plasticiser

A plasticiser that gives better heat-ageing qualities to P.V.C. has been introduced by Scott Bader and Company, Wollaston, Wellingborough, Northamptonshire. It is given the trade-name Monoplas 513. P.V.C. film and sheet based on this material resists the leeching action of water and will withstand frequent washing in hot soapy water. At low temperatures it still has good flexibility. Oils and chemical solvents take out roughly a quarter of the weight, so Monoplas 513 is not recommended where the P.V.C. is in contact, with such fluids. Monoplas 513 is particularly recommended by the makers for use in electric-cable insulation, P.V.C. sheet for babies' pants, shower curtains, etc., and vinyl cloth used in car upholstery.

New Monitoring System

A new remote monitoring system which can make measurements on unmanned equipment—such as oil pipe line pumping stations—and send them over long distances, has been produced by a British firm, E.M.I Electronics Ltd. Measuring and sensing devices at the unmanned station send data over a telephone line to a central control point where checking and recording is easily carried out. Known as the Voice Frequency Telemetry System, because it transmits data along a telephone line on audible frequencies, the equipment is expected to be useful to organisations handling the distribution of electricity, gas, oil or water, where it is necessary to control many units dispersed over long distances. Another use for the system is in plants whose sites extend over large areas—oil refineries, chemical plants and steel mills. A control panel can monitor the behaviour of the entire plant. If a two-way telemetry system is incorporated, the process being monitored can also be controlled at the central point.

Heavy Duty Power Tools

Two new heavy duty industrial power tools—a ¼ in. (.64 cm.) drill and a No. 8 guage nibbler—have been produced by a Middlesex firm, Black and Decker Ltd. The drill, weighing 3¼ lbs. (1.476 kg.) is a cylindrical unit with the chuck set at right angles to the body. This allows close drilling when working flush against part of a workpiece or a wall. The working speed, no load, is 2,000 r.p.m. and on load about 1,000 r.p.m. The tool cooled by twin fans, has a drilling capacity of ¼ in. (.64 cm.) in steel and ½ in. (1.27 cm.) in hardwood. The nibbler works on a punch and die principle. As the tool is fed along the cutting line, small rectangular pieces of metal are punched out leaving a smooth edge. Pattern lines can be followed on either side of the punch, which is made of high-speed steel for long efficiency. An automatic oiler deposits oil on the work to increase punch and die "life". Running free the tool has 1,000 strokes a minute and on load it runs at about 600 strokes a minute. The cutting radius, outside edge is 3⅜ in. (8.57 cm.) and inside edge 3.3/32 in. (8.05 cm.). It weighs 16¼ lbs. (7.36 kgs.).

Transporter for Heavy Equipment

A transporter for heavy equipment which dispenses with the need for cranes and loading bays and can be towed by all forms of prime mover, has been produced by a British firm, Charles Pitt (Barton Stacey) Ltd. In appearance the transporter resembles a conventional trailer of 12-ton (12.192.6 kg.) capacity. In operation, the trailer bed is lowered to ground level. In a continuous operation, the sides of the trailer, the suspension and the wheelbox are swung upwards at an angle of 45° giving free access to all parts of the trailer bed. The operation is hydraulic. Heavy loads can then be winched or moved on rollers up the comparatively slight incline of a 5 ft. (1.52 cm.) long ramp onto the bed. The operation is then reversed, the wheels and suspension are lowered and the trailer bed raised to travelling height in one operation. The last part of the hydraulic operation is the insertion of spring loaded locks, which hold the bed to the suspension. The locks require hydraulic power to release them.

Self-priming Centrifugal Pump

A new 3 in. (7.62 cm.) self-priming centrifugal pump, which has no gears between pump and engine—an innovation that cuts the cost and makes the unit more compact without reduced performance—has been developed by a Leicestershire firm, Pegsons Ltd. The gears have been eliminated by reducing the pump speed to that of the engine, and mounting the impeller directly on to the engine shaft. The design maintains the pump's capacity at 16,800 gallons (76,371.77 litres) an hour and gives it a shut-off head of 70 ft. (21.33 m.) and less power is needed than with a geared pump. The engine is an air-cooled diesel with a continuous rating of 4½ h.p. at 2,000 r.p.m. The diffusion priming system employed in the pump is effective down to static suction lifts of 25 ft. (7.62 m.). If the static lift is 20 ft. (6.09 m.) or less, a faster type of priming system can be used, reducing standard priming times by as much as 30 to 40 per cent. Both systems are very simple, with no re-circulation mechanisms to clog or wear.

Better Quality Cricket Balls

Better quality cricket and hockey balls can now be made in India with the help of leathers obtained from raw as well as vegetable-tanned cow hides by a new process developed at the Central Leather Research, Institute, Madras. The new process makes use of a basic alum combination tannage for making hockey ball leathers. The same leathers, on dyeing, could be used for making cricket balls also. These leathers are free from defects found in those prepared by traditional methods. Leathers for hockey balls have been so far made by using alum and salt. These leathers become hard and bony on drying after getting into contact with water. They sweat in damp weather and turn yellow on ageing. They also deteriorate quickly because of the mineral acid content formed in them during the course of their processing. These defects can now be removed by using the basic alum combination tannage. Usually vegetable tanned leathers dyed to red shade are used for making cricket balls. This type of leather is hard, absorbs water and the colour changes on exposure to atmosphere and light. It also stains the hands of the players handling the cricket ball on account of perspiration and deteriorates quickly. The treatment of these leathers with basic aluminium salts after dyeing makes them pliable, waterproof, fixes up the dye, improves their fastness to light and stabilises them against deterioration.

Plastic Gloves for Industrial Use

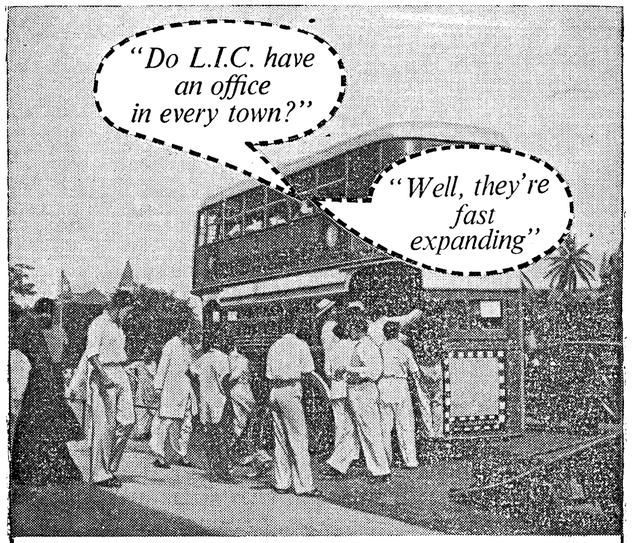
After a lengthy period of research carried out in co-operation with the Plastics Institute of the T.N.O., Delft, a Dutch firm has succeeded in making unlined plastic gloves that are supply and highly resistant to a wide variety of chemicals and fluids. The gloves, which are made of polyvinyl chloride (PVC), are supplied in all half sizes between 6½ and 10. They are 0.65 mm. (0.03 in.) thick and 30 cm. (12 in.) long; their weight averages 100 grams (3½ oz.) a pair. At the moment their colour is bright yellow, but it is intended to manufacture orange-red ones too in 1963. In normal domestic use the plastic gloves can withstand prolonged contact with soap, synthetic detergents and cleaning agents, and bleach. It is also resistant to gasoline, paraffin, turpentine and turpentine substitute, polishes, beeswax, oils and greases, vinegar, methlylated spirits, ammonia, alcohol, lysol, etc. Hot water and sunlight have no deleterious effect on them either. Apart from use in the home, the gloves are also suitable for use in industrial businesses such as the chemical and galvanising industries, the oil, leather and furniture industries and the building trade, not to mention horticulture and fisheries. No elaborate precautions are required for transporting the gloves or storing them for long periods in the tropics. The gloves satisfy the requirements of the Dutch Housewives' Association.

Transistor Clock

One intriguing result of research in radio engineering—the transistor principle—has now been applied to clockmaking. The Kundo transistor clock, displayed for the first time in the United Kingdom at the Watch and Jewellery Trade Fair, held this month, has an operating mechanism of unusual simplicity. A magnet attached to its pendulum dips into a coil at each oscillation, producing, by induction, a voltage pulse which, fed into the transistor, triggers the flow of current from the battery to the drive coil. A driving impulse is thus imparted to the pendulum—the transistor acting in effect as a contactless switch. Needing no maintenance, no winding and no external power-supply this extraordinary timepiece runs continuously from its own 1.5-volt battery (which is easily replaced) for no less a period than three years.

Plastic Car Tyres

Motor-car tyres made entirely from plastics are being produced by a German firm. The company making them says that they have high resistance to wear and that they skid less than rubber on wet surfaces. They have been designed mainly for high speed motoring and for use on rough ground. For both tubeless and tubed tyres, the outer casing is made from polyurethane; this is backed by polyurethane foam. Correct combination of these plastics, it is stated, makes it possible to vary the flexibility of the cover, particularly the walls, without altering the total thickness. A centrifugal casting process is used to make the tyres which, outwardly, look no different from ordinary rubber tyres.



In 1956, the LIC had 97 offices in the country. Today they have 344*. And more are being opened. It is all part of LIC's drive to get to the people where they are, to offer them security, service them at their door-step and promptly satisfy local needs.

PEOPLE ARE TALKING ABOUT L.I.C.

This expansion was promised. This expansion is taking place.

Life Insurance Corporation of India

ASP/LIC-E-31

LIFE INSURANCE IN U.S.

PHENOMENAL GROWTH IN RECENT YEARS

SOME time ago, the Life Insurance Corporation of India deputed a team of senior officers to study the trends and techniques of life insurance business in the U.S. This was a clear tribute by nationalised life insurance to the efficiency of life insurance under private management. The tribute was, indeed, well deserved, for the growth of life insurance in the U.S. has been so spectacular that, measured in terms of the ratio of life insurance in force to national income, the U.S. ranks as the most insurance-minded nation in the world, next only to Canada. At the end of 1961, life insurance in force in the U.S. amounted to $685,000 million, that is, $685 billion. This works out to an average of $10,800 per family, which is about 21 months' average family income. The ratio of life insurance in force to annual national income was 142 per cent in 1960, as against 97 per cent in 1950. As already stated, the only country in the world where the ratio of life insurance in force to national income exceeded that of the U.S. is Canada where the life insurance in force at the end of 1960 represented 172 per cent of the national income. It is noteworthy that these two countries enjoy the highest *per capita* income in the world. The *per capita* income in the U.S. last year was as much as Rs. 13,513, whereas in Canada it was Rs. 9,993. Apparently, there is a close relation between national income and life insurance.

Other countries lag far behind North America, as will be evident from the comparative table given below. It will be noted that even in Britain, the home of insurance, life insurance in force represented only 67 per cent of national income in 1960, although, over the decade 1950-60, the ratio had gone up from 58. New Zealand ranked third, with life insurance in force representing 102 per cent of national income. India has doubled the ratio from 8 per cent in 1950 to 16 per cent in 1960. Even so, it ranks very low in the world, because its national income is still poor. Pakistan has shown a better record, life insurance in force in that country having risen from one per cent to five per cent of national income. The only two countries where the ratio declined during the decade are Spain and Chile, both victims of galloping inflation.

According to the *Life Insurance Fact Book*, 1962, published by the Institute of Life Insurance, New York, of the total life insurance in force of $685,000 million at the end of 1961 in the U.S. as much as $629,500 million was accounted for by the legal reserve companies (that is, public limited joint-stock insurance companies), while the rest was accounted for by fraternal and assessment organisations, savings bank, and U.S. Government veterans' insurance programmes. New business done by legal reserve companies last year was an all-time record of $78,800 million. The biggest increase was in group contracts, thanks to a new $2,100 million group policy for railroad employees.

New Types of Business

A generation ago, life insurance in force with the legal reserve companies in the U.S. was hardly $100,000 million, that is, less than one-sixth of the present size of their business. An important factor responsible for this phenomenal growth of insurance in the past generation has been the development of new types of insurance to meet the family's changing needs. As the earnings of low-income workers have improved over the years, industrial life insurance has tended to decline. Industrial life insurance in force at the end of 1961 amounted to $39,500 million. The number of industrial policies is declining. Ordinary life insurance is now the main avenue of insurance protection and it aggregated $364,300 million, covering 97 million individual life policies at the end of 1961.

Another factor for the growth of life insurance in the U.S. has been the introduction of group life insurance which now accounts for 31 per cent of the total life business in that country and aggregates $192,200 million. Credit life insurance has also been contributing a small but expanding amount to total life insurance in force. Credit business in force at the end of 1961, at $33,500 million, was double that five-years ago. This expansion is attributable to the fact that credit insurance has taken a part of the risk out of consumer borrowing for instalment purchases which has now become a distinguishing feature of the U.S. economy.

Liberalisation of insurability standards, thanks to the improvement in mortality rate following advances in medicine, also accounts for life insurance's great leap forward in the U.S. To record some of the more important changes. For many years, blind people have had to pay higher premiums for life insurance, if at all they could get themselves insured. But the majority of life insurance companies now issue policies at standard rates of premium to healthy blind people who are well-adjusted to their handicap. Insurability standards for expectant mothers, underweight and tall, overweight people, airline pilots, and people who are cured of cancer and even certain heart ailments have also been liberalised. Apart from these, many other health and occupational barriers to life insurance protection are disappearing because of advances in medicine, public health and job safety. As a result of all this, only about three per cent of the applications for ordinary life insurance are now rejected. The majority of the rejections are for reasons of health and only a negligible fraction, 0.5 per cent, to be exact, are due to occupational hazards.

Extra-Risks Policies

For those who are not insurable at standard rates, extra-risk policies at higher rates are issued. At the end of 1961, an estimated $22,000 million extra-risk ordinary life insurance policies were in force. The average extra premiums charged for such policies have gradually been reduced or eliminated as health and job safety standards have improved.

A breakdown of the reasons for extra ratings on a sample of the extra-risk policies issued in 1958 showed the following distribution: Heart disease 22 per cent, overweight and underweight 20 per cent, other medical reasons 26 per cent, hazardous occupations 26 per cent, other reasons 6 per cent.

An analysis of mortality experience, according to causes of death, indicates that heart and circulatory diseases, cancer and accidents are the worst killers. These are responsible for four out of every five deaths of ordinary life insurance policyholders in the U.S. They also explain the slowing down in recent years of the continued general improvement in policyholders mortality experienced in the first half of the present century. In fact, for more than a decade now, there has been little significant improvement in the policyholders' death rate. The tendency, on the other hand, has been for a deterioration. Thus, the death rate in 1961 at 6.12 per 1,000 ordinary life insurance policyholders was higher, as compared with 1960 when it was 6.03 per 1,000. The improvement in mortality during the first half of the century was due primarily to medical advances against diseases against pregnancy and child birth, communicable diseases of childhood, respiratory infections, diebetes and tuberculosis. But many of the people spared from these diseases are becoming susceptible to other diseases as they grow older.

The India Reinsurance Corporation is planning to start operations in Melbourne, Sydney, Adelaide, and other Australian capital cities soon. The company has been registered in Melbourne with a nominal capital of Rs. 10-million or £A9,500,000. The paid-up capital is £A1-million. The company which was formed in 1956, is jointly owned by private insurers doing general insurance business in India.

4¾ PER CENT

MAHARASHTRA STATE ELECTRICITY BOARD DEBENTURES, 1974

FOR RS. 300 LAKHS

(ISSUED BY MAHARASHTRA STATE ELECTRICITY BOARD)

(Payment of Interest and Repayment of Principal Guaranteed by the Government of Maharashtra)

ISSUE PRICE: RS. 100 PER CENT

REDEEMABLE AT PAR ON 15TH OCTOBER, 1974.

The Debentures will be Trustee Securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act. The Debentures will also be eligible for the purposes of advances under Section 17(4)(a) of the Reserve Bank of India Act, 1934.

Subscriptions will be received in cash or cheques from 15th October, 1962 but the list will be closed without notice as soon as the total subscriptions amount approximately to Rs. 300 lakhs and in any case not later than the close of business on 20th October, 1962.

Applications will be received at *(a)* the office of the Financial Adviser and Chief Accounts Officer, Maharashtra State Electricity Board, Mercantile Bank Building, Fort, Bombay-1, *(b)* the offices of the Superintending Engineers, Maharashtra State Electricity Board at Nagpur, Aurangabad and Kolhapur, and *(c)* the office of the Executive Engineer, Maharashtra State Electricity Board at Poona.

Copies of the Debenture Prospectus announcing the terms of issue and the application forms are available at the receiving offices mentioned above and at all Divisional offices of the Maharashtra State Electricity Board in the State of Maharashtra.

ESTABLISHMENT OF AN EXPORT SECTOR

BOARD OF TRADE APPOINTS EXPERT COMMITTEE

THE fourth monthly meeting of the Board of Trade was held in Bombay on Friday, 28th September. It may be recalled that its first two meetings were held at New Delhi and the third at Calcutta. An important proposal that came up for consideration at the Bombay session related to the establishment of an export sector in a fresh bid to promote exports. The meeting, presided over by Mr. Manubhai Shah, Union Minister for International Trade, decided in principle that the industrial units working for exports should be given further assistance to increase their contribution to exports. The objectives of the proposed export sector are to make select existing industrial units more export-oriented, expand existing industries with export potential to establish additional capacities for export and encourage the establishment of new units in select industries for providing additional exports. It was, of course, realised that no unit could be entirely designed to cater for exports, but, according to the Board, "it will be sufficient if the units or industries in the export sector contribute substantially, say, about 50 to 60 per cent of production, for exports." There are, it is said, several industries which have greater export potential but which have just started making their initial contributions, such as pig iron, castings, forgings, oilcake extractions, specialised varieties of cotton textiles, woollen and jute carpets, cashew, raw sugar, as well as engineering and pharmaceuticals.

The main consideration which weighed with the Board of Trade is advocating the creation of an export sector appears to be that facilities and privileges granted to industries should have full effect upon production, costs and quality. Instead of scattering away various incentives over a wide field, the best results could be obtained, according to the Board, if a selection were made of those products for which the external demand would be growing and special attention was devoted to those industries. It is claimed that this would enable the industry to expand and take full advantage of the economies of scale and the specialisation for different world markets. The establishment of the industrial units, according to the scheme, may also be determined in such a way as to take full advantage of rationalisation in transportation costs. In the case of existing industries, the proposal is to select units which are already catering to exports and help to remodel them for increasing their output of export goods. Ultimately, the major part of the output will be designed for export markets. Separate export units will also be set up in export-oriented units. The Board, however, deferred a final decision on the proposal. It constituted a committee to study these questions in detail and submit a report to the Board for further consideration. The Committee consists, among others, of Mr. Padampat Singhania, Dr. P. S. Lokanathan, Mr. Sachin Chowdhury, Mr. R. G. Saraiya, Dr. D. R. Gadgil and Mr. G. L. Bansal.

Vegetable Oils

As in the other previous meetings, the Board paid special attention to an examination of the prospects for expanding exports of certain select items. The commodities that figured at the last week's meeting were (non-essential) vegetable oils, oilcakes, *vanaspati* and other allied products. The Board was of the opinion that these commodities would have to contribute, in an increasing manner, substantial foreign exchange earnings. It, therefore, suggested that adequate steps would have to be taken to increase the production of oilseeds and oils, apart from making the industry more modern and efficient. It called upon the Government to provide greater facilities to the oil and oilcake industry for future development. One does not know what are the precise measures of encouragement which the Board had in view. It would have been better had the Board spelt out in concrete terms the precise means of assistance to be given to these industries, instead of merely reiterating a statement that has been made times without number. It is also not clear how the Board came to the conclusion that the present export promotion schemes for the aforesaid commodities were adequate. The proof of the pudding is in the eating. What has been the export performance of these commodities of late? Exports of vegetable oils have suffered a distinct setback in recent years, having gone down from Rs. 34 crores in 1955-56 as low as about Rs. 6 crores by 1961-62 (for details please see *Commerce* dated 18th August 1962, page 270). As the domestic prices of groundnut oil, castor oil and linseed oil have been ruling very much higher than world prices, their exports have been adversely affected. Even the export of *vanaspati* has, of late, come down. The industry has been asking for better incentives for promoting exports. Apparently, the Board has not appreciated the stand of the industry. The shipments of deoiled cake, however, have shown an upward trend; and the Board stressed the need for stepping up its exports further. The Board also felt that special encouragement would have to be given to the development of deoiled rice bran and deoiled cakes of other varieties, including cottonseed cakes and linseed cakes.

Crop Planning

It is obvious that no amount of talk on export promotion of oilseeds, oils and oilcakes will lead to an increase in their shipments. It is only by increasing the production of oilseeds that the goal can be reached. It is only appropriate, therefore, that the Board should have devoted some thought to the need for expanding production of oilseeds and other crops. The Board felt that the advantage which India has enjoyed in some of the crops could only be maintained if crop planning was properly drawn up, giving due weightage to the crops in which the country is deficient, and in stepping up production of such cash crops which are needed for both internal consumption and augmenting exports. The crop planning, in turn, in the opinion of the Board, required a great deal of co-ordinated and inter-related price structure of different crops, so that balanced growth takes place and balanced importance is given to different crops in a planned manner. Increase of agricultural productivity with adequate supply of fertilisers, seed multiplication and various other facilities that were already being given should, the Board stressed, be further augmented and in the current Plan and in the next Plan, greater attention and priority would have to be paid to development of agriculture, placing agriculture as the most important sector of economy in the country, both for internal requirements and specially for expanding exports.

There is nothing new in the Board's suggestions. They have been advocated before by others. But the Government has scarcely bothered to introduce crop planning. Will Mr. Manubhai Shah convey the Board's emphasis on this point to Mr. S. K. Patil and see to it that sufficient surpluses were created in commercial crops? It will take quite a few years for the results to be felt, even if prompt steps are taken with effect from the forthcoming *rabi* crops. Accordingly, the measure advocated is not going to lead to any significant increase in the export of vegetable oils and cakes in 1962-63 or even in 1963-64.

The Board also examined the question of sugar exports and was of the view that exports of sugar should form a very important part of future export programme, because, through proper crop planning and by taking maximum advantage of economies of scale, by modernisation and expanding the existing units, in preference to creation of more units, costs could be reduced, contributing to larger exports. Increasing the productivity of sugarcane cultivation and by various rationalisation and management practices in sugar industry, the export of sugar could both be expanded, as well as the losses suffered in export of sugar could be reduced. It should be possible to maintain the export to near about 500,000 tons on annual basis. Regarding the production of raw sugar, in preference to crystal sugar, it was appreciated that the world markets demand raw sugar in preference to crystal sugar. The Board noted that sugar industry was already drawing up programme for production of raw sugar required for export.

The Committee on "fair trade practices" appointed by the Board under the chairmanship of Mr. Shriyans Prasad Jain, gave the Board its preliminary idea about the question. The Committee is expected to submit its final report in the next three weeks. In the meantime, the Board endorsed the general approach of the Committee that the trade and industry should, in co-operation with the Federation of Indian Chambers of Commerce and Industry and various chambers of commerce and other industrial associations in the country, display price lists prominently at the ex-factory level, at the wholesalers' depots and in the retail shops for 20 to 25 commodities of daily consumer need like foodgrains, oils, cloth, light engineering products, domestic equipment, footwear, medicines and provisions stores, paper and paper products, crockery and porcelainware and other items.

The price lists are expected to be exhibited at the retail and wholesale levels and factory level. Along with these, the Board also endorsed the idea of the Committee that individual price tags on different items should be exhibited in stores, retail shops, consumer cooperative stores, fair price shops, and wholesale depots, clearly laying down the price and specification of each product, so that the consumer could easily know the price of each commodity. To begin with, all the shops in urban areas with a population of about 50,000 and over, should be selected and preparations must be made by all retailers, wholesalers and factory owners, to start this in the course of the next few months. Once the practice got adopted, more commodities could be covered, more shops could be brought into this programme and, gradually, the practice could spread to the rural areas. Further action would be taken after the report of the committee was received.

CONSUMER GOODS INDUSTRIES

MR. P. SINGHANIA'S VIEWS

THE need for giving greater attention to expanding consumer goods industries was stressed by Mr. Padampat Singhania, a well-known industrialist of Kanpur and the head of the J. K. Organisation. Mr. Singhania, who was speaking at a meeting of the Central Board of the J. K. Organisation at Kanpur the other day, observed that renewed emphasis on the development of consumer goods was called for in view of the increase in prices of such commodities and its impact on the cost of living. Apart from increasing production of consumer goods, he urged the Government to reduce the various levies on consumer goods, as they raised their ultimate cost to the consumer. According to him, if excise duty alone were to be removed, prices of consumer goods would go down by 25 per cent. He added that this showed that, although there was possibility of holding the price line, the Government did not want to take the logical step.

Mr. Singhania was also not very optimistic about the possibility of fulfilling the third Plan targets. He, in fact, advocated the abandonment of some of the third Plan projects, if India wanted to make the Plan a success "with limited financial resources at its command." Elucidating his stand, he observed that the basic problem confronting the Government now was shortage of foreign exchange. Although domestic resources of the country mobilised to the greatest extent possible had been supplemented in substantial measure by external assistance, loans so far secured would "prove inadequate, if we do not keep watch on expenditure and abandon some projects which may not be necessary at the moment and give more attention to the planning and execution of specific basic industries." He also wanted the Government to give licence to such plants the establishment of which required no foreign exchange, so that their production might go up and, in turn, earn more foreign exchange.

On the question of improving the system of transport and communications, Mr. Singhania pointed out that never before in the history of the railways were there so many accidents as there was today. He was of the opinion that, if the railways were re-divided into four separate sectors controlling each zone and their General Managers were given complete responsibility, there would be few accidents and the responsibilities would be efficiently shouldered by them. He felt that, since the amalgamation of zonal railways and the assumption of complete control by the Railway Board, "the General Managers of railways seem to have lost all responsibility, with the result that the life of passengers has become too cheap." He was of the view that road transport was more efficient, especially over short and medium distances. This did not mean that railways were less important. Indeed, he added, one would have to depend on railways alone for moving heavy goods.

THE JAY ENGINEERING WORKS LIMITED

LALA CHARAT RAM, CHAIRMAN, STRESSES NEED FOR REDUCING PRODUCTION COSTS

EXPORTS ARE OF PARAMOUNT IMPORTANCE

THE keynote of the speech of Lala Charat Ram, Chairman of the Jay Engineering Works Ltd., at the Twenty-fifth Annual General Meeting of the Company held at Calcutta on Thursday, 27th September 1962, was the emphasis laid on reducing cost of production as a prerequisite for promoting exports. He, however, was not in favour of "mud-slinging" at either labour or the Government for increasing costs. The task of reducing costs, he said, was the joint responsibility of the management personnel in industry, its operating personnel in plants and offices and of the Government. Lala Charat Ram, whose speech was notable for a realistic appraisal of his Company's experience on the export front, extended unequivocal support for the proposal to make exports mandatory.

The following is the full text of Lala Charat Ram's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the twenty-fifth annual general meeting of the Company.

"At the last meeting, I had deputised for my father, Sir Shri Ramji, on account of his indisposition. Sir Shri Ramji has continued to guide the affairs of the Company so far, in spite of keeping indifferent health for sometime now, and he has now requested the Board to relieve him of the responsibilities of the Chairman's position; he has, however, assured us all, if an assurance were at all needed, that he will continue to be a part of us all, remain on the Board of the Company and guide our steps as heretofore. It is a solemn occasion for me, and one of no little apprehension at stepping into shoes that had hereto been filled by such an eminent personage. In all humility, I pray for being able to serve this Company well, which is so near to Sir Shri Ramji's heart.

"During the year, your Company—as indeed the whole of India—lost its great friend, Dr. B. C. Roy. Dr. Roy's services to West Bengal and particularly to its industry—need no repetition. Your Company had the privilege of his special patronage and we feel his loss greatly.

"The annual report of the Company for the year ended March 1962 has been with you for some time now; with your permission, I shall take it as read. As usual, there have been some areas of gains, and some other areas which must cause us all concern. I would like to highlight some of these here.

Higher Profit

"The gross profit has been marginally higher at Rs. 91 lakhs, as against Rs. 88 lakhs last year. This profit, however, is on increased capital and reflects a lower capital productivity, i.e., return on the capital employed. The decline is explainable somewhat by increasing investments in our Hyderabad factory, which will necessarily take some more time before it begins to contribute to the profits of the Company. The profits were also affected by frequent power shedding in Calcutta, increased excise levies on copper, winding wires and special steels, considerably higher transport charges on coke on account of rail transport not being available, and very much higher price paid for American silicon sheets due to restricted import licensing from other countries. The incidence of actual cost due to these causes has been considerable. Your Company, however, has refrained from increasing the prices of its finished products, in keeping with its traditional policy of avoiding increases in selling prices so far as is at all possible.

Plan for Economy

"The equity dividend proposed to be disbursed this year amounts to Rs. 22.8 lakhs, as against Rs. 18.4 lakhs last year, being 15 per cent this year on enlarged share capital, as against 17.15 per cent last year on smaller capital. In the face of continuous increase in costs, which are beyond the management's scope of control, it is requiring all the management effort in keeping down costs by expansion of production and reduction of expenditure. We are launching this year on a plan of economies in all directions, and it is hoped that, with this effort, and the contribution which the Hyderabad unit might make, profitability will show improvement.

"Increases in production have been less this year than previously. Whereas the rate of expansion necessarily slows down as higher levels of output are achieved, nonetheless the production would certainly have been better, but for the dislocation caused by frequent power shedding in Calcutta.

Exports

"Exports have been for your Company a matter of social and business philosophy and our efforts have been continuing for an expanding organisation to meet the targets of higher export figures. I referred last year to the proposal for the setting up of foreign subsidiaries as a part of our export promotion drive. Your Company has now started the manufacture of sewing machines in Ceylon in collaboration with the people of that country. Authorisation has also been obtained for starting a manufacturing unit in Burma. There has been an unfortunate decline in exports from Rs. 113 lakhs to Rs. 91 lakhs in the preceding year; the fall is accounted for by the import restrictions imposed by the Governments of Yugoslavia, Burma, Ceylon and Egypt, resulting in a decline of Rs. 33 lakhs, from Rs. 52 lakhs to Rs. 19 lakhs. On the other hand, our exports to industrially developed countries, such as the U.S., Germany, the U.K. and others are increasing.

Rising Cost

"The matter of rising cost of manufacture is one of great alarm. Criticism is voiced, and rightly too, against increase in selling prices of goods, and the steady inching up of living costs. But, if manufacturing costs continue to mount up, they must sooner or later be reflected in increased selling prices. It would appear, however, that those people who represent against this trend, pay only lip sympathy to the cause. Organised labour which represents an important mass of consumer group, ceaselessly strives in the factory for higher remuneration in one form or the other, while agitating in the market place for lower prices—a contradiction in terms. Governmental authorities wish to keep prices down, as any good Government must, and yet as a consequence of one or the other imposts, costs of transport, materials, power, etc., keep on going up. Management personnel have an important role to play in this area; without implying that the material efficiency in Indian industry is not capable of improvement, the fact needs to be faced that tirading against industry as distinct from trade may meet political objectives, but will not provide solutions to the problem. To the extent that the ratio of return on capital in an industry shows a decline in the face of increasing production, it is a demonstration of the fact that the management has not increased its selling prices to match rising costs. The matter, however, is much too serious to permit of mutual mud-slinging; it is a matter of joint responsibility of the management personnel in industry, its operating personnel in plants and offices, and of the Government. Each of these groups needs to work wholeheartedly in their own areas of responsibility for keeping unit costs down. This matter of keeping unit costs low is of vital importance for our export trade, for it is on our export earnings that our very future hangs. I am glad to be able to report to you, as I have said earlier, that in the face of rising costs, your Company has refrained from any increases in the selling prices of its sewing machines and fans.

"It is heartening to note that the Prime Minister has thought it fit to give the portfolio of International Trade in the Union Government in the very energetic hands of Mr. Manubhai Shah. However, apart from some assistance in the shape of elimination of bottlenecks, which the Government might render, I consider that it is in the enlightened self-interest of Indian industry itself that it realises the absolute importance of self-reliance and maximum individual export effort. Every one must be aware of the country's very difficult foreign exchange situation and its impact on the country's economic plans. If the retardation in the growth of our economy continues to take place, as has been evident from several recent studies, this would necessarily have an impact on employment opportunities.

Economics of Export

"In this context, I may briefly state here what may be termed as 'the economics of export,' in the light I understand it. It is only a truism that the cost structure for most of our country's products is higher than in other countries. It is also correct that management personnel and operating personnel owe a duty towards a constant reduction in cost, and I hope that we are all attempting to work towards this objective. However, it would be unrealistic to wait for working aggressively for exports till such time as our costs become comparable to those of other countries. The selling prices in export markets bear little relationship to the costs of manufacture, even as they do not in the domestic market, and exports will need to be done only at competitive prices, and very often at prices below costs. Almost all countries follow a dual price policy, there being a much lower price for the export market than for the domestic market, the former being subsidised by the consumer in the domestic market. The incidence of all export loss has to be borne by the home consumer through increases in domestic prices; there is no escape from this situation. However, the incidence of loss on exports is not as frightening as it is made out to be very often. For the loss of every rupee in export, about half is contributed by the Government by way of loss in taxes, partly it is borne by the workers in the shape of reduction in bonus; partly by the management in the shape of reduced remuneration; and partly by the shareholders in the shape of reduced dividends. The consumer shares his bit by marginal increases in the domestic selling prices. If we also consider the reduction in costs, which higher output on account of export leads to, the loss to any Company in its net retained profits would be negligible indeed. Let me repeat that export effort is necessary now as a patriotic effort for national development, irrespective of short-term, real or imaginary self-interest.

Marketing Organisation

"But export sales need not only patriotism, but a good marketing organisation. As one of the major exporters in the engineering group of industries, it might be of some interest, if I was to give a brief account of the export marketing experience of your Company. All sales of your Company are now handled through a separate marketing company which was set up a few years ago. This was done with the conscious knowledge that the manufacturing activities had grown to such large proportions, that for the satisfactory marketing of these goods, an independent organisation, free from the problems of factory and production, was needed. This step, taken initially with some apprehension, has been fully justified by subsequent results. In fact, it will be correct to state that the high rates of output being achieved by the factory might not have been possible without a distinct marketing organisation, planned for selling all the output. This marketing company makes a constant study of the market potential in India and abroad, and keeps a constant watch on the designs, quality and prices of our competitors' products in the foreign markets. Every year, export targets are set for each country, and the achievement of these targets becomes the responsibility of the sales organisation personnel as a whole. More often than not, we have been able to meet and even surpass these goals. The proper location and expansion of distribution channels is extremely important for any marketing activity. We have distributors located strategically in various parts of the world. The annual report which is in your hands gives a list of the 40 odd countries, where the products of your Company are distributed. Basically, there are two alternatives available for the development of distribution in the foreign markets, i.e., either to establish a foreign

(*Continued on page* 615)

C.I.M.M.CO.'S MUCH BETTER RESULTS NO CONSOLATION TO SHAREHOLDERS

NEW CAPITAL PROJECTS IN HAND

MUCH better indeed are the results of the Central India Machinery Manufacturing Company Ltd. (Director: Mr. R. K. Birla, Gwalior) for the year ended 31st March 1962, which are highlighted by an almost one-crore increase in turnover at Rs. 365.63 lakhs, a nearly fourfold rise in gross profit at Rs. 48.29 lakhs and a significant spurt in the profit-margin (ratio of gross profit to sales) from a mere 4.5 per cent to 13.2 per cent. All the same, they are no consolation to the shareholders who have had no return on their capital since the Company was founded in 1943.

The year saw a sharp increase in the production of plain looms from 3,721 to 5,955 as also in that of drop box looms from 19 to 352. The output of automatic looms also increased from 19 to 41, but that of dobbies was down to 31 from 271, to which level it had declined in the previous year from 383 in 1959-60. The cost of raw materials and stores consumed during the year rose from Rs. 161.92 lakhs to Rs. 225.04 lakhs. Power and fuel cost about Rs. 3 lakhs more at Rs. 11.53 lakhs. Staff expenses jumped up from Rs. 50.46 lakhs to Rs. 65.54 lakhs. Other expenses increased from Rs. 25.14 lakhs to Rs. 37.96 lakhs.

As against nothing in the previous year, a sum of Rs. 32.91 lakhs has been provided for depreciation. In the opinion of the auditors of the Company, the fixed assets have not been adequately depreciated. This is attributed by the Directors to insufficiency of profits. The quantum of arrears of depreciation, computed in accordance with Section 205(2) of the Companies Act, 1956, amounts to Rs. 41.87 lakhs. The provision of Rs. 32.91 lakhs made this year is, we are told, in accordance with that section and comprises Rs. 16.88 lakhs for 1960-61 and Rs. 16.03 lakhs for 1961-62. No provision has been made for taxation. The net profit amounts to Rs 15.38 lakhs, as against Rs. 11.99 lakhs a year before. The preference dividend for the years 1960-61 and 1961-62 absorbs Rs. 8.06 lakhs. There are no arrears of preference dividends now. A sum of Rs. 1.54 lakh, as against Rs. 0.81 lakh in the previous year, has been set apart for development rebate reserve. The surplus of Rs. 19.17 lakhs has been carried forward, as against Rs. 13.17 lakhs brought in.

The comparative table below gives at a glance a clear idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales proceeds and job works	365.63	265.77	168.54	124.03
Closing stock of finished goods	25.73	17.81	26.16	29.96
Other income	0.80	2.88	0.28	0.40
Raw materials and stores consumed	225.04	161.92	90.32	67.34
Power and fuel	11.53	8.80	6.91	6.47
Staff expenses	65.54	50.46	39.49	34.84

* Subject to deduction of tax.

During the year, the Company started the manufacture of Cimmco-Sakamoto automatic looms in collaboration with the renowned firm of Messrs. Enshu Ltd. of Japan. It also took up production of high speed winding and warping machines with creel in collaboration with the well-known manufacturers, Messrs. Franz Muller Maschinenfabrik of West Germany. The automatic looms, we are told, have been well received in the market. The winding and warping machines are yet under production. The position of orders for plain looms at present, according to the Directors, is discouraging, because of the restrictive policy of the Government in the issue of permits for installation of such looms.

The calender bowl plant at Gwalior and the shuttle factory at Bombay are said to be making steady progress. Work at the Company's wagon and structural shop division at Bharatpur continues to be satisfactory. During the year under review, production there amounted to 1,493 wagons, as against 1,034 wagons in the previous year. For the current year, orders for 1,250 M.B.C. wagons have been received.

The Company is branching out further in diversification of its activities. It has two projects for early implementation, namely, cast iron spun pipes and steel casting. Import licences for plant and machinery for these projects are expected in due course. The necessary steps for setting up these factories will be taken on the receipt of the import licences.

The last year's results, if anything, are suggestive of a period of some great progress in store for the Company, after years of unsatisfactory working. Perhaps it is on this realisation that the Rs. 10 fully paid ordinary shares of the Company were quoted all of a sudden at Rs. 16 on 25th August last, after having remained unchanged at a nominal rate of Rs. 10 since 13th January last, on the Bombay Stock Exchange. According to market circles, Birlas are said to have released 10,000 shares of the Company for open sale. The best rate for the shares so far this year has been Rs. 16.52. Currently, however, they are quoted at Rs. 14. Looking to the future prospects for the Company, they do not seem to be a bad bargain at this rate.

Financially, the Company has yet to consolidate its position. Its paid-up capital of Rs. 150 lakhs, of which Rs. 100 lakhs are in equity shares and the rest in two types of preference shares, finds poor backing in reserves and surplus aggregating Rs. 34.18 lakhs. Secured loans have increased during the year from Rs. 28.39 lakhs to Rs. 56.25 lakhs and comprise debentures worth Rs. 30 lakhs, loan from the Government of Rajasthan of Rs. 1.29 lakh and private borrowings of Rs. 24.95 lakhs. Unsecured loans amount to Rs. 4.55 lakhs. Current liabilities and provisions aggregate Rs. 101.40 lakhs. The total short-term indebtedness to outsiders amounts to Rs. 130.90 lakhs and is fully met by current assets, loans and advances aggregating Rs. 181.53 lakhs. Investments amount to Rs. 8,200 and are in debentures of Rs. 100 each of the Sholapur Spinning and Weaving Mills Ltd. The gross block, which increased during the year from Rs. 194.74 lakhs to Rs. 207.66 lakhs, has been written down to Rs. 164.60 lakhs. Out of a total depreciation of Rs. 43.06 lakhs provided so far, as much as Rs. 32.91 lakhs has come from the profit for 1961-62, as already noted.

MADRAS ALUMINIUM COMPANY LTD.

Considerable progress has been made by the Madras Aluminium Company Ltd. during the calendar year 1962 in the construction of buildings and erection of machinery. Disclosing this, in their report for the year ended 31st December 1961, the Directors of the Company have explained that the original schedule of work was delayed because of two unforeseen difficulties. First, the Company, which is setting up the plant in collaboration with Messrs. Montecatini of Italy and has obtained the finance for the entire imported machinery from the Italian bank, Mediobanca, on deferred payment basis, under the credit facilities made available by the Italian Government, was affected by the amendment to the Law as regards insurance and financing by the Italian Government. The operation of the amended law was delayed until a new Government took over in Italy. Second, the Company had to furnish clarification, in regard to certain items of machinery to be imported, to the Government of India, before licences for the same could be obtained. However, we are told, the amended law in Italy offers terms more advantageous to the Company than before. Further, the collaborators have made efforts to expedite the work and maintain it, as far as possible, according to the original schedule. The import licence is worth Rs. 380 lakhs, c.i.f. The cost of the first stage of industrial buildings is estimated at Rs. 20 lakhs.

The Company is setting up the plant on a 100-acre plot at Mettur, about a mile from the Mettur Dam Railway Station. Last year, the Company shipped about 600 tons of bauxite from its mines to Italy for analysis by the machinery manufacturers in that country. The experiments on the ore have proved the correctness of the original project report submitted by Montecatini as to the quantity of aluminium available in the ore and designs for the plants have been prepared on the basis of such analysis. The Company received last year the technical know-how packet from the collaborators and, as per the agreement, it allotted them 45,000 equity shares of Rs. 100 each, treated as fully paid in consideration for the know-how. Inclusive of these 45,000 shares, the paid-up capital of the Company, as at 31st December last, amounts to Rs. 165 lakhs, of which Rs. 37.50 lakhs are in 9.3 per cent, taxable, preference shares of Rs. 100 each on which Rs. 25 have been called so far, and the balance in equity shares, also of Rs. 100 each, with Rs. 25 called up so far, excepting those shares which have been allotted to the foreign collaborators and are treated as fully paid-up. After the close of the financial year, the Company made a call of Rs. 25 per share on the equity shares.

KALPETTA ESTATES LTD.

PROFIT LOWER, BUT DIVIDEND MAINTAINED

HIGH cost of producing tea and lower selling prices for all the principal products, namely, tea, rubber and cardamom, have been responsible for the disappointing financial results of the Kalpetta Estates Ltd. (Managing Agents: Messrs. A. V. Thomas and Company Ltd., Alleppey) for the year ended 30th April 1962. Actual production during the year was generally higher than what was estimated for the year and also what it was in the previous year. Thus, production of tea amounted to 161,000 kgs. (as against the estimate of 154,222 kgs. and the previous year's outturn of 159,711 kgs.), of rubber to 154,112 kgs. (as against 136,078 kgs. and 136,334 kgs.) and of cardamom to 7,829 kgs. (as against 6,804 kgs. and 5,024 kgs.). As against the estimate of 15,240 kgs., actual production of coffee, however, declined to 10,187 kgs. from 12,549 kgs. in the previous year. The cost of producing tea increased from Rs. 2.77 per kg. to Rs. 3.26, but that of rubber declined from Rs. 2.72 per kg. to Rs. 2.37 and so did that of cardamom from Rs. 13.73 per kg. to Rs. 9.86, cost of producing coffee also fell from Rs. 3.37 per kg. to Rs. 3.30. The average selling price of tea declined from Rs. 4.46 to Rs. 4.38 per kg., for rubber from Rs. 3.32 to Rs. 3.25 and for cardamom from Rs. 18.66 to Rs. 15.95 per kg.

Due to the lower realisation on the principal products, sale proceeds registered only a minor improvement from Rs. 13.06 lakhs to Rs. 13.44 lakhs. The increase in the production costs referred to earlier was mainly due to (*a*) large amounts paid as gratuity to retiring workers (Rs. 7,300, as against the estimate of Rs. 3,000), (*b*) interim increase in wages at 15 nP and 11 nP per adult male and female worker, respectively, per day, and also to staff at Rs. 10 per member per month granted by the Wage Board with effect from 1st December last, and (*c*) intensive manuring programme adopted and heavy expenditure on repairs and upkeep of roads, buildings, etc., found necessary during the year.

The gross profit has declined from Rs. 3.10 lakhs to Rs. 2.43 lakhs. After providing Rs. 0.50 lakh (Rs. 0.46 lakh a year before) for depreciation, Rs. 0.80 lakh (Rs. 1.34 lakh) for taxation and Rs. 0.15 lakh (Rs. 0.26 lakh) for Managing Agents' remuneration, the net profit amounts to Rs. 0.98 lakh, as against Rs. 1.04 lakh in the previous year. Once again no amount has been transferred to reserves, while the dividend has been maintained at 12.5 per cent per annum, taxable, on the Rs. 10 fully paid shares.

The comparative table below contains the salient features of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 30th April			
	1962	1961	1960	1959
Sale proceeds	13.44	13.06	9.84	11.10

High	12.10	13.12	13.45	13.50
Low	11.22xr	12.00	11.15	11.50

* Subject to deduction of tax.

For the current year, the tea crop is estimated at 165,000 kgs. at a cost of Rs. 3.06 per kg., the rubber crop at 160,000 kgs. at a cost of Rs. 2.74 per kg., the cardamom crop at 9,100 kgs. at a cost of Rs. 10.37 per kg. and the coffee crop at 15,240 kgs. at a cost of Re. 1.70 per kg. Actual production during the current year up to 20th August amounted to 69,019 kgs. of tea and 33,926 kgs. of rubber, showing an increase of 12,670 kgs. and 8,279 kgs., respectively, as compared with the same period last year. The estimated cardamom picking is expected to be fully realised this year. The Directors have decided to dispose of the coffee area for Rs. 1.25 lakh, as it has resulted in a continues loss to the Company for the past three or four years.

Satisfactory progress has been reported on the expansion programme, envisaging planting of 150 acres under rubber on the Poonoor Estate

(*Continued on next page*)

JAIPUR UDYOG DOES WELL, DESPITE HEAVY ODDS

RESERVES STRENGTHENED

IN the face of serious impediments posed by such diverse factors as an illegal strike lasting for a fortnight, high ash content of coal, inadequacy of transport facilities for the movement of raw materials and the finished product and an insufficient supply of electric power, the improvement in output achieved by the Jaipur Udyog Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) during the year ended 31st March 1962, is really heartening. Not only has the production of clinker and cement gone up from 632,899 tonnes and 678,988 tonnes to 669,675 tonnes and 742,988 tonnes, respectively, but the despatches of cement also have been higher at 734,139 tonnes as compared with 676,751 tonnes during the preceding year, thanks to the keen demand for cement experienced throughout the year. Reflecting this better offtake and the rise in the retention price of cement, made effective from 1st November 1961, gross proceeds from sales have registerd a substantial gain of Rs. 120.12 lakhs to Rs. 765.35 lakhs. With higher production and despatches of cement it is but logical that there should have been an increase in the incidence of excise duty and cost of raw materials and stores consumed. However, the wage bill and other expenses also continued to grow. These rising expenses have restricted the growth in gross profit to only Rs. 39.08 lakhs, that is, from Rs. 70.09 lakhs for 1960-61 to Rs. 109.17 lakhs for the year under review. From this figure, the provision for Managing Agents' commission has taken away Rs. 2.02 lakhs (*nil*) and for depreciation Rs. 42.13 lakhs (Rs. 41.31 lakhs), leaving Rs. 65.02 lakhs as the net profit for the year under review. Although the profit for the year has been eminently comfortable, as compared with that for any one of the past three years, the Directors have thought it fit to conserve nearly 50 per cent of the profit and have accordingly transferred a sum of Rs. 33.13 lakhs to the reserves as against Rs. 11.30 lakhs last year. After setting aside Rs. 4.47 lakhs for the payment of bonus to workers for prior years and Rs. 2.25 lakhs for payment of dividends to the preferred shareholders, the Directors have utilised the balance for paying an ordinary dividend of 8.36 per cent, as against 8 per cent, both subject to deduction of tax. Although the rate of dividend is only fractionally higher than that for the preceding year, it must be noted that the dividend for 1961-62 amounts to a net dividend of 80 nP per share of Rs. 10 each and that too on an enlarged number of shares. This absorbs Rs. 20.90 lakhs, as against only Rs. 16 lakhs last year. Nevertheless, the carry forward at Rs. 4.95 lakhs is substantially higher than the amount brought in, namely, a mere Rs. 67,719.

The rapid progress achieved by the Company during the past four years is well reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Cement sales (gross)	765.35	645.23	596.72	378.76
Other income	5.20	3.67	2.42	1.43

Low	11.44	10.63	9.44	11.62

* For 1958-59 and 1959-60. *Note*:—All dividends are taxable.

It will be noted from the above table that, despite substantial profits and no carry forward of previous losses, no provision was made during the three years prior to 1962 for Managing Agents' commission and that provision for taxation is conspicuous by its complete absence. This may appear to be intriguing but is explained by the fact that the Company has been charging depreciation on the straight-line basis on all its major assets and at income-tax rates on the written-down value on other minor assets and that its liability on account of depreciation according to income-tax rates has been substantially higher than that arrived at on the straight-line basis. During 1960-61, for example, it provided, as shown in the foregoing table, Rs. 41.31 lakhs for depreciation as compared with Rs. 80.54 lakhs required for the computation of the Managing Agents' commission on the amount of taxable profit. Since the gross profit was only Rs. 70.09 lakhs, this meant that for these two purposes the Company actually had a deficit on its profit and loss account and as such was not liable to provide for either the Managing Agents' commission or taxation. For the year under review the provision for depreciation as per income-tax rules worked out to Rs. 73.33 lakhs as against Rs. 42.13 lakhs actually provided for. In view of the unabsorbed amount of over Rs. 30.00 lakhs and the carry forward—for the calculation of the Managing Agents' commission and taxation only—of the deficit balance from the previous year, provision for Managing Agents' commission was restricted to a mere Rs. 2.02 lakhs while no need was felt to provide for taxation this year also.

During the year under review, the paid-up capital of the Company was raised by Rs. 50 lakhs by issue of further equity shares of Rs. 10 each to existing shareholders in the porportion of one new share for every four shares already held. This has increased the share capital to Rs. 325.00 lakhs of which Rs. 75.00 lakhs are in preference shares of Rs. 100 each and the balance in ordinary shares of Rs. 10 each. Reserves and surplus aggregate Rs. 99.00 lakhs. Despite the reduction effected during the year, loans are still on the high side, amounting as they do to Rs. 335.08 lakhs. In addition, there are current liabilities and provisions placed at Rs. 66.01 lakhs.

The net block of the Company is worth Rs. 594.43 lakhs and has been arrived at by deducting from a gross block of Rs. 869.04 lakhs the amount of depreciation of Rs. 274.61 lakhs provided so far. New assets acquired during the year were of the value of Rs. 34.07 lakhs. Current assets, loans and advances amount to Rs. 229.08 lakhs and investments are shown at Rs. 1.58 lakh.

Along with other industrial enterprises, the Company's operations were affected by the inadequacy of transport facilities for the movement of raw materials and cement. Besides, the railway freight of Rs. 4 per ton on the movement of basic raw materials over a distance of 14 miles placed a heavy drain on its profit. With a view to overcoming the transport bottlenecks and reducing the cost of operation, the Company is considering the question of installing an aerial ropeway or a railway siding of its own complete with rolling stock, etc., and has already instituted preliminary surveys and negotiations.

In order to improve efficiency and achieve economy of operation, the Company has been taking steps for large-scale mechanisation of the quarries by installing mechanical handling and other equipment. Four dumbers have been received during the current year and are being put into operation. Orders for one more shovel and the tractor have been placed and the erection of an additional slurry basin is in progress.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 13.16 *cum-div.* and on an *ex-div.* basis fetch a net return of about 6.5 per cent per annum.

FRESH CAPITAL ISSUES SANCTIONED

Following are the details of the fresh capital issues sanctioned by the Controller of Capital Issues:

Indian Refineries Ltd., New Delhi, a wholly-owned Central Government undertaking, is to issue further capital of Rs. 9.10 crores (in addition to Rs. 3.85 crores already issued) divided into 91,000 equity shares of Rs. 1,000 each to be issued to the Central Government for cash at par.

Bharat Forge Company Ltd., Bombay, a new company, will issue capital of Rs. 230 lakhs in equity shares of Rs. 100 each. Out of this, shares of the value of Rs. 5 lakhs will be issued to the Steel Improvement and Forge Company of Cleveland, Ohio, U.S.A. The proceeds of the issue will be utilised for the manufacture of various types of steel forgings.

Indian Aluminium Company Ltd. will issue (i) 801,276 equity shares of Rs. 10 each for cash at a premium of Rs. 15.50 per share, to be issued to the existing shareholders; (ii) 6¼ per cent 1971-76 debenture-stock for an amount of Rs. 100 lakhs to be issued at par, or at a premium not exceeding 2 per cent; (iii) sterling debentures stock of the value of £500,000 to be issued to the Commonwealth Development Finance Company Ltd., U.K. The proceeds of the issue will be utilised for increasing the production capacity of the smelter at Alupuram from 5,120 tons to 10,850 tons per annum and setting up an aluminium foil rolling and finishing mill of the capacity of 2,500 tons per annum at Kalwa, near Bombay.

The Titaghur Paper Mills Company Ltd., Calcutta, is raising further capital of Rs. 1,68,07,200, consisting of Rs. 56,02,400 in bonus shares on capitalisation of reserves and Rs. 1,12,04,800 in equity shares of Rs. 10 each for cash, to be offered to the existing equity shareholders at a premium of Rs. 5 per share. The proceeds will be utilised for financing the scheme of expansion and renovation of the mills.

Hindustan Photo Films Manufacturing Company Ltd., Madras, which is wholly-owned by the Central Government, is issuing further capital of Rs. 130 lakhs in equity shares of Rs. 1,000 each, to be subscribed by the Central Government in cash at par. The proceeds will be used for the manufacture of raw films for cinema industry, X-ray and roll films.

Fiber Glass Pilkington Ltd., Bombay, a new company, is raising capital of Rs. 1,19,99,930 in equity shares of Rs. 10 each at par. Out of this, shares of the value of Rs. 61,20,000 will be issued to the foreign collaborators—Rs. 30.60 lakhs to the Fibre Glass Ltd., of St. Helens, Lancashire, England, and Rs. 30.60 lakhs to the Owens Corining Fiberglass Corporation of U.S.A. The proceeds of the issue will be utilised for the manufacture of glass fibres and glass fibre products.

Mac-Tools Ltd., Madras, will issue capital of Rs. 1 crore, divided as Rs. 80 lakhs in equity shares of Rs. 10 each and Rs. 20 lakhs in 9.5 per cent preference shares of Rs. 100 each, all for cash. The proceeds will be used for the manufacture of bench lathes, hydraulic surface grinders and workshop presses, etc., in collaboration with Messrs. Matre-Werke G.m.b.H. Germany, which will be allotted equity shares of Rs. 9 lakhs.

The Indian Tool Manufacturers Ltd., Bombay, is issuing bonus shares of Rs. 5 lakhs, divided into 5,000 equity shares of Rs. 100 each, to be issued in the ratio of one bonus share for four shares held.

Devidayal Cable Industries Ltd., Bombay, will issue (1) bonus shares of Rs. 4.10 lakhs on capitalisation of general reserve fund to a like extent and (2) further cash issue of Rs. 37.50 lakhs in 275,000 equity shares of Rs. 10 each and 100,000 9½ per cent (subject to tax) preference shares of Rs. 10 each. The proceeds will be utilised for the manufacture of winding wires and insulated cables, etc.

Geep Flash-Light Industries Ltd. (formerly Great Eastern Electroplaters Ltd.) Allahabad, U.P., which is engaged in the manufacture of dry cell flashlights, is to issue capital of Rs. 2 lakhs divided into 20,000 ordinary shares of Rs. 100 each to be issued as bonus shares on capitalisation of the Company's reserves to a like extent.

Oil India Ltd. is to issue debentures worth Rs. 30 crores for cash at par. The proceeds will be utilised for the construction of a pipeline from the oil fields to the two refineries at Gauhati and Barauni.

Madras Spinners Ltd. is issuing equity capital of Rs. 25 lakhs for cash at par. The proceeds will be used for starting a cotton mill at Palghat, Kerala State.

(*Concluded from previous page*)

and 200 acres under cardamom on the Chulika Estate. During July 1962, 40 acres under rubber and 100 acres under cardamom have been planted as part of the expansion scheme. Certain portions of land on the two estates are under dispute and the Company is taking necessary legal action. The Directors state that this will not affect the expansion programme. It will be recalled that, in order to finance the expansion programme, the Company recently issued 40,000 equity shares of Rs. 10 each at par and offered them at first to the existing shareholders and the remainder to the public. It is proposed to raise the Directors' fees from Rs. 75 to Rs. 100 per Director per sitting, in view of the increase in the work.

The financial position of the Company is sound. Its paid-up capital of Rs. 8 lakhs is supplemented by reserves and surplus aggregating Rs. 8.02 lakhs. Secured loans, representing bank borrowings, amount to Rs. 1.71 lakh, as against *nil* in the previous year. Current liabilities and provisions aggregate Rs. 5.44 lakhs. The total short-term indebtedness to outsiders thus amounts to Rs. 7.15 lakhs, as against which current assets, loans and advances total Rs. 5.99 lakhs and investments amount to Rs. 0.27 lakh. The gross block, which increased during the year from Rs. 19.45 lakhs to Rs. 21.32 lakhs, has been written down to Rs. 16.91 lakhs.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 11.22 *ex-right, cum-div.* On the *ex-div.* basis, they offer a net yield of 8.4 per cent per annum.

SYNOPSES OF COMPANY REPORTS

Khardah Co., Ltd.

(*Managing Agents*: Messrs. Anderson Wright, Ltd., Calcutta.)

Annual General Meeting: Held on 29th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sale of cloth and bags	5,40,28	6,61,92
" jute	1,69	13,57
Closing stock of jute	82,44	61,05
" " " jute in process	7,10	9,91
" " " cloth and bags	26,23	35,13
Gross profit	27,53	13,94
Transfer to Managing Agents' commission	1,92	61
" " depreciation	7,30	7,57
" " provision for taxation	8,16	2,71
Net profit	10,15	3,05
Adjustments	Nil	87
Appropriations:		
Total available balance	10,15	3,92
Transfer to development rebate reserve	2,10	36
" " additional dividend on preference shares in respect of previous years	Nil	16
Proposed dividends on preference shares	70	70
" " on ordinary shares	6,75 (12.50%)	2,70 (5%)
Carry forward	60	Nil

N.B.—Adjustments include the balance brought down from the previous year and a balance from preference dividend suspense account.

Extracts from the Directors' report: In compliance with the working time agreement of the Indian Jute Mills Association, the mills were permitted to work the equivalent of a single shift for 42½ hours per week with 12 per cent of the total complement of looms sealed from the beginning of the accounting period. In order to conserve jute stock, the mills, in conjunction with the rest of the industry, remained closed for a period of one week each at the end of June and July 1961. With the advent of the new crop, the working hours were increased from 42½ to 45 hours per week from the 25th September and to 48 hours per week from the 16th October 1961. Production was further stepped up by progressive unsealing of 2½ per cent of the looms from the 13th November 1961 and by a further 2½ per cent from the 1st January 1962. From the 15th January 1962 the mills were permitted to work to the full extent of their ability and the mills have been working to their maximum capacity by utilising accumulated loom hours.

In spite of critical trading conditions which prevailed during the first half of the year under review, the profit of company for the year shows a substantial increase over the previous year. This was due to improved trading conditions with adequate supply of jute and continued demand for gunnies in the second half of the year. The prospects for the current year are expected to be better.

Modernisation of the preparing and spinning sections of the mills is almost completed and plans are being made for installation of 50 broad looms for manufacturing carpet backing cloth which are expected to go into production by the end of 1962.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	63,00,000	Gross block	2,33,02,046
Reserves and surplus	26,68,697	—Depreciation	1,47,20,051
Other liabilities	1,82,92,072	Net block	85,81,995
		Current assets	1,81,37,418
		Investments	5,21,053
		Cash	19,403
	Rs. 2,72,60,769		Rs. 2,72,60,769

* Paid-up capital consists of 9,000 6 per cent. cumulative preference shares of Rs. 100 each paid up, 90,000 ordinary shares of Rs. 10 each issued for cash and 4,50,000 ordinary shares of Rs. 10 each as fully paid up by way of bonus shares by capitalisation of reserves.

Raneegunge Coal Association Ltd.

(*Secretary*: Susil Kumar Mukerjee Esq., Calcutta.)

Annual General Meeting: Held on 29th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sale of coal and coke	1,11,05	1,01,39

Proposed dividends last year	Nil	4,08
" " equity shares	5,71 (17%)	Nil (—)
Carry forward	36	51

N.B.—Adjustments include the balance brought down from the previous year, adjustments relating to previous year, unclaimed dividend forfeited and liability no longer required written back.

Extracts from the Directors' report:

Progress	*Year ended* 31-3-1960 Tonnes	*Year ended* 31-3-1961 Tonnes	*Year ended* 31-3-1962 Tonnes
Raisings	4,47,017	5,02,222	5,05,126
Despatches	4,44,162	4,83,456	5,19,850
Stocks	42,701	61,468	46,744

Raisings increased by 2,904 tonnes and despatches increased by 36,394 tonnes.

Coke Manufacture: The Company manufactured during the year under review 5,385 tonnes of hard coke, 4,516 tonnes were despatched and 2,511 tonnes remained in stock.

Development and Prospects: Development in all sections of the collieries is progressing favourably.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	33,58,900	Gross block	1,62,75,321
Reserves and surplus	41,20,781	—Depreciation	1,12,48,598
Other liabilities	29,05,231	Net block	50,26,723
		Current assets	12,30,290
		Investments	8,583
		Cash	41,19,316
	Rs. 1,03,84,912		Rs. 1,03,84,912

* Paid-up capital consists of 3,35,890 equity shares of Rs. 10 each fully paid.

Amalgamated Coffee Estates Ltd.

(*Managing Director*: K. N. Neelakantan, Esq., Seethagundy Estate, Kerala.)

Annual General Meeting: Held on 29th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Coffee sales	6,18	10,62
Cardamom sales	8,90	12,52
Timber sales	21	9
Closing stock	3,70	6,12
Gross profit	2,24	4,15
Transfer to depreciation	47	53
" " provision for taxation	30	1,92
Net profit	1,47	1,70
Adjustments	15	24
Appropriations:		
Total available balance	1,62	1,94
Transfer to debenture redemption reserve	50	75
Proposed dividend on preference shares (taxable)	36	36
" " on equity shares (taxable).	68 (10%)	68 (10%)
Carry forward	9	15

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Average*: The existing acreage of the Company stands at 3,914.25 acres for the current year, of which coffee in bearing amounts to 1,143 acres.

Crop and Price: A total crop of 3,93,775 litres of coffee which gave an outturn of 114 tonnes and 64 kgs. cured coffee and 49,917 kgs. of Cardamom were harvested during the year under review. Coffee was produced at a cost of Rs. 281.85 per 50 kgs. and Cardamom at Rs. 5.88 per kg.

The average price realised on coffee was Rs. 163.58 per 50 kgs. and that of cardamom was Rs. 16.80 per kg.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,75,000	Gross block	20,40,043
Reserves and surplus	2,94,161	—Depreciation	3,98,057

" " balance of dividend on preference share (1960-61)	Nil	4
Proposed dividends on preference shares (taxable)	16	16
" " on ordinary shares	1,60 (20%)	1,60 (20%)
Carry forward	1,07	1,45

N.B.—Adjustments include only the balance brought forward from the previous year's account.

Extracts from the Directors' report: During the year the sales of copper sulphate decreased because of adverse seasonal conditions caused by last year's unprecedented floods and landslides in the plantation area. There was also keen competition in the sales of the chemicals manufactured by the Company. Owing to the lower prices obtained there has been a reduction in profits. The production at Belagula factory has been affected by the unhelpful attitude of the labour and slowdown tactics. Owing to short supplies of coal, the Company had to resort to fuel oil during the year which has put up the production costs considerably. Consequent on the award of increased wages to the workers retrospectively by the Industrial Tribunal the wage bills have increased without corresponding increase in output.

The Company is undercapitalised and the directors propose to issue further capital progressively. They have decided to issue Rs. 2 lakhs capital out of the unissued authorised capital for the present in the shape of 20,000 equity shares of Rs. 10 each to existing shareholders payable in full on application and ranking *pari passu* with existing shares at one share for every four shares held.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	13,38,515
Reserves and surplus	5,66,690	—Depreciation	7,11,140
Other liabilities	46,32,351	Net block	6,27,375
		Current assets	53,14,350
		Investments	2,30,302
		Cash	27,014
	Rs. 61,99,041		Rs. 61,99,041

* Paid-up capital consists of 20,000 6 per cent. cumulative tax-free preference shares of Rs. 10 each and 80,000 ordinary shares of Rs. 10 each fully paid up. Of the ordinary shares, 20,000 shares are allotted as fully paid up by way of bonus shares by capitalisation of reserve.

THE JAY ENGINEERING WORKS

(*Concluded from page* 611)

branch of the Company or to appoint local distributors; the choice ultimately depends partly upon the extent of the market and partly the extent to which we have resources for running a departmental distribution system in a foreign country. However, there is no doubt that a branch of the Company is in almost all cases far more effective than local distributionship. The combination of these two exists, however, in the sense that while work of physical distribution is the responsibility of local people, the sales promotion effort is largely planned and directed by our own representatives.

Quality

"The development of distribution channels is only a part of the big effort needed for the promotion of exports. Unflagging heed to quality maintenance is a must for any exporter of engineering goods. Traditionally, the Indian producer has not been as quality-minded as is needed. Japan has made a remarkable recovery in this matter in the post-war era. Its exports have increased in the last 10 years by 300 per cent to the staggering figure of over Rs. 2,500 crores per year, as against our annual rate of only Rs. 650 crores. This increase is largely due to the comparable, if not better quality, goods that Japan now offers at highly competitive prices. These handicaps, however, are bound to wear off as we gain experience and your Company is meeting the challenge of quality and design constantly in a fast changing world market.

"Yet another matter which an exporter has now to pay increasing attention to, is one of credit extension. This involves the raising of funds, and of covering the inherent risks involved in bad debts. Unfortunately, refinancing facilities for exporters are still inadequate in India. In this connection, the Mathrani Study Group recommendation for the establishment of an Indian Export-Import Bank is most welcome. The risk of bad debts is now somewhat covered by the Export Risks Insurance Corporation. It is, however, necessary to liberalise the terms of insurance on the basis that a little more than reasonable risk is worth taking, if the real objective of export insurance is to be attained.

After-sales Service

"The provision of 'technical service-after-sales' is of imperative importance in the marketing of engineering goods. This applies not only to industrial products, but also to consumer products, such as sewing machines and fans. Unless adequate servicing arrangements go hand in hand with sales arrangements, the export venture is likely to end in distress. We have always assigned the highest importance to this aspect and the success that we have had in exports is attributable in no small measure to emphasis on this matter.

"Finally, I would refer to an aspect of export sales which is abstract rather than tangible, but nonetheless significant. It is the 'image' that the exporter creates in the foreign market. Business has always to be responsive to community needs in any area; it becomes much more important when doing business in a foreign country. The newcomer is always suspect, and a natural impression is created that he is there for his own ends, at the expense of the receiving country. The exporter has to create confidence, to generate a feeling of community of interest, and to establish himself not as a self-seeker, but as one who is there to contribute to the welfare of the society in which he is operating. This aspect can present considerable difficulties, and much unintended offence can be caused. We have attempted always to pay great attention to local susceptibilities, and to create an image of 'USHA' which evokes respect and *comaraderie*. This has helped us a great deal.

"I am sorry that I have taken so much of your time in attempting to place before you some of the points that our Company emphasises in developing the export business; basically, there is nothing new in any of these points, yet this has been done in the hope that it may, possibly, provide some guidance to the willing and young exporter of this country. I believe that such pooling of experience will be of great advantage to the country's export trade.

"In closing, I wish to briefly say a few words on my understanding of the real difficulty in the way of exports and what is needed to be done about it. I believe that in the existing economic situation in our country, there is scarcely any alternative to a programme of mandatory exports. Incentives and persuasion have been tried for many years now, but with disappointing results. The vast increase in volume and spread of purchasing power makes this country of 400 million people a fabulous market for any producer. It would be a foolish producer who would seek out difficult markets and at a loss. Banking on patriotism is, in my opinion, banking on a weak staff. Many arguments are placed against mandatory exports; however, the opponents of this scheme are not able to place any positive alternative scheme of expansion of exports. There is no objection in trying for some more time the instrument of persuasion, but I hope that ideological opposition will not be permitted to come in the way of expansion of export earnings for much longer; our country cannot afford the time. This, however, is my own personal view and I would be very happy to see myself proved wrong.

"I thank you for the patience with which you have heard me. I am very proud of this opportunity of addressing you today, and I hope that the operations of the Company in the year have been a matter of general satisfaction to you.

"Thank you."

TEXTILES

(*Concluded from page* 590)

into Japan, where the stocking up phase appears to have ended, may, therefore, decline. Whether the total volume of world trade will be maintained or not will thus depend mainly on the extent to which imports into the U.S. and into the countries of the Sino-Soviet area recover during 1962. Shipments from Argentina and Uruguay may again be withheld, following the downward trend in prices at the opening of the South American season. In such an event, expansion would take place in exports from Australia, New Zealand and South Africa. In view of the de-stocking tendency and the intensification of competition from synthetic fibres, especially in Western Europe, an early significant recovery of wool prices is considered unlikely. Nevertheless, with a more regular pattern of wool textile activity in the major consuming countries, greater price stability may be expected.

The Technical Committee of the International Wool Study Group continues to meet regularly and to make quarterly reviews of world wool situation in general, including the price reserve operations of the New Zealand and South African Wool Commissions.

BANKING

(*Concluded from page* 588)

lakhs) drawn in the earlier years for the payment of guaranteed dividend.

The salient features of the Corporation's working results for the past four years are given in Table B.

Issue of Bonds

The Corporation did not enter the market for a fresh issue of bonds during 1961-62. The aggregate bonds issued and outstanding as at the end of June 1962, therefore, remained unchanged at Rs. 22.24 crores. In the current year, however, it has issued, as stated at the outset, bonds worth Rs. 6 crores. Borrowings from the Reserve Bank continued to be sparingly availed of during the year. The rate of interest charged by the Reserve Bank of India on these borrowings remained unchanged at 4 per cent per annum throughout the year. As on 30th June 1961, the outstanding loans from the Central Government stood at Rs. 15.25 crores. During the year under review, a sum of Rs. 2.50 crores was repaid to Government and a sum of Rs. 7.00 crores was drawn. The balance outstanding at the end of the year was Rs. 19.75 crores. The rate of interest payable in respect of these borrowings was 4½ per cent per annum, that is the same as in the previous years. The loan of $10 million sanctioned to the Corporation by the Development Loan Fund, now merged in the Agency for International Development of the United States of America, stood fully committed.

There has been a notable improvement in the resources position of the Corporation of late. The total reserves as on 30th June 1962 stood at Rs. 230.63 lakhs. With the recent bond issue of Rs. 6 crores, the grant of a second U.S.A.I.D. loan (Rs. 20 million or Rs. 9.52 crores), a likely credit in West German currency (15 million D.M. or Rs. 1.79 crore), allocation of $2-million yen credit, and the French credit (50 million or Rs. 5 crores), the Corporation), is today in a strong position to meet the growing credit demands of industries.

Notices

ROHTAS INDUSTRIES LIMITED

NOTICE

THE TWENTY-NINTH ANNUAL GENERAL Meeting of the Shareholders of Rohtas Industries Ltd. will be held at the Registered Office of the Company at Dalmianagar on Wednesday, the 31st October, 1962, at 11 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the financial year ended 31st March, 1962.
2. To declare dividends.
3. To elect a Director in place of Shri P. L. Saraogi, who retires by rotation and is eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., are eligible for re-appointment.

By Order of the Board,

For SAHU JAIN LTD.,

A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA, 1*st October*, 1962.

N.B.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

2. The dividends, if declared, will be payable to the Shareholders registered in the Books of the Company on 12th October, 1962.

ESSO STANDARD REFINING COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5¼ per cent Debentures 1964-68 will be closed for transfers from 18th October 1962 to 31st October 1962, both days inclusive.

R. N. CHETTUR,
Secretary & Treasurer.
State Bank of India.
Agents for the Esso Standard Refining Company of India Ltd., for the management of the debentures.

STATE BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 15th October to 18th October, 1962, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ended 30th September, 1962, on or after the 18th October, 1962, to those Preference Shareholders whose names appear on the Company's Register of Members on the 18th October, 1962, or to their mandatees.

By Order of the Board,
L. K. SEN CHOWDHRY,
Acting Secretary.

Registered Office:
12, MISSION ROW,
CALCUTTA-1,
5th October, 1962.

CALL MONEY RATE UP AGAIN

(From Our Own Correspondent)

BOMBAY, 3rd October

After remaining distinctly easy till Monday, the short-term money market experienced a slight pull on Monday, when the inter-bank call money rate spurted to 3½ per cent from 2½ per cent. This trend continued today also; actually borrowers dominated the scene. It is said that one or two medium banks paid even 4 per cent. The revival of upward trend is attributed to month-end demand for funds, especially for paying taxes. Advices from Calcutta, too, pointed to a hardening tendency, with eager borrowers even at 3¾-4 per cent. The short-term deposit rates are, however, unchanged at the ceilings under the Inter-bank agreement.

It is said that the draft agreement prepared by the Executive Committee of the Indian Banks' Association fixing the minimum lending rate at 6 per cent is having a good reception at the hands of its members. The sponsors appear to be confident of bringing the agreement into force from 1st November 1962.

The results of 91-days' Government of India Treasury Bills sold through tenders on Monday the 1st inst. are colourless. Amount tendered at Rs. 2 crores was the same as that last week and no more than that invited. The average rate of accepted tenders also was unchanged at 2.360 per cent per annum. Sales of Intermediate Bills from 26th to 29th September, both days inclusive—that is, during the days when the money market was extremely easy with inter-bank call money fetching no more than 2½ per cent—yielded as much as Rs. 2.30 crores. Sales of both the types of Bills are continuing.

A fall of Rs. 1.98 crore in foreign assets, bringing the total down to Rs. 93.94 crores, is disclosed by the Reserve Bank's statement for the week ended 28th September 1962. Loans and advances to scheduled banks have declined further by Rs. 1.74 crore, the total amount outstanding being Rs. 4.55 crores. Since advances against usance bills alone have declined by as much as Rs. 2.43 crores, there would appear to have been an increase in the scheduled banks' borrowings against other assets.

The Gilt-edged market continued to be quiet with further decline in the value of State loans raised this year. Thus, 4½ per cent 1974 of Maharashtra, Gujarat, Madras, Andhra Pradesh, Orissa and U.P. have lost in varying degrees. While the loans of the first two States have declined by 5 nP, the loss in others varies from 25 nP to 50 nP. There has also been a fall of 40 nP to 50 nP in the 4½ per cent 1972 issues of Madras, Andhra Pradesh and U.P. Among Central loans, there has been no significant variation. While 3 per cent 1963-65 has declined by 5 nP, 3 per cent 1970-75 has gone up by 5 nP. A similar rise has occurred in 2½ per cent 1962. 3 per cent 1986 Conversion Loan has, however, dropped 20 nP to Rs. 68.05, at which rate the yield works out to 4.40 per cent per annum.

After remaining quiet in the earlier part of the week, the £ sterling has picked up some strength in terms of U.S. dollar. Thus, the latest rate of 280.130-280.160 cents per £ for spot sterling in New York is better by 0.060 cent, as compared with the rate prevailing on 29th September 1962. There has been a like improvement in three months' forward, the latest rate being 279.680-279.710 cents per £. Locally, the Banks' selling rate for spot dollars has gone up by 25 nP to Rs. 478 per 100 dollars. Their buying rate, however, remains unchanged at Rs. 474.50.

SUGAR PRICES RALLY

(From Our Own Correspondent)

HAPUR, 1st October

After a further decline following the Government's move to release more sugar for sale in the open market, sugar prices here tended to rise in the week-end, thanks to revival of support from Delhi and Punjab. Demand from Gujarat, Maharashtra and Saurashtra was absent. Mills were burdened with heavy stocks. Forward deals in sugarcane came to a standstill and the prices were at a further discount on ideas of better prospects for cane following the recent rains. Latest prices were: Spot delivery Rs. 105.75 per quintal. Mill delivery (D-29) Amroha Rs. 103.15, Dhampur Rs. 103.15, Seohara Rs. 102.80, Meerut Rs. 104.49, (E-29) Simbhoali Rs. 103.82, Dhampur Rs. 102.80 and Bijnore Rs. 102.99.

In Muzaffarnagar, sugar prices suffered a sharp decline in the early part of the week due to lack of buying support, but rallied later on revival of demand towards the week-end. Earlier in the week, Punjab, Delhi, Rajasthan, Gujarat and Saurashtra refrained from making any bulk commitments in an uncertain market. Consequently, prices came down sizably by 32 nP to Re. 1.34 a quintal. But lower levels attracted demand, and during the second half of the week 50,000 bags were sold. Business in the bold crystals was done with Gujarat, M.P. and Saurashtra. Prices recovered modestly by 32 nP to 51 nP. Week-end prices for the different varieties were: AA 29 Shamli Rs. 108; Iqbalpur Rs. 109.50; Khatauli Rs. 108; B 29 Deoband Rs. 106.75; Rampur Rs. 105.75; Daurala Rs. 107; Rohana Rs. 106; C 29 Deoband Rs. 105.50; Saharanpur Rs. 105.75; Daurala Rs. 106; Seohara Rs. 103.66; D 29 Meerut Rs. 104.81; Sakoti Rs. 103.66; Amroha Rs. 103.47; Deoband Rs. 105; Dhampur Rs. 103.47; E 29 Bijnore Rs. 103.31 and Simbhoali Rs. 104.14, a quintal.

Khandsari prices were also depressed during the week in sympathy with the fall in the crystal sugar prices. Demand was also slack. The local offtake was fair for conversion into boora. Week-end prices were:—*Khandsari desi* Rs. 80.38 to Rs. 104.49, crystal Rs. 96.45 to Rs. 101.81 and boora Rs. 96.45 to Rs. 107.17 a quintal.

A steadier trend was witnessed in *gur* prices during the week, as old stocks were nearly exhausted and the festive demand was reported from rural areas. New production arrivals commenced in small quantity. The quality was reported to be poor and fetched Rs. 71 per quintal. The cane crop was reported poor in East U.P. and Bihar. *Shakker* continued to attract good buying support. The latest prices here were: *Gur* Rs. 64.30 to Rs. 68.38 and *shakker* Rs. 66.98 to Rs. 72.34 a quintal.

Gur futures were bullish during the week on support influenced by reports of damage to the cane crop in Punjab due to floods.

FURTHER FALL IN BULLION

(From Our Own Correspondent)

BOMBAY, 3rd October

There was a further decline in bullion prices during the week under review. The decline followed selling pressure from spot houses and up-country operators on renewed fears of official controls over bullion trading. Arrivals of both gold and silver were considerably larger than in the previous week, the daily average being 14,500 tolas and 45 bars, as against 9,000 tolas and 24 bars, respectively. The offtake, of course, registered a rise, but the pace of rise was much slower than that of arrivals. The actual daily average offtake was 11,000 tolas of gold, as against 5,500 tolas, and 10 bars of silver, as against 8 bars. The undertone of the market at the time of writing (5 p.m. today) was distinctly easy.

Bullion traders seem to be much agitated over reports suggesting the possibility of official controls over the bullion market. The Board of the Bombay Bullion Association, at its meeting on Friday, 28th September, decided to convene an all-India meeting of bullion dealers at New Delhi sometime in November next to urge the Government not to interfere in any way with the present mechanism of the bullion market. Meanwhile, the Board, it is said, will make efforts to mobilise public opinion before the Government takes any action to control trading in bullion, especially in gold.

The *Margashir* (11th December) settlement in gold moved down Rs. 121·60 last week-end to Rs. 119.05 today. At this level, there was some support and the settlement recovered to Rs. 119.35. The net loss over the week was Rs. 2.25.

Ready gold continued to be quoted at a discount under the forward throughout the week. The actual discount rose from 55 nP to Re. 1.30 today when the spot rate stood at Rs. 118.55, as against Rs. 121.05 on Wednesday last. The lowest level touched was Rs. 118.25 today.

In silver, the *Margashir* (12th December) settlement began the week at Rs. 221.30, as against the previous close of Rs. 221.05, and after declining steadily to Rs. 218.40 today, finished at Rs. 218.80. The net loss over the week was Rs. 2.25.

Ready silver encountered selling and receded from Rs. 220.05 to Rs. 217.40 today. At this level, the discount under the forward was Re. 1, same as that a week ago.

Silver at New York climbed up further to touch a fresh 42 year peak of 121.50 cents per ounce on 28th September. Following, however, the possibility of U.S. Treasury intervention by selling out of its stocks, silver receded to 118.50 cents on Monday this week but improved again to 119 cents today, a rise of one cent over the week. Ready silver in London, which had gone up to high of 103½d. on 28th September, slumped to 100½d. The dollar price of gold improved slightly from $35.11 to $35.11⅛ per fine ounce. Ready gold also gained ¼d. to 250s. 9d.

The following table shows the trend of prices during the week under review:

	3-10-62 (closing)	High	Low	26-9-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	118.55	121.05	118.25	121.05
*Margashir** ..	119.35	121.65	119.05	121.60
Sovereign	94.50	95.00	94.50	94.50
SILVER				
Ready (.999 fine) ..	217.80	220.45	217.40	220.05

London—				
Gold	250s.9d.	250s.91d.	250s.81d.	250s.83d.
Silver Ready	100d.	103d.	100d.	101½d.
Silver Forward ..	101d.	104d.	101d.	101¾d.
New York—				
Silver	119.00 cents	121.50 cents	119.00 cents	118.00 cents

* 11th December settlement. † 12th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

MODERATE ACTIVITY IN KIPS

(From Our Own Correspondent)

MADRAS, 1st October

Arrivals of kips in the local market this week were moderate and prices steady. Export trading was moderate, as most tanners were unwilling to adjust their prices to meet buyers' ideas, especially for the good tannages. Demand for f.a.q. was poor, except for the fifths selection in medium weight. Cowcalf skins in the higher average weights were in demand. Buffhides ruled quiet, as American buyers were still out of the market. Substantial inquiries for buffcalf—superior tannages—were in evidence and a few sales were reported of run parcels at 88d. and thirds at 78d. The market was firm.

In the tanned skins section, more inquiries for tanned sheep of all classes were received by the exporters with the middle class sheep in obtaining higher prices. Prime goat skins ruled firm especially the 5½/6 and 11/12 lbs. Demand for 13/14 lbs. up in goat skins from the Continent persisted for the secondary tannages.

In the German auctions, held last week, 70 per cent of goat skins were cleared at fairly good prices, as there was good bidding. Demand centred round lights and heavies. In sheep, only 15 per cent were sold at 3d. to 6d. below the current levels in the local market.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, 3rd October

The cotton futures market, after having ruled firm during the first two days of the week, turned easy in subsequent sessions. The earlier firmness was due to short coverings and fresh support prompted by reports of damage to the crop in the Punjab and other area. Later it turned out that the damage to the crop was exaggerated and that in the Punjab it might not be more than 10 per cent. Crop news from other areas, particularly Gujarat and Berar, was also satisfactory. Thus the earlier apprehension of serious damage gave place to a feeling of satisfaction over the overall crop situation. Reflecting this changed outlook, and also influenced by the poor demand for cloth, the Jarilla March contract declined from Rs. 744 (per three quintals) on Friday, the 28th September, to Rs. 736 on Monday the 1st inst. The market was closed yesterday on account of *Gandhi Jayanthi*. The contract receded further in today's dealings and is currently quoted at Rs. 731, a net decline of Rs. 9 over the week.

It is reported that an urgent meeting of the Cotton Advisory Board has been called on October 10th to review the overall cotton supply prospects during the current season. The Board is also likely to consider measures necessary to facilitate marketing of new crop Indian cotton at the ceiling prices. Simultaneously, an all-India cotton conference has been convened by the East India Cotton Association to consider the present cotton situation. The Conference may give its reaction to the scheme suggested by the Indian Cotton Mills Federation recently for marketing the new crop cotton through appointment of controllers.

Trading in the spot market at Sawri was featureless. Mill demand was very slack. Stray inquiries were, however, noted for such varieties as Co2, L147, Laxmi, and Kalyan. Turnover was very limited.

Although export demand for Bengal *Deshi* was only moderate, prices tended to harden, thanks to reports of damage to *Deshi* crop. Among foreign cotton, some business in Sudan cotton for prompt shipment was reported. East African growths too attributed some attention. Some mills also showed interest in U.S. cotton. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sawri:

Bengal *Deshi* 665; *Hubli* Jaydhar 1,051; Co2 1,610.

American on sample 1,175 to 1,220.

Sudan G4L 1,330; Busoga 1,210; Busoga (U.N.U.G.) 1,235; B.P. 52 1,240.

Easy conditions prevailed in the Karachi cotton futures market during the week. Both the January and March contracts succumbed to selling, the former declining from Rs. 69.20 last week-end to Rs. 67.50 and the latter from Rs. 68.70 to Rs. 67.25. Ready prices too receded.

Cotton futures in Liverpool recorded modest gains during the week. Paucity of offerings in the wake of good trade and mill demand led to hardening of prices. Ready demand centred mainly round Middle Eastern, Argentine and Peruvian cotton.

The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing rates:

October 23.50 (23.20); December 23.40 (23.15); September 29.50 (29.50).

Cotton futures in New York moved narrowly in thin and featureless trading, showing small net changes over the week. The nearby October attracted some short-covering and improved slightly while the more distant positions met with selling. The October contract rose from 33.29 cents last week-end to 33.35 cents. The December contract, however, declined from 33.83 cents to 33.75 cents and the March contract from 35.32 cents to 34.32 cents. Spot prices too were a shade easy. New York spot was quoted lower at 34.90 cents, as against 34.95 cents last week-end.

President Kennedy said at Washington last week that the Administration would present to Congress in January next a proposal to eliminate the two-price system of cotton. Government analysis of various alternatives were not yet finished but he emphasised that the proposal would be definitely introduced. Under the present Government subsidy programme American mills pay 8-12 cents per lb. more for cotton than what foreign mills pay. The Tariff Commission recently rejected an application for imposition of a special equalisation fee of 8¼ cents per lb. on cotton textile imports. There was no doubt, the President said, that the proposal was going to make some people unhappy. "It will perhaps make some other people less happy. Otherwise, it would have been done long ago. It means a struggle, but I think the struggle is worthwhile, because I think it is really foolish to pile this extra burden on the manufacturer, and then, at the same time, try to hang it another way on the importation of textiles."

BLACK PEPPER REACTS

(Messrs. Parekh and Co.)

BOMBAY, 3rd October

Malabar black pepper, after a continuous hectic rise for a period of more than a week, reacted from the highest at Rs. 345 for garbled to Rs. 312, as New York dealers withdrew after buying a sizable quantity from $0.36 to $0.40 for prompt and nearby shipment.

Singapore touched the highest at $125 but came down later to $120. The rise in New York spot, which was more or less engineered for a squeeze by a prominent bull, who was holding a majority of ready stock in the U.S.A. In the rising market, grinders who were buying hand to mouth got excited and sizable inquiries from them proved a timely help to the bull who was marking time and was building position both in ready and on the New York Exchange. The notable feature of the market was that the quotations for black pepper stood almost on a par with white, as white was neglected. October delivery on the Cochin Exchange rallied from Rs. 318 to Rs. 350 to come down to Rs. 312 with few buyers, as demand from New York or overseas proved poor and the growers who were stiff sellers became soft.

Ready demand for inland consumption was fairly good. The future of market is uncertain and the present level may not be maintained if timely support is not coming forth from New York as Lampong black pepper crop is already moving and in view of proximity of new season for Malabar. Every thing depends upon the policy of New York dealers. Crop prospects for new crop Malabar are reported to be good, but it is too early to give out any reliable estimate at this time of the season.

Ready pepper in Bombay is nominally quoted at Rs. 170 per 50 kilos.

YARNS DRIFT LOWER

(From Our Own Correspondent)

BOMBAY, 3rd October

Art silk yarn and staple fibre yarn drifted downward during the week under review, and cotton yarn continued to rule dull. Buying support from consuming centres was poor, while the supply position was quite comfortable. Some parties were reported to have sold sizable parcels of art silk yarn and staple fibre yarn. There were also rumours that a few spinners were making sales for forward delivery. Spot S.I. Viscose 150 deniers fell by 42 nP to Rs. 16.85 per kg., Century 75 deniers by 13 nP to Rs. 22.55 and National Rayon 120 deniers by 9 nP to Rs. 16.85.

Among staple fibre yarns, 40×2 October delivery encountered selling and declined from Rs. 718 to Rs. 702 per case of 90.72 kg. December contract dropped Rs. 14 to Rs. 722. Spot Centurys receded by 13 nP to Rs. 7.82. Kohinoors eased by 6 nP to Rs. 9.22.

Cotton yarns, as already stated, continued to rule dull. Business put through was restricted, though prices were generally maintained at last week's levels.

A vigorous plea for the reconciliation of the Central Government's decision that, against exports to rupee payment countries, imports of yarn should be also from the same countries was put forward by Mr. D. N. Shroff, Chairman of the Silk and Art Silk Mills Association, in his speech at the annual meeting of the Association held in Bombay on Saturday this week. Mr. Shroff said that it had always been the experience of the silk industry that, against export of art silk fabrics, no supplies of art silk yarn were available from rupee payment countries. As fairly large export of art silk fabrics took place to rupee payment countries, he added, there was the risk of losing these markets, if the link or switch arrangements were made to procure yarns against incentive licences issued for such exports. Proceeding, he stated that the State Trading Corporation's failure to enforce fulfilment of contracts entered into by the rupee payment countries such as Hungary should also help to throw into bold relief the seriousness of the problem.

The indigenous art silk yarn Distribution Committee has issued a notification calling for particulars of indigenous art silk supplies yet to be received by card-holders from rayon manufacturers under actual users scheme and art silk export promotion scheme. The Committee has said that card-holders under the above scheme should furnish required information before the 10th inst. to the Committee at Resham Bhavan, Bombay, particulars regarding export promotion scheme and actual users scheme should be given separately. The particulars required are name and address of the card-holder and category to which he belongs (P.L. or D. & T. etc.), allocation card number, allocation period, spinner's name, quantity of allocation, quantity yet to be supplied by spinner, reasons for non-delivery given by spinner and reasons why card-holder has not taken delivery.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	3-10-1962	26-9-1962
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	16.85	16.94
Century 75D	22.55	22.68
S. I. Viscose 150D	12.91	13.33
Nainsook 100	19.67	19.93
Staple fibre yarn (40×2)—		
October (per 90.72 kg.)	702.00	718.00
December (,,)	722.00	736.00
Kohinoor (per kg.)	9.22	9.28
Century	7.83	7.96
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.50	18.50
20s Modern		24.50
30s Madura	29.00	29.00
40s Gokak	36.25	36.50
60s Finlay	69.00	69.00
80s Madura	81.00	81.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

OILSEEDS RECEDE

(From Our Own Correspondent)

BOMBAY, 3rd October

Oilseeds and oils suffered a sharp setback in values during the week under review, thanks to persistent offerings. The deliberations of the Board of Trade in Bombay on the possibility of promoting exports of oils and oilcake did not have any perceptible effect on the market, as the Board did not suggest any specific export promotion scheme. Operators welcomed the export quotas for linseed oilcake (50,000 tons) for the six-month period ending March 1963. Exports against these quotas would be licensed freely by all shippers without any restriction on maximum shipment by individual shipper and licensing would be done on shipping bills supported by documentary evidence of valid firm sale contract. The Government of India has also decided to continue free licensing of mustard and rapeseed oil exports. Groundnuts ruled easy as more and more arrivals of new crop from Mysore unnerved bulls. Castorseeds, too, were depressed on reports of better crop in Brazil this season. Linseed and cottonseeds moved down in sympathy.

During the week, the September contracts of groundnut, castorseed, linseed and cottonseed, as also groundnut oil, went off the board. The tenders offered against these contracts were quite large.

Groundnuts January 1963 contract fell by Rs. 2.75 to Rs. 219.37. The September 1962 contract, which had closed last week at Rs. 247, ran out at Rs. 246. Nizam bold was marked down by Rs. 4.25 at Rs. 44.50 and Khandesh quality by Rs. 3.50 to Rs. 45.25. Oil January 1963 contract declined by 30 nP to Rs. 30 (per 16 kgs.). Railway receipts dropped 5 nP to Rs. 18.75.

Castorseed March 1963 contract receded by Re. 1.37 to Rs. 161.50. Kanpur shed 13 nP to Rs. 30.87. Oil B.S.S. and commercial lost 20 nP each to Rs. 12.80 and Rs. 12.20, respectively.

Linseed March 1963 contract closed lower at Rs. 39.19, as compared with Rs. 39.31. Bold ready decreased a rupee to Rs. 40.50. Linseed oil eased by 20 nP to Rs. 16.80.

Cottonseed January 1963 contract dropped Re. 1.50 to Rs. 100.50. White declined by 15 nP to Rs. 21.90 and Berar by 10 nP to Rs. 22.60.

The following table shows the closing prices of oilseeds and oils on Wednesday, 3rd October, as compared with those of the two previous weeks:

	3-10-1962	26-9-1962	19-9-1962
Groundnut	Rs.	Rs.	Rs.
Groundnut January 1963	219.37	222.12	221.62
Nizam bold	44.50	48.75	48.00
Khandesh quality	45.25	48.75	48.50
Oil ex-mill ready*	19.25	19.15	19.25
Railway receipts*	18.75	18.80	18.90
Castorseed			
Castorseed March 1963	161.50	162.87	164.00
Ready Madras	32.25	32.12	32.50
Ready Kanpur	30.87	31.00	31.12
Oil B.S.S.†	12.80	13.00	12.95
Oil commercial†	12.20	12.40	12.40
Linseed			
March 1963	39.19	39.31	39.37
Bold ready	40.50	41.50	41.00
Oil ready†	16.80	17.00	16.90
Cottonseed January 1963	100.50	102.00	103.00
Niger seed	36.00	36.75	37.00
Kardi seed	28.00	28.50	28.00

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

MEDIUM TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 27th September

A total of 457,000 kgs. was offered in sale No. 38 held on Tuesday the 25th inst. Quality generally showed little change from last week. There was strong and active demand. Highgrown brokens came to an irregular market with selected lines often dearer. Fannings in the category elicited less inquiry than in recent weeks and were easier to buy. Good mediums were strong and sold at generally dearer rates. Medium and low medium brokens were about firm. Similar fannings, however, were irregular but often much dearer, particularly as the sale progressed. Plainest descriptions were well supported and may be quoted firm to dearer. Black leaf sorts were again strong. Whole leaf grades were slightly dearer than last. Teas of unorthodox manufacture were fully firm. Tippy teas were well supported.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.50-4.50	3.95-4.10
Mediums	4.40-5.00	4.10-4.20
Good mediums	4.75-5.70	4.20-4.90
Nilgiri B.O.P.	5.00-8.90	5.00-7.40

The average price realised in sale No. 38 was Rs. 4.56 per kilo, as against Rs. 4.38 a week ago and Rs. 4.44 in the corresponding sale last year.

Offerings in dust sale No. 38 held today amounted to 214,000 kg. There was less demand than seen in recent weeks. Highgrowns were irregular but generally easier. Mediums declined by some 10 to 20 nP on last rates, although a few selected invoices were steady. Black, grainy dusts were well supported and were strong. Unorthodox descriptions followed the general trend of the market and may be quoted irregularly easier.

The average price realised in dust sale No. 38 was Rs. 4.05 per kilo, as compared with Rs. 4.12 a week ago and Rs. 4.50 in the corresponding sale last year.

Colombo: In Monday's sale, just over 4½ million were offered and these met with good demand. Uvas were substantially lower following quality while the best dimbulas also eased in price, but the lesser kinds were firm. Medium descriptions came to a fully firm market whilst lowgrowns were dearer. Good fannings followed an easier tendency.

London: North Indian and other growths: In Monday's auction, there was a good demand and prices showed little change from the previous week, but buying was more selective.

Ceylon and South Indians: In Tuesday's sale, offerings amounted to 27,019 packages, of which 11,391 packages were from South India. There was good general demand. Ceylons were generally dearer with improved quality teas selling at substantially higher rates. South Indians were also in good demand at fully firm rates but the plainest kinds were weak.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 39: 413,000 kgs. offered. Useful demand. Low medium and mediums irregular and generally easier. Good mediums fully firm, occasionally dearer. Highgrowns brokens steady with quality fannings less inquiry. Unorthodox irregular."

QUALITY TEAS STRONG

(From Our Own Correspondent)

CALCUTTA, 2nd October

Quality teas were keenly sought after at the export sales held here yesterday. Demand at the dusts sale held last week was steady, but only at lower levels. At last week's sale in London, although the quantity of teas of all origins on offer was higher at 80,000 packages, as against 65,000 packages in the week previous, quality teas met with strong demand. This had a favourable effect here. It was noted that for the first time this season Pakistan offered a small quantity of 540 packages in the Mincing Lane sales last week. This small quantity from Pakistan did not cause any surprise here, as this season that country has hardly any exportable surplus. Bad weather has led to liberal revision of earlier estimates, which were unduly optimistic. Pakistan's output is now estimated at about 52 million lbs., as against internal requirements of 50 million lbs. Recently, there had been reports of shortage of tea in some places in Pakistan.

Pakistan has embarked on an ambitious plan of tea acreage expansion and is going all out to improve irrigational facilities by constructing tube-wells and small dams wherever possible. By 1965, production is likely to go up to 65 million lbs., but then internal consumption is also expected to rise as much. In other words, it would be difficult for Pakistan to enter the export market for several years.

Dusts on offer during last week's sale here totalled 30,041 packages which met with an improved demand. A strong feature was the non-wither legg-cut dusts for which buyers showed keen interest, with the small and powdery teas receiving the pride of place. Although prices were irregular and eased generally, medium C.T.Cs were accorded good support. The good C.T.Cs lost 20 nP on balance, but had opened on a strong note. Plain orthodox teas fell by 10 nP to 20 nP, with Assams following suit. The quotations per one kg., in rupees, inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 6.70, medium Assam C.T.C. dust 5.50 to 5.80, legg-cut dust 4.90 to 5.30, medium Assam dust 4.70 to 5.05 and plain orthodox dust 4.10 to 4.45.

The need to reduce cost of production in gardens in order that Indian teas would gain more overseas markets was one of the themes developed by Mr. S. M. Mohta in his presidential speech at the annual meeting of the Tea Association of India here during last week. He pointed out that, while world consumption of tea was rapidly increasing, India's share in the increase was small. He demanded that no tax on exportable teas should be levied by both the Union and the States. He also wanted that no tax should be levied on tea garden stores and that freight rates should be kept as low as possible. Although Mr. Mohta's demands are too much for the Finance Minister to accede, the trade would strongly urge early measures for lessening the cost burden on gardens. Methods suggested by the trade here include tax concessions and even abolition of the export duty, and, what is more important, the linking of wages in future to productivity.

Mr. Mohta's complaint about the difficulties in getting foreign exchange to enable gardens to import essential equipment has been dealt with by the Central Tea Board. The Board has already informed the industry that there would be no difficulty in obtaining foreign exchange for genuine and essential requirements. The Tea Board studies all individual requirements, and if the proposed imports fall within the declared category of genuine and essential requirements, recommends the same to the Union Government for sanction. On this basis, the licensing authorities have been granting import licences.

With a view to realise the production target of 900 million lbs., the Government has recently liberalised the rules for grant of permission for extension of the planted area. Thus, the present ceilings for extension have been raised. Gardens having 60 hectares or less can now extend the area by 100 per cent, as against 40 per cent previously. Gardens having 200 hectares or more can increase the planted area by 30 per cent as against 15 per cent previously.

The trade has stressed the urgent need to strengthen India's publicity campaigns abroad. In this respect, India has to steal a march over Ceylon. For that country's campaigns in the Middle East, South Africa, Australia, New Zealand, Denmark, the U.K. and Italy are lively. It has been reported that Ceylon was the largest contributor to the Tea Councils in West Germany, the U.S. and Canada. Ceylon has been able to increase its exports gradually not only to the U.K. but other countries also, although it is realised that the Sudan and Egypt have been India's near monopoly. It is no surprise that while India has been unable to get a proper share in the increase in world consumption in 1961, Ceylon registered a good advance. With competition from India completely lacking in South Africa as a result of the old trade sanctions against the former, Ceylon has made tremendous advance there in marketing purely Ceylonese tea.

Ceylon has already gone ahead to meet the changing market requirements, and in accordance with market researches, it has already planned to set up a plant to manufacture instant tea with German collaboration. In this connection, it is good news that the joint plan of Tatas and Finlays to set up an instant tea factory has advanced a stage further with the choice of location of the

plant in Kerala. Demand for instant tea in the U.S.A. and Canada is believed to be very good.

The useful competition accorded to tippy teas, the prices of which, as a result, rose, was a strong feature during the export sales held yesterday, when offerings totalled 60,165 packages. Demand was more active than in the last week, and prices of quality teas added gains. Another strong feature was the orthodox Assam B.O.Ps which were sold at dearer rates. Fannings met support at dearer rates, but others eased. Plain orthodox descriptions generally were a weak feature. At reduced rates, Darjeelings met with good support, and a similar trend was also registered in whole leaf grades. In C.T.Cs, the more fibrous teas met a dearer market, but medium C.T.Cs sagged following a decline in quality. The demand for the best lots gave way as the sales progressed and in balance lost 20 nP to 40 nP. Good support was accorded to legg-cut teas, the prices of which were higher. The quotations per one kg. in rupees, inclusive of excise duty, were: Best Assam C.T.C. fannings 6.50 to 7.20, medium Assam C.T.C. fannings 5.30 to 5.70, clean plain pekoe 4.10 to 4.40, best Assam C.T.C. B.P. 6.50 to 7.20, medium Assam C.T.C. B.P. 5.30 to 5.70, plain fannings 3.80 to 4.10 and plain B.P. 3.70 to 4.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *1st October*

An easy trend continued in the foodgrains market here this week following the start of *kharif* crop arrivals in market which induced stockists of *rabi* grains to liquidate.

Wheat prices declined by 67 nP to Rs. 1.34 per quintal according to quality due to slack demand in the face of better arrivals. The average quality was quoted at Rs. 39.52 to Rs. 40.19 and the farm quality at Rs. 42.20 to Rs. 42.87, a quintal. Red wheat prices also eased to Rs. 37.51 a quintal. Arrivals were better at 400 maunds daily, mostly from East U.P. and the stocks here stood at 64,000 maunds. Rice prices eased appreciably by Rs. 1.34 to Rs. 2.67 per quintal according to quality due to slack demand. Week-end prices were:—Rice *basmati* superior Rs. 85.74 to Rs. 93.77, *sela basmati* Rs. 75.02 to Rs. 85.74, *mainpuri sela* Rs. 52.25 to Rs. 54.92, *ramajwayan* Rs. 58.94, *raimunia* Rs. 61.62 and *gadda* Rs. 53.58, a quintal.

Gram prices moved down by 67 nP a quintal on lack of support. The Punjab quality was quoted at Rs. 42.87 and the local produce at Rs. 42.20. Maize prices also declined 67 nP per quintal and were quoted at Rs. 28.80 to Rs. 32.15. Arrivals improved to 400 maunds daily and were expected to rise. Barley and *bejhar* prices declined by Rs. 1.34 and 67 nP a quintal, respectively, due to slack demand and were quoted between Rs. 25.46 and Rs. 26.79 and at Rs. 26.79 per quintal, respectively. *Jowar* and *guwar* prices were unchanged at Rs. 46.89 to Rs. 50.91 and Rs. 33.49 to Rs. 34.83, a quintal, respectively. But *methi* ruled steady on good demand, while *bajra* and other grains were quiet. Week-end prices were:—*Bajra* Rs. 37.51, *methi* Rs. 61.62 and oats Rs. 29.47, a quintal.

In pulses, peas declined by 67 nP to Rs. 1.34 per quintal according to quality, as the offtake was poor. The *dara* quality was quoted at Rs. 31.48 and the farm variety at Rs. 32.18 to Rs. 32.83. Arrivals were small, and stocks stood at 51,000 maunds. *Arhar* prices eased Rs. 1.34 per quintal to be quoted at Rs. 53.58 to Rs. 56.26. *Urd* and *moong* prices also registered an easy trend. *Masoor* ruled steady on better demand in the face of poor stocks. *Moth* prices declined Rs. 1.34 to Rs. 2.67 a quintal. Week-end prices were:—*Urd* Rs. 77.70, *urd dal* Rs. 85.74, *moong* Rs. 49.57 to Rs. 52.25, *moong dal* Rs. 57, *masoor* Rs. 42.87, *malka* Rs. 53.58, *masoor dal* Rs. 56.26, *moth* Rs. 38.85 to Rs. 40.19, *moth dal* Rs. 46.89, *gram dal* Rs. 48.23, peas *dal* Rs. 36.17 and *arhar dal* Rs. 66.98 to Rs. 69.66, a quintal.

RAW JUTE ARRIVALS HEAVY

(From Our Own Correspondent)

CALCUTTA, *2nd October*

Under the influence of good demand, hessian prices were maintained firm during the week under review, while paucity of demand and existence of selling pressure in futures trading affected prices of heavy goods. The week was noted for increased arrivals of raw jute, a usual pre-*Pooja* feature, for cultivators need cash for meeting festival requirements. With their godowns full with fibre, mills were in no mood to purchase ready jute. This caused a decline in prices, as sellers desired to dispose of incoming wagons containing jute as early as possible in an attempt to avoid demurrage. Fibre arrivals in Calcutta and mills' stations during August at 348,750 bales (340,100 bales from India and 8,650 bales from Pakistan) were the highest for that month since the last six years. In July and August, the first two months of the current season, total arrivals were 707,705 bales (693,100 bales from India and 14,605 bales from Pakistan), as against 510,200 bales (478,500 and 31,650 bales) in the corresponding previous period, thus representing an overall increase of 197,505 bales, 214,550 bales in arrivals from India and a decline of 17,045 bales from Pakistan. Such an analysis has made trade circles infer that the current crop is in all probability higher than the last harvest. A striking increase in arrivals from India followed by a remarkable drop in arrivals from Pakistan certainly aids such an inference, although, of course, the fact that, due to early rains this year, the crop commenced coming much earlier than usual. Arrivals in the coming months are, therefore, expected to be proportionately lower.

Although generally mills are doubtful if the current year's crop is higher than last year's, they point out that the increased arrivals emphasise the acute lack of storage space in the mofussil. The trade demands that, in the long-term interests of trade and industry, the present glut in fibre supplies should be removed. Accordingly, the fixation of an export quota of the inferior fibre is strongly urged. With the deterioration in the quality of fibre, it is evident that, if mills in India are to maintain the present proportion of output between hessian and heavy goods, more imports of the Pakistan fibre should be made. With the fixation of minimum prices in Pakistan, conditions in markets there are reported to be firm. With the recession of flood waters, arrivals have increased, but, despite this, prices were firm, since balers were active buyers in anticipation of fixation of minimum prices. Overseas buyers showed interest in quality fibre, tossa being the cynosure of all eyes. The minimum prices now fixed in Pakistan do not apply for buffer stock purchases, and this has been a surprise to traders here as well as in Pakistan. The prices now fixed are fully in accord with current market levels, but, in the case of bottoms, the price fixed is higher. The reason for this discrimination is not indicated, but X bottoms are a quality in which buyers are seldom interested.

A subdued trend was in evidence in the fibre market in Calcutta, as, with their godowns full, the mills were disinclined to purchase ready fibre. There was no surprise in the rumour that the Government of India would increase the import quota for Pakistan cuttings by 100,000 bales. With fibre fit for manufacture of hessian, more imports from Pakistan are only natural. The Jute Buffer Stock Association made some purchases to cover its latest quota. Middles commanded a premium of Rs. 2. Generally, quotations were unchanged as follows: daissee bottoms Rs. 33, Assam bottoms Rs. 30, and northern bottoms Rs. 29.50.

The week in the goods market was intercepted by two holidays, one on Friday being *Mahalaya* and another today being Gandhiji's birthday. The fact that both the holidays were sandwiched by working days went to lessen activity during the latter. November hessian 40" 10 oz. opened at Rs. 53.24 in the futures market to ease to Rs. 52.54, after being higher at Rs. 53.34. November B. twills eased from Rs. 120.30 to Rs. 118.25. In ready goods, overseas buyers were not inclined to increase their commitments in expectation of a post-*Pooja* decline in prices. However, the trade would believe that prices would recover after the *Poojas* since usually then buying is large. Due to lack of adequate business, ready B. twills eased from Rs. 120.50 to Rs. 119.35. There was scattered buying in hessian and, following this, ready hessian 40" 10 oz. was firm at Rs. 56.70. On Wednesday, there was a further decline in B. twills to Rs. 118.60. However, there was some covering in hessian and the 40" 10 oz., thus resisting the general declining tendency, closed firm at Rs. 56.50. Covering business was again a feature on Thursday, but, since the quantity involved was inadequate, hessian 40" 10 oz. eased fractionally to Rs. 56.25. Heavy goods were neglected, and B. twills were nominally quoted at Rs. 118.50. Hessian were steadier on Saturday, as a result of covering business and scattered inquiries. Hessian 40" 10 oz. hardened to Rs. 56.75. In sympathy, B. twills also improved to Rs. 119.00. Covering business in hessian was a feature during yesterday, although fresh overseas business taking place was insignificant. Hessian 40" 10 oz. spurted to Rs. 57.50. However, heavy goods were weak in the absence of support and B. twills eased to Rs. 117.50.

METALS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, *2nd October*

Due to the forthcoming *Pooja* holidays, activity in the local metals market was on the wane this week, and prices, as a result, declined. Tin was, however, an exception to the general trend, and recorded a hardening tendency, as the supply position worsened.

Conditions on the London Metal Exchange were steady. Spot tin opened at £850 a ton, and after being lower at £849½ for a time, closed higher on balance at £851. Demand for tin in London was poor, but the decline in the price was arrested by buffer stock purchases. The rise in the three months' position from £853½ to £854⅛ could not be maintained. In Singapore, the price was unchanged. In Calcutta, the price movement was erratic. The quotation opened at Rs. 2,411.25 per 100 kgs., and after being lower at Rs. 2,401.50, hardened to Rs. 2,448.00 to close at Rs. 2,431. Fresh arrivals were expected in the near future. It was reported that the General Services Administration in the United States released the first lot of tin from the strategic stockpiles. The release totalled 200 tons, of which 50 tons were of grade 'B' and the remainder of grade 'A'. Prices realised were $1.0756 and $1.0826 per lb., respectively. Consumption of tin in the U.S. in May 1962 was reported to have totalled 5,170 tons which represented an increase of 320 tons as compared to April 1962. On the other hand, consumption in the U.K. for the same month declined to 2,090 tons from 1,616 tons.

Utensil scrap opened here at Rs. 540.50 per 100 kgs. to ease to Rs. 535.75. The decline followed the increased availability of permit metal. Further, the uncertainty as to the non-issuance of import licences for the current six months has been removed to a certain extent with the report that the State Trading Corporation has covered a large tonnage for arrival in the next two months. On the London Metal Exchange, spot copper was firm at £234 a ton, while in New York the price eased slightly. Lead here was quiet at Rs. 140 a quintal and electrolytic zinc eased from Rs. 275 to Rs. 269 per 100 kgs.

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport. A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable. ††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935. —Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest. M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice. T—Liability taken over by Madhya Pradesh.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.

Accounts:—Figures in the "*Accounts Closed*" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

PROSPECTS FOR WORLD AGRICULTURE

EVERY year, over the last decade, the Food and Agriculture Organisation of the United Nations has been highlighting the steady, though slow, pace of technological improvement in world agriculture. But the optimum effectiveness of this process of improvement has always been subject to the prevalence of fair weather in any particular year. For instance, "widespread bad weather" in the year 1961-62 is stated to have been mainly responsible for keeping down world agricultural production to the record level attained in 1960-61. The index number of world agricultural production (base: average 1952-53/1956-57=100) in 1961-62 remained unchanged at 119 for "all agricultural products." It was at the same level for "food products only" in both the years—1960-61 and 1961-62. What is true of the world as a whole is equally true of India, where the foodgrains output (78.6 million tons) in 1961-62 was about the same as, or a little less than, that (about 80 million tons) of the previous year. It would thus appear that the additional production potential represented by agricultural development programmes cannot actually reach its optimum level in a year in which Nature's vagaries upset human endeavours.

One cannot, therefore, draw much comfort, as the F.A.O. does, in *The State of Food and Agriculture 1962*, even from the fact that the longer-term trend of agricultural production during the past decade, and also in comparison with the pre-war period, has been ahead of population growth. If world population, as of 1961-62, has increased by 14 per cent, as compared with the 1952-53/1956-57 average, the increase in world agricultural production should have been substantially more than the 19 per cent actually attained to allow for income elasticity of demand and higher standards of consumption. It would be more relevant here to have a look at the index of *per capita* agricultural production. The fact that this index shows only 105 points in 1961-62, as against 106 in 1960-61, is indicative of the extremely delicate or precarious balance between agricultural production and population. Unless agricultural growth registers a higher rate in the years to come—higher than the average of 2.9 per cent per annum over the past decade—the developing countries, where both the growth of population and the felt need for higher standards of consumption are tending to accelerate, will be heading for economic trouble on a wide front. It is, therefore, difficult to understand the F.A.O.'s tendency to underestimate the impact of population, as well as income, growth in relation to agricultural, particularly food, production. The italicised sentence in the following passage quoted from *The State of Food and Agriculture 1962* is relevant in this context:

"It must be noted that the growth of population is tending to accelerate in the less developed regions as the spread of hygiene and medical care brings down death rates. Recent censuses in many countries have revealed rates of increase much higher than those estimated earlier and it has been necessary to revise the estimate of the annual rate of increase of world population (excluding Mainland China) from 1.6 to 1.8 per cent. *The accelerating growth of population partly accounts for the slower increase of* per capita *production in some of the less developed regions in recent years, though the main influence in this case has come from the production side of the equation.*"

If world agricultural production has thus failed to ensure a faster increase in *per capita* terms uptil now, are the prospects better at least in so far as the next decade is concerned? The F.A.O. report has referred, in this connection, to a number of policy developments which took place in 1961-62—"developments which are likely to influence the course of world agricultural development for many years to come." In the United States, for instance, where there are vast surpluses of grain and other agricultural commodities, the proclaimed objective of policy "is to reduce farm output below needs for several years, and then allow it to increase to balance demand." The effort to reduce grain output is already having a perceptible effect, as will be seen from the following facts and figures gleaned from the F.A.O. report:

(i) The Emergency Feed Grain Programme, approved in March 1961, was successful in reducing production. The 1961 crop of maize was down by 7 per cent and of sorghum by 22 per cent, while crop acreages were reduced by as much as 18 per cent and 29 per cent, respectively. For the crops to be harvested in 1962, acreage restrictions for maize and sorghum have been maintained and extended to barley. The latest available information indicates that altogether some 19 per cent of the barley acreage at the 1959-60 base period, 27 per cent of the maize and 32 per cent of the sorghum, may be diverted in 1962. As in the 1961 programme, in order to discourage a more intensive cultivation of the reduced crop area, only an output equivalent to normal yields of these grains will be eligible for price support.

(ii) Under the 1962 Wheat Programme, the national minimum wheat acreage was reduced below the previous minimum of 55 million acres for the first time since the 1930s. Inducements were provided for voluntary diversions of upto a further 30 per cent of the farm wheat allotment to soil conserving uses. Price supports at the same level as in 1961 were made conditional upon diversion. In April 1962, it appeared that the area under wheat would be about 27 per cent lower than in 1961. The official June forecast of the 1962 crop has anticipated a reduction of about 14 per cent.

The United States Government has described the above measures for reducing grain production as only emergency measures. Although its comprehensive Bill providing for greater powers to divert cropland to other uses has been narrowly defeated in the House of Representatives, it is expected that the 1962 Grains Programme will be extended for a further year. Thus, the world, especially its needy parts, must anticipate, and provide for, the day when American commodity surpluses will be much less than they are. The rate of increase in world agricultural production will, therefore, slow down to some extent. It may be recalled, in this connection, that, in 1960-61, North America accounted for about a fourth of all wheat production, a third of oats output and a half of maize production in the world as a whole (excluding Mainland China).

In Western Europe, on the other hand, the trend seems to be in the direction of greater agricultural production through an increase in productivity. But the European Economic Community's common agricultural policy, while aiming at technical progress for increasing productivity, will also be designed to stabilise markets through a possible reduction in imports of temperate foodstuffs. It is stated that the Community-directed pricing system will be basically intended to encourage increases in production of those commodities for which the region is a net importer and also, at the same time, to discourage the generation of surpluses.

To the extent that the E.E.C.'s common agricultural policy acquires an autarchic orientation, to that extent agricultural production in such primary exporting countries as Canada, Australia and New Zealand may be curtailed in the long run.

In Eastern Europe and the U.S.S.R. where agriculture has failed to register dynamic growth, the long-range plans call for big increases in production. Especially in the U.S.S.R., the projection of the 1959-65 plan to 1970 is intended to increase agricultural production to 2.5 times its 1960 level—a tall order indeed, considering the notorious failure of collectivised agriculture to deliver the goods on the scale expected of it by Communist rulers. Even if the ambitious targets laid down for Communist agriculture happen, by any miracle, to be attained, the most that is possible in Eastern Europe and the U.S.S.R. is a degree of self-sufficiency. It is extremely doubtful whether any of the Communist countries will be in a position, over the next decade, to export any substantial agricultural surpluses

The long-term trends in North America, Western Europe, Eastern Europe and the U.S.S.R., and Oceania seem to be rather disheartening in the sense that these regions are not likely to contribute their full share for increasing world agricultural production at a rate higher than what was registered during the last decade. The developing countries in Asia, Africa and Latin America will thus have to contribute disproportionately more towards additional agricultural production in the world, if they are to stand increasingly on their own feet for food and raw materials. Will these countries be in a position to achieve phenomenal increases in agricultural production over the next decade? They will have a reasonable chance of succeeding in their goals if the advanced industrial countries assist them on a larger scale than at present to bring about far-reaching technical improvements in their agricultural systems.

Many Latin American countries, it is interesting to find, have recently announced new development plans for agriculture. These plans will not mean much if the Alliance for Progress —a ten-year programme of U.S. aid to Latin American countries for economic development—fails to gain the requisite momentum for any reason, or if feudal systems of land tenure are not drastically reformed, or if internal resources are not adequately mobilised. What is true of Latin American countries is no less true of countries in the Far East. Almost all these latter countries have formulated at least their first development plans, and some like India have already implemented more than one plan over the last decade or so. But it is not possible to generalise and say that agriculture is uniformly receiving greater attention in these countries. The urge for industrialisation is so great in this region that agriculture has not been able to secure all the resources needed for its fuller development. It is true that industrialisation will ultimately spell greater agricultural progress. But, in the short run or even in the next ten years, agriculture cannot be expected to make the requisite progress without further technical and financial assistance from the advanced countries. It will be the same story in the countries of West Asia and Africa where, too, economic development plans are increasingly being formulated.

When the developing countries are thus becoming more and more plan-minded, they may be expected—or can be prodded or persuaded—to mobilise their internal resources and introduce basic reforms in their land tenure and tax systems in order to match, and make full use of, external aid. The next decade is too crucial for agricultural, as for general economic, development to be left to chance. If a minimum growth rate of 5 per cent per annum during the development decade, as canvassed by the U.N. Economic and Social Council, is to be achieved, the rate of growth in agriculture in the developing countries would have to be of the order of 4 to 4.5 per cent. It is only such a high rate of agricultural growth that can make up for the expected lag in production in North America and also increase *per capita* food supplies by roughly 1.5 to 2.0 per cent per annum in the developing countries over the next decade. The consequences of possible failure to achieve this rate of agricultural growth can be easily imagined.

THE ANTI-MARKETEERS

By Our London Correspondent

IT is not always that the Annual Conference of a political party in opposition can be of interest to a country six thousand miles away; but, considering that that Party might in eighteen months' time become the Government of the country and that its election programme would be fought on a matter of high economic importance to India, Pakistan and Ceylon, the interest of the Conference becomes apparent.

This year's Labour Party Conference has made history. After eleven years of wandering in the wilderness, of internal dissensions and frustrations, the Opposition have at last found the unity, the power and the direction which they believe will give them victory in 1963 or 1964. And the issue which has united them has been that of opposition to Britain's entry into the Common Market under which banner form and spirit have been put into the whole of the Labour economic and political programme. For this opposition—and herein is its strength which the Government will ignore at its peril—has not been delivered blindly or polemically. It has been based on a cold calculation of the economic and political advantages and disadvantages of entry; on a cold assessment of the reasons why the Government desires entry; and on a cold appraisal of the alternatives. It is these alternatives which have made realistic a political programme which is a bid for political power.

And since a political programme, to be effective, must have fire in its belly, it is a personal triumph for the Leader of the Opposition that he put it across to his Annual Conference in the best speech of his career, and received two standing ovations of a magnitude that Labour Party veterans can hardly recall as having been equalled. It only remained for his triumph to be completed when his traditional opponent—head of one of this country's largest Unions—offered to pay for the speech to be printed and delivered throughout the country!

Appropriately, this Conference was held in the ice-skating rink at Brighton and, although the ice was heavily carpeted to keep the delegates' feet warm, there was a great deal of skating being done on the platform. And this was the manner of it: a year ago, the Labour Party declared five points, which, if met, would lead them to accept entry into the Common Market. In August of this year, the Government White Paper, showing the progress of the negotiations, suggested that the terms likely to be obtained would fall far short of those required. Opinion in the Labour Party hardened (as indeed it did in the Conservative Party) into the pros and cons: the pros being those who—like the Government—were prepared to go in on the best terms obtainable and the cons who were not prepared to go in on the terms as known. Officially, the Labour Party sat on the fence until, as your correspondent described recently, Mr. Gaitskell, in commenting on the Premiers' Commonwealth Conference, jumped down on the con side. Then came the marshalling of the arguments to be presented as a resolution to this Conference and, finally, a speech which went even beyond the resolution, rallied the whole Party and left the opponents bewildered and floundering on the ice, as it were, wanting and yet hardly able to oppose.

The position now is that, while on the one hand the Government have decided to go into Europe on the best terms they can get, the Opposition have said, in brief, that the case for entry is evenly balanced, depending on the final conditions. But to make entry worth while, these conditions must be fulfilled:

1. The E.F.T.A. countries, especially the Scandinavians and Switzerland, must also be let in, if they so wish (thus of course making a potential grouping of 13 and not 6 or 7 nations with a consequent diminution of Franco-German power).

2. The U.K. must be free to plan its own economy—above all to maintain a full employment policy, control as necessary over capital movements and over foreign exchange.

3. U.K. agriculture must continue to be fostered.

4. The U.K. must retain its own independent foreign policy without any implied commitment towards any supra-national authority.

5. The interests of the Commonwealth must be protected.

But, if these conditions were *not* fulfilled, said Mr. Gaitskell—and he believes they could be—then the Labour Party would both oppose entry and seek an election on the issue. He was not, of course (and this is where the "anti-marketeers at any price" deluded themselves, so skilfully did the Party leader skate) closing the door; "we are," he said, "passing judgment on the terms as known so far and these we reject." The final decision would be made on the final terms judged in the light of the five conditions. And Mr. Gaitskell expressed the hope that the Six would have a change of heart and modify their terms, for that would give the best solution. But, if not, then at the moment of decision, "we will not flinch from our duty if that moment comes."

Indeed, it is not credible that the Six will modify their terms which are eminently suitable for their own purposes. In time, the Six might be ready to join a wider, looser Federation comprising the E.F.T.A. Seven and the Commonwealth, but they are not ready for that now.

So the Labour Party look like having in due course to insist on a General Election and, if they get it, they will fight on excellent ground. For their alternative will not be a tighter Commonwealth, but—

(*a*) a suspension of talks for entry;

(*b*) a wider world conference to reduce *all* tariffs;

(*c*) all possible steps to *more* world trade.

Obviously, this would need to be accompanied by a programme of expanded home production, for, as the economic arguments showed, Britain would not find salvation either by going in to Europe or by staying out; but by producing and exporting more—and the opportunities, quantity-wise, for exporting more were not worse *outside* the Six than inside them.

Now it must not be supposed that this well-documented case against entry on the terms as now known is the end of the debate within the Labour Party. The Trade Unions, by and large, had been, up to now, with the Government and they no longer know how to skate with the majority and yet maintain their beliefs. They have been swept up by Mr. Gaitskell and obliged to say, "we are going to support you, but we do wish you hadn't taken the line you have." For they saw the economic advantages of entry as rather better than Mr. Gaitskell's fifty-fifty, and were not so much concerned with the political aspects where the great danger is that a move towards a Federal Europe (which the Six want apart from De Gaulle) must involve the dissolution of the Commonwealth.

If the Labour Party gets its Election before entry, then Mr. Gaitskell's programme would be followed and, as far as the Indian Continent is concerned, that would mean a policy of trade rather than aid. The leading Parliamentary pro-marketeer said that the U.K. must be careful not to become more pro-Commonwealth than the Commonwealth. But he was answered "why the hell not!"—it was an unimaginative trading policy with the Commonwealth that had led to Britain's share of Commonwealth trade going down. It was up to British exporters to recover their position and for the Government to increase its assistance to the underdeveloped countries.

But, if the Government push entry through *before* an Election (which is their objective), then would a victorious Labour Party undo the work? No one will answer that question today, although, in the context of the Conference, the answer would be "yes." In practice, it will always depend on the conditions. The likelihood, in spite of what has been said this week, is that a Labour Government would probably stay in the Economic Community and seek to compensate the Commonwealth for lost preferences by world trade agreements; yet resist absolutely any move towards political integration—so that ultimately there might be an Economic Seven-*plus* (with some of the E.F.T.A. countries gradually being drawn in) but a Federal Six.

MARKET GOSSIP

Banks' Lending Rate

IT looks as though the agreement drafted by the Executive Committee of the Indian Banks' Association, fixing the minimum rate of interest which banks should charge on their advances at 6 per cent per annum and approved by a large section of its members, is unlikely to come into force by 1st November 1962, as was expected last week. Some banks have suggested certain modifications; one of them wants the rate to be fixed at 5½ per cent, instead of at 6 per cent as proposed. These suggestions have to be considered by the Executive Committee and, if found unacceptable, their authors have to be persuaded to fall in line with the rest. All this will take some time, besides delicate negotiations.

So far as the State Bank of India is concerned, it is said that, while it has no objection to its associate banks being parties to the agreement, it does not desire to subscribe to it. The main reason for its wanting to keep aloof from the agreement seems to be the special rates of interest which it charges on advances to public sector units. These rates are lower than 6 per cent, the minimum rate under the inter-bank accord. Leaders of commercial banks in the private sector appear to have reconciled themselves to the necessity of doing without the State Bank of India's participation. The inter-bank agreement on rates of interest payable on deposits has been working well and the State Bank of India has not done anything to undermine it. Similarly, it is thought, the agreement on the minimum lending rate also could be worked without any hitch. Further, the State Bank of India has of late been quite co-operative with the commercial banks in the private sector and this seems to have induced confidence among the latter that the former would not try to lure away their customers by offering credit at rates of interest lower than the minimum lending rate under the agreement.

New Name For E.I.D.

What's in a name! Thus exclaimed the bard once. For ages, however, name has meant a lot. Mankind, perhaps, just acquires different names, but inanimate objects are given names which suggest their special characteristics, the nature of their work and so on. For a corporate body, name has a certain sanctity upheld and protected by law, in addition to suggesting the nature of its work, ownership, location, etc., a change in which often necessitates a change in the name.

E.I.D.-Parry Ltd. is the new name for the East India Distilleries and Sugar Factories Ltd. proposed by its Directors. A special resolution to the effect "that the name of the Company be and it is hereby changed from 'the East India Distilleries and Sugar Factories Ltd.' to 'E.I.D.-Parry Ltd.'" will come up for consideration of the shareholders of the Company at an extraordinary general meeting of the Company to be held at Madras on 1st November next. In a circular issued to shareholders, Mr. H. V. R. Iengar, Chairman of the Company, has explained the reasons for proposing the change in the name of the Company. Briefly, the reasons are as follows:

First, the main objects for which the Company was incorporated in 1897 were to carry on the businesses of distillers, sugar manufacturers and refiners, which are reflected in the present name of the Company. Whilst these activities still form an important part of its operations, the Company has, over the years, branched out, and a substantial and growing portion of its business now consists of the manufacture of fertilisers, pottery and sanitaryware and it has, in recent years, taken over the major portion of the Agency business previously operated by its subsidiary, Parry and Company Ltd. Besides, with the commissioning of its new fertiliser factory at Ennore, fertiliser manufacture will form an important line of the Company's business in future. These considerations alone suggest, Mr. Iengar points out, the desirability of changing the Company's name so as to avoid giving the impression to the public that its interests are solely or even mainly concentrated in the sugar industry.

Secondly, an even more important reason which has influenced the Directors to propose the aforesaid change in the Company's name, is that the new name will place prominently before the public the close association which exists between the Company and its subsidiary, Parry and Company Ltd. The name "Parry" is well known all over the country, especially in South India, for the quality and standard of its products and its services to the country. As such, E.I.D. has acquired from the subsidiary many of its registered Trade Marks which include the word "Parry" and markets its sugar, chemicals, sanitaryware and fertiliser products under such Trade Marks.

The Directors, therefore, feel that it would be both appropriate and beneficial to the interests of the Company to include "Parry" as part of its name. The U.K. Board of Trade, whose sanction to the change in the name is required under Section 18 (1) of the English Companies Act, 1948, has indicated its willingness to grant its sanction once the special resolution seeking the change is approved by the shareholders of the Company.

Groundnuts Turn Firm

There was a welcome pause in the uptrend of groundnut oil prices during 1961-62, after a continuous increase during the previous four or five years. This was in refreshing contrast to the increase in commodity prices in general in the past year, and was the result of a distinct improvement in the output of groundnuts. According to official (final) estimates, the total groundnut crop (in shell) was higher by about 7 per cent at 4.76 million tons in 1961-62, as compared with the previous year. Mention may be made, in passing, of the fact that this increase in output was due mainly to an expansion in acreage under cultivation rather than to any improvement in unit area yield. Be that as it may, under the impact of larger crop, prices declined. Thus the price of groundnut oil, which was quoted at Rs. 2,350 per tonne in June 1961, came down to Rs. 1,750 by June 1962. This trend seems to have been reversed during the past three months. And the price of groundnut oil has shown a tendency to rise again. Already, it is very near Rs. 2,000 per tonne. What is more, there has been a sudden spurt in groundnut futures prices in Bombay this week.

The present bullish fervour in groundnuts, which has pushed up the prices of other seeds and oils also, is the result of a marked reduction in private estimates of current groundnut crop in Gujarat. It would appear that the adverse weather conditions recently experienced by Saurashtra and Kutch have resulted in a 10 per cent fall in the groundnut crop of Gujarat, the major producing State in this country. According to private estimates, which are in terms of unshelled seed, the output in Saurashtra, in particular, would be only 600,000 tons in 1962-63, as compared with 800,000 tons in 1961-62. But marginal improvements in output have been predicted for other States. Andhra Pradesh is expected to have a larger crop of 550,000 tons, or an increase of 75,000 tons over the previous year. The contribution of Maharashtra, it is reported, may go up from 425,000 tons to 450,000 tons, that of Madras from 375,000 tons to 425,000 tons and of Mysore from 200,000 tons to 250,000 tons. These are largely rough estimates and it will take at least a month or two more for getting a precise picture.

The latest crop estimates, however, have given a fresh lease of life to the bulls in the Oilseeds Exchange. The January 1963 contract for groundnuts has been pushed up substantially; it is now quoted at Rs. 228 (per 100 kgs.), which compares with Rs. 221 in the middle of July. At this time last year, January 1962 contract, it may be recalled, was ruling at Rs. 200. The rally in the futures contract has actually led to a hardening tendency in the spot section. If this trend is not to be aggravated to the extreme discomfiture of consumers and speculation is to be brought within control, the Government of India must take timely decision to stabilise domestic prices by permitting actual users to import some quantity of soyabean oil from the U.S. under P.L. 480. This will, in turn, enhance the export capacity of industries like *vanaspati* and soaps. The outlook for exports of these products, as also groundnut oil, is at present gloomy. For world prices have been steadily declining. Groundnut oil B.W.A. in the London market, for instance, has come down to £96 per ton from about £122 earlier during 1962 and £106 a year ago. Unless, therefore, the upward trend in domestic prices is nipped in the bud, there will be more difficulties for the country. Farmers and co-operative societies may be tempted to hold on to their crops in expectation of still higher prices. This holding movement, if it gathers momentum, will result in a vicious circle of shortages and higher prices.

Distribution of Cotton

The millowners and the cotton trade have only themselves to thank for having to accept the new scheme of distribution of cotton devised by the Textile Commissioner. For, in spite of protracted discussions spread over many weeks, they had failed to evolve a scheme of distribution of cotton mutually acceptable to them and the Government. It is true that both millowners and traders put forward schemes and counter-schemes, which were revised over and over again, but they could not agree. One cannot think of any reason for this failure other than the inability of each party to see the other's point of view. This is surprising, considering that the role each has to play is complementary and the fortunes of the industry and the trade are bound together. A stable and flourishing industry is as much an asset to the trade as is a good distribution arrangement through normal commercial channels to the industry.

It is, therefore, difficult to find fault with the stand the Government took on this issue at the meeting of the Cotton Advisory Board held on Wednesday this week. Representatives of the Government would appear to have made it clear that it would proceed with the implementation of a scheme formulated by the Textile Commissioner. This scheme envisages the appointment of supervisors (as opposed to nominees and controllers suggested under the millowners' scheme) in consultation with both the industry and trade. These supervisors will be responsible for drawing samples before delivery is taken by mills and ensuring that the prices paid by mills are not in excess of the ceilings. They will also be empowered to check the purchases made by mills. Two important features of the scheme put forward by the trade was that (1) mills should be prohibited from buying *kapas* (unginned cotton) and (2) that no mill should be allowed to hold stocks of cotton which are equivalent to more than three months' consumption. The Textile Commissioner's scheme envisages prohibition of mills from holding more than three months' consumption as stocks, but mills will be free to buy *kapas*. Traders are particularly unhappy about this qualification in favour of mills, because they feel that it contains a big loophole in that there is no price control on *kapas*. They are inclined to feel that the authorities have turned a deaf ear to their pleas and have accepted the millowners' scheme in substance.

The Textile Commissioner's scheme differs from the controls that were in force in the last season in one important respect. The functions and powers of supervisors to be appointed by him have been so defined as to reduce the scope for dodging the ceilings very considerably. There will be very little chance, in theory at any rate, for collusion between the trader and the millowner in order to circumvent the price control because their transactions will be strictly watched by a third party, namely, the supervisor.

Quite apart from the merits or demerits of any particular distribution scheme, a section of traders, especially traders and associations in up-country centres, doubts whether there is need for any change in the *status quo*. They consider the haste and urgency shown by both millowners and the Government to introduce drastic measures unwarranted. It is pointed out, for instance, that, even during seasons when the crop was very much smaller than that of the current season, such an alarmist approach, as is the case at present, was not taken. They also argue that the arrangements made for the last season had worked, on the millowners' own admission, fairly satisfactory. In support of this contention, it is said that no mill was starved of cotton.

Traders consider the Government's decision to go ahead with its scheme as unwise and hasty, especially because an all-India conference of cotton trade, convened by the East India Cotton Association, Bombay, is expected to consider the whole scheme. They fear that such a conference will serve little purpose if the scheme is sought to be implemented before they have had their final say on it. It is also argued that a final decision might await the emergence of a clearer picture of the crop. This is expected to be available by the middle of next month. Traders' current expectations of the crop are that it will be around 5.5 to 5.6 million bales, whereas the Cotton Advisory Board's estimate is 5.2 to 5.3 million bales. Even if the latter estimate were to prove correct, no drastic measures might be necessary, according to traders.

One thing is clear. The Government is determined to see that cotton prices are kept within the ceilings this season. And it is leaving nothing to chance. It wants to keep the control machinery geared to meet the situation should the crop fall again, as it did last season, or turn out to be smaller than present expectations, or should there be any hitch in imports. Its anxiety to be vigilant is quite understandable in the context of the revival of the upward trend in general price level during the past six months. It is perfectly right in saying that it must be prepared for the worst, instead of merely hoping for the best.

Art Silk Industry

What must be the pattern of art silk yarn production in India? How is the yarn to be distributed? And what should be the level of prices? These were the questions to which the Development Council for Art Silk Industry sought to give answers when it met at Bombay on Wednesday this week. The Council made several recommendations to the Government of India and, if accepted, they will surely go a long way towards ensuring adjustments in the output of yarn to suit consumers' (handlooms, powerlooms and mills) requirements, a rational distribution arrangement and price stability.

The findings of the Council reveal that as much as 45 per cent of the aggregate art silk yarn consumption requirements is accounted for by 120 bright deniers, the percentage share of the other deniers being 20 in the case of 100D, 15 of 150D, 13 of 120D (full dull), 5 of 75D and 2 of 300D. If the spinners were to plan their production programmes in conformity with this pattern within, of course, reasonable tolerances, situations like surplus of some deniers and scarcity of some others could be avoided. Simultaneously, the distribution of yarn to actual users should, as the Council has rightly urged, be according to their denier-wise requirements. The Art Silk Yarn Distribution Committee, we are told, will ascertain the consumer requirements for six months and communicate the same to the Association of Man-made Fibre Industry. This move, together with the fixation of prices for different deniers at the levels fixed by the Council, will doubtless help the spinning units suitably to adjust the production pattern. The prices suggested by the Council per kg. (exclusive of excise duty) are: 75D—Rs. 13.14; 100D—Rs. 8.84; 120D—Rs. 7.89; 150D—Rs. 6.94; and 300D—Rs. 6.30. These were the prices which the high-power committee of spinners and weavers had also proposed last month.

The Development Council has also suggested the following modifications in the Export Promotion Scheme for art silk fabrics:

For every rupee worth of import entitlement surrendered by weavers to meet the imported pulp requirements of spinners, the latter shall deliver 0.85 lb. of yarn, of which 0.25 lb. will be at 40 nP per lb. less than the actual users' price of yarn and the remaining 0.60 lb. at the actual users' price without any concession.

The card-holders under the scheme must be supplied (unless otherwise desired by the allottee) first quality yarn of the required denier on cones, subject to the winding capacity of the spinners concerned.

Since the aforesaid recommendations of the Council have been approved by both the art silk spinning and weaving interests, there should be no difficulty for the Government to give effect to them. The recommendations are of special significance in the present context of the need to

step up the indigenous production of art silk yarn. The Government has already allocated a sum of Rs. 12 crores for imports in the current year and, the foreign exchange position being what it is, the country cannot afford to liberalise imports further. Needless to say that, to the extent to which production is increased, the dependence on imports can be reduced and more foreign exchange can be earned through exports of art silk fabrics. It may be noted here that India exported fabrics worth as much as Rs. 10 crores in 1958. Although in subsequent years exports had fallen substantially, their performance in 1958 is an indication of what can be achieved under favourable conditions.

Textiles in Pakistan

It is not the Indian cotton mill industry and textile trade alone that are greatly worried about the future of export trade in textiles, for their counterparts in Pakistan, too, are equally worried. Pakistan textiles are meeting with stiff competition in world markets from the developed countries, particularly Japan, and the export prospects, it is feared, will worsen further after Britain joins the European Common Market. No wonder that the development programme for the Pakistan cotton textile industry drawn up under the second Five-year Plan (1960-65) has been kept in cold storage at any rate for the present. The Government of Pakistan has now decided not to allow any more expansion of textile industry. Announcing the decision, Mr. Abdul Qadir, Finance Minister, stated at Lahore on Monday this week that the industry could not afford to expand further. Mr. Qadir, it may be noted, had assisted President Ayub Khan at the recent Commonwealth Prime Ministers' Conference and also visited the U.S. in connection with the Fund-Bank meetings.

When the Planning Commission of Pakistan formulated the second Five-year Plan in June 1960, Pakistan's exports of cotton textiles were highly encouraging, the actual shipments of cloth then being at an annual rate of about 76 million yards, as against 42 million yards in 1959 and 4.88 million yards in 1958. Prior to 1955, it may be recalled, Pakistan was not exporting even a single yard of cloth. Encouraged naturally by the marked rise in overseas sales of cloth and with a view to earning larger foreign exchange through still higher exports, the planners fixed the second Plan targets (to be achieved by 1965) for the cotton textile industry pretty high: 2.50 million spindles and 37,000 looms, as against 1.95 million spindles and 30,000 looms in 1960; the corresponding figures for 1954 and 1947 were: 1.46 million and 20,700; 177,000 and 4,800, respectively. The capacity targets were considered necessary to ensure by 1965 a *per capita* consumption of 14.5 yards (for a population of 96.9 million) and to maintain exports at a high level. No information is available as to the extent to which licences have already been issued for the establishment of new textile mills and the expansion of the existing units. It is also not known whether the Pakistan Government proposes to revoke any licence that continues to remain unutilised.

In view of the change in textile production policy and in order to attract more foreign investment, the Government is contemplating to revive the industrial programme for the remaining period of the second Plan. Hinting at such a revision, the Finance Minister said that considerable interest in investment in Pakistan was shown in the U.S., but, since the "Industrial Schedule" had already been committed, there was little scope for fresh investment. Nevertheless, he added that some scope did exist in certain spheres which might be transferred from public to private sector.

World Wheat Output Up

The world production of wheat during the 1962-63 season, it now appears, will far exceed all the earlier forecasts. This cannot be comforting news for the major producers and exporters of wheat who had managed to fix a higher price for this commodity under the current International Wheat Agreement that came into force from August last. It may be recalled that, under the agreement, the maximum and minimum prices were raised by 12.5 cents to $2.02½ and $1.62½ per bushel (the basis being No. 1 Manitoba wheat). A higher price was asked for in the light of record shipments of wheat and some decline in stocks during the last two seasons. If the present assessment of the size of the new crop is borne out by events, the relative stability in wheat markets, accomplished during the last two years, may not last long. The latest reports suggest that most countries will have a bumper crop during 1962-63, in distinct contrast to the decline experienced in 1961-62. The world output of wheat was lower in 1961-62 at 209 million tons, as against 219 million tons in 1960-61 (excluding that of China). Canada's output in 1962-63 is placed at about 14.2 million tons, which means 100 per cent increase over the previous year. It may be noted here that, in 1961-62, Canadian wheat output had fallen drastically from 13.3 million tons in the previous year to just 7 million tons, because of lower yields resulting from drought. The spectacular recovery in Canada only means a return to the normal level of production. It was, however, not expected. All earlier estimates, including those by the F.A.O., indicated the possibility of a further decline because of the depletion of sub-soil moisture reserves in the hard spring area of the Prairie Provinces in the last few years.

The increase in Canadian output would not have been a source of concern but for the sizable increase in production in the major importing countries, particularly Western Europe and the Far East. According to the latest estimates, wheat output in the U.K. during this season is higher by 25 per cent at about 3.2 million tons, mainly as a result of the increase in area from 1.73 million acres to 2.15 million acres. Much more spectacular, and potentially very significant, has been the increase in wheat output in the Common Market countries. Production of wheat is estimated to have gone up by two million tons to 11.3 million tons in France, in contrast to the setback suffered during the previous year. The output in Italy is placed higher by one million tons at 9 million tons and that in West Germany by 300,000 tons at 4.3 million tons. A better wheat crop is expected in the other Common Market countries also. Besides, Australia and Argentina, which are large exporters of wheat, are also likely to report larger crops. But one has to wait for a little while more to get a clear picture of their crops. Among Asian countries, production in India is expected to be higher than in 1961-62 and so is the case with Pakistan. China, which has been buying large quantities of wheat from Canada and Australia during the last two years, seems to have recorded some improvement in foodgrains output, despite the unfavourable climatic conditions. But, as the improvement is only modest, China will possibly continue to be a large buyer of wheat during this season as well. Production in Soviet Russia, which has ratified the latest International Wheat Agreement for the first time, is also expected to go up.

A conspicuous exception to this general trend is provided by the U.S., where the output has tended to move down, thanks mainly to the reduction of acreage under the Wheat Stabilisation Plan and also because of unfavourable weather conditions in the South. The U.S. wheat output during 1962-63 is expected to be 28.5 million tons, as compared with 34 million tons in the previous year. But the U.S. can no longer hope to reduce its already large stocks to any substantial extent; these are estimated at as much as 37.2 million tons, as compared with 38.4 million tons a year before. This is particularly so, because of the improvement in harvests noted in almost all the importing countries and the possible decline in world import demand.

Bonus for Bombay Mill Workers

Over 200,000 textile workers and their families in Bombay City will have a brighter *Diwali* this year, as a result of the bonus award given by Mr. Y. B. Chavan, Chief Minister of Maharashtra, who was requested to arbitrate in the dispute between millowners and workers. The award of Rs. 10.75 crores as bonus for the three years 1959, 1960 and 1961, given by the Chief Minister, represents a compromise between the demand for Rs. 13.50 crores made by the representative union, *Rashtria Mill Mazdoor Sangh* (I.N.T.U.C.) and the offer of Rs. 7.50 crores made by the millowners. The bonus will be paid in three instalments. The first instalment is expected to be paid before *Diwali*.

The mill-wise allocation of the bonus will be made on the basis of the profits made by each of the 60-odd textile mills in the City during the three years. The quantum of bonus per individual worker will accordingly depend upon the profit made by the mill in which he works. The Communist-led unions do not favour this idea. They are pressing for the equal distribution of bonus to all workers.

A detailed account of how the bonus will be distributed mill-wise and year-wise, together with our comments on the method, or lack of it, of arriving at the bonus awarded by the Chief Minister and related issues will be given in the next issue. Here we only propose to make some preliminary observations about the implications, for good or bad, of this sudden spurt in the purchasing power of a sizable population of the city.

The bonus works out to an average of Rs. 500 per worker. This is one and a half times the annual average *per capita* national income and it represents, to many workers, a fortune. It is essential to see that a good part of the amount is judiciously invested by workers rather than spent away. The Communist-led unions have already pleaded that the entire amount should be paid in cash and not in the form of small savings certificates. Will they help the workers to invest the bonus wisely? The *Rashtria Mill Mazdoor Sangh* has advised the workers to save the money for investment in houses. It has offered its help in promoting co-operative housing societies. Although the feasibility of this suggestion remains to be tested, the spirit behind it is commendable. Here is a challenge to, and an opportunity for, trade unions, of whatever political affiliation, to serve the cause of workers in the real sense of the term.

TREND OF SHARES

BEGINNING OF THE END?

(From Our Own Correspondent)

BOMBAY, 11*th October*

AT least the beginning of the end, if not the end itself, of the present downward trend in equities seems to have been seen this week. This is the impression gathered by this writer and shared by not a few on Dalal Street from the week's trading pattern on the Bombay Stock Exchange, which alone mattered in determining the near-term trend in equities this week, as the Calcutta Stock Exchange was closed throughout the week (it will be closed for 15 days in all up to the 15th inst.) for the *Puja* holidays and the Madras Stock Exchange was closed on the 8th and 9th, in addition to the 6th which was the usual Saturday off. Trading in Bombay during this week, threw some indications of the worst having been nearly over and of the long awaited technical correction, in the form of a rally, to the prolonged downward trend in share values being round the corner. What shape the rally would take and when it would do so is, however, anybody's guess. Meanwhile, investment buying is conspicuous by its absence.

Dalal Street blew both hot and cold during the week. It commenced the week on a strong note under the influence of the maintenance of the T.I.S.Co. dividend at Rs. 7.25 net per share on the Rs. 75 fully paid ordinary shares, with almost the entire list showing sizable overnight gains. After some further improvement, however, prices receded on quick realising. Saturday saw a renewed setback in values on stale bull liquidation. On Tuesday and Wednesday (Monday was a holiday due to *Dassera*), values drifted idly lower only to rally slightly at close. Today, they slipped back perceptibly, but staged a smart rally from the mid-session, with the result that the closing prices showed only minor losses and, in some places, even moderate gains over the week.

This trading pattern of the week was characterised by a marked restraint on the part of bears to sell further in distinct contrast to their eagerness previously to sell at any and all levels. All the same, early gains were erased soon because of tired liquidation and absence of support. Lower levels, however, met with considerable short-covering which led to the small rallies. According to marketmen, the big bear operators have successfully manœuvred the market in their favour, especially after the rally following the announcement of T.I.S.Co. dividend, to square up their positions at more favourable rates and go long. In support of their contention, marketmen cited the smart rally that was seen today. With sellers on the defensive, trading around the low levels became dull and prices automatically rallied, though only slightly.

Sellers have turned cautious because (i) at their current levels, some shares are quoted even lower than in the previous year, (ii) some of the counters are quoted on *cum-div.* basis, and (iii) there is a growing awareness of the market authorities to the need for checking recurrence of unhealthy speculation. In view of these factors, it is possible that further short-covering may follow, barring unforeseen unfavourable events.

Newswise, sentiment during the week improved to some extent by the maintenance of the dividend by the T.I.S.Co. at the previous year's level. The successful arbitration on the mill workers' bonus issue by Chief Minister Y. B. Chavan was received with mixed feelings. While some heaved a sigh of relief that the possibility of a strike had been averted, others thought that the burden on the mills would be pretty heavy. Reports that Mr. Edward Heath, British Minister in charge of negotiations with the European Economic Community, had asked the six Common Market countries to make two declarations, namely, (i) that the enlarged Community was willing to enter into trade agreements with India and Pakistan immediately after the U.K. joined the E.C.M. and (ii) that they would declare their readiness to allow the U.K. to suspend the common external tariff on imports from India and Pakistan for a reasonable period, pending the conclusion

PERSPECTIVES & PROJECTIONS

By Mercator

ECONOMISTS on the panel newly constituted by the Planning Commission have not disappointed. They have, as usual, failed to agree and Press reports that their disagreements related not only to remedies for the price situation but also to its diagnosis are credible, though seemingly uncharitable. The fear that they may offer some textbook solutions, which the Government may then seize upon and interpret as it chooses, has been allayed; and, meanwhile, the news emanating from Food Ministry sources that prices have been actually falling may throw the Planning Commission's study groups into such further confusion that they may hardly be able to proceed beyond the vagest commonplaces in which they have specialised. Doctrinaire solutions might thus have suffered a deserving defeat, but this whole episode reflects the woeful lack of cohesion in planning and implementation. There have always been two radically different views on food controls; in the first Plan period, Mr. C. D. Deshmukh and the late Mr. Kidwai openly expressed opposite views in Parliament which cast doubts on Cabinet solidarity and the present difference between Mr. Patil's and Mr. T. T. Krishnamachari's ideas on the steps needed to control the price line are, therefore, not unprecedented.

Mr. Patil is on strong ground in respect of the policy on wheat and sugar, of which he has at his command sufficient stocks to influence the market without having to resort to difficult, costly and unpopular controls. But T.T.K. naturally reflects the anxiety of the people of the rice-eating areas where the trends are far from encouraging. It is a little odd that Mr. Patil should be referring to minimum prices for rice at this time merely to win party support against control but it has been part of his Couèist technique of creating an atmosphere of plenty even when the harvests tell a different story. But both are wrong in thus concentrating their tactics on foodgrains, the prices of which are less objectionable than those of other foodstuffs which receive the direct impact of the Government's inflationary financing policies.

One can hardly see how the price of meat, fish and eggs will be controlled; even if in a predominantly vegetarian population these are of less political consequence (though fish cannot be in West Bengal), there are other articles of consumption similarly sensitive like milk and ghee, pulses, oils and vegetables. Urban house rents shoot up quickly when there is a surplus of cash with the middle income groups and city landlords have been the prime beneficiaries of the larger pay packets provided by the Second Pay Commission—at least so it seems in Delhi. Fuel and charcoal are other items which the Government is not in a position to control even in an area like Delhi where the use of soft coke is common; nationalised transport in the cities has been quick to seize any pretext to raise fares and thus set the pace for increasing the cost of other forms of transport. Consumer goods, particularly many forms of baby foods, have gone up in recent months and even if industry is not always to blame, retailers have never been slow to act upon the too clearly visible trends in purchasing power. The Finance Minister's announcement in each Budget that the deficit element will not be wiped out and that Plan outlay will be moving up (irrespective of the current behaviour of the economy, trends in production and the size of non-Plan expenditures like defence) is another bullish factor in the economy.

It does no one any good to deny that a price problem exists. The coming stagnation in the economy may worsen it, unless Plan outlays are so phased that currrent trends are not accentuated. But, as the Government is still psychologically unprepared for the modification of the third Plan in accordance with the present foreign exchange prospects, defence expenditure, industrial and agricultural production prospects, it can only preach the virtues of self-denial. So Mr. Shriman Narayan has dutifully exhorted ladies to give up one yard of their *sari*; it is a pity that one who had worked up sufficient courage to make such a request was not bolder. He could have asked for the giving up of gold ornaments, too!

An Ambassador's Model Plan

Ambassador Galbraith was at his usual stimulating best in his address to the Lucknow University on the Purpose of Economic Development, especially when he referred to "the generally amiable idiosyncrasy of man in his ability to expend a great deal of effort without much inquiry as to the end result," citing the flights to the moon as an example. While denying any desire for excessive introspection, he spoke in very general terms on planning as a method of symbolic modernisation, maximised economic growth and selective economic growth. It is difficult to detect the category in which he actually included India; but the last of them—the popular consumption criterion which he said was implicit in a good deal of Indian thinking—seemed to be the most appropriate to him, since it resolved the political problems which arise under the other criteria of planning.

The weakness of his analysis seemed to lie in the fact that whatever the criterion formally adopted, there will be need for securing the highest rate of economic growth to satisfy the wants of a fast-rising population and that this would involve an attempt to secure either selective or maximum economic growth with consequent curbs on consumption to effect savings as is done in India. Even if popular consumption, as an objective, can avoid deliberate imposition of hardships and sacrifices, these cannot in any case be long postponed. The distinctions which seemed to offer "guidelines" do not in practice help. On the other hand, planning in a democratic set-up by itself leads to the choice of criteria which will minimise hardships in the interests of the popularity of the planners; the resulting checks are more automatic, and even independent of the actual inclinations of the planners whatever they may actually profess at any moment. Symbolic modernisation alone stands condemned by any of these tests; building a stadium with foreign aid (which Indonesian has successfully achieved to satisfy its national pride) is not only undesirable in itself but even ineligible to be included in the alternative systems of planning which can be seriously considered by countries requiring development.

Less Dogmatism in Soviet Union

In the current ferment of ideas in the Soviet Union, a striking feature is the heroic manner in which the theoreticians are attempting to reconcile the irreconcilable aspects of Marxist-Leninist teachings with the industrial requirements of the space age. But ingenious logic-chopping has often to be judiciously blended with quotations from respectable authority; and published sources are apparently proving inadequate. Recently an unpublished version of Lenin's dictated document of 1918 was dug out to establish that it was perfectly proper for the U.S.S.R. to learn efficient production methods from the West. In this extract, Lenin is reported to have said that "socialism has to be learnt to a great extent from the leaders of the trusts: socialism has to be learnt from the major organisers of capitalism." *Pravda* commented that this document had "tremendous significance in our time." There is of course nothing which is revolutionary in what Lenin had said, though to the dogmatists then and now, who were persuaded that they were creating something altogether new on the ruins of capitalism, the idea of copying the latter's methods should be anathema.

That Lenin had a better insight than his followers into the working of the capitalist society and its motivations and methods has always been accepted; it is not surprising, therefore, that he wrote in this unpublished document that the new type of industrial leader needed was not so much a political agitator as an organiser giving workers a share in management. Many will like something similar to be said in India about the adequacy of the merely successful vote-catcher to lay down planning policies and priorities (as indeed Gandhiji seemed to say when he cautioned against the Congress Party converting itself into a political party). The result will not, however, be any different, since it is not easy in a communist or a democratic State to displace the agitator after his role is over. It is understandable that Lenin's call for the application of F. W. Taylor's management system and American methods of raising labour productivity throughout Russia remained unpublished all along till the advent of the present Age of Reason in the Soviet Union.

There have been other straws in the Russian wind. Since 1958, when official recognition was given to cybernetics as one of the finest achievements of the human mind, a debate has been conducted as to how it could be fitted into the theory of Dialectical Materialism. Machines, under Marxism, cannot be endowed with the powers of thinking but only with the processes of communicating information. On more practical economic matters, as, for example, making a charge on investment capital provided for State undertakings, Marxist opposition to the idea of interest cannot be easily overcome, but, recently, one of the theoreticians has deprecated the free provision of "basic investments by society to this or that plant" and called for imposition of a charge. Imitation is the sincerest form of flattery; others have flattered the Soviet Union by copying its system of five-year plans and the techniques of planning which can be fitted into the democratic apparatus. Only barren minds cling to ideology and there are enough of these all over the world to make things difficult for a real movement of ideas and know-how across the Iron Curtain.

Urban Housing

How bad is our urban housing? The Planning Commission estimated the shortage last year at 5 million urban houses, but the latest Census shows the percentage distribution of households and population living with or without a room and those with more than one. Some current ideas about the relative positions of the important Indian cities in this respect may require revision. About 2.4 per cent of the households in Bombay had no regular room. This will not come as a shock to those who have seen this City's pavement-dwellers but curiosity sharpens when we are told that corresponding percentage for Calcutta is only 0.4 per cent but that for Bangalore is the worst of all, being 3.5 per cent. Calcutta and Bombay, however, have nearly the same percentage (72 per cent) of households in one-room dwellings, with Madras, Ahmedabad and Delhi closely following them. At the top, among families having more than five rooms, Calcutta and Madras have an equal percentage showing perhaps the proportion of established local families while Bombay and even Delhi with its V.I.P. bungalows have less than half of their number.

It is difficult to say what this offers by way of suggestions for future housing policy, but, in spite of much construction going on in Bombay, not enough has apparently been done to house its population adequately.

Without Comment: Although there was no change in the area of the Union Territory of Delhi on account of the Reorganisation of the States, a unanimous figure for the area of this territory remains yet to be determined. The All India Census of 1951 adopted 538 square miles while the District Census Handbook for Delhi for 1961 made out 576.2 square miles. ... The latest figure communicated by the Surveyor General of India is 573 square miles.... It may be mentioned that such small differences have been observed for areas of districts of other States.—*From Census of India, 1962, Paper No. I.*

INDIA DIARY 1963

Pictorial Diary for the next year. A page to a week. A picture facing each page. 13 colour and 40 black and white photographic reproductions of Indian life and scenic beauty.

Expected to be out shortly

Price Rs. 5.00

(Packing and forwarding 65 nP.; 50 nP. extra for Registration.)

INDO-MEXICAN TRADE

THE visit of the Mexican President, who is accompanied by a well-represented trade delegation, to this country bids fair to open a new chapter of fruitful Indo-Mexican co-operation in the economic and commercial fields. The new move towards strengthening bonds of friendship between the two countries is particularly welcome, because it reflects an awareness of the need for closer co-operation among the developing countries of Asia and Latin America. Mexico is also a leading member of the Latin American Free Trade Zone Association, which came into being in the beginning of this year.

Trade between India and Mexico has, of course, not been very satisfactory during the last decade. India's exports to Mexico have suffered a sharp setback, the actual figure being just Rs. 8 lakhs in 1961-62, as compared with as much as Rs. 409 lakhs in 1951-52. Imports from Mexico, however, have risen during the period from Rs. 97 lakhs to Rs. 105 lakhs. India has thus a large adverse balance in its trade with Mexico. The volume of trade at present between the two countries is rather modest, but there are several complementary economic features in these countries which enhance the scope for promoting mutual trade.

The trade delegation from Mexico, headed by the Minister for Commerce and Industry, Dr. Raul Salinas Lozano, had talks with the representatives of the Government of India, including Mr. Manubhai Shah, on the question of expanding trade. The outcome of the discussions seems to have been quite satisfactory. The two countries have agreed to exchange *aide memoirs* indicating the possibilities of expansion of trade and techno-economic collaboration between the two countries. The Mexican delegation has shown interest in buying from this country railway equipment, including locomotives, structurals, engineering products, pharmaceuticals and other manufactured goods. Mexico has several goods to offer, including raw cotton, hides, some categories of steel plates and non-ferrous metals, particularly zinc concentrates. India's imports now consist mainly of some base metals and exports of certain vegetable and animal crude materials for medicinal uses, etc. Mexico, it may be noted, is a developing country, with a population of about 36 million and with a national income of about 120 billion pesos. Its exports aggregated an equivalent of $838 million U.S. dollars in 1961. Of these, one-fifth was accounted for by raw cotton. The other major items were such primary commodities as coffee, lead, copper, zinc and sulphur.

The Mexican delegation has proposed to send shortly a delegation consisting of railway experts and other representatives of industry and trade to study the possibilities of promoting mutual trade. India will also be sending a delegation next year to Mexico to coincide with the biennial Congress of the International Chamber of Commerce due to be held at Mexico City in April next year. The Mexican delegation's discussions with the members of the Federation of Indian Chambers of Commerce and Industry at Delhi also seem to have been quite useful. The Federation, in this connection, will do well to take the initiative by launching some market survey studies which would be beneficial to exporters of this country.

U.P. LAND TAX BILL

So bitter and determined has been the opposition to the U.P. Land Holdings Tax Bill in its original form that the State Government has compromised to the point of reducing the incidence to next to nothing. The modified Bill, now under discussion in the Vidhan Sabha, is only a ghost of its former self. The original Bill, it may be recalled, had envisaged a tax on the holdings of more than 90 per cent of the State's landholders (numbering ten million) in addition to the land revenue or rent paid by them in terms of the Zamindari Abolition Act. Holdings of an acre or less were then exempted from the Bill. The modified Bill, however, will not affect 90 per cent of the landholders from the levy, for the exemption limit has been raised to about eight acres of average quality land. This will have the effect of exempting all sirdari holdings paying a land revenue of about Rs. 40 or less and all bhumidari holdings paying half of that amount from the proposed additional tax. In view of this exemption, the yield from the proposed tax will be no more than Rs. 3.5 crores. This may be compared with Rs. 10.5 crores estimated under the original Bill, a sum equal to half the existing land revenue of Rs. 21 crores paid by the State's landholders of whom nearly 75 per cent are sirdars and 25 per cent bhumidars.

The rate of tax proposed in the modified Bill is equivalent to 2½ per cent of the capitalised value of land. In the case of a bhumidar the capitalised value will be 50 times the land revenue or rent of the holding, while in the case of a sirdar it will be 20 times. The difference in the capitalised value is explained by the circumstance that the land revenue now paid by a bhumidar is only half of that paid by a sirdar under the Zamindari Abolition Act. How this rate will work out may be known from an illustration. Since the "average quality land" is defined in the modified Bill "as that whose land revenue or rent per acre in the case of a sirdari holding is about Rs. 5," the capitalised value of a sirdari holding of, say, 10 acres will be Rs. 1,000 (Rs. 5 x 10 x 20) on which the proposed tax at the rate of 2½ per cent will work out to Rs. 25. This amount (Rs. 25) will be in addition to the existing land revenue or rent of Rs. 50 paid on that 10-acre holding.

While this 50 per cent increase may look like a big jump, it is doubtful whether even that much increase will adequately reflect the prevailing high prices of agricultural commodities and the indubitably high net farm incomes accruing to landholders in U.P., as in other parts of the country. Since the incidence of agricultural income-tax in Uttar Pradesh is confined to a relatively small number of "substantial" landholders and the yield from that tax is only about Rs. 90 lakhs, the present attempt to raise more land revenue at least from about a million landholders, if not from all the ten million of them, is commendable. As the State needs all this additional revenue and, possibly, more for financing its third Plan schemes on revenue account, it is to be hoped that the Vidhan Sabha will not further whittle down the severely restricted scope of the modified Bill.

NEW TURN IN BRUSSELS TALKS

The U.K.-Common Market negotiations at Brussels have taken an unexpectedly welcome turn, with the U.K. favouring a more realistic attitude towards Commonwealth problems. Contrary to earlier fears, the British Government appears to be making a fresh bid to secure better terms from the Common Market for safeguarding the trade of Asian Commonwealth countries. This move belies the impression, created by the British Government at the Commonwealth Prime Ministers' Conference last month, namely, that there was no scope for modifying the terms of the agreement already reached between the U.K. and the Common Market. Thus the strong, but cogent, advocacy of the cause of underdeveloped countries espoused at the Conference by Prime Minister Nehru and others, seems to have struck a sympathetic chord in Britain. At the resumed negotiations this week at Brussels between the U.K. and the Common Market, the leader of the British delegation, Mr. E. Heath, made some significant suggestions designed to remove the possible difficulties which would be faced by developing countries like India, Pakistan and Ceylon. His stand is in consonance with the somewhat surprising statement made by the British Prime Minister, in the course of a pamphlet published earlier in London, to the effect that the U:K. would put forward some new proposals to deal with the point raised at the Commonwealth Conference.

In his talks with the representatives of the Common Market, Mr. Heath urged the Six to make some marginal adjustments in the agreement reached in July on the question of trade relations between India, Pakistan and Ceylon. He wanted to add two supplementary statements to the agreement. The first statement, according to him, should relate to the date proposed for the comprehensive trade agreements between the expanded Common Market and the three Asian Commonwealth countries. Mr. Heath suggested that these trade talks should be started soon after Britain's entry into the Common Market. It may be recalled that the July agreement simply laid down that negotiations should be opened not later than the end of 1966. The second suggested amendment would be of greater significance, inasmuch as it would provide for the suspension of the application to the U.K. of the common external tariff of the enlarged Community until the proposed comprehensive trade agreements were concluded. In other words, the *status quo* in regard to Commonwealth preferences should not be disturbed until the proposed trade agreements were reached. Mr. Heath was certainly on unassailable grounds when he reminded the Six that the Asian Commonwealth countries feared drastic deterioration in balance of payments if the present position was altered abruptly without adequate safeguards.

The suggestions put forward by Mr. Heath do reflect the British Government's recognition of the anxiety expressed by the Commonwealth Prime Ministers. The July agreement, it may be recalled, provided for the application of the common external tariff of the Common Market on cotton textiles (18 per cent) in four stages, with a provision to introduce 20 per cent of this tariff soon after Britain's entry into the Common Market. In regard to most of the other manufactured goods, too, the common tariff was to be applied in four stages, with an initial enforcement of 15 per cent of the ultimate common tariff. Tariffs on a few other manufactured goods of relatively lesser significance like sports goods were to be reduced to zero. The agreement also provided for *nil* tariffs on tea, besides conclusion of comprehensive trade agreements by 1966. This arrangement, it was feared, would disturb the existing pattern of trade of the Asian Commonwealth countries with the U.K., traditionally their major market, adversely affecting, in turn, their import capacity and the tempo of development. The latest suggestions, therefore, come as a welcome gesture by the U.K. But the Six do not seem to have responded adequately to the proposals. According to the latest reports, they seem to have no objection to initiating trade talks with the countries concerned soon after Britain's entry. But they are reluctant to permit the continuance of Commonwealth preference during the interim period. France, in particular, seems to have taken strong exception to Mr. Heath's demand. A clear picture of the Common Market stand will be available only by the end of this month, when the U.K.-E.C.M. negotiations are proposed to be resumed once again. One feels that it is in the interests of the Common Market itself to accept the new suggestions designed to take care of the genuine difficulties of developing countries. For the new suggestions constitute a testing ground for the Common Market to prove whether it is really outward-looking as it claims to be and whether its policies conform to the spirit of the declared objectives of the G.A.T.T.

CONTROL OVER STATE ENTERPRISES

Public enterprises in India possess a degree of autonomy from Government and Parliament alike. But, at the same time, there is ministerial responsibility to Parliament for their successful operation. And Parliament also exercises a sort of indirect control over them through the Estimates Committee or the Public Accounts Committee. The usual scrutiny of the accounts, plans and working of public enterprises, mostly by the former Committee, can henceforth be more systematically done by yet another committee which has been proposed by the Planning Commission. This Committee can keep itself continuously informed of the working of public enterprises and master complex facts about them. The idea here is that informed parliamentary criticism will thereby be rendered possible and that a growing number of members of Parliament will take a specialised interest in these matters. What is visualised is a degree of expertise on the part of at least a section of Parliament.

If such a committee functions on the lines envisaged, it may well come to resemble, in some respects, the Select Committee in the House of Commons in Britain. How this British parliamentary committee exercises control over nationalised industries is worth careful study. According to Prof. A. H. Hanson of Leeds University who spoke recently at the Indian Institute of Public Administration at New Delhi, the British system of parliamentary control over public enterprises is a success because the committee is generally composed of members of Parliament who are experts on industrial problems. These members work hard, adopt a sympathetically critical attitude towards the industry, shed their political prejudices and conduct investigations in different industries in an impartial manner. The Committee is also assisted by adequate staff and an

apparatus to investigate study and analyse memoranda. Its probes are done in such a manner that they do not curb the initiative of the managements.

If these conditions obtain in India, too, the British system can be successfully adopted. But that is a big 'if,' for the Indian Parliament cannot be said to have a "low political temperature" and there are hardly any representatives of industry or known industrial experts therein. It is, of course, conceivable that some members of Parliament will themselves gradually acquire specialised knowledge of industries by virtue of their membership of the Committee continuously for three years or so. But by the time they attain a certain amount of proficiency, the time will be up for them to retire and face the next elections. And there is no certainty that they will be included in the Committee even if they get elected again. Unless, therefore, the Committee consists, right from the beginning, of members who are knowledgeable and well-informed on the intricacies of industrial management, parliamentary control over public-sector industrial undertakings may not be efficient and effective.

DEVELOPMENT OF SPAIN

The latest in the series of economic survey mission reports covering individual countries published by the World Bank is on Spain. The mission was headed by Sir Hugh Ellis-Rees, a former Chairman of the O.E.E.C., and consisted of 16 members. It was numerically the largest sponsored by the World Bank. This is, perhaps, a reflection of the complexity and the uniqueness of the Spanish economic problem.

Spanish economy is in transition at present. After having suffered seriously on account of Government intervention and controls, which characterised its period of isolation, Spanish economy has of late been expanding at a good pace and moving towards closer integration with the rest of Europe. The stabilisation programme, initiated in July 1959, in co-operation with the I.M.F. and the O.E.E.C., brought about stability, removed the crippling internal and external controls and greatly strengthened the value of the Peseta, the national currency. The success of this economic therapy, limited though it was in scope, encouraged Spanish authorities to think in terms of a comprehensive long-term programme to expand and modernise the economy for raising the living standards of the people. Spain's subsequent decision to seek association with the European Common Market has invested the need for a quick transition to a freer economy and a higher rate of growth with special urgency. For, without these, Spain could not be expected to play its rightful role in the European scene. It was in this context that the World Bank's assistance was sought in preparing a long-term programme of economic development.

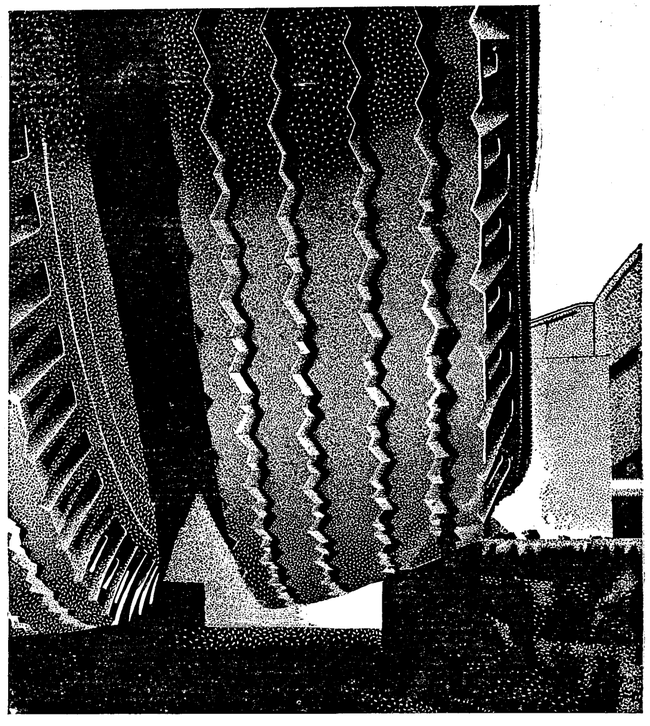
The World Bank mission has found the prospects for the Spanish economy very bright. Spain has the natural and human resources with which to achieve and maintain a high rate of economic growth. How rapidly growth in fact takes place is a question on which the mission has not offered an opinion as the rate of growth depends, more than anything else, on how effectively the resources and opportunities available were utilised by the Government and private enterpreneurs. But the mission has emphasised the decisive role of the Government in directing public investment into the most productive channels and in creating an environment in which businessmen can make their maximum contribution. This is a clear hint for the Government to play a more active role in determining investments and priorities. The mission, however, does not appear to be in favour of overall Governmental planning in the sense of fixation of production targets and priorities. The most appropriate type of Governmental action at this juncture, according to it, is "indicative" planning, under which the Government would undertake to make a prognosis of the nature and pace of change in the economy in the long-term and also state the action proposed for achieving the forecast rate of growth. This would provide the basis of planning for the public and private sectors of the economy. The mission has, however, no doubt that, given suitable policies and the requisite public and private investment, an annual increase in *per capita* income of the order of 5 per cent should be possible over an extended period.

Details of the development proposals made by the World Bank mission are not available at the time of writing. It is, however, clear that the mission has expressed itself in favour of a policy of stimulating general economic growth as the best way to solve the problems of unemployment, income and regional development. A general increase in prosperity, assisted by measures aimed at free mobility of labour and capital, offers, in the mission's view, the most positive means of raising living standards and relieving the hardships of rural poverty. In order to place the Government in a better position to guide the economy, the mission has suggested a number of improvements in public accounts, in the control of expenditures, and in the collection of taxes. On monetary management, the mission has recommended measures for achieving effective and unified control of the capital market.

Apart from the study of the overall problems and policies, the mission has also made a special study of the major sectors of the economy. The policy recommendations made in these sectional studies are as important as the suggestions concerning the national economy. Some of the recommendations have also more than purely local value and are relevant to countries where, although conditions might be different, the problem is largely identical. According to the mission, in Spain, so far as transport is concerned, the basic network of roads and railways is already well established but public policy must be alert to shifts in the pattern of traffic arising as a result of economic development and also investments in transport and rate structure.

Action will need to be taken, according to the mission, to improve administrative and operative arrangements and to modernise the railway system. This will entail a change in emphasis among various types of investment and an effort to concentrate funds on that part of the network where traffic is likely to be heaviest. As regards agriculture, the mission has stressed that future development should be largely determined by the growth in domestic and export demand for agricultural products. It has suggested many methods to raise agricultural productivity other than irrigation which is relatively costly in Spain.

The mission considers the prospects for further industrial expansion in Spain to be good. Natural resources, manpower, electricity, etc., are available in plenty, thereby making expansion easy. But it found that many firms were too small to operate efficiently, while others were insufficiently mechanised. Public policy could help in various ways to build up a modern and competitive industry. And the mission's recommendations in this regard indicates the influence of the lessons of West German economic miracle and the Indian experiment in democratic socialism. For instance, the mission has suggested (1) the lifting of controls on capital and labour so as to create an environment in which industry will put its resources to the most productive use, and (2) the announcement of a clear definition of the role of public enterprise, of the conditions under, and the extent to, which it will operate and the assurance of competitive equality between public and private enterprise.



THE TYRES MOST TESTED AND PROVED

Dunlop Truck and Bus tyres have been tested under the toughest conditions you can imagine. It has proved itself to be the tyre that can stand up longest to shock treatment. You will be surprised at the tremendous strength of its casing and the safety and long mileage which it offers.

HELPING GOA TO "CATCH UP"

PROSPECTS FOR IRON ORE EXPORTS

From Our Special Correspondent

NEW DELHI, *9th October*

THE first major industry to be developed in Goa will be shipbuilding and the nucleus for it is the repair yard of Estaleiros Navais de Goa which was laid waste by the Portuguese in the face of Indian troops which marched into Goa last December. The shipyard, laid out by the Portuguese about four years ago, was mainly handling repairs of iron ore barges, about 200 of which were being used by mineowners for transporting ore down the rivers. The Portuguese removed the equipment and damaged several machines and some months ago the barge repair centre was taken over by Mazagon Dock Limited, which is under the Defence Ministry. The firm has partly re-equipped the yard and soon more machinery will be installed. In addition to the repair work, the plans are to build small vessels.

DELHI LETTER

Mazagon Dock in Bombay, as well as the Garden Reach Workshops in Calcutta, which are also under the control of the Defence Ministry, will undertake the construction of naval vessels like destroyers and anti-submarine frigates. While the expansion of the Hindustan Shipyard has been bogged down and there are delays even in the contracted manufacture of the Mitsubishi type of ships, the Transport Minister, Mr. Raj Bahadur, is having talks with German and Japanese firms on technical collaboration for the proposed second major yard in Cochin. There is also a Dutch offer under the consideration of the Government.

Mine Leasing

The Union Government, and particularly the Ministry of Steel and Heavy Industries, is pursuing measures to make Goa catch up with the rest of the country. The transformation of Goa from a smugglers' paradise into an integral part of a big country is certainly going to be a painful process. Mining is about the only modern industry which has been developed in the area and the absence of power supply and trained men will make any industrialisation a slow process. Although the natural process would be for numerous Indian entrepreneurs to go into the area, some in the Government do not favour such a rush because of fear of political complaints that the local people are being subjected to exploitation. The Goan contracts with the Japanese, West Germans and Italians for iron ore supplies were made at prices far below ruling world prices and the mineowners in Goa were able to carry on because of the allocation of exchange from their earnings. Imports against these earnings and smuggling of goods into India enabled the operators in Goa to export ore at low prices. In the long run there will also be need to reorganise the pattern of mine leasing. There are now more than 350 mine lease holders.

The Srivastava Committee, which reported on possibilities for industrialisation of Goa, confined itself to general matters which included encouragement to cottage crafts. A proper mineral survey of the region and a survey of the power potential remain to be done. The prospects of setting up pig iron plants will be studied by a team of technical experts.

Despatches Decline

Following the Indian take-over and the disruption in Goa, and also a recession in demand for iron ore abroad due to readjustments in steel production, there has been a decline in iron ore despatches from Goa. Immediately, the iron ore exports may be stabilised at the earlier rate of six million tons a year, with a little less than half going to Japan, about thirty-five per cent to West Germany and about fifteen per cent to Italy. After the shipbuilding yard on which expansion work has already begun, the next project in Goa is expected to be the deepening of the harbour by dredging. The pig iron plants proposed for the region will take some time to take shape.

Goa's total electricity production is around 9,000 kw.h., and using the yardstick of power consumption, Goa is one of the most undeveloped parts of the world. A high tension transmission line is planned to be laid for taking power from the Koyna project into Goa. This may increase the power supply in Goa by a third and the transmission lines may be ready some time next year. A hydro-electric project is possible in Goa at Dudsagar but even preliminary investigation has not got under way. An expert team from the Water and Power Commission is expected to visit Goa this month.

Iron Ore Hopes

In Goa as well as elsewhere in the country the Government has plans to speed the production of iron ore and exports. The International Trade Ministry has been at work producing miracle papers to plan a boost in exports and one of these relates to a dream of exporting up to 25 million tons of iron ore by the end of the fourth Plan in 1971. There seems to be ample foreign demand to justify such a hope. It is claimed that there are almost firm offers from abroad to buy upto 25 million tons of iron ore at the end of the sixties. The problems in developing such exports hinge on a large scale of investment, including foreign exchange, on transport, port handling and mining. If such a scale of investment and co-ordination is achieved, iron ore can become the top foreign exchange earner for India, excelling tea and jute goods. In tea and jute goods the problem will be to maintain the present level of earnings in competition with Pakistan jute and African tea.

Including the exports from Goa, the total iron ore despatches from India, as of 1961, are around nine million tons and the earnings are about Rs. 20 crores from Goan exports and about Rs. 16 crores from other Indian iron ore exports. Marmugao harbour will have to be deepened, eight to nine feet to 36 feet before it can take bulk ore carriers and an investment of at least Rs. 300 crores will be needed to attain a target of 25 million tons of iron ore exports by 1971. Of this the major investment will be on the Bailadila and Kiriburu mines and Visakhapatnam port. This will cost Rs. 120 crores and the foreign exchange cost will be as high as Rs. 80 crores. More than half of the total investment of Rs. 300 crores will have to be in foreign exchange.

Among the new mine areas to be developed will be Bellary-Hospet, and Chittaldurg, in the south and Nayagarh in Orissa to feed Paradip port. Among the buyers will be Japan (12 million tons), West Germany and Italy (two and a half million tons excluding purchases from the Goa area), Rumania (two and a half million tons), other East European countries (five million tons).

Exports Expand

The State Trading Corporation of India never tires of publicising the fact that until 1952 India exported only about two lakh tons of iron ore. And today the exports are more than three million tons. The Goans exported only one lakh tons in 1954 but their despatches rose to six million tons a year. Malaya's exports, very recently developed, are running at six million tons. Indian iron ore is costlier than Brazilian and Swedish ores. Present competitors of India in sales to Japan are Malaya, Australia, South Africa and Brazil. A possible future competitor is the Soviet Union which has been developing Siberian mines. The Soviet sales will have the greatest price attraction for the Japanese who have been careful in not committing themselves on prices in their long-term arrangements with India. The price negotiations with the Japanese will pinch the Indians periodically, as has been the experience in the past few years.

Some of the ore mined in the south will need to be channelled through Goa. The other outlets will be Madras and Mangalore which is being developed as a major port. The ore loading plant at Visakhapatnam, with a capacity of 2,000 tons per hour will be ready by the end of next year and iron ore traffic on a large-scale will begin through Visakhapatnam in January 1964, according to present estimates. The initial plans are for export of two million tons a year, but the capacity of Visakhapatnam will be raised to six million tons a year later. Expansion of Madras port is to raise its ore loading capacity to two million tons but this will have to be raised later to handle the production from the Bellary-Hospet area. There is a suggestion by the State Trading Corporation to develop Pondicherry also into an ore loading port. Mangalore is to handle two million tons of ore every year. The port may be ready early in 1967. On current estimates the biggest ore loading port will be in Goa to handle more than twelve million tons a year, including some quantity from Bellary. The second in importance will be Visakhapatnam.

MIG 21 Planes

First supplies of Soviet, MIG 21 fighter aircraft for India are expected to be made before the end of the year. After an initial delivery of six planes, more will come in the middle of next year, it is understood. The Russians obviously have ignored Chinese objections to Soviet offers of military hardware for India. These objections were also recently echoed by Albanian and North Vietnamese Communists. The deal for a Soviet engine to power the HF 24 Indian supersonic jet fighter plane designed at Hindustan Aircraft Limited, Bangalore, is also expected to be completed soon. The Soviet engine may have to be modified somewhat for use in the India-made plane. Some minor alterations in the design of HF-24 will also be needed since the Soviet engine is heavier than the one originally intended for use.

In 1956 the Indian Government and Bristols had made an agreement for the manufacture of Orpheus engines, with India also gaining the benefit of all future developments in the Orpheus engine. Bristols were developing the B Or 12 engine under a programme financed by several countries. This engine was selected for the HF-24 Mark II aircraft and the plane was designed round this engine. Bristols later told the Indian Government that the B Or 12 was not needed by the other countries and therefore the finances for developing the engine were not available. If India was particular about the engine she would have to defray all the development expenses. While delaying a decision on financing the Bristol engine, Delhi started looking out for alternative engine supplies and found a suitable substitute in a Soviet engine which will now be made in India.

Simpler to Make

The Indian Air Force, which is already using Soviet AN 12 heavy transport planes on the northern borders for dropping road-building supplies, is planning to secure more AN 12 craft and some Soviet helicopters. The deal for the purchase of MIG planes incidentally was an offshoot of the visit to Russia earlier this year of an I.A.F. mission which went to inspect the engines for HF 24. At that time the I.A.F. mission was shown details of MIG manufacture and it reported to the Government that the MIG plane was simpler to make than several Western types with comparable performance.

India's basic idea has been to reduce the dependence on foreign sources for the Air Force and the acquisition of modern supersonic planes had become urgent early this year following the American supply, overriding Indian protests, of F-104 fighter planes for Pakistan. Negotiations with American manufacturers for building supersonic fighters in India were made difficult on two counts. First, under N.A.T.O. policies and American official thinking, modern military hardware could not be easily sold to India which not only remained outside military pacts but also was a vocal critic of arms pacts. Secondly, any deal for the manufacture of American planes would need arrangements with a host of American manufacturers of components. In the case of negotiations with the Soviet Union, the whole thing would be a package deal.

The Western uproar over the Indian intention to go in for MIGs was followed by diplomatic moves by the American Ambassador in India, Mr. Galbraith, and the Commonwealth Relations Secretary, Mr. Duncan Sandys, who visited Delhi some months ago primarily to explain Britain's point of view on negotiations with the European Common Market members. Neither the Americans nor the British had a convincing answer to India's problem of aircraft manufacture although they expressed some willingness to amend their policies on sales. Even such amendment would have been an uphill task for the American administration.

A new team of Indian Air Force men is expected to leave for the Soviet Union for advanced training in MIG maintenance. Already, several Indian airmen have been trained in Russia in the past two years on operation and maintenance of AN 12 and Ilyushin 14 transport planes and helicopters.

The Avro 748 transport aircraft, built by an air force establishment in Kanpur and flown in in November 1961, has been on successful demonstration flights through south Asian countries which in the long run may become customers for the Indian-produced aircraft. The twin-engined turbo-prop, Avro 748, is designed by Hawker Siddley with whom India has a contract permitting export of the aircraft. The Indian

HIGH LEVEL OF ACTIVITY SUSTAINED

GOOD DEMAND FOR AUTOS EXPECTED

From Our Special Correspondent

NEW YORK, 6th October

A MILD business expansion continues in the United States, although there has been a levelling out in some areas but on a relatively high plateau. The overall industrial production index was virtually unchanged in the latter part of the summer.

Output of steel moved up somewhat in terms of capacity. The auto industry, generally, is quite optimistic and predictions are that the number of 1963 models, now coming into the showrooms, to be sold in the ensuing automobile fiscal year will equal if not better the 1962 model record of 6,687,000 cars.

There was much eyebrow raising over the announcement that the unemployment figure had jumped from 5.3 to 5.8 per cent between July and August, but most stories did not point out that nearly 70 million persons were employed in the U.S., a new high. This figure excludes about 3 million individuals in the U.S. Armed Forces.

Three Major Problems

The U.S. Government and public opinion have three chief preoccupations and a few minor ones. The bloody racial riots in Mississippi assumed scandalous proportions in a country which comes under the general classification of "civilised." There are obvious economic connotations. That part of the country has been and is one of the least industrialised ones and, with the decline of "King Cotton," thanks to the development of synthetic fibres, one of the poorest ones. Racial friction such as was displayed the other days is certainly not conducive to efficient industrial operations. Hence, the reluctance of many manufacturers from the North, East and West to engage in large-scale operations there, except to take advantage of lower wages, a warmer climate and a lower standard of living.

The second preoccupation is Cuba. Demands of boycotts and even of a blockade are heard which could have a significant influence on shipping, exports and imports in the U.S. Atlantic and Gulf port areas. It is yet too early to tell just what will happen but the situation is loaded with dynamite which could explode at any time.

The third preoccupation is still the U.S. balance of international payments. Concern over that question is not as great as it was a year ago. Relatively little about it was said at the annual meetings of the International Bank for Reconstruction and Development and of the International Monetary Fund. The gold outflow still continues. Treasury Secretary Douglas Dillon told the meetings he estimated the 1962 gold outflow at about $1,500 million, against $2,500 million in 1961 and $3,900 million in 1960. President Kennedy spoke of the payments position as "a matter of first priority" and said that further corrective measures were being planned.

There seemed to have been a universal rejection by the assembled finance ministers and central bankers of any change in the official gold prices.

The Outlook

The gross national product continues to rise slowly. This must be regarded as quite satisfactory in view of the relative price stability which has been prevailing. The chances are that the G.N.P. will continue to climb slowly.

After a long era of inflation, the price stability has become somewhat painful, because of the cost-profit squeeze. Many manufacturers would like to raise their prices and some have done so, only to be forced by competition to lower them again. Competition is both foreign and domestic. Excess capacity is a considerable factor in some industries while in others imports are providing the pressure.

There are hardly any sectors of the U.S. economy which have exceptionally strong growth prospects. At the same time, it is reasonable to assume that Government spending will continue to rise for the balance of 1962 into next year and so will consumer services. These are strong elements for expansion.

As yet, there is uncertainty over a tax cut next year and the effect of more liberal depreciation allowances will have to be seen. In the meantime, there have been no substantial changes in business outlays and none is expected. At this writing, it looks as though expenditures on plant and equipment this year will be in the neighbourhood of $37,000 million which would be about the same as in 1957. Future spending plans will depend on the outlook for profits which, of course, is closely tied to taxes.

The Peace Corps

Mr. Sargent Shriver, President Kennedy's brother-in-law and head of the U.S. Peace Corps, made himself available to the foreign Press correspondents stationed here. He explained the intentions of U.S. policy and hopes of achievement.

The general aim, he said, was not only to provide technical and educational help where it was required, but also to expose as many trained Americans to ways of life overseas, so that they come back with a better understanding of how people in other parts of the world live and have to live. He added that no person was sent to any country, unless and until the Government in question so desired and requested it.

In the course of the interview he was asked, for example, whether American teachers being sent to India would displace teachers now employed in India. He replied that the request for teachers in certain fields had come from New Delhi and that the Government of India, obviously, felt a need to expand the academic forces. Hence, he could not see why local teachers would necessarily be displaced by acceding to the request of the Government of India.

The same applied to manual skills and the professions in all countries where the Peace Corps is now active. The conference coincided with the first anniversary of the Corps. The Kennedy Administration points with pride to its record and even those in Congress who were opposed to the original idea are now willing to admit that the experiment has been a relatively great success.—*All Rights Reserved.*

FARM ASSETS IN U.S.

During 1961, the value of U.S. farm assets rose by $7,300 million to $300,000 million. Farm operators increased their realised net income by more than $1,000 million or almost 10 per cent over 1960. The average farm represents an investment of $47,600, a rise of 19 per cent from 1959. This increase is due to the advance in the value of the productive assets used in farming—machinery, and so forth—and the continued increase in the size of farms and the decline in their number. Total gross farm income in 1961 was $40,200 million, or $1,900 million above 1960. The purchasing power of the farmer's income in 1961 was nine per cent higher than in the preceding year.

Farmers invested $3,148 million in farm machinery and motor vehicles. Expenditures for tractors were up 21 per cent over 1960. Investments by farmers in their co-operative associations rose to $4,500 million. Investments in rural electric co-operatives rose by 11 per cent.

(Concluded from next column)

of stocks and the rapid conversion of the favourable into an adverse balance of payments.

Yet he is very unhappy to know that there has been recently both an increase in unemployment and more and more evidence of a slack in the country's heavy industries. At the Conference of the Labour Party in Brighton this week, attention was being drawn to this in more acid terms. There the moral was being drawn that the Chancellor was going to find himself in the position familiar to previous Chancellors of encouraging industrial expansion at home only at the expense of a balance of payments crisis which would have to be followed by the familiar regime of credit contraction. Mr. Maudling himself knows only too well that he is caught in the toils. He has shown himself only timid so far, but he knows the country expects more of him and that "more" does not only mean a further possible ½ per cent cut in the Bank rate: the likelihood is that he will feel impelled to make some further pronouncements on policy before long.

LONDON LETTER

THE GENTLE PUSH

MR. MAUDLING'S TIMID APPROACH

(From Our Own Correspondent)

LONDON, 6th October

IT really is too bad that the brave new Chancellor, just at the point when he and everyone else felt that the economy ought to be kicked into activity, should be cut back to the size of Mr. Selwyn Lloyd by worries about the balance of payments. Before his visit to Washington, it was difficult to imagine that the banks and industry would be trying to push Mr. Maudling forward, while he would be pushing back. Now, in a negative kind of way, this is what is happening: negative in this context means that, while Mr. Maudling is dismantling the last traces of credit squeeze and pumping some money into the economy, he is not prepared to do enough to make things really happen.

The first decision to ease credit was the repayment to the joint-stock banks of half of the special deposits which they have had to make with the Bank of England. In May of this year £75 million belonging to the London clearing banks (amounting to 3 per cent of their gross deposits) was repaid to them and this month a further £75 million will be repaid, leaving only 1 per cent outstanding. Now as bank advances are about six times bank cash, a refund of cash to the London clearing banks of £75 million should enable them to lend about £450 million. Unfortunately, in August-September, the volume of outstanding advances dropped by £34 million and it looks as if the banks have simply got no use for more cash.

Bankers' Dinner

This week, the Chancellor, when speaking at the Lord Mayor's London Bankers' Dinner, announced his supplementary measures; however, his principal decision had been taken just before going to the dinner and his mouthpiece was the Governor of the Bank of England. The announcement marked the formal end of the fifteen-month long credit squeeze. The banks have been given not only the additional cash on which to make advances but told that it is entirely up to them to lend as they wish. Unfortunately, this does not create customers.

The Chancellor decided to give a couple of fillips to spending power, first by a repayment of £42 million of special war-time taxation; it has been customary to make these repayments (known as Post-war Credits) when the taxpayer reached a particular age—originally seventy in the case of men. The qualifying age has come down in steps and has now been reduced to sixty. Since the taxpayers concerned are mostly in the middle income groups, at that age they are more likely to save the money until they get older still then to spend it. It is very doubtful whether very much of Mr. Maudling's £42 million will reappear as real purchasing power.

Balance of Payments Worry

The second step was to announce an increase in public investment covering the rest of this financial year and the next of £70 million. The money is to be spent on the building of more houses, schools and roads. The trouble again is that the building and construction industries are very heavily employed and it is not certain that the authority to spend will enable much more real spending to be undertaken. The industries in which there is a slack are steel, heavy engineering and other such capital goods industries. If direct taxation such as the purchase tax were reduced, this might result in more general spending. Unfortunately, from the point of view of undertaking this kind of action, the August figures of retail sales show a jump of 4 per cent over those of the previous three months; this is after making a seasonal adjustment. The Chancellor has no doubt felt that, if the public are beginning to spend more money anyway, then it is not for him to stimulate this process.

But he has had to admit, at the same time, that the current trade figures indicate the disappearance of any surplus on the balance of payments which, for the first half of the year, total about £100 million on current account—that is before taking account of long-term capital movements. Mr. Maudling is sensitive to the possibility that too large an impetus to the economy will lead to a steeper increase in imports relative to exports and the building up

AUTUMN STOCKTAKING OF ECONOMY

U.S. DOLLAR GAINS STRENGTH

By W. T. C. King
EDITOR OF *THE BANKER*

LONDON, *29th September*

NEWS of economic importance for Britain has come thick and fast in this past month. It has come from two international gatherings and from the bringing together of a more than usually significant batch of current economic statistics which provide the basis for an autumn stocktaking of the economy. It is widely expected that the new Chancellor of the Exchequer will shortly indicate his first major decisions in the field of domestic economic policy; he must now decide whether, and if so to what extent and by what means, an additional stimulus should be given to business activity. (Since this despatch was posted by the author, Mr. Maudling has announced certain measures to give a push to the British economy. For details, see this week's London Letter on an earlier page.—ED.)

This has been a subject of lively public discussion throughout the summer. And now, at the end of September, public anticipation has been whetted by the announcement of an easing of the restraints on bank credit.

The first of the international gatherings to hit the headlines in London was the conference of Prime Ministers of the Commonwealth, which on this occasion gave the major part of its attention to the course of Britain's negotiations with the six member-countries of the European Economic Community with a view to possible entry. The British Government had originally hoped to be able to put before this gathering provisional agreements reached with the Six showing the terms on which Britain could enter; but this time-table for the talks in Brussels went awry, so that the provisional arrangements available for examination at the Commonwealth meeting left many vital matters still to be negotiated or made more precise.

This incompleteness was, no doubt, in part responsible for the uneasiness shown by a number of the visiting Premiers. Though the proceedings as such were private, Press reports of the gist of opening speeches showed many reservations about the effect that Britain's entry would have on Commonwealth trade through the dismantling of the present system of preferences, and worries about the uncertainties of the provisional arrangements to safeguard such trade interests under a new regime.

These doubts were not, however, pressed to the point of putting specific restraints on the further course of the negotiations in Brussels. The lengthy official *communique* agreed upon by the whole gathering did record that only when the full terms were known would it be possible to form a final judgment, and it did establish that, in the further negotiations, the British Government would not only continue its efforts to safeguard the interests of the oversea Commonwealth but would take full account of the views expressed during the London talks.

It did not, however, provide for the reopening of any matters already provisionally agreed, nor did it otherwise tie the hands of Britain's negotiators. Britain will, of course, continue to keep the other members of the Commonwealth in "closest consultations" in the further talks, but it is agreed that, when the time comes to decide whether Britain does or does not enter, the responsibility for that decision would rest with the British Government.

Impact of Fund-Bank Meetings

The other major international gathering was that of the world's finance ministers and central bankers at the annual meetings, this time in Washington, of the International Monetary Fund and World Bank. At these proceedings, the spotlight focussed on two topics—the better stability now ruling in the world exchange markets and the contribution made by Mr. Maudling, Britain's new Chancellor, to discussion of ways of easing the problem of future shortage of international means of payment. Both the annual report of the Fund and the speech from its Managing Director, Mr. Per Jacobsson, voiced a confidence that the severe spasms of tension experienced in international payments in the past were now giving place to a more dependable equilibrium, increasing confidence in particular in the underlying strength of the U.S. dollar and in the capacity of the world's exchange mechanism to evolve to meet world requirements without any alteration in the price of gold.

These comforting observations had their reflection in the exchange markets in a notable strengthening of the dollar in terms of European currencies. It was mainly as a backwash of these movements that sterling depreciated a little further around the middle of the month, momentarily touching parity with the U.S. dollar, though it has since risen perceptibly above that point.

International Liquidity

Mr. Maudling's promised initiative in the debate about international liquidity proceeded from the background of thinking that I outlined last month—notably from the proposition that, on a long view, the present international payments facilities need to be extended and that the processes of extension should not be such as to put excessive strain on the "key" currencies, dollar and sterling. If that were to happen, the whole exercise might be self-defeating, since the Governments responsible for the safeguarding of those currencies might be obliged to resist the strain by taking measures likely to react adversely on the growth of world trade.

Mr. Maudling suggested that the two new devices recently adopted to extend the facilities —the scheme launched at Vienna to give special borrowing facilities to the I.M.F., and the extension of arrangements between central banks for the mutual holding of currencies—would not be likely to provide a permanent solution, valuable though they were. Would it not be possible, he asked, for the Fund to build on these ideas and to broaden them to provide "the basis of a multilateral system of a more regular and automatic character which would be capable of expansion to the extent necessary at any time?"

He himself was attracted to the idea that the leading trading countries might co-operate in establishing and utilising a mutual currency account within the I.M.F.: "By this I have in mind an arrangement of a multilateral character under which countries could continue to acquire the currency of another country which was temporarily surplus in the markets and use it to establish claims on a mutual currency account which they could themselves use when their situations were reversed. Such claims on the account would attract the guarantee that attaches to holdings in the Fund."

Such a scheme could have far-reaching possibilities; further details of what the Chancellor has in mind are awaited with interest by financial circles in London—but not with any high confidence that the idea will equally attract the monetary authorities of Washington and Europe.

On the home front, the latest indicators of the trend of the economy have not all pointed in the same direction. The index of industrial production, seasonally corrected, suggests that the very rapid recovery experienced in the early months of the year levelled out around mid-year: from its low point of 111 last January (1958—100), the index rose to 116 by May (thus returning to the all-time peak of July 1961) and then climbed another point in June, only to relapse to 116 in July.

At this period, however, seasonal correction is especially difficult; it would be premature to infer a change of trend. Retail sales, by value, also flattened out at this time; they also were approximately restored to the peak of May 1961, but, by volume, they show a drop of nearly two per cent from the peak. On the other hand, informal evidence suggests that the early autumn trade has been much brisker; the advance foreshadowed by official estimates earlier in the year may still show itself. Unemployment rose further at the September count to 465,000 or 2.1 per cent of the labour force which is the highest for this time of year since 1958; but, if seasonal influences are allowed for, the rise had been virtually halted in the latest four-week period.

Stocks Run Down

Rather unexpectedly, the quarterly estimates of movements in stocks and work in progress showed a further outright decline in the aggregate in the second quarter of this year; it is rare for actual de-stocking, as distinct from a decline in the rate of addition to stocks, to be shown for two quarters running. The reduction was, however, smaller than in the first quarter, which supports the general assumption that the long projected swing into re-stocking has since begun. This apparent behaviour of stocks in the first half-year makes the strong rise then in production somewhat surprising, since fixed investment outlays by manufacturing industry were still falling (though investment by the service and distributive industries rose by more in the second quarter than it fell in the first). The only evidence of dynamic influences on the economy were the rising outlays of the public sector and the rise in exports.

This last movement, which carried the seasonally adjusted total of exports from £298,000,000 for December 1961 to £328,000,000 for June 1962, was halted in July and then, in August, there was a reaction to only £309,000,000. It is hoped that this latest movement is not representative, but reflects merely the vagaries that may affect a single month's figures. Rather more worrying was the fact that the seasonally-adjusted figure for imports in August virtually maintained the sharply increased level that had been reached in July.

The widening of the "crude" gap between imports (c.i.f.) and exports (f.o.b.) in these two months may have meant that Britain's current balance of payments as a whole was barely in equilibrium at that time. In the second quarter of the year, however, it is officially estimated to have been in substantial surplus. The "identified" surplus is estimated at £76,000,000, easily the largest since 1959 and followed one of £20,000,000 in the first quarter. For the first half of the year, therefore, there was an "identified" current surplus of nearly £100,000,000, as compared with an "identified" current deficit of £60,000,000 in the similar period of 1961.

SINCE 1899 Wherever wheels and shafts turn, there is a fight against friction. Helping you win this battle are Timken tapered roller bearings. They practically eliminate friction. Not just in cars, but in trucks, farm equipment, plant machinery—in almost every kind of machine in the world. ■ Timken Company engineers have been working since 1899 in partnership with engineers the world over. Their object is to help design machines that run smoother, run longer, run with less maintenance and cost less. ■ It's the high quality of Timken bearings that delivers this kind of performance. They're precision manufactured of nickel-rich steel and case-hardened to make them resist wear and take shock loads. Quality control from start to finish assures uniform performance. Bring your bearing application problems to the men who proved the tapered roller bearing design. The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable: "TIMROSCO". Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

S. INDIAN YARN DEALERS' CONFERENCE

PRICE CONTROL SCHEME CRITICISED—RATIONAL DISTRIBUTION URGED

IT is not at all surprising that the Indian Cotton Mills Federation's voluntary scheme of yarn price regulation was subjected to severe criticism at the South Indian Yarn Dealers' Conference held at Madras last week. For the scheme does not seem to have succeeded in ensuring steady supplies of mill yarn at the prices fixed by the Federation, as witness the wide gap between these prices and the prices at which the yarns are actually sold in the market, even after taking into account the increase in prices necessitated by higher cotton prices, etc. Forty counts single hank yarn spun from Indian cotton is currently quoted in Bombay at Rs. 35.50 per bundle of 10 lbs., as against the "controlled" net mill price of only Rs. 28.75. Similarly, 30 counts are quoted higher at Rs. 29, 26 counts at Rs. 27.50, 20 counts at Rs. 24.12 and 6 counts at Rs. 16.37, whereas the "controlled" prices are only Rs. 25.32, Rs. 24.18, Rs. 21.60 and Rs. 13.57, respectively.

The wide gap, thus, in yarn prices must be attributed to two factors. In the first place, the price ceilings for yarn, which were fixed as far back as in September 1960 with August 1959 as the base, have been rendered uneconomic, notwithstanding the percentage increases allowed to cover increases in manufacturing cost, mainly the rise in cotton prices; some mills are, therefore, reported to have been compelled to sell yarn at relatively higher prices. Secondly, there is a lack of suitable arrangement for ensuring proper distribution of yarn at the "controlled" prices through the trade to consumers.

Artificial Scarcity

The speeches and discussions at the Conference revealed that the ceiling prices, instead of acting as a healthy curb on yarn prices, had created an artificial scarcity in the midst of plenty and brought about a scramble for supplies, high prices and undesirable shifts in production, to the detriment of the legitimate trade and the consumers. In his speech at the Conference, Mr. Kanak Paul, Vice-President of the Calcutta Yarn Merchants Association, declared that the system of ceiling prices had failed to stabilise prices and had caused more distress to the trade and consumers. Mr. Ambalal D. Patel, Chairman of the Reception Committee, declared that the scheme had failed. The Government, he said, had been exerting pressure on the mill industry to ensure yarn supplies to the co-operative societies at the ceiling prices, but had not cared to see that the same benefit was extended to the trade and weaver bodies outside the co-operative field. Such discrimination in regard to yarn distribution was also criticised by Mr. A. M. M. Murugappa Chettiar, a leading millowner and industrialist, who presided over the Conference. Taking the instance of Madras State, Mr. Chettiar said:

"There are (in the State) about 466,370 registered handloom weavers. The total demand for yarn, apart from what the composite mills themselves consume on their looms, represents what this group of weavers require. Of these, 224,085 looms are within the co-operative organisation. This is little less than 50 per cent, leaving the remaining number under what may be termed as unorganised sector. The co-operative societies get their requirements of yarn at fixed ex-mill prices. But what is the fate of the 50 per cent of handlooms that lie outside the co-operative sector? They are dissatisfied at the irregularity of supplies and the high prices they have to pay for yarn obtained through yarn dealers, merchants, brokers, master weavers, etc. ...

"Any discrimination between handloom weavers in the co-operative sector and outside in regard to the supply of yarn should be eliminated. There cannot, and should not, be any differentiation, much less discrimination or antagonism, between the two sections in the matter of supplies. Here is, I think, plenty for the Government to do.... There is need for a more rational and equitable arrangement for assuring the yarn trade adequate supplies at fair prices involving no discrimination, and an assured, even if low, percentage of profit margin."

In the course of a special resolution adopted at the Conference, the yarn dealers urged the Government and the Indian Cotton Mills Federation to remove forthwith the voluntary ceiling on prices. The introduction of ceiling, the resolution stated, had created an artificial crisis in yarn supplies and led to a general deterioration in the quality of yarn and, consequently, of handloom products, besides adversely affecting the manufacture of staple handloom products of the Southern region such as *dhotis, lungis* and "Bleeding Madras" fabrics. Characterising the scheme as "impracticable and unrealistic," the resolution said: "The price ceiling scheme had brought about a wide disparity in the purchase price of yarn as between the co-operative societies and the weavers outside the co-operative field."

Voluntary Control

On his behalf, Mr. R. Venkataraman, Minister for Industries, Government of Madras, speaking at a dinner meeting organised by the Conference, assured the yarn dealers that their grievances would be looked into sympathetically by the Government. He did not, however, commit himself in any way on the general policy of prices and distribution, though he pleaded for voluntary distribution control. He said:

"Though suggestions were made to introduce control system in the distribution of yarn, the Government did not accept the view and merely asked the millowners to supply yarn to the weavers in the co-operative field at the voluntary ceiling prices. Out of the total needs of 24,000 bales, the Government requested millowners to give about 6,000 bales to the co-operative sector and about 5,000 bales to weavers outside the co-operatives. Therefore, about 5,000 bales out of 24,000 bales have been brought under voluntary ceiling system and the rest is available for sale in the open market. As co-operatives have to work under restrictions of ceiling prices, the Government had to make arrangements for the supply of yarn at reasonable prices to handloom weavers in the co-operative societies. Under the present circumstances, some sort of distribution control, without a rigorous card system or price control fixed by the Government, between millowners and a group of people who consume yarn is necessary. ... The question of yarn prices is before the Tariff Commission, and its report will enable the Government to see that the prices are based on cost of production and not on the prevailing market rates as at present."

By implication, the Madras Industries Minister has suggested official price control and voluntary distribution control over cotton yarn. Whatever be the nature of controls, the fact cannot be disputed that controls, as Mr. D. C. Kothari, President of the Southern India Millowners Association, aptly remarked, create a scare psychology. If controls were removed, according to Mr. Kothari, supply and demand would adjust themselves and, in a short while, enough yarn would be available for supply at reasonable prices. This view seems to be a correct one. The supply position of yarn is quite comfortable and bids fair to be so in future, thanks to the upward trend of production. The mill output of yarn is currently running at an annual rate of 1,900 million lbs., as against the actual production of 1,733 million lbs. in 1960 and 1,722 million lbs. in 1959. Since there is virtually a ban on the weaving capacity of the mill sector, the quantity of yarn delivered for "civil consumption" has increased markedly in recent years. The monthly average of actual deliveries at present is about 56 million lbs., whereas it was a bare 45 million lbs. in 1960, 34 million lbs. in 1954 and 23 million lbs. in 1951. The deliveries can be stepped up still further not by price and distribution controls, voluntary or otherwise, but by higher production. Mr. G. K. Devarajulu, Vice-President of the Indian Cotton Mills Federation, did well to emphasise this aspect. The only remedy he could see was to increase production. With co-operation from labour, adequate power supply and a little more liberal imports of cotton, the production of yarn could be stepped up. Indeed, he was confident that, if the two million additional spindles licensed for the third Plan period were quickly installed, the industry would definitely be able to meet the full demand for yarn and reduce the difficulties. Needless to say that, if supplies of yarn are plentiful, there will be no scope for such undesirable practices as cornering of stocks or rigging up of prices by any millowner or trader.

COTTON INDUSTRY STILL PRETTY SICK

ASSESSMENT BY AN AMERICAN MILLOWNER

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, *2nd October*

THE first international agreement on world trade in cotton textiles has come into force, but Lancashire is still very much in the dark about it. Little official information has so far come out of Geneva on the all-important question of the actual level of imports and exports agreed. Even those in the Lancashire industry who were prepared to take an optimistic view, arguing that any agreement was better than none, are finding it hard to decide whether there is real hope now for a positive and more equitable sharing of the burden of cotton textile imports from the developing countries.

What is known is that 19 nations are parties to the agreement, which will run for five years from 1st October. They are the United Kingdom (accepting also for Hong Kong), Canada, Denmark, Egypt, India, Israel, Japan, Norway, Pakistan, Portugal, Spain, Sweden, the United States, and the six Common Market countries.

According to a report from Geneva, the Six have agreed to increase their imports by 88 per cent over the 1962 quota figure; Austria will take 95 per cent more, Denmark 15 per cent, and Sweden 15 per cent. Percentages, of course, are meaningless unless they can be related to the actual yardage of cloth involved; until this is known, it is impossible to make a judgment. Many questions remain unanswered; for example, is the 88 per cent increase agreed for the Six based on individual takings by member-countries or an overall average for the group?

But, on the working details known so far, it hardly seems likely that the agreement will do very much to ease Lancashire's burden—the tremendously heavy imports of cotton goods from Asia. At best it can be said that it will not make the situation worse than it has been and still is; inured now to being told to fight its own battles, perhaps the industry should be thankful for small mercies.

Still Shrinking

Export figures for the first two-thirds of the year, now available, provide cold statistical corroboration of the visible day-to-day evidence that the Lancashire cotton industry is still pretty sick. The month of August, in fact, was even more melancholy than the ones that went before it: shipments of piecegoods, at 16,511,000 square yards, were the lowest for any month for more than 20 years and lower even than during the war years. At £2,500,000, earnings were the smallest since November, 1945. This brought total exports of cotton piecegoods for the first eight months of the year to 160,733,000 yards, almost 38,000,000 yards down on the same period of 1961. Earnings were nearly £6,000,000 down at £22,611,081.

The eight-month picture for cotton yarn exports was relatively more cheerful, although shipments in the month of August showed a slight reduction. The total so far this year now stands at 10,195,983 lbs. (value £3,698,055), as against 10,746,450 lbs. (£4,269,325) in the corresponding period of last year.

Imports Down, Too

Against a general background of slackness and inactivity in Lancashire's home and export markets, it is not surprising to find that the downward trend in cloth imports is being maintained. With August arrivals down to 31,900,000 square yards, imports of foreign grey cloth into Britain in the eight months aggregated 282,986,000 yards, as compared with 433,699,000 yards in the same period of 1961. Finished cloth imports accounted for a further 93,899,000 yards up to the end of August, as against 106,205,000 yards. Arrivals of cotton yarn fell to 21,419,450 lbs., as against 29,986,647 lbs.

Through American Eyes

It is always arguable whether the man on the spot, with intimate knowledge of the day-to-day problems of his particular trade, or the man with general commercial knowledge from outside, viewing an industry more dispassionately can get closer to the heart of its fundamental difficulties. Whatever the final outcome, it is always interesting to find out how the situation strikes someone in the same line of business, but from a different part of the globe.

A recent tour of Lancashire mills made by an American cotton man has raised serious doubts in his mind as to whether both Washington and London have decided that the cotton textile industry is expendable not only in the United States but in the United Kingdom. British observers have been saying much the same thing for a long time. This American's assessment of Lancashire's "terrible condition" emphasises that the mills which accepted the redundancy plan and went out of business are now by far better off than those who stayed on, bought more machinery and modernised their output. "These owners now have a wildcat by the tail," he says, "and the only course they can follow is to run the mill full blast twenty-four hours a day, in an attempt to achieve production economies."

The rest of the mills which have not bought new machinery, he says, have big reserves and with business as bad as it is and foreign textiles dumped on the home market, the directors and shareholders naturally prefer to shut down operations and get their money out. For this reason it is predicted that 25 per cent more of Lancashire mills will close down.

Movements in Prices

Although day-to-day fluctuations in either raw material rates or selling prices of yarn and cloth are almost a thing of the past, the trend of values on a long-term basis has a definite bearing on the attitude of traders generally, and buyers in particular. As such, a periodical appraisal of the movement in quotations is called for to remind both producers and distributors of the way in which values have changed. During a phase of inactivity so marked as that encountered for at least 18 months back, the pressure on prices must be expected to increase and salesmen are invariably urged to accept quotations which they know will offer little or no margin of profit. Such has been the case this year and, coupled with the small offtake, the financial results so far seen are the outcome.

The table at the end illustrates the trend in raw cotton and yarn quotations in Lancashire during the past 12 months, together with changes in New York spot rates, which do at least provide more variation than those in the practically stationary Liverpool market.—*All Rights Reserved.*

WORLD SUGAR POSITION

NO UNDUE PRESSURE OF SUPPLIES EXPECTED

JUST six weeks have elapsed since the current (1962-63) world sugar season commenced, on 1st September last to be precise, and it is too early to say with any degree of accuracy as to what would be the trend of world sugar markets in the new season. From indications currently available, however, it appears that there would be no undue pressure of supplies on world markets. This at any rate is the broad conclusion arrived at by the U.N. Food and Agriculture Organisation in its latest (1962) annual *Review*. The conclusion seems to be quite justified, in that it is based on certain valid grounds. Demand for sugar in Western Europe, for instance, is expected to be maintained at roughly the same level as in 1961-62. Again, the Sino-Soviet area will doubtless continue to absorb the bulk of Cuban surplus, which, it is said, is likely to remain lower than in the past, mainly because of the programme of crop diversification that is being pursued in Cuba. Further, under the U.S. Sugar Act, the American suppliers will have the opportunity of meeting the larger part of the domestic demand, but other countries will continue to benefit from the re-distribution of the Cuban quota.

A look back at the past (1961-62) season at this stage would be quite relevant. The world sugar supply position continued to be favourable from the importing countries' point of view, despite the sharp setback in production. The total quantity of sugar actually produced was about 53 million tons (raw value), that is 3.5 million tons lower than the record output (56.5 million tons) of the previous season. Since, however, the opening stocks were substantially higher at 16.0 million tons, as against 13.4 million tons, the total available supply amounted to 69.0 million tons which, though slightly smaller than that (69.9 million tons) in 1960-61, was well above the supply of 62.7 million tons for the 1959-60 season. The excessive supplies that were being offered by exporters in many parts of the world continued to exert a depressing influence on the market, and the International Sugar Agreement did not succeed in its objective of holding free market prices above the minimum of 3.25 cents per pound.

Sugar Council

A United Nations Sugar Conference was held at Geneva in September 1961 to review the operation of the Agreement and to determine the basic export quotas for the two years 1962 and 1963. Even after adjourning and reconvening later, the Conference was unable to reach agreement on the question of quotas, and the quota provisions of the Agreement accordingly lapsed on 31st December 1961. The Sugar Council, however, continues to exist. The U.N. Sugar Conference adopted a final resolution inviting the Council to consult the U.N. Secretary General on reconvening the Conference, if favourable conditions for resumption should emerge. Failing this, arrangements are to be made to request the U.N. to convene another negotiating conference in 1963. The Council was also asked at the Geneva Conference to keep under review the world sugar situation, to undertake studies of relationship between the prices of raw and white sugar and the problem of stocks, and to formulate, in co-operation with the international organisations concerned with improvement of world living standards, programmes for expanding sugar consumption.

While the termination of export quotas has rendered the immediate outlook for sugar obscure, a large proportion of the trade of countries supplying preferential markets will, according to the *F.A.O. Commodity Review* 1962, be unaffected. Arrangements such as that between the U.K. and the Commonwealth producers will also continue in effect, even though previously incorporated into the wider International Agreement, and only that part of the individual quotas not subject to negotiated prices will be influenced by the immediate trend in world market prices.

Consumption

Encouraged by low prices, sugar consumption continued to rise at the high rate of recent years during 1961-62. The actual consumption of sugar in the free world during the year 1961 is estimated 38.6 million tons, as against 37.4 million tons in 1960 and 36.6 million tons in 1959, the percentage increase being 3.2 per cent in 1961 and 2.2 per cent in 1960. The average annual rate of increase during 1956-61 was 2.7 per cent, one of the highest rates for any major foodstuff. The situation in the Sino-Soviet area is less clear. At the February 1961 session of the International Sugar Council, the U.S.S.R. indicated that its purchases from Cuba were for internal consumption and that total exports from the U.S.S.R. would not exceed their customary level. Production of white sugar in the Soviet Union increased from 6.1 million tons in 1960 to 8.4 million tons in 1961, despite a slight decline in State purchases of domestic beet. However, 500,000 tons of sugar were loaned to China in mid-1961, this incidentally tending to confirm the general impression that the latter country, at least, is putting its imports to immediate use. Some of the East European countries have been re-exporting white sugar of Cuban origin, and it is not known how much of the imported supplies went into stocks. If allowance is made for an increase in stocks in the area as a whole of about a million tons (25 per cent), domestic production and imports would still have made possible a rise in consumption of over 25 per cent, to more than 15 million tons, from 12 million tons in 1960 and 10 million tons in 1959. For the world as a whole, consumption would then total around 54 million tons, as compared with 50 million tons in 1960 and 47 million tons in 1959.

Upward Trend to Continue

All indications point to a continuation of the upward trend in world sugar consumption in 1962 and beyond, but at a slower rate than was achieved in 1961. In Europe and the Western Hemisphere, *per capita* consumption has now risen to about 37 kilogrammes and, in the U.S.S.R. and Eastern Europe, it may be higher. Great possibilities for expansion undoubtedly exists in Africa and Asia where consumption in 1961 averaged only about 9.3 kilogrammes. Following the large increase in India's domestic production, stocks on hand at the end of October 1961 increased to 1.2 million tons and controls on distribution, prices and local movement of sugar have been lifted in order to stimulate consumption. One of the largest potential markets in China where, even in 1961, the supplies available could not have permitted a higher level of consumption than about 3 kilogrammes, but it is unlikely that, in the immediate future, domestic production can be expanded or financial resources used for importing additional quantities of sugar.

Trade in Sugar

The world sugar trade throughout 1961 was under the influence of the record 1960-61 harvest and the substantially increased imports into the Sino-Soviet area. The fuller emergence of Russia and China as major importers in 1961 led to a large expansion in the volume of world trade, despite the reduction in West European imports. The actual imports by these two communist countries aggregated 4.8 million tons, as against a bare 2.1 million tons in 1960 and less than half a million tons in 1959. The rise more than made good the fall in imports by other countries from 14.60 million tons in 1960 to 13.75 million tons, so that the aggregate world imports rose from 16.8 million tons to 18.6 million tons. The large quantity of 4.8 million tons imported by Russia and China comprised entirely of Cuban sugar. This was due to the imposition of a complete ban on Cuban sugar imports by the U.S. Administration. Alluding to this ban, the F.A.O. observes:

"As far as the United States was concerned, the resultant gap in supplies was filled partly from the larger domestic production, but mainly by dividing the Cuban share among other established suppliers and non-quota countries where supplies were more than adequate following bumper 1960-61 harvests. Several countries, including Australia and India, received non-quota allocations for the first time. This development was, of course, of outstanding importance in the world sugar trade. Not only did it give many countries an unexpected outlet for their additional production, but prices in the United States continued to be very much higher than those obtainable on the world market or even under the British Commonwealth Sugar Agreement."

The world sugar production in the 1961-62 season was lower, as already stated, by 3.5 million tons at about 53.0 million tons. The decline was accounted for by both cane sugar and beet sugar. Private sources put the aggregate world cane sugar output at about 30.06 million tons, as against 31.18 million tons, the production of beet sugar being estimated at 22.94 million tons, as against 25.74 million tons. In order to compensate for the reduction in sugar output in 1961-62, while allowing for higher consumption, countries outside the Sino-Soviet area needed about 3.5 to 4.0 million tons of sugar over and above their domestic production (of 45 million tons during 1961-62), as against 1.5 to 2.0 million tons in 1960-61. Some of this quantity must probably have come from stocks which in many countries could be comfortably reduced and there were also larger imports. In this connection, the supply position in Cuba was, of course, of key importance. Even after the record trade in 1961, Cuban stocks carried forward into 1962 aggregated 1.1 million tons, or roughly the same as at the beginning of the previous year, but the total supply in 1961 is estimated at only about 6.5 million tons, as compared with 7.9 million tons in 1961. Of this supply, the Sino-Soviet countries are expected to absorb again something like 4.9 million tons under their long-term agreements with Cuba and agreements with other countries such as Japan also account for further large quantities. It is not surprising, therefore, that Cuba announced many months ago its withdrawal from the world market. The current (1962-63) season's output of Cuban sugar is expected to be only a little better than in 1961-62 (when the output was lower at 5.38 million tons, as against 6.77 million tons in 1960-61), but, since the opening stocks were appreciably less, the total available supply will be small indeed. From this, one cannot, however, rush to conclude that Cuban sugar has ceased to have a predominating influence over world sugar markets. It would be pertinent to recall here that sales of "second hand" cane sugar by a Cuban agency, to which has lately been resold a part of sugar supplied to Russia and Communist countries, are still continuing.

SHIPPING IN THE THIRD PLAN

TARGET AND FINANCIAL PROVISION

(Contributed)

THERE has been some misunderstanding in regard to the target for expansion of shipping and financial provision for it in the third five-year Plan. There are, for instance, some discrepancies between the figures contained in the recommendations of the National Shipping Board and those mentioned by Mr. Raj Bahadur, Minister of Shipping, in his statement and speeches in the Lok Sabha. It is necessary, therefore, to clarify the position in so far as the National Shipping Board is concerned, so that the public may have a correct picture of the recommendations made by the Board and the extent to which these recommendations have been accepted by the Government.

The question of the target for the third Plan and the financial provision required for achieving it was considered in all its aspects by the National Shipping Board in 1959 and the Board submitted a detailed report in January 1960. The Board had recommended a target of 14.2 lakhs G.R.T. to be reached by the end of the third Plan period involving a total financial outlay of Rs. 118.8 crores inclusive of about Rs. 14 crores to be contributed by private sector companies from their own resources. In other words, the Board had suggested a financial provision of Rs. 104 crores in the Plan for achieving the above target. The Board's recommendations envisaged a gross addition of about 6.9 lakhs G.R.T., including replacement tonnage of about 1.72 lakhs G.R.T., on the assumption that the second Plan target of 9 lakhs G.R.T. would have been achieved by the end of that Plan period. The details of the tonnage addition and the financial provision recommended by the Board were as follows:

	Replacement	Addition	Total	Estimated cost
	G.R.T.	G.R.T.	G.R.T.	(Rs. crores)
Coastal :				
Dry cargo	1,00,000	40,400	1,40,400	18.60
Tankers	..	7,500	7,500	1.15
Overseas :				
Dry cargo including passenger vessels .	72,000	4,04,200	4,76,200	90.45
Tankers	..	66,000	66,000	8.60
Total ..	1,72,000	5,18,100	6,90,100	118.80

	(Rs. crores)
Estimated contribution by private shipping companies from their own resources	14.03
Financial provision to be made in the Plan	104.77

In examining the target for the third five-year Plan, the Board had kept in view the objective of enabling Indian shipping to carry not only the entire coastal trade but also a substantially larger share of the overseas trades than during the second Plan period. It was also felt that the target should be based on an assumption of the possible expansion of tonnage in both the public and private sectors. The Board was also of the opinion that apart from liner trade in which considerable progress had already been made by Indian companies, Indian tonnage should cater to the oil, bulk cargo and passenger traffic so that India could have a balanced fleet consisting of dry cargo tonnage, both liners and tramps, tankers and passenger vessels.

The Planning Commission, however, decided to provide only Rs. 55 crores in the Plan owing to paucity of resources and the National Shipping Board was accordingly asked to formulate revised proposals regarding the allocation of this provision between the private and public sectors and between ships of various types. The programme of acquisition as envisaged in the Plan is as follows:

	Replacement	Addition	Total	Estimated cost
	G.R.T.	G.R.T.	G.R.T.	(Rs. crores)
Coastal :				
Dry cargo	1,00,000	25,000	1,25,000	16.70
Tankers	..	7,500	7,500	1.15
Overseas :				
Dry cargo including passenger vessels .	93,600	95,400	1,89,000	36.70
Tankers	..	53,000	53,000	6.80

	(Rs. crores)
Estimated contribution by private shipping companies from their own resources	7
Financial provision to be made in the Plan	55

Even though the Board felt that the shipping target for the third Plan which they had recommended earlier was a modest and reasonable one and represented only the minimum necessary development based on a rate of expansion which had already been achieved during the last two years of the second Plan, the Board indicated priorities for the acquisition of ships of different types in the private and public sectors in order to enable the available financial provision to be utilised in the best interests of Indian shipping. The indication of such priorities would, it was believed, also serve to emphasise the inadequacy of financial provision for shipping in the Plan and enable a better appreciation of the need to enhance the amount of allocation. In laying down the priorities, the Board recommended that first priority should be given to the replacement of overage tonnage, both on the coast and in overseas trade, then to bulk tankers, then to dry cargo ships (particularly tramp ships), and lastly to passenger ships. The Board accordingly forwarded in July 1961 their revised proposals, particulars of which are shown in the following tabular statement:

	Replacement	Addition	Total	Estimated cost
	G.R.T.	G.R.T.	G.R.T.	(Rs. crores)
	PRIORITY No. 1			
Coastal :				
Including Konkan passenger vessels .	1,03,300	40,400	1,43,700	20.10
Tankers	15,000	..	15,000	2.50
Overseas :				
Dry cargo including passenger ships .	77,300	1,80,500	2,57,800	46.10
Tankers	..	60,000	60,000	6.00
Total ..	1,95,600	2,80,900	4,76,500	74.70
Add—Carry forward from Second Plan.	..	..	..	6.50
			Total ..	81.20
	PRIORITY No. 2			
Coastal	..	..	..	..
Overseas :				
Dry cargo	..	1,61,500	2,61,500	25.60
Tankers	..	1,00,000	1,00,000	10.00
	..	2,61,500	2,61,500	35.60
	PRIORITY No. 3			
Coastal	..	..	..	..
Overseas :				
Passenger vessels ..	..	60,000	60,000	18.00

It will be observed that the gross addition of tonnage and the financial provision envisaged in the recommendations under priority No. (1) (2) and (3) were as follows:

	Gross addition G.R.T.	*Financial provision* (Rs. crores)
Priority No. 1	4,76,500	81.20
Priority Nos. 1 and 2	7,38,000	116.80
Priority Nos. 1, 2 and 3	7,98,000	134.80

Since the formulation of these proposals, however, certain developments have taken place such as the demand for additional tonnage on the coast to cater for the increased movement of coal, the proposed acquisition of substantial tonnage by the Jayanti Shipping Company, placing of orders by the Shipping Corporation with the Hindustan Shipyard (Visakhapatnam) for construction of liner vessels, decision to build new passenger vessels to replace the existing ones employed on the Konkan coast. At the request of the Ministry of Transport, the Board reviewed the position in the light of these developments and made a further report in July 1962 recommending the target of 13.5 lakhs G.R.T. with a total outlay of Rs. 82 crores.

While reviewing the position, the Board found that, with the tonnage already acquired or ordered, the target set in the Plan, namely, 10.8 lakhs G.R.T. could be considered to have already been reached. They, however, felt that, irrespective of whether this target had been reached or not, there was an urgent need to acquire some additional tonnage both for replacement of overaged tonnage on the coast and in the overseas trade and for expansion of tonnage for operation in certain essential sectors. For example, there was the need to modernise and expand the coastal fleet, particularly having regard to the requirement of additional tonnage for the movement of coal. There was also the need to acquire bulk tankers for overseas trade as India has only one such tanker at present. Moreover, although the Jayanti Shipping Company had ordered a fleet of large-sized bulk carriers, the Board felt that a few bulk carriers of smaller size should also be acquired. The Board's proposals in this connection are summarised below:

	Replacement	Addition	Total	Estimated cost
	G.R.T.	G.R.T.	G.R.T.	(Rs. crores)
Coastal :				
Dry cargo including Konkan passenger vessels	1,43,600	42,400	1,86,000	29.67
Tankers	15,000	..	15,000	2.50
Overseas :				
Dry cargo including passenger vessels .	59,300	56,000	1,15,300	25.30
Tankers	..	40,000	40,000	4.00
Total ..	2,17,900	1,38,400	3,56,300	61.47

The Board estimated that on the basis of the total cost of Rs. 61.47 crores for acquiring the abovementioned tonnage, the financial allocation required in the Plan would be about Rs. 50 crores, the balance being contributed by the shipping companies themselves. According to the information available with the Board, an amount of about Rs. 32 crores had already been expended or committed to in respect of the tonnage already acquired or ordered. The total financial provision for shipping in the Plan, according to them, thus worked out to Rs. 82 crores against the provision of Rs. 55 crores already provided in the Plan. The Board accordingly recommended the allocation of an additional provision of Rs. 27 crores.

According to Government sources, however, the actual addition made to Indian tonnage during the current Plan period and the financial provision that has been committed to in respect of such tonnage are as indicated in the following statement:

	Tonnage acquired or ordered G.R.T.	*Target set in the Plan*	*Financial provision committed to* (Rs. crores)
Coastal trade	73,356	1,32,500	46.90
Overseas trade	3,02,044	2,42,000	3,309.89
	3,75,400	3,74,500	3,356.79

It will be observed from the figures given above that the physical target set in the Plan may be considered to have already been reached, although (*a*) there is a shortfall in the target for coastal tonnage and (*b*) several of the ships which have been ordered have yet to be delivered. As regards the financial provision, it is understood that, while working out the figure regarding the provision utilised so far, Government have excluded the commitments carried forward from the second Plan but have included the commitments actually made during the current Plan, irrespective of the fact that a portion of the loans already sanctioned will be made available only during the fourth Plan period. For example, while the Board have taken into account a sum of Rs. 12.5 crores being the amount carried forward from the second Plan and excluded an amount of Rs. 13.5 crores out of the loan of Rs. 20.5 crores promised to the Jayanti Shipping Company which would be payable in the fourth Plan period, Government have taken into account only the commitments entered into in the current Plan period. Thus, the amount utilised so far on account of loans was taken as Rs. 33.57 crores as mentioned in the above statement. In addition, a sum of about Rs. 3.5 crores has been invested in the Shipping Corporation. The total expenditure that has so far been incurred or committed to on the basis of the above figures is thus about Rs. 37 crores.

It has, therefore, been pointed out by Government that there is a balance of Rs. 14 crores still available in the financial provision made in the Plan. It has also been estimated by them that this amount of Rs. 14 crores would be sufficient to acquire ships worth about Rs. 17.5 crores on the assumption that the balance of 20 per cent of the purchase price would be met by the shipowners concerned. On a rough basis, it has been estimated by Government that it will be possible to acquire ships of about 175,000 G.R.T. with this provision and the physical target raised to 12.5 lakhs G.R.T.

Doubts have been expressed in certain quarters whether, in view of the fact that a

SEPARATION OF AUDIT FROM ACCOUNTS—II

PROS AND CONS VIEWED FROM CURRENT DAY REQUIREMENTS

By A. Premchand

THE main features of the separation scheme as introduced in the Central Departments, Lok Sabha and Rajya Sabha, and in the States of Bengal and Saurashtra (the features were generally the same in respect of all these units) were: the secretary of each department, brought under the separation scheme, was considered as the chief accountant officer and his responsibility was to be discharged through the assistance of the accounts officer who will work in direct relation with him without any interference from any other officer in the Ministries. The personnel who were appointed as the pay and accounts officers and the other subordinate ranks were all drawn from the Indian Audit and Accounts Department. The experiments in the States, did not enjoy a long life. The Saurashtra scheme was abandoned when the State was integrated with Bombay. The West Bengal scheme was abandoned with effect from 1st November 1957, as it had proved a failure. It was found that well understood financial principles had been disregarded under instructions of departmental offices and that, on the whole, it had not given any beneficial results. The scheme could not be extended to other Ministries at the Central Government also, as the amounts of expenditure involved were fairly big. The problem before the Government was whether to go ahead with the separation scheme or to defer its further implementation to a future occasion. The Government chose the latter. A significant development took place meanwhile, namely, the implementation of the revised procedures for budgeting and financial control introduced in August 1958. The Government wanted to assess the utility of this system with a view to considering the efficacy of the extension of the pay and accounts offices in the changed context of financial arrangements. While this has been the general approach of the Government, there has been a reversal of the policy so far as the Comptroller and Auditor-General was concerned. The second C. & A. G., Mr. A. K. Chanda, who had started off as a protagonist of separation, changed his opinion during the later part of his tenure. He thought that the departmentalisation of accounts had not by itself contributed towards an increase in efficiency but had only resulted in avoidable extra expenditure and dilution of competent manpower. He, therefore, urged a reappraisal of the scheme.

Why Reversal?

What are the reasons for this reversal of policy? This question brings us to a consideration of the arguments for and against "separation." As has been pointed out earlier, a number of arguments are adduced from time to time in favour of and against separation; we may consider, first, the arguments in favour of separation. On a consideration of the question from the standpoint of the executives it may be said that separation of audit from accounts is essential, in order to have an adequate machinery to watch the expenditure, to aid financial control, to help scrutinise and examine each proposal leading to a disbursement of money, to plan the budget estimates and, generally, to be in charge of all the financial matters of a Ministry. In the 'thirties, when the scheme of separation was introduced, emphasis was laid on the preparation of two sets of accounts, as being essential to a proper financial control. The two sets of accounts were: (i) on behalf of the Government for the purpose of financial control and (ii) on behalf of the Auditor-General for the supply of the material for the computation of the appropriation accounts and finance accounts. The need for such accounts continues even now; but, meanwhile, there has been another development which, in a way, changed the complexion of the problem. With the advent of the developmental expenditures on a large scale, the need for data which can help the formulation of projects and policies has become essential. Thus, accounting data have a twofold purpose, accountability and policy. Though this distinction was first recognised in the business world, its applicability to public finance was not so readily conceded. The main purpose of accountability is to present a means of control over the actions of people who are entrusted with the handling and disposal of moneys not belonging to them. The policy aspect is served when the data given are useful in the formulation of a policy both for short run and long run alike. The data should be able to reveal to the administrative authorities the extent to which a plan has been carried out, so that it could serve as a preliminary to the formulation of a fresh plan. It should indicate the progress in terms of money spent as also in physical terms. The need for such data in the context of planned development can hardly be overemphasised.

The data required can be conveniently supplied if the pay and accounts offices are separated and transferred to the charge of the administrative department. The present role of an Accountant-General, who is away from the administrative department and impersonal in his approach, can hardly be expected to fill this role and discharge the functions listed above. Besides, the existing procedures, outmoded as they are, add to the difficulties and no data are available at any time to help the formulation of new projects. Accounting data are the eyes and ears of a department in the context of fulfilment of the tasks and responsibilities entrusted to a modern department. Separation has also been favoured on the plea that audit should be independent from the accounting authorities. It is a generally recognised principle in the commercial world "that business transactions should be subjected to the audit scrutiny of an agency independent of those charged with the duty of keeping the accounts of these transactions." So, "theoretically, the same principles should apply equally well to Government transactions." The present position, however, is one where the same agency is responsible for the maintenance of accounts and also the audit of the accounts compiled by itself, and it is this position which is characterised as being anomalous and highly improper and defective. This point of view has two implications: (i) in the absence of a check by an outside and independent audit agency, the accounts are not reliable, and (ii) it presents a split personality involving preparation of accounts for the executive, on the one hand, and auditing the same by transforming itself into an agency of audit, on the other. The combination of such duties is illogical and therefore undesirable.

Value of Pre-check

Separation would ensure a pre-check of all claims before payment. Such a scrutiny is an essential function of the pay and accounts officer. This pre-check system has certain advantages. It provides a check on the accuracy of each claim; and it enables prompt compilation of data, as the figures of disbursements are entered in the accounts immediately after the disbursement on the basis of the cheques issued.

Another argument adduced in favour of separation is that, when audit becomes an independent agency, devoid of the responsibility of the routine work, and entrusted with the task of auditing the completed records compiled by others, it brings to bear a more detailed view and will have opportunities to concentrate on matters of greater importance, as, for instance, special investigation. These factors make audit not only a more independent but also a more efficient agency. There is, however, a drawback, for it would involve "double audit"—the pre-audit made by the pay and accounts officers before payment and the independent audit carried out at a later date by the Auditor-General. But it is argued that this process, far from being a handicap, would actually ensure a more efficient audit.

The pay and accounts officer can, in his person, act as a financial adviser to the controlling officer. He can be helpful in the preparation of the estimates, in considering economy and regularity of an expenditure proposal, in fortifying a financial proposal which is to go to the Finance Department for its concurrence, in watching the progress of expenditure and in taking timely action for a supplementary grant if the situation warranted such a course. In addition, the pay and accounts officer will provide an important agency which acts as a concurrent and internal audit, a financial adviser and a compiler of up-to-date 'data' for policy-making. These functions, if carried on well, would go a long way towards establishing an effective control of expenditure.

The separation of audit from accounting will also enable the introduction of a system of exchequer control, as the pay and accounts officer, who compiles the accounts regularly, will have an opportunity to judge whether there is any likelihood of the grant being exceeded. Besides, the pay and accounts officers are authorised to reject payment of claims which are not legal and which are not provided for in the appropriation act, especially if the payment of such a bill is likely to result in excess of the original grant. This check is particularly valuable, for, not unoften, the political executives, in their anxiety to go ahead with certain schemes and not being aware of the accounts position, launch on schemes which may eventually result in excess expenditure.

Arguments Against Separation

While the aforesaid arguments are in favour of separation, there are other arguments which blow up the entire thesis itself.

The anti-separationists argue that the mere keeping of total expenditure within the grant as is done by the pay and accounts officer does not mean anything significant. What is more important is a continuous watch on the progress of expenditure as also an awareness of the duty to ensure that the expenditure incurred is justified and economical and therefore proper. These functions, they argue, are of the controlling officer himself and not of the pay and accounts officer. It is also pointed out that the accounts officer may know only the expenditure incurred and booked, while the controlling officer knows not only these two, but also the commitments as well. If the competence of controlling officers has gone down, the solution does not lie in creating a new cadre, namely, pay and accounts officers to supplement the functions of controlling officers. What is required is the granting of more financial and administrative powers to the heads of departments, so that the departments could be made fully responsible for their functional charge. It is further argued that, without financial authority being transferred to the administrative authorities, there could be little or no meaning in transferring accounting responsibility. However, as indicated earlier, such an opportunity of combining the accounting functions with financial responsibilities arose when the revised arrangements for budgeting and financial control were introduced in the Central Government during August 1958. These arrangements included transfer of financial responsibility and greater devolution of powers. But they were not followed by a transfer of the accounting responsibilities for the following reasons: (*a*) the separation scheme, which involves more expenditure, may prove to be a further drain on the Exchequer at a time when expenditure on civil administration was to be at the minimum. And (*b*) the experiment of the revised arrangements and its progress should be watched and carefully assessed before any further changes could be effected. Added to these were the reluctance of the Comptroller and Auditor-General himself to extend the scheme to other Ministries.

Full Trial Never Given

The main question is whether the institution of pay and accounts officers will not help a better expenditure control. The answer appears to be in the affirmative, for the role of the pay and accounts officer should not be visualised merely as that of an accounting officer adding and subtracting figures, but that of a financial adviser and the principal assistant. That is how the controlling officer in the U.K. is regarded. In India, the separation system has never been tried in full and in strict adherence to the blueprint first prepared by J. C. E. Jukes. What has been done is only a piecemeal application of the scheme. The pay and accounts officer should not be judged by what he is but from what he would have been, for, in the present position, he is only a part of what he was to have been.

As for the charge that audit is now done by the same agency which compiles accounts, it is argued by the anti-separationists that it does not audit its own accounts but audits the vouchers and accounts sent by the various departmental officers through the Treasuries. The audit, as it functions now, in its combined role, only consolidates the statements sent to it and, in this process of compilation, there is neither scope nor any motive for manipulation. It is also argued that the present system offers many checks and balances at various points, equivalent to the pre-check that would be done in the separated offices. The checks are comprehensive enough to offer almost a perfect safeguard. Moreover, it is doubtful whether an independent audit agency, which may not have ready and free access to documents, will prove as good as the present system.

As regards exchequer control, the anti-separationists argue that centralised payment system, which is an essential part of the separation scheme, would be difficult in a country like India. It is also suggested that the exchequer control does not ensure 'economy' but is only negative in its approach and therefore not very desirable.

Other Arguments

The other arguments against separation may now be summed up. (i) Under separation, the appropriation accounts may not be as reliable as they are in a combined system, as the accounts are prepared by an interested party. (ii) Even under separation, the system of making allotments to the various controlling officers in the department will have to continue. This will necessitate the maintenance of administrative accounts, as these will not be maintained by the pay and accounts officers. (iii) Even now, the Accountant-General is of considerable help and assistance to the administrative department and the Finance Ministry in the preparation of budget estimates, etc., and, in a way, he functions as a financial adviser also. (iv) The separation involves twofold audit (*a*) by the pay and accounts officer, and (*b*) by the statutory audit, and it is not desirable to multiply agencies. (v) The test audit staff, being in poor touch with the executive as compared with the present system, will be less advantageously placed than at present for the conduct of higher audit investigations. (vi) Accounting and audit functions being interrelated, there is nothing wrong in the combination of two functions. (vii) Audit is necessary to ensure that departmental accounting is correct. But, where the audit itself is a different and independent organisation, it is questionable whether there ought to be another independent audit agency. (viii) It is a part of the functions of the Comptroller and Auditor-General to prescribe the forms of accounting. Further, in the context of the formation of linguistic provinces, transacting their business in the regional languages, separation of accounts, is likely to present a fresh problem; it may, therefore, be desirable to maintain the *status quo*. And (ix) Is it necessary to break up a century-old organisation which has withstood the test of time?

Added to all these is the powerful argument that separation would mean an extra recurring expenditure of Rs. 12 crores a year and would involve an additional employment of 45,000 men. In the context of the need for conserving all available resources for financing economic development and of a shortage of trained manpower, it is undesirable, so it is contended, to enter into commitments which may lead to more unproductive expenditure. The expenditure factor may be a powerful one, but the fact remains that, if the accounts operations are mechanised, there would not only be a remarkable fall in the manpower requirements, but also an appreciable reduction in the total expenditure calculations.

The question that now arises from the analysis of the problem so far is whether separation of audit from accounts is desirable or not. The exercise of the option among the choices offered involves the exercise of a value judgment and, to an extent, the adoption of a partisan attitude also. The answer obviously depends on the purposes which separation is expected to serve. It has been stated earlier that separation, which alone can throw up the accounts data required for the successful implementation of a development plan is an absolute imperative of the day. A scheme of separation should not be rejected on the consideration of cost alone, for what is invested today will repay itself in the form of a sound administrative set-up in future. Further, the need for such separation is inherent in the present situation and the importance of such a scheme should not be allowed to be nullified or hindered on the basis of objections, which might have had some relevance in the 'twenties but have no relevance in the present-day context. Another aspect which requires consideration is that the successful implementation of an exchequer control also requires separation of audit from accounts not only at the Centre but also in the States. What is required is faith in the scheme and a zeal for experimentation.

HEAVY INDUSTRY BIAS IN INDIAN PLANNING

PROF. MAHALANOBIS'S MODEL RE-EXAMINED

THE third Five-year Plan, like the second, has adopted the broad strategy of planning advocated by Professor P. C. Mahalanobis. This strategy is distinguished by its emphasis on investment in heavy, capital-intensive industries. One of the arguments advanced in support of the strategy is that the establishment of heavy basic industries would secure economic independence in the sense that "everything else can be gradually manufactured in India mostly out of domestic resources." Such economic independence means, in other words, "foreign exchange saving." It may be recalled that Prof. Mahalanobis had illustrated this some years ago by providing a numerical example with the following conclusion:

"In order to feed the fresh additions to the population at the rate of five million persons per year, it would be necessary to provide an additional quantity of 700,000 tons of foodgrains *every year* which would require Rs. 450 crores of foreign exchange over a period of five years. The cost can be reduced to Rs. 135 crores of foreign exchange in a five-year period, if an additional quantity of 350,000 tons of ammonium sulphate is ordered from abroad *every year*, at least two years in advance of the crop season. The cost can be further reduced to Rs. 125 crores (out of which the foreign exchange component would be Rs. 50 crores) over a five-year period if a new fertiliser factory of 350,000-ton capacity is started *every year*; this would call for decision four or five years ahead of the crop season concerned. The apportioned cost of a heavy machine-building factory which would manufacture machinery in India to install *every year* a new fertiliser factory of 350,000-ton capacity would, however, be so small as Rs. 12 or 15 crores with a foreign exchange component of perhaps Rs. 8 or 10 crores. Such a decision would have to be made only once but eight or ten years in advance of the season in which the fertiliser would be used.... *Wise utilisation of Rs. 10 crores of foreign exchange once for all can lead, in time, to a saving of Rs. 450 crores of foreign exchange in imports of foodgrains over a period of five years.*"

Prof. Arndt's Criticism

The practical utility of this argument has, however, been questioned by Mr. H. W. Arndt of the Australian National University (Canberra) in a paper published in the February 1962 issue of *Sankhya* (*The Indian Journal of Statistics*) received in Bombay last week. It is, of course, recognised in the paper that the "foreign exchange saving" argument is "formally of general validity and probably valid for India even for a relevant planning period." But, in Mr. Arndt's view, it "represents a dangerous over-simplification." "Its too ready acceptance by economists and politicians," he says, "may not be unconnected with the complacency about the foreign exchange aspects of national economic planning which must bear some responsibility for the balance of payments difficulties of the second Plan period." Mr. Arndt's arguments, which are dealt with in the following paragraphs, convey, in short, "that the net gain to the balance of payments to be obtained from the policy of priority to heavy industry is much less than Professor Mahalanobis's exposition would lead us to suppose." His calculations show that the *net* saving of foreign exchange would not be Rs. 440 crores as suggested by Professor Mahalanobis's model, but only Rs. 84 crores.

Mr. Arndt emphasises at the outset that, during the 8-10 years needed, under Prof. Mahalanobis's model, for the successive production of engineering works, fertiliser factories, fertiliser and the first increase in food output, the needs of the growing population for food would have to be met. Here he assumes that imported fertiliser can be used, as soon as practicable, to produce the extra food at home, until home-produced fertiliser made in home-produced fertiliser factories becomes available. He further assumes that the engineering works take four years to build, that is, begin to produce machinery for the fertiliser factories at the beginning of year V, that engineering capacity for the equipment of three new fertiliser factories a year is created, and that investment in the fertiliser factories has a gestation period of two years (so that the first home-produced fertiliser from three factories becomes available at the beginning of year VII).

On these assumptions, since fertiliser must be imported at least two years in advance of the crop season, foodgrains worth Rs. 30 and Rs. 60 crores, respectively, will have to be imported in years I and II. In addition, fertiliser will have to be imported in every year from I to IX, at an increasing rate of Rs. 9 crores for each year's population increase upto year VI and at a diminishing rate over the next three years as more and more domestic fertiliser factories go into production. Since the first year in which the application of imported fertiliser yields additional domestic food output is year III, fertiliser imports in year I must begin with Rs. 27 crores. Finally, there is the import of machine tools, at the rate of Rs. 10 crores worth, for establishing engineering capacity for one fertiliser factory per year. This will call for an import expenditure of Rs. 30 crores in year I for establishing engineering capacity for three fertiliser factories in all. Thus, the direct foreign exchange requirements during the first ten years are as follows:

	Rs. crores
Foodgrains imports in the first two years	90
Fertiliser imports from year I to year IX	405
Machinery imports in year I	30
	525

There will also be some indirect foreign exchange requirements. Here Mr. Arndt has made some suitable assumptions regarding the import content of fertiliser factories and fertiliser output, for it would be unreasonable to expect *all* the required raw materials to be available from purely domestic sources. An import content of 10 per cent of the fixed investment in fertiliser factories has been assumed. The proportion of import content in the fertiliser produced is assumed at 20 per cent. Another assumption pertains to the "opportunity cost" in terms of foreign exchange. Account has to be taken of this cost, for the resources, had they not been used for the aforesaid purposes, could have been employed in other (better) forms of import-replacing or export production. The indirect foreign exchange requirements on all these counts add up to Rs. 328 crores. The total foreign exchange requirements (both direct and indirect) of a policy of maximum food self-sufficiency, as compared with those of a policy of importing all foodgrains, are brought together by Mr. Arndt in the following table:

Total Foreign Exchange Requirements

(Rs. crores)

Year	Policy of importing all foodgrains	Policy of maximum self-sufficiency		
		Direct	Indirect	Total
I	30	87	..	87
II	60	96	..	96
III	90	45	..	45
IV	120	54	..	54
V	150	63	21	104
I–V ..	450	345	21	366
VI	180	72	41	113
VII	210	54	57	111
VIII	240	36	74	110
IX	270	18	66	84
X	300	..	69	69
VI–X ..	1,200	180	307	487
I–X ..	1,650	525	328	853

It will be seen from the above table that a policy evolved in the light of Prof. Mahalanobis's model will yield a substantial saving of foreign exchange (Rs. 1,200 crores *minus* Rs. 487 crores) only in the second five-year period assumed. In the first five-year period the net saving in foreign exchange will be no more than Rs. 84 crores (Rs. 450 crores *minus* Rs. 366 crores). It may be noted further that, in the first two years of the programme, its foreign exchange costs (Rs. 87 crores *plus* Rs. 96 crores) will be more than twice as high as those (Rs. 30 crores *plus* Rs. 60 crores) under the alternative policy of importing all foodgrains. The strain that will be imposed by a policy of import-replacing domestic production in the first few years is undeniable. Here, the example pertains to food—a commodity which has been mostly imported in the last five or six years under U.S. P.L.480 without any foreign exchange expenditure. But it can be as well applied to any other kind of import-replacing domestic production. That is not the relevant issue. What is more relevant is the period of time that will be necessary for achieving economic independence through the establishment of heavy basic industries. An equally relevant issue pertains to the heavy initial requirements of foreign exchange which will upset the balance of payments as they have undoubtedly done in the last six years. This, however, should not be taken to mean that Mr. Arndt has made out a case for a reversal of priorities. What, on the other hand, he has done is to suggest that the optimum policy for India, *for balance of payments purposes*, would be a slower and more cautious advance in the chosen direction.

The chosen alternative is even otherwise a difficult proposition, for it poses some organisational problems. For instance, an immense organisational effort would be required to induce the Indian cultivator to use fertilisers and to make technical improvements in his agricultural methods. Making available irrigation facilities should also form part of this effort. It is true that Prof. Mahalanobis has recognised the importance of such organisational efforts. But he has, at the same time, placed greater emphasis on heavy industry in particular. Referring to this emphasis, Mr. Arndt says:

"The question suggests itself whether such emphasis is not bound, in some measure, to detract from the organisational effort needed to bring about the postulated increase in food production. If failure in this campaign results in growth of domestic food production lagging behind the targets set out in the model, then, availability of all the requisite fertiliser notwithstanding, the population can only be fed by, after all, importing foodgrains and thus still further diminishing the net balance of advantage in favour of the chosen route. ... It is no answer to this to say that expansion of export production would require even greater organisational effort. The trouble is that the effort required *either* for expansion of domestic food production *or* for exports is stupendous, while the task of building up heavy industry *sounds* relatively easy. Yet it is the stupendous effort in one form or other that is inescapable."

On balance, Mr. Arndt's re-examination of Prof. Mahalanobis's model does not amount to a refutation of its theoretical validity. It merely shows up the danger of oversimplification, brings into the open some of the more important qualifications, and highlights the need for commensurate competent organisational efforts in the chosen direction of heavy industrialisation.

NEW PRODUCTS AND PROCESSES

Fully Automatic Washing Machine

A COMPANY in Dallas, U.S.A., has perfected a fully automatic machine that washes, rinses, dries, and irons flat pieces of laundry in less than one minute. Jet Stream Products Inc. has applied for 20 patents for the large multipurpose machine that is now being installed in some commercial laundries. An operator places soiled laundry on a conveyor belt that moves as fast as 150 feet a minute. As fabric enters the wash chamber, high-pressure jets of water and detergent are forced through the fabric. In the rinsing chamber, clear water is forced through the cloth. A heated chamber completely dries the material, which is then dampened slightly for ironing. A device folds the material as it rolls out of the machine. Mass users of laundry service, such as hotels and hospitals, are expected to benefit by faster service and lower costs from the use of this machine. Large families may also find the new machine helpful. President K. G. Smith of Jet Stream Products predicts: "We estimate that when the Jet Stream service is widely available, it will greatly increase the ratio of flatwork done professionally. We foresee 80 to 90 per cent of the nation's housewives sending sheets, tablecloths, towels, etc., to laundries at the prices Jet Stream will make possible." The principle of the laundry machine is also adaptable to many other functions and industries, according to Mr. Smith. His firm is studying its application to dry cleaning, in particular. The first of the revolutionary laundering machines was delivered in July 1962 at a cost of approximately $78,000. The manufacturer plans to build 150 more during the coming year.

Anti-lock Braking Device

An anti-lock braking device, claimed to be the first of its kind in the world, has been announced by a British firm, Lockheed Hydraulic Brake Company Ltd. This new device should completely preclude many of the dangers associated with "panic stops" on many road surfaces. It has the added safety feature of reducing braking distances under wet and slippery conditions. A locked wheel has no directional stability and consequently the vehicle takes the least line of resistance that, due to road camber or uneven tyres, frequently results in its crossing the path of oncoming vehicles or hitting roadside obstacles. To overcome these hazards, it is desirable to have a braking system that automatically prevents wheel lock and yet permits the best possible levels of braking to be maintained consistent with the road surface. The new system consists basically of a single inertia type skid sensing device driven off the differential input drive flange, and a vacuum servo to regulate the rear brake pressure in response to the requirements of the sensing device. Tests have shown that with the rear brakes controlled by this system the car will consistently stop straight on a variety of surfaces even though the front wheels are locked. When braking on dangerously slippery surfaces, this new device gives reduced stopping distances compared with the 4 wheel locked condition. This is an additional safety feature, but is one that is secondary to that of ensuring that a vehicle will brake in a straight line and not slew into oncoming traffic.

Quality Control for Steel

Claimed to be the only British instrument of its class on the market, a London firm, Hilger and Watts Ltd., has announced that they are now supplying their Polyvac direct-reading spectrograph to a British steel manufacturer who will use it to analyse a wide range of stainless steels produced to the customers' specifications.

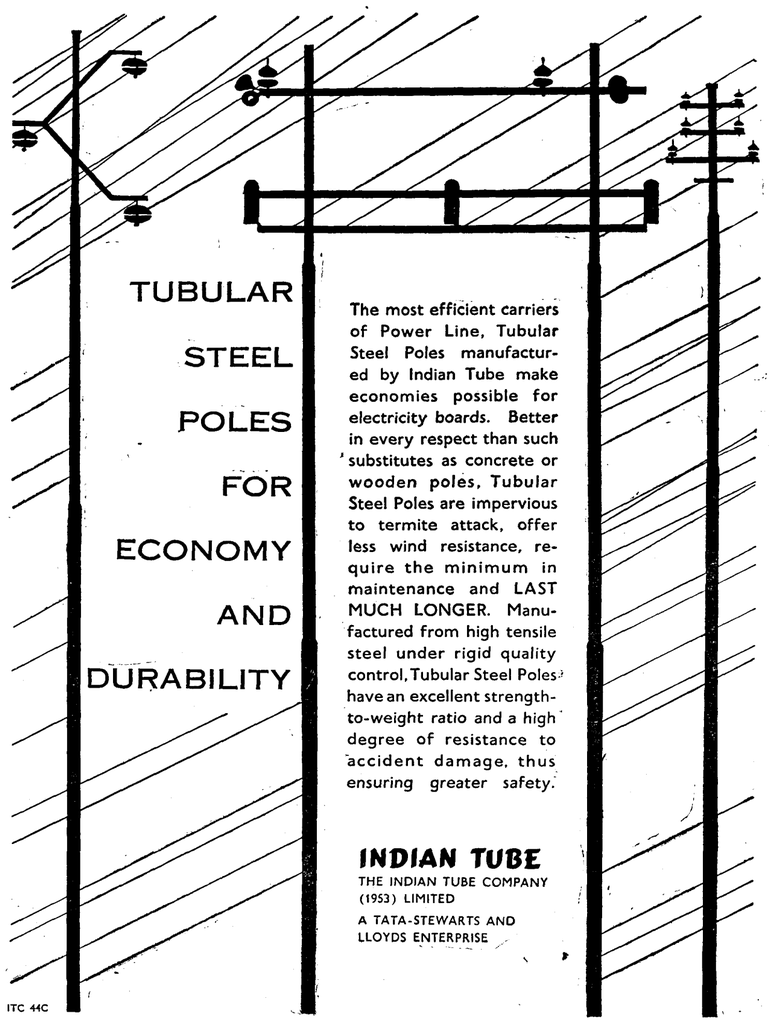
The Polyvac is stated to be the first of its type to be applied to quality control of molten steels made to other than the steelmakers' own specifications and, as such, will deal with programmes which are not only variable but are virtually unpredictable. At present fitted with twelve channels, the instrument will later be fitted with another eight which, in conjunction with a computer, will provide mean results for 20 elements from three separate sparkings of each sample, and also convert the results into percentage concentrations. These results, automatically recorded by an electric typewriter, will be available to the melting shop management in about four minutes—a time short enough to guarantee striking economies in the operation of the furnaces.

New Device for Testing Wood

An original method of determining the acoustical properties of wood for musical instruments has been developed by Leningrad specialists. Pieces of wood are sounded out at scores of points with the help of a special device in a soundproof chamber to determine the spots with the highest sonic yield. The instrument-maker then has merely to take account of the musical properties of every part, and use it to the best account. This method enables the making of instruments with ideal sound which surpass in quality the creations of the great masters of the past. An ordinary guitar made by the new method has won first prize at a contest in Leningrad ahead of the best Italian, Austrian, Spanish and French-made instruments.

A New Film Projector

The "Kolos" ("Grain Ear"), a new Soviet film projector designed for rural localities, is claimed to be one of the best new models manufactured by the Odessa Film Equipment Plant. It can be operated either automatically or semi-automatically. The tests of the first models have shown a high quality of projection. The "Kolos" has been designed by a special office of the State Planning Committee of the Ukraine.



PURPOSE OF ECONOMIC DEVELOPMENT

NEED FOR PROPER GUIDELINES

By John Kenneth Galbraith
U.S. AMBASSADOR TO INDIA

[In order to get good results from modern economic planning proper guidelines are the most urgent need. ... Unaided by guidelines, development planning is likely to miss its goal, because of the generally amiable idiosyncrasies of man to expend a great deal of effort without much inquiry as to the end result. ... Since development implies movement toward some result, we need on occasion to reflect on the result. There is always a danger that, in the absence of such specification, we will risk unintended consequences or we may act inefficiently in the light of what we really want. ... Economically advanced countries generally remain unaware of the need for choice in the specification of development goals, because, as these countries see it, the principal purpose of the economic system is to supply a full range of consumer's goods. ... A faithful imitation of the developed countries is not a proper or useful procedure. ... The goal of expanding production based on the demands by the income pyramid is not a satisfactory guide to less developed lands. That is because the demands of a very large population very near the subsistence level, and those of the well-to-do and of the State, may well conflict with one another. There must, therefore, be a conscious decision to conserve resources and apply them to the highest priority needs. ... A development goal that is highly desirable for underdeveloped countries is the one that anchors economic development to the consumption requirements, present and prospective, of the typical citizen—of statistically speaking, the model consumer. ... There is no form of development—capitalist, socialist or communist—which does not accord higher rewards to trained and educated or to otherwise qualified or responsible personnel. There will, then, be production to meet the purchasing power of these income recipients. This must be recognised and expected. These points were made by Mr. John Kenneth Galbraith, U.S. Ambassador to India, in an address delivered under the auspices of the Lucknow University on 5th October 1962, the full text of which is published on this page.—ED.]

ONE of the generally amiable idiosyncrasies of man is his ability to expend a great deal of effort without much inquiry as to the end result. Most of the descriptions of the moon which I have seen make it out to be a rather unattractive piece of property. The absence of atmosphere would seem to be a real handicap. Even the twenty footsteps which, with the diminished force of gravity, men will take, though initially interesting, may in the end prove inconvenient for getting around in a small house. Yet these and similar reflections show no signs of deterring man from his effort to get there. And I, for one, am glad that they do not. It is an interesting, if by no means inexpensive, adventure and one that is worth pursuing for its own sake. Evelyn Waugh in *Decline and Fall* tells the useful story of a modern churchman, who, while reflecting deeply on the sins of the world, was suddenly impaled by the question as to why God had made it in the first place. Thenceforth, he could think of nothing else. He had to give up his church; the only further employment he could find was as chaplain in a progressive penitentiary, where, perhaps fortunately, he was soon murdered by another deeply thoughtful man. It is a warning against excessive introspection.

But, while appreciating the dangers, it may still be useful on occasion to ask about goals and I am persuaded that this is one such time. For some 15 years, the world—East and West, capitalist and Communist, democratic and more democratic (no country has lately described itself as undemocratic much less anti-democratic) has been engaged in what it has agreed to call economic development. And it is now pursuing this effort in what, with no excess of pessimism, it has chosen to call the Decade of Development. Development is in active voice; it implies movement toward some result. We need on occasion to reflect on the result. There is always danger that, in the absence of such specification, we will risk unintended consequences or we may act inefficiently in the light of what we really want.

Needless to say I am saying here generally and as an economist. What I have to say may not be wholly inapplicable to India, but it should not be deemed to have any special application.

II

One reason why specification of development goals has some special urgency is that the circumstances of the economically advanced countries have enabled them, in very considerable measure, to remain unaware of the need for choice. The principal purpose of the economic system, as these countries see it, is to supply a full range of consumer's goods; the particular mix—the distribution of capital and manpower to different products—is given by distribution of income and the efficiency of markets. And if the distribution of resources between, say, necessaries and luxuries—between mass products for the masses and the more precious or esoteric delights of the few—seems wrong, the thing to change is the distribution of income. An increase of taxes on the incomes of the well-to-do or the products they consume has anciently been thought the appropriate remedy.

Given the income distribution, the only need is to make production as efficient as possible and insure that markets so function as faithfully to reflect the desires of consumers. All of this being regarded as natural, there has been little tendency at least in peacetime to reflect on alternative economic goals. Moreover, there has been a further measure of concurrence from the Soviet-type economies. The Soviet Union has repeatedly proclaimed that its industrial goal is to "catch up" with the United States. By implication, at least, this means a similar industrial apparatus in the service of similar ends. It has been easy to go to the further and final assumption, which is that the industrial apparatus of the United States, Western Europe and the U.S.S.R. is the natural and indeed the only model for the newer countries. These need only to recreate in some rough form what the more developed countries already have. Development is the faithful imitation of the developed.

III

In fact this is not a proper or useful procedure. In the less developed lands, the simple goal of an expanding production, the assortment reflecting the demand given by the income pyramid, is not a satisfactory guide. There is, first, a very large population very near or sometimes below the margin of subsistence. Those who are hungry have a special claim on resources. So do the measures which promise to remedy privation. There is for the same reason a special case against waste or the luxury consumption of the well-to-do. Certain claims of the State take on an added or seemingly added urgency in the poor country—a point to which I will return. The question of how much should be consumed now and how much should be invested for larger production and consumption later on takes on a vastly greater urgency, for, in the poor country, the necessary saving may have to come from people who are already insufficiently supplied. That there must be a conscious decision to conserve resources and apply them to the highest priority needs is reflected in the wide acceptance of the notion that development must be in accordance with a plan.

It is when we come to inspect these plans, in their various degrees of sophistication, that we find the conflict in goals. To systematise matters I think we can recognise three types of economic development which, currently, are more or less in vogue. They are as follows:

1. ***Symbolic Modernisation.*** This is designed to give the developing country the aspect, though not necessarily, the substance of development. There are certain things a modern State must have. Any claim to nationhood requires a decently glittering airport, some impressive buildings of State, a paved capital, an economic plan, one considerable hydro-electric project, at least the intention of creating a steel industry and, perhaps, also a balance of payments deficit and a minimum amount of inflation. I do not discount the importance of these symbols—or some of them. Certainly, no one should be lofty or patronising about them. Effective national leaders have always known the importance of the concrete and visible expressions of national being. Abraham Lincoln insisted during the American Civil War that work on the then unfinished Capitol continue. It was hardly an essential expenditure, but he felt that, if the legislative building went on, people would feel that the union would go on. In the last century, American settlers had no sooner redeemed a new country from the wilderness than they went into debt to build an impressive courthouse. Thus, they proved to themselves and the world that civilisation had arrived.

Yet it will be clear that the economic well-being of the people is not much advanced by symbolic modernisation. And it may be retarded for those who must pay the bill. In the past, moreover, much symbolic modernisation has been a strategy for fooling people into believing something was being done. Or it has been a form of monument building by which politicians have undertaken to commemorate their existence (and perhaps also their inadequacy) at public expense. As it would be unwise to deny a role for symbolic modernisation, so it would be unwise to accord it unqualified approval.

2. ***Maximised Economic Growth.*** I come now to a more respectable formulation of the goal of development and the one which reflects most strongly the influence of Western economic thought. This proclaims it to be, over some period of time, the greatest possible increase in total and *per capita* income and product. While, through import restrictions and duties and domestic excises, the production of some less essential goods may be discouraged, the goal is the overall increase in output. The composition of the product is secondary. At the extreme, plan outlays are selected in accordance with their capital-output ratios. This means that the only test of an investment outlay is the amount by which it increases total product.

There is also likely to be a strong emphasis on heavy initial capital investment. This establishes a large industrial base which then makes possible a larger subsequent rate of expansion in investment goods, consumer goods or both. The growth rate is thus maximised.

Other questions are decided on similar grounds. The rate of needed savings—voluntary, earned or imposed through taxation—is set so as to sustain the largest possible rate of growth. And questions of priority that are beyond the statistics available for calculation of capital-output ratios—the position to be accorded education or other social overhead investment, the balance between industry and agriculture, between light industry and heavy industry—are decided in accordance with the contribution to growth. The only other test which enters with high respectability is the possibility of economising in foreign exchange. A slower rate of growth may be acceptable, if it permits of increased reliance on internal as distinct from imported resources.

As compared with symbolic modernisation, this test of increased income and product obviously has much to commend it. The reality of economic advance—the production of goods and services—replaces the mere image. We have solid and objective tests of performance.

Yet this goal too is not without dangers. People, especially poor people, are not especially influenced by economic gains in the abstract. It is what they can use and enjoy that counts. Considerable extremes of wealth and income continue to exist is nearly all of the less developed lands. These can create a strong drag of demand in the direction of higher-priced or luxury products. And this tendency is especially insidious, for many of these products are commonplace in the more advanced countries and equally so in the consumption habits of the upper income minority of the poorer country. To the extent that the high incomes of the minority draw development resources into privileged consumption, social differences are widened and to the strains associated with poverty may be added those associated with obvious differences in well-being. People soon come to sense that economic development is not for the many but the few.

There are further dangers. In the strategy of modern development, taxation—what have come to be called fiscal savings—plays a considerable role. In the less developed land, there is also a considerable likelihood that taxation will be regressive—that it will fall most heavily on the poor who, after all, are available in the most abundant supply. And since the underdeveloped country is, *pro tanto*, an agricultural community, there may be a traditional tendency for this taxation to fall upon the farmer or his land. Thus, not only does undifferentiated growth tend to support higher income consumption, it may do so partly as the result of saving from lower income consumption.

Moreover, the process of development itself both requires and justifies a substantial increase in the number of people earning higher incomes. Even (perhaps especially) if development is under socialist auspices, there will be an exfoliation of administrators, managers, engineers, technicians, accountants, clerks and other civil servants, all at rates of pay that seem high to the taxpayer. The political consequences of this may be discomforting in any case. If these job-holders are engaged in forms of development that do not benefit the taxpayer, it will obviously be worse. The latter quickly comes to think of development as something which rewards not him but some urban official.

Finally, there are serious dangers in the heavy investment. The saving that this requires can easily reflect the preferences of the planner, not the people. In a number of countries since World War II—Yugoslavia, Poland and most recently China—there have been revolts against rates of saving and investment in excess of what the community would endure.

3. ***Selective Growth.*** The foregoing problems have not gone unrecognised, although the recognition has, perhaps, been less explicit than might be wished. Back of much development planning has been the belief that benefits must accrue as a matter of priority to the more needy sectors of the population. Resources so painfully conscripted from the people must return benefit to the same people.

Unhappily, this politically salutary principle has led to diverse and even contradictory conclusions as to application. To some, agriculture, agricultural extension, community development and local primary education have seemed the obvious answer. These have acquired a kind of mystique as development for the people at large. But to others the obvious answer has not seemed to be increased agricultural income and amenity. These are only palliatives. Agricultural development, in this view, is primitive even reactionary. The real answer is industrial employment. This argues for investment in manufacturing, power, transportation and the other components of an industrial base. The progressive solution is to rescue people if not from the idiocy at least from the inevitable poverty of rural life.

This, however, is a policy with appeal to those who remain unrescued. It means, moreover, that there is a period of heavy saving without a reward in consumers' goods even for the urban worker. This has led to political strains paralleling and not wholly distinct from those associated with investment for rapid growth.

In some countries, notably in India, there is further disagreement between those who defend modern machine methods and those who contend that, since employment is the goal, labour-intensive enterprises, including rural and cottage industries of various kinds, should be favoured.

This discussion, it must be stressed, is quite apart from the debate over which kinds of investment will lead to the most rapid rate of growth. Thus, although there is wide agreement on a policy of selective economic growth, there is very little agreement on what should be selected.

IV

There is a further development goal which, I believe, resolves the foregoing difficulties. It is one, incidentally, that has been implicit in a good deal of past Indian thinking—and in the best planning in other countries. This anchors economic development to the consumption requirements, present and prospective, of the typical citizen—of statistically speaking, the modal consumer. It organises development around the protection and increase of the living standard of this consumer. By way of illustration, if, as in India, the annual income of 80 per cent of all family units is less than Rs. 1,200 (about $250), development resources will be concentrated on consumption that is purchaseable by people with such income. The number of goods and services is not large. Obviously, it means a major emphasis on food, cloth, shelter, education and medicines, since these are the dominant items in the economy of the low-income family. The same rule operates equally against automobiles, expensive dwellings, luxury consumers' goods in general. But, it will be observed, this is not a decision for agriculture or for industry or even for light industry as opposed to heavy industry. It is a chance for the industrial structure which supplies the typical or modal citizen. That person wants, perhaps first of all, an abundant supply of inexpensive food. But back of an improved agriculture lie fertiliser plants and a chemical industry and well-designed agricultural implements and an efficient transportation system and hence a source of steel. Textiles, bicycles and other low-budget consumers' goods will similarly support capital investment. To gear investment to the present and prospective requirements of the modal income family will decisively influence the pattern of development. But it is not, in itself, a decision for or against agriculture or light or heavy industry. It is a decision for an economic structure which is a related to the requirements of the typical consumer.

The goal I am here describing—it might be called the popular consumption criterion—will be seen to resolve the political problems which arise in connection with other criteria. The attention of planners and of the planning is kept concentrated on the needs of the most numerous or typical citizen. The chance that he will have any sense of neglect is thus minimised. There is a warning in this system against measures to enhance savings which depress or unduly postpone this citizen's hope for improved well-being. We have here firm criteria for discouraging luxury imports, production and consumption. We also have a useful barrier to outlays for symbolic modernisation. The required taxes may reduce popular consumption. Even if they do not, opportunities for investing for such consumption are forgone.

The application of the popular consumption criterion cannot be total. In the past, the poorer countries of the world have often produced the luxury products of the more affluent lands. Exports are still necessary and export and domestic markets are never wholly separate. What is supplied to one will always, in some measure, be available to the other. And even development that is firmly geared to the income of the modal consumer produces higher incomes. There is no form of development—capitalist, socialist or Communist—which does not accord higher rewards to trained and educated or to otherwise qualified or responsible personnel. There will, then, be production to meet the purchasing power of these income recipients. This must be recognised and expected.

The criterion is no less important for this reason. For it still fixes objectives and establishes the priorities in the distribution and planned investment. It establishes the line between what is automatically included and on what falls a burden of proof. It also provides the basic guide in taxation and in the administration of exchange controls.

Such guidelines, not perfection of accomplishment, are the most urgent need of modern development planning.

He never looked back...

In 1920, P. K. Chatterjee, a young man just out of school, joined Tata Steel as an apprentice draughtsman.

Full of ambition and zeal to learn, he entered the Company's Technical School which afforded the opportunity to study during leisure. Young Chatterjee was among the first to complete a three-year course in engineering.

Over the years, Chatterjee has worked his way up in the Engineering Department, and blast furnaces have been his enduring interest. He has helped to rebuild the blast furnaces in the Jamshedpur Works, including a 1,000-ton-a-day blast furnace which was rebuilt to his design—the first such attempt in India.

Now an Assistant Chief Engineer in charge of special projects, Chatterjee is widely travelled and highly esteemed by blast furnace designers all the world over.

He is yet another example of how creative talent is recognised and developed in Jamshedpur, a city where industry is not merely a source of livelihood but a way of life.

WORLD AGRICULTURAL OUTPUT STAGNATES

MARKED DETERIORATION IN TERMS OF TRADE

THERE was little increase in the overall world agricultural production during the 1961-62 crop year, according to the latest estimates of the Food and Agriculture Organisation as contained in its annual report, *The State of Food and Agriculture*—1962.* The index of world agricultural output (Base: 1952-53—1956-57=100) in 1961-62 was stationary at the previous year's level of 119. With world population estimated to be rising by about 1.8 per cent per year, *per capita* output has, therefore, actually fallen. Thus the index of *per capita* agricultural production was lower at 105 in 1961-62, as compared with 106 during the three preceding years. The pause in the expansion of production, according to the F.A.O. report, was caused by widespread unfavourable weather. Region-wise, there were quite sharp reductions in the output in Africa and the Near East as a result of drought in a number of countries. In Western Europe and North America, too, output declined somewhat over the previous year. As regards Mainland China, all the evidence points to a "third successive season of poor crops." It was only Latin America which was able to record a substantial increase in output. There were also small increases in eastern Europe and the U.S.S.R., Oceania and the Far East (excluding Mainland China).

On a commodity basis, the products mainly responsible for the pause in the expansion of World production in 1961-62 were grains and sugar. Expansion in world cocoa production noted in the previous years was also arrested in 1961-62. The output of other agricultural commodities, however, continued to rise. Table I shows the production of major commodities in 1961-62, as compared with some previous years. In respect of forest products, roundwood removals recorded a slight increase in 1961. The production of fuelwood continued to decline slowly, but total industrial wood removals are estimated to have increased by about 3 per cent over the 1960 level. Thanks to the failure of production to expand in the face of continuing rise in population, the overall level of stocks of commodities was reduced in 1961-62, for the first time since 1957-58. Final estimates of stocks are not yet available, but, when published, wheat stocks are likely to show a decline of about 15 per cent over the year, following lower output in the U.S. and Canada and large Canadian sales to Mainland China. Stocks of coarse grains are also estimated to have declined, for the first time during the last decade, by 12 per cent, partly on account of the aforesaid reasons and partly to decline in output of maize and sorghum under the Emergency Feed Grain Programme in the U.S.

The major exceptions to the downward movement of stocks in 1961-62 were coffee, soyabeans, butter and cheese. The increase in these products (other than coffee) was confined mainly to the U.S., where it is estimated that about 70 per cent of the total world stocks of agricultural products are still held. Apart from coarse grains, world coffee stocks are the largest in relation to international trade, with the bulk of the surplus being held mainly in Brazil.

Exports

The total volume of exports of agricultural products continued to expand in 1961, the actual increase being 4.5 per cent. This was accounted for mainly by large increase in the volume of agricultural imports into the Sino-Soviet area. On the other hand, the volume of imports into countries other than those of the Communist bloc, which had started to level off in 1960, showed no increase in 1961. To a large extent, this reflects larger production in many food importing countries during 1960-61. Thus, food imports into Western Europe and most of the less developed regions were lower. In addition, imports of raw materials into Western Europe, which for some years now had been rather stagnant, actually declined in 1961. So far as North America is concerned, their intake remained at the low level of recent years. There was, however, an increase in the imports of beverages and tobacco into nearly all regions, and larger imports of agricultural raw materials into the Far East and other less developed regions, but these increases were only moderate. Table I on this page shows recent trends in exports of major agricultural commodities in 1961, as compared with some of the preceding years.

As the export outlets were not expanding to any significant extent (outside the Communist bloc), exportable surplus in the free world continued to compete keenly for markets, with the result that the general level of agricultural export prices again fell. There was, therefore, no increase in the total value of agricultural exports in spite of a rise of about 4 per cent in the volume of shipments. Agricultural export earnings of the less developed countries, in fact, fell substantially. According to the F.A.O. report, the value of exports from the less developed countries fell by about 4 per cent in Latin America and Africa and by as much as about 10 per cent in the Far East and the Near East. This decline sustained a trend under which the share of these regions in the value of world agricultural exports had declined from 56 per cent in 1952-53 to 52 per cent in 1960. In 1961, this share was as low as 49 per cent.

Imports of Developed Countries

In striking contrast to this depressing picture, both the volume and value of exports from the more industrialised regions rose, partly because of increased sales under special terms. It is, however, important to note that imports of agricultural products by the developed countries have tended to slacken. This is particularly marked in the case of raw materials. Between 1952-53 and 1961, when the volume of agricultural imports increased by over 30 per cent, raw material imports into Western Europe rose at only half the rate, and those to North America fell by one-third, mainly owing to lower imports of rubber and wool. Explaining the reasons for this decline in imports, the F.A.O. Report says as follows:

"Among the factors responsible, the substitution of synthetic for natural raw materials is the best known and easiest to measure. Thus, in Western Europe, the total consumption of all rubber increased more than four-fifths between 1952-53 and 1961, but that of natural rubber rose by only 13 per cent as the share of synthetic jumped up from 7 to 42 per cent of total rubber usage. In North America, the share of synthetic rubber in total consumption had by 1952-53 already risen to about 60 per cent and it increased further to 72 per cent. Of textile fibres, rayon, the first of the important man-made fibres, had already made much of its impact before the war, and its share in the total mill consumption has in the last decade remained stable in North America and risen only moderately in Western Europe. Of the post-war synthetics, nylon has affected mainly the consumption of silk, and to a less extent rayon and cotton, while some of the still newer fibres have tended to substitute for wool. In North America, these were the only fibres whose consumption showed any increase at all between 1952-53 and 1959-60. In Western Europe, they have so far had less impact, although their share in the total fibre consumption rose from 1 to 6 per cent.

"Factors other than the substitution of synthetic for natural products have also slowed down the growth of imports. One is the slow increase in North American consumption of all types of rubber—by only 17 per cent between 1952-53 and 1961—which has magnified the effect of the substitution on imports. The trend of imports since the first half of the 1950s has also been affected by the cessation of purchases of rubber for the United States Government strategic stockpiles in 1954, and their gradual disposal since 1959. As a result, while the consumption of natural rubber in the region fell by 15 per cent between 1952-53 and 1961, its imports were almost halved."

Wool and Cotton

For wool, too, the effects of substitution have been magnified by the slow increase in final consumption of apparel fibres in North America. Between 1952-53 and 1959-60, the total consumption of all fibres rose by only 5 per cent and a relatively small increase in the share of synthetic fibres in the total was sufficient to cause a 3 per cent fall in the consumption of wool. The effect on raw wool imports was further magnified by an 8 per cent increase in the domestic clip in North America, and a substantial rise in the imports of wool tops, yarn and textiles. The imports of raw wool consequently fell by more than one-fourth. In Western Europe, cotton imports have also been much affected by the growth of textile industries in the less developed countries, and the recovery of textile manufacturing in Japan. Gross exports of cotton manufactures from Europe have risen hardly at all since 1952-53, while gross imports have more than doubled. The consequent two-thirds reduction in net exports of cotton manufactures has affected mill consumption and therefore imports of raw cotton. While the final use of cotton fibre in Western Europe has grown by nearly 30 per cent, mill consumption and imports of raw cotton have risen by only 12 to 13 per cent.

Most of the small increase in the total volume of trade in agricultural raw materials in 1961 was thus due to a rise of some 10 per cent in imports into the Far East region, where Japan is the main importer. Other less developed regions also increased their imports, but in the world picture, these imports are of minor importance. Far Eastern imports, now nearly twice as high as in the early 1950s and several times larger than those of North America, consist mainly of cotton and wool. Japan's cotton imports were particularly high in 1961; its wool imports also rose substantially.

Prices

The loss in exports earnings of the less developed countries in world markets has been accentuated by a further increase (2 per cent) in the average prices of manufactured goods. Consequently, the terms of trade of agricultural exports suffered a sharp setback, having deteriorated by no less than 6.4 per cent in 1961, as against only about one per cent in the previous year. The deterioration in terms of trade of agricultural exports has thus continued for seven years in succession. In 1961, the terms of trade was 24 per cent lower than in 1952-53. An idea about the extent of deterioration in terms of trade can be had from the following table:

Indices of Volume, Unit Value and Total Value of World Trade[1]

(Base 1952-53 average=100)

	Average 1948-52	1959	1960	1961
Total Volume of World Trade[2]: *(Agricultural and Non-agricultural)*	87	143	159	167
Trade in Agricultural Products:

In real terms[4] (terms of trade)	104	82	81	76
Total Value of Exports:				
At current prices	94	108	115	116
In real terms[4]	98	105	110	108
Value of Commercial Exports[3]:				
In real terms	98	99	103	101

1 Excluding trade between Russia, Eastern Europe, Mainland China, North Korea, North Viet Nam and Mongolia, but including the trade of the rest of the world with these countries.
2 U.N. index, adjusted to 1952-53 base.
3 Excluding U.S. shipments under special terms.
4 Deflated by U.N. index of unit value of exports of manufactured goods.

The outlook for 1962-63 also does not give any room for hopes of improvement in the position of less developed countries. According to the F.A.O. forecast, the rate of growth of economic activity in the industrialised countries (which account for the bulk of world import demand for agricultural products) seems likely to be slower in the latter part of 1962 and early next year. Supplies of most agricultural products are expected to remain ample and "there seems no reason to expect any great increase in demand that would halt the decline in prices on world markets." Larger grain harvests are expected in Western Europe, as also in Russia and Eastern Europe. Some increase is predicted for the Far East also, "assuming normal weather for the rest of the season." In the U.S., however, wheat output is expected to be lower by 14 per cent in 1962-63 with the reduction in acreage under the Wheat Stabilisation Plan. Further decline in the output of U.S. coarse grains is also expected. In Mainland China, adverse weather is reported to have seriously affected spring-sown grains and other food crops during this season as well. The grain markets are likely to remain firm, because of the possibility of larger imports by China and no perceptible reduction in purchases of wheat by India and Pakistan. On the question of outlook for coffee and cotton, the F.A.O. report observes as follows:

"Although the world coffee harvest in 1962-63 is expected to be lower than in the previous year, supplies will remain abundant because of the heavy stock accumulations in Latin America, and no significant strengthening of prices is anticipated, particularly if production increases in countries producing robustas and secondary milds. . . . Meanwhile, cocoa supplies and demand are approximately in balance, and, if consumption continues to expand at the recent rate, the market should be better situated to absorb another crop in 1962-63 of the same size as those of the previous two years. Tea supplies also remain closely in line with the demand, with prices of high quality leaf showing the better prospects.

"With little change in the United States crop and recovery in the United Arab Republic and Uganda, world cotton production in 1962-63 is expected to reach a new peak. The upward trend in cotton consumption, on the other hand, is likely to flatten out under the impact of the European stock cycle, the Japanese restrictions on textile output, and more intensive competition from rayon. The greater stability of wool prices apparent since the beginning of 1962 may continue into the new season. Jute production is likely to recede from the high level reached in 1961-62, and export availabilities may be reduced, thus checking the present fall in prices. A further increase in the output of hard fibre in 1962 is expected to be matched by a sizable expansion in demand. The production of natural rubber is again likely to show a slight increase, and, with continued expansion in the consumption of synthetic rubber in Western Europe, Japan and the U.S.S.R., prices may remain under pressure during 1962."

INDIA STORE DEPARTMENT

An annual saving of Rs. 6.75 lakhs in foreign exchange is expected to be made as a result of the implementation of the recommendations made by Mr. T. Sivasankar, former Secretary, Union Ministry of Works, Housing and Supply, for streamlining the overseas purchase organisations at London. The Director General, India Store Department, London, has now appointed a suitable firm of Shipping and Forwarding Agents for handling transport and other formalities for goods to be sent to India. The Agents will undertake the work without any cost to the Government of India. They will finance themselves from the commission on freight charges from the shipping lines on goods booked by them from North Europe. The strength of the Shipping Directorate in the I.S.D., London will be reduced to a few officials required for liaison with the Shipping and Forwarding Agents. Mr. Sivasankar, who made a detailed examination of India's overseas purchase organisations at London and Washington, had suggested the appointment of shipping and forwarding agents to whom the entire work of the Shipping Directorate in the I.S.D., London could be transferred.

MYSORE ELECTRICAL INDUSTRIES LTD.

PRODUCTION BEING DIVERSIFIED

STATEMENT BY MR. N. G. AYYANGAR, MANAGING DIRECTOR, AT ANNUAL MEETING

THE trio of shortages, namely, fuel, transport and power, which had manifested itself of late in the economy, adversely affected the working of the Mysore Electrical Industries Ltd. during the year ended 31st March 1962. Disclosing this, Mr. N. G. Ayyangar, Managing Director of the Company, reassured the shareholders at their Seventeenth Annual General Meeting held at Bangalore on 29th September 1962, that the difficulties were temporary and would be soon over. Production during the first five months of the current year was higher, as compared with last year. He also disclosed that the Company was diversifying its products by entering the higher voltage field and for which a licence had already been received.

The following is the full text of Mr. Ayyangar's statement:

"GENTLEMEN,

"In the absence of your Chairman in Europe it is my privilege on behalf of the Board of Directors, to welcome you, to this, the seventeenth annual general body meeting of your Company.

"The audited balance-sheet and the profit and loss account for the year ended 31st March 1962 along with the Auditors' report have been in your hands for sometime, and, with your permission, I shall take them as read. There is not much for me to dwell upon the details relating to the accounts that are placed before you. You may have noted that there is a departure from our normal practice in the presentation of the profit and loss account. Details under each head are brought together in the form of a statement so that the various aspects of the working of the Company can be easily grasped by a glance at the appended schedules.

Sales Higher

"Sales rose to Rs. 1.03 crore, an increase of approximately 32 per cent over the previous year's figure of approximately Rs. 78 lakhs. The net profit before taxation and depreciation has risen to Rs. 15.32 lakhs from Rs. 11.58 lakhs last year. The charge on account of taxation is Rs. 6.91 lakhs against Rs. 4.91 lakhs last year. This increase in provision is necessitated not merely by an increase in taxable profits because of a larger turnover but also due to the recent increase in the corporate taxation from 45 per cent to 50 per cent. Your Board of Directors have recommended a dividend of 20 per cent, taxable, the same as in the previous year, but a larger capital ranks for dividend in the year.

"I have pleasure in presenting separately a synoptical view of your Company's progress during the last decade. You will be pleased to observe that, as compared to the year 1953 as a base, sales have increased more than thirteenfold; profits before taxation have practically doubled as a percentage of sales and there has been a four-fold increase in the profits in terms of net worth. I am sure you will all agree that the progress in this decade has been noteworthy.

Shortages

"The year under review was beset with many difficulties. Like most industrial undertakings, your Company also has been seriously concerned with the trio of shortages, namely, fuel, transport and power. To these must now be added the foreign exchange shortage. Although we do not ourselves directly consume any appreciable quantity of coal or coke, inadequate supplies of these to those on whom we depend for our supplies of castings and components, etc. have many times in the past put our production work out of gear.

"Transport bottlenecks affected the even flow of stores and material supplies necessitating a larger capital being locked up in stores. Despatches from the factory were similarly affected often cluttering up the assembly floor area with finished articles, that could not be moved out for want of rail booking to make room for new assembly work.

"The power shortage in Mysore is already assuming alarming proportions. We are directly affected by it and similar shortage in many other States has led to appreciable curtailment of production affecting our supplies.

"The acute shortage of foreign exchange has already created widespread scarcities in imported raw materials and components. I am not recounting all these difficulties with a view to striking a note of pessimism for the future but that the performance of your Company in the last year may be judged in its proper perspective.

"We have started the current year with a backlog of orders to last the next sixteen months at current rate of production. In the five months of the current year, production has been better than in the same period last year and I have every hope that we will close the year with a much better performance. It is estimated that the production of switch and control gear in the country amounted to approximately Rs. 4.5 crores in the year under review. Your Company has contributed approximately 23 per cent towards this. The total production of the switch and control gear is expected to go up to Rs. 15 crores by 1965-66. We have therefore a very good field for expansion. The difficulties encountered are only temporary and it is hoped that the efforts of the Government of India in eliminating them will soon bear fruit. We, on our part, are fully conscious of the export angle to get over our difficulties of foreign exchange and I am glad to inform you that we may very shortly secure, on a global tender basis, a substantial foreign order for our switchgear. We are diversifying our products and entering the higher voltage field for which we have recently secured an industrial licence. Our thanks are particulaly due to the Commerce and Industries Ministry of the Government of India and its Development Wing for the encouragement we have always received from them. Our Sole Selling and Servicing Agents are doing an excellent work in familiarising the public with our products and I am sure you will join me in thanking them for their excellent co-operation and assistance.

"Our relations with the trade union continue to be cordial and I am glad to say that, as in the past, we have been able to settle our differences in a spirit of mutual accommodation and understanding. I am sure you will join me and my colleagues on the Board in taking this opportunity to offer our sincere thanks to the administrative and technical officers, staff and workers for their hard work and co-operation without which it would not have been possible for your Company to have made the progress it has.

"Before I conclude, I wish to thank Sri R. D. Char, Chairman, and my colleagues on the Board for their wise counsel and guidance in the administration of the Company.

"Thank you, gentlemen. I now move that Directors' Report and the audited statement of account for the year ended 31st March be adopted."

Note:—*This does not purport to be a report of the proceedings of the annual meeting.*

INDIAN STEEL AND WIRE PRODUCTS

POOR PERFORMANCE LAST YEAR, BUT PROSPECTS PROMISING

THE Indian Steel and Wire Products Ltd. (Managing Agents: Messrs. Indra Singh and Sons, Private Ltd., Calcutta) has suffered the worst ever setback in its life during the year ended 31st March 1962. Proceeds from sale of the Company's wide range of wire products have severely declined, for the second year in succession, to Rs. 446.47 lakhs from Rs. 500.09 lakhs in 1960-61 and Rs. 547.52 lakhs in 1959-60. Thus the entire gains achieved a couple of years back have been completely wiped out and the turnover has once again slipped back to the 1958-59 level or what, incidentally, are the average sales since 1956. It is, however, in respect of gross profit that the Company has suffered the worst damage, the profit realised being only Rs. 53.89 lakhs, as compared with Rs. 107.56 lakhs for the previous year. It is, in fact, the lowest to be recorded in the recent past.

Reasons for this disappointing performance are several. The coal supplied to the Company during the year was of such inferior quality that not only did it lead to its increased consumption but also to abnormal shut-downs and decreased production. There was also a considerable increase in the cost of stores and overheads. Moreover, as a result of the adjudication award, salaries and wages, as well as incentives for workers have had to be substantially increased. And, as if all these were not enough, several instances of slow-down by workers were also reported during the year. Consequently, production was adversely affected, and so also turnover and profit.

Out of the aforesaid gross profit, a sum of Rs. 4.54 lakhs has been provided for Managing Agents' commission. This is Rs. 5.42 lakhs less than the amount earned by the Managing Agents in the previous year. Provision for taxation is likewise lower at Rs. 23.00 lakhs as against Rs. 45.00 lakhs a year before. Depreciation, however, has received a slightly higher amount of Rs. 9.29 lakhs, as compared to Rs. 7.78 lakhs for 1960-61. After these essential provisions, there is left a net profit of Rs. 17.06 lakhs, which as compared with Rs. 44.82 lakhs for the preceding year shows a drop of 61 per cent. If despite such a heavy fall in net profit the Directors could propose only a slightly lower dividend of 23 per cent subject to deduction of tax, as compared with 24 per cent subject to deduction of tax, it was only by drawing heavily on the surplus of Rs. 7.72 lakhs brought forward from the previous year. The carry forward, it may be noted, is only Rs. 2.31 lakhs.

The working of the Company during the past four years is presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

* Subject to deduction of tax. † Including cash bonus.

The Company's financial strength is formidable, reflecting as it does its successful working in the past. The paid-up share capital has stood unchanged at Rs. 96.80 lakhs, of which Rs 96.53 lakhs are in ordinary shares of Rs. 10 each fully paid and a small amount of Rs. 26,580 in ordinary shares of Rs. 10 each, with only one rupee per share called and paid up. This is backed up by reserves and surplus amounting to as much as Rs. 275.10 lakhs or nearly three times the paid-up capital. Nevertheless, current liabilities and provisions continue to be high, amounting to Rs. 271.09 lakhs. Of this, however, Rs. 134.44 lakhs represent 70 per cent of the cost of the new rod mill and are fully reflected on the assets side in the cost of capital expenditure in progress. Besides these liabilities, there are secured and unsecured loans aggregating Rs. 43.95 lakhs. Turning to the assets side of the balance-sheet one finds that a gross block of Rs. 229.64 lakhs has been written down to Rs. 59.93 lakhs or nearly to one-fourth of its original cost. But to this has to be added Rs. 267.45 lakhs as the cost of capital work in progress to get a total net block of Rs. 327.38 lakhs. Current assets, loans and advances amount to Rs. 240.46 lakhs and afford an adequate cover to loans and current liabilities put together. During the year, the Company had to pay further calls to the tune of Rs. 36.00 lakhs on its investments in the Metal Corporation of India, raising its investments in the equity shares of the latter Company to Rs. 70.83 lakhs and the cost of its entire investment portfolio to Rs. 119.10 lakhs. Against this, the market price of quoted scrips alone, as at 31st March, was no less than Rs. 123.62 lakhs.

The paid-up capital noted above includes Rs. 64.53 lakhs capitalised out of general reserves on 31st March 1959. The bonus shares thus issued was in the proportion of two for one.

It will be recalled that, during 1958-59, the Company had received a licence for the import, on a deferred payment basis of wire rod mill machinery. A considerable portion of this was received during the year under review and the first phase of its erection was completed. As a matter of fact, the entire plant had been anticipated to go into production by the end of 1961. This was, however, rendered impossible, due to the delayed arrival of some of the imported parts. Moreover, the technical advisers have now recommended that the new mill should be commissioned in two distinct stages. The chief advantage of this proposal, the Directors report, is that the first stage, which is now almost complete, will be brought into commission, making use of a part of the old rod mill, while the the work connected with the erection of the second phase will continue, so that the changeover from the old to the new mill may be brought about with shortest possible closure of the works. The first phase should come into operation by now. The second phase of construction is also well in hand and the Directors have good reasons to expect that, by the second quarter of 1963, the new unit could be commissioned in its entirety. At the same time, the company is taking adequate steps to make necessary adjustments in the rest of the works to be able to handle the increased production of the new rod mills.

The Metal Corporation of India Ltd. in which the Company has a large investment, is going ahead with its plans. The civil works in connection with the smelter to be erected are well in hand. Although the Company did not fare well in 1961-62, there is sufficient indication in its development plans to warrant the conclusion that it has a promising future. That investors generally agree with this view is evident from the current market value of the Company's Rs. 10 fully paid shares. These were quoted at Calcutta before the *Puja* holidays at as high a level as Rs. 47.37, at which rate the net yield works out to about 3.4 per cent per annum.

(Concluded from next column)

Government that it would make its own arrangements for the foreign exchange required for the project.

The Company has as satisfactory a financial position as can be expected of a unit yet in its teens. The paid-up capital of Rs. 18.75 lakhs is supplemented by reserves and surplus aggregating Rs. 6.10 lakhs. The outstanding secured bank borrowings at Rs. 4.31 lakhs are lower as compared with Rs. 6.23 lakhs a year before and so are the unsecured loans amounting to Rs. 10,421, as against Rs. 1.40 lakh in the previous year. Current liabilities and provision aggregate Rs. 5.67 lakhs, as against Rs. 5.24 lakhs a year before. The total indebtedness to outsiders amounts to Rs. 10.08 lakhs and is adequately met by current assets, loans and advances totalling Rs. 25.53 lakhs. The gross block, which expanded during the year from Rs. 22.28 lakhs to Rs. 26.49 lakhs, has been very conservatively written down to Rs. 9.02 lakhs. Work-in-progress amounts to Rs. 38,029, as against Rs. 1.55 lakh in the previous year.

Currently quoted at Rs. 160 *cum-div.*, the Rs. 100 fully paid ordinary shares offer on the *ex-div.* basis, a yield of 5.5 per cent per annum, free of tax.

LAXMI STARCH SCRAPES THROUGH

LESS RETURN ON HIGHER CAPITAL

THERE is nothing particularly exciting about the working of the Laxmi Starch Factory Ltd. (Chairman: Mr. Bhogilal Patel, Kundara, Kerala State) during the year ended 31st March 1962 as can be seen from the financial results for the period, which show, as compared with those for 1960-61, a minor improvement in sale proceeds from Rs. 65.55 lakhs to Rs. 72.03 lakhs and an insignificant rise in gross profit from Rs. 7.11 lakhs to Rs. 7.35 lakhs. In terms of profit-margin, the year's results have turned out to be rather discouraging, as the ratio of gross profit to sales has shrunk from 10.8 per cent to 10.2 per cent which was the level seen in 1959-60. This slight decline in profit-margin is the result of profit failing to keep pace with the improvement in sales. This contrasts significantly with the rise of nearly Rs. 2 lakhs in profit following an improvement of about Rs. 14 lakhs in sales realisations in the previous year.

From the Directors' report it appears that the profit for the year did not rise in the same proportion as did the proceeds from sales because of higher prices of the raw material tapioca, the crops of which were seriously damaged in Madras and Kerala States due to heavy floods in July and August 1961. As the raw material was dearer, exports during the year also remained at a low level. Apparently, but for this circumstance beyond its control, the Company would have given a better account of itself in both sales and profit.

The cost of raw materials and stores consumed during the year increased from Rs. 41.49 lakhs to Rs. 46.01 lakhs, staff expenses went up from Rs. 3.87 lakhs to Rs. 4.85 lakhs and other expenses rose from Rs. 13.25 lakhs to Rs. 14.68 lakhs. The provision for depreciation has been raised from Rs. 1.07 lakh to Rs. 1.40 lakh and that for taxation from Rs. 2.70 lakhs to Rs. 2.80 lakhs. Transfer to development rebate reserve at Rs. 0.43 lakh is double the amount set apart in the previous year. General reserve has received Rs. 1.50 lakh, as against Rs. 1.25 lakh a year before. However, following the 50 per cent increase in the paid-up capital to Rs. 18.75 lakhs in the previous year, the dividend on the Rs. 100 fully paid equity shares has been reduced by a point to 12 per cent per annum, subject to tax. The return on the 6,252 new shares is *pro rata* at the rate of 4.25 per cent, and, therefore, the total distribution by way of dividend has gone up only modestly from Rs. 1.63 lakh to Rs. 1.77 lakh. From the current year onwards, the new shares will be entitled to a full year's return, which means that, to maintain the dividend at 12 per cent, the Directors will have to set apart about Rs. 3 lakhs. The carry forward is Rs. 0.96 lakh, as against Rs. 1.10 lakh brought in.

A clear idea of the progress made by the Company in the past four years can be had from the comparative table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

As we are told that the plantation of tapioca in the current season has been satisfactory, the outlook for 1962-63 can be rated better. In the previous year, the Company was licensed to expand its capacity by setting up another factory for the manufacture of 25 tons of starch, glucose, dextrose and other starch products per day at a capital outlay of Rs. 55 lakhs. No further progress is, however, reported by the Directors on this scheme. The Company is yet to receive the licences to import plant and machinery. This delay by the authorities in the issue of import licences is quite ununderstandable, particularly when the Company had given an undertaking to the

(Continued in previous column)

SATHE BISCUIT MAKES FURTHER HEADWAY

PARTLY PAID SHARES MAY BE FULLY CALLED UP SOON

AFTER a year of near-static conditions in 1960-61, the Sathe Biscuit and Chocolate Company Ltd. [Managing Agents: Messrs. Sathe Food Industries (Private) Ltd., Poona] has made further headway during the year ended 31st March 1962. Sales realisation, which was higher by just a lakh of rupees at Rs. 46.48 lakhs in 1960-61, has spurted by Rs. 10 lakhs to Rs. 56.98 lakhs during the year under review. Likewise, gross profit, after remaining almost unchanged at Rs. 4.31 lakhs in the previous year, has improved smartly to Rs. 6.49 lakhs in 1961-62. Since the rise in profit has been greater than that in sales, the profit-margin (ratio of gross profit to sales) has jumped up by two points to 11.3 per cent. This is a very encouraging trend.

The improvement in sales of such products as biscuits and chocolates (which the Company manufactures) is clearly indicative of the rising standard of living in the country and the growing popularity of the Company's products in a highly competitive market. Twelve years before (in 1949-50), the Company's turnover amounted to Rs. 15.32 lakhs, and three years before (in 1958-59) it stood at Rs. 40.80 lakhs. The turnover of Rs. 57 lakhs for the year under report, therefore, represents a substantial improvement over a decade or so and is about thrice the present net block of Rs. 18.89 lakhs. According to Mr. G. V. Puranik, Chairman of the Company, last year itself saw a 12 per cent increase in the production of biscuits in the organised sector of the industry, to which the Company had naturally its own share to contribute, notwithstanding the natural calamity in the Panshet dam disaster and power failures.

Higher production has meant a sharp increase in the cost of raw materials and stores consumed from Rs. 25.66 lakhs to Rs. 33.25 lakhs. Advertisement expenses—a significant item of selling costs especially for the manufacturer of such consumer products as biscuits, chocolates, etc.—have also increased from Rs. 4.27 lakhs to Rs. 4.44 lakhs, at which level they are higher by about Rs. 2 lakhs as compared with Rs. 2.74 lakhs in 1958-59. Other forms of expenses have also been higher as shown in the following table. With a larger gross profit, the provision for depreciation has been stepped up from Rs. 0.77 lakh to Rs. 1.49 lakh and so has that for taxation from Rs. 1.52 lakh to Rs. 2.50 lakhs. Managing Agents' remuneration has increased from Rs. 0.37 lakh to Rs. 0.52 lakh. Due to these higher allocations, the net profit shows but a minor improvement from Rs. 1.65 lakh to Rs. 1.98 lakh, out of which Rs. 0.74 lakh, as against Rs. 0.29 lakh in the previous year, has been set apart for different reserves and funds. The return on the Rs. 100 fully paid ordinary shares has been maintained at the modest level of 9 per cent per annum, subject to tax.

The comparative table below mirrors the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

The extension of the factory building, we are told, is almost ready and very shortly the chocolate machinery will be housed in the spacious hall with proper layout of machinery and air-conditioned storage. The modern equipment for packing biscuits and the automatic oil-fired wiremesh oven, licence to import which has been obtained under the U.S. Export-Import Bank programme, will arrive very shortly. When installed, these machines will raise output by 50 per cent. The despatch department, which is presently housed in Poona City, will also move to the new premises, resulting in a considerable saving in transport charges. While these are the efforts at sales maximisation in the not too distant future, from last year itself the Company has obtained a new market in Goa following the liberation of the Portuguese pocket. The average offtake of biscuits has gone to about Rs. 11,000 a month; the Company has yet to introduce chocolates into Goa, as the territory is said to be saturated with imported material.

The new machinery and equipment are expected to cost about Rs. 6.5 lakhs and the cost of construction of building is estimated at Rs. 3.6 lakhs. In all, the capital outlay will be about Rs. 10 lakhs. The Maharashtra State Financial Corporation has sanctioned the Company a long-term loan of Rs. 8 lakhs for capital investment. However, there is still a gap of Rs. 2 lakhs to be covered. The Articles of the Company limit borrowings to the extent of the amount issued by way of capital. The Directors are, therefore, considering the possibility of calling the balance of Rs. 50 on the partly-paid 10,268 shares held by the public. This will bring in about Rs. 5 lakhs and raise the present paid-up capital of Rs. 14.85 lakhs to a level in line with the net block of Rs. 18.89 lakhs.

From what has been said above, it is clear that the near-term outlook for the Company is quite satisfactory. For the current year, however, the prospects are uncertain, inasmuch as the Company's licence for the import of the raw material, namely, cocoa-beans, has been cut "unexpectedly" by as much as 40 per cent. Cocoa-beans are not grown in India, and their imports are essential to meet the consumer demand for cocoa powder. The Company has, therefore, urged the Development Wing to grant it a supplementary licence for the import of cocoa-beans.

The financial position of the Company is not particularly impressive. Its paid-up capital of Rs. 14.85 lakhs comprises Rs. 9.85 lakhs in ordinary shares (of which Rs. 4.73 lakhs are held by the vendors in shares of Rs. 100 each) and Rs. 5 lakhs in redeemable 7 per cent cumulative preference shares. As against this, reserves and surplus aggregate only Rs. 3.36 lakhs, of which Rs. 1.50 lakh are under the head preference shares redemption reserve; the preference shares are now redeemable any time on six months' notice. Unsecured loans have increased from Rs. 12.26 lakhs to Rs. 13.61 lakhs. Current liabilities and provisions total Rs. 7.75 lakhs. The aggregate liabillity to outsiders amounts to Rs. 21.36 lakhs and exceeds slightly the total of current assets, loans and advances at Rs. 20.66 lakhs. The gross block, which recorded a small increase from Rs. 30 lakhs to Rs. 30.66 lakhs during the year, has been written down to Rs. 18.89 lakhs.

The Rs. 100 paid ordinary shares are *nominally* quoted on the Bombay Stock Exchange at Rs. 100. At the rate of 9 per cent, taxable, the net return works out to 6.3 per cent per annum.

MYSORE ELECTRICAL INDUSTRIES LTD.

A sharp rise in sales proceeds from Rs. 77.73 lakhs to Rs. 102.74 lakhs and a substantial improvement in profit before taxation from Rs. 10.45 lakhs to Rs. 14.16 lakhs are the highlights of the *satisfactory* results of the Mysore Electrical Industries Ltd. for the year ended 31st March 1962. The ratio of profit to sales has edged forward from 13.5 per cent to 14 per cent. Profit as percentage of net worth is, however, one point lower at 40 per cent. Profit after taxation is higher at Rs. 7.25 lakhs as compared with Rs. 5.54 lakhs a year before, but its ratio to sales is unchanged at 7 per cent and its ratio to net worth is two points lower at 20 per cent. The taxable return on the Rs. 100 fully paid ordinary shares is maintained at Rs. 20 per share. The shares are currently quoted at Rs. 218 *cum-div.* and offer on the *ex-div.* basis, a net return of about 7 per cent per annum. The number of employees in the Company increased during the year from 540 to 604. It was 399 in 1957-58.

Given below is a comparative table showing the salient features of the progress made by the Company in the past five years:

(In lakhs of rupees)

	For the year ended 31st March				
	1962	1961	1960	1959	1958

LOWER PROFIT FOR BOMBAY BURMAH

A small setback in profit from Rs. 121.91 lakhs to Rs. 101.08 lakhs, after providing Rs. 33.11 lakhs (Rs. 26.59 lakhs a year before) for depreciation, has been reported by the Bombay Burmah Trading Corporation Ltd. for the year ended 31st May 1962. The profit has been arrived at after making provision for Secretaries' and Treasurers' remuneration, the exact amount of which for the year under report is not disclosed in the preliminary statement. In the previous year, the remuneration amounted to Rs. 10.21 lakhs. The decline in profit has occurred despite the improvement in tea production in the Company's plantations in Madras from 3,421,001 kgs. to 3,627,947 kgs. The coffee crop, however, had turned out to be lower at 785 tonnes, as against 1,368 tonnes a year before. It may be recalled that the Directors had announced the final dividend for the year 1961-62 three weeks ago. The net result was that the dividends for the year were the same as in 1960-61.

After adding Rs. 1.61 lakh, being the amount brought forward from the previous year, and Rs. 9.08 lakhs, being income attributable to the previous year, the profit for the year, after depreciation and Secretaries and Treasurers' remuneration, amounts to Rs. 111.77 lakhs. The provision for taxation amounts to Rs. 49.50 lakhs, as against Rs. 59 lakhs a year before. Transfer to development rebate reserve has been raised from Rs. 3.18 lakhs to Rs. 4.10 lakhs, but the credit to other reserves amounts to only Rs. 12 lakhs, as against Rs. 22.63 lakhs in the previous year.

4¾ PER CENT

WEST BENGAL STATE ELECTRICITY BOARD BONDS, 1972

(Second Series)

For Rs. 150 Lakhs

(Payment of Interest and Repayment of Principal Guaranteed by the Government of West Bengal)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE RS. 99.75 PER CENT

REDEEMABLE AT PAR ON THE 27th OCTOBER 1972.

SUBSCRIPTIONS will be received in cash or cheques. Applications will be received at the head offices of State Bank of India at Calcutta, Bombay, New Delhi and Madras from 22nd October, 1962 to 26th October, 1962 both days inclusive. But the list may be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices mentioned above and at the Head Office of the State Electricity Board, 1, Hastings Street (7th floor), Calcutta-1.

SYNOPSES OF COMPANY REPORTS

Jost's Engineering Co., Ltd.

(*Chairman*: T. V. Baddeley, Esq., Bombay.)

Annual General Meeting: Held on 27th September 1962.

,, ,, claims for salary [Ex General Manager]	11	Nil
,, ,, Sales tax	2	Nil
Proposed dividend (taxable)	60	60
	(10%)	(10%)
Carry forward	2	2

N.B.—Adjustments include the balance brought forward from the previous year, allowances to customers etc.

Extracts from the Directors' report: *Review of the year's working*: There has been an increase of 20 per cent in the sales during the year. The import business of the Company showed some improvement, but in view of the very severe import restrictions imposed recently, it is unlikely that this trend will continue. The order book of the Company is about the same as for the previous year.

Factory: Reference was made last year to the commencement of manufacture by the Company. The Company now manufactures a range of *Air Compressors*.

The first phase of the Factory building on the Company's own plot at Thana has been completed. Power has not been made available as scheduled and the Factory is now expected to go into production shortly after the power supply is received. Plans for the second phase of construction have been prepared and the work is expected to commence by the end of the year.

Auto Trucks, Jumbo: During the year, the Company received sanction from the Central Government for the manufacture of *Auto Trucks*. The first *Jumbo Truck*, and *Trailers* and *Stillages* to go with it, have been produced. Enquiries received for these trucks are satisfactory and subject to the receipt of import licences for essential Components, production of these trucks should be established during the year.

Collaboration Agreement: The Company has negotiated an agreement with Kerry's (Great Britain) Limited for the manufacture of drilling machines in a new Company. An industrial licence for the manufacture of 1,200 drilling machines per annum has been received. Arrangements are now being made to complete the formalities for forming the new Company.

Finance: In view of the increased manufacturing activities of the Company, a loan of Rs. 4 lakhs is being negotiated with the Bombay State Financial Corporation. An opportunity is also being taken to increase the authorised capital of the Company to Rs. 25 lakhs. This is being done to enable the Company to invest in the new Company and to expand its manufacturing activities.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,00,000	Gross block	4,44,286
Reserves and surplus	4,75,869	—Depreciation	1,55,896

* Includes Rs. 60 lakhs transferred from development rebate reserve: Rs. 79,752 being excess provisions in previous years and Rs. 1,024 being tax refunds.

† This represents Rs. 1,22,648 being excess provisions in previous years and Rs. 12,614 being tax refunds.

Extracts from the Directors' report: The Directors are happy to report that the Shipping Corporation has achieved gratifying results. The net profit of Rs. 1,07,00,086 for the year 1961-62 works out at 4.56 per cent of the subscribed and paid-up capital of Rs. 23.45 crores. This compares favourably with the combined net profit of Rs. 47,51,509 of the Eastern and Western Shipping Corporations for the year 1960-61, which was about 2.07 per cent of the then total paid-up capital of Rs. 22.90 crores. The operating earnings of the year 1961-62 (Rs. 7,88,52,927) have thus yielded a net return or profit of 13.57 per cent as compared to the net return of 8.38 per cent which the operating earnings of the previous year 1960-61 (Rs. 5,66,94,186) had yielded.

There has also been a substantial increase in the quantity of cargo handled and the operating earnings, as shown below:

Year	Cargo carried (Revenue tons)	Operating earnings Rs.
1959-60	3,82,925	3,90,53,922
1960-61	5,17,619	5,66,94,186
1961-62	8,69,784	7,88,52,927

The number of passengers carried, and the amount of passage money earned (which is included in the figures of operating earnings given above), during 1961-62, however, remained about the same as during the previous year 1960-61.

The number of round voyages performed by the vessels of the Corporation on the regular Overseas Services has also been showing a steady increase as indicated below:

Year	Number of overseas routes operated	Number of round overseas voyages on liner service
1959-60	4	48½
1960-61	6	57
1961-62	7	65

Fleet of the Corporation and the Expansion Programme: Here also the picture is one of constant growth and progress. As on 31st March 1960, the combined owned fleets of the Eastern and Western Shipping Corporation consisted of only 15 vessels with a total g.r.t. of 1,09,263. The steady growth of the fleet of the Corporation since then is indicated below:

Date	No. of ships owned	G.R.T.	Investment on fleet (Rs. crores)
31-3-1960	15	1,09,263	15.55
31-3-1961	17	1,26,180	20.38
2-10-1961 (formation of S.C.I. Ltd.)	19	1,38,598	23.28
31-3-1962	20	1,45,224	24.24
October 1962	23	1,73,956	28.00 (approx.)

The 23 vessels mentioned above include M.V. *Vishva Shanti*, which is being delivered to the Corporation by the Hindustan Shipyard early in September 1962 and M.V. *Westfalia* (to be renamed M.V. *Vishva Sudha*) which the Corporation has recently decided to purchase and the delivery of which is expected to take place early in October 1962. The abovesaid fleet of the Corporation would then consist of 19 cargo vessels, 2 tankers and 2 passenger-*cum*-cargo vessels.

The Corporation is already the second largest Indian Shipping Company from the point of view of the gross registered tonnage owned. In accordance with the policy of the Government of India regarding the substantial expansion of Indian tonnage, both overseas and coastal, the Corporation has embarked upon a substantial programme of expanding its fleet. In furtherance of this programme, 9 fast modern dry cargo vessels are already on order with the Hindustan Shipyard Ltd. and all these vessels are expected to be delivered by the Shipyard to the Corporation during the third Plan period. Each of these vessels would be of about 9,220 g.r.t. as Closed Shelter Deckers. These 9 vessels would aggregate 82,980 gross tons. The Corporation is thus by far the biggest customer of the national Shipyard during the current Plan period.

In addition to the above, the Corporation has already decided to purchase or get constructed at least the undermentioned vessels during the third Plan period.

(i) Super tanker for being chartered to Messrs. Caltex .. .. — 1 — 20,000 g.r.t.
(ii) Coastal vessels principally for the movement of coal from Calcutta Port .. .. .. — 6 — 8,000 g.r.t. each
(iii) Small coastal vessel for the proposed Colombo/Tuticorin Service. — 1 — 400 to 600 g.r.t.

The Corporation can accordingly look forward to achieving an owned tonnage approaching between 3,00,000/3,25,000 g.r.t. by the end of the third Plan period.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	23,45,00,000	Gross block	24,28,32,087
Reserves	2,27,12,241	—Depreciation	4,62,67,332
Other assets	7,86,98,979		
		Net block	19,65,65,655
		Block-in-progress	4,20,32,195
		Other assets	42,728
		Current assets	2,72,18,709
		Investments	65,72,640
		Cash	6,29,78,037
		Miscellaneous expenditure	5,03,256
	Rs. 33,59,11,220		Rs. 33,59,11,220

Hindusthan Twyfords Ltd.

(*Chairman*: Mr. H. L. Somany, New Delhi.)

Registered Office: 2, Wellesley Place, Calcutta 1.

Second Annual General Meeting—24th September 1962.

Extracts from the Directors' report: The profit and loss account shows a deficit of Rs. 15,184.89 after transferring a sum of Rs. 2,54,583.70 to the "Expenditure during Construction" Account. This deficit has been set off against last year's surplus of Rs. 1,81,458.99 brought forward, and thus, a net surplus of Rs. 1,66,274.10 (subject to taxation) has been carried forward to the next year's account.

The total expenditure up to 31st March 1962 under the head "Expenditure during Construction" period as shown in the Balance-sheet amounts to Rs. 30,05,489.29. As the construction of the plant will be completed during the current year this amount will be adjusted under the appropriate headings under Fixed Assets.

Land: The construction remained deferred until the judgment of the Supreme Court in favour of this Company was delivered on the 14th November 1961. In spite of various difficulties in procurement of materials and adverse weather conditions the main factory building covering approximately 1,70,000 sq. ft. has been completed.

Machinery and Equipment: Simultaneously with building construction installation of the Pilot Plant was carried on. This plant is equipped for electric firing and will be very useful for trial purposes as also for the manufacture of specialised articles. Most of the other machinery, imported and indigenous, have arrived and are under erection. It is expected that the Tunnel Kiln will commence production before the end of the year.

Electricity: Bulk electric supply was connected on the 10th July 1962. A separate feeder line from the Bahadurgarh supply station has been provided to minimise fault breakdowns but the main 33 kvA. line from Delhi needs technical improvement. Electricity failures in June and July last aggregated to 114 hours with the single largest breakdown lasting 24 hours. Breakdowns are so frequent that no large continuous plant can operate satisfactorily. Apart from production loss, breakdowns of long duration could seriously effect the Tunnel Kilns.

Trial Production: Immediately electric supply was available the Pilot Plant machinery started operation and this Company seized the opportunity of having the first cast poured in on the 14th July 1962 by Mr. G. L. Mehta, Chairman, Industrial Credit and Investment Corporation of India Ltd., Bombay. It is hoped that some production will be made available to the market by September end.

Collaborators: The four Indian Technicians trained in England arrived back as per schedule. This staff has further been strengthened by addition of another person who too had his training in Twyfords' factory in England. In spite of the pressing need of trained personnel in the Company's Collaborators' South African Project, this Company has been fortunate to get the services of five very able technical personnel headed by Twyfords' most experienced Manager.

Project Cost: In spite of the increase in Customs and Excise duties and increased cost of building and other materials, it is estimated that the project will be completed within 5 per cent of the estimated total Project Cost.

Raw Materials: The Company's Collaborators are busy in trying to find out suitable combinations of all Indian raw materials for the Body. While Indian chinaclay is reasonably suitable some use of the English ball clay is unavoidable. This ball clay is required to increase the strength of the finished article and is more important in sanitaryware which are subjected to more rough use than to tableware. Apart from ball clay, some glaze materials such as tin oxide etc. are required to be imported. Some allocation of foreign exchange is necessary for new industries to enable them to produce standard products and manufactured wares suitable for export.

I.F.C.—Loan of Rs. 25 lakhs. The Directors regret to state that in spite of all efforts even an interim Loan has not yet been received. The project would have been subject to heavy delay had not the Secretaries and Treasurers advanced Rs. 12 lakhs.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,60,750	Gross block	3,90,53,922
Reserves and surplus	1,66,274	—Depreciation	5,66,94,186
Other liabilities	14,40,380		
		Net block	4,62,194
		Expenditure during construction a/c	30,05,489
		Goods-in-transit	3,76,398
		Fees for technical know-how	8,00,000
		Current assets	14,31,077
		Cash	2,27,855
		Miscellaneous expenditure	2,64,391
Rs.	65,67,404		Rs. 65,67,404

* Paid-up capital consists of 4,00,000 equity shares of Rs. 10 each and 20,000 tax-free redeemable cumulative preference shares of Rs. 100 each—Rs. 50 paid up. Calls in arrears amount to Rs. 39,250.

Bengal Luxmi Cotton Mills Ltd.

(*Managing Director*: Mr. D. N. Bhattacherjee, Calcutta.)

Annual General Meeting—Held on 29th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales of cloth, yarn and wastes	1,82,73	1,62,40
Miscellaneous sales	43	25
Closing stock	36,44	27,95
Gross profit	12,85	10,82
Transfer to depreciation	5,60	3,93
Net profit	7,25	6,89
Adjustments	20	19
Appropriations :		
Total available balance	7,45	7,08
Transfer to development rebate reserve	1,26	2,43
,, general reserve	1,70	19
To depreciation for 1960	Nil	2,28
,, adjustment of loss brought forward	2,61	65
Proposed dividends (taxable) preference	34	1.02*
,, ,, ordinary	81	51
	(8%)	(5%)
Carry forward credit (+) or debit (—)	+73	—2,61†

N.B.—Adjustments represent only dividends forfeited.

* Preference dividends for the years 1959, 1960 and 1961.

† This represents the loss carried forward after adjusting Rs. 65,130 against the loss brought forward from the year 1960 amounting to Rs. 3,26,098.

Extract from the Directors' report: The modernisation programme made some more progress during the year. Machineries worth Rs. 8,44,424 have been received and installed during the year under review. Some more machines have since been received in the current year.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,35,450	Gross block	1,12,12,785
Reserves and surplus	8,75,027	—Depreciation	74,29,208
Other liabilities	70,35,462		
		Net block	37,83,487
		Current assets	55,82,540
		Investments	21,072
		Cash	58,810
Rs.	94,45,939		Rs. 94,45,939

* Paid-up capital consists of (*a*) 17,782 ordinary shares of Rs. 40 each; 4,354 ordinary shares of Rs. 40 each—Rs. 30 per share called up, and 8,500 ordinary shares of Rs. 40 each—Rs. 20 per share called up; (*b*) 13,088 five per cent cumulative redeemable tax-free preference shares of Rs. 40 each; fully called up (preferred as to dividend only).

NEWS IN BRIEF

FORWARD trading in hessian and gunny (non-transferable specific delivery contracts only) has been started in Bombay, with effect from Monday this week, under the auspices of the Bombay Hessian and Gunny Merchants' Association.

An official Indian trade delegation will leave for Ceylon in December next to review the working of the existing trade agreement between the two countries signed in October last. It will also examine the scope for further expanding trade.

An official team, led by Mr. M. M. Philip, Secretary, Department of Communication and Civil Aviation, has left for Cairo for talks with the U.A.R. Government about the operating pattern of services of Air-India and the United Arab Airlines.

In order to study the developments in the Malayan rubber industry, the Rubber Board has sponsored the visit of a delegation which will be in Malaya for two weeks. The delegation is headed by Dr. Rama Varma, Chairman of the Board.

The Planning Commission has recommended an *ad hoc* grant of Rs. 1 crore to Goa, for the speedy implementation of certain development schemes which have been prepared by the Goa administration. This grant is outside the overall development scheme which is now being prepared for Goa, Daman and Diu.

A team of dairy experts from Denmark has arrived in India to select a suitable site for the establishment of a dairy farm for which the Danish Government has offered assistance. The proposed farm will be stocked with Danish cows. A dairy will also be set up for processing and distributing milk.

The plant to manufacture chemical thermometers which was set up at Surendranagar in Gujarat in collaboration with a Japanese firm was declared open by Mr. Manubhai Shah, Union Minister for International Trade, on Tuesday this week. The factory, which is claimed to be the largest in Asia, is expected to produce 100,000 thermometers a month.

A new factory is to be built at Palghat in Kerala to make laboratory meters and component test equipment currently produced in Britain. A company (with £90,000 capital), known as British Physical Laboratories (India) Private Ltd., will be established to finance the scheme. The factory is scheduled to begin production in January 1964. The new industrial partnership will be owned 49 per cent by British Physical Laboratories and 51 per cent by Universal Refrigeration Corporation, of Bombay, manufacturers and distributors of mechanical and electrical machinery. The Board of Directors of the new company will consist of three Indian and two British directors.

Soviet engineers have completed designs of machinery for the hardware plant of heavy electrical equipment to be put up in India. The technical plan is made in such a way that the plant, without substantial reconstruction, will be able to produce steam turbines of a capacity of up to 300,000 kilowatts, instead of 200,000 kilowatts as envisaged originally. Vertical boring and turning machines with remote control are to be installed in the turbine shop which will occupy an area of 40,000 square metres. The diameter of the face plate of the largest of them will be 12 metres. The pig iron shop will produce 12,000 tons a year.

The fifth Shipping and Shipbuilding Conference will be held at Calcutta in February 1963. A Governing Council has been formed with Mrs. Sumati Morarjee, Dr. A. Ramaswami Mudaliar, Mr. Biren Mookerjee, Mr. M. R. Das, Mr. H. Mackay Tallach and Mr. B. B. Ghosh as members. The Conference will provide a valuable forum for the discussion of Indian and world problems relating to shipping and shipbuilding. The idea of holding such a conference was mooted by the Naval Architecture Society of the Indian Institute of Technology, Kharagpur, where the first conference was also held in 1958, followed by two sessions in 1959 and 1960.

Seshasayee Wire Ropes Limited has secured an industrial licence for establishing a steel wire rope manufacturing project in Ernakulam district, Kerala, with a capacity of 3,000 tons of wire ropes annually. The Company has entered into an agreement with Ataka and Co., Ltd., of Osaka, Japan, which will purchase and supply machinery and equipment for setting up the factory. The Kokoku Iron and Steel Wire Manufacturing Company of Tokyo will design and draw up specifications for equipment and work in liaison with Ataka and Co., Ltd. According to a project report prepared by the Company, the capital outlay is estimated at Rs. 71 lakhs. Out of this Rs. 1.85,000 will go for buying lands, Rs. 10.80 lakhs for factory and colony buildings. Machinery and equipment, including machinery of local procurement, will cost Rs. 39.73 lakhs.

* * *

From Abroad

West Germany and Madagascar have signed an agreement providing for the mutual protection of investments against discrimination and expropriation.

Union Carbide Ltd., the U.K. subsidiary of the Union Carbide Corporation of New York, and the Distilleries Company Ltd. have decided to merge their interest in plastics in the U.K. This move will make the joint company the largest single plastics concern in the U.K. in terms of vertical integration.

The U.S. International Development Agency has offered a loan of $2 million to Uganda, the East African country which became independent on Tuesday this week. The loan is granted to the Uganda Development Corporation for financing schemes of agricultural and industrial undertakings. The loan bears interest of four per cent and is repayable over 15 years.

The number of motor vehicles on the roads of West Germany increased by nearly half a million in the first half of this year. About 9,460,000 motor vehicles were counted on 18th July 1962, about 480,000 more than in January. The number of motor cycles continued to drop by 123,000 to 1,470,000, while that of passenger cars rose by 547,000 to 6,130,000.

Ceylon and Communist China have agreed to sign a third five-year trade and payments pact. The understanding was reached, following the visit to Peking of a Ceylonese trade delegation headed by the Ceylonese Minister of Commerce, Trade, Food and Shipping, Mr. T. B. Ilangaratne. An agreement relating to economic and technical co-operation has also been signed between the two countries.

Canadian Industries, Montreal, an affiliate of I.C.I., has decided to put up an explosives and chemicals plant in Liberia, in collaboration with Baird Chemicals of New York. A new company, known as the West African Explosives and Chemicals, will be set up. The proposed plant is likely to be completed by 1964 and will manufacture blasting agents. The production of agricultural, industrial and household chemicals will also be taken up as markets develop for them.

West Germany provided development aid amounting to almost DM20,000 million between 1950 and the middle of 1962. About DM15,000 million were paid under bilateral schemes and DM4,000 million were channelled through multilateral organisations. Private bilateral contributions alone amounted to more than DM8,000 million. The largest amount of public and private aid together—about DM5,000 million—went to Latin America.

The International Monetary Fund has entered into a stand-by arrangement with the Government of Uruguay which authorises drawings upto the equivalent of $30 million over the next twelve months in currencies held by the Fund. The new arrangement, which is designed to support the continuation of the stabilisation programme initiated in December 1959, replaces a previous arrangement for the same amount which expired on 5th June 1962. No drawings were made under that arrangement. Uruguay has made considerable economic progress since the adoption of the stabilisation programme and exchange reform in late 1959. The overall balance of payments has improved, exchange reserves have increased and domestic inflation has been virtually arrested.

The U.S. Congress has approved a new farm Bill which increases the amount of American farm products that can be sent abroad under the food-for-peace programme. Under this programme, American farm products are sold abroad for local currencies, the proceeds being used for the country's economic development. The U.S. Government, under the original food-for-peace legislation, was allowed to provide food products only to foreign governments. Under the new farm Bill, the Secretary of Agriculture is also empowered to sell food products to private trade firms and institutions abroad. Agriculture Department officials look on this as an additional means of putting U.S. farm products in the hands of needy people overseas through private trade channels. The farm Bill also "specifically" authorises donations of food for use in non-profit school lunch programmes outside the U.S. Under the food-for-peace programme, approximately $1.500 million worth of U.S. food products was sent abroad in the fiscal year 1962. Since the programme began in 1954, about $9,100 million worth of U.S. food has been provided to the developing countries. Another $2,000 million worth of such food products has been provided to nations abroad in the same period under the U.S. foreign-aid programme.

BUSINESSMEN ON U.S. ECONOMIC OUTLOOK

Business sales should continue to gain over 1961 in the final three months of this year. They may level off in early 1963, but will stay on a high plateau. That, at least, is the consensus of 50 company executives in varied industries surveyed by *The Wall Street Journal*. Their opinion, however, conflicts with the predictions of many economists, and lately some steel makers, that the business advance that started in March 1961 will end in a recession late this year or early next. But the executives' views often are based not on guesswork but on the state of their companies' order books. These books rarely promise sensational new gains. But most executives surveyed expect fourth-quarter sales to maintain about the same rate of gain over 1961 that their companies have posted so far this year. Sales of all manufacturers rose in the first and second quarters this year; despite a dip in sales and orders in August, the Commerce Department believes the full third quarter will show another increase and it anticipates sales will set a record in the fourth-quarter.

"We should continue the rest of the year 15 to 20 per cent ahead of last year," says the Vice-President of Messrs. P. R. Mallory & Co., Indianapolis producer of batteries and other electric components. His reason: Mallory's backlog of unfilled orders is running ahead of a year ago. Distributors' orders for such things as toasters and irons promise fourth-quarter sales gains for the small appliance industry, reports Willard H. Sahloff, Vice-President and General Manager of General Electric Co's housewares and commercial equipment division. The strong finish, he predicts, will boost industry dollar volume for the year 15 per cent ahead of 1961.

Looking further ahead, some businessmen predict sales gains in early 1963 almost equal to those expected in the fourth quarter. "We have been hearing talk for the past six months of a dip or a recession coming, but all the evidence is to the contrary" says A. W. Teichmeler, Vice-President of U.S. Plywood Corporation in New York. His company's sales in next year's first half should jump 10 per cent ahead of the 1962 period.

The majority view, however, is that early 1963 sales will about hold even with early 1962, or register only slight gains. Business is not moving up, but it is not moving down either, says the head of a large manufacturing company. "It is riding a plateau." That "plateau" is a comfortable place for many companies. A Minneapolis underwear maker says that his company's sales "will probably begin levelling off in the first half of 1963" but adds that "this will still be a high rate of activity." Monsanto Chemical Co. expects sales in the first two quarters of 1963 to match the 1962 period or perhaps gain about 5 per cent. Libbey-Owens-Ford Glass Company, which concentrates on auto glass, also expects a fourth-quarter sales gain over 1961 to be followed by first-half volume next year matching early 1962. The main reason for this relatively cheerful outlook is, according to a maker of glass bottles, the "high level of personal income and the ability of consumers to buy." Several manufacturers cite TV-set demand as an indication that consumers are willing as well as able. Construction activity in 1963, it is said, may top even this year's high level. Construction contracts in the first eight months of 1962, including apartment houses and office buildings, ran 12 per cent ahead of the 1961 period; actual execution of the contracts follows by some weeks or months. Demand for machinery next year also will be moderately higher than in 1962, predicts a leading producer of heavy equipment. Sales of many new products are expected to stay at a high level.

As factors moderating their optimism, businessmen cite a relatively high rate of unemployment, uncertainty over Washington's attitude toward business, and doubts whether the Government will take any significant action to spur the economy. Although the Kennedy Administration has decided, at least for the time being, not to recommend an economy-boosting tax cut, several businessmen think that such a move is vitally needed.—*P. G. Krishnayya's Service.*

PERSONAL

MR. Morarji R. Desai, Union Finance Minister, has returned after attending the annual conference of the I.M.F. and World Bank at Washington. On his way home, he also visited Japan.

Sir Paul Gore-Booth, British High Commissioner in India, returned to New Delhi from the United Kingdom on Tuesday this week, after a period of leave in Britain.

Raja Surendra Singh of Nalagarh, Chairman of the Agricultural Administration Committee, has taken over charge as Adviser, Special Agricultural Programmes in the Planning Commission.

Mr. K. K. Mody has been elected President of the All-India Plastics Manufacturers' Association for 1962-63. Mr. S. N. Kasera and Mr. S. I. Parekh have been Vice-Presidents.

Mr. E. G. Norris has taken charge in Calcutta as the British Deputy High Commissioner. He succeeds Major-General W. H. A. Bishop who has been appointed Director of Information Services, Commonwealth Relations Office, in London.

Mr. H. V. R. Iengar, Chairman of the East India Distilleries and Indian Aluminium Company Ltd., has been appointed Chairman of the National Productivity Council *vice* Dr. P. S. Lokanathan who has resigned.

Dr. G. P. Kane, Senior Industrial Adviser (Chemicals), Development Wing, Union Ministry of Commerce and Industry, was the leader of the Indian delegation to the E.C.A.F.E. seminar on basic chemicals and allied industries held at Bangkok from the 3rd to 13th inst. The delegation also included Dr. C. J. Dadachanji of Union Carbide India Ltd. who submitted a paper on prospects and problems of chemical industry in India.

PHILLIPS CARBON BLACK LIMITED

PRODUCTION TO COMMENCE SOON: SCHEME TO EXPAND CAPACITY

MR. K. P. GOENKA ON NEED TO ENSURE RAW MATERIALS SUPPLY

ADDRESSING the Annual General Meeting of the shareholders of Phillips Carbon Black Limited, held at Calcutta on 1st October 1962, Mr. K. P. Goenka, Chairman of the Company, said:—

LADIES & GENTLEMEN:

In welcoming you all to the Second Annual General Meeting of the Company, I feel the opportunity should be taken to bring you up to date on the progress that has been made since we last came together, just over twelve months ago.

The annual report and accounts for the year ended 31st March 1962 have already been circulated, and in accordance with our usual practice, the Directors have outlined in their Report most of the more important developments that have taken place during the period. It is however some weeks since the report was prepared and I am glad to say that the progress made since then is so substantial that we can now virtually say we are ready to go into production, and that part of the plant is indeed already operating.

Full Commercial Production

I must admit that we have suffered a great many disappointments and setbacks of one kind and another during the period of construction and for this reason I hesitate to fix an exact date for the start of full commercial production, but we are confident that our manufacture will be fully under way by the early part of next month. We can all take some pride not only in the ownership of such an elaborate and modern plant but in the contribution that this unit of ours will shortly be making towards the national economy. We have the capacity to satisfy almost the entire current requirements of this country and the Company's full output should result in the saving of over Rs. 2 crores in foreign exchange.

At this stage I would like to pay my tribute to the late Dr. B. C. Roy, who had taken a personal interest in our venture from the very beginning and whose encouragement has helped us so greatly towards the fulfilment of our plans.

We hope that official approval will soon be given to the 10 million pounds expansion for which we have recently applied to the Ministry of Commerce and Industry. Your Directors submitted this application in response to Government's request that the private sector should make practical suggestions for means of assisting the nation over its long-term foreign exchange difficulties. In our case the answer appeared relatively straightforward since a capital outlay of little more than Rs. 4 lakhs—only about one-half is required in foreign currencies—would enable us to increase our capacity from thirty to forty million pounds per annum, thereby going a long way to close the then remaining gap between demand and indigenous production and saving another Rs. 50 lakhs or more in foreign exchange. As I have already indicated, the outcome of this application is not yet known, but I cannot help feeling that delay in approving it must to that extent retard our full contribution towards resolving present foreign exchange difficulties. The proposed expansion would moreover improve the economy of the undertaking.

Government Assistance

I feel it is only right for me to mention at this juncture certain respects in which we feel that Government could improve the co-operation between its various agencies and an undertaking of national importance such as ours, and I hope I shall not be unduly taken to task for referring briefly to these matters. The first thing that must be said in this connection refers to the delay that has occurred in commissioning the plant. Last year's report will have given you the expectation that this might take place around the middle of 1962, and it must be confessed therefore that we are in fact a few months behind schedule. This is due to a great variety of causes, and it would be unfair to ascribe too much of the blame to any single factor: overseas as well as indigenous suppliers have alike fallen in some cases far behind their planned delivery schedules, and there have been strikes and stoppages not only in India—the Calcutta port strike earlier this year was a particularly severe blow to us—but also in foreign countries from which some of our essential equipment has been ordered. But I cannot conceal the fact that speedier decisions in official quarters could have helped us to start several weeks earlier. The authorities concerned were reasonable and helpful but the machinery for implementation has worked slowly and as a result the clearing of some essential items through Customs suffered a delay. Furthermore I would urge that there should be a more equitable policy over allocations of steel and cement for the erection of important new industrial units; although all reasonable steps have been taken by the Company's management there have been countless interruptions of varying length due to shortages or inadequate allocations of these basic constructional materials, and it does seem a real misfortune that any enterprise which will so materially contribute to our national wealth should be delayed in this fashion. The procedure for obtaining import licences for essential spares and other production requirements also appears at times to be unduly devious, although one should not of course underrate the very genuine foreign exchange difficulties that have confronted our Government in recent months. However, quite apart from these problems the procedure for implementing the provisions for relief from customs duty on imported equipment for a plant such as ours are at times found to be needlessly cumbersome and elaborate, and the machinery for disposal of claims and obtaining refunds is often much too slow for the convenience of financial management in a complicated venture such as this.

Raw Materials

On the positive side I would reiterate our plea that the Union Government should direct its attention seriously to the question of raw materials for the carbon black industry. It is our wish every bit as much as theirs to ensure that our prices are reasonable and comparable with the cost of similar imported products, but this cannot be done unless our raw material prices are also kept to reasonable levels, and as the public sector is a major producer of these materials there is much that can be done by helpful and constructive direction from the Centre. We are committed, and rightly so, to make the maximum possible use of indigenous supplies including locally produced coal tar, and in this light it seems to us in a sense waste of national resources that large proportions of the output of this valuable raw material in both the public and private sectors should be burned as a fuel. In the present situation it seems to me that a careful reappraisal is necessary to ensure that the best possible use is being made of the country's resources and that a revision of the price and tax structures should be considered in this light. In particular it is desirable that excise and other duties on the raw materials of industry should be kept at an absolute minimum and that the movement of these vital materials should not be checked and halted by the machinery of State or Central taxation. Consideration should also be given to geographical factors, so that for instance we are not excluded from local sources of supply such as Sindri Fertiliser and Durgapur Steel while being obliged to go as far afield as Rourkela and Bhilai to secure our requirements; when actions taken in the public sector lead to anomalies of this kind it seems fair to say that the best use is not being made of our limited transport facilities.

Failing the reallocation and expediting of local supplies which seem to us so necessary it is evident that Government should permit the import of feedstocks from overseas which still must result in a substantial overall *net* saving of foreign exchange. Our applications have hitherto received sympathetic attention and I would only hope that this policy will continue until we can achieve the most satisfactory solution, namely a revised allocation of the coal tars produced in India.

As I have already explained these references to the Union Government and its various agencies are not made in any spirit of carping criticism, for the fact remains that we have throughout received a great deal of valuable and constructive assistance from official sources, particularly at the highest levels. We have always found patient ears, ready to listen and where feasible to act upon our requests for help, assistance and advice. To the Government of West Bengal also we are grateful for much practical co-operation during the period of construction and I would merely ask that as we initiate and expand our production its present policies should be continued and extended in the matter of securing adequate power supplies for us.

In conclusion I would like to end by paying tribute to all those who have participated directly or indirectly in bringing about the completion of our plant and the provision of capital and finance with which to work it. This applies to a very wide cross-section of our national community, including the Union and State Governments, as well as public and private undertakings, but above all I must mention very specially the untiring efforts and assistance of our overseas collaborators, Phillips Petroleum Co., their advice and guidance in technical matters have been of inestimable value and they have never failed to help us whenever needed in these respects and also in regard to capital requirements. We have moreover been fortunate in the cadre of experts with whom they have provided us, and I am thinking particularly of Mr. Willis Barber who has so ably and with such devotion fulfilled the role of Superintendent during the very difficult initial period. Our thanks are due to him and at the same time to the other members of the staff who loyally assisted us at Durgapur and in Calcutta.

Notice

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED

(Incorporated in England)
Liability of Members Limited

DIVIDENDS

THE FOLLOWING DIVIDENDS HAVE BEEN recommended in respect of the year ended 31st March, 1962, payable on the 14th November, 1962:—

(1) On the Preference Shares at 5 per cent (Five Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

(2) On the Ordinary Shares at 10 per cent (Ten Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

Payment of any Dividend declared will be made only to those Members whose names are registered in the Books of the Company on 7th November, 1962 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from 25th October to 7th November, 1962, both days inclusive.

By Order of the Board,

CALCUTTA-1, *3rd October,* 1962.

MYSORE TOBACCO COMPANY LTD.

HIGH PRICE AND SHORTAGE OF FUEL CAUSE CONCERN

MR. I. P. MALLAPPA'S SPEECH AT ANNUAL MEETING

THE number one problem of tobacco manufacturers is the high price of fuel required for curing tobacco and the increasing difficulty in obtaining adequate supplies. Underlying this difficulty, Mr. I. P. Mallappa, Chairman of the Mysore Tobacco Company Ltd., told the Twenty-fifth Annual General Meeting of shareholders, held at Bangalore on 27th September 1962, that, if the situation were to continue, there might come a time when fuel would be hard to get.

The following is the full text of Mr. Mallappa's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in extending a cordial welcome to you to the twenty-fifth annual general meeting of the shareholders.

"I took over charge of the office of the Chairman of this Company from Mr. B. S. Hanuman, on the 27th July 1962. Your Directors have placed on record separately their appreciation of the valuable services rendered by Mr. B. S. Hanuman to the Company.

"The report of the Directors and the audited accounts of the Company for the year ended 31st March 1962 have been in your hands for some time and, with your permission, I shall take them as read.

"Before moving the adoption of the report and accounts, I would like to make some observations on the working of the Company during the year under report. At the outset you will be gratified to note from the profit and loss account on page 12 that our sales have increased from Rs. 18.43 lakhs to Rs. 31.80 lakhs, an increase of over seventy per cent over last year's sales. This satisfactory position was largely due to the favourable seasonal conditions that obtained and the increased quantity of cured leaf that we were able to produce by increasing our planted area from 2,582 acres to 3,720 acres. There was a shortfall in the returns to the Company under 'processing charges' as there was a decline in the intake of tobacco coming from other sources.

Fuel Costs

"Our other charges on operational expenditure have been normal. But one important item which is disturbing the mind of your Board of Directors is the position obtaining in regard to the supply of fuel required for curing in the event of the Company undertaking large expansion of areas for producing larger quantities of tobacco. The price of this essential raw material required for processing the green tobacco, is increasing enormously and there might come a time when its availability would become very difficult. Your Directors are therefore exploring measures for replacing the wood fuel by other kinds of fuel. Even the availability of coal to the industries in the region has been very scarce. I am, however, glad to be able to report that we have recently converted our boiler at Whitefield and it is now fed with furnace oil instead of coal and this has enabled us to carry on our operations without any interruption.

"Coming to the accounts under review, I wish to invite your kind reference to page 14 of the printed report furnishing particulars of our fixed assets. You will notice that a sum of Rs. 92,670 has been spent on capital assets, during the year—of which a sum of Rs. 36,167 has been on buildings and barns, and Rs. 46,729 on vehicles. Both these items of expenditure have been incurred with a view to accelerating the production of cured leaf. More barns are put in places where the cured tobacco can be obtained at low cost and the speedier and efficient transport of such tobacco for marketing has been ensured. You may be aware that even the best cured tobacco will get reduced in its value if exposed to moist weather and so it has become very necessary to keep our transport system at a high level of efficiency.

"Your Directors are actively examining all programmes of expansion with particular reference to the development of other types of tobacco, like suncured, with a view to improveing the prospects of the Company.

"On this occasion, I am glad to be able to inform you that we have sold all the stocks we had held. I am also happy to report that as per present indications our operations for the current year, namely, 1962-63 are quite satisfactory although a considerable extent in our planted area suffered due to excessive rains recently.

"Our request to the State Government to give us relief from the levy of octroi by certain Municipalities on green leaf transported to our barns for curing has not met with success as yet. Attempts are being made to get the necessary relief and your Directors will endeavour to get this relief as quickly as possible.

Favourable Season

"Before concluding, I shall now briefly refer to the Indian tobacco in the Union. The 1962 season has been a very successful season. The fluecured tobacco production has reached the record figure of 165 million pounds and it is gratifying to note that all the surplus production has been exported. Many importing countries, who only few years ago started buying, have increased their intake of Indian tobacco and new countries like East Germany have made substantial purchases during this year. I am sure, this trend will continue and this augurs well for the future of Indian tobacco. The Tobacco Export Promotion Council has strived to bring about greater awareness to the quality of Indian tobacco in overseas markets and the increase in export is in a large measure due to the work done by the Council in overseas market.

"Although an upward trend in the consumption of Indian tobacco in domestic and export markets has been noticed, the problem of improving the quality of tobacco has not diminished and I am glad to inform you that the extension units set up in each State by the Indian Central Tobacco Committee are, however, intensifying their efforts for improving the quality of tobacco by extending proper advice to the growers. These extension units are also serving as links between the research organisations and the growers and are engaged in disseminating knowledge of better methods of cultivation to the growers.

Silver Jubilee

"In conclusion, having due regard to the vicissitudes through which the Company has had to pass particularly during the past three years which were subjected to seasonal adversities and also having due regard to the reduced returns which the Company got, I am sure you will nevertheless look back upon the achievements of the Company in this 'silver jubilee' year of the Company with pride and satisfaction.

"Our relationship with our local and foreign buyers continues to be cordial and encouraging. Our thanks are due to the many silent cultivators and curers who are the backbone of the Company for the loyal support they gave to the Company.

"I wish to acknowledge with grateful thanks the valuable advice, guidance and co-operation, which I have received from my colleagues on the Board. The employees and the officers of the Company have done very well indeed and the loyal services rendered by them to the Company deserves special mention. My grateful thanks are also due to them.

"I now move that the Directors' report, audited balance-sheet together with the profit and loss account be adopted."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

MONEY STILL IN DEMAND

(From Our Own Correspondent)

BOMBAY, 10*th October*

There has been no significant change in the short-term money market. The demand for funds continues to be good, while the supply is not expanding fast enough. The inter-bank call money rate remains unchanged at 3½ per cent. Some business was reported even at 3⅜-4 per cent.

There were no sales of 91 days' Government of India Treasury Bills under the tender system this week, as Monday was a bank holiday, but they will be resumed on 15th October. Although Intermediate Treasury Bills were available on tap from 3rd October to 6th October 1962, there was no demand for them and none were sold. This is in striking contrast to the investment of Rs. 230 lakhs in these Bills in the previous week and clearly reflects the shortage of floating funds in the market.

The Reserve Bank's statement for the week ended 5th October 1962 discloses a sharp rise of Rs. 42.85 crores in contrast to a contraction of Rs. 8.31 crores in the previous week. There is nothing unusual about this increase, as in the first week of every month notes in circulation always stage a large expansion on account of month-end payments by the Government and the private sector. Invariably, a part of this expansion is neutralised by the return of money to banks in the latter half of each month. This is particularly so in the slack season which is now fast drawing to a close.

There has been only a fractional improvement of Rs. 3 lakhs (to Rs. 93.97 crores) in foreign assets held by the Reserve Bank which, in the previous week, it may be recalled, had come down by Rs. 1.98 crore.

A significant indication of the tightness in the short-term money market is provided by an increase of Rs. 6.63 crores in the Reserve Bank's advances to scheduled banks during the week ended 5th October 1962. Of this increase, as much as Rs. 5.89 crores were under usance bills. The total of these advances stand at Rs. 11.18 crores. The fact that the scheduled banks' deposits with the Reserve Bank during that week had come down by Rs. 45 lakhs suggests that all the money which they borrowed from the Bank was used for expanding their credit to trade and industry.

There has been no improvement in the state of the gilt-edged market. There are more sellers than buyers, especially in the State loans floated this year. Accordingly, the downward trend in the value of these loans continues. The week under review witnessed a drop of 10 nP in the 4½ per cent 1974 Andhra, of 15 nP in Orissa 1974 and of 5 nP in U.P. 1974. Among Central loans, there was some enquiry for 3½ per cent 1968 as well as for 3 per cent 1970-75. The former went up by 15 nP and the latter by 10 nP. 3½ per cent 1963, however, was on offer and declined by 5 nP. Similarly, 3 per cent 1986 Conversion Loan, which had lost 20 nP in the past week, declined further by 40 nP this week.

The £ sterling in the New York exchange market was quietly steady, with a negligible rise in value. Thus, spot sterling was quoted at 280.180-280.210 cents, an improvement of 0.050 cent over the week. A corresponding improvement was recorded in three months' forward also, the latest rate being 279.730-279.760 cents. Locally, banks' selling rate for ready T.T. dollars was marked down by 25 nP to Rs. 477.75, while their buying rate remained unchanged at Rs. 474.50 per 100 dollars.

SLOW DEMAND FOR HIDES

(From Our Own Correspondent)

MADRAS, 8*th October*

There was no material change in the Madras kip market. Arrivals of stocks from the tanneries were on moderate scale and clearance was restricted, despite stockists' willingness to reduce their prices to a small extent. This was no doubt due to the absence of demand for inland trade and low grade kips and for export section of f.a.q. types. Arrival of buff-hides have been large and offtake small, and demand for export to U.S.A. was not in evidence. There were good inquiries for buff-calf skins for export and several orders were put through at prices lower than last week, because of competition from tanners in Pakistan, where raw stocks are available at low prices. Demand for cow-calf was insistent, for the small quantities arriving from the tanneries, and prices ruled strong in consequence.

Export inquiries for tanned goat skins were brisk but buyers were not willing to place orders at tanners' asking prices. Demand seemed to be strong for 11/12 lbs. average and upwards as also for lower selections in all weights, especially fifths. U.S.A. buyers were still out of the market, probably on account of price quoted at origin. In the sheep section, the trend was unchanged. Primes and semi-primes were neglected and middle class was in moderate demand from buyers in U.K. and Continent. Tanners of sheep and goat have been complaining of the limited quantities coming to the raw centres and of the high prices.

The following are the ruling prices per lb. in the local market for all round lots:

Tanned cow hides 8/8½ lbs. average Rs. 2.00 to Rs. 2.05, tanned cow calf 1½/2 lbs. average Rs. 3.75 to Rs. 3.88, tanned buff hides 12/14 lbs. average Re. 1.60 to Re. 1.66 and tanned buff calf 2/2½ lbs. average Rs 3.10 to Rs. 3.25.

Shipments during September 1962 were as follows: 2,193 bales cow hides, 192 cow calf, 15 buff hides, 207 buff calf, 412 goat skins and 200 sheep skins to U.K. ports; 338 cow hides, 2 cow calf, 10 buff calf, 426 goat and 306 sheep skins to Continent; 37 buffs, 65 buff calf and 231 goat skins to U.S.A.; 3 goat, 169 sheep skins to Japan. Besides these, 834 cases of pickled and chrome tanned skins were exported to East European countries.

SPECIAL CLEARANCE IN BULLION

(From Our Own Correspondent)

BOMBAY, 10*th October*

The bullion market had only three working sessions during the week under review, as it remained closed on the opening day of our week, namely, Thursday the 4th inst. (as a protest against the proposal to construct a slaughter house at Deonar in Bombay), Saturday (passing away of Dr. P. Subbarayan, Governor of Maharashtra) and Monday (*Dassera*). During this brief period, the market presented an irregular trend, gold ruling distinctly easy and silver firm. The easiness of gold was due to rumours suggesting heavy arrivals of contraband metal. Even the seizure of 1,700 tolas of gold by the customs officers in Bombay on Tuesday had no effect. Silver, however, tended to move up, following good buying support, but staged a retreat today in sympathy with gold which encountered persistent bull liquidation.

A special interim clearing was declared in bullion today by the Bullion Association. In gold, a margin at Rs. 6 per 10 grams payable by sellers was also enforced.

The daily average arrivals of gold during the week were smaller than in the previous week—10,000 tolas, as against 14,500 tolas—while offtake was better at 12,500 tolas, as against 11,000 tolas. Reverse was the case in silver. The average daily arrivals increased from 45 bars to 56 bars, while offtake declined from 10 bars to 9 bars.

It is reported that the Union Finance Ministry has informed the Government of Mysore that the Centre would take over the kolar gold mines on 1st November next, pending the settlement of the compensation question. The cost accountants of the Central Government are understood to have estimated the quantum of compensation at Rs. 4 crores, but the State Government has demanded Rs. 6 crores.

Over the week, the *Margashir* (11th December) settlement in gold fell by Rs. 2.25 to Rs. 117.10. Ready gold receded from Rs. 118.55 to Rs. 116.00 today, at which level the discount under the forward was Re. 1.10, as against 80 nP on Wednesday last week.

In silver, the *Margashir* (12th December) settlement advanced from Rs. 218.80 last week-end to Rs. 219.75 yesterday but declined to Rs. 218.95 today before finishing at Rs. 219.35. Ready silver continued to be quoted at a discount under the forward throughout the week, though the actual discount declined from Re. 1 to 50 nP. The closing spot rate was Rs. 218.85, as against Rs. 217.80 a week ago.

The dollar price of gold in the London bullion market improved from $35.11⅜ to $35.13.1/32 per fine ounce. Ready gold also gained 1*d.* to 250*s.* 9*d.* Ready silver hardened by ¾*d.* to 101¼*d.* and forward by ⅞*d.* to 101⅛*d.* Silver in New York was unchanged at 119 cents.

The following table shows the trend of prices during the week under review:

	10-10-62 (closing)	High	Low	3-10-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.90 fine)	116 00	119 55	115.75	118.55
*Margashir** ..	117 10	120.10	116.80	119.35
Sovereign	94.00	95.00	94.00	94.50
SILVER				
Ready (.996 fine) ..	218.85	219.45	218 05	217 80
Margashir†	219.35	219.75	218.80	218.80
London—				
Gold	250*s.* 0¼*d.*	250*s.* 9*d.*	250*s.* 8⅞*d.*	250*s.* 9*d.*
Silver Ready ..	101¼*d.*	—	—	100¼*d.*
Silver Forward ..	101⅛*d.*	—	—	101*d.*
New York—				
Silver	119.00 cents	—	—	119.00 cents

* 11th December settlement. † 12th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

METALS LISTLESS

(From Our Own Correspondent)

CALCUTTA, 8*th October*

With the prevalence of a holiday atmosphere, activity in the local metal market was limited this week. As a result, quotations were mostly unchanged. On the London Metal Exchange, spot copper was firm at £234 a ton. The backwardation for the three months position was £2 a ton in the beginning of the week, but, as the week progressed, it narrowed down to £1½ a ton following reports of worsening of the labour situation in the mines in Chile, Peru and Rhodesia. Utensil copper scrap was unchanged at Rs. 535.75 per 100 kgs. in Calcutta. The news that Belgium was to join the Aid India Consortium and provide India with a sum of $10 million to finance purchases from abroad was noted with satisfaction against the background of the hope that, if, as a result of the Finance Minister, Mr. Morarji Desai's efforts during his recent visit abroad, the foreign exchange situation improved, there was every prospect of the Government of India's import policy, to be announced at the end of this month, being liberalised. Trade circles here took forward to the restoration of relaxation in the cut of 50 per cent in the case of established importers and of 10 per cent to 15 per cent in the case of actual users.

Tin, in London, opened at £851 a ton and declined to close at £850½, due to poor demand. The rate here was unchanged, but fresh arrivals were expected in the near future. It is expected that small-scale consumers would be allotted a quota of 150 tons of tin and 2,000 tons of zinc. Zinc, in London, firmed up from £63¾ a ton to £64¼, while lead gave way from £53½ a ton to £52⅜.

FURTHER DECLINE IN COTTON

(From Our Own Correspondent)

BOMBAY, 10*th October*

The cotton futures market, along with other commodity markets in the city, had a short week of only three trading days. The trend of futures prices during this short period was anything but consistent. On Friday, the first trading day of the week, there was a pronounced easiness in values. This was attributed to heavy selling prompted by (1) sluggish conditions in the yarn and piecegoods market, (2) satisfactory crop progress, and (3) reports that stocks of cloth with mills at the end of July last, the latest month for which figures are available, were the highest for the past twelve months. A recovery was, however, evident towards the close of the session which gathered momentum when the market reopened on Tuesday after *Dassera*. The firmness of the seeds market and fresh support tanned the bullish fervour. The Jarilla March contract, which had closed at Rs. 731.25 on the 5th inst., firmed up to Rs. 734 on Tuesday. The market however again turned easy today on renewed selling and absence of buying support. The Jarilla March contract receded from Rs. 734 to Rs. 728 before finishing higher at Rs. 729.50.

Traders are anxiously awaiting the outcome of the Cotton Advisory Board's meeting scheduled to be held today. Some important recommendations regarding (1) the issue of Indian cotton quota to mills, (2) the marketing of the new crop, and (3) imports of foreign cotton are expected to be made by the Board at this meeting. No information is available at the time of writing as to the outcome of the meeting.

Activity in the spot market was limited. The intervening holidays and the uncertainty about the new arrangement for marketing the new crop made traders cautious. The delay in the announcement of the first instalment of the Indian cotton quota for the current season left mill buyers no choice but to wait. Needy mills were, however, found busy booking available lots of popular varieties such as Co2, L.147, Laxmi and 197/3. Foreign demand for Bengal *Deshi* did not show any sign of revival, while fresh mill interest was noted for African and Sudan cotton, probably because some mills received individual quotas against the global import allocation of 175,000 bales issued in August last.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Co2 1,350; B.P. 52 1,225; Busoga 1,210; Busoga (U.N.U.G.) 1,230; Jinja 1,125; Pakistan AC 134 1,070; Sudan G4S 1,434; American 1-5/32" 1,220.

The downward trend witnessed in the Karachi cotton futures market last week gathered further momentum during the week. Both the January and March contracts reacted, thanks to heavy selling. Slackness in domestic mill and export demand and bearish crop news were the influencing factors. The January contract declined from Rs. 67.50 last week-end to Rs. 65.90. The March contract receded by Re. 1.10 to Rs. 66.15. Ready prices too tended to ease.

Quietly steady conditions prevailed in the Liverpool cotton futures market during the week. Commission house buying in the distant positions and some trade covering accounted for most of the turnover. Futures prices closed largely unchanged over the week. Ready demand centred round Peruvian, South Brazilian, Syrian and Sudan cotton.

The following are the latest available quotations—in pence per lb.—for Liverpool, the figures in brackets being last week-end closing:

October 23.50 (23.50); December 23.45 (23.40) November 29.50 (29.50).

The U.S. Department of Agriculture, in its fourth estimate has put the country's cotton crop during the current season at 14.67 million bales, as against 14.68 million bales forecast a month ago. The yield per acre has been estimated at 448 lbs., as against 449 lbs. Last year's final crop was 14.32 million bales and yield 438 lbs. per acre.

The publication of the crop forecast had no perceptible effect on the New York cotton futures market where values tended to recede on short selling and bear pressure. The October contract declined from 33.35 cents last week-end to 33.30 cents per lb. and the December contract from 33.75 cents to 33.65 cents per lb. The March contract too eased from 34.26 cents last week to 34.10 cents. Spot prices were steady. New York spot ruled unchanged at 34.10 cents.

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 10*th October*

Barring forward staple fibre yarn which ruled firm, the yarn market depicted an easy trend during the week under review. Enquiries from consuming centres were at a low ebb. The downward trend of rayon fabrics exports also acted as a damper. The actual exports during September 1962 are put at no more than 5.25 million metres valued at Rs. 50.65 lakhs, as against 5.75 million metres valued at Rs. 53.70 lakhs in August. The declining trend would appear to have been persisted in the current month also. Consequently, prices drifted lower. National Rayons 150 deniers dropped 9 nP to Rs. 12.98. 120 deniers was dull at Rs. 16.85. Centurys 75 deniers receded by 55 nP to Rs. 22 and 100 deniers by 23 nP to Rs. 17.12. S.I. Viscose yarns, however, registered a rise. 150 deniers rising by 16 nP to Rs. 13.07 and 120 deniers by 7 nP to Rs. 16.92.

Among staple fibres yarns (40×2), spot Citys declined by 24 nP to Rs. 8.98. Kohinoors eased by 7 nP to Rs. 9.15. Centurys were neglected at Rs. 7.83. In the forward section, October contract improved by Rs. 8 to Rs. 710. December settlement picked up Rs. 7 to Rs. 729.

Activity in the cotton yarn section continued to be restricted. Offtake by handlooms and powerlooms was said to be poor. Prices were unchanged with the exception of a few finer counts which tended to move up.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	10-10-1962	3-10-1962
Art silk yarn (per kg.)—	Rs.	Rs.
National Rayon 120D	16.85	16 85
Century 75D	22 00	22 55
S. I. Viscose 150D	13 07	12 91
National Rayon 100	16.68	16.97
Staple fibre yarn (40 × 2)—		
October (per 90.72 kg.)	710 00	702 00
December (,,)	729 00	722 00
Kohinoor (per kg.)	9.15	9.22
Century	7.83	7.83
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18 50	18.50
22s Apollo	23.00	23.00
30s Bradbury	27 00	27 00
40s 8⁵ Raja	38 00	37 50
60s Finlay	72 00	69.00
80s Madura	—	81 00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

GROUNDNUTS BUOYANT

(From Our Own Correspondent)

BOMBAY, 10*th October*

In distinct contrast to the easy trend noted last week, the oilseeds market ruled buoyant during the week under review. There was a smart rally in groundnuts on hectic short covering induced by bearish crop reports from major producing centres such as Gujarat and South. Owing to unfavourable weather conditions, output of groundnuts during this season at Kathiawad, for instance, is estimated at only 500,000 tons, as against 800,000 tons anticipated earlier. In view of the upward trend in prices, *vanaspati* producers and crushers were eager to replenish stocks and this extended sustained support. In view of the pronounced strength groundnuts, castorseed ruled distinctly firm, despite the absence of encouraging export news for castor oil, Linseeds and cottonseeds moved up in sympathy.

The Government of India has decided to release a quota of mustardseed for export to all permissible destinations excluding South Africa/South West Africa and Tibet region of China for the period of October, 1962 to September 1963. Exports against this quota will be licensed freely to all shippers against the evidence of valid firm sale contracts subject to a maximum of 100 tons per shipper at a time. Licensing will be stopped as soon as the ceiling is reached.

Among groundnuts, January 1963 contract spurted from Rs. 219.37 to the week's ceiling rate of Rs. 225.87 by Tuesday. In private dealings, the quotation was pushed upto Rs. 228 today. Nizam bold hardened by a rupee to Rs. 45.50. Khandesh quality rose by 50 nP to Rs. 45.75. Oil January 1963 contract put on 85 nP to Rs. 30.85. Oil Railway receipts improved by 15 nP to Rs. 18.90. But oil ex-mill shed 10 nP to Rs. 19.15.

Castor March 1963 contract climbed up by Rs. 2.75 to Rs. 164.25. Madras small closed higher at Rs. 32.50, as compared with Rs. 32.25. Karad bold picked up 25 nP to Rs. 31.12. Oil B.S.S. rose by 20 nP to Rs. 13 and commercial by 10 nP to Rs. 12.30.

Linseed March 1963 contract strengthened by 68 nP to Rs. 39.87. Bold ready gathered 50 nP to Rs. 41, Linseed oil gained 5 nP to Rs. 16.85.

Cottonseed January 1963 contract hardened by Re. 1.50 to Rs. 102. Berar, however, shed 10 nP to Rs. 22.50. Among other seeds, niger Madras improved by 25 nP to Rs. 36.25.

The following table shows the closing prices of oilseeds and oils on Wednesday, 10th October as compared with those of the two previous weeks:

	10-10-1962	3-10-1962	26-9-1962
Groundnut	Rs.	Rs.	Rs.
Groundnut January 1963 ..	225.87	219.37	222.12
Nizam bold	45.25	44.50	48.75
Khandesh quality	45.75	45.25	48.75
Oil ex-mill ready*	19.15	19.25	19.15
Railway receipts*	18.90	18.75	18.80
Castorseed			
Castorseed March 1963	164.25	161.50	162.87
Ready Madras	32.50	32.25	32.12
Ready Kanpur	31.12	30.87	31.00
Oil B.S.S.†	13.00	12.80	13.00
Oil commercial†	12.30	12.20	12.40
Linseed			
March 1963	39.87	39.19	39.31
Bold ready	41.00	40.50	41.50
Oil ready†	16.85	16.80	17.00
Cottonseed January 1963 ..	102.00	100.50	102.00
Niger seed	36.25	36.00	36.75
Kardi seed	27.50	28.00	28.50

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

ORANGE PEKOE TEA STRONG

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 4*th October*

Offerings in sale No. 39 held on Monday the 1st inst. amounted to 413,000 kgs. Quality in general was well maintained. The market met with useful demand. Low medium and medium brokens were irregular, but these can be quoted about firm. Corresponding fannings followed a similar trend, but did not receive the same support as that received in recent weeks. A few selected lines, however, met strong competition and were much dearer. Good mediums were in useful demand and were fully firm with occasional invoices being dearer. Highgrown brokens were well supported and were about steady, buyers following quality. Fannings under this category, however, elicited less enquiry and a few of them were withdrawn from the sale. Clean black leaf descriptions continued in demand and were fully firm. Unorthodox descriptions were irregular and slightly easier, particularly whole leaf grades. Orange pekoes were strong, whilst flowery pekoes were slightly irregular. There was strong inquiry for tippy teas.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.60-4.50	3.95-4.10
Mediums	4.40-5.00	4.10-4.25
Good mediums	4.85-5.70	4.25-5.10
Nilgiris B.O.P.	5.00-8.90	5.00-7.80

The average price realised in sale No. 39 was Rs. 4.57 per kilo, as against Rs. 4.56 a week ago and Rs. 4.52 in the corresponding sale last year.

In dust sale No. 39 held today, 272,000 kgs. were offered. The market met with fair general demand, but prices were generally easier for most descriptions. Low mediums and mediums eased irregularly up to 20 nP and sometimes more. Good mediums were better supported, but prices for these were barely steady and in most cases registered a decline. Highgrowns sold readily but were easier. Clean black grainy descriptions also followed the general trend of the market and sold at lower rates. Unorthodox descriptions attracted irregular support, particularly those of true C.T.C. manufacture. C.T.C. types and legg-cut types met with good inquiry and sold at around last rates.

The average price realised in dust sale No. 39 was Rs. 3.99 per kilo, as compared with Rs. 4.05 a week ago and Rs. 4.57 in the corresponding sale last year.

Colombo: There was good general demand in Monday's sale. Teas from Uva were lower. Best mediums were firm. Lowgrowns were also well competed for and these sold at slightly dearer rates.

London: North Indian and other growths: In Monday's sale, there was good demand. Best Assams were well competed for and these were occasionally dearer, whilst others were a little irregular. Plainest descriptions were again easier.

Ceylon and South Indians: In Tuesday's sale, 30,849 packages were offered, of which 11,190 packages were from South India. Ceylons and South Indians met with strong support and were often dearer except the plainest and light liquoring kinds.

INTERNAL TEAS WEAK

(From Our Own Correspondent)

CALCUTTA, 8*th October*

A weak tone was in evidence in the internal tea sale held here last week. Due to the *Pooja* holidays, there was no export sale yesterday. Strong demand continued in London. During last week's sales there, Dooars teas were a favourite among bidders with best Assams receiving more attention. Stocks in the U.K. for the week ended 29th September were higher by 4 million lbs. at 127 million lbs., thus reflecting increased shipments from Calcutta.

Medium C.T.Cs were a very weak feature during last week's sale for internal consumption, when dusts on offer totalled 29,966 packages. The price for this variety declined by 30 nP. A similar loss was also recorded in the good C.T.Cs, but the few selected lines were firm. Legg-cut teas were irregularly easy, leading to some withdrawals. At reduced rates, plain orthodox teas met with good demand. Assams also eased. The quotations per one kg. (in rupees), inclusive of excise duty, were: Good Assam C.T.C. dust 6.30 to 6.70, medium Assam C.T.C. dust 4.50 to 5.70, legg-cut dust 4.80 to 5.20, medium Assam dust 4.60 to 4.95 and plain orthodox dust 4.10 to 4.40.

The importance of maintaining India's hold on the U.K. tea market was stressed by Mr. A. D. Bolland in his address from the chair to the general meeting of the Calcutta Chamber of Commerce held here last week. He urged the Government to undertake a stimulating propaganda in favour of tea in the E.C.M. countries. The E.C.M. has already announced that tea would be admitted duty-free in the E.C.M. as and when the U.K. joins the European Community, and as such attempts should be made to increase exports of Indian tea to Europe, including the U.K. Mr. Bolland also demanded immediate measures so as to make Indian tea more competitive in world markets and added that, in this regard, a realistic step would be the abolition of the export duty on tea and placing tea on a par with all other excisable commodities for drawback of excise duty on tea exports. In this connection, trade circles would call attention of the Government of India to the Trade Expansion Act passed in the United States. This Act enables the President to reduce duty or even cancel the same on exports to the E.C.M. on a reciprocal basis. Now that the E.C.M. has agreed to cancel the common tariff on tea as and when the U.K. joins the E.C.M., India can ask the U.S.A. to grant facilities to increase tea exports to that country.

In any attempt to make tea more competitive, a reduction in costs of production comes foremost. It has been reported that the Government of India is in general agreement with the view that the only way to enable Indian tea to find a place in foreign markets where tea has been monopolised by producing countries other than India is a further relief in tax. Recently, Sir Richard Duckworth, Chairman of the Indian Tea Association, said that due to the heavy costs of the Indian tea industry other producing countries were able to increase their exports. In this connection, the I.T.A. Chairman declared that it was necessary that any decision to raise wages should be by discussion and agreement in wage boards and not by a majority vote. Marginal tea gardens were already working at the sacrifice of profits, he said. Generally it is suggested that any addition to the wageload should be linked to productivity. If this consideration cannot weigh, Sir Richard's suggestion to reduce bonus to the extent of any wage increase appears to be practical.

Tea output in North East India totalled 364 million lbs. up to 15th September, showing a reduction of 16 million lbs. as compared with the output in the corresponding previous period. It is hardly likely that the declining trend would be reversed in the coming months.

JUTE GOODS FALL FURTHER

(From Our Own Correspondent)

CALCUTTA, 8*th October*

Holiday considerations restrained buyers and, in the three days from 3rd to 5th inst. the market was open in the week under review, prices of jute goods recorded a gradual decline and closed liberally lower on balance. The declining tendency received an impetus on Friday when figures relating to goods in stock with mills as at the end of September were announced. For, at 92,800 tons, the total of all goods in stock rose by 2,100 tons. Heavy goods at 54,600 tons showed a heavy increase of 3,100 tons, while hessian at 24,500 tons and miscellaneous constructions at 13,700 tons recorded respective declines of 600 tons and 400 tons, respectively. For the last few months heavy goods in stock have increased every time and it is becoming only too clear that there is not adequate demand for all the production of sacking. These figures call for transfer of some sacking looms to hessian, if mills would like to continue the present rate of higher output. However, the lack of adequate quantities of fibre fit for hessian manufacture prevents mills from adopting such a course. It is expected that the situation would be reviewed by the Indian Jute Mills Association towards the end of this month, as the higher rate of production had been extended only up to the end of October. Shipping instructions were lower during this week, and it was estimated that, in September, shipments had declined. With the maintenance of high level of production, the squeeze in ready delivery positions is no longer developing and, as a result, the market trend is all the poorer. As the week under review progressed, holders became nervous about the continued weakness. This also added force to the declining trend.

The fall in overseas interest in heavy goods for some months now has been due to increased competition from Pakistan mills which, by virtue of the availability of cheaper and at the same time superior fibre and of lower costs of production, are able to underquote Indian goods. The growing Pakistan competition comes to better light when figures are analysed. Of the total exports of jute goods from India and Pakistan in 1955, India's share was as high as 94 per cent, while, in 1961, India's share was reduced to 80.9 per cent, the reduction going to increase the share of Pakistan to 19.1 from 6 per cent. In 1960, of total sacking exported by both the countries, India's share was only 71.6 per cent but, in 1957, this was higher at 87.6 per cent. Until a few years ago, Burma used to buy jute goods from India only. In 1960, Burmese purchases from Pakistan were 12,785 tons and, in 1961, these increased further to 17,134 tons. Indian jute goods purchased by Burma in these two years were 6,200 and 7,000 tons, respectively. In other words, Pakistan increased its exports to Burma by 33 per cent, while the increase by India was only 24 per cent. Similarly, while Pakistan exported to Cuba in 1961 as much as 22,000 tons, as against 11,000 tons in 1960, India's exports to Cuba at 44,100 tons rose by only 2,500 tons. Pakistan's total exports in 1961 were 206,000 tons showing an increase of 18,000 tons or a little over 9 per cent as compared with 1960. On the other hand, Indian exports in 1961-62 fell to 785,400 tons from 915,600 tons in the previous year, although, by virtue of higher prices, these earned for India foreign exchange to the tune of Rs. 144.8 crores as against Rs. 135.1 crores. In other words, India's share in volume fell by a little over 8 per cent, whereas Pakistan's rose by a little over 9 per cent. Prices of jute goods have fallen since then, and that explains the fact that, although the Government has fixed the export target for this year at 850,000 tons, no more than Rs. 140 crores is expected to be realised in foreign exchange.

That within the next few years Pakistan competition would increase is evident inasmuch as against the existing looms of 8,000, expansion work is on hand to this number by 4,000. Even doubling the loomage has been urged by the Pakistan Jute Inquiry Commission. The trade and industry here, concerned at this state of affairs, have been urging the Government of India to take immediate measures, so that Indian mills can at least maintain their position in foreign markets, let alone strengthening it. The installation of broad looms is, of course, encouraged, and the Government has been allocating liberal foreign exchange for importing these looms. Clearly more steps are called for and, in the present situation, a reduction in production cost in an attempt to enable mills in India to sell cheaper abroad would appear to be the only measure. Cost of production can be lowered by accelerating the rationalisation process and a revision of fibre prices. A reduction in wages is not possible with so much legislation favouring workers and their welfare, but, since there has been in evidence that even at the present prices the farmer's margin of profit is fairly high and that the holding power of farmers has gradually increased in recent years, attention is necessary in an attempt

(Continued on page 664)

SHIPPING IN THE THIRD PLAN

(*Concluded from page 645*)

provision of Rs. 14 crores is still available and also having regard to the possibility of acquiring additional tonnage on deferred payment terms, any further financial allocation as asked for by the Board is necessary. The answer to this will depend on several factors. For instance, whether the additional tonnage to be acquired would consist of only cargo ships and whether they would be new or second-hand or partly new or partly second-hand; whether it will be necessary to acquire new tankers for the overseas trade and new passenger-*cum*-cargo ships for replacing the existing ones as recommended by the Board; and whether any shipping company would acquire ships without financial assistance from Government as has been done by the Jayanti Shipping Company in respect of one tanker costing £1.15 million (Rs. 1.5 crore) and Liberty ships costing Rs. 1.3 crore. Unless the break-up of the additional tonnage that should be acquired against the Plan provision of Rs. 14 crores is determined, it will be difficult to say whether it would be possible to acquire additional tonnage of 175,000 G.R.T. with this provision. It may also be pointed out that irrespective of whether the ships are acquired on deferred payment terms or not, the total financial commitment for their acquisition will have to be met from the allocation in the current Plan.

So far as the Board is concerned, it has worked out the additional provision required, namely, Rs. 50 crores for the acquisition of additional tonnage recommended by it on the basis of the present-day costs of new and second-hand tonnage and on the assumption that 80 per cent of the total cost would have to be found from the Plan provision for grant of loans to shipping companies and investment in the Shipping Corporation. It may be mentioned that the estimates have been made on the same basis as was adopted by the Board in its original recommendations. It is, however, possible that the actual provision needed may be less than Rs. 50 crores for reasons explained earlier.

DELHI LETTER

(*Concluded from page 636*)

Government is also entitled under the contract to the manufacturing rights for all advanced versions based on Avro 748. The British are already at work on a bigger version.

Indian Government plans were to make two Avros in 1962, twelve in 1963, eighteen in 1964 and 36 in 1965. But these plans are not going according to schedule. The Transport Ministry has not yet approved of the Avro as a substitute for the Dakota. As early as 1955 India has started searching for a replacement for the Dakota. The Transport Ministry's suggestions for making a Lockheed-designed plane was turned down by the Planning Commission. An expert committee of the Air Force selected the Avro even as it was in the blue-print stage and the Government made the agreement with Hawker Siddley in July 1959.

The present plans are to make two versions of the Avro in India. The basic version (Mark I), is fitted with Rolls Royce Dart 6 engines and the Mark II will be powered with R Da 7 engines. The Da 7 engine will improve the take-off and climb performance of the plane, making it more suitable for operation from high altitude or hot airfields.

The Dart is one of the world's most proven turbo-prop engines and the Da 7 engine will be progressively manufactured in the Hindustan Aircraft Factory at Bangalore. The Viscounts in the Air Force as well as with the Indian Airlines Corporation and the Fokker Friendships with the Corporation use Rolls Royce engines. These planes and the Avros will provide the largest possible use of the engines and components made in Bangalore. The Bangalore factory will also make a jet plane for training men of the Air Force. This plane, to be called the HT 16, will be powered by the same engine as that in the British Provost trainer, the Viper.

Besides the deals with the British and the Russians in the aircraft industry, India has arrangements with the French to make Aloutte II helicopters. French Caravelles will also be operated by the Indian Airlines Corporation which is expecting additions to its Fokker Friendship fleet in the next few months. Another Lockheed delegation is also expected to visit Delhi.

MARKET REPORTS

(*Concluded from page 661*)

to determine data for arriving at a fair cost of production of fibre. Without such a step the outlook of the jute industry in India does not appear encouraging.

On Tuesday last, ready B. twills declined from Rs. 117.50 to Rs. 117.00 following the influence of bears in futures trading. Also there was only little business done with overseas countries. In ready hessian, apart from scattered covering demand involving small quantities, there was nothing else of interest. However, the price of ready hessian 40" 10 oz. was unchanged at Rs. 57.50. The drift was much more impressively in evidence on Thursday, when absence of business forced down ready hessian 40" 10 oz. to Rs. 54.75 and B. twills to Rs. 116.65. On Friday, the news of increased stocks of sacking goods depressed quotations and B. twills closed for the *Pooja* holidays at Rs. 115.75. Hessian 40" 10 oz. was unchanged but quiet at Rs. 54.75.

A further increase in arrivals in agencies was reported during the week and prices for certain varieties declined fractionally. Such a trend enabled traders to discard earlier apprehensions that the crop would be smaller than the original estimate. Daisee bottoms fell from Rs. 33 to Rs. 32.50, while Assam bottoms and northern bottoms were unchanged at Rs. 30 and Rs. 29.50, respectively. Sellers were very eager for business at discounted rates and the further extension of the date for completion of the purchase of the fresh quota for bufferstock added to the quiet trend. The Calcutta Baled Jute Association has urged Government that the Buffer Stock Committee should include sellers' representatives also. Speaking at the general meeting of the Association, its Chairman, Mr. Tulsidas Kanoria, said that his Association had considerable experience and could assist the Government in policy-making. He demanded that, in view of the surplus crop, Government should actively encourage exports, by relaxing existing conditions and removing export limits. Although Government had fixed an export quota for last year's fibre, no such quota has so far been fixed for this year's crop.

FOODGRAINS IMPROVE

(From Our Own Correspondent)

HAPUR, *8th October*

A steadier tendency was witnessed in foodgrains prices here this week on reports of heavy damage to the crops due to floods in the Punjab.

Wheat prices improved by 67 nP to Re. 1.34 per quintal, according to quality, on better demand in the face of poor arrivals. Average wheat was quoted at Rs. 40.19 and farm quality at Rs. 42.87 to Rs. 44.88 per quintal. Arrivals were poor around 200 maunds a day, and stocks were stationary at 64,000 maunds. Rice prices also sought higher levels due to poor arrivals and meagre stocks. New produce rice would reach the market soon, as harvesting of paddy has already begun. Week-end prices were:—Rice *basmati* superior Rs. 85.74 to Rs. 101.81, *sela basmati* Rs. 77.70 to Rs. 85.74, *mainpuri* Rs. 52.25 to Rs. 54.92, *ramajwayan* Rs. 58.94 to Rs. 61.62, *raimunia* Rs. 61.62 to Rs. 64.30 and *gadda* Rs. 53.58. a quintal.

Gram prices hardened by 67 nP per quintal to Rs. 43.54 for the Punjab variety and Rs. 42.87 for local produce on better local inquiries and firm advices from Punjab. Arrivals were negligible. Stocks were also lower at around 14,000 maunds. Barley and *bejhar* prices sought lower levels on slack demand. Maize prices drifted lower by 67 nP to Rs. 1.34 per quintal according to quality on better arrivals which were around 400-500 maunds a day, mostly from East U.P. *Juwar* prices were unchanged, but *guwar* ruled firm due to poor stocks. *Methi* ruled quiet in the absence of demand. Week-end prices were:—Barley Rs. 26.79, *bejhar* Rs. 26.79 to Rs. 28.80, *methi* Rs. 58.94 to Rs. 61.62, *bajra* Rs. 37.51, *juwar* Rs. 46.89 to Rs. 50.91. *guwar* Rs. 36.17 and oats Rs. 30.81, a quintal.

Among pulses, peas improved fractionally on good outside buying support. The dara quality was quoted at Rs. 32.15 and farm quality at Rs. 32.82 to Rs. 34.16. Arrivals were negligible and local stocks were estimated around 51,000 maunds. *Arhar* prices sought lower levels at Rs. 50.91 to Rs 53.58. Prices of *arhar* were much lower at Rs. 33.49 in 1961 and Rs. 34.83 in 1960. *Urd* and *moong* were, however, steadier due to poor stocks and reports of damage to crops in Punjab due to heavy floods. Week-end prices were:—Peas *dal* Rs. 36.17, gram *dal* Rs. 48.23, *urd* Rs. 77.70, *urd dal* Rs. 85.74, *moong* Rs. 49.57 to Rs. 52.25, *moong dal* Rs. 57.60, *masoor* Rs. 42.87, *malka* Rs. 54.22, *masoor dal* Rs. 56.26 a quintal.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, *8th October*

Sugar here ruled steady this week on revival of demand from Delhi, Punjab and other centres in the South. Both spot and mill delivery prices improved by one rupee per quintal. Local demand was also brisk due to the festival. Week-end prices were: Spot delivery Rs. 106.75; mill delivery (D 29) Amroha Rs. 103.82, Dhampur Rs. 103.47, Seohara Rs. 103.47, Meerut Rs. 105.00; Simbhoali (E 29) Rs. 105.16, Bijnore Rs. 103.82 and Dhampur Rs. 103.15, per quintal.

Crystal sugar prices, which had ruled steadier in Muzaffarnagar during the major part of the week on brisk festival demand, suffered a setback towards the week-end following the release of an increased quota of 250,000 tons by the Government for sale in the open market. In the mill delivery sections, festival demand for smaller grains was very brisk. Supply position was also easy, but in spite of this, prices of various qualities improved by 25 nP to Re. 1 per quintal. Bold crystals were in demand from Madhya Pradesh, Gujarat and Saurashtra. But rise in prices here was not so much as in the smaller grains. Towards the close of the week, the Government announced a monthly quota of 250,000 metric tons of crystal sugar for sale in the open market. This quota announcement was done ten days ahead of the schedule to meet the increased demand, and as a result of this, prices declined by 32 nP to 75 nP per quintal. Forward sugar was neglected, as trade circles were expecting further release of a supplementary quota near *Diwali*.

Khandsari prices also sought higher levels in line with the rise in the prices of crystal sugar. Imposition of purchase tax, details of which were still awaited, was likely to adversely affect the *khandsari* industry. New arrivals were still poor. Week-end prices were: *Khandsari* Rs. 80.38 to Rs. 103.15, crystal Rs. 96.45 to Rs. 101.81 and *boora* Rs. 99.13 to Rs. 107.17, a quintal.

Ready *gur* prices improved during the week due to good festival demand. New arrivals were still poor, around 50 maunds a day, and these were readily absorbed by consumers. Stocks of old *gur* were reported to be poor and it was not in demand, as its quality was poor. Arrivals of new produce were expected to increase as soon as the cultivator was free from *rabi* sowing by the end of the current month. Cane crop prospects were reported better. Week-end prices were: New *gur* Rs. 66.98 to Rs. 79.78, old Rs. 64.30 and *shakker* Rs. 66.98 to Rs. 72.34, a quintal.

TREND OF SHARES

(*Concluded from page 632*)

of such trade agreements, were well received by the market. It was reported, however, today that the Six had turned down this request from Britain. While this dampened the initial enthusiasm of marketmen, they were inclined to feel that, from the current talks at Brussels, some favourable compromise for India would emerge. The week also saw an unfavourable development in India's relations with Nepal, when China pledged itself for defending Nepal against any foreign aggression. This is certainly not a good omen, especially when we are faced with a serious situation across the Northern and North Eastern borders. In fact, the greatest worry of the market at present is the problem posed by the militant China..

* * * *

Steel shares experienced sizable activity in Bombay following the announcement of the dividend by the T.I.S.Co. Wide two-sided movements on hectic short-covering and liquidation characterised trading in these shares. Tata Ordinary, which had closed last Thursday at Rs. 134, opened at Rs. 141, improved to Rs. 141.50, reacted sharply to Rs. 135.75 during the week and closed at Rs. 137. After opening 65 nP higher at Rs. 25.70 Indian Iron improved further to Rs. 25.80, fell subsequently to Rs. 25 to close at Rs. 25.30. Textiles displayed considerable weakness, but regained some strength at close. Thus, Standard, which had declined from Rs. 850 on Friday to Rs. 796 today, recovered briskly to Rs. 880 and closed 47 points higher at Rs. 872. Bombay Dyeing were sold down from Rs. 66 to Rs. 64.40, but rallied quickly to close at Rs. 65.10, as against Rs. 64.90 a week ago. Morarjee closed three points higher at Rs. 465, Phœnix two points higher at Rs. 242, Podar one point higher at Rs. 128 and Kohinoor 50 nP higher at Rs. 295.50. But Century were down by Rs. 6.50 at Rs. 605.50, after having declined during the week from Rs. 622 to Rs. 594 and Svadeshi were six points lower at Rs. 250, after having declined during the week from Rs. 258 to Rs. 247.50. After being done at Rs. 476.50 on Friday, National Rayon lost ground steadily and were quoted as low as Rs. 453.50 today, before rallying to close at Rs. 463, as against Rs. 468 a week ago.

In the Miscellaneous section, Bombay Burmah were sold down from Rs. 647 to Rs. 627. At close, however, the shares showed a gain of one point at Rs. 638.50. Hindustan Motors fell from Rs. 18.64 to Rs. 18.20 to rally to close 40 nP higher on balance at Rs. 18.68. Telco came down from Rs. 310 to Rs. 295, but closed with a gain of Rs. 1.50 at Rs. 303. Likewise, Voltas rallied from Rs. 247 to close at Rs. 253.50, as against Rs. 252.50 a week ago, after having been traded earlier at Rs. 258. B.B. Petrol continued to forge ahead and, at close, disclosed a gain of 56 nP at Rs. 4.24. Premier Construction closed 10 points lower at Rs. 132 and Cooper Engineering showed a big loss of Rs. 30.50 at Rs. 134. Chemicals and Dyes continued to be weak. Amar Dye-Chem showed a loss of Rs. 13.75 at Rs. 243.75 and Tata Chemicals were 72 nP lower at Rs. 13.80 following the publication of disappointing preliminary results, showing a decline in profit before taxation from Rs. 34 lakhs to Rs. 16.94 lakhs; this disclosure outweighed the maintenance of the dividend at 65 nP per share, taxable, on the Rs. 10 fully paid shares. Shippings and Electrics were well supported and showed small gains over the week, but Sugars and Cements ruled quiet. Cash scrips disclosed minor changes either way, with the exception of Permanent Magnets which declined by Rs. 17.50 to Rs. 225.

* * * *

While Textiles were easy, other sections closed on a steady note on the Madras Stock Exchange. Among Textiles, Madura were lower by 10 nP at Rs. 35, Travancore Rayon by 50 nP at Rs. 31.70, Bangalore Woollen by 80 nP at Rs. 242 and Cannanore by Rs. 1.50 at Rs. 181, but S.I. Viscose closed one point higher at Rs. 160. In the Miscellaneous section, Ashok Leyland showed a gain of 25 nP at Rs. 7.95, India Cement of 14 nP at Rs. 6.20, Mettur Chemicals of 10 nP at Rs. 13.70 and Madras Rubber of 12 nP at Rs. 21.62. In Sugars, India were up by 90 nP at Rs. 11, but Travancore showed a loss of 85 nP at Rs. 7.50. Among Plantings, T.R. and T. improved by 20 nP to Rs. 9.10, but Cowcody showed a loss of 8 nP at Rs. 4.02.

DEBATE ON CONTROLS

TO control or not to control the prices of necessaries of life is a question on which a hot discussion has been going on in this country for some time now. Much of the discussion is, however, confusing. What is worse, certain responsible leaders, who ought to know what they are saying, are talking as though the country has been free from economic controls. A Union Deputy Minister, Mr. B. R. Bhagat, is reported to have stated at Madras a few days ago that, "if we do not have the courage to implement controls, we should give up planning." If he has been correctly reported, it is amazing that he should have made this remark. Mr. Bhagat has been a member of the Government for so long a time that he must surely be aware that there is already an enormous number of controls. His own Ministry, namely, Finance, is in charge of a number of controls, the latest addition being the curb on foreign travel through a stringent denial of foreign exchange. On the success of this new control opinion is sharply divided. One thing, however, is clear. The Reserve Bank, which had been free from criticism all these years in regard to administration of foreign exchange controls, has become the target of considerable, widespread criticism ever since this new curb was introduced a few months ago. It is unfortunate that it should have allowed itself to be dragged into this situation, which it could have easily avoided by asking one of the Ministries of the Government to be in charge of issuing permit-chits to those who wish to go abroad. It is also common knowledge that the much older foreign exchange controls have not been effective in preventing leakages, as witness the continued influx of smuggled goods, not merely gold but a variety of others. That overinvoicing of imports and underinvoicing of exports have been merrily going on cannot also be denied. Why has the Finance Ministry, of which Mr. Bhagat is one of the chiefs, not been able to close these loopholes?

Another minister with Cabinet rank, T.T.K., declared at Madras the other day that the Government was afraid of imposing controls on foodgrains, because it was afraid that the money bags would get annoyed. His line of reasoning is far from the truth. Actually, the Government has never been afraid of the business community; indeed, the reverse is true. That community, as readers are aware, has been treated with impunity, subjected to heavy taxation and all sorts of controls, even though it has been providing almost all the funds the party in power needed for fighting elections. If the Government is afraid of anyone, it is the vast mass of agriculturists, landless labour and industrial workers. That is the real truth. The anxiety to win votes in elections has not a little to do with many incongruities in the Government's economic policies.

Among the underdeveloped countries in the free world, Indian economy is a heavily controlled one. All the vital industries are controlled; steel, cement, coal, oil, electricity, paper, cotton textiles, sugar, coffee, rubber, certain types of heavy chemicals, fertilisers, automobiles and road transport are all subject to various types of controls, including price controls, in varying degrees. These controls, however, have not been successful in arresting the upward trend in their prices for consumers. Petroleum products may be an exception, but, if the world trend in regard to these products had been allowed to operate, their prices ought to have been much lower than they are today.

To revert to the controversy on controls over foodgrains. It has arisen because of the perceptible rise in price level since March last and a fear that it may continue in the coming months also. It is common knowledge that opinion on this issue is sharply divided not only among academicians but also among ministers and officials of the Planning Commission. One should be happy over this fact. It shows how free we are, in contrast to countries in the Communist camp. The difference of opinion among ministers of the Central Government on a vital issue like controlling foodgrains grown by millions of small producers and consumed by 440 million people is not such a great tragedy as is made out by some commentators in this country. On the contrary, it is a healthy sign, in that it shows that the Cabinet is no longer a one-man affair. It would, of course, be deplorable, if ministers were to air their differences of opinion either in public or in private after a decision is taken by the Cabinet, for that would amount to indiscipline. But no harm, excepting some embarrassment to the ministers concerned, would follow if they were to give public expression to their views on control of foodgrains. Such a thing may not happen in a country like the U.K., but political conditions in India are vastly different from those in the Mother of Parliaments.

It is wrong to think that there are no controls whatever on foodgrains. Rice, for instance, is still subject to zonal controls. Wheat is free from this restriction, but consumers are none the worse for it. If anything, they are actually getting wheat 6 per cent cheaper than in January 1962 and almost at the same price as in March. It is only rice that has gone up in price, by 10 per cent since March, 13 per cent since January and 3.6 per cent since September 1961. The jump in rice prices is largely due to the failure of production to keep pace with the growth in demand, following the addition of more mouths in the country and more money in the hands of people. Coarse grains like *jowar* and *bajra* have also gone up in price, again due to a shortfall in production.

On paper, controls may sound perfect for a planned economy. But, in practice, they will not be, because the prerequisites for the success of controls, namely, (*a*) efficient, honest and devoted administration and (b) public co-operation, are absent to a very substantial extent. This remark applies with greater force so far as the common man's essentials are concerned than in regard to articles like chemicals, fertilisers and automobiles. Corruption is already widespread in this country. It will go up by leaps and bounds once controls on foodgrains are introduced. The whole controversy here, it must be noted, is over comprehensive controls, including requisitioning and rationing, and not mere strategic controls. The entire country will be seething with discontent, as it will get steeped in corruption, and the atmosphere will be fertile for the vigorous growth of communism.

Then there is the cost of controls. Those who advocate controls on foodgrains from the fields to the storage bins of consumers will do well to calculate the cost of administering them, including the inevitable waste that occurs under State trading. One has reason to feel, in the light of past experience, that it will run into several crores of rupees a year. May be, a year's expenditure on this negative measure will be equivalent to the cost of putting up four fertiliser plants of the size of the Trombay factory with a capacity of 70,000 tons nitrogen. The food requirements of each State would be exaggerated if control on consumption were introduced, for every State Government would like to play for safety. Another valid argument against this control is that, at best, it can "protect" only 30 per cent of population against rising prices, leaving the most vulnerable sections, namely, small agriculturists and landless labour, high and dry. Yet another argument against it is that it will not be conducive to securing larger production through higher productivity which is exactly what the country needs. India has had bitter experience of physical and price controls on foodgrains in the second half of the 'forties and the first half of the 'fifties. It would be sheer folly not to profit from that experience. If, after mature deliberation, the Planning Commission has come to the unanimous conclusion (as Mr. Gulzarilal Nanda is reported to have told the Price Sub-Committee of the Congress Parliamentary Party on Tuesday this week) that rationing and compulsory procurement are not necessary, it is a victory for the voice of reason.

The cost of living has been moving up due more to the rise in the prices of other things than to the high prices of cereals. Gram and other pulses among foodgrains and milk, ghee, *gur*, spices and condiments, vegetable oils used as cooking media, fruits, vegetables and fish among other food articles have shot up in price. Besides, housing, fuel, education of children, transport, clothing (including tailoring charges), footwear and soap have all gone up in price. How does the Government propose to bring down the cost of these necessaries of life? By merely holding the foodgrains price line and leaving these other necessaries out, the authorities cannot hope to keep down the cost of living. It may be recalled, in this connection, that, although there was hardly any rise in the prices of foodgrains during the fiscal year 1961-62, the all-India cost of living index had gone up by 3 points to 127. The increase would have been much more if the index number were more representative of the family budget of the common man, including the middle-class. The answer to this problem, which is the cumulative result of neglecting horticulture, animal husbandry, poultry and forestry over a number of years, does not lie in extending the controls to other necessaries also, for the remedy is simply not practicable. The only course left open is to increase the production of all food articles and cash crops to a much greater extent than has been the case so far. If this is not possible, then there is no choice but to reduce the development expenditure and face heavier unemployment, as well as underemployment. Not a pleasant alternative indeed.

THE TRIO OF SHORTAGES

THERE is no doubt that the 'trio' of shortages —the ones relating to transport, coal and power—was largely or mostly responsible for slowing down the rate of industrial growth in 1961-62, the first year of the third Plan. The net output of mining and factory establishments in that year, at constant prices of 1948-49, was Rs. 1,245 crores, which was 6.7 per cent more than in 1960-61 when the net output was Rs. 1,167

crores. This rate of increase, it will be seen, represented only about half of the rate (12.7 per cent) at which the net output in 1960-61 (Rs. 1,167 crores) had increased, as compared with that in 1959-60 (Rs. 1,035 crores). It would thus appear that industrial growth in 1961-62 had greatly slowed down in absolute, as well as in percentage, terms. What is now confirmed was broadly foreseen, early in 1961 itself, by experienced businessmen and economic observers who uttered the warning that the crucial shortages were bound to slow down the tempo of industrial production. Industrial users or consumers, represented in the leading commercial organisations, have also been anxiously discussing the 'trio' of shortages and making representations to the powers-that-be for more than a year now. The Government and the Planning Commission, too, have doubtless devoted a good deal of attention to the problems in question, and taken some *ad hoc* measures to relieve the shortages.

Much, of course, remains to be done in the direction of liquidating the shortages. It is, therefore, heartening to know that the Federation of Indian Chambers of Commerce and Industry, which convened a transport and power conference at New Delhi late in September last, has just followed it up by detailed discussions with the Planning Commission. The Federation's representations do not seem to have been in vain, for it has secured a categorical assurance from the Commission that the revised third Plan target for power, namely, 13.4 million kw. of installed capacity would be achieved. As foreign exchange for the power programme has been almost entirely assured, there is not likely to be much difficulty in reaching the power target. But the aggregate capacity in commercial operation in 1965-66 is expected to be only 12.7 million kw. As power demand is known to double itself every five years and as it was about 8 million kw. (including an estimated 1.5 million kw. of unsatisfied demand) in 1961-62, the revised third Plan target, even if fully reached, may not wholly relieve the shortage. It would, therefore, be prudent to assign a bigger role to the private-sector electricity undertakings and encourage them in all suitable ways to double or treble their proposed investment of Rs. 50 crores in power generation under the third Plan. Only, the authorities must make up their minds soon to adopt a pragmatic approach towards power generation in the private sector and liberalise the provisions of the Electricity (Supply) Act. The Planning Commission, incidentally, has adopted an unhelpful attitude by telling the Federation that the power development policy would continue to be guided strictly by the Industrial Policy Resolution.

As for the coal shortage which has been due as much to transport bottlenecks as to lagging production, it is encouraging to hear that, in recent months, there has been considerable improvement in rail transport of coal. The Planning Commission is reported to have told the F.I.C.C.I. representatives that practically no pithead stocks are left now in the Bengal-Bihar area and that the railways are lifting all coal traffic offered to them in the outlying fields. So far, so good. But it is too early to congratulate the railways on this performance, as coal production has been running well behind the target. Whether they will be in a position to lift an enhanced rate of production remains to be seen.

The present state of coal production in the private sector is disquieting, for the latest available figures show that the raisings of private-sector collieries in July this year were only 3.98 million tonnes, as against 3.76 million tonnes in the corresponding month of 1961. The position in respect of public-sector collieries is, of course, better, for their output in July this year was 0.88 million tonnes, as against 0.40 million tonnes in July 1961. Taking both the sectors together, aggregate coal production in July this year was 4.86 million tonnes only—not a great achievement in the current Plan's second year in which average monthly production should be well above the monthly average of 5.0 million tonnes targeted for the end-year of the second Plan. When coal production is thus increasing at an extremely slow rate, what is required is a more helpful official policy for inducing greater activity in the private sector which, whether one likes it or not, continues to have the major role. The nationalisation proposal reportedly revived by Mr. K. D. Malaviya, Union Minister for Mines and Fuel, though it has no relevance to the current or even the next Plan period, is still tantamount to a threat to the industry—a Damocles' sword over its head. This threat, it may be noted, is contrary to the assurances given by the Government of India to the World Bank. In the loan agreement with the World Bank for assisting the development of collieries in the private sector, the Government has given an undertaking not to nationalise this industry. Can anyone conceive of a more inopportune moment for talking of coal industry nationalisation? The national interests demand more coal production from both the sectors. A sense of insecurity injected into the private sector now may only interfere with its current expansion programmes which call for equity capital from the market.

The coal shortage, in so far as it is caused by lagging production, would have to be remedied in two ways. One way would be to ensure speedier and more adequate supplies of power, equipment, explosives and stowing sand to the collieries. Another way in which coal shortage can be relieved would be to encourage the use of furnace oil as a substitute fuel on a larger scale in the southern and western parts of the country. The Planning Commission's view seems to be that shortage of foreign exchange and the price of furnace oil set severe limits to its use. This is not a wholly valid argument, for the foreign exchange required for an appropriate quantity of crude oil import would be much less than that required for import of furnace oil. It should also be possible to reduce the price of furnace oil by removing or drastically reducing the present excise duty. If the private refineries are allowed to expand their throughputs further, more furnace oil can be produced at economic rates and at a lower foreign exchange cost, and its larger use will relieve the pressure on railways in so far as coal transport is concerned. But the Planning Commission has held out no such hope.

The Federation, however, can take some comfort from the major point it has won in respect of rail transport. The point is that, if large industrial units indicate one month in advance their transport requirements for each monthly period, the zonal railway authorities should plan for full trainloads. By agreeing to get a detailed scheme worked out for each industry and each railway system in the next two months, the Planning Commission has certainly met the Federation more than half-way. It is now for the Railway Board to follow up the agreed proposal in terms of the assurance given by the Planning Minister.

SUGAR OUTPUT CUT REMOVED

THE decision of the Government of India to discontinue the ten per cent cut in sugar production during the ensuing season, due to begin on 1st November next, is neither surprising nor of any practical significance. It is not surprising because the problem of sugar surplus is not as difficult as it appeared to be at the beginning of this year, thanks to the reduction in output, on the one hand, and rise in offtake, on the other. The total quantity of sugar actually produced in the current (1961-62) season is estimated at no more than 2.70 million tons, as against 2.98 million tons in 1960-61. It is true that, due to the heavy carryover stocks (amounting to 1.17 million tons as on 31st October 1961, as against 540,000 tons a year before), the aggregate supply of sugar in 1961-62 is higher at 3.87 million tons, as against 3.52 million tons in the previous season. As against the rise thus of 350,000 tons in supply, offtake of sugar has risen by 600,000 tons to 2.95 million tons—domestic consumption by 400,000 tons to 2.45 million tons and exports (on the basis of commitments already made) by 200,000 tons to 500,000 tons. Consequently, the current season is expected to close on the 31st inst. with a closing stock of 920,000 tons. Ordinarily, this quantity will have been considered as quite high, but not so now, apparently because production prospects for the next season are not very promising. Indeed, an official spokesman at New Delhi is reported to have remarked that "the Government is not bothered any more about the problem of surplus stocks which will be wiped out next year and that the present is, therefore, the most propitious moment for taking a step forward on the road to normalcy."

With the removal of output restrictions, sugar mills are now, of course, free to produce as much sugar as they want. But it is highly doubtful whether all the mills will, in fact, be able to maintain production even at the current year's level of 2.7 million tons; a section of sugar interests estimates the production at a bare 2.4 million tons. For, apart from the dislocation in the normal production of mills that will be caused by the proposal to undertake manufacture of raw sugar, the factories may find it exceedingly difficult to obtain regular and adequate supplies of cane, in view of the prospects of large-scale diversion of these supplies to the manufacture of *gur* and *khandsari* which are commanding very high prices as the accompanying table shows. In view of such high prices, the cultivators will naturally prefer to utilise the cane themselves for making *gur* and *khandsari*, instead of supplying it to the sugar mills. What is worse, the size of the 1962-63 cane crop itself is expected to be much smaller than that harvested in the current season, though the first official estimate of the crop had placed the acreage higher at 5.68 million acres, as against the corresponding adjusted estimate of 5.59 million acres in 1961-62. This is because of the severe damage to the crop in several parts of the country, especially in Uttar Pradesh, Bihar and the Punjab, on account of floods. In Maharashtra, too, the cane crop is expected to be less, owing to pest attack.

It is, however, too early to assess the production prospects for the next season with any certainty. May be, there is an attempt on the part of some to exaggerate the effects of adverse factors. Assuming that the estimated production of 2.40 million tons in 1962-63 is a fairly reliable guess, the total supply in the next season will be 3.32 million tons. Excluding 500,000 tons for purposes of export, the supply available for domestic consumption may be put at 2.82 million tons. This quantity is considered to be too inadequate fully to meet the requirements of domestic consumption and to leave a reasonable running stock of about 500,000 tons. The actual consumption of sugar may be expected to be much higher than in the current season, what with the addition of 8 to 9 million to the country's population, increase in purchasing power in the hands of the community and the shift in consumer preference from *gur-khandsari* to white sugar, in view of the high prices commanded by the former. It, therefore, looks as though the supply position of sugar will be pretty tight in the coming season, assuming that actual exports will be what

SUGAR, GUR AND KHANDSARI PRICES

(In rupees per quintal)

	Latest available	Three months ago	A year ago
Sugar

the Government desires and that production does not turn out to be higher than the present estimates.

If the aforesaid picture materialises, the credit for solving the sugar surplus will go to Dame Nature and not to the Union Food Ministry. So far as the industry is concerned, the prospects are disturbing indeed. If it had the problem of overproduction and heavy stocks in the 1960-61 season, in the one now drawing to a close, it will have the problem of underutilisation of capacity in the coming season. Both are equally bad for its economic health. With its highly inelastic cost structure, underutilisation of capacity may, perhaps, prove to be more damaging than overproduction. The production capacity of the sugar industry at present is about 3.1 million tons. Since the estimated output is only 2.4 million tons, the capacity lying idle will be as much as 700,000 tons or 22.6 per cent. Surely, the country cannot afford to suffer such a waste of capital resources. In view of the large stocks of sugar that are being carried forward, one may consider the impending fall in production as a godsend. But that would be a ridiculous way of solving the problem of surplus for a country which is having less calories than it should to ensure a balanced diet. The correct way would be to put to use the full capacity of the industry and stimulate consumption of sugar by reducing the incidence of taxation on it. So far as the supply of cane is concerned, there will be plenty for making white sugar, if the inroads made by *gur* and *khandsari* can be minimised. After all, it is an acknowledged fact that production of these brown sugars is a wasteful process of extracting sucrose from cane. The recovery of sucrose in *gur* manufacture is only 50 to 60 per cent of that obtained in factories making white sugar. Effective steps should, therefore, be taken from now alone to ensure adequate cane supplies to factories. Otherwise, the country may not have sufficient supply of sugar for export on the same scale as in the current season.

MARKET GOSSIP

Hindustan Lever's Rights Issue

THE decision of the Directors of Hindustan Lever Ltd. to issue, subject to the consent of the Controller of Capital Issues, 842,725 new ordinary shares of Rs. 10 each to the existing shareholders of the Company for cash at Rs. 35 per share, that is, at a premium of Rs. 25 per share, came as a surprise to share market circles in Bombay for two reasons. First, the proposed premium is too high—two-and-a-half times the face value of the shares. It may be noted here that only a few days ago, the authorities permitted an equally well established company, namely, the Indian Aluminium Company Ltd., to issue 801,276 new equity shares of Rs. 10 each at a premium of Rs. 15.50 per share which itself was considered pretty high. It is true that Hindustan Lever is an older, bigger and stronger company than Indian Aluminium. Even so, a premium of 250 per cent is a stiff one. It is not known whether this price was chosen by the Company's management itself or was suggested by the Government during informal discussions which must have preceded the public announcement. Secondly, the decision of the Directors, which was made known on Wednesday this week, was significantly enough not preceded by gossip and rumours among the so-called informed circles in the market. This shows that the management had kept the secret well.

It was, however, fairly certain that, sooner or later, the Company would be raising new capital, for, earlier this year, its Chairman, Mr. P. L. Tandon, had disclosed at a Press Conference in Bombay that the Company had plans for near-term expansion involving some crores of rupees investment. The announcement of the proposed right issue was, therefore, not unexpected. Apart from the scheme to manufacture skimmed milk powder and ghee at Etah in U.P. which is making satisfactory progress, the Company has several new projects under active consideration. Mr. Tandon had revealed at the Press conference that, among the new industrial projects the Company had in mind, one was for the preservation of human blood initially by dehydration and later by more sophisticated methods. In their report for the year ended 31st December 1961, the Directors had referred to the Company's application to the Government for a licence to set up a plant for the solvent extraction of cottonseed. According to them, modernisation of soap-making plant in the Bombay factory was on hand, and two mazzoni units had already been installed. A second glycerine still was brought into operation in the Bombay factory. The engineering building at the Calcutta factory had been completed last year and the expansion of the *vanaspati* factory at Ghaziabad was nearing completion. It is also known that the Company proposes to modernise its existing equipment as far as possible within the limits imposed by foreign exchange scarcity. Further, the Company proposes to set up research departments similar to those in the U.K. and the U.S.

The total cost of the capital projects approved last year was estimated at Rs. 196 lakhs. The outlay on the total expansion proposed and under consideration will obviously be much more than that. The foreign exchange component of the outlay on the milk scheme was estimated last year at Rs. 47 lakhs. The I.C.I.C.I. has granted the Company a loan of Rs. 25 lakhs in foreign exchange. We are told that a sum of about Rs. 100 lakhs more is needed for the milk scheme and the other projects under consideration.

The proposed rights issue will bring in not only additional rupee finance but also foreign exchange to the extent Unilever Ltd. of the U.K., which owns 90 per cent of the capital of the Company, subscribes to it, subject to the necessary consent of the authorities in Britain. On the basis of its present holdings, the British firm will be entitled to take up 758,452 new shares out of a total of 842,725 shares which are to be issued in the proportion of 25 new shares for every 37 shares already held. It has, however, agreed to take up only 285,725 new shares, thus increasing the number of shares to be offered to the minority shareholders in India from a mere 84,273 to as much as 557,000 which, if taken up by them in full, will increase the participation of Indian investors in the aggregate issued and paid-up capital from 10 per cent to 15 per cent and reduce Unilever's share from 90 per cent to 85 per cent.

By voluntarily forfeiting its right to subscribe to all the shares that fall due to it, Unilever has promoted the laudable cause of increasing Indian ownership in Hindustan Lever. But it is a moot point whether the five per cent increase in Indian share of the Company's capital was so urgent and necessary at this juncture, when the Company needs and should value more foreign currency than Indian rupees, especially in view of the serious scarcity of foreign exchange in the country. Supposing Unilever takes up the full quota of shares falling due to it and the Government of India agrees to the terms of the new issue, namely Rs. 35 per share, the Company will get funds worth Rs. 2,65,45,820 in foreign exchange, as against Rs. 1,00,00,375 which it will receive under the present proposal, according to which the parent company will surrender 472,727 rights shares to Indian shareholders. It will be irresponsible to say that the proposed high premium of Rs. 25 per share has scared away Unilever from exercising its full right of subscription to the issue. But, perhaps, on a lower premium, Unilever might have been induced to go in for full subscription. The Government itself may be in favour of the proposed high premium on the ground that it will bring in more funds to the Company. It must not, however, be forgotten that, if and when the share premium account is capitalised by way of a bonus issue, such moneys will attract a bonus tax of 12.5 per cent. Does this not mean that the authorities are indirectly taxing the issue of rights shares also?

Simultaneously with the announcement of the rights issue, the Directors of the Company have proposed an interim dividend of 60 nP per share, taxable, for the current year, as against a single dividend of Rs. 2.60 per share, taxable, paid for the previous two years and of Rs. 2.40 per share, taxable, paid for 1959. The proposed interim is on the increased capital of Rs. 824.36 lakhs following the issue of 2,673,600 bonus shares of Rs. 10 each in May last. The decision to pay an interim dividend as against a single dividend in the past marks a deviation in the Company's policy, and market circles hope that it does not portend any reduction in the total dividend for the year. They also hope that the expansion programme on hand will earn the Company sufficient profit at least to maintain the dividend at the last year's level on the capital to be increased further by the proposed rights issue which ranks for dividend payable for years subsequent to 1962.

L.I.C.'s Investments

The Life Insurance Corporation of India is the largest institutional investor in the country. The total book value of its investments as on 31st December 1961, according to the fifth annual report of the Corporation covering the year ended 31st December 1961, which was released to the public only on Wednesday this week, amounted to Rs. 581.54 crores. Of this, Rs. 12.22 lakhs pertained to general insurance business and Rs. 5.42 lakhs to capital redemption business. Investments pertaining to life business aggregated Rs. 581.37 crores, of which Rs. 565.70 crores were in India and Rs. 15.67 crores outside India. Investments in stock exchange securities accounted for the bulk of the Corporation's investments. The total book value of life investments in stock exchange securities, as at 31st December 1961, was Rs. 518.16 crores, of which Rs. 503.56 crores were in India and Rs. 14.60 crores outside India. Investments in the public sector, comprising Central and State Government securities, and the major portion of approved securities and shares in Government-owned companies, aggregating Rs. 392.71 crores, accounted for 77.9 per cent of the total investments in stock exchange securities. The corresponding figures of investments in the private sector (consisting of debentures, preference shares and ordinary shares of joint stock companies, as also some of the approved securities) were Rs. 110.85 crores and 22.1 per cent. Of the total investments of Rs. 392.71 crores in the public sector, Rs. 236.82 crores were in Central Government securities, Rs. 117.04 crores in State Government securities, Rs. 37.78 crores in approved securities, Rs. 70.13 lakhs in Municipal loans, and Rs. 36.50 lakhs in debentures, preference and ordinary shares. Of the total investments of Rs. 110.85 crores in the private sector, Rs. 8.59 crores were in approved securities and the balance of Rs. 102.26 crores in debentures, preference and ordinary shares.

It is noteworthy that the percentage of investments in the public sector to total has declined during 1961 to 77.9 per cent from 78.7 per cent in the previous year, whereas the percentage of investments in the private sector has increased from 21.3 per cent in 1960 to 22.1 per cent in 1961. This is a reversal of the trend witnessed over the past few years when the percentage of investments in the public sector to the total was steadily increasing, whereas the percentage of investments in the private sector showed a corresponding fall. The following table illustrates the position:

(As at the end of December)

(Rs. in crores)

	1961	1960	1959	1958	1957
In India	503.56	457.43	398.28	368.93	329.95
Outside India	14.60	13.21	11.54	9.96	8.84
Total ..	518.16	470.72	409.82	378.89	338.59
Of investments in India:					
In public sector	392.71	360.06	311.60	288.12	255.13
Percentage to total ..	*77.9*	*78.7*	*78.2*	*78.1*	*77.37*
In private sector.. ..	110.85	97.37	86.68	80.81	74.62
Percentage to total ..	*22.1*	*21.3*	*21.8*	*21.9*	*22.63*
Approximate breakdown of private sector investments:					
Debentures	22.63	23.07	20.55	20.54	20.41
Preference shares ..	21.80	20.51	18.30	16.61	15.44
Ordinary shares	55.25	46.19	39.85	35.07	31.88

It will be noted from the foregoing table that there has been a substantial increase in the Corporation's investments in ordinary shares. Incidentally, the market value of equities, as of 31st December last, was higher by some Rs. 11 crores or 20 per cent (whereas four years before it was only Rs. 3 crores or about 10 per cent). The market value of preference shares, however, was down by Rs. 3.29 crores, though that of debentures was better by Rs. 43 lakhs.

The L.I.C. is one of the principal underwriters of new capital issues. During the year under review, it underwrote 52 new issues to the extent of an aggregate amount of Rs. 7.59 crores, of which Rs. 5.37 crores were debentures, Rs. 1.02 crore preference shares and Rs. 1.19 crore ordinary shares. Of the 52 new issues underwritten, 31 were placed in the market. The total underwriting commitments of the L.I.C. in respect of these issues amounted to Rs. 4.23 crores in debentures and loans, preference and ordinary shares. The amount allotted to it was Rs. 3.86 crores.

The scheme for grant of loans in mortgage of immovable properties, which was in operation in Bombay, Delhi, Calcutta, Madras and Hyderabad, was extended by the Corporation to cover 13 more additional centres. Extension of the scheme to some more cities is under consideration. Simultaneously with the extension of the scheme, the Corporation raised the interest payable on mortgage loans from 7 per cent per annum, payable half-yearly, with a rebate of ½ per cent per annum for punctual payment, to 8 per cent per annum with effect from 18th July 1962. The rebate for punctual payment has, however, been raised to 1 per cent per annum. The Corporation sanctioned 153 applications for mortgage loans for a total amount of Rs. 1.2 crore during the year. The total amount of mortgage loans outstanding at the end of December 1961 aggregated Rs. 8.48 crores.

SIR COWASJEE JEHANGIR

It is with deep regret that we record the passing away of Sir Cowasjee Jehangir (Bart.), a Director of Commerce (1935) Ltd., ever since its reconstruction 27 years ago. Born on 16th February 1879, Sir Cowasjee was 83 when he died on Thursday this week. Although he hailed from a rich, aristocratic and widely-known family in Bombay, it was his intrinsic worth and hard work that pushed him to the pinnacle of glory. Many and diversified were his achievements in the fields of industry and finance. And no less important is the part he played in the civic life of Bombay and as a patron of art and a philanthropist. Sir Cowasjee began his public life as a member of the Municipal Corporation in 1904 and became its President in 1919-20. He was also a member of the State Legislative Council, the Executive Council of the then Government of Bombay (1923-28) and an elected member of the Central Legislative Assembly for 17 years from 1930. He attended all the three Round Table Conferences in London during 1930, 1931 and 1932 in his capacity as a member of the Liberal Party, the London Monetary and Economic Conference in 1933, and the Empire Parliamentary Conference in 1935.

Alert in grasping a point, objective in judgment and receptive to new ideas, Sir Cowasjee was a successful industrialist, landlord and banker. He was a man of high integrity, a rare quality among mankind, and expended his wealth and power on deserving causes. As the Chairman of the Bank of India and the Oriental Life Assurance Company, he contributed his mite to the progress and prosperity of these leading financial institutions. He was also a Director of T.I.S.Co., T.E.L.Co., Tata Chemicals, Bombay Burmah Trading Corporation, and several others. Sir Cowasjee was at his best in unravelling complicated economic and financial problems during debates in the legislatures. His death has certainly removed from Bombay a towering personality.

Import Substitution

The Technical Panel on Import Substitution, constituted by the Planning Commission at the end of last August, has commenced its work, with the first meeting held this week in Bombay. At the meeting, the Chairman of the Panel, Mr. G. L. Mehta, who is also the Chairman of the Industrial Credit and Investment Corporation of India Ltd., and formerly the Chairman of the Import Control Enquiry Committee (1950), gave a clear exposition of the scope and nature of the Panel's work. The objective of a policy of import substitution, according to Mr. Mehta, should be that "imports are so regulated as to meet the changing needs of a dynamic economy." These changes must naturally be in conformity with the changing requirements of the economy. It is admittedly vital to plan the expenditure on imports on a judicious basis, for, as Mr. Mehta pointed out, the quantum of imports in the near future is likely to be "limited within a range around that obtaining at present," if due account is taken of the trends in export trade and prospects for external aid. The acute foreign exchange shortage at the present moment brings into bold relief the need for conserving the limited export earnings. In order, therefore, to sustain a greater tempo of industrial development, it is necessary to ensure that "imports are released continuously by existing users to make it available to newer claimants." In other words, the policy of import substitution should aim at reducing the total reliance on imports or increasing the indigenous content of domestic output. Mr. Mehta, however, pointed out that, in a dynamic economy like ours, output was not constant and, therefore, it was essential to keep in mind the import requirements of an increasing level of output.

There are two ways in which import substitution can be accomplished: One, the use of an indigenously available material in the place of an imported product, for instance, substitution of copper by aluminium; two, substitution of a finished (imported) product by imports of less finished or intermediate products. Viewed thus, it becomes essential for the Panel to examine the secondary and tertiary implications of a policy of import substitution.

TREND OF SHARES

EARLY GAINS ERASED

(From Our Own Correspondent)

BOMBAY, *18th October*

EARLY gains on the stock exchanges this week on bear covering and some fresh support were erased near the close on renewed liquidation and absence of follow-up support. Closing prices, therefore, showed a sprinkling of small losses over a broad front. The undertone was, however, rather steady, as the tendency seemed to be not to sell at lower levels. The fag-end liquidation appeared to be mainly on account of weak bulls. At the same time, however, the tense situation at the Northern borders, absence of any encouraging corporate news and unforeseen delay in the announcement of the final dividend by the I.I.S.Co. restrained buyers in extending commitments.

Almost throughout the week, the markets were under the shadow of border troubles with China. The market started the week nervously following reports on 11th October of severe fighting between Chinese troops and Indian forces in N.E.F.A. area on the previous day, which resulted in some serious casualties to both sides. Subsequently, the country heard the Prime Minister give orders to the army to throw out the Chinese from N.E.F.A. Towards the close of the week, the scene wore an uneasy calm. The new developments at the border, although welcome in the sense that they speak of the Government's determination to meet the Chinese threats and aggressions, spell a great strain on the country's resources and might hold up its economic progress. It was realisation and not any fear of China that explained lack of follow-up support for equities.

The professional operators were, however, encouraged by such considerations as the oversold position of the markets as reflected in the low-to-moderate carryover charges at the turn of settlement in the principal markets and the relatively low levels to which equities have generally fallen now as compared with the levels seen during the boom period. These operators, therefore, lent some fresh support, especially to the speculative counters, in the beginning of the week, and were disinclined to sell at setbacks seen towards the close.

Besides the disturbing reports from N.E.F.A., the markets were worried by the reported statement of Mr. Nanda that the Planning Commission had recommended to the Government proposals for controlling the prices of necessaries of life, including such items as cloth and soap. This development was particularly responsible for the drop in prices witnessed on Wednesday. Before this, however, there was some encouraging news. On Sunday came the news that the Planning Commission had accepted some of the suggestions of the Federation of Indian Chambers of Commerce and Industry for making the available transport facilities more effective. In this connection, it was reported, a detailed scheme would be worked out for each industry and each railway system within the next two months. As regards power, the Commission was said to have assured the F.I.C.C.I. representatives that all steps would be taken to achieve the Plan target of 12.7 million kw., that foreign exchange for power projects had been practically ensured and that the difficulties experienced in the second Plan would not arise in future.

It was reported on Tuesday that India would not be affected by the recent cut in the U.S. Foreign Aid Bill and that, in addition to its commitment of $435 million made at the last meeting of the Aid India Club for the second year of the third Plan, the U.S. was willing to contribute another $65 million to make good its promise of $500 million, provided the other members of the Club individually or jointly contributed a similar amount. As against this, it was reported on Wednesday that, from the discussions held by Mr. P. C. Bhattacharyya, Governor of the Reserve Bank, with Mr. Morarji Desai, Union Finance Minister, it became clear that, in the context of the dwindling foreign reserves of about Rs. 94 crores, as against a statutory minimum of Rs. 89 crores, and the poor export performance, India might have to draw another instalment from the standby credit recently given by the I.M.F.

* * * *

In an otherwise steady market initially, failure of steel shares to improve along with the main body dampened operators' enthusiasm later and led to some weak liquidation on Dalal Street. Until mid-session yesterday, values were well held at the improved levels, but, thereafter, they turned lower on selling by the erstwhile bulls and in the absence of follow-up support.

Both the steel shares, Tata Ordinary and Indian Iron, closed lower over the week, the former with a loss of Re. 1.75 at Rs. 135.25 and the latter with a loss of 20 nP at Rs. 25.10. As noted at the outset, uncertainty about the final dividend of the I.I.S.Co. restricted support for these shares. Textiles staged an impressive recovery at first, but failed to retain the gains. Thus, Standard were bid up initially from Rs. 845 to Rs. 925, but, at close, they showed a gain of only 20 points at Rs. 892. Tata Mill showed a gain of 20 nP at Rs. 57.70, Indu Ordinary of 15 nP at Rs. 26.40, Mafatlal, in the Cash list, improved by Rs. 27.50 to Rs. 802.50. Leading shares in this section showed, however, small losses; Century of Rs. 4 at Rs. 601.50, Kohinoor of Rs. 4.75 at Rs. 290.75 and Bombay Dyeing of 70 nP at Rs. 63.70 *ex-div.* National Rayon continued to be weak and showed a sizable loss of 11 points at Rs. 452, despite the fact that the authorities of the Bombay Stock Exchange revived the special deposit making-up price system and fixed a special making-up price of Rs. 467 for the scrip against bears, as against the normal making-up price of Rs. 457, at the turn of the last settlement on Friday. This meant that the bears had to pay in a margin of Rs. 10 per share.

In the Miscellaneous section, Bombay Burmah rallied swiftly by 20 points to Rs. 653, but reacted to close with a gain of only Rs. 4.50 at Rs. 643. Telco were weak and disclosed a loss of Rs. 10 at Rs. 293, followed by Voltas which closed four points lower at Rs. 249.50. Hindustan Motors showed a loss of 16 nP at Rs. 18.52, but Premier Automobiles closed with a small gain of Re. 1.75 at Rs. 112.75. Chemical shares were steadier, with trading featured by a spurt in Indian Dyestuff from Rs. 432.50 to Rs. 472.50 on rumours of a bonus issue. At close, however, the shares showed a gain of only Rs. 20 at Rs. 457.50.

Electric shares recorded handsome gains, particularly Andhra Valley which rose by Rs. 22.50 to Rs. 1,050 and Tata Power which spurted by 40 points to Rs. 1,155 following the statement by the U.S. Ambassador, Mr. J. K. Galbraith, in Bombay on last Friday of a $17.9 million U.S. loan to finance the full foreign exchange cost of the major expansion of Tata's thermal power station at Trombay. Sugars, Shippings and Cements were steady. Cash scrips showed generally minor changes either way. However, T. Maneklal were down by Rs. 20 at Rs. 690 as were Kesar Sugar at Rs. 170, while Colour Chem scored a gain of 10 points at Rs. 412.50.

* * * *

The Calcutta Stock Exchange opened on Tuesday, after the *Puja* holidays from the 5th to 15th. However, the market was yet not through the holiday mood, and trading was dull, with the operators disinclined to extend commitments because of the delay in the announcement of the final dividend by the I.I.S.Co. Excepting G.K.W. which rose by 87 nP to Rs. 38.37 and Indian Aluminium which showed a gain of 25 nP at Rs. 35.31, other speculative counters were down, with Birla Jute showing a loss of 63 nP at Rs. 33.37. Kesoram of 65 nP at Rs. 25.31, Shree Gopal of 57 nP at Rs. 24.37 and Howrah Jute of 37 nP at Rs. 19.75. In the Cash section, jute shares showed generally small losses, with Bally moving down from Rs. 189 to Rs. 184, Delta from Rs. 181 to Rs. 175 and Gourepore from Rs. 463 to Rs. 459. Textiles showed minor changes. In Coals, Bengal were down from Rs. 341 to Rs. 335, but Ghusick improved from Rs. 12 to Rs. 15. Engineering and Chemical shares were devoid of much activity. The Miscellaneous section had hardly any feature, and a gain of 62 nP in Associated Battery at Rs. 28.87 was offset by a loss of 87 nP in Hindustan Development at Rs. 4.75.

* * * *

Widespread gains in tea shares featured trading in Madras. Blue Mountains improved by 22 nP to Rs. 2.48, Chembra by 28 nP to Rs. 3.50, Haileyburia by 23 nP to Rs. 12.85, Nonsuch by 25 nP to Rs. 22.25 and Peermades also by 25 nP to Rs. 21.75. Other Plantings were dull, with Cochin Malabar showing a gain of 10 nP at Rs. 6.60 and Midland a loss of 20 nP at Rs. 10.12. Among Textiles, Madura declined by 35 nP to Rs. 34.65, Travancore Rayon by 70 nP to Rs. 31 and S.I. Viscose by Rs. 2.50 to Rs. 157.50, but Bangalore Woollen improved by 80 nP to Rs. 242.80 *ex-div.*, Buckingham by Rs. 3.20 to Rs. 281 *ex-div.* and Cannanore by Rs. 7 to Rs. 135. Selected issues recorded small gains in the Miscellaneous section.

BRAITHWAITE'S PREFERENCE SHARE ALLOTMENT

The recent public issue of 20,000 9 per cent. taxable, redeemable cumulative preference shares of Rs. 100 each by Braithwaite and Company (India) Ltd. received encouraging response. In all, 1,537 applications were received by the Company for a total of 73,515 shares. This means that the issue was more than thrice oversubscribed, a highly commendable performance for a preference share. A minimum of five shares will be allotted to the applicants for 10 to 15 shares and a maximum of 1,505 shares will go to those who had sought 10,000 shares, according to a scheme of allotment completed by the Directors of the Company with the approval of the authorities of the Calcutta Stock Exchange. Under the scheme, an applicant for 20 to 35 shares will be allotted 10 shares, for 40 to 50 shares 15 shares, for 60 to 90 shares 20 shares, for 100 to 140 shares 30 shares, for 150 to 170 shares 40 shares, for 200 to 270 shares 50 shares, for 350 to 400 shares 70 shares, for 500 to 600 shares 100 shares, for 1,000 to 1,500 shares 150 shares and for 3,000 shares 450 shares.

Supplies or Sweets to Our Jawans?

IN the characteristic Indian fashion of doing important things in an unobtrusive manner, public attention to the growing Chinese threat and the conditions for facing the national emergency has been drawn in an almost casual manner, perhaps to suggest that there is as yet no danger of full-scale war between the two countries. The President, Dr. Radhakrishnan, chose the forum of a commerce chamber to call for national unity and avoidance of non-partisan politics in the country. Mr. Krishna Menon gave a pledge that India would fight to the last man and the last gun (which many newspapers did not seem to regard very highly considering the space they gave to it). And Mr. Nehru took the country into his confidence to announce to Press correspondents at the airport just before leaving for Ceylon that the Indian Army had been ordered to rid Indian territory of the Chinese; he has since emphatically rejected Chinese "grab and talk" tactics. In view of Chinese tenacity and persistence in unrighteous conduct, all these may mean a prolonged series of incidents, stiffer and stiffer notes between the two Governments and much uncertainty about the immediate tasks to be faced on the economic and domestic political fronts.

With Pakistan and Nepal also trying to exploit the present situation for their anti-Indian campaign and policies, and the economic stagnation at home, Mr. Nehru cannot indeed be a happy man. Anyone listening to the relay of his Press conference in Colombo could have detected the painful feelings with which he explained Chinese duplicity about the McMahon line and Nepal's impossible demands on India. Now that the Himalayan Dangers (as the London *Times* called the recent developments) have come more fully into view, greater attention to the strengthening of the economic front is necessary. It may not be easy to enforce a political truce as the President has desired; in the Punjab, the Sant has, in his moment of triumph revived the demand for Punjabi Suba; in the south, the D.M.K. is now in the background but the Periar has called for an agitation against the Supreme Court's judgment in the Mysore case invalidating excessive reservation of posts and college admissions to backward classes.

But it is not so difficult to call a truce on the economic issues which have been debated *ad nauseam*, such as whether there is more or less coal and wagons and whether and how much captive power plants are desirable. Mr. Menon's statement at Bangalore that the present situation did not call for any revision of India's foreign or economic policy may have to be qualified. Defence preparedness, even more than the need for achieving quick economic growth, requires all-out efforts to secure more production with existing resources and facilities. The Defence Ministry is reported to have taken the initiative already and instructed all ordnance factories to work three shifts if necessary; it also seems to have secured the willing co-operation of labour engaged in them for this objective. That is a worthy example to be followed over the rest of the Indian economy; unfortunately, however, those at the helm of economic affairs do not seem to have the requisite initiative and dynamism for this task. A country-wide grow-more-food campaign and methods to raise industrial productivity and output will be needed, if the soldiers stationed on the North Eastern Frontier have to be backed by adequate supplies. All that we have so far seen is the keen interest taken by a few good Samaritans in collecting funds for sending *Diwali* sweets to the *jawans* in N.E.F.A.; a laudable purpose, no doubt, but should we as a nation always concentrate on the less serious aspect of every issue and mistake sentimental gestures for the actions and sacrifices demanded of every Indian in the present circumstances?

* * * *

N.D.C. to the Rescue

There has been quite a considerable amount of speculation about the possibility of summoning a meeting of the National Development Council to approve of measures for rescuing the economy from the slough of stagnation. The Council's past record does not justify much faith in optimism about its capacity to give the right lead; its resolutions on co-operative policy or State trading did not prove to be the powerful instruments for dealing with the situation which they were once intended to remedy. Only recently at its last session in 1961, its unrealistic approach was demonstrated in the targets and outlays prescribed for the third Plan. Unless the Union Government and the Planning Commission are ready with solutions which they can ask the N.D.C. to approve as a matter of course, a meeting now may serve no useful purpose. Some airing of views after the general election may be appropriate, especially after the recent experiences of State Ministers in raising resources for the Plan through land taxes and levies on road transport. If there is a decline of enthusiasm for taxation, and the Centre can say that its own resources are increasingly committed to defence needs, the stage will be set for a realistic revision of Plan priorities and outlays in 1963-64.

As an informal, extra-constitutional but important policy-making body, the N.D.C. can help to focus attention where it is most needed and persuade State Governments that its decisions are not imposed on them from above but taken after full consultation and participation with them. On the question of price regulation, for example, they can be persuaded to agree to a wide range of local measures for distribution of essential articles to the public and giving publicity for fair prices, besides paying more attention to increasing yields in agriculture. But the procedure of the Council does not facilitate transaction of such practical work; some controversy or other on a side issue distracts members from the main agenda, taking up a good portion of its brief sessions and making this opportunity for consultation with State Governments almost farcical.

Besides the wholly unreal and altogether unnecessary debate over price controls, it is possible that the vexed question of the actual extent of concentration in the economy will again rise to the surface on the report of the Congress Sub-committee which is soon expected to be ready. If middlemen's margins and large trading profits have been responsible for some of the trends towards inequality in incomes in recent years, some might be naive enough to suggest that consumers' co-operatives can take their place and give relief to consumers. The time now taken by the Planning Commission and the Union Government to formulate their price policies is some indication of their own diffidence in these matters and the lack of concrete alternative remedies.

National Income Cycle

"Quick" estimates of National Income for this country, which are released by the Central Statistical Organisation months ahead of the annual White Paper, have often erred on the cautious side. It may be that the final figures for 1961-62 will show a better rate of increase than 2.2 per cent in National Income at constant prices. But a break-up of its constituent elements shows that, with a very low contribution from agriculture last year and a small increase of less than 6 per cent in industry (which raised national income by 0.6 per cent), it was left to the other (tertiary sector) services to make the major contribution (of 0.9 per cent) to the increase. These services consist of the professions and liberal arts, administrative services, domestic service and house property.

Since the latter half of the first Five-year Plan, there have been years in which the National Income has jumped by over 6 per cent to be invariably followed by a small rise or even a setback (as in 1957-58); and 1961-62 fits perfectly into this cycle which is determined mainly by the agricultural sector. The only snag on the present occasion is that, even if the weather conditions in the current year are favourable, the scope for a substantial increase in production may be limited in the absence of special measures to raise yields. State Governments have not shown much new initiative, though the working of the "package programme" has indicated the scope for taking effective measures.

This current phase of the National Income cycle also happens to coincide with the gloomy outlook for industrial expansion, so that no offsetting factors are in sight. But since deficit financing continues and total Government spending remains high, personal incomes will also be high enough to keep up the demand for services of all description. There is much guesswork in estimating their contribution to the National Income and, in any case, they can not be expected to make up for the physical shortages elsewhere. The third Plan's bad start is confirmed by these figures and the question is how soon the economy can get out of it to resume its growth.

Living up to L.I.C.'s Image

L.I.C.'s promptness in repairing the damage to its prestige by the Madras High Court's judgment, and the Press criticism that followed it, is breath-taking and surely is a record for resilience in a State undertaking. The Chairman has reassured the Press, the policyholders and the public about its intention to honour its obligations to insured persons and their families. What all critics (including this columnist) sought to point out was not that cases of fraud should not be questioned at any stage but that the L.I.C. should not cite its own delay as a bar to a claimant seeking redress through legal processes. Delays may occur in investigations, though, even in this matter, there should be an obligation on the agents concerned to expedite them. The Corporation cannot, in cases in which there is no readily available basis for its doubts about the policyholder's declaration, indefinitely delay acceptance of claims in the hope that some day it may be able to unearth facts to justify a refusal.

The Chairman's particular emphasis on the co-operative character of the Life funds is, indeed, touching but some of this solicitude could be shown at the earlier stages when policies are taken out. A closer watch on agents and, perhaps, also on doctors, who submit more than a reasonable proportion of sub-standard lives, is possible. The anxiety to push up figures of annual new business completed should not become an excuse for doing bad business. Moreover, the Corporation's readiness to provide cover even for some risks formerly considered to be bad (like female lives in certain categories) appears to have been interpreted by some agents and doctors as a signal for a general relaxation of the usual standards.

Were it not for the large number of other delays in settling claims, which are in striking contrast to the practice of the better managed companies before nationalisation, the L.I.C.'s plea in this particular case might not have attracted so much criticism. No one will desire that the L.I.C. should collude or compound with fraud; there is enough of it in the country in other fields. The wide publicity given to this case has underlined very forcefully the importance of good public relations and the need to live up to the very fine image that the L.I.C. presents of itself before the public—with protective hands shielding the flame of the *diva*—as the guardian of *Yogakshema* or the individual's welfare.

A FITTING TRIBUTE

IT could not have been purely sentimental reasons that prompted Mr. J. R. D. Tata to re-enact this week the historic flight he made 30 years ago which marked the birth of commercial aviation in India. It is true that it demonstrated, in a dramatic way, the rapid strides the country has taken in the field of aviation during the past three decades. But more than that, it was meant to drive home, in a unique way, the point that great things often have humble beginnings and that daring and enterprise are the prerequisites of progress. Mr. Tata performed this demonstration at great personal risk and at an age which most people consider too advanced for even far less risky pursuits. It is this spirit of adventure of Mr. Tata, combined with foresight and drive, that has carved out for this country a prominent position in the world of commercial aviation.

By celebrating the thirtieth anniversary of the first scheduled flight, personally conducted by Mr. J. R. D. Tata for Tata Airlines, Air-India, which is a nationalised undertaking now, has paid a fitting tribute to the pioneering spirit and enterprise of the private sector to which it owes its origin. Air-India's personal salutation to its worthy Chairman, Mr. J. R. D. Tata, through the medium of the national Press and at a pleasant, special function held at Juhu aerodrome, where he first landed from Karachi thirty years ago, was richly deserved and quite appropriate. For it is a return gesture for the greatness of heart shown by Mr. Tata in consenting to be the Chairman of Air-India even after it had been taken over by the Government and for having devoted so much of his time to make this public sector enterprise one of the finest airlines in the world.

MR. WYATT ON U.K.-E.C.M.

Even as Mr. Hugh Gaitskell, Leader of the Labour Party, was condemning outright the U.K. Government's move to join the Common Market, a leading member of that Party, Mr. Woodrow Wyatt, M.P., who was in Bombay this week, expressed full-throated support to the move. In fact, he felt that Mr. Gaitskell had jumped to the wrong side of the fence after having been on it for a pretty long time. He was strongly of the view that Britain's entry into the Common Market would benefit the U.K. no less than its Commonwealth partners like India. In his speech at a meeting organised by the Indian Council of World Affairs in Bombay on Monday, Mr. Wyatt observed that the U.K.'s economy, which was relatively stagnant, would receive a big boost, if it participated in the economic and commercial revolution unfolding itself on the Continent. Only a prosperous Britain, in his opinion, would be able to buy more goods from countries like India, and increase the flow of development funds. He appealed to the people of this country to exploit the new trade opportunities not only by improving productive efficiency, but also by catering to specific consumer preferences on the Continent on the basis of extensive market surveys.

Mr. Wyatt was at pains to show that Britain's entry into the Common Market would not adversely affect India's trade. Alluding to the U.K.-E.C.M. agreement for *nil* tariffs on tea and for the phased application of common tariff on cotton textiles and other goods exported from India, he felt that Britain's entry and the application of common tariff would not have any adverse effect on 65 per cent of India's exports to the U.K. India would also get short-term privileges for about 16 per cent of its trade. According to him, the effect on about 6 per cent of trade was uncertain, whereas 9 per cent would face some difficulties. Thus the actual loss would be only in respect of about 4 per cent.

It is not possible to estimate the precise extent of damage that will be caused by the liquidation of Commonwealth Preferences and the introduction of the common external tariff of the E.C.M. All the same, Mr. Wyatt's estimate may not be wide of the mark. Irrespective of precise estimates of loss and gain, India, however, can ill afford to sustain even a modest setback in exports in view of its acute balance of payments difficulties; the developed countries, like Western European countries, on the contrary, are economically resilient to withstand any temporary setbacks. One hopes, therefore, that leaders like Mr. Wyatt will do their best to secure adequate concessions for this country in case Britain joins the Common Market. It must be stressed here that neither the Government of India, nor responsible public opinion in this country has ever suggested that the U.K.'s entry would spell doom for this country's trade. What this country seeks are some suitable safeguards before the Commonwealth Preferences are abolished. There is no denying the fact that the British Government has shown awareness of India's difficulties.

In his enthusiasm to support the move for Britain's entry into the Common Market, Mr. Wyatt brushed aside all criticisms of the Common Market. For instance, he characterised as "rubbish" the view that "association" with the Common Market by the underdeveloped members of the Commonwealth would tantamount to neo-colonial status. He also did not agree with those who thought that the offer of associate status to some of the countries in Africa, for instance, was aimed at keeping the newly independent countries mere suppliers of agricultural products and raw materials. He said that, although the U.S. exported vast quantities of wheat, tobacco and cotton, it did not mean that it had a colonial status. Mr. Wyatt's comparison is rather amusing. The U.S., no doubt, exports primary products, but this is only a relatively small proportion of its exports of manufactured goods. On the contrary, the underdeveloped countries are desperately striving to industrialise themselves, in order to reduce their dependence on exports of primary products, the fortunes of which are fluctuating in world markets. It should not be forgotten that the vast improvement in agricultural productivity accomplished by the U.S. itself owes its origin to industrialisation. Further, one cannot judge this issue purely on economic grounds. The political and prestige aspects cannot be ignored, especially when the basic motive behind the Common Market is a political union and the very expression "associated status" implies an inferior position. The opposition to associated status *vis-a-vis* the Common Market is thus based on apprehensions which are neither baseless nor irrelevant.

ELECTRICITY UNDERTAKINGS

For some years now, since May 1958 to be precise, the electricity supply industry has repeatedly represented to the powers-that-be that the provisions of the Electricity (Supply) Act should be liberalised so as to provide the incentive for raising new capital for expansion. The authorities, too, have repeatedly held out hopes, albeit vague, of remedying a situation marked not only by lack of incentive for raising development capital but also by some disinvestment. It is, indeed, unfortunate that this question is still pending and the industry has to pursue the exasperating task of persuading some Union Minister or other. The latest essay in persuasion has just been made by Mr. S. M. Zubair, President of the Federation of Electricity Undertakings of India, at a licensees' conference inaugurated on the 15th instant by Mr. O. V. Alagesan, Union Minister of State for Irrigation and Power. Mr. Zubair has reiterated the following familiar demands on behalf of the industry:

(i) An increase in the "standard rate" of return on capital by at least one per cent per annum.

(ii) The elaboration of the permissible appropriation, namely, "all taxes on income and profits," so as to cover all forms of taxation, including the tax at the prescribed rate deductible from dividends, the object being that all tax liability or tax relief redounds to the consumers' account.

(iii) To make enabling provision in the Act, so that undertakings which are obliged to raise loan finance at rates of interest above the level of the "standard rate" are allowed to charge up the actual rate of interest plus *half* per cent.

Mr. Alagesan has, of course, announced that the Government is "very favourably disposed towards the request of the electricity industry for a higher rate of return on capital," but without committing himself to the date, that is, the end of the current financial year, suggested by Mr. Zubair for suitably amending the Act. If, according to the Minister himself, the Government is "fully aware of the problems facing the industry" and is determined "to do its best to solve them," he should have at least broadly indicated when and how the "best" would be done. The Government's full awareness of the industry's problems does not mean much, if it is still not in a position to lay down, even roughly, a timetable for solving them. As the Minister has thus ignored the time factor, the industry must continue to pray in the devout belief that "more things are wrought by prayer than this world dreams of."

Another instance of the Minister's non-committal manner of reply is provided by his reference to the question of acquisition of licensees' undertakings. His bland retort that the licensees should have no objection to the Government's taking over weak and inefficient units in the larger interests of the country is no straight reply to the following plea put forward by Mr. Zubair on behalf of the industry:

"A degree of uncertainty over the tenure of franchises still continues to be faced by the electric supply industry as now and again one hears of premature acquisition of licensees' undertakings by one State or another. The enactment of the Electricity (Supply) Act, 1948, with its emphasis on rationalisation as distinct from nationalisation, has made acquisition for acquisition's sake a needless luxury."

This issue apart, it would be pertinent if an inquiry were made to find out the extent to which the Government's dilly-dallying on the question of economic viability of electricity undertakings has been responsible for even well-managed companies developing debility and deterioration in their efficiency. The country's demand for power is so insatiable that it would be prudent for the State Electricity Boards to create new productive facilities instead of displacing licensees who are already rendering valuable service. The 15-year perspective plan for power which is to be outlined by the recently-appointed Planning Group would be lacking in balance if it does not assign a bigger role to the private-sector undertakings. Given long-term security of franchise tenures and a higher rate of return on capital, these undertakings on the side of generation and/or supply may be depended upon to discharge their allotted responsibilities adequately.

NATIONAL INCOME IN 1961-62

The first year (1961-62) of the third Plan period was a rather poor one for agriculture in India as in several other countries round the world. According to the latest estimates, the country's foodgrains output, for instance, in that year was only about 78.6 million tons, as compared with 79.3 million tons under the final estimate for 1960-61, the last year of the second Plan. Largely because of this decline in foodgrains production, the contribution of agriculture (proper) to national income (at constant, 1948-49, prices) in 1961-62 was less by 0.3 per cent, as compared with 1960-61. The "quick" estimates of national income for 1961-62, released last week by the Central Statistical Organisation, show, in this connection, that the fall in the net contribution from agriculture during the year was more than made good by an increase in other sectors which, taken together recorded a rise of 3.8 per cent. The overall percentage rise of 2.2 per cent in aggregate real national income in 1961-62 was thus more than entirely due to the growth in sectors other than agriculture. The sectorwise picture of contribution to the overall percentage rise is provided by the following table:

(At 1948-49 prices)

Sector	*Percentage contribution to total national income in 1960-61*	*Percentage change in 1961-62 over 1960-61*	*Contribution to the overall percentage rise in 1961-62 over 1960-61*
Agriculture (proper)	39.2	(—) 0.3	(—) 0.1
Mining and factory establishments ..	9.2	6.7	0.6
Communications	0.5	5.2	*Neg.*
Railways	2.5	6.6	0.2
Organised banking and insurance ..	1.0	12.6	0.1
Other commerce and transport ..	15.3	3.7	0.5
Other sectors	32.3	2.9	0.9
All sectors	100.0	2.2	2.2

If, suppose, agriculture had registered a rise of 2.5 per cent instead of a decline of 0.3 per cent, in its contribution to national income in 1961-62, the overall increase in national income would have been 3.2 per cent. But that was not to be. Even if the sector of "mining and factory establishments"—a sector which contributes no more than 9-10 per cent to aggregate national income—had, by any chance, registered an increase of, say, 10 per cent, instead of the actual 6.7 per cent, the increase in aggregate national income would have been 2.5 per cent, in 1961-62, as compared with 1960-61. But, again, even that was not to be. The failure on the agricultural front has, however, been mostly responsible for a lower rate of economic growth —much lower than the 7.1 per cent rise in national income in 1960-61, as compared with 1959-60. A similar low rate of growth, it may be recalled, was in evidence in 1959-60 when the national income was only 1.7 per cent more than in 1958-59. Again, a comparable high rate of growth was registered in 1958-59 when the increase in national income was as much as 7 per cent, as compared with 1957-58. The year-to-year fluctuations in national income, which are largely or mostly determined by agricultural performance, may be noted in the following table:

Year (Financial)	*National income at 1948-49 prices (In Rs. 100 crores)*	*Per capita income(In Rs.) at 1948-49 prices (based on 1941, 1951 and 1961 population census figures)*
1950-51	88.5	247.5
1955-56	104.8	267.8
1956-57	110.0	275.6
1957-58	108.9	267.4
1958-59	116.5	280.2
1959-60	118.5	279.0
1960-61	126.9	292.5
1961-62 (provisional)	129.7	292.5

It is just possible that, over the third Plan period as a whole, the increase in national income will more or less correspond to the projected 30 per cent on the twin assumption that there will be at least three good agricultural years as in the second Plan period and that the crucial shortages of coal, power, transport, steel and other raw materials will be remedied in good time. If these assumptions go wrong, then the economic growth will be substantially less than that projected in the third Plan. Such lower growth will also mean less financial and physical resources for carrying out the development programmes, a larger degree of unemployment than has been bargained for, and considerable delay in reaching the take-off stage. The authorities must, therefore, strive hard to see that agriculture yields the resources expected of it and that the trio of shortages is quickly liquidated. They must set aside their excessive preoccupation with the dogma of socialism and ultra-nationalism in regard to acceptance of foreign private capital. Instead, they must concern themselves more and more with the practical ways and means of achieving a high rate of economic growth.

U.S. TRADE EXPANSION ACT

The new U.S. Trade Expansion Act, which has come into force with the signing of the Act by President Kennedy last week-end, is indeed a bold and imaginative legislative measure of far-reaching significance. The Act bestows on the President sweeping powers to negotiate and finalise tariff reductions in respect of U.S. trade with the Common Market and other countries. It thus replaces the 28-year-old Reciprocal Trade Act (amended in 1958) which has proved unsuitable and out of date to "meet the challenge and opportunities of a rapidly changing world economy." The "escape clauses" and "peril points" provided for in the Reciprocal Trade Act were found out of tune with the overwhelming interests of the U.S. economy. It was also found almost impossible to negotiate reciprocal tariff reductions as the process, under the Act, was protracted and was based on an item-by-item approach.

There is no doubt that the most important single factor that inspired the new Act was the emergence of the European Common Market, apart from the possibility of the U.K.'s entry into it. The U.S. Government has been of the opinion that, unless it bargained for substantial reductions in the common external tariff of the Common Market, U.S. trade with Western Europe, the largest market, would be adversely affected. It may be recalled here that the U.S. and the Common Market entered into an agreement in March last for a 20 per cent reciprocal cut in tariffs on a wide range of products. The new Act will extend the scope of this measure on a substantial scale, embracing not only the Common Market but also other countries, including the developing nations of Asia and Latin America.

The Trade Expansion Act contains five major provisions. In the first place, the Act authorises the President to reduce tariffs by 50 per cent on broad categories of goods as well as single items on an across-the-board basis over a five-year period. Secondly, it empowers him to reduce or eliminate all tariffs on those categories of products for which the U.S. and the Common Market countries together account for 80 per cent of world trade. Thirdly, the President will be entitled to remove duties on any article, subject to a tariff of 5 per cent or less on the level of 1st July last. Fourthly, he is free to reduce or remove the duty and other restrictions on any agricultural or forestry product. This provision, of course, is subject to two conditions, namely, that the Common Market would make comparable concessions and that the article concerned is not produced in the U.S. in any significant quantity. Fifthly, on the domestic front, adjustment assistance has been promised for firms or labour, if they are adversely affected by the impact of new legislation.

At the time of signing the Act, President Kennedy characterised it as the "most important international piece of legislation affecting economics since the passage of the Marshall Plan." In a vigorous defence of the Act, President Kennedy observed as follows:

"This Act recognises, fully and completely, that we cannot protect our economy by stagnating behind tariff walls, but that the best protection possible is a mutual lowering of tariff barriers among friendly nations so that all may benefit from a free flow of goods. Increased economic activity resulting from increased trade will provide more job opportunities for our workers. Our industry, our agriculture, our mining will benefit from increased export opportunities as other nations agree to lower their tariffs. Increased exports and imports will benefit our ports, steamship lines, and airlines as they handle an increased amount of trade. Lowering of our tariff will provide an increased flow of goods for our consumers. Our industries will be stimulated by increased export opportunities and a career competition with the industries of other nations for an even greater effort to develop an efficient, economic and productive system. . . ."

The immediate effect of the Act will be to strengthen U.S. trade relations with the Common Market. It is significant to note that the Common Market countries themselves have hailed the passage of the Act. The proposed tariff reductions between the U.S. and the Common Market will be of great significance to world trade, for they, together, account for 90 per cent of the free world's trade in industrial products. President Kennedy aptly put it: "Together we make up . . . the greatest aggregation of economic power in the history of the world."

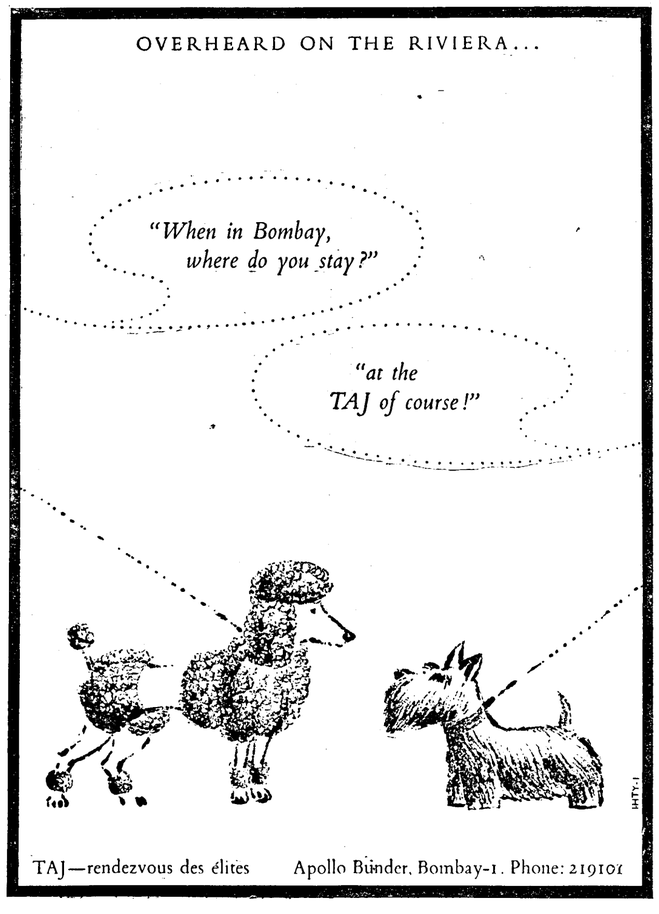
The scope of the Act is admittedly not confined to U.S. trade with the Common Market alone. The President made it clear that he would also initiate trade negotiations with "other great trading partners, Canada and Japan, and with the countries of Latin America, Asia and Africa." This assurance is in consonance with the G.A.T.T. provisions. It is encouraging to note that the President has also promised that efforts would be made to widen markets for raw materials and manufactures of less-developed countries. If the Act is used to subserve the cause of ending discriminatory and preferential arrangements, as President Kennedy claimed it would be, the U.S. would have made a great contribution towards building up a system of freer world trade.

L.I.C. AND CLAIMS SETTLEMENT

In deference to public and judicial criticism, the Life Insurance Corporation of India has settled in full the claim under a policy on the life of one Mr. Rajaratnam Nadar which was earlier repudiated by it as time-barred. This repudiation, it may be recalled, was upheld as legally correct by the Madras High Court but was condemned by it as morally wrong. Announcing this at a Press Conference this week, Mr. B. K. Kaul, Chairman of the Corporation, reiterated the policy of the Corporation in regard to claims settlement and reassured the policyholders and the public that it was the firm policy and obligation of the Corporation to pay the just claims of policyholders whose savings it holds in trust. The Corporation, he emphasised, was not ordinarily guided by considerations of the claim being barred by the passage of time in its decision to admit or repudiate liability. In fact, many claims had been admitted and paid on the merits of the case long after the period of limitation had expired. He pointed out that, as against a few claims which were rejected on the ground of suppression of material information by lives assured at the time of proposal, thousands of claims, of which quite a few were time-barred, were paid by the Corporation. The number of death claims paid by it in 1961 was as large as 27,000, as against only 334 claims repudiated.

The Chairman made it clear that, although the Corporation was anxious to settle all *bona fide* claims, it had to exercise vigilance and ensure that claims which appeared to be fraudulent or in respect of which material information

(*Continued on next page*)



LONDON LETTER

BALANCE OF PAYMENTS

(From Our Own Correspondent)

LONDON, *12th October*

WHEN Mr. Selwyn Lloyd was Chancellor of the Exchequer he hoped that the result of his austerity measures in mid-1961 would be to give this country a favourable surplus on balance of payments of £150 million in 1962. For the first half of this year the favourable surplus has indeed turned out to be £96 million. The question hanging over the economy is not, unfortunately, whether a further surplus can be made to bring the total towards the former Chancellor's target but whether we can hold on to the surplus so far earned.

It is worth taking a look at the make-up of this favourable balance over the past three half-years:

(In million £s)

	1961		1962
	Jan/June	July/Dec.	Jan/June
Visible Trade :			
Imports f.o.b.	2,080	1,926	2,027
Exports and re-exports	1,965	1,898	2,011
Adverse balances	115	28	16
Invisibles :			
Government	—175	—163	—189
Shipping	—29	—27	—25
Interest, profits and dividends	142	195	197
Other services and payments	117	96	129
Net invisibles	55	11	112
Net current balances	—60	—17	96

The improvements comparing the first half of this year with the first half of last year have been, first of all, in the field of visible trade where we are some £100 million better off, partly as a result of improved exports and partly as a result of diminished imports. Secondly, invisible income (interest, profits and dividends, largely the overseas earnings of oil companies) has made a big contribution. The net result is that in the first half of this year this country has acquired a surplus on current account in its balance of payments nearly as big as that for the whole of the prosperous year 1959 which makes a magnificent showing against the disastrous deficit of £300 million for 1960 and £77 million for 1961.

What is putting the total outturn for 1962 in jeopardy is the movement of visible trade since July; there has been a combination of slackening in exports and a tendency for imports to rise. We are here back to the new Chancellor's dilemma that increased domestic activity could accentuate such a trend and widen the gap.

But apart from items of current balances the strength of sterling depends upon the capital movements and the flows of demand and supply for sterling. In the first half of last year long-term capital movements—that is, investment by this country overseas—amounted to some £27 million but then there set in a substantial movement of long-term capital into this country. For the six months it was as much as £53 million so that for the year as a whole the net inflow of long-term capital totalled £26 million. In the first half of this year the traditional outwards trend has been re-established and the outflow amounts to £41 million. Nevertheless, whereas in the first half of 1961 capital was flowing out at the same time as there was an adverse balance of payment on current account, there was a net deficit of £87 million. For the first half of this year a big surplus of current account has more than financed the long-term capital outflow and *still* left a surplus of £55 million.

When account is taken of the movements of short funds and the drawing down of sterling balances we can determine whether the net monetary gains are with or against this country. In the first half of 1961 the monetary movements were unfavourable to the extent of nearly £50 million, and although this was reversed in the second half-year as a result of the inflow of long-term capital and the improvement in current balance of trade, 1961 as a whole ended up with a *favourable* monetary movement in this country's favour of £29 million.

That is the background against which we must see the *favourable* balance for the first half of this year of no less than £148 million. If we express this in terms to show the flow of different currencies, we get the following picture: the overseas sterling balances (and nowadays this means balances held by the International Monetary Fund, etc. as well as by other countries) have been *reduced* by £194 million. Against this the inflow of short-term capital has increased this country's external liabilities by £87 million. The net balance is a reduction in the United Kingdom's overseas liabilities by £107 million. If we add to this the *increase* in the gold and currency reserves over the first half-year of £41 million we get the net improvement of £148 million.

One old lesson re-learned in the past eighteen months has been the enormous effect of interest rates influencing long-term capital movements. In 1961 there was a net outflow of hot money (an inflow in the first half-year and an enormous outflow in the second half-year) of £75 million. Against this the United Kingdom overseas sterling liabilities increased by £77 million (this net figure conceals a drawing down of sterling balances by overseas countries and a big increase in sterling holdings by the I.M.F.).

Neither the big inflow of long-term capital in the second half of 1961 (£53 million) nor the big inflow of hot money in the first half of this year would have been possible without the attraction of high interest rates. In short, the exercises of last July were successful by using the traditional weapon of dear money. Clearly, it is a weapon which works and yet the price is paid for in terms of internal economic disadvantages and those who today have to consider what economic policy the country should follow are still torn between the desire to maintain high rates to encourage a capital inflow into this country and the desire to get them down lower and so encourage domestic investment. Of course, if the balance of payments is sufficiently healthy there is no need to encourage the inflow of foreign capital. The problem becomes acute though when, as at the moment, the country does not want to be embarrassed by an outflow of capital and it seeks to encourage domestic activity.

(Concluded from previous page)

seemed to have been wilfully suppressed, were not casually dealt with. Suspicions arise invariably with early claims, that is, those coming soon after the policy is taken out, say, in less than two or three years. The Corporation's contention is that it can settle these early claims only if it is convinced that suppression of material information was of no consequence or if investigations did not provide any proof of any such information having been suppressed at all. Mr. Kaul pointed out that delay occurred mostly in early claims which were under investigation and it was due to reasons beyond the control of the Corporation such as reluctance and even refusal on the part of various agencies to provide the necessary information.

Referring to the "Nadar claim," Mr. Kaul said that it was repudiated on the basis of available evidence in regard to suppression of material information and not on the plea of limitation which came up only at the Court stage. It may be recalled here that the Court did not accept the contention of the L.I.C. that the policy was null and void because the policyholder had suppressed material information, but upheld the point of limitation raised by it. Mr. Kaul disclosed that the Corporation decided to waive this limitation in the case under reference, because the claim was proved, to the satisfaction of the Court, to be a genuine one.

According to Mr. Kaul, if, in the discharge of their duties, the concerned officers of the Corporation repudiated liabilities under certain policies, such action was resorted to in the sincere belief that the evidence before the Corporation tended to vitiate the contract and that, by repudiating the liability under such claims, they are serving the cause of policyholders in general. But, as the "Nadar claim case" has clearly shown, the decision of the officers of the Corporation in regard to the genuineness of a claim is not always correct, either because the evidence at their disposal is insufficient or because the conclusion drawn from it is wrong. A thorough and speedy investigation of claims could avoid a recurrence of such cases in future. It would also be desirable for the Corporation to devise a system whereby decisions to repudiate claims, especially those of a doubtful character, could be checked by a high-power body of the Corporation's officials before notifying the claimants.

Cast Iron Standard Socket and Spigot Specials

for Water, Sewage and Gas Mains

From 3" to 8" size to B.S. 78/1938
80 mm & 100 mm size to I.S. 1538/1960

Manufactured in our modern foundries at Kulti under strict quality control.
Attractive deliveries—from extensions recently completed at our Kulti Works, particularly for 80 and 100 mm. standard specials.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

A SIMPLE PHRASE...
...VITALLY IMPORTANT!

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

JAPANESE MISSION EXPECTED

MANY HURDLES BEFORE COCHIN YARD PLANS

From Our Special Correspondent

NEW DELHI, 16*th October*

IF the plans for the second shipbuilding yard proposed to be built in Cochin have not progressed as quickly as the people and politicians of Kerala have wished, it is not for want of support from the Transport Ministry of the Union Government. The shipyard was a major lobbying issue in the Kerala elections to oust the Communists from power and Congress leaders made several promises on the shipyard which they have not been able to keep. The Communists and the Congress and the Praja Socialists were united in pressing a demand from the State Legislative Assembly when it was feared that experts were pouring cold water on the project by saying that it was expendable during the third Plan. The Planning Commission was not enthusiastic over giving a high priority for the second shipyard and officials of the Hindustan Shipyard at Visakhapatnam have more than once demanded that proposals for the expansion of the Hindustan Shipyard should take precedence over the plans for the second major shipyard. Even the expansion plans at Visakhapatnam have been bogged down with the Union Government having approved only the expenditure of Rs. 75 lakhs so far out of the expansion plan costing Rs. 244 lakhs.

DELHI LETTER

The second shipyard project has been under investigation for more than five years, the choice of the site and preliminary estimates having been made by a British mission sent to India under the Colombo Plan. Transport Minister Raj Bahadur's visit to Tokyo early in October and talks with Japanese firms there have resulted in the decision by the Japanese to send a technical mission to India in November. According to Mr. Raj Bahadur, who explained the results of his Tokyo mission yesterday, Mitsubishi and Ishiki Wajama are interested in the Cochin project. Mitsubishi has already a hand in Indian shipbuilding, since the Hindustan Shipyard has started building ships of Mitsubishi design. When the Mitsubishi mission arrives in India next month, it will discuss further details of technical collaboration. As a matter of fact, there is no shortage of technical collaboration offers for the shipyard, British, West German and Dutch firms having been among those who have sounded out the prospects. There has been a persistent reluctance by the Planning Commission to recommend the release of foreign exchange for the project, although the Commission has given the shipyard a technically higher priority than in the initial stages of discussion. The project still hinges on the capacity of the Japanese firms to persuade the Japanese Government to pump in more yen credit specifically for the shipyard.

Plea for Yen Credit

In their talks with the Japanese Prime Minister and Finance Minister, Mr. Raj Bahadur, as well as Finance Minister Morarji Desai, who was in Tokyo at that time discussing prospects of greater flow of Japanese aid, suggested a new yen credit to cover the shipyard. The Japanese were willing to have the project included in the yen credit already announced, but the Indian Government has made fairly firm allocations of the credit of $95 million Japan has offered for the first two years of the third Plan. The Japanese firms have taken upon themselves the onus of lobbying for more yen credit to get the shipyard plan through. Even if new credits will not cover the project's foreign exchange cost fully, Mr. Raj Bahadur hopes to find the balance from some untied credit. The foreign exchange cost of the shipyard was placed by the British mission at around Rs. 350 lakhs out of the total estimates of Rs. 20 crores.

Mr. Raj Bahadur also took up with the Japanese the question of India getting a greater share of the iron ore trade with Japan. At present, Indian shipping's share in iron ore exports to Japan is a low five to six per cent and the Japanese share is more than sixty per cent. The Japanese are reported to have expressed general agreement to meet Indian wishes in the matter, but the question of reallocation of the share will arise when bulk carriers on order are delivered to Indian firms.

Woollen Goods Exports

The revised export promotion scheme for woollen textile goods just announced, after the industry's reluctant acceptance of the compulsory export proposals of the Government, is expected to be followed by specific efforts to increase sales of woollen goods. One target is the Western European countries, and the Ministry of International Trade is studying a proposal to send a delegation to Europe before fixing specific targets for despatches to each European country. Negotiations are also being conducted with Yugoslavia and East Germany by the State Trading Corporation which recently made a deal with the Soviet Union and Hungary for export of nearly 200,000 yards of woollen goods. From less than 4,000 yards in 1956-57, the Soviet Union had increased its Indian woollen goods purchases to 112,000 yards in 1957-58 and 444,000 yards in 1959-60. The exports fell to 261,000 yards in 1960-61. The current contract is for a lower level. The export incentive scheme is naturally not for increased exports to the rupee payment countries in East Europe and the woollen industry has some pessimism, since the prices of Indian goods are one and a half times the ruling world levels. Japan's efforts in mixed fabrics have been particularly successful and India's infant synthetic fibre industry handicaps the industry's efforts here.

The recently announced $744,000 assistance from the U.N. Special Fund will help establish an institute to improve the productivity of Indian sheep and the rupee equivalent of the Indian Government expenditure on the project may be about Rs. 2 crores. The institute will train more than 1,000 men for field work to improve Indian sheep flocks. Four hundred lakhs of sheep in the country scarcely produce about 70 million lbs. of wool. The per sheep production of wool in Australia is between eight and nine lbs.

Four Australian experts are to work in India under the Colombo Plan and these experts are being selected by the International Wool Secretariat. One of them, Mr. Michael Ryan, an expert in shearing, clip handling and marketing of wool, has been in India since the middle of last month on a three-month assignment. He has had talks with the officials of the Indian Council of Agricultural Research and Mr. Manubhai Shah and is now working in Rajasthan with Jaipur as his headquarters. One Indian official suggested to Mr. Ryan that import of about 5,000 Australian merinos could help improve Indian breeds. But Mr. Ryan was not certain whether he could recommend to the Australian Government a relaxation of the Australian ban on export of merinos, which is a political problem. Mr. Ryan has said that it is necessary to grade the Indian wool more scientifically if the wool-growing industry is to improve. The finer clip is now mixed with the rough and the whole thing sold away at cheap prices for carpet manufacture.

There is a difference in the estimates by the Government and other experts of the combing capacity available in the country. The Government estimates a combing capacity of around seven million lbs., while some other assessments place it at double that figure. The third Plan target is 32 million lbs. and the new licences issued by the Government total about 23 million lbs.

Housing Plans

Indian officials used the opportunity provided by the E.C.A.F.E. urban housing seminar to publicise the housing plans of the Government. According to the National Building Organisation, which also functions as the regional housing centre of the E.C.A.F.E., 900,000 houses are planned to be built in the country by the public sector during the third Plan period. Expenditure on social housing schemes during the second Plan period was Rs. 84 crores, but the total investment of public funds, including that of Central Ministries and public undertakings, during the second Plan was about Rs. 300 crores. The initial third Plan provision for social housing and urban development schemes is a little over Rs. 200 crores, but, including the possible investments by Ministries and public undertakings for their own employees, the amount may be Rs. 425 crores. During the second Plan, the private sector investment in housing was placed at Rs 1,000 crores and the third Plan estimates are Rs. 1,125 crores.

But these initial estimates for use of public funds in housing are undergoing a revision. In the Rs. 200 crores allocation, about Rs. 60 crores were to come from the Life Insurance Corporation. Now it is estimated that an additional expenditure of Rs. 100 crores may be needed. The Union Government is toying with the idea of asking the L.I.C. to shoulder an additional Rs. 80 crores investment in the form of loans. These new estimates are based on demands put forward by various State Governments, but this does not mean all these amounts will be used. Even within the allocations, the States have not maintained full utilisation of funds available for housing. Simultaneously, it is likely that the Centre will increase allocations to the States for the preparation of various master plans and other projects for improving urban conditions. The trend of thinking is that the Centre will foot the bill for master plans during the third Plan period and, afterwards, the States will have to find their own resources. The Centre has also circulated to State Governments a model town planning law.

The National Building Organisation will grow into a regional housing training institute when the recommendations of the E.C.A.F.E. seminar are implemented. According to the Acting Secretary General of the United Nations, more than 1,000 million people in Asia, Africa and Latin America—or nearly half the population of the countries in the region —are homeless or live in houses which "is a health hazard or affront to human dignity." U Thant's proposals envisage the construction of between 19 and 24 million dwellings annually in the 'sixties.

E.C.A.F.E.'s Findings

An E.C.A.F.E. working paper deals in part with the Indian housing problems. It said that, in 1951, there was an estimated shortage of 2.5 million houses in urban areas alone. Between 1951 and 1961, the estimated requirement of urban housing was 3.2 million for new families to take the increase in urban population of 16 million, one million for replacement of houses in slum areas, and one million to replace houses that are overaged or have deteriorated. These total 5.2 million and to this has to be added the 2.5 million shortage in 1951. Of the 7.7 million needed, about three million houses are estimated to have been built in the decade to 1961, leaving a lag of 4.7 million. Thus the housing shortage has increased by 2.2 million from 2.5 million in 1951.

Dealing with the major cities' problems in India, the E.C.A.F.E. paper says that, in Madras, high densities of 200 to 250 families or 1,000 to 1,500 persons per acre prevailed. Fifteen families share one water closet and one water tap. In Bombay, 20,000 buildings out of 55,000 are more than 60 years old, more than 9,000 of these buildings are occupied by 500,000 people and these constitute ninety per cent of the slums in the city. There are 200,000 single-room tenements in Bombay for 1.2 million people and seven to 10 persons (two or three families) often share one room. In 140 areas of Bombay, which accommodate half the city's population, facilities are sub-standard and a large number of people live on the footpaths. Infant mortality in these areas is as high as 160 per thousand.

In Calcutta, one-fourth of the total of 5.5 million people live in slums which cover one-eighth of the city's living space. In most of these areas, the density is more than 1,000 persons per acre, less than 30 square feet of sub-standard living space per person. Sixty-two per cent of the families in Calcutta's slums have no water supply and there is no proper lighting or ventilation. On an average, 23 persons share a latrine and in some instances 45 persons.

More than sixty per cent of the population of Kanpur lives in makeshift houses in slums. And sixty per cent of these slum settlements do not even have community latrines, and where these exist there is one for every 18 persons. Conditions in Delhi and Ahmedabad are rated to be somewhat better, with twenty per cent of the people living in slums. The enormity of rural housing problem is illustrated by the fact that, for about 360 million people, there are 54 million houses, of which 50 million need to be improved or rebuilt.

COMMERCIAL BANKS UNDER THE PLANS

SHARP FALL IN PROFIT MARGIN, DESPITE LARGER TURNOVER

HOW have the commercial banks in India fared under the two Five-year Plans? This is a question of much exciting interest. Fortunately, one can easily provide the answer in all its aspects. For there is a wealth of information on the working of banks compiled and published by the Reserve Bank of India in a number of its annual publications. Most comprehensive of all these is the one entitled *Statistical Tables*. The latest (twentieth) in this series is that pertaining to the year 1961. The data presented in this latest edition are comprehensive and, when compared with those given in the *Tables* for the years 1956 and 1951, give a consolidated picture of the developments in the sphere of Indian banking system during the ten years 1951-61, corresponding to the first and second Plan periods. Although the *Tables* cover all the three constituent units, namely, scheduled banks, non-scheduled banks and co-operative banks, it is proposed to deal here only with the first two constituents which together comprise the commercial banking sector. Some data may not be strictly comparable, owing to changes in definition and other refinements since 1951, but this deficiency does not vitiate the broad conclusions emerging from this analysis.

Consolidation and expansion are the two most striking features of commercial banking development in the past decade. Thus, thanks to amalgamations (of weaker units with the bigger banks) and liquidation of uneconomic and inefficient banks, the number of banks in existence has gone down from 466 in 1951 to 291 in 1961, while, over the same period, the number of banks' offices has risen from 4,170 to 5,050. The decline in the number of banks is accounted for principally by the non-scheduled banks as the accompanying table shows. The number of scheduled banks has fallen but only slightly from 73 to 67 in the case of domestic banks and from 16 to 15 in the case of foreign banks. The scheduled banks have taken care to open as many branches as possible even in small places with population of less than 25,000. According to the 1961 census figures, 1,427 offices of scheduled banks were located in such places, representing 31 per cent of their total number of offices as at the end of 1961; the corresponding figures for non-scheduled banks were 330 offices and 52 per cent, respectively. There has also been a steady improvement in regard to Indian banks' offices abroad, agents and correspondents of scheduled banks in London and elsewhere, members and sub-membership of clearing houses, etc.

Liquidity Improves

Following the opening of more branches in the different parts of the country, improvement in banking facilities, spread of thrift habit among the people and, above all, the large development expenditure of the order of Rs. 10,000 crores under the development plans, necessitating a considerable amount of deficit financing, the aggregate deposits of commercial banks have registered a notable rise. They stood at Rs. 2,125 crores as on 31st December 1961, as against less than Rs. 974 crores ten years before, representing an increase of nearly 119 per cent. This large expansion in their resources has enabled the commercial banks to meet the major part of the credit requirements of trade and industry. The total of advances at the end of 1961 stood at Rs. 1,346 crores, as against Rs. 642 crores towards the close of 1951, that is, an increase of 109 per cent. The banks have, of course, been taking recourse to borrowings from the Reserve Bank, etc., but the actual borrowings in 1961 aggregated only Rs. 68 crores which, though higher than Rs. 51 crores in 1951, were much less than the total of Rs. 109 crores in 1956. There has also been a welcome improvement in the liquidity position (cash, balances with Reserve Bank and other banks, and money at call or short notice) and investments, the former from about Rs. 163 crores in 1951 to Rs. 287 crores in 1961 and the latter from Rs. 362 crores to over Rs. 674 crores.

The notable expansion in the activities of commercial banks during the last ten years has resulted in a perceptible improvement in their gross earnings which in 1961 amounted to Rs. 118 crores, as against Rs. 47 crores in 1951. The bulk of the rise is naturally accounted for by interest and discount, together aggregating Rs. 92 crores, as against Rs. 33 crores in 1951. The share of commission, exchange and brokerage was nearly Rs. 23 crores, as against Rs. 12 crores. A large part of the increase in earnings has, however, been neutralised by higher expenditure. The interest paid on deposits, borrowings, etc., alone has risen by as much as Rs. 37 crores to about Rs. 48 crores. Similarly, staff expenses have increased by Rs. 21 crores to Rs. 38 crores. Even so, the gross profit in 1961 was higher than in 1951, being Rs. 16 crores, as against Rs. 10 crores. Only, the growth in profit has not been commensurate with the expansion in business. This will be quite evident from the fact that profit-margin (that is, gross profit, expressed as a percentage to gross earnings) has sharply gone down from 21.4 per cent in 1951 to 13.4 per cent in 1961.

Banking During 1961

A brief reference to the trend and progress of banking in India during the year 1961 may also be made, so that readers may have a record for their ready reference. An interesting feature of Indian scheduled banks' balance-sheets for the year 1961 is that their owned funds (comprising paid-up capital and reserves) showed a significant rise of Rs. 2.7 crores in 1961, as compared with a nominal rise of Rs. 0.86 crore in 1960. Some of the banks, the reserves of which had already equalled their paid-up capital, strengthened them further through transfers from their profits in 1960 and 1961. The total deposits of scheduled banks registered a sizable rise in 1961 as compared with only a small increase noticed in 1960. The rise in bank credit, however, was less than that in 1960. This enabled the banks to reduce their reliance on the Reserve Bank of India. Investments in Government securities of scheduled banks, other than the State Bank of India, also recorded an increase, in contrast to the fall noted in 1960. The decline in investments of the State Bank of India is attributable to the phased transfer of P.L. 480 and P.L. 665 deposits to the Reserve Bank. The non-scheduled banks registered a further decline in their deposits and loans, mainly as a result of liquidation of some banks and amalgamation of some weaker units with the bigger banks.

Scheduled banks' earnings registered a further rise in 1961, due mainly to the increase in the level of advances and partly to a rise in their lending rates. In respect of Indian scheduled banks, earnings from loans and advances increased by Rs. 10.7 crores to Rs. 56.6 crores, as compared with the rise of Rs. 6.0 crores to Rs. 45.9 crores in 1960. On the other hand, earnings from investments in Government securities declined by Rs. 3.8 crores to Rs. 16.1 crores, following the reduction in the level of investments of the State Bank. Total current operating earnings rose by Rs. 10.9 crores to Rs. 103.3 crores, as compared with the rise of Rs. 9.2 crores in 1960. Their current operating expenses went up by Rs. 4.6 crores to Rs. 78.8 crores; the rise in 1960 was Rs. 5.0 crores. As a result, their gross profits showed a larger rise of Rs. 6.1 crores to Rs. 23.5 crores in 1961, as compared with the increase of Rs. 3.8 crores to Rs. 17.4 crores in 1960. As for foreign scheduled banks, their current operating earnings increased by Rs. 4.9 crores to Rs. 22.9 crores, in continuation of a rise of Rs. 2.5 crores in 1960. Their current operating expenses rose by Rs. 3.7 crores to Rs. 17.8 crores, whereas the rise in 1960 was Rs. 1.2 crore resulting in an increase in profits by Rs. 1.3 crore to Rs. 5.1 crores in 1961, as compared with a rise of Rs. 1.2 crore in 1960.

The number of scheduled banks' offices in the Indian Union increased by 243 to 4,393, as against the rise of 224 in 1960 and 297 in 1959. The number of offices of non-scheduled banks, however, continued to decline. The increase in the offices of the State Bank of India was 45, as compared with 78 in 1960 and 111 in 1959.

WANTED : A MUNICIPAL BANK IN BANGALORE

In a communication addressed to us, Mr. S. Venkat Ram, Councillor, Corporation of the City of Bangalore, writes as follows:

"In my capacity as member of the Corporation Council of Bangalore, I have moved a resolution in the Council proposing the establishment of a municipal bank in Bangalore on the lines of the Mont de-piete working in France and also in Pondicherry. According to me, the bank would take over almost entirely the pawn-brokers' trade in the city. At present, on a crude guess, there are about seven to eight hundred pawn-brokers' shops in the city. They advance loans to people mostly of the working and lower middle class, and occasionally of the well-to-do sections as well, on the basis of articles pledged. The type of articles pledged varies from garments to gold jewellery and includes such articles as watches and utensils. The rate of interest varies from 2 or 3 per cent on gold to 10 or 12½ per cent on garments, etc., per month, depending on the article and the client. In marginal cases, it may be a little more or less, rather more. This system contributes not a little to make the users of the pawn-shops perpetually indebted. On every pay day, the worker redeems his pledged article only to bring it back the next day. Indebtedness has a pronounced tendency to snowball.

"It is my proposal that the Corporation should start a bank and may restrict the type of articles to those made of metal only including utility metals, as any metal is valuable today. We may not go in for watches, garments and such other articles. Naturally our rate of interest would be reasonable, 10 per cent or so per annum. At a time when we are looking for more revenue for local bodies, this will yield revenue to the Corporation and give credit facilities to the public.

"In Pondicherry, a revenue bank of this type is functioning. The rate of interest is 8 per cent. Definite rules are laid down for assessing and granting loans on pledged articles. At the end of the term of credit, either originally agreed or subsequently extended, the article is auctioned, and balance due either to the bank or to client is settled. This is on the French model. In many other European cities also, the system is working. Some information on this is available in *Encyclopædia Britannica*."

CENTRAL REVENUE COLLECTIONS

The revenue realised from items on which duties are levied and collected by the Central Government in the first five months of the financial year 1962-63 amounted to Rs. 391.15 crores. Of this, Rs. 85.52 crores were collected during the month of August 1962. The corresponding figures for the first five months of the financial year 1961-62 and for the month of August 1961 were Rs. 338.89 crores and Rs. 68.41 crores, respectively. Following are the details of the revenue realised under various heads:

(In lakhs of rupees)

Revenue head	August		April to August	
	1962	1961	1962-63	1961-62
Customs	19,39	17,04	95,99	78,28

TOTAL ..	85,52	68,41	3,91,15	3,38,89

* Provisional.

FOREIGN INVESTMENTS IN JAPAN

The Japanese Ministry of Finance has recently announced that regulations governing repatriation of proceeds by foreign investors from sales of their Japanese stocks, debentures and beneficiary certificates have ceased to be effective from 1st August 1962. Foreign investors can now sell their holdings and remit their proceeds home, if they had owned such acquisition for six months, instead of two consecutive years as hitherto. Under the old regulations, foreign investors could not dispose of their holdings for two years and remittance of proceeds thereof had to be made in instalments over a period of five years. The relaxation is designed to assist Japan's liberalisation of capital transactions with foreign nations, which have become active in recent years.

Foreign investments in Japanese stocks began to assume noticeable proportions in 1959. Investments by foreigners during that year aggregated $27,031,000. The amount soared to $74,151,000 in 1960 and to $116,142,000 in 1961.

PATTERN OF INCOME DISTRIBUTION DURING 1953-57

INCREASE IN DEGREE OF INEQUALITY

THE report of the Mahalanobis Committee, which was appointed in 1960 to inquire into the changes in the pattern of distribution of income and wealth and the levels of living during the first and second Plan periods, is yet to be published. It is expected to throw some light on the extent to which the economic and social policies followed during the period have helped to achieve the Plan objectives of (*a*) reduction in the inequality of income and wealth, (*b*) diffusion of economic power in the country. The Committee's findings and conclusions are bound to influence the Government's policies in the coming years. It is an indication of the extent of public interest in the subject that even some of the preliminary findings of the Committee, reported in a section of the Press, attracted wide attention.

A study of distribution of incomes in India, which is similar, in some respects, to the one that is being attempted by the Mahalanobis Committee but more limited in scope and covering a shorter period, made by Mr. P. D. Ojha and Mr. V. V. Bhatt in the Division of Planning and Special Studies, Economic Department of the Reserve Bank of India, has been published in the latest (September 1962) issue of the Reserve Bank of India *Bulletin*. The object of the study was to estimate income distribution in the household sector of Indian economy during the period 1953-54 to 1956-57 and to indicate the changes in income distribution between the two sub-periods 1953-54 to 1954-55 and 1955-56 to 1956-57 as a result of the acceleration of economic activity. The period covered by the study is thus a short one of four years, divided into two sub-periods of two years each, and corresponds to the third, fourth and fifth years of the first Plan and the first year of the second Plan. The choice of this period, which stretches uneasily across the first and second Plans, strikes one as rather odd. Anticipating this reaction, the authors have given an explanation. They say that comparable data for a more convenient and compact period, say, the first Plan period or the second Plan period, were not available. While not ignoring the statistical problem presented by the absence of relevant data, one would nevertheless wish that at least, in future, the Reserve Bank's Department would cover the Plan periods by filling up the gaps, so that it would be possible for one to make inter-Plan comparisons of the level of and changes in income distribution.

The authors have divided the Indian economy, for the purpose of their study, into three sectors: (1) Government sector, (2) corporate sector and (3) household sector, comprising individuals, non-corporate business (including agricultural sector) and private collectives like temples, educational institutions and charitable foundations. The study under reference is concerned with the last mentioned sector, namely, the household sector. The income-receiving unit for the purpose of the study is the household and not the individual. Income distribution in the household sector is estimated in terms of certain income groups as well as certain functional groups. The income groups are: (*a*) low-income group, that is, households with yearly income upto Rs. 3,000; (*b*) high-income group, that is, households with yearly income between Rs. 3,001 and Rs. 25,000, and (*c*) top-income group, that is, households with income above Rs. 25,000.

The households in the high-income group are divided into three functional groups: (1) Salary-earner group, (2) non-salary earner group and (3) farm-household group. Another classification of the household sector comprises rural households and urban households and farm households and non-farm households.

The main conclusions emerging from the authors' study are summarised below. The changes in the income distribution indicated below, it may be noted, are the result of comparison of the position in the years 1955-56 and 1956-57 (that is, Period II) with that in 1953-54 and 1954-55 (that is, Period I):

The per household personal income in each income group increased over the period, but unevenly. The increase was 0.4 per cent in the income group Rs. 0 - Rs. 3,000, 9.5 per cent in the income group Rs. 3,001 - Rs. 25,000 and 6.1 per cent in the income group Rs. 25,000 and above. The increase in the average per household personal income was 2.1 per cent, whereas the increase in per household income in the high-income group was 9.2 per cent. The increase in the per household disposable income in the three income groups (Rs. 3,000 and below, Rs. 3,001 to Rs. 25,000 and Rs. 25,000 and above) was 0.4 per cent, 9.4 per cent, and 6.5 per cent, respectively. The rate of increase in the per household disposable income of the top-income group indicates that it has not been affected, in any perceptible manner, by the high level of direct taxes, as personal income of this group rose faster than the increase in direct taxes. The per household disposable income of the high-income non-salary earner group increased by 13.6 per cent as compared with the 12.9 per cent increase in its personal income, indicating that the direct taxes for this group increased at a lower rate than its personal income.

It is beyond the scope of this brief article to deal with the estimation procedures followed by the authors of the study with regard to the number of households in each income and functional group and the distribution of income in various income groups. Nor is it possible or necessary to go into the details of income distribution during the period and the changes in income distribution in the two sub-periods. Suffice it to list here the final conclusions drawn by the authors of the study. The first conclusion is that the degree of inequality in the income distribution increased somewhat during Period II covering the years 1955-56 and 1956-57, as compared with Period I covering the years 1953-54 and 1954-55. This was more or less entirely due to a substantial increase in the per household income of the high-income, non-salary earner group. This was also the reason for the differential rates of increase in the per household personal income of the high-income rural and urban group and the high income farm and non-farm household groups.

Another conclusion drawn by them is that the urban low-income group as a whole suffered a decline in its per household personal income. Factory employees, however, were an exception in that they experienced the largest increase in their personal income among all the low-income groups. This again shows that factory workers had fared far better by comparison with other sectors of the urban population.

Finally, as already stated, the direct taxes prevailing in those years did not affect the pattern of changes in personal income to any significant extent. For the high-income non-salary earner group in particular, the increase in direct taxes was less than that in this group's personal income. This clearly suggests that self-employed people like doctors, lawyers, hotel proprietors, middlemen, traders, and manufacturers came out better off financially during the period under review than salaried employees in the private and public sectors alike.

Notice

BURN AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Registers of Members and Share Transfer Books for 6 per cent and 7 per cent Preference Shares in the Company will remain closed from the 26th October to the 31st October, 1962, both days inclusive, for the purpose of payment of Preference Dividends for the half-year ending 31st October, 1962, on or after the 10th November, 1962, to those Preference Shareholders whose names appear on the Company's Registers of Members for 6 per cent and 7 per cent Preference Shares on the 31st October, 1962, or to their mandatees.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Managing Director,
Managing Agents.

How ISI Helps the Manufacturer

BY PROVIDING THE SEAL OF INTEGRITY

The ISI Certification Mark may be given to any manufacturer whose products are made to the relevant Indian Standards. It is a recognition of his business integrity and trustworthiness.

Modern methods of quality control, an essential part of any scheme of certification, bring about many economies in production through elimination of defectives, increase in productivity, and securing of uniform quality of output. These benefits far outweigh any additional cost involved in instituting continuous inspection and testing.

Periodical check-up by ISI of manufacturers' own quality control systems constitutes an invaluable service to ensure top management of the high efficiency of production and maintenance of quality.

Consumer satisfaction and competitive marketing position are the obvious advantages enjoyed by all ISI Mark users.

Enquire for details NOW how you too can join the distinguished company of manufacturers who already hold the ISI Certification Mark Licence.

INDIVIDUAL AND CORPORATE INCOMES

TAX STATISTICS ANALYSED

THE official statistics pertaining to income-tax revenue, especially for the period 1953-54 to 1959-60, are more or less comparable in spite of their limitations. It is possible to deduce the broad changes that have occurred during that period in the incomes and tax liabilities of those coming under the purview of the Indian Income-tax Act of 1922, that is, in the non-agricultural sector of the economy. But the limitations of the data have to be kept in mind before any meaningful, though restricted, interpretation is attempted. This is precisely what the latest (April-July 1962) issue of the *Tata Quarterly* has done in its peep into income-tax statistics. Three important limitations have been set out, at the very outset, by the *Tata Quarterly*. These are:

(a) The statistics of assessments relate to *assessments completed* in a financial year. Assessments of a given year thus include a large number of assessments for earlier years and exclude the assessments carried over to the next year. Consequently, they include two or more assessments of the same assessee in a particular financial year. Hence, the number of assessments do not strictly correspond with the number of assessees. The fluctuations in the number of assessments may not, therefore, be entirely due to the increase or decrease in the number of assessees.

(b) The statistics of assessments cover only those *assessments which result in a positive demand*. Assessments of new industrial undertakings falling under Section 15-C of the Indian Income-tax Act or cases where the entire income is absorbed by depreciation allowances and development rebate, etc., are left out.

(c) *The figures of tax assessed are not the figures of actual tax collections* but only of the *demand made on assessees*. Tax collected is usually, though not always, lower than the tax assessed owing to the scaling down of tax demand as a result of appeals.

It must also be remembered that the fluctuations in assessments referred to in (a) above may be caused by a number of factors, such as (i) changes in the statutory exemption limit of taxable income, (ii) changes in national income and/or its re-distribution, (iii) erratic operation of Section 15-C of the Income-tax Act, and the provisions regarding depreciation allowances, development rebate, etc., and (iv) the degree of vigilance shown by the tax-gathering authorities. The *Tata Quarterly* study has mentioned these qualifications and explanations before proceeding to analyse and interpret the income-tax statistics of the period under reference. The study has highlighted several interesting trends in a few tables worked out from the basic statistics.

Table I, to begin with, presents the number of assessments, income and tax assessed and national income at current prices. *Here the figures of national income do not include agricultural income as the latter is not subject to tax.* It must also be noted that assessments of a given year are correlated to the national income of the year preceding because income assessed in any particular year relates to the income earned in a previous year. One of the findings of the study, based on this table, is that the steady increase in the number of assessments and income assessed since 1954-55 is attributable to (i) the rise in national income, (ii) the lowering of the statutory exemption limit for income-tax (from Rs. 4,200 per annum for individuals and Rs. 8,400 for Hindu undivided families in 1953-54 to Rs. 3,000 and Rs. 6,000, respectively, in 1957-58), and (iii) perhaps, greater vigilance shown by the tax-gathering authorities. Another finding is that the volume of income assessed as a proportion of national income constituted only 18 per cent of the taxable national income in 1959-60, as compared with roughly 70 per cent in the United States and 84 per cent in Great Britain. The low ratio in India is explained by the circumstance that the incomes of large masses of people are below the statutory exemption limit of Rs. 3,000. A third finding is that the increase in tax assessed over the period under study is also the combined result of the growth of income assessed and the increase in tax rates upto 1956-57.

In Table II are presented the figures of assessments and of income and tax assessed for the two important classes, namely, individuals and companies, which account for the bulk of the income-tax revenue. It will be seen from this table that there was a sharp decline in 1954-55 in income and tax assessed, chiefly on account of companies. According to the authors of the study, there is no satisfactory explanation for the decline in the assessment of corporate income and tax in that year. But there is an explanation for the similar decline in 1959-60. It is that there was no assessment, in that year, of some of the new big companies, particularly the oil refineries, *owing* to the operation of exemptions such as development rebate, depreciation allowances, etc.

While examining the magnitude of changes according to the principal types of assessees, the *Tata Quarterly* study has highlighted a significant trend in respect of Hindu undivided families. Although the total number of assessments of these families increased from 39,491 to 54,608 during the period under study, the volume of income and tax assessed did not increase *pari passu*, for the increase in the number of assessments mainly occurred in the low-income group. Amongst Hindu undivided families, assessees having an income of above Rs. 40,000 have been gradually declining. Thus, for instance, in 1953-54, there were 2,099 assessees in this slab, with a total assured income of Rs. 18.2 crores and a tax liability of Rs. 8.4 crores, whereas in 1959-60 the number of assessees fell to 1,759, with a total assessed income of Rs. 14.6 crores and a tax liability of Rs. 6.9 crores. The significant trend noted here by the authors of the study is that Hindu undivided families with large incomes seem to be gradually disintegrating and/or partitioning themselves.

Distribution of Income

An idea of the distribution of income in different groups and the average tax liability of each group may be had from Table III. It will be noticed that the bulk of the increase in income occurred in the income range below Rs. 5,001. While a large part of this increase is obviously due to the lowering of the exemption limit from Rs. 4,200 in 1953-54 to Rs. 3,000 in 1957-58, some part of it may be due to the rise in national income. Another significant trend noticed is that the increase in the amount of income assessed in 1959-60 over 1953-54 in each income group is of a diminishing order of magnitude. Above Rs. 2 lakhs, the amount of assessed income showed a sharp decline in 1959-60, as compared with 1953-54, the decline being sharper for each of the higher steps of the income ladder. The inference may, therefore, be drawn that the tax policy of the Government has been successful, to some extent, in discouraging the earning of large fortunes.

In Table IV are presented the statistics of assessed income from all sources together (salaries, interest on securities, property, business and professions, capital gains, incomes accruing or arising abroad and incomes from dividends) and from "business and professions" separately. What clearly emerges from this table is the importance of those who earn their livelihood from "business and professions." It is most significant that more than 55 per cent of the total income assessed and more than 63 per cent of the total tax assessed are accounted for by this class. But, within this class which covers nine groups of trades and professions, the greatest beneficiaries of planned economic development in India have been the traders and contractors. The average annual rate of growth in income, it may be noted in this connection, was nearly 13 per cent for the commerce and transport group and 16 per cent for the construction group during the period under study. On the contrary, the manufacturing groups (four in all) registered rates of income growth ranging from about 2.0 per cent to 7.5 per cent per annum only. This conclusion, however, needs to be qualified by the statement that, in view of the various exemptions available under the Income-tax Act in favour of manufacturing activities, their incomes may not be fully reflected in income-tax statistics.

The *Tata Quarterly* study has also examined the assessment of "business and professions" by the types of assessees (individuals, Hindu undivided families, unregistered firms, registered firms, and companies). But the relevant breakdown figures are available only for 1959-60. From these figures the conclusion is drawn that

Note: Figures in brackets indicate income and tax assessed from business and professions as percentage of income and tax assessed from all sources respectively.
* They are classified under 7 categories viz. incomes from (i) salaries, (ii) interest on securities, (iii) property, (iv) business and professions, (v) capital gains, (vi) incomes accruing or arising abroad, and (vii) other sources which include mainly incomes from dividends.

DESULTORY OFFTAKE OF TEXTILES

MORE PRINT WORKS CLOSED DOWN

From Our Special Correspondent

MANCHESTER, *9th October*

SOME expansion in demand has been apparent in the Manchester yarn and cloth market over the past few weeks, but the resultant turnover still falls considerably short of the business which might conceivably have been expected at this time of the year. There remains much disquiet among traders as to the outcome of this desultory offtake in the shape of eventual additional curtailment of machine activity.

MANCHESTER LETTER

Although chairmen's reports of public companies must, of necessity, cover the previous year's workings, their statements generally offer some guidance to the future and present a picture of the industry from which some indication can be secured of current trends. Two such documents recently circulated to shareholders provide useful background to the existing situation.

Emphasis on Selling

Mr. Eric Cartwright, Chairman of Barlow and Jones Ltd., has put on record his personal opinion that, if the textile trade is to continue at anywhere near its present level, there must be large units, not necessarily of mammoth size, which control every link in the chain of operations, particularly the selling of the finished product. Emphasis on selling, indeed, is a key point in the opinions cited by most *trade commentators. In contrast to many other* companies involved in similar activities, the fine spinning mills of Barlow and Jones, according to Mr. Cartwright, earned slightly larger profits than in the previous year. Production is now running at a record level, with the newly-equipped mill, on which about £1 *million* has been expended, providing the main contribution. This unit is operating at 105 hours *a week and the output of the group* as a whole is 10 per cent above the rate before reorganisation, although the number of spindles has been reduced by over 40 per cent.

Like many other firms, however, Barlow and Jones is deferring final decisions on further expenditure until the outlook is clearer. Despite the use of the most modern machinery in order to produce competitively, present margins show a very low return on money invested.

Printers' Difficulties

Mr. Roger Lee, Chairman of Calico Printers' Association, describes trading conditions during the past year as being the most difficult of any in living memory. The printing section among the finishing trade as a whole was handicapped, he says, by its reorganisation scheme being launched after the redundancy programmes for spinning and weaving. Decisions had to be made at a time of inflated demand for finishing services due to overbuying by merchants after the turmoil which followed the widespread scrapping of spindles and looms.

Three major reasons for the poor state of *trade quoted by Mr. Lee are the weather*, the throwing open of the home trade to imports of cheap prints from Far Eastern and other countries, and the general uncertainty affecting all industries. Three successive poor summers must inevitably affect the print trade and induce nervousness among customers. Coupled with the complicated position of imports, it is scarcely surprising that the Association's financial results have been *severely* affected. More print works have been closed and, at present, *the group is engaged in* overhauling its selling methods and, like many others, carrying out strict economies both in staff and office space.

On the merchanting side, the Company cannot fail to be concerned about the sustained reduction in shipments from this country to Commonwealth areas which have for many years been the mainstay of our export trade. This has been very noticeable in West Africa, while increasing tariffs on textile goods entering Australia have been another source of profound discouragement.

Indicative of the way in which textile firms are having to reorganise their own internal affairs in the light of changed circumstances is the rearrangement of the printing done by the Association for its merchant subsidiary companies. The past year's experience, says Mr. Lee, has heavily underlined the risks inherent in the fashion print trade and has shown the desirability of reducing the group's investment in it, if this can be done without affecting efficiency at the print works.

The effects of this *reorganisation will* be to release within the next two years some £500,000 of capital at present employed in the dress division and to reduce operating costs by a very substantial amount. The number of designs produced to stock will be reduced by about one-third and the whole production marketed under two brands, and through two sales organisations, instead of three.

Changed Cloth Basis

Some adjustments have *lately been made* in the basis on which the Board of Trade fixes its price index for both cotton cloth and rayon and acetate fabric. Although the figures still relate to the index number of 100 being the average price in 1954 of selected cloth constructions, the alterations revert back to the beginning of 1961 in the case of rayon cloth, and from the start of the current year in cotton material.

The highest point in cotton goods was reached in the early months of 1961, after which the fall has been steady and uninterrupted. Steadiness in the cost of rayon fabrics, which reached their peak in May last year, has *suffered some setback in the last few months*, so that the current level is only slightly higher than the annual average in 1960. Contrary to experience in the past, however, the index number for raw cotton has varied little in recent years. The Board of Trade index (based on 100 being the 1954 average) shows raw cotton at 73.6 at the end of 1959, 75.9 a year later, 74.7 at the beginning of 1962, and 73.1 in July this year.

On the same basis, the average cost of cotton yarn has fallen from 98.3 to 90.0 in the past 12 months, and the index for spun rayon yarn has been reduced from 100.0 to 91.8.

The following table shows comparative figures which offer a general guide to the trend of values:

1961	Cotton cloth	Rayon cloth	1962	Cotton cloth	Rayon cloth
January ..	108.4	113.7	January ..	100.2	114.5
February ..	108.7	113.7	February ..	99.1	114.3
March ..	108.7	114.3	March ..	98.3	113.7
April ..	108.2	114.5	April ..	97.6	113.4
May ..	108.0	114.6	May ..	96.8	113.3
June ..	107.5	114.3	June ..	96.2	113.0
July ..	107.3	114.4	July ..	96.2	112.7
August ..	106.7	114.4	Annual Averages—		
September ..	105.6	114.4	1959 ..	90.0	104.9
October ..	104.2	114.4	1960 ..	103.7	112.0
November ..	102.9	114.4	1961 ..	106.6	114.3
December ..	102.8	114.3			

Textiles, having for long been an industry predominantly staffed by women, must naturally be interested in any investigation into the availability of female labour in this country in the future. The fact that the tendency towards three-shift working and more automation in the mills may well tend to equalise the ratio between men and women staffing spindles and looms does not detract from the importance of womanpower in the industry.

For this reason, a contribution by Professor T. E. Chester of Manchester University to the latest issue of the *District Bank Review*, coupled with research at present being undertaken at that university, should be of some value to those concerned with the cotton trade. The investigation centres on such basic questions as how long do women work on average before they marry, when and under what circumstances do they return and how long do they stay subsequently at their jobs.

National statistics on the employment of women generally show very definite trends during the past decade. For example, married

BARODA RAYON TO COMMENCE PRODUCTION SOON

PLANS FOR STAPLE FIBRE YARN MANUFACTURE

VISCOSE rayon is a regenerated fibre, that is, a natural cellulose of plant material dissolved and reprecipitated in a different form which may be either a continuous composite thread or cut into staple lengths. The principal raw materials required to produce viscose rayon yarn are wood-pulp (obtained usually from such coniferous trees as spruce, pins, hemlock and beech usually found in temperate zones), caustic soda, carbon disulphide and sulphuric acid. It was way back in 1892 that the process of making viscose rayon yarn was first discovered by Mr. C. F. Cross and Mr. E. J. Bevan. But so far as India was concerned, efforts to manufacture rayon yarn began only after the end of the Second World War. The Travancore Rayons' plant at Perambavoor (now Rayonpuram) was the first to go into production (in July 1950), followed by the National Rayon Corporation's plant at Kalyan in Bombay (in February 1951); both these factories have adopted the viscose process. The third plant to go into production (in 1953) was Sirsilk Ltd. at Kaghazpur in former Hyderabad State now part of Andhra; it is equipped to produce cellulose acetate filament yarn. The three units together had an annual capacity of 22.3 million lbs. at the beginning of the second Plan. The expansion of these units (by an additional 8.4 million lbs.) and the establishment of three new factories (Century Rayons in Bombay, J.K. Rayon in Kanpur and Kesoram Cotton in Calcutta, with a combined capacity of 21.6 million lbs.) raised the aggregate capacity of the six units to 52.3 million lbs. by 1st April 1961—48.3 million lbs. of viscose filament and 4.0 million lbs. of cellulose acetate filament. After the third Plan began—in October 1961—the South Indian Viscose mill with a capacity of 8.0 million lbs. commenced operation. Two new viscose rayon mills are being set up, namely, Baroda Rayons at Udhna (Surat) and Indian Rayons at Veraval. Besides, Century Rayons at Bombay and Delhi Cloth at Delhi are putting up new plants for manufacturing viscose rayon tyre cords.

Financing of Project

The idea of putting up a viscose rayon yarn spinning plant at Udhna in Surat was originally conceived by Mr. Babubhai M. Chinai of the House of Chinais who have successfully established the National Rayon Corporation. The Baroda Rayon Corporation was registered in May 1958 with an authorised capital of Rs. 10 crores; the issued capital is Rs. 4.90 crores in 490,000 equity shares of Rs. 100 each, while the actual paid-up capital is Rs. 4.76 crores. The Company obtained in September 1959 an industrial licence to set up a factory with a capacity to produce 61 tons of continuous filament rayon yarn on 100 denier basis per day, together with plants to produce every day 20 tons of sulphuric acid, 10 tons of sodium sulphate and 5 tons of carbon-disulphide. The Company also obtained an import licence worth Rs. 3 crores under yen credit for getting the necessary machinery and equipment from Japan. The preliminary work at Udhna was started in November 1960. Eight months later, that is, in July 1961, the Government permitted the Company to expand the capacity of the rayon yarn plant from 6½ tons to 7½ tons a day and that of sulphuric acid plant from 20 tons to 40 tons. The capacity of rayon yarn plant has since been stepped up to 9 tons per day. The whole project is estimated to cost Rs. 8 crores. This sum has been met out of equity issue (Rs. 4.76 crores) and a long-term loan of Rs. 2.93 crores granted by the Industrial Finance Corporation of India. More recently, the Company secured official permission to raise the capacity of the plant still further to 11¼ tons per day; this expansion is estimated to involve an additional expenditure of Rs. 60-65 lakhs.

The trial operations of the rayon yarn manufacturing plant will commence on the 31st of this month and full-scale production in March or April next. The Company has already imported and stocked sufficient quantities of wood-pulp and sulphur. In order to achieve the licensed expanded capacity of the rayon plant, the management has already taken effective steps. Provision has been made in the main plant building to accommodate eight more spinning frames, in addition to the existing 30 frames. The Company is awaiting a licence to import the required machinery and equipment; the delay in getting the licence is due to foreign exchange difficulties. The Company has also approached a leading financial institution for credit facilities in the form of both foreign exchange and rupees. Meanwhile, the Company has plans to put up a caustic soda plant with a daily capacity of 20 tons and a staple fibre yarn plant with a capacity of 40 tons a day.

Taking the present licensed capacity of 11¼ tons per day, the actual output of rayon yarn will amount to nearly 3.25 million lbs. (150 deniers and 120 deniers) per annum. In terms of value, the annual output is expected to be of the order of Rs. 3 crores. Since imports of wood-pulp and sulphur will cost Rs. 40 lakhs, this factory's production will result in a saving of foreign exchange amounting to Rs. 2.60 crores which would otherwise have to be spent on imports of foreign yarn. Half of the production will be yarn on sized beams, the other half being in cones. The yarns that will be produced are assured of a ready market, inasmuch as 33 per cent of the powerlooms using rayon yarn are located in the vicinity of Surat. Moreover, the quality of the yarn, it is claimed, will be of a high order. For the factory is equipped with most modern and up-to-date machinery supplied by the Mitsubishi Shoji Kaisha of Japan and the technical know-how and engineering services are provided by the Asahi Chemical Industry Company, also of Japan, both of which occupy a very high position in the field of rayon. A team of 30 highly skilled Japanese technicians has helped in installing the plant. The Company's Indian technicians have also received comprehensive training in Japan.

From the point of view of production cost, too, the Baroda rayon factory possesses a distinct advantage. Since the factory generates its own power and has made arrangements to get water direct from the river Tapti and since the Gujarat Government has given complete exemption from electricity and water taxes, the Company does not have to incur large recurring expenditure on these accounts. On an average, the reduction in cost of production, we are told, will be to the tune of half of one per cent. The thermal power plant has two generating sets each of 5,000 kw. capacity. It has been erected at a cost of Rs. 1.15 crore. The Company has placed orders for the machinery to convert the present coal firing boilers into oil firing boilers, so that shortage of coal may not hinder power supply. Regular and adequate power and water supply is a prime necessity, because manufacture of rayon is a continuous process. Emphasising this aspect, Mr. Rangilbhai B. Chinai, Resident Agent of the Company, while talking to Pressmen at Surat early this week, stated:

"Power cut, even for a few seconds, may result in a heavy loss. In case of power failure, we will have to throw away the entire viscose which will result in a loss of about anywhere from Rs. 20,000 or more depending on the duration of failure. Similar is the case with water; we could not succeed in getting enough water in the nearby area. So we had to go a long way—nearly seven miles—to bring water. We have six tube-wells at the bed of Tapti river and we have set up our pumping station there. We have nearly 34,000 feet of water pipeline which passes through the lands belonging to various private parties and Government authorities. The production of rayon requires lots and lots of water. Manufacturing of one pound of rayon requires 250 gallons of water. Our capacity of percolation wells is 6 million gallons at Varacha and the remaining water for cooling will be taken from our tube-wells at the site."

The cost of pumping station and water pipeline is estimated at Rs. 15 lakhs and Rs. 22 lakhs, respectively. A plant to treat water chemically before use in the manufacture of rayon yarn has also been installed. As the water supply will be much more than what the factory actually requires, the Company can expect to earn some money by making available the supplies to other parties. Several parties have already approached the Company for water supply.

The total factory area is 320 acres. The buildings housing the rayon plant, as well as the sulphuric acid, carbon-di-oxide and sodium sulphate plants, are scientifically planned and constructed, under the direction of Japanese technical collaborators so as to achieve maximum benefit in manufacturing operations. The Company has also put up godowns for storing raw materials and finished products. The number of workers and staff employed in the initial stage of working will be about 1,200. The factory has a residential colony accommodating 96 families and 44 bachelors. About 192 workers' family tenements are expected to be constructed immediately. The management has plans for various welfare activities. It is intended to provide shortly a consumer co-operative society, shopping centre, children's park, playground, garden and club-house. A hospital and a school will be established later.

The Baroda Rayon Corporation has an influential Board headed by Maharaja Fatesinhrao P. Gaekwad of Baroda. Messrs. Gaekwad Chinai and Co. (Private) Ltd. are the Managing Agents. The Company is taking full advantage of the benefit of tax-holiday of five years granted to new companies under Section 84 of the Indian Income-tax Act. With all the distinct advantages enjoyed by it, the 28,000 shareholders of the Company can certainly look forward to getting a reasonable return on capital in a reasonable period of time.

TUSSAR SILK FABRICS

It will be recalled that on 7th April 1961, the Chief Controller of Imports and Exports, New Delhi, announced the grant of import licence for coal-tar dyes and textile chemicals against export of tussar silk fabrics. The goods for export, it was stated, were to be inspected by the Textile Commissioner and import licences were to be issued on the production of certificate from the Textile Commissioner recommending grant of such licences. In view, however, of the fact that it has not been possible to arrange so for the pre-shipment inspection of the material, it has been decided that the Joint Chief Controller of Imports and Exports, Bombay, will grant import licences without a certificate for inspection of the goods by the Textile Commissioner, Bombay, in respect of exports of tussar fabrics effected from 1st April, 1961 onwards and until further notice.

Exide Batteries still keep going when the rest have stopped

Everywhere you go motorists agree Silver Exide are the strongest, most reliable batteries under the sun. They are made from the finest materials and are quality tested at every stage of production. . that's why you're sure of a long and trouble free life. Exide Batteries are known and trusted all over the world. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—fit the finest battery money can buy and you'll still keep going when the rest have stopped.

SOVIET OIL EXPORTS MARK TIME

REFINERY CAPACITY PRETTY FULLY UTILISED

AFTER advancing at an average annual rate of 37 per cent (compound) for three years, exports of oil from the Soviet bloc are now marking time. This is the striking conclusion that emerges from a study of the available trade statistics for the first half of this year. During these six months, net exports of crude and products from the Soviet sphere to the rest of the world amounted to 15¼ million tons—much the same quantity as in January-June, 1961. Some of the importers took rather more, others rather less; but the general pattern of the trade showed comparatively little change.

Several factors seem to have been responsible for this significant check to the expansion of Communist exports. There is, for example, a growing realisation in some countries of the risks inherent in undue dependence on sources behind the Iron Curtain. Again, most of the possible outlets for Russian oil are already being supplied from this source, and the past year has seen no important windfalls such as that provided by Cuba in 1960. Finally, the small increase in the prices charged by the Russians, against a background of continuing competition from established marketers, has damped the enthusiasm of some buyers in Europe and Japan. It seems also to imply that the pressure to export Russian oil—at least petroleum products—is not so strong as it was; there are, indeed, indications that refinery capacity in the Soviet bloc is pretty fully utilised.

The table accompanying this article reveals the pattern of trade by country of destination in the two half-years under review, together with the estimates for the whole of 1961. (In comparing the half-year figures with annual totals, seasonal factors may have to be taken into account.) The latest figures given must be regarded as approximations only; because of the incompleteness of the data, the estimates have been rounded to the nearest hundred thousand tons.

Two-thirds of Soviet bloc oil exports are still consigned to Europe, almost every European country figuring on the list of buyers. And of the European total, rather more than half is taken by the six countries of the Common Market. That the latter countries would actually reduce their total purchases of Soviet oil this year was forecast in an official E.E.C. study;

*Estimated Soviet Bloc Oil Exports**

	Year 1961	First Half 1961	First Half 1962
To Europe:			
Italy	6.5	2.9	3.5
W. Germany	3.9	2.2	2.2
Sweden	2.5	1.3	1.2
Finland	2.3	1.1	1.2
Austria	1.0	0.5	0.6
France	1.0	0.5	0.5
Greece	1.1	0.5	0.4
Other Europe	1.5	0.7	0.7
Sub-Total	19.8	9.7	10.3
To Rest of World:			
Cuba	3.7	2.1	2.0
Japan	3.0	1.3	1.6
Egypt	2.3	1.2	0.7
India	0.2	0.1	0.2
Brazil	0.3	0.2	—
Other countries	1.1	0.4	0.5
Total	30.4	15.0	15.3

* Mostly from the U.S.S.R.; including crude oil and products.

the total envisaged for this year was 10.7 million metric tons, equal to just over 8 per cent of E.E.C. imports from all sources excluding Algeria, against 11.1 million last year. This decline is not evident in the figures for the first six months. If it occurs in the second half, it will materially affect the total picture.

Turning to individual countries, Italy still heads the list of customers, with E.N.I. as the main importer. Its purchases have been substantially higher this year than last, June shipments being particularly heavy. The Italian Government has, however, been under increasing pressure from its Common Market partners to reduce the country's dependence on Communist oil, and this pressure must be expected to have some effect. Incidentally, Italian imports of Russian crude for refining in bond for re-export are forecast to drop from 1.3 million tons in 1961 to 1 million this year—which may slightly reduce the available supply of cut-priced products for West European markets.

The German Federal Republic, which imports oil from East Germany, Rumania and Hungary, as well as from the U.S.S.R., has been buying on much the same scale as in the first half of last year. The same is true of France, whose trade agreement with the U.S.S.R., envisages an import of 1.1 million tons this year. This figure, which may not be attained in fact, is the same as that for 1961, which was reduced in relation to 1960 in order to make room for growing supplies from the Sahara. Austria, which envisages a gradual expansion of its oil purchases from Russia up to 1965, has been buying rather higher quantities this year than last. Greece, on the other hand, in its new 1962-64 trade agreement, has somewhat reduced its prospective import quota from the U.S.S.R. to 750,000 tons a year; and, at least so far as black oils are concerned, the Russians have lately seemed to be having difficulties in meeting their commitments.

Among the Scandinavians, Sweden has a trade agreement with the Russians which provides for a slow expansion of the oil trade, from 2.5-2.7 million tons in 1961 to 2.5-2.8 million this year and to 2.7-3.0 million in 1963. But, although actual imports (mostly fuel oil) jumped up last year, they fell short of the target figure; and they fell back slightly during the first half of 1962. Finland's imports from Russia were virtually unchanged in 1961, but the protocol for 1962 provides for a modest increase; and the figures for the first half are consistent with the target rate of 2.4-2.7 million tons. (Because of seasonal factors, shipments tend to be higher in the second half.)

Outside Europe, Dr. Castro is the Communists' best customer, and Moscow has given ample evidence of its desire to help him in all possible ways. The Russians have reported that 15 of their tankers (all, so far, of modest size) are currently engaged on shipping oil to Cuba, apart from a considerable number of chartered vessels. Shipments during the first half of this year seem to have been of the order of 2 million tons, or much the same as in the corresponding period of 1961, though this may possibly be an underestimate.

Next on the list is Japan—where Moscow has entertained hopes of eventually selling 10 million tons of oil a year. The current trade agreement envisages shipments of 3.4 million tons (crude and black oils) this year, and it looks as though this rate will not be significantly exceeded. Negtiations for a new trade agreement between Japan and Russia are to start this month; and the Japanese, who recently booked a $100 million shipbuilding order from the Russians, will doubtless be under pressure to increase their offtake of oil.

Egyptian imports from the Soviet bloc were expected to fall to little more than 1.5 million tons this year in view of the growth of crude oil production at home; and the estimate of 0.7 million for the first half is consistent with this. Soviet shipments (of refined products) to India, on the other hand, are estimated to have increased—and further growth is expected. So far as Brazil is concerned, for reasons that are not clear, shipments from the Soviet bloc appear to have fallen to negligible proportions in the first half of this year.

The standstill in Soviet oil exports revealed in the latest statistics is a new phenomenon. Only the boldest prophet would have predicted such an occurrence six months ago, though we ourselves referred to the growing difficulty of expanding in existing markets and of securing new ones. The question in everyone's mind will be whether the period of dynamic growth has now come to an abrupt end or whether the phase of marking time is the prelude to a fresh advance.

In assessing market prospects, it must be remembered that the Communist bloc is now dependent on six countries—Italy, West Germany, Cuba, Japan, Sweden and Finland, in that order—for three-quarters of its total oil sales. Clearly, developments in these six countries, each of which absorbs over a million tons a year, will decisively influence the future course of the Soviet oil trade. But, in each of the six, with the exception of Japan, the Russians would now appear to have only limited scope for increasing their share of the market.—*By special arrangement with* ***Petroleum Press Service.***

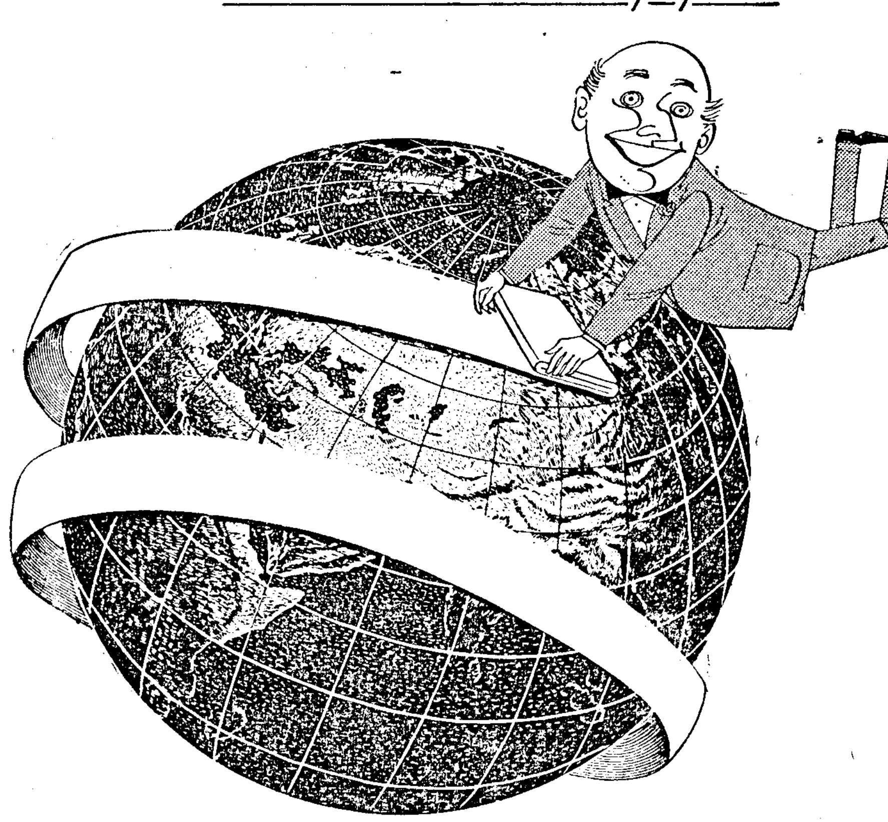
-about twice every year



The BINNY Group of Mills manufactures over 50,000 miles of cloth every year—enough to encircle the world twice at the equator!
From their inception the Madras and Bangalore Mills have unfailingly concentrated on the production of high grade materials so that the name 'BINNY'—synonymous with superior quality and durability—has been carried to the remotest corners of the country. The volume of their production bears ample testimony to the popularity of BINNY fabrics, the fine quality of which has not only created a large and growing following in India but has also succeeded in winning the goodwill of buyers in many countries overseas—sure proof that BINNY fabrics are equal to the best in the world.

Buy your requirements of BINNY fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

JUTE GOODS STOCKS ACCUMULATE

CAUTIOUS ATTITUDE TO MAINTAINING PRODUCTION AT HIGH LEVEL

THE jute mills are somewhat perturbed over the marked increase in stocks of manufactured goods lying unsold with them; the total of these stocks as on 30th September 1962 stood at 92,800 metric tons, as against 80,300 tons three months before and 52,400 tons a year before. In view of the heavy accumulations of stocks and after taking into account the current rate of offtake, the Indian Jute Mills' Association has developed a rather cautious attitude in regard to production. At its meeting held at Calcutta on Friday last week, the I.J.M.A. Committee decided to extend the present maximum level of production by its member-mills only for ten more days after the end of this month; extensions hitherto were being done on monthly basis. The Association has, of course, stated that it will review the position early next month when the October stock figures become available.

The periodic Press notes issued by the I.J.M.A. announcing the extension of the period of maximum production, by the way, are very brief ones, conveying just the decision reached at the meetings and nothing else. Surely, it would help the public a great deal if the I.J.M.A. were to give, in these Press notes, a consolidated statement relating to the trend of production, despatches and stocks of jute goods upto the end of the month preceding the date of the latest meeting. Such a consolidated account is much better than the issue of separate statements at irregular intervals. Otherwise, one has to wait until the publication of the printed *Monthly Summary of Jute and Gunny Statistics* to understand the significance of the Association's decisions. Brevity is no virtue on such occasions.

To resume our analysis of the statistical position of jute industry. The rise in jute goods stocks is particularly marked in the case of sackings, the actual stocks of which towards the close of September amounted to 54,600 tons, as against 38,900 tons in June 1962 and 29,600 tons in September 1961. The table below shows the variations in jute goods stocks position.

(In metric tons)

	30th September 1962	A month ago	A year ago
Hessian cloth and bag	24,500	25,100	15,600
Sacking cloth and bag	54,600	51,500	29,600
Others	13,700	14,100	7,200
Total ..	92,800	90,700	52,400

The marked increase in the stocks of jute goods in recent months has occurred, despite the appreciable improvement in the offtake for both exports and domestic consumption. The quantity of jute goods actually despatched during the first three quarters of 1962 was approximately 857,600 tons, as against 725,400 tons in the corresponding period of last year. But the pace of rise in despatches has been less than that in production which in the first nine months of this year aggregated about 894,800 tons, as compared with 701,300 tons produced in the same period during 1961. On the basis of the figures for the first three quarters, the total production and despatches for the whole of 1962 may be roughly estimated at 1.19 million tons and 1.24 million tons, respectively, the corresponding figures for 1961 being 970,300 tons and 991,200 tons. The month-by-month trend of production and despatches is indicated below.

(In metric tons)

	Production		Despatches	
	1962	1961	1962	1961
January	96,700	87,600	90,800	82,600
February	92,200	78,600	89,900	79,000
March	97,800	88,900	98,200	87,400
April	97,000	80,500	82,300	73,900
May	99,700	79,600	99,000	77,000
June	97,800	67,300	100,900	83,100
July	103,500	64,400	96,700	69,800
August	105,100	78,300	99,900	83,800
September	105,000*	76,100	108,300*	87,000
Total Jan.—Sept. ..	894,800*	701,300	857,600*	725,400
Whole of 1961 ..	970,300	..	991,200	..
Whole of 1960 ..	1,088,142	..	1,058,760	..
Whole of 1959 ..	1,072,530	..	1,118,328	..

* Rough estimates only.

Sacking cloth and bag account for the bulk of jute goods production. The actual output in the first three quarters of 1962 was 428,000 metric tons, as against 349,300 tons in the same period of last year, or a rise of 78,700 tons. Hessian output was also higher at 351,100 tons, as against 250,000 tons. The production of other jute manufactures, too, was higher at 125,700 tons, as against 102,000 tons. The following table shows the actual trend of output, together with equivalent of raw jute consumption, during the first nine months of 1962 and 1961, as well as in the whole of 1961 and 1960.

(In metric tons)

	January-September		Whole of	
	1962*	1961	1961	1960
Hessian	351,100	250,000	355,700	371,900
Sacking	428,000	349,300	483,700	532,700
Others	125,700	102,000	130,900	117,900
Total ..	894,800	701,300	970,300	1,022,500
Equivalent jute consumption (in thousand bales)	5,021	3,935	5,458	5,806

* Rough estimates only.

The year 1962, it may be recalled, began with a lower carryover stock of the previous year, amounting to 55,600 tons, as against the actual opening stocks of 81,500 tons at the beginning of 1961. Since, however, the production of jute goods has registered a notable rise, the supply position is today much more comfortable that in the past two years. The statement below gives the relevant details.

(In metric tons)

	January-September		Whole of	
	1962	1961	1961	1960
Opening stocks ..	55,600	81,500	81,500	58,900
Production	894,800	701,300	970,300	1,088,442
Total supply	950,400	782,800	1,051,800	1,147,342
Closing stocks (end of period)	92,800	52,400	55,600	81,500
Actual offtake ..	857,600	725,400	996,200	1,065,842
Of which—				
Export ..	..	522,100	715,600	790,471
Internal consumption ..	..	203,300	280,600	275,371

Despatches of jute goods in the past few months, as already stated, have been well above those in the corresponding months of 1961, the total despatches during the first three quarters of 1962 being 857,600 tons, as against 725,400 tons. The rise is accounted for by both exports and internal consumption. The aggregate despatches for exports amounted to 636,420 tons, as against 522,100 tons, and those for internal consumption were higher at 221,180 tons, as against 203,300 tons. Details are given below.

	Despatches for exports		Despatches for internal consumption	
	1962	1961	1962	1961
January	63,400	57,300	27,400	25,300
February	62,300	54,500	27,600	24,600
March	66,400	55,800	31,800	31,600
April	54,300	52,700	28,000	21,200
May	66,200	53,700	28,300	24,200
June	81,500	60,800	19,400	22,300
July	76,700	50,800	20,000	19,000
August	79,240*	68,600	20,660*	15,200
September	86,380*	67,900	22,520*	20,000
Total Jan.-Sept.1962	636,420*	522,100	221,180*	203,300
Whole of 1961 ..	713,100	..	278,100	..
Whole of 1960 ..	780,930	..	271,830	..
Whole of 1959 ..	881,586	..	236,742	..

* Rough estimates only.

Despite the upward trend of offtake, the prices of jute goods have drifted downwards, thanks to the highly encouraging supply position, decline in raw jute prices and stiff competition from Pakistan. Sacking B. twills in the Calcutta market are currently quoted at Rs. 115.25 per 100 bags, as against Rs. 130.75 three months before and Rs. 144.50 a year before. Similarly, hessian (40 x 10 oz.) is quoted at Rs. 54.85 per 100 yards, as against Rs. 58.25 and Rs. 55.00, respectively. The prices of raw jute have suffered a setback. The latest available quotation for Assam bottoms is Rs. 30 per maund, the floor price, as compared with Rs. 54.50 prevailing in the middle of June 1961. The decline in raw jute prices must be attributed to the bumper jute and mesta crops harvested in the 1961-62 season ended on 30th June. The total of the crops is placed at 8.0 million bales of 400 lbs. each, as against 5.2 million bales harvested in 1960-61. The enlarged output more than made good the reduction in opening stocks—from 1.65 million bales in 1960-61 to 863,000 bales in 1961-62—as well as in imports—from 413,000 bales to 398,000 bales—

TOOLS TOOLS TOOLS

Machine tools are our business. We import them—we sell them—we service them.

We represent many renowned companies in this field. Here are a few :

MT/9/11

so that the total available supply of jute and mesta in the 1961-62 season was appreciably higher at 9.26 million bales, as against 7.26 million bales in 1960-61. The all-India figures relating to the jute and mesta crops for the past four seasons are given below:

	1961-62	1960-61	1959-60	1958-59
Raw jute :				
Area (000 hectares)	914	612	682	737
Production (000 bales) ..	6,269	3,982	4,605	5,178
Per-hectare yield (bales) ..	6.86	6.51	6.75	7.02
Mesta :				
Area (000 hectares)	385	279	285	334
Production (000 bales) ..	1,705	1,131	1,118	1,488
Per-hectare yield (bales) ..	4.43	4.05	3.92	4.46

One hectare=2.48 acres ; one bale =400 lbs.

It will be seen from the above table that the substantial increase in the production of both raw jute and mesta during 1961-62 followed a significant expansion in area. The per-hectare yield also tended to rise, but it is still much lower than that obtained in East Pakistan, which is by no means a country worthy of comparison in the sense that its agricultural techniques are as backward as those of India or any other developing country in Asia. Even so, a comparison with that neighbouring country will show the extent to which India can raise its per-acre yield of raw jute. The average yield of raw jute per-hectare in East Pakistan in 1961-62 was 8.36 bales; it was actually higher at 9.65 bales in 1959-60. Similar yields can be obtained in India, too, provided a vigorous drive is launched to intensify cultivation. To the extent the yields are raised, the cost of raw jute can be reduced and such a reduction is imperative in the context of enhancing the competitive capacity of Indian jute goods in world markets *vis-a-vis* not merely Pakistan jute goods but also other substitute packing materials such as paper, cotton and plastic bags. Incidentally, increased productivity of jute lands will release a large part of acreage for the cultivation of rice, the production of which is lagging behind the country's growing needs.

RAW JUTE PRICES

The maintenance of the minimum prices for raw jute should present no "insuperable difficulty" according to the Indian Central Jute Committee. For it is said that, irrespective of buffer stock purchases, the jute mills have stepped up their individual buying, particularly of select marks. In fact, all Daisee and high-quality white jute, we are told, is in great demand enjoying a premium of Rs. 2 to Rs. 3 per maund over the minimum prices. To quote the Committee:

"What with floods which delayed harvesting in some areas and insufficient retting water in others, the current jute crop has yielded a limited supply of the higher grades, whereas the sharp increase in world demand for hessian and specialities like carpet backing cloth has led to a corresponding rise in the requirement of quality fibre. The position in this respect is no better in Pakistan. So the prospects of supplementing what is available locally with imports from that source are highly uncertain. This may be the reason why every offer of Daisee and middle grades of white jute is snapped up in no time."

In the opinion of the Committee, it is the average quality jute, usually constituting the bulk of a season's production, that may need support. Even here, it is said, the supply-demand position may ultimately tilt the balance in favour of the grower. The glut of offerings during August and September is no true indicator of the season's output. The preliminary estimate of the Pakistan crop places the output anywhere between 5.5 million bales and 6 million bales. The trade estimate of Indian jute and mesta crops is not much higher either. Provided the world demand for sacking goods, in which the Indian stocks have been accumulating for the last four months, picks up during the remainder of this year, it is considered quite possible that heavy mill consumption would take care of the entire marketable surplus from the current jute crop.

EXPORT OF WOOLLEN GOODS

A revised export promotion scheme for woollen goods has been announced. This scheme will cover all woollen textiles and woollen goods, including woollen worsted yarn, fabrics and woollen shoddy yarn, fabrics, woollen hosiery, woollen yarn, woollen shawls, woollen blankets, woollen garments and all other woollen goods as may be notified and included in this scheme by the Textile Commissioner, but will not include woollen carpets, woollen rugs and woollen druggets which are covered by a separate export promotion scheme.

The principal features of this scheme are: (1) The manufacturer-exporters as well as merchant exporters are eligible to receive import entitlements covered under the scheme; (2) the import entitlements have been increased from 85 per cent of the f.o.b. value to 100 per cent of the f.o.b. value. The entitlements will cover import of machinery, dyes and chemicals, embellishments, man-made fibre tow, raw wool/wool tops, shoddy wool, wool waste or rags in the proportion specified in the scheme.

It has also been decided to constitute an Export Promotion Panel with Mr. I. B. Dutt, Industrial Adviser (Textile Production) and ex-officio Joint Textile Commissioner to the Government of India, as Chairman to advise the Textile Commissioner in regard to the working of the scheme of export promotion of woollen textiles and woollen goods excepting woollen carpets, woollen rugs and woollen druggets.

4¾ PER CENT

WEST BENGAL STATE ELECTRICITY BOARD BONDS, 1972

(Second Series)

For Rs. 150 Lakhs

(Payment of Interest and Repayment of Principal Guaranteed by the Government of West Bengal)

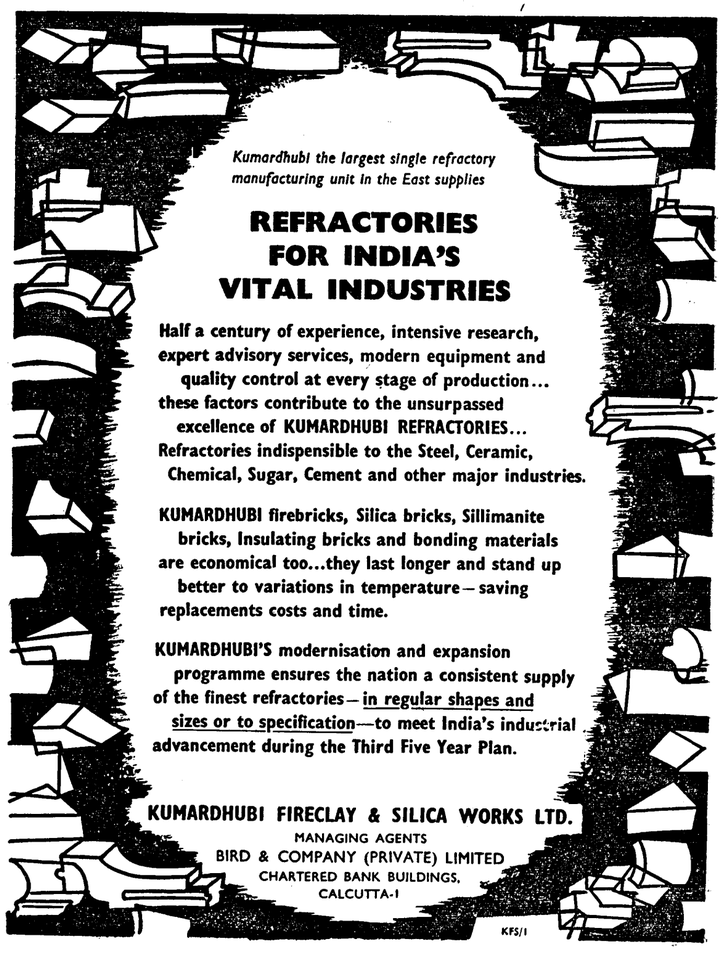
The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE RS. 99.75 PER CENT

REDEEMABLE AT PAR ON THE 27th OCTOBER 1972.

SUBSCRIPTIONS will be received in cash or cheques. Applications will be received at the head offices of State Bank of India at Calcutta, Bombay, New Delhi and Madras from 22nd October, 1962 to 26th October, 1962 both days inclusive. But the list may be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices mentioned above and at the Head Office of the State Electricity Board, 1, Hastings Street (7th floor), Calcutta-1.



Kumardhubi the largest single refractory manufacturing unit in the East supplies

REFRACTORIES FOR INDIA'S VITAL INDUSTRIES

Half a century of experience, intensive research, expert advisory services, modern equipment and quality control at every stage of production... these factors contribute to the unsurpassed excellence of KUMARDHUBI REFRACTORIES... Refractories indispensible to the Steel, Ceramic, Chemical, Sugar, Cement and other major industries.

KUMARDHUBI firebricks, Silica bricks, Sillimanite bricks, Insulating bricks and bonding materials are economical too...they last longer and stand up better to variations in temperature—saving replacements costs and time.

KUMARDHUBI'S modernisation and expansion programme ensures the nation a consistent supply of the finest refractories—in regular shapes and sizes or to specification—to meet India's industrial advancement during the Third Five Year Plan.

WASTE PRODUCT UTILISATION

SYSTEMATIC STUDY AND EXPLORATION NEEDED

By Shivaji

THE Stanford Institute of Research in California drew a distinction between a rich and a poor country by pointing out that the former utilised its wastes while the latter wasted its riches. The idea of waste product utilisation has caught on in India and has drawn men of enterprise who have been quick to realise the great scope in this field.

Not much, however, is known of the efforts in this direction by isolated individuals or entrepreneurs in India. In Madras, leather cuttings and shavings which, until two or three years ago, were being either thrown away or were collected by pavement cobblers and shoemakers, are now fetching a handsome price of Rs. 175 per ton, thanks to the enterprise of The India Leather Corporation who make leather boards out of them. Their leather-board factory in Madras is said to be the only one of its kind in Asia and turns out 500 tons of leather board a year at a price of Rs. 1,000 per ton. Another firm, Messrs. T. H. Gangappa and Sons, who have been waste paper merchants for several years, have put up a plant for the manufacture of cardboards, with a daily capacity of five tons, the raw material used being waste paper. They have also plans for making strawboards out of paddy straw by installing a plant with a capacity of 10 tons per day, at a capital cost of Rs. 50 lakhs. The Madras Rubber Factory has installed modern equipment in their factory for the collection of the finely powered carbon black dust settling on the shop-floor during the manufacturing operations and the small rubber cuttings from the crevices of machinery for further utilisation as emergency tyre patches. A small operator is putting through plans for the utilisation of vulcanised rubber scrap for making a number of items like scooter and motor cycle foot-rests, window channels, bushes, etc. The factory's capacity amounts to six tons per day.

A petroleum technologist is currently sponsoring a new company, The Guardian Oil and Refining Corporation of India, for the manufacture of lubricating oil and petrol from waste oil and rubber wastes at a capital cost of Rs. 15 lakhs. The sources of his raw material are the State Transport departments, railway workshops, aviation depots, and other industrial establishments in the private sector. The estimated monthly production of finished lubricating oil obtained from waste oil is 25,000 gallons, while that of petrol recovered from waste rubber is 10,000 gallons.

Research

Apart from these projects and schemes that are taking and have taken shape, the few research institutions functioning in the country have published papers on waste product utilisation. The Central Leather Research Institute at Madras, for instance, has published a paper on the processes for the preparation of glue and gelatine from cattle bones and vegetable tanned (E.I.) leather wastes. Writing about the problem of effluent disposal in small paper mills, an expert estimated that the volume of small paper mill effluent in the whole country amounting to 50,000 to 100,000 gallons a day was a hazard to health as the effluents were being discharged into rivers. These could be disposed of by sedimentation and eventual utilisation as land-fill. If the percentage of fibre in the effluent is high, it could be reclaimed by the paper mill.

The Central Food Technological Research Institute in Mysore published a paper on the recovery of ginger oil from fresh ginger scrapings thrown away by manufacturers through steam distillation. The percentage of recovery ranged from 0.2 to 0.5; ginger oil is used as a flavouring agent in soft drinks, bitters, carbonated drinks, etc. The recovery of paint waste from spray-painting was described in another isolated bulletin, the method indicated being the flushing of the backside of the spray-painted article with water which would carry the unused paint droplets into a pit.

The British Iron and Steel Research Association has developed a pilot-scale plant for the recovery of waste sulphuric acid used for pickling steel sheets before tinning. A Press report stated that the British Egg Marketing Board had devised a process for the pulverising and drying of empty egg-shells and the production of a powder which could be used by the cosmetics industry and also as a base product for the plastics industry. In Europe, the powdered shells are used to remedy calcium deficiencies.

Dictionary Being Compiled

An extensive study of waste product utilisation and the beginnings and achievements in the country would bring to light several other projects, programmes and processes of the kind described above, apart from revealing much unsuspected talent and ingenuity. One does not, fortunately, have to search far for an appropriate entity to take up this work. The Council of Scientific and Industrial Research has interested itself in the problems of industrial waste treatment in India and has already the nucleus of an organisation to conduct studies and researches on this subject. The study is bound to throw up ideas as it proceeds. The investigator would have to make a beginning with the wastes and effluents of every industry, determine their volume before considering the processes that are available or could be evolved for their recovery and subsequent use. The data that are at present available are sparse and scattered. Official compilation of industries lists a little over twenty of them in the whole country, ranging from textiles, iron and steel, metal industries, cement and ceramics to bicycles. Information relating to waste products is available only with regard to a few of them, namely, ferrous and non-ferrous scrap, textile wastes including blow-room and card-room wastes, droppings and sweepings. The extensive field work that would be necessary could usefully cover auctioneers for Government and private parties dealing in a variety of scrap and waste products. The Scrap and Waste Utilisers' Association in Madras is compiling a dictionary of waste products in every industry and hope to complete the same next year. They estimate that the number of items would be in the region of 600, though one suspects that this is an underestimate.

The study should be able not merely to arrive at the size of investment called for, for the reclamation of waste products in every industry, but also the commercial feasibility of such undertakings. One might discover the need to retain a proper sense of proportion and to guard against hasty ventures on projects seemingly attractive; these might yield products far too unsatisfying with regard to both quality and durability to merit all the efforts that had gone into their reclamation as well as the further ingenuity called for further reclamation. In this, as in other matters, there could be no substitute for experience.

Government Co-operation Needed

The projected study might well point to the merits of individual efforts in the matter of waste product recovery. Mr. R. Venkataraman, the Madras Minister for Industries, who is almost missionary in his zeal for waste product utilisation, disapproved of all talk of co-ordination of activities in this regard, especially if it envisaged the participation of Government departments. He was sufficiently familiar with such well-meant efforts coming to naught because of the traditional lack of initiative and promptness on the part of officials to work successfully any agency that might be set up to secure co-ordination. It is, however, difficult to see how one could avoid having to reckon with Government departments in matters of waste product utilisation schemes. This was well illustrated by the predicament in which a reputed firm of foam rubber manufacturers in Madras found itself. The firm deputed a technician to Japan to study the processes of recovering foam rubber waste for the manufacture of cheap bicycle and scooter cushions. But, on his return, the technician and the firm were dismayed when the Central Excise Department intervened and said that they could not utilise the waste product, namely, rubber, without paying an excise duty of Rs. 1.25 per kilogramme, which rendered the whole project uneconomical. Representations have been made by the firm to the department against the levy and for redress. One quickly discovers that simple matters throw up questions of policy and it is upto industry to strive for greater official resilience in taking or modifying decisions, however frustrating the experence of industry might have been in the past in this respect.

Co-ordination

While there is much to be said for individual initiative, there would seem to be no virtue in isolation with regard to waste product utilisation. In many cases, it might be feasible for the main unit to operate the waste utilisation schemes, but, in some cases, these would have to be taken up by separate units, especially if the waste products are to be collected from different units in the industry. As the schemes of waste utilisation make some progress, a certain pattern is likely to emerge between the main units and the waste product auxiliaries and the best methods of organisation could be ensured only through co-ordination at the appropriate levels.

The progress of waste utilisation schemes would develop the need for research establishments for the evolution and testing of new processes and it would become necessary for the concerned industries to think in terms of putting up such establishments. The Government could help by strengthening the staff in the institutes already functioning and the expansion of their activities or through the putting up of additional institutes. Co-ordination at this level also will be necessary and helpful.

As waste product utilisation gains momentum, it is likely that some of the waste materials now being exported, as, for instance, ferrous and non-ferrous scrap as well as textile wastes, would be increasingly in demand in the country. The Government of India has already decided to ban the export of heavy melting scrap and No. 1 sheet cuttings. Similar action would have to be taken in respect of other items in the future, and these steps would necessitate high level co-ordination if wise policies are to be evolved. The Government would also have to decide in a few cases on the issue of import licences for machinery and approval of collaboration ventures for waste product utilisation and the decisions would have to be based on the soundness of the schemes themselves. This would presuppose detailed knowledge on the part of the authorities that could be ensured only by eliciting the co-operation of industry.

CONGRATULATIONS TO ALL CONCERNED

GOOD NEWS

The new well has struck oil. The collection tanks on the site are getting full, and the management have sent their congratulations to the drillers. Now the problems are to estimate the probable size of the field and determine the rate at which it will be practicable to extract the oil. The first well by itself will not give the answers, so a number of outstep wells must be drilled to find how far the oil bearing rocks extend to the North, South, East and West of the discovery. Then the thickness of the productive zone must be measured, and tests made to see whether there are deeper oil deposits besides those discovered in the initial test well.

Although every oil strike is good news, a great deal of drilling, testing and scientific evaluation is required before the real importance of the discovery can be assessed.

REFORM OF BRITISH COMPANY LAW—I

JENKINS COMMITTEE REPORT EXAMINED AGAINST INDIAN BACKGROUND

By A Special Correspondent

THE publication of the Report of the Jenkins Committee on Company Law, which was set up in December 1959, in the United Kingdom "at a time when there was a good deal of public uneasiness both about the inadequacy of law to protect the investors and about the social implications of take-over bids," has been an event of considerable importance for the U.K. as well as for India. The significance of the Report for the U.K. lies in the fact that "it sets the stage for another step in the evolution of twentieth century Company Law" in that country. As for India, it is likely to prove a helpful guide in many matters as the earlier reports of the Greene and Cohen Committees had been in connection with the reform of Company Law in this country. To the extent the Indian Company Law still closely resembles the English Company Law, the reports on Company Law that are published in the U.K. become an object of direct relevance to this country.

The Jenkins Committee Report, which was published along with two other reports, namely, the Pilkington Committee Report on Television and the Molony Committee Report on Consumer Protection last summer in the U.K., blazed the headlines in the daily and financial press and dominated the discussions in public life in the U.K. It is a big-sized report, produced after two and half years' labour, and at the cost of about £32,000 to the British Exchequer. It contains some 334 recommendations, a few of which, it is suggested, being very important in character, should be given retrospective effect from the date of the publication of the Report, that is, the 21st June 1962.

Terms of Reference

The terms of reference given to the Committee were "to review and report upon the provisions and working of the Companies Act, 1948, the Prevention of Fraud (Investments) Act, 1958, except in so far as it relates to industrial and provident societies and building societies, and the Registration of Business Names Act, 1916, as amended; to consider, in the light of modern conditions and practices, including the practice of take-over bids, what should be the duties of directors and the rights of shareholders; and, generally, to recommend what changes in the law are desirable." In comparison to the terms of reference given to its predecessor body, namely, the Cohen Committee, which was asked "to consider and report what major amendments are desirable in the Companies Act, 1929, and in particular to review the requirements prescribed in regard to the formation and affairs of companies and the safeguards afforded for investors and for the public interest," the Jenkins Committee's assignment was limited in nature. But the "evidence presented to the Committee soon made it clear in abundant measure that eleven years of active financial development left the law behind at many points" and to some extent the Committee tried to review these new developments and make appropriate recommendations, rather than merely recommend the plugging of loopholes and the correction of ambiguities of drafting in the law.

A similar development took place in our country as well in 1957, when the Sastri Committee was appointed to consider "what amendments in the Acts are necessary to overcome such practical difficulties in its working as may have been encountered since it came into force, to remove such drafting obscurities as may have interfered with the working of the Act and to ensure the better fulfilment of the purposes underlying the Act and to consider what changes in the form or structure of the Act, if any, are necessary or desirable to simplify it." The Sastri Committee's terms of reference were somewhat wide and general and the result of this was that certain far-reaching changes came to be made in the Indian Company Law of 1956 in 1960 which placed our law in many more respects ahead of the British Law. In fact, the Indian Company Law of 1956, though modelled in a large measure after the British Company Law of 1948 according to the almost century-old tradition and practice of making the Indian Law a shadow of the British Law, had already registered notable advances of germinal significance over the British Company Law under the impact of socio-economic forces at play in the country and that of the directive principles of the Constitution. In this series of articles it is proposed to make an analytical study of the recommendations of the Jenkins Committee to show how far the Company Law and the Administration in our country are ahead of the position in the U.K. as might result even after the implementation of the suggestions of the Jenkins Committee.

Great Disappointment

Before coming to a discussion of the details, it may be mentioned here that, being dyed in the conservative hue, the Jenkins Committee Report has proved a great disappointment to progressive opinion in the U.K. Even conservative opinion and the liberal school in the U.K. have somewhat been disappointed and found themselves in agreement in several important matters with the authors of the two notes of dissent appended to the Report. Commenting on the Report, the London *Economist* said that "it is too concerned with improving and tidying up and too little concerned with radical reforms in British Company Law." The Report, it further said, "will not rank as a major reformist document but neither is it a smug acceptance of the 1948 Companies Act. This, then is emphatically a technician's report seeking to strengthen a system that is of proven value unobsessed by controls and regulations that would hobble honest men in order to bring down an occasional scoundrel and weighing an apparatus of prevention against the risk of abuse it is supposed to counter." The *Economist* has complimented the Committee with having a meticulous job well done but "undramatically done as most good craftsmanship is done. It will give a useful push, tempered with a slight edge of caution, towards company law reform, bringing the well established code more up-to-date."

Perhaps the London *Economist's* reaction is the most generous of all other comments made by the Press and financial commentators in the U.K. By and large, there has been widespread dissatisfaction over the Committee's verdicts on non-voting shares, exemptions to banks and discount houses and turnover figures, which have been pointed out by some experts as the "most conspicuous timidities" of the Report. "Taurus" of the *New Statesman* criticised the Report for having failed to bring up-to-date the legal concept of a company, as certainly no one will read the Jenkins Committee Report to find out what the place of a company in modern society ought to be. The London *Observer's* commentator on financial matters regarded the Jenkins Report "a lost opportunity" and felt that "the whole document breathes a veneration for conventional ways and established city institutions which remind one of the Parker Tribunal on the Bank Rate rather than the critical and analytical Radcliffe Report." However, notwithstanding the general failure of the Report to suggest radical reforms, the Report constitutes an important milestone in the evolution of company law worthy of attention in this country as well. More than the main body of the Report, the suggestions made in the two dissenting notes fit in with the prevailing trends of opinion on the control of affairs and working of the corporate sector in this country which require more radical approaches and solutions.

General Observations

It would be pertinent to recall here some of the general observations made in the Report on the existing company law in the U.K. At the outset, the Jenkins Committee has defended the voluminous size of the Companies Act, for which the Companies Act in our country has also been assailed. Commenting on the size of the English Companies Act, the Report says, "we would gladly see a reduction in this unwieldy mass of legislation but have not found it possible to make suggestions contributing to that end to more than a very limited extent." Further, it says that "this elaboration of the law can, generally speaking, be fairly justified as having been found necessary, in order to keep effective control over the growing and changing uses of the company system as an instrument of business and finance and the possibilities of abuse inherent in that system. It would be wrong in principle to disturb in any important respect longstanding provisions designed to serve these ends, unless they have clearly outlived their usefulness or are demonstrably objectionable on other grounds. It, therefore, appears unlikely that the dimensions of any new Act (after allowing for our own recommendations so far as adopted) will in the end prove substantially less than those of the Act of 1948." These observations broadly correspond to those made in the Sastri Committee Report which said that, "under our terms of reference, we have been asked to consider what changes in the form or structure of the Act are necessary or desirable to simplify it," but, after due regard to the inordinate length, the complexity of the structure of the Companies Act, etc., which caused considerable hardship to the business community and others concerned with this law, "the balance of convenience and advantage was found to lie in retaining the scheme and arrangement of the present Act."

Three Other Points

Besides this, the Jenkins Committee has made three other general observations of great significance. First, it says that "we cannot, however, accept the view that the Act of 1948 has left no room for further improvements of substance in the law as it now stands. This is not a field of legislation in which finality is to be expected. The law here falls to be applied to a growing and changing subject matter, and the number and variety of the suggestions submitted by our witnesses clearly show that there are many questions of sufficient importance to merit legislative attention, left unresolved by the Act of 1948, or arising out of its provisions, or out of events occurring since it was passed."

Secondly, the Report says that "it is no doubt necessary for the protection of shareholders, creditors and intending investors that the activities of companies and those responsible for their management should be subject to a considerable degree of statutory regulation and control. But controls and regulations carried to excess may defeat their own objects; and we share the views expressed by the Greene and Cohen Committees as to the undesirability of imposing restrictions which would seriously hamper the activities of honest men in order to defeat an occasional wrong-doer, and the importance of not placing unreasonable fetters upon business which is conducted in an efficient and honest manner."

Thirdly, the Report mentions that, "it may be theoretically desirable that shareholders should have a more effective voice in the management of their company's business, of which they are the ultimate proprietors. As against this, no company's affairs can be managed properly or indeed managed at all, otherwise than through a board of directors with a reasonably free hand to do what they think best in the interests of the company. The risk (which must not be exaggerated) that dishonest directors may abuse the trust reposed in them must be accepted, if business is to go on."

Law Cannot be Static

From the evidence available in our own country, it has been observed that the Government of India also believes that the Company Law could not be a static law in a fast moving age marked with rapid industrial development, in which an increasingly large number of big corporate bodies with vast capital bases and sprawling networks precipitate new problems and situations which have to be solved in the light of the socio-economic objectives defined in the basic documents of State Policy. But, while there is an agreement with the Jenkins Committee on the dynamic approach to Company Law, the Government in India does not seem to share their other viewpoints that corporate bodies and their managements should not be subjected to any great degree of statutory regulation and control and that the board of directors should be given a reasonably free hand and the risk of abuse of positions by dishonest directors should be accepted. The Indian Company Law and the Department of Company Law Administration in our country, with the grim background of gross anti-social practices and business methods resorted to by many in the corporate sphere for nearly fifteen years beginning with World War II, aim at having "greater control over the formation and management of joint-stock companies" and promoting and developing "a sense of fiduciary responsibility" among the company directors through legal compulsions. It must be stressed here that company legislation and Administrative actions are impelled by quite different considerations in the two countries. Both the Cohen and Jenkins Committees in the U.K. felt that "the great majority of limited companies, both public and private, are honest and conscientiously managed" and that Company Law in that country had on the whole worked well in practice over the years and that it had required amendments only in certain parts leaving the basic structure unchanged. As a result, changes of major importance were kept to the minimum.

As against this picture in the U.K., the Company Law in India had been found in 1952 by the Bhabha Committee to have become a "blunt weapon" to deal with the corporate abuses and required to be strengthened very considerably in order to raise the standard of good behaviour and business honesty in company promotion and management to a minimum level, to develop a due recognition of the legitimate interests of the shareholders and creditors and of the duty of the management not to prejudice or jeopardise those interests, and to prevent the diversion of companies' funds for purposes that thwarted national economic policies or economic objectives, etc. Further, apart from the historical background of the practical experience of the working of the Company Law in the two countries, another important point to note is that, while in the U.K. the Companies Act is essentially regarded as a law that treats companies as private bodies and does not seek to control their affairs as that of social institutions, in India, the regulation of private interests of the shareholders and creditors is directed towards furtherance of the socio-economic policies of the State.

Major Recommendations

With this much on the general tenor of the Jenkins Committee Report, we may now look into the major recommendations of the Report which comprises fifteen chapters. The analytical study of the Report in these articles is done under five broad sections, namely, (*a*) formation and classification of companies and related matters, (*b*) duties and responsibilities of directors, (*c*) protection of investors and minority interests, (*d*) annual accounts and audit and financial matters, and (*e*) miscellaneous matters.

To take section (*a*) first. Important issues connected with the formation of companies and related matters on which the Committee gave its decisions are the formation of "irresponsible companies," exempt private companies, subsidiary companies, objects clause and the doctrine of *ultra vires*, no par value shares, non-voting shares and the prospectus provisions in the Act.

Formation of Irresponsible Companies

The U.K. Board of Trade, in its evidence before the Committee, referred to the bad consequences arising out of the formation of "irresponsible multiplication of companies, particularly of one-man companies." The Committee found itself in agreement with the Board of Trade that there were dangers of abuse through the incorporation of very small undercapitalised units of business with limited liability and that incorporation was frequently used as a cheap means of protecting a name and for various other purposes than for carrying on an undertaking or business in association with others. It felt that, in so far as such proliferation of very small companies can and does lead to abuse and gives rise to ever-increasing administrative difficulties, "it should, if possible, be checked without making it unduly difficult for genuine small businesses to incorporate with limited liability." To check the spate of irresponsible incorporations, the Committee recommended that every company should have at least two directors and that the first two subscribers to the Memorandum of Association of a company incorporated after its entry into force should be deemed to be directors, unless and until the company notifies to the Registrar names of at least two directors. Another additional suggestion put forward before the Committee to check the formation of companies with an under-capitalised base, which was a major cause of business failures, was that a statutory minimum capital, paid-up in cash, should be laid down in the Act. The Committee favoured the suggestion in principle but came to the conclusion that its purpose would be too easy to evade, as "it would be difficult, if not impossible, to prevent a company, once formed with a statutory minimum of cash from returning the cash to the promoters either in exchange for assets, such as goodwill, or by way of loan or in some other way."

Thus, the Committee by suggesting a minimum of two persons for company boards has tried to remedy the position created by the provisions of Section 176 of the English Companies Act which permitted private companies and the public companies incorporated before the 1st November 1929 to have one director only. In this respect, India has been far ahead of Britain. Thus, the provisions of Section 252 of our Companies Act, 1956, prohibit what the Jenkins Committee proposes to do now. The provisions of the aforesaid section in our Act compulsorily prescribe a minimum of three directors for public companies and two directors for private companies.

But, notwithstanding the fact that the Indian Companies Act prohibits the formation of one-man companies, and that the number of private companies is comparatively very small in our country being below 20,000, a very large number of them are every year either struck off the register under Section 560 of the Act or go into liquidation and, in the total death-roll of companies, many are such companies which have barely existed for three to five years. Thus, there is a case and need for checking mushroom growth of private companies and, for this, the Jenkins Committee's recommendation that there should be an initial minimum registration fee could usefully be given effect to in our country. As at present, a company with a nominal share capital below Rs. 20,000 in our country can be formed after paying a registration fee of Rs. 100, whereas the minimum fee prescribed under Schedule XII to the English Companies Act is £2 for companies with a nominal capital below £2,000. This fee, according to the Jenkins Committee, should be raised to, say, £25, that is to about Rs. 325 in our currency. Thus, although the present minimum fee leviable on a company floated with a nominal capital below Rs. 20,000 is higher in our country than that in the U.K., there is good ground to raise it sufficiently high to check irresponsible growth of corporate bodies which spoil the image of companies in the eyes of the public and add much avoidable strain on the already overstrained administrative machinery of the Government.

The class of exempt private companies came into existence in the U.K. under the Companies Act, 1948, as the brainchild of the Cohen Committee which wanted to save the small family business from disclosing its affairs to the public. These companies, under the provisions of Section 129(4) and of the Seventh Schedule to the English Companies Act, 1948, are not only exempted from the requirement as to the filing of accounts but also are not required to appoint a qualified accountant as auditor who could even be a partner or officer of the company. They are also not subject to the provisions of Section 190 of the Act which prohibit a company from making loans to its directors. A vast majority of the private company came to claim the status of "exempt private company" of which some were "not very small in membership or in capital or in the extent of their undertakings." This was regarded as objectionable by the Committee who recommended the abolition of such companies. To save embarrassment to the members of a small family business which is likely to be caused by the publication in the accounts of such information as directors' emoluments, company turnover and rent, the Committee, however, has suggested that these should not be required to be disclosed in the filed accounts of companies whose securities have neither been quoted nor offered to the public. This decision regarding the abolition of exempt private companies was a natural corollary to the acceptance of the broad principle by the Committee that "disclosure is right in principle and necessary to protect those who trade with and extend credit to limited companies."

While abolishing the class of exempt private companies, the Committee has also recommended the dropping of the distinction between public and private companies in regard to the application of the provisions of Section 48(3) (filing of a statement in lieu of prospectus), Section 109 (restrictions on commencement of business), Section 130 (statutory meeting and report) and Section 181 (restrictions on appointment of directors). It came to be noticed that many a promoter had a company incorporated first as a private company and converted it later into a public company and
