thus avoided the requirements of law in connection with the formation of a public company straightaway. Thus, according to the Committee's recommendations, there should be only one class of companies with certain concessions made available to companies "whose securities have been neither quoted nor offered to the public and which are not subsidiaries of companies whose securities have been quoted or offered to the public." These are referred to as "unquoted companies" in the Report and it is suggested that they should not be compelled to disclose directors' emoluments, turnover and rent in the filed accounts. The Committee has, however, added that this information should be given in the accounts of those companies which are circulated to members and debenture-holders.

Under the Indian Companies Act, the class of exempt private companies is non-existent. On the contrary, the law treats certain categories of private companies as public companies for purposes of operation of many sections of the Act. Two such categories of private companies are the private companies which are the subsidiaries of public companies and those which, under the provisions of new Section 43A inserted in the substantive Act in 1960, have become "deemed public companies." Besides this, after the passing of the Amendment Act in 1960, private companies are required to file both their balance-sheet and profit and loss account under the provisions of Section 220, though the latter account is not to be made available for inspection to the public. Further, in contrast to the position at present existing in the U.K. that the requirements of filing a statement in lieu of prospectus as required under Section 48(3) can be avoided by forming a company first as a private company and then converting it into a public company, in India, under the provisions of Section 44, a prospectus or statement in lieu of prospectus is required to be compulsorily filed by a private company on ceasing to be so. Thus, under the Indian Law, technical avoidance of obligations cast on a public company in regard to the issue of prospectus cannot be got over.

Subsidiary Companies

Section 154 of the English Companies Act, like Section 4 of the Indian Companies Act, lays down two broad criteria for a subsidiary company, namely, (*a*) membership of the company and control over its board of directors, and (*b*) majority ownership of equity share capital. The presence of non-voting and restricted voting equity shares sometimes creates an anomalous situation where criterion (*b*) is applicable. In such cases, the possibility has increased that a company might own a majority of the equity shares of another company without controlling the composition of its board of directors. To check this situation, the Committee has recommended the dropping of the second criterion laid down in Section 154(1) (*a*) (ii), with the result that, in future, the definition of a subsidiary is to be based solely on membership and control. This revision, however, in the absence of voteless equity shares, is not called for in our country.

Objects Clause and the Doctrine of "Ultra Vires"

The Jenkins Committee examined the doctrine of *ultra vires*, namely, that a company has only limited objects as stated in its Memorandum of Association and cannot enter into contracts as freely as an individual, and came to the conclusion that it was better to leave the *ultra vires* rule standing but that it should be modified in favour of third parties who innocently contracted with the company in good faith. In entering into a contract with the company, the third party should be entitled to assume without investigation that the company, in fact, possessed the necessary power and further that the party should not be deprived of his right to enforce the contract on the ground that he had actual knowledge of the contents of the Memorandum and Articles at the time of entering into the contract if he honestly and reasonably failed to appreciate that they had the effect of precluding the company or any director or other person on its behalf from entering into the contract in question.

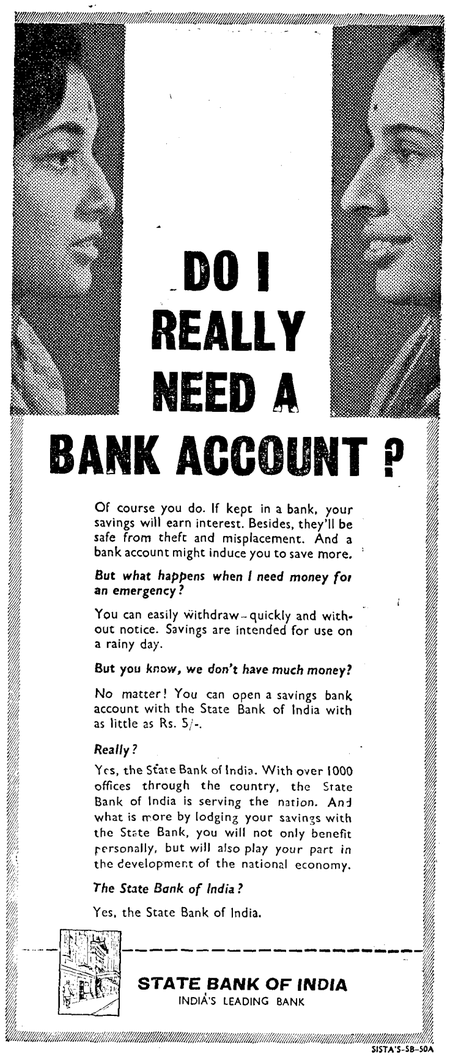
Apart from making the aforesaid recommendation on the *ultra vires* doctrine, the Committee felt that the objects clause in the Memorandum of Association, of which bulk of the provisions "appear to be powers," made this document unduly lengthy and suggested that "the Act should be amended to provide that every company should have certain 'common form' powers which would apply automatically to every company, unless excluded or modified." This would lead to some simplification of Memorandum. The Committee further suggested that the Act should make it clear that the powers listed in this way "should be merely ancillary powers exercisable in the course of carrying on a company's business and not specific objects."

Further, in connection with the objects clause, the Committee found fault with the existing provisions of sub-sections (2) and (3) of Section 5 which provide that an application should be made to the Court by the holders of not less than 15 per cent of nominal value of the company's issued share capital or if not limited by shares, 15 per cent of the members to cancel any such alteration and that the application must be made within 21 days of the passing of the resolution under Section 5(10) and if no such application is made within the stated time, under sub-section (9) of that section, the alteration is to hold good whether or not justified by the limited purposes set out in sub-section (1). To the Committee it appeared to be "unsatisfactory that alterations not falling within the authorised cases should be capable of being validated merely by the circumstances that no one has challenged their validity within the period of 21 days" and, therefore, it thought that "it would be better to do away with the list of authorised alterations altogether, and substitute for it, in Section 5(1), a general power of alteration by abandoning or restricting any existing object or by adopting any new object which could lawfully have been included in the objects clause of the company's Memorandum as originally registered."

In India, the doctrine of *ultra vires* holds the field with the same force as in the U.K. The judicial decisions in this country run on the same lines as in those in the U.K. Thus, the suggestions made by the Jenkins Committee on this subject would be found to be new in this country as well. Similarly, as in the U.K., the objects clause in the Memorandum of Association of companies in almost all cases is a lengthy one containing both the objects and powers merged and fused together and, therefore, the Committee's suggestion of separating the two elements from the Memorandum would be a new innovation for this country also.

As regards the alterations in the objects clause of the Memorandum, the requirements of the Indian Companies Act as laid down in Section 17 are radically different from those of the English Act. In fact, the provisions of our Act may be regarded as progressive. In contrast to the position under the Companies Act in the U.K., the distinctive features of the relevant section in the Indian Act are that (*a*) a petition has to be compulsorily moved in the Court for the alteration by the company which is not required under the English Act, (*b*) the company has to give sufficient notice to the debenture-holders and to every other person or class of persons whose interest will, in the opinion of the Court, be affected by the alteration and also to every creditor who in the Court's view is entitled to object to the alteration, etc., and (*c*) the Registrar of Companies is to be given a reasonable opportunity to appear before the Court to state his objections and suggestions with respect to the confirmation of the alteration. The Registrar is to be given a notice of the petition for confirmation under sub-section (4) of Section 17. Thus, in our country, the provisions of law offer a stronger line of protection to shareholders and

(*Continued on page 698*)



NEW PRODUCTS AND PROCESSES

New Telephone Switching Device

TO save office workers the trouble of leaving their desks to answer the telephone on a far-off desk, the Fuji Communications Apparatus Manufacturing Company of Japan recently perfected a new telephone device in which five telephones can be switched at will. Dubbed 'Fuji Color Call,' this "miniature switchboard" makes it possible to switch the line to any of five telephones by just a flick of the button. Each device is furnished with five buttons and lamps in five different colours which blink when some of the five telephones are engaged. Three sets of 'Fuji Color Call' can be attached to one telephane at the maximum, enabling the user to connect 15 telephones. The Company envisages the manufacture of as many as 5,000 units of the device per year. 'Fuji Color Call' is priced at 9,000 yen per unit.

Easy Handling of Heavy Tools

Handling of heavy dies and press tools is made easier and safer by using a machine developed by Winhall and Rogers, of 3, Sherwood Park Road, Sutton, Surrey, England. Enabling one man to handle large tools it allows adjustments to be made and trial impressions to be taken during the final stages of manufacture. For some operations the top half of the tool can be clamped to the machine's top platen and the bottom half to clamping bars of the bottom platen. The two halves can then be parted by lowering the bottom platen by motor or hand. After the bottom half of the tool has been lowered into the base of the handler the top half can be turned through 360 degrees by means of the hand-operated worm gear, giving access to the underside of the top tool and enabling it to be set at an angle for machining or handworking purposes. Alternatively, the whole head of the handler can be swung to the rear giving clear access to both top and bottom halves of the press tool. The bottom half can then be raised to a suitable working height.

Moulding Presses

A new range of compression and transfer moulding presses has been introduced by a Cheshire firm, Fawcett Preston and Co. With capacities of 50, 75, 100 or 150 tons, the presses are suitable for either semi-automatic or hand control. They are of down-stroking column type with double-acting main ram assemblies and have precision piston ring sealing to cut down maintenance. The main features of the range are ease of semi-automatic cycle adjustment, accuracy and reliability of cycle reproduction and rapid ram speed.

Electronic Machine Tool for Drilling

A machine tool for drilling and reaming tube plates used in heat exchangers, condensers and boilers, now fitted with electronic control, eliminates marking-out procedures generally associated with a radial drill. The drill, which is operated by analogue positional control equipment, has a bed on which moves a flat work-table in the direction of the "x" axis. A bridge is set transversely over the work-table at 90° to the direction of travel. This is the "y" axis. Along the bridge moves a motorised drilling head with its spindle feeding downwards. A total drilling area of 72 in. x 72 in. (1.82 x 1.82 m.) can be covered by the drilling spindle, and holes can be drilled in any position by co-ordinate settings of the two movements. The control tape is coded on a keyboard-operated teleprinter.

Collapsible Bicycle

A collapsible bicycle developed by an Austrian enterprise can be disassembled in a few minutes into four parts and stored away in a passenger car, forwarded by mail in a box or kept even in the smallest flat. The cycle for which patents have been applied for, consists of an Austrian-made high-quality tubular-steel frame of an entirely new design. The unimpeded mounting and the saddle and handle-bars easily adjustable to the required height by means of lever controlled clamp collars make the cycle equally useful to adults, juveniles and children. Near the pedal support the frame has hinges in its front and rear parts. The hinges cause the 2 parts of the bicycle to stay strictly parallel after assembling. Assembling and disassembling of the 2 halves of the cycle is made in the very shortest time. While in use, the hinges are kept in a locked position by gravity. The locking mechanism foreseen is also extremely easy to handle and the same can be said of the disassembling of the saddle and the handle-bars. The circuit from the dynamo to the rear light can be quite easily connected and disconnected by means of an intermediate plug.

New Fertiliser

An Austrian firm has started the production of a new complex fertiliser known under the trade name "Grundkorn 5-15-20." The new fertiliser contains 40 per cent plant nutrients, above all phosphoric acid and potassium. It is especially well suited for ground fertilising—a method which has been increasingly practised in Austria in recent years.

New Electro-hydraulic Locomotive

An Austrian enterprise has devloped a new model of an electro-hydraulic shunting locomotive. The most important feature of the new electric locomotives is the insertion of a hydraulic continuous gear between the electromotor and the axles which make it possible to start the motor at a low step and to bring it loadless to its normal r.p.m. As the flow of the current through the collector is only rather low during this operation, damages of the collector lamellae or brushes by faulty operation are excluded. The adaptation of the system to different tensions, frequencies and to D.C. or A.C. is considerably easier than with other systems. The system may also be applied for the construction of bifuel locomotives.

Fibreglass Absorbs Noise

A type of exhaust muffler which utilises fibreglass is becoming increasingly popular in Australia. The muffler, manufactured by Laurion Pty. Ltd., of Melbourne, is of the straight-through absorption type in which the sound energy of the diesel engine is dissipated by fibreglass surrounding the gas duct. This obviates the use of baffles, deflectors or other restrictions on which the ordinary engine muffler depends for its performance. In the Laurion muffler there is a central duct, from inlet to outlet, fabricated form strong yet light flexible metal mesh, to form a permanent, obstruction-free passage for the gases. Around the duct is wound a spiral of wire netting between each turn of which is compressed a thick layer of fibreglass. In use, the explosion noises from the diesel engine are absorbed at all frequencies. As the exhaust gases arrive in the muffler in high pressure pulses they expand into the fibreglass packing, thereby causing an immediate drop in pressure. The gases then pass back into the centre duct as the pressure in the latter falls. The exhaust pulsations, in this way, are greatly smoothed out, but no attempt is made to reduce the mean pressure and the gases issue as freely as through a plain pipe. The flexible nature of the centre duct in the Laurion muffler is responsible for two subsidiary but important features conducive to long life and trouble-free use. Firstly, it readily accommodates any small dimensional changes due to temperature variations: secondly the small but constant working of the flexible mesh prevents the build-up of carbon deposits. Laurion straight-through absorption mufflers are available for immediate shipment in any quantity. The standard range covers most types of engines, and special ones to suit particular requirements can be manufactured at short notice.

Electrophoresis Column

A new type of apparatus for high-resolution preparative electrophoresis on a large scale has recently been launched on the market by LKB-Produkter AB, Stockholm, makers of scientific instruments and laboratory equipment. The apparatus, named the Porath preparative electrophoresis column, is reported to have normal separation capacity for quantities of proteins and related compounds as large as 200 ml of blood serum. Two researchers, Drs. J. Porath and B. von Hofsten, of the Institute for Biochemistry of Uppsala University, have succeeded in separating 125 ml of crude extract from 150 grams of E. Coli from a single run of 47 hours, including elution. Another noteworthy feature is that the rapidly moving components are removed by counter current elution as soon as they emerge from the stabilising medium, while electrophoretic separation of the more slowly migrating components is continuing. This mode of operation, by increasing the effective length of the column several times, gives the apparatus an unusually high resolving power. The large capacity of the apparatus is partly the result of a particularly efficient cooling, which permits an electric power of up to 500 watts to be used. In contrast to previous apparatus for preparative electrophoretic separation, whose function is based on the continuous-flow principle, the Porath column gives results determined solely by the electrical properties of the substances being separated. Unusually stable and well-defined conditions are obtained by having a stationary buffer in the column and by rinsing away the products of electrolysis formed in the electrode chambers. A ring of nozzles around the lower end of the column allows the more rapidly migrating components displaced during electrophoresis to be withdrawn and collected in an ordinary fraction collector. The remaining components are recovered by eluting them with buffer after the potential has been removed. The voltage is applied across two platinium electrodes, placed in the upper and lower electrode compartments respectively. Besides a buffer solution continuously circulated through the electrode compartments in order to neutralise the products of electrolysis, further protection against the entry of such products is afforded by a gel-covered polyethylene filter dividing the lower compartments into two sections. P.V.C. powder, Sephadex G-25, Munktell ethanolysed cellulose powder and other stabilising media have been used with good results as column packing. The apparatus may be used for separating a preparative scale substances such as proteins, peptides, nucleic acids, nucleotides, enzymes, many harmones and other natural and synthetic polyelectrolytes with high molecular weight.

Blankets for Hospitals

Wool blankets—without cotton counterpanes—are the most suitable for hospitals. This is shown by the results of further research over several months into the spread of air-borne bacteria in hospital wards, as published in a medical paper in the *British Medical Journal*. Dr. Sydney D. Rubbo, professor of bacteriology in the University of Melbourne; Dr. Bryan C. Stratford, deputy medical superintendent at St. Vincent's Hospital, Melbourne, and Shirley Dixon, research officer in the school of bacteriology, Melbourne University, conducted ward experiments in a 20-bed female hospital surgical ward.

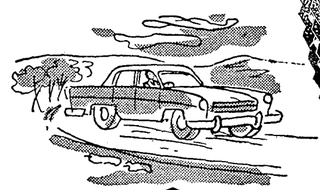
Firestone

Here's another reason why motorists who know always choose

New DeLuxe Champion Tyres

GIVES MORE KILOMETRES PER RUPEE INVESTED

As an end product of over 20 years experience in the manufacture of tyres in India for Indian road conditions, and backed by Firestone world-wide technical research, the Firestone New DeLuxe Champion is a tyre exclusive in quality and construction. The specially compounded wear-resistant tread and strongly reinforced cord body ensure more trouble-free mileage—means more kilometres per rupee invested.



Your Mark of Quality

TRENDS IN INDUSTRIAL RELATIONS

FACTORY EMPLOYMENT AND EARNINGS IMPROVE

IN his address to the twentieth session of the Indian Labour Conference, held at New Delhi from 7th to 9th August last, Mr. G. L. Nanda, Union Minister for Labour, stated that "it was expected" that, by the end of the third Plan period, the number of man-days lost would decline to 2.4 million, which is less than half the number of man-days lost due to work stoppages in 1961 which was of the order of 4.85 million. The Minister did not make known the facts or calculations on which this expectation was based, but he seemed to imply that the improvement in industrial relations since the adoption of the Code of Discipline in July 1958, warranted such an optimism. The number of man-days lost declined from 7.8 million in 1958 to 5.6 million in 1959 but increased to 6.5 million in 1961. This increase was primarily due to the Central Government employees' strike and other work stoppages which followed in its wake which alone accounted for nearly 1.3 million man-days lost. If allowance were made for this factor, time lost through industrial disputes would appear to have been steadily declining during the last three years. But it is extremely risky to predict, as Mr. Nanda sought to do, the future trend of man-days lost on the basis of past performance. There are already many visible signs of industrial unrest in this country. The sharp rise in price levels during the past six months has given a convenient handle for labour leaders to agitate for an increase in the workers' emoluments in various forms. The fact that Mr. Nanda himself drew pointed attention to the revival of upward trend in prices has strengthened their hands. An issue that is being conveniently exploited, so far as industrial workers are concerned, is bonus. The threat of strike by a section of workers in the cotton mill industry of Bombay over bonus has been scotched by the industry agreeing to distribute to workers a huge sum of over Rs. 10 crores on account of the past three years. In the context of current industrial profits, which are reported to be far lower than in 1961, such an expensive purchase of industrial peace, however expedient it may be from the political angle, will prove to be embarrassingly costly. Not only workers in every other industry will expect liberal sums by way of bonus, but, next year, the cotton mill industry itself will find it extremely difficult to satisfy its workers' appetite now whetted by the Chavan Award.

Elsewhere, workers are forcing the hands of employers and Government to pay more under the pain of strike threats. The unrest is confined by no means to factory workers and low paid white collar staff. Even scientists and surgeons, not to speak of pilots of airlines, have found it necessary to resort to collective action and call of strike. This is undoubtedly the result of the continuing fall in the purchasing power of the rupee and the consequent increase in the hardships of the fixed income group. Accordingly, present indications are that 1962 may not prove as favourable a year as 1961. Such data as are available for 1962 so far also support this conclusion. The monthly average of industrial disputes for 1962 shows that, though the average number of work stoppages and the number of workers involved were lower than in 1961, the number of man-days lost was higher. Thus the monthly average number of man-days lost in the initial months of 1962 was 277,734, as against 242,948 in 1961. The average number of workers involved (monthly) was 31,064, as against 32,547 in 1961. The number of work stoppages was 105, as against 106 in 1961. Table A gives the monthly average figures of work stoppage, workers involved and man-days lost since 1955.

While labour-management relations have thus tended to deteriorate during the current year, there has been an improvement in the trend of employment in the cotton mill and coal mining industry. In the cotton mill industry, which accounts for 25 per cent of factory employment in the country, the daily average of workers employed increased from 794,346 in 1961 to 802,760 in 1962 (in three shifts). This is the highest average daily number of workers employed since 1957, when the average daily number of workers employed in the cotton mill industry was as high as 812,948 in three shifts. In coal mines, which account for 50 per cent of the total employment in the mining sector, the average daily number of persons employed increased from 398,703 in 1961 to 413,171 in 1962.

Figures of average daily number of workers employed in all factories are available only for 1960. These show that the public and private sector factories taken together provided employment for an aggregate 3,764,000 persons in 1960, as compared with 3,635,000 in 1959. Of this, factories in the private sector accounted for an average number of 3,225,000 workers daily and those in the public sector for 539,000. As compared with this position, in 1950, the average daily number of workers employed in both public and private sector factories was 2,959,000. Table B indicates the trend of factory employment in both the private and public sectors over the period 1950-60.

It will be seen from the above table that, whereas the average daily number of workers in public sector factories increased from 283,000 in 1950 to 539,000 in 1960, the corresponding figures for the private sector increased from

Construction of an annular kiln using Accoset-50

ACC'S REFRACTORY CEMENT

ACCOSET-50

makes linings and joints as strong as the firebricks themselves

Composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals, **ACCOSET-50** gives good bonding strength and high heat resistance. Once it is dried and burnt **ACCOSET-50** becomes *one with the bricks.*

YOU CAN USE ACCOSET-50

for jointing, repairing and patching
for bonding and laying firebricks of any shape
for protective wash for furnace walls and floors
for monolithic and rammed linings

ACCOSET-50 — your refractory monolithic cement that makes strong joints to improve furnace thermal efficiency.

ACCOSET-50 — saves your time, saves your money.

Technical literature sent free on request.

For your requirements of **ACCOSET-50** *contact*

WORLD TRADE EXPANDS AT SLOW PACE

WESTERN EUROPE'S EXPORTS, HOWEVER, FARE BETTER

WORLD trade continued to expand in 1961, albeit at a slower pace. The aggregate world exports (excluding U.S. shipments under special categories), for instance, touched a record of $131,000 million in 1961, or an increase of $5,400 million over the previous year. The rate of growth of exports, however, was only 4 per cent, as compared with as much as 11 per cent in 1960 and 8 per cent in 1959. The reduced growth rate, according to the G.A.T.T. annual report, *International Trade 1961**, just published by the G.A.T.T., reflects largely the slower growth in world output. The rise in world commodity production was only 2 per cent in 1961, as against 6 per cent during the previous year. This, in turn, is attributed to a slackening in the expansion of industrial production in Western Europe and to the fact that industrial output in North America in 1961, in spite of some recovery in the latter part of the year, barely exceeded the level of 1960.

As against the 4 per cent increase in the value of world exports, the actual volume rose by 5 per cent. As a result, average prices fell by one per cent over the previous year. There was a marked fall in the prices of primary products, whereas those of manufactures continued to rise. The G.A.T.T. Report points out that the ample supplies and the correspondingly high stocks which have marked recent years exerted a steady pressure on the prices of many primary products and outweighed the effects of increasing demand.

Common Market

One of the major features of world trade in 1961 was that Western Europe alone accounted for two-thirds of increase in exports. In particular, exports of Common Market countries to one another and to other West European countries represented about one-half of the total world increase. On the other hand, exports from North America levelled off in 1961, after having shown a great increase in 1960, especially to other industrial countries. During the year under review, trade between industrial and non-industrial areas remained stagnant in both directions, in contrast to the trend in the previous year. The relative importance of trade between the industrial and non-industrial areas actually declined further in 1961. While this decline was due entirely to the falling share in world trade of exports from the non-industrial to industrial areas upto 1958, trade in the opposite direction also showed a tendency to decrease in relative importance in 1959 and again in 1961. In contrast to this trend, trade in manufactured goods among industrial countries continued to expand in 1961 due partly to further progress towards regional integration but also to factors such as the large demand for American machinery created by the high level of investments in Western Europe and to the fact that trade between E.C.M. and E.F.T.A. countries expanded as fast as trade among E.F.T.A. countries themselves.

It may be noted here that the term "industrial countries" includes North America (U.S. and Canada), Western Europe and Japan. Non-industrial areas include the rest of the world, with the exception of the Eastern trading area (Eastern Europe, Soviet Russia and Mainland China). The term "developing countries" embraces all the non-industrial countries, except Australia, New Zealand and South Africa.

Exports of Primary Products

The primary products exporters continued to face several difficulties in the field of trade. Although the volume of world exports of primary products increased by 4 per cent, prices continued to decline for the fifth year in succession and were 2 per cent lower than in 1960. As a result, export proceeds from primary products only reflected one half of the increase in the volume exported, rising by 2 per cent in 1961, as against 10 per cent in 1960. In respect of manufactures, the rise in volume was 5 per cent accompanied by an increase of 2 per cent in their prices. This resulted in a 7 per cent increase in their value, which, however, was modest, as compared with an increase of 14 per cent in 1960.

The value of exports of primary products from non-industrial countries, which had increased by about 5 per cent in 1960, made only a slight further advance in 1961, while exports of these products from industrial countries rose by about 3 per cent. This, according to the Report, was further evidence of a tendency of long standing. In 1958, the industrial countries imported about the same value of primary products from the non-industrial areas as they imported from one another, that is, about $19,000 million from each source. By 1961, the value of this trade among the industrial countries had increased by $5,600 million over the figure for 1958, while their imports from the non-industrial areas had risen by only $2,000 million. The divergence was particularly striking in the case of agricultural products and foodstuffs, imports of which from the non-industrial areas increased only very slightly between the two years (from $12,200 to $12,600 million), while trade among the industrial countries grew by over $3,000 million (from $11,300 to $14,400 million). In addition, exports of fuels as well as agricultural products from the Eastern trading area have lately gained some ground in the industrial areas. The share of the non-industrial countries in the industrial areas' total imports of primary products thus declined from 51 per cent to 48 per cent between 1958 and 1960, and went down further to 47 per cent in 1961.

The aggregate volume of goods shipped by the non-industrial areas rose by about 5 per cent in 1961, but their average unit value declined by 3 per cent, reflecting "the slackening in the rate of growth of world industrial production." Consequently, the total export earnings of non-industrial countries increased only slightly, that is, by $620 million to $31,900 million. Of this increase, Australia, New Zealand and South Africa—where the quantum increase and the price decline were more pronounced than in the rest of the area—accounted for as much as $400 million. Thus the combined increase in trade among developing countries (the remaining countries of the non-industrial area) was of the order of only $210 million, their aggregate exports in 1961 being $27,570 million. The volume of their exports expanded by 3.5 per cent but the average price fell by 3 per cent. The small improvement in exports of developing countries was due mainly to a rise in the trade among themselves ($150 million), and also to an expansion in exports to Communist countries. The combined offtake by the industrial countries from them was stagnant at $19,000 million between 1960 and 1961. While exports of developing countries to the U.S. fell from $5,910 million to $5,710 million, there was a significant expansion in the value of shipments to the Common Market countries (from $6,280 to $6,430 million). There was, no doubt, a fall in exports to the U.K. (from $3,630 to $3,490 million), but this was more than offset by an increase in exports to Japan (from $1,400 to $1,630 million).

The total import expenditure of the developing countries expanded by 3 per cent (as against 9 per cent in 1960) and the volume by 2 per cent (as against 8 per cent). During the year, there was a further deterioration in the trade deficit of these countries. The trade deficit aggregated as much as $1,750 million in 1961, as compared with $1,150 million in 1960 and only $200 million in 1959.

Industrial Areas

It would be evident from what has been stated thus far that industrial areas continued to play a dominant role in world trade. To give some specific data. Their aggregate exports went up from $79,600 million in 1960 to $83,800 million. Among them, Western Europe made by far the greatest contribution to the development of world trade in 1961. One of the reasons for this feature, according to the G.A.T.T. Report, is the notable economic growth in the Common Market. But, even for this area, the rise in trade was considerably lower than that in 1960. Nevertheless, it is significant that, in trade, as well as in production, the Six Common Market countries showed a much larger average growth rate than the rest of Europe, increasing the value of their intra-trade (that is, trade among themselves) by 16 per cent and their trade with the rest of the world by 5 per cent. Although the rate of expansion in trade among the E.E.C. countries was slower than in 1960 (16 per cent, as compared with 25 per cent) the trend continued to be markedly upward, thanks to the rapid integration of the market of the Six member-countries. The G.A.T.T. attributes this high level of growth to the tariff reductions granted by these countries to each other and, what is more, to the deliberate cultivation by manufacturers in the Common Market countries of the entire region as if it were already a single market.

As regards E.F.T.A. countries, trade among them rose by 9 per cent, with manufactured goods accounting for the whole increase. All the seven countries increased their exports to one another. The U.K.'s exports accounted for half of the increase. The E.F.T.A.'s combined exports to the Common Market rose by 11 per cent in 1961, thereby reversing a tendency apparent in 1959 and 1960 of intra-E.F.T.A. trade to rise more rapidly than E.F.T.A.'s exports to the E.E.C. A half of the increase in E.F.T.A.'s trade with the Common Market was contributed by the U.K., followed by Sweden and Switzerland.

While Western Europe's imports from industrial areas increased, their intake of goods from non-industrial areas was stagnant, being only about $13,300 million. This, according to the G.A.T.T., reflects the weak demand for raw materials caused by the slower growth in industrial production and the consequent reluctance on the part of manufacturers to increase their stocks. Western Europe's exports to non-industrial areas also fell by $100 million to $13,780 million, although the Common Market countries expanded their exports, particularly to Latin America and to many of their overseas associated countries. Western Europe's trade with Eastern Europe and the Soviet Union continued to grow in 1961.

North America

The large increase in North American exports (particularly to Western Europe and Japan), which had been witnessed in 1960, did not continue in 1961. However, total exports from North America were maintained at the level of the preceding year, thanks to a 30 per cent increase in shipments to Japan, whereas those to Western Europe actually fell. In 1961, North America increased its trade surplus by about $1,000 million to $5,500 million. The U.S. alone exported $6,000 million more than it imported.

Imports by North America from outside sources amounted to $12,900 million, which was $400 million less than in 1960 and the lowest since 1958. This sluggishness in imports, states the G.A.T.T. Report, resulted from the recession at the beginning of the year and from the fact that the initial rise in domestic requirements for imported materials was absorbed to a certain extent by inventory reductions. The high imports during the second half of the year, although also reflecting the need to replenish stocks, were not enough to balance the low level of imports in the first half. The demand for primary products being on the average rather weak, it was impossible for the non-industrial areas to enlarge their exports to North America. Imports both of textiles and other light manufactures from Japan fell by about $70 million, bringing total imports from Japan to about $1,200 million. Total imports from Western Europe into North America fell for the second year in succession. The decrease was some $130 million, as compared with a fall of $360 million in 1960. As in the previous year, falling imports of passenger cars was the major factor behind the decline.

Japan's External Trade

A feature of Japan's external trade in 1961 was the sharp increase in imports (by 31 per cent), thanks to the rapid growth of industrial output (21 per cent). The pace of rise in Japanese exports was, however, slower, being only 7 per cent, as compared with 14 per cent in 1960. As a result of slow expansion of exports and large increase in imports, trade deficit of Japan reached an all-time high of $1,575 million, as compared with no more than $440 million in 1960 and $140 million in 1959. This was the first time since 1957 that Japan had such a large imbalance on its external trade account. It was, however, less acute than in 1957 for two reasons. One, the currency reserves were much higher in 1961; and, two, the domestic metal industry, now the world's fourth largest, had a capacity enough to meet the great increase in demand caused by the investment boom in the country.

ANOTHER BAD YEAR FOR ROHTAS

DIVIDEND CUT AGAIN

OWING to persistence of serious difficulties in respect of transport for movement of raw materials, coal and finished products, and rising cost of production due to higher prices of raw materials, enhanced railway freight and additional excise duty, there has been a deterioration in the working results of Rohtas Industries Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) for the year ended 31st March 1962. This, it may be noted, is the second adverse year in succession. There has been a perceptible fall in profit, necessitating a cut in the dividend by one-fourth, from 10 per cent to 8 per cent. Even this lower return has been possible only through a depletion, albeit slight, of the reserves built up in the past.

With both output and despatches of the main products having suffered, the turnover declined by Rs. 36.56 lakhs to Rs. 15.88 crores and the closing stocks continued to expand to stand at Rs. 288.27 lakhs as against Rs. 260.39 lakhs as at the close of the previous year. Because of the lower output, expenditure on raw materials and stores consumed contracted from Rs. 8.42 crores to Rs. 7.91 crores but the incidence of this particular item of cost continued to be pretty high. Further, there was a rise of Rs. 18.11 lakhs to Rs. 280.32 lakhs in royalty, cess, duties, etc., and an expansion of Rs. 7.49 lakhs to Rs. 471.53 lakhs in other expenses, including salaries, wages and bonus. Thus caught between lower sales, on the one side, and rising costs, on the other, the gross profit has shrunk by 14 per cent to Rs. 104.59 lakhs from Rs. 121.32 lakhs for the year ended 31st March 1961. The decline is very marked as compared with Rs. 251.35 lakhs earned in 1959-60 and Rs. 289.75 lakhs in 1958-59.

Prior to 1960-61, the Company had been computing depreciation at normal and extra-shift allowance rates as per the Income-tax Act. A change in the basis of computation was introduced during the preceding year and depreciation was calculated on the straight line method as required under Section 205(2) (b) of the Companies Act. This has resulted in a saving of Rs. 17.71 lakhs in the provision for depreciation for that year, despite an enlarged depreciable block. The same method has been followed in respect of the year under review, though it has meant a slightly higher provision of Rs. 59.84 lakhs for depreciation, as compared with Rs. 58.32 lakhs in the preceding year. No provision has again been made for Managing Agents' remuneration and taxation, the latter because of the relief obtainable under Sections 84 and 101 of the Income-tax Act 1961.

The Company's performance during the past four years is presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

† Subject to deduction of tax.
Note: In September 1960, there was a right issue of 1:1 in equity at par. This largely accounts for the wide difference between the highs of 1960 and 1961 and between the high and low of 1960.

Insufficient availability of bamboo due to transport bottlenecks and other factors necessitated slowing down of the pulp mill. Efforts to obtain licence for import of pulp were unsuccessful. This resulted in an under-utilisation of the paper-making machines and a consequent drop in production. For the same reason, namely, non-availability of wagons for the movement of coal and raw materials, production of clinker and cement was also sizably lower than during the preceding year. Production of sugar which is the third main product of the Company, was also adversely affected due to non-availability of cane on account of bad weather conditions and Government's restrictive policy on production. Consequently, the output declined despite a better sugar recovery. Production of all the three major commodities, namely, paper and boards, cement and sugar suffered considerably during the year under review, as will be evident from the following figures:

(In tonnes)

	1958-59	1959-60	1960-61	1961-62
Paper and boards	47,844	54,021	50,936	46,565
Cement	280,576	305,456	314,945	267,885
Clinker	274,743	268,658	286,981	285,860
Asbestos cement	10,616	9,937	15,510	17,770
Sugar (season)	15,175	16,166	14,898	11,611
Vanaspati	9,018	10,424	10,655	9,795
Caustic soda	5,072	5,671	5,484	5,575

Apart from lower production, the Government's refusal to allow the selling prices for cement and paper to be raised in consonance with the increase in cost of production was also responsible for the decline in the Company's profit-margin.

During 1960-61, in September 1960 to be precise, the Company raised the issued ordinary share capital to Rs. 500.00 lakhs from the then existing level of Rs. 250.80 lakhs by issuing 2,508,000 new shares at par in the ratio of one for one. Out of these right shares, 2,480,090 shares were taken up during the same year and the balance of 11,755 were absorbed only in 1961-62. Consequently, the Company's paid-up equity capital rose from Rs. 498.53 lakhs to Rs. 499.72 lakhs (excluding the calls in arrears) and together with the preference capital of Rs. 105.50 lakhs, there is a total paid-up capital of Rs. 604.77 lakhs. This is supported by reserves and surplus amounting to no less than Rs. 262.88 lakhs. Loans have increased from Rs. 531.99 lakhs to Rs. 562.48 lakhs but there has been a welcome fall of Rs. 63.76 lakhs in current liabilities and provisions to Rs. 237.22 lakhs.

With the addition of new assets worth Rs. 33.42 lakhs during 1961-62, the gross block of the Company has increased to Rs. 15.35 crores and on deducting therefrom Rs. 731.60 lakhs as the depreciation provided to date, there is a net block of Rs. 803.39 lakhs. Besides, there are machinery and equipment awaiting installation worth Rs. 1.51 lakh. Investments, most of which are in joint-stock companies, are carried in the books at Rs. 110.49 lakhs of which Rs. 106.37 lakhs are in quoted shares. The market value of these as of 31st March 1962 was no more than Rs. 103.86 lakhs. Current assets, loans and advances aggregate Rs. 751.99 lakhs or just a little less than the total indebtedness to outsiders.

As for the current year, there appears to be some enough justification for the Directors' expectation of improvement in the working results. Some licences have been received for the import of wood-pulp. An assurance of leases of bamboo areas for additional supply has also been given by the Bihar Government. It is, therefore, expected that production of paper and boards would show an upward trend during the year. Further, there has been some, though not adequate, increase in the selling price of paper. Moreover, steps are also being taken to improve the production of the pulp mill and for obtaining a larger percentage of bleached pulp. The results of these will be felt from the middle of the current year. Application has also been made for a licence to import equipment for expansion of the existing pulp and paper mills by 36,000 tonnes. On the cement side, the year will be the first full year of increased retention prices and some increases in realisation from sale of cement can be expected. Besides, in common with other cement manufacturers, the Company has submitted to the Government details of actual rise in the cost of production that has already taken place, particularly in account of coal and railway freight, for an upward adjustment in the ex-factory sugar prices. As for the sugar section, however, the outlook is not very promising. The supply position of cane for the current year, according to the latest reports, is not very encouraging. There may be larger exports of sugar and domestic consumption of sugar may also expand further. But, while all this will mean an improvement in the statistical position of white sugar, it is unlikely to result in a better margin of profit on sugar manufacture. To sum up, at best, the Company's results for 1962-63 could only be a shade better than those for the past year.

The Rs. 10 paid-up ordinary shares are now standing in the neighbourhood of Rs. 14.50 *cum*-dividend to yield a net return of a little over 4 per cent per annum.

TRAVANCORE SUGARS SUFFER AGAIN

OUTLOOK, HOWEVER, A LITTLE BETTER

FURTHER all-round setback has been reported by the Travancore Sugars and Chemicals Ltd. (Managing Agents: Messrs. Parry and Company Ltd., Trivandrum) for the year ended 30th April 1962. Sales realisations, excluding excise duty paid, have declined further from Rs. 90.93 lakhs to Rs. 85.24 lakhs and so has gross profit from Rs. 9.40 lakhs to Rs. 7.03 lakhs. Consequently, the profit-margin (ratio of gross profit to net sales), which had shrunk only slightly from 11.2 per cent to 10.3 per cent in the previous year, has beat a sharp retreat to 8.2 per cent during the year under review. What is still more disappointing about the year's results is that the profit available for distribution by way of dividends, after making the essential provisions, is insufficient to cover fully even the reduced, low dividend of just 5 per cent per annum, subject to tax, on the Rs. 10 fully paid ordinary shares, which absorbs Rs. 1.50 lakh. The Directors have, therefore, drawn, for the first time in the past four years, a sum of Rs. 1.50 lakh from general reserve to provide full cover for the dividend. The ordinary dividend for the year has been cut again by 2.5 per cent, from 7.5 per cent, to which level it was reduced in the previous year from 10 per cent paid for 1959-60.

The table below gives a clear idea of the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 30th April

*Subject to deduction of tax. †In metric tonnes.

According to Mr. H. V. R. Iengar, who recently succeeded Mr. G. N. Noel-Tod as the Chairman of the Company and whose statement to shareholders was published in our last issue, the most important of the factors responsible for the year's poor results are: (i) the fall in the price of sugar and withdrawal of excise duty rebate on excess production of sugar, (ii) lower profit-margins on spirits and Indian-made foreign liquors, (iii) an increase in bank and other interest charges due largely to accumulation of sugar stocks, (iv) the additional tax liability both in respect of the current year and the previous years, arising from the increase in the rate of corporate taxation effected by the Finance (No. 2) Act 1962, and (v) a drop in the average recovery of sugar from cane crushed from 8.88 per cent to 8.62 per cent.

As anticipated in the previous year, the Company was obliged to close down its pharmaceutical works due to Kerala Government's decision not to place orders with the Company on the basis covered by the agreement until then in force. The State Government had indicated then that it would no longer place its orders for the 50 per cent of its requirements of pharmaceuticals with the Company on a cost plus basis as in the past and would invite tenders. As such, the works were closed down on 31st December last. This resulted in lower production and lower sales of pharmaceutical products during the year under review, besides various closure costs. At the same time, the commission payable by the Company to the State Government was reduced following the termination of the agreement about pharmaceutical products.

Mr. Iengar is cautiously optimistic about the outlook for the current year. He points out that some of the adverse factors referred to above are not of a recurring nature, for example, the loss due to the closure of the pharmaceutical works and the additional provision for taxation. As for the other adverse factors, he is hopeful that they will not recur in future, at any rate not to the same extent. Besides, he feels that sugar position in the country will be stabilised over the next two or three years as a result of lower production and increased exports. The 1962-63 crushing season commenced on 20th September 1962, and the factory will probably crush 130,000 tonnes of cane and produce 11,700 tonnes of sugar at a recovery of 9 per cent on the average. The condition of the cane crop is said to be satisfactory.

The position regarding the Company's liability in respect of cane payments under the price linking formula is still somewhat obscure. However, it appears from Press reports, says Mr. Iengar, that the Government formula, perhaps in a modified form, will apply for the four seasons from 1958-59 to 1961-62. The Company, we are told, has been paying a 'brix bonus' for cane, which will be deducted from final payments due under the price linking formula. Last year, a 'brix bonus' payment of Rs. 2.10 lakhs was made in respect of the 1960-61 season, but there will be no such bonus in future, as the Government has now linked the price of cane to its average quality. The Company is said to have made adequate reserves to cover any additional liability that may be due under the Government formula.

The new still ordered by the Company for modernising the distillery was received last year and has since been erected and brought into production. This unit is expected to result in economic working of the distillery. It may, however, be pointed out that, in the previous year, the Directors had expressed doubts about modernisation of the distillery yielding any increase in returns to shareholders on the ground that the ex-distillery price fixed by the Government had no correlation to the cost of production, at any rate in the South.

The Company has a satisfactory financial position. It has a paid-up capital of Rs. 45 lakhs, Rs. 30 lakhs of which are in ordinary shares of Rs. 10 each and the rest in preference shares of Rs. 10 each, which is supplemented by reserves and surplus aggregating Rs. 10.37 lakhs in addition to a credit of Rs. 8.25 lakhs under taxation equalisation reserve. Current assets, loans and advances aggregate Rs. 102.22 lakhs, at which level they substantially exceed current liabilities and provisions, which together amount to Rs. 75.08 lakhs. On the gross block of Rs. 73.28 lakhs (Rs. 71.92 lakhs a year before), a total depreciation of Rs. 39.47 lakhs has been provided so far. Together with work-in-progress of Rs. 2.69 lakhs, the net block is shown at Rs. 36.49 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at a discount at Rs. 7.50 *cum-div.* On the *ex-div.* basis, they offer a net yield of about 5 per cent per annum.

HIND RECTIFIERS LIMITED

The Hind Rectifiers Ltd. (Managing Agents: Messrs. R. P. Nevatia and Company, Bombay), whose plant for the manufacture of selenium rectifier plates was commissioned during the year to 31st March 1962, is expected to benefit from the present restrictions on the import of such plates into the country. Disclosing this to the shareholders at the recent annual general meeting of the Company, Mr. Ramkrishna Bajaj, a Director of the Company, who presided over the meeting in the absence of the Chairman, Mr. R. P. Nevatia, observed that the import restrictions had changed the situation now from what it was last year, when demand for the indigenous plates was limited because the manufacturers of rectifier apparatus carried stocks of the imported plates. Significantly enough, the Company has recently concluded, according to Mr. Bajaj, arrangements with two leading manufacturers of rectifier apparatus in India for the supply of their entire requirements of selenium plates.

The Company is now looking forward to setting up the plant for the manufacture of silicon diodes, which is said to be ready for shipment from England. The plant is to be supplied by Westinghouse Brake and Signal Company Ltd., U.K. It is expected to go into production early next year. When this happens, the Company will be the first manufacturer of power diodes in this country. It is also said to be well set for the manufacture of small, as well as large, silicon rectifier apparatus and has already received some orders.

Last year, the working of the factory was affected for about two months early in 1962 due to 'go slow' tactics of workers. Since then, however, relations with the labour have improved. Sale proceeds for the year amounted to Rs. 16.42 lakhs, as against Rs. 15.81 lakhs a year before. The gross profit worked out to Rs. 1.56 lakh, as against Rs. 1.15 lakh in the previous year. The provision for depreciation was raised from Rs. 12,987 to Rs. 1.14 lakh, but no allocation was made for taxation, as against Rs. 45,898 set apart in the previous year. The net profit amounted to Rs. 42,119, as against Rs. 56,097 in 1960-61. After taking into account Rs. 1,719 brought forward from the previous year, the surplus worked out to Rs. 43,838. Appropriation to development rebate reserve was stepped up from Rs. 3,000 to Rs. 88,000, leaving a debit balance of Rs. 44,162. No dividend was therefore, proposed on the Rs. 100 fully paid ordinary shares. In the previous year, a dividend of 10 per cent per annum, subject to tax, was paid. After the close of the year (in June 1962, to be precise), the Company offered 120,000 equity shares of Rs. 10 each for public subscription. It also offered then 50,000 equity shares of Rs. 10 each to the existing shareholders as rights shares, of which 40,000 shares had been taken up as of 30th August last.

TATA CHEMICALS' POOR PERFORMANCE

The preliminary results of Tata Chemicals Ltd. for the year ended 30th June 1962 are very disappointing. The total turnover for the year at Rs. 531.12 lakhs is substantially higher as compared with Rs. 415.72 lakhs a year before, but profit before taxation has declined by about 50 per cent from Rs. 34 lakhs to Rs. 16.94 lakhs. However, the dividend on the Rs. 10 fully paid ordinary shares has been maintained at 65 nP per share, subject to tax; a proportionate dividend for one month is proposed on the new ordinary shares. The aggregate distribution by way of dividend on ordinary shares amounts to Rs. 16.65 lakhs, as against Rs. 16.38 lakhs in the previous year, inclusive of interest paid in that year out of capital as sanctioned by the Government. The dividend on preference shares absorbs Rs. 4.28 lakhs, as against Rs. 4.82 lakhs, including Rs. 0.53 lakh distributed by way of additional dividend for 1959-60.

To the year's profit of Rs. 16.94 lakhs is added a sum of Rs. 3,571 brought forward from the previous year and a sum of Rs. 4 lakhs transferred from the development reserve. In the previous year, no amount was withdrawn from reserves. Once again, no provision has been made for taxation. Transfer to development rebate reserve is *nil*, as against Rs. 17.40 lakhs set apart in the previous year. After providing Rs. 20.93 lakhs for the proposed dividends, the balance available is Rs. 4,550, which is to be carried forward.

SYNOPSES OF COMPANY REPORTS

Mysore Lamp Works Ltd.

(*Chairman*: Mr. J. L. D'Sa, Bangalore.)

Annual General Meeting—Held on 24th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales of finished lamps	23,42	22,28
Closing stock of finished lamps and work-in-progress	1,34	1,48
Gross profit	5,74	4,38
Transfer to depreciation	46	41
,, ,, provision for taxation	2,51	1,77
Net profit	2,77	1,20
Adjustments	15	1,07*
Appropriations:		
Total available balance	2,92	3,27
Transfer to development rebate reserve	25	8
,, ,, capital redemption reserve	Nil	1,04
,, ,, dividend equalisation reserve	Nil	25
To donations	2	Nil
Proposed dividends (taxable) preference	7	13
,, ,, equity	2,43	1,64
	(37%)†	(25%)
Carry forward	15	13

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

*This includes Rs. 1,03,930 transferred from general reserve.

†The dividend of 37 per cent is inclusive of 12 per cent Silver Jubilee dividend.

Extracts from the Directors' report: Both production and sales during the year under report have maintained their level. The total production was 24,48,471 pieces of lamps as against previous year's production of 24,25,601 pieces. The total sale was 24,60,101 pieces of lamps with a sale value of Rs. 23,42,381 as against 25,13,967 pieces with a sale value of Rs. 22,27,941 during the previous year.

Most of the replacement machines for which license had been obtained and orders had been placed were received and installed during the year. The remaining machines are being received and will be installed shortly.

The Company has completed 25 years of its useful service. It has therefore been proposed to celebate the "Silver Jubilee" of the Company during November-December 1962. In commemoration of this a special "Silver Jubilee Dividend" of 12 per cent less tax has been recommended.

In the previous annual report, mention was made of securing assistance of some foreign firms for implementing the Company's expansion programme. Sustained negotiations for this purpose are going on with a foreign firm with a view to concluding a collaboration agreement in order to put the expansion programme into operation as early as possible.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	8,02,320	Gross block	14,05,916
Reserves and surplus	9,91,473	—Depreciation	8,00,548

,, ,, ,, equity	2,24	1,44
	(28%)	(18%)
Carry forward	23	36

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: During the year under review our production of *Vanaspati* fell by 5 per cent which was less than the overall decrease of 7.2 per cent in production of *Vanaspati* in Eastern India. The lower demand has been due to unusually high prices of raw materials.

This Company took over the *Vanaspati* Factory of Messrs. United Vegetable Manufacturers Ltd., at Rishra on a long term lease with effect from 16th March, 1962. It has duly been commissioned for manufacture of industrial oils and fats.

The production of soap during the period showed an increase (approximately 4 per cent) over that of last year and the directors' hope that the increasing trend will continue. The second continuous cooling plant already ordered is expected to be received by December, 1962. The directors hope to commission the same before the end of March. 1963. The soap production is likely to increase substantially during 1963-64.

The Company has received the essential components for Continuous Rice Bran Extraction Plant from Japan. The remaining plant has been fabricated by the Company. These are being installed in a new building at our Rishra Works. The plant will commence production before March. 1963.

The Chemical Engineering Division has made satisfactory progress. Its first plant has been commissioned without any teething trouble much to the satisfaction of the Company's clients. The Company's activities in this field are expected to increase considerably during the coming year.

The position regarding supply of edible oils in the country has not shown any improvement. On the other hand it still continues to cause anxiety to the industry. Negotiations have been initiated at the instance of the *Vanaspati* Manufacturers' Association of India for the import of *Soyabean* Oil in bulk under P.L. 480 from the U.S.A. This move. if successful. may relieve the shortage of raw materials.

The slab system of rebate on excise duty for *Vanaspati* has been withdrawn and the ceiling for exemption from excise duty for soaps has been lowered since 1st April. 1962. This has added to the tax-burden of the industry at a time when the industry is trying its best to hold the price line.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	16,00,000	Gross block	53,16,270
Debentures	10,00,000	—Depreciation	33,54,727
Reserves and surplus	9,89,398		
Other liabilities	62,50,869	Net block	19,61,543
		Current assets	76,36,810
		Investments	36,533
		Cash	2,05,381
Rs.	98,40,267	Rs.	98,40,267

*Paid up capital consists of 80,000 Equity shares of Rs. 10 each and 8,000—5½ per cent. Taxable cumulative redeemable preference shares of Rs. 100 each.

Raghuvanshi Mills Ltd.

(*Managing Agents*: Ravindra Maganlal & Co., Private Ltd., Bombay.)

Thirty-third Annual General Meeting—29th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales of yarn, cloth and waste (gross)	1,93,37	1,71,05
Closing stock	18,98	22,08
Gross profit	28,77	23,34
Transfer to Managing Agents' remuneration	2,00	1,64
,, ,, depreciation	7,42	6,22
,, ,, provision for taxation	9,16	6,47
Net profit	10,19	9,00
Adjustments	1,91	21
Appropriations:		
Total available balance	14,10	9,21
To goodwill written off	8	Nil
To expenses relating to previous year	3	Nil
Transfer to development rebate reserve	1,86	1,96
,, ,, gratuity reserve	1,00	1,25
,, ,, general reserve	4,29	Nil
Proposed dividend (taxable) ordinary	4,80	4,20
	(12%)	(10½%)
Carry forward	4	1,80

N.B.—Adjustments include the balance brought forward from the previous year and other credit items like excess provisions no longer required etc.

Extracts from the Directors' report: As reported in the previous years, the Company has been continuing its policy of progressive modernisation of its plant and machinery. In the blow room section the by-passing machinery which was on order has since been received and put into commission. Similarly the spinning department is being equipped with the latest drafting systems. The carding engines are being replaced by new N.M.M. cards and it was reported to you last year that 40 such new cards are under order. There has been a delay in the delivery of these cards and thus the programme of replacement has been prolonged. It is hoped that the cards under order will be received during the current financial year. New machinery, in spite of difficulties in the procurement thereof, has been received or is under order for the sewing thread, winding, warping and sizing departments. As a result of this policy, it is expected that the working of the Mill will improve further considerably. Additions to the fixed assets during the year under report comes to Rs. 13,27,090 and commitments made for further modernisation as at the end of the financial year was Rs. 11,50,000.

In the last report, the members were informed that the scheme of amalgamation of the Company with the Sidhpur Mills Co., Ltd. was awaiting sanction from the Gujarat High Court under the petition made to that Court by The Sidhpur Mills Co., Ltd. The Gujarat High Court has not sanctioned the scheme of amalgamation and therefore the same has fallen through.

The working of Messrs. Emsons Bleaching, Dyeing and Printing Works of which this Company is a partner, during the period ended 31st March 1962, after providing for depreciation of Rs. 1,23,411, had resulted in a loss of which the Company's share comes to Rs. 22,931. The loss was mainly due to the fact that various restrictions have been imposed by the Government such as fixation of quota for printing, etc., and the further difficulty by the recent levy of excise duty on processing of art silk and rayon fabrics.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	1,23,85,849
Reserves and surplus	22,41,078	—Depreciation	70,45,337
Other liabilities	99,43,144		
		Net block	53,40,512
		Block in progress	1,84,458
		Capital contribution to Emsons Bleaching, Dyeing and Printing Works	10,23,951
		Current assets	91,99,159
		Investments	1,19,569
		Cash	16,873
Rs.	1,61,84,222	Rs.	1,61,84,222

* Paid up capital consists of 40,000 Ordinary shares of Rs. 100 each. Out of this 20,000 Ordinary shares of Rs. 100 each are issued as fully paid Bonus shares by way of capitalisation reserve.

National Iron and Steel Co., Ltd.

Registered Office: 51, Stephen House, 4, Dalhousie Square East, Calcutta-1.

Twenty-seventh Annual General Meeting—31st October 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	1,53,29	1,41,96
Closing stock	23,99	23,57
Gross profit (+) or loss (—)	+3,32	—5,53*
Transfer to depreciation	5,75	5,22

*Only a small sum of Rs. 117.

†This represents loss carried forward after adjusting the loss of Rs. 3,03,710 brought forward from 1960 accounts.

Extracts from the Directors' report: The Mills were able to earn decent profits as trading conditions were on the whole favourable during the year under review. The production programme of the mills was in the main confined to the spinning of 40s counts of yarn for which the opening stocks of cotton and purchases during the earlier part of the year were available at a favourable cost. Prices of cotton suitable for 40s counts of yarn were gradually rising and as such, during the latter half of the year and thereafter the parity between the ceiling prices for such counts of yarn and cotton prices was very considerably narrowed down if not practically absent. In this context, it is contemplated to curtail the production of 40s and increase that of high counts like 60s and 80s, although a high premium has to be paid on the foreign cotton used for their manufacture.

There was no power cut during the year under review and the mills were able to work on double shift for 298 days. The installed capacity of the mills stood at 27,420 spindles as at the end of the year. The financial commitments of the Company in respect of expenditure on modernisation of machinery from the close of the financial year under review upto the date of this report amount to *Rs. 5,60,000 approximately.*

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	7,80,000	Gross block	34,52,665
Reserves and surplus	4,99,913	—Depreciation	24,64,061
Other liabilities	13,19,417		
		Net block	9,88,604
		Current assets	15,81,434
		Investments	17,475
		Cash	11,817
Rs.	25,99,330	Rs.	25,99,330

*Paid up capital consists of 31,..00 Equity shares of Rs. 25 each. Of this 18,720 Equity shares of Rs. 25 each are allotted as fully paid up Bonus shares by capitalisation of reserves.

NEWS IN BRIEF

INDIA and Yugoslavia have signed a trade agreement providing for expansion of trade between the two countries over a period of five years. The agreement followed the visit of an official delegation to Belgrade last week.

A trade delegation sponsored by the Spices Export Promotion Council will leave shortly on a tour of the Middle East, Continent and the U.K. for studying the possibilities of expanding exports of spices to those countries. The delegation will be led by Mr. S. P. G. Nithyanandan, Vice-Chairman of the Council.

Esso has signed an agreement with the Jayanti Shipping Company to charter for twelve years its 51,800 tons super-tanker, the largest commercial ship to be registered in India. The tanker is expected to make its first trip in 1964 and result in a saving of foreign exchange to the tune of Rs. 70 lakhs annually.

The Aichi Vijaya Water Plant Meters, set up at Hyderabad in technical collaboration with a Japanese company, was inaugurated by Mr. N. Sanjeeva Reddy, Chief Minister of Andhra Pradesh, last week. The factory will manufacture 30,000 meters in the first year and production will rise by 20,000 a year later.

The Film Finance Corporation has sanctioned a loan of Rs. 1,50,000 to Messrs. Chitra Niketan of Bombay for the completion of the picture *Fakira* in Marathi. The loan will be paid in instalments and bears interest of 9 per cent per annum, subject to a rebate of interest for early repayment as provided in the by-laws and regulations of the Corporation.

The U.N. Special Fund will provide $744,000 for establishing in India an institute designed to improve the productivity of sheep and the quality and quantity of wool, under an agreement signed by the representatives of the Government of India, the Fund and the F.A.O. The counterpart contribution of the the Government of India will be $4.27 million for services, personnel, buildings and maintenance. The F.A.O. will implement the project over a five-year period.

The U.S. Agency for International Development has agreed to lend $17.9 million for financing the full foreign exchange cost of the expansion programme of the Trombay thermal power station. The programme envisages the installation of a single generating unit of 125 mw., with associated boiler and other facilities. The loan will be repayable by the Government of India over 40 years, with a grace period of ten years. It is interest-free, but a service charge of one per cent will be levied. The Tata Power Companies, to which the loan has been allotted, will be required to make repayment as well as interest at 3½ per cent to the Central Government over a period of 20 years.

The trade agreement between India and Italy, which expired on 30th June 1961, has been extended for two years from that date. Letters to this effect were exchanged at New Delhi this week between Mr. Enrico Carrara, Charge d'Affaires, Embassy of Italy, and Mr. D. S. Joshi, Special Secretary, Ministry of Commerce and Industry. The arrangement provides for a freer flow of goods between the two countries. The main items of export from India to Italy are industrial raw materials, food items like coffee, tea, spices, meat preparations and dried fruits, cotton fabrics, jute, coir and leather footwear. The principal items of imports from Italy are agricultural and other types of machinery, scientific, engineering and optical instruments, synthetic fibres and dyestuffs.

The volume of trade between India and the Soviet Union is expected to be of the order of Rs. 100 crores next year, as against Rs. 56 crores in 1961, according to the terms of the trade agreement signed between the two countries in Moscow last week. India has agreed to import from Russia next year raw materials like raw asbestos, wood-pulp, chemicals, newsprint, refractories, metal items like lead, zinc, alloy and special steel, chemicals, fertilisers, machinery and equipment, capital goods, oil and oil products, including mineral lubricating oil, electric equipment, etc. Important items of export from India, apart from traditional goods, will be woollen and textile fabrics, leather footwear, leather cloth, safety razor blades, rolled steel products and other consumer articles like tanning materials, linoleum, coir products and handicraft goods. The agreement is within the framework of the existing Indo-Soviet trade and payments agreement.

The Government of India has issued a new Exports (Control) Order, freeing a large number of items from all export control. Under the new Order, export restrictions will operate only on a small number of items in respect of which control is inescapable. These fall under six categories, namely, specified kinds of metals, minerals, oilseeds, seeds, wild life and wheat and wheat flour. Exports of about 31 categories of items will be allowed on merit, or subject to ceilings or subject to some stipulations to be specified from time to time. Among these are specified animals, coal and coke, raw cotton and cotton waste, raw jute and mesta, wheat bran and rice bran, hides and skins, grains, pulse and flour (other than wheat and wheat flour), metals scraps, certain types of minerals, ores and concentrates, certain varieties of oilcakes, raw wool, wood and timber, arms, ammunition and military stores, mineral oils, aircraft and parts, tapioca meal and wastes, rock salt and specified types of metals, cinematograph films (not exposed), mustard oil and rapeseed oil. All the items, which are not included in either of these two lists, will be allowed for export without any licensing formalities whatsoever.

• • • •

From Abroad

In a fresh bid to tide over balance-of-payments difficulties, the Ceylon Government has brought under control most of the goods imported hitherto under open general licence, with the exception of foodstuffs, petroleum, fuel, fertilisers and certain drugs.

The first "look-telephone" has been installed in the Netherlands, working between the offices of a large Dutch company at Amsterdam and Rotterdam. It is based on the "vision phone" system which is a combination of telephone and television.

The Government of Burma has decided to permit only the indigenous companies to import petroleum and petroleum products under open general licence. The import and distribution of these products will also be taken over by the State undertaking, the Burma Economic Development Corporation.

The Japanese Ministry of Trade has prepared a plan to scrap about two million obsolete cotton spindles by the end of 1965. Under the plan, the Government will give long-term, low-interest loans upto 15,000 million yen (about £15 million) for the industry through semi-official and commercial banks.

The Government of Tanganyika proposes to introduce legislation to guarantee overseas investments in the country. This was announced by the Prime Minister, Mr. R. Kawawa, while inaugurating the Kilombero Sugar Estate scheme recently. The scheme, comprising a 25,000-acre concession, is designed to make the country self-sufficient in sugar by next year.

West German industrial production would appear to have passed its cyclical "down," because the August production—almost 6 per cent higher than in August 1961—shows a new upward trend, according to the Federation of German Industries.

PERSONAL

MR. Benjamin King has been appointed Resident Representative of the World Bank in New Delhi *vice* Mr. Stokes M. Tolbert.

Mr. N. G. Ayyangar, Managing Director of the Mysore Electrical Industries Ltd., has left for the Continent on a business tour.

Mr. D. N. Shroff and Mr. S. M. Mehta have been re-elected Chairman and Vice-Chairman, respectively, of the Silk and Art Silk Mills' Association Ltd. for the year 1962-63.

Mr. C. P. Srivastava, Managing Director of the Shipping Corporation of India, has returned from Tokyo, after representing India at the annual session of the Bay of Bengal-Japan Shipping Conference held there earlier this month.

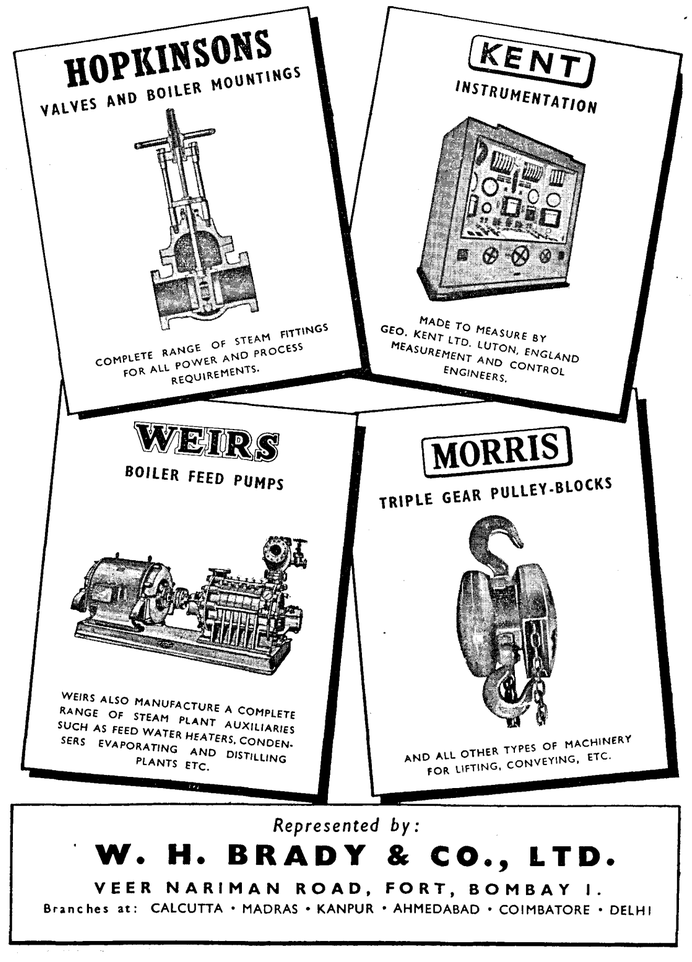
Mr. John Little of the Asian Department of the Federation of British Industries is expected to arrive in India on a five-day tour on the 28th inst. His visit is part of his twenty-day familiarisation visit to Asia sponsored by the Federation.

Mr. J. Chakravarty, Proprietor of the Kalpana Advertising and Public Relations, Calcutta, has left for Manila to represent the Advertising Agencies Association of India at the third Asian Advertising Congress now being held there.

Mr. Jacques L. Rueff, Inspector-General of Finance for the French Government, will lead a World Bank mission to study the economic implications of the merger of the Federation of Malaya, Singapore and the Borneo territories to form the Federation of Malaysia. The merger is to take place by August 1963.

The Federation has recommended the use of "autumn upturn" for new, qualitative investments in order to strengthen the industry's competitive power.

Industrial production in the member-countries of the Organisation for Economic Co-operation and Development increased by 7.6 per cent in the first half of this year over the corresponding period of 1961. Higher production in the U.S. and Canada chiefly contributed to the overall rise, with growth rates of more than 9 per cent in each of the two countries. The rate of increase in the O.E.C.D. European member-countries was 4.3 per cent. In the Common Market alone, it was 5.1 per cent.



REFORM OF BRITISH COMPANY LAW—I

(*Concluded from page 690*)

other interests likely to be affected by the alteration of the objects clause in the Memorandum than in the U.K.

No Par Value Shares

The advocacy in favour of no par value shares in the U.K. dates back to the days of the Wrenbury Committee on Company Law Reforms which reported in 1918. The issue had also been discussed by the Greene Committee in 1926, the Cohen Committee in 1945 and by the Gedge Committee in 1952; the last named Committee was specially set up to examine the question of the desirability of issuing such shares. The Cohen Committee refrained from recommending anything on them and only recorded that "while there is, in our view, much logic in the arguments put forward in favour of the shares of no par value, there is little public demand for, and considerable opposition to, the proposal." Reporting after nearly seven years, the Gedge Committee, however, said that "we are now satisfied that there is now a demand for legislation permitting the issue of shares of no par value. We are also satisfied that the introduction of the system on a permissive basis would not entail any elaborate amendments to our company law." That Committee was convinced of the five principal advantages advanced in favour of such shares, namely, that (*a*) they represent the share for what it is—a fraction or aliquot part of the equity—and they do not import a notional token of value, (*b*) as there is no nominal capital and the share has no nominal value attached, they make it impossible to relate a dividend to a nominal capital and they thus avoid a potent source of misunderstanding and misrepresentation, (*c*) whether the undertaking be one having shares of no par value or of nominal value, it is the capital employed and not the paid-up share capital which is the true capital of the undertaking, (*d*) given the conception of shares of no par value, matters analogous to 'bonus' issues and sub-divisions are simplified, and (*e*) in certain cases, such shares facilitate the raising of additional equity capital. Main opposition to the introduction of no par value shares at that time came from labour circles—Trade Union Congress—which said that "one of the purposes of the issue of shares of no par value is to conceal what is happening inside public companies and in particular to camouflage the payment of excessive dividends." They further apprehended that companies would use the device of splitting no par value shares to conceal the fact that they were increasing dividends.

The Jenkins Committee, however, received no evidence against and much evidence in favour of no par value shares and the only subject of conflict was the issue of no par value preference shares. Earlier the Gedge Committee had decided against the extension of no par value shares to preference issues largely because a fixed dividend should bear some relation to the sum on which it is paid. But this time the Jenkins Committee came to the conclusion that the issue of such shares, though would be "misleading to the uninitiated investor" who would not realise that, if interest rates were to climb up, the market value of the shares would fall, it would "enable a company to issue one class only of preference shares with consequent benefit to the shareholders by reason of the wider market involved." The Committee has recommended that the Companies Act should be amended to allow the issue of both preference and ordinary shares of no par value.

In India, however, the question of issuing shares of this nature was raised at the time the Companies Act, 1956 was on the anvil. But the idea was firmly rejected by Mr. C. D. Deshmukh, who piloted this legislation. Since then, there has been no worthwhile discussion of this subject but the utility of no par value shares is getting slowly known to investors and it might become a point of issue in future discussions on reform of company law.

Non-voting Shares

Like the no par value shares, non-voting shares do not exist in India. Notwithstanding this, the observations and recommendations made by the Jenkins Committee are significant and important for us also in so far as they bring out the progressiveness or distinctiveness of our law and show that, slowly and steadily, informed opinion in the U.K. is also veering round to the philosophy of our Company Law in matters of ownership and control of companies.

Non-voting shares were one of the rather very delicate matters that came before the Jenkins Committee and over which evidence tendered before the Committee was very sharply divided. The supporters of the voteless shares urged that the abolition of such shares would be an unwarranted interference with freedom to contract. They also pointed out the useful purposes served by these shares, namely, that they were useful where it was desired to raise fresh capital for the extension of a business, while leaving control in the same hands as formerly and that voteless shares tended to perpetuate efficiency; this latter claim was, however, challenged by the opponents of these shares. The supporters further pointed out that heavy compensation would have to be paid, if they were to be enfranchised. As against these arguments, the opponents emphatically stressed the principle that shares conferring interests in the equity or 'risk' capital of a company should carry voting rights commensurate with those interests and that, "as a matter of public policy, ownership of interests in companies should carry with it some measure of responsibility for their control, and that voteless shares tend on the contrary, to establish *de jure* the severance of ownership from control which frequently arises *de facto* from the indifference of shareholders." Two bad features of these shares pointed out by the opponents were that the holders of voteless shares had no redress short of expensive and difficult court proceedings in the event of misconduct on the part of directors appointed by the voting sections of the company's members and that the descriptions applied to voteless as distinct from voting shares might not be sufficiently clear to ensure that a purchaser knew which kind he was getting and very often if he knew about the nature of shares, might not fully comprehend the implications.

After careful consideration of the two sides of the issue, the Committee, by a majority of eleven members to three, came to the conclusion that the case for abolition by law of voteless shares had not been made out and that their abolition would be too drastic a step. The Committee, however, recommended that (*a*) the Board of Trade should seek the voluntary co-operation of the stock exchange, Press, and other representative institutions concerned to give full publicity to any lack or restriction of voting rights attaching to particular equity shares and (*b*) notice of all general meetings of their company should be required to be sent to the holders of voteless equity and preference shares for information and these interests should also get a copy of the chairman's statement circulated with the accounts.

These recommendations have left expert opinion in the U.K. rather dismayed and disappointed. For instance, the well-known financial expert, Harold Wincott, sees in the perpetuation of these shares, a contradiction between what the Committee said about the shareholders' control of their companies and other recommendations like those on these shares which in fact perpetuate shareholders' weaknesses and lack of information. This inconsistency has fully been brought out in the note of dissent to the Committee's Report by Mr. L. Brown, Sir George Erskine and Prof. L. C. B. Gower.

In India, the Company Law reform on the question of voting rights attached to the shares has taken place on the opposite side. Thus, the provisions of Sections 87 and 88 in the 1956 Companies Act have abolished the class of deferred or founders' shares which carried disproportionate voting rights. By doing so, the Indian law has recognised the democratic principle that a man's power in company matters should be proportionate to his stake in it.

Prospectus

Section 45, read with Section 55, of the English Companies Act gives the definition of a prospectus. It is generally accepted in the U.K. that a document containing an offer of securities for a consideration other than cash, for example shares, cannot be a prospectus, although it may be a circular to which the Prevention of Fraud (Investments) Act applies. The Jenkins Committee has recommended that a document which offers securities for a consideration other than cash, but is in all other respects a prospectus as defined in the Act, should be treated as a prospectus, but offers of securities duly complying with the take-over rules should be deemed to comply with the prospectus provisions. The second recommendation of the Committee is that no allotment of securities offered to the public should be permitted after the expiry of three months from the date on which the prospectus is first issued. Thirdly, the Fourth Schedule to the Act which requires certain specific information to be given should be amended on the lines of that required by the London Stock Exchange and also include turnover in respect of the five financial years immediately preceding the issue of the prospectus and the method of computation should be required to be disclosed, excepting in the case of banks and discount companies. Fourthly, the provisions of the Act relating to statement in lieu of prospectus should be repealed as they serve no useful purpose. Finally, the Committee has recommended that the Registrar should be empowered to reject any prospectus in relation to unquoted securities presented to him for registration and so also a prospectus which is likely to create a false impression. Finally, the issue of a prospectus which had not been accepted for registration should be made an offence.

Sections 2(35), 64 and 67 of the Indian Companies Act, 1956 furnish a clear definition of a prospectus and the contents of the same are spelt out in Part I of Schedule II to the Act. Nevertheless, recommendations made by the Jenkins Committee open fresh ground for consideration and action in our country.

(*To be continued*)

MANCHESTER LETTER

(*Concluded from page 679*)

women now constitute nearly one-fifth of the total labour force and 53 per cent of all working women. In the past ten years, the number of married women in employment has increased by 40 per cent, at an average annual rate of 120,000. Other facts in this sphere are that women now constitute substantially more than one-third of the total number of employees; more than half of all employed women are now married; one-third of all married women are already part of the labour force and whereas in 1931 only about 1 in 10 of all married women were working the current figure is approximately 1 in 3.

Professor Chester makes what might appear to be a fairly obvious point in that, apart from increases in the number of young people entering the labour force owing to the higher birth rate and the possibility of retaining people over retiring age, married women so far not in employment are the country's major labour reserve for the future. "Employers, however, who are anxious to draw on the seven million reserve pool of womanpower not as yet gainfully employed will have to do more than produce glossy advertisements and recruitment appeals," he warns. "Much has already been said about the lack of facilities, such as day nurseries and nursery schools, and about the disincentives contained in our tax system."

Employers themselves, Prof. Chester continues, could do still more in other directions, for example, in diminishing the pay differential which still persists between men and women employees. Although the textile industry is not a major offender in this direction, he points out that the average earnings of adult male workers in all industries and services are nearly twice as high as those of women.

LABOUR

(*Concluded from page 692*)

2,222,000 in 1950 to 3.225,000 in 1960, or by over a million. An industry-wise analysis of the trend of employment in the private sector indicates that, in textiles, the average daily number of workers employed showed only a minor change over the decade under review. Thus, the average daily number of workers employed in textiles rose from 1,019,000 in 1950 to only 1,159,000 in 1960. The increase was, however, much higher, percentage-wise, in other industries such as basic metals, chemicals, transport, gins and presses, etc.

Data relating to earnings of factory workers reveal that the annual average earnings of a factory worker in all industries increased from Rs. 1,035.6 in 1951 to Rs. 1,481 in 1960, a rise of 43.6 per cent. Table C shows the trend of factory earnings during the period 1951-60. It will be seen from this table that the average annual earnings were the highest in products of petroleum and coal industries, whereas they were the lowest in wood and cork industry. Further, during the decade under reference, the average annual earnings of workers employed in products of petroleum and coal almost doubled from Rs. 1,131 to Rs. 2,197 in 1960, whereas, in the case of textile workers, they increased by 57.6 per cent, from Rs. 1,044 to Rs. 1,637.6, to be precise.

MONEY TEMPORARILY EASY

(From Our Own Correspondent)

BOMBAY, 17*th October*

The supply of floating funds in the short-term money market recorded a significant improvement this week. Some attribute this development to the return of funds to the market that had been subscribed to the new issues of the Industrial Finance Corporation and State Electricity Boards. Whatever the reason, the demand for inter-bank call money declined, especially after Monday, and, with that, the rate, too, from 4 per cent a week ago to 3 per cent today. In Calcutta also, the rate fell to 3½-3¾ per cent.

This easiness, however, may not last very long. For one thing, the usual busy season will be commencing in two or three weeks. For another, Oil India Ltd., a Government of India concern, is actively canvassing support for its Rs. 30-crore debenture issue for which the Controller of Capital Issues has already given sanction. It would appear that the L.I.C. has agreed to take up Rs. 7 to 8 crores of these debentures and the State Bank some Rs. 3 crores. Other banks, too, may soon be sounded, if a beginning has not already been made. It is unnecessary to add that Rs. 30 crores is not a small amount and that this issue, coming as it does on the eve of the busy season, will place a sizable strain on the capital market.

The Government of India's 91-days' Treasury Bills sold under the tender system on Monday the 15th inst. must have been taken up by only special quarters, for the amount offered at Rs. 2 crores was just equal to that invited. Nevertheless, the average rate of these Bills went up from Rs. 2.360 per cent to 2.365 per cent per annum. Intermediate Treasury Bills, which were on tap from 9th to 13th October, fetched only a small sum of Rs. 5 lakhs. This is not surprising, as during those days the demand for floating funds was pretty good. Sales of both types of bills are continuing, the intermediates from today to 20th October and the tenders on 22nd October.

The Reserve Bank's statement for the week ended 12th October 1962, as compared with that for the previous week, shows a rise of Rs. 19.07 crores, of which Rs. 16.80 crores were under notes in circulation and the balance under notes held in the Banking Department. Foreign securities held in the Issue Department have been reduced by Rs. 25 lakhs and balances held abroad have fallen by Rs. 1.05 crore, so that the total fall in foreign assets comes to Rs. 1.31 crore, bringing it to Rs. 92.66 crores.

According to the same statement, there has been a minor fall of Rs. 83.4 lakhs in Scheduled banks' borrowings from the Reserve Bank which now stand at Rs. 10.34 crores, of which Rs. 5.89 crores are against usuance bills. There has also been a contraction of Rs. 1.64 crore in the deposits of scheduled banks with the Reserve Bank.

Reflecting the good demand for funds that was in evidence during the last two weeks, bank credit has gone up by Rs. 12.73 crores to stand at Rs. 1,391.11 crores, according to the Scheduled banks' statement for the week ended 5th October 1962. The same statement shows only a minor increase of Rs. 3.32 crores in deposits, bringing their total up to Rs. 2,173.29 crores. Inter-bank borrowings were also higher during that week, albeit by Rs. 3.53 crores, the total being Rs. 38.24 crores.

The Gilt-edged market was dull, but the trend was quiet. State loans continued to be on offer, with a significant marking down in the value of 4½ per cent 1972 issues. Thus, there was a fall of 75 nP in this issue of Mysore and Rajasthan, of 65 nP in Madhya Pradesh, Bihar and Orissa and of 25 nP in Madras. Andhra Pradesh and the U.P. Among Central loans, 3 per cent 1986 Conversion Loan dropped 60 nP to stand at Rs. 67.05. 3½ per cent 1974 lost 5 nP but 4 per cent 1981 was better by 10 nP.

There has been no notable variation in the foreign exchange markets. In New York, spot sterling was practically unchanged throughout the week, the latest rate being exactly the same as that a week ago. Three months' forward was actually a shade better. The rates are: 280.180-280.210 cents per £ for spot and 279.740-279.770 cents for three months' forward. There was no change, over the week, in the banks' selling and buying rate for dollars in this country.

COWCALF FIRM

(From Our Own Correspondent)

MADRAS, 15*th October*

The Madras kips market ruled steady this week. Demand on both export and local account was small. Importers seemed to be interested in the superior tannages, but were not willing to pay tanners' prices; and consequently sales were limited to a few selected styles. The market for cowcalf remained firm, and for buffcalf firmer, for 1½/2 lbs. and 2/2½ lbs. average weights for export. Arrivals of buffhides were good, but clearance was slow and prices were lower.

The market for tanned goat remained steady, with importers showing great resistance to the increased prices demanded by tanners. Inquiries for 8/9 lbs. goat skins were in evidence, in welcome contrast to the dormant conditions in this section for past sometime. There were good inquiries for the light weight middle class sheepskins, but sellers were cautious in booking orders, as arrivals were small. There was no change in demand for the prime and semi-prime class of sheep-skins, which continued to be patchy. Arrivals of raw skins were small and the E.I. Tanners paid high prices to secure stocks to keep their tanneries working.

SPURT IN BULLION

(From Our Own Correspondent)

BOMBAY, 17*th October*

The bullion market depicted a distinctly firm trend during the week under review. There was good buying support from local bulls as well as some Calcutta operators on fears of a possible shortage of floating stocks in the next few weeks. The fears stemmed from Press reports suggesting that the Union Government was contemplating to take fresh measures to check smuggling activity. The tense situation in the N.E.F.A. region and hopes of a marked rise in offtake during *Diwali* also imparted considerable strength to the market. Consequently, bullion prices registered a handsome rise. Over the week, ready gold has spurted by Rs. 4.50 to Rs. 120.50 per 10 grams and forward by Rs. 3.05 to Rs. 120.15. Likewise, ready silver has hardened by Rs. 2.45 to Rs. 221.30 per kilogram and forward by Rs. 3.20 to Rs. 222.55. Since the rise in ready gold was more marked than that in forward, the discount of ready under forward declined in the course of the week from Re. 1.10 to 35 nP. Reverse was the case in silver, the discount increasing from 50 nP to Re. 1.25.

The daily average arrivals of gold were larger than in the previous week (12,800 tolas, as against 10,000 tolas), while offtake was lower (7,000 tolas, as against 12,500 tolas). In silver, both the daily average arrivals and offtake were smaller, being 32 bars and 8 bars, as against 56 bars and 9 bars, respectively. The floating stocks in the market are estimated at 60.000 tolas of gold and 700 bars of silver.

The view that futures trading in gold is a necessity has been expressed by the Bombay Bullion Association in the course of a memorandum submitted to the Union Finance Minister. The essential advantage of a futures market, it is pointed out, is to lend stability, mobility, liquidity, continuity and uniformity to the market. The Association has warned against any ban on futures trading in gold. Such a step, according to it, will deprive the bullion traders and the public the aforesaid advantage. There will be a big gap in buying and selling prices. Values will fluctuate violently, owing to seasonal factors, as there will be no facility of evening out such fluctuations in the absence of a forward market. In this connection, the Association has sought to dispute the contention that ban on forward trading in bullion will help check smuggling of gold. To quote it:

"Smugglers bring gold from foreign countries by land, sea or air, and they are always eager to sell off as soon as possible because of the fear of being detected by the customs. They generally sell in the towns very near to the frontiers in various parts of this country in small lots which are sold out in ready markets. Smugglers never come to the forward markets for hedging or for giving delivery in forward. They make large profit by immediate sale and they do not care at all for a marginal price fluctuation of Rs. 2 to Rs. 3 for their profits in hedging. Average yearly fluctuations in forward gold prices is about Rs. 12 which comes to a rupee per month. There is no reason to believe that the persons to whom smugglers sell gold come to trade in forward markets. Forward market facility is used by the genuine dealers to cover their risk against ordinary fluctuations for the stock held by them. Smugglers are indifferent to this type of small fluctuations."

The Association has recalled that the Forward Markets Commission had stressed sometime ago the utility of forward trading in bullion in the context of its socio-economic and socio-religious role in India and observes: "If cotton with an annual turnover of Rs. 300 crores and oilseeds with a turnover of Rs. 75 crores require forward markets, bullion with an average turnover of more than Rs. 250 crores needs it all the more.... Though the internal production of gold and silver is limited, the marketable quantities are sufficiently large and, owing to their unperishable nature, same quantities are traded again and again."

The move to impose ban on futures trading in gold and/or silver is expected to be stoutly opposed at the All-India Bullion and Allied Trade Conference scheduled to be held at New Delhi on 1st and 2nd December next. The details of the Conference were discussed at a meeting of the bullion traders representing 30 centres in India in Bombay on Monday this week.

The dollar price of gold in the London bullion market was a shade better at $35.13¾ per fine ounce, as against $35.13.1/32 last week-end. Ready gold, however, eased from 250*s.* 9½*d.* to 250*s.* 8½*d.* There was a further sharp advance in silver prices, the ready rate rising from 101½*d.* to 103½*d.* and forward from 101⅞*d.* to 104*d.* The rise followed bullish advices from New York where silver shot up from 119.00 cents to 121.25 cents.

The following table shows the trend of prices during the week under review:

	17-10-62 (closing)	High	Low	10-10-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	120.50	120.90	116.75	116.00
*Margashir**	120.15	120.55	116.65	117.10
Sovereign	94.50	94.50	94.00	94.00
SILVER				
Ready (.996 fine) ..	221.30	222.00	219.10	218.85
Margashir†	222.55	223.50	219.30	219.35
London—				
Gold	250*s.*8½*d.*	250*s.*10*d.*	250*s.*8½*d.*	250*s.*9½*d.*
Silver Ready	103⅜*d.*	103⅜*d.*	101⅛*d.*	101⅛*d.*
Silver Forward ..	104*d.*	104*d.*	102⅛*d.*	101⅛*d.*
New York—				
Silver	121.25 cents	121.25 cents	119.50 cents	119.00 cents

* 11th December settlement. † 12th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 17*th October*

The cotton futures market, which had struck a note of hesitancy early in the week, firmed up in subsequent sessions. The firmness largely persisted till the close. The statement of Mr. J. K. Galbraith, U.S. Ambassador to India, that India would get a "substantial quantity" of the 700,000 bales of cotton it had asked for under P.L. 480, was interpreted to mean that the actual might fall short of current expectations. This gave a bullish twist to the market. Reports of adverse weather from certain cotton growing tracts, especially Berar, also imparted strength to the market. Under pressure of buying, the Jarilla March contract rallied from Rs. 728.50 at the beginning of the week to Rs. 737.50 yesterday. This level could not be maintained. Hedge selling by upcountry traders and liquidation by local operators led to a decline and the March contract receded to Rs. 734.25 at close. A recovery was witnessed today and the contract improved to Rs. 735.25 at close.

Knowledgeable observers do not expect a sustained bullish trend in cotton, unless of course there is a marked deterioration in the crop position. This is because the Government is determined to keep the price of cotton within the ceilings and it would not hesitate to take any measures that might be called for to hold the price line.

Activity in the ready section was limited. The first instalment of the quota for Indian cotton has yet to be released. So also the official announcement regarding the new scheme of distribution of cotton has not yet been made. The delay, it is said, is due to certain legal difficulties. The proposed scheme was opposed by traders at the All-India Cotton Conference held in the city on Friday the 12th inst. Although the absence of quota did not permit any large-scale business, spinners' interest in crop varieties such as 197/3 and Khandesh broadened. Export interest in Bengal *Deshi* was only moderate. Among foreign cotton, East African and Sudan cotton attracted attention and sizable business passed. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Khamgaon 1,025; Hubli Jaydhas 1.041; B.P. 52 1,230; B.P. (U.N.U.G.) 1,230; Giza 45 1,785.

Cotton futures in Karachi staged a smart recovery during the week, thanks to short covering and fresh buying attracted by the low level of prices. N.T.R.G. January rose from Rs. 65.90 to Rs. 66.40. The March contract was quoted higher at Rs. 66.90, as against Rs. 66.19 last week-end.

Listless conditions prevailed in the Liverpool cotton futures market. Values moved in a narrow range in thin trading. Net change in values over the week was negligible. A moderate volume of hedge selling in the distant deliveries was absorbed in Commission House buying. In the ready section, demand centred round Turkish, South Brazilian, Mexican and Peruvian cotton. Small lots of Pakistan and Indian cotton also attracted attention. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing rates:

October 23.50 (23.50); December 23.45 (23.45); November 29.50 (29.50).

Caution was the keynote of trading in the New York cotton futures market during the week. Traders were awaiting the official announcement of the 1963 acreage allotments. A statement on the price support level for cotton was also expected. Trading interest was, therefore, lacking. Futures value tended to recede. The October 1962 contract went off the board on the 15th inst. at 33.25 cents. December contract was quoted at 33.55 cents, as against 33.65 cents last week. The March contract receded from 34.10 cents to 34.02 cents. Ready prices, however, ruled steady. New York spot was unchanged at 34.90 cents. New Orleans spot was quoted at 32.65 cents, same as last week.

YARNS IRREGULAR

(From Our Own Correspondent)

BOMBAY, 17*th October*

Traders in the yarn market are awaiting the official announcement of the new scheme for determining import entitlements against exports of art silk fabrics. The scheme envisages grant of import entitlements on the basis of f.o.b. value of actual exports or the international prices fixed by the Textile Commissioner, whichever is lower. It is reported that the Textile Commissioner has almost finalised the schedule of international prices and the announcement of the same is expected any day. Meanwhile, yarn circles have noted with interest the recommendations pertaining to the pattern of indigenous art silk yarn production, distribution and prices as well as the modifications in the export promotion scheme for fabrics made by the Development Council for Art Silk Industry at its meeting held in Bombay on Wednesday the 10th inst. Since these recommendations and modifications have been discussed in detail in our Market Gossip column last week, it is unnecessary to go into them again. The general opinion among traders is that the recommendations are notable and that the Government will do well to accept them.

Art silk yarns ruled irregular. Thus, 150 deniers drifted downward, while 120 deniers tended to look up on good buying support induced by reports of enlarged offtake in consuming centres. 150 denier National Rayons receded by 13 nP to Rs. 12.85 per kg. and S.I. Viscose by 16 nP for Rs. 12.91. 120D National Rayons, however, spurted by 68 nP to Rs. 17.53 and S.I. Viscose by 55 nP to Rs. 17.47. Centurys 100D rose by 26 nP to Rs. 17.38, while 75D declined by 55 nP to Rs. 21.45.

Staple fibre yarns encountered selling and suffered a setback in values. The supply position was said to be quite comfortable, whereas demand from weaving mills was slack. Spot (40 x 2) Centurys and Kohinoors dropped 9 nP to Rs. 7.74 to Rs. 9.06, respectively. Citys fell by 47 nP to Rs. 8.84. In the forward section, October delivery receded by Rs. 16 to Rs. 694. December contract declined by Rs. 15 to Rs. 714.

Cotton yarns ruled easy in the absence of any fresh encouraging news. Turnover was small and values moved narrowly.

About 770,041 kg. of art silk yarn were imported into the Bombay port during the month of September 1962, as against 855,065 kg. in the previous month. During the same month, 371,584 kg. of synthetic yarn (383,468 kg. in August), 3,802 kg. of staple fibre yarn and 1,176 kg. of cotton yarn were imported. Exports of cotton yarn from Bombay port in September aggregated 183,044 kg., as against 127,522 kg., and those of cotton thread were of the order of 16,811 kg., as against 13,947 kg.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	17-10-1962	10-10-1962
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	17.53	16.85
Century 75D	21.45	22.00
S. I. Viscose 150D	12.91	13.07
Staple fibre yarn (40 x 2)—		
October (per 90.72 kg.)	694.00	710.00
December (,,)	714.00	729.00
Kohinoor (per kg.)	9.06	9.15
Century	7.74	7.83
Cotton yarn (per bundle of 10 lbs.)		
10s Pedar	18.50	18.50
22s Apollo	23.00	23.00
30s Bradbury	27.00	27.00
40s S. Raja	37.50	38.00
60s Finlay	69.00	72.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

TEA DRIFTS LOWER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 10*th October*

A total of 570,000 kgs. was offered in Sale No. 40 held on Monday the 8th inst. Quality was about maintained. The market met with good demand, but prices were irregularly lower. Highgrowns were a weak feature of the sale, especially their brokens, and there was a number of withdrawals in this category. Good mediums elicited less support than last week and were generally easier. Low medium and medium brokens were barely steady and often lower, while their fannings followed a similar trend. Plainest descriptions sold at about last rates. Clean black leaf types were irregular, whereas whole leaf sorts may be quoted about steady. Unorthodox grades sold readily but generally inclined easier. There was less enquiry than in recent weeks for tippy teas.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.50-4.40	3.90-4.10
Mediums	4.30-4.85	4.10-4.30
Good mediums	4.85 5.70	4.30-5.40
Nilgiri B.O.P.	5.00-8.50	5.00-7.80

The average price realised in sale No. 40 was Rs. 4.58 per kilo, as against Rs. 4.57 a week ago and Rs. 4.61 in the corresponding sale last year.

In dust sale No. 40 held today, 314,000 kgs. were offered. There was good demand which eased slightly as the sale progressed. Highgrowns were irregular and generally easier. Better mediums eased slightly and, while Travancore types declined up to 30 nP, Wynaad sorts attracted better support. Black grainy types were firm to dearer. Unorthodox descriptions eased slightly on last rates.

The average price realised in dust sale No. 40 was Rs. 3.85 per kilo, as compared with Rs. 3.99 a week ago and Rs. 4.59 in the corresponding sale last year.

Colombo: Just over 4¾ million lbs. were offered and there was strong general demand. Dimbulas were dearer, but Uvas were easier. B.O.P.Fs came to a strong market. Medium sorts were dearer, while fannings in this category were steady. Lowgrowns were ½ cents easier.

London: *North India and other growths*: In Monday's auction, there was fairly good demand, but Assam C.T.Cs were appreciably lower. Orthodox Assams and African teas were steady, but legg-cut and plainest were barely steady.

Ceylon and South Indians: In Tuesday's sale, there was strong demand and prices were dearer with the improvement in quality seen in most teas.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No. 41 held on 16th inst*: Offerings aggregated 610,000 kgs. Active demand. Prices irregularly easier by 5-10 nP, except black leaf which was dearer. Highgrowns firm with quality."

OILSEEDS FIRM

(*From Our Own Correspondent*)

BOMBAY, 17*th October*

The upward trend of oilseeds prices noted last week gathered further momentum during the week under review, thanks to persistent bull support and bear-covering. Groundnuts continued to make headway, as the latest reports from upcountry centres confirmed the earlier fears of a smaller crop in Gujarat. New crop arrivals from producing centres were also relatively modest because the farmers appeared to be reluctant to release stocks in the rising market. There was larger offtake by *vanaspati* manufacturers and crushers, on account of seasonal increase in pre-*Divali* demand for edible oils. Bulls were further enthused by the pronounced strength in groundnut extraction, following brisk purchases by East European countries. Castorseeds, too, put on a cheerful appearance on the news that some export business in castor oil was transacted with the U.K. and Soviet Russia. Firm conditions prevailed in linseed. The firmness was engendered by persistent demand in the face of paucity of supplies. In sympathy with other seeds, cottonseeds ruled buoyant.

The groundnut January 1963 contract, which was quoted in private dealings at Rs. 228.25, spurted to Rs. 235 today, or Rs. 3.63 above the ceiling level. In view of the strength in forward contracts, the spot section moved up. Khandesh quality put on a rupee to Rs. 46.75. Oil railway receipts hardened by 40 nP to Rs. 19.30 and oil ex-mill by 35 nP to Rs. 19.50.

Among castorseeds, March 1963 contract rose by Rs. 2.37 to Rs. 166.62. Madras small scored a gain of 75 nP to Rs. 33.25. Kanpur also improved by a like amount to Rs. 31.87. Oil B.S.S. spurted by 35 nP to Rs. 13.35. Oil commercial hardened by 10 nP to Rs. 12.40.

Linseed March 1963 contract strengthened by 25 nP to Rs. 40.12. Bold ready was higher by a rupee at Rs. 42. Linseed oil closed firm at Rs. 17.35, as compared with Rs. 16.85 last week-end.

Cottonseed January 1963 contract hardened by 50 nP to Rs. 102.50. White rose by 75 nP to Rs. 22.50. Among other seeds, kardi seed improved by 50 nP to Rs. 28. Niger Madras was maintained at Rs. 36.25.

The following table shows the closing prices of oilseeds and oils on Wednesday, 17th October as compared with those of the two previous weeks:

	17-10-1962	10-10-1962	3-10-1962
Groundnut	Rs.	Rs.	Rs.
Groundnut January 1963	231.37	225.87	219.37
Nizam bold	47.00	46.25	44.50
Khandesh quality	46.75	45.75	45.25
Oil ex-mill ready*	19.50	19.15	19.25
Railway receipts*	19.30	18.90	18.75
Castorseed			
Castorseed March 1963	166.62	164.25	161.50
Ready Madras	33.25	32.50	32.25
Ready Kanpur	31.87	31.12	30.87
Oil B.S.S.†	13.35	13.00	12.80
Oil commercial†	12.40	12.30	12.20
Linseed			
March 1963	40.12	39.87	39.19
Bold ready	42.00	41.00	40.50
Oil ready†	17.35	16.85	16.80
Cottonseed January 1963	102.50	102.00	100.50
Niger seed	36.25	36.25	36.00
Kardi seed	28.00	27.50	28.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PLAIN ORTHODOX TEAS IMPROVE

(*From Our Own Correspondent*)

CALCUTTA, 16*th October*

Firm conditions were discernible in the first post-*Puja* holiday tea export sale held here yesterday. In the absence of any auction in the previous week due to the holidays, support at yesterday's sale was pretty good. Plain orthodox teas improved on sustained support.

If the crop position does not improve in the closing months of the season, a shortage of tea will occur. Prices are then likely to move up, though not to the extent as to compensate the gardens for the shortfall in output. Up to the end of September, the shortfall in output has been about 15 million lbs., and the season is likely to close with a setback of at least 20 million lbs. It is doubted, therefore, whether the country would be able to achieve the production target of 900 million lbs. by 1965-66. This position calls for early measures to raise output, and it is suggested that these should include irrigation of gardens in the summer months. If only plants are watered in the period from March to June, bushes can flush freely. There is also the need for using more fertilisers.

Tea circles here point out that the target of 900 million lbs. should be achieved more by intensive cultivation than by extension of acreage. For, a tea plant takes more than five years to come of age for plucking. As such, irrigation and fertilisers are the best way by which gardens can increase the crop. Of course, a percentage of the increase can be expected from extension to acreage in recent years. Intensive cultivation may affect quality, but what India needs is a larger output of not the common but the superior teas. Considering that many new tea-growing areas in the world produce more common teas and that India's cost of production is higher, it is difficult for India to find a market abroad for common teas.

It is against such a background that the tea industry is insisting on the revival of internal propaganda. In the decade to 1961, India's annual consumption of tea increased by 75.3 million lbs. This compared favourably with the increase of 73.4 million lbs. in the previous decade. Although even without propaganda internal consumption is bound to increase in the coming years thanks to the rapidly increasing standard of living, the industry would be in psychological relief if only the Tea Board revived internal propaganda, as this would be a cushion to the industry if its efforts at intensive cultivation to fulfil the production target were to result in increasing the proportion of common teas to the total output.

Export offerings at yesterday's sale totalled 41,773 packages. It had been expected that in view of the absence of sales last week the quantity on offer would have been greater, but the actual quantity offered was unusually small. Good support was accorded to plain orthodox teas and prices recorded a higher trend. B.O.Ps were a particularly strong feature. Keen competition was accorded to orthodox Assams, and the brighter liquoring B.O.Ps added a liberal gain. Whole leaf grades were very steady, and the more stylish grades received keen attention. Tippy teas hardened. An irregular trend was seen in C.T.C. teas, prices of which eased up to 30 nP. Legg-cut teas came in for an easier market. Darjeelings were irregular, but were readily absorbed. The quotations per one kg. (in rupees), inclusive of excise duty, were: Best Assam C.T.C. fannings 6.40 to 7, medium Assam C.T.C. fannings 5.30 to 5.70, best Assam C.T.C. B.P. 6.40 to 7, clean plain pekoe 4.20 to 4.50, medium Assam C.T.C. B.P. 5.30 to 5.70, plain fannings 3.80 to 4.10 and plain B.P. 3.70 to 4.

JUTE GOODS DECLINE

(*From Our Own Correspondent*)

CALCUTTA, 16*th October*

The week under review was a short one for the jute market and, during the few days the market was open, buyers of goods were in no mood to extend their commitments. This explains the gradual decline in prices. Yesterday's reopening after the holidays was marked by a note of hesitancy, and the week-end announcement by the Indian Jute Mills Association of the decision of mills extending the present high rate of production up to 10th November encouraged buyers in their pausing tendency. However, the I.J.M.A.'s announcement made it clear that anxiety had been rightly entertained inasmuch as stocks of heavy goods had risen consecutively for five months now up to the end of September. Hence, the Association proposes to review the position *de novo* after the stock figures as at the end of this month are known, that is by about the first week of November. The trade believes that, if heavy goods in stock at the end of this month show a rise, mills would reduce working hours. This may not be to the liking of the Government, since a reduction in output of mills may lead to a decline in fibre prices. The difficulty with mills is that, while there is good demand for hessian, transfer of more looms from sacking to hessian manufacture is not possible due to the limited availability of the superior fibre.

Goods that were shipped during the week declined as a result of the local holidays. The trade believes that it would not be surprised if sacking goods in stock with mills at the end of this month again showed a rise. On Wednesday last, although the opening rates were steadier, prices eased as overseas buyers were not inclined to accord support. Ready B. twills were quiet at Rs. 116.60. However, there was some covering demand in hessian, and the 40" 10 oz. was steady at Rs. 55.85. Also, bulls were active in hessian futures. Dull conditions were again in evidence on Thursday and ready B. twills eased to Rs. 116.15. Some transactions were put through in hessian, but, since the volume was inadequate, the price fell to Rs. 55.75. On Friday, the decision by the I.J.M.A. to continue the existing rate of higher production up to 10th November encouraged the declining tendency and, in the absence of steadiness, overseas buyers were biding time. Mills were keen sellers of near and forward positions. Ready B. twills eased to Rs. 115.25 and hessian 40" 10 oz. to Rs. 54.85. Earlier in the week, there was the news that members of the Bombay Hessian and Gunny Merchants Association Ltd. commenced trading in non-transferable specific delivery contracts in gunny bags and hessian, and that the Association proposed to do forward business after obtaining official permission. The market here, after remaining closed for two days, reopened yesterday, when the weakening influence was again in evidence. Conditions were far from normal during yesterday in the absence of support. There was selling pressure in the futures market, as a result of which hessian constructions recorded a sharper setback than hitherto. Ready hessian 40" 10 oz. was as low as Rs. 54.00. Ready B. twills eased to Rs. 115.00.

During the week, fibre arrivals were maintained at the rate of about 150,000 maunds a day. With mills showing greater interest in agencies, sellers here were keen for business. Mills also showed interest in the Cossipore bazar. Prices were maintained as follows: northern bottoms Rs. 29.50, Assam bottoms Rs. 30, and daissee bottoms Rs. 32.50. With the increase in the proportion of wet jute arrivals, complaints have been heard that water is being purposely added in order to inflate the weight. It has been reported that even the outstanding portion of the old crop is being sent in "moisture" condition. There was the news during the week that the Government of India has issued a further quota of 100,000 bales of Pakistan cuttings; however, it is reported that this allocation would be to the buffer stock. The minimum price fixed for Pakistan cuttings is Rs. 75 a bale in Pakistan. Although this is higher than the recent prevailing rate, it is lower than the price for Indian cuttings even after taking into account the transport and insurance charges.

HOLIDAY MOOD IN METALS

(*From Our Own Correspondent*)

CALCUTTA, 16*th October*

With the intervening *Puja* holidays, this week was short of three working days in the local metals market, which, however, continued to wear a holiday mood, with consumers disinclined to enter into commitments. On the London Metal Exchange, the principal metals were steady, and the feature of trading was a very modest rise in the price of zinc. The Government of India has now finalised arrangements for linking established importers with the actual users for the distribution of electrolytic zinc. In Calcutta, zinc ruled firm at Rs. 273 per 100 kgs. Demand was restricted, especially from small consumers. Importers of zinc from the general currency area are reported to have commenced covering their requirements. On the London Metal Exchange, zinc spot opened at £64⅞ a ton and hardened to £65¼ on sustained support.

In London, spot tin opened at £849½ a ton and was maintained at that level throughout the week. Despite the accumulated surplus in the U.S.A. and the weekly release of 200 tons, world output is running lower than demand, and current indications are that the U.S. releases and the General Services Administration's refusal to agree to the International Tin Council's suggestion about the price for the releases would prevent marginal producers from increasing production and restarting the abandoned mines. It should be remembered that the price in London is being maintained at £950 a ton, thanks to the active watch of the Buffer Stock Manager on the price trend. He has so far exhausted about one-tenth of the funds placed at his disposal for keeping the price support scheme into operation. World consumption of tin has been on the increase as can be seen from the decline in the stocks in the U.S.A., Malaya and the U.K. by 7,225 tons, 1,720 tons and 1,337 tons, respectively, during the six months to June last. At the same time, it should be noted that production has also been increasing, but it is believed that the gap between supply and demand is only widening, and that the U.S.S.R. has not been able to increase production, as its efforts to locate first class tin deposits are believed to have been fruitless so far. The U.S.S.R. has deposits, considered sub-economic for exploitation by world standards. In Calcutta, holiday considerations pushed down tin from Rs. 2,439 per 100 kgs. to Rs. 2,411.25.

Utensil copper scrap here was firm at Rs. 535.25 per 100 kgs. and, in London, it was unchanged at £234 a ton. It has been reported that Chile has agreed to sell about 1,000 tons of copper to the U.S.S.R. It will be recalled that about five years ago Russian attempts to get Chilean copper did not prove successful. Reports indicated that the anxiety about the outlook for copper has diminished in view of the pronounced trend now towards an increase in consumption. Lead, in London, closed at £52½ a ton, after opening at £52⅜.

Locally, it was unchanged at Rs. 140 per 100 kgs.

RENEWED SETBACK IN SUGAR

(*From Our Own Correspondent*)

HAPUR, 15*th October*

Crystal sugar prices here, which had tended to stabilise last week, turned again bearish this week due to the early release of 2.5 lakh metric tonnes of sugar for open sale in the market in the form of a monthly quota. The releases last month covered an aggregate quantity of 6 lakh metric tonnes under the two monthly releases of 2.5 lakh metric tonnes each and one special release of one lakh tonnes. Supply position, therefore, became very easy, despite the festive season, and mills were reported to be anxious sellers. It is further gathered that should prices rise following the *Divali* offtake, the Government might issue another extra release. Demand from consuming areas of Punjab, Rajasthan, Gujarat and Saurashtra was slack.

New production season would officially commence on 1st November but factories this side would start crushing late, as cane is still not fully ripe. To encourage sugar production, the Government of India has withdrawn the ten per cent cut on production, imposed last year. Sugarcane acreage this year has also increased by about 92,000 acres. Week-end prices of sugar here were: Spot delivery Rs. 106 per quintal, mill delivery (D 29) *Amroha* Rs. 103.47, *Dhampur* Rs. 103.47, *Seohara* Rs. 103.31, Meerut Rs. 104.75, (E 29) Simbhauli Rs. 104.49, Bijnore Rs. 103.47 and Dhampur Rs. 103.32 a quintal.

The mill delivery prices eased by 31 nP to 87 nP per quintal during the week in the Muzaffarnagar market, thanks to the easy supply position. Even at lower levels demand was lacking. Spot prices also eased up to 75 nP a quintal. Mills were fast clearing old stocks to make room for the new produce which would arrive early next month. Week-end prices were: Mill delivery (per quintal) AA 29 Mawana Rs. 108, Iqbalpur Rs. 109.50, Shamli Rs. 108, Daurala Rs. 107.25, D 29 Deoband Rs. 105.50, Kashipur Rs. 103.50, E 29 Seohara Rs. 102.64 and Dhampur Rs. 102.80.

Khandsari prices ruled steady on revival of demand from Punjab and local areas. New production would start sometime in mid-November. Crystal and non-crystal prices were quoted at Rs. 96.45 to Rs. 101.81 and Rs. 97.79 to Rs. 103.15 per quintal, respectively. *Boora* was quoted at Rs. 99.13 to Rs. 101.81 a quintal.

New *gur* arrivals were on an increase and averaged 2,000 maunds daily. Demand for festive season was fairly good. Offtake during the week was three wagonloads to Gujarat side. All crushers here were still manufacturing *gur* and were buying cane at Re. 1.12 a maund. But cane supplies at this price were very small. *Gur* arrivals would further rise as soon as the cultivator is free from *rabi* sowings. Old stocks of *gur* and *shakker* left were negligible. Week-end prices here were: *Gur* new superior Rs. 75.02 to Rs. 78.23, inferior Rs. 66.98, *shakker* Rs. 66.98, to Rs. 72.34, a quintal.

Gur futures moved narrowly both ways during the week on bouts of speculative selling and buying. Having opened at Rs. 21.53 on 9th October, *gur Fagun* delivery touched the highest and lowest level at Rs. 21.62 and Rs. 21.38, respectively, in mid-week and was quoted today at Rs. 21.48.

22 OCT 1962 PUBLIC DEPARTMENT

Notice

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-ninth Annual General Meeting of the Shareholders of the Corporation will be held at the Sheth Goculdas Tejpal Auditorium, Gowalia Tank T.T., Bombay 7, on Monday the 12th November, 1962, at 4.30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and audited accounts for the year ended 31st May, 1962.
2. To sanction the declaration of a dividend.
3. To elect a Director in place of Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., who retires by rotation and is eligible for re-election, by passing the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Corporation.

   "Resolved that Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., who has attained the age of 83 years, and who retires by rotation, be and is hereby re-elected a Director of the Corporation and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

4. To elect a Director in place of Mr. C. H. Campbell, who retires by rotation and being eligible offers himself for re-election.
5. To elect a Director in place of Mr. Neville N. Wadia, who retires by rotation and being eligible offers himself for re-election.
6. To elect a Director in place of Mr. G. V. Nath who retires under Section 260 of the Companies Act, 1956, and being eligible offers himself for re-election.
7. To appoint Auditors for the period until the next Annual General Meeting of the Corporation and to fix their remuneration.
8. To appoint Branch Auditors at a remuneration to be fixed by the Board.
9. To consider and if thought fit to pass the following Ordinary Resolution with or without modifications:

   "Resolved that the Company in General Meeting hereby sanctions the investment by the Company of a sum of Rs. 73,50,000 in 7,35,000 equity shares of Rs. 10 each at par of Formica India Limited, a Company incorporated under the Companies Act, 1956, in the State of Maharashtra, this investment representing 49 per cent of the proposed issued capital of Formica India Limited though such investment be in excess of the percentages specified in sub-section 2 of Section 372 of The Companies Act, 1956, and the provisoes thereto, if applicable.

   Resolved further that the Company approves of the application made by the Board of Directors, to the Central Government, requesting its approval to the said investment.

   Resolved further that the Board of Directors be and are hereby authorised to take such steps as are necessary for obtaining the approval of the Central Government as also to agree to such modifications or conditions as the Central Government may prescribe in relation to such investment and in general to take all such steps as are necessary to implement this Resolution."

10. To consider and if thought fit to pass the following Special Resolution:

    "That pursuant to Section 360 of the Companies Act, 1956, approval be and is hereby accorded to the following contracts being entered into with The Bombay Company (Private) Limited, an Associate of Wallace and Company, the Secretaries and Treasurers of the Corporation, namely:

    (*a*) The clearing and forwarding by The Bombay Company (Private) Limited of the Corporation's Tea from Cochin on such terms and conditions as may be prescribed from time to time by the Cochin Tea and Rubber Shippers' Association, for a further period of five years from the 24th February 1963.

    (*b*) Leave and license for the Corporation to occupy two portions of the premises at No. 9, Wallace Street, Fort, Bombay, for an office at a total compensation of Rs. 1,300 per mensem for a further period of five years from the 24th February 1963, subject to earlier termination by either party giving six months' notice in writing to the other party.

By Order of the Board,

WALLACE & CO.,

Secretaries and Treasurers.

9, WALLACE STREET, FORT,
BOMBAY, 16*th October*, 1962.

Note: An Explanatory Statement, in terms of Section 173 of The Companies Act, 1956, and covering material facts in respect of items 3, 9, and 10, has been forwarded to the members of the company.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Corporation. Warrants for the dividend, if declared, will be posted to Shareholders on the 14th November, 1962. Dividend will be payable on and from that date to those shareholders whose names stand on the Register at the close of business on 13th October, 1962. The Transfer Books of the Corporation will be closed from the 15th October, 1962 to the 5th November, 1962, both days inclusive.

INDIVIDUAL AND CORPORATE INCOMES

(*Concluded from page 678*)

the nature of business organisation in India is still proprietary, for nearly 77 per cent of the assessments and 43 per cent of the income assessed in 1959-60 were accounted for by individuals. But their total tax liability was only 15 per cent of the total tax liability of the class of "business and professions."

The bulk of the *individual* assessees was concentrated in the group of commerce, transport, etc. which accounted for 68 per cent of the total *individual* assessments. In contrast to individuals, though companies accounted for a mere 1.8 per cent of the total assessments and 27.5 per cent of the total income assessed, their tax liability was stupendous. Of the total tax assessment of Rs. 188 crores, tax assessed against companies amounted to Rs. 143 crores or 76 per cent. Manufacturing activity formed 24.7 per cent of the total assessments and 51 per cent of the total income assessed under companies. Of the total income of business and professions, registered firms accounted for 16.2 per cent but contributed only 1.8 per cent to the tax assessed.

The main conclusions of the *Tata Quarterly* study may now be drawn together. First, in spite of the big increase in assessments, assessable incomes and income-tax revenue over a period of seven years, only a microscopic minority of India's working population is still covered by the Income-tax Act and only a small fraction of the non-agricultural national income is assessed for income-tax. If the number of assessments in 1959-60 is equated with the number of assessees, the number of assessees (excepting registered firms and companies) in that year was no more than 866,000—a very small minority collectively contributing to the Central exchequer as much as 14 per cent of the total tax revenue. Secondly, the corporate sector roughly accounts only for 20 per cent of the total income assessed. The proportion is rather low because the whole of the assessable incomes of companies is not reflected in income-tax statistics as a result of the operation of development rebate, depreciation allowances, etc. Thirdly, of the total income assessed under the group "business and professions" in 1959-60, nearly 43 per cent was accounted for by individuals as against only 28 per cent by companies. This vividly brings out the largely proprietary nature of India's business organisation. And, finally, of the total income assessed from "business and professions" in 1959-60, more than 45 per cent was accounted for by commerce, transport and communications. This brings out the fact that the non-agricultural sector of the Indian economy is still a substantially trading sector.

@ Excludes NEFA and Tuensang districts of Nagaland. * The last census in Jammu and Kashmir was held in 1941. For purpose of variation, mean of 1941-61 increase has been taken. (*P*) Provisional. † A census of Goa, Daman and Diew was taken by Portuguese Government as on 15th December 1960. The figures represent "present" population on that date. ‡ Variation is based on the population of 1948-1961. 1948 population (when a census was taken) has been assumed as 1951 population. †† The population of Tuensang district for 1951 and 1961 have been excluded as the 1951 population is not for the same territory as in 1961.

ABBREVIATIONS. N—Nominal. (*f*) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport. A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable. ††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935. i—Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest. M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice. T—Liability taken over by Madhya Pradesh.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.

Accounts:—Figures in the 'Accounts Closed' column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

S.—The reserves of Straw Products Ltd. include a non-distributable amount of Rs. 63,40,654 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December 1955. §§ Investment at cost.

H.—Clive Row Investment—Dividend for 1959 includes additional dividends of 9 nP for the year ended 31st March 1955 and 37 nP for the year ended 31st March 1956. * Includes bonus.

M.—Managed by the Board of Directors. *N.B.*—Dividends paid since 31st March 1959 are shown as taxable. (k) Investments.

A.—Associated Battery Makers (Eastern) Ltd. The effective dividend for the year 1960 would work out to 16.36 per cent approximate, as the final dividend of 10 per cent was paid on the increased capital of Rs. 118 lakh whereas the interim dividend of 15 per cent was on a paid-up capital of Rs. 50 lakhs only. X.B. Ex-Bonus.

MARKET GOSSIP

(*Concluded from page* 667)

Drawing particular attention to the need for reducing the expenditure on maintenance imports, Mr. Mehta urged the Union and State Governments, public sector enterprises and private sector units so to plan their projects as to keep their requirements of imports low. In giving this advice, he was conscious that this would mean a drastic change in "the established thinking and working practices of industries in the public and private sectors." Making a fervent plea to industrialists to get over their addiction to imported products, Mr. Mehta observed as follows:

"Under conditions of shortage, the temptation to import, even to the extent of exaggerating import requirements, is considerable. Often, the imported goods are cheaper and nearly always better in quality. Industrialists who, therefore, incessantly try to get import licences for materials and components, even when corresponding indigenous materials and components are available, tend to forget that to protect them, and often at their instance, consumers of their products have been deprived of the same facility—use of cheap and superior imported goods. I found, during my association with the Tariff Board and the Tariff Commission over a decade ago, that those who wanted protective tariffs, quantitative restrictions and even total import bans were themselves averse to using indigenous raw materials or components or assisting ancillary industries on the plea that these did not come up to the requisite standard. On the other hand, they themselves claimed additional protection on the ground that their products had to offset prejudice against indigenous articles, because of the attraction of well-known foreign brands. Such inconsistent attitude is not helpful either for wholesome industrial development or for our foreign exchange savings and earnings. Moreover, in a period of crisis, some make-shift arrangements are necessary, some adjustments unavoidable. The remedy for high price is encouragement of efficient production in a country poor enough for every anna's worth of efficiency to matter; we want not merely more production, but better productivity; and the remedy for inferior quality is adherence to requisite standards and insistence on inspection—and not continued reliance on imports which many entrepreneurs seem to prefer."

There is considerable force in Mr. Mehta's view that every user of foreign exchange should be under an obligation to justify regularly the need for such resources. He felt that, in the long-run, it would be necessary to encourage the establishment of those industries which required fewer imported materials and components. This problem will engage the attention of the sub-committees set up at the meeting. Five sub-committees have been constituted one each for textiles, steels, petroleum oil, fertilisers and machinery. These sub-committees of experts are expected to place specific proposals for import substitution before the next meeting of the Panel due to take place in about a month's time. It would appear that the attention of the Panel is devoted to industries alone. This emphasis is, no doubt, understandable. But one feels that the possibility of import substitution in respect of agricultural products should also be examined by the Panel. Apart from cereals, raw cotton and edible oils, there have been some imports of fish, canned meat, dairy products, cocoa, etc., in recent years. Is it not necessary to make adequate changes in the pattern of agricultural production as well as to conserve the foreign exchange for development purposes?

All preference shares are taxable unless otherwise stated.

*** These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent (cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

'tal and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

CHINA MUST BE QUICKLY CONTAINED

WHEN the history of the present-day world comes to be written in the free countries, India will stand out as a nation that was subjected to unprovoked aggression, despite its peaceful endeavours to avoid a war with its neighbours. The credit for winning that place for this country will go to Communist China, which has consistently shown nothing but scorn for international law and made no secret of its disbelief in the theory of co-existence between communism and democracy. It has broken the *Panchsheel* to pieces after solemnly swearing by it and blown away the Bandung spirit by unleashing a typhoon. It has painfully reminded us of the lesson which two world wars had clearly established but which our leaders chose to ignore in their anxiety to preserve world peace. The lesson is that one cannot rely on the undertakings given by any regime of dictatorship, whether its hue is red or blue. It has also demonstrated beyond doubt to our peace-loving people and its leaders that a bully understands only force and not arguments. Another age-old truth which our leaders failed to grasp until it was driven home by the present-day China is that negotiations, if they are to succeed, have to be from a position of strength, not only moral but also physical. All honour to Prime Minister Nehru and his able lieutenants for having valiantly tried to save peace by pursuing a line of action in which they passionately believed, ignoring the lessons of history. They took a great risk in the honest belief that it was worth taking, paying no heed to the warnings sounded by well-meaning friends. Their laudable venture in peace has failed, thanks to the Chinese who have, of their own free will, adorned the label: "I am the Enemy Number One of India." This fact has to be faced. Our learned President Radhakrishnan, who is a renowned authority on *Bhagwat Gita*, must render to our Prime Minister the services which Lord Krishna did to Arjuna.

The war into which we have been forced has to be won. In a war, the country which first strikes has always certain advantages and initial victories, because of its advance preparations for reaching specific goals. It is not, therefore, surprising that our forces have been compelled to retreat, yielding precious ground to China. But it would be a serious mistake to underestimate the ambitions of China any more. It would be an illusion to think that China wants only the border to be redrawn by a few miles in its favour. Further, initial successes easily won always go to the head. The enemy knows how unprepared we are. He is, therefore, bound to press on. The possibility of his doing so in the North-East is greater than in the North. Quick steps must be taken to stop the Chinese advance well ahead of Assam, the strategic importance of which to the country is obvious. Assam, as readers are aware, produces tea, a valuable foreign exchange earner, and oil, an indispensable commodity for war and peace alike. The time for debating on the virtues of alignment or non-alignment is over. So is the time for mere brave words or crying over spilt milk. Prompt action and quiet diplomacy for strengthening our armed forces with modern equipments are the need of the hour. It will be a long time before we can be self-sufficient in arms. Since we cannot wait that long, we have to seek the help of others. We need not be ashamed about it, for our cause is a righteous one. We have tried our best to prevent an Armageddon. We cannot stop it, if the Chinese are determined to force it on the world.

Undoubtedly, many delicate issues are involved. We presume our leaders must have already thought about them in anticipation of the contingency that has now materialised. The biggest issue is our relationship with Russia. We have been receiving valuable assistance from the Soviets and some of the East European countries in our peaceful endeavour to eradicate poverty. It would be a pity, if anything were to happen that would cut off this assistance. But what are we to do, if Russia fails, as it seems to have, to restrain China and ask it to withdraw its forces from Indian territory? By all means let the Government of India try again, if it has not already tried, to use the good offices of Russia. One cannot, however, indefinitely live on the hope of Russia doing something that would force the Chinese out of our soil. The time has come for testing Indo-Russian friendship in the open. If Russia considers that non-alignment of India is an asset for preserving world peace, then it must ask China to vacate its aggression on the Indian soil. To many this solution appears to be futile, besides carrying the risk of strengthening the hands of Communists in this country and glorifying another dictatorship. But let us leave no stone unturned for preserving peace. Only, we must try this expedient expeditiously. If it fails, our salvation lies in aligning ourselves with our friends in the free world who have already given us massive economic assistance without any strings. It is unnecessary to add that economic freedom cannot be had without political freedom. And it is this freedom that is in great danger.

IMPLICATIONS OF THE CHALLENGE

IT is gratifying to find that Prime Minister's call for unity in this hour of national emergency and the prospect of prolonged hostilities with China, which has entered NEFA *en masse* as it were at the time of writing, has had a resounding response. If the observations made by the various political leaders during the past one week and the demonstrations, as well as gestures, made by the people are any dependable indication, as they undoubtedly are, the country has surely rallied round the Government. The people are determined to throw the invaders behind the McMahon line in NEFA and clear them out of Ladakh. All opposition parties, except the Communist, have offered their fullest co-operation and affirmed their resolve to stand united. Even the Communists have condemned China, though some of them, especially the top leaders, are not unequivocal. Leaders of the business community, as well as of industrial workers, have promised to do their best to increase production. Every one is agreed that, whatever might have been the omissions and commissions of the Government in the past, now is not the time for fault-finding and that, instead, we must look ahead, work hard to rid the country of the aggressor. It is now for the Government to harness this enthusiasm wisely and weld the nation into a strong body. Its actions must be such as to generate confidence among the people that the task of defending the country is being handled on practical lines, without letting ideological prejudices stand in the way.

The first requisite for this purpose is to disabuse the impression, which the Ministers themselves have been spreading by their speeches, that our Defence forces are lacking in fire-power and that this deficiency cannot be easily made good. If the people are not to be weighed down by a sense of pessimism and dark forebodings, something more than pep talk will be necessary. A possible way is indicated in the previous article. Another way would be to associate with the administration of the country persons who are known for their talents in the respective fields of defence, industry, agriculture and trade. How exactly this should be done is a matter of detail, but the important point is that they should be given an effectively active role, so that the jobs may be done efficiently and goods delivered in time. A third way would be not to increase the economic dependence of the country on the Communist bloc, at least in regard to strategic materials such as petroleum and aircraft. On the contrary, all possible steps should be taken to reduce that dependence. The Government's oil policy, in particular, is in urgent need of revision. Mr. K. D. Malaviya's announcement at New Delhi last week-end, twenty-four hours after Communist China had mounted its massive offensive in both Ladakh and NEFA, that the Government had decided not to allow any of the three foreign oil companies to expand their refining capacity was ridiculous, if not irresponsible. The Government has already enough and more on its hands. Its oil projects are not proceeding according to schedule. The demand for petroleum products is rapidly expanding and the country has no foreign exchange either to buy plant and machinery or to import the expensive petroleum products. The largest proved oil reserves, the richest oil-bearing area, the first completed public sector refinery and the oldest refinery of the country are all in an area which is within striking distance of our foe. And still the Minister for Fuel reiterates most firmly his dog-in-the-manger policy. It looks as though Mr. Malaviya loves his brand of socialism more than the country. Can the second largest Communist power in the world, which has chosen to be our number one enemy, be defeated at minimum damage and cost to the country, if we pursue such dubious policies?

It is said that the third Plan should be pruned wherever possible to release the resources necessary for strengthening our defence forces, so that an offensive can be mounted against China as early as possible. On the face of it, this suggestion sounds sensible. But the fact is that the third Plan has already been pruned by the shortage of real resources and the inability of numerous entrepreneurs to proceed with the projects for which they

had obtained licences. By and large, it is only the core of the Plan that now remains to be implemented. The successful implementation of this Plan is as essential for strengthening the country's defences as it is for raising the living standards of the people. The investments in agriculture (they include fertilisers and irrigation as well), power, transport, steel, coal, cement, aluminium, chemicals, drugs, oxygen, plastics, clothing and other wage goods, synthetic and natural rubber, vehicles, tyres and tubes, machine tools and heavy industries, electronics, watches, hospital equipment, to mention only some, are all necessary. One cannot fight a modern war without these basic requirements. Even rayon, nylon and terylene fibres are essential. Accordingly, there is hardly any room for cutting down the expenditure on the third Plan. On the contrary, there may have to be some increase and realignment of priorities. Greater emphasis will have to be laid on special steels than is the case now. The pace and efficiency of implementation will have to vastly improve. So the war effort will mean a far greater tempo of economic activity and larger employment than that envisaged in the third Plan. Only, a substantial part of production of goods listed above will not be available for civilian consumption. That is the tragedy of a war. It would be worse still, if the conflagration were to spread, resulting in a full-scale war.

When goods are diverted for war purposes and employment increases, inflation will follow. Controls will become inevitable. The atmosphere for the working of controls will, however, be more congenial in such a situation, for people's co-operation can be expected to be more readily forthcoming during an emergency like national war than in times of peace, assuming, of course, that the leadership will successfully rouse their sense of patriotism. Nevertheless, vigilance will be necessary on the price front. The entire business community will have to exercise self-restraint and desist from hoarding, profiteering and black-marketing. The war forced on us is different from the one in which we found ourselves during 1939-45 and so also the social and political climate. The businessmen's instinct for self-preservation will itself demand that they go out of their way to ensure that the price-line does not get out of hand and that they accept restraints on their profit-margins and dividends, so that labour may feel inspired to extend its wholehearted support for stepping up production by working on holidays and Sundays and for not insisting on a wage-structure with built-in inflation. When one comes to think of all this, one realises that, of all the people, businessmen, in particular, will have a lot to do for the successful prosecution of war effort, because they hold the position of leadership at the various levels of community. It is to be hoped that businessmen and politicians in power alike will realise this simple point and work together in close co-operation.

Agricultural production will have to be tackled most energetically. It is here that State Governments and local politicians have to prove their mettle as leaders of people. All idle hands in rural areas must be mobilised to improve the productivity of land and farms. If rightly organised, impressive results will be possible even in a year's time. The challenge thrown by China can be successfully met only if we win the battle on the production, both agricultural and industrial, front.

THE HOUSING PROBLEM

THE magnitude of India's housing problem is simply stupendous, as will be seen from a few statistical aggregates. As many as 50 million rural dwellings, it is officially estimated, would have either to be rebuilt completely or improved substantially. Even if it is supposed that the third Plan's housing programmes in both the public and private sectors are implemented fully, there will be a huge shortage of about 14 million houses (of which six million represent the additional demand in the third Plan period) in urban areas at the end of 1965-66. But no such supposition can be confidently made, for the current acute shortages of building materials are bound to get aggravated in the next few years in the context of increasing defence requirements. So, the shortage of urban houses that will have to be carried over into the fourth Plan may be reckoned at not less than 15 million. It is patently inconceivable that finances on the scale estimated—Rs. 7,500 crores for urban housing covering 15 million units and Rs. 6,500 crores for rebuilding or improving 50 million rural dwellings—can be found for solving the entire problem in, say, five years.

The problem is essentially one that should be tackled in terms of a long-range plan as in the case of road construction or power development. A 30-year Plan (1966-96), for instance, could have, as its objectives, the rebuilding or improvement of 50 million rural houses and the construction of about 50 million urban housing units (third Plan's carry-over of 15 million, besides 6 million additional demand arising in *each* successive five-year period from the increase in urban population). Any such long-range plan would involve an aggregate outlay of not less than Rs. 30,000 crores, or an average of Rs. 1,000 crores per annum over the specified period in both the public and private sectors. As, however, so much investment in housing cannot be logically envisaged in conformity with national income projections, the country will continue to have a housing shortage of some magnitude or other even at the turn of the present century. There should, therefore, be no illusions about this question at any level, official or non-official. If it is going to be extremely difficult to satisfy fully even the first two of the "trio" of basic needs—food, clothing and shelter—the third cannot obviously be expected to command a higher order of priority.

That provides a perspective for the average citizen who may be well advised to cultivate a degree of contentment, or even of fatalistic resignation to the depressing prospect, if he is not to find himself in an utterly miserable state of mind. But, then, contentment is easy to preach but difficult to practise, especially these days when everybody, be he rich or poor, seems to be discontented for some economic reason or other. Time and tide waits for no man, and the revolution of rising expectations may have its grim side too. As a decent house, even if it is very modest in terms of rent or capital cost, can exert a healthy psychological influence on the perpetually discontented urban dweller belonging to the working class or the lower middle class, something must be done during the third Plan period itself to put more hope into his mind—the kind of hope that is realisable within a reasonable period in his lifetime. It is not meant to suggest here a higher priority for, or even an increase in the proposed public-sector investment of Rs. 425 crores in, housing under the third Plan. All that is not possible, the resources picture being what it is. If the urban dweller is not to feel a sense of frustration, he must see more tangible evidence of the Government's earnestness in the matter of housing not only in the public sector but also in the private sector. This is essentially the task of State Governments, for it is they who have to take all the necessary steps.

It is possible to advance some concrete suggestions in this connection. First, even within the proposed public-sector outlay of Rs. 425 crores, under the third Plan, for building 775,000 urban dwellings and 125,000 rural houses, an attempt should be made to build a larger number of houses. Specifications pertaining to plinth area and construction materials should be re-examined and re-defined with a view to ensuring lower unit costs without prejudice to utility and durability. For instance, there would be undoubted scope for lowering the space specifications of the 300,000 houses of varying sizes to be built by the Central Government departments. It is well known in Delhi, for instance, that the housing accommodation so far provided by the Government to its employees is twice or thrice as large as equivalent private accommodation—equivalent in terms of rent. As tens of thousands of Government employees continue to live in privately-owned houses and thereby aggravate the housing shortage for private employees, the Government departments should construct, *within their third Plan budgets for housing*, at least 600,000 housing units, if not more. If this is done, as it can very well be by revised space and material specifications, there will be considerable relief to non-Government employees and other lower middle class housholds in cities like Delhi, Calcutta, Bombay and Madras where there are Central Government offices.

Secondly, in the matter of housing for industrial workers, the Union Government would do well not to pursue seriously the idea of imposing a special levy on employers for financing housing projects. This idea, favoured by the State Housing Ministers' Conference held at New Delhi last week, would involve varying amounts of levy, depending upon the percentages of workers provided with houses by different employers. By all means, let the Government collect statistics from all over the country about the number of houses so far built by employers, both with Government assistance and otherwise, to ascertain the shortage in the industrial housing sector. Having done that, the Government should reactivate and enlarge its subsidised industrial housing scheme instead of imposing any special levy for the purpose of expanding accommodation facilities for workers. If only about 26,000 houses, out of the 150,000 houses sanctioned under this scheme till March 1962, have been built so far by industrial employers (including Government companies), the Government should rather remedy the difficulties faced by employers in implementing the scheme than think in terms of a new approach or a new scheme. The following points made by the representatives of employers in their discussions with the State Housing Ministers last week seem to reflect genuine difficulties:

(i) The ceiling costs of various types of tenements prescribed under the scheme are unrealistic.

(ii) The Government should help in acquiring land for setting up housing colonies for workers.

(iii) Building materials for implementing the scheme should be available at controlled prices.

(iv) Instead of releasing the amount (that is, 50 per cent loan and 25 per cent subsidy) to the employers in instalments, the Government should place the entire admissible amount in the account of bankers of the employers. The amount so deposited may be secured by the bank guarantee of due performance.

(v) The discretion of employers in the allotment of houses to eligible workers (that is, workers earning less than Rs. 350 per month) should be more than 15 per cent.

(vi) Measures should be available to evict workers from houses when they cease to be eligible for the benefits of the scheme.

(vii) The scheme should also provide for schools, marketing centres, hospitals, etc., in the housing colonies.

As the Union Minister for Housing, Mr. Meherchand Khanna, himself has admitted that some of the difficulties pointed out by employers are genuine, it only remains for the Government to devise remedial measures so that all the 73,000 houses, proposed to be built under the Subsidised Industrial Housing Scheme at a cost of about Rs. 30 crores in the third Plan period, could actually be built. It is of utmost importance that all the parties concerned—Government, employers and workers—must cooperate with one another in implementing the scheme.

The success of this scheme, like that of all other non-departmental housing schemes under which 400,000 houses are to be built during the third Plan period, will depend, to a great extent, on the speed and efficiency with which the State Governments acquire and develop land, assuming that building materials will be readily available. The Housing Ministers' Conference has recommended, in this connection, that the State Governments should take immediate steps to freeze land values and acquire land in accordance with interim general town plans. It is by no means easy to curb speculation in urban land values. Still, the attempt should be made to acquire the required land at prices that would be fair to both the parties.

In so far as housing in the private sector is concerned, the expected investment of Rs. 1,125 crores by individuals over the third Plan period may not materialise fully if certain steps are not taken at an early date. Transport bottlenecks, which retard the movement of key building materials like cement and steel, would have to be eliminated to the extent possible. The output of cement and steel has to be pushed up. Production bottlenecks, which often occur in the case of locally-produced bricks for want of coal dust, for instance, can be remedied by prompt supply of raw materials for brick manufacturing. More immediate and practical research for utilisation of local building materials and mechanisation of the manufacture of bricks will go some way towards cheapening the cost of construction of houses. Above all, private house building in cities like Bombay may receive a fresh impetus if the restrictive provisions of rent control legislation, wherever they render investment in housing palpably unremunerative, are suitably modified.

MARKET GOSSIP

Cotton Crop Prospects

NOW that the uncertainty regarding the scheme for marketing of Indian cotton in the current (1962-63) season is over, traders can settle down to normal business. Details of the scheme were announced by the Textile Commissioner on Friday the 19th inst. Its salient features are given on page 747 of this issue. The Textile Commissioner also announced simultaneously the first instalment of the quota of new crop Indian cotton to spinners. Mills in Maharashtra, Gujarat and the South can purchase new crop equivalent to 20 per cent of their total consumption of Indian and foreign 'B' cotton (that is, cotton of staple length 1" and below) during the 1960-61 season. Mills in other areas can buy up to 30 per cent. On the basis of consumption during the 1960-61 season, the aggregate quantity allotted under the present quota would work out to a little over one million bales. This represents 20 per cent of the current season's crop which is currently estimated by the trade at 5.4 million bales.

Apart from extraneous factors, such as the Sino-Indian conflict and the international political situation, which are bound to affect all markets, the trend of cotton prices should from now on be determined by the normal forces of supply and demand. It is true that the extent of availability of U.S. cotton is an important element in determining the level of supply in the country. India is reported to have asked for about 700,000 bales of U.S. cotton under P.L. 480. Although "a substantial" part of the quantity asked for has been promised by the U.S., no definite commitment as to the exact quantity that will be made available has been made so far. Trade circles feel that no less than 350,000 to 400,000 bales of U.S. cotton could reasonably be expected. It remains to be seen whether, in view of the Caribbean crisis, the U.S. will cut the P.L. 480 allocations and, if so, to what extent it will affect the supply of cotton to India.

Barring the uncertainty in this regard, the trend of cotton prices may be expected to follow crop developments. Current expectations are that this season the crop will turn out to be a bumper one. The Cotton Advisory Board, at its meeting held on the 10th inst., estimated the crop at between 5.2 and 5.3 million bales. Although this is 300,000 to 400,000 bales higher than last season's output, the Board was of the opinion that, in view of the lower carryover stock at the beginning of the season, estimated at 1.4 million bales, as against 1.8 million bales at the beginning of last season, the rising mill consumption (consumption of Indian cotton in the month of July 1962, the latest month for which figures are available, was the highest for the previous 10 months) and the uncertainty about imports, the supply position would continue to be tight during the current season also. Hence it endorsed the Textile Commissioner's new scheme for stricter control over the distribution of cotton.

Trade estimate, as already noted, is higher at 5.4 million bales of 400 lbs. each. This is based on favourable weather obtaining till the end of September. According to a leading firm of cotton traders, weather conditions were ideal for the growing crop till the end of September all over the country, except in the Punjab where unprecedented rain followed by floods in the second half of September damaged the crop in the eastern and central regions. Gujarat, Saurashtra, and the Oomra tracts enjoyed very favourable weather and crop progress has been very satisfactory. In Madhya Pradesh, excessive rains in September were followed by good weather, so that the crop has escaped with only a minimum of damage. Down South, all crops have got off to a good start and ideal weather promises an excellent harvest. Weather conditions so far during the month of October have been satisfactory. But, according to this firm, the crop has still to go through a critical period. In making arrangements for distributing Indian cotton among mills, it would, therefore, be safer to err on the side of caution.

World Sugar

The world sugar markets have reacted bullishly to the Cuban blockade ordered by President Kennedy. Within twenty-four hours, raw sugar (spot No. 8 world contract) at New York jumped up by 46 to 50 points. In London, too, sugar is reported to have staged a smart rise. The firmness of world sugar is bound to gather further momentum, even if—big 'if', indeed—the international political situation caused by the Cuban crisis eases by any chance. For the beet sugar crop in Eastern Europe, it is said, has suffered much damage from adverse weather conditions. The cane sugar production in Cuba in the current season is also expected to show little improvement on the previous season's figure which was well below pre-Castro regime levels. Further, it is considered likely that Russia will be a substantial importer of sugar.

As against the aforesaid assessment, some observers in London feel that sugar stocks are sufficiently great to cushion the effect of all but the very largest fluctuations in crop levels on the world market. The free price of sugar, sold particularly to Japan and uncommitted nations such as Iran and Iraq, it is said, continues at a rate described as "far below the cost of production." With this in mind and with a view to raising the free market price, the International Sugar Council has called for the resumption of the World Sugar Agreement. The alternative to such a move, according to Dr. Stedman, Executive Director of the Council, would be the gradual elimination of commercial sugar production in countries depending on free market sales.

Whatever be the outlook for world sugar, in India, sugar interests have taken an optimistic view of export possibilities at least in 1963. Indications are that actual exports will touch 500,000 tons, which incidentally represent the third Plan export target. The Export Agency Division of the Indian Sugar Mills Association has, we are told, already entered into export commitments aggregating 370,000 tons. Speaking to Press men at Calcutta a few days ago, Mr. S. S. Kanoria, Chairman of the Division, disclosed that the I.S.M.A. had signed a contract with an international trade house for the export of 200,000 tons of raw sugar worth about Rs. 7 crores in the first half of 1963. The bulk of this quantity will go to Japan, one of the largest importers of raw sugar in the world. The I.S.M.A. has arranged with 25 sugar mills for the manufacture of 160,000 tons of raw sugar. And it is expected that some other factories will undertake raw sugar production later. The total exports of sugar in 1962 are estimated at 440,000 tons (valued at Rs. 18 crores), as against 268,000 tons exported last year.

Cuban-Soviet Bloc Trade

Panic gripped the stock exchanges throughout the world, following President Kennedy's nation-wide proclamation on Tuesday, the 23rd inst., announcing a strict blockade of Cuba in a bid to stop further flow of certain selected military weapons into that country. The President ordered that all Cuba-bound ships be intercepted and searched for "offensive weapons" that they might carry. As Russia was expected to resist this, a head-on collision was thought imminent. Millions of dollars were wiped off share values as an avalanche of selling orders hit Wall Street. The London Stock Exchange and most of the Continental bourses, too, reacted sharply to the news.

The military blockade of Cuba comes as a dramatic climax to the economic blockade which the U.S. had applied against Cuba ever since it turned into a Soviet satellite. This forced Cuba to lean heavily on Soviet Russia for its very existence economically, and trade between Cuba and Communist countries has increased enormously. A few days before imposing the military blockade, the U.S. Government had announced severe curbs on shipping, in a bid to stop the free world's ships from carrying cargoes from the Soviet Union and its political associates to Cuba and *vice versa*. How big has the Soviet bloc's trade with Cuba become? How lucrative has carrying cargoes from Russia to Cuba been to non-Communist shipping nations? The following analysis of Cuban-Soviet bloc trade by *P. G. Krishnayya's Service*, in an exclusive despatch to this journal from New York prepared before President Kennedy's proclamation, provides the answers:

The Soviet bloc's trade with Cuba has grown at an enormous rate in the past two years and carrying the cargoes has been exceedingly lucrative to shipowners in the free world's maritime nations, including the U.S.'s closest allies. To be specific, Soviet trade with Cuba this year will reach $750 million, according to a study just published in Geneva on the Iron Curtain economies by the Economic Commission for Europe.

This represents a 40 per cent jump over Russian-Cuban trade in 1961 which, in turn, was 300 per cent above 1960. Poland's sales to Cuba more than tripled between 1960 and 1961, rising from $4 million to $23 million, while its purchases from Cuba more than doubled, rising from $10 million to $24 million. Rumania's sales to Cuba climbed from next to nothing in 1960 to $11 million in 1961. Czechoslovakia's trade followed a similar course and is scheduled to increase another 20 per cent this year.

While the U.S. trade with Cuba has been slashed from 4.3 million tons in 1959 to a mere 75,000 tons in 1961 (mostly medicines), the Soviet bloc nations have taken its place. Implicit in the statistics of the tremendous rise in Soviet Russia's trade with Cuba is the answer to the second question. Ships of non-Communist nations are transporting millions of tons of food, materials and machinery to Cuba. Shipping fees on the traffic are now running at an estimated $100 million a year—a welcome bonanza at a time of world-wide maritime recession.

Between 1st January 1962 and the end of August last, a total of 433 ships carrying free world flags docked at Cuban ports. In the three months of June, July and August 1962, according to the U.S. Maritime Commission, owners of 169 ships of free world nations made 185 trips in and out of Cuban ports, with ships of such countries as Greece, Britain, West Germany and Norway accounting for more than 60 per cent of the trade.

Under mounting pressure from the U.S. though, the nations have begun to act. Turkey has banned all shipments; West Germany and Italy are blocking the trade via licensing policies; Denmark has told shipowners that it does not approve of the shipments; Norway has asked shipowners to "reconsider" hauling cargoes. Britain is "considering" the U.S. request for restrictions, and Greece is asking shipowners to cancel chartering agreements.

And now the U.S., on its own, is taking unprecedented action in peacetime to tighten the trade noose around Russia's new satellite. It will (1) close all U.S. ports to all ships of any country if any of the nation's ships carries arms to Cuba, (2) withhold any U.S. owned or financed cargoes from a foreign shipowner if any of that shipowner's vessels is used to carry Soviet cargoes to Cuba, (3) bar from all U.S. ports any ship which delivers even clearly non-military Soviet cargoes to Cuba and then tries "on the same continuous voyage" to come to U.S. ports to pick up cargoes to carry home, and (4) forbid all U.S. flagships or U.S.-owned ships to carry goods to and from Cuba.

The choice before the free world's shippers is between making short-term profits on Soviet-Cuban trade or long-term profit on hauling U.S. cargoes. The U.S., it may be noted, offers the world's largest total of cargoes of all sorts. The choice, experts believe, is almost certainly to be what the U.S. wants it to be. Russia will, of course, be able to replace the ships. But it will be far more expensive, far tougher, far more burdensome for it to push the Cuban build-up. From an economic and commercial standpoint, this is truly a drastic action against the Soviet satellite, which is just 90 miles from the U.S. shores.

Woollen Goods

It is disquieting that a considerable part of the woollen industry's productive capacity continues to lie idle. The actual idle capacity (on three-shift basis) is of the order of 75 per cent in the weaving sector and 42 per cent in the spinning sector, the output being currently maintained at an annual rate of 18 million yards of fabrics and 35 million lbs. of yarn. Even assuming that there is some exaggeration in the estimate of unutilised capacity, the country cannot certainly afford to have such a vast idle capacity, especially when the demand for woollen goods, civilian as well as defence, is pretty high. With a war on in our Northern and North-Eastern borders, the defence requirements of woollen goods are bound to go up. Then, there is the fact that low utilisation of capacity inflates overheads in production, resulting in higher prices for consumers. Something must be done to utilise the capacity more intensively at least of those units that are economic. But there is a serious limitation, namely, shortage of raw materials, that is, wool tops, raw wool and shoddy. The quantity of these materials covered by the actual users' licences worth Rs. 7 crores for the year October 1962-September 1963 is considered to be inadequate. Increased use of Indian wool will no doubt help the industry to some extent, but sufficient supplies of right quality wool are said to be not available at present. It was to this aspect that Mr. Jagdish L. Behal, the retiring Chairman of the All-India Woollen Mills Association, drew pointed attention when he addressed the second annual meeting of the Association at Bombay on Wednesday the 24th inst. There is considerable force in his statement that, if sufficient effort were made, to improve the quality of Indian wool by improved breeding and better shearing, grading, sorting, etc., larger supplies of Indian raw wool would become available for use within the country.

The requisite supply of raw materials to woollen industry, though very essential, may not be of much avail, if steps are not taken to rehabilitate and modernise a sizable part of the industry's equipment which is dilapidated. It may be that there are units which are beyond repair and deserve to be consigned to the scrap heap. These must carefully be weeded out and the deserving ones given all possible help to improve their capacity. Recalling that the problem of modernisation had all along remained unsolved, Mr. Behal urged the Government to give the necessary encouragement and assistance. His specific plea for allowing the woollen industry to utilise the export promotion licences fully for importing new machinery for rehabilitation purposes deserves sympathetic consideration subject to the qualification just mentioned. The three other suggestions which Mr. Behal put forward also merit careful examination. One, the ceiling prices fixed for woollen yarn must be raised, for, otherwise, they will disturb the cost structure of mills and maintenance of fair prices. The need for such an upward revision may, however, be less pressing if the mills are enabled to work to full capacity. Two, the present policy of controls and compulsory distribution of woollen yarn should be revised in a constructive manner. It is suggested that the entire production of weaving and knitting yarn should be taken over and placed at the disposal of the Distribution Committee; for determining the knitting yarn supplies for distribution purposes, the Government should take into account the actual dyeing capacity of mills and not merely their consumption in 1960-61. Three, shoddy yarn must be exempted from excise duty. The excise duty on shoddy yarn does not seem to be justified, considering that the processing of shoddy blankets and cloth, which are used mostly by poor people, is itself subjected to heavy duty.

Jacking Up India's Exchange Reserves

The fears expressed in certain circles to the effect that the foreign exchange resources of India will be subjected to a considerable strain in the not too distant future are not at all exaggerated. The defence requirements are mounting up heavily because of the massive invasion of China through the North and North-Eastern borders. The need for ensuring the necessary imports to keep the wheels of industry going is also pressing to a degree. And the outlook for earning larger amount of foreign exchange through exports continues to be none too encouraging. Nobody would have bothered about the situation if only the country had, as was the case during the first Plan period, the cushion of sterling balances. But the position now is vastly different. India has successively run down these balances. The total of foreign assets now stands at no more than Rs. 94.35 crores which is just Rs. 9.35 crores above the statutory minimum of Rs. 85 crores. Surely, it will not be advisable to do away with this minimum or to make a second drawal from the I.M.F. standby credit of $100 million; the first

TREND OF SHARES

CHINA TAKES HEAVY TOLL

(From Our Own Correspondent)

BOMBAY, 25*th October*

SENTIMENT on the stock exchanges this week was totally demoralised by the undeclared war by the Chinese with this country on its Northern and North-Eastern borders from last Saturday. Values toppled down day after day to yet new low levels on an avalanche of selling by panicked bulls and aggressive bears. The pace and the extent of the decline in values during the week was unprecedented in recent times. Some millions of rupees were chopped off the aggregate paper value of the numerous shares listed on the stock exchanges. With the Chinese dealing fresh blows to the Indian army day after day and swallowing our territory in chunks, the tone of the markets progressively turned from bad to worse and was nervous till the close. Support was conspicuously absent even at the very low levels, and even a semblance of rally failed to materialise. Closing prices disclosed widespread heavy losses over the week.

The setback was so sharp that the authorities of the principal stock exchanges became alert, albeit after some avoidable delay, and announced curbs on bear raids to stem the rot, reportedly on instructions from the Stock Exchange Directorate. The Directorate was said to have asked the authorities to apply automatic interim margins whenever prices declined by 5 per cent, as against the usual 10 per cent, from the last clearing rates, to impose special margins on individual scrips and to reintroduce the system of special deposit making-up price.

Declaring an emergency on Tuesday, the authorities of the Calcutta Stock Exchange were the first to announce margins on sales. They decided that on any net extra sales in the cleared shares at the end of that day, sellers would have to pay margins per share at the following rates:

Indian Iron Rs. 3, Burrakur Coal Rs. 2, Texmaco Rs. 2, Orient Paper Rs. 3, Indian Copper 50 nP, Indian Aluminium Rs. 3, Indian Cable Rs. 3, Dunlop Rubber Rs. 3, Howrah Jute Rs. 2, Hindustan Motors Rs. 2, Rohtas Re. 1, Shree Gopal Rs. 2, Guest Keen Williams Rs. 3, Birla Jute Rs. 3, Orissa Cement Re. 1, Jaipur Udyog Re. 1, Kesoram Industries Rs. 2, and J.K. Rayon Re. 1.

The authorities also announced that with effect from Wednesday, 24th October, operators would be allowed to make day-to-day sales and purchases up to a total limit of 10,000 shares in respect of all the cleared securities put together. Members were allowed to square up their outstanding business in cleared securities on the basis of their position prevailing on Monday, 22nd October.

In special circumstances, the Committee of the Exchange Board allowed sales to be effected, after satisfying the President or Vice-President of the Exchange. Members were also asked to file the daily list of the transactions.

Notwithstanding these special measures, the landslide continued on the Calcutta Stock Exchange on Wednesday, and the authorities fixed a special clearing. A making-up price of Rs. 24 was fixed for Indian Iron, of Rs. 31.50 for Birla Jute, of Rs. 37.25 for Dunlop Rubber, of Rs. 36.50 for Guest Keen Williams, of Rs. 17.25 for Hindustan Motors, of Rs. 34.50 for Indian Aluminium, of Rs. 23.58 for Kesoram Industries, of Rs. 13.25 for Rohtas Industries, of Rs. 21 for Texmaco and of Rs. 38 for Orient Paper. Needless to say, the closing rates of Wednesday were quite lower than these settement rates.

Taking the cue from the market authorities in Calcutta, the President of the Bombay Stock Exchange added in the settlement on Wednesday four more scrips under the system of special deposit making-up price, in addition to National Rayon which had already been placed under the system at the last settlement. The normal making-up price and the special deposit making-up price for the shares were respectively: Kohinoor Rs. 273 and Rs. 285, Century Rs. 562.60 *ex-div.* and Rs. 586.60 *ex-div.* (interim dividend being Rs. 8.40 net), Telco Rs. 273 and Rs. 293, Voltas Rs. 231 and Rs. 245 and National Rayon Rs. 432 and Rs. 467. The special deposit making-up price for National Rayon was the same as at the last settlement. This step meant that bear operators would have to keep with the Stock Exchange Clearing House a deposit of Rs. 12 per share in respect of Kohinoor, Rs. 24 for Century, Rs. 20 for Telco, Rs. 14 for Voltas and Rs. 35 for National Rayon on their open positions, until they are squared up.

At its special meeting on Thursday, the Governing Board of the Bombay Stock Exchange was understood to have decided, in consultation with the Stock Exchange Directorate, to impose with immediate effect a special flat margin of 7.5 per cent per share on any fresh sales in all the active and inter-market shares. For the three worst hit shares, namely, Indian Iron, Hindustan Motors and National Rayon, the margin was said to double, that is, 15 per cent per share. The Board was also said to have decided to impose an *ad hoc* margin on any heavy sales by a member-broker.

The Directors of the Delhi Stock Exchange decided on Wednesday to impose margins on outstanding position either way in Indian Iron and Hindustan Motors. The margin on sellers is Rs. 3 per share on sales exceeding 7,000 shares and on buyers Re. 1 per share on all purchases in excess of 7,000 shares.

The Governing Board of the Ahmedabad Stock Exchange decided on Wednesday to modify the system of automatic interim margins to make it more effective against bear raids in response to instructions from the Stock Exchange Directorate. The Board decided to impose automatic margins when prices declined by 5 per cent, as against 10 per cent as at present, from the last clearing rates. It also decided that deposits in lieu of interim margins should not be returned soon after the turn of the settlement. The Board also announced extension of the special payment rates to as many as seven of the nine cleared shares at the turn of the settlement on Wednesday. As from 1st November, the free limit for outstanding business in Ahmedabad is proposed to be re-reduced from Rs. 2 lakhs to Rs. 1.50 lakh.

While it is to be hoped that these measures will bear fruit, the fact cannot be ignored that the market authorities have acted belatedly. It is, indeed, sad that these preventive measures have come after much damage has been done and the morale of markets shattered. Had they been announced soon after the first news of the China war, and enforced simultaneously on all the Stock Exchanges in the country the situation would have been different. Now, at best, they can succeed only in preventing further deterioration in that situation. Further, the measures adopted are neither new nor sufficient. The situation in the markets called for more drastic measures, such as, clamping down all fresh short-sales and heavier margins.

* * * *

Dalal Street suffered on incessant selling which was markedly heavy on Wednesday—though it did not differ much in degree on the other days—following the special anti-bear measures adopted in Calcutta on Tuesday, which made operators there turn to the Bombay market. Speculative issues in different sections closed with heavy losses, the extent of which is indicated below. The other counters also disclosed small to sizable losses. It was for the first time since the system of automatic interim margins was introduced in the market towards the close of last year that a leading speculative share like Telco attracted an automatic margin of Rs. 15.50 per share against sellers on Wednesday. It will be recalled that, so far, only the small-priced and offside scrips have attracted such margins. The setback in the market was all-round, enveloping also Electrics, among which

* After 24th October in unofficial trading.
T.I.S.Co. dividend=Rs. 7.25 net.

Tata Power and Andhra Valley lost their previous week's glamour and closed with a loss of Rs. 23.75 and Rs. 20 at Rs. 1,131.25 and Rs. 1.030, respectively. In the Cash section, too, losses were widespread and fairly sizable. To mention only a few shares, Chemicoat and Citric lost Rs. 11 each to finish at Rs. 168 and Rs. 89, respectively, and Alembic showed a loss of Rs. 11.25 at Rs. 193.75.

* * * *

Forward shares were the worst hit in Calcutta. Birla Jute were down from Rs. 33.37 to Rs. 30, G.K.W. from Rs. 38.37 to Rs. 34.87, Dunlop from Rs. 38.12 to Rs. 36, Indian Aluminium from Rs. 35.31 to Rs. 32.50, Indian Cable from Rs. 36.50 to Rs. 34.50, Kesoram from Rs. 25.31 to Rs. 22.25, Orient from Rs. 40 to Rs. 36.20, Rohtas from Rs. 14 to Rs. 12.62, Shree Gopal from Rs. 24.37 to Rs. 23.25, Orissa Cement from Rs. 16.56 to Rs. 15.25, Burrakur from Rs. 17.37 to Rs. 16.12, Texmaco from Rs. 22.15 to Rs. 20 and Howrah Jute from Rs. 19.75 to Rs. 19.

In the Cash section, leading Textiles like Bharat Commerce and Dunbar weakened further, the former from Rs. 28.06 to Rs. 25.81 and the latter from Rs. 30.50 to Rs. 27, respectively. Among Coals, East Indian showed a loss of Rs. 2.37 at Rs. 50, N. Beerbhoom of Rs. 2.31 at Rs. 20.94 and Equitable of Rs. 1.32 at Rs. 25.62. The principal losers among Jutes were Anglo India from Rs. 232 to Rs. 223, Kelvin from Rs. 190 to Rs. 173 and Champdany from Rs. 143 to Rs. 138. Engineering and Chemical shares were, however, not much affected. But in the Miscellaneous section, Hindustan Aluminium showed a big loss of Rs. 2.69 at Rs. 13.25, Martin Burn of Rs. 1.19 at Rs. 29.75 and N.I. Cable of Rs. 2.88 at Rs. 25.12. Titaghur Paper were conspicuously weak at Rs. 37, as compared with the previous week's close of Rs. 38.12. Other sections were quiet.

* * * *

Miscellaneous shares and some leading Textiles bore the brunt of selling pressure in Madras. Thus, Aluminium Industries showed a loss of 55 nP at Rs. 22.75, Ashok Leyland of 20nP at Rs. 7.75, India Cements of 28 nP at Rs. 6.15, Andhra Cements of 15 nP at Rs. 10.10, F.A.C.Ts of 10 nP at Rs. 7.40 and Mettur Chemicals of 25 nP at Rs. 13.85. However, Textools closed with a gain of Rs. 2 at Rs. 168 and Dalmia Cement of 8 nP at Rs. 14.20. Textiles were otherwise steady, but S.I. Viscose receded sharply from Rs. 157.50 to Rs. 147.50 and Travancore Rayon showed quite a heavy loss of Rs. 1.50 at Rs. 29.50. In Sugars, Deccan showed a loss of 50 nP at Rs. 10.25 and E.I.D. declined from Rs. 42.50 to Rs. 40.75. Among Plantings, United Nilgiri receded from Rs. 21.75 to Rs. 21.19 and Consolidated Coffee from Rs. 17.05 to Rs. 16.85.

OIL INDIA'S RS. 30-CRORE DEBENTURES

Oil India Ltd. at Duliajan, a public sector company incorporated in Assam on 18th February 1959, on a 50 : 50 ownership by the Government of India and the Burmah Oil Company and engaged in the search for more oil, development of its existing fields and construction of a 720-mile pipeline to transport crude oil to the public sector refineries at Gauhati (Assam) and at Barauni (Bihar), has announced the issue of a Rs. 30-crore 6.5 per cent 1968-77 debentures in units of Rs. 5,000 each. The Union Government is taking up one-fourth of the issue, that is, Rs. 12.50 crores, and financial institutions and banks have agreed to subscribe for the issue to the tune of Rs. 8.75 crores. This leaves a balance of Rs. 8.75 crores, which is fully underwritten and to be offered to the public for subscription. The lists are due to open on Tuesday, 30th October, and will remain open until Thursday, 1st November 1962, or longer at the discretion of the Directors of the Company.

The total estimated cost of Oil India's project for drilling, mining and transporting Assam oil by its own pipeline is Rs. 75 crores. Of this, Rs. 49.50 crores constitute the cost of the pipeline on which Rs. 36.03 crores have already been spent. The foreign exchange components of the outlay on the pipeline project is £13 million and is secured by way of a £3 million loan from the U.K. Government to the Government of India and overdraft facilities up to £10 million from the Bank of Scotland, London. The overdraft is guaranteed by the Burmah Oil Company Ltd. and will be eventually converted into a long-term loan. Rupee finance of Rs. 26 crores for the project was obtained by way of a Rs. 6-crore advance from the Government of India and a Rs. 20-crore overdraft from the State Bank of India. The Rs. 30-crore debenture issue will be utilised to repay this rupee loan.

T.I.S.CO.'S PRELIMINARY RESULTS

The preliminary results of the Tata Iron and Steel Company Ltd. for the year ended 31st March 1962 show a slight improvement over the previous year. The gross revenue during the year amounted to Rs. 92.48 crores, as against Rs. 87.08 crores in the previous year. The profit, after deducting all expenses (including provision for depreciation of Rs. 13.15 crores, as against Rs. 13.92 crores a year before, and Managing Agents' commission of Rs. 25.30 lakhs, as against *nil*) aggregating Rs. 86.39 crores (Rs. 81.99 crores in 1960-61), shows an improvement of exactly Rs. 1 crore at Rs. 6.09 crores. As in the previous year, the provision for depreciation has been brought up to the level laid down under the Income-tax Rules. The Managing Agents have received their commission after a lapse of four years.

Inclusive of Rs. 0.34 lakh (Rs. 8.47 lakhs in 1960-61) brought forward from the previous year and Rs. 70 lakhs (Rs. 127 lakhs) transferred from general reserve, the total available for distribution works out to Rs. 679.21 lakhs (Rs. 644.34 lakhs). Out of this, Rs. 678 lakhs (Rs. 644 lakhs) have been transferred to the development rebate reserve. The total credit includes Rs. 536 lakhs being towards arrears of the previous years. As was reported before, the ordinary dividend, which was maintained at the previous year's level of Rs. 7.25 net per share of Rs. 75 each, and the preference dividends together absorbing Rs. 465.05 lakhs, are provided for from reserves. The surplus of Rs. 1.21 lakh (Rs. 0.34 lakh), after allowing for the transfer to the development rebate reserve, is to be carried forward.

RS. 11-LAKH PUBLIC ISSUE BY WELLMAN INCANDESCENT

Wellman Incandescent (India) Ltd., a new public company formed in collaboration with the Wellman Smith Owen Engineering Corporation and the Incandescent Heat Company Ltd., U.K., has recently been granted permission by the Controller of Capital Issues to issue shares worth Rs. 25 lakhs. Out of this amount the collaborators in the U.K. will take Rs. 12.50 lakhs, directors and their friends Rs. 1.50 lakh and the balance of Rs. 11 lakhs will be offered to the public in the near future.

The Company's plant at Howrah is now being equipped and it is hoped that it will go into full production early in 1963. Besides, the Company has already entered into sub-contract agreement with reputed companies in various parts of India because it feels that its own plant will not be able to meet the demand for the industrial furnaces and mechanical handling equipment which it intends to manufacture. By selecting sub-contractors at different parts of India, the Company hopes to reduce burden on the overworked railway system and also to cater to the needs of its customers at a lesser cost. It has already received its first orders, including one from the Heavy Electricals India Ltd., Bhopal, for the manufacture of 11 low temperature ovens, some of which will be made for the first time in India.

The Company has a strong Board of Directors, with the Maharaja Pratap Chandra Bhanjdeo of Mayurbhanj as the Chairman and Mr. D. A Hume and Mr. G. Wright representing Wellman Smith Owen Engineering Corporation Ltd. and Incandescent Ltd., respectively. Mr. Hume is a Director of the parent company in the U.K. and the Managing Director of Wellman Incandescent International Ltd. which controls and co-ordinates the export activities of the group. He is also on the board of several subsidiaries of the group, situated in different parts of the world. Mr. G. Wright is a Director of Incandescent Ltd., and Wellman Incandescent International Ltd.

PERSPECTIVES & PROJECTIONS

By Mercator

In peace there's nothing so becomes a man;
As modest stillness and humility;
But when the blast of war blows in our ears,
Then imitate the action of the tiger;
Stiffen the sinews, summon up the blood,
Disguise fair nature with hard-favoured rage.

SUCH exhortation may be appropriate to men in the field of battle whom Henry V addressed during his war with France, but it is difficult for men dedicated to peace like Prime Minister Nehru to strike up similar poses. Those who heard him broadcast to the nation on Monday night could visualise the anguish and the sorrow in Mr. Nehru's heart even when he minced no words and characterised the enemy as unscrupulous and the Chinese attack as unabashed aggression. Mr. Nehru may not have the Churchillian qualities of leadership in war, but his countrymen understand him, in an emotional sense, as Mr. Nehru might himself describe it. That China could be so ungrateful and unmindful of India's policy in the past and return evil for the good that Mr. Nehru and his Government has tried hard to do has been most disappointing. But all this was not unexpected; even those who fully believe in the Indian Government's policy of neutrality and avoidance of military blocs may say that enthusiasm for China was often overdone. China's readiness to defy Moscow was a sufficient indication that she would have scant consideration for others; if there was hope in India that the Peking regime would remain satisfied with cartographic aggression and the occupation of a few posts in barren territory, it was clearly misplaced and to the extent to which it has reduced our defence preparedness, it has done us great harm.

The purchase of small arms and automatic weapons, for which India is reported to have approached Britain and the U.S.A., need not have begun so late after the NEFA and Ladakh invasion; even now, the Indian public knows less about it than the foreign Press. Obviously, the Indian Government does not want to do anything which will extend the conflict and convert it into an all-out war; military alliances with Western powers must therefore, be ruled out, at least until Russia's intentions are clear and that may take a long time. So far the India-China conflict has not been published in the Soviet Press or broadcast by Moscow radio; one difficulty may be the problem of whose version to accept, India's or China's. If the latter, the U.S.S.R. has to provide assistance to Peking against Indian aggression under the old defence pact; cold as Sino-Russian relations are at the moment, they may not yet have gone to the point at which Mr. Khruschev can openly side with India. If the M.I.G. deal goes through without any further hitch, there will be something to build one's hopes upon; even Western opinion now takes the view that Russia's attitude will be crucial; Indian defence will, therefore, have the limited objective of resisting the Chinese advance and where possible of throwing the aggressive hordes back behind the McMahon line and no further and that, too, without using superior weapons like fighter planes or bombers. The use of air will be confined only for relief or supply operations.

While thus there is good reason for India doing everything to keep the conflict localised and restricted to ground warfare, there is no reason at all why there should still be weakness in waging propaganda warfare. Unscrupulous and unabashed may be descriptions which sensitive gentlemen may consider extremely abusive, but they will hardly make any dent on the Chinese skin or sensibility or awaken the ordinary citizen of India to realise fully the enormity of Chinese perfidy. That most of the Indian political parties, including a large number of the Communists, are behind the Government now should be helpful to the stepping up of publicity about Chinese intentions so as to prepare the nation for larger sacrifices, if they should unfortunately become necessary.

Why should China risk irreparable enmity with India? This question is still being asked everywhere. The Malayan Premier Tengku Abdul Rahman observed that China did not want any rival in this part of the world and was showing off its strength against India as the next most powerful country in the region. Mr. Nehru seems to believe that it is due to the innate Chinese expansionist ambitions getting the better of their reason whenever a strong government comes to power. India's economic advance with foreign aid from several quarters, when China was deprived of even the Russian aid she had at first obtained, may be yet another reason which may also explain why China has been conciliatory to Nepal, Pakistan, Burma and Indonesia with all of whom she had differences at one time or other, though not a long border extending over thousands of miles. India's sins in Chinese eyes might also include the asylum given to Tibetan refugees and receipt of large-scale American aid for the Plan. Above all these, there are the serious internal difficulties caused by famine and setbacks to industrial production, besides serious rifts in the Chinese Communist party; an Indian adventure might have been regarded as a timely step. Whether there was also a desire to embarrass Russia *vis-a-vis* India and lower Soviet prestige among the non-aligned nations is also worth pondering.

This mixture of evil motives and the historical context of Chinese aggression have a lesson for India; our defence preparedness should never be less than the best we are capable of. To reconcile planning and development with large-scale defence expenditure and imports of military supplies is not easy and the composition of the Union Government at present is hardly encouraging for the success of the broad-based national efforts to be undertaken. A cabinet reshuffle has been talked about for a long time, but considering that there is far too much of ballast in the Nehru Cabinet, some drastic overhaul seems to be needed. There have been suggestions for the formation of a National Government and the Orissa Assembly under Mr. Patnaik's leadership has taken a bold step of recommending it unanimously; this might prove an ideal solution not only for the larger war efforts but also for the incipient threats to national unity from separatist tendencies, which Peking has apparently interpreted to be signs of Indian weakness. As a demonstration of strength, a National Government will have much to commend it at this stage. But the question is: Will the various party leaders who have not so far had any obligation to subordinate their individuality in the larger interests find that common measure of agreement which will hold them together until the enemy is thrown back into his territory? If the National Government is one way by which the Union Government can be purged of its slothful and inefficient elements, the risks may be worth taking.

* * * *

Plan and the War

The prolonged conflict with China, which Mr. Nehru mentioned as likely, will necessarily call for a revision of the assumptions behind the third Plan. In 1960-61, when the Plan was drawn up, defence expenditure on revenue account was Rs. 247 crores; in the current year the Budget provision is Rs. 343 crores and, perhaps, some supplementary demands will soon be made. If there is further diversion of revenues to defence in future years of about the same order almost the entire additional taxation of Rs. 1,100 crores by the Centre will not be available for the Plan. There may also be diversions from loans and savings collections and it should be obvious that, having to fight a long war with inflationary finance if necessary at a later stage, the economy should not be upset even now by the Government's recourse to deficit financing on the scale assumed in the Budget. Such restraint is particularly important because of the diversion of materials and transport facilities for military purposes which will create shortages and high prices. Thus, the net effect of the China war (there is now no need to use any euphemisms for it) may be to reduce the rupee resources of the public sector by Rs. 1,500 crores; but even more severe will be the effect on the foreign exchange, if India has to purchase arms with current earnings. A cut in the Plan seems inevitable, even though the Prime Minister has said that the Government will not be giving up the Plan but only adapting it to the present situation.

Even without a China war, the Plan stood in need of some adaptation, in view of the foreign exchange difficulties and the slackened tempo of implementation. Schemes which now stand no chance of getting foreign exchange can be postponed to better times; similarly, in the private sector, a new order of priorities is necessary, so that unutilised licences for new industries may be either renewed or scrapped altogether, according to their place in the new order. If, as a result of all these steps, the third Plan also gets a "core," it will mean no reflection on the Plan or planners. But experience tells us that the authorities will consider any reduction in outlay to be a sign of defeatism and will continue to maintain the make-believe that we can put through a Plan of the same or only slightly reduce dimensions, even though State Governments may not be justified in expecting Central assistance on the scale envisaged in the Plan or materials or manpower may have to be diverted to defence. Some of the frills which abound in the Plan can always be cut; grants for sundry development for this or that area or small sections of the population, fads like prohibition and grandiose plans for public buildings can be cut without injury to the country's economic progress. Better use of existing capacity through more shifts, labour-intensive techniques for raising more output and permission to existing agencies in industry and mining to increase their production through expansions not involving much capital outlay or foreign exchange (oil and coal being examples) are some of the lines which a practical approach may take at the present juncture. But, unless the revision is itself placed on a war-footing, the Planning Commission may take the rest of the Plan period for rounding off its fine phrases and finding the most felicitous verbal devices for saying how and where the cuts should be applied.

Good-bye to Industrial Management Pool?

I must pass on quickly to what must appear to many as an anti-climax. The sublime and the ridiculous are never very far apart in our scheme of things and the way in which the winds of change can often blow upon the authorities is very curious. I am referring to a report that the Government or at least its top executives have decided that the Industrial Management Pool has failed to come up to their expectations and has to be disbanded. In this case, none of the usual ways in which such public questions are debated before reaching a decision was adopted; there was no published report of any inquiry or debate in Parliament, but it seems that a private study by a Public Administration Research expert came to some adverse conclusions on the basis of the limited experience of the working of the Pool in the last three years. This was the initial phase in which the problems of qualifications, seniority rules and placements were not satisfactorily settled; recruitment took long and placements longer still, so that some recruits driven to despair, abandoned hope and declined offers when they came. Instead of trying to cure the defects in its working, a recommendation appears to have been made departmentally for abandoning the scheme.

This may not be a disaster, but it certainly shows the Government to be very fickle in its ways. The disappointment caused to those who joined the Pool hopefully may have a chain reaction and affect not only their morale but of the members of other new services now contemplated, like the Economic and Statistical services at the Centre and the All-India services for engineering, medical and forest personnel. Apparently the managements of some public sector undertakings feel that their discretion (or is it also their patronage?) is affected by having to accept members of the Pool and that they have insufficient control over them, because of their rights of membership of a cadre. But these are matters which should be thrashed out openly for which there is the time-honoured method of committees. Why should it be abandoned in favour of some surreptitious course, to present everyone with a *fait accompli*? Perhaps too much credence should not be given to stray reports of official proposals, which may be only in one of several stages of gestation, but that the issue should at all have arisen in this fashion is not unimportant.

A SEMINAR ON EXPORTS

THE major problems of export promotion were discussed threadbare at a seminar held at Calcutta last week-end under the auspices of the World Trade Department of the Indian Chamber of Commerce. The seminar, of course, covered only the familiar ground. There was also nothing new in the suggestions it made. But this does not detract the importance of the seminar as such, for an exchange of views among industrialists and exporters is bound to go some way towards inculcating an element of export-consciousness among all concerned. At no time in the history of this country was export promotion as urgent as at present. Apart from the growing requirements of maintenance and development imports, the need for buying armaments and other military equipment from abroad for defending the far-flung borders of this country has invested the task of export promotion with a compelling urgency. Mr. Manubhai Shah, who inaugurated the seminar, appealed to the business community to accept the losses involved in exports with patriotism and a sense of dedication. There is no doubt that Mr. Shah's call will be heeded to some extent or other. But the question remains whether the continued sacrifice by industry and trade, compensated to some extent by incentives, can be a permanent solution to the problem. Although the exporter stands to lose in securing overseas orders, the ultimate incidence of export losses will fall on the domestic consumer. This, in turn, will raise the cost of living, leading to higher costs of labour, etc. Again this will further increase cost of production and thereby render domestic goods more and more non-competitive in terms of price in world markets. The reliance on sacrifices, therefore, should not be carried too far but limited to a period as short as possible.

Viewed thus, one comes to the inescapable conclusion that a policy of export promotion should be based primarily on measures to bring down the cost of production within the country. It is in this sphere that the Government has failed to take timely and appropriate action. It is, of course, true that the Government appointed an expert committee in July last for suggesting programmes of cost reduction at the instance of the Board of Trade. One does not know when its report will be ready. Even in the absence of that report, it is quite clear that the high cost is the cumulative result of increasing labour costs, unsatisfactory production of agricultural output, scarcity of raw materials, fuels and transport. Mr. Shah will now do well to impress upon some of his colleagues in the Central Cabinet, particularly the Labour Minister, that the cause of export promotion cannot be served, unless they take effective measures to arrest the increase in the cost of various factors that enter into the process of production. The Minister for International Trade is admittedly helpless when energetic steps for cost reduction are not forthcoming from those in charge of the various facets of production. Mr. K. P. Goenka, Chairman of the World Trade Department, was quite justified in his assertion that the high cost of production was the main obstacle to export promotion. There is certainly no exaggeration in his statement that wages unrelated to productivity and taxes which crippled industry's efficiency adversely affected the competitive capacity of many major export commodities like tea and cotton textiles. It is here that the Government should act in a more helpful way than it has done in recent months.

The need for reorientation of industrial licensing policy is no less important in bringing down prices and improving productive efficiency. The seminar has drawn pointed attention to this issue. Its plea that the industrial licensing policy should be formulated with less rigidity and greater realism is not unwarranted, considering the restrictions imposed on development and diversification of large-scale units for ideological considerations. Even if the Government, for understandable reasons, refuses to revise its policy *in toto*, there is still a strong case for encouraging large-scale units designed for the manufacture of export goods. Unless more and more efficient units are encouraged to come up, Indian goods will find it extremely difficult to maintain their competitive capacity in terms of price and quality. Equally noteworthy is the suggestion that the Government should take a more liberal attitude towards industries in the matter of rationalisation and modernisation of plant and equipment. These considerations should not be lost sight of, particularly when the proposal to establish an export sector materialises. It must, however, be added that the scope for any large-scale augmentation in the tempo of modernisation is limited, in view of the shortage of foreign exchange necessary for importing modern equipments, apart from the rather unhelpful attitude of labour.

A RETROGRADE STEP

It is reported that the Planning Commission has suggested to the Government of India the fixation of coarse cloth production quotas for cotton mills in the country as a solution to the problem of soaring prices. Apparently, the Commission feels that, if the mills were made to weave more of coarse cloth, the total production of piecegoods would be much larger than at present and that higher output would exert a downward pressure on prices. On the face of it, the suggestion may appear sound, for it is estimated (by the Textile Commissioner's Office) that a change in the pattern of production on the coarse side by about two to three counts can give an additional output of 200 to 300 million yards of cloth. But the suggestion ignores certain other vital considerations. Before dealing with these considerations, it is, perhaps, necessary to give a brief account of the pattern of mill cloth output in recent years.

No one will dispute that there has lately been a marked reduction in the mills' production of coarse cloth. The actual output is currently running at an annual rate of about 755 million yards representing just 15.1 per cent of the aggregate production, as against 1,163 million yards representing 21.9 per cent of the total in 1957. But the reduction has been offset by the increase not in the production of finer counts but in that of medium cloth, as the following table shows.

(In million yards)

Variety	1962*	1961	1960	1957
Coarse	755 (15.1)	861 (16.8)	705 (14.0)	1,163 (21.9)
Medium	3,797 (75.8)	3,836 (74.7)	3,813 (75.5)	3,503 (65.9)
Fine	192 (3.8)	197 (3.8)	229 (4.5)	383 (7.2)
Superfine	264 (5.3)	238 (4.6)	301 (6.0)	268 (5.0)
Total ..	5,008	5,132	5,048	5,317

* Projected on the basis of the figures for the first half of the year. Figures in brackets relate to percentage share in the total.

The decline in coarse cloth output is a welcome development, in that it reflects the advance made by India's textile industry and its workers. To lay emphasis at this stage on producing coarser varieties is to put back the clock of progress. Further, the improvement in the average counts of cloth produced in this country is a natural phenomenon, being due to two important factors. First, the production of short-staple cotton from which coarse yarn of 11 to 20 counts is spun has gone down, while that of medium and long-medium staple cotton has risen markedly. Secondly, consumer taste has shifted towards cloth made from higher counts and that too for bleached, dyed, mercerised and printed cloth. Consumer preference for counts better than coarse is due not only to higher purchasing power, as is commonly supposed, but also to their longer durability. In the long run, it pays the consumer to buy medium counts cloth rather than coarse counts. It was precisely for these reasons that the mills had expressed their inability to produce more of coarse cloth when the Textile Commissioner asked them last year whether they could change the pattern of production.

The idea of producing a larger quantity of utility or standard cloth holds good in times of emergency such as war or when the level of output is much below what the country needs but not so in normal times like the present. There is no scarcity of cloth supplies and the varieties of cloth produced by mills, handlooms and powerlooms are numerous. What is more, the consumer nowadays is highly quality-conscious; he just does not pick what he is offered. Accordingly, the mills have to produce only those varieties of cloth which suit the tastes of consumers. Even here, it may be noted, the mills' efforts to supply what the consumer wants are limited by the type of cotton available to it, on the one hand, and the nature of their plant and equipment, on the other. A particular mill specialising in the production of fine categories of cloth, for instance, cannot be expected easily to switch over to the manufacture of coarse fabrics, having regard to the present average counts of the various mills and their export commitments, etc. Such a course will be a sheer waste of the capacity of both men and machines. It has taken years of hard labour to train workers in producing better and finer varieties of cloth. It would be a retrograde step to ask them to weave coarser cloth.

Consumer tastes are more and more for mixed fabrics and processed goods and the mills will have to adjust the pattern of production continuously according to consumer requirements. Pinpointing this aspect, the Indian Cotton Mills' Federation stated, in its memorandum submitted to the Tariff Commission last year, that it did not seem possible to standardise any particular pattern of production as a long-term measure. The Federation had also emphasised then that, apart from the necessity of cultivating cotton to cater to the tastes of the consumer, the farmer himself benefited through improvement in the quality and staple of cotton produced. It is for this reason that the cotton supplies are tending towards higher staple, resulting in the production of higher-count yarn. If the planners and powers-that-be are anxious to ensure adequate supplies of good quality cloth to consumers, they must unhesitatingly accept the need for giving all possible encouragement and assistance to the mill sector to expand their production capacity, modernise equipment and rationalise the manufacturing processes. The production of standard cloth is in the interest of neither consumers nor mills, nor cotton growers, nor the Government. In the past when standard cloth was produced, circumstances were different. The consumer did not want it and had to be compelled to accept it by denying him what he desired.

INDUSTRIAL PRICE FIXATION

The integrity and objectivity of a statutory body like the Tariff Commission would have to be taken for granted if it is to function effectively in the interests of industrialisation. Its meticulous calculations of manufacturing costs, on which the fair ex-works prices recommended by it are generally based, cannot be lightly brushed aside without simultaneously undermining its status as an impartial body. Two recent instances of drastic and arbitrary changes made by the Government in the recommendations of the Tariff Commission—the ones pertaining to ex-works prices of soda ash and retention prices of steel—have served to highlight the need for restoring to the Commission its accustomed status "as an important statutory, quasi-judicial and independent authority to advise the Government on various matters." The South India Millowners' Association, at its meeting held on the 20th instant at Coimbatore, has, therefore, suggested that the Federation of Indian Chambers of Commerce and Industry "should take necessary action to see that the Government accepted the Tariff Commission's reports without making any *ad hoc* reductions in prices.

Any drastic reductions ordered by the Government in the fair ex-works prices recommended by the Commission after elaborate enquiries can only be arbitrary. For instance, one of the grounds on which the Government has based its decision to reduce the steel retention prices recommended by the Commission is its assumption of 100 per cent capacity utilisation, as against the 90 per cent assumed by the Commission. Considering the steel industry's known difficulties in working even to 90 per cent capacity, the Government's assumption of cent per cent capacity production can only be called arbitrary. Incidentally, the various impediments to the continuous working of plants, such as transport bottlenecks and shortages of raw materials of all kinds, are not unknown to the Government, for it is itself responsible for some of those shortages.

The other instance of arbitrary reduction by the Government of the fair ex-works price for soda ash recommended by the Tariff Commission has come in for critical comment in the statement, dated 12th October 1962, made by Mr. J. R. D. Tata, Chairman of Tata Chemicals Ltd., to the shareholders of the Company. Referring to the cut of Rs. 20 per tonne in the recommended ex-works price (exclusive of excise duty) of Rs. 400 per tonne for light soda ash, Mr. Tata has pointed out that the profit-margin allowed by the Commission would be correspondingly reduced. It may be noted here that the reduced profit-margin would not suffice for all the recognised purposes, namely, taxation, bonus to employees, dividends to shareholders, interest on borrowed capital, and commission to the Managing Agents. The Government's decision to institute ex-port town prices in place of the ex-works price has meant, in effect, a further impost of Rs. 19 per tonne of soda ash in the form of unrecovered freight charges. This uncovered freight loss has, of course, been mostly reduced by the more recent increase of Rs. 20 per tonne in the ex-port town prices. Still, the uncovered freight costs come to Rs. 8 per tonne in view of the increase in freight rates since June last.

Cost increases of the kind—the ones pertaining to power, fuel and transport—are usually compensated by escalator clauses and/or contingency allowances during the period for which the Tariff Commission has fixed ex-factory prices. But the dilatory manner in which such cost increases are wholly or partially compensated is most exasperating to industry. According to Mr. Shriyans Prasad Jain, President of the F.I.C.C.I., "as soon as the cost increases occur, the industry concerned has to make out an elaborate case for cost adjustments, but quick decisions are not taken by the Government." There is no effective machinery for taking prompt decisions regarding legitimate cost increases and allowing the industry to recover them from consumers. The F.I.C.C.I.'s plea for the establishment of such a machinery is, of course, quite distinct from the general expectation of industries that the fair ex-works prices recommended by the Tariff Commission should not be reduced by the Government, except, to use Mr. Tata's words, "in the most exceptional circumstances." Even in such exceptional cases, the Government is rightly expected to provide convincing arguments in justification of its decisions.

COFFEE INDUSTRY

In its weekly newsletter dated the 12th inst., the United Nations Information Centre at New Delhi observes that India has expressed its unwillingness to sign the new international coffee agreement at the final plenary session of the U.N. Conference held in New York on 28th September last. It is not known from where the U.N. newsletter got this information. The Government of India, to the best of our knowledge, has so far not issued any *communique* on this issue. In any case, the Chairman of the Coffee Board, Mr. B. Sitarama Reddy, has stated that it would be advantageous for India to participate in the agreement. Addressing the annual meeting of the Mysore State Planters' Association at Bangalore on Monday this week, Mr. Reddy, who was the leader of the Indian delegation to the World Coffee Conference, disclosed that the Central Government was examining the question and that a decision would be taken by the end of next month. Incidentally, it may be noted that the new coffee agreement will remain open for signature at the U.N. Headquarters until and including 30th November 1962.

From the statement of Mr. Reddy, it looks as though the Government will decide to join the coffee agreement. The general opinion among coffee planters is also in favour of it. Mr. P. G. Gurjer, the retiring Chairman of the Mysore State Planters Association, declared, for instance, that, if India was to fight for a foothold in the valuable established markets, it must join the agreement and be a part of the world coffee community. He felt that the export quota of about 21,000 tons fixed for India was satisfactory in a short crop year like the present one, but hastened to say that it was very unfair against the higher crop years expected in future. Recalling the third Plan production target of 80,000 tons, Mr. Gurjer pointed out that, if this much was picked, the country would have to export about twice as much as the quota allotted and added: "For small producers like India, there should be a more liberal policy in regard to export quotas under the agreement."

While the case for fixing a higher coffee export quota for India is pretty strong, it has to be emphasised that the level of quota will not, by itself, mean anything. For much will depend on the capacity of India to sell its exportable surplus coffee in world markets, especially the non-quota markets, in competition with the other coffee producing countries. This capacity, it is needless to mention, will be influenced primarily by price and quality considerations. In other words, this means that India will have to export the best coffees at prices determined by a world market swamped with surpluses. At the same time, there is the need for ensuring that the domestic consumer gets the kind of coffee he wants at reasonable prices. The coffee planters know full well that their profit-margin will be higher to the extent the cost of production is reduced and quality improved. But the point is that the cost structure has tended to be rather rigid. The cost analysis of some 27 coffee producing companies which Mr. Gurjer cited reveals that the average expenditure per acre has gone up in the past ten years from less than Rs. 350 to over Rs. 900. The wage bill alone has risen from Rs. 165 to Rs. 388. The cost of supplies necessary for production on estates has also increased markedly, following inflationary pressures and indirect taxation.

Mr. Gurjer did admit that it would be too much to expect the Government to extend special concessions to coffee growers. But he only considered it legitimate to expect that the Government did not place special handicaps, sometimes illogical and discriminatory, on the producers of coffee and other plantation crops. The two specific instances of "particularly marked and wholly unjustified" discrimination which he mentioned relate to fertilisers and tractors. According to him, since the planters are required to pay a higher price than other agriculturists, the expenditure on this single item alone has risen from Rs. 26 to Rs. 144 per acre in the past ten years. Similarly, a tractor bought for a coffee estate is not treated as being used for an agricultural purpose and is subjected to taxes (customs duty, excise, surcharge at 1 per cent and Mysore sales tax at 7 per cent) which an ordinary agriculturist does not have to pay. He disclosed that planters have to pay Rs. 21,347 for a tractor of convenient size which price is Rs. 3,500 more than any other field crop grower has to pay in this country. Further, for a comparable tractor, a planter in Ceylon pays Rs. 16,000 and in Kenya Rs. 11,000.

Summing up his views on rise in costs, Mr. Gurjer observed:

"The whole impact of the increase in cost was moderated by the remarkable increase in yield per acre which we achieved during the past 10 years. Without that increase, the industry could not have survived. The future yield pattern may be such that those who have already reached a fairly high level will find further increase slower and costlier. Those who have not reached the higher yields already may not have the means to spend more as the return is falling. This does not offer a very bright picture of coffee, but it is better that the facts are now faced, instead of hoping that costs can be further inflated and somehow the planters will manage to overcome its effects. If rising yields help to absorb the shock of quicker rising costs, the rate of yield increase in future will not suffice to cover the rise in the cost of those units which are already high producers."

Any one who has cared to study the economics of coffee industry will at once appreciate the validity of the reasoning behind the aforesaid observations. He will also fully agree with Mr. Gurjer when he says that, if higher wages are to be given without involving the plantation industry in high cost, the only way to do it is to raise labour productivity.

Referring to coffee marketing, Mr. Gurjer made three important suggestions which merit due consideration. One, with ample stocks of robusta and cherry coffee, the function of distribution should be left to the trade; the elaborate paraphernalia of local sales make the cost too high. Two, more attention must be devoted to publicity and propaganda abroad. Three, the inequity of imposing the same weight of excise duty on all grades and kinds of coffee irrespective of the price they fetch must be removed. Mr. Gurjer's plea for relief in the tax burden as a whole also merits due consideration. It is common knowledge that coffee and other plantations are bearing a number of direct taxes—agricultural income-tax, wealth tax, octroi duty, sales tax, village *panchayat* tax, land revenue and surcharge, health cess, excise duty and export duty. The burden of taxation on plantations is certainly too heavy, considering that the bushes have a limited life, requiring replanting on a scientific basis. The planters must, therefore, be left with a sufficient percentage of their profit for financing such replantation.

FINANCING ROAD TRANSPORT

That road transport will have to play a vital role in the mechanism of national defence is being realised by the powers-that-be in the context of the latest Chinese aggression on India's northern borders. The inaugural speech of Mr. Raj Bahadur, Union Minister for Shipping, at the meeting of the Road and Inland Water Transport Advisory Committee held at New Delhi on the 22nd instant is notable precisely for this emphasis, albeit without further elaboration, on the defence aspect of road transport. It is obvious that the quantum of traffic to be moved in the present national emergency will be larger than hitherto and that the areas to be served on the frontiers are not enjoying railway facilities. A higher priority for road transport at the present time is thus called for. But what are the authorities going to do about it? If the road transport system is to serve both civilian and military needs efficiently and adequately, it must be enabled to grow at a faster rate. In a young and nascent industry like motor transport such a faster rate of growth can be brought about by the generation of more internal resources and the provision of outside financial assistance. As for internal resources, they can be substantially more only if the incidence of motor vehicles taxation is reduced. Mr. Raj Bahadur's own partial recognition of the need for tax relief could be inferred from his relevant observations:

"The Administration will have to keep in mind the needs and interests of the various sections of the community. It will also have to balance the immediate return in the form of revenue that any proposal for taxation on motor vehicles may bring, against the overall benefit to the economy of the State that may be secured if some tax relief is provided. At any rate, there is always a need for observing due care and caution to ensure that tax burdens are not disproportionate to the capacity of an industry to bear them and do not curb or cripple its healthy growth and development."

Nobody knows what is the optimum level of taxation which will not inhibit the growth of the road transport industry. Suffice it to say that current rates of taxation are pretty heavy and have produced the unedifying spectacle of truck-owners going on strike in quite a few States. Obviously, the tax burden has become unbearably heavy for road transport operators. The improvement effected recently in all the States by way of single-point taxation of motor vehicles operating on regular permits seems to have been offset by additional levies in some of them like Madras, Madhya Pradesh and Maharashtra. The principle of single-point taxation is yet to be extended to "goods and passenger" tax. Consolidation of all taxes, including octrois, is still marking time. Even if there is no progress in these directions, there should at least be a moratorium, as recommended by the F.I.C.C.I.'s Transport and Power Conference recently, from the imposition of additional taxes on road transport during the third Plan period by the Central and State Governments alike. That way internal financing of future growth in the industry can be facilitated further.

The need for external financing of development will still remain. To some extent this need can be met by the State Financial Corporations which have been permitted, with effect from the current year, to grant direct financial assistance and guarantee facilities to road transport industry. It is noteworthy that this assistance will be available not only to the organised sector of the industry but also to individual operators. The limit of accommodation has been fixed at Rs. 20 lakhs in the case of a co-operative society or a joint-stock company and Rs. 10 lakhs in any other case. It is now upto the State Governments and the State Financial Corporation authorities to provide liberal credit facilities. Another measure recommended by the F.I.C.C.I.'s Transport and Power Conference may also be considered in the context of external financing. This is to the effect that the proposed hire-purchase enactment should be based on the U.K.'s hire-purchase laws which ensure security to the credit institutions. As this will facilitate the expansion of credit to road transport and ensure its further growth, there is no reason why the suggestion should not be accepted and a suitable amendment made in the Bill. In its understandable anxiety to protect the buyer of vehicles under the hire-purchase system, the Government should not overlook the important point that tilting the balance in favour of the hirer will tend to drive out the honest and reasonable lenders, a development which will not be in the interest of hirers themselves.

COLOMBO PLAN

One of the outstanding achievements of the Colombo Plan has been the spreading of technical knowledge in the countries of the South and South-East Asian region. This aspect is of paramount importance to the developing countries in as much as it seeks to ensure a rational use of manpower and material resources. In view of the dearth of technical personnel in these countries, the Plan's activities in this field are perhaps more valuable than its two other functions relating to the actual development plans of the region and foreign capital aid. Technical co-operation, it may be noted in passing, covers the provision of training, of experts and equipments.

It is encouraging to note that there has been a steady increase in the provision of technical assistance under the Colombo Plan in recent years. According to the latest annual report of the Colombo Plan Council for Techni-

cal Co-operation in South and South-East Asia, the number of persons who were given training during the year ended 30th June 1962 was higher at 4,529, which compares favourably with 4,417 in 1960-61. Similarly, the number of experts made available to the region (excluding those already in the field) rose from 786 to 1,008. The total cost of equipment provided under the Plan, too, made headway, having gone up from £5.6 million to £17.5 million. This brought the total expenditure on Technical Co-operation during the year to £36 million, as compared with £20.2 million in 1960-61.

Thus, the Colombo Plan Technical Co-operation activities, which have been steadily growing from its inception in late 1950, reached the highest level in 1961-62, the twelfth year of operation of the Plan. The total value of technical assistance that has flowed into the region since 1950 amounts to over £102 million. The total number of persons in this region who have received training is 24,062. Besides, 4,163 experts in the fields of agriculture, industry, and administration have visited this region to perform a wide variety of highly technical tasks. These facilities have been supplemented by the provision of scientific and technical equipments, the aggregate value of which has amounted to £32 million.

India figures as the biggest donor of training places among the aid-receiving countries under the Colombo Plan. In 1961-62, training facilities were given in this country for 369 persons from the other countries of this region. With this, the total number of persons trained in India since 1950 has gone upto 1,914. The other countries of the region which contributed training places for foreign personnel under the Plan were Singapore (which trained 38 persons in 1961-62), followed by Malaya (24) and Pakistan (15). Countries outside the region (that is, the aid-giving countries under the Plan), however, continued to be the largest donors of training places. The U.S. provided training facilities for 2,223 persons, or almost 50 per cent of the total training awards in 1961-62. The U.K. offered 656 training places, Australia 541, Canada 246, New Zealand 218 and Japan 189. It may be noted here that India has not only been the biggest contributor under this scheme, but also the largest recipient of such facilities. During the year under review, it received 830 training awards, followed by Indonesia (737), Thailand (579), Pakistan (436), Vietnam (341), Nepal (340), Philippines (293), Malaya (242) and Ceylon (200).

An analysis of the fields in which training has been provided shows that the largest number of trainees (785) pursued general education, particularly in India, Australia and the U.S. There were 768 trainees in the field of food, agriculture and forestry. The third position went to training in the field of administration, the award of total training places being 544. Medicine and health constituted another field which attracted a large number of trainees, being 528 in 1961-62. This, incidentally, shows the emphasis laid on problems of health in the Colombo Plan, an emphasis that has coincided with "a dramatic fall in the death rate and a sharp rise in natural increase" in population. As the report says, the population increase constitutes a challenge to the countries of the region to create conditions for a fuller and better life for their peoples. The Colombo Plan Technical Co-operation itself is designed to meet this challenge through international co-operation.

TEXTILE WORKERS' BONUS

Details of the year-wise and mill-wise allocation of the bonus of Rs. 10.75 crores awarded by Mr. Y. B. Chavan, Chief Minister of Maharashtra, to the cotton mill workers in the city have been published this week. The amount, it may be recalled, was fixed by Mr. Chavan as the mediator in the bonus dispute between the Millowners' Association, Bombay, and the *Rashtria Mill Mazdoor Sangh*, the representative union. The mediation agreement provided that the amount of bonus payable by each mill for each of the three years, namely, 1959, 1960 and 1961, covered by the award, should be settled between the *Sangh* and the Association. The parties, however, failed to come to a settlement on the allocation of this amount among the different mills. The matter was, therefore, referred to Mr. Krishnaraj M. D. Thackersey, a former Chairman of the Indian Cotton Mills' Federation, who was appointed the arbitrator under the mediation agreement. Mr. Thackersey gave his award on Saturday the 20th inst. Under the award, the minimum bonus payable by a mill is 5 per cent of the basic earnings (that is, exclusive of merged and unmerged part of D.A. and bonus paid) during the year and the maximum 25 per cent. All mills, including those which might have made losses, will pay bonus, the minimum being 5 per cent of the basic annual earnings. It is not clear from the arbitrator's award how the share of each mill was arrived at, as he has not disclosed the basis. Profit made by a mill, however, appears to have been the dominant consideration. Thus, the larger the profit, the higher the bonus a mill has to pay.

A year-wise breakdown of the total shows that Rs. 2.30 crores will be paid as bonus for 1959, Rs. 3.82 crores for 1960 and Rs. 4.63 crores for 1961. This is only as it should be, because, of the three years covered by the award, 1959 was the leanest and 1961 the best for the industry from the point of view of profit. The first instalment, being the bonus for 1959, will be paid on Friday, 26th October, the second, being bonus for 1960, will be paid on Saturday, 22nd December 1962 and the third instalment, being the bonus for 1961, will be disbursed on 25th March 1963. Thus, the mills have been given sufficient time to find the resources. The workers, too, will be protected from the temptation of dissipating their hard-earned income in a spending spree, assuming, of course, that they do not resort to borrowing by mortgaging the bonus in advance.

A rough picture of mill-wise distribution of the bonus for each of the three years is as follows: For the year 1959, 15 mill companies will pay their workers a bonus equivalent to 25 per cent of their basic earnings, the maximum rate payable under the award, 18 mills will pay 5 per cent of basic earnings, the minimum payable under the award, and the remaining 14 mills will pay a bonus at rates between 5 and 25 per cent. For the year 1960, 34 mill companies will pay a bonus equivalent to 25 per cent of basic earnings, 6 mills will pay the minimum of 5 per cent and the remaining 7 mills will pay between 5 and 25 per cent. For the year 1961, 41 mill companies will pay a bonus equivalent to 25 per cent of basic earnings, three mills will pay the minimum of 5 per cent and the remaining four mills will pay between 5 and 25 per cent.

It will thus be noted that the number of mills paying the maximum rate of bonus, namely, 25 per cent of basic annual earnings, is the highest in respect of the year 1961, 41 mills out of a total of 48 mills liable to pay bonus during the year whereas, for 1959, the corresponding figure is only 15. The share of each mill in the yearly and total bonus varies according to its percentage liability for each year and and the total liability for the three years taken together. The table below indicates the amount of bonus payable by some of the leading cotton mills.

Name of Mill	Percentage of Basic earnings			Bonus payable for the 3 years 1959, 1960 and 1961 (Rs. in lakhs)
	1959	1960	1961	
India United	5	25	25	92.62
Bombay Dyeing ..	15	15	25	63.09
Century	11	25	25	69.85
Standard	25	25	25	53.20
Sassoon Spg.	25	25	25	45.34
Shree Niwas	25	25	25	40.91
Khatau	25	25	25	44.87
Morarjee	25	25	25	33.39
Tata Mills	16.9	25	25	34.95
Svadeshi	25	25	25	38.20
Shree Ram	25	25	25	29.30
Elphinstone	22.4	25	25	19.90
Finlay	25	25	25	26.95
Gold Mohur	25	25	25	20.67
Phoenix	25	25	25	27.95
Kohinoor	5	9.6	25	30.57
New City	5	5	9	3.64
Dawn	25	25	25	11.69
Apollo	5	25	25	14.85

The company to distribute the largest amount as bonus for the three years is the India United Mills, the amount being Rs. 92.62 lakhs. It pays the maximum of 25 per cent of basic earnings for both 1960 and 1961 and the minimum of 5 per cent for 1959. The Jubilee Mill pays the lowest, namely Rs. 2.73 lakhs, for all three years. This amount has been arrived at on the basis of 25 per cent of basic earnings for the two years 1961 and 1960 and 15 per cent for 1959. There are 15 mills which pay the maximum of 25 per cent of basic earnings for all the three years. Only one mill, namely, New Kaiser, pays the minimum of 5 per cent of basic earnings as bonus for all the three years.

East Germany and India have agreed to extend their long-term trade and payments agreement for the year 1963. The agreement provides for exports of jute, spices, nuts, iron ore, tobacco and coffee from this country and imports of machine tools, printing and textile machinery, etc.

AMERICAN LETTER

STATE OF ECONOMY

CONFLICTING VIEWS

(From Our Special Correspondent)

NEW YORK, *20th October*

OPINIONS are varying widely about the future course of the United States economy. Here are a few typical examples. The First National Bank of Chicago says, in its *Business and Economic Review* for October, that a vigorous resurgence of activity is a possibility. It adds "considerable strength has returned to one sector after another." Yet, the Federal Reserve Board saw fit to reduce reserve requirements of commercial banks so far as time deposits and savings accounts are concerned. The action will pump some $4,600 million into what Washington calls a "lagging economy." And the temperamental stock market sold off again considering this a bad omen rather than a welcome "shot in the arm."

The downright pessimism of Wall Street is difficult to understand. Personal incomes, for example, are far from discouraging. The August figure was a record, even though the rise to $443,000 million, at an annual rate, was the smallest gain in seven months. But the trend is still on the upside. Retail trade may be slow in some areas and in some stores, but, generally speaking, it has been expanding and the big holiday season is yet to start. The latter always generates big spending in cash or on credit. Corporate profits have been somewhat higher and promise to be better in the fourth quarter of the year and for 1962 as a whole than they were previously. Producers of durable goods particularly have been doing extremely well.

The private controversy between Government and business continues. Said Mr. F. R. Kappel, Chairman of American Telephone and Telegraph Company, addressing a closed session of the Fall meeting of the Business Council at Hot Springs—"it seemed to many that Government interference in industrial pricing policies, coupled with Government acquiescence in continuing wage increases, has adverse implications for profit prospects, business confidence and business investment." Mr. Kappel foresees a slight dip in 1963 and so does Mr. Bradford B. Smith, economist for the U.S. Steel Corporation. He told a meeting at the University of Pittsburgh that this country may be confronted by the possibility that real profit "has virtually disappeared from our economy. Should that be true, no other explanation of slowed economic growth is required. Should it continue, economic stagnation is assured."

I am quoting these comments, because I think they are highly significant of the currently prevailing state of mind. They are all said to be well-balanced but they are humanly influenced by the positions occupied by the spokesmen. They are all entitled to their opinion. The First National Bank of Chicago has analysts who are as competent as those of the Federal Reserve. I am convinced there are no deliberate untruths in any of the foregoing statements.

Foreign Trade and Foreign Exchange

The announcement that new tariff schedules will go into effect under the new trade expansion policy is bringing out the protectionist forces as could have been expected.

The first rather influential group to be heard was the Commerce and Industry Association of New York. It asked President Kennedy "on behalf of those firms which will be injured by imposition of new tariff schedules" to suspend for 90 days the effective date of any import duties which are to be either increased or decreased by 5 per cent or more because of reclassification. Changes of less than 5 per cent could become effective as contemplated, according to the Association's request.

The Federal Reserve Bank of New York has been issuing a continuing series of statements on Treasury-Federal Reserve policy in connection with foreign exchange operations. As stated previously, the U.S. Treasury resumed foreign exchange operations in March 1961 and the Federal Reserve System in February 1962. It has been part of a co-operative effort by Treasuries and central banks on both sides of the Atlantic to create a first line of defence against disorderly speculation in the foreign exchange markets. Apparently, this co-opera-

TOO MUCH TALK, TOO FEW HOUSES

STATE MINISTERS FAIL TO IMPRESS

From Our Special Correspondent

NEW DELHI, *23rd October*

DELHI LETTER

THE malaise with the housing plans in the country, according to a Planning Commission official, is too much talking and too little building. Judged by the performances of various State Housing Ministries and municipal administrations, there is no sense of urgency about housing projects. Even if financial allocations already made are spent to the full, the lag in urban housing alone is likely to worsen to ten million dwellings by the end of the third Five-year Plan from a little fewer than five million when the current Plan began. The slums and the problems of the slum dwellers have become more intense in cities like Delhi and all the repeated shouting of the Prime Minister about the disgraceful housing conditions has scarcely produced any action. Demolition of unauthorised houses or hutments built across open spaces in the capital, or any attempt at demolition, has been followed by demonstrations and agitations by the slum-dwellers, since the demolition is not simultaneously supported by provision of alternative roof for the dispossessed. Opening the Housing Ministers' Conference last week, the Prime Minister made it clear that he did not think more money would be made available to the States and city administrations. Mr. Nehru concentrated his fire on the engineers of the Public Works Department who, he declared, should evolve economic methods of house construction. The Planning Minister, Mr. Nanda, who met the Housing Ministers, also poured cold water on demands for more funds.

The proceedings of the conference exhibited the indifference of the State Ministers. Apart from the Maharashtra Minister, none of the Ministers was able to make substantial contributions to the discussion. As a matter of fact, the Ministers were by and large absent from most of the sessions. Several of the Mayors who had been invited were not there at all and, among the municipal officials, only the Bombay Corporation representatives were active. The States have, allowed some of the Central assistance for housing to lapse for want of satisfactory projects to implement or provision for housing schemes in general allocations has been diverted for other purposes politically more impressive. Of about Rs. 15 crores allotted by the Centre for a special programme of land acquisition, only a third has been withdrawn by the States and again only about Rs. one crore has been spent. Only three States and the Delhi Administration, which is under the Centre, have taken steps to evolve land acquisition legislation, although the suggestion for such laws was made five years ago at a Housing Ministers' Conference.

The investment needed to eradicate the housing problem would total even more than the outlay in the third Plan and Works and Housing Minister Mehr Chand Khanna's grouse was that, in successive plans, while the allocation for housing increased marginally in absolute terms, the share of housing as a percentage of the total outlay was diminishing fast—from 34 per cent in the first Plan to 15 per cent in the third Plan. The Planning Commission's reply to the demand for more funds is that the States may first spend all the money allotted to them—they could spend the five-year allotments in three years if they could—and then try for more finances. The Life Insurance Corporation, which is a major source of money for housing, complains that the State Governments make it a habit to draw the funds allotted to them only towards the end of the financial year. This means that the L.I.C. has to maintain liquid funds over a long period and the Corporation wants the States to follow a phased programme of withdrawals from October to March. If the States fail to withdraw in the phased manner, the Corporation wants a penalty to be levied on the State Governments. The Works Housing and Supply Ministry has now suggested to the States to outline their firm demands by 31st July every year and the Central Ministry will decide on the demands and authorise withdrawals by 30th September.

Even the industrial housing scheme, which is more specific than other projects, is not being smoothly implemented. According to Mr. Khanna, out of 150,000 houses sanctioned until the end of March, only a little more than 26,000 have been constructed. The industrialists list three difficulties with the scheme: (1) the ceiling for various types of tenements is unrealistic; (2) land acquisition for housing colonies is an onerous process; and (3) building materials are not available at controlled prices. The Central Government is to study a proposal for a levy on employers for provision of industrial housing.

The village housing programme has received even less attention from State Governments than the urban projects. The Ministers accepted a decision to change the emphasis on village housing and try out an intensive programme like the package plan for agriculture. The present plans are to make a concerted attack on housing problems in selected villages and show a visible impact of Government efforts. According to Government estimates, only seven per cent of the village houses have plinths or walls of bricks, cement or stone and roofs of tiles or corrugated sheets. Eighty-five per cent of the village houses have mud plinths.

The Housing Ministry has also appointed a working group to study the problem of co-operative housing ventures. There are today about half a dozen State-level housing co-operative societies and about 5,600 primary societies. All these together have been able to construct a total of 45,000 houses a year, at an investment of Rs. 38 crores.

Intensive Oil Search

Offshore drilling for oil in the Gulf of Cambay is one of the steps the Oil and Natural Gas Commission plans to undertake before the turn of the year, according to Mr. K. D. Malaviya, Minister for Mines and Fuel, who last week-end expressed to newspaper correspondents his confidence that the target for indigenous production of three and a half million tons of crude would be achieved by the end of the third Plan. Under the terms of last year's agreement, the Italian E.N.I. will do contract drilling in the Gangetic plains. Despite some disappointments in the Punjab, exploration will be continued in the area and work will also begin in the Cauvery basin. The most creditable performance so far has been in Assam, where Oil India has drilled 137 wells, of which 104 are commercially successful producers of oil or gas. Some wells are under tests.

Mr. Malaviya is leading a high-level delegation to the Soviet Union, Rumania, Poland and Italy. He will pursue with the Rumanians the provision of further aid to the Indian oil industry, a subject which was taken up during the Rumanian President's visit to India this month. Mr. Malaviya and the Rumanian Foreign Minister, who was with the visiting President, had preliminary talks. The Nunmati refinery, which was aided by the Rumanians, is sought to be expanded from an annual capacity of 750,000 tons to one million tons. Mr. Malaviya wants to discuss with the Russians the possibilities of early expansion of the Barauni refinery which will have a capacity of two million tons in the initial stages. This refinery design is such as will permit quick expansion.

The Koyali refinery proposal in Gujarat also needs to be pursued and implemented quickly. While Mr. Malaviya's talks in Warsaw will concern coal-mining projects, at Rome he will discuss with top E.N.I. officials the project report on a refinery for the south. The Italians have in their proposals for the South Indian refinery ruled out the use of Soviet crude though the Italians have been importing supplies from Russia. They have suggested a refinery based on imports from Kuwait or Iraq. Possibilities of Government imports of crude from Iraq were probed in talks with the Iraqi Oil Minister, who visited the country a few days ago. The Soviet offers of crude some years ago had to be rejected by Delhi, because the Government had no way of forcing the oil companies to use Soviet crude and, if Iraqi crude comes in, it will be the first time the Government enters the crude import field. Madras, Mangalore, Cochin and Tuticorin are the possible sites for the South Indian refinery. The Italians have suggested a 150,000-ton lubricants plant integrated with a two-million-ton refinery. Mr. Malaviya has also started talking aloud about yet another public sector refinery to be sited in Calcutta.

All these refinery plans will take some years to mature, but the country may be victimised by another crisis in fuel stemming from large underestimation of oil needs until recently by the planners and the Fuels Ministry. Even early in 1960, some oil company executives told this correspondent that oil consumption by the end of the third Plan may be in the range of 14 million tons. But the planners estimated the requirements at 11.7 million tons in the third Plan document. Their estimates of Indian production was 7.923 million tons, 5.641 million tons by the private sector and the balance by public sector refineries. It took Mr. Malaviya some time to acknowledge that the demand may rise to 14 million tons. But now even that estimate is considered too low. At the Plan's end, the needs may total 17 million tons. Between 1951 and 1960, oil consumption rose from 3.96 million tons of 7.575 million tons. As compared with the eight to nine per cent increase in consumption in the past decade, an increase of fifteen to seventeen per cent is estimated during the third Plan. The expansion of company refineries will take private sector production to a little less than 7.5 million tons. Nunmati contributes 750,000 tons, Barauni will produce two million tons and the Gujarat refinery, if it comes to fruition by the Plan-end, another two million tons. If the Gujarat refinery does not go on stream, the gap between demand and indigenous refinery may be seven million tons, or almost equal to the total 1960 consumption. E.N.I.'s estimates of Indian consumption by 1966 are 18 million tons, higher than all other estimates.

For the South Indian refinery, there are two choices before the Government today, Mr. Malaviya having again ruled out a private sector plant. One is to obtain Italian collaboration and the other to accept an offer by an independent American operator who is reportedly willing to be a partner with the Government. If the American proposal is accepted, the Italian credit can be used for petro-chemicals.

The Soviet pressure for a higher price for its oil products poses another problem for Mr. Malaviya, whose Ministry is also facing Soviet criticism of the public sector for inefficiency and confusion in the distribution arrangements made by the Indian Oil Company.

THE PRO-MARKETEERS INTO EUROPE WITH A BANG

LABOUR PARTY OUTWITTED

By Our London Correspondent

IT is an odd reflection that the issue over the Common Market has proved the salvation of all the political parties. Just as it rallied the Labour Party, so also the Conservative Party Conference was transformed last week by the cause of European unity. And that cause was made all the more dramatic by the Conservative Conference being held after Mr. Gaitskell had thrown down the challenge against entering the Market. For it is well known that the Conservative Party and the Government supporters in the House were almost evenly split between the pro-marketeers and the anti-marketeers and the Prime Minister has had many an anxious thought as to the practicability of uniting his whole Party behind him in his determination to join the European Economic Community. In the event, it was the Leader of the Opposition who did his work for him. This is not to say that those in the Government opposed to Britain's entry were reconciled by an opposition to the Labour argument, but the important rank and file of the Conservative movement through the country felt that the arguments at the Labour Conference were arguments they could refute. And yet none of this enthusiasm and anxiety was evident before the day devoted to the debate on the Common Market.

The Conference began with debates on economic and industrial issues and these fell hopelessly flat. Mr. Maudling, whose appointment as Chancellor of the Exchequer had raised such high hopes, appeared to have had all his enthusiasm and energy for a go-ahead policy squeezed out of him since his visit to Washington. He gave the impression of being even more cautious than Mr. Selwyn Lloyd and even the Party leaders were beginning to look glum.

No Opposition At All

But when the Common Market came to be debated all doubts were swept away. Mr. Heath, the Government's negotiator, was the hero of the occasion, even though most of his carefully marshalled facts were—simply by their weight and quantity—beyond the capacity of much of the audience to absorb. The point was that they felt he knew his business and delegates accepted the general theses (*a*) that the economic advantages of entry would *greatly* outweigh the disadvantages and; (*b*) that the industrial future of this country lay in economic unity with the Continent. At the same time they accepted the declared intention of the Government that economic unity bore with it *no political implications*. By the time Mr. Butler, the Premier's Deputy spoke, the whole mass of Conference had been won over. The Parliamentary opponents of entry into Europe tried to maintain their arguments but they were simply swept away—in just the same manner as Mr. Gaitskell's opponents had been demolished a week earlier—by the enthusiasm of the lead given and accepted by the Conference. At the end of the debate, there was no opposition left at all in the Conservative ranks. Accordingly, the Government can now go forward on what they declare is their adventurous course, sure that their Party is behind them. It is impossible to conceive that the Prime Minister's opponents on his side of the House will dare to vote against him now; at the most, they might abstain.

The Prime Minister himself did not attend the Conference until the end of the week and, when he spoke, it was to the converted. His battles had all been won. Thus, he and his Ministers and the Conservative Party go forward from this last of the three great Conferences, rejoicing in the clear-cut nature of the issue which is being put before the people of this country, on the one hand, a united Conservative Party, confident that entry into Europe is the right answer to Britain's economic problems and, on the other, a possible not-so-united Labour Party affirming that Britain should stay out.

At the Conference, it was possible also to learn something of the technique which the Government will now follow. Mr. Macmillan and Mr. Heath hope to have the negotiations finalised by the end of this calendar year: the one danger to this time-table is President de Gaulle, because French intransigence could lead to at least six months longer of negotiating. But, assuming that the French do not prove a stumbling block, then, before the middle of next year, the Treaty of British adherents could be ready for signature. But what, then, of Labour's intention to insist on a General Election, if they do not consider the terms of the Treaty acceptable? The Opposition will not be given an opportunity of debating the Treaty as they would debate an ordinary Bill; the Treaty will be signed by the Government and then simply presented to the House for ratification; the debate will be on the straightforward issue to ratify or not to ratify and there will be no debating of details. Thus, the Government could ignore the Opposition's demand for an election, carry its Treaty through the House with an affirmative vote and not concede the election for another year, that is, not before, say, May 1964. By that time, although nothing much would have happened in practice, the processes of integrating the British economy with that of Europe might be regarded as having gone too far to enable even a victorious Labour Party to withdraw without incurring much odium from the Six and from the United States.

It is felt that the most dangerous thing that could happen would be for the Labour Party to declare beforehand that, unless there was an election before the Government signed the Treaty, it would, if victorious in an election, repudiate the Treaty; it could only take this line, if it had completely solid support, that is, the Trade Unions would have to accept the Party's decision to fight entry (they have accepted it by approving the motion of opposition to entry but at this moment there is still a good deal of suppressed objection). Of course, if the Labour Opposition do threaten to annul the Treaty, the Government could still ignore them and trust that the Opposition would forget its objections if sufficient time had passed. There is also the question whether a fore-announced declaration of intention to annul would alienate many floating voters. The Opposition's own view, on the other hand, is that they would rally the whole of the working class vote. But the Government and the Conservative Party feel that an Opposition carried to this degree would have an adverse effect on Labour's chances. So, all in all, the Government and their Party consider that the cards are well stacked in their favour. To sum up. They have an exciting proposition to put before the country; they have fired their rank and file workers with the necessary enthusiasm; there will not be much doorstep debate on the precise details; all that they will have to do is to say: "Britain's future lies in linking up with the other countries of Europe; we cannot stay isolated; we must look to the future," etc.

(*Concluded from next column*)

sources. The following table shows how the total national income is at present divided and how it would be divided in five years' time if this plan is accepted and realised:

(In £ thousand million)

	1961	1966
Consumer expenditure	17½	20½
Public consumption	4½	5½
Investment	4½	6½
Exports	3½	5
Total ..	30½	37½

The figure of public consumption is the expenditure by the Government on defence, health, education, etc. and the increase postulated in the Report is 3½ per cent per annum, against the present 1 per cent; clearly, proper account is being taken of the need for expansion in the social services. Finally, consumers' expenditure *per head of the population* will be able to rise by 2½ per cent per annum (the increase in the figures in the table above of 3.2 per cent provides also for the increase in population).

That, then, is the first stage in the preparation of the Five-year Plan for Britain: it remains for the employers and trade unions to advise the Chancellor on its practicability, for the Chancellor perhaps to accept it, and then for all the detailed steps to be taken to translate it into reality. And it is at this last stage that more than planning will, of course, be necessary.

PLANNING FOR PROSPERITY

AN OUTLINE EMERGES

(From Our Own Correspondent)

LONDON, 19*th October*

LONDON LETTER

THE former British Chancellor of the Exchequer, Mr. Selwyn Lloyd, was a great believer in the virtues of planning and the National Economic Development Council remains one of his memorials. The present Chancellor, Mr. Maudling, does not think that planning will provide all the answers but he is expecting the Council to provide him with a clear lead before the end of this year. In the meantime, the body of economists and researchers, who form the permanent staff of the Council, have prepared their first report for it. This report is the result of instructions they were given to aim for a 4 per cent per annum increase in national output, as against the 3 per cent per annum which has been customary over recent years and which has, indeed, been regarded as the normal.

What the planners, therefore, had to do was to see what the implications of such an increase in output could mean for the economy as a whole. It will thus be for the Council (NEDDY)—of which, incidentally, the Chancellor is Chairman—to decide on the feasibility of achieving this target. To express all this in figures we could say that the gross production of the United Kingdom in 1961 was £26.5 thousand million. To this must be added imports of £4 thousand million giving a total availability of resources of £30.5 thousand million. If the Five-year Plan is adopted, the national output will rise to over £32 thousand million, while imports will be stepped up to £5 thousand million, giving a total volume of resources of £37.3 thousand million.

It will be noted in the figures quoted above that imports alone would rise by £200 million per annum. The implication behind all this planning is not restrictive, it is that the whole economy can be expanded, imports as well as domestic production. At the same time, investment, exports and consumers' expenditure can equally be increased. It is not, therefore, a plan to show how, by cutting down consumption, it is possible to expand, say, investment and exports: in this plan, everything is supposed to go up.

Exports

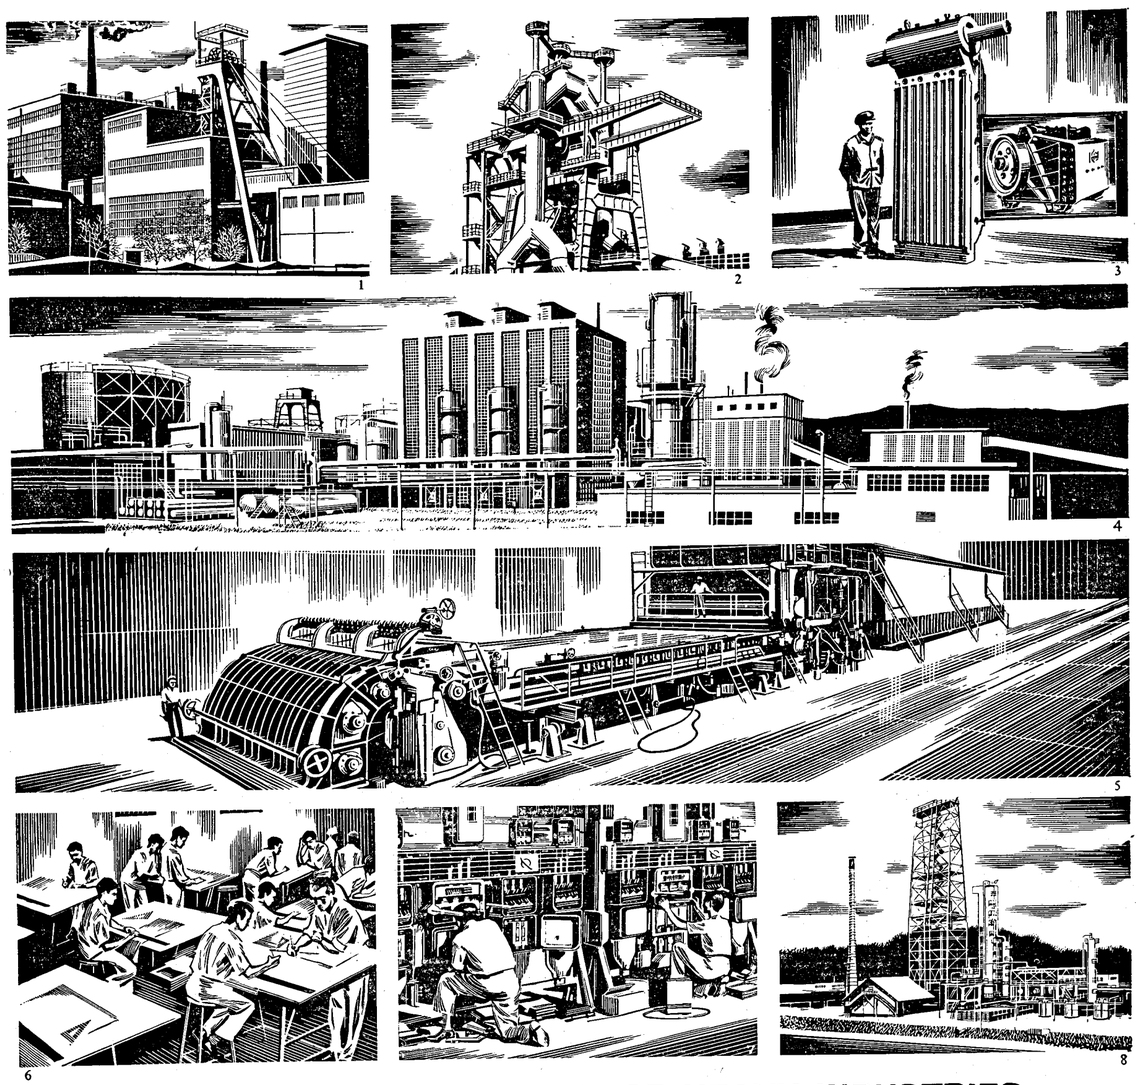
Exports, for instance, will have to rise by £250 million per annum and thus the balance of payments can be expected to improve on visible account by £50 million per annum and the additional improvement to give an overall surplus in excess of £300 million per annum would come from improved invisible earnings. *But* an increase in exports of this order, which is the equivalent of 5.7 per cent per annum, is double the rate of increase witnessed in recent years. To take one quoted instance alone, Britain's share of world trade in manufactures, which has been diminishing over recent years as other countries have increased their exports, would have to be held at its present level, i.e. the actual volume of manufactures would have to be increased.

Again, the achievement of an increase in the domestic output means more productivity per worker—only 0.7 per cent of the increase will come about through a rise in the working population, the other 3.3 per cent will have to come about through improved output per head. But it is also implicit in this figure that this can be achieved not only through new investments but through better use of existing resources; indeed, the Report stresses heavily the resources which now exist but of which the fullest use has yet to be made.

Investment

Nevertheless, an increase in investment is important and the annual rise is around £350 millions or an increase of 6.2 per cent. Another way of putting this is to say that at present investment accounts for 18 per cent of the total national production; in 1966, it would have to account for 20 per cent. The percentage increase is not considerable, simply because of this reliance upon a better use of existing re-

(*Continued in previous column*)



UTMAL: VITAL MACHINERY FOR HEAVY INDUSTRIES

UTKAL Machinery Limited (Utmal), now getting ready to swing into full operation, is one of India's largest machinery-manufacturing enterprises. ■ UTMAL combines the resources and experience of three of the best-known German firms—GHH, Koppers and Voith—and a well-established Indian company: Larsen & Toubro Limited. Each is a leader in its own field, associated with pioneering ventures that have revolutionised many industrial techniques. ■ UTMAL will fully utilise indigenous technical skill, labour and raw materials. Through a special training programme, Indian engineers and administrative staff will play an increasingly important role in its development.

■ UTMAL has a multi-phased programme of manufacturing essential equipment for India's developing industries: Blast furnaces, steel works plant, pig casting machines, sintering plant, coke ovens and by-products recovery plant, plant and equipment for the cement, fertiliser, petro-chemical, paper and hydraulic industries, etc.

GHH One of the foremost manufacturers of heavy machinery in Germany. They are acknowledged pioneers in many fields—particularly in steel production. GHH export machinery to many parts of the world. Their products include plant and equipment for the iron and steel, mining, cement, sugar and chemical industries, floating docks, aerial ropeways, etc.

KOPPERS Experts in the field of fuel refining, Koppers design and construct coking plants and low temperature carbonisation plants with all by-product plants; plants for synthesis gas production from fuels of all kinds; mineral oil refineries, plants for water treatment and waste water purification, industrial furnaces of all types and plants for the chemical industry.

VOITH The largest manufacturers in Europe of pulp and paper machinery. Since their inception almost a century ago, Voith have made many important contributions to the development of this industry. With their extensive experience VOITH offer their services as project engineers for the design of complete plants.

L&T Larsen & Toubro Limited are one of the leading engineering concerns in India. They have wide experience in the manufacture, supply and installation of different types of machinery and industrial plants.

They specialise in the manufacture of chemical plants in stainless steel, aluminium and copper, switchgear, petrol pumps, dairies and ancillary equipment, cooling towers, general fabrication etc. They have undertaken the complete installation of many major industrial projects in the country.

ROLE OF COMMERCIAL BANKS IN EXPORT PROMOTION

NEED FOR LIBERAL CREDIT FACILITIES

By Mr. Manubhai Shah
UNION MINISTER OF INTERNATIONAL TRADE

THE third Five-year Plan estimates that developmental and maintenance imports during the third Plan period will amount to Rs. 5,750 crores. In addition, capital repayments of the order of Rs. 550 crores have to be made. These include repayment of past loans and credits to the extent of Rs. 450 crores, the balance being for various other capital transactions, including payments under the Indus Water Treaty agreement. To meet these obligations, it is estimated that we shall have to export goods worth Rs. 3,700 crores over the third Plan period and try to secure foreign assistance of the order of Rs. 2,600 crores. Invisible earnings which contributed sizably to relieve the pressure on the balance of payments would disappear altogether because of increasing interest payments on our loans for development and diminishing interest earnings from our rapidly declining sterling reserves. It was felt that Rs. 3,700 crores of exports were the minimum to be aimed at, while actually the needs of the situation may turn out to be much larger.

Although such an export requirement would mean an average of Rs. 740 crores per year, the actual step up in exports would have to be from around Rs. 640 crores in the beginning of the third Plan to about Rs. 840 crores in the last year of the third Plan. Again, since development is to continue through successive Five-year Plans and since our aim is to build up a self-generating economy which will dispense with foreign assistance for development within a decade from now, the need to increase our exports rapidly is very urgent. It has been estimated that in the first year of our fifth Five-year Plan, our exports will have to be in the neighbourhood of Rs. 1,400 crores per annum, if the development potential built up by then is to be sustained. Exports, therefore, have to have the highest priority in any way of thinking, if our aim is to build up a self-generating economy and maintain a modest rate of growth.

Since the step up of Rs. 200 crores in our exports in the third Plan can only be achieved gradually, it was natural to assume that, every year, exports would rise by about Rs. 40 crores. At least that would be a realistic and modest way of setting a target to work up to. Actual performance in the past 17 months has not been at all encouraging. Exports during the first year of the Plan were only Rs. 660 crores, Rs. 20 crores short of the target for 1961-62. The exports during the first five months of this year are not very much different from those during the same period last year and offer very little hope that they will reach the level of Rs. 700 or 720 crores which may be considered the target for this year. Tea and cotton textiles which account for about 30 per cent of our exports show hardly any improvement. Exports of jute have maintained a satisfactory rate of growth. Exports of other items like ores, iron and steel, cashew kernels, fish, footwear and leather manufacture are stagnant. It is only in the exports of items like vegetable oils and oilcakes, sugar and tobacco that some improvement is registered. Exports of new manufactures have also registered an increase.

Poor Export Performance

The reasons for such a poor performance are well known. High cost of production, non-maintenance of quality standards, lack of after-sales services and a buoyant market at home make exports unattractive. Competition from other countries makes the going so difficult in world markets that our exporters do not venture out from the comfortable and secure pastures at home. The scope for the expansion of traditional export items like tea, jute and cotton cloth, though good, is limited when viewed in the context of the needs of expansion of our export trade. We cannot place all our hopes on these for achieving the target figures mentioned above. Increasingly, we will have to turn to new items like ores, iron and steel, fish, fruits, engineering products, chemicals and pharmaceuticals and various manufactured articles which alone have an elastic market. And these cannot be sold in foreign markets, unless there is aggressive and scientific salesmanship. The products have to be familiarised, a reputation for quality and service has to be built up and trading connections have to be developed with planning and care. All this takes time and results of our efforts now will only be seen a few years hence. But we must begin now, if we wish to export annually upto Rs. 1,400 crores worth of goods nine to ten years later. Every means and agency for promoting exports have to be pressed into service to attain this goal.

Commercial banks have an important role to play in the matter of selling our goods abroad. Their branches abroad can function as very useful agencies for commercial intelligence and market information. Since they have an intimate contact with the business communities in these places they are in a position to make useful introductions for intending exporters, advise on the financial and commercial soundness of importers and exporters, mediate in disputes and so on. Since exports involve two parties, the banks have to be helpful, for suing and win the confidence of both the parties. Thus by building up goodwill and modern banking service among a large number of people abroad, they can help build up exports.

Foreign Branches

This is on a personal plane. On a more general plane, foreign branches of our banks can provide excellent information regarding economic conditions of the countries in which they operate, indicate the scope for pushing our wares in particular lines, assess the tastes of people and the peculiar features of a market and evaluate competition from others. This is more in the nature of work being done at present by commercial representatives of Government, but as bankers move more closely with businessmen, they are likely to have a better feel and confidence about these things. Being men on the spot, they are able to assess any situation much more clearly than others. They know the heart of the matter. The range of services which banks can render to exporters can be clearly seen from the activities of foreign commercial banks in this country or in South East Asia, the Middle East or Africa. Some of the "Reviews" which they produce are often the only source of information regarding some of these countries.

Our export promotion drive would have been helped greatly, if our commercial banks had branches in all the areas which we want to reach, like the Middle East, South East Asia, Africa and Europe. Unfortunately, Indian banks have very few branches abroad and even those few are located only in areas where there is a large Indian population. Such an attitude is hardly likely to be conducive to export promotion. A perusal of the history of some of the British commercial banks shows how these ventured during the nineteenth century into distant and unfamiliar lands in search of profits and assisted British trade greatly in the process. They went to India, South East Asia and China, Africa and South America. Venturesomeness of that kind is necessary on the part of Indian banks today.

Of course, it is true that regulations imposed by Government on foreign banks accepting deposits, etc., make expansion on that scale difficult today. Again, expansion of banking activity abroad has taken place only in the case of those countries which have surplus capital to export and, therefore, a country securing substantial assistance and private foreign capital cannot hope to emulate their expansions. Nevertheless, there is scope for far greater branch expansion than has taken place so far. Our banks, I feel, have been over-cautious in this regard.

Financial Facilities

The second field in which commercial banks can help promotion of exports is by making readily available financial facilities to exporters. These facilities would take two forms: one is the provision of credit to the exporter by banks for periods at least as long as the exporter has to wait to receive payment from his customers or for as long a period as the bank can liberally afford to advance. The second, which is strictly non-financial, is the insurance against the risk that the customer may not pay at all. The latter has been taken care of by setting up the Export Risks Insurance Corporation. The Export Risk Insurance Corporation was set up towards the end of 1957 and, upto the end of 1961, it has been able to underwrite risks of the order of Rs. 13 crores. The risk cover given by the Corporation offers additional security to the exporter wanting to borrow money from a bank against that particular transaction and should normally make the bank more willing to lend. It has been found that some banks are not willing to extend credit on this basis even to parties who are otherwise suitable financial risks. A reconsideration of this attitude and approach by Indian banks would help exports to a large extent.

By and large, Indian commercial banks have been providing some short-term credit to Indian exporters. Exporters sending goods to countries which are members of the I.M.F. can draw export bills against which banks do lend money. Demand bills on sight involve locking up bank funds for only 10-12 days and other demand bills involve lending for longer periods usually not exceeding 90 days. These are eligible for rediscount with the Reserve Bank of India under the Bill Market scheme and therefore the lending bank is not unduly worried about its liquidity position. Over half of our exports are covered by export bills and banks find them lucrative to hold because the yield on them is higher than on inland bills or loans.

Some of the banks, including the State Bank of India, provide "packing credit" to Indian exporters against letters of credit opened in their favour. These advances enable the exporters to undertake the processing or finishing of goods meant for export.

Interest on Export Credit

It has often been argued that many of our exportable commodities are priced out of world markets because of high domestic costs of production and, therefore, it would help them to be more competitive if the rate of interest on export credit were lower. It is pointed out that Germany and Japan, which have built up their exports so well in the post-war years, give preferential discounts in favour of export bills and a similar practice in India would give a stimulus to our exports. The analogy, however, does not strictly hold because both Japan and Germany were high-interest countries, whereas India, because of Government's need to borrow large sums for development, has remained a low-interest country. As a matter of fact, the criticism has often been levelled that the rate of interest hardly reflects the scarcity of capital prevalent in a poor country. Even so, a further reduction in the rate of interest on export credit is very desirable and I hope something will be soon done in this direction. The difference in interest rates between lending rates and charges for internal marketing and external marketing finances lowering them in favour of the latter will mitigate to some extent the existing terrible "internal pull" of the market for local sales as against exports. For a long time to come, the export sector of the economy has to be more favourably treated. Also, what the commercial banks can do is to keep the export sector free from the effects of a credit squeeze and make money available to exporters even when other sections of the economy have to do with a smaller supply of funds.

Medium- and Long-term Credit

The real problem regarding credit which exporters are facing is more with regard to the medium-term and long-term credit. Now that world markets have turned into buyers' markets and there is greater competition among sellers, intending importers expect the exporter from whom they buy to provide the credit they require. This is because private foreign investment does not flow adequately into developing countries and because the flow of international assistance is not commensurate with the countries' needs. The richer countries are in a position and seem quite willing to provide such credit. So even developing countries like India who aspire to sell engineering and other manufactured goods have to provide such credit if they want to be in the export field.

The period for which export credit is required varies with the nature of the commodity. Light engineering consumer durables like sewing machines, fans or bicycles, may require credit for a period of 18 months. For trucks and automobiles and their parts the prevailing period is three years. For machinery and equipment, e.g. ring frames, boilers, sugar machinery, machine tools, locomotives, etc., credit up to five years may have to be given.

It would appear strange that a country which is seeking large amounts of assistance from other countries for its development programme has to give credit to others, some of whom may not be poorer than us. But there seems to be no alternative to this, if we want to step up our exports, because other countries, both developing and developed, offer such terms. Very often, we hear that China or East European countries and others get our textile trade in Asian countries because of the better payment terms they offer.

I feel that banks should undertake such medium-term and long-term financing of exports, if the export transactions are found to be otherwise satisfactory. The maximum duration of such export credit need not be more than five years, as decided upon at present by the "Berne Union." Commercial banks in India have been able in recent years to go beyond the limits of strict commercial banking and provide medium-term credit to industry. A similar step will have to be taken with regard to exports as well.

Non-payment Risk Cover

Anyone who makes such a suggestion has to confront the question: what happens to the liquidity of the banks, if they lock up funds for such a long time? Again, how is the risk of non-payment to be covered over a longer period? The latter is taken care of by the Specific Contract Policy of the Exports Risks Insurance Corporation. The Corporation has been experimenting with such policies and it is to be hoped that their experience will enable them to extend their activities further in this direction. We are also contemplating other institutional and organisational steps in this direction.

Banks can undertake such extended term finance, only if they have adequate rediscount facilities. The present rediscount facilities may not quite meet the situation and we may have to think of setting up a special institution for providing such facilities. Most countries in Europe have such specialised institutions. In France, for example, the *Banque Francaise du Commerce Exterieur* guarantees export paper by its acceptance. In Belgium, the Institute of Rediscount and Guaranty, established in participation with commercial banks, rediscounts export paper for medium-term periods. In the Netherlands, the Export Finance Company set up in 1951 functions along the same lines. In Italy, Western Germany and Austria also there exist agencies to provide export credit on convenient and acceptable terms. In India, perhaps, the Refinance Corporation or similar institution could be made to function in this fashion. Whatever be the ultimate solution, the problem has to be tackled urgently because the need for such credits will grow as we produce more and more engineering goods, machinery, machine tools and manufactured articles for export.

Like every other agency in this country, the banks also have been slow in realising the urgent need to promote exports. Since our future development depends to a large extent on our being able to step up our exports, they have to participate actively in the drive for exports. A little more venturesomeness like that of the merchant bankers of the nineteenth century, a little more of the glory and honour of our seafaring ancestors and a little less harking backwards to comfortable domestic pastures will enable our commercial banks to participate significantly in this great adventure and supreme national task of export promotion.

AIDING THE LESS DEVELOPED NATIONS

NEED FOR EXPANDED FLOW OF ASSISTANCE URGED

THE Development Assistance Committee of the Organisation for European Economic Co-operation and Development (O.E.E.C.D.) has just published the first annual *Aid Review* of the aid efforts and policies of individual D.A.C. members. May be, the *Review* has as the Chairman of the Committee, Mr. James W. Riddleberger, says, raised many issues rather than solved them. Nevertheless, the *Review* is of considerable importance and value, in that it not merely highlights the urgency of aiding the development of the underdeveloped countries and indicates the nature and quantum of assistance actually rendered in the past two years (1960 and 1961) but also makes several useful recommendations designed to expand as well as improve the flow of long-term funds and other development assistance.

In the course of a brief introduction to the *Review*, the D.A.C. Chairman has most forcefully emphasised the need for greater developmental assistance to the less developed countries. There are, according to him, few issues of such fundamental importance for world peace and prosperity as that of aid to the less developed countries. Despite the large sums devoted to foreign economic assistance in recent years, the needs of developing countries are certainly no less than they were fifteen years ago. In fact, as a result of improvements in administrative systems, pre-investment and technical co-operation activities, the capacity of less developed countries to absorb foreign capital has expanded significantly. More than two-thirds of the free world's people, we are told, receive only one-fifth of total income, the average annual *per capita* income being less than $300. The average rate of growth of *per capita* income in the past decade has been between just two and three per cent per year. This represents an annual rate of increase of less than $7 per head, while the corresponding figure for the O.E.E.C.D. countries is as high as $25. Stating that this gap is growing because of the relatively rapid rise in income in the more industrialised countries, the D.A.C. Chairman observes: "Since the O.E.E.C.D. countries taken together hope to increase their real income of 50 per cent during the next decade, the imbalance in economic growth is likely to be increased, unless fresh, vigorous and more effective efforts are made by the less developed countries and complemented by commensurate action on the part of the economically more developed countries."

Aid Rises Markedly

The findings of the D.A.C. Committee reveal that the total flow of long-term financial resources (both public and private) from the ten D.A.C. countries listed in the accompanying table to the developing countries during the calendar year 1961 touched a high of $8.7 billion, as against $7.4 billion in 1960. The major portion of this increase of $1.3 billion was accounted for by official contributions (net) which rose from $4.9 billion in 1960 to $6.0 billion. The flow of private capital also improved but to a much smaller degree, from $2.5 billion to $2.7 billion (preliminary figure). Almost all donor countries expanded their official contributions in 1961. The rise was particularly marked in the case of West Germany and Japan. The advance registered by the Netherlands was likewise vigorous. France and the U.K., which have made relatively substantial contributions for many years, also continued, though more modestly, to step up their official assistance. Last year, the U.S. considerably increased its extensive programme. Canada's programme, which since its inception in 1951 has concentrated on grants, was recently expanded to provide for long-term lending in the form of official export credits.

The Government contributions of D.A.C. member-countries to development financing are expected to rise in the next few years. This expectation is based on the official statements made by almost all member-countries and is already embodied in the budgetary requests and appropriations of several countries. It is, however, said that the pace of rise in aid contributions is not likely to equal the vigorous expansion of 1961.

The *Review* notes that significant changes occurred during 1961 in the terms of official contributions, the general tendency being towards easier terms of lending. The interesting arrangement first used by the I.D.A. which permits private borrowers to repay their Governments in local currency at terms appropriate to its external debt servicing capacity was adopted by the United States in 1961. The introduction of these measures is evidence of a growing appreciation of the heavy and increasing burden of external debt servicing on many underdeveloped countries.

Larger Support Wanted

The *Review* has urged a vigorous effort to stimulate public and parliamentary support for larger foreign assistance programmes. It no doubt recognises that certain member-countries have, in spite of rapid progress in recent years, a relatively low average *per capita* income and that, as a consequence, their domestic needs limit their aid effort more than is the case for more fortunate countries. But still the *Review* emphasises that the substantial differences in development effort require correction. It also feels that the differences among the member-countries over basic policy attitudes in respect of the terms at which aid is provided to developing countries require further consideration. Further, the *Review* emphasises the need for improved co-ordination in aid effort. To quote it:

"In addition to closer agreement on basic policies, it is clear that closer co-ordination in respect of individual financial operations is highly desirable. The general long-range objective should be that the size and composition of the aid package received should be related to the total needs and resources of the recipient country. Such co-ordination would facilitate adjusting the financial terms of aid to the ability of the recipient country to service and repay external debt. To accomplish this type of co-ordination, it is obvious that something more than agreement on general principles is required. Donor countries should take into account the total economic and financial situation of a recipient country (short-term debt, long-term debt, availability of local resources, development possibilities and priorities, national development plans, etc.) and then adjust their respective aid programmes toward the accomplishment of agreed goals. This can obviously be accomplished only in close association with the recipient country and by agreement on goals. The D.A.C. members should, therefore, make increasing use of the co-ordinating group concept recently developed by the Committee, which provides for the possibility of arranging a systematic exchange of views on individual development projects and programmes of less developed countries which would appear to raise problems of common interest to several members of the Development Assistance Committee."

Longer-run Growth

Simultaneously, continuing efforts, the *Review* points out, are required to ensure that foreign economic aid is directed, to the greatest extent possible, towards uses which make a maximum contribution to the long-run growth of developing countries. Further, the *Review* calls upon the D.A.C. to give increasing attention to the geographic distribution of financial flows which at present is largely determined by historical circumstances. Some regional specialisation in the bilateral aid activities, especially of the smaller donor-countries, is clearly justified. There is, besides, the need for joint efforts to reverse the trend towards more tying of aid. The member-countries are specially urged to ensure that the remaining tying regulations do not unduly impair the most effective use of aid funds and that general purpose contributions are made to meet certain essential import requirements which cannot be allocated to specific projects.

Summing up the major findings of the *Aid Review*, the D.A.C. Chairman observes as follows:

"I believe that answers can be found for these problems (of development effort) over the longer-term through persistent, patient common efforts. I think it is fair to say that the first *Aid Review* was a success, and that it has contributed substantially to improved understanding among member-Governments of the challenging problems of development assistance. Individual members were given a full opportunity to explain their aid efforts and policies. I am confident that the resulting increased understanding of the objectives and problems of each Government provides an invaluable base for future co-operative endeavours. A commendable spirit of frankness and co-operation prevailed throughout these confrontations. Full effectiveness of the Review will depend on the willingness of all Governments to give serious consideration to improving their programmes and policies in the fields discussed in the *Annual Aid Review*."

Private Capital

The foregoing account underlines the urgency of larger and improved flow of development assistance to the developing countries. It is, however, necessary to point out that even such assistance will not make its maximum contribution, unless it is, as the *Aid Review* has pertinently remarked, matched by effective self-help efforts, including sound economic, social and financial policies on the part of the developing countries themselves. The *Review* has done well to draw pointed attention to two other important aspects, one pertaining to the flow of private capital and the other to trade policy. It is recognised that most countries have taken special measures to stimulate the flow of private capital to the less developed countries and further measures are said to be under consideration both in the framework of the O.E.E.C.D. and by individual Governments. But the proper appreciation of the role of private capital, it is stated, is somewhat impaired by lack of comprehensive statistical data. The D.A.C. member-countries have, therefore, been asked to improve their information on the size, composition and geographic distribution of the flow of private capital. Alluding to this, the D.A.C. Chairman has called for a further exploration of ways and means to promote and safeguard the flow of private capital to the less developed countries. On the issue of trade, the *Review* has not covered the problems relating to trade policy. Nor has it stressed the need for stable and growing foreign exchange earnings for the less developed countries. It has, however, made it very clear that the Development Assistance Committee must recognise the increasing importance of these problems, if the full effect of the common aid effort is to be realised and sustained.

WORLD BANK LOAN TO ISRAEL

The World Bank has announced a loan equivalent to $22 million to Israel for highway construction and improvement. During the next 4½ years, about 512 miles of inter-urban highways will be built or reconstructed to higher standards to provide better communication with ports, to reduce traffic congestion and transport costs, and to improve traffic safety. About 155 miles of feeder and access roads, linking agricultural and other settlements to the main highway network, will also be improved.

The total cost of road construction and improvements is estimated at $46 million. The Bank loan of $22 million will cover the foreign exchange requirements of this work and also of related imported equipment and services. The contracts awarded for road construction and for the procurement of equipment will be made on the basis of international competitive bidding.

The loan is for a term of 17 years and bears interest of 5½ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in January 1967.

TREND AND PROGRESS OF LIFE INSURANCE

MOUNTING LAPSES CAUSE CONCERN

THE fifth annual report of the Life Insurance Corporation of India covering the year ended 31st December 1961 was released to the Press towards the close of last week. The report is a 92-page document containing detailed and exhaustive information about life insurance in the country. The text of the report is supplemented by tables, graphs and charts which together present a comprehensive picture of the activities of the Corporation during the year. It would be desirable for the Corporation to publish its annual report of accounts along with the Chairman's statement reviewing its progress. The L.I.C. is, perhaps, the only corporation in the world to follow, for reasons best known to itself, the old procedure of publishing the Chairman's statement first and the accounts afterwards. Usually, there is considerable time lag between the two publications. This year, the time lag was about seven weeks. In the absence of the full report, comments on the Chairman's statement have perforce to be based on incomplete and insufficient data. By the time the Directors' report, containing detailed information, is published, the Chairman's statement becomes stale. It would, therefore, be desirable if the Chairman's statement were accompanied by the relevant annual report. It does not matter very much if this causes a delay of a few weeks in publishing the Chairman's statement.

New Business

New business done during the year ended 31st December 1961, according to the latest annual report, crossed the Rs. 600-crore mark and stood at Rs. 608.82 crores under 1,469,664 policies, as compared with Rs. 497.54 crores, under 1,257,557 policies, in the previous year. This represents an increase of 22.37 per cent, as compared with 16.1 per cent in the previous year. Of this, business in India accounted for Rs. 598.79 crores and business outside India for Rs. 10.03 crores. The following table indicates the trend of new business:

Trend of New Business

	In India		Outside India	
	No. of policies	Sum assured (Rs. crores)	No. of policies	Sum assured (Rs. crores)
1957	810,738	277.67	5,055	5.40
1958	954,771	339.06	5,399	5.62
1959	1,143,387	419.70	7,912	9.47
1960	1,249,821	487.84	7,736	9.70
1961	1,461,608	598.79	8,056	10.03

It will be seen that business done in foreign countries also has gone up to some extent.

Business in Force

Total business in force at the end of December 1961 amounted to Rs. 2,737 crores, under 8.57 million policies. Of this, Rs. 2,623 crores, under 8.33 million policies, represented the business in force in India and Rs. 114 crores under 241,000 policies the business outside India. As compared with this, business in force at the end of 1960 amounted to Rs. 2,285 crores under 7.73 million policies. Business in force during the year thus increased by 19.8 per cent.

Reviewing the trend of new business, Mr. B. K. Kaul, Chairman of the Life Insurance Corporation of India, pointed out some time ago (*vide* page 370 of *Commerce* dated 1st September 1962) that, in the context of the rise in price level during the year, and natural calamities like floods in some parts of the country, the increase of more than Rs. 100 crores in new business might be considered satisfactory. Rural business contributed substantially to the increase in new business. In 1961, 530,000 policies, assuring a total sum of Rs. 182.59 crores, were issued to people in the rural areas. The extension of the non-medical scheme has also given a boost to new business. According to the Chairman, one of the main difficulties in popularising life insurance in rural areas, apart from lack of facility for the collection of premium, is paucity of medical examiners. This has been got over, to some extent, by a wider application of medical schemes. Under a general scheme, which now extends throughout the country, medical examination is waived in respect of proponents within certain age groups, provided the total insurance on their lives does not exceed Rs. 2,000. Besides this general scheme, the Corporation is also insuring without medical examination special categories of persons in civil employment upto a total sum assured of Rs. 5,000. This limit was increased to Rs. 10,000 during the course of the year in the case of eligible persons whose ages at entry do not exceed 30 years and also in the case of category 'A-I' of the commissioned officers in the armed forces. Under this scheme, new business of Rs. 58.46 crores, covering 240,000 lakh policies, was completed, bringing the total non-medical business to Rs. 96.76 crores. Thus, during the year one out of every three proposers were insured by the Corporation without medical examination. The Corporation has provided, we are told, adequate safeguards to ensure that the class of business coming under the purview of these schemes is of the usual standard which would experience a favourable mortality. It is proposed to enlarge the scope of the scheme gradually as further experience of this class of business is gained.

Average Sum Assured

Along with the improvement in new business, there has also been an increase in the average sum assured per policy in India from Rs. 3,903 in 1960 to Rs. 4,097 in 1961. The average sum assured per policy in respect of foreign business, however, showed a slight decline from Rs. 12,539 to Rs. 12,446. Within India itself, the average sum assured per policy shows wide variations between different zones. It is the highest in the Northern Zone at Rs. 4,991 and lowest in the Southern zone at Rs. 3,624.

It is noteworthy that, out of the 1,461,608 policies issued in India, 1,023,948 policies, or 70.1 per cent of the total policies, were issued on the lives of persons who were insuring for the first time. On the basis of sum assured, the percentage of first insurance was 61.8 during the year, indicating that the benefits of life insurance is reaching out to those sections of the population which have so far remained outside its purview. The percentage distribution of new business, according to the sum assured, also confirms this. It shows that policies assuring sums upto Rs. 1,000 form 19.95 per cent of new business. Policies for sums between Rs. 1,001 and Rs. 2,000 accounted for another 26.25 per cent and policies for sums between Rs. 2,001 and Rs. 3,000 for 17.93 per cent. Thus, over 64.13 per cent of the new policies issued were for sums assured of Rs. 3,000 or less.

An analysis of new business in India, according to the plan of insurance, indicates certain interesting trends. Endowment assurances continues to be the most popular form of insurance, accounting as they did for 65 per cent of the new business written in 1961. Whole life assurances ranked second, their share being Rs. 75.81 crores, or 12.66 per cent of the total business. Children's assurances accounted for 8.18 per cent of the total. A comparison with the 1957 pattern of distribution of new business according to the plan of assurance shows a distinct trend in favour of whole life assurances. Thus, while the percentage of endowment assurances to the total declined from 74.75 in 1957, to 64.99 in 1961, that of whole life assurances increased from 9.35 to 12.66. This shift is attributed to the growing awareness among the insuring public of the value of insurance as a security for the family more than anything else. The following table indicates the trend over the five-year period 1957 to 1961:

(Sum assured in crores of rupees)

	1961	1959	1957*
Whole life assurances	75.81 (12.66)	35.38 (8.47)	30.68 (9.35)
Endowment assurances	389.15 (64.99)	270.02 (64.79)	245.24 (74.75)
Children's assurances	48.98 (8.18)	27.94 (6.99)	13.02 (3.97)
Miscellaneous	84.85 (14.17)	36.22 (8.67)	22.03 (6.99)
Joint-life assurances	N.A.	47.53 (11.38)	16.21 (4.94)
Total ..	598.79	417.69	328.08

Note: Figures in brackets represent percentage to the total sum assured. N.A.=Not available.
* Sixteen-month period ended 31st December 1957.

Lapse Ratio

The trend of lapses has been a cause for concern ever since the declining trend of the lapse ratio was reversed in 1958. The ratio of lapses, less revivals, to the mean business in force during the year increased from 6.6 per cent (in 1960) to 7 per cent. The lapse ratio was as low as 5.1 per cent in 1958 after which it continued to increase year after year, as will be seen from the figures given below:

Year	*Lapse ratio*
1957	6.4
1958	5.1
1959	6.0
1960	6.6
1961	7.0

According to Mr. Kaul, the rise in the net lapse ratio reflects the deleterious effect of the increase in the general price level on the saving capacity of the insured population. This is only partly true. It is also a reflection of the quality of business done which has tended to deteriorate in recent years. There is a tendency on the part of agents and field officers to artificially inflate new business so as to fulfil targets and quotas. In doing so, they would appear to be encouraged, if not forced, by the Development Officers of the Corporation.

The rising trend of lapse ratio figured prominently at the Press Conference held by the Chairman on 27th August last at which he released his statement to the public. Mr. Kaul made an impressive plea for understanding. He pointed out that the Corporation has been assigned a high target to be reached within a short period. Intensive canvassing was, therefore, going on to book new policyholders. When quantity increased, quality naturally suffered to some extent. Nevertheless, he conceded that everything possible should be done to keep down the lapse ratio, for he was fully aware that, apart from the monetary loss to policyholders and the Corporation alike, the termination of life insurance protection for several lakhs of families every year was a matter of vital concern to the Corporation. It is encouraging to find that the necessary machinery has been set up to renew the lapse position periodically, so that any adverse trend may be detected at an early stage and checked by taking suitable action.

Expenses

While the position in respect of lapses has deteriorated, expenses have shown an encouraging trend. The overall expense ratio for the year declined by 0.4 per cent to 28 per cent as compared with 1960. The renewal expense ratio, which is a better index of efficiency in management, also declined from 12.90 in 1960 to 12.42 in 1961. Although the trend of renewal expense ratio has been consistently downward, the year-to-year decline in the ratio has not been commensurate with the expansion in new business. Thus, during the period 1957 and 1961 new business done more than doubled, whereas the renewal expense ratio declined from 15.89 per cent in 1957 to only 12.42. The economies of scale ought to be considerable for an organisation of the size of the Corporation and the renewal expense ratio could surely be reduced further by exercising constant vigil on expenses and by eliminating unproductive expenditure through strict budgetary control.

The substantial increase in new business last year resulted in a rise in the premium income which, for the first time, exceeded the Rs. 100-crore mark per annum to stand at Rs. 112.30 crores, as against Rs. 96.89 crores in 1960. The premium income has more than doubled since 1955 when it amounted to only Rs. 58.55 crores. Claims paid during the year was larger at Rs. 34.11 crores, as compared with Rs. 30.69 crores paid during the previous year. A breakdown of the total shows that claims through both death and maturity rose, the former from Rs. 7.68 crores to Rs. 8.65 crores and the latter from Rs. 23.01 crores to Rs. 25.46 crores. The life fund as at 31st December 1961 amounted to Rs. 631.59 crores, an increase of Rs. 72.46 crores over the adjusted life fund as at the end of December 1960.

An important issue that requires the early attention of the authorities of the L.I.C. is the revision of its mortality table, which forms the main consideration for determining the premium rate. This table is based on data which are considerably old and bear no relation to the marked fall that has taken place in the death rate. The absence of competition should not lull the authorities into complacency. As a nationalised institution, the Corporation's profit-motive should be tempered by the social aspect of making available life cover to a progressively increasing section of the country's population at the cheapest possible price.

SLIGHT RISE IN DEMAND FOR TEXTILES

END OF DE-STOCKING IN SIGHT?

From Our Special Correspondent

MANCHESTER, 16*th October*

AUGUST returns on the trend of orders in the textile and clothing trade issued by the Board of Trade suggest that the volume of orders on hand is about 2 per cent less than in July, and 20 per cent lower than a year previously. Net new orders during the month, however, were 3 per cent higher than in August 1961. In the intervening weeks, however, the position has certainly improved. To suggest that a real buying revival has taken place would be to exaggerate, but most producers have been busier dealing with demand, and the volume of orders secured has provided relief after a very lengthy period of virtual stagnation.

MANCHESTER LETTER

Perhaps one of the most significant factors of the immediate market situation is that, in some directions, salesmen have been able to hold out for stiffer rates. For the first time for about 18 months, American yarn quotations have been slightly firmer and, although much bargaining has gone on before contracts have finally been booked, the ability to obtain even a slender improvement in margins might justifiably be regarded as the turning of the tide. Some allowance is also being made by producers for the possible rise in wages which may ensue following the arbitration on the union's pay claim which is to be heard next week. Coupled with the continual rise in overhead charges and the recent run of uneconomic working through short-time and other devices to curtail output, any small concessions which sellers can wrest from consumers is immeasurably welcome.

Europe in Focus

In a short time, it should be possible to have the latest official information about the cotton trade's prospects in the light of the European Common Market controversy. No doubt a comprehensive mass of figures will be provided for the delegates at the annual conference organised by the Cotton Board at Harrogate. In the absence of such immediate information and, working from the scattered extracts of speeches made at Brussels and other centres where the negotiations are taking place, it is difficult to obtain a clear picture of the scene, but this will presumably emerge before the week-end is over.

In the meantime, the Cotton Board's latest statistical review has thrown a little light on the situation by giving an outline of the provisional agreement which is under negotiation on the treatment of trade with India and Pakistan. Comprehensive trade agreements between the enlarged Common Market (containing Britain) with India and Pakistan are contemplated by 1966 at the latest, and Britain plans to impose the common external tariff on cotton textiles in four stages.

If, however, exports from India and Pakistan to the Community as a whole in the transitional period decline, as a result of the progressive application of the tariff, steps will be taken to restore the situation. Imports into the United Kingdom, it is agreed, will be restricted at about the present limit. Control will be imposed over re-exports of such goods from Britain to the other members of the Community during the transitional period in the event of difficulties arising in European markets.

Minimising Disruption

This follows the general pattern of what had been expected in the negotiations aimed at effecting a compromise between the need of the underdeveloped areas in the Commonwealth, such as India and Pakistan, to maintain and possibly expand their sales of textiles while avoiding too much disruption in the traditional manufacturing centres. In Lancashire, the main complaint has always been that the burden should be shared, but it is not always easy to persuade others to act as philanthropists. Already, it is well known that the French cotton industry is objecting to this provisional agreement with India and Pakistan, fearing that cheap cotton goods will be shipped across the Channel despite the safeguards proposed in the arrangement.

Britain's chief negotiators at Brussels have been trying to get better terms for the Commonwealth suppliers, suggesting that discussions on the trade agreements should begin as soon as this country joins the European Market. Equally, it has been suggested that tariffs should not be imposed on exports to Britain from India and Pakistan until the trade agreements have been concluded.

A Tale Re-told

Dealing with the state of the Lancashire cotton trade, the Cotton Board *Statistical Review* records no basic change in the unsatisfactory state of affairs ruling in the industry, nor does it suggest signs of any immediate improvement. Carrying on the tale of steady shrinkage, it points out that the amount of machinery in place in the industry has diminished by a further 800,000 spindles and 12,000 looms even since the end of the big scrapping programme early in 1960. The labour force at the end of July was about 25,000 lower than a year previously. The daily rate of output is now running at nearly 20 per cent below the peak before the present recession.

De-stocking

Having noted the gloomy present, the survey makes an effort to produce the possibility of a silver lining. The immediate cause of the industry's difficulties, it confirms, is the de-stocking phase of the current textile cycle, which has now lasted for about 12 months. "It is perhaps legitimate to hope that the end of this phase cannot be delayed longer than a few more months," it declares.

Recovery, as the review suggests, may have been postponed by the relatively poor retail sales of clothing, which for the first seven months of the year were some two or three per cent below the 1961 level. There is no need to re-emphasise the major reason for this development—the extremely disheartening weather throughout the months when the sun should have been shining.

Many of the comments made in the review must of necessity be factual reports of the general state of trade. Export operations throughout the world are running at a distinctly lower rate than last year and in the second quarter had fallen by about seven per cent, much the same proportional decrease as in the first three months of the year. The major exception to this trend was Japan, but practically all the other important exporters sent smaller quantities of goods overseas.

New Inter-industry Pacts

Any document of this kind can scarcely avoid reference to the many series of negotiations which are at present in progress between different countries arising from the basic agreement at Geneva relating to the future extent of international trade in cotton goods. The American restraint on imports from Hong Kong has clearly affected the Colony's export business; Japan and France have got together in an effort to predetermine the rate of business between the two countries as regards volume, types, quality ranges and prices; a similar arrangement is contemplated between Japan and Italy.

Meanwhile, much speculation is still proceeding as to the outcome of Britain's request to participate in the European Common Market and the way in which cotton textiles will be treated. More details should be available before the end of the Harrogate Conference.

More Three-shift Working

As a footnote to the current trading situation in Lancashire, figures quoted in the review relating to machine activity are somewhat revealing. In the second quarter this year, the rate in the spinning section was 84.4 per cent, as against 93.9 per cent in the same period of 1961. Machine activity, in fact, has declined steadily each quarter since then and the total ring equivalent spindles running are now 6,890,000, as against 8,160,000 in place.

One encouraging aspect of the second quarter's returns is that more ring spindles were running on three shifts than ever before. After remaining virtually unaltered at about 180,000 throughout the whole of last year, the figure has improved to 210,000. At the same time, two-shift working has been reduced from the peak of 1,460,000 spindles in the second quarter last year to 1,310,000 spindles in 1960. Evening shifts have been severely curtailed—from 2,060,000 spindles to 1,090,000 spindles.

The proportion of loom activity has not fallen to quite the same extent as in spinning. Again the peak was reached in the second quarter of 1961, when 92.3 per cent of weaving machinery was fully engaged; the corresponding figure this year is 86.1 per cent. In terms of looms actually running, the second quarter's total was 122,000, as against 138,800 twelve months back. Of the looms in place in running mills, fully automatics account for 42,700 in the total of 141,700.

STEPPING UP COTTON OUTPUT

CALL FOR MORE INTENSIVE EFFORT

RECURRING shortfalls in cotton production in the context of rising mill consumption is a continuing problem exercising the minds of planners, the Government and the millowners in the country. Every year, the Indian Central Cotton Committee, as the cotton expert of the Government of India, reviews the trends in cotton production, examines the problems encountered in raising output and makes suggestions and recommendations for achieving the plan targets for cotton. But, in spite of all the advice and guidance of the Committee and the remarkable success of its research efforts, cotton production still falls short of requirements and imports of cotton continue to impinge heavily on the country's meagre foreign exchange resources.

Mr. A. D. Pandit, President of the Indian Central Cotton Committee, had no quick solution to offer to the problem when he addressed the eighty-sixth meeting of the Committee held at Bombay on 20th October. He reviewed the crop and supply position of cotton during the 1961-62 season, analysed the reasons for the decline in production and emphasised the needs for more vigorous action to step up production along lines which are already well known. Production during 1961-62, which is officially estimated at 4.5 million bales (trade estimate is 4.9 million bales, including non-commercial production), fell short of the third Plan target for the year by 926,000 bales. As usual, adverse weather conditions such as heavy rains in the Vidarbha and Marathwada regions of Maharashtra and in Madhya Pradesh during the growing period falsified earlier hopes of a good crop. According to the President of the Central Cotton Committee, since only about 13 per cent of the total cotton area is irrigated, the crop is still highly vulnerable to weather conditions. While every effort should be made to increase the area under irrigated cotton, given the limited scope in this direction, attention should simultaneously be concentrated on ways and means of securing an average crop even under unfavourable weather conditions. The President conceded that this was a difficult task but felt that it should not be beyond the ability of research and development workers, in co-operation with the cotton growers, to minimise the effects of adverse seasonal conditions by all possible means.

It is common knowledge that higher yield per acre holds the key to increasing cotton production. Conceding this point, Mr. Pandit observed that, since March last, the Planning Commission and the Union Ministry of Agriculture had been devoting special attention to measures specially aimed at increasing production. The recommendations of the Committee in this regard, especially its suggestion that vigorous steps should be taken to induce cultivators to take up intensive cultivation on a wide scale, had been accepted and acted upon. Two examples of the special measures taken is the inclusion of cotton in the package programme and the offer of assistance for the wider adoption of plant protection measures. These measures are intended to be taken as part of the integrated cotton development scheme in the major cotton growing States. The effectiveness of these measures remains to be seen.

Research and Extension

The President of the Central Committee then dwelt on the measures being taken by the Committee to tackle the problem of raising the yield per acre in the major cotton-growing tracts. Recently, model agronomic schemes have been sanctioned for all the major cotton-growing States. These schemes envisage the conduct of comprehensive agronomic experiments to ascertain all the factors that will help raise yield. The President referred, in this connection, to the wide gap that exists between research and extension. Unless this gap is bridged and the results of research percolate to the level of the ordinary farmer, no spectacular improvement, he emphasised, could be expected. He cited certain instances to show how the knowledge available with research workers could contribute significantly to raising production, provided they are applied in practice by farmers. It has been demonstrated that, in the Vidarbha region of Maharashtra alone, where American cotton is grown under unirrigated conditions over some 1.5 million acres, an increase of 60 lbs. of *kapas* per acre could be obtained by the application of 20 lbs. of nitrogen per acre. This would mean that, by merely fertilising the crop in this area, production could be increased by 75,000 bales. Similar is the case in regard to plant protection measures. Unless intensive efforts are made to persuade the farmers to adopt such measures, their benefits will remain only on paper. The integrated cotton development scheme launched in most States affords a good media for better and concerted efforts in this direction. It is up to the State Governments to see that the improved methods developed by research workers find practical application on as wide a scale as possible. But so far they have not bestirred themselves into vigorous action. An instance of the apathy of State Governments is the experience in regard to fertiliser distribution. For the intensification of cotton development work, the Government of India recently agreed to make special quotas of fertilisers available for cotton. The State Governments have not lifted these quotas in a majority of cases.

The question of introduction of cotton in areas newly coming under irrigation is also an important one from the point of view of increasing production which merits the close attention of the State Governments. The present trend appears to be to cultivate paddy and sugarcane in such areas to the total exclusion of cotton. If this tendency is not curbed, the President of the Committee warned, cotton would continue to be a predominantly dry land crop, subject to all the vagaries and hazards of the weather; in other words, the average yield per acre would continue to remain low. It is estimated by the Committee that, if cotton is given the same priority as other crops in the new areas coming under irrigation, it could claim as much as 1.5 million acres of irrigated land. How this could be brought about is a question which deserves the immediate attention of the State Governments.

Double cropping of cotton in rice fallows is yet another method which calls for more intensified efforts. Although some progress has been made in this direction in some States, the tempo of progress, as the President himself admitted, has been slow.

No less important than the adoption of improved cultural practices, from the point of view of yield, is the cultivation of high-yielding varieties. The yield factor being inherited, breeding for better yield is an integral part of the drive for raising the per-acre yield. A special sub-committee appointed by the Central Cotton Committee has examined this question in detail and has recommended that, in all breeding projects, particularly those catering to the problem areas with precarious or uncertain rainfall, the yield factor should always be kept in the forefront along with quality.

Quality

Reviewing the progress of research on the improvement of quality, the President pointed out that some progress had been made towards the evolution of suitable strains to replace imported cotton. Imported cottons can be broadly classified into two groups; one group falling in

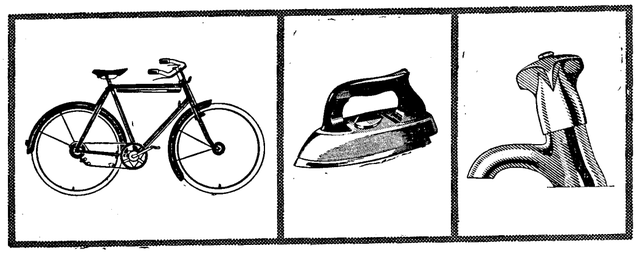
Electroplating Facts



As a manufacturer of goods which have electroplated surfaces for decorative effect, you are no doubt anxious to know whether the plating will last the lifetime of the article or will break down in a matter of months or even weeks, to the extreme annoyance of the customer. Bad plating cannot remain hidden for long and when the ugly rust-spots do show up, remember that the customer will blame *you* for it and not the plater who did the job for you. What can you do, to make sure that the plated finish on your goods—say, an electric iron or a table lamp or a bicycle—lasts and does not let you down? Follow the tips given below and you will be fairly safe:

(a) Tell your plater you want the plating done to a standard specification such as IS 1068:1958 or BS. 1224-1959, if what you want is nickel/chromium plating. These standards recognize three grades based on thickness of nickel deposit.

(b) Also tell your plater or mark on your blue-print, which of these three grades you want in a particular case. The choice will depend on whether the article is intended for (i) severe, (ii) moderate, or (iii) mild service.

(c) Mark the "significant" surface on the blue-print before giving to the plater, as it will enable him to give special attention to it. A significant surface is defined as that part of the surface which is visible when the article is in service and where failure of the plated coating cannot be tolerated by the user.

(d) Test the thickness of plating to see if it conforms to standard. Several different types of instruments are available for this purpose, but two of the most modern and reliable are the B.N.F. Thermo-Electric Gauge and the B.N.F. Coulometric. Thickness measurements are made in a few seconds and are, moreover, non-destructive in the former case. Equip yourself with a suitable instrument and keep a regular check on the quality of plating. Otherwise, choose a plater who is so equipped and insist on frequent tests. It is worth paying a little more for high-class finish on your products. Sub-standard plating can lose you valuable business.

AUGMENTING SUGAR PRODUCTIVITY

PROPER PLANT LAYOUT IMPERATIVE

By G. Ramchander

THE sugar industry is the second largest industry of our country, textiles being the first. India is the birthplace of sugarcane. Sugar manufacture was known during the Vedic period and the Sanskrit word *Sharkara* was used to denote sugar as it has the appearance of gravel. While as sugarcane is a tropical plant and the cane sugar industry in other countries is situated in the tropical belt, the industry is mostly concentrated in the sub-tropical region of our country, especially in the States of Uttar Pradesh and Bihar, where it spread rapidly during the thirties immediately after the grant of fiscal protection to the industry in the face of competition from Java.

There are at present 171 working factories with a total installed (crushing) capacity of 191,801 tons of sugarcane per day. Another 27 factories with a daily capacity of 26,650 tons are under construction and, when these go into production, there will be in all 198 factories with a total daily capacity of 218,451 tons of sugarcane.

Sugar is a pure carbohydrate. It is an important energy-giving food. A teaspoonful of sugar gives 18 calories of energy. It is almost instantaneously absorbed into the blood stream and relieves fatigue within minutes after it is eaten. It helps the functioning of every cell in the human body. The body uses sugar to burn its own fat. When eaten between meals, it controls an oversize appetite or false hunger. Though its consumption is increasing in our country, the *per capita* consumption (of both sugar and *gur*) is very much lower as compared with that in other countries, being 13.6 kgs., as against 51.5 kgs. in Britain, 44.3 kgs. in the U.S., 44.9 kgs. in Canada, 46.9 kgs. in Cuba and 54.5 kgs. in Australia.

Record Output

The target of sugar production under the second Plan was 2.25 million tons. This was achieved even in the fourth year of the Plan. In the final year of the Plan, the target was exceeded, the actual production touching the all-time record of 2.98 million tons, resulting in a glut of supplies, as consumption has not kept pace with production and there has been very little export to relieve congestion in the factories due to heavy accumulation of stocks.

The following table gives the man-hour requirement to produce one ton of sugar in India as compared with some countries:

Country	*Man-hour requirement per ton sugar*
Philippines	16.83
Puerto Rico	5.10
Louisiana	7.87
Hawaii	4.64
India (average)	97.36

The following table shows the capacity groupings of our factories as compared with those in the countries cited above:

Crane crushing capacity in tons per day	Country				
	Philippines	Puerto Rico	Louisiana	Hawaii	India
Below 500	..	..	..	..	10
500 to 1,000	4	..	..	..	87
1,000 to 2,000	4	6	17	16	63
2,000 to 3,000	4	3	16	5	9
3,000 to 4,000	4	11	3	3	2
Above 4,000	9	9	5	3	..
Total	25	29	41	27	171

Against this background, let us now study the production planning and the plant layout problems of the sugar factory. The table of capacity groupings reveals that the capacities of the Indian factories are very much smaller as compared with those in other countries. Hence the fundamental planning has to lay emphasis on increasing the capacity of the individual units. At present, a crush of 1,000 tons of cane per day of 24 hours is considered to be an economic unit. But sooner or later, this has to be revised upto at least 2,000 tons crush per day, if not 3,000 tons. This is the only possible way to bring down the man-hour requirement. The technical efficiencies of our factories compare very favourably with those in foreign countries. In order to bring down the production cost and increase productivity appreciably, the unit size has to be increased.

Then comes the problems of plant layout. Plant layout may be defined as planning the path each component part of a product is to follow through the plant. In the case of the sugar factory, the product is homogeneous and there are no different components. The layout has to be on the product method or a straight line as opposed to the process layout.

The objectives of this layout are sevenfold:

1. Facilitate the manufacturing process.
2. Minimise materials handling.
3. Maintain a large turnover.
4. Hold down investment.
5. Make economical use of floor space.
6. Promote effective utilisation of labour.
7. Provide convenience and comfort for the employees.

The flow as already pointed out should be in a straight line. There should be no back tracking. A good layout should reduce material handling to the minimum. In a sugar factory, cane loading and sugar bagging are the two places in our country where manual handling is resorted to. In the first case, cane handling becomes a case of sweated labour in heat and cold and in the uncomfortable pricking sensation. In bagging and lifting a quintal sugar bag and manual stacking in piles, it is again a case of sweated labour. These together fall under items 6 and 7 also. Mechanical handling in these cases, though it means an investment, will add to employee comfort and add to productivity. The proper arrangements of the machines and balancing the various units will reduce investment per production unit.

Each square foot of floor area costs money. In the U.S.A., a manufacturer has estimated that his floor area cost him one dollar per square foot per month. Though such a calculation is seldom available in our country, it is best to plan and arrange the units in such a way that there is no wasted space. But, at the same time, the units should not be cramped, making the whole show ugly and uncomfortable to the worker. This has a bearing also on the next objective, namely, promoting effective use of labour. One plant in the States found that 20 per cent of the time was lost due to unproductive working by men. So when units are arranged, they should be compact for the personnel to work and see easily. This will also facilitate easy supervision, thereby contributing to increased productivity.

The evaporator arrangement in the sugar factory can be a case in question. In the absence of automatic level, controllers and similar other gadgets, the evaporator attendant in our factories will be going up and down his station. In such cases, instead of the conventional straight line arrangement of the multiple effect bodies, a parallelogram arrangement may be useful.

Provision of comforts to employees is very essential in the modern age. Adequate light and ventilation will reduce fatigue and increase productivity. Equipment causing excessive noise should be isolated. Equipment giving obnoxious gases like the sulphur furnaces should be housed outside the main buildings. Wherever necessary, air conditioning will aid in employee comfort. Safety measures should be properly observed. Belt guards and proper earthing of the electrical machinery will reduce hazards.

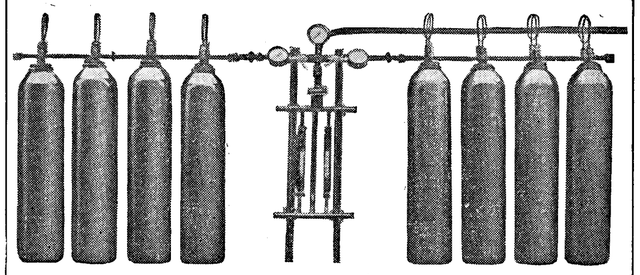
SUGAR PRODUCTION AND STOCKS

Sugar production during the month of September 1962 was 9,000 metric tons, as against 16,000 tons in the same month last season. This brings the total production for the season 1961-62 (upto 30th September 1962) to 2,728,000 tons (including 56,000 tons produced prior to November 1961 for the current season), as against 3,037,000 tons in the corresponding period last season (including 55,000 tons produced prior to November 1960).

The offtake of sugar from factories during the month of September (including 61,000 tons despatched for exports) was 254,000 tons, as against 238,000 tons (including 49,000 tons for exports). The total despatches upto 30th September 1962 were 2,575,000 tons (including 296,000 tons for exports), as against 2,133,000 tons (including 244,000 tons for exports) in the same period last season.

The total closing stocks of sugar with factories on 30th September 1962 amounted to 1,300,000 tons, as against 1,451,000 tons on the same date last year.

Pipeline to Economy



Pipeline supply of industrial gases leads to a remarkable reduction in production costs by decreasing cylinder handling, greatly reducing wear and tear on regulators, taking up less space, ensuring unbroken supply and cutting down gas wastage. Pipelines deliver oxygen, acetylene and other industrial gases at various work-points at controlled pressures.

There is a pipeline system to suit every individual requirement. Please consult us for details.

JENKINS COMMITTEE REPORT VIEWED AGAINST INDIAN BACKGROUND—II

APPOINTMENT AND DUTIES OF DIRECTORS

By A Special Correspondent

THE Jenkins Committee went into the questions relating to the appointment of company directors, their duties, powers and shareholders' control over them in great detail and has made no less than 34 recommendations in Chapter III of the Report. These recommendations cover in particular Sections 157, 185, 188, 190, 191, 192, 193, 194, 195, 196, 199 and 200 of the English Companies Act, 1948.

As regards the appointment and tenure of office of directors, the Committee found that the provisions of the existing Companies Act were "generally satisfactory" but made suggestions for amendment of Section 185 concerning appointment of persons over the age of 70, as its provisions "are unnecessarily complicated" and of Section 188 which gives the Court power, under specified conditions, to disqualify a person convicted of certain offences under the Act from being a director or taking any part in the management of a company for a period not exceeding five years, on the ground that its provisions "are too narrowly drawn."

Age of Directors

The Committee's recommendation about the retirement of directors attaining the age of 70 is that the formality of giving special notice under Section 185(5) for re-electing (or for electing if the person is a newcomer on the Board) should be dispensed with and in its place, notwithstanding any provisions to the contrary in the Articles which could completely bar the election or re-election of superannuated persons, the age of the proposed person be disclosed in the notice of the meeting at which the election or re-election is to be made.

The corresponding provisions in the Indian Companies Act are contained in Sections 280 and 281, which suggest the same procedure to be followed as is laid down in the English Act. In the Indian law, the age of superannuation is put down at 65 years, instead of 70 years as in the U.K. Act. The Sastri Committee, however, did not suggest any change in the procedure when this issue was examined by it.

Disqualification of Directors

As regards the disqualification of directors, the Jenkins Committee has recommended that the scope of Section 188 should be extended to cover (*a*) persons convicted on indictment of any offence involving fraud or dishonesty whether in connection with a company or not, (*b*) persons who have been persistently in default in complying with the provisions of the Companies Act, (*c*) persons who have shown themselves, when acting as directors of companies or when otherwise concerned with their management, to have acted in an improper, reckless or incompetent manner in relation to the companies' affairs. There is nothing in the present English Companies Act to prevent such persons from continuing to act as company directors. The Committee has recommended that "the Court should have power to prevent them from so acting when satisfied that this is in the public interest." The Committee has, however, recognised that "it may be difficult to decide in any particular case whether a company director has acted so recklessly or incompetently that he should no longer be allowed to remain a director. But, in serious cases, where, for example, a man has succeeded in steering a series of companies into insolvency, we think that the Court should be able to put a stop to his activities." The Committee has further recommended that, in cases where the person concerned is sentenced to a term of imprisonment for an offence for which he is also disqualified from acting as a director, the Court should have express power to direct that the disqualification should continue for not more than five years after the end of his term. Another recommendation of the Committee is that corporate bodies should be prohibited from being directors.

In our country, the grounds for disqualification of directors are set out in Sections 203, 274 and 283 of the Companies Act. The provisions of Section 203 run almost on parallel lines to those of Section 188 of the English Act, but they are strengthened by the provisions of Section 274(1) (*d*) which say that a person shall not be capable of being appointed director of a company if he has been convicted by a Court of any offence involving moral turpitude and sentenced in respect thereof to imprisonment for not less than six months and a period of five years has not elapsed from the date of expiry of the sentence. Further, under Section 283(*c*), an existing director, if convicted and sentenced as aforesaid, automatically vacates his office on the Board. Originally in the 1956 Act before amendment, this section covered convictions only in the Indian Courts but, after the Amendment in 1960, conviction by any foreign Court has also been made a ground of disqualification. The Jenkins Committee's suggestion that the disqualification should not continue for not more than five years after the end of the term of imprisonment is already provided for in Section 274(1) (*d*) of the Indian Act. Besides this, sub-section (1)(*f*) of Section 274 gives power to the Court which has passed the order of disqualification under Section 203 to cut short the period of disqualification. Thus, in regard to frauds, the provisions in Indian law are already very stringent. Further, the suggestions of the Jenkins Committee regarding the disqualification on grounds of persistent default and acting in an improper, reckless or incompetent manner in relation to the companies' affairs are very wide in nature but this ground of disqualification is specifically defined in sub-sections (*a*) to (*l*) of Section 283 in the Indian Companies Act. Lastly, the recommendation of the Committee that corporate bodies could not be directors is also covered by the Indian Companies Act, *vide* Section 253, which allows the appointment of individuals only as company directors.

Duties of Directors

It was pointed out by a number of witnesses to the Jenkins Committee that the Companies Act "expressly lays certain duties on directors but is by no means exhaustive in this respect as a larger part of their duties and responsibilities having been determined by extensive and complex case law does not find expression in the Act," and, therefore, the existing legal duties and responsibilities of directors should be codified in a new Act. The Committee expressed itself against such a view, as, in its opinion, it "would involve great risk" and "there would be inevitable lacunæ which might well make it more difficult to determine in any particular set of circumstances what these duties were." But the Committee did feel that "a general statement of the basic principles underlying the fiduciary relationship of directors towards their companies might well be useful to directors and others concerned with the company management." and, therefore, recommended that the Act should provide that:

(*a*) The company director should act with the utmost good faith towards the company in transactions with it or on its behalf.

(*b*) He should not make use of any money or property of the company or of any information acquired as a director to obtain directly or indirectly an improper advantage for himself at the expense of the company.

(*c*) A director who uses confidential information to influence materially the value of the securities of his company or group should be liable to compensate the person suffering from his action, unless that information was known to that person.

(*d*) A director of a company may be prohibited from dealing in "put" and "call" options in securities of his company or group.

(*e*) The details of all transactions affecting a director's holdings should be notified to the company within seven days and these details should be entered in the register within three working days of their notification to the company, and the register of directors' holding should be kept open by the company for inspection in the same way as the register of members of the company is.

(*f*) The provisions of Section 190 which prohibit loans to directors by companies should be strengthened.

The above enumerated recommendations have been made by the Committee with a view to making the directors of companies realise their fiduciary responsibilities towards their companies. The Committee's recommendation at (*e*) above has been made to strengthen the existing provisions of Section 195 of the English Companies Act, whose corresponding section in the Indian Act is Section 307. This section in the Indian Act is further supported by Section 308 which requires a company director to give details of any transaction affecting his shareholdings but no time limit is prescribed. However, while dealing with the fiduciary responsibilities of the directors, it would be pertinent here to draw attention to the provisions of Section 300 (which prohibits interested directors from participating or voting in Board's proceedings on the concerned item), Section 301 (maintenance of register of contracts, companies, and firms in which directors are interested), Section 302 (disclosure to members of director's interest in contract appointing manager, managing director, managing agents or secretaries and treasurers), and Sections 304 to 306 (obligations cast on company to keep the register of directors, etc.) in the Indian Companies Act which are ahead of the English Act and would remain so even after the Jenkins Committee recommendations have been given effect to. Notwithstanding this, however, it must be conceded that the Committee's recommendation regarding the "call" and "put" options by directors if incorporated in our law would yield wholesome results and valuable information.

As regards the loans to directors which are prohibited under Section 190 of the English Act with certain exemptions, the Committee agreed with the view expressed by some witnesses that Section 190 could be circumvented and it ought to be strengthened. As such, it recommended that the aforesaid section "should be extended to prohibit loans by a company to another company held singly or collectively and whether directly or indirectly a controlling interest." In our country, the purpose underlying the aforesaid recommendation of the Committee is served by the provisions of sub-section (*d*) and (*e*) of Section 295. Further, the circumvention of the spirit of Section 295 in our Act is not possible, as the approval of the Central Government is to be obtained and the Government's scrutiny is far too detailed to allow any abuse to go unnoticed.

Disclosure of Directors' Interests

In connection with the compensation for loss of office, the Committee has recommended that, in any cases in which Sections 191, 192 or 193 now require the disclosure of an uncovenanted payment, any payment to the same director at present exempted from disclosure by virtue or Section 194(3) should also be required to be disclosed, as the Committee did not think that "the members of a company are in a position to judge the appropriateness or otherwise of a proposed payment to the directors, unless they are informed of the total payment which it is proposed to make to them."

Another important recommendation with regard to disclosure of directors' interest is that Section 199(3) should be extended to enable a director to give general notice of interests other than those arising from his membership of another company or firm and also to state the nature of the interest. This recommendation of the Committee is already covered, in a way, by the provisions of Section 301 of the Indian Companies Act which require a company to keep a register of contracts, company and firm in which directors are interested and keep it open for inspection by the members of the company. The other two sections dealing with the disclosure of directors' interest in contracts, etc., in the Indian Companies Act are Sections 299 and 302. Thus, the three sections named here meet, to a great extent, the Committee's suggestions on the subject.

Further, in regard to the directors' remuneration or pensions, the Committee has suggested that, where it is proposed to alter the articles of a company and the proposed alterations include provisions improving the position of the directors in respect of remuneration or pensions, those provisions should be adequately explained in the notice of the relevant meeting or in a document accompanying the notice and the proposal should be separately voted on. In our country, the provisions of Sections 198, 309 and 310 go much further than the Jenkins Committee recommendation. Sections 198 and 309, for instance, prescribe the statutory limits of remuneration payable to the directors, whereas, under the provisions of Section 310, any increase in the whole-time directors' remuneration is to be approved by the Central Government and, without this approval, any resolution passed by the Company in general meeting or by its Board of Directors will not be operative.

Directors' Powers *vis-a-vis* Shareholders' Control

The Jenkins Committee's verdict on the issue of directors' powers and shareholders' control is the same as the one given by the Cohen Committee in 1945, except that it has made the following observation:

"... the description (by the Cohen Committee) of the control theoretically exercised by shareholders as illusory is, perhaps, now something of an overstatement. The Act provides shareholders with powerful weapons provided they choose to use them and, even if practical considerations make them difficult for the small investor to wield, the same cannot be said of the institutional investor who is not likely to submit to any major abuse of power by the directors of any company whose members include investors of that description."

"Looked from that practical angle," the Jenkins Committee goes on to add, "it may be very difficult for a small shareholder in a company of any size, even if he knows his rights under the articles, to rally to his support a simple, let alone a three-quarters majority of the total voting strength or even the relatively small proportion of it required to support a requisition for a meeting under Section 132, or for the circulation of resolution under Section 140." Nevertheless, the Committee is of the view: "To say that it is useless to provide investors with further safeguards which apparently they do not want and which, if provided, they will not use is a counsel of despair. Legislation can only proceed on the footing that new powers meeting real needs will, if created, be used."

Further, about the position of shareholders' control, the Committee came to the conclusion that a case did exist for legislation designed to ensure that shareholders should be kept more informed of the company's activities through enlargement of the directors' report to include the names of the directors, the main activities of company or its subsidiaries and changes in them, if any, indication of substantial difference between the current and book values of the company's fixed assets, if not indicated in the accounts, the circumstances in which any capital has been issued during the year, contracts in which any director has a material interest, any other matters so far as they are material for an appreciation of the state of the company's affairs disclosure of which would not be harmful to the business of the company or companies in the same group, in addition to those required to be given under the provisions of Section 157(1) of the Act. The corresponding Section 217 in the Indian Companies Act, however, is wider in a few respects than the relevant section in the English Act and covers such additional items as the changes in the nature of business of the company or its subsidiaries, etc. However, the Committee's suggestion regarding making the directors' report more detailed in regard to certain matters of crucial importance is a thing for serious examination in our country.

A second recommendation of the Committee which aims at extending shareholders' control over directors is that the directors should not be able, without the specific approval of the company in general meeting, to dispose of the whole or substantially the whole of the undertaking or assets of the company. This suggestion of the Committee already finds a place in Section 293(1) (*a*) of the Indian Companies Act.

A third important recommendation of the Committee limiting the directors' powers is that the directors should not have power to issue any shares in the original or any increased capital of the company without the prior approval of shareholders in general meeting and copies of such resolutions giving the approval should be filed with the Registrar of Companies within 15 days after the passing of the same. This recommendation has been made to check the dilution of equity capital "at the expense of the existing shareholders, for the advantage of new comers." The protection which the Committee has suggested in para 122 (*h*) of its Report for the existing shareholders is already available to them in India under the provisions of Section 81 of the Companies Act, 1956 which recognise the pre-emptive rights of existing shareholders.

(To be continued)

A SWISS BAROMETER-WATCH

The "Bivouac" watch created by a Geneva (Switzerland) watch manufacturer will render invaluable service to mountaineers, hikers, flyers and explorers of all kinds as well as a great many others. In addition to its watch movement indicating the time, the new "Bivouac" watch contains a barometer and an altimeter with a red pointer moving round a scale on the dial marked in millibars, as well as a graduated revolving rim indicating the height above sea-level. One has only to set the pointer to the correct height at the start, in order to read off the subsequent altitudes on the scale on the revolving rim. By setting this rim to the 760 millibar mark, it is also possible to read the average barometric pressure corresponding to any altitude. Naturally, it is also possible to see from the movement of the red pointer whether the pressure is stable or whether it is going up or down, thus making the "Bivouac" watch a small portable barometer.

AIR TRANSPORT FOR THE COMMON MAN

LORD BRABAZON'S CRITICISM EXAMINED

By Our Aviation Correspondent

THE Annual General Meeting of the International Air Transport Association is always an important event in the aeronautical calendar. This year's meeting—the post-mortem on a year in which the airlines carried more traffic than ever before but which also recorded the lowest ebb of their financial fortunes—was, perhaps, of even more interest than usual. The purpose of this article, however, is not so much to shed crocodile tears over the airlines' distressing loss of £50 million, as to discuss, what was certainly one of the highlights of the meeting, the address delivered by Lord Brabazon as the "guest speaker" of the year.

Lord Brabazon's speech—characteristically, hard-hitting and provocative—revolved around three main themes: first, the airlines' present financial situation; secondly, the safety aspect, and, thirdly, the manner in which the Association had developed air transport. On the first count, he expressed astonishment that an industry which received so much aid from governments, should be in such a financial mess. "This," he said, "surpassed the comprehension of the ordinary man in the street. In ordinary business, such results would not be tolerated, and rightly."

As one has already written, one does not propose to dwell on this particular topic. It may be pertinent, however, before passing on, to point out that, in the U.K. and for the very same period, British Railways recorded a loss just three times greater than that suffered by the combined members of I.A.T.A. So much, one suggests, for the stricture that "in ordinary business, such results would not be tolerated."

Feasibility of Low Cost Travel

Similarly, one does not propose to dwell on the safety theme. This is important enough but to argue the case, other than very superficially, would involve technicalities which are probably of little interest to the general reader. On Lord Brabazon's third charge, in which he condemned the lines on which I.A.T.A. has, so far, developed air transport, there is involved the whole question of fares, facilities, and amenities available to the travelling public. This, one imagines, will be of far more general interest.

Quoting from the Association's charter, Lord Brabazon chided the airlines on what he alleged to be their failure "to promote air transport for the benefit of the peoples of the world." "So far," he said, "your interpretation of peoples of the world is to help the rich to travel vast distances at very high speed and cost. The peoples of the world are hungry for safe short hauls at moderate prices."

The inference is that, in Lord Brabazon's view, there is far too great an emphasis on speed and that, as a direct consequence, fares are too high for all save the well-to-do. It is a popular point of view and one, moreover, which has been a favourite theme of critics for a good many years. By all means provide, they say, fast air services for those who can afford to pay, but to open up air travel to the millions, we must have ultra-low-cost airliners of comparatively slow speed. It is an attractive theory, but, carefully studied, it is by no means so sound as it might at first appear.

The conditions which these critics visualise are, in fact, almost impossible to attain. In terms of seat or ton-miles, it is cheaper, we are told, to operate a jet aircraft such as the Boeing 707, than it is to operate slower piston or turbo-propeller airliners. It seems to be taking too much for granted, therefore, to start with the assumption that the slower aircraft would, in fact, be cheaper to operate. The contrary might well be the case. In any event, by operating two distinct classes of travel in separate aircraft, the overall costs of operation would be increased by the additional staff, in almost all categories, which would then be necessary.

Even if we brush all that aside, what would be the practical results of operating fast services, at first class fares, with, say, a Boeing 707, and slower services, at popular fares, by a piston or turbo-propeller aircraft? The Boeing, one suggests, would not achieve an economic load factor and the slower aircraft, even at a very high load factor, might still operate at a loss—or, at best, a very marginal profit. The criterion, of course, is the level of fares which the so-called ultra low-cost transport could offer. Unless that level was very materially lower than present 'economy class,' it is extremely doubtful whether there would be any worthwhile increase of traffic.

On balance, one suggests, present methods are by far the most economical. The 'mixed-class' airliner affords the same speed for both first-class and economy-class passengers. It differentiates between the two classes only in terms of comfort and catering. It reduces, moreover, the number of services necessary for any given volume of traffic, it reduces the number of types of aircraft in operation, and it is undoubtedly the optimum arrangement from the point of view of load factors.

Not that Expensive

Let us turn now to the question of existing fare levels. As one pointed out in a previous article, in a world of steadily increasing prices, air fares are almost the sole items in the collective costs of travel which have remained, more or less, stable. They have risen, indeed, only very fractionally since 1938! Even if we attribute that fact solely to the greater efficiency of modern aircraft—and disregard the contribution which the airline industry itself has made to that end—how do we measure what is a fair price for air travel? The airlines, obviously, are not covering the costs of operation—a loss of £50 million is sufficient proof of that! The only available yardstick, one suggests, is comparison with other means of public transport.

In this respect, air travel seems to be very reasonably priced. Air fares, as a general rule, compare quite favourably with those prevailing on comparable and competitive transport systems. There are instances, of course, where sea or rail, having regard to comparable comfort, provide cheaper travel. On the other hand, there are probably more instances where the air is cheaper. In the United States, for example, domestic air fares, generally speaking, are cheaper than rail fares. In the U.K., to quote a specific example, it is very considerably cheaper to travel by British European Airways from London to Glasgow than it is to travel second class by rail. One is talking, moreover, of fares on scheduled air transport. The non-scheduled operators often offer fares which are considerably lower.

Not the Monopoly of the Rich

Finally, let us examine the charge that only the rich can afford to travel by air. In a sense, of course, this is true. To travel at all extensively in the world today costs a great deal of money. That, however, if we ignore the very cheapest forms of accommodation—such as 'steerage' by sea—which have no parallel in air transport, applies equally to all existing means of transport. Most of us, when it comes to travelling for pleasure, have to confine such journeys to an annual holiday. Recent surveys of traffic originating both in America and Europe show that the great bulk of tourist travel is from the middle income brackets. One would go so far as to say that on any flight, by any airline, almost anywhere in the world, whilst the first-class cabin may be occupied mainly by the 'expense account' traveller, the 'tourist' or 'economy' seats are filled by as mixed a collection of passengers as you will find on any other form of transport.

"The peoples of the world are hungry for safe short-hauls at moderate prices." So said Lord Brabazon and one does not dispute it. We should all like to see the prices of everything—food, clothing, housing, and travel—lower than they are today. That, however, does not seem necessarily to cast any more reflection on the air transport industry than it does on other forms of transport—most of which, incidentally, are more suitably geared to bulk short-haul operation than air transport.

Lombard Banking Ltd., London, announces that, following its offer to acquire the minority interest in their subsidiary company, Lombard New Zealand Limited, acceptances have now been received from over 90 per cent of the shareholders. The offer has, therefore, become unconditional and Lombard Banking Ltd. states that the offer will remain open to late acceptors until further notice.

THE NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

CHAIRMAN, DR. RAMASWAMI MUDALIAR, OUTLINES STEPS TO IMPROVE QUALITY AND PRODUCTION

RUPEES TWO CRORES SAVING IN FOREIGN EXCHANGE ENVISAGED

STEPS to improve both quality and newsprint manufactured by the National Newsprint and Paper Mills Ltd, were outlined by Dr. A. Ramaswami Mudaliar, Chairman of the Company, in his statement to the shareholders at their Fifteenth Annual General Meeting which was held at Nepanagar on Monday, 15th October 1962. As the Chairman could not attend the meeting for personal reasons, his statement was read out by Major Raja Bahadur Birendra Bahadur Singh, a Director of the Company, who was elected as the chairman of the meeting. According to the Chairman, in addition to mixing a small proportion of imported mechanical and chemical pulp and bleaching with hydrogen peroxide for improving the quality of newsprint, the Company hopes to implement suggestions from the four American experts who visited the Mills for three months from January last. A detailed report by the visitors is awaited. Production of newsprint, which was stepped up last year from 13,250 tons to 18,500 tons, is to be raised further to 28,000 tons during the year ending 31st March 1963 to cover fully the supply of 20,000 tons to newspapers as determined by the Government and to save thereby foreign exchange of nearly Rs. 2 crores for the country.

The following is the full text of Dr. Ramaswami Mudaliar's statement:

"GENTLEMEN,

"I have much pleasure in welcoming you to the fifteenth annual general meeting of the shareholders of the National Newsprint and Paper Mills Ltd. The Directors' report, the balance-sheet and the audited accounts for the year ending 31st March 1962, along with the comments of the Comptroller and Auditor General, have been in your hands for some time, and with your permission, I shall take them as read.

"The progress during the year ended 31st March 1962 has been satisfactory. During the year, the production was 25,279 metric tons, of which only 895 tons was unbleached paper. The year ended with a net profit of Rs. 40,84,837.05, after providing for depreciation and development rebate reserve. The profit has been utilised to reduce the debit balance of Rs. 65,67,818.00, standing at the beginning of the year, leaving a debit balance of Rs. 24,82,890.95 on 31st March 1962. This is the fourth year in succession when the Company has shown a surplus after meeting all expenditure and depreciation. The Directors have utilised the profits to further reduce the losses incurred in the earlier years, which at one time amounted to Rs. 195 lakhs. I think, it is necessary for the private shareholders, apart from the Government shareholders, to understand the position of the Company and what difficulties it had to overcome before attaining the present position. I should like to tell them that the venture was started with about Rs. 60 lakhs subscription from the private shareholders and Rs. 60 lakhs subscription from the Government, and as everybody must now realise, it was an impossibility to establish a newsprint factory of the present productive capacity with such meagre resources. The difficulties were fortunately overcome by the loans which the Madhya Pradesh Government liberally gave, and partly by loans which the Union Government gave. The shareholding of the Company, after it was reorganised, was nearly Rs. 5 crores, the shares being held as follows:—

	Rs.
Government of India	2,55,00,000.00
Government of Madhya Pradesh	1,69,72,900.00
Private shareholders	62,48,500.00
Amount from forfeited shares	6,03,477.50
Rs.	4,93,24,877.50

Dividend Likely Soon

"Even after conversion of much of the loan into equity capital by the two Governments, there was still a loan of Rs. 1,05,13,752.39, with interest payable thereon to the Madhya Pradesh Government and Rs. 32,73,000 payable to the Union Government with interest. The results of the working of the last four years have wiped out these loans and the interest payable thereon. Apart from this, there was an amount of Rs. 1,11,19,218.74 which had accumulated as interest on the original loan granted by the M.P. Government. The private shareholders must be grateful to the M.P. Government for having agreed to convert this amount into a non-interest-bearing loan payable in ten instalments. The Company has so far paid three instalments and there is an outstanding non-interest-bearing loan of Rs. 77 lakhs, which has to be paid in equal amounts over a period of seven years. I hope, it will be realised that the Company has done its best to retrieve what looked like a hopeless position at one time, and I venture to think that, within a short time, the private investor as well as the Government may look forward to a reasonable return on their equity investments. While I can well understand the natural concern of the private shareholders, I trust that they will realise the efforts that have been made to bring the day nearer, when they can expect a return from their investment.

"The position of supply of electric power and steam offered by the Chandani power station continues to cause occasionally some concern. It is understood that the original plan of expanding the power house at Chandani has been given up and that the Madhya Pradesh Electricity Board proposes to supply power from the Chambal Hydro-electric Project. Steps have been taken by them to construct the transmission line and the sub-station etc. required, and it is expected that the power will be available by the end of this year and that the factory will have a comfortable position regarding the supply of power and steam.

Caustic Soda Chlorine Plant

"I stated last year that there has been considerable difficulty in the procurement of chlorine, as the supplies have to come from several distant places. On many occasions, supplies failed either on account of breakdown in the supplier's plant or due to transport restrictions. Further, heavy freight charges have to be incurred on these supplies. Your Directors have, therefore, decided to establish a caustic soda chlorine plant to meet the factory's requirements of chlorine and caustic soda. An order for a 10/12 ton caustic soda chlorine plant has been placed with a Swiss firm and the civil engineering work is well in progress. It is hoped to receive all the machinery by the end of January-February 1963 and complete the erection of the plant within the next two or three months thereafter. When the plant is brought into commission, it is expected that it will be possible to meet all the requirements of chlorine and caustic soda and would be reducing the production cost to some extent.

"A scheme for doubling the capacity of the mill and stepping up the production to 200 tons per day has been included in the third Five-year Plan. The project plan for this expansion was prepared some time back, but doubts have been recently expressed as to the availability of the necessary raw material. The Board of Directors have considered it necessary to examine this aspect carefully before the project can be further progressed.

Quality of Production

"The quality of our newsprint has been improved to a certain extent by mixing a small proportion of imported mechanical and chemical pulp which has not only added to the strength but also has improved the appearance and colour. Bleaching with hydrogen peroxide has also been tried out and extended trials are being done with this form of bleaching as it has given better results. In addition, the Board of Directors arranged for a team of four American experts to visit the mill for a period of three months to improve the quality of newsprint manufactured at this mill, obtain maximum output out of the present equipment, reduce the cost of production, examine raw material question, and suggest ways and means for expansion of the mills. The American experts arrived early in January and worked for a period of three months at the factory. They have suggested a number of improvements particularly in the grinding and recovery sections. They have also made slight modification to the equipment on the paper machine which have helped in bringing down the number of breaks and waste of paper and improving production and quality of newsprint. Their detailed report has not been received yet and we hope to implement their recommendations and take necessary steps to see that the improvement in quality is achieved.

Demand for Newsprint

"The demand for newsprint has been increasing and the quantity supplied to newspapers has been considerably stepped up. During the year, nearly 18,500 tons were supplied to the newspapers as against 13,250 tons supplied last year. During the current year, in order to save foreign exchange, the Government has decided that at least 20,000 tons of the production should be supplied to the newspapers. We have estimated for a production of nearly 28,000 tons and it is hoped that it will be possible to supply this quantity to newspapers, only the balance being distributed to printers and publishers, Government and the dealers. In this way, there is likely to be a saving of foreign exchange of nearly two crores of rupees. I would like to point out here that even though cost of all raw materials and power and steam have gone up and the establishment and labour costs considerably increased, the price of the Nepa newsprint has not been increased since May 1958.

"The distribution of newsprint during the last year was very smooth but early this year this has been disturbed by the removal of the concession of excise free duty on newsprint supplied to newspapers. Instead, the full excise duty of 22 nP per kg. was enforced on supplies to the newspapers when the Budget was introduced on the 24th April 1962. As a result, the supplies to the newspapers decreased considerably owing to lack of orders. The matter was represented to the Ministry both by the newspapers and by us and the Government have revised the concession to the extent of 17 nP per kg. The newspapers have to pay now an excise duty of 5 nP only per kilogram, subject to certain conditions. This has relieved the situation to some extent. The Government has also decided that 25 per cent of the quota of each newspaper will be supplied from the Nepa mills. As a result orders have recently started coming in and it is hoped to clear the accumulated stock and also ensure a regular manufacturing programme and supplies.

Staff Welfare

"The welfare of the staff continued to be given attention by the Directors. This year also an incentive award equal to a month's pay and allowances to all employees getting a basic pay of upto Rs. 500, subject to a maximum of Rs. 325, was given. We have taken in hand the building of a full-fledged 40-bed hospital which, I hope, will provide the necessary medical facilities to all the employees. The school has been taken over by the management from the 1st April of this year and it is hoped to reorganise the educational facilities given to the employees in such a manner that it will cater to the needs of all in this small place. Considerable amenities and concessions have been given with the result that the salaries and wages have increased from Rs. 14 lakhs in 1957 to nearly Rs. 24 lakhs in 1962, though there has been no appreciable increase in the number of employees.

"I would like to thank all the employees for the work they have done during the year 1961-62. It has been a difficult period and inspite of all the difficulties they have stepped up production and manufactured 25,279 tons even though it is less than the target. I would like to take this opportunity to recognise the enthusiastic help and co-operation that has been extended by all the employees, both on the factory side and in the administrative offices. In token of the increase in production this year, we have recommended a payment of 1¼ month's incentive award to all the employees. I would like to make an appeal to all of them to see that they improve on the performance of last year and try to reach the target production of 30,000 tons as expeditiously as possible so that they can get increased benefits.

"I should fail in my duty, if I did not recognise the valuable work done by the assistant works manager and the technicians in charge of the mill. The mill has had no works manager for some time, as it was not possible to get a highly qualified officer at the level of salary permitted by the Government. The Government has since relaxed the rule, and it is expected that a works manager will be joining very soon. It is all the more creditable that the assistant works manager and the comparatively junior staff of technicians have, with their experience and initiative, carried on for nearly two years, increasing the production and with no damage to the mill.

"I must pay a special tribute to the devoted services of Mr. S. L. Visvanadhan, Managing Director, who will be retiring in a few weeks. His knowledge and experience as an engineer and as an administrator has been of very great value to the Company. His place is expected to be filled by the officer to whom I have referred, both as Works Manager and Managing Director.

"Lastly, I have to convey my apologies to the shareholders for my inability to attend this meeting and to have the pleasure of meeting them once again."

Note: *This does not purport to be a record of the proceedings at the annual general meeting.*

---

158 NEW COMPANIES REGISTERED IN AUGUST

According to information received from the regional offices in the Research and Statistics Division of the Department of Company Law Administration, Union Ministry of Commerce and Industry, during August 1962, 158 companies with a total authorised capital of Rs. 23.20 crores were registered in the various States of the country. Disclosing this, a Press note, issued by the Department on 16th October, adds that of the 158 companies, 24 were registered as public companies with a total authorised capital of Rs. 17.79 crores, whereas 134 were registered as private with a total authorised capital of Rs. 5.41 crores. In the preceding month of July 1962, 128 companies with a total authorised capital of Rs. 19.72 crores were registered all over the country.

The regionwise break-up shows that companies registered in the Northern, Eastern, Southern and Western regions totalled 32, 43, 43 and 40, respectively. Besides the aforesaid companies, one each company not for profit has also been registered in the States of Delhi, Maharashtra and Madhya Pradesh. During the first five months of the current fiscal year, 1962-63, in all, 697 new companies having a share capital have been registered as against 692 companies in the corresponding period of the preceding fiscal year.

During the month of August 1962, according to the note, 423 prosecutions were launched all over the country, of which 115 were initiated in Northern region, 222 in the Eastern region, 70 in the Western region and 16 in the Southern region. Taking the prosecutions pending at the beginning of the month, the field offices in the country dealt with 1,992 prosecution cases, of which 247 were reported to have been disposed of during the month. Of these 247 cases disposed of, 236 ended in conviction, six in acquital and no case was withdrawn by the department.

Out of the 236 convictions obtained, 64 were in the Eastern region, with the State of West Bengal alone accounting for 58 of them. Among the rest, 38 convictions were in the Northern region, 97 in the Western region and 37 in the Southern region.

ASHOK LEYLAND'S PRODUCTION HIGHER

In spite of foreign exchange and power shortages, production at the factories of Ashok Leyland Ltd., Madras, during the financial year ending 30th September 1962, was 37 per cent higher than in the corresponding period in 1961. The production of Ashok Leyland diesel engines for installation in plant and machinery was also substantially higher. The value of spare parts sales was increased by over 22 per cent. The increase in chassis production was equally shared between goods and passenger vehicles and orders received from both public and private sectors indicate a growing preference for the Comet vehicles both for long-distance and short-haul work.

Relaxation of G.V.W. restrictions has enabled a large number of articulated tractor-trailer units to be sold and has resulted in an increased demand for long-range heavy haulage vehicles.

One of the main contributing factors to the larger output of spare parts is the ability of the Company to obtain an adequate supply of high quality castings from its sister concern, the Ennore Foundries Ltd. In spite of the substantially higher output, the number of unfulfilled contracts held by the Company as on 30th September 1962 was 10 per cent, higher than at the end of the previous year and represented over 12 months' production valued in excess of Rs. 15 crores.

help conserve nation's fuel

FUEL is in short supply and expensive too. It forms a substantial part of the budget in every Industry. Efficient use of FUEL has therefore become imperative, whether you want to cut costs or plan to increase your production. Our FUEL experts have devised ways and means of getting 10 to 20% more out of the FUEL you use without costly capital investment.

NEW PUBLICATIONS

Practical Auditing. By Spicer and Pegler. Indian Edition prepared by S. V. Ghatalia. Published by Allied Publishers, Bombay, 1962. Pages : 735. Price: Rs. 20.

FOR nearly 60 years *Practical Auditing*, written by Messrs. Spicer and Pegler, has held the field and proved useful to students of accountancy as well as to professional practitioners. Indian students and company management have been handicapped in the use of this publication so far since the background and the examples largely related to the principles and practices followed in the United Kingdom. Though the fundamentals of accountancy and audit do not differ from country to country the Acts which regulate the maintenance of accounts have some small variations. Therefore a revision of the book to suit the needs of Indian students and management should be welcomed. Though largely following the Company Law of the United Kingdom, the Indian Companies Act has its own special features which have been recently codified. Similarly, unlike in the United Kingdom, we have an elaborate Banking Companies Act. For the purpose of revision Mr. Ghatalia is eminently qualified, being an eminent practising Chartered Accountant and a well-known Professor and the Head of the Department of Accountancy in the Sydenham College of Commerce and Economics at Bombay.

The publication is divided into 15 convenient chapters dealing in detail with the different items which an auditor should look into. This edition has dealt with the statutory provisions affecting accounts relating to India while basically retaining that part of the book relating to practices and principles as embodied in the original work and its successive revisions. The first six chapters deal with audit procedures in general; the next four chapters deal with the audit of a limited company. Since India has a comprehensive Companies Act, this chapter has been thoroughly rewritten. Wherever necessary, relevant reference to the Act has been provided so that the students and practitioners may not lose sight of the points in the voluminous and intricate provisions of the Company Law. This is all the more necessary because with the growing development of company organisations in the country, the problems of company audit have assumed new dimensions and acquired greater complexity. The chapter on divisible profits has been dealt with ably, particularly for the reason that we have now a more or less complete formula for ascertaining divisible profits incorporated in the Company Law. As rightly pointed out in the preface to the publication, the changes in law have thrown overboard many legal decisions and judicial data which for the past 75 years were regarded with the same sanctity as the Ten Commandments. The chapter on banking and insurance companies attempts to bring out the differences that have been borne carefully with the auditing of these institutions as compared to general companies.

In a separate chapter on audit of different types of institutions, points relating to a wide variety like electricity companies, hotels, publishers, schools, theatres, etc., have been dealt. One of the useful chapters relates to investigations which become necessary in the implementation of any governing legislation. These have been broadly grouped into eight categories such as the proposal to buy a business or to detect fraud suspected or known to have taken place. The auditors are entrusted with these responsibilities and the points to be looked into differ according to the purpose of the inquiry. At the same time, importance has been laid on the liability of auditors. The auditors' statement is always taken for granted and can be broadly classified into contractual or statutory liability and civil or criminal liability. Apart from the provisions of the Companies Act, the Banking Companies Act also lays special responsibility on the auditors and in certain circumstances may be publicly examined. They owe a duty, not only to the shareholders of the company they audit, but also to the community. Several legal cases have been quoted to illustrate the various points.

This is a comprehensive treatise on modern auditing practice which will meet the requirements of a variety of readers.

Industrial Estates — Tool for Industrialisation. By William Bredo. Asia Publishing House, Bombay. Pages : 270. Price: Rs. 15.50.

The initiative for development of small-scale industries can develop in many ways, and one of the successful and practical ways tried since the Second World War in both industrially advanced and newly industrialising countries has been the establishment of industrial estates. Dr. William Bredo of the Stanford Research Institute, has had considerable opportunities to make field investigations of industrial estates or related undertakings in the United States, Canada, Puerto Rico, Jamaica, the U.K., Pakistan and India. India initiated the scheme of industrial estates in the second Plan. This scheme forms an integral part of the programme for industrial development in the third Plan too.

Designed primarily for planners and administrators, the economics of industrial estates is emphasised rather than the technical point of view or engineering detail. The industrial estate is treated as an institutional technique potentially useful to any major industrialisation programme—whether executed through public or private initiative. In the United States and the U.K., where most industrial estate experience has developed, diverse forms of both public and private enterprise have taken the initiative. In the U.K. public sponsoring was taken up in 1930, stressing the need for creation of jobs in new areas and bringing jobs to the so-called development areas. In the U.S.A., public development agencies are realising that organised industrial districts may be a powerful tool for community industrial development. In the Netherlands there is the municipality, the joint municipal body, the industrial foundation and the limited liability company. In the underdeveloped countries the initiative has come from Government agencies.

The different aspects are discussed in nine well-defined chapters. To provide practical aid to economic planners and administrators, the principles in development are illustrated by case studies numbering twenty-two. Three of these give an idea about the estates at Gunidy, Okhla and Naini. Importance of pre-project planning is emphasised in the fifth chapter which is concerned with aspects such as location of the estate, selection of occupants, lay-out and facilities, phasing of construction, organisational arrangements for construction and long-term management, and methods of financing and evaluation of financial feasibility. In the next three chapters some of the practical problems in planning and development and special facilities and services that could be provided are discussed. Some of the institutional devices are industrial advisory services, research services, demonstration or development centres, co-operatives, trade associations, training programmes and financial aid such as through a development bank or a system of instalment purchase of machinery. "Industrial estate" is not thought of as an end in itself for industrial development. The book is a useful addition to the literature on industrial estates and should be of practical use in the programme.

Conditions of Economic Progress of Farmers. An Analysis of thirty-six case studies. By C. H. Shah, Reader in Agricultural Economics, University of Bombay. Published by the Indian Society of Agricultural Economics, 46-48 Esplanade Mansions, Mahatma Gandhi Road, Bombay 1. Pages: 130. Price: Rs. 5.

The book under review is a complementary volume of the author's earlier work entitled *Problems of Small Farmers*. Both the studies were undertaken on behalf of the Indian Society of Agricultural Economics, with assistance from the Research Programmes Committee of the Planning Commission. The previous book, it may be recalled, was devoted to a statistical analysis of the problem of small farmers in the Kodinar taluka (Gujarat), with particular reference to their relative economic position as compared with the big and medium farmers. The present study, which is an offshoot of the earlier work, is designed to find out (1) the factors that helped some farmers with small holdings to improve their position in the past and (2) the factors responsible for the decline of farmers with big or medium holdings. The work is based on field studies of the economic conditions of thirty-six selected farmers of Kodinar.

The micro-economic studies like the one at hand serve to bring to light the major drawbacks in the present aggregate approach towards agricultural development. As Mr. Shah stresses, from the aggregate picture, we can know "what happens to agriculture as a whole, whether it progresses or declines... But any such aggregate picture is the sum total of two diverse processes, namely, progress for some farmers and decline for others (and some stationary farmers)." One of the important features which one notices on a perusal of this book is that most of the farmers who have made progress have been using improved techniques of production, including the use of iron ploughs, improved seeds and fertilisers, although other factors like savings, size of land holdings, credit facilities, accidents like the death of bullocks, etc., affect the process of "progress" or "decline" in varying degrees.

Deterioration in the economic condition of small farmers is attributed mainly to such accidental events as death of bullocks, house collapse or death of a family member. Although the overall efforts, such as improvement in the provision of credit, irrigation and production resources foster economic progress, they do not halt "the process of economic deterioration which operates simultaneously." In all such events, despite social sympathy and the caste organisation which is otherwise helpful to some sections, no concrete help becomes available to overcome the sudden and overwhelming mishap. What is more, according to the author, "the insecurity caused by such unfortunate events bring in its train low production efficiency." The schemes of insurance and social security for farmers, such as those prevailing in developed countries, will help solve this problem of insecurity. But the author feels that they are not practical in an underdeveloped country like India. Dr. Shah, therefore, advocates the formation of a "co-operative association" in every village for promoting "mutual help and joint work." Such an organisation, according to the author, will also be able to channel Government help more effectively and expeditiously. Whether or not one completely agrees with Dr. Shah on the question of the practicability of the measures recommended by him, it cannot be gainsaid that his book provides a masterly exposition of some of the basic problems of the rural economy.

Guide to Employers. Published for the Indian Chamber of Commerce, Calcutta, by the Oxford Book Company, Calcutta and New Delhi. Pages : 263. Price: Rs. 16.

Industrial laws in our country have developed so enormously and so quickly that it becomes difficult to keep pace with the developments and even more difficult to know actually the important provisions of the various enactments which have to be complied with by all industrial employers. Guidance is, therefore, required for all employers, whether old or new.

It is in this context that this book, published by the Indian Chamber of Commerce, has to be welcomed. Recently the Chamber has been doing signal service to its members and businessmen generally all over India by publishing useful books and booklets. In the field of labour legislation it has brought out a digest compiling almost all the decisions of the Labour Appellate Tribunal and a small booklet explaining "Bonus" with reference to decided cases.

The present book covers the Factories Act, Provident Funds Act, Employees' State Insurance Act, Payment of Wages Act, Industrial Disputes Act, etc., and the relevant rules and regulations. The Chamber of Commerce has included the rules framed by the West Bengal Government, as its main purpose is to serve its members in Calcutta and Bengal. The other chambers of commerce in the country could also publish the rules and regulations as well as the notifications under various enactments for the benefit of their members.

The book provides guidance in the form of discussions and explanations. Every employer has to know what he has to do and what he should not do, and what he has to follow and how it should be followed or done. The Factories Act, as every employer knows, provides for industrial safety, welfare of labour, hours of work, leave, health of the employees, lighting in the factory, what type of employees to be employed, etc. The Act also provides for penalties for violation of the provisions. Similarly, the Employees' Provident Funds and State Insurance Acts provide for various penalties for non-compliance with the provisions of those enactments. The book also gives decided case law on the subject, wherever necessary. It is very handy and should prove useful to all employers concerned with the said enactments and also to others, especially lawyers and industrial advisers like labour welfare officers.

Financing Small-Scale Industries in India, 1950-52. By G. Balakrishnan. Published by Asia Publishing House. Bombay. Pages : 80. Price : Rs. 6.

Increasing attention is paid these days to company finances and considerable analytical data are now being put out by various bodies. But when Dr. Balakrishnan began investigation for his thesis for a doctorate degree, very little study had been made of small-scale units in industry in India. The data presented relates to 1950-52 and nearly a decade is over. Therefore, the interest in the publication is restricted to one of history, a basis which may help comparison with future data. The financial experiences of ten small-scale industries soread over 269 companies have been analysed. Though these covered 8 per cent of the total number of companies, they accounted for 13.5 per cent of the paid-up capital. Compared with large companies, the author contends, the small companies did not have as good a financial experience as their large counterparts in all the industry groups. The small companies were characterised by their low profit-earning capacity, perhaps attributable to their higher cost of production. Their carried forward losses resulted in eating up the reserves, and this prevented them from registering the same degree of growth as the large companies.

Co-operation. By W. R. S. Sathianadhan and J. C. Ryan. Published by Oxford University Press, Bombay, 1962. Second Edition. Pages: 45. Price : 80 nP.

During the year 1946 the Oxford University Press had brought out a series of popular pamphlets on current topics and one amongst these was on Co-operation, written by two civilians from Madras. Since then Co-operation has progressed considerably and one of the authors, Mr. J. C. Ryan, had the opportunity to guide the movement on an all-India plane as Chief of the Agricultural Credit Department of the Reserve Bank of India. The original pamphlet has now been thoroughly revised. Though volumes can be written about Co-operation in India, the authors have attempted in about 45 pages to give a precise and clear outline of the movement in this country. Much of the content is factual presentation, but in the last para a perspective has been indicated. They have attempted to impress that "co-operation has not by any means failed, but has entrenched itself deep in the Indian economy." "It is a logical system for transacting business based upon all that is fundamentally lasting and good in human nature."

The pamphlet is well written and can be commended both to the student and the general reader.

Supreme Court Digest of Labour Law Cases. Volume II. By V. B. Kher. Published by Thacker & Company, Ltd., Rampart Row, Fort, Bombay. Pages : 307. Price: Rs. 15.

In his foreword to the first volume of this Digest, Mr. M. C. Setalvad, the Attorney-General of India, stated: "I welcome this little publication. It helps one to get a glimpse of the great role played by the Supreme Court in enunciating principles of cardinal importance in the field of labour relations." These few words explain the importance of the digests to members of the legal profession.

Kher's *Digest* has been published in two volumes. The first volume was published in 1959 and it covered all the judgments of the Supreme Court from its inception to 1959. This second volume contains the digest of the cases decided from May 1959 to December 1960. During this period the Supreme Court had to decide numerous cases of far-reaching nature. The *Digest* is arranged in alphabetical order as in the first volume and follows the same pattern in respect of table of cases and a well-prepared index. This arrangement helps easy reference. Both the volumes are very useful to all those practising in the field of labour laws and to those who are interested in labour legislation.

Announcement Regarding the Issue of

Rs. 30,00,00,000 6½% Debenture Stock 1968/77 in Units of Rs. 5,000/- at Par

By

OIL INDIA LIMITED

REGISTERED OFFICE: **DULIAJAN (ASSAM)**

ACTIVITIES OF BUSINESS AND LOCATION

The Company was formed in 1959 pursuant to an agreement between The Government of India, The Burmah Oil Company Limited, and Assam Oil Company Limited, to search, find and produce Crude Oil and Natural Gas and transport Crude Oil to the Government Refineries at Gauhati (in Assam) and Barauni (in Bihar) and the Refinery of Assam Oil Company Limited, at Digboi. It is constructing a 720 mile pipeline from its oilfields in Nahorkatiya to Gauhati and Barauni which is nearing completion.

The Company's oilfields are situate in Nahorkatiya, Hugrijan and Moran all in Assam.

BOARD OF DIRECTORS

Shri KHANDUBHAI KASANJI DESAI, M.P., (*Chairman*) 63, Shubham, Sharda Sahakari Society, Anandnagar, Ahmedabad 7.

Chairman Committee on Presidential Awards to Public Sector Undertakings, Member of Rajya Sabha and Member Board of Trade.

Shri JOHN CAMPBELL FINLAY, M.C., (*Managing Director*) 10, Golf Links, New Delhi.

General Manager of The Burmah Oil Company (India Trading) Limited and Director of The Tinplate Company of India Limited and India Trading (Holdings) Private Limited.

Shri PALAT GOVINDAN NAIR, I.C.S., (*Financial Director*) B-8, Wellesley Road, New Delhi.

Joint Secretary, Government of India, Ministry of Finance and Director of Indian Refineries Limited and Indian Oil Company Limited.

Shri SARAT CHANDRA KAGTI, I.A.S., La Chaumiere, Shillong, Assam.

Director India Carbon Limited, Development Commissioner, Government of Assam and Member of the Assam State Electricity Board.

Shri LAKSHMI PRASAD MATHUR, 62, Lytton Road, Dehra Dun, U.P.

Member (Exploration and Development) Oil and Natural Gas Commission.

Shri WAMAN BAPUJI METRE, 72, Ring Road, New Delhi.

Senior Technical Adviser, Assam Oil Company Limited.

Shri GRAHAME NORMAN STRUAN ROBERTSON, T.D., 63, Friends Colony, New Delhi.

Deputy General Manager, The Burmah Oil Company (India Trading) Limited.

Shri ANANTHANARAYANA SUBRAMANI, Bungalow No. 48, Digboi, Assam.

Technical Manager, Assam Oil Company Limited.

MANAGING DIRECTOR:
Shri JOHN CAMPBELL FINLAY

AUTHORISED CAPITAL:
Rs. 50,00,00,000 (in 500,000 equity shares of Rs. 1,000 each)

ISSUED, SUBSCRIBED AND FULLY PAID UP:
Rs. 28,00,00,000 (in 280,000 equity shares of Rs. 1,000 each)

ISSUE

The Debentures will be issued at par and will be in units of Rs. 5,000 each. Out of Rs. 30 crores the Government of India have agreed to take Rs. 12.50 crores. Out of the balance of Rs. 17.50 crores the undernoted Banks and Corporations have agreed to subscribe for Debenture Stock to the extent of Rs. 8.75 crores:

1. Life Insurance Corporation of India.
2. State Bank of India.
3. Industrial Finance Corporation of India.
4. Industrial Credit and Investment Corporation of India Limited.
5. State Bank of Bikaner.
6. State Bank of Travancore.
7. State Bank of Patiala.
8. State Bank of Saurashtra.
9. State Bank of Mysore.
10. State Bank of Hyderabad.
11. The Export Risks Insurance Corporation Limited

leaving a balance of Rs. 8.75 crores for Public Subscription, which is fully underwritten by the undernoted underwriters:

UNDERWRITERS

1. Life Insurance Corporation of India, Bombay 1.
2. Industrial Finance Corporation of India, New Delhi.
3. Industrial Credit and Investment Corporation of India Limited, Bombay 1.
4. National and Grindlays Bank Limited, Bombay 1.
5. Oriental Fire and General Insurance Company Limited, Bombay 1.
6. Chartered Bank, Bombay 1.
7. Central Bank of India Limited, Bombay 1.
8. United Commercial Bank Limited, Bombay 1.
9. Bank of India Limited, Bombay 1.
10. Bank of Baroda Limited, Bombay 1.
11. Messrs. Harkisondass Lukhmidass, Bombay 1.
12. Mercantile Bank Limited, Bombay 1.
13. Canara Bank Limited, Bombay 1.
14. Canara Industrial and Banking Syndicate Limited, Bombay 1.
15. Devkaran Nanjee Banking Company Limited, Bombay 1.
16. Union Bank of India Limited, Bombay 1.
17. United Bank of India Limited, Bombay 1.
18. New India Assurance Company Limited, Bombay 1.
19. Batlivala and Karani, Bombay 1.
20. Merwanjee Bomanjee Dalal, Bombay 1.

OPENING/CLOSING OF SUBSCRIPTION

The subscription list will open at the commencement of banking hours on the 30th October, 1962 and will close at the discretion of the Directors but not before the closing of banking hours on the 1st November, 1962.

The application forms along with copies of the Prospectus can be had from the registered office of the Company at Duliajan and from the Company's underwriters, bankers and brokers mentioned herein.

BANKERS

STATE BANK OF INDIA

Calcutta	Nagpur	Ahmedabad
Bombay	Patna	Bhopal
Madras	Lucknow	Cuttack

(This is an announcement and not a Prospectus)

STUDY OF THE INDIAN OCEAN
INTERNATIONAL SCIENTIFIC EXPEDITION UNDER WAY

By Dr. T. S. Satyanarayana Rao

Scientific Liaison Officer, U.S. Programme in Biology, International Indian Ocean Expedition

[The Indian Navy is just participating in an international scientific expedition for studying the Indian Ocean. The scientific cruise of I.N.S. 'Kistna', recently inaugurated by Prof. Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs, is particularly expected to result in the acquisition of valuable knowledge about the origin and causes of the monsoon which brings rain to the Indian sub-continent, and about its fishery and mineral resources. The following article may be read with interest in this context.—ED.]

IT may perhaps be stated that scientific investigation of the Indian seas began with the advent of the English in this country, when the Marine Survey of India started working in 1874 under the command of Dundas Taylor. This was also the time when the famous *Challenger* expedition was opening new vistas in the knowledge of the seas of the world. This great expedition and its reports laid a firm foundation for the growth of oceanography in all its aspects in the maritime countries of the world. It had its influence on India also when in 1881 a wooden paddle steamer of 580 tons, named *Investigator*, was launched by the Marine Survey Department of the Government of India. This ship received much of the *Challenger* equipment for continuing oceanographic investigations in the Indian Seas.

The work of the *Investigator* is fully described by Alcock (1902) in his book—perhaps the only book so far published on Indian waters—*A Naturalist in Indian Seas*. This ship continued its work in the Indian waters till 1908 when it was scrapped and replaced by a new ship, *Investigator II*, of about 1,018 tons and capable of steaming at 14 knots. It was in this ship that Sewell (1925-38) conducted his famous oceanographic researches in the Bay of Bengal.

Previous Expeditions

Several expeditions have collected oceanographic data in the Indian Ocean and incorporated them in their reports. The more important of these expeditions are: *Challenger* (1874-75), *Gazelle* (1874-75), *Elizabeth* (1877), *Investigator* (1887, 1892, 1893, 1925-38), *Penguin* (1891), *Waterwitch* (1895), *Stork* (1897), *Valdivia* (1898-99), *Gauss* (1901, 1903), *Sealark* (1905-09), *Planet* (1906), *Mowe* (1913), *Merlin* (1920), *Amiraglio Magnachi* (1924), *Ormande* (1927), *Snellius* (1929), *Dana* (1929-30), *Mabahiss* (1933-34), *Discovery II* (1930-51), *Albatross* (1948), *Charcot* (1949, 1950), *William Scoresby* (1950), *Galathea* (1950-52), *Ob* (1955-57), *Lapérouse* (1956), *Norsel* (1955, 1956-57), *Oven* (1957-58), *Atlantis* (1959) and *Vitiaz* (1960). Of these, *Sealark* and *Mabahiss* are the only expeditions which spent considerable time in a detailed investigation of parts of the Indian Ocean. The reports of these expeditions and the papers published by Sewell in the *Journal of the Royal Asiatic Society of Bengal* constitute an important source of oceanographic data for the Indian seas. More recently, the Andhra University (1952-61) conducted, with the help of the Indian Navy, 56 cruises into the Bay of Bengal and some of the results have been published in the *Oceanographic Memoirs*, Volumes 1 and II, of this University. The Naval Hydrographic section at Cochin, the Universities of Travancore, Madras and Bombay and the Central Marine Fisheries Research Station at Mandapam have also been working on some aspects of Oceanography.

The Indian Ocean is smaller than the Atlantic and the Pacific. Dominated in the north by a very huge Asiatic land mass and subjected to enormous drainage of the monsoon-fed regions of India and Burma, its hydrography shows certain special features. Added to these there are the monsoons which blow from different directions during the year thus bringing about periodic changes in the patterns of surface circulation in the Indian Ocean north of the equator. Our knowledge of the bottom topography of the Indian Ocean is far from satisfactory. Only a few months ago *Vitiaz* reported the discovery of a new submarine ridge about 550 miles south-east of Ceylon. It was traversed by *Vitiaz* on a track 150 miles long. Above the ridge a submarine mountain of about 3,000 metres in height was discovered and named after *Afanasv Nikitin*, the first Russian who navigated the Indian Ocean in the fifteenth century. The bottom of the Indian Ocean, particularly its western part, is monotonously flat. The Andhra University reported the occurrence of a shell zone far out on the continental shelf and this special feature was attributed to pleistocene glaciation level of the sea in this part of the world.

Marine Biological Studies

Some of the more important early workers associated with marine animal studies in the Indian waters are Carter (Porifera), Cantor, Day and Russel (Fishes), Annandale and Kemp (Fauna of the Chilka lake), Gardiner (Fauna of Laccadive and Maldive Islands), Chopara (Crustacea), Fauvel (Polychaetes), Herdman (Pearl oyster fishery investigation of Ceylon), Gravely (Fauna of the Madras coast), Sewell (Copepods) and others. In the earlier investigations by Alcock and his successors on the *Investigator*, dredges and deep-water trawls were successfully used and Sewell has given a list of the numbers of species and genera collected during the period 1885-1925. What is surprising in this list is the larger number of new species and varieties reported.

Apart from the academic interest in the occurrence of varied fauna and flora, importance should be given to the study of the productivity and fishery potential of the Indian seas. Fish are considered to be the cheapest source for proteins and naturally an under-fed country like ours should take the greatest interest in the exploitation of the fishery resources of the nearby ocean. The results of the newly-introduced mechanised fishing in some parts of the country are very encouraging. The exploratory work of the fishing grounds has not yet taken concrete shape, although some attempts are being made by the Offshore Fishing Unit of the Government of India (Ministry of Food and Agriculture) to explore near-shore areas.

An Important Problem

It is often stated that tropical waters are poor in organic production as compared with temperate regions. At the same time, it is pointed out that the coral reef community, mostly occurring in the bluest of the tropics, produces at the rate of about 24 gr/c/m2/day; in other words, five to six times more productive than the most fertile ocean. This disparity in the productivity of the tropical waters is as interesting as it is problematic. Off the Waltair Coast, it was found that, besides upwelling, dredging set off heavy productivity of the phytoplankton. From the latter observation it would appear that in these warm waters what is needed for high productivity is the churning or mixing up of the bottom with the surface waters. These ideas have to be experimentally substantiated and, for this, we need a ship and a field laboratory. The Maritime Universities of India like the Andhra, Madras, Annamalai, Travancore and Bombay, are now developing field laboratories for Marine Biology.

Oceanographic Ship

Besides, we need a well-equipped oceanographic ship maintained by a central agency and available for the different universities and working groups on a contractual basis or by turns taking into consideration the requirements and scope of work of particular groups. Granting this, one can visualise exciting possibilities for research in the Indian Ocean. One of the important programmes of research would be the exploration of the fishery potential of the neighbouring seas. Mr. D. B. Fin of the Food and Agricultural Organisation, writing in a special U.N.E.S.C.O. issue on oceans, has this to say about an area in the Arabian Sea: "In 1957, a ship from the U.S.S.R. sailing through the south-eastern part of the Arabian Sea came upon vast quantities of dead fish. According to the Soviet report, the fish were found between 60°-70°E. and 10°-12°N., covering an area of about 200,000 sq. km. The fish were said to be 20-25 cm. in length, in which case they would weigh about 100 gm. each. If we assume that one-tenth of the area reported contained dead fish at density of 10 to the square metre, some 20 million tons of fish perished. But even if it was only a tenth as serious as this conclusion suggests, some two million tons of fish were killed." By any standard this is a tremendous tragedy.

New adventures in science are always extremely fascinating to man and the occurrence on our shores of a large ocean absolutely unexplored should have challenged us long back. And so far nothing tangible has been done in this connection. With its 70 million square kilometres, the Indian Ocean covers some 14 per cent of the earth's surface. Its resources, both fisheries and mineral, are not known. What is now harvested belongs to the very fringe of this vast area—mostly the coastal strip of a few miles operated by slow-going country craft.

To fill in this gap of our knowledge of this ocean, an International Indian Ocean Expedition has been sponsored by the special committee on Oceanic Research of the International Council of Scientific Unions. It is expected that under this project—parts of it are already under way—30 nations are to take part during 1960-64. Some 40 ships specially equipped for different studies of the ocean are detailed for cruising the various stretches of the Indian Ocean and this programme is expected to cost approximately 75 million rupees. When the expedition is over, it is said that more than 288,000 kilometres of water would have been traversed and data collected to last for many years of analysis by hundreds of scientists all over the world. These investigations might also reveal the exploitable fishery resources of the Indian Ocean, besides interesting oceanographic phenomena peculiar to this region.

The International Indian Ocean Expedition is a joint venture of many nations and its success would depend on the co-operation forthcoming from everyone concerned in this great programme. In view of its location and existing facilities, India's responsibility is immense in this project. Bombay and Cochin will become the nerve centres of activity for this expedition and already steps are being taken for the establishment of offices for the United States Programme in Meteorology and Biology with the co-operation of the local Meteorological Department and the Bombay University. This is also an excellent opportunity for the Maritime States, their governments and institutions to avail of the experiences of hundreds of visiting scientists of many nations for developing different aspects of oceanography in our country.

ELECTRICITY UNDERTAKINGS

The Licensees Conference of the Federation of Electricity Undertakings of India concluded its five-day session at Bombay on the 19th instant after adopting a number of resolutions on the problems and difficulties of the electricity industry. The first resolution, noting with concern the growing tendency on the part of State Electricity Boards to encroach upon licensees' areas of supply notwithstanding the specific provisions of Section 19 of the Electricity (Supply) Act 1948, requested the Central Government to use its good offices with the State Governments for getting the relevant provisions implemented. The second resolution referred to the refusal and/or failure by some State Governments to implement the recommendation of the Central Government to afford licensees taxation relief to the extent of 6.5 per cent of the assessable income. It emphasised the need for a uniform approach, on the part of all State Governments, to the question. The other important resolutions passed by the Conference are:

The Conference took note of the difficulties experienced by some of the licensees arising out of the demand by State Electricity Boards for security deposit against average consumption. A demand of this nature, it was felt, was unrealistic as the State Electricity Board, as the ultimate purchasing authority, could always have a collateral against any defaulting licensee.

The Conference noted with some concern delays experienced by some of the erstwhile licensees, whose undertakings had been acquired by the State Electricity Board, in securing payment of compensation. It was accordingly felt that the procedure of evaluation and payment of compensation should be streamlined so as to be completed within a reasonable time of the vesting date.

The Conference noted with gratitude the assurance of the Minister of State, Irrigation and Power, that undertakings performing their public duties efficiently would not normally be acquired. It was accordingly felt that this policy statement should be appropriately noted by the various State Electricity Boards.

In view of the unremunerative character of rural electrification, another resolution urged that incentives similar to those afforded to the State Electricity Boards should be available for rural electrification in the licensees' areas also.

NEW PRODUCTS AND PROCESSES

Fire-resistant Fluid

THE Esso Research and Engineering Company, an affiliate of Jersey Standard of the U.S. has mixed oil and water to develop a product, bearing the trade name IMOL which, the makers claim, almost completely eliminates the cause of many fires in coal mines. The fire-resistant hydraulic fluid is composed of millions of water droplets suspended in oil. This type of lubricant, an emulsion, is replacing flammable hydraulic mixtures in coal mining equipment and other industrial applications. The emulsion is said to be the most durable and stable fluid yet developed for this purpose. Among the other industrial applications are die-casting machines, steel mill operations, metal working presses, plastic and glass moulding machines, combustion control mechanisms, casting furnaces, lift trucks, electric and other types of welders, extrusion machines, forge and foundry equipment, automotive assembly machinery, cotton-baling presses, and paper mills—all sizable users of hydraulic fluids.

One of the problems in developing the new product was to achieve a stable mixture that not only resisted fires but was also a good lubricant and was non-toxic when used in critical industrial operations. After a number of trials, a compound was produced which had the proper lubricating properties and was fire-resistant as well. In addition, it has unusual stability or "balance." If the balance of an oil and water emulsion is disturbed because of normal storage settling or through exposure to high or low temperatures, the effectiveness of the product is lost. In laboratory tests IMOL and two competitive products were centrifuged at high speed to accelerate the effect of settling. The emulsion was outstanding in this test. The new product also demonstrated excellent emulsion stability over a wide temperature range.

The water content of the new hydraulic fluid serves to promote heat dissipation and enables it to serve as an excellent coolant. In addition, the emulsion's viscosity characteristics are such that lower leakage losses result. Further the new product is a milky-white substance that can be easily spotted in case of leaks in hydraulic systems. The development of IMOL was carried out principally for use in the mining industry, which consumes 10,000,000 gallons of hydraulic fluid a year in the United States. IMOL is expected to find uses in other industries where hydraulic lines might be exposed to high temperatures.

General Purpose Electronics

A general-purpose electronics machine, "Kiev," operating at the computing centre of the Academy of Sciences of the Ukraine, needs only one hour to find the optimum design for a 600-kilometre-long new railway line. In the past, designers had to spend many months on a solution of this problem. Besides, the design determined by the machine is more economical than that drawn up by experienced engineers. Computers are used for the calculations of freight haulage, the determination of the cargo fleet and for other purposes. The process of metal smelting has been controlled from a distance exceeding 400 kilometres for the first time in Europe. An electronics machine controlled production processes at a chemical plant located 600 kilometres from the computing centre. A general-purpose control machine with a specialised computing system is now being adjusted here.

Liquid Nitrogen as Fertiliser

A Russian chemist, Kakyn Sulaimankulov, has evolved a new kind of liquid nitrogen fertiliser which can be used even in hot climate where such fertilisers quickly evaporate. Among the ingredients of the new fertiliser are such micro-elements as cobalt, manganese, iron, zinc and boron. The fertiliser, which was tested successfully in the field conditions of the hot Chu Valley, contains various forms of nitrogen fit for assimilation by all farm crops. Maize plantations, when dressed by this fertiliser, have yielded over 100 centners more green fodder than before, while the grain harvests increased, on average, 15 to 20 per cent.

Damp-proofing System

Building and housing authorities in several countries have expressed interest in a new rubber and chemical damp-proofing system, announced recently by its British manufacturers, The Cambridge Timberproofing Laboratories. The product used is a fluid combination of rubber latex and siliconate—the water repellant chemically related to sand. Holes are drilled in the mortar joints, below or above ground level, and the mixture pumped or poured in. The result is a thin damp-proof layer which can spread through bricks or stonework. The siliconate is a fluid water repellant and the latex is a kind of sealer, blocking the pores in masonry with the siliconate. Work is going ahead on using the liquid as a surface sealer which can be plastered over or painted.

Stereophotography

Precise data on the space measurements of intricate architectural constructions can be obtained by the stereophotography of their models. Such a method of measurements, suggested by the Leningrad Laboratory of the Academy of Construction and Architecture of the U.S.S.R., will make it possible to carry on building work without the preliminary drawing up of blueprints. Soviet designers are the first to use stereophotograph c record of space measurements to control the assembly of buildings made of large pre-fabricated structures. The record, revealing flaws in the assembly work, helps to improve them quickly which is highly important in the conditions of mass construction now under way in the Soviet Union. Specialists believe that the new methods can be used in the future also to determine the efficient use of building machines in various operations. A series of consecutive pictures gives a volumetrical idea of the movements of machines, and the automatically recorded schedule yields their precise calculation. By means of this method it will be easy to survey the territory of towns in the Soviet Union before making plans for their reconstruction. From large measurements to the investigation of the microstructure of building materials, determination of corrosion and the formation of cracks—such is the range of possibilities of the application of stereophotography. Methods are being worked out for the broad application of the new measuring techniques in construction and architecture.

Fender Technique for Dry Dock

A new fender technique based on a tyre and axle combination has been used in the entrance of the new dry dock in North East England, opened by Vickers-Armstrong (Shipbuilding) Ltd., at Hebburn-on-Tyne. The dock can take tankers up to 85,000-ton deadweight and, in the words of the company, "practically all passenger liners afloat except the 'Queens'." It is 850 ft. (259.08 m.) long and could be extended later to 1,000 ft. (304.80 m.). The new system uses earthmover-type tyres fixed horizontally on stub axles. The assembly is mounted in a steel frame with shock absorbing bearings. When a vessel "rides" against the tyre, the steel axle retracts into the bearing arrangement in the system, giving a safe, cushioning effect. At Hebburn, a series of the tyre-fender scheme is employed. The fender system has never been used in a dry dock before. The tyres are over 6 ft. (1.82 m.) in diameter, and are nylon. At Hebburn, the tyres are capable of carrying a static load of 130 tons (3,04,814 kg.). The units have a high energy absorption rate. They "spin away" from the point of impact, which increases the absorption of impact and deflects the course of the vessel from the fender.

Weather-resistant Building Panels

An American method of making glass fibre and plastic panels for building work is claimed to reduce weather erosion of the plastic. The maker says that ordinary panels leave the strands of fibre exposed. These are said to act like a wick, picking up and carrying moisture into the panels. The moisture in turn causes breakdown of the panel surface. The new method puts a layer of pure plastic on each surface of the panel after it is pressed. This is claimed to block the entry of water into the panel.

Producing Pure Silicon

A method of purifying silicon intended for subsequent use in the manufacture of transistors and other semi-conducting components has been patented by a German company. The need for repeated distillation is eliminated, it is stated. The silicon and its impurities are first melted and then a complex organic solid containing sulphur is added. The mixture is allowed to cool and the two components are left in contact with each other for periods ranging from an hour to a day, depending on the amount of impurity originally present. The next stage is the heating up of the mixture and the distilling off of about 90 per cent pure silicon which, says the company, is suitable for immediate use.

Coal Pulveriser Ball

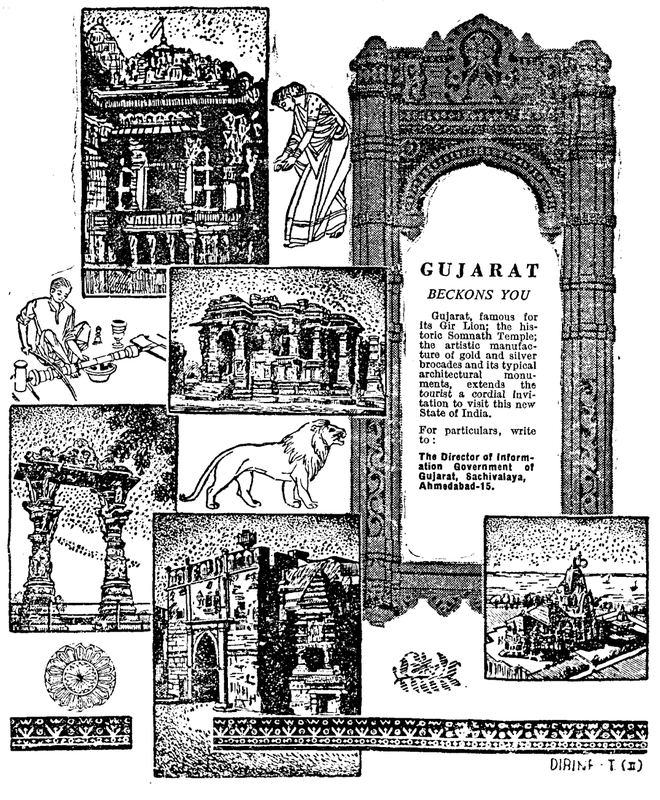
Recently developed by the Babcock & Wilcox Company in the United States is a novel type, hollow-cast Elverite pulveriser ball of increased diameter with double the wear life of the conventional solid-forged ball, for grinding bituminous coal. Major advances in metallurgy and manufacturing technology have permitted development of the larger, more durable ball, which will reduce coal pulveriser maintenance costs and increase availability. Besides increasing the life of the ball, the improved, high-grade metals, with superior wear resistance and strength, also will result in longer and more economical life of pulveriser grinding rings. The hollow ball development programme included 18-month field tests at several large central station electric utility plants. Wear properties of eight different sets of balls having four slightly varying metal structures were determined. Results were used to select the final metal structure to be used in the new hollow-cast pulveriser ball. Field tests proved that one set of the new hollow balls will grind 200,000 tons of abrasive bituminous coal before replacement is necessary, which is double the capacity of solid balls.

Aluminum Safety Hats and Caps

A completely Canadian-made line of aluminum safety hats and caps has just been introduced by Safety Supply Company, Toronto. Working closely with Aluminum Goods Company, who manufacture the shells to strict specifications from Canadian made aluminum, the Safety Supply Company then complete the assembly by attaching the anchors and inserting their patented maximum security cradle or suspension. It is claimed that these Canadian-made safety hats and caps are unsurpassed for protection, performance, and appearance. Aluminum safety hats and caps are used by workers in many industries including oil drilling, refineries, construction, lumbering, quarrying, shipbuilding, manufacturing, etc.

Barrage Balloons for Timber Transport

Experiments with anchored barrage balloons for transporting timber from inaccessible lumbering sites to roadside storage places have been carried out in Sweden by Professor Ulf Sundberg, of the Royal School of Forestry, Stockholm, and a team of assistants. The balloon, a 500 cu.m. British-made barrage balloon with a lifting power of 300 kg., was not used for transporting the timber helicopter-wise but anchored to form a high attachment for a wire. Along the wire the timber was winched from the cutting site to the storage. The experiments proved that the method would be of little practical value in Sweden, where tractors and horses generally can do the forest transport job better and cheaper. However, it might find application in countries with more rugged terrain, such as Norway and Switzerland.



TRENDS IN CORPORATE AUDITING

FINDINGS OF C.L.A. RESEARCH STUDY

CONCENTRATION of audit is more pronounced and perceptible in the private sector than in the public sector companies. In the public sector, in respect of companies having a paid-up capital of Rs. 50 lakhs and above, there is, for instance, no auditor who has to audit more than five companies, but in the case of private sector companies, there are 16 auditors who have more than five audits each individually or jointly. Two firms of auditors are the sole auditors each of more than 40 companies in the private sector. Joint audit is more common among big and giant-size companies in the private sector than in the public sector where there are only three cases of such audit. These are the broad conclusions drawn in the latest Company Law Administration Staff Paper No. 8, comprising a research study in "The corporate sector and the accountancy profession in India," carried out by Dr. Raj K. Nigam, Director of Research and Statistics, Mr. S. M. Dugar, Senior Accounts Officer, and Mr. A. R. Khare, Accounts Officer, of the C.L.A. The authors of the study have qualified their observations thus: "We would like to emphasise the fact that our factual study of concentration of audits in this paper is a limited one, confined only to big and giant size companies, and a question of such wide importance as this should be examined for the entire corpus of corporate bodies, which will necessarily require more time and efforts. In the fitness of things, therefore, this should be undertaken by the specialised professional body which is aware of the full implications of the concentration question."

Purpose of the Study

It will be pertinent to point out here how the study came to concentrate on concentration of audit, although its scope was clearly far too wide. The authors of the study have referred to the appointment of a Reviewing Committee by the Government in the past, which was composed of the luminaries in the accountancy profession, to review the working of the Institute of Chartered Accountants within the framework of the present Chartered Accountants Act and to examine the scope for its improvement. The authors have also referred to the appointment of an *ad-hoc* Committee by the Council of the Institute some years ago to examine the problems of the profession, in addition to concentration of audits, nationalisation of the profession, audit of Government companies, audit fees, etc., as also to the Special Committee appointed again by the Council of the Institute in 1959 to examine the various problems relating to training for entry into the profession of chartered accountants. While the foregoing Committees have no doubt done some valuable work, the authors of the study point out that their labours were, however, somewhat inhibited by the lack of factual material and information on such subjects as audit fees, distribution of company audit among the audit firms, etc. The purpose of the C.L.A. Staff Paper, according to its authors, is to fill up these gaps and thereby facilitate a proper appreciation of the problems connected with audit fees and concentration of audits which have been the subject matter of some interest in recent years. And, in this connection, the authors of the study have reproduced the following interesting observations made by the *ad-hoc* Committee appointed by the Council of the Institute of Chartered Accountants:

"Although the general trend of the views received by the Committee indicates that there might be a certain amount of concentration of work, in the absence of any definite information or statistics, it is not possible to come to the conclusion that there is concentration. A few of the representatives have mentioned that the opportunities available to junior members of the profession are being restricted on the grounds of concentration of audit practice. But no one of the representatives has stated what in his opinion means or amounts to 'concentration.' And in the absence of any definite evidence before it, accompanied with appropriate statistics, the Committee is unable to arrive at any specific conclusion.

"In the natural evolution of any profession (the Committee felt), there is bound to be disparity in practice between members, the mere existence of which, however, does not necessarily prove that the work has concentrated. Besides, those who have a large practice employ and associate more chartered accountants with their audits. The regulatory professional body cannot be expected to remedy such a situation nor is it desirable that it should do so, because any regulation in this will bring about impediments to the natural growth of the profession."

The Committee gave considerable thought to the question of concentration of audit work and considered it from various angles, but was unable to evolve any yardstick for determining whether that problem existed, for the following reasons:

(a) If the total number of companies registered in India is taken, then the percentage of audit work in terms of number of companies in the hands of some firms cannot reflect the individual size of the companies involved.

(b) If, on the other hand, any of the investors' year books which normally contain information on 1,500 to 1,700 companies is taken as the guide, then not only does it suffer from the same defect as in (a), but also these 1,500 to 1,700 companies do not necessarily indicate the general pattern of audit work. For there are many companies the shares of which are quoted on the stock exchange but do not find a place in the several investors' year books. Further, the Companies Act requires every company, private or public, to have its accounts audited annually by chartered accountants only. Therefore, in the opinion of the Committee, statistics of a few companies from the investors' year books will not represent the extent of the audit work in the hands of chartered accountants, when all the companies are required to have their accounts audited under the Act and particularly because the 1,500 companies represent only 5 per cent of the total number of companies registered in India and 20 per cent of the total number of public companies.

(c) The extent of work in the hands of chartered accountants is not represented only by the audit work, as there is a great deal of work to be done by them besides that. The experience of some members of the Committee is that the audit work represents just one-third of the total practice which they have.

And (d) even in the case of firms which enjoy sizable audit practice, the problem has to be looked at not only from the size of the work involved in audit of the company concerned but also from the number of qualified chartered accountants employed in such firms as partners, or assistants.

Keeping the above observations of the Committee in view, the authors of the C.L.A. Staff Paper have proceeded to examine concentration of audit work in the hands of audit firms on the basis of a sample study of 357 big and giant size companies in the private sector and 115 companies in the public sector, of which 44 belong to the class of big and giant size companies with a paid-up capital of Rs. 50 lakhs or more each. The authors have observed that audit of the 357 private sector companies is in the hands of 85 firms of auditors. Out of these 357 companies, 300 have sole auditors and the remaining 57 have appointed joint auditors. The audits of the 300 firms having sole auditors is with 66 firms of auditors.

Distribution of Audits

A study of the frequency distribution of audits handled by the firms of auditors discloses that 30 of the 66 firms of auditors handle the audit of two companies each, four firms have audit of three companies each, five firms of four companies and four firms of five companies each. This means that 26 firms of auditors are handling audit of two to five companies each, five firms of six to ten companies each and one firm has audit of 12 companies and another of 13 companies. The authors point out that three firms of auditors do audit of an excessively large number of companies; one of them of 35 companies, another of 42 companies and yet another of 51 companies.

G. S. SUNDARAM
Secretary

Combining the sole and joint audits together, it is revealed that 46 firms of auditors have less than two audits each, 24 firms have two to 5.5 audits each and nine firms have six to ten audits each. Thus, the position of concentration has, however, not changed as a result of this combination of sole and joint audits in the higher frequency distribution of audits, notwithstanding the fact that for the purposes of the study, when there are joint auditors in a company, each auditor has been allocated half company.

As for the public sector, it has been found that, out of the 46 firms of auditors handling audit of 115 Government companies as sole auditors, 22 are having one audit each, eight have two audits each, seven have three audits each, five have four audits each and one firm has five audits. Among the remaining three firms, one has six audits, another ten audits and the third 15 audits.

Apart from studying the concentration of audits in the hands of auditors in the private and public sectors separately, the authors of the study have also attempted to review the concentration of audits of companies with a paid-up capital of Rs. 50 lakhs and more each in the private and public sectors together. The combined position shows that, out of 91 firms of auditors handling sole audits of 343 companies, 44 firms have single audits, 18 two audits each, nine three audits each, six four audits each, four five audits each and 10 more than five audits each. This means that 37 auditors have audits of companies ranging between two to five each, four firms have audits ranging from five to ten and three firms have audits between ten and 20. The remaining three firms of auditors have audits of 35, 42 and 51 companies each. As mentioned before, the concentration of audit in the hands of these three firms of auditors is in respect of the private sector companies.

Resources and Staff

The above findings of the C.L.A. research study confirm the suspicion of the upcoming junior members of the accountancy profession that company audits have been concentrated in the hands of a few and as such this is unhealthy, especially when one is told that the profession is far from saturated and that, in view of the vast growth of the corporate sector following the large-scale industrialisation in the country, there will actually be a shortage of qualified chartered accountants in the not-too-distant future. However, those familiar with the profession will be aware that a beginner obtains company audit generally not during at least the first five years of his career, unless he happens to be lucky enough to have the necessary pull and contacts which in any profession are as important as, if not more important than, ability and talents. That is why not a few qualified chartered accountants prefer to serve with a competent professional rather than go in for independent practice as soon as they have qualified themselves for the profession. Besides, in order to obtain the audit of a big and giant size company having a paid-up capital of Rs. 50 lakhs or more, a chartered accountant must have sufficient resources. To be an independent auditor, he must have sufficient staff to perform company audit. As much of the work is seasonal, the problem of providing work to the assistants during lean months has to be faced. It may be noted, in this connection, that corporate auditing as such is not very paying and a firm of auditors has to specialise in other matters also, as, for instance, tax consultation.

Again, the vast majority of young men who get the C.A., after putting in four years of articleship during which period they scarcely get any remuneration, have not the resources for setting themselves up as practising company auditors and naturally prefer to take up a job with some company or other. Resources apart, accounts are something secret and sacred. One would not like to talk about it to any one and everyone. It is a matter of trust and confidence. And it is an uphill task for a beginner to build that trust and confidence among company managements. But, once confidence is gained, the going is fairly easy. This explains why a single firm of chartered accountants is often appointed as the auditors of almost all the companies of one group. Further, concentration of audit in the private sector is also explained by the fact that there are three times more companies in that sector than in the public sector.

Audit Fees

The study has also analysed trends in audit fees. Information for this has been collected in respect of 49 big-sized companies in the private sector whose paid-up capital is Rs. 50 lakhs and more and 74 public sector companies of which 30 have a paid-up capital of Rs. 50 lakhs and more. The number of companies for studying audit fees trends, we are told, could not be increased, because separate figures of audit fees were not stated in the profit and loss accounts of the companies from which information has been collected. It is only after the passing of the Companies (Amendment) Act, 1960, that disclosures in this regard are being made in the profit and loss account.

Turnover is one of the important determinants of audit fees in our country. The other determinants are the total funds employed by the company, the number of accounts entries, the nature of business of the company, the degree of scrutiny required, the quality of audit, the services to be rendered by the chartered accountant in addition to audit, such as tax consultation, etc. The authors of the study have pointed out that, in contrast with the position obtaining in certain countries like France, where the scales of audit fees are determined according to a tariff prescribed by the Government, in India audit fees are determined by negotiations between the board of directors and the firm of auditors.

The authors have studied (i) the relationship of audit fees to turnover, (ii) the comparison of the quantum of audit fees paid by the big-size companies in the private sector with that paid by similar companies in the public sector, and (iii) the co-relation between audit fees and turnover over a period of time to examine as to what extent audit fees move in step with the volume of turnover, for which purpose the study has been confined to 15 companies in the private sector and nine companies in the public sector over a period of 1957-59.

A sample study of 49 private sector big and giant-size companies revealed that the total amount of audit fees paid by them to their auditors aggregated Rs. 6.74 lakhs and the total turnover of the companies aggregated Rs. 354 crores. The average audit fee per lakh of turnover worked out to Rs. 19, whereas the average audit fees per company amounted to about Rs. 13,800. The range of variation in the audit fee per lakh of turnover was found to be very wide at between Rs. 4 and Rs. 222. Another conclusion emerging from the sample study is that the companies having a turnover of Rs. 25 crores or more have the lowest audit fees per lakh of turnover, the range of the fees in such cases being from Rs. 6 to Rs. 9 per lakh of turnover. Barring a few extraordinary cases, where the audit fee does not fall into the general pattern of fees paid by the companies belonging to the same group as determined by turnover, it is noticed that the companies with a turnover of Rs. 10 crores and under Rs. 25 crores pay an audit fee between Rs. 9 and Rs. 16 per lakh of turnover, companies with turnover between Rs. 5 crores and Rs. 10 crores pay an audit fee between Rs. 10 and Rs. 30, companies with turnover between Rs. 2 crores and Rs. 5 crores pay an audit fee between Rs. 10 and Rs. 23, companies with turnover between Rs. 1 crore and Rs. 2 crores pay an audit fee between Rs. 16 and Rs. 103 and companies with turnover of below Rs. 1 crore pay an audit fee between Rs. 66 and Rs. 222 per lakh of turnover. The range of audit fee is thus too wide in the last two groups because of the fact that turnover in these groups is not a strong determinant of the fees in relation to the other factors. The findings of the study, the authors say, will have to be confirmed from an analysis of a large sample.

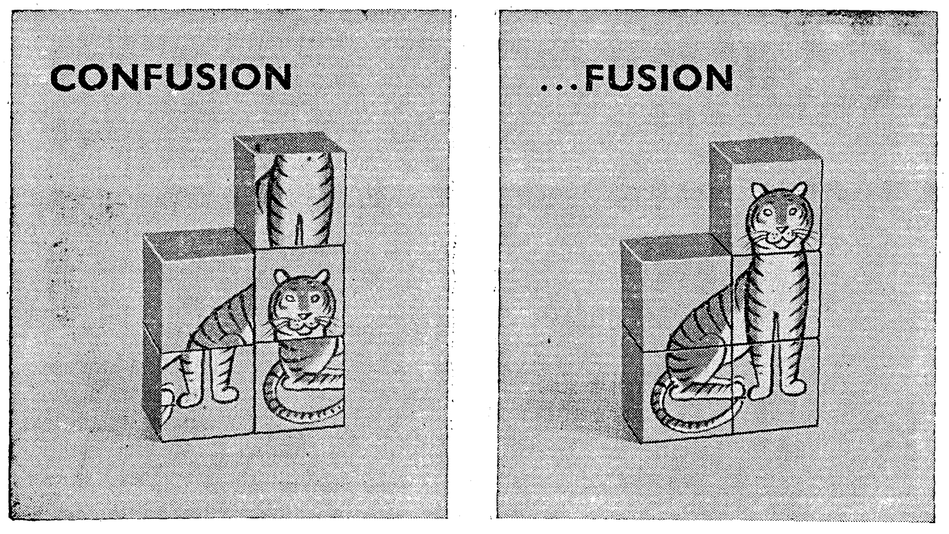
In the public sector, the average of audit fee per lakh of turnover works out to Rs. 29 and the range in audit fee per lakh of turnover amounts to between Rs. 10 and Rs. 380 in the case of 30 big-size companies. It will thus be seen that the average audit fees per lakh of turnover is more in the case of the big-size public sector companies as compared with the companies in the private sector, though the range in the audit fee is relatively less. The audit fee per lakh of turnover in the case of the remaining 44 small-size Government companies amounts to Rs. 82. This average figure is high and confirms the conclusion drawn in the case of private sector companies, namely, that the lower the turnover the higher the audit fee.

Variations in Fees

A study of the trend of variation in audit fees over a period of three years (1957-59) reveals that, in absolute terms, there has been an increase in the audit fees paid by eight out of the 15 private sector companies studied, whereas, in the case of six companies, the quantum of fees has remained constant at the 1957 levels; in one case, there has been a marginal fall over the period. Out of the eight cases where the audit fees has increased, in six cases the turnover has increased, while in two cases it has dropped. In the case of the six companies having constant audit fees, the turnover of five companies improved and of one company declined. The one company which reported a fall in audit fee, however, had an increase in the turnover.

In the case of the eight Government companies, it is observed that the audit fee has risen in seven cases and remained constant in one case. Out of the seven cases where the audit fee has risen, the turnover rose in six cases and declined in one case. The eighth company reported constant audit fee and increase in turnover.

The C.L.A. research study also deals briefly with the important stages in the growth and development of the profession of accountancy, the oldest among the other professions concerned with the working of the corporate sector. With its maturity and status, the services of the accounting profession, the study points out, have been diversified from the mere maintenance and preparation of books of accounts in companies and the audit of company accounts in the early days. Today, the members of the accountancy profession play such roles as tax consultants, financial advisers, secretaries, arbitrators, liquidators, receivers, administrators, trustees, and valuers. In these capacities, they render service not only to the corporate sector but to the Government and the economy of the country in general. The study also refers to the roles and services of cost and works accountants, taxation experts and company secretaries in the corporate sector. In India, such highly qualified experts number but a few. As the study points out, when all these four or five specialised professions, are fully developed, the Indian companies will be adequately serviced by well trained professional men who would have the capacity to tackle the complexities of the laws relating to the working of the corporate sector as also the complexities of modern business transactions.



Just stacking up the pieces isn't enough. To get a picture, you need to put them into a meaningful pattern.

The same is true of the records in your office: the lists and ledgers, the files and notes and charts and references.

They need to be maintained.

Many people think this is enough. We don't.

We have devised Systems of maintaining records so that not only are they maintained easily—they also give you an immediate, clear picture of your business—at all times.

Remington Rand Systems are the result of research with problems in all kinds of offices in many countries. They are simple to use and they can be arranged so that your records *work for you.* They can tell you when to act. Even how to act. You do not have to be a big businessman to use a Remington System. You just have to be a good businessman.

MAKE YOUR RECORDS WORK FOR YOU

AIR-INDIA'S PROFIT SHRINKS

NOT A DIVIDEND PAYER YET

THANKS to the large-scale introduction of jet aircraft, the year 1961-62 was one of transition and incomplete readjustment for the international air transport industry. By the end of 1961, it may be recalled, the world's airlines had ordered 900 jet aircraft and taken delivery of two-thirds of that number. It was, therefore, a year marked by a massive world-wide increase of capacity. But it was also a year of abnormally poor increase in passenger traffic. The load factors were consequently reduced, resulting in serious financial losses for many of the major airlines. It is, indeed, remarkable that, in a year of poor working results in the larger part of the international air transport industry, Air-India had fared reasonably well, though not as well as in 1960-61. The operating revenues of this public-sector concern in 1961-62 were Rs. 21.57 crores, representing an increase of 12.5 per cent over those of the previous year. But, while capacity offered rose by over 34 per cent following the introduction of Boeing 707 jets on some routes, the loads carried increased by only 24 per cent. The average overall load factor, therefore, fell from 47.3 per cent in 1960-61 to 43.7 per cent in the year under review. Operating expenses also rose, at the same time, by about 16 per cent because of the increase in the quantum of operations. The cost per unit, that is, per available tonne-kilometre, fell by 15 per cent from Re. 1.13 in 1960-61 to Re. 0.96 in 1961-62 while operating revenues, too, per available tonne-kilometre fell from Re. 1.19 in the former year to Re. 1.00 in the latter. In the result, operating profit during the year was only Rs. 77 lakhs, as compared with Rs. 117 lakhs in 1960-61. The net surplus, after deducting the previous year's arrears of staff salaries and other net non-operating expenses aggregating Rs. 38.13 lakhs, has come to Rs. 38.86 lakhs in the year under review. Out of this net surplus plus the previous year's carry-forward of Rs. 6.55 lakhs, appropriation to the tune of Rs. 42.74 lakhs has been made to the equipment renewals reserve fund.

The following table provides a comparative picture of the Corporation's results for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Operating revenue:				
Traffic	20,44.80	18,45.45	11,99.61	11,10.12
Other sources	1,12.19	71.96	58.87	45.65
Non-operating revenue.. ..	..	..	8.72	6.27
Operating expenses* ..	17,93.01	15,46.03	10,87.82	10,00.52

Additional depreciation ..	..	..	..	..
Carry forward	2.67	6.55	15.03	0.95

* Other than depreciation and obsolescence.

It will be noted that the Company has not been able to declare any dividend for the year under review also. The Government's total investment in this enterprise is Rs. 25.20 crores (Rs. 18.26 crores a year before), half of which is in equities and the other half in loans. These loans are interest-free upto 1st October 1966, whereafter they are to carry interest at the modest rate of 4½ per cent per annum. From the state of affairs prevailing in international air transport, it looks as though the Government will have to wait for a long time to get any return on this massive investment, growing year after year.

The following synopsis of the balance-sheet as at 31st March 1962 gives a bird's-eye view of Air-India's financial position:

(In crores of rupees)

LIABILITIES		ASSETS		
Equity capital ..	12.60	Gross block		25.94
Loan capital	12.60	*Less*—Depreciation ..		6.39
Reserves and surplus	2.73			
Lower-term liabilities .	6.53	Net block		19.55
Short-term liabilities .	4.93	Investments		0.81
		Current assets ..		13.08
		Cash balances ..		5.48
		Expenditure to be written off		0.47
Total..	39.39			39.39

A conspicuous omission in an otherwise detailed and beautifully illustrated statement of accounts is the report of the auditors. No explanation is available in the report for this omission. That the Company has auditors of its own is evident from the debit of Rs. 31,460 to the profit and loss account as auditors' fees and expenses. In the absence of auditors' certificate, one is not able to say whether or not the Company has provided adequate depreciation—a material point for judging its financial position.

The Corporation commenced the year 1961-62 with a fleet of 13 aircraft, comprising three Boeing jets, nine Super Constellations and one Dakota. Two Boeings were added to the fleet in April 1961 and March 1962, respectively. A sixth Boeing was added to the fleet in April 1962. Under an agreement with the Government of India for the transfer of Super Constellations to the Indian Air Force, four aircraft were delivered before the end of March 1962, three in April 1962, and one each in May and June 1962. The Dakota was also transferred to the Indian Air Force before March 1962. The Corporation has thus acquired the distinction of being the first airline in the world to operate an all-jet fleet.

The sale of the Super Constellations could be effected only at half the written-down value. This has resulted in a capital loss of Rs. 87.73 lakhs on account of the four aircraft actually transferred before 31st March 1962. The loss has been set off against the equipment renewals reserve. Again, the Corporation's own internal resources have come in handy for making a payment of Rs. 160 lakhs to commercial banks in the United States towards the loan of Rs. 5.33 crores given by them for the purchase of Boeing jets. The interest and other charges paid on dollar loans, amounting to Rs. 34.83 lakhs for the year, have been charged to revenues. Incidentally, the total amount (Rs. 3.20 crores) repaid up to the end of March 1962 has come wholly from the Corporation's internal resources. The U.S. commercial banks advanced, during the year, a further loan of Rs. 1.14 crore to cover 20 per cent of the dollar content of the cost of the fifth and sixth Boeing aircraft, while the Government of India provided a further sum of Rs. 6.95 crores on capital account, half in equity and half as loans carrying interest at 4½ per cent which, however, has been waived upto 1st October 1966. Further expenditure on capital account is foreseen, for an additional Boeing will have to be ordered by about January 1963, so that it can be obtained for operation from the summer of 1964 to meet the expected growth in traffic and the Corporation's increased operational commitments.

The foregoing review of the activities and working results of Air-India is by no means exhaustive. But it serves to highlight the fact that the Corporation has achieved a commendable degree of competitive efficiency in the difficult, uncertain and acutely competitive field of international air transport. The Corporation seems to believe that a general reduction of fares and rates by the members of the International Air Transport Association will solve the problem of excessive capacity by tapping a much larger market than what is available at the present fare levels. The virtually total ban on travel abroad by Indian nationals except for essential purposes, recently introduced in order to conserve foreign exchange, has shut off an important source of the Corporation's revenues. It is feared that, in the long run, India might lose more in foreign exchange than it will save by banning foreign travel by Indians, for travel between countries cannot be a one-way affair for ever. The Corporation's interest in the development of foreign tourist traffic is so great that it is bound to become, in course of time, another important source of foreign exchange earnings for the country, provided this handicap on tourist traffic can be rendered less onerous than it is now.

PROBLEMS RELATING TO DIRECT TAXES

One of the items discussed at the second meeting of the Direct Taxes Advisory Committee, which was held at New Delhi on 16th October 1962, with Mr. Morarji Desai, Union Finance Minister, in the chair, related to charitable trusts. It was explained at the meeting, according to an official Press note, that, so long as the income was utilised for charitable purposes, it would not be taxed, even though it was derived from business. Further, any surplus realised by a charitable trust on the sale of any property would not be taxed, if the surplus was utilised for the charitable purposes of the trust.

In another item tabled for discussion, it was suggested that, in some cases, shareholders were experiencing difficulty in obtaining unilateral relief against double taxation of income from dividends received from foreign countries. The chairman clarified that, if any assessee experienced any difficulty in any case, its facts could be reported to the Central Board of Revenue which would go into it.

It was also decided at the meeting that whenever an income-tax officer decided to drop the proceedings against a company, in which the public was not substantially interested, for determining the charge of additional super-tax on undistributed profits, he should send due intimation to the company concerned.

Earlier, in his opening remarks, the Finance Minister said that quite a number of questions would be posed before the Committee in view of the fact that the new Income-tax Act and the rules framed under it had recently come into effect. He hoped that things would soon settle down and there would be no difficulty in the application or interpretation of the law and its rules. He also referred to the publication of the first issue of the *Direct Taxes Bulletin*, containing the statutory notifications, etc., issued upto the end of June 1962.

NEW CENTRAL JUTE REPORTS LOSS

DIVIDEND PASSED OVER—OUTLOOK BETTER

THE New Central Jute Mills Company Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta), which in addition to its original line of jute manufacture has diversified its activities for some years by taking up the production of chemicals and fertilisers, has suffered in both these fields during the year ended 31st March 1962 and reported for that year a net loss of Rs. 18.06 lakhs, as against a net profit of Rs. 34.99 lakhs for the previous year, after providing Rs. 47.47 lakhs (Rs. 36.23 lakhs a year before) for depreciation. The chief reasons are: another failure of jute crop last season and the Government's action in fixing a lower price for soda ash at Rs. 380 per tonne ex-works at ex-port town rates, as against Rs. 400 per tonne ex-works recommended by the Tariff Commission which itself was by no means remunerative. As the break-up of the financial results into those of the jute division and those of the chemical and fertilisers division are not provided by the Directors in the annual accounts, it is difficult to know to what extent exactly the Company fared badly in the two fields. Neither during the year under review nor in the preceding year did the Managing Agents draw their remuneration. The dividend on ordinary shares has been passed over. To pay the preference shareholders and to write off the loss fully, the Directors have withdrawn Rs. 19.29 lakhs from reserves, while additionally a credit of Rs. 2.87 lakhs is available on account of tax rebate on past dividends.

The last time the Company incurred a loss was in 1949. But it paid then a fair return of 12 per cent per annum, tax-free, on the ordinary shares which had then a face value of Rs. 100 each as against Rs. 10 each at present. Since 1949, the Company has fared well, though not uniformly so. The loss for the year under report has occurred, despite an improvement of Rs. 3 crores in sales proceeds to Rs. 15.10 crores.

Thanks to a bumper jute crop in the 1961-62 season, the situation has turned for the better, with the industry enjoying the rare opportunity of continuous working at a good margin of profit. Overseas demand for jute goods has also been satisfactory, and we are told that the industry will raise a peace-time record foreign exchange earnings of Rs. 150 crores in the calendar year 1962.

A detailed analysis of the Company's working in the past four years is contained in the table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

Demand for the Company's backing cloth is said to be steadily growing. Last year, 42 broad looms were added to the complement to make a total of 152 broad looms as on 31st March 1962. Since the close of the year, 45 additional broad looms have been commissioned raising the total to 197. The Company has received industrial licence for installing a total of 350 broad looms. Orders for looms and spinning and ancillary machinery have been placed and construction of buildings has been taken up.

The Directors have criticised the Government's action in fixing a lower price for soda ash at Rs. 380 per tonne ex-works at ex-port town prices, as against Rs. 400 per tonne ex-works only as recommended by the Tariff Commission. The price fixation is said to be completely uneconomical. In the case of the Company's factory, which is run in the style and name of Sahu Chemicals and Fertilisers, the incidence of freight on the basic raw materials is higher, as the factory is situated far away from the salt producing centre, although near the consuming points. The freight advantage available on the basis of f.o.r. destination prices, which would compensate the higher incidence of freight on salt, is denied to the factory by the ex-works price fixation. Besides, the Northern Railway has changed the classification of ammonium chloride from fertiliser to chemical, and the average freight has consequently gone up by 2½ times. The price for ammonium chloride as fertiliser has been fixed on the f.o.r. destination basis and the increased freight has, therefore, to be borne by the Company and this has resulted in heavy losses. Further, costs have increased since the Tariff Commission inquiry due to rise in the prices of raw materials and fuels and other increases consequent on Governmental action. The extent to which output at the plant has been maximised as a result of the modifications already made will be known this winter. Further modifications and/or expansion of the plant will be taken up thereafter in consultation with the foreign collaborators.

With the better profitability of the jute industry and the expected increase in the output at the Sahu Chemicals and Fertilisers plant, the working results of the Company for the current year should turn out to be better.

A feature of the Company's financial position is heavy indebtedness. It has a paid-up capital of Rs. 289 lakhs, comprising Rs. 256 lakhs in ordinary shares and Rs. 33 lakhs in 7 per cent cumulative preference shares of Rs. 100 each, which is supplemented by reserves and surplus aggregating Rs. 242.35 lakhs. Inclusive of the 6.5 per cent debentures of Rs. 89.92 lakhs, the loan liability increased during the year from Rs. 541.64 lakhs to Rs. 553.09 lakhs. While secured loans, consisting of debentures of Rs. 89.92 lakhs (Rs. 89.11 lakhs a year before), U.P. Government advance of Rs. 158.91 lakhs (Rs. 150.99 lakhs) and bank borrowings of Rs. 257.05 lakhs (Rs. 301.27 lakhs), aggregated Rs. 505.88 lakhs, as against Rs. 541.37 lakhs in the previous year, unsecured loans, representing bank borrowings and security deposits, amounted to Rs. 47.21 lakhs, as against a mere Rs. 27,160 in 1960-61. There are, besides, current liabilities and provisions amounting to Rs. 103.24 lakhs, as against Rs. 130.84 lakhs a year before. Excluding the debentures and the U.P. Government loan, which are of a long-term nature, the aggregate liability of the Company to outsiders works out to Rs. 407.50 lakhs, against which are available current assets, loans and advances, aggregating Rs. 359.03 lakhs and investments of Rs. 19.69 lakhs (Rs. 17.04 lakhs a year before), of which Rs. 16.79 lakhs are quoted and command a market value of Rs. 20.27 lakhs. The gross block expanded during the year from Rs. 9.67 crores to Rs. 10.28 crores. It has been written down to Rs. 8.09 crores.

THE TYRE MOST IN DEMAND

Dunlop Truck and Bus tyres are most in demand with operators all over the country. They have proved themselves to be the most sturdy, most dependable and most profitable under all conditions of service. Extra strong casing—more re-treads per tyre—lowest cost per mile!

LONGEST MANUFACTURING EXPERIENCE IN INDIA

MORE ON BOMBAY BURMAH'S RESULTS

COSTS HIGH—REALISATIONS POOR

READERS are aware that the Bombay Burmah Trading Corporation Ltd. (Secretaries and Treasurers: Messrs. Wallace and Company, Bombay) has reported, for the year ended 31st May 1962, a setback in gross profit from Rs. 158.71 lakhs to Rs. 142.59 lakhs, despite further improvement in sales realisations from Rs. 516.57 lakhs to Rs. 538.48 lakhs. Details of the Company's preliminary results for the year were published in *Commerce* of 13th October (*vide* page 655). The dividend for the year on the Rs. 125 fully paid ordinary shares, it will be recalled, has, however, been maintained at the previous year's higher level of 33 per cent per annum, subject to tax, comprising interim of 9.6 per cent and final of 23.4 per cent. Incidentally, this is the first setback to profit since 1957-58 when it had declined sharply from Rs. 165.45 lakhs to Rs. 68.66 lakhs. The decline in profit for the year under report has also reduced the profit-margin (ratio of gross profit to sales) from 30.7 per cent to 26.2 per cent.

Full details of the year's working are given in the table below, which also contains the salient features of the working in the preceding three years:

(In lakhs of rupees)

	For the year ended 31st May			
	1962	1961	1960	1959
Sale proceeds	538.48	516.57	458.86	396.79

Low	615.00	539.50	519.50	458.50

† Subject to deduction of tax.

The continued rise in costs in a year of lower timber selling prices in North Borneo and sharply reduced coffee crop yield in Coorg (South India) are, according to the Directors, the main factors responsible for the decline in profit. Main increases in costs were in the planting operations in South India and the timber operations in North Borneo. Total staff expenses increased from Rs. 188.82 lakhs to Rs. 200.73 lakhs, the cost of power and fuel went up from Rs. 13.18 lakhs to Rs. 17.44 lakhs and repairs to buildings and machinery amounted to Rs. 7.52 lakhs, as against Rs. 6.06 lakhs a year before. While this gives a picture of the trading account, the Company's non-trading income declined from Rs. 93.58 lakhs to Rs. 86.21 lakhs mainly because of lower dividend receipts from the Joint Timber Company Ltd. of Thailand and lower interest earnings on current and deposit accounts.

Thanks to generally favourable weather conditions, the South Indian estates produced a record tea crop of 36,27,947 kgs., as against 34,21,001 kgs. in the previous year. But unit costs of made tea rose from Rs. 2.996 per kg. to Rs. 3.068 per kg. Only a part of this increase was offset by a rise in the price realised on sale of tea; the average rate went up from Rs. 5.203 to Rs. 5.260 per kg. Adverse weather and the normal alternating sequence of heavy and light bearing resulted, as expected, in a steep fall in the coffee crop from 1,368 tonnes to only 785 tonnes. The crop has been valued at Rs. 2.30 per point, as against Re. 1.90 per point a year before. The cardamom crop at 8,126 kgs. was slightly lower than the previous year's level of 8,325 kgs.

The Wallace Bay branch in North Borneo again made a substantial contribution to the overall earnings of the Company, although unfavourable weather and more difficult forest terrain conditions hampered working and were reflected in higher costs. Timber extraction operation, we are told, have gradually moved into areas increasingly distant from the main waterways and shipping points, with a consequent increase in road building, log handling and related expenses. A slight fall in the output of hardwood log was offset by increased purchases, bringing the total business to 178,731 tons, as against 161,284 tons in 1960-61. Mill production of sawn timber declined from 6,663 tons to 5,926 tons. Realisations on sales of log and sawn timber, however, were lower. The North Borneo Timbers Ltd. reported for the year a higher profit, before taxation, of M$5,378,739, as compared with M$4,321,648, but only maintained the dividend at 30 per cent, free of North Borneo tax, which is credited in the year's accounts of the Company. The Quoin Cocoa Estate is being gradually developed and consolidated. An area of 790 acres was planted last year and small trial shipments of cocoa have been made. About 2,011 acres were planted under oil palm on the Mostyn Estates and a further 1,000 acres were cleared for planting this year.

Repair work in the Rangoon dockyard increased slightly during the year, but there was little new building. Most of the old orders have been executed, and the prospects are bleak. The tea factory at Namhsan (Burma) was closed on 31st May 1962 following increasingly difficult trading conditions. The concrete products plant and the asbestos cement plant in Rangoon are said to be working satisfactorily.

In Thailand, the operations of the Joint Timber Company Ltd., were confined to clearance and disposal of the remaining stocks, as there was no prospect of further forest working. Since 1st June 1961, interim dividends equivalent in total to 210 per cent (as against 300 per cent received and credited in the previous year, of which 100 per cent were in respect of the year to 31st May 1960) and a small distribution of surplus funds were declared and have been received and credited in the year's accounts. The company, in which Bombay Burmah's holding amounts to 26 per cent of the equity, went into voluntary liquidation on 7th December last, and Bombay Burmah received a full return on the capital. There was no improvement in the working of the Thai Tapioca Ltd. last year. Actually, the year's working, characterised by higher costs and lower selling prices, resulted in a loss again. The Company's commission from Thai Tapioca amounted to Tcs. 924,943, as against Tcs. 1,006,268 in 1960-61. Steps are being taken to re-equip the factory and bring down unit costs, but these will bear fruit only from 1963 onwards. A further amount of Rs. 3.72 lakhs was received from the liquidator of the East India Rubber Corporation Ltd. (in voluntary liquidation). Liquidation proceedings are over now. The accounts of N.V. the Indo-Java Rubber Planting and Trading Company reported for 1961 a lower profit of Rp. 60.31 lakhs, as compared with Rp. 70.46 lakhs in 1960. Crop and sales were lower, average returns declined and costs rose.

Satisfactory progress has been reported by the Directors on the working of Afco Ltd., a subsidiary of the Company in Bombay. Negotiations with Formica International Ltd. for joint manufacture with the Company in India of industrial and surfacing plastic laminates under the well-known 'Formica' trade mark have progressed further. Formica India Ltd., a new company, will operate the project for which industrial licence has been obtained. Bombay Burmah proposes to invest Rs. 73.50 lakhs in 7,35,000 equity shares of Rs. 10 each at par of Formica India, which will represent 49 per cent of the proposed issued capital of that company. Formica International is to subscribe for 50 per cent of the capital.

The Company's financial position is strong. Its paid-up capital of Rs. 134.58 lakhs (made up of Rs. 89.25 lakhs in Rs. 125 fully paid ordinary shares, Rs. 42 lakhs in Rs. 50 partly paid ordinary shares, Rs. 2.50 lakhs in Rs. 2,500 fully paid ordinary shares and Rs. 83,000 on account of forfeited shares) is supplemented by reserves and surplus aggregating Rs. 418.64 lakhs. Unsecured bank borrowings came down during the year from Rs. 59.64 lakhs to Rs. 41.93 lakhs. Current liabilities and provisions together amounted to Rs. 224.78 lakhs. As against the aggregate liability of Rs. 266.71 lakhs are available current assets, loans and advances aggregating Rs. 397.22 lakhs and investments of Rs. 90.29 lakhs almost all of which are unquoted, including Rs. 56.45 lakhs in subsidiaries. The gross block, which increased during the year from Rs. 596.96 lakhs to Rs. 634.13 lakhs, has been written down to Rs. 326.03 lakhs.

At their current quotation of Rs. 625 *cum-final div.*, the net yield on the Rs. 125 fully paid ordinary shares works out to 3.8 per cent per annum.

RADIO AND ELECTRICALS MANUFACTURING

PROGRESS SATISFACTORY: EXPANSION MOVES APACE

FROM 1959 onwards, the Rs. 10 fully paid ordinary shares of the Radio and Electricals Manufacturing Company Ltd. (Chairman: Mr. T. Shamanna, I.A.S., Bangalore) have been treated with respect on the Madras Stock Exchange, within a yearly range of four to seven points, with a peak level of about Rs 25, except for one year (in 1960, to be precise), when the highest level touched by the shares was only Rs. 21. The actual highest and lowest levels touched by the shares in the past four years are given in the accompanying table. This fairly steady going by the Company's shares since 1959 contrasts sharply with their earlier performance characterised by a discount of 12 to 40 per cent from the face value, and speaks of the investors' confidence in the prospects for the Company and its management. The steady behaviour of the shares is all the more significant, especially as one finds that, in a span of two years, the Company raised its issued capital twice; in March 1960 from Rs. 25.00 lakhs to Rs. 37.50 lakhs by the issue of 125,000 shares of Rs. 10 each at par to the existing shareholders in the proportion of one share for every two shares held and, in February 1962, from Rs. 37.50 lakhs to Rs. 62.50 lakhs by the issue of 250,000 shares of Rs. 10 each at par to the existing shareholders in the ratio of two shares for every three shares held. Needless to say that the investors' confidence rests on a solid base of actual performance of the Company since 1959, an index of which is the annual return on the shares of 16 per cent net in 1959 and 23 per cent gross in 1960 before the capital was increased and of 18 per cent gross in 1961 and 1962 on the increased capital. The latest increase in capital last year was, however, not subscribed for before the close of the year on 31st March 1962.

The salient features of the Company's working in the past four years are pictured in the comparative table below.

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales proceeds	116.02	106.54	75.06	65.15

Low	19.30	18.68	17.07	20.00

† Subject to deduction of tax.

The results of the Company for the year ended 31st March 1962 mark a continuation of the progress seen from 1959. Over the year under review, sale proceeds have improved further from Rs. 106.54 lakhs to Rs. 116.02 lakhs and gross profit is higher at Rs. 34.32 lakhs as compared with Rs. 33.89 lakhs in 1960-61. We are told that the profit did not improve in the same proportion as did sales due to payment with retrospective effect of increased dearness allowance to the employees and increase in labour welfare and other expenses as a net result of which staff expenses went up from Rs. 12.52 lakhs to Rs. 15.30 lakhs. Because of the failure of profit to keep pace with sales, the profit-margin (ratio of gross profit to sales), which had expanded in the previous year from 29 per cent to 31.8 per cent, slipped back to 29.6 per cent. The provision for depreciation is slightly higher at Rs. 3.11 lakhs and has been made, as in the previous year, with reference to the written-down value of the assets as shown by the books of the Company duly taking into account the additions and deletions during the year, as prescribed under Section 350 read with Section 205 of the Companies Act. As a result of the five point increase to 50 per cent in corporate tax under the Finance Act, 1962, the provision for taxation has been put up by Rs. 2 lakhs to Rs. 16 lakhs. The net profit at Rs. 15.21 lakhs is, therefore, actually lower as compared with Rs. 16.97 lakhs for the preceding year.

(*Continued on next page*)

SYNOPSES OF COMPANY REPORTS

Zenith Steel Pipes Ltd.

(*Secretary*: Mr. R. H. Toprani, Bombay.)

Second Annual General Meeting—24th October 1962.

Extracts from the Directors' report for the period from 1st July 1961 to 30th April 1962:

After transferring an amount of Rs. 2,75,195 to the "Expenditure for Construction Account" and after providing Rs. 39,000 for taxation, the profit and loss account for the period shows a surplus of Rs. 7,065 to which is added the surplus of Rs. 23,584 brought forward from the previous period, making a total of Rs. 30,649 to be carried over to next year's account.

The erection of the Company's factory at Khopoli having been almost completed by 30th April 1962, the directors considered it appropriate to segregate the accounts for the period of erection up to that date and for the period thereafter and to end the financial year of the Company on 30th April beginning from 1962.

The plant has now been commissioned. Although its installation was completed within a period less than a year and a half of the receipt of the import licence, the achievement of full and regular production was hampered on account of inadequate supply of steel and power. These difficulties are now being overcome and the production is gradually coming up.

Out of the loan in foreign exchange equivalent to Rs. 45.94 lakhs (including additional loan for Socket plant) and rupee loan of Rs. 15 lakhs made available to the Company by the Industrial Credit and Investment Corporation of India Ltd., Rs. 50.32 lakhs have been drawn to-date.

Expenditure on block account as shown in the accounts amounts to Rs. 96,08,392. Further capital expenditure has been and is being incurred. The total block expenditure is expected to be near about the original estimates in spite of the subsequent revaluation of the Deutsche Mark and increases in import duty.

The machinery required to manufacture pipe sockets has been ordered and partly received. Every endeavour is being made towards the speedy implementation of this scheme.

Accounts in brief as at 30th April 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	69,73,125	Gross block	96,08,392
Reserves and surplus	30,649	—Depreciation	19,432
Other liabilities	45,23,585	Net block	95,88,960
		Current assets	14,12,579
		Investments	5,500
		Cash	4,01,631
		Miscellaneous expenditure	1,18,689
Rs.	1,15,27,359	Rs.	1,15,27,359

* Paid-up capital consists of 7,00,000 equity shares of Rs. 10 each. Calls in arrears amount to Rs. 26,875.

Man Industrial Corporation Ltd.

(*Managing Agents*: Messrs. Prithviraj Sons, Jaipur.)

Sixteenth Annual General Meeting—15th October 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961

N.B.—Adjustments represent only the balance brought forward from the previous year.

* Represents preference dividend for three years from 1st April 1956 to 31st March 1959.

† For the year 1960.

Extracts from the Directors' report: A little fall in the sales during the year under report compared to that during the previous year is due to the reduction in the production of profile of sections in consequence to the short and irregular supply of billets.

Expansion and prospects: The Company has been successful in rolling ½" bulged angle which is commonly required by Textile Mills. This item was formerly imported from foreign countries. In the *Forging* section progress in manufacturing parts for scooters, cycles and oil engines has been maintained and the Company has undertaken the forging of a few more parts for scooters. In the *Steel Door* and *Window Sections*, with the installation of a *Brake Press*, sheet working for doors and windows has been much facilitated. The Company is undertaking the manufacture of windows with steel or glass louvres. The Company has also developed gearing system for the operation of several ventilators simultaneously.

The machineries for the manufacture of *Transmission Towers* for overhead high tension lines arrived during the period of this year. The installation of a Galvanizing Plant along with other machineries is being carried out and it is now expected that the Unit will be put into commission very shortly.

The Government of India granted the Company a licence for the manufacture of *Silico Manganese Steel* (*Spring Steel*) for the annual output of 12,000 tonnes rising to 24,000 tonnes in due course. Strenuous efforts are being made for foreign collaboration for the successful execution of the scheme.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	53,73,065
Reserves and surplus	1,75,891	—Depreciation	33,71,642

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: The crop harvested was 99,223 kgs., as compared with 1,01,478 kgs., in 1960. Climatic conditions were favourable in calculating the estimated crop. The average selling price was Rs. 8.77 per kg. as against Rs. 9.95 per kg. in the previous year.

Estimates for 1962 provide for a crop of 1,00,000 kgs., at an outlay of Rs. 6,86,000 including inland freight, warehousing and sale charges. The planted area remains at 205 hectares.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.

* Gross loss after providing for Managing Agents' commission and depreciation.

† This includes Rs. 85,000 transferred from contingency reserve.

Extracts from the Directors' report: The earlier part of the year under review was one of the most critical periods in recent years although the position improved slightly from October onwards when the pressure of new crop arrivals brought fibre to economic price levels. This eased the acute shortage which had earlier prevailed and in consequence the disparity between prices of raw jute and those obtaining for finished goods was thereafter dispelled.

In the second half of the year conditions improved although it did not prove possible for the Company to recoup the very heavy trading losses incurred earlier in the year.

As mentioned in their last report the Directors decided to concentrate the manufacturing operations of the Company at Wellington Mill and this major rationalisation was completed during the year with a consequent substantial reduction in manufacturing costs. Champdany Mill closed down permanently on 15th May, 1961, and all machinery in Wellington Mill is now being worked on a multiple shift basis. Unfortunately the reorganisation process was greatly obstructed by the infransigent attitude of the labour at both Champdany and Wellington Mills. The Management were compelled to declare a lockout at Wellington Mill on 31st May and the Mill remained closed until 1st July although full working was not possible until 9th July. This was a regrettable and unavoidable setback which inevitably has had its effects on the results of the Company's working during the year under report.

As a result of difficulties in installation and the late delivery of certain machinery from overseas the *Wide Carpet Backing Plant* of 20 looms was not in full production until March and the results from this project are not reflected in the current year's accounts. This section of the Mill is now working well and a further 10 looms are expected to be in production by November of this year. The immediate prospects for the Company's *Wide Carpet Backing* cloth are good and this plant is currently making a substantial contribution to the Company's working.

The outlook for the current year is satisfactory. It is, however, becoming more apparent than ever that if the Indian jute manufacturing industry is to be protected from the recurring cycles of acute losses followed by some months of profitable working, further steps must be taken to ensure that the costs of raw jute (which should in turn reflect a reasonable income to the grower) are effectively stabilised and linked at a profitable level to the prices obtaining for jute manufactures. These latter are dictated by world influences, not internal factors peculiar to India as in the case of Indian raw jute. This is a difficult problem, the solution of which involves the reconciliation of many differing viewpoints.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	59,16,400	Gross block	2,30,70,944
Reserves	82,28,226	—Depreciation	1,29,03,864
Other liabilities	70,08,394	Net block	1,01,67,080
		Current assets	83,84,533
		Investments	2,05,000
		Cash	44,069
		P.L. a/c deficit	24,02,338
Rs.	2,11,53,020	Rs.	2,11,53,020

* Paid-up capital consists of 59,164 ordinary shares of Rs. 100 each fully paid in cash.

(*Concluded from previous page*)

Nonetheless, the dividend has been maintained at 18 per cent per annum, taxable, of which half was paid as interim dividend. The amount of profit retained in business is, however, lower by Rs. 1.19 lakh at Rs. 8.74 lakhs.

We are told that necessary steps have been taken not only for substantial expansion of the production of the existing lines in which the Company is engaged but also for taking up the manufacture of new products. A delegation of the Company's Directors visited Japan in 1961 and conducted negotiations with Japanese collaborators for the manufacture of loudspeakers and transistor radio receivers. Agreements covering the manufacture of these two products have since been concluded and applications have been made to the Government for the issue of licences. Progress on the other expansion programmes is said to be satisfactory. Licences for substantial expanion of the existing production of plastic cables and wires have been obtained and cover the manufacture of D.C.C. and paper covered conductors in addition to wire drawing and P.V.C. compounding. Further progress on this scheme will depend on the availability of foreign exchange required for the import of plant and equipment and raw materials as also the availability of additional power, which is expected only by the end of 1963, following the delay in the implementation of the Mysore State's Sharavati power project.

Most of the items of machinery required for the manufacture of capacitors have been received and are under erection. Production of these products will start as soon as additional power is made available, when the imported machinery and equipment will also have arrived and been erected. Plans to expand production of electricity meters are going on as scheduled. The first consignment of machinery has already arrived, the second is shipped and two more are to arrive before the end of April next. The cost of these shipments is shown at Rs. 30.07 lakhs in the balance-sheet as outstanding commitments for capital expenditure. Production of water meters and switches for electronic industry has been stepped up almost to the licensed capacities and proposals are on hand to get the licensed capacities enhanced. Efforts are under way to make the sales organisation of the Company more effective. It is proposed to have the shares of the Company listed on the Bombay Stock Exchange.

The financial position of the Company is sound. Its paid-up capital of Rs. 36 81 lakhs is supplemented by reserves and surplus aggregating Rs. 26.41 lakhs. Secured loans from the Government of Mysore are practically unchanged over the year at Rs. 28.15 lakhs. Current liabilities and provisions together amount to Rs. 81.20 lakhs, as against Rs. 69.98 lakhs a year before. As against this, current assets, loans and advances aggregate Rs. 146.25 lakhs, an increase of Rs. 17.87 lakhs over the year. The gross block, which increased during the year from Rs. 48.66 lakhs to Rs. 51.89 lakhs, has been written down to Rs. 25.49 lakhs.

Currently quoted at Rs. 19.87 (*cum-final div.* of 9 per cent, taxable), the Rs. 10 fully paid ordinary shares of the Company offer, on the *ex-div.* basis, a net yield of 6.5 per cent per annum, which is very attractive for a sound growth scrip.

NEWS IN BRIEF

THE State-owned Bharat Electronics at Bangalore is exploring the possibilities of manufacturing television transmitters and studio equipment. It has already approached foreign T.V. manufacturers for possible collaboration.

A tea delegation, headed by Mr. A. S. Bam, Chairman of the Tea Board, has left on a tour of Australia, New Zealand, Fiji islands, Malaya and Singapore to study the possibilities of expanding exports of tea to these countries.

The possibility of fixing a floor price for coarse rice (at around Rs. 14 or Rs. 15 per maund) has been hinted at by Dr. Ram Subhag Singh, Union Minister for Agriculture. The Government of India is now collecting the necessary data from various States.

The Central Wage Board for Coffee Industry (Chairman: Mr. L. B. Dave) has suggested an interim increase in wages for estate labour in the different areas to be given with retrospective effect from 10th August last. The Government of India is likely to take a decision on the suggestion shortly.

The Glasgow and the Clyde Valley in Scotland has decided to establish a feed-mixing plant at Anand in Gujarat State at a cost of £108,000. This is one of the plans announced by Lord Polwarth, Chairman of the Scottish Committee set up as part of the British "Freedom From Hunger" campaign. The new plant at Anand will help improve milk supplies to Bombay and other towns.

The cotton textile mills' production during the month of September 1962 is provisionally estimated at 70 million kilograms of cotton yarn and 375 million metres of cotton cloth. At the end of September 1962, the composite mills of the industry held an estimated stock of 191,000 metric bales of cloth as unsold and 193,000 metric bales as sold (unlifted).

The Planning Commission's Programme Evaluation Organisation will undertake a pilot study of the handloom development programme and its effect on employment and earnings of weavers. The study will be in six selected districts in Andhra Pradesh, Madras, Maharashtra, Mysore, Orissa and West Bengal and in a limited way in Tripura.

Some of the major Swiss watch manufacturers, including Favre-Leuba and Technika, have offered to collaborate with Indian industrialists in the manufacture of watches in India, according to Mr. A. Bezzola, Director of Henri Sandoz and Fils, who was on a short visit to Bombay recently. Henri Sandoz itself is one of the largest Swiss watch manufacturers, producing 3,000 watches per day.

The Ganga-Brahmaputra Water Transport Board has agreed in principle to extend its Patna-Buxar service to Allahabad in the light of a scheme of the Department of Mines and Fuel for the carriage of coal from the Bihar-Bengal coalfields up to Mokameh by road and then to Allahabad by river. It has also decided to undertake the necessary conservancy measures on the Ganga between Buxar and Allahabad so as to facilitate the implementation of the scheme.

The Gujarat Fisheries Central Co-operative Association proposes to establish a factory to manufacture caprolactum-nylon with an annual capacity of 5,000 tonnes per year. Japanese collaboration has been secured for the project, which will be the first of its kind in India. The Association also proposes to erect, with Japanese collaboration again, two plants, one at Ahmedabad and the other at Kandla for the manufacture of nylon net and twine.

The foundation-stone of the Rs. 80-lakh heavy engineering project of the S.L.M.-Maneklal Company at Vatwa near Ahmedabad was laid last week. The project, which is being put up in collaboration with the Swiss Locomotive and Machine Works, will undertake the manufacture of high-power diesel engines of 163 to 655 horsepower, compressors and watering pumps. The construction of the factory is expected to be completed within a year.

The ownership of the Kolar Gold Mines will be transferred from the Government of Mysore to the Centre by the end of this year or earlier, provided the question of compensation was decided, according to Mr. S. Nijalingappa, the State's Chief Minister. The Central Government has agreed to give compensation of Rs. 3 crores to the State Government, but the latter has been demanding more. The State Government, after transfer, would continue to get royalty on the ore besides tax on electricity.

Rumania has offered India further technical and economic assistance for the development of petroleum, petro-chemicals, chemicals, ores and other minerals. The offer is contained in letters exchanged between the two countries. The letters provide for the officials of the two Governments to meet and draw up specific proposals aimed at expanding technical and economic co-operation. Rumania has already helped in the establishment of the 750,000-ton oil refinery at Gauhati in Assam, besides assisting in oil exploration programmes.

The organic chemicals plant put up at Kandla by the Atul Drug House was inaugurated on Monday this week, by Dr. Jivraj Mehta, Chief Minister of Gujarat. The plant, which is the first of its kind in this country, is designed to manufacture 14,000 tons of formaldehyde and 300 tons of hexamine annually; these are basic raw materials for plastics, paints and laminations. Atul has secured the collaboration of the West German firm, Karl Fischer, for the venture. Put up at a cost of Rs. 75 lakhs, the plant is expected to result in a foreign exchange saving of Rs. 50 lakhs.

Tea exports touched a record figure of 308 million lbs. during the first nine months of 1962 (January-September). As compared with the corresponding period of 1960 and 1961, exports were higher by 58 million lbs. and 24 million lbs., respectively. The total value of tea exports during January-September 1962 amounted to Rs. 81 crores which was higher by Rs. 11 crores and Rs. 1.3 crore, as compared with the corresponding periods of 1960 and 1961. The earnings from tea exports would have been still higher, but for the decline in the unit value of tea from Rs. 2.80 to Rs. 2.63 per lb. in the current year.

The Government of India has reduced the price of calcium ammonium nitrate by Rs. 32 per metric ton. The price reduction is part of the Government campaign to popularise this new nitrogenous fertiliser whose production is rapidly increasing in the country. The revised maximum retail price of calcium ammonium nitrate, when sold for the use of cultivators as well as plantations, is Rs. 310 per metric ton, as against the old rate of Rs. 342 per metric ton. The rates for other nitrogenous fertilisers covered by the pool system, namely, ammonium sulphate, urea, and ammonium sulphate nitrate remain unchanged. With the present cut in the price of calcium ammonium nitrate, this fertiliser has become Rs. 50 per tonne cheaper than ammonium sulphate.

The Central Council of Health has recommended that confiscation of property of dealers and manufacturers dealing in spurious drugs be provided in the Drugs Act. It has also suggested that the minimum punishment should not be subject to the discretion of the trial magistrate and that the relevant provision of the law should be applicable to Government factories as well. These recommendations are contained in a resolution passed by the Council at its tenth meeting which concluded at Mahabaleswar on the 19th inst. This resolution recommends that ayurvedic and unani medicines should be brought within the purview of the Drugs Act. Provision for publicising the names of manufacturers of spurious drugs after a report from the Government analyst and provision against hoarding of medicines have also been recommended. The Council has called upon the State Governments to develop drug control machinery on the pattern of Maharashtra and Gujarat Drug Control Administrations.

From Abroad

A British team of experts representing the animal feed industries is scheduled to visit the U.S. shortly for studying the latest methods of utilising maize and sorghum as the cereal content of livestock feeds. The visit has been sponsored by the U.S. Feed Grains Council.

Austria sold 25 million bushels of wheat to Communist China last week. The terms of payment will be 10 per cent cash, 20 per cent after six months, another 20 per cent after nine months and the rest after a year. In previous deals, the six-month payment was 40 per cent and there was no nine-month payment.

The nationalised Bank of Ceylon has reduced its interest rate to 4½ per cent from 6 per cent with effect from the 16th inst. in a bid to give more attractive credit facilities to small borrowers. In addition, the borrowers who pay their instalments regularly will get their rebate of one-fifth of the total interest payable by them on their loans.

Under an agreement signed between Communist China and Ghana, China will help the latter to set up cotton spinning and weaving factories. The agreement, which involves an amount of £7 million, also provides for Chinese technical aid for a number of projects, including factories for enamel and chinaware. Ghanaians will also be given training in China.

Du Pont in the U.S. has developed a synthetic leather which has most of the qualities of natural leather. The Company will put up at Tennessee a multi-million dollar plant which is expected to commence production by 1964. Meanwhile, the Company proposes to market small quantities of synthetic leather to shoe manufacturers from next year onwards.

The U.S. Department of Agriculture estimates that the world output of wheat will go up by 7 per cent to 8,400 million bushels in the 1962-63 season, as compared with last year. In the U.S., a cutback in acreage is expected to reduce production. This reduction will, however, be more than offset by an increase in Canada, Western Europe, India and Pakistan, which are expected to have record or near-record crops.

Australia has almost doubled its meat exports to the U.S. over the past year. Shipments rose from 95,000 to 175,000 tons and, although shipments to Britain fell by almost 100,000 tons to 733,000 tons, Britain was still the biggest outlet.

PERSONAL

MR. Milton C. Rewinkel has taken over charge as the U.S. Consul-General in Bombay in place of Mr. Robert M. Carr.

Mr. Prezemyslaw Grodzinski has been appointed Poland's Ambassador to India, Ceylon and Nepal.

Mr. T. N. Kaul, until recently Deputy High Commissioner for India in London, has been appointed India's Ambassador to Soviet Russia.

Prof. J. K. Galbraith, U.S. Ambassador in India, returned from London on Monday this week after cancelling his scheduled visit to Washington.

Mr. B. M. Grover has been elected Chairman of the All-India Woollen Mills Association Ltd., Bombay, for 1962-63 and Mr. R. K. Seth and Mr. T. N. Khaitan have been elected Vice-Chairmen.

Dr. Harvie Branscomb, Chancellor of Vanderbilt University, has been appointed Consultant to the World Bank on educational policy. He will devote full time to this assignment when he retires as Chancellor in February 1963.

Mr. B. Mukerji, Managing Director, State Bank of India, left Bombay on Tuesday the 23rd inst., for the U.K. and the Continent where he will study the training programme and procedure in connection with the banking industry.

Mr. K. D. Malaviya, Union Minister for Mines and Fuel, left New Delhi this week on a fortnight's tour of the Soviet Union, Poland, Rumania and Italy to discuss the possibility of greater collaboration in developing the coal and petroleum industries in India.

The U.S. was still by far the biggest purchaser of beef with imports from Australia of 151,000 tons last year. On the other hand, Britain's purchases of beef at 31,000 tons were less than half the previous year's total.

The U.S. has granted Pakistan a long-term interest-free loan of $8.6 million for the expansion and improvement of the electric power distribution system in the eastern wing. The total U.S. economic and technical assistance (excluding military aid) has so far exceeded $1.75 billion over a period of more than ten years. Much of the aid has been used to import commodities which have been sold for rupees and later used by Pakistan for its development programmes.

Pakistan and Nepal have signed a trade agreement providing for most-favoured-nation treatment between the two countries. The agreement also provides for the conclusion of special arrangements to facilitate the movement of goods from one country to the other. The two countries have also signed a protocol regarding special payments arrangement governing the exchange of certain specified goods. The items to be imported by Nepal under the specified payments arrangement include cotton textiles, woollen textiles, rock-salt, newsprint and films. Nepal will export to Pakistan timber and wood, pulses, potato seeds, oilseeds, musk and cardamom.

The European Parliament of the Common Market has passed a resolution seeking to harmonise the monetary policies of the Six. The resolution calls upon the E.C.M. Commission to formulate a co-ordinated monetary policy among the Six as quickly as possible for the short-term period. In the long-run, it foresees the displacement of the co-ordinated monetary policy (envisaged in the Rome Treaty) by a single common policy, under which no member-country will alter the exchange rates without prior consultation with the other members. In case the U.K. joins the Six, the resolution suggests, the I.M.F. should liaise between the sterling area and the enlarged Common Market.

U.S. personal income in September was at a seasonally adjusted annual rate of $443,000 million—unchanged from the record August level. The figure for the first nine months of 1962 was at a seasonally adjusted rate of $438,000 million, an increase of $25,000 million. The income total of $442,500 million in the third-quarter annual rate represents an advance of $3,000 million over the second-quarter rate. Wage and salary disbursements were at an annual rate of $297,500 million in September 1962 or a decline of $500 million from August. Dividends, interest and transfer payments were higher in the month to offset the payroll decline.

The U.K. has decided to reduce customs tariff by 20 per cent on a wide range of industrial items with effect from the 31st inst. This step is in pursuance of the concessions in the British tariff which were granted in the agreements with the United States and the European Economic Community and announced on 7th March and 17th May, respectively. Under the operation of the most-favoured-nation clause and the rules of the G.A.T.T., the concessions will apply to imports from all countries. The preferential position enjoyed by Commonwealth countries is preserved by the new order which also introduces the fourth reduction in British import duties on goods coming from the countries of the European Free Trade Association. The order in effect implements the changes in the British customs tariff resulting from the conclusion of the 1960-61 G.A.T.T. tariff conference (of which the bilateral agreements with the United States and E.E.C. were a part).

CALL MONEY DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, 24th October

Conditions in the short-term money market are extremely comfortable. Funds available are plentiful, with lenders over. The inter-bank call money has, as a consequence, registered a further fall. The actual rate today is no more than 2 per cent, as against 3 per cent a week ago and 4 per cent two weeks ago. The rate at Calcutta has also gone down from 3½-3¾ per cent to 2½ per cent. Renewals are done at ¼ per cent higher. The money markets may continue to rule easy for a few more weeks. It would appear that the busy season will commence much later than usual, since it is reported that there will be some delay in the arrival of 1962-63 agricultural crops.

In the context of the easiness of money, the success of Oil India's Rs. 30-crore debenture issue (1968-77), due to open for public subscription on Tuesday the 30th inst., is fully assured and the issue will not, contrary to the earlier belief, place a sizable strain on the capital market. For, out of the Rs. 30 crores, the Central Government has already agreed to take Rs. 12.50 crores and another sum of Rs. 8.75 crores will be subscribed by the L.I.C., I.F.C., I.C.I.C.I., Export Risk Insurance Corporation, State Bank and its six subsidiaries. The balance left for public subscription is thus only Rs. 8.75 crores, a small amount indeed which may be easily taken up by banks and other institutional investors. Incidentally, the debentures will be issued at par in units of Rs. 5,000 each, carrying interest at 6½ per cent per annum subject to tax.

There was no change in the amount (Rs. 2 crores) of Government of India's 91-days' Treasury Bills sold under the tender system on Tuesday this week, but the average rate of these Bills declined from Rs. 2.365 per cent to Rs. 2.350 per cent per annum. The Intermediate Treasury Bills, which were on top from the 17th to 20th inst., fetched a much larger sum than last week—Rs. 1.40 crores, as against a bare Rs. 5 lakhs—reflecting the slackness in demand for floating funds during those days. The sales of both types of bills are continuing, the Intermediates from today to 27th October.

A fall of Rs. 23.26 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 19th October 1962 as compared with that for the previous week. Since the notes held in the Banking Department have also fallen by Rs. 46 lakhs, the total notes issued are lower by Rs. 23.72 crores at Rs. 2,067.53 crores. There has been a decline of Rs. 24.99 crores in the rupee securities held in the Issue Department. Foreign assets show a rise of Rs. 1.69 crore to Rs. 94.35 crores. The rise is accounted for entirely by balances held abroad in the Banking Department, while foreign securities in the Issue Department remain unchanged at Rs. 88.08 crores. Indicative of the return of easy money conditions that had set in in the previous week itself is the notable fall of Rs. 8.82 crores in the scheduled banks' borrowings from the Reserve Bank in the week-ended 19th October and of a rise of Rs. 6.23 crores in their deposits with the Bank. The outstanding amount of their borrowings is only Rs. 1.53 crore, of which those under usance bills is only Rs. 90 lakhs.

The pace of increase in bank credit slowed down considerably during the week ended 12th October, according to the scheduled banks' statement for this week. The actual increase was just Rs. 84 lakhs, as against Rs. 12.73 crores in the previous week. There was a further accretion of Rs. 8.70 crores to the deposit portfolio of banks. Inter-bank borrowings, however, were higher but by only Rs. 1.25 crore.

The Gilt-edged market continued to rule dull during the week under review. 3 per cent 1986 Conversion Loan was subjected to selling and dropped 45 nP to Rs. 66.60. 4 per cent 1979 eased by 10 nP to Rs. 98.55. State loans were generally easy. The exception was 4½ per cent 1974 Maharashtra which were bought 40 nP higher at Rs. 99.90.

The rupee in the foreign exchange market was slightly easy in terms of the dollar, the actual T.T. and D.D. selling rate today being Rs. 478.00 per $100, as against Rs. 477.75 a week ago. The banks' buying rate (clear T.T. and bills) for dollars was also easy by 25 nP at Rs. 473.75 for D.D. bills, Rs. 471.00 for 60-day bills and Rs. 468.25 for 120-day bills. In New York, sterling was stronger *vis-a-vis* the dollar in the first two sessions but turned weak later. The latest available rates are: 280.110-280.150 cents per £ for spot and 279.770-279.810 cents for three months' forward, the corresponding rates for last week being 280.160-280.210 cents and 279.740-279.770 cents, respectively.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 22nd October

Sugar prices here were depressed this week, as demand was poor and mills were anxious sellers in view of the expected new crop arrivals in early November. Pre-*Diwali* demand was not visible, but was likely to increase in the next few days. Supply position was still reported easy following heavy releases last month. Traders do not apprehend rise in prices in the near future, as the Government has declared its willingness to release further extra quantity to meet the festive demand. Spot delivery prices were almost unchanged at Rs. 106 a bag of one quintal. Mill delivery prices (per quintal) were: D 29 Meerut Rs. 104.87, Amroha Rs. 103.47, Dhampur Rs. 102.99, Seohara Rs. 102.80, E 29 Simbhauli Rs. 104.49 and Bijnore Rs. 103.31.

Lack of outside buying support accounted for further easiness in the Muzaffarnagar market this week. Mills were eager sellers, and prices declined by 25 nP to 50 nP a quintal. In the week-end, however, some *Diwali* demand was visible.

However, on good festive demand, *khandsari* ruled steady. Crystal was quoted at Rs. 96.45 to Rs. 101.81 and non-crystal at Rs. 97.79 to Rs. 103.15, a quintal. *Boora* prices improved by Rs. 2.68 to Rs. 101.81 to Rs. 104.49 a quintal.

Ready new *gur* prices sagged heavily by Rs. 5.34 a quintal thanks to the pressure of arrivals which averaged daily here at 2,500 to 3,000 maunds. However, they were lifted mostly by Gujarat, the week's offtake to which amounted to 10 wagonloads. *Gur* arrivals would increase further by the end of the month, when *rabi* sowings would be complete. Crushers were still finding it profitable to manufacture *gur* at the prevailing prices and were buying cane at Rs. 3.50 a quintal. Week-end prices here were: *Gur* superior Rs. 69.66, average Rs. 64.30 to Rs. 66.98, inferior Rs. 49.57 to Rs. 52.35, old Rs. 58.94 and *shakker* Rs. 69.66 to Rs. 72.34, a quintal.

New *gur* arrivals in Muzaffarnagar were, however, still poor at average of 1,000 maunds, which were being lifted, on account of the festive demand, at Rs. 60 a quintal for *pansera*, Rs. 69.62 for *chaku* and Rs. 58.74 to Rs. 62.50 for *khurpapar* quality. *Shakker* was quoted at Rs. 65 to Rs. 82.50 a quintal.

GOLD FAILS TO KEEP THE GAIN

(From Our Own Correspondent)

BOMBAY, 24th October

A war psychosis, following the undeclared war by the Chinese with this country on its Northern frontiers, gripped the bullion market during the major part of this week. Prices shot up in both spot and futures sections of the market on some heavy demand for the ready material and nervous short-covering in forward deals. Improvement was particularly marked in silver, thanks to firmer overseas advices. Sentiment was also influenced by fears of an adverse turn in the international situation following the U.S. naval blockade of Cuba. Extreme gains were, however, pared on realising and due to some easiness in the spot section owing to very large inflow. Today the tendency was soft, especially in gold, following the statement by Defence Minister Krishna Menon in Bombay yesterday that those who had the ill-gotten gold should deposit it with the Reserve Bank. This statement revived the fear of some possible official measures to make people dishoard bullion. Consequently, whereas both spot and forward silver could wind up the week with a substantial gain, gold futures showed a minor variation and the spot metal disclosed a distinct loss.

Silver stole the show throughout the week. The *Margashir* contract after declining on Thursday last from Rs. 223 to Rs. 222.40, shot up in stages to Rs. 225.20 on Monday the 22nd inst., and, in the process, attracted a special clearing, as the rise was more than Rs. 5 over the last clearing rate. Subsequently, however, the contract turned lower to Rs. 224.20 and closed at Rs. 224.35, as against Rs. 222.55 a week ago. Ready silver spurted from Rs. 220.90 to Rs. 224.20 and closed at Rs. 223.75, that is, Rs. 2.45 higher over the week.

After being done at Rs. 120.15 on Thursday, gold *Margashir* declined to Rs. 118.95 the next day for want of support and on some selling pressure from Delhi. But the contract soon regained the lost ground and advanced to Rs. 121.95 on Monday the 22nd inst. Later, it reacted to close with a gain of only 5 nP over the week at Rs. 120.20. After jumping up earlier during the week from Rs. 119.70 to Rs. 123.20 on disturbing news from NEFA, spot gold declined later in the week to lose almost the entire gain and closed lower at Rs. 119.85, as against Rs. 120.50 a week ago.

Forward silver in London advanced from 104*d.* to 104⅝*d.*, at which it closed, as against 104*d.* a week ago. Spot silver was done higher at 104*d.* as compared with the previous week's close of 103⅜*d.* In New York, too, the price for silver improved from 121.25 cents to 122 cents. As against the previous week's close of 250*s.* 8¾*d.*, ready gold in London was initially done slightly lower at 250*s.* 7*d.* But it soon improved to close at the week's highest level of 251*s.* 1*d.*

The following table shows the trend of prices during the week under review:

	24-10-62 (closing)	High	Low	17-10-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	119.85	123.20	119.70	120.50
Margashir * ..	120.20	121.95	118.95	120.15
Sovereign	96.75	97.25	94.50	94.50
SILVER				
Ready (.996 fine) ..	223.75	224.20	220.90	221.30
Margashir † ..	224.35	225.20	222.40	222.55
London—				
Gold	251*s.*1*d.*	251*s.*1*d.*	250*s.*7*d.*	250*s.*8¾*d.*
Silver Ready ..	104*d.*	104*d.*	103.⅜*d.*	103⅜*d.*
Silver Forward ..	104¼*d.*	104⅛*d.*	104*d.*	104*d.*
New York—				
Silver	122.00 cents	122.00 cents	121.25 cents	121.25 cents

* 11th December settlement. † 12th December settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 22nd October

Firm conditions continued in the local linseed market this week, due mainly to shortage of supplies from upcountry. Mills evinced interest daily in ready and forward deliveries, but sellers were reserved. The oil market ruled steady, but the turnover was limited, as sellers were not inclined to do any business for forward deliveries until supplies of seeds improved. The oilcake market was very firm due to shortage of supplies. The latest quotation for the October delivery was Rs. 85.20 per quintal.

COTTON FUTURES RECOVER AT CLOSE

(From Our Own Correspondent)

BOMBAY, 24th October

The cotton futures market, after having ruled firm during the first half of the week under review, showed signs of weakness in the second half which gave place to renewed strength towards the close. The principal reason for the earlier firmness was the release by the Textile Commissioner on Friday, the 19th inst., of the first new crop cotton quota for the 1962-63 season. Although actual purchases against the quota could be made only after the mills had received individual quota letters, the announcement was followed by a spurt of demand for new crop in the ready market. Consequently, prices of all new crop varieties firmed up and this imparted a bullish twist to the futures market. The Jarilla March 1963 contract firmed up from the last week's closing rate of Rs. 735.25 to Rs. 745.50 on Saturday, thanks to heavy shortcovering and fresh support by local and upcountry operators. However, this level could not be maintained. Reports of large-scale Chinese aggression prompted nervous liquidation and prices receded. Profit-taking accelerated the downward trend. The Jarilla March contract was marked down to Rs. 738 yesterday. A recovery was evident today and the contract closed higher at Rs. 744.75, as against the last week-end quotation of Rs. 735.25.

In the spot market at Sewri, demand for new crop broadened, following the release of the new crop quota. Actual business put though was, however, limited as mills had not yet received the quota. According to the Textile Commissioner's notification, mills in Gujarat, Maharashtra and the South will get 20 per cent of their consumption of Indian and foreign B cotton during 1961-62 as the first instalment of the quota while others will get 30 per cent. The variety-wise distribution of cotton, which was introduced last season, has been discontinued. All outstanding quotas of the 1961-62 season will automatically lapse on 31st October 1962. Hence no purchase of new crop can be made against the unutilised portion of these quotas.

Simultaneously, the Textile Commissioner also announced officially the new scheme of marketing of cotton during the 1962-63 season, thus sealing the controversy that has been going on for some time now between the mill and trade interests.

The main features of the new scheme are as follows:

(1) Purchases of cotton for ready delivery will be channelised through supervisors who will be responsible for drawing of samples for survey, checking whether the purchases made by mills are against their valid quotas, ensuring payment of 7½ per cent of the sale price after satisfying themselves that the prices agreed to are in accordance with the final survey certificates and that the weights shown in the invoices are in order.

(2) The seller should not directly receive from the buyer an amount exceeding 92½ per cent of the invoice value of the cotton sold by him against delivery. The amount received should be intimated by the seller to the supervisor along with a copy of the invoice.

(3) In the case of a pre-sale valuation certificate issued by the E.I.C.A. or the zonal committee, the charges of the authorised controllers and supervisors for drawing the samples will be paid by the applicant. In case of appeal, the person preferring the appeal will bear these charges. Where cotton is ready for delivery against sale to the manufacturer and is not accompanied by any pre-sale valuation certificate the buyer shall pay the charges of the authorised controller for drawing the sample in addition to the commission of the supervisors. In the event of an appeal to the *ad hoc* committee in such cases, the party preferring the appeal will bear the appeal fees.

(4) The supervisor will be entitled for a commission of ⅛th per cent of the final invoice value which will be paid by mills on all purchases made by them.

(5) In case where a manufacturer has been given permission for ginning *kapas* the supervisor will check on the samples of lint cotton drawn by him and the authorised controller in the manner prescribed and submitted to the zonal committee or to the *ad hoc* committee as the case may be, whether the price paid by the mill for the *kapas* bears a reasonable relation to the price fixed by the Textile Commissioner for the lint cotton. If the price actually paid by the manufacturer for *kapas* is found to be higher than the price warranted by the Textile Commissioner's maximum price for the lint cotton, the lint cotton so produced will be liable to be requisitioned and the permission to buy and gin *kapas* will be liable to be withdrawn.

Export demand for Bengal *Deshi* continued to be slack. The Government is reported to have decided to bring Zoda and Yellow Pickings, which are hitherto exported freely, under the purview of licensing. Hitherto, these cottons were exported freely, without any quota restrictions and licencing was done one shipping bills. Hence forward, it is said, shippers will have to obtain a valid export licence before shipping the cotton.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Hubli Co2 1,225; Baramati 1,240; B.P. 52 1,211; Karnak 151 1,585; Sudan G4S 1,425.

Cotton futures in Karachi recorded further gains during the week. Persistent buying prompted by good domestic mill demand and export inquiries led to a mild rally in prices. N.T.R.G. January firmed up from Rs. 66.40 last week-end to Rs. 68.75. The March contract rose from Rs. 66.90 to Rs. 69.10.

Quiet conditions prevailed in the Liverpool cotton futures market. Both the American and American type contracts moved in a narrow groove and closed virtually unchanged. Trading sentiment was dull as traders were awaiting details of the U.S. cotton marketing policy. The following are the latest available quotations—in pence per lb.—from Liverpool:

October 23.50; December 23.65; November (Sudan Cotton Contract) 29.50.

Cotton futures in New York, after having ruled subdued early in the week, picked up strength in subsequent sessions. Commission house buying and the general firmness of other commodity markets imparted strength to the market. Values firmed up. The rise in prices would have been more marked but for the uncertainty about the marketing policy for cotton. The nearby December contract improved from 33.55 cents per lb. last week-end to 33.92 cents. The March contract closed higher at 34.48 cents, as against 34.02 cents per lb. Spot prices, however, tended to recede. New York spot was a shade lower at 34.85 cents per lb., as compared with 34.90 cents last week-end.

YARNS IMPROVE

(From Our Own Correspondent)

BOMBAY, *24th October*

Both staple fibre yarn and cotton yarn staged a modest improvement this week on better offtake. In the art silk yarn section, 150 denier National Rayons improved over the week from Rs. 12.85 to Rs. 13.20 per kg. and 120 denier advanced by 27 nP per kg. to Rs. 17.80. The 120 and 150 denier S.I. Viscose closed higher at Rs. 17.80 and Rs. 13.27, respectively, as against Rs. 17.47 and Rs. 12.91 a week ago. Centurys 100D improved from Rs. 17.38 to Rs. 17.80 and so did 75D from Rs. 21.45 to Rs. 21.71. 40/2 staple fibre yarn October settlement closed 20 points higher over the week at Rs. 714 and the December contract improved from Rs. 714 to Rs. 736. Spot Centurys recovered from Rs. 7.74 to Rs. 7.83, but Kohinoors eased from Rs. 9.06 to Rs. 8.93, as did Citys from Rs. 8.84 to Rs. 8.71. Among cotton yarns, 10s Petlad spurted by one full point to Rs. 18.75 and 40s Gokak showed a sizable gain of Rs. 2.25 at Rs. 37.25.

An important development concerning the yarn market was noted this week, when the Executive Committee of the Indian Cotton Mills' Federation decided, at its meeting at Coimbatore on the 22nd inst., to approach the Government for an upward revision in the prices of yarn of 40 counts and below. The present prices, according to the Committee, were uneconomical and, in view of the steep rise in the prices of domestic cotton, the Committee felt, it was necessary that the yarn prices should be raised.

WHOLE LEAF TEA EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *18th October*

A total of 610,000 kgs. was offered in sale No. 41 held on the 16th inst. Quality from the Nilgiris was slightly irregular, while there was little change from other districts. The market opened to good demand, but, later in the sale, demand slackened. Low mediums and mediums were irregular and easier by 10 nP but were often much easier towards the close. Good mediums were well supported, though prices of these also declined by up to 10 nP. Clean black leaf descriptions were sold well, with a number of them registering advances. Highgrowns attracted better support than last week, but these were irregular with quality. Unorthodox descriptions were well supported and sold at around last rates. Whole leaf grades were a little easier, while a small selection of tippy teas sold at rates below last.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.50-4.30	3.85-4.15
Mediums	4.30-4.70	4.15-4.40
Good mediums	4.75-5.60	4.40-5.40
Nilgiri B.O.P.	5.00-8.70	5.20-7.90

The average price realised in sale No. 41 was Rs. 4.50 per kilo, as compared with Rs. 4.58 a week ago and Rs. 4.79 in the corresponding sale last year.

In dust sale No. 41 held today, 260,000 kgs. were offered. The market met with good general demand. Coloury mediums were well supported at fully firm rates, whereas other mediums were quoted barely steady. Residuals also received useful support and were fully firm. Highgrowns were sold readily at irregular rates. There was useful support for clean black grainy descriptions which were sold at around last rates. Unorthodox descriptions were in keen demand and were fully firm with some invoices selling at dearer rates.

The average price realised in dust sale No. 41 was Rs. 3.82 per kilo, as against Rs. 3.85 a week ago and Rs. 4.74 in the corresponding sale last year.

Colombo: There was fair general demand. Uvas were substantially lower. Western brokens and mediums declined by 5 to 10 cents. Tippy lowgrowns were easier by 10 to 15 cents, while others were a little easier.

London: *North Indian and other growths*: Monday's sale met with good demand. With the exception of best C.T.Cs which were a little irregular, others were firm. *Ceylon and South Indians*: In Tuesday's sale, offerings amounted to 29,666 packages, of which 9,330 packages were from South India. Highgrowns and light liquoring teas from Ceylon were easier. There was little change in the prices of South Indian teas, except for light liquoring teas which were occasionally lower.

As we go to press, Messrs. Forbes, Ewart and Figgis wire as follows:

"Sale No. 42 was held on the 23rd inst. Offerings amounted to 515,000 kgs. Good general demand. Good mediums and black leaf strong. Others easier. Highgrowns irregularly generally easier. Unorthodox teas lower."

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *24th October*

Firm conditions prevailed in the oilseeds market during the week under review. Chinese aggression on India's northern borders and the possibility of a clash between the U.S. and Russia on the Cuban question served as strong bullish factors. The warning by the Forward Markets Commission against unofficial deals (at prices above ceiling levels) did not have any effect. Nor was the constitution of a special committee by the Exchange authorities to decide ways and means to curb such deals of any avail. Groundnut futures staged a smart rally today, after a setback yesterday prompted by larger arrivals of new crop. The renewed firmness was engendered by fears that transport of oilseeds and oils might be adversely affected in some parts of the country in view of Chinese aggression. Demand from crushers and *vanaspati* manufacturers was also quite good. There was a strident improvement in castorseeds prices, following revival of sizable buying of castor oil by the U.K. and some Communist countries. Linseed moved up on persistent demand. Cottonseeds ruled buoyant in sympathy with the firmness of other seeds and raw cotton.

During the week, the Forward Markets Commission granted permission for the commencement of hedge trading in the new crop mustard and rapeseed in North Indian markets, namely Agra, Bhatinda and Kanpur. The associations concerned will commence trading in May 1963 delivery contracts, subject to three conditions: (1) there will be a limit of one rupee per 40 kgs. on the weekly rise in price; (2) there will be a maximum price of Rs. 39 per 40 kgs. at Agra, Rs. 39.50 at Kanpur and Rs. 38 at Bhatinda, and (3) limits on the open position (long or short) of each individual member will continue to be in force in the same way as in the case of previous contracts.

Groundnut January 1963 contract fell from Rs. 235 (in unofficial dealings) to Rs. 228.25 in the earlier sessions, but recovered later to Rs. 233.50 on renewed support. Groundnut oil January 1963 contract gathered 30 nP to Rs. 31.80 (per 16 kgs.). The spot section was easy on account of larger new crop arrivals. Thus Khandesh quality dropped Re. 1.18 to Rs. 45.57. Oil ex-mill and railway receipts fell by 40 nP each to Rs. 19.10 and Rs. 18.90.

Castorseed March 1963 spurted by Rs. 3.88 to Rs. 170.50. Kanpur bold strengthened by 38 nP to Rs. 32.25. Madras small rose by 25 nP to Rs. 33.50. Oil B.S.S. hardened by 40 nP to Rs. 13.75 and commercial by 25 nP to Rs. 12.65.

Linseed March 1963 contract advanced by 44 nP to Rs. 40.56. Bold ready was higher by 25 nP at Rs. 42.25. Linseed oil, however, shed 20 nP to Rs. 17.15.

Cottonseeds January 1963 contract moved up from Rs. 102.50 to Rs. 105.50. Non-white (new) strengthened by 55 nP to Rs. 24.50.

The following table shows the closing prices of oilseeds and oils on Wednesday, 24th October as compared with those of the two previous weeks:

	24-10-1962	17-10-1962	10-10-1962
	Rs.	Rs.	Rs.
Groundnut			
Groundnut January 1963	233.50	231.37	225.87
Nizam bold		47.00	46.25
Khandesh quality	45.57	46.75	45.75
Oil ex-mill ready*	19.10	19.50	19.15
Railway receipts*	18.90	19.30	18.90
Castorseed			
Castorseed March 1963	170.50	166.62	164.25
Ready Madras	33.50	33.25	32.50
Ready Kanpur	32.25	31.87	31.12
Oil B.S.S.†	13.75	13.35	13.00
Oil commercial†	12.65	12.40	12.30
Linseed			
March 1963	40.56	40.12	39.87
Bold ready	42.25	42.00	41.00
Oil ready†	17.15	17.35	16.85
Cottonseed January 1963 ..	105.50	102.50	102.00
Niger seed	36.00	36.25	36.25
Kardi seed	28.00	28.00	27.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER RECEDES

(Messrs. Parekh and Co.)

BOMBAY, *23rd October*

Ready Malabar black pepper at New York, after establishing a record high level of 55 cents, came down to 39 cents, as the grinders refused to follow up the rise and the sizable purchases by dealers done at 36 to 39 cents in the rising market from both Singapore and India started pouring in. Ready garbled on the coast also retreated from Rs. 312 to Rs. 300 in sympathy with New York.

Short covering in Lampong having been finished at Singapore and in view of the petering off of foreign demand, Lampong black in the island turned quite. It is now nominally quoted at $120.

The future of the world's paper market now hinges on how the political situation develops in Cuba and on the Chinese front.

Imported spices in the local market are now looking up under fear of political uncertainties.

New York, after haggling for lower prices, is now reported to have paid 35 to 36 cents for October-November shipments for Malabar black. December delivery on Cochin ring shot up to Rs. 310 after receding to Rs. 287. The prospects for the coming Malabar crop are now promising, but the future tendency of the market will be shaped by political considerations rather than by supply and demand as during normal times.

Ready garbled and ungarbled are quoted at Rs. 305 and Rs. 299, respectively, in the primary markets.

Ready pepper in Bombay is nominally quoted at Rs. 162 per 50 kilos.

EXPORTABLE TEAS IN DEMAND

(From Our Own Correspondent)

CALCUTTA, *23rd October*

Demand at the tea export sale here yesterday was good, and it was evident that the Chinese aggression had accelerated foreign bidding. During the week, export bookings were satisfactory. Although there was good demand at the internal sales held yesterday, prices turned lower, as quality of the offerings declined. The strong demand at the London auctions last week was well received here. Apparently, the lower production figures of North India and Pakistan are compelling buyers to cover their requirements early. The strongest feature in the Mincing Lane sales was the all bright liquoring teas. At the Colombo sales, prices eased following a decline in quality.

It was noted that at the London sale referred to above, offerings from Pakistan were of a small quantity of 896 packages, indicating that Pakistan was unable to offer effective competition in the export markets. Earlier this year, Pakistan had doubled the export quota to 10 million lbs. But this quantity is unlikely to be completed. In fact, Pakistan itself is facing an acute tea shortage, and the Government has had to postpone export auctions. As in North East India, the Pakistani crop is also expected to be running below earlier optimistic estimates. The crop is now conservatively estimated at 52 million lbs. The carryover from last year is 17.44 million lbs., and thus this year's availability is placed at 69.44 million lbs. Last year's internal consumption totalled 43 million lbs. and a 12 per cent increase to about 47 million lbs. is expected this year. These figures would leave a carryover of about 12 million lbs., after completely fulfilling the export quota of 10 million lbs. However, trade circles here are doubtful if, in view of the acute shortage for tea within the country, Pakistan would be able to complete the ambitious export quota. The gravity of the shortage becomes all the clearer, when it is stated that even after raising the price of tea by ¾th of a rupee, tea is not freely available in Pakistan.

Output in North East India is running short by nearly 20 million lbs. and, assuming that this shortage is not made good within the next two months, offerings at the internal sales would decline appreciably and a shortage psychosis may raise prices. Although prices at the internal auctions recorded a small recovery when sales of the second flush teas commenced here this season, the average price realised for dusts in the auctions up to the end of September had been only Rs. 4.79 per kg., representing a decline of 28 nP over the corresponding previous average price. On the other hand, it is satisfactory to note that the average price of leaf up to the end of September was higher at Rs. 5.70 per kg., as against Rs. 5.39 a year before.

Exports to the United Kingdom from India in this season so far have set a record for the past 14 seasons up to the corresponding periods. The total of exports to all countries in the nine months to September was 308 million lbs., realising foreign exchange earnings of Rs. 81 crores. In the corresponding period last year, exports were lower at 284 million lbs., which realised foreign exchange worth Rs. 79.7 crores. As compared to the figure for the first nine months of 1960, this year's figure has recorded a very satisfactory increase of 58 million lbs, with the value realised being higher by Rs. 11 crores. North Indian tea exports in the first three months of this season amounted to 110 million lbs., that is, 3.5 million lbs. more than in the previous year.

Russian offtake this year has been very satisfactory so far, and it is expected that total purchases by the U.S.S.R. would substantially exceed last year's figure of 11,000 tons valued at 15 million roubles. In 1960, Russian purchases of Indian tea amounted to 11,200 tons valued at 15.9 million roubles. On the other hand, exports to the U.S.A. and Canada have declined this year, and it is necessary that immediate results are obtained from the export campaigns for this area. Exports to the U.A.R. have also declined, and India's loss has been Ceylon's gain. Another country in which Ceylon has recorded considerable success is Ireland; Ceylon's share in the total tea imports into Ireland in 1961 increased to 22 per cent from 13.6 per cent in 1958, whereas India's share declined to 62.6 per cent from 79.6 per cent.

In the internal sales held here last week, dusts on offer totalled 30,252 packages which met with a good general demand, although with the decline in quality, prices realised were lower. Prices of plain and medium orthodox teas eased up to 20 nP and occasionally more. Non-wither Dooars were irregular, and generally easier. The small powdery teas evoked more attention. Medium and good C.T.Cs eased up to 20 nP, but met with good support.

The brighter lines realised good prices. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.25 to 6.70, medium Assam C.T.C. dust 5.50 to 5.70, leggcut dust 4.70 to 5.20, medium Assam dust 4.50 to 4.90 and plain orthodox dust 3.95 to 4.40.

Inquiry for the plain orthodox teas was a feature of yesterday's export sale, when offerings totalled 67,086 packages. Prices of the brighter B.O.Ps and O.Fs were higher. C.T.C. teas eased in selective support. Whole leaf grades met with keen competition and recorded a good additional prices. An irregular trend was recorded in tippy teas. Darjeelings eased. The quotations (in rupees) per one kg. inclusive of excise duty, were: Best Assam C.T.C. fannings 6.20 to 6.70, medium Assam C.T.C. fannings 5.30 to 5.70, best Assam C.T.C. 6.20 to 6.70, medium Assam C.T.C. B.P. 5.30 to 5.70, plain fannings 3.80 to 4.20, clean plain pekoe 4.40 to 4.80 and plain B.P. 3.80 to 4.10.

HESSIAN DECLINES FURTHER

(From Our Own Correspondent)

CALCUTTA, *23rd October*

In the absence of fresh support, hessian constructions eased further during the week under review, while the liberal mid-week decline in prices of B. twills was erased as a result of substantial buying on Government account as the week progressed. With sellers keen for business, lower-grade fibre was available at below the minimum prices, while the premium for the higher-grade fibre hardened. Until recently, hessian prices had been firmer than sacking, but this trend has reversed itself in the past two weeks. For the last five months, stocks of heavy goods have consecutively been rising and, considering that the decision of mills to continue the higher rate of production up to 10th November was taken with some reluctance, the possibility of a reduction in total output might be contemplated after that date had been hinted. If it is so, it is easy to see that the mills would attempt to maintain the present rate of hessian output, but production of sacking would be reduced. To such a possibility should be attributed the current weakness of hessian and the comparatively firm trend of heavy goods. In the context of the acute shortage of fibre fit for the production of hessian, it is clear that production of hessian is at present the maximum possible. All the same, the month-end stock figures are eagerly awaited by the trade. This week's firm trend in the prices of sacking goods is an important consideration and, if, in view of increased buying of B. twills on Government account, stocks decline, it is likely that the Indian Jute Mills Association would decide to maintain the current level of production even beyond 10th November. For it should be emphasised that one of the methods by which fibre prices can be prevented from falling further is to continue the current rate of output. Another method is, of course, to fix an export quota for this year's low grades. However, the Government would appear to be reluctant to follow the second course, at least at the present time.

It is significant that output during the month of September fell, but stocks rose. Thus, at 100,500 tons, output recorded a reduction of 4,600 tons. The production of sacking was lower by 2,000 tons at 47,200 tons, of hessian by 400 tons at 41,600 tons, and miscellaneous constructions by 2,200 tons at 11,700 tons. That the least decline was recorded in hessian shows that the mills had been very earnest to produce the maximum quantity of that construction. With stocks at the beginning of September being 90,700 tons, the total availability of all goods in the month was 191,200 tons. Stocks at the end of September were 92,800 tons, and it follows then that demand during the month was of the order of 98,400 tons. It is seen thus that demand was 2,100 tons lower than production. Such a variation in demand is insignificant and cannot be attributed as the reason for the recent decline in the prices of goods. Despatches of goods from mills during the month also recorded a decline. Hessian despatched fell from 43,400 tons to 42,200 tons with the figure for export being lower by 1,100 tons and that in respect of local purposes being lower by 100 tons. Sacking goods despatched at 43,000 tons recorded an increase of 700 tons, but, while those for export at 28,100 tons increased by 1,400 tons, despatches for local consumption declined by 700 tons. Other constructions despatched for export as well as for local purposes fell from 14,200 tons to 11,600 tons, with the result that the total of despatches at 96,800 tons fell by 3,100 tons. These figures reveal that the statistical position of sacking goods had not been as bad as had been pictured recently.

The news that U.S. consumption of burlap during the month of September aggregated 70 million yards was greeted with satisfaction. Although this was 3 million yards lower as compared with the consumption in the previous month, it should be noted that consumption during September 1961 was only 64 million yards. With U.S. consumption up to the end of September this year amounting to 650 million yards, the monthly average has been 72.2 million yards. This compares very favourably with the corresponding previous period when total consumption at 574 million yards gave a monthly average of 63.8 million yards. In the coming weeks, the trade expects to do substantial business with the U.S.A., as it is usually at this time of the year that U.S. buyers replenish their stocks. Burlap stocks in the U.S.A. at the end of September were 236 million yards, representing a decline of 7 million yards. The fact that consumption declined only by 3 million yards but that stocks decreased by more than double that figure shows that consumption surpassed replenishment during that month. This is a healthy indication strengthening the trade expectation that U.S. buyers would begin to be more active in the coming few weeks.

The goods market opened dull on Tuesday last. Rumours were circulating earlier in the day that the Government of India would be inviting tenders for a substantial quantity of B. twills, but, soon, there was disappointment when the quantity actually involved in the tender was lower than expectations. As a result, ready B. twills declined from Rs. 115.00 to Rs. 113.85. In sympathy, ready hessian 40" 10 oz. fell from Rs. 54.00 to Rs. 53.10. On the following day, although conditions were listless earlier, subsequently there was some amount of buying of B. twills on Government account. As a result, ready B. twills recovered to Rs. 114.20. However, business in hessian was lacking and ready hessian 40" 10 oz. eased to Rs. 52.50. At lower levels, there was good covering demand in nine porter hessian bags. This made hessian 40" 10 oz. to recover to Rs. 53.10 on Thursday. B. twills improved to Rs. 115.00, following the publication of a Government tender for November-December delivery. Also there was some business done by mills. On Friday, there was a further improvement in B. twills to Rs. 115.10, but, since overseas business was limited, hessian 40" 10 oz. eased to Rs. 52.90. Over the week-end, there was no improvement in conditions. Overseas business was lacking, but, stirred by speculative activity in the futures market, ready B. twills hardened to Rs. 115.25. However, hessian 40" 10 oz. eased to Rs. 52.35. There was a small amount of covering business yesterday following fresh overseas business, as a result of which hessian 40" 10 oz. picked up slightly to Rs. 52.40, with B. twills spurting to Rs. 116.25.

Conditions in the fibre market were generally quiet. Arrivals have now increased from 150,000 maunds to 175,000 maunds a day. Mills accorded support only sparingly. It was announced during the week that the Buffer Stock Association would be purchasing a further quantity of 250,000 maunds of *jungli* fibre. Following this announcement, Bihar *jungli* steadied. It was by 15th October that the members of the Buffer Stock Association completed their purchases of the fifth allocation of a similar quantity. The present quantity has been issued as a result of the recent fall in the prices of lower grades. It should be pointed out that the Government of India's concern at the recent fall in the prices of lower grades has been overdone. Although the lower grade fibre is available at below minimum prices, it should be emphasised that the higher grades are commanding a respectable premium. Thus, on an average, it is likely that the minimum prices have been realised. The trade would urge the Government to consider the fibre situation and decide to fix an export quota much earlier than last year. It is certain that the lower grades are in surplus and, if only the trade is asked to examine export possibilities, that would itself impart the much-needed uptrend in prices. During the week, the quotations in Calcutta were: Assam bottoms Rs. 30.00; daissee bottoms Rs. 32; northern bottoms Rs. 29.50.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *23rd October*

The local metal market was steady this week on good support. Advices from the London Metal Exchange and the other world markets were also encouraging. During the week, there were reports that the Government of India was considering the possibility of permitting imports of metals from East European countries. At present, import of metals is permitted mainly from the Western countries, especially the United States. However, supplies from these sources have been limited, thanks to the tight foreign exchange situation in the country. The D.L.F. supplies, although substantial, have also been insufficient to meet full requirements of the country. Hence the idea to import metals from East European countries on rupee payment has been considered. It is expected that a firm decision in this regard would be taken before the delayed import policy is announced at the end of this month, although it is probable that the Chinese aggression may not permit the Government to allocate the full foreign exchange as planned earlier for the import of metals.

A feature on the London Metal Exchange during the week was the strength in tin. Spot tin opened at £849½ a ton and steadily rose to £855. The three months' position hardened from £846 to £850. The rise was attributed to the recent continued purchases by the buffer stock manager and to the fear of the development of a technical shortage in the near future. The uptrend in Singapore was also significant. There were reports that the U.S. fear of an imminent shortage of the metal was much exaggerated and that opinion that the releases by the General Services Administration were not actually essential to bring supply in line with demand was developing. The refusal by the U.S. Government to adhere to any price line for the releases is a matter of concern in producing countries, but there is appreciation of the U.S. policy of rejecting low bids. In the meantime, reports of the Malayan mines demanding a higher price for tin as an incentive for developing the poor grade deposits and for restoring the abandoned mines have appeared. In Calcutta, tin opened at Rs. 2,470 per 100 kgs. and at one time was as high as Rs. 2,480 but soon reacted to the opening level.

Lead, in London, hardened from £52½ a ton to £52¾. There was good European consumer demand. Another cause for the firmness was the steadiness in zinc and the apprehension by Mr. R. L. Stubbs, Director-General of the British Lead and Zinc Development Association, that for the first time in many years lead may cease to be in surplus this year. The Calcutta rate was unchanged at Rs. 140 per 100 kgs. The stock position continued to be comfortable. Electrolytic zinc opened here at Rs. 264 per 100 kgs. and hardened to Rs. 273 to close steady at Rs. 265. Stocks stood depleted, despite arrivals in September totalling 7,000 tons, as against 6,580 tons in the previous month. On the London Metal Exchange, spot zinc opened at £65¾ a ton and steadily improved to £67⅞.

FOODGRAINS STEADIER

(From Our Own Correspondent)

HAPUR, *22nd October*

A steadier trend was witnessed in the local foodgrains market this week, as stocks tended to decline in view of fresh demand for seed purposes. *Rabi* sowings were in full swing and would be almost over by the end of the month.

Wheat hardened by 67 nP per quintal owing to poor arrivals. Dara wheat was quoted between Rs. 40.19 and Rs. 40.87 and the farm quality between Rs. 44.21 and Rs. 45.55 a quintal. Red wheat was stationary at Rs. 38.18 a quintal. Local arrivals at an average of 200 to 300 maunds daily were poor, and stocks declined to 63,000 maunds. Rice prices sought lower levels on better arrivals and poor demand. Stocks were only 4,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 85.74 Rs. 96.45, *sela basmati* Rs. 75.02 to Rs. 85.74, *mainpuri* Rs. 52.25 to Rs. 54.92, *ramajwayan* Rs. 58.94, *raimunia* Rs. 61.62, paddy Rs. 34.83, *gadda* rice Rs. 53.58 and *munji* Rs. 32.15, a quintal.

Good demand and firm advices from Punjab registered a steadier trend in gram. Prices advanced by 67 nP to 99 nP a quintal according to quality and the Punjab variety was quoted at Rs. 44.21 and the local produce at Rs. 43.86. New maize prices also hardened by Re. 1.34 per quintal to be quoted now at Rs. 29.47 to Rs. 32.15 a quintal. Consumer demand was brisk. Old maize stocks were poor and were done between Rs. 26.79 and Rs. 28.13 a quintal. Barley and *bejhar* prices also sought higher levels in sympathy up to Rs. 26.79 to Rs. 28.13 and Rs. 26.79 to Rs. 28.13 a quintal, respectively. *Juwar* and *guwar* prices remained unchanged, while *methi* eased on lack of support. Other grains were listless. Week-end prices (in rupees) were: *Juwar* 45.55 to 48.23, *guwar* 36.17 to 37.51, *methi* 58.94 to 60.28, *bajra* 37.51 and oats 32.15, a quintal.

In pulses, a firm tendency was witnessed. Peas prices moved up by 67 nP to Re. 1.34 per quintal according to quality on better outside demand. Four wagons of peas and peas *dal* were loaded to the South during the week. Arrivals were small and local stocks declined to 49,000 maunds. *Arhar* prices improved by Rs. 2.67 a quintal on good buying support for conversion into *dal*. *Urd* prices ruled quiet on reports of increased new produce arrivals in producing centres. *Moong* and *masoor* also registered a steadier trend on better demand.

Notice

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT IN compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5 per cent Cumulative Preference Shares for the half-year ending 31st October, 1962, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 13th November to 16th November, 1962, both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 16th November, 1962 or to their Mandatees.

By Order of the Board,
K. S. BASU,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *23rd October*, 1962.

SYDENHAM COLLEGE OF COMMERCE AND ECONOMICS

Founded on 22nd October 1913 as the first institution in India to provide a systematic course of study leading to the university degree of Bachelor of Commerce, the Sydenham College of Commerce and Economics of Bombay entered its 50th year on Monday this week. The College proposes to celebrate the golden jubilee, and an executive committee has been formed for the purpose. Mr. Morarji Vaidya, a past student of the College and Chairman of the Committee, told Pressmen in Bombay on Saturday last that the celebrations would be spread over the whole of the jubilee year, although the major events would take place between January and March next, before the university examinations. Details of the programme, which will comprise a cultural fete, a symposium, an exhibition, a festival cricket match, sports and athletics and a contributory dinner, are being chalked out. It is proposed to raise a jubilee fund for five laudable causes, namely, to institute merit scholarships for students, to establish a chair for the subject of business management for undergraduates, to build up a well-equipped and up-to-date statistical laboratory, to strengthen the present College library, and to develop a research centre. The jubilee year got off to a good start on Monday last, when Principal K. T. Merchant inaugurated the research centre at a function widely attended by the staff and students in the College. The centre, for which the Maharashtra Government administering the College has provided a nucleus, is to grow into a bureau of commercial and economic intelligence fit enough to undertake surveys and research projects to help the enterprising business community of Bombay.

AMERICAN LETTER

(*Concluded from page 720*)

tion has functioned well, despite the massive reshuffling of international funds, including the revaluations of the German mark and the Dutch guilder. The protective arrangements work very much like forward sales in the private markets. For example, when the forward premium on German marks was expected to exceed the internationally agreed upon one per cent level, the U.S. Treasury made forward sales of marks which were backed by an agreement with the German Federal Bank that the Treasury would be provided with marks, should they be needed, at the time the contracts matured.

United Nations News

The usual frictions continue over Cuba, Berlin and the visit of Prime Minister Ben Bella of Algeria first to the White House at Washington and then to Cuba. The racial riots in Mississippi have left their marks as well. So far as world opinion is concerned, it is amazing how the delegates from the new Afro-Asian bloc have praised the Kennedy Administration for its firm stand. The legal angle under which the Federal Government could intervene at the University of that State in favour of enrolling Negroes was that the University is the recipient of Federal grants.

On the constructive side, the U.N. has become the sponsor of a "Spiritual U.N." which is planned to be located outside of Washington in the neighbouring state of Maryland. Political leaders and eminent religious persons from 56 nations have agreed to support a proposed "Temple of Understanding" which will serve as an education and information centre for the world's six major religions. The Temple will contain separate chapels and reading rooms dedicated to the philosophies of Hinduism, Confucianism, Buddhism, Judaism, Christianity and Islam. The project will be financed through voluntary contributions by people of every faith in the world.

Inaugurating the fund-raising campaign, a dinner was given here at the Waldorf Astoria, attended by Ambassadors of many nations and the foreign and domestic Press. The current President of the U.N. General Assembly, Sir M. Zafrulla Khan, told the guests that mankind's salvation in the nuclear age was to unite on the fundamental thesis that there is "one creator of the universe." Other prominent international figures who spoke in support of the "Spiritual United Nations" included Mr. B. N. Chakravarty of India, Mr. Abraham Darom of Israel, Mr. Katsuo Okazaki of Japan, Mr. Zenon Rossides of Cyprus and Dr. Liu Chieh of the Republic of China as well as Mr. Charles W. Yost, Deputy Permanent Representative of the U.S. to the U.N. It may be recalled here that plans for the Temple were initiated as long as three years ago by a group of private citizens in Connecticut.—*All Rights Reserved.*

COTTON

(*Concluded from page 728*)

the staple range of 1.1/16" to 1.3/16" and the other in the staple range of 1.3/16" and over. A few types such as Devitej and Deviraj, which closely resembles the former group, have been developed. But these indigenous strains do not possess the qualities of the imported varieties, particularly fineness of fibre and tensile strength, and they do not therefore yield yarn of the high count indicated by their staple length. The problem of making up the deficiency in the second category is a more difficult one. In this category, the main hope at present centres round Sea Island and hybrid cotton. The progress of Sea Island cotton development has been very slow due to various reasons. Although hybrid cotton made a promising start in 1960-61, unfavourable weather adversely affected its progress in 1961-62 and its yield declined from 1,163 lbs. of seed cotton in 1960-61 to 530 lbs. last season. The goal of substituting imported cotton by indigenous varieties is, therefore, an elusive one.

The Committee, at its meeting made some important recommendations for raising cotton production and took certain decisions to help intensify the efforts for increasing production. It decided that various suggestions made at the meeting should be brought to the notice of the State Governments at the highest level with a view to ensuring urgent remedial action lest the efforts made by the Central Government and the Committee should go waste. It was also decided at the meeting to request the Union Ministry of Food and Agriculture to convene a meeting of the State Agricultural Ministers and representatives of the Committee, so that the need for raising the yield per acre could be impressed on the former. Both the suggestions are well-thought-out and timely.

The Committee approved of the implementation of a project for inter-specific hybridisation and co-operative research for the improvement of Indian cotton to be undertaken at the Indian Agricultural Research Institute, Surat and Coimbatore. Another recommendation of the Committee was that a special sub-Committee should be established to consider the question of establishing a seed-testing station for cotton in the country. The only comment that we have to offer on these decisions is that it is surprising that they were not taken much earlier, considering that the deficiencies in cotton cultivation date back to many years.

MARKET GOSSIP

(*Concluded from page 715*)

drawal amounting to $25 million was made during the week ended 27th July 1962. What then should be done? Some financial circles in India and abroad are inclined to feel that devaluation of the rupee is inevitable. To this section belongs "Lombard," the well-known columnist of the London *Financial Times*. Here is what "Lombard" says in a recent article:

"... It would be as well to press the Indian authorities to consider whether it wouldn't be in the country's interests to devalue the rupee to a more realistic level ... in order to remedy some of the weaknesses in the basic payments position that have brought reserves to such a low level, even though the foreign exchange aspect of development was being taken care of by the outside world.... That Indian firms are now having to be dragooned into expanding their exports by official controls over the distribution of raw materials strongly suggests that the over-valuation of the currency is responsible to a significant extent for the fact that exports are not contributing in the way they should be to the strengthening of the basic payments position. And this is a situation that India can in any case hardly afford to perpetuate."

Simultaneously with the devaluation of the rupee, "Lombard" suggests that the Western countries should arrange a sizable reinforcement of a semi-permanent nature of India's foreign currency holdings. How urgent is the need for these measures is impressively brought out by "Lombard" thus:

"India has been making vigorous efforts of late to restrict maintenance imports in order to check the persistent tendency foreign exchange expenditures, other than in respect of the Development Plan, have shown to exceed her current account earnings. But now that her reserves have fallen so low that even short-term downward movements are apt to give rise to considerable concern, a complication connected with the timing of the inflow of aid funds is becoming a major worry. It arises from the fact that the contributions other countries have undertaken to make towards the cost of financing development are usually linked with specific projects. For, because the arrival in India's hands of aid tied in this way is largely determined by the progress of the projects involved, the inflow of such money not only tends to be distinctly uneven in an overall sense but is also inclined to lag behind the foreign exchange expenditure it is intended to cover.

"It is not difficult to see that, unless external reserves can be fortified to enable them to take short-term pressures arising in this way in their stride, the already extremely difficult task of keeping the Indian economy on an even keel will be further complicated. It is not only that, as things stand at present, maintenance imports have to be further restricted from time to time—only a few months back, the issue of licences even for top priority imports was all but suspended for a while —thereby generating shortages of goods that are badly needed to keep the economic machinery turning. It is also that the very fact that the country is constantly on the brink of a new and even more acute balance of payments crisis must tend to mean that extremely short-term considerations play an unduly large part in the shaping of economic policies."

In the considered opinion of "Lombard," India can derive tremendous benefit from the provision of a substantial loan by its friends in the West for the express purpose of jacking up its reserves to a more adequate level. The loan, according to him, is to be earmarked for dealing with the backwash of the uneven incidence of aid payments. If this aspect is clearly understood, "Lombard" observes, there is no reason why the transfer of the funds involved should impose a major strain on the payments positions of the donating countries. To quote him again: "It would, indeed, be excellent value for money." Before, however, such a stabilisation operation is launched, "Lombard" emphasises, the one question that should be answered is "whether it would not be still better value for money, if the stabilisation were made a full-blooded affair, the Indian rupee being reduced in value at the same time to a level more closely approximating to its current purchasing power parity." Here is an indication of what the rest of the world thinks about our currency. We have good reasons to believe that quite a few Americans too feel the same way.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2690 BOMBAY, 3rd NOVEMBER 1962 PRICE Rs. 2

GEARING STEEL INDUSTRY TO WAR

WITH the outbreak of hostilities between India and China, the heavy industry bias of this country's third Plan, as of the second, is now more fully vindicated. But not much comfort can be drawn even from this farsighted emphasis on heavy industry as something basic to both defence preparedness and peace-time industrialisation. For the country's iron and steel industry, which is now producing at an annual rate of about five million tons in terms of ingots, is trailing far behind that of China with its reported annual output of about 20 million tons at present. What is even more disconcerting is the fact that, while the bulk of China's steel output has been going into armaments production, the bulk of India's limited output of this vital metal has been put to peaceful uses. Surely, this is a situation which cannot be expected to continue, now that the Indian people and Government have been rudely awakened to the reality, namely, that such sinews of war as armaments, trucks and armoured vehicles cannot be provided adequately without stepping up steel production, on the one hand, and curtailing its consumption in peaceful uses, on the other. To a country which has been wedded to the ways of peace this is, indeed, a hard choice.

The element of civilian sacrifice in that choice has been rightly underlined in the most forthright language possible by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries. This is what the Minister said, *inter alia*, at the second meeting of the reconstituted Iron and Steel Advisory Council held at New Delhi on 25th October 1962:

"We may be called upon to produce types and categories of steel which are urgently required by the ordnance factories and other factories engaged in producing military equipment. No delay can, therefore, be tolerated in meeting these requirements. I do appreciate that it would mean diversion of essential supplies which, in many cases, are not even to the full requirements of industry, but in the present crisis every one will have to put up with such inconveniences and shortages. The categories of steel required for the manufacture of strategic materials will, therefore, become more scarce and civilian requirements will have to be given 'second priority' to the defence requirements. . . . Everything will have to be produced and supplied at top speed, and there is no room for conflict of views or friction."

Yes, speed is the most crucial thing now, if fuller advantage is to be taken of the present rated capacity (6.5 million tons in terms of pig iron and 6.0 million tons in terms of ingot steel) of the entire iron and steel industry in both the public and private sectors. In the industry as a whole, there is substantial scope for expansion of production in the next six months. The latest available figures show, in this connection, that 3.7 million tons of pig iron and 3.2 million tons ingot steel were produced in the eight-month period, January-August 1962. While pig iron production during the period worked out to an annual rate of 5.6 million tons, representing 86 per cent of the rated capacity, ingot steel production was at an annual rate of 4.8 million tons, representing 80 per cent of the relevant rated capacity. Production to full capacity, in the light of these figures, seems to be a realisable objective in the next six months or so, especially because of the spur provided by urgent defence needs.

The plant-wise picture of current production trends, incidentally, shows that the immediate effort to achieve capacity production will have to be concentrated almost entirely on the Tata Iron and Steel Company in the private sector and the Rourkela and Durgapur plants in the public sector, for the Indian Iron and Steel Company in the private sector has already attained a level of production representing 106 per cent and 97 per cent, respectively, of its rated capacities in pig iron and ingot steel and the Bhilai plant in the public sector has likewise achieved a high level of production working out to 103 per cent and 97 per cent, respectively, of its relevant rated capacities. As the Rourkela plant, too, has turned the corner and produced, as of September 1962, ingot steel at a rate representing 65 per cent of its capacity, it may be supposed that progress towards capacity production in that plant can be easily accelerated in the coming months. In the same way, the tempo of production at Durgapur may be expected to be stepped up, now that the third blast furnace of that plant has also been commissioned. To what extent the T.I.S.Co. can achieve fuller utilisation of its installed capacity (two million tons of ingot steel) in the immediate future is, however, not quite clear. It may be that favourable reconsideration, by the Government, of its recent decision to allow only a small increase in steel retention prices will enable this premier steel plant to expand production without undue strain at the present juncture.

There is no doubt whatever that the iron and steel industry will rise to the occasion and seek to fulfil the additional demands that will be made on it. The limits to its production effort will be set, if at all, only by supplies of inferior coal and shortage of other vital raw materials, not to mention transport. Representatives of the industry have, therefore, done well to urge that the supply of raw materials to the steel plants should be planned and ensured on an "emergency basis," that the Government should arrange for the supply of better quality coking coal and that a better railway schedule be introduced so as to avoid congestion at the steel plants. Several other constructive suggestions for obtaining better production results and for effecting expeditious changes in the pattern of production are stated to have been put forward by the industry's representatives at the meeting of the Advisory Council. All these suggestions boil down to one thing, namely, that a crash programme, involving a series of practical measures for ensuring adequate supplies of raw materials of good quality, be devised forthwith.

Among the raw materials, better quality coking coal is of crucial importance, for it is well known that the lack of such coal has led, time and again, to complications in coke oven practices, adversely affecting the efficiency and life of the ovens themselves. It must, therefore, be laid down that greater production of coking coal of the requisite quality specified for use in the iron and steel industry should be effected, as a matter of first priority, in private collieries as well as in those of the National Coal Development Corporation. Unless energetic steps are taken to gear the coal industry, too, to the defence requirements and expand its production to the level of at least 70 million tons (of all qualities) in the next year, as against the current annual rate of just under 60 million tons, the steel industry, like several other strategic industries depending on coal, will find it difficult to expand production. It may be well to remember here that China, with its production of coal, including lignite, of the order of 420 million tons (according to the *Statistical Yearbook* of the U.N.) in 1960, has no problem of coal shortage except in so far as it is caused by occasional transport bottlenecks.

Likewise, supplies of limestone of the quality required for steel making should be ensured without any interruption. The State Governments concerned seem to have agreed with the Union Minister for Steel and Heavy Industries that they should prevent the misuse of good quality limestone deposits and conserve them for the use of the steel industry. This they can do by not executing fresh leases in favour of parties other than the steel plants. But there are limits to what the State Governments can do in the matter of mineral raw materials required by the steel industry. The matter is essentially one which can be tackled only at the Union level through the fullest co-operation of the Ministries of Steel, Mines and Fuel, Railways, and Power. To devise and execute a crash programme for bigger steel production would be to get these Ministries to co-ordinate their activities in a practical and non-ideological manner.

Thus far we have approached the question of steel production from the point of view of what is to be done for fuller utilisation of existing capacity. But the question of expanding the capacity itself is no less important. The current plans for doubling the size of the three public-sector plants would have to be more expeditiously executed. The Bokaro project, too, must be pursued vigorously and it is to be hoped that the American technical team's study will turn out to be favourable. Above all, there is no reason why the T.I.S.Co. and the I.I.S.Co. should not be allowed to expand their capacities further. An early decision on this issue is vital, if timely results are to be obtained.

Democracy at War

Now thrive the armourers, and honour's thought
Reigns solely in the breast of every man:
They sell the pasture now to buy the horse...

—SHAKESPEARE

TO those who are under forty and cannot recollect the war that democracies bestirred themselves at the last minute to resist Fascist aggression in 1939, there has been a re-enactment in India of the excitement and the emotional fervour aroused in a people, who, having been grossly betrayed, have only their valour and patriotism with which to defend their hearths and homes. Contributions have kept pouring in for the war effort and some are restrained, as they do not yet know to whom to contribute or whether their offers will reach the right quarters. In these matters, official preparations are still considerably behind popular enthusiasm; could not Mr. Morarji Desai, for example, have announced the details of the savings schemes he talked vaguely about in his broadcast address?*

Long ago, the Government decided to withdraw the old Prize Bond scheme and put forward a new one; even that was not ready for announcement. Now that the Government has come down to asking the ordinary man to part with his personal possessions of gold and precious trinkets, has anything been done demonstrably to show that there will be nothing less than the utmost austerity in the management of our foreign exchange resources by our embassies and by the innumerable official delegations still travelling abroad because of an insatiable wanderlust? Mr. Desai might have done well to have insisted on his departments to give specific examples of sacrifice and austerity which they are prepared to make, with which he could preface his appeal to the people. May be, it was unnecessary, because the people had risen magnificently above all such pettiness, having no thought of calling anyone to account for the management of our funds or defences; if the country is well defended at least now, the people can't care less about what happened before or how much they contribute. This spirit is remarkable, if not unparalleled, and those who have sermonised on the nature of India's unity have now an opportunity to revise their views.

The proclamation of State of Emergency came almost as expected; it was timely and necessary to enable the country to proceed ahead with defence preparations unhindered by the safeguards for Fundamental Rights; even more, it helped to create the psychological atmosphere of urgency in which alone people can drop their daily distractions and concentrate on the war effort. Some apprehend that criticism of Government may be stifled, but, actually, the position is not much different from that prevailing during the last war under the Defence of India Act; all the judicial decisions during that period will be available as precedents for defining the area of personal liberty, but this should, in fact, be much larger during a people's war. Even officialdom, which likes to go by past precedents, may be spurred to immediate activity by the various organisational matters thought of and put into effect between 1939 and 1945 to control supplies and transport, establish Home Guards and civil defence measures.

* * * *

Secrecy or Security?

Mr. Nehru is too good a democrat to think of suppressing information or legitimate comment, but the Defence Ministry's allergy to the Press is well known and, even now, facilities have not been provided for independent Press coverage from the battle front. (Some relaxation has been made since writing.—Ed.) Much damage has been done by insufficient news; one example is the delayed publication of news about the minor illness of Lt.-Gen. B. M. Kaul, which was withheld till after he had returned to his post. Meanwhile, rumour had done its worst and caused much speculation about the reasons for his return to Delhi when he was expected to be commanding the troops on the Eastern Frontier. So what is really important is not the possible suppression of information likely to be of value to the enemy or of anti-national activities of persons whose loyalty to the country is questionable but an imaginative approach to public relations in the interests of maintaining civilian morale on which the entire war effort will have to rest in future.

* * * *

No Post-mortem

The demand for the recall of some of our retired Generals is one of the ways in which public disquiet over the state of our preparedness has shown itself. Mr. Nehru admitted that people were annoyed and that they had a right to know; he went so far as to say that he did not know if there was an adequate answer to the doubts. That about 2,500 are dead or missing and that our *Jawans* were poorly armed will naturally raise questions as to what the Government was doing with its annual budget on defence and what our defence factories were producing all these days when they were said to have sufficient spare capacity to turn out a wide range of consumer goods and to take up even things like baby cars. But for the fact that few are interested in a post-mortem at this stage, many of the present realities will need to be squared with past assurances of the state of our defences.

If retired Generals come back for operational duties, it may well be that they will insist on repairing some past omissions in defence preparations, but it is unlikely that, in this hour, they will rake up old controversies. If they return and are required to give their wholehearted efforts, a purely advisory capacity such as membership of the National Defence Council, in which they will be allowed to do some talking, will not be enough. But this is all that seems to be intended at present, in view of Mr. Nehru's hints that "protocol" difficulties are likely to arise. Rajaji's suggestion that one of the retired Generals should be made a Minister of State, after Mr. Nehru takes over Defence personally,† seems to have some point, since there is no one who can be considered the most obvious alternative to the present Defence Minister, should he be willing to accept constitutional responsibility for the present shortcomings (as others like Mr. Lal Bahadur Shastri and Mr. T. T. Krishnamachari had done in the past) and quit. Omissions can be repaired under the new emergency; that does not make them less serious. The only thing to be said in extenuation is that, historically, a defending country, especially a democracy, has always been unprepared, ill-equipped and not conditioned mentally for war, even though money might have been spent on the army, navy and air force; but, historically also, the compulsion to change the old ways has invariably coincided with a change at the top.

* * * *

Moment of Truth

When the history of the present times comes to be written, 25th October may well be treated as a turning point in our annals, for that was the day when Mr. Nehru proclaimed that all Indians, including the Government, had been shocked out of the artificial atmosphere in which they had been living and went on to add that they had been getting out of touch with the realities of the modern world. For candour, this is without parallel and, obviously, what made Mr. Nehru say it out was not Chinese aggression, of which he had abundant notice already in many ways, but the pompous sermon from *Pravda* and *Izvestia*, which indicated, after a long spell of suspense, that it was idle for anyone in India to expect Russia to take India's side in the present conflict. It is, perhaps, too much to say that all Indians had been living in this world of unreality in which the Government chose not only to frame its policies and pursue a policy of unrequited friendship and peace (which is understandable in a moral sense) but also to antagonise, sometimes gratuitously, those to whom we have now to turn in our hour of peril and who have responded to our appeal magnificently.

Even now, perhaps, there is no need to take up any rigid attitudes or draw any firm conclusions from Russian editorials. With Mr. Khrushchev's challenge to the U.S.A. over Cuba, any other attitude would have been surprising; even if Russia had any intention of using its good offices in favour of India, it may be tactically wise to appear to lean in favour of the Chinese side rather than against it. India has also played at this game often and should know its finer points; but it is quite significant that most of the non-aligned neutral leaders—of Indonesia, Egypt and Yugoslavia in particular —have been sitting on the fence or sending peace-feelers, which, in effect, would be similar to Peking's own. Such is the influence of the Bandung spirit; so it is not merely China which is repaying good with evil. The trouble and unpopularity which India had courted in the West in rushing to champion Egypt's cause in Suez or support Indonesia's postures on West Irian or, for that matter, India's dubious attitude towards Israel in the attempt to placate the Arab world may all prove vain.

Although the Government of India seems to have been misled into the belief that the Soviet Union may act as an honest broker in the Sino-Indian dispute, there has been some evidence that Russia has been following a cautious policy all along even in the matter of economic aid. Much of Soviet aid promised at various periods has remained unutilised and, though at one time Mr. Khrushchev was keen on completing the Bhilai projects, there has subsequently been some decline of enthusiasm, apparently because of China's protests and the influence of the Stalinist wing within the Soviet Communist Party. There is, however, no need for disillusionment now. Our policy may still be based on the possibility of a change in the Russian attitude some day in the future, for which the present settlement over Cuba may help, if, indeed, it is not merely a prelude to another challenge to the West in Berlin or elsewhere.

The question remains whether in this hour of crisis there can be a new approach to Pakistan so that the Indian Army may be concentrated on the China front. Pakistan's antics, or rather those of its Press, are disheartening at the moment and it remains to be seen how effective the United States can be in persuading its ally to take a responsible attitude, as the British Press has pointed out. Mr. Nehru has often in the past shown great magnanimity in his relations with Pakistan, the most recent example being his sympathetic human approach to the question of ejecting illegal Pakistani immigrants from Assam. A team from Pakistan has visited Peking and is reported to have shown readiness to discuss the whole of the Kashmir border with China (instead of the border behind the cease-fire line), giving Peking fresh claims in the area. India is being outmanœuvred in this game of power politics and opportunist alliances of Pakistan. The U.S.A. must step in to define what its alliance in this area really means, now that it has come forward to support India's right to the McMahon Line, while Pakistan is not only questioning it but actively allying itself with China whose aggression in this area was supposed to be contained by S.E.A.T.O. All that Pakistan should be required to do at this juncture is not to embark on any adventure in the area while Indian soldiers are fighting the Chinese; whether its hatred of India will drive it to a position in which it will become a willing dupe of Chinese policy despite American efforts, is one of the questions for which we will have to wait for an answer.

* * * *

A Textbook Solution

I have always wondered at the tenacity with which "Lombard" has tackled the question of the real value of the Indian rupee and suggested on various occasions that the time had probably come to find a realistic parity for it. He has now returned to the subject in the *Financial Times* (24th October) and, while helpfully proposing a stabilisation loan for India to increase her reserves for tiding over the uneven flow of economic aid, considers that it might be better value for money if the stabilisation were made a "full-blooded affair" and the rupee were reduced to a level more closely approximating to its current purchasing power parity. Now, this is a concept which one does not often hear outside the classrooms and, if, indeed, every currency including the pound and the dollar were to follow the purchasing power (assuming that it could be determined), there might be case for India following such excellent example. The primary reason for this feeling about the rupee seems to be the difficulty in export promotion, though it would be interesting to know whether Indian textiles will be more welcome or have better sales in Europe if they are priced low as a result of a devaluation or whether any of the other manufactures for which there are quotas or high tariffs in Europe will fare better. That countries like India placed in the peculiar circumstances in which they find themselves can occasionally maximise their advantages by a selective devaluation of currency is no argument for claiming that a full-scale revision of parity is logically justified.

*Since writing this. Details of savings schemes have been announced.

†Mr. Nehru did this late on 1st November and Mr. Krishna Menon was made the Minister for Defence Production.

FINANCE FOR WAR EFFORT

SPEND LESS, SAVE MORE

THE initial steps for financing the war effort have been taken. These are three in number: a National Defence Fund, a new issue of National Defence Bonds and a new set of instruments for attracting small savings. The National Defence Fund offers an opportunity to the people to give donations in money, gold and gold ornaments. While the minimum contribution is one rupee, there is no limit to the maximum. The Fund is thus designed to appeal to the patriotic instincts of the people of all levels of income and wealth. Contributions to the Fund will qualify for income-tax exemption within the limits prescribed in Section 88 of the Income-tax Act 1961. Under this section, it may be noted, an individual is entitled to a rebate of both income-tax and super-tax upto 10 per cent of one's income, subject to a maximum of Rs. 2 lakhs. The rebate will be given in the same way as is done in regard to life insurance premia. Those who have hidden wealth can fearlessly contribute to the Fund, for they have the option not to disclose their identity. They can thus wash away their sins by liberally contributing to the defence of our motherland and no cause is more sacred and worthier than this. The total amount subscribed to the Fund since its inauguration a fortnight ago is not known at the time of writing, but all available accounts show that the response has been highly encouraging.

The appeal for contributions in gold and jewellery is justified in terms of the country's need and capacity alike. Our foreign exchange resources are no more than Rs. 92 crores, whereas the cost of buying arms and essential materials from abroad will run into an astronomical figure, if we are to throw the enemy out, as, indeed, we must. It is a well-known fact that there is a large amount of gold in the country in the form of jewellery and bullion. The major part of it is dispersed over millions of people of modest means for whom a small investment in gold is a social and religious necessity. Nevertheless, a sizable amount of gold, say, anything between Rs. 200 crores and Rs. 400 crores worth, must be in the hands of those who can afford to part with it. They would be well advised to do so, for, if India were lost to communism, their gold possession would be of no value to them. Wisdom and foresight, therefore, demand that they should hand over all their surplus gold to the Government.

Human nature being what it is, it would be highly unrealistic on the part of the Government to expect all such gold to be donated even for war effort. Accordingly, the Government should think of devising some ways and means of giving appropriate value for the gold surrendered. If I.M.F. rules stand in the way, the Fund authorities must be asked to exempt India from these rules, for a temporary period, as a special case for fighting the war against China. We have no doubt that the Fund will relent and give us the necessary exemption. A gold loan may then be issued; it will be a gold loan in the sense that, while subscriptions will be in gold, repayment will only be in rupees, so that posterity need not be saddled with an obligation, the discharge of which will be well-nigh impossible. It is true that this journal itself had contended that mobilisation of gold reserves with the people for financing the development plans was a wild-goose chase. But a war is different from economic development under peace. The security of the whole nation and that of every individual are at stake now. A well-conceived gold loan has, therefore, better prospects of success now than before the Chinese brutal aggression. It may induce many a middle-class family of even modest means to contribute at least a part of the jewellery it has for fighting the war.

Some method must be found to harness for war effort the resources hidden away by persons who have earned large sums in black markets and other illegal means and who have evaded taxes. The task will by no means be difficult and a discussion with some of our financial experts will be fruitful, provided the Government is willing to relax a little on the ethical side. It will, of course, amount to condoning black-marketeers, profiteers and tax-evaders. But large resources are needed to fight a ruthless and unscrupulous enemy. At present, a substantial part of this ill-gotten wealth is chasing scarce goods, besides being frittered away in conspicuous consumption. To this extent its effect is inflationary. A large portion of this black money is invested in gold and other precious metals (as well as stones), thereby encouraging smuggling. Another portion is held abroad. It is worthwhile to provide facilities for converting all this black money, or as much of it as possible, into white, as a means of finding the resources for prosecuting the war. Those who have foreign exchange may feel encouraged to hand over at least a part of it to the Government. Those who have gold may sell it in the open market and use the proceeds to be converted into white. In that event, the price of gold will go down which in turn will discourage smuggling. It may be recalled here that, when the military regime took over the Government in Pakistan, it took some practical steps in this direction which yielded sizable dividends.

The list for the National Defence Bonds announced on Wednesday this week will open on 10th inst. The terms of this new issue are a little more favourable than the return that can be had on existing Central loans of comparable maturity. The Defence Bonds carry interest at 4½ per cent and are repayable at par after 10 years. As the issue price is also at par, the yield is 4.25 per cent per annum, as against 4.09 per cent that is available on the existing 4 per cent 1972 loan. The Bonds will be on tap until further notice. A special feature of this issue is that the tax on interest will not be deducted at source, so that even small investors can subscribe to it without having to bother about getting refund orders from the tax collectors. Only, they will have to declare the income in their tax returns and pay the tax after they are duly assessed by the income-tax officers. This facility is not available on investments in existing Government loans and interest due is paid only after deduction of tax at 30 per cent. It is needless to add that for small investors whose rate of taxation is less than 30 per cent, the yield on the Defence Bonds will be correspondingly higher than 4½ per cent. These bonds are an ideal form of investment for those investors who do not have the patience to wait for 10 or 12 years to realise the full rate of interest that can be earned on small savings certificates and deposits. Some, however, are of the view that the bonds are not as attractive as medium-term fixed deposits with banks are to small savers. The banks, it may be noted here, are offering without deduction of tax 4½ per cent per annum on four-year deposits and 5 per cent per annum on five-year deposits. The bulk of the support to National Defence Bonds, however, will have to be from institutional investors such as the L.I.C. and the banks. At the moment, the banks do not have much surplus funds left. The usual busy season is about to start in a couple of weeks and, from then on right up to the end of April, banks' resources will be fully taken up by trade and industry. Further, the latest credit curbs announced by the Reserve Bank are unlikely to induce the banks to absorb any sizable amount of Defence Bonds. Accordingly, one should not expect any spectacular response to the Bonds in the first six months of their issue, unless, of course, there is heavy deficit financing resulting in a sharp rise in the deposits of banks.

The new series of small savings certificates, designated as Defence Deposit Certificates and National Defence Certificates, also offer a better return than their existing counterparts. The latter, for instance, give a yield of 6.25 per cent per annum simple interest or 4.75 per cent compound, though one will have to hold them for a period of 12 years. This represents an increase of ½ per cent straightaway. Since provision has been made for converting the existing deposits and certificates into new ones, those who have supported these issues hitherto need not feel that they have been let down. It would have been conducive to the success of these new issues had the Government doubled the limits upto which one could invest in them. Even now it is not too late to make the necessary amendment. After all, the Government's primary objective is to raise as much funds as possible. It is true that most of the rich people will try to increase their holdings in these certificates, as the return on them is tax-free. But the consequent loss of income to the Treasury will be negligible as compared with the sizable capital funds it can thus raise. A new series of bearer Prize Bonds, repayable at a premium *plus* bigger prizes, has also been announced. This should attract those investors who wish to try their luck at earning a large sum in one stroke without running the risk of losing the principal and interest. At the same time, they can have the satisfaction of having contributed their mite to the war effort.

NATIONAL DEFENCE BONDS

The terms of the National Defence Bonds appear to have been hurriedly drawn up. As the Bonds will be on tap, there will be as many maturities as there are working days in a year. For instance, the Bonds sold on 10th November will fall due on 10th November 1972, those on 11th November on 11th November 1972 and so on. This will cause confusion and hardship in marketing the Bonds and even a loss to the investor. But this can be avoided. The Reserve Bank has only to look back and find out how loans were being sold on tap during the last war. The selling price has to be adjusted week after week for covering the accrued interest from the first day of issue. We have no doubt that the Bank will announce in good time the schedule of selling prices for the Bonds for weeks following the week when the list opens.

The people of this country will have to bear in mind one important fact. It is that the success of the Government's new borrowing programme depends on their willingness to reduce consumption and divert their savings to the new Defence bonds and certificates. They may, if they so like, invest their savings in bank deposits and the banks in turn will use them for productive purposes, besides buying war loans. The basic need is that they should spend less and save more. Austerity all round should be their watchword. By doing so, they will be benefiting themselves and the nation alike. The real resources which they do not consume will be available for fighting the war forced on us by the Chinese. There will be less inflation and a comfortable nest egg for the future. In fine, by deferring consumption, the people can defend the country against the aggressor more effectively and also themselves against price increases and profiteering.

A part of the surplus goods saved by restraining consumption and leading a frugal life will undoubtedly be available for earning foreign exchange through exports. But it is as clear as daylight that India cannot fight the Chinese backed, albeit behind the scenes, by Soviet might. The time will soon come, if it has not already, when the Government will have to make up its mind to join hands with the forces opposed to China-Soviet imperialism and expansionism. It would be mere wishful thinking to believe that Russia would give military assistance to India for resisting its biggest ally, China. The Indian economy would be wrecked—and that is one of the objectives of China—if it were to rely on exports and borrowings for buying arms and ammunition from abroad Our fight against China is a fight for democracy all over the world. Other democratic countries in the free world have readily conceded this contention. Only the dictators in the non-aligned countries are wavering. Already the U.S. and the U.K. have most graciously and touchingly hastened to our rescue. They have expressed their readiness to stand by us. United we stand, divided we fall. That is the basic principle of collective security which the West has promoted against international communism. China has clearly taught that lesson to the powers-that-be in this country. It would be sheer folly not to profit by it before it is too late.

FASHIONING A NEW OUTLOOK

(By Our Delhi Correspondent)

PRIME Minister Nehru has repeatedly declared that a nation's defence potential is to a large extent the sum total of its industrial strength. In the past few days, the Prime Minister has been emphasising how his and the country's ideas had been fashioned in the past decade for peaceful endeavours. Now the war, forced on the nation by the Chinese, also brings a compulsory and revolutionary reorientation of economic, political and social concepts held dearly so long by many leaders. The menacing military advance by the Chinese is tearing to shreds a fundamental Nehru concept of developing the country without brutality, without the harsh and painful experiences which England, Germany, Japan or Russia underwent. The Chinese communists have been the most ardent advocates of a brutal system for quick development and the anomaly or tragedy of the situation (as Mr. Nehru calls it) is that the military measures now being organised in the country will carry with it an essential element of brutality, if the war effort is to succeed. The difficulties in this transformation in thinking among the leaders accounts for the apparent groping in the dark over economic policy in Delhi in the few days since the massive Chinese onslaught began.

Mr. Morarji Desai's initiation of principles for mopping up national resources to meet the emergency will soon be followed by detailed programmes for action. But these only touch the fringe of the problem, according to several Congress members of Parliament who are already in the capital. One M.P. said to this correspondent that it would not be enough to depend on voluntary gold contributions alone. If the Government expects to get hold of a substantial part of the estimated Rs. 4,000 crores worth of gold hoards and savings and jewellery in the country, it will, be necessary, according to him, to offer an inducement like special defence bonds against gold redeemable after some years. By the time Parliament meets next week, the National Development Council would have formulated the firm principles for diversion of recources for the defence effort—first for the import of sorely needed arms (which have already started coming into the country) and then for speedy and intensive manufacture of modern military hardware.

The Steel Minister, Mr. Subramaniam, and the Transport Minister, Mr. Swaran Singh, will have two tough assignments in co-ordinating industrial and transport arrangements to meet the military needs. Mr. Subramaniam has already launched steps to overcome the lag in the production schedules of the Durgapur and Rourkela plants and it is expected that the British and German firms guiding the projects will support the expansion plans without entering into new controversies. Stocks of motor trucks and jeeps have already been frozen for needed allocation for defence purposes. Fortunately, the planners had already launched projects to increase many-fold the production of automobile tyres, far beyond the original plan estimates. Licences had been issued in the past few months for new plants and for the expansion of existing factories. Some of the existing factories were not utilising their capacity in full, but this lacuna will soon be overcome through larger imports of rubber.

A major reorientation of economic policy may have to follow the Soviet declaration in support of the Chinese stand. Although the Soviet Union says that economic assistance to India will continue, in materials of strategic value, Soviet supplies will be impossible to obtain. By a twist of circumstance, some of the major Soviet-aided projects fall in the field of industries with great strategic importance. The refinery at Barauni, which the Government wanted to expand soon after it reached its first stage capacity of two million tons, the Nunmati refinery expansion and the new public sector plant in Gujarat were all to be with European communist assistance. In view of the shattered illusion about Soviet neutrality in the Sino-Indian dispute, it is hard to expect the Government to continue with the folly of putting all public sector oil barrels in the Soviet installations. Expansion of existing company refineries will anyway be far quicker than seeking to build new plants which also will be needed. Over long-range economic development, there were major differences between the oil companies and the Government, and one senior oil company official tells me that the Government should "have no doubts about obtaining an expanded contribution and disciplined co-operation from the oil companies" in this time of crisis.

A sustained effort is also expected in improving the railway transport facilities in the eastern region already riddled with bottlenecks but now called upon to handle large military supplies. The Railway Ministry is studying a scheme to speed the electrification of traction in the region.

TREND OF SHARES

WEAKNESS STILL PERSISTS

(From Our Own Correspondent)

BOMBAY, *1st November*

DESPITE the numerous measures taken by the authorities of the principal stock exchanges last week to stem the rot created in the markets by heavy selling following the Chinese aggression (*vide* page 716 of *Commerce* dated 27th October), weakness persisted in the markets this week also, owing to almost complete lack of buying interest in view of the extremely unpredictable and disturbed political and economic situation in the country. The official statements, underlying a shift in economic planning from a peace-time to a war-time requirements, left marketmen anxious and even bewildered and scared away prospective investors and speculative buyers, notwithstanding the rather attractively low levels to which equities have sunk. All sorts of fears and apprehensions over the border war and the measures to meet it, which would inevitably lead to some heavy pressures and burdens on the economy and the people, influenced the market sentiment. With support lacking and sellers contained by the market authorities, trading was dull and thin. Even reports that most of the leading Western countries were prepared and had already started to air-speed arms and ammunition to this country to enable it to fight the Chinese failed to revive enthusiasm among the operators. Sentiment at close was dampened further by the decision of the Reserve Bank to tighten credit control well in advance of the start of the busy season. It was feared that the tighter credit control which eliminates the fourth tier of unlimited accommodation to commercial banks by the Reserve Bank at 6.5 per cent, would restrict the availability of funds for financing carry-over of business in shares. Already, due to the disquieting political situation, private financiers have tended to withdraw from share markets.

The policy of the market authorities to arrest the downward trend in equities found further extension in the past few days. On Thursday, 25th October, the Committee of the Calcutta Stock Exchange announced a series of new measures. It decided that, barring business of a squaring-up nature, all day-to-day jobbing business in cleared securities would be suspended until further notice. Three additional measures to govern trading in cleared securities were also introduced by the Committee. These are: (i) fixation of minimum prices for scrips on the forward list for the then current settlement at the levels at which they had closed on 24th October, (ii) fixation of making-up prices at levels to be chosen by the President of the Exchange, and (iii) sales against fresh purchases to be made only with the permission of the President or Vice-President of the Exchange.

MARKET GOSSIP

Our customary feature "Market Gossip" appears on page 796.—ED.

As for the non-cleared securities (other than Government securities and debentures) the Committee decided that (i) minimum prices would be fixed at the closing levels of such securities as on 24th October, until further notice, (ii) in respect of hand delivery transactions of such securities, the seller must deliver the securities on the first delivery day following the third business day from the date of the contract, failing which the buyer must buy the securities on the next business day on spot delivery basis against the seller without reference to the Arbitration Sub-committee and must report to the Committee whether he had done so or not, and (iii) a sub-committee had been constituted to review, revise or revoke the minimum prices for such securities.

The Committee also decided to curtail the trading hours in the market from the normal four hours (12 noon to 4 p.m.) to 2½ hours (12 noon to 2-30 p.m.) on all business days, except Saturdays. No business, even on telephones, before or after the official trading hours was to be allowed by the Committee.

In order to prevent member-brokers from effecting the carry-over of business of some of their clients holding big positions through inter-client understanding and adjustment outside the market with a view to escaping the markings and circumventing other restrictions imposed on the day-to-day business, the authorities of the Bombay Stock Exchange asked such member-brokers today to deposit special margins on outstanding business of such of their clients. The margin would vary from broker to broker, depending on the quantum of business of the big clients. It was, however, thought that the margin would amount to anything from Rs. 2 lakhs to Rs. 20 lakhs for those brokers who have entertained such big clients.

Following the aforesaid measures, the Committee of the Calcutta Stock Exchange authorised the President yesterday to fix the carry forward charges at 9 per cent. The President also ordered that there would be compulsory carry-over of unadjusted business by the respective parties for the next (that is, now current) settlement. Due to these measures, the last settlement passed over smoothly yesterday.

These special measures are an offshoot of the curbs preceding them on any fresh sales. As no fresh sales were permitted in the market, the private parties, financing the carry-over of bull positions from one settlement to another on the strength of their investments, would have either withdrawn from the market or insisted on giving delivery of their holdings; in either case, carry-over charges would have shot up. Anticipating such a contingency, the Committee announced the special measures before the settlement and ensured a smooth carry-over of the unadjusted business.

Similar measures are expected to be taken by the Governing Board of the Bombay Stock Exchange before the current settlement ends on 9th November. For already the charges for late carry-over against the last settlement which ended on 24th October are reported to have shot up generally by as much as 100 per cent from the normal carry-over charges in the regular session on 24th October. In the case of Tata Steel Ordinary, the carry-over charge which was only 56 nP on Wednesday, 24th October, shot up lately to Re. 1.50, that is, by about 200 per cent. In the case of National Rayon and Century, the *badli* rate expanded by 180 per cent from Re. 1.75 to Rs. 5. The rise in these rates reflects the anxiety of the private *badli* operators to withdraw from the market before the market authorities bind them to doing *badli* operations for the current and future settlements by adopting measures similar to those introduced in Calcutta. Once the special measures are adopted and *badli* rates are fixed by the Governing Board in Bombay, the operators will be tied down to their past commitments and will be obliged to repeat the same, until such measures are withdrawn.

Meanwhile, the measures adopted by the various market authorities have averted further bear raids, though at the expense of liquidity of markets. Some marketmen feel that the measures are excessive. There are, however, others who feel that any relaxation will be unwarranted by the current political situation. Further, the measures are designed to protect banks which have large advances against shares and securities. It may be noted that bank borrowings against shares have to be supplemented by cash deposits, or additional collateral if share prices fall sharply.

* * * * *

In dull trading, values on Dalal Street moved both ways to close with generally small variations either way over the week. The announcement of the I.I.S.Co's final dividend of 80 nP gross on Tuesday bringing the total, together with the interim of 80 nP declared earlier, for the year ended 31st March 1962 to Re. 1.60 gross per share, that is, the same as in the previous year, disappointed the marketmen who had all throughout expected a token increase in the dividend. The preliminary working results of the Company for the year show that gross profit improved from Rs. 9.96 crores to Rs. 12.54 crores, showing a rise of 25.87 per cent. Depreciation has claimed Rs. 3.35 crores (Rs. 2.96 crores a year before) and taxation Rs. 3.96 crores (Rs. 1.66 crore). A sum of Rs. 2.98 crores (Rs. 3.11 crores) has been ploughed back to reserves. Following the maintenance of the dividend, despite higher profit, Indian Iron continued to be depressed and finished the week with a loss of 68 nP at Rs. 23.28. Tata Ordinary closed with a loss of Re. 1.75 at Rs. 121.50 *ex-div.*

Textiles were generally lower. Standard were down by 10 points at Rs. 795, Century by four points at Rs. 567 and National Rayon by Rs. 5.50 at Rs. 426. Swan fell by Rs. 27.50 to Rs. 257.50 and Khatau by Rs. 18.80 to Rs. 390 *ex-div.* However, Svadeshi rallied smartly from Rs. 236 to Rs. 259, but reacted to close at Rs. 239.50, as against Rs. 234.50 a week before. Chemical shares were extremely weak, with Indian Dyestuff disclosing a loss of Rs. 27.50 at Rs. 385 and Colour Chem of Rs. 37.50 at Rs. 335. Bombay Burmah, in the Miscellaneous section were down by seven points at Rs. 602, Hindustan Motors by 64 nP at Rs. 16.40 and Premier Automobile by Rs. 10 at Rs. 96. With the exception of Voltas which gained Rs. 6.50 at Rs. 237.50, Engineering issues showed small losses. Electrics were down again, especially Tata Power which lost Rs. 22.50 at Rs. 1,108.75. Cash scrips were quiet.

* * * *

The special margins imposed on sellers last week induced some short-covering in Calcutta, and as a result, values finished with small gains. Activity was, however, confined to some selected counters. Among Forward shares, Birla Jute gained 75 nP at Rs. 30.75, Howrah Jute 37 nP at Rs. 19.37, J.K. Cotton 75 nP at Rs. 15, Dunlop Rubber 44 nP at Rs. 36.44, G.K.W. 50 nP at Rs. 35.37 and Indian Cable 56 nP at Rs. 35.06. In the Cash section, trading was confined to some Miscellaneous issues and selected Tea and Paper shares. Net changes were, however, small. A few exception to this trend were Hindustan Aluminium which recovered 56 nP at Rs. 13.81, J.K. Synthetics which gained 25 nP at Rs. 12.44 and Nagri Farm, among Teas, which improved from Rs. 25.44 to Rs. 27.

* * * *

The Madras Stock Exchange continued to be easy. Textiles lost further ground, with Laxmi shedding three points at Rs. 143, Travancore Rayon 65 nP at Rs. 28.85 and S.I. Viscose Rs. 3.50 at Rs. 144. Miscellaneous issues were depressed, with F.A.C.Ts. moving down from Rs. 7.40 to Rs. 6.85, Mettur Chem. from Rs. 13.85 to Rs. 13.25 and Travancore Chemical from Rs. 22.62 to Rs. 21.75. Aluminium Industries showed a loss of 25 nP at Rs. 23.50, Ashok Leyland of 20 nP at Rs. 7.55 and Orissa Cement of 25 nP at Rs. 15.25. Among Sugars, E.I.D. were down by Re. 1.25 at Rs. 39.50, India by 75 nP at Rs. 10.25 and Travancore by 55 nP at Rs. 6.95. Among Plantings, the only noticeable changes were a gain of 56 nP in Peermades at Rs. 21.75 and a loss of 55 nP in Consolidated Coffee at Rs. 16.30.

4¼ PER CENT

NATIONAL DEFENCE BONDS

Subscriptions tot he Bonds will be received at the following places with effect from 10th November 1962:—

(a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
(b) Branches of the subsidiary banks of the State Bank of India conducting Government Treasury work; and
(c) Branches of the State Bank of India at other places in India.

Subscriptions will be in multiples of Rs. 100/- and will be paid in the form of cash or cheque. Interest will be paid half-yearly at the rate of 4¼ per cent per annum and the Bonds will be repaid at par after 10 years from the date of sale. The interest paid will be liable to tax but tax will not be deducted at source in case of Bonds held by individuals.

UNDERWRITING CAPITAL ISSUES

ANALYSIS OF TRENDS IN LAST SIX YEARS

ALONG with the spurt in new capital issues in India during the last two years, both the number of underwriters and the amount of capital underwritten by them have improved considerably. Thus, the actual number of new capital issues went up from only 18 in 1956-57 (year ended March) to as many as 51 in 1960-61 and the aggregate amount of issues from Rs. 10.70 crores to Rs. 33.72 crores. Although the number of issues increased further to 60 in 1961-62 (first year of third Plan), the total amount was lower at Rs. 26.41 crores. The number of underwriters and the amounts underwritten, respectively, were: 7 and Rs. 1.09 crore in 1956-57; 52 and Rs. 11.92 crores in 1960-61; and 86 and Rs. 13.60 crores in 1961-62. Thanks to the improvement in underwriting facilities, the overall picture for the six-year period from 1956-57 to 1961-62 turned out to be quite healthy and promising. During this period, 185 issues for an aggregate capital of Rs. 118.19 crores were made and underwritten to the extent of 40.3 per cent, or Rs. 47.72 crores, by 181 underwriters. The number of stock and share brokers connected with the issues was 16 in 1956-57, 76 in 1960-61 and 89 in 1961-62; for the six-year period, the total was 252. The progressively greater underwriting and broking facilities underlined a sense of robust confidence, especially of investors, in the Indian economy and toughened, at the same time, the sinews of India's growing and yet to be fully developed capital market.

Although the percentage of capital underwritten to capital issued shows an improvement from a mere 10.1 in 1956-57 to as much as 51.5 in 1961-62, it has expanded in an uneven and rather erratic fashion. In 1957-58, for instance, the percentage was 54.3 (incidentally, the highest level for the six-year period), but, in the next year, it declined by 20 points to 34.1, recovered to 46.0 and was down again to 35.3 in 1960-61. This irregular trend was not, however, due either to plentiful underwriting facilities in the different years or to lack of them. The trend was influenced mainly by two important factors concerning the total capital issued. First, the capital issues were made in the light of the prevailing conditions and sentiment in the market, influenced primarily by the taxation and budgetary policy of the Government in a given year, as well as by political, corporate and other factors. Secondly, certain capital issues were so well anticipated in the market that the promoters did not find it necessary to have them underwritten. An illustration of the first factor is provided in the capital issues during 1957-58 when the number of issues declined from 18 to 12 and value from Rs. 10.70 crores to Rs. 4.86 crores, as the market sentiment was affected by the heavy additional taxation under the November 1956 supplementary and May 1957 budgets. Out of the Rs. 4.86 crores issued, Rs. 2.64 crores were underwritten by four underwriters and the percentage of capital underwritten to capital issued spurted to 54.3 from 10:1 in the previous year.

The aforesaid details constitute the findings of a research study, entitled "Capital underwriting in India," made by Dr. G. Balakrishnan, Senior Research Officer in the Research and Statistics Division of the Company Law Administration. The study covers 185 major capital issues announced by promoters of industrial public limited companies in the form of prospectus during the period from 1st April 1956 to 31st March 1962, which includes the whole of the second Five-year Plan and the first year of the third Plan. Out of the 185 issues, 125 were made in the second Plan period and 60 in 1961-62. The study is fairly comprehensive. Besides analysing the broad trends in the new issue market and noting the growth of underwriting facilities in the country, as noted above, it deals with the role played by the principal underwriters (I.C.I.C.I., I.F.C. and L.I.C.) during the six-year period, examines the extent of underwriting commission, assesses the scope for managing brokers, and gives a brief account of underwriting new issues in the U.S. and the U.K.

I.C.I.C.I.

Among the principal underwriters, the I.C.I.C.I. had executed, during the period covered by the study, agreements for underwriting Rs. 9.31 crores in the issues for a total amount of Rs. 13.34 crores. Out of the aggregate business completed of Rs. 9.31 crores, the Corporation actually underwrote Rs. 5.44 crores. It had to subscribe for shares of the value of Rs. 4.03 crores as a result of commitment for non-subscription by the public and had earned a commission of Rs. 19.40 lakhs. During the period of study, it underwrote some preference share issues made along with equity capital issues. Recently, however, the I.C.I.C.I. has recently restricted underwriting only to equity shares, because of the poor marketability of preference shares. The details of the underwriting business (in lakhs of rupees) done by the Corporation in each of the six years are as follows:

Year	*Business completed*	*Amount underwritten*	*Amount taken up*	*Commission, brokerage earned*
1956-57	177	60.00	75	1.42
1957-58	93	152.15	58	2.48
1958-59	218	183.33	45	3.44
1959-60	103	156.73	61	3.23
1960-61	172	41.50	123	6.75
1961-62	78	60.28	41	2.07

The figures relating to the amount underwritten and the amount taken up by the Corporation have to be read as part of the business completed in the previous years. From these figures, it is clear that, after showing an irregular trend in the first three years, business completed by the I.C.I.C.I declined in the next three years, notwithstanding the spurt in new capital issues in the last two years. The author of the study does not explain this setback. The ratio of commission and brokerage earned to amount underwritten fluctuated between 2.5 per cent and 1.6 per cent in the first four of the six years, shot up to 16.2 per cent (presumably as an exception) in 1960-61 and settled down to 3.4 per cent in 1961-62. The author of the study points out that, in all cases where a prospectus provides for payment of brokerage in advance, the Corporation insists that it should also be paid brokerage at the same rate on allotments in respect of applications made by or procured through it. This is said to have mainly accounted for the large amounts of brokerage earned by the Corporation as mentioned above. From the various transactions executed by the I.C.I.C.I., the author of the study has inferred that the Corporation also charges commission in respect of shares which it has already committed to subscribe for. Moreover, when it underwrites, it does not ask for a firm allotment. In case where it asks for the same, it does not claim any underwriting commission or even brokerage. It is also true that, where the I.C.I.C.I. is required to subscribe for shares against its underwriting liability, it stipulates that brokerage should be paid to it in the same way as banks and brokers are paid in order that all the underwriters are at par and none is dealt with unfavourably.

L.I.C.

Referring to the policy of the L.I.C. on underwriting, the author of the study has quoted the views of the Corporation's Chairman, Mr. B. K. Kaul, as reported in the local press. According to Mr. Kaul, the Corporation invested 'funds' when it 'underwrote' an issue and did not procure subscription for the issue, which was strictly the function of a broker. Consistent with this definition, the L.I.C. applied for the underwritten amount and accepted a proportionate allotment in case an issue was oversubscribed. During 1961 (the financial year for the L.I.C. is the calendar year), the L.I.C. decided to underwrite new shares worth Rs. 7.59 crores, applied for shares worth Rs. 4.28 crores and was allotted Rs. 3.86 crores. According to the L.I.C., the distinction between 'underwriting' and securing firm allotment lies in the fact that, unlike in the latter, the Corporation receives in the former no guarantee from the company of an allotment equivalent to that applied for by the Corporation. It would appear, therefore, the author of the study notes that the L.I.C. charges an underwriting commission on the purchase of shares by 'underwriting' or open application and firm allotment. According to Mr. Kaul, the Corporation was justified in charging a commission on shares received by it on firm allotment basis. In support of his contention, Mr. Kaul is said to have quoted at a Press conference Section 76 of the Companies Act and said: "Why should not the Corporation earn a little more for its policyholders, strictly within the terms of law? For, after all, we are not a charitable organisation." Readers will recall the recent controversy even in the Government over the L.I.C.'s underwriting policy in regard to commission and brokerage.

Up to 31st December 1957, the L.I.C. underwrote 21 issues involving an aggregate of Rs. 1.87 crore, comprising Rs. 23 lakhs of debentures and loans, Rs. 1.2 crore of preference shares and Rs. 44 lakhs of ordinary shares. Thus, a large part of underwriting by the L.I.C. was confined to preference shares and debentures, and such a bias continued well up to 1959. In 1958, the Corporation underwrote 19 issues, aggregating Rs. 2.74 crores and comprising Rs. 2.21 crores of debentures and loans, Rs. 43 lakhs of preference shares and Rs. 10 lakhs of ordinary shares. In 1959, nine new issues worth Rs. 120.8 lakhs, comprising Rs. 30 lakhs of debentures and loans, Rs. 70 lakhs of preference shares and Rs. 20.8 lakhs of equity shares, were underwritten by the Corporation. In 1960, the L.I.C. underwrote 14 new issues aggregating Rs. 233.90 lakhs, of which Rs. 115 lakhs were in debentures and loans, Rs. 51.40 lakhs in preference shares and Rs. 67.50 lakhs in ordinary shares.

I.F.C.

It was only in its tenth year ending 30th June 1958 that the I.F.C. first undertook underwriting business. From 1957-58 to 1960-61, the Corporation underwrote issues worth Rs. 4.22 crores and subscribed out of this for Rs. 1.42 crore as a result of non-subscription by the public. Together with the I.C.I.C.I. and the L.I.C., the I.F.C. underwrote in 1957-58 debentures worth Rs. 1.6 crore to the extent of Rs. 30 lakhs, in addition to the already outstanding loan of Rs. 45 lakhs from the company concerned. In 1959, the Corporation underwrote, jointly with two firms of stock and share brokers of Bombay, preference shares worth Rs. 50 lakhs. The Corporation's liability was to the extent of Rs. 37.50 lakhs. The Corporation also sanctioned an application for underwriting another issue of preference shares worth Rs. 50 lakhs. Preference shares worth Rs. 50 lakhs were underwritten by the I.F.C. to the extent of Rs. 34.75 lakhs in 1960. In that year, the Corporation also approved of two more proposals for underwriting issues of preference shares, of which one worth Rs. 20 lakhs was underwritten up to Rs. 10 lakhs and another worth Rs. 25 lakhs up to Rs. 15 lakhs. A loan of Rs. 25 lakhs was also sanctioned by the Corporation for one of the two companies. In 1961, the Corporation approved underwriting facilities for four proposals to the extent of Rs. 90 lakhs in equity shares and Rs. 142 lakhs in preference shares.

The aggregate amount which the I.F.C. agreed to underwrite in the three-year period from 1958-59 to 1960-61 worked out to Rs. 419.50 lakhs, of which actual underwriting was done up to Rs. 160 lakhs. Rs. 60 lakhs for equity shares and Rs. 100 lakhs for preference shares. As against these, the Corporation took up equity shares of Rs. 40.32 lakhs and preference shares of Rs. 66.87 lakhs. During 1961-62, the Corporation received applications for underwriting facilities aggregating Rs. 548.59 lakhs, composed of applications for equity capital of Rs. 494 lakhs and preference capital of Rs. 54.59 lakhs. Including the previous year's pending proposals, the Corporation approved of 11 proposals for underwriting Rs. 62 lakhs in equity shares and Rs. 10.50 lakhs in preference shares during 1961-62. The total amount of underwriting business approved by the Corporation up to 30th June 1962 came to Rs. 492 lakhs. One application for underwriting share capital for Rs. 13 lakhs was rejected by the Corporation. Nine applications for underwriting issues aggregating Rs. 214 lakhs were either withdrawn or lapsed, mainly because the promoters did not pursue their applications or failed to furnish the requisite information.

The foregoing account reveals that the I.F.C. has continued to opt for preference shares. This is attributable to the attractive return of 7 per cent, tax-free, or 9 per cent to 9.3 per cent, taxable. The author of the study, therefore, points out that the underwriting operations of the I.F.C. have characteristics akin to a loan rather than actual underwriting. This, he adds, may be due to the fact that the Corporation is mainly a lending institution and has only recently started underwriting issues.

According to the author of the study, since the underwriters make a detailed scrutiny of the financial position of the company concerned and study in detail the soundness of its project, they render a distinct service to investors who on their own may not be able to do such scrutiny and study for lack of resources, facilities, expert knowledge and time. Underwriting commission is a reward to the underwriter for rendering such service, in addition to bearing the risk involved in a new capital issue. To safeguard themselves against the risk, the underwriters also enter into an agreement with company promoters, covering such matters as loans and borrowings to be raised by the company for financing the project. The agreement, *inter alia*, provides that the managing agents, or secretaries and treasurers of the company concerned should undertake to make arrangements to meet any shortfall in resources and that the directors and promoters should subscribe for their shares before the issue is offered for public subscription.

State Financial Corporations

Among the State Financial Corporations, it is only the Madras Industrial Investment Corporation that has done any underwriting. Even here, the amount underwritten is found to be very small, being Rs. 5 crores. The Corporation underwrites about 20 to 25 per cent of the issues and insists that the promoters should take up at least 15 per cent. It also arranges for sub-underwriting by brokers.

Managing Broker

Who is a managing broker? The question has been answered by the author of the study thus: Till recently, a company was free to nominate its brokers, accept only those applications for shares which bear their stamps and pay them some brokerage. The position has, however, changed now following the revision in the rules of the recognised stock exchanges, under which equal opportunity has been provided to all the member-brokers of a stock exchange for subscribing to capital issues. Possibly to get over the new situation, company promoters and brokers have created a new agency of managing broker. It is also contended, the author of the study states, that the agency of managing brokers has grown owing to the realisation by the brokers that they deserve to be treated with special consideration for assisting companies in piloting their capital issues and providing them with contacts in the various financial institutions rather than be left to take their chance with others and be satisfied with brokerage on allotments made against applications bearing their stamps.

It has not been possible for the author to collect any information regarding the extent of remuneration paid to managing brokers and the duties actually performed by them in detail. However, in some cases, the managing brokers are known to have done virtually everything for the company, starting from the preparation of the prospectus, application to the Controller of Capital Issues and participation, and finally even getting the clearance to the issue with the stock exchange authorities. But whenever the company management felt itself competent to do some of these functions, the managing broker has come in only after the Controller has consented to the issue. The most important function of the managing broker seems to be to act as a liaison between the stock exchange authorities and the company management for obtaining quotations.

The number of underwriters who participate in one issue in the U.S. is found to be very high as compared with India. To illustrate, in the case of the U.S. Steel Corporation which had issued capital $300 million, there were 301 underwriters, whereas the number of underwriters in the biggest issue covered by this study in India amounted to nine. It is also seen that, whereas in India the rate of underwriting commission is about 2.5 per cent, it ranges from 5 per cent to 8 per cent in the U.S. In the U.K., certain issues floated recently carried an underwriting commission of 1¾ per cent to 5 per cent, as against a statutory limit of 10 per cent.

The study has also classified the capital issued during the period from the point of view of the location of projects for which the capital is issued. It was found that, out of a total of Rs. 118 crores issued during the period Rs. 22 crores were in respect of plants located in the Madras State. Thus, the Madras State leads the list, closely followed by West Bengal with Rs. 19 crores and by Uttar Pradesh with Rs. 17 crores.

DEFENCE OF INDIA ORDINANCE

IN view of the critical situation caused by Communist China's aggression on India's northern and north-eastern border territories, the President proclaimed, on the 26th October 1962, a State of Emergency under Article 352 of the Constitution. The proclamation was accompanied by the promulgation of an Ordinance providing for special measures to ensure public safety and interest and the defence of India and civil defence and for the trial of certain offences. Called the "Defence of India Ordinance 1962," this emergency measure is stated to be on the lines of the Defence of India Act which was in operation during the last World War (1939-45). While the Government alone was in a position to decide whether the threat to the security of India was such as to necessitate the adoption of extraordinary measures, the public, for its part, was also quick to appreciate, emotionally and otherwise, the enormity of the external challenge. By all accounts, the nation seems to have spontaneously welcomed the declaration of "emergency" not only because it involves the adoption of a series of consequential measures for the effective security of the country but also because it connotes the determination of the Government to throw back the invaders.

The emergency powers, which have been acquired by the Central Government under the Ordinance and which may be exercised, as and when necessary, through notified rules and executive orders, are required for the efficient conduct of military operations and for maintaining supplies and services essential to the life of the community. As the Army's efficient performance at the front will depend, to a great extent, not only on its own morale but on that of the nation as a whole, there can be no two opinions about the powers assumed for preventing anti-national activities and for ensuring the safety of public installations. Civil disorder of any kind, it goes without saying, cannot be condoned, especialy in war-time when the nation's energies have to be concentrated on industrial and agricultural production for sustaining an enlarged flow of food, clothing and a variety of other manufactured goods to the armed forces. Anything like a total war effort presupposes the mobilisation of manpower and material resources in a variety of ways for meeting defence needs on the basis of an overriding priority. Considered from this angle, the powers acquired by the Government for regulating shipping, transport and communications, agriculture, trade and industry do not require any elaborate justification. But the public would also be justified in expecting that even war-time powers and controls should be exercised with the utmost possible restraint and moderation. In other words, the Government should rely more on persuasion than on compulsion for getting the community to make the required sacrifices. It is, indeed, heartening to find that the Central and State Governments are already canalising the upsurge of people's patriotism into constructive endeavours and voluntary offers of manpower and material resources for the defence effort.

All war-time controls, it may be noted, are socialistic to some degree or other. As the Government is wedded to the creation of a socialist pattern of society, the temptation to avail of war-time controls for a more permanent advance in the direction of socialism may be irresistible. For instance, in the matter of control of trade, industry and mining or in the matter of requsitioning and acquisition of any movable or immovable property, the executive authorities are liable to take undue advantage of the partial suspension of the relevant fundamental rights under the Constitution. These are only possibilities. But, happily, these are least likely to become actualities, for the Ordinance has provided sufficient safeguards against possible excesses and arbitrary exercise of emergency powers. The provision relating to the compensation payable for the acquisition of any requisitioned immovable property, for instance, is certainly fair. The relevant clause lays down that the compensation shall be "the price which the requisitioned property would have fetched in the open market if it had remained in the same condition as it was at the time of requisitioning and been sold on the date of acquistion, or twice the price which the requisitioned property would have fetched in the open market if it had been sold on the date of the requisition, whichever is less." (Incidentally, it is not clear how the compensation payable for the acquisition of any movable property shall be determined.) So long as there are adequate safeguards in respect of compensation, no serious infringement of property rights may be said to take place. In the same way, such necessary restrictions as are imposed on individual freedoms in the interests of public safety, civil defence and national security will not be repugnant to the spirit of the fundamental rights enshrined in the Constitution.

COAL FOR INDUSTRIES

The iron and steel industry alone, it has been estimated, will require 25 million tons of raw coking coal by the end of the third Plan. Even if the coal industry's production target is achieved in full—which, of course, is by no means certain—a shortage of about two million tons in supplies to the steel industry is currently foreseen. Already, because of the extremely slow growth of coal production, the steel industry is receiving, by and large, an inferior quality of coal—generally a grade, sometimes even two grades, below the specification required for coking. Further, there is no uniformity even in the bad coal received, for its ash content varies very considerably. Owing to this lack of uniformity, blending of such coal with other coal and its processing in coke ovens become very difficult, making standardised practice in coke ovens impracticable and thus adversely affecting the efficiency and life of the ovens. While the steel industry's grievance is thus mainly about the quality of coal supplies, other consuming industries have been complaining about inadequate supplies, bad quality, and also uncertain and delayed deliveries owing to shortage of wagons.

An idea of the overall shortage in coal supplies this year for all industries is provided by some figures given in the presidential address of Mr. Darab C. Driver at the seventeenth annual general meeting of the Coal Consumers' Association of India held at Calcutta on 26th October 1962. The relevant figures pertaining to *all the coalfields* for the period January to June 1962 are:

	Wagons per day
Requirements assessed by the Coal Controller	8,127
Target fixed by railways	6,925
Actual loading	6,049

Even if the railways had supplied all the 6,925 wagons as targeted, they would have, according to Mr. Driver, moved only about 55 million tons of coal. Again, if coal production had progressed according to the third Plan schedule, the wagon position would have worsened still further. In his view, the failure of steel and coal production to increase as planned has saved the railways from further criticism covering the even more acute shortage of wagons that would have then prevailed. The railways cannot, therefore, claim that they have effected any positive improvement in coal transport. The Government is doubtless aware of the transport difficulties that may arise in the coming years. Hence its present proposals to supply annually a million tons of coal by 1964 to the Punjab from the Kashmir coalfields, to send Central India coal to Bombay and Gujarat, and to cater to U.P.'s needs partly from Singrauli coal mine by road which is to be ready by the end of 1963, partly from the newly-opened mines in Assam and partly through road-*cum*-river movement of coal to Allahabad with effect from 1963. These proposals are generally sound, except in so far as they relate to supplies to northern U.P. from Assam and to supplies through the road-*cum*-river route to Allahabad. It remains to be seen whether the Government will succeed in its two latter objectives.

As coal supplies to industries may not greatly increase even if the Government's aforesaid policy is successfully implemented, some of the constructive suggestions canvassed by Mr. Driver would need to be examined by the authorities. One of his suggestions is that the excise duty on furnace oil should be reduced in order to encourage its use as an alternative fuel. Another suggestion is that, besides the proposed washeries for coking coal for the steel industry, some washeries should be set up by the Government for washing non-coking coal for industries other than thermal power generation and brick-making. But this raises the question of additional financial allocation which may or may not be found feasible. Mr. Driver has also suggested the possibility of using trucks, instead of wagons, for transport of coal from coalfields to railway depots within a distance of 50 miles. As the practicability of this suggestion is by no means clear, a detailed study of it is called for.

EMPLOYERS ON BONUS

Few concepts in industrial relations in India have been so clouded by conflicting views and interpretations as bonus. And there is no other question in which the need for a clear understanding of the issues involved is more urgent. Emotion and economic facts have got so inextricably mixed up in this issue that, in spite of the existence of certain clearly defined norms governing bonus payment, bonus disputes continue to be a major source of industrial strife in the country. The Council of Indian Employers, jointly constituted by the two leading central employers' organisations in the country, namely, the Employers' Federation of India and the All-India Organisation of Industrial Employers, for representing the employers' case before the Bonus Commission has, therefore, done well to plead, in its memorandum submitted to the Commission, for consideration of the question from the economic angle, keeping in mind, at the same time, the need to ensure harmonious industrial relations. The memorandum covers only general issues affecting all industries and businesses in regard to the question of bonus. According to the Council, three principles should govern the approach to this problem:

1. The interests of the community are paramount and it would be unfair to deal with the claims of the industrial workers in isolation by ignoring the lot of the working class as a whole. (2) The long-term requirements of industry should be reconciled with the immediate needs of labour. (3) The arrangements to be evolved should give optimum satisfaction to all and increase the earnings of workers as well as efficiency and productivity of industry.

The memorandum deals at length with the problems faced by the various industries and underlines the need for maintaining and improving the competitive capacity of existing industries in foreign markets and for creating appropriate climate for establishing new industries so as to provide employment for the country's growing population. Two essential conditions for economic growth, it points out, are (1) augmentation of individual and corporate savings, so that they could be invested in productive outlets, and (2) improvement in the general level of efficiency. Improvement in living standards, which is the aim of planning, will not be possible, unless savings are mobilised and invested, and no savings will materialise if efficiency and productivity are not mantained at a level which will yield the requisite profits and surplus. The memorandum does not deny that the human factor is important, nor does it presume that the aspirations of industrial workers should not be given due weight. What it stresses is that the problem should not be viewed exclusively from a social or political angle, as such an approach is likely to jeopardise the ultimate economic goal. If, in the process, certain immediate short-term requirements cannot be satisfied in full, it should be accepted as inevitable and unavoidable in the larger interests of the country.

Since independence, various protective and promotional measures have been taken to safeguard the interests of workers. For various reasons, the memorandum points out, these measures have been largely confined to industrial workers, although they constitute only 5 per cent of the working population. Three trends are clearly discernible in the labour field in the post-independence period. They are: (1) An improvement in the conditions of work; (2) extension of the provision of welfare measures; and (3) progressive increase in wages along with partial neutralisation of increases in cost of living by the process of linking wages with cost of living index. Whether reckoned in terms of absolute figures or as a percentage of national income, wages of industrial workers have been increasing. Thus, according to the memorandum, during the period 1950-59, industrial employment increased by 27 per cent and the earnings of factory workers by 40 per cent. The share of industrial wages in the national income increased from 3.4 per cent in 1951-52 to 4.3 per cent in 1958-59. In fine, the lot of industrial workers is infinitely superior to that of workers in non-industrial pursuits who have received only a fraction of the attention showered on industrial workers.

Employers, the memorandum goes on to argue, do not desire that the standard of living of workers, or for that matter any section of the community, should remain static. In fact, public policy should, according to it, be attuned to a programme which would stimulate ambition to earn progressively more. But it emphasises that the community and the economy can support a higher standard of living only if it is preceded and continuously accompanied by an increase in productivity. If it is admitted, as it ought to be, that there can be no appreciable increase in emoluments without a corresponding increase in productivity, the country should concern itself with measures and incentives that will increase productivity. It cannot be argued that payment of bonus based on profit will increase productivity. If anything, the opposite is probably more true. By and large, bonus has failed to serve any useful purpose from the productivity angle. The Council is, therefore, perfectly justified in emphasising that the aim of the Commission should be to replace it, wherever possible, by a system of bonus related to productivity in a period of two years but not exceeding five years. It is upto each industry or unit to evolve its own production of productivity or efficiency bonus scheme.

Bonus, the Council submits, can best be conceived of as a payment in addition to normal wages or salary to employees for their direct contribution to efficiency or prosperity of the undertaking, such payment depending upon the different circumstances prevailing in different industries. This concept is a practical one and permits a flexible approach to evolve formulæ, with different bases, after taking into account the practices and preferences of employers and workers in each industry. The Council has, however, cautioned that in no one industry should different formulæ be applicable, unless otherwise agreed upon by bipartite agreements between workers and employers and that whatever bonus formulae or arrangements are ultimately decided upon in respect of private sector undertakings should also be made applicable to all units in the public sector engaged in the same industry.

The Council recognises that it may not be possible to effect forthwith this change and has accordingly suggested that, for the interim period, the Labour Appellate Tribunal formula should be improved to achieve simplicity. It further suggests that 25 per cent of basic annual wages should be fixed as the ceiling for bonus. In industries where, due to special reasons, bonus related to profits is paid by mutual agreement on a basis other than the L.A.T. formula, they may be allowed to continue it in the interim period. But in no case should the system of profit-bonus, avers the Council, be introduced in industries where it does not exist at present due to special features of the industry.

It is evident from the foregoing account that the employers prefer a system of bonus based not on profit, as is the case at present, but on productivity or efficiency. It is true that a bonus scheme which relates rewards more directly to effort and which has in it a built-in incentive for better effort is more scientific and better calculated to maximise output. But it is likely to be opposed by workers on the ground that such a scheme could justifiably be introduced only after the living wage has been reached. It is for the Bonus Commission to reconcile these contentions. In doing so the Commission will do well to bear in mind the basic considerations urged by the Council which, in our opinion, are unexceptionable.

WATCH INDUSTRY

Watch manufacturing is one of the youngest industries of the country, being no more than a couple of years old. India's breakthrough in this field has been undoubtedly swift, though not spectacular. The day appears to be not far off when the industry can cater to the bulk of the country's requirements. This, indeed, is a comforting thought to all except the watch smugglers who have had a flourishing business during the last few years in a situation of drastic import cuts. Stimulated by the protection afforded by the import restrictions, a few fair-sized units have come into being with foreign collaboration. They have a phased programme of manufacture, envisaging gradual increase in installed capacity and production with a corresponding increase in indigenous content. It is stated that the Government of India has already licensed watch manufacturing units with a total ultimate annual capacity of 1.34 million pieces.

The first watch manufacturing unit was put up in the public sector at Bangalore as an adjunct to the Hindustan Machine Tools. It has secured the collaboration of a well-known Japanese firm, the Citizen Watch Company. The Bangalore plant was commissioned in August 1961. It has been assembling imported components, but has plans to undertake the manufacture of components as well shortly. According to the phased programme of this project, the output will be stepped up progressively from 55,000 watches during the first year (with an indigenous content of 54 per cent) to 360,000 pieces at the end of the sixth year (1966-67). These watches will be of the full lever type.

The credit for establishing the first watch manufacturing project in the private sector goes to the Indo-French Time Industries Private Ltd., Bombay. The unit, which has already started functioning, has plans to increase its capacity from 90,000 pieces during the first year to 310,000 pieces (on a single-shift basis) by the end of the fifth year. Collaborating with this project is a French consortium, S.E.D.I.M. Two more units have been licensed in Bombay. One of these, the Asika Industries Ltd., seeks to produce 90,000 watches during the first year, which will be increased to 300,000 pieces by the end of the fifth year. The other unit will be put up by the Hindustan Equipment Suppliers Ltd. in collaboration with a French company, L.I.P. Besancon. Its initial capacity will be 82,000 pieces, which will be raised to 300,000 by the end of the third year. In addition, six schemes have been approved in the small sector, each with a capacity of 12,000 pieces per year. Three of them will be set up at Ludhiana, and one each at Chandigarh, Himachal Pradesh and Delhi. The type of watches taken up by the small units is 10½ and 11½ ligne, centre second, gents' full lever jewelled.

On top of these developments comes the news that some of the major Swiss manufacturers such as Favre-Leuba, Technicka and Henry Sandoz and Fils have offered to collaborate with Indian industrialists in the manufacture of watches. If this offer is finally accepted, it will open a new chapter in the development of watch industry in this country. Switzerland is the acknowledged pioneer in watch manufacturing and its collaboration will be of immense help to the domestic industry. There is, however, no denying the fact that the Swiss offer is rather belated. Japan and France have, as already shown, extended help to the domestic industry. And, if all the schemes go through as planned, India will be able to produce over 1.3 million watches within the next five or six years. The gap in domestic demand, therefore, is not likely to be very large. An indication of the domestic demand is provided by the Planning Commission's Panel on watches, clocks and timepieces. According to the Panel, the demand for watches at the beginning of the third Plan was of the order of one million pieces, and the likely demand at the end of the Plan will be 1.2 million pieces.

It is possible that the Panel's estimates are very conservative. The Planning Commission will do well to make a further study of the demand prospects and try to take advantage of the Swiss offer. Being the largest producers of watches in the world, the Swiss have a vast reservoir of up-to-date research facilities and technical know-how. India should, therefore, make an earnest effort to secure their technical collaboration and capital participation. It should not be forgotten, in this context, that the watch industry, being a precision engineering industry, is considered strategically important even by countries like the U.S. which has given high protection to its watch manufacturers against foreign competition. The workers employed by watch industry, when fully trained and mature, will be useful for making many delicate instruments. While it is, therefore, of utmost importance to promote Indo-Swiss cooperation in this field, there is also need for ensuring that the terms of collaboration are not onerous. Further, there should be no restriction on exports of watches produced in this country. The agreement should also provide for sufficient safeguards to the watch manufacturers who have already entered the field. While competition is a prerequisite for improving efficiency, it should not be wasteful. There is, however, no reason to be unduly concerned over this issue. For, while most of the present producers are engaged in the manufacture of standard types of watches, the Swiss manufacturers should be able to cater to the demand for superior varieties for the high-income groups and the defence services.

AMERICAN LETTER

WHAT IS KHRUSHCHEV UPTO?

MILITARY PREPAREDNESS INTENSIFIED

From Our Special Correspondent

NEW YORK, 29th October

SINCE my last despatch just a week ago, many things have taken place and the general public and business atmosphere has changed radically as well. The relative peace of mind has given way to tension. Here in the East the main concern is, of course, over Cuba, where missiles are poised in the direction of the United States according to official airplane photos which were published and shown to the General Assembly of the United Nations. Of almost equal concern has been the invasion of Chinese military forces into territories of India and the declaration of a national emergency by the New Delhi Government. As on previous occasions of declared and undeclared wars, the stock markets responded with violent ups and downs. On balance, prices are down. This condition, however, may not prevail for very long, if a full-fledged shooting war of whatever dimension should develop. And the chances are pretty good that it will. At Washington there is a crisis atmosphere. The forthcoming Congressional elections are all but forgotten.

The crux of the whole matter are the missile bases in Cuba which the United States insists have to be dismantled and destroyed. For the present, the Soviet Union has avoided a show-down by agreeing to comply with the U.S. demand. But it is quite probable that Khrushchev has other ideas in mind. It is incredible to believe that he has quietly submitted to Kennedy's firm stand with no motives other than his desire to avoid a head-on-collision with the U.S. Soon, time will uncover them. Meanwhile, the U.S. is not relaxing its military vigilance On the contrary, it has increased its state of readiness to meet any emergency that may arise.

Economic Implications

The war crisis has, of course, profound economic implications. The Secretary of Defence has been given the authority to increase the drafting of young men into the Armed Forces. He may also call up considerable forces of reservists whenever the situation requires it. This, in turn, will have a distinct effect on available civilian man-power and may change the somewhat unfavourable unemployment situation to a better ratio.

There have been vast troop movements here this last week by rail, over highways and by air. This means unexpected income for the railways, for the oil companies and for some airlines, in addition to the military transports which are involved in this and future movements.

All this is only the beginning. It is becoming increasingly obvious that Soviet retaliation is most likely to occur in other parts of the world and the stepping up of Red Chinese attacks against India may fit into this pattern. State Department spokesmen tell me that Washington would lend very sympathetic ears to requests for assistance of whatever sort from New Delhi.

There are other Far Eastern trouble spots and there is always Berlin. A conventional armament and accelerated missile build-up which seems inevitable, would benefit the heavy and the chemical industries materially. Like in periods of other threats of war and of actual conflicts, this is also almost inevitable as it would be for many other industries. All this, however, might not increase the profit picture.

In most previous such periods in the recent past, excess profits' taxes were enacted to prevent war-profiteering. At the same time, there would be accelerated write-offs for new plant and equipment which is badly needed anyway. Higher payrolls and greater industrial activity would naturally provide higher revenues for the Treasury which is also needed.

The Minus Side

On the *minus* side, there would be most likely another cycle of inflation and some of the luxury peace-time trades would suffer. Already, the very large cruise business to the West ... has been affected since the ship lines are ...ing to go anywhere near Cuba, the Wind... 'assage, Haiti, Nassau and the Dominican ... Airline traffic, too, is avoiding Cuban ... for obvious reasons.

... psychological side, it must be said ...esty that the decision to quarantine Cuba has come as a great relief to everyone here. Nearly 90 per cent of all people with whom I talked said, in effect, "it should have been done a year ago." During the discussions in the United Nations General Assembly and Security Council there was also overwhelming approval of the U.S. action as well as deep concern over the Sino-Indian situation.

So far, commodities have been sharply affected by the crisis and so are the international gold markets. The so-called war stocks have risen in price and if the situation increases in seriousness price upturns could be expected in many areas.

Atomic War Unlikely

All this assumes that whatever military ventures which may occur will not make use of atomic weapons. No predictions are made by anybody just what atomic destruction would be in terms of property. Official estimates by the Defence Department are that, in case of an all-out atomic missile attack, about 50,000,000 people would be killed in this country out of a present population of 187 million.

So far as property is concerned, wholesale destruction would, of course, affect the value of mortgages and securities held privately, or in institutional portfolios. Assets of insurance companies would not be large enough to pay claims, since most of their assets are in values which would have been destroyed.

The only foreseeable answer would be Government moratoria on debts and private and institutional obligations. It is a somewhat frightening prospect and this thinking is behind the insistence by the United States that nuclear missiles be removed from the island of Cuba which is only 90 miles from the United States mainland. The range from the already built installation even by intermediate weapons would reach to the Hudson Bay in the North and Mexico City and beyond to the South. This includes naturally all the most important industrial cities and population centres in between.

Tailpiece: It is an ironic anomaly in the present context that on 31st October four winners of the international "1962 Search for Peace" Essay Contest will be honoured here. The affair is sponsored by Letters Abroad, Inc., New York, a clearing house for adult international correspondence, in co-operation with the Voice of America. The winners are Mr. Sadashiv S. Chavan, 24, of Thana, Bombay, a Government employee; Miss Annettee Watney, 45, of Paris, France, a social worker with the blind; Mr. Martin Majier, 23, of Bor, Sudan, a university student; and Dr. Hugo de Castro, 45, of Fortaleza, Brazil, educator and Government employee. The essayists, it will be noted, come from all walks of life.—*All Rights Reserved.*

AUSTRALIA'S LARGEST COMMERCIAL BANK CAN HELP YOU TO PROMOTE TWO-WAY
TRADE WITH AUSTRALIA, NEW ZEALAND, AND FIJI

Want to sell? Want to buy? Want market information? The international Division of the Bank of New South Wales can tell you about the opportunities for trade offering with these countries.

The Bank's complete banking service includes such specialized facilities as trade introductions to buyers and sellers, industrial enquiries, economic and market information, and a complete travel service. The Bank is closely and constantly in touch with industry, business, and agriculture in the areas it serves through more than 1,100 branches and agencies.

LONDON LETTER

ECONOMY IN THE DOLDRUMS

HOT MONEY UNDER WORLD CRISIS

(*From Our Own Correspondent*)

LONDON, 26th October

ONE of the interesting results of the crisis over Cuba has been the relatively small effect on stock markets as compared with what one usually expects under such conditions. The industrial ordinary index (*Financial Times*) stood a week ago at 278. Today it stands at 271 and in between it had fallen no lower than 264; about half the loss had been recovered in one day as soon as the immediate tension was relaxed. It suggests that the feeling was that, however serious the crisis, it was not likely to lead to war. At the same time, the general consensus is that a state of uncertainty will continue for a long time, so that the markets are liable to remain sluggish. When one considers that the level of the index a year ago was near its all-time high of 365 and at the beginning of this year it was still 310, sluggishness can mean bumping along indifferently. For this reason, these indices will have less significance than usual of indicators of the economy and this condition will continue until the Cuban crisis is entirely resolved.

But there are other sphere in which worries about Cuba can have more marked results. What, for instance, of the vast funds of hot money held here with a Bank rate level of 4½ per cent? Are some havens likely to be considered better than others when nations stand on the brink of war, or, is the underlying feeling that war will not result likely to prevent any sort of precipitate action? The trouble is that movements of hot money do not have to be logical; it is enough for pressure on sterling to begin for a speculative position to build up. Switzerland would be a more than likely drawing point for funds and Britain might again find herself obtaining help from the International Monetary Fund. But it would not be because sterling is being held in favour of the dollar on this occasion—dollars, indeed, would be likely to be under as much pressure.

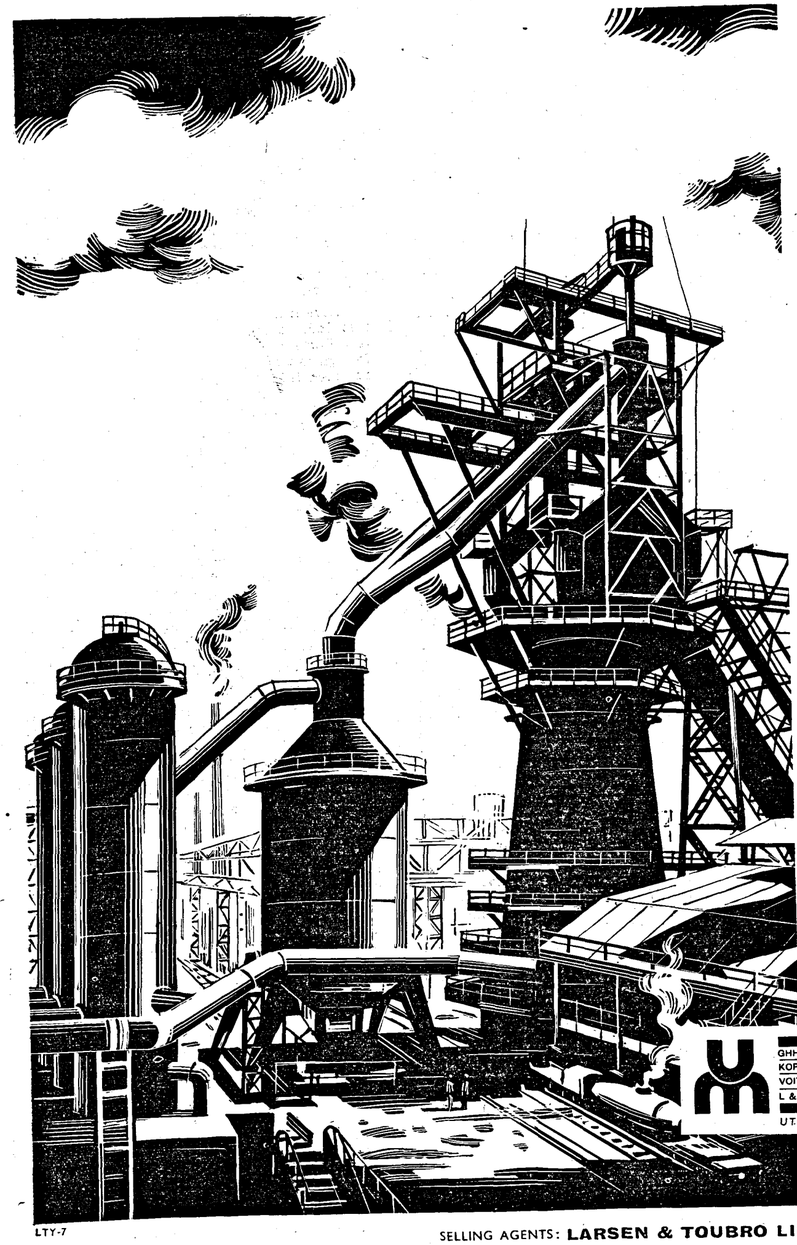
An Unhappy Record

This week there is no attractive domestic picture to counter the international scene. The only record to be struck is an unhappy one—the unemployment figures have topped the half million mark for the first time since the recession of 1958 and, with industry fearful that the volume of its unused capacity will continue to grow, one must expect the unemployment level to rise further between now and the end of the year. Against the figure of unemployment is a figure of 170,000 of unfilled vacancies. This indicator is better than that of the unemployed as a guide to the difficulty which firms find in getting the labour they want. A year ago, the total of unemployed was about 300,000 and exactly equalled the total of unfilled vacancies, and earlier the vacancies exceeded the unemployed.

But the rise in unemployed has only been partly due to a decline in the numbers employed. At this time of year, young people leaving school and looking for jobs will be taken up into industry if conditions are good or be a cause in pushing up the unemployment figures. A month ago, the number of new school-leavers out of work was as high as 20,000; that figure has since been halved, but at the expense of displacing older people.

A further comment that one must make on the present pattern of the economy is that unemployment is found principally in the north and north-west, the centres of heavy industry—but not engineering—and areas where the tendency to decay is stronger than that of expansion. This is a matter of great importance domestically as indicating that the movement of industry southwards in this country still continues. Its deeper significance is that, when areas of heavy industry are stagnant or decaying, the load put on the rest of the economy for expansion is increased. Add to this the fact that production is stubbornly refusing to move towards a new peak and one is tempted to question the targets of the National Economic Development Council, in particular, the basic target of an expansion in the economy of 4 per cent per annum. But, perhaps, the doldrums in which the U.K. economy is finding itself are autumnal and, in the New Year, they may dissolve into a new wave of activity. One can only add that, looking at the internal economy at the moment, one cannot quite see where this wave would begin.

THE TWO BIGGEST BLAST FURNACES
in the European Economic Community (EEC) were supplied by
GHH



Gutehoffnungshuette—GHH—are one of the oldest of the heavy engineering enterprises that have set the pace for Germany's industrial growth. Established over 200 years ago, they have designed and built some of the largest and most important projects in the country.

GHH have pioneered techniques and equipment that have revolutionised many industrial processes. Notably in the field of steel production, GHH commissioned the first blast furnace in the Ruhr, then still fired with charcoal, pioneered in the application of pure oxygen for iron and steel production, supplied the world's first LD converter as a vital accessory to modern steel production.

Their vast research and manufacturing resources enable GHH to keep a front-rank position in many technical branches. GHH products are exported to all parts of the world—plant and machinery for the iron and steel, cement, sugar, chemical and mining industries, aerial ropeways, floating docks...

At Kansbahal, Orissa, three leading German firms—Gutehoffnungshuette Sterkrade AG., J.M. Voith G.m.b.H. and Heinrich Koppers G.m.b.H. —and a reputed Indian company, Larsen & Toubro Limited have pooled their vast resources and experience to set up UTMAL, a major undertaking for manufacturing heavy machinery. UTMAL will play a significant role in the rapid industrialisation of our country, by supplying a wide range of industrial machinery.

PUBLIC DEBT OF CENTRAL GOVERNMENT

MR. C. H. BHABHA'S ANALYSIS

THE growth in the public debt of the Government of India in recent years was analysed by Mr. C. H. Bhabha, Vice-Chairman of the Central Bank of India Ltd., in an address delivered under the auspices of the Progressive Group last week. His reasons for trying to focus public attention on this economic problem in particular were: (1) the growing liabilities might cause great embarrassment to the nation in the not too distant future; (2) the subject was so intimately connected with the welfare of the succeeding generations that it merited a free and frank appraisal from time to time by the well-meaning citizens of this country; and (3) a critical analysis of the problem at this stage would help one to understand whether "we could go along the lines chalked out in the past and continue to adopt the methods we have followed hitherto." In order to confine his talk within the allotted time, Mr. Bhabha did not refer to, or include in the data quoted, the borrowings of State Governments which are all in rupees. The relevant text of Mr. Bhabha's address is reproduced below:

At the outset, I would like to mention that the Central Government's Public Debt consists of internal debt, that is, Rupee Liabilities created in India and foreign debt, that is, foreign obligations repayable to foreigners in foreign currencies and also include Provident Fund Balances, Treasury Saving Deposits, Postal Saving Deposits, advance payment of taxes, Depreciation Funds of Railways, Posts and Telegraphs, etc. All these liabilities or obligations excluding marketable securities and Treasury Bills are familiarly called the Unfunded Debt of India, although all of them, without exception, are interest-bearing obligations of our Central Government.

Now coming to the total amount of the debt liability of the Government of India, I should like to mention that, in 1939, the total debt of the then undivided Government of India amounted to Rs. 1,200 crores. This increased in 1951, that is, the first year of the First Plan, to Rs. 2,800 crores and today, in 1962, the total debt of our Union Government is estimated at Rs. 7,400 crores. In other words, our Central Government's Public Debt increased by over six times between 1939 and today and shows an increase of over 275 per cent during the last 10 or 11 years.

Short-term Obligations

Analysing these figures a little more, we find that, in 1951, the marketable securities portion of the total debt amounted to Rs. 2,088 crores, and today it amounts to Rs. 5,500 crores. It is somewhat worrying to find that the short-term borrowings of our Central Government constitute a high percentage of 40 per cent of these total marketable borrowings. This indicates that our Government of India has not been successful in raising its requirements from the savings and from market sources and, during the last few years, had to rely, to a larger extent than ever before, on short-term borrowings for its needs. In all fairness, nevertheless, I should mention that these short-term obligations would and should at some appropriate opportunity be converted into medium and long-term obligations, which, of course, in the first instance may have to be held by the Reserve Bank of India as its investment portfolio or as part cover against the notes issued by it.

Perhaps, at this juncture, it may be quite appropriate for me to mention the projection of our Central Government's Public Debt as at the end of the third Plan period. The total obligations of the Union Government today are, as already stated, of the order of Rs. 7,400 crores. In the course of the next two or three years, foreign assistance, including P.L. 480, on which our third Plan so greatly depends or relies, is estimated to be of the order of Rs. 3,600 crores; internal savings and market borrowings are computed to bring in a sum of Rs. 1,400 crores and, during the same period, the unfunded debt of India is expected to increase by a figure of Rs. 1,200 crores. In other words, the total debt obligations of the Central Government at the end of the third Plan would be of the order of Rs. 13,600 crores, a figure which, for the first time, will exceed the total annual income figure of our country.*

*National income is expected to touch Rs. 19,000 crores by the end of the third Plan period, so that the estimated total Public Debt will be Rs. 5,400 crores below the annual national income.—ED.

Quite often, while discussing the subject of India's debt position, a popular fallacy which is trotted forward is that the situation is not at all one to worry about or to cause great anxiety in this respect, if one considers the *per capita* debt of our country and compares that figure with similar figures of other countries in the world. Let me say most emphatically that such unwarranted comparisons of incomparables may only lull us into a sense of false complacency and lead us fast towards the much dreaded path of inflation and national bankruptcy. Undoubtedly India is a land bestowed with enormous resources. But, at the same time, the rate or pace at which the public debt of our nation is increasing is something which must cause great anxiety to all understanding and thoughtful people of our land. When thinking or considering the debt position of our country, it is not the hidden resources, nor the fortuitous find of gold or oil, nor the *per capita* rate of debt, particularly in a country where the population is growing by leaps and bounds and causes many jolts to our economic policies, but it is the growth of the nation's production year after year that is to be considered and compared with the growth of the Public Debt. Judging from that angle, we find that, whereas the annual income of our country at constant price increased from a value of Rs. 8,800 crores to Rs. 11,500 crores during the last 10 or 11 years, the proportion of increase of our Central Government's debt has been at an astronomical rate. In other words, the ratio of our Central Government's Public Debt to our annual national income which was 30 per cent only 10 or 11 years ago has shot up to Public Debt being almost 62 per cent of the nation's annual production of goods and services, i.e., annual income.

Growth of Assets

When thinking about the question of the Central Government's Public Debt, a very important feature which must be constantly watched is that of the growth of the Central Government's assets year after year. Before I come to the present day's situation, I should like to mention that, in 1939, the very valuable assets of our then Government of India amounted to Rs. 1,200 crores, a figure which almost equalled the total debt liabilities at that time of the Central Government of our country. Since then, the situation has worsened or deteriorated. Let me say here that I do not wish to be critical about the large investments made by the Central Government in recent times of the high order of Rs. 900 crores which hardly yields a return of ¼ per cent per annum. What I wish to point out is the growing gap between the interest-bearing obligations of the Central Government and the interest-yielding assets. In the year 1951, this gap was of a very small order and, at the end of the first Plan period in 1956, the gap had widened to Rs. 792 crores. At the end of the second Plan period, this gap had further widened to Rs. 1,300 crores. At the rate at which we are expanding our economy, it is quite likely that the gap would still widen to Rs. 2,500 crores at the end of the third Plan period, that is, the interest-bearing obligations would exceed the interest-yielding assets by that fantastically large amount. Imagine for a moment what the state of an individual or a corporation would be, if it had to bear the strain of the interest charges and the instalments of such a large amount which was not represented by sufficient earning assets. In that context I should like to remind you of the fact that, for reasons best known to our Government, the debt due from Pakistan, exceeding Rs. 300 crores, is classified in our Budget as interest-yielding asset, although all of us know too well about the probability or possibility of the recovery of this asset or part of it and also are well aware of the fact that no portion of the interest due on this so-called interest-bearing asset has been recovered at any time in the past or has been included in the revenue of the Central Government of our country.

Before I pass on to the External Debts of our Central Government, I should like to make a reference to the heavy interest charges which are provided in our Budget year after year. Naturally, along with the increase in the total debts of our Union Government, the provisions for debt charges in our Budget is bound to be of an ever-increasing nature. In 1951, the provision for interest charges on debts amounted to about Rs. 69 crores. This increased to Rs. 93 crores in 1956 and today is of the high order of Rs. 220 crores. No doubt these increases in their absolute give an idea of the amount of strain on our budgetary resources, but, in order to get a better picture, it would be necessary for us to show their rates to budgetary revenue of our Central Government. Looking at it from that angle, we find that, in 1951, the interest charges on debts, accounted for about 9 per cent of the total revenue of the Government of India; in 1956 the ratio was 13 per cent and, today, the interest charges account for about 21 per cent of the total revenue figures, although our revenue estimates for 1962-63 have increased to the high figure of Rs. 1,070 crores.

Foreign Debt

Now coming to the foreign debt of our country, I should like to remind you that, at the time of India's independence in 1947, this undivided country had amassed, through sweat, toil and tears, a huge foreign balance in foreign currencies of the order of Rs. 1,800 crores. Actually, this large amount lying with the foreigners was a source of embarassment to them. Like the other assets, at the time of the creation of the new State of Pakistan, a part of this very valuable asset had to be given to that State. Nevertheless, India started her new economic and political history with a large foreign balance of roughly Rs. 1,300 crores. In the course of the next three years or so, for various commitments and other purposes a good portion of this very valuable asset had been eaten into and, in 1951, that is, at the beginning of our first Plan period, India had a foreign debt of the order of Rs. 24 crores. This increased to Rs. 110 crores at the end of the first Plan period and, thereafter, has been increasing at a fast rate or pace, with the result that, today, India's foreign obligations repayable only in foreign currencies to non-nationals amount to a large figure of Rs. 1,200 crores. It is computed that, along with the commitments made and the needs of our programme and economic developments, at the end of the third Plan period, the foreign debt may exceed a sum of Rs. 2,500 crores, if not more.

Here it may be useful for me to remind you that India today is the largest borrower from the World Bank and that over 60 per cent of foreign assistance that has come to this country has been from the United States of America. As against all that, Russia and her satellites have only contributed to the extent of 7½ per cent of the total foreign debt of our country.

While on this subject I would like to mention the fact that it has been most difficult to estimate the strain of the foreign debts and foreign investments on our foreign exchange situation year in and year out. Through official sources we may be aware of the interest charges which are provided for these foreign obligations. Contrary to popular belief, these charges are at a comparatively higher rate as compared with the interest charges payable on obligations raised within the country. It is estimated that 25 per cent out of the total interest charges are for foreign obligations, although these obligations account for no more than 16 per cent of the total Public Debt of the Central Government.

All this foreign assistance was most essential in the context of our schemes of economic developments and regeneration. However, in the opinion of some impartial observers, quite a substantial bit has been used in current consumption, wasteful expenditure and unproductive projects. These observers feel that, in the years to come, it may not be possible for this nation to bear the heavy strain of the interest charges and the instalment repayments of these foreign obligations. Many of the projects on which quite a substantial part of our foreign borrowings have been employed may only bring returns or dividends after a long period. Since it is said often that more than 60 per cent of the borrowings from the World Bank has been employed in the public sector projects, an impartial enquiry about the capacity of these projects to bear the interest charges and instalment repayments of the foreign exchange portion consumed by them may prove useful and revealing to many of our countrymen.

While thinking about the foreign debt, a very important matter which must be kept uppermost in mind is that of repayment of these obligations. India's credit has always been very high in the world; her record has been grand; and never has there been an occasion for India to default any of her legitimately created obligations. All the more reason, therefore, that we should keep on continuously thinking about resources both for servicing of these foreign debts and for their repayments. Apart from some extraneous circumstances or from further friendly assistance or through arrangement for postponement of debts, the only correct and proper way to meet these liabilities is through vigorous exports of goods and services. In this matter, unfortunately, our record during the past few years has not at all been bright or encouraging. Not only have we not been able to come up to the targets fixed by our planning experts and others but we have also been systematically pushed out both from our natural markets and others developed during the last quarter of a century. Although the statistics for exports during the last three or four years show figures of an increasing nature, these have been nowhere near the estimated or expected figure of Rs. 750 crores which is the target per year during our third Plan period. Hence, in the first place, in the coming two or three years, we have to make up for the leeway of the past and at the same time try to go up to the targeted figure for our export of goods and services. As a consequence of this deficiency at present, India has been accumulating an annual adverse balance of payment on an average of Rs. 300 crores.

With the planned growth of our economy, it does not look creditable to try and balance our figures of payment through a process of indiscriminate slash of imports. This almost appears an amateurish experimentation. While the international trade as per the recent publication of the United Nations shows an annual increase of 2 per cent during the last decade or so, our total trade in the corresponding period hardly shows a fraction of that increase and at times indicates a tendency to slide backwards. What is necessary is that a complete re-examination of the cost structure of every one of our important national products should be undertaken and an urgent revision of all our policies should be made—policies pertaining to rationalisation, mechanisation, labour benefits, fiscal policies, etc. By that process, and that process alone, could our economy proceed on sound lines and ensure steadiness and help to our currency and finances.

Mr. Black's Views

With the best of intentions, many of our well-wishers and friends in distant parts of the world seem to feel that our capacity to borrow on traditional terms is well-nigh exhausted. In that connection, I would like to refer to a portion of the speech by no less than a person of the status of Mr. Eugene Black, President of the World Bank, at the Vienna meeting held in September 1961. He stated:

"A second and large group of countries in which I.D.A. is prepared to operate consists of those whose burden of foreign debt service is so high that, while they can borrow, on conventional terms, some of the external capital which they require to carry out their priority programmes, they cannot prudently borrow the whole of it. In these circumstances, you may find the World Bank making loans and I.D.A. extending credits at one and the same time. This, in fact, has happened with India, Chile, Sudan and Colombia, for example."

Let us nevertheless hope that this land of great tradition, culture and resources moves along a steady healthy path in the years to follow. For that purpose, a drastic revision of policies must be envisaged and along with that replacement of several main personages should not be ruled out. Not only a good deal of discontent is noticeable amongst the so-called vested interests and also that discontent seems to have spread to the common man in the distant rural area of our land. Hence, let us sincerely wish that something healthy and constructive is done before it is too late and before any of the evil forces overwhelm us and create a state of confusion and chaos in our land.

WORLD BANK'S NEW PRESIDENT

At a meeting held on 24th October, the Executive Directors of the World Bank selected Mr. George D. Woods as successor to Mr. Eugene R. Black, President of the Bank, who intends to retire on 1st January 1963. Mr. Woods also becomes, *ex officio*, President of the International Development Association and Chairman of the International Finance Corporation, the Bank's two affiliates.

Mr. Woods is an investment banker of long experience and international reputation. He was born in Boston on 27th July 1901, and grew up in Brooklyn, N.Y. He joined the New York investment firm of Harris, Forbes & Co. at the age of 17, and served with the firm until he joined The First Boston Corporation, an outgrowth of the Harris, Forbes firm, in New York in 1934. He has been Chairman of the Corporation since 1951. During the war, Mr. Woods served in the United States Army from 1943 to 1945, rising from major to colonel in the General Staff Corps. Before taking up his new appointment, Mr. Woods will resign the chairmanship of First Boston.

Mr. Woods has been closely associated with the operations of the World Bank for more than a decade, and has played a prominent part, as an investment banker, in the distribution and sale of World Bank bond issues since 1952. He has frequently given his time, without pay, to special missions undertaken at the request of the management of the Bank. In 1952, he visited India to help arrange the amalgamation of the Steel Company of Bengal with the Indian Iron and Steel Company, Ltd., as a prelude to World Bank lending for the expansion of Indian Iron and Steel's production facilities. He visited India in 1954 and Pakistan in 1956, to help local and overseas investors to form the Industrial Credit and Investment Corporation of India and the Pakistan Industrial Credit and Investment Corporation; these two institutions are now important sources of finance for the growth of small and medium-sized private industries, and each has received World Bank loans to promote industrial growth. In 1958, Mr. Woods served as financial consultant to the World Bank management in its settlement of the dispute between the United Arab Republic and the shareholders of the Suez Canal Company over the question of compensation for the nationalisation of the Canal.

Early in 1962, Mr. Woods was one of five investment bankers of France, Germany, the United Kingdom and the United States who agreed to serve on a voluntary basis as advisers to the International Finance Corporation, a World Bank affiliate which makes equity and other investments in new or expanding private industries in less developed countries. In recent months, Mr. Woods has been advising the Bank and I.F.C. on the establishment of a new privately owned industrial development financing institution in the Philippines which is expected to be formally established in the near future.

I.M.F. RESOURCES AUGMENTED

The resources of the International Monetary Fund have been augmented by the formal adherence on 24th October of the Government of the United States to the Fund's general arrangements to borrow. The United States commitment of up to $2,000 million raises to the equivalent of $5,650 million the amounts so far committed by the leading industrial nations of the world that have already adhered to the Fund's arrangements.

The Fund's general arrangements to borrow became effective on receipt of the United States adherence which raises the total commitments above the level of $5.5 billion necessary for bringing the arrangements into effect. Commitments have already been made by the Governments of France, Italy, Japan, the Netherlands and United Kingdom, the Deutsche Bundesbank and Sveriges Riksbank. The Governments of Belgium and Canada are also expected to announce their formal adherence when legislative approval has been obtained, and this will bring total commitments to the equivalent of $6 billion.

A main reason why the Fund has sought these additional resources was to equip it better for dealing with possible sudden and substantial shifts of funds from one country to another. The countries participating in the borrowing arrangements have undertaken to lend their own currencies to the Fund up to certain stated amounts, if this becomes necessary to forestall or cope with an impairment of the international monetary system. It will thus be possible in these circumstances to arrange for the prompt mobilisation of the resources needed to deal effectively with the situation.

Requests for drawings which would involve use of these arrangements will be assessed according to the Fund's established policies and practices on the use of its resources, and any currency drawn by a member from the Fund's supplementary resources will be repayable to the Fund as and when the member's problem is solved and in any event within three to five years. When the Fund receives repayment, it will in its turn repay the countries that made supplementary resources available for the drawing, but a country that has lent to the Fund may receive earlier repayment if its own payments position deteriorates. The Fund will pay a charge of ½ of 1 per cent on each borrowing transaction, and also interest on the resources lent to it based on a formula which at present yields a rate of 1½ per cent per annum.

These provisions were incorporated in a decision which the Fund adopted and published in January of this year. This decision also provides that the arrangements are to remain in effect for four years, and may be extended. The amounts included in the arrangement and the countries participating may be reviewed from time to time and altered with the agreement of the Fund and all participants.

The Fund's decision was the culmination of long discussions in the Fund's Executive Board in the spring and summer of 1961, and subsequently at the Annual Meeting of the Board of Governors in Vienna in September 1961. Further discussions took place in Paris in the fall and winter months between the Fund and the representatives of the ten prospective participant countries. The Fund had previously strengthened its resources by means of a general increase in members' quotas of fifty per cent in most cases, which increased quotas from a total of $9 billion at the end of 1958, to a little more than $15 billion at the end of 1961.

"BANK OF INDIA BULLETIN"

The Bank of India Ltd. has just brought out the inaugural number of its new bi-monthly publication, entitled *Bank of India Bulletin*. This is a welcome addition to similar reviews of economic problems which some of the domestic commercial banks, more notably the United Commercial Bank, have been publishing for some time past. In fact, this was long overdue, considering the leading position held by the Bank of India.

Releasing the publication this week, Mr. T. D. Kansara, General Manager of the Bank, stated that the *Bulletin* would provide a forum for an objective discussion of developments having a vital bearing on banking. It will contain the findings of special studies conducted by the Bank's Department of Economic Intelligence and Statistics. It will acquaint the public with the various types of activities which the Bank undertakes, as well as the wide range of services provided to customers. The inaugural number is well-got-up and contains, among others, two special articles, one on problems of export finance and the other on the Indian Bankers' Seminar held at Bombay in July last.

The publication of the first issue of the *Bank of India Bulletin* on 1st November 1962 coincides with the opening of the Bank fifty-six years ago. In the foreword to this issue, Mr. A. D. Shroff, Chairman of the Bank, observes:

"Banking is becoming a highly complex as well as a very competitive business. Several developments having a vital bearing on banking are taking place at a rapid rate and the demands of the economy place increasing responsibilities on the nation's banking system. In providing financial resources for agriculture as well as industry and for domestic trade as well as foreign trade, banks have been called upon to play a major role. The *Bulletin* will provide a forum for the discussion of these developments in an objective manner."

It may be noted here that such publications abroad have, as Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India, says in his message of good wishes to the *Bulletin*, contributed in no small measure to an intelligent understanding among people of financial and economic problems and have earned for themselves a pride of place even in academic circles. If the *Bulletin* succeeds in effectively focusing attention on the wide and varied aspects of banking industry and in stimulating constructive thinking, it will have served the noble purpose for which the Bank of India has launched it.

WORLD BANK LOAN TO URUGUAY

The World Bank has announced a loan equivalent to $18.5 million to Uruguay for the improvement of road transportation. The loan will be used to rebuild to all-weather standards Uruguay's main north-south trunk highway, which extends from Montevideo, the capital and principal port, to Revera, about 320 miles to the north on the Brazilian border. It will also help finance a programme to improve the country's highway maintenance organisation and its operations and will provide funds for a study of Uruguay's future highway needs. Five commercial banks are participating in the loan, without the World Bank's guarantee, for a total amount of $365,000 representing the first maturity which falls due in March 1967. The loan is for a term of 15 years and bears interest at 5¼ per cent annually, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in March 1967. This is the first Bank loan to Uruguay. Earlier loans aggregating $71 million were made for the development of electric power and agriculture and for the expansion of telephone services.

GOVERNMENT OF INDIA

4 ½ per cent

Ten-Year Defence Deposit Certificates

(FREE OF INCOME-TAX)

Interest at the rate of 4½ per cent. will be payable free of income-tax annually from the date of deposit and will not be taken into account in calculating the total income of the Depositor for the purpose of income-tax.

The maximum amount that may be held in these deposits including the amount invested in 3½ and 4 per cent. Ten-Year Treasury Savings Deposits, will be—

	Rs.
(a) For an individual	25,000
(b) For an individual jointly with another	50,000
(c) For an association or institution donations to which are exempt from payment of income-tax under Section 88 of the Income-tax Act, 1961 (43 of 1961), and a local authority	1,00,000
(d) For institutions and associations other than Provident Funds and those covered by item (c) above	50,000
(e) For Provident Funds	No limit.

Deposits (in multiples of Rs. 50) in cash/cheque or in matured 3½ per cent. Treasury Savings Deposit Certificates will be received from 10th November 1962 until further notice. Such deposits will be refundable at any time after the expiry of one year from the date of deposit at a certain discount.

Applications will be received at the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi, branches of the State Bank of India and its Subsidiary Banks conducting Government treasury business and treasuries and sub-treasuries in India at places where there is no such office or branch of the aforesaid banks.

Deposit Certificates will be accepted for safe custody by Public Debt Offices and interest remitted to holders, if so desired. The Certificates will be transferable by deed and will also be eligible for nomination.

For full particulars please apply to any of these offices, branches or treasuries.

TURNING POINT IN WORLD COTTON?

CHANGE IN SUPPLY-DEMAND RELATIONSHIP

A REMARKABLE feature of the world cotton situation during the past six years has been the persistent tendency for disappearance to exceed production. As a result, stocks have been declining progressively, the drop in the past six years having been as much as 6 million bales (of 478 lbs. each). Thus from 24.57 million bales in 1957, world carryover stocks of cotton declined to as much as 18.8 million bales at the beginning of the current season. Consequently, world stocks of cotton are now lower than at any time in the last ten years. But, according to the International Cotton Advisory Committee, Washington, there are now indications that a turning point has been reached, thanks to the renewed upsurge in acreage and production of cotton during the current season. Coming as it does on top of the continuous increase in output during the past six years, this increase in production bids fair to reverse the supply-demand relationship. According to the Committee, this relationship has already been reversed in the U.S. where stocks showed an increase of about 700,000 bales last season and, on the basis of the latest estimate of production and consumption, an even larger movement is in the offing for the present season. This has given rise, in certain circles, to concern over the long-range outlook for U.S. cotton. The increasing competition from man-made fibres in the domestic market and between U.S. cotton and other growths in foreign markets are additional causes for concern. Further, renewed demands have been made by the U.S. textile industry for greater protection against textile imports.

The decline in world stocks was brought about last season in part by unusally small crops in certain countries. It is expected that the higher production envisaged during the current season would result in an increase in stocks, unless there is a noticeable increase in consumption which is at present considered unlikely.

World production of cotton is expected to set a new record in the current season. Preliminary estimates place global production at 49 million bales, as compared with 47.2 million bales in 1961-62, comprising 14.6 million bales in the U.S., 20.4 million bales in the rest of the free world and 14 million bales in Communist countries. Consumption, on the other hand, seems to have held stable at around 48 million bales in recent years and little variation either way seems to be in prospect during the current season. In fact indications are that the top of the present textile cycle may have been reached in the U.S. Consumption is expected to show a declining trend during the present season. Elsewhere in Western Europe and Japan, it is currently running at a level significantly under that a year ago. Even though there could conceivably be a resumption of the upward trend in some countries before the end of the present season, that is not, according to the Committee, likely to result in any significant difference in the season's total.

The following table indicates the supply and distribution of cotton during the past three years:

(In million bales)

	1959-60	1960-61	1961-62	1962-63
Opening stocks:				
United States	8.9	7.6	7.2	7.0
Other net exporters	3.6	3.2	3.5	3.5
Net importers	5.3	6.0	6.5	5.3
Total	17.8	16.8	17.2	16.7
Communist countries	3.2	3.4	2.5	2.1
World total	21.0	20.2	19.7	18.8
Productions:				
United States	14.5	14.4	14.4	14.6
Elsewhere	16.7	19.0	19.2	20.4
Total	31.2	33.4	33.6	35.0
Communist countries	16.0	14.0	13.6	14.0
World total	47.2	47.4	47.2	49.0
Consumption:				
United States	9.0	8.3	9.0	..
Elsewhere	22.2	23.3	23.4	..
Total	31.2	31.6	32.4	..

Grand total	48.4	48.1	48.2	..

An increase in carryover stocks would not necessarily be an unfavourable development in many countries, because stocks in net importing countries must be near the minimum consistent with the normal operation of the textile industry. Accordingly, under appropriate market conditions, a renewed upswing in consumption would eventually justify some increase in stocks. Thus, in India, the supply situation continues to be tight and some increase in stocks would indeed be desirable. In most net exporting countries also, stocks are at minimum levels, despite the year-by-year increase in production.

Under present circumstances, the only real imbalance between supply and demand would, according to the Committee, be in the U.S., where, on the basis of present estimates, stocks are expected to increase by a million bales. In part this is the result of a prospective increase in production but equally significant is the expected decline in disappearance. There is growing concern in the U.S. over the difficulties in achieving a permanent expansion in the market for U.S. cotton. The basic difficulty is competition from the man-made fibres and imported textiles and it is estimated by the National Cotton Council that, during the twenty months ended August 1962, cotton has suffered a competitive loss of 850,000 bales.

While the recent decision of the U.S. Tariff Commission against the imposition of an 8¼ cent equalisation fee on the cotton content of imported textiles is of primary concern to the domestic industry, it may also have, in the Committee's view, important repercussions on the whole of the U.S. cotton economy. In announcing the decision, the U.S. President stated that he was instructing the U.S. Department of Agriculture to give immediate attention to the formulation of a domestic programme that would eliminate the inequity of the two-price system on the American textile industry. He further indicated that he would recommend to the Congress legislation to achieve this end. In the export market, the real problem facing U.S. cotton is that it continues to be undersold by other growths, resulting in a reduced market for it. The new cotton export programme under contemplation in the U.S., it is generally conceded, can only be supplementary to the payment in kind programme now in force. Under normal circumstances, it is unlikely to have any major effect on U.S. exports.

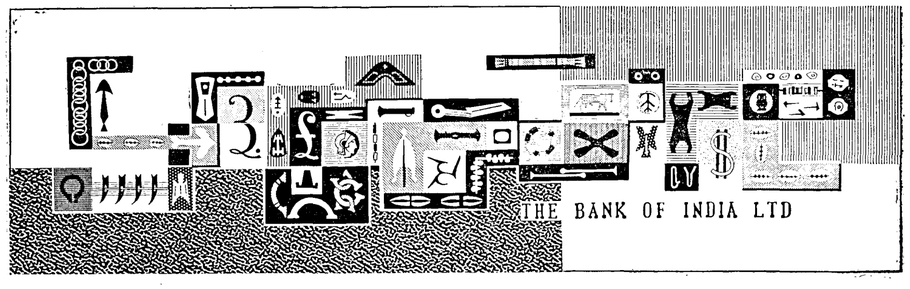
COTTON CONSUMPTION

Figures relating to consumption of cotton by mills in India during the 1961-62 season, which ended on 31st August 1962, have borne out the prediction that cotton consumption would set a new record during the season. At 5.68 million bales (of 180 kgs., or 396.83 lbs.) such consumption during the season is 314,000 bales higher than the previous season's figure of 5.37 million bales and is a record for the post-Independence period. It is noteworthy that the increase has occurred only in Indian cotton consumption, which went up from 4.24 million metric bales in 1960-61 to 4.7 million metric bales in 1961-62, whereas consumption of foreign cotton declined from 1.12 million bales to 978,000 bales. The following table indicates the monthly trend of consumption of Indian and foreign cotton during the past two seasons:

In thousand metric bales

	1961-62		1960-61	
	Indian	*Foreign*	*Indian*	*Foreign*
1961				
September	384	94	314	111
October	385	96	293	123
November	378	93	317	118
December	399	96	352	107
1962				
January	401	90	364	86
February	370	79	345	74
March	390	80	369	82
April	385	73	364	82
May	399	72	391	83
June	397	68	373	85
July	406	66	395	87
August	415	71	394	89
	4,709	978	4,246	1,127

It is evident from the above table that consumption of Indian cotton has generally been steadily rising from month to month while consumption of foreign cotton has been progressively declining.



This is the impressive 84 feet x 18 feet mosaic mural on the outside of the Bank's new building in Kampala, East Africa. The mural depicts many of the tokens used as coinage in various parts of the world through the centuries.

THE BANK OF INDIA LTD., at present has Overseas Branches at: LONDON, MANCHESTER, NAIROBI, KAMPALA, MOMBASA, JINJA, LAGOS, DAR-ES-SALAAM, ADEN, KARACHI, SINGAPORE, HONG KONG, TOKYO & OSAKA. With these Overseas Branches and a network of over 500 correspondents in almost all parts of the world, THE BANK OF INDIA LTD., is well equipped to handle Foreign Exchange Business of every description.

COTTON BOARD'S CONFERENCE

LORD ROCHDALE CALLS FOR MORE INTEGRATION

From Our Special Correspondent

MANCHESTER, 23rd *October*

MANCHESTER LETTER

BIG changes in the fundamental structure of the British Cotton Board were advocated by the retiring Chairman of the Board, Lord Rochdale, at the closing session of the Cotton Board conference at Harrogate. He strongly denied that the Board was "the tool of the Board of Trade," as had sometimes been suggested—"such a remark is as unworthy as it is untrue." Originally, the organisation was established in virtually its present form at the request of the industry, he reminded the conference. It was not, as some people mistakenly believed, imposed on the industry by the Government of the day, and any new change must also be with the full agreement of the industry.

Lord Rochdale expressed his belief that the day would come when there would be only one employer organisation and one trade union organisation, leading to a far more closely-knit industry. At the top he visualised a combined committee of leaders of the trades unions and employers, perhaps about the same size as the present Cotton Board, which should not be merely advisory or consultative but the recognised mouthpiece of the industry on matters affecting the Government. On the question whether the Chairman should be from within the industry or an independent, Lord Rochdale said: "My own view is that an industrial chairman including, of course, from time to time a trade union chairman, would in the long term do more to knit the industry together than an independent."

A United Industry Wanted

Admitting for the first time publicly the existence of the Textile Action Group which has been calling for the winding-up of the Cotton Board, Lord Rochdale added that he could understand and sympathise with the feeling of frustration and irritation of its promoters, but the industry needed a united industry. Lord Rochdale joined those who have been calling for more integration in the cotton industry, with a number of fully vertical concerns of substantial size. The real argument in favour of this move, he said, was to give the main producing sections who had so much capital invested in the undertaking far more responsibility in the framing of policy governing the promotion pricing, stocking and sale of the finished cloth. This, he hoped, should lead to less violent fluctuations in the activity of those sections that were serviced from the ultimate customer. The other points from Lord Rochdale's speech were:

Re-equipment: The final total of applications for the subsidy under the Government scheme amounted to £116 million and claims for payment had already been submitted for £18.3 million. He warned concerns not to delay decisions on re-equipment in the hope that the outlook might become clearer. The effective dates under the scheme were tied by the 1959 Act and, even now, if certain types of machinery were ordered today, their delivery and installation before July 1964 could become a real problem.

Public image: "Whenever anyone foretells the utter destruction of the industry due to the flood of imports, he is actually contributing to the industry's downfall himself. Indulgence in this sort of activity has played its part in putting textiles, in general, and cotton textiles, in particular, in a needlessly unfavourable light in the City and financial circles generally."

Promotion: He warned that costs had gone up over the years. "Unless more money is forthcoming by levy most of the promotional work at present undertaken by the Cotton Board will be forced to finish after this year."

New Pact on Imports

At the same conference, the question of European Common Market countries sharing the burden of imports from underdeveloped areas was dealt with in detail by Mr. Michael Grey, Chairman of the U.K. Textile Manufacturers' Association, in a survey of the cotton textile negotiations at Geneva. These culminated in a five-year agreement to regulate trade in cotton goods between 19 participating countries and came into force at the beginning of this month. He revealed that percentage increases over and above the current import restrictions imposed by certain European countries had now been agreed at a fresh round of meetings which began late in September.

Under the arrangements, access to the markets of those countries would be raised in the case of Sweden and Denmark by 15 per cent and Austria by 95 per cent. The E.E.C. countries had agreed to accept an increase of 88 per cent in imports of cotton textiles from other participating countries but it was not yet known how that global increase of 88 per cent would be apportioned between the various countries.

"It was significant throughout the negotiations that the Governments of the other countries of the Western Community had no doubts whatever in their minds about the wisdom and necessity for the protection of their own domestic textile industries on a permanent basis as necessary and desirable elements in their national economies," said Mr. Grey. It would seem that they have witnessed with alarm the fate in recent years of the U.K. textile industry. They are clearly determined to ensure that no such fate shall overtake their own domestic textile industries.

Mergers Called For

More concentration of the 70 major concerns in the cotton industry which control a very substantial proportion of the production of the Lancashire mills was called for by Mr. A. M. Alfred, head of the Economics Department of Courtaulds, in his paper presented to the conference on the effect of Britain's entry into the Common Market on the cotton industry. Pointing out that these 70 concerns between them controlled 80 per cent of the spindles, 35 per cent of the looms, perhaps 40 per cent of converting and 40 per cent of textile finishing, Mr. Alfred said that these now needed groups "large enough to rationalise their production and to finance and control their own marketing."

As an example, 15 of these businesses were already important vertically and, together with three horizontal weavers and two finishers, would control about 30 per cent of the spinning, weaving and converting industry. The U.K. cotton industry, he claimed, appeared on average to have running and capital costs considerably above Continental levels. "We do not suffer from high wages but principally from low machine utilisation. The U.K. also suffers from a structure as outdated as some of its machinery."

The argument for Britain joining the E.E.C. was essentially political, he believed, but there were marked economic consequences. The target of equal pay stated in the Treaty of Rome implied that those industries with a high female employment and lower ratio of female to male pay might feel the pinch most. In so far as Britain moved towards the Common Market type of taxation an increase in labour taxes of one sort or another was probable, with a compensating decrease in taxes on profits or capital.—*All Rights Reserved.*

Notice

THE NATIONAL ROLLING AND STEEL ROPES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twentieth Annual General Meeting of the Shareholders of The National Rolling and Steel Ropes Ltd., will be held at the Registered Office of the Company, NICCO HOUSE, Hare Street, Calcutta, on Monday the 26th November, 1962, at 3-30 p.m., to transact the following business:

(1) To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1962.

(2) To declare Dividend.

(3) To appoint a Director in place of Shri Krishna Prasad Khaitan who retires by rotation and is eligible for re-appointment.

(4) To appoint a Director in place of Dr. R. L. Bhattacharya, who retires by rotation and is eligible for re-appointment subject to compliance with the provisions of Section 281 of the Companies Act, 1956 and to consider and, if thought fit, to pass the following Resolution of which a Special Notice as required under Section 281 of the Companies Act, 1956 has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. R. L. Bhattacharya, who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors, prescribed under Section 280 of the said Act, shall not apply to him."

(5) To appoint Auditors and fix their remuneration.

(6) AS SPECIAL BUSINESS: to consider and, if thought fit, to pass the following Resolutions with or without modification as Ordinary Resolutions:—

(a) "RESOLVED that the appointment of Messrs. Associated Agents and Merchants, Madras, as the Sole Selling Agents for the sale of Wire Ropes manufactured by the Company for the whole of South India, comprising the States of Madras, Mysore, Kerala and Andhra Pradesh for a period of three years as on and from 1st January, 1962, subject to termination by three calendar months' notice on either side upon the terms and conditions as recorded in the Agreement dated the 13th February, 1962, made between the Company of the One Part and the said Sole Selling Agents of the Other Part be and is hereby approved."

(b) "RESOLVED that the re-appointment of Messrs. Hind General Mercantile Agency Ltd., Calcutta, as Sole Selling Agents of the Company for the sale of the Steel Wire Ropes manufactured by the Company for the States of West Bengal, Assam, Bihar and Orissa for a period of three years as on and from 15th April, 1962, subject to termination by three calendar months' notice on either side upon the terms and conditions as recorded in the Agreement dated the 12th April, 1962, made between the Company of the One Part and the said Sole Selling Agents of the Other Part be and is hereby approved."

The Share Transfer Books of the Company will remain closed from 12th November to 26th November, 1962, both days inclusive.

By Order of the Board,

FOR THE NATIONAL ROLLING & STEEL ROPES LIMITED,

FOR ASSOCIATED INDUSTRIAL DEVELOPMENT CO. (PRIVATE) LTD.,

S. C. ROY,
Director,
Managing Agents.

Registered Office:
NICCO HOUSE,
HARE STREET,
CALCUTTA-1.

The 17th September, 1962.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a Member.

The Dividend, if declared, will be paid to those Shareholders whose names appear in the Register of the Company on 26th November, 1962 or their mandatees and the dividend warrants will be posted from 10th December, 1962, onwards.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 in respect of Item Nos. 4, 6(*a*) and 6(*b*) has been appended to the Notice of the Meeting and forwarded to the Shareholders.

TO ALL SHAREHOLDERS:

And in particular to:

R. R. Bhandary, Esq., Lt.-Genl. Shanker Shum Shere J.B.R., Messrs. Mahendra Prasad and Hrishikesh Prasad, Mr. Cali Shawakshaw Dinshaw and Mrs. Louise Cali Shawakshaw Dinshaw, Sm. Durga Kumari Rimal and Sri Siddhi Nath Rimal.

OIL DIVERSITIES IN E.C.A.F.E. REGION

MANY ARE ONLY SMALL PRODUCERS

[The recent Oil Symposium held in Teheran by the United Nations' Economic Commission for Asia and the Far East brought together a mass of information about many of the member countries and about varied aspects of oil and gas operations in many others; some of the salient points are brought together in this article. In a number of countries there is little hope of finding oil on land, but elsewhere search is going on, in some instances with Russian help. Oil consumption (in 1960) per person averaged 13 U.S. gallons a year, ranging from 334 in Australia to 77 in Japan, 5.6 in India and an estimated 3.6 in mainland China.]

THE twenty-four countries within the purview of the United Nations' Economic Commission for Asia and the Far East, together with mainland China, cover a land area of over 30 million sq. kms., one-fifth of the world's land surface. They are inhabited by 1,628 million people, over half the world's population. But they contain only one-tenth of the world's known oil reserves, produce little more than one-twelfth of the world's output, and account for only about one-fifteenth of its consumption. Average *per capita* consumption of petroleum products at 13 U.S. gallons in 1960 was only about one-tenth of that for the world as a whole. Although the majority of E.C.A.F.E. countries have in common a warm climate and a low degree of industrialisation, the area is not homogeneous. Thus, Japan and Australia account for 60 per cent of oil consumption, while Iran accounts for over 60 per cent of oil production and Indonesia for another 20 per cent. If these countries are excluded, the place of the E.C.A.F.E. region in the world oil picture is small indeed.

This was the rather challenging background to the Second Symposium on the Development of Petroleum Resources of Asia and the Far East held in Teheran (in September last) and attended not only by the countries directly concerned but by delegations from the U.S. and Western European countries, from the Soviet Union and Rumania, and by international organisations, including O.P.E.C. for the first time. No less than 186 papers were submitted, reviewing oil and natural gas in the region, also offering much useful information about happenings, and experience gained, elsewhere.

Excluding Australasia, the area (which of the Middle East countries includes only Iran) is a net exporter of both crude and products. Crude production is about 50 per cent greater than demand, and there are four exporting countries: Iran, Indonesia, British Borneo, and Western New Guinea which was not represented at the Symposium. About half the output of refined products in the region is also exported. Its refining capacity at the end of 1960 was 1,808,300 b/d or one-seventh of the world total. (The region's and the world's capacity have risen since then). The increase of one-third since 1957 was almost entirely in oil-importing countries and several have now acquired refineries for the first time. Japan's capacity rose by 67 per cent in 1957-60, and the increase in her consumption of refined products represented nearly two-thirds of that which occurred in the region as a whole. During those three years the region's demand rose by 34.9 per cent to 1,156,060 b/d. Without Japan, the rise over the three years was of the order of 17 per cent with the absolute quantities remaining relatively small.

But industry is expanding rapidly in virtually all E.C.A.F.E. countries and requirements of petroleum products are expected to double over the next few years. To cater for this—to try to find local crude or to increase oil imports, to build refining capacity, to extend distribution facilities—will need money, and large amounts of capital will have to be attracted from outside the region. Several countries have been able to finance oil operations by means of credits obtained from Governments or by agreements made with foreign oil companies, but several have passed legislation or taken action likely to deter foreign capital. These problems were not really tackled by the Symposium except in a paper from Iran; but Iran's oil potentialities are so exceptionally good that her case is not typical.

The Four Exporters

"To him that hath, to him shall be given." And Iran, already by far and away the region's largest producer, has also been the scene of the most important new finds in recent years. Since the first E.C.A.F.E. meeting in New Delhi in 1958, new fields have been confirmed: at Ahwaz by the Consortium, offshore at two locations, by Iran Pan American, and one by SIRIP. In the north NIOC's Alborz field is now commercial, and NIOC has also found a large gas-condensate field at Saradjeh. Four or five other discoveries, as yet unassessed, have been made by the Consortium at various points on land in the south, at Pazanun, Binak, Bibi Hakimeh, Khalafabad and on Kharg Island.

In striking contrast to this string of successes no new finds have been made in Indonesia because man-made obstacles have rendered the search for oil impossible. During more than 20 years no concessions were granted and no exploration in new areas could therefore be done. Production has kept up owing to fields found some years back being brought into production in Sumatra, and recently in Kalimantan. Production has been revived in North Sumatra under a crude-sharing development contract between a Government entity and a Japanese company.

The only other significant oil-exporting area in the region, British Borneo, is in decline. Extensive exploration on and offshore has not so far yielded any new commercial discoveries. Western New Guinea has proved a very big and costly disappointment. After reaching a peak of 11,500 b/d in 1954, decline set in, output last year being only 3,200 b/d.

The Small Producers

Countries in the region able to produce a part of the oil they need are Burma, India, Pakistan, Japan, and mainland China. Burma now only imports marginal quantities, crude production of nearly 10,000 b/d, making her very nearly self-sufficient. One of the oldest oil exporters in the world, she might return to that fold. The producing company, in which the Government of Burma has a 51 per cent interest and the Burmah Oil Company most of the remainder, is spending £7½ million on its 1961-64 exploration programme, and has recently found oil in Central Burma and substantial quantities of gas under the Irrawaddy riverbed.

In India, the Assam fields will soon be producing 60,000 b/d and the joint government/Burmah Oil Company partnership running them has been granted fresh concession areas in Assam where work is, however, held up owing to delay in the granting of licences. The Government's Oil and Natural Gas Commission has found three new fields in Gujarat State on the west of the peninsula: Cambay is mainly gas, Ankleshwar has a potential production of 25,000 b/d, and at Kalol three successful wells have been drilled. The Commission is exploring in several other parts of India. It is assisted by Russia and Rumania who provide technicians and equipment under credit agreements. Pakistan has a similar recent agreement with Russia, whose technicians are now helping the state oil body to explore in the Potwar Basin in the north of West Pakistan. This is the area from which comes Pakistan's present small output of 8,400 b/d, and where a deeper producing horizon has been found in the old Dhulian field. New gasfields beyond what the country can use continue to be found—five in the last three years—and taking both wings of Pakistan there are now 11 fields with estimated recoverable reserves totalling over 15 million million cu. ft., equivalent to 2,500 million barrels of oil.

Japan trebled her oil reserves to 60 million bbl. between 1957 and 1960 and production went up 64 per cent to 10,190 b/d, but this still covers only 2 per cent of consumption. Japan is the only E.C.A.F.E. country where private capital has ventured abroad to seek oil. It has been rewarded by the discovery of the important Khafji offshore field in the Persian Gulf. A Japanese company is also helping to develop oil production in North Sumatra, as mentioned above. In Taiwan, where oil production of 45 b/d is quite negligible compared with a consumption of 24,020 b/d, a discovery of natural gas was made in 1959 in the deep zones of the old Chinshu field, where six wells have yields, ranging from 480,000 to 1,900,000 cu.m./day. Gas has also been found this year in the deeper zones of Chu-Huang-Kenj in the northwest. On the mainland of China the discovery of several new fields in the interior and northwest has been rumoured in the last few years. E.C.A.F.E. has not been able to check any data, but it is estimated that production increased from 10,000 b/d in 1957 to 65,000 b/d in 1960, and that a further 45,000 b/d was derived from shale and from synthetic coal-oil plants.

The Have-nots

The remaining 13 E.C.A.F.E. countries, i.e. excluding Australasia, which together consumed in 1960 about 143,000 b/d, are dependent wholly on imports of crude or products. In some, there is a chance of finding oil but in others little or none. With Russian help, exploration in remote Afghanistan has increased recently and six exploratory wells have been drilled; one encountered oil at about 700 metres, and three others have found gas. A gasfield at Khoja Gogirdak in the north will be developed by the end of 1963.

Thailand has a very small oilfield, Farng, serving a northern province, but development drilling has proved disappointing. In the Philippines, where several local and foreign concerns are exploring, there has been no luck so far; outstep wells to an interesting shallow discovery on Cebu proved disappointing.

In various parts of the vast territory of Australia and Papua, the search for oil has been going on intermittently for half a century but until just now, fruitlessly. An exploration boom in Australia is now in full swing, and the recent discovery of the small Moonie field in Queensland is encouraging. It is, however, insignificant in relation to Australia's oil needs of 70 million barrels a year. While searching for oil in New Zealand some gas and condensate has been found at Kapuni in western Taranaki at 13,000 ft, for which a market is being sought.

In Cambodia the only likely place is the Korat plateau extending southwards from Thailand. Ceylon is unfavourable geologically except in the shallow offshore area between the island and India. Malaya and Singapore, Hongkong and the Korean peninsula are all lacking in prospects, Vietnam is doubtful, and little is known of the potentialities of Nepal.

Natural Gas

That in a poor region, use cannot be found for all the available natural gas, ensured that the subject should figure high on the symposium's agenda. One of O.P.E.C's two papers was on this topic. In only one country, Pakistan, does natural gas of itself play a significant part in the energy picture. Pipelines from the Sui field in the Western wing distribute 75 million cu. ft. a day north and south to main centres, and extensions to the network are planned. If agreement were reached on terms, gas could be exported to India, permitting another of the numerous gasfields to be brought into production. In East Pakistan, the Sylhet field produces 18 million cu. ft. a day used in a fertiliser plant, and at Chhatak 3 million cu. ft/day are used in a cement works.

Elsewhere in the region, the gas is mainly associated with oil production. In southern Iran, it is used in power stations and as a refinery fuel and is now piped to Shiraz for an industrial fuel and for fertiliser plant to be built there. But no use has so far been found for much of the gas produced with the oil and it has to be flared. Non-associated gas found at Saradjeh in the north will be piped to the capital. In Indonesia, the Government, with a loan from the International Bank, is building a fertiliser plant at Palembang in Sumatra, which will use some gas from a nearby field. In Borneo, about 70 per cent of the gas produced in association with oil is used for various local purposes, including injection into the Seria reservoir. India is working on projects for using gas in Assam and Gujarat for producing fertilisers, carbon black and other chemical products and for local power generation. Non-associated gas recently found in Chauk in Burma may be used for a fertiliser plant. Big gas resources in Papua have no market.

Only two countries can utilise fully their modest resources. Taiwan's present output serves as domestic and industrial fuel and output is expected to quintuple to about 17.6 million cu. ft./day by 1963, most of the increase feeding a fertiliser plant to be built by two U.S. firms and the Government. Japan already uses its natural gas to the greatest possible extent in the ten-year-old petrochemical industry, described fully in one of the 21 informative papers submitted by the Japanese delegation. New reserves in the Niigata district, from which gas is already distributed locally by pipeline, now justify laying a 334 km. line to supply 17.6 million cu. ft./day to Tokyo, which will displace coal-gas.

As a guide to countries in the utilisation of gas other than as fuel, the U.N. Division of Industrial Development presented a most comprehensive paper embracing the manufacture of fertilisers, sulphur, acetylene, vinyl chloride, plastics, detergents, synthetic rubber and synthetic fibres. It gives cost figures for U.S. conditions and discusses their modification for a non-industrialised setting. The upshot is not very cheering. For, although the raw material, the gas itself, might be cheaper than in the U.S., the investment cost of plant will be higher. The economics of large-scale production in such industries are often decisive for costs; yet a plant too large for the immediate demand for its products may be uneconomic where technology rapidly becomes obsolete.

Operating costs will probably not be higher than in industrialised countries, but little employment is created. Four men per shift can as easily make 500 tons of ammonia as 100 tons, and if a plant operates below capacity, costs per unit soon soar. Methods of selling the output will depend on the type of product made, but fertilisers are likely to be more in demand locally than elaborate plastic components or chemical feedstocks. Local demand must be the first criterion since in international markets competition is already intense.

Not much more hope was given by a study of the techniques and scope for the transport of liquefied natural gas overseas, since, here again, a big volume of demand is imperative for economic operation.

Future Efforts

Production in the region now lies mainly with the international oil companies. But, for a variety of reasons, it is becoming more and more common for Governments in underdeveloped countries to want to have a direct stake in oil operations. This is the case also in the E.C.A.F.E. region, even though the high risk involved in oil exploration makes this a most unsuitable venture for Governments with slender financial resources on which there are so many competing claims. Partnerships of Government and oil companies have, however, provided a middle way. This has been the basis upon which two new foreign concerns (Pan American and E.N.I.) have started work in Iran and the new basis for expansion for old-established concerns in India and Burma. Another departure is the recent contracting arrangements between Pan American and the Government of Indonesia, where new agreements are being negotiated with the established foreign companies.

Private enterprise and capital remain, however, the mainspring of the exploration effort in the region. In addition to the instances already mentioned, international and local companies are active in the Philippines and New Zealand, and particularly in Australia, where the Government gives valuable encouragement by making available preliminary surveys and other information, by offering tax concessions, and subsidising drilling. However, in India where an already large and rising oil demand and a chronic foreign exchange shortage really calls for early and widespread exploration, the Government still denies to private capital the necessary attraction for searching in new areas.

Three countries which are themselves undertaking exploration are all receiving assistance for this work from the U.S.S.R. Under credit agreements, the Russians provide technicians and equipment to the Indian Oil and

HOW TO REDUCE COST OF SUGAR OUTPUT

BETTER QUALITY OF CANE AND IMPROVED MILL EFFICIENCY IMPERATIVE

THE new sugarcane price formula of the Government of India has come into force from the 1st of this month, that is, the day on which the current (1962-63) sugar season commenced. The scheme, it will be recalled, links the price of cane payable by the sugar mills to both the recovery per cent of sugar contained in it and the quantity of cane as such, whereas the system hitherto in vogue had as the basis only the quantity of cane delivered to a factory irrespective of quality considerations. The salient features of the new scheme—they have already been discussed in detail in these columns on more than one occasion—may be summed up as follows:

The minimum price of cane with a recovery of 9.8 per cent is maintained at Re. 1.62 per maund. A discount or premium, as the case may be, shall be allowed on this price at the rate of 1.5 nP for every 0.1 per cent fall or rise in the average certified recovery below or above 9.8 per cent. There will be no discount if the recovery falls below 9 per cent. In other words, Re. 1.50 per maund of cane delivered at the gate of factory shall be the *irreducible minimum price*. The price for delivery at purchasing centres connected by rail shall be 12 nP less than the price paid at the factory gate. The usual transport rebate will be admissible in case cane is transported by road.

While the above scheme is a welcome departure from the principle followed so far, it is highly doubtful whether it will ensure regular, adequate supplies of cane to the sugar mills and bring about a reduction in the cost of producing sugar. It may be true that, under the scheme, the cane growers will get a higher price than what they would have secured otherwise, if the quality of their cane is on the higher side. But many growers may not avail themselves of this opportunity, since they can obtain a considerably larger return, if they utilise the cane themselves for making *gur* and *khandsari* which are commanding pretty high prices. Moreover, the size of the cane crop itself is expected to be much smaller than in 1961-62. The actual reduction in production is put at 25 per cent in Bihar, 15 per cent in Maharashtra and 12 per cent in Uttar Pradesh. The cane crop has suffered severe damage in the Punjab too. Looked at from the long-range point of view, however, one may agree with Mr. Desraj Narang, President of the Sugar Technologists Association of India, when he says that the scheme is a bold step, a good beginning in the right direction. Addressing the thirteenth annual convention of the Association held at Kanpur on Wednesday last week, Mr. Narang observed: "This is the only way of creating quality-consciousness amongst the cane growers." And few can dispute his statement pertaining to the reduction in cost of cane. Our efforts and resources, he said, got diluted when spread over an enormous area; if these limited resources were applied to small and compact areas, the results would be substantial and spectacular.

Exports Expensive

Inasmuch as sugarcane accounts for three-fourths of the total cost of making sugar, the problem of bringing down the cost has to be tackled especially in the primary stage of sugar industry. The need for this is all the greater in the context of exports. Mr. A. M. Thomas, Union Deputy Minister for Food and Agriculture, certainly struck a note of realism when he declared, while inaugurating the convention, that, without a substantial cut in production cost, the prospects for expansion of sugar exports in future were not bright. In order to drive home this fact forcefully, he recalled that the export of 400,000 tons of sugar in 1962, which at best could fetch a foreign exchange to the tune of Rs. 16 crores, would entail a subsidy of about Rs. 17 crores which was mostly being met by the Government. He clearly conceded that foreign exchange through sugar exports was very costly for India.

The heavy incidence of cane cost in sugar manufacture must be attributed primarily to low per-acre yield and poor sugar-content of cane both of which are responsible for the negligible yield of sugar per acre *vis-a-vis* many other countries. The all-India average yield of sugar is no more than 1.444 ton, as against as high as 8.830 tons in Hawaii, 6.440 tons in Java, 5.076 tons in Peru, 4.060 tons in Australia, 3.657 tons in Japan and Formosa, 3.396 tons in Puerto Rico and 3.088 tons in Mauritius. When other countries have been able to obtain such large yields, why not India which possesses all the advantages for growing sugarcane? Certainly, there is, as Mr. Thomas said, much scope for reducing the cost of sugar production by increasing the per-acre yield of sugar particularly in Northern India where it is comparatively low. To quote him: "I believe it is not difficult to attain this within a short time by the application of modern scientific methods of agriculture."

Other Measures

The target of sugarcane production fixed in the third Plan, it may be noted here, calls for the output of 18 tons of cane per acre, which is well above the average yield of 14.8 tons in 1960-61. Alluding to this, Mr. Thomas pointed out that sugarcane experts had a vital responsibility in bringing about a rapid improvement in cane yields. They could certainly perform this job satisfactorily, provided the politicians help them by not pursuing policies under which a premium is given to the inefficient farmer and no incentive whatever to the efficient farmer. Mr. Thomas also stressed the need for adopting a few other measures designed to lower the cost of sugar production. They are:

The technical efficiency of sugar mills, in the *milling* as well as in the *boiling house*, must be improved.

The techniques of statistical quality control, now widely employed in all advanced countries, must be adopted.

The by-products of the sugar industry should be fully and suitably utilised.

The old and outdated plants of sugar mills must be rehabilitated and modernised. The report of the sub-committee of experts, set up by the Development Council for Sugar Industry to look into this question and to estimate the needs of the industry, must be made available before long.

There is, of course, nothing new in these suggestions. By mentioning them, however, Mr. Thomas has only indicated that adequate attention has still not been paid to the question of augmenting the productivity of sugar mills. In view of low productivity, the labour cost per unit of sugar is very high. The actual average cost is put at Rs. 2.75 per maund of sugar, as against Re. 1.50 in Egypt, for instance. The number of workers employed in a sugar factory with a daily cane-crushing capacity of about 1,000 tons is said to be 1,000, as against just 80 workers in Hawaii and 150 workers in Cuba. The labour force can be reduced through electrification, mechanical unloading of cane, and installation of sturdy mill of latest design, high-pressure boilers with economisers, vapour line, juice heaters, continuous sulphitation, large pans with circulators, continuous crystallisers and continuous centrifugals. Further, sizable economies, as Mr. Narang emphasised, are possible with large-size plants with 3,000-4,000 tons capacity as in countries such as Hawaii and Mauritius. This question can, however, be taken up for examination only at the time of considering the development programme of sugar industry in the fourth and succeeding Five-year Plans. For several of the schemes already approved have actually been completed and many others are half-way through implementation. Thus, 41 of the 72 new sugar mills licensed and 40 of the 120 existing mills permitted to expand have already completed their schemes and the remaining are expected to be completed by the end of the third Plan. Then, there will be the question of absorbing the labour rendered surplus as a result of introducing better types of machinery. This can be done only when the industry's capacity is expanded.

Kumardhubi the largest single refractory manufacturing unit in the East offers

EARLY DELIVERIES OF SILLIMANITE REFRACTORIES

PIONEERS in the manufacture of Firebricks and Silica bricks, Kumardhubi's venture in the field of Sillimanite has met with unrivalled success. Recent large-scale expansions, harnessed to the most up-to-date equipment and rigid quality control, ensure prompt, early deliveries of Sillimanite Refractories... Refractories indispensible to the Glass, Enamel and Ceramic industries.

KUMARDHUBI SILLIMANITE bricks are ideal for glass furnaces, oil and gas-fired furnaces, roofs of electric furnaces, soaking pits and wherever ability to support heavy loads under extreme temperature variations is essential.

KUMARDHUBI'S MODERNISATION PROGRAMME to meet increasing demands during the Third Five Year Plan assures the nation of a consistent supply of Kumardhubi Sillimanite Refractories—in regular shapes and sizes, or to specification.

NEW PUBLICATIONS

The Economics of Socialism Reconsidered. By Henry Smith. Published (1962) by Oxford University Press, London. Pages : 225. Price : 30s. net in U.K. only.

THE subject of this penetrating and thought-provoking study has been the main interest of the author's entire adult life. As an economist, principally engaged in teaching at Ruskin College, Oxford, for some twenty-five years now, Mr. Henry Smith has done this excursion into economic theory in the hope that it may help the British labour movement to clarify its short-term and long-term objectives. The brilliant and almost impeccable logic of his analysis of the contemporary crisis of democratic socialism—a crisis caused by the phenomenal development of modern capitalism with its new standards and ideologies which render the ultimate objectives of traditional socialism unattractive to the majority—has led the author to reconsider the economics of socialism. This reconsideration, done within the framework of the author's definition of the object of socialism "as the elimination of economic conflict" has, in turn, led to the following startling(?) conclusion:

"The development of a world of prosperous free enterprise, with no more central direction than that envisaged in, for example, Lerner's *Economics of Control* or Scitovsky's *Welfare and Competition*, I believe to be possible. Progress of this kind will lessen the rigidity of the class structure of contemporary society more and more, and will, partly by improvement in the standard of living of the poorest and partly by the social pressures which it will create, lessen conflict between classes, and blur their outlines. To that extent, therefore, the two paths (modern capitalist and traditional socialist) converge."

In other words, progressive capitalism, which is oriented to the creation of an "affluent society," and traditional socialism aiming at the relief of poverty and elimination of economic conflict are substantially the same in their direction and stated or unstated objectives. But it is strange that liberal reformers of free enterprise and democratic socialists in many countries, including our own, cannot understand each other or talk the same language in spite of the several areas of agreement between them. Mr. Smith has referred, in this connection, to the possibility of the communist alternative in a situation of continuing friction between both types of reformer. His grave warning is to the effect that "unless both those who wish to humanise and liberalise the workings of a free enterprise economy, and those who wish to transform it into a socialist society, are aware of where their aspirations coincide, and where they are in conflict, areas of friction and confusion will develop, which will most probably stultify the efforts of both, leaving the field free for those who prefer the harsher alternative."

That harsher alternative is, of course, the communist alternative which, however, is least likely to be adopted in the more advanced industrial countries. For there is, as the author has shown, a fatal flaw in Marxist analysis, which ignores the *rising labour productivity* which the accumulation of capital permits and of which the consequently changing social balance demands that full use be made, and which thus softens class antagonisms in those countries. Catastrophic revolutions in the contemporary world, expropriating the owners of property completely, are, on the other hand, likely to happen only in poor and backward countries. That, in brief, is the author's prognostication. The reader may well ask here whether a communist revolution will happen in a semi-industrial developing country like India too. The answer is that it conceivably can. But the probability of its happening can be greatly minimised, though not wholly eliminated, if "*free enterprisers*" become reformers in their own right and "non-communist socialists" do some hard rethinking on their traditional dogmas. Unfortunately, however, the immediate reactions of those with certain cherished beliefs to the rather iconoclastic approach of the author may not be charitable. Given some patience and sobriety, they will find this study—one of the outstanding economic treatises published in recent years—most rewarding indeed.

The Structure of Public Enterprise in India. By Dr. V. V. Ramanadham. Published by Asia Publishing House, Bombay, 1961. Pages : 267. Price : Rs. 18.

In the context of the new economic set-up of the country the problems of industrial organisation have assumed new dimensions and acquired a greater complexity. While the controversy about the relative role of the private sector and the public sector persists, they continue to co-exist. With the large investments made in the public sector—the third Plan gives a definite impetus in this regard—it is desirable to have an idea of their organisational and financial characteristics and diversities and an assessment of their functioning. Dr. Ramanadham, in his book, *The Structure of Public Enterprise in India*, has attempted a critical analysis. The author has devoted a long number of years to the study of public enterprises in this country as well as outside.

The subject has been studied in seven chapters. The enterprises, which earlier consisted of departmentally-run railways, posts and telegraphs and ordnance factories, have, with the growth of planning, widened the range. *The second chapter, dealing with planning* and public enterprises, emphasises the profit motive and the underlying idea of a redistribution of income and wealth. The transferable nature of the product of many enterprises places a severe limitation on the use of a price discrimination such as low prices that can be charged for consumers falling in the low-income groups and discrimination against rich consumers. The danger always is the disregard of the legitimate interests of the consumers and the taxpayers and a pampering of the claims of workers merely because the profits happen to be large in a particular concern. The question of profits policy forms the subject matter for a whole chapter. The author feels that sizable profits may accrue so long as the industry as a whole works under conditions of scarce output. Accordingly, the reasons for the low profits are: (1) low managerial efficiency, (2) many enterprises belong to the category of industries that yield a profit in the long-run, and (3) the policy of profits has not yet been enjoined by Parliament on the enterprises unequivocally yet.

The next three chapters deal with organisation and administration in state or public corporations. Several of the corporations are monolithic organisations with country-wide activity. The circumstances under which they came into existence were such that these enterprises could not afford to be inefficient nor practise unusual kinds of inter-regional subsidisation; also in the case of some, single units tended to become the optimum units.

Examining the distinction between the provisions of the Companies Act and the Public Corporatons Acts, it is observed that Government officers dominate on the boards, the president or the Government derives extensive powers from the Articles and there is a heavy interlocking of directorships. "The boards of Government companies seem to work with the privileges of departmental administration, yet without the vulnerability of the latter to parliamentary criticism." The view seems to be that the company form is hardly the correct form of organisation for several activities, carried on by the Government or under its ægis, which border on non-commercial considerations and ought to fall within the purview of a Government department, e.g., the State Trading Corporation. Allied to these is the question of public accountability. There is a bias in favour of the Auditor-General being in charge of the audit system directly or indirectly. The practices differ today—in some cases there exists audit by the Auditor-General on behalf of the Government and by an auditor on behalf of the company or undertaking. Considerable overlapping and confusion results in this arrangement and it would be desirable to have a single commercial audit, whether under the ægis of the Auditor-General or otherwise.

Public administration ought to play a helpful role in guiding the Government on when to interfere with an enterprise and when not to. The promotion of factual analyses of probable control situations will be desirable. The author attempts a fourfold distinction between public administration and public enterprise, namely, difference in the motivation of action, difference in the approach to the tasks set, the criterion of action which are more objective for public enterprise than for public administration and lastly differences in the facility with which it lets public interest influence its decisions. Public administration in many fields proceeds on the basis of equity on human and social grounds but public enterprise is concerned with equity in terms of economics. Public enterprises must give more weight to efficiency and initiative as against seniority in the case of staff and labour and more attention to the demand for the products of the concern. In the criticism by the public and in Government circles of public enterprises a certain amount of vagueness or misunderstanding of the objective is noticeable. The public enterprises should in reality be run with efficiency and with a view to profit as in the case of private enterprises. The author concludes that "while it is necessary to allow public enterprise to develop on lines distinct from those of public administration, many institutional gaps have come to light in the course of expansion of the public sector which neither public enterprise itself, nor the existing departments of public administration can directly fill up.... Above all, the need is to reform public administration so as to create an ideal institutional background for the fairly new experiments in the field of public enterprise."

Dr. Ramanadham has attempted a careful analysis of the problems relating to a public enterprise. His book is a useful contribution to the literature on the subject.

Techno-Economic Survey of Punjab. By National Council of Applied Economic Research, New Delhi. Pages : 234. Price : Rs. 20.

Punjab presents the picture of a buoyant economy ready for rapid economic development because of its strong base and vast potential for future growth. Considering its initial travails and tragedy that overtook it in 1947, Punjab can justifiably be said to have achieved something of a miracle, rehabilitating itself and advancing on the economic front. The grievous riots that followed partition, the stream of refugees that poured in, the problems involved in their rehabilitation in the context of a shattered economy, political instability—all these handicaps were formidable, but such has been the dauntless spirit of its people that Punjab is cited today as an example in respect of increasing agricultural production and the establishment of small industries.

The structure of Punjab's economy is rather unique among the States of India. Its strong economic base is characterised by a powerful agricultural sector, an active decentralised industrialised sector, adequate power supply and absence of transport bottlenecks. In addition to these, unlike other States, Punjab has no serious problem of unemployment. These are some of the facts that are highlighted in the "Techno-Economic Survey of Punjab" conducted by the National Council of Applied Economic Research.

A large and progressive farming sector, a vigorous small industry sector, a broad tertiary sector and an infrastructure—these provide the growth pattern of this progressive State. A combination of better yields, developed animal husbandry and a favourable man-land ratio have resulted in a relatively high *per capita* income from farming. It is this high level of farming income that gives the dynamic impulse to a young supplementary growth sector in industry and the necessary support to a large tertiary sector, according to the Council's survey. A significant aspect of this relationship is that the prosperity in the State is diffused widely, contrary to the situation in other developed States where there are relatively large concentrations of income in big industrial centres. Because of all these factors, the *per capita* income of the State in 1956 was Rs. 296, as against Rs. 261 for the country as a whole.

Broadly speaking, the composition pattern of industries in Punjab is similar to that in the country as a whole. Agriculture and livestock-based industries account for the major part of the industrial employment and output, followed at some distance by engineering. For lack of coal, the emphasis has so far been only on the development of small-scale industries which have made phenomenal progress in the State. There has been some progress in the development of producer goods industries too. Important among the engineering industries of this type existing in the State are manufacture of tools, agricultural implements, diesel engines, industrial machinery and re-rolling of ferrous and non-ferrous products. Cement and paper are the only resources-based industries of the large-scale type.

A singular feature of the Punjab industrial pattern, as has been referred to already, is the predominance of small-sized units. In terms of employment, non-factory (unorganised) units employ six workers for every worker employed in organised industrial units and is almost double the all-India figure. It is only since 1951 that there has been a striking growth in the factory industry in Punjab, the average annual increase in employment between 1951 and 1956 being 7.4 per cent. The rate increased to 7.7 per cent between 1956 and 1958. The largest increase was registered in the engineering industry in which factory employment increased at an average annual rate of 14.7 per cent during 1951-58. Chemical industries followed at the rate of 12.4 per cent. While the growth in textiles among the agricultural-based industries and in the forest-based industries has been fair, that in processing industries has shown a somewhat modest rate (4 per cent).

Punjab's industrial pattern, dominated as it is by small-scale industry, suffers from certain inherent handicaps. It is weak and is unable to compete with large-scale units in other than local markets. Technically, it is either inferior or it tends to minimise the importance of equality because of the existence of a seller's market. Financially it lacks the ability to build up sufficient reserves for introducing technological changes either to bring down cost or to improve quality.

Lack of metallic ores and industrial fuel, the Council says, sets a limit to the establishment of heavy industries in Punjab. Hence the strategy of industrial development should be expansion of engineering industries like sewing machines, bicycles, fans and the like for domestic and foreign markets. Farm-based industries and engineering industries mainly for the production of durable consumer goods have good scope for expansion. As the output of sugarcane, cotton and oilseeds is expected to increase by 143 per cent, 113 per cent and 400 per cent, respectively, during the decade 1961-71, it will enable the rapid expansion of industries using these agricultural commodities as the raw materials.

The Council has recommended that in the immediate future 19 composite milk plants and 12 milk powder factories should be established in major towns of the State. With more efficient employment of forest resources, paper and pulp factories and saw mills can be set up. Besides engineering industries, the Council has suggested the establishment of a few large plants such as *tractors, roller mills* and printing machinery. It was also suggested that the Government should take the responsibility for setting up a central foundry plant, a central machine workshop and a central fabrication shop. The Council has further recommended that 200,000 additional spindles and 4,000 to 5,000 looms should be set up in the State in the next decade.

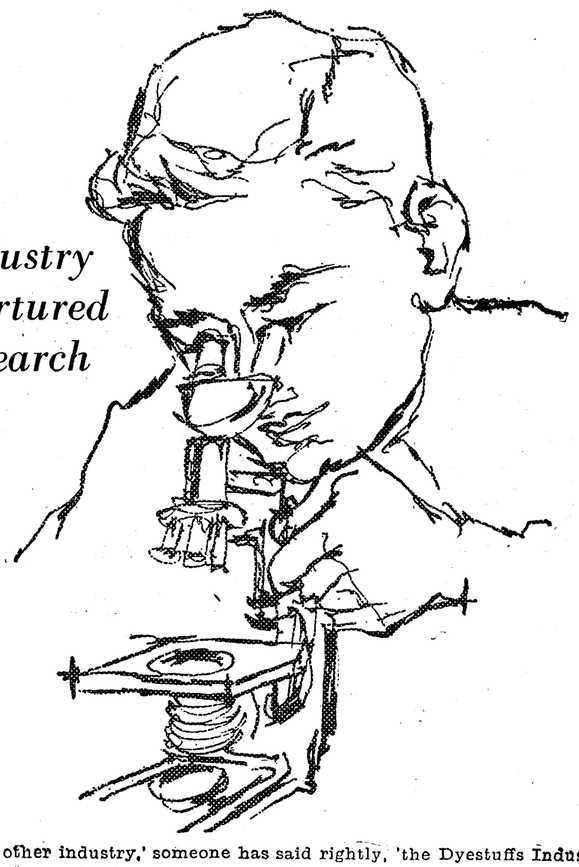
As regards power, it is estimated that the total consumption in 1971 in the State will be 1.3 million kilowatts. With the available resources, the State should be able to meet a major part of it. Since hydel power is the mainstay, more power can be obtained by reducing the difference between installed and firm capacities. A sum of Rs. 160 crores has been suggested for investment in power.

An investment programme of Rs. 1,114 *crores over the next ten years* has been suggested by the Council to secure the maximum possible development of the State. A break-up of the Council's investment programme as between the various sectors is as follows: Agriculture and allied activities—Rs. 324 crores; industry and power—Rs. 394 crores; and the tertiary sector, including transport—Rs. 396 crores. The share of the State Government would be Rs. 660 crores in this programme.

In the Council's estimation, the total resources, both tax and non-tax, available to the State for development purposes during the decade 1961-71 are likely to be Rs. 275 crores. This would necessitate greater efforts at mobilisation of resources and more generous assistance by the Centre than hitherto. The possibility of mobilising resources from the agricultural sector seems to be relatively slender, for the State's farm economy is conditioned by a low value-yielding cropping pattern. Consequently, though per-acre yields of most of the agricultural commodities are much higher in Punjab, as compared with all-India averages, the value of output per acre is lower than the Indian average.

According to the N.C.A.E.R., if this programme is implemented in full, the State income would increase by 75 per cent during 1961-71 and *per capita* income would go up by 40 per cent. The exportable surplus of foodgrains would be about three million tons. Moreover, the entire additional labour force will be absorbed by the economy without detriment to productivity.

The N.C.A.E.R. study constitutes a valuable contribution to the literature on economic planning, in general, and on the progressive State of Punjab, in particular.



An Industry Nurtured by Research

'More than any other industry,' someone has said rightly, 'the Dyestuffs industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

PEACE AND DISCIPLINE IN INDUSTRY

RECOMMENDATIONS OF STANDING LABOUR COMMITTEE

THE compulsions of the critical situation now facing the country have imparted a new meaning and added a new dimension to the term "industrial peace." Mr. G. L. Nanda, Union Minister for Labour, pointed out, in his speech at the twentieth session of the tripartite Standing Labour Committee held at New Delhi on 17th October, that even perfect industrial peace would not answer the needs of the country's developing economy. What was required, he said, was the most efficient utilisation of human, financial and material resources. It was not only imperative, he emphasised, that no single man-day should be lost but also that productivity should be raised and cost cut. Mr. Nanda could not have anticipated the developments that have taken place on India's northern borders since the Standing Labour Committee met. His plea for perfect industrial peace and the most efficient utilisation of resources has, therefore, assumed added importance, in view of the mounting Chinese threat to India's security which has forced the President to take the unprecedented, extreme step of proclaiming a national emergency.

In the changed circumstances obtaining now, the measures suggested by Mr. Nanda and accepted by the Standing Labour Committee to increase productivity and promote exports are inadequate. But they are welcome to the extent they go. The Committee approved of the Minister's suggestion that separate meetings of representatives of workers and employers be convened to find out ways and means of making Indian goods competitive in foreign markets. Meetings of the various Industrial Committees would also be called to suggest measures for reducing production costs and increasing productivity and output. It was also agreed that representatives of workers and employers should make recommendations for sharing the gains arising out of higher productivity and that these suggestions should be discussed at the next meeting of the Indian Labour Conference and a formula for distribution of the gains of productivity be evolved. It is to be hoped that those who are handling this issue will remember two things: one, the interests of consumers (including the export markets also) and two, the need for setting apart a sufficient sum from profit for modernisation and expansion of industry so very essential for ensuring a progressively rising level of employment.

Protection Against Victimisation

Several issues affecting labour-management relations and industrial peace figured on the agenda of the meeting. Among the subjects on which there was prolonged discussion and sharp differences of opinion, the most important was the question of additional measures for protection of workers against victimisation by employers and reference of cases of victimisation to arbitration. In fact, this question has turned out to be one of the principal bones of contention between employers and workers, ever since the recommendation of the seventeenth session of the Indian Labour Conference (held in July 1959) to the effect that the existing legal provisions on the subject of victimisation (contained in the Industrial Disputes Act, the Bombay Industrial Relations Act and the Madhya Pradesh Industrial Relations Act) should be re-examined. This subject was discussed at the last meetings of the Standing Labour Committee and the Indian Labour Conference, but no agreement could be reached. The consensus of opinion among employers is against further liberalisation of the provisions of the Central Act, as the existing safeguards against victimisation are deemed to be quite adequate. It has even been suggested by employers' representatives that, if at all any modification is required, it is in the direction of restricting rather than enlarging the existing protection. They are of the further opinion that clause (6) of Section 33(2) of the Industrial Disputes Act should be deleted, as it is said to put a premium on misconduct.

Workers' representatives, on the other hand, are in favour of further liberalisation of the provisions. The central organisation of workers is of the opinion that none of the existing provisions in the Central or State enactments gives adequate protection to workmen against victimisation. State Governments are divided on the issue, though most of them seem to be of the view that the existing provisions in the Industrial Disputes Act are adequate.

At the meeting of the Standing Labour Committee under reference, the question was again discussed. Workers' representatives reiterated their complaint that, as matters stood at present, a worker had no security of service and urged that individual workers must have direct access to Industrial Courts or Tribunals for the redressal of their grievance relating to victimisation. Alternatively, they suggested that all such matters should be referred to arbitration. The employers' representatives pointed out that the existing provisions of law gave enough security to workers against alleged victimisation by employers and that any further amendment of the Industrial Disputes Act, in the manner desired by workers' representatives, would greatly undermine discipline, lead to all kinds of unrest and result in fall in production. Mr. Nanda appeared to appreciate the employers' point of view and suggested that, for the time being, at any rate, the magnitude of the problem, namely, to what extent existing law has failed to give protection to workers against alleged victimisation, should be studied. Further action, if any, could be taken in the light of such studies. He, however, assured workers' representatives that, meanwhile, Government would invariably refer cases of this kind to adjudication, if, even after discussion with a senior official of the Central or State industrial relations machinery, the central organisations of workers' concerned insisted on such a reference being made.

Compensation

The proposal for amending the Industrial Disputes Act to provide for payment of full compensation in case of closure of an undertaking on account of expiry of lease or licence was accepted by the Committee. Opinion was, however, divided on the question of covering cases of closure due to exhaustion of resources in industries such as iron ore and coal mining. It was agreed that this subject should be considered in the first instance by the Industrial Committee on Coal mining and Mines and, thereafter, brought before the Standing Labour Committee or the Indian Labour Conference.

The Standing Labour Committee also discussed the question of empowering Registrars of trade unions to cancel the registration of a trade union the executive of which has been found to have violated its registered rules. Workers' representatives were most reluctant to give power to Registrars to cancel registration. The State Governments, on the other hand, were anxious to have such powers. It was, however, agreed by the Committee that the Registrars need not be given very wide powers. It recommended that State Governments should examine the difficulties experienced by them in this regard and formulate, in consultation with the State Labour Advisory Committee, proposals concerning the specific types of violations for which Registrars might be given power to cancel registrations. It was agreed that the subject should, therefore, be considered at a subsequent meeting of the Standing Labour Committee or the Indian Labour Conference.

The meeting also decided, *inter alia*, that (1) further consideration of the Report of the Study Group on Social Security should be suspended for three years and (2) steps to raise the rate of provident fund contribution from 6¼ per cent to 8⅓ per cent, wherever this has not been done, should be speeded up. It was felt that, unless this was done, introduction of the integrated social security plan could not be considered. It was also decided that the wage limit for eligibility to membership of the Employees' Provident Fund Scheme should be raised from Rs. 500 to Rs. 1,000 per month.

Transatlantic television and SKF

The successful reception and transmission of transatlantic television by the G.P.O. radio telescope at Goonhilly Downs (England) is dependent on the precision tracking of the 'Telstar' satellite. The telescope is rotated on rollers which incorporate 108 SKF spherical roller bearings and is centred on a fixed vertical post by two spherical roller bearings. SKF bearings are also fitted to the gearboxes.

Once again SKF *are at the hub of progress*

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial resurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

JENKINS COMMITTEE REPORT VIEWED AGAINST INDIAN BACKGROUND—III

PROTECTION OF INVESTORS AND MINORITY INTERESTS

By A Special Correspondent

THE question of beneficial ownership of shares was gone into by the Cohen Committee in 1946 which recommended that "every person directly or indirectly the beneficial owner of one per cent or more of the issued capital of a company should be required to make a declaration of the fact to the company who would in turn be required to maintain a register of such beneficial ownership." Because of the practical difficulties involved, however, this recommendation was not given effect to by the Government. This matter was examined by the Jenkins Committee also. This Committee thought that something should be done to secure the disclosure of beneficial ownership of shares amounting to 10 per cent or more of the equity capital in quoted companies as is the case in the U.S.A. The Committee has recommended that a new section should be inserted in the British Companies Act requiring the disclosure of the above stated percentage of beneficial ownership. This new provision need not, however, apply to directors of a company whose holdings of shares in the company and all transactions in them are already required to be included in the register of directors' shareholdings under the provisions of Section 195 of the Act. The Committee has also recommended that the identity of holders of 10 per cent shares in quoted companies and the extent of their individual holdings of and transactions in the equity shares should be recorded by the company in a new register within, say, three working days of the notification to it and this register should be kept open by the company for inspection by the same persons and on the same terms as the register of members of the company. The copies of this new register should also be made available to the public on the same terms as the copies of the register of members. It has further recommended that Section 172, which empowers the Board of Trade to appoint inspectors to investigate into the ownership of shares in a company, should be extended to cover the question of ownership of shares of a company when circumstances suggest that there has been a failure to comply with the above requirement. It has also recommended that a heavy penalty should be imposed for failure to notify or to record such transactions in the register.

Under the Indian Companies Act, there is a provision for disclosure of directors' shareholdings as also for maintenance of a register recording this fact under Sections 307 and 308. The powers to appoint investigators to go into the question of beneficial ownership is given to the Government under Sections 247 and 248 of the Act. The Jenkins Committee's recommendation regarding disclosure of 10 per cent shareholdings in the quoted companies deserve careful attention in our country, too, in order to check the cornering of shares by unscrupulous elements in the corporate sphere.

Variation of Class Rights

Section 72 of the British Companies Act gives the minority interests constituting 15 per cent or more of the holders of the class of shares concerned, power to apply to the Court to cancel the variation of their class rights where a prescribed majority of shareholders of that class have agreed to the variation, within 21 days after the passing of the resolution. In such cases, the variation can take effect only if it is confirmed by the Court. The Jenkins Committee felt that, in the existing provisions, the prescribed minority was too large and that the time for exercising their rights was too short. It, therefore, recommended that that section should be made more effective by reducing the necessary quorum of the objectors from 15 to 10 per cent of the issued shares of the particular class concerned and by giving slightly more time from 21 to 28 days for making the application. As at present, this remedy under Section 72 of the Act would continue to exist without prejudice to any application that can be moved under Section 210 of the Act.

In this regard, it may be pointed out that Section 107 of the Indian Companies Act already prescribes a 10 per cent strength for the minority to make an application to the Court. The time, however, for making the application after giving consent or passing the resolution varying the rights by the majority shareholders is the same as in the British Companies Act, namely, 21 days.

Protection Against Oppression

As briefly referred to above, Section 210 of the British Companies Act, which was an important innovation in the 1948 Act in the U.K., aims at assisting the minorities to obtain redress other than that of obtaining an order for winding-up under the "just and equitable" provision in the winding-up sections. From practical experience, it has been found that this section has been of limited use to the minorities. As the real interest of the minority lies in saving the company from going into liquidation and in sharing the prosperity of the company or in the purchase of their shares by others as a going concern, it was considered necessary that the provisions of this section should be made more useful to them. In actual experience, in its existing form, three shortcomings were found in this section: (a) The petitioner had to establish that it was otherwise just and equitable to wind-up the company and this was never a very easy thing to do and many applications under this section have fallen at this hurdle. That is to say, the section is too closely linked with the winding-up provisions. (b) In order to prove that the affairs of the company were being conducted oppressively, a course of conduct had to be proved and one or two isolated cases of oppression were not sufficient. And (c) it is by no means clear as to what oppression in this context means and the few reported cases in which the petitioners have been successful do not encourage the view that the word has been interpreted in a sufficiently wide sense to comprehend all types of conduct, that is, general unfairness in the conduct of the affairs of the company to which the section is really directed. After fully considering all these difficulties and shortcomings, the Jenkins Committee came to the conclusion that Section 210 required strengthening very considerably. Therefore, it has recommended that (i) the section should be amended to make it clear that it covers isolated acts as well as a course of conduct; (ii) sub-section (2)(b) of this section which puts the onus on the petitioner to establish that it is otherwise just and equitable to wind-up the company be repealed; (iii) the section should extend to cases where the affairs of the company are being conducted in a manner unfairly prejudicial to the interests of some parts of the members and not merely for a minority; (iv) Courts should be empowered to restrain commission or continuance of any act which would suffice to support a petition under this section; and (v) the legal representatives and others to whom the shares are prescribed by process of law but who are not registered as members are entitled to present a petition or seek an injunction under this section.

As regards the practice of starting investigations into the affairs of companies by the Board of Trade by forwarding a copy of the complaint to the directors and asking for their comments, it was urged before the Committee that that procedure afforded directors, especially if really fraudulent, a first class opportunity to destroy or fabricate evidence. The Committee found some force in this criticism and has made the recommendation that power should be conferred upon the Board of Trade to obtain documents from the directors and officers of the company before the appointment of inspectors and for testing the complainants' statement of facts. It has also recommended that Section 165(b) of the Act should be extended to empower the Board of Trade to appoint inspectors to investigate into the affairs of the company if it appears to the Board that it is necessary for purposes of investigation of another company already pending.

The sections in the Indian Companies Act corresponding to Section 210 of the British Act are Sections 397 and 398 which give the right to minority interests to apply to the court for relief and for passing an order under Section 402, in cases of oppression and mismanagement. In addition to these, the minority can also approach the Central Government under Section 408 to prevent an apprehended oppression or mismanagement. In fact, the whole string of Sections 397 to 408 seek to prevent apprehended or accomplished oppression or mismanagement. In comparison to the provisions of the British Companies Act, those of the aforesaid sections in the Indian Companies Act possess greater effectiveness in regard to protection of minority interests which is now being sought to be secured by the proposals of the Jenkins Committee. As regards extending the scope of investigation into the affairs of other companies as recommended by the Jenkins Committee, Section 239 of the Indian Companies Act as amended by the Companies Amendment Act of 1960 already empowers the inspector to investigate into the affairs of related companies, managing agency company, etc.

Take-over Bids

The subject of take-over bids, which multiplied with great rapidity during the unhappy days of dividend limitation just after the last world war and caused alarm in the public in the U.K., was specifically referred to the Jenkins Committee for study and making recommendations which would ensure that adequate information is disclosed in a take-over or merger offer to the shareholders to judge for themselves whether or not to accept the offer. The Committee, after a detailed study of the fine mechanics employed in such bids, stated that it has had "no evidence to suggest that amalgamations or take-overs, where the bidding company has had no cash available, has been undesirable or disadvantageous to the shareholders of either company" and that it, therefore, saw no justification for imposing upon all offers to acquire companies or controlling interests therein, a requirement that a part of the consideration should be in cash.

The Committee has, however, recommended that the Board of Trade should be given power to make suitable rules which would govern not only the procedure to be followed and information to be given, but also the circulars from the directors of the corporation about to be taken over to their shareholders; and that there should be a civil remedy in damages available to anybody who suffers loss as the result of a reckless or fraudulent statement in a take-over circular. Further, the Committee has accepted, subject to certain modifications, the existing Licensed Dealers (Conduct of Business) Rules of 1960 as they are basically sound. The Committee has suggested the strengthening of the rules in five ways. These are:

(a) A copy of every circular containing or recommending acceptance of such an offer must be sent to the Registrar who is to be empowered to refuse to accept them for registration, if they do not comply with the rules or which does so misleadingly and it will be an offence to issue a circular not accepted for registration.

(b) If the terms of the offer are varied upwards in the course of the take-over, anybody who has accepted the initial offer is to be entitled to the higher figure.

(c) If any offer is not declared unconditional within 35 days, any acceptor may revoke his acceptance, even if expressed to be unconditional.

(d) When the offer is declared unconditional, the offeror must disclose the number and proportion of each class of shares which he controls.

(e) Directors of an offeree company are to be entitled to reimbursement from the funds of their company of expenses properly incurred by them on behalf of and in the interests of their members in connection with the offer.

(f) Finally, any cash offer must contain a statement by the offeror stating what steps have been taken to ensure that the cash will in fact be available.

The principal contents of the Rules for which the foregoing modifications have been suggested by the Jenkins Committee are the following:

(i) The terms of the offer shall be delivered to the offeree company not less than three clear days, excluding holiday, before the offer is despatched to the offeree.

(ii) A take-over offer shall, unless totally withdrawn, remain open for acceptance for at least 21 days.

(iii) Where the offer is conditional, a date shall be specified as the latest date on which the offeror can declare the offer conditional.

(iv) The acquisition of securities to which the offer relates shall not be conditional upon the offerees approving any payment or other benefit to any director of the offeree company.

(v) If the offer relates to less than the total amount in issue of any class of securities, the offer shall be open to acceptance by all.

(vi) Information must be given as follows: the bidder must be identified; the offeree must be given specified information bearing upon the value of the securities he is being invited to transfer and, where the bid takes the form of an offer of securities for securities, the value of the securities he is being invited to accept in return for his own securities; other facts likely to affect the offeree's decision must also be given, such as the extent of the offeror's interest in the securities of the offeree company and details of any special treatment to be accorded to the directors of the offeree company; where a circular contains a recommendation by the directors of an offeree company that an offer be accepted, further details must also be disclosed.

In India, however, take-over bids are not a very common thing at present and as such do not pose any serious problem. But the manner in which these are to be guided, keeping in view the interests of the shareholders, deserves serious study and attention.

Reduction of Capital

The Jenkins Committee also went into the controversial Section 54 which renders it unlawful for a company to provide financial assistance, whether direct or indirect, for the purchase of its own shares. There were two shades of opinion put before the Committee, one saying that the section is too stringent and many innocent transactions are unwittingly caught by it, whereas the other said that it was not stringent enough, and that breach of its provisions should entail much greater penalties. The Committee saw force in both these points of view and, therefore, came to the conclusion that it should no longer be unlawful for such assistance to be given, that it should be given only if the giving of such assistance is first approved by a special resolution of the company and a declaration to the effect that the company will be able to meet all its liabilities as they fall due is filed with the Registrar at the same time. The first requirement of passing of special resolution is suggested to safeguard the minority shareholders, who, in a body of 10 per cent or more holdings of the company, have also the right at any time within 28 days of the passing of the resolution to apply to the Courts to prohibit the transaction. The second requirement of making a declaration is meant for the protection of creditors. Apart from this, the Committee has also recommended that financial assistance should be deemed to have been given by a company, if, within a period of, say, a year of the date of acquisition of a controlling interest in it, the company purchased any assets from the controlling shareholders or their other companies.

On this question, the position under the Indian Companies Act is that, under Section 77(1), no company can buy its own shares, unless the consequent reduction of capital is effected and sanctioned under Sections 100 to 104 or under Section 402. But, in regard to loan, guarantee, financial assistance, etc., there is an absolute ban imposed on the public companies and private companies which are subsidiaries of public companies excepting companies belonging to certain excepted categories such as banks or when these are given to the trustees, etc., for the benefit of the employees of the company or when it is made to an employee, in which case the quantum of advance shall not exceed six months' salary or wages. In the British Companies Act, there is no such limit laid down.

Three member-companies of Simon Engineering Ltd. have been actively engaged at the new Spencer Works of Richard Thomas and Baldwins Ltd., England. Simon Carves were responsible for the whole of the 140-oven coke oven and by-products plant, including the effluent treatment plant. Lodge-Cottrell provided the blast furnace gas-cleaning and sludge filtration plant as well as the scarfer unit electrical precipitator. Turbine Gears supplied motor couplings, inter-connecting spacer gear type couplings, medium-sized triple reduction gear units, three-speed gears and double helical gear units complete with mill spindle couplings.

Pan American World Airways reported a net profit after taxes of $8,900,000 for 1961, up 25 per cent over 1960 profits. Operating revenues were $460,000,000, an increase of 11 per cent over 1960. Dividends paid to shareholders amounted to $5,300,000, marking the 21st consecutive year in which the carrier has paid dividends. In 1961, the Airways once again carried more passengers, more cargo and more mail than any other international airline. Pan American is a private company owned by its shareholders, and receives no subsidy from the United States Government.

NEW PRODUCTS AND PROCESSES

Laminated Plastic Top

A LAMINATED plastic top conveyor table with a one-piece slider bed and work table is manufactured by Sadler Conveyor and Equipment Ltd., Toronto. The one-piece construction eliminates joints and prevents access of food particles or corrosive materials, for which reason the conveyor is suitable for food processing, pharmaceutical and other industries where contamination or damage by corrosive liquids is a problem. The table top can be supplied in a selection of colours and designs to match existing equipment. It is also available with a moulded raised edge to prevent spillage of material. Mounted on fixed or mobile stands made from enclosed boxed sections.

Improved Machine Tool

The Machine Tool Division of David Brown Industries, of Trafford Park, Manchester, has produced a new fully automatic gear hobbing machine. Called the Hydrax V, it is suitable for the continuous cutting of spur or helical gears up to five inches in diameter and can be adjusted for incorporation in automatic production lines. The company has also announced new versions of its vertical six-spindle co-ordinate turret drilling machine. Two sizes are available. The VTD 30 with a table positioning range of 30 inches by 18 inches and the VTD 45 with a range of 45 by 25 inches. The E.M.I. Type B 100 control system is used for table positioning, a continuous automatic cycle, programmed by punched tape, being used to control the table and turret position sequences. This, it is claimed, eliminates the need for expensive drill jigs and reduces the duties of the operator to the mounting and removal of the workpiece, which is clamped to the table manually or hydraulically. The machine can also be used to perform certain milling operations.

Pliable Stainless Steel for Roofing

"Ezeform" stainless steel, a product of Atlas Steels Limited. Welland, Ontario, Canada is so pliant and ductile that it is ideal for eave strips, copings, gutters, curbs, sheet roofing and a myriad other roofing components, the manufacturers state. The product is said to respond perfectly to fabrication on a hand brake, in seaming machines, and for many other individual or special needs where a long-lived yet completely flexible metal is desired. Other advantages claimed for the new pliable steel are these: it is easy to solder; will bend, form and flex with ease, yet provide the inherent rigidity of steel; obscures scuff marks and scratching because of its patterned surface; reduces metallic reflection; needs no painting or plating; is non-staining. A low carbon stainless steel, it is rolled to gauge and then passed through pattern rolls which create a slightly raised impression on both sides of the strip. It is then subjected to an annealing or softening process which renders it so flexible and workable that light gauges can be folded 180 deg. and hammered flat without fracture.

Five Car Bodies Every Minute

Standards of productive efficiency claimed to compare favourably with any in the world have been built into a car body manufacturing plant recently completed by a British firm, The Pressed Steel Co. Ltd., Oxford, at a cost of £8 million. An output of 11,000 bodies a week or five every minute, is achieved through the most advanced flow-production methods, using mechanisation and automation on a scale which make the plant a show-piece for production engineers. One of the highlights is the system for multi-spot welding of pressings to form sub-assemblies. This is done; with batteries of welding guns linked by a variety of automated transfer systems. The multi-welding systems are "indexed" to move automatically across stationary pressings to weld at a number of different points. With this device a complete set of sub-assemblies for a car body can be produced in 30 seconds. In the press shops, manual operations have been reduced to feeding blanks to the first press in a line and disposing of the result at the end of a sequence system using anything from two to ten presses.

Car Safety Seat for Children

A British development claimed to be world's first car safety seat for children between the ages of 10 months and 5 years has aroused wide interest in Europe. It is a chair designed for anchorage to the rear metal frame of a car so that in the event of the vehicle somersaulting neither the chair nor the child will be flung out. The chair is moulded in glass fibre with sides, seat and backrest covered in foam rubber trimmed with plastics material. The safety harness includes pelvic and groin straps and a quick release pin which an adult can release immediately in an emergency. The chair can be easily removed and used in the home or for picnics.

Drying Print on Plastics

An oven for fast-drying print on polythene containers such as detergent bottles, cosmetics phials and similar products are now available from George Vokes (Infra-Red), of Infra-Red Works, New Southgate, London, N.11. Known as Model 1,000 V, it operates in the vertical plane and occupies nine square feet of floor space. It houses 46 horizontal spigot platforms each mounted with six spigots for locating the containers. The platforms move vertically on an endless belt into the heat and cooling zones at manually pre-set speeds and temperatures. The spigots are stepped to take a variety of neck widths. The machine is suitable for drying containers printed both by offset litho and screen methods, and can deliver upto 5,000 bottles per hour depending upon the drying time of the inks employed.

High-conductivity Earthing Electrode

A Dutch firm has produced an earthing electrode comprising a steel rod and a shrunk-on copper sheath, giving the electrode an extremely high conductivity rating.

The electrode is 3 metres long and can be supplied in diameters of 12, 15 or 19 mm. The copper sheath is 1 mm thick and fits extremely securely and accurately around the steel core.

The wire (e.g. of a lightning conductor) is connected to the top, of the electrode by means of a cast bronze clamp coupling. If a 3-metre electrode has to be extended by a second electrode, the two rods are joined with a special metal alloy sliding coupling consisting of a sleeve with two conical holes. A special feature is that resistance at couplings are lower than the resistance in the rod iself.

The electrode is highly corrosion-resistant as has been proved by accelerated corrosion tests and in practice. It can be driven rapidly into the earth and is suitable for use in all kinds of earthing duties.

Rotary Extrusion of Steel

Making metal sheets of extremely accurate gauge by rotary extrusion is one of the latest developments in the French steel industry. The starting material is a short, thick ring which is subjected to rotary extrusion until it becomes a long thin cylinder of the length and thickness of the required sheet. The cylinder is heat-treated then cut, opened and flattened out. Extrusion is carried out by mounting the ring blank on a cylindrical rotating mandrel and applying high pressure to its outer surface.

Chemical Resistant Cement

A cement that resists, attack by sulphate-containing, chemicals such as sulphuric acid is now being made available by a German concern. It contains a high proportion of alumina yet, says the company, it may be used for work below ground level, where chemical attack from salts in the earth is to be expected.

Improved Cattle Feed

Dried grass bound with a small amount of molasses and compressed into cubes is a well known cattle food, but in a new compound feed from Iceland the molasses is used in a much higher proportion. Grass and molasses are mixed gradually to make a meal—the molasses content being about two-thirds by weight as opposed to the usual 10 per cent. The meal is said to form a feed with a high percentage of easily digestible carbohydrates and to be superior to feeds with smaller amounts of molasses. It is claimed that the meal can be stored in paper and asphalt coated bags without any major risk of fermentation.

NEW STEPS FOR STRENGTHENING SOVIET ECONOMIC BLOC

WORLD SYSTEM OF "SOCIALISM," THE ULTIMATE GOAL

By Yury V. Marin

ON 4th September, the newspaper *Trud* (Labour) published an article entitled "A New Stage in Fraternal Collaboration," which proclaimed that "the world system of socialism" is now entering a "new phase"—"a higher form of economic collaboration" among the countries belonging to the Soviet-bloc Council for Mutual Economic Aid, or COMECON. The article was virtually a commentary on an essay ostensibly authored by Khrushchev and published as a leader in *Problemy mira i sotsializma* (Problems of Peace and Socialism) (September 1962, No. 9) and *Kommunist* (1962, No. 12) under the heading "Vital Problems in the Development of the World Socialist System." Khrushchev's article officially established a "new frontier" in the economic and political alliance between the Soviet Union and her satellites, proclaimed that the socialist countries have now entered "a new stage in the development of economic collaboration," and dealt in some detail with the trends, tasks and measures involved in the new situation. The same subject received detailed treatment in the August issues of *Mezhdunarodnaya zhizn* (International Life) and *Mirovaya ekonomika i mezhdunarodnye otnosheniya* (World Economics and International Relations) under the respective titles "Socialist Collaboration: Possibilities and Prospects" and "The International Socialist Division of Labour and the Competition Between the Two Systems."

The new phase was ushered in by the resolutions and recommendations adopted by the Congress of Representatives from the Communist Parties of COMECON member-countries and the 16th COMECON session, both of which were held early in June 1962, in Moscow. These metings, and the session of the Political Consultative Committee of the Member-States of the Warsaw Pact, which was held on 7th June, were attended by all Communist party first secretaries and Government heads of the entire Soviet bloc with the exception of Albania. For the first time, Red China and the rest of Communist Asia, except for Mongolia, which has COMECON membership, were unrepresented.

New Phase

In connection with the new phase in the Communist economic alliance, the 16th session of COMECON formed a permanent Executive Committee "consisting of the deputy heads of Government of the COMECON countries." (*Pravda*, 10th June 1962). The Soviets appointed V. N. Novikov, Deputy Chairman of the U.S.S.R. Council of Ministers, as their representative on the Executive Committee and also as their permanent representative to COMECON. Novikov's transfer from his job as Gosplan Chairman to the leadership of the body charged with the economic planning of the whole Soviet bloc is indicative of the importance which the Soviet Government attaches to economic *rapprochement* with its satellites.

The *communique* issued by the Congress of Representatives from the Communist Parties of COMECON member-countries aketches the lines along which economic consolidation within the Soviet bloc is to be developed. It is stressed that the whole series of "successful achievements"

> ....demands even closer economic, scientific and technical collaboration, the creation of more favourable conditions for the expansion and true shaping of the international socialist division of labour. ... (*Ibid.*, 9th June 1962)

and that the basic method of COMECON activities is at present the careful co-ordination of the long-term and current plans of the COMECON member-states (*Ibid.*) The Congress "deemed it necessary" to devote special attention to speeding up work on specialisation and co-operation in production, especially of machinery and equipment which are in short supply, and in the new branches of mechanical engineering, which play an important role in technical progress; to maximum development of the *overall* raw material, fuel and power base: to co-ordination of the main capital investments in the extractive and processing branches of industry; to co-ordination of scientific and technical research; and to the building and equipping of joint enterprises for interested COMECON countries.

The Congress passed a resolution on the "basic principles of the international socialist division of labour" as the basis for the drafting of "a long-term programme of economic collaboration." (*Ibid.*, 17th June 1962.) Since these "principles" are much less concrete and radical than the "new phase" concept itself it will be of little purpose to present them in full. The main points are as follows: (1) In every COMECON country plans for economic development are to be developed on the basis of each country's concrete conditions, its political and economic tasks, but necessarily "with consideration of the requirements and possibilities of all the socialist countries"; (2) inter-State specialisation is to be based on the comprehensive concentration of homogeneous production, especially in machine-building, the chemical industry, ferrous and non-ferrous metallurgy; (3) the transition to unified power systems is to be achieved; (4) the co-ordinated specialisation of agriculture is to be achieved, and there is to be a continual exchange of agricultural produce; and (5) the effective strengthening of "the mutual bond among the economies" of the various COMECON countries is proclaimed and the tendency to create a multilateral complex for the national economy in any Communist country is condemned as leading to "a decrease in the effectiveness and a retardation of the economic development rate in the separate countries and in the COMECON bloc as a whole."

World Socialism

In a radio and television speech on 2nd July 1962, Khrushchev developed still further the economic prospects opened up by the June congress and stressed that they are the basis for the future creation of a "united world socialist economic complex" and must be backed by concrete, bold and extensive industrial co-operation in the COMECON countries and by use of all the advantages offered by the overall planned economy which is being created.

According to an editorial in the journal *Kommunist*, the resolutions of the June congress opened "a new chapter" in relations within the Soviet bloc and are directed at creating "a united economic complex" (*Kommunist*, 1962, No. 9). This article is of interest for the fact that it admits the existence of counteracting national forces in the countries and even in the Communist parties of the Soviet bloc. These forces, the article charges, regard the policy of "economic *rapprochement*" as leading to a further loss of political sovereignty, an increase of dependence on the Soviet Union and a general trend towards an artificial lack of balance in the national economic system, *Kommunist* declares:

> The new relationships in the world socialist system are not taking shape in a haphazard fashion. The laws governing the development of the world socialist system operate by no means automatically. The prime necessity for their implementation is an international policy of the fraternal parties. In setting out a domestic and foreign policy, proletarian internationalism demands of each fraternal party that it act not only in the interests of its own country but also in the interests of the whole socialist system and the world Communist and workers' movements. It is against this that nationalism moves and, under the present conditions, nationalism represents the greatest threat to the unity and solidarity of socialist collaboration. (*Ibid.*, p. 5.)

A radical development from the resolutions of the June congress was the subsequent programme and instructional articles, especially the article already mentioned, "Vital Problems in the Development of the World Socialist System." Although authorship of this article is attributed to Khrushchev, its specific nature and its fairly high theoretical level indicate that, in all probability, it was written by a team of Soviet economic theorists and was approved by all the Soviet leaders. An analysis of its contents shows immediately that the radical nature of the attention to the problem of new forms of close "collaboration" within the Soviet bloc is the result not only of the Party's endeavours to keep the satellite countries in ever-increasing dependence on the Soviet Union but also of the considerable successes of west European economic integration. The article emphasises the fact that:

> ....We are considering the objective trends towards the internationalisation of production which are operating in the capitalist world and in connection with these we are forming our own political and our own economic measures.... Socialist collaboration presents an even more consolidated and united alliance in the face of the united front of the forces of imperialism. (*Problemy mira i sotsializma*, 1962, No. 9, p. 6.)

The article goes on to speak of the desirability "not only of undeviating economic co-operation between our countries, materialising step by step, but also of ideological, political and cultural *rapprochement* of the socialist peoples, in the course of which the distrust and alienation of the nations will disappear." It also states that "collaboration" between the U.S.S.R. and the Communist countries of east Europe was founded in the early post-war years in the form of the "military and political union." Economic relations during the first period of collaboration were established on a bilateral basis, between States with a "multiple-structure" economy. The "world socialist market" began to take form with the creation of COMECON in 1949. The co-ordination of national economic plans was started in 1956, but, in the 12 years of its existence, COMECON has established only "the basis of collective collaboration and mutual aid."

A Significant Remark

At the present juncture, claims the article, this "basis" is solid enough to begin the transition to that "high degree of unity without which it is impossible even to imagine the future life of the socialist peoples together," creating conditions under which it is possible "to raise their economic and political co-operation to a new and higher level." The article even "recommends" the establishment within the framework of the Soviet bloc of a "united economic organism" with the "abolition of all economic barriers" and the creation of a "united world socialist economic complex," which should be run according to a "general scheme of inter-State specialisation and co-operation in production."

The same line is taken by the journal *Mirovaya ekonomika i mezhdunarodnye otnosheniya* (World Economics and International Relations), (1962, No. 8), which states that *en route* to the creation of a "united Communist world economy" the time has come to establish a "united economic ensemble" of the COMECON countries. The journal *Mezhdunarodnoe zhizn* (International Life) (1962, No. 8) adds that, during the period 1970-80, the COMECON countries will switch from co-ordinated plans to "the compilation of a single national economic plan scaled to the whole world system of socialism."

The matters of first importance among these "recommendations" are the co-ordination of the economy of all the COMECON countries, the creation of a type of "composite balance which would fill the role of a collective development plan for the economy of all the COMECON countries," and the development of "single plans" common to all the COMECON countries for all the branches of production. (*Problemy mira i sotsializma*, 1962, No. 9, p. 8). It is also proposed to establish "combined capital" funds, their transfer from one country to the other, the co-ordination of capital construction under a system of joint financing, and the establishment of a "collective credit bank" for this purpose.

Khrushchev's article points out that construction, based on joint-financing, must be realised on the basis of "profitability," *khozraschet* (non-financing by the State) on an inter-State scale, and subsequent "recouping of expenditures." The implementation of all planned economic, financial and practical measures for the construction of objectives and systems is to be realised on the principles of "healthy socialist competition," with the introduction of a system of material stimuli and the establishment for the producer-countries of "incentive prices" on co-operative products, especially in those branches of production where there are shortages. The establishment of a system of "mutual responsibility" for the performance of obligations is also foreseen.

It should be mentioned that his project, which, if carried out, cannot but increase the dependence of the satellite countries on the Soviet Union, is described as being certain to increase their sovereignty, "according to the degree to which each country ... receives the opportunity of relying not only upon its own

(*Continued on page 782*)

PROGRESS OF TYPEWRITER INDUSTRY

PRODUCTION STILL BEHIND DEMAND

THE development of typewriter industry has received considerable momentum, with the ban on imports imposed in 1958. The domestic demand has, of course, been going up steadily, as a result of growing requirements, particularly from industrial and trading establishments. At the beginning of the second Plan (1956-57), there were three units engaged in the manufacture of typewriters, with a total installed capacity of 33,000 machines per annum. A new unit was put up in 1960 at Calcutta by Messrs. Blackwoods (India) Ltd. This unit, with an annual installed capacity of 12,000 typewriters, is the first of its kind in the country manufacturing portable typewriters. Thus, the total annual installed capacity stood at 45,000 typewriters—on a single-shift basis—at the end of the second Plan. All the units, except Messrs. Blackwoods, are manufacturing standard typewriters in different carriage lengths varying from 11" to 27", out of which the sizes 11" to 15" are most popular.

The three units manufacturing standard typewriters are Messrs. Remington Rand of India Ltd., Calcutta, The Rayala Corporation Ltd., Madras, and Messrs. Godrej and Boyce Company, Bombay. Of these, the largest unit is Remington, the annual licensed capacity of which is 15,000 typewriters. With this capacity, the unit is in a postion to manufacture 18,000 typewriters annually. It manufactures standard typewriters of different carriage lengths with keyboards in English and vernaculars, such as Bengali, Marathi, Gujarati, Hindi, Assamese and Tamil. The Rayala Corporation, which manufactures Halda typewriters in collaboration with a Swedish company, has an annual installed capacity of 6,000 machines with keyboards in English, Hindi and Tamil. This unit has been granted a licence for stepping up its annual capacity to 14,400 (standard type) typewriters, besides manufacturing 6,000 portable varieties. Godrej and Boyce Company of Bombay has so far been producing only Standard typewriters with English keyboard. The Company has an installed capacity of 12,000 typewriters per annum. Although it has so far been undertaking production without foreign assistance, it has recently entered into an agreement with an East German firm for technical collaboration, with the object of manufacturing typewriters of different carriage lengths with English and Hindi keyboards.

New Scheme

A new scheme for a typewriter plant at New Delhi was also licensed in March 1961. The plant, under construction, is expected to manufacture 10,000 standard typewriters, on a double-shift basis. The Company has been able to secure the collaboration of the Czechoslovakian firm, Kovo, Praba, a sister concern of Skoda. Besides, a small-scale plant is also expected to come into being at Bahadurgarh, Punjab. The plant, which will have a capacity to manufacture 2,000 typewriters per annum, has been offered technical collaboration by a German company.

When these two new units are commissioned, along with the expansion of the Rayala Corporation, the aggregate capacity of the industry will stand at 66,400 typewriters, on a single-shift basis (including 2,000 in the small-scale sector), according to the third Plan *Programmes of Industrial Development*. The Planning Commission is of the view that this capacity will be adequate to meet the estimated demand by the end of the third Plan, if the various units operate even on a double-shift basis. The Commission has, therefore, decided not to license any new unit. It may be noted that, according to the Commission, the demand for typewriters will expand to 90,000 units by 1965-66, or an increase of 100 per cent over the level in 1960-61. The export demand at the end of the third Plan is placed at 10,000 typewriters. This brings the total number of typewriters required in the country to 100,000 by 1965-66.

It may be that the Commission is correct in its assessment of the capacity of the industry to meet full requirements of the country by the end of the third Plan. But it is rather disconcerting that the current level of production is much below the targets envisaged. What is worse, there is a large unutilised capacity in the industry. In 1961, for instance, the total number of typewriters produced was 31,101, as against the installed capacity of 45,000. This shows that over 30 per cent of capacity remained unutilised last year. It is, however, encouraging to note that the situation has been improving in recent years. Five or six years ago, it may be recalled, the unutilised capacity was to the extent of about 70 per cent. The following table shows the trend in the growth of production and capacity since 1955:

	Installed capacity (Nos.)	Production (Nos.)
1955	33,000	9,664
1956	33,000	13,620
1957	33,000	15,430
1958	33,000	15,846
1959	33,000	21,457
1960	45,000	23,649
1961	45,000	31,101

Third Plan Target

The third Plan production target is 100,000 typewriters, including 10,000 anticipated from the small-scale sector. In view of the large potential demand in the country and the ban on imports, the scope for full utilisation of capacity on a double-shift basis is quite bright. But, like most other industries, this industry, too, is confronted with the problem of raw materials. The Government will, therefore, do well to be helpful to the industry in the matter of securing adequate raw materials like rods from abroad. Otherwise, the current shortage of typewriters will continue and the cost will remain high.

It may be noted that, before the ban was imposed, India used to import about 21,000 standard and 7,000 portable machines annually. In 1956, imports of typewriters were of the order of 34,220, valued at about Rs. 123 lakhs. But, of late, the annual imports have been less than 200 machines costing about Rs. 1.5 lakh. Imports of components of typewriters come to about Rs. 35 lakhs annually. Indian typewriters made some contribution to exports as well. In 1961-62, exports (including both standard and portable) were of the order of 350 typewriters fetching foreign exchange to the tune of Rs. 2 lakhs. Exports went mostly to Pakistan, Malaya, Singapore and Ceylon. As in the case of several other durable consumer goods, customer preference, as the Planning Commission rightly says, is of considerable importance in building up a good export trade. It is also necessary to improve quality and quote more competitive prices for Indian products.

(*Concluded from next column*)

of units is unmistakably clear, namely, between 10-25, with the qualification that in the case of Bangalore and Mysore, the overall mean will go slightly to the next bracket 26-100 because of the substantial number of large establishments in their district totals. The author suggests that the significance of this finding should not be missed, especially after the formulation of a definite policy regarding small-scale industries by the Government of India since 1955. Perhaps, even in the administrative field, the carrying out of the Central Government's policy will mean a very early rethinking and rearrangement.

The major industries in the State are textiles, engineering, chemicals and dyes, food and drinks, tobacco, paper, minerals and metals. Four classes of industries, according to the study, have come into prominence during the period under review. They are engineering, chemicals and dyes, food, drink and tobacco, and wood, stone and glass. It may be noted here that the study gives detailed statistical outlines of the trend of growth of the various industries, occupational pattern, consumption of electricity, etc., which have a close bearing on the location of industries.

LOCATION OF INDUSTRIES IN MYSORE

A STUDY IN REGIONAL PLANNING

THE Indian Statistical Institute has published a study entitled *Location of Industries in Mysore State*, which makes a detailed enquiry into the nature and pattern of industrial location in that State. The enquiry, which was undertaken by Dr. M. C. Munshi, Professor-in-charge of the Section of Economics and Social Sciences of the Indian Institute of Science, Bangalore, with the assistance of the I.S.I., seeks to provide (1) a factual survey of industrial location, and (2) a workable methodology of such surveys for future guidance and use. The study assumes much significance in view of the Planning Commission's growing desire to remove regional imbalances in industrial development. Appropriately enough, the study, which provides a wealth of statistical information on industries in the State, has given a brief account of the theoretical approaches to regional planning. The concept of regional planning is, of course, not used in the book as an alternative approach to the macro-economic analysis on which the Five-year Plans are based. The emphasis in the book is laid only on those aspects relating to relative concentration of industries in the various districts in Mysore State and the possibility of removing disparities in industrial development between various regions within the State.

The approach of enquiry is inductive, being based on aggregate data for various industries in the State. Thus, the economist's theory of location of industries based on industrial firms—representing units within an industry—has not been adopted for the study. This is mainly because of the difficulty in getting adequate data for cost studies, including labour costs, transport costs and marketing costs for all the units. The study, it may be noted, has taken into consideration not only large-scale enterprises, but also small-scale industries. It is proposed to examine here some of the important findings of the study, without going into the theoretical discussions on the concepts of regional planning and the methodology adopted in the study.

The period covered by the study is 1949-56. Although the data are thus out of date, the study reveals the general pattern of concentration of industries, which has not changed much in the course of a few subsequent years. The study reveals that, during the period under review, both the perennial and seasonal establishments in the organised sector showed a steady increase. A very significant trend noted in the industrial progress of the State is that the growth in the number of workers employed in the perennial factories has not at all kept pace with the rise in the number of these units. The number of workers increased from 102,000 in 1949 to just 113,000 in 1956. During the same period, the total number of perennial factories (registered and others) rose from 1,441 to 2,856. The number of seasonal factories was 50 in 1956, as against 30 in 1953.

Concentration of Industries

The Bangalore district accounts for about 50 to 60 per cent of the total perennial factories in Mysore State. Of the total of 880 registered perennial factories in the State, 535 are in this district, as of 1956. In 1949, there were only 285 such units in the district, as against 471 in the whole of the State. The study observes, therefore, that the problems of location policy in this area are somewhat similar to those which London and its surrounding areas presented for solution in the U.K. so acutely during the inter-war period. The next two districts in the order of importance, from the point of view of industrial location, are Mysore and Kolar.

The analysis of the size of industrial establishments from the viewpoint of workers employed shows that it is only in Bangalore that there has been a more or less steady growth in the units having more than 500 workers. In the three other districts, far less in importance here, namely, Kolar, Chitaldrug and Shimoga, the number has been almost stationary, whereas in Mysore (owing to the closure of some well-known units), this number has actually declined. It is perhaps even more noteworthy, according to the author, that in the Bangalore district, an overwhelmingly large proportion of establishments is within the two brackets, 10-25 and 26-100 employees. Taking all the districts together, the means for the size

(*Continued in previous column*)

CALCUTTA ELECTRIC SUPPLY EARNS LESS

POWER SELLING RATE REVISED

THE year ended 31st March 1962 has proved a poor one for the Calcutta Electric Supply Corporation Ltd. (Chairman: Sir William Lamond). For, despite a rise of some £700,000 in the total revenue, the gross profit has declined sharply, a fall which is fully reflected in the net profit figure as well. If the dividend has still been maintained at the very modest level of 7½ per cent (actual), it is only after withdrawing heavily from the reserves to make good the deficit in the revenue.

Although the revenue from sale of current improved from £9,805,661 to £10,494,687, the effective rate of increase over the previous year works out to less than 7 per cent as compared with 11 per cent during 1960-61 and nearly 9 per cent in 1959-60. The slower rate of increase in the face of rapidly rising demand for electricity in the Calcutta region can be directly attributed to the series of serious breakdowns of plant which occurred at the Company's New Cossipore generating station towards the end of the previous year and at the beginning of the year under review. The maximum demand on the Company's system at the time of these failures was approximately 385 MW sent out and, although the Damodar Valley Corporation were able, at times, to increase their exports to 85 MW, the outage of the New Cossipore plant, totalling 110 MW, entailed load shedding on an extensive scale. The effect of this load shedding has been almost entirely confined to the high tension industrial consumers as will be apparent from the following figures showing the energy consumed (in millions of units) during the past four years by various categories of consumers:

	Year ended 31st March			
	1962	1961	1960	1959
Power purposes	1,489.3	1,438.0	1,350.6	1,240.9
Flat rate	277.4	259.2	242.7	229.7
Public lighting ..	23.2	19.5	18.5	17.4
Traction	48.4	48.4	45.8	42.9
Bulk supplies ..	109.0	89.6	66.4	62.8
Special contracts	101.6	100.3	92.6	86.4
Total ..	2,048.9	1,955.0	1,816.6	1,677.1

Apart from restricting the growth of sales of electricity, the aforesaid breakdowns also had a deleterious effect on the profits of the Company for the year under review. Since the outages of the plant had to be covered by increased generation with less efficient plant elsewhere in the Company's system and by increased imports (which in fact happened to a substantial degree), there was a sharp rise in revenue expenditure, quite apart from the actual cost of repairing the damaged machines. Total revenue expenditure thus increased by no less than £1,115,865 to £8,108,633, owing, for the most part, to an increase of £870,581 to £1,940,775 in the cost of power purchased from the Damodar Valley Corporation. In the preceding year the Company had purchased 390.4 million units from the Corporation at a total cost of £1,070,194. During the year under review, power imports rose to 664.9 million units at a cost of £1,940,775. This large increase in the cost of imports—which necessarily includes interest and depreciation charges that are not included in the Company's own operating expenditure since they are shown separately—increased the total operating expenses. Cost of generation, transmission and distribution was also higher by £190,629 at £5,278,764, despite a saving of about £75,000 in the cost of coal and can be ascribed mainly to the increase in salaries and wages arising out of a general revision of scales of pay. Administration and general establishment charges have also increased by about £60,000 for the same reason. Because of these higher costs, the gross profit has gone down to £2,593,506 from £3,009,778 a year ago. Although the provision for depreciation has been stepped up from £960,615 to £994,487 because of a higher depreciable block, there has been a saving of £211,909 in the provision for taxation which has taken up £943,105. As a result, the net profit stands reduced at £655,914 in comparison with £894,149 for 1960-61 and £1,167,490 for 1959-60.

The clear profit, however, for the year, as calculated in accordance with the Electricity (Supply) Act, 1948, was less than the reasonable return by £515,618. This shortfall has been reduced by a transfer of the balance of £187,816 standing to the credit of the reserves created for such contingencies. Paucity of profits has compelled the Directors to credit a lower sum of £392,406 (as against £639,257 last year) to reserves, while transferring £168,793 (£159,966) to the debenture sinking fund.

The following comparative table presents the Company's working in the past four years:

(In £s sterlings)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale of current ..	10,494,687	9,805,661	8,834,610	8,114,777

Market price of ordinary shares in rupees—	1962	1961	1960	1959
High	15.31	15.25	16.02	15.31
Low	14.50	13.94	14.75	13.56

It will be recalled that, during the preceding year, the West Bengal Government had at last authorised the extension of the Company's power generating station at New Cossipore by installing an additional machine of 50 MW capacity. During the year under review, great progress was made on the foundation raft and the new pumphouse monolith, both of which were completed ahead of time. In view of the plant manufacturing programme being well up to schedule, the Chairman has expressed confidence that the new machine will be on commercial load by October 1963—about the same time as the Company has been promised the first tranche of the power it would be importing in increasing quantity from the West Bengal State Electricity Board in the future. The shortage will thus continue for at least another year.

As against this there is a possibility of the demand for energy rising during days to come. In addition to large industrial concerns supplied at high tension, energy supplied for power purposes covers a large number of small industries supplied at low tension such as the jute industry, rolling mills and engineering workshops, cotton mills, chemical works, and paper mills. With the exception of the last mentioned, their consumption is clearly on the increase. Similarly, with the growing popularity of small air-conditioning units in residences and offices, demand for energy for domestic power purposes has also been rising. The position arising out of this situation can only be alleviated by an increase in the import of power from D.V.C.

Despite the uninterrupted increase in sales and the continuous rise in all costs since the war, the Company's existing rates for lights and fans and for domestic power have remained unaltered for over fifteen years and other rates have altered only to the extent necessary to reflect the greatly enhanced cost of coal. These have been instrumental not only for bringing unsufficient revenue to meet the rising costs of operation but also for disabling the Company to earn the full reasonable return to which it is entitled by statute. The Company, therefore, decided, and very rightly in our opinion, to revise its rate structure on the general principle that each class of consumption should bear its proper share of the cost of production and distribution. The first call has fallen on the industrial high voltage consumers whose rates have been increased by about 17½ per cent on an average. No change has been proposed for the present for power supplied for lighting and fans as also for power supplied to small low voltage users. Larger low voltage users, however, have to pay an additional charge of about 17½ per cent, while high voltage energy users have to bear an additional charge of 13 per cent.

The ordinary stock of the Corporation is quoted on the Calcutta Stock Exchange at Rs. 14.87, at which rate the yield roughly works out to 6.72 per cent (actual) per annum.

RESULTS OF TEXTOOL IMPRESSIVE

STAFF MAIN BENEFICIARY

DESPITE shortages of textile machinery components and coke and a ten-day lockout in the factory following a strike by workers, the Textool Company Ltd. (Managing Agents: Messrs. Balasundram and Company, Coimbatore) has managed to report further progress during the year to 30th April 1962. Sale proceeds have improved from Rs. 172.82 lakhs to Rs. 206.40 lakhs and, thanks to an upward revision in selling prices, gross profit has expanded by more than Rs. 7 lakhs to Rs. 24.71 lakhs and the profit-margin (ratio of gross profit to sales) has improved further to 11.9 per cent from 10.1 per cent to which level it had advanced in the previous year from 7.8 per cent in 1959-60. But for the strike and the shortages just mentioned, which affected production, the improvement in profit and profit-margin would have been more pronounced. The main beneficiary of the year's better performance is the staff. Subsequent to the lockout in the factory, the Industrial Tribunal gave an award, under which the wage bill of the Company increased slightly. Staff expenses during the year aggregated Rs. 61.45 lakhs, as against Rs. 56.52 lakhs a year before. Besides, out of the distributable surplus, Rs 5.01 lakhs, or 38 per cent, have been provided for bonus to staff in respect of previous years. The shareholders, on the other hand, have been awarded the same return of 15 per cent per annum, subject to tax, on the Rs. 100 fully paid ordinary shares. Transfer to development rebate reserve has been stepped up from Rs. 0.84 lakh to Rs. 1.80 lakh, and a sum of Rs. 30,000 has been set apart, as against nothing in the past three years, for other reserves.

The table below compares the salient features of the year's working with those of the preceding three years:

(In lakhs of rupees)

	For the year ended 30th April			
	1962	1961	1960	1959

† Subject to deduction of tax.

The Directors say that the demand for the Company's products has continued to be good and heavy orders on hand await execution. The Company has established itself well all over the country by offering a complete range of spinning machinery with the latest improvements at competitive rates. It has entered into a collaboration agreement with the Nippon Signal Company Ltd. of Tokyo for the manufacture of electric power signals for the railways, and production of these has commenced. Another well-known Japanese firm of textile machinery manufacturers is collaborating with the Company for the manufacture of cone winders. These machines will be ready for marketing shortly.

Financially, the Company's position reflects the state of a young but rapidly growing concern, engaged in a capital goods industry. Such a company necessarily takes a pretty long time to attain an impressively strong financial position. The Company has a paid-up capital of Rs. 39.77 lakhs, which is backed by reserves and surplus aggregating Rs. 16.78 lakhs. Secured loans at Rs. 55.01 lakhs, as against Rs 49.60 lakhs a year before, comprise Rs. 19.40 lakhs (Rs. 21.70 lakhs) from the Madras Industrial Investment Corporation Ltd., key loan from banks of Rs. 10 lakhs (Rs. 7.80 lakhs) and open loan from banks of Rs. 25.60 lakhs (Rs. 20.10 lakhs). Unsecured loans have also increased during the year from Rs. 42.40 lakhs to Rs. 68.44 lakhs. Current liabilities and provisions aggregate Rs. 146.85 lakhs, as against Rs. 101.48 lakhs a year before. Excluding the Investment Corporation loan, the total indebtedness to outsiders works out to Rs. 250.89 lakhs, as against Rs. 171.78 lakhs a

(Continued on next page)

TATA CHEMICALS HIT BY RAIN AND GOVERNMENT

GOOD PROGRESS ON EXPANSION

THE preliminary results of Tata Chemicals Ltd. (Managing Agents: Messrs. Tata Industries (Private) Ltd., Bombay) for the year ended 30th June 1962, showing a setback in net profit from Rs. 34 lakhs to Rs. 16.94 lakhs, despite an improvement in sale proceeds from Rs. 415.72 lakhs to yet another record level of Rs. 531.12 lakhs, were published in *Commerce* of 20th October (*vide* page 695). The net profit has been arrived at after providing Rs. 35.75 lakhs, as against Rs. 23 lakhs in the previous year, for depreciation and allowing Managing Agents' commission of Rs. 1.41 lakh in the previous year, as against nothing for the year under review. As in 1960-61, no provision has been made for taxation in 1961-62. Excluding the excise duty paid Rs. 20.57 lakhs (Rs. 5.79 lakhs in the previous year), sales realisation during the year shows an improvement of Rs. 100.62 lakhs, or 24.5 per cent, to Rs. 510.55 lakhs. As against this, the gross profit has declined from Rs. 58.41 lakhs to Rs. 52.69 lakhs.

From the comparative table that follows, it will be clear that the recovery of about Rs. 8 lakhs which the Company had staged in its profit in the previous year, has been almost completely lost during the year under report. The profit-margin (ratio of gross profit to gross sales), which in 1960-61 was slightly lower at 14 per cent than 14.7 per cent in 1959-60, has dipped to 9.9 in 1961-62. The percentage of net profit to sales has declined to 3.2 in 1961-62, after having recovered from 7.7 to 8.2 per cent in the preceding year. Likewise, the percentage of net profit to capital employed has dropped to 2.1, after having recovered from 3.9 to 4.4 per cent in 1960-61. The net surplus per ordinary share works out to Re. 0.49 in 1961-62, as against Re. 1.16 in the preceding year and Re. 0.90 in 1959-60.

The main features of the Company's working in the past four years are brought out in the table below:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959

* Subject to deduction of tax.
† The dividend on preference shares has been raised to 7.14 per cent (taxable) to give a net return of 5 per cent. The amount includes Rs. 0.59 lakh paid for the previous year under this adjustment.
‡ Excluding interest at 4 per cent, payable out of capital.

From the Directors' report and the Chairman, Mr. J. R. D. Tata's statement to shareholders, we find that the Company became a victim of the catastrophically heavy rainfall last year at Mithapur (Gujarat), where its plant is situated. The heavy rains, we are told, washed away the bulk of the Company's salt harvest and necessitated the purchase of 125,000 tonnes of salt at an additional cost of Rs. 26.60 lakhs. The loss suffered on account of this would have been less severely felt, had the Government accepted the Tariff Commission's revised selling price for soda ash at Rs. 400 per tonne ex-works, instead of cutting it by Rs. 20 to Rs. 380 per tonne ex-works and that too at ex-port town rates. This decision of the Government cost the Company no less than Rs. 17 lakhs. But for these two adverse factors, the gross profit would have been some Rs. 43.60 lakhs higher than that shown in the accounts.

The higher provision of Rs. 35.75 lakhs for depreciation, as against Rs. 23 lakhs in the previous year, is the result of the change in the method of calculating depreciation from a uniform rate of 10 per cent to the straight-line method as laid down under the Income-Tax Rules 1962. As the revised rates of depreciation were applicable for tax purposes, retrospectively to the previous year, the total allocations to depreciation and development rebate reserve made in last year's accounts were found to have exceeded the statutory requirements by approximately Rs. 7 lakhs. The transfer of Rs. 4 lakhs from this account is, therefore, from this excess amount of Rs. 7 lakhs. No provision has been made for taxation and development rebate reserve this year, as there is no assessable profit, after providing for depreciation.

The Directors have referred to the imposition of an excise duty, under the definition of "compressed gas," on carbon dioxide gas produced and consumed in the manufacture of soda ash at the rate of Rs. 500 per tonne of gas from 24th April to 6th July last and at Rs. 25 per tonne from 7th July onwards. At the higher rate of Rs. 500 a tonne, the duty will be Rs. 200 a tonne of light soda ash which itself sells at only Rs. 380 per tonne ex-works and is already subject to an excise duty of Rs. 20 per tonne. The industry has protested against the imposition of the levy and submitted to the Government that, in the solvay process used in the manufacture of soda ash, no carbon dioxide gas as such is produced and that what is produced is only kiln gas, which, while containing 42 per cent carbon dioxide gas, does not constitute compressed gas in the legal sense of the term. While indicating some possible relief from the higher rate of duty, the Government has ruled out total exemption from the lower rate of duty. This will increase the cost by Rs. 10.30 per tonne of light soda ash. The industry intends to press for a judicial ruling on its stand. Hence no provision has been made in the year's accounts for the duty.

Soda ash production, at 102,000 tonnes, showed an increase of 28 per cent over the year. The current rate of production is said to be substantially higher than last year's average figure. The dense ash plant, installed and commissioned last year, is now on regular production, and the product has been well received by the principal users, namely, glass manufacturers. However, the profit-margin on the product has been reduced by Rs. 10 a tonne, as the Government has imposed a cut to that extent in the price differential of Rs. 30 a tonne in favour of dense ash as recommended by the Tariff Commission. Sodium bicarbonate output was 11 per cent higher than in the previous year, and steps are under way to increase it to 30 tonnes a day.

Production of caustic soda by chemical processes has been discontinued, as the Tariff Commission did not recommend a higher price for chemical caustic soda. The plant has been turned over to the manufacture of caustic potash and industrial pure salt. Electrolytic caustoc soda continues to be manufactured and the production will be expanded by the addition of a second batch of 28 Hooker cells within the next few months. Production of magnesium chloride declined by 81 per cent and of bromine by 67 per cent, as the working of the marine products section was also affected by the damage to the salt pans.

According to Mr. Tata, the proposal to commission a further 700 acres for salt has materialised, with the Government of Gujarat leasing to the Company additional area. This area is being developed and will start producing salt during the current year. To safeguard the Company's position further in respect of salt supplies, a new salt works is being developed in the Okhamandal area, some ten miles south-east of Mithapur. The combined salt output from the two areas during favourable weather is expected to be in excess of the Company's requirements. If the weather is unfavourable, the two areas, being widely separated, will be mutually supporting and complementary to each other. Maximum output of soda ash and its derivatives at minimum cost and production of dense ash and pure salt, as is now proposed, will complete the current programme of modernisation and expansion. With some additional capital expenditure, it may be possible then to increase soda ash output by another 100 tonnes a day, which, however, will be done only if it is profitable to do so. At that stage, however, the Mithapur plant would have reached its optimum potential. Mr. Tata believes that the Company will then have to look to other activities for further growth and diversification.

Following the issue of 503,920 ordinary shares during the year, referred to earlier, the paid-up capital has increased from Rs. 311.93 lakhs to Rs. 362.34 lakhs, of which Rs. 302.34 lakhs are in ordinary shares and Rs. 59.97 lakhs in 5 per cent cumulative preference shares of Rs. 100 each. As against this total, reserves and surplus aggregate only Rs. 58.31 lakhs and provide but a one-fifth cover for the equity. It will be recalled that the Company issued during 1961-62 also Rs. 50 lakhs 6.5 per cent 1970-75 debentures, in addition to the existing 5 per cent 1975 bonds worth Rs. 5.31 lakhs. Out of the new issue of Rs. 50 lakhs, debentures worth Rs. 34.68 lakhs were taken up by the L.I.C. and the remainder of Rs. 15.32 lakhs were subscribed for by the shareholders. This issue enabled the Company to reduce its bank borrowings during the year from Rs. 143.48 lakhs to Rs. 91.11 lakhs. Secured loans, including debentures, bank borrowings and a Rs. 1.53 lakh housing loan from the Government, aggregate Rs. 147.95 lakhs, as against Rs. 150.44 lakhs a year before. Unsecured loans amount to Rs. 254.05 lakhs. Current liabilities and provisions aggregate Rs. 120.01 lakhs. As against an addition of Rs. 103 lakhs during the year to the long-term liability following the issue of new shares and debentures, the aggregate short-term indebtedness to outsiders, amounting to Rs. 465.17 lakhs, has shrunk over the year only by about Rs. 20 lakhs. Further, the short-term indebtedness exceeds the total of current assets, loans and advances at Rs. 309.50 lakhs and trade investments at Rs. 18.78 lakhs, all of which are unquoted. Thus, the financial position of the Company is not quite happy. However, in providing depreciation on fixed assets, the Company has followed a conservative line, and the gross block, which increased during the year from Rs. 709.66 lakhs to Rs. 808.55 lakhs, has been written down to Rs. 544.88 lakhs and, inclusive of capital works-in-progress of Rs. 66.50 lakhs, is shown at Rs. 611.38 lakhs.

At their current market value of Rs. 13.28 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer a net yield of 4 per cent per annum.

year before. As against this, current assets, loans and advances aggregate Rs. 268.01 lakhs and investments (unquoted) amount to Rs. 26,200. The indebtedness is thus fully covered. Since the close of the year, the Company has repaid mortgage loans to the extent of Rs. 2 lakhs. It also increased its capital by Rs. 20 lakhs by the issue of 20,000 shares of Rs. 100 each at a premium of Rs. 10 per share to shareholders as on 15th June last in the proportion of one share for every two shares held. The gross block, which expanded during the year from Rs. 77.83 lakhs to Rs. 93.12 lakhs, has been written down to Rs. 58.57 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 168 *cum-div.* On the *ex-div.* basis, they offer a net yield of 6.6 per cent per annum.

AGRICULTURAL PROBLEMS

A SYNOPSIS

By Virendra Agarwala

IN a century and a half, man has broken all the *old barriers which limited productivity and* has revolutionised the techniques of production. When he did this he could, for the first time, regard poverty and hunger not as part of man's sad lot on earth, but as the result of ignorance and illiteracy. It is being gradually realised that freedom from want is quite attainable. Economic freedom implies that the world, particularly developing countries, must pass from an economy of scarcity to an economy of abundance.

It is widely recognised that a politically free man must work to attain economic freedom based on social justice and security. A scientific and modern agricultural base is vital for economic development. The scope for fuller utilisation of manpower turns largely on the two important factors, namely, the rate of increase in agricultural produce and the rate of saving. Agricultural and allied pursuits in India continue to absorb about 70 per cent of the working population. *It is true that a rapid* rate of economic development is associated generally with a rapid growth of agriculture. A rapid growth of the agricultural sector also helps to provide a growing demand for the products of industry and thus stimulates a high rate of growth in this sector as well. It is, therefore, very much in our national interest that everything possible should be done for reconstruction and development of our rural economy.

Plan Outlay

The third Plan provides for an outlay of Rs. 1,281 crores for agricultural programmes, as compared with Rs. 667 crores and Rs. 354 crores in the second and the first Plans, respectively. The third Plan envisages an increase of about 27 per cent in agricultural production. Accordingly, the index of agricultural production is expected to rise from 139.1 in 1960-61 to 176 in 1965-66. The *per capita* availability of foodgrains is expected to rise from 16 ozs. in 1960-61 to 17.5 ozs. in 1965-66. The *per capita* consumption of foodgrains is at present below the nutritional norm of 18 ozs; it was 15.7 ozs., per day in 1954 and 15.4 ozs. in 1960. The country has to increase its present output by 21 million tons by 1965-66, if it is to achieve the third Plan target of 100 million tons of foodgrains which comes to an increase of over 26 per cent in four years. Whether 480 million people which India will have by then will be able to have a nutritious diet, even if the target of 100 million tons is achieved in 1965-66, remains a big question of doubt.

The production of foodgrains in 1960-61 reached the record level of 79.3 million tons, exceeding the production in 1959-60 by 3.8 million tons. In 1961-62, there was a slight fall in output, due chiefly to a slight setback in the production of rice, *bajra* and *jowar*. In order to maintain the upward trend in production, it is necessary to ensure conditions which will maintain farmers' incentive. Accordingly, besides continuing the decontrol of wheat already effected in 1961, an assurance of a minimum price below which market price of wheat will not be allowed to fall, has been given to the farmer. The Government has fixed a minimum price of Rs. 13 per maund for fair average quality of common varieties of white wheat when delivered at specific markets. It is widely known that the prices of agricultural commodities constitute the primary factor in determining the price level in the national economy. Prices should be so stabilised that they do not fluctuate more than 1½ per cent on either side. It is a matter for satisfaction that the Union Minister for Food and Agriculture, Mr. S. K. Patil, has ruled out any reduction in foodgrain prices from levels that were prevailing before March last, since when there has been a perceptible rise in cereal prices. It is only but fair that the farmer must be guaranteed fair prices for his produce and should not be punished for producing more. On the contrary, he must be provided with additional incentives in a manner which will not be inflationary. We must pay urgent attention to the question of increasing agricultural output in view of the rapidly rising rate of growth of population. In some States, such as Kerala, West Bengal, Uttar Pradesh and Bihar, the population increase has outstripped the present resources of food production. With the present rate of population increase of 2 per cent, many more States are likely to join the ranks of overpopulated areas. India will repeat the story of China and Soviet Union, if special efforts are not made to meet this challenge.

Productivity

Increase in agricultural output has been achieved so far chiefly by increasing the area under cultivation, but there is hardly any scope for pursuing this means in the coming years. *Already, the area under agriculture in India is* as large as 370 million, or 41 per cent of the total. This is the highest in the world and yet India is heavily dependent on the outside world for supply of food and agricultural raw materials. It is, therefore, necessary to concentrate on raising the productivity of our farm lands. *The following table indicates the great leeway* that remains to be made up in this respect:

(100 kg. per hectare)

	India	*Japan*
Wheat	6.6	21.2
Rice	13.7	46.2
Tobacco	6.8	20.3

The question of agricultural productivity hardly needs to be determined by the total quantum of investment. Agriculture is the least capital-intensive of all commodity producing sectors. For any given amount of investment, agriculture yields output equal to about four times the same investment would yield in the *basic investment goods sector* and about twice it would yield in the large-scale consumer goods sector. Japan increased its output of major crops by 77 per cent with very little new fixed investment.

The Central Government gave financial and technical assistance to the State Governments and allocated for the year 1961-62 a sum of Rs. 47.79 crores as assistance to the States for schemes falling in the agricultural sector of the State Plans. In addition, a provision of Rs. 25.50 crores was made for giving financial assistance as short-term loans to State Governments for the procurement and distribution of fertilisers and improved seeds. The pilot package programme has been sponsored by the Ford Foundation on the advice of the Union Ministry for Food and Agriculture. Nevertheless, very little has been achieved. This should open our eyes to what remains to be done to raise our agricultural productivity.

Imports

The total quantity of foodgrains imported *in 1961 amounted to 3,495,000* metric tons, valued at approximately Rs. 129.57 crores. *A continuous* import of foodgrains and industrial raw materials has resulted in a heavy strain on our foreign exchange and the resources made available by foreign countries to help India. How long can the country afford to rely on overseas supplies when it does not have the means to pay *for them? Instead of being self-complacent* in the matter, the Central and State Governments must give prior attention to schemes which may offset the effects of national calamities and low productivity. These include extensive irrigation facilities, abundant supply of fertilisers, mechanisation wherever possible and provision of better seeds and storage facilities.

So far as fertilisers are concerned, it is depressing to find that their annual production is not more than one-third of the demand for them in terms of nitrogen and the total supply of fertilisers, including imports, comes to only about 40 per cent of the demand. Even the target of 1.5 million tons fixed by the Planning Commission is an underestimate of the requirements, which, according to the Ford Foundation team, will be 2.5 million tons by the end of the third Plan.

Mr. S. K. Patil has emphasised the need for changing the food habits of people and reducing their dependence on cereals. He favours an increase in the consumption of fruits and leafy vegetables. Scientific research, however, has revealed that such diet is unbalanced and lacking in adequate nutrition. One should not forget that the vast majority of people in this country is not in a position to afford even this unbalanced diet, let alone consume more dairy products which are neither economical nor freely available. Again, it should not be presumed that it is easier to change one's food habits. It is not, therefore, wise to make any calculation of our food requirements on such unreliable basis.

Bombay Cotton Annual,'1960-61. Compiled and Published by C. M. Parikh, Secretary, East India Cotton Association, Ltd., Bombay. Pages: 301. Price : Rs. 7.50.

The latest issue of the Bombay Cotton Annual (Forty-second in the series) for the year 1960-61, is a comprehensive compendium of information relating to Indian cotton. It presents, as usual, in a handy volume a wealth of statistical and other data conveniently classified and carefully tabulated. The coverage of the *Annual* is, indeed, very wide, encompassing every aspect of raw cotton, including important Government notifications. It is by far the most authoritative and exhaustive reference book on Indian cotton.

SOVIET ECONOMIC BLOC

(*Concluded from page 776*)

strength but also on the support of the whole confraternity. (*Ibid.*, p. 4.)

Khrushchev's article also deals with the political aspects of the problem. The Western powers have, he maintains, accepted the Soviet "challenge" to economic competition between the two world systems, and the "socialist" bloc must accordingly implement the whole complex of measures described above to ensure its victory in this competition. This concept is enlarged upon by the theses that the successes of west European economic integration are fully and objectively recognised, that the "strength of the enemy" must be kept in mind, and that there should be collaboration with the West, "not only with separate States with a diverse social structure but also with their economic alliances." (*Ibid.*, p. 6.) This statement is an obvious reference to the possibility of co-operation between COMECON and the Common Market. It is stressed that the COMECON countries are prepared to collaborate with west European countries "in the spheres of development of varieties of raw material which are in short supply, of increasing power resources, of joint exploitation of waterways, and in other branches." (*Ibid.*)

Why China is Out

Another point of interest in the article is the explanation why not all socialist countries, especially Communist China, are members of COMECON, despite the fact that the policy of consolidation is viewed as so important.

The activities of the Council of Mutual Economic Aid in the organisation of collective economic collaboration do not at present extend to all the socialist countries. The uniformity of entry onto the road of socialism has not permitted them to embark on collective economic collaboration simultaneously. (Ibid., p. 3.)

This statement does not, of course, stand up to criticism. The fact that Red China entered *the "road to socialism" a year after the establishment of COMECON is no reason for withholding membership. It is obvious that the time element is unimportant. Indeed, Mongolia was accepted into COMECON in the thirteenth year of its existence. Nor can the level of national economic development play a part, since both Mongolia and China are far from being industrialised countries, and, in the words of the article:*

... The creation of a specialised and co-operative industry is equally advantageous both for countries which already have a developed industry and for those which are following the road to industrialisation. (Ibid.).

Red China, North Korea and Communist Vietnam have been kept out of COMECON for other reasons. In the spheres where its influence is unlimited the Kremlin has created, and is still *creating a closed political and economic complex.* Red China could be allowed to enter it only if the Peking Government were willing in subordinate itself to the Soviet leadership. The growing rivalry between the two entirely excludes this possibility. Moreover, it should not be forgotten that the association of Red China, with its population of 650 million and endless economic crises, with COMECON would lower the general economic, and therefore political, potential of the Soviet bloc.

In its treatment of the new phase in economic relations within the Soviet bloc the Soviet press has been full of propaganda declarations of the "benefits" which will be enjoyed by the satellite countries. The falseness of such statements is patent. While implementing the planned measures the Soviet Union is retaining of universal "multiple structure" of its own economy at a time when the satellites are becoming increasingly one-sided and dependent in their economy. The direct result of this process will be a further reduction of the satellites' already meagre degree of independence in domestic policy. Essentially, the new move is nothing but a form of neo-colonialism.

The Soviet proclamations of the principles of "proletarian internationalism," on which the "new phase in the economic alliance of the COMECON, countries" is to be based, are clearly for propaganda purposes only. In point of fact, the entire process represents neither more nor less than a new step towards the establishment of a Soviet economic and political empire.

India will supply 150,000 tons of sugar to Japan over a period of one year under the deal concluded between the two countries. A substantial quantity will be in the form of raw sugar. Japan will pay 50 per cent of the total cost in foreign exchange and the balance through the supply of fertilisers.

NEWS IN BRIEF

THE Government of Gujarat proposes to start drilling for lignite in the Kutch area.

The Union Government has decided to allow export of bauxite within an overall ceiling of 550,000 tons annually in the next two years.

Manganese ore deposits have been discovered at Adilabad district in Andhra Pradesh. The ore is said to be of high quality and is practically free from phosphorus, sulphur, etc.

An export promotion panel for woollen goods (except carpets, rugs and ruggets) has been set up at Ludhiana. The panel, comprising 12 members representing the woollen industry, will advise the Textile Commission on the working of the scheme.

The State Trading Corporation has entered into barter deals with some U.S. and European companies for the import of long-staple cotton and steel *in exchange for exports of 100,000 tons of* manganese ore.

The U.K. has offered gift of laboratory equipment worth £5,000 for the two Indian research institutions in India, namely, Central Building Research Institute, Roorkee and Central Drug Research Laboratory, Lucknow.

The Director-General of the Overseas Communications Services has notified that, according to the Iranian Administration, telegraph connection with Basstak situated in Shiraz area has been re-established and telegrams to and from that place are again being accepted.

A team of West German experts is expected to visit Mysore shortly to study the possibility of purchasing iron ore produced there. If the team were satisfied with the quality of ore, West Germany would collaborate with the Government of India in the construction of the Mangalore port and in laying the connected railway link.

The Government of Andhra Pradesh has decided to set up a pilot plant at Nuzvid in West Godavari district for manufacturing brown sugar from palm juice. The plant, which is expected to cost Rs. 1.25 lakh, will have a capacity to produce one ton of sugar per day. It will be managed by the State Khadi and Village Board.

The Government of India has granted an industrial licence to a Calcutta firm for the establishment of a portland cement manufacturing plant in the Purulia district of West Bengal. The plant, which will have a capacity of 600 tons a day, is expected to go into production early in 1965 and will utilise the limestone deposits in Purulia district.

The last date for covering, by the contracts with the U.K. buyers for exports of cotton textiles, 100 per cent of the total quota allotted to quota holders (reserved quota and unreserved quota including supplementaries) has been extended from 31st October 1962 to 31st December 1962, according to an announcement by the Cotton Textile Export *Promotion Council.*

The official delegation, which visited Cairo for negotiating with the United Arab Republic Government on the revision of a bilateral agreement governing the airlines of the two countries returned this week. The delegation was headed by Mr. M. M. Philip, Secretary, Department of Communications. It is understood that accord has been reached over the revised text of the agreement to meet the current and anticipated requirements of Air-India for services through Cairo and of United Arab Airlines for services to and through Bombay.

The Government of India has concluded an agreement with Messrs. M. A. N. Augsburg of West Germany for the manufacture of marine diesel engines in India. The range of engines comprises the large ones for the main propulsion of merchant ships, to smaller ones suitable for power generation on board ships, or, on land, and others for propulsion or river and inland watercraft. The manufacture will be undertaken by a public-sector undertaking under the Ministry of Defence. It is expected to go into production during the third Plan period.

The Government of India proposes to sponsor a conference of Indian shipping lines as one of the means to ensure co-ordination of export promotion efforts. As a first step towards this move, shipowners on the east coast have been asked to form an association on the same lines as the Indian National Steamship Association of Bombay. The two associations will be amalgamated at a later stage into one single conference. India is currently paying Rs. 150 crores per annum as freight on exports alone, of which the share of Indian shipping companies is about Rs. 30 crores.

The Government of India has set up under the chairmanship of the Textile Commissioner an Export Promotion Advisory Committee for handloom goods at Madras. The Committee will act as a channel of communication between the Government, the Handloom Board and the export trade so as to facilitate discussion of problems facing the export of handloom fabrics. It will also make recommendations regarding means and methods of expanding these exports to traditional and non-traditional markets and work out export promotion schemes and suggest necessary export incentives.

The Government of India has constituted a high-power Maritime Freight Commission in a bid to strengthen India's bargaining position and to secure freight concessions for exports. The Commission will advise the Government on all matters of shipping freight, international and coastal. Mr. Y. N. Sukthankar is the President of the Commission. One of the members is Mr. S. D. Joshi, Special Secretary, Union Ministry of Commerce and Industry, who will advise on shipping freight from the export trade point of view. The other member is Dr. Nagendra Singh, Additional Secretary, Ministry of Transport and Communications and Director-General of Shipping.

Regional research centres at Coimbatore, Surat and New Delhi will implement a long-range programme of research to evolve "inter-specific hybridisation" in cotton, according to a programme *sanctioned by the Indian Central Cotton Com*mittee. The programme is designed to evolve types of cotton possessing a combination with desirable characteristics like extra-long staple length, good fibre finesse, tensile strength and resistance to pests. The work will have its co-ordinating centre at Coimbatore with the overall supervision of the head of the Regional Research Centre there. Hybridisation is aimed at between the American and Asiatic cottons as well as between the presently cultivated species capable of transferring useful characteristics.

The Maharashtra Government has directed the Collectors and Sub-Divisional Officers in the Vidharbha region to assume management of any holding which has remained uncultivated for any two consecutive years or of any lands of which full and efficient use has not been made for the purpose of agriculture. The officers have been given these powers under section 80-A of the Vidharbha Tenancy Act, 1958. These lands, after take-over by the State, will be leased out to such persons who are capable and willing to cultivate them, preferably tenants or agriculturists cultivating adjacent or nearby land. If such persons are not able to cultivate these lands, they will be leased out to other small holders capable or willing to cultivate them.

From Abroad

President Kennedy has vetoed a Bill which would have doubled the tariff on about half of all bicycles imported into the U.S.

The Government of Pakistan has reduced the export quota of tea from 10 million lbs. to 5 million lbs. in order to ensure adequate supplies for local consumption.

The Ivory Coast, the third largest coffee producer in the world, has become the 30th signatory of the recently-adopted International Coffee Agreement.

The population of Japan stood at 95.01 million at the beginning of last August. There were 257 persons per square kilometre. The population is expected to touch 100 million by 1967 or 1968.

Soviet Russia has offered to buy 20 ships worth about $100 million from Japan. The purchase may include canning factory ships, tuna factory ships, refrigeration transports and fish factory ships.

A G.A.T.T. declaration prohibiting export subsidies on goods, other than primary products, will come into force on the 14th inst. The declaration has been signed by all the 14 countries whose acceptance was needed for bringing the declaration into force.

France has agreed to grant a loan of $150 million to Mexico's State Oil Agency, Petroleos Mexicanos (Pemex), for financing the development of petro-chemical industry. The loan will enable Mexico to buy capital goods from French companies.

The first auction of Indonesian tea at London during the post-war period was held last week. 1,400 chests of tea offered at the auction came direct from the Government-owned estates in Indonesia. Auctions are expected to take place twice a month henceforth.

The world output of coffee during the 1962-63 season will be 60.9 million bags, of which 52.7 million will be exportable, according to the latest estimate of the U.S. Foreign Agricultural Services (F.A.S.). The estimated output will exceed world requirements by six million bags.

Hungary has agreed to build a glass factory in Cuba with an annual capacity of 18,000 tons. The factory is expected to go into production in 1964. About 50 Cuban technicians will undergo training in Hungary, while 60 Hungarian specialists will plan and supervise the construction work of the factory.

The West German finance house, the Coutinho Caro, has signed an agreement with the Government of Tanganyika providing for a £2.2 million credit for the establishment of a variety of manufacturing plants in Tanganyika. Germany has had considerable experience in similar financial arrangements in West Africa.

Soviet engineers are designing a big industrial complex for Indonesia in Northern Sumatra, an aluminium combine near Medan and a hydro-power station on the River Asahan. The first section of the complex is to be commissioned in 1967. With an overall capacity of 280,000 kw., the power station will be the biggest in the country and will *supply the aluminium combine, the first in Indo*nesia, and certain towns where a cotton ginnery, mineral fertiliser and plastics works are to be built.

The Bank of Japan has reduced the bank rate from 7.30 per cent to 6.93 per cent with effect from 27th October 1962. The reduction is part of the series of monetary measures designed to lift the credit squeeze introduced in September last year for balance of payments reasons. The Bank has also announced a reduction in the reserve requirements of commercial banks and relaxation of progressive interest rate system.

West Germany's foreign trade surplus fell in the first nine months of 1961. Exports amounted to half of its size a year ago. It amounted to DM 2,500 million as against DM 5,300 million in the first nine months of 1961. Exports amounted to DM 38,800 million in the January-September 1962 period, or 3.2 per cent more than in the same period in 1961. Imports rose by 12.5 per cent to DM 36,300 million.

Exports of the European Common Market countries increased by 7 per cent to $16,900 million during the first half of this year, as compared with the first half of 1961. The rises in the individual member countries were varying. France (with 3.5 per cent to $3,700 million) and West Germany (4.4 per cent to $6,500 million) showed the lowest growth rates. Italy recorded the largest increase with 16.7 per cent to $2,300 million. Belgium's exports went up by 13 per cent to $2,200 million. The Netherlands registered an increase by 6.7 per cent to $2,200 million.

The rapid progress of integration amongst the European textile markets and the growing interdependence of world textile markets in general have stimulated efforts in the field of standardisation. In particular, the introduction of TEX, the new universal yarn count system, which was planned in three stages over a period of several years, is to be accelerated. In line with those organisations representing the man-made fibre producers, the International Federation of Cotton and Allied Textile Industries has now asked its member-Associations to proceed to the second phase of the Tex system (Tex number first, traditional number in brackets) on 1st January 1963. At the same time, educational efforts are being made at national levels to popularise the Tex system in both textile industries and trade.

The steel rolling mill being set up in Ceylon by the State-owned Steel Corporation in financial and technical collaboration with Soviet Russia is expected to go into production in 1965. The mill is designed to produce 35,000 tons of light merchant sections on two shifts and 50,000 tons on three shifts. The capital outlay on the first stage of production is Rs. 8 crores, of which Rs. 3.26 crores, representing foreign exchange costs, will be met by a Soviet loan carrying interest at 2½ per cent The mill will utilise imported billets in the first stage and imported pig iron and scrap (which will be converted into billets) in the second stage. In the third stage, iron ore—imported as well as whatever is available locally—will be smelted to produce pig iron. The second and third stages are expected to cost Rs. 7.84 crores.

The Common Market and its eighteen associated territories have reached broad agreement on the provisions of a new five-year convention of association. The main feature of the agreement is the financial aid from the Six to the independent associates, which will amount to $730 million. Of *this sum, $500 million will be used for economic* development and technical aid, while the remainder will be devoted to diversification of industry and for price subsidies. *A further $70 million of aid will be given to the Community to the de*pendent associates. Price subsidies will be gradually phased out by the end of the five-year period. Coconuts, pepper, palm oil, cotton and gum arabic must start competing on world markets by 1963-64, while subsidies on rice and sugar will cease when the Common Market has worked out a common policy. The subsidy on oil products will also be phased out when the Six have a common policy, and in any case not later than 1964-65. For coffee, the subsidies will start to go at the end of next year, and will have disappeared by the end of 1967.

PERSONAL

MR. J. K. Walker, a former Australian Ambassador to Moscow, has been elected Chairman of the Colombo Plan Consultative Committee for this year.

Mr. P. S. Kothari has been appointed Managing Director and Works Manager of the National Newsprint and Paper Mills Ltd. (N.E.P.A.), Madhya Pradesh.

Prof. M. P. Gandhi, Editor of the *Major Industries of India Annual*, Bombay, has been appointed a member of the State Advisory Council of Industries in the Gujarat State.

Prof. M. S. Thacker, until recently Secretary to the Ministry of Scientific Research and Cultural Affairs and Director-General of the Council of Scientific and Industrial Research, has taken over charge as a Member of the Planning Commission in charge of Education, Health, Natural Resources and Scientific and Technical Manpower.

SYNOPSES OF COMPANY REPORTS

Barnagore Jute Factory Co., Ltd.

(*Secretaries*: McLeod Russel and Co., Ltd., London. *Agents in Calcutta*: Messrs. Jardine Henderson Ltd. *Chairman*: Sir John H. Burder.)

Ninety-first Annual General Meeting—7th November 1962.

Working Results:

	For the year ended 31st March (In pound sterling)	
	1962	1961
	£	£
Gross profit (+) or loss (—)	—89,216*	+197,517
Transfer to depreciation	55,808	55,374

Carry forward	1,042	95,080

* Loss after taking into account provision for depreciation and doubtful debts.

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items like excess provisions for taxation no longer required and amounts transferred from reserves if any.

Extracts from the Directors' report: At the beginning of the year under review the working hours in the Mills had been reduced to 42½ hours per week with 12 per cent of the looms sealed in order to mitigate the effects of the shortage of raw material. It soon became evident, however, that further restrictive measures would be required if the Industry as a whole was to continue working on an organised basis until new crop jute became available in quantity in September and October. With this object in view a block closure of Mills took place for one week in June and one week in July. In spite of these efforts to regulate supplies, stocks of jute fell to extremely low levels.

From November onwards, ample supplies of jute became available, and the restrictions imposed by the working time agreement were virtually removed from the 15th January onwards. The percentage of the Industry's loomage which officially remains sealed has been reduced to 5 per cent but, due to the availability of accumulated loom hours, the Industry has been working to its full capacity.

As was foreseen in the report of the Directors dated 24th November 1961, heavy losses were sustained by the Mills during the first six months of the financial year and it was not until December, when the weight of the new crop came on the market, that there was a return to profitable trading conditions.

This change in the fortunes of the Jute Industry has continued, and the forecasts for 1962 are satisfactory. The Board feel that they can now look forward to a period of more stable conditions, and the trading results of the 6 months since the closing of the accounts justify them in recommending the payment of a dividend of 10 per cent on the ordinary shares of the Company, in spite of the severe loss of the past year. In furtherance of this, a sum of £14,000 has been transferred from reserves to the appropriation account leaving a balance of £1,042 to be carried forward.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	£	Assets	£
Capital*	475,000	Gross block	1,427,611
Reserves and surplus	829,901	—Depreciation	1,022,716

Gross loss subject to depreciation	—80	—7,76
Adjustments credit (+) or debit (—)	—7,65	+11
Total debit balance carried forward	—8,45	—7,65

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: During the year under report, the Company processed 17,594 tonnes of cottonseed, 556 tonnes of groundnut seeds and 500 tonnes of purchased groundnut cake, as against 11,271 tonnes of cottonseed, 1,896 tonnes of groundnut seeds and 2,704 tonnes of purchased groundnut cake in the previous year. The total tonnage thus handled during the year although more by 2,779 tonnes over the previous year, fell considerably short of the tonnage this Company's Mills at Hubli should normally process.

The excessive rains and floods in late September/October 1961 in many parts of the country, and particularly in Berars, caused heavy damage to the cotton crop in the 1961-62 agricultural year which led to serious cotton shortage in the country in the calendar year 1962. This prevented the Company from crushing adequate quantity of cottonseed during the November/March period, since the price of cottonseed reached very high levels. Also, there was negligible processing of groundnut seed and cake during the November/March period, which is the main season for this activity, on account of the relatively higher prices prevailing for these raw materials compared to the finished products, viz. groundnut oil and groundnut de-oiled meal.

The prices of groundnut de-oiled meal are mainly governed by foreign markets. Solvent extraction plants near port towns in Saurashtra, Bombay and Madras, which are served by the groundnut producing hinterland, have, therefore, been in a relatively advantageous positin in regard to exports of de-oiled groundnut meal. However, with the early opening up of Marmugoa harbour, which is only about 100 miles from Hubli, a similar advantage of lower inland freight incidence of almost Rs. 15 per tonne would soon be available to the Company. The question of opening up of Marmugoa harbour for oilcake/de-oiled meal cargo has been actively taken up by the Company with the Government of India and a decision is expected very shortly.

The opening up of Marmugoa harbour should restore the economics of groundnut cake de-oiling, for which purpose the solvent extraction plant was originally purchased in 1958. Moreover, a substantial saving in inland freight cost would also be possible for the present large export by the company of de-oiled cottonseed meal, for which the export incentives have been still further increased since July 1962.

With the better export prospects for the major product, namely de-oiled meal, the Directors have taken steps to improve the domestic marketability and price realisation of the Company's other main product, viz. vegetable oil, by ordering a Sharples *Miscella Refining Plant*.

The Company increased its paid-up capital by Rs. 2,47,100 during the year under report, principally by way of further investment by The Modern Mills Ltd., and the issue of equity shares to the Pacific Vegetable Oil Corporation of California, U.S.A., against machinery supplied by them.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	27,32,125	Gross block	35,40,856
Reserve for development rebate	1,97,040	—Depreciation	3,07,433

To additional preference dividend for 1959	Nil	3
Carry forward	2,52	2,53

* The accounting year has been changed from December to March and hence the comparative figures for the previous period are for the year ended 31st December 1960.

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: Three of the gardens in Dooars were struck with hail in March 1961 resulting in a damage assessed at 47,463 kgs. of black tea; the weather was otherwise favourable. A total crop of 28,49,021 kgs. was made against an estimate of 28,07,553 kgs., out of which 87,635 kgs. were destroyed by fire at Malangi T.E. in November 1961, leaving a saleable crop of 27,61,386 kgs.

	Season 1961	Season 1960
Total net average sale price—	*Per Kg.* Rs.	*Per Kg.* Rs.
Hasimara Divisions	4.42	4.93
Tumsong	6.65	6.52
Total working cost per kg. of tea produced—		
Hasimara Divisions	4.04	3.62
Tumsong	7.03	5.80

Capital.—The authorised capital of the Company was increased to rupees two crores pursuant to the Extraordinary General Meeting of the Company held on 15th June 1962 and the Company also issued bonus shares in the ratio of 1 : 1 to the ordinary shareholders registered on 15th June 1962 by capitalising reserves.

Fire at Malangi Factory.—On 17th November 1961, there occurred a fire at the factory of the Company's Malangi Tea Estate involving extensive damage to buildings and machinery, etc. These were covered under a reinstatement insurance policy and the Insurance Company has since reinstated the buildings and the machinery, etc. and the Company's share of cost of reinstatement of fixed assets lost by fire amounted to Rs. 2,17,895 only. A sum of Rs. 4,67,894 was also realised from Insurance Company for 87,635 kgs. of made tea destroyed by the fire.

Seksaria Cotton Mills.—The Directors are pleased to record that the partnership venture for running the Seksaria Cotton Mills for a period of only nine months proved very advantageous to the Company as will be evident from the accounts presented herewith and they are also pleased to report that they have been successful in negotiating an interest of 33⅓ per cent of the Seksaria Cotton Mills' net profit for one year from 1st April 1962 in consideration of the Company providing finance required by Seksaria Cotton Mills Ltd. for the conduct of their business. The Directors have also secured a further option for the Company to take the Seksaria Cotton Mills on leave and license for a further period of three years should it so desire. The current trend and the working results of the Mills are satisfactory.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	35,00,000	Gross block	1,33,08,388
Reserves and surplus	79,24,408	—Depreciation	69,58,031
Other liabilities	1,15,34,984		
		Net block	63,50,357
		Block in progress	1,29,156
		Current assets	1,49 04,701
		Investments	10,65,831
		Cash	5,09,347
	Rs. 2,29,59,392		Rs. 2,29,59,392

* Paid-up capital consists of 3,000 seven per cent cumulative preference shares of Rs. 100 each and 3,20,000 ordinary shares of Rs. 10 each. Of the above 2,80,000 Ordinary shares of Rs. 10 each are allotted as fully paid up by way of Bonus shares by capitalisation of general reserve and appreciation of fixed assets.

OIL DIVERSITIES

(*Concluded from page 767*)

Natural Gas Commission, the Pakistan Oil and Gas Development Corporation, and the Afghan Ministry of Mines and Industries. (Aerial survey in Afghanistan was done by Russians in the north and by a U.S. company under American aid in the south.) The agreements for Russian assistance provide for the training of nationals, which, of course, has also been done for a long time by the large oil companies in the region. A paper showed that 400 technical men of various kinds had been trained by Stanvac in the course of its Bengal Exploration project. It is planned to send trainees from E.C.A.F.E. countries to Iran, in view of the facilities available there for research and technical instruction and the gaining of oilfield experience.

Knowledge and Know-how

No text-books exist which could have brought to E.C.A.F.E. members the wealth of information contained in the several highly instructive papers recording experience gained in countries both in and outside the region. Thus, the Australian delegation submitted a paper on the whole range of local exploration costs, all, of course, in the context of Australia's vast distances and absence of oilfield equipment industry, but existence of an adaptable labour force and conditions which attract capital. A paper by the Government of Brunei on Offshore Exploration in Borneo also gave most useful cost figures, e.g., for marine surveys, and for drilling by fixed platform and by a special mobile platform. A paper on Efficient Oilfield Development by the U.K. delegation afforded detailed costs estimates for typical major equipment, spare parts, stores, and number and type of personnel required. Another from the U.K., on the estimation of reserves at various stages of appraisal was also helpful, not least for its bibliography. And many other papers presented by members of delegations of long experience were virtually up-to-date handbooks, giving data only otherwise available in company files or scattered about in industry publications.

The Symposium was valuable too as a clearing house for regional information and for enabling countries to see their problems in wider perspectives. No less than 41 papers were presented on the geology of the region, and an oil and natural gas map of Asia and the Middle East that has been prepared will help the regional surveys it is desired to foster. The delegations of Pakistan and Iran have announced that they are undertaking a joint border geological survey, and the Russian delegation suggested to Iran the exchange of geological information about the Caspian basin.

The early days of the Symposium were, of course, overshadowed by the severe earthquake not very far from Teheran. Throughout, good organisation ensured orderly discussion; and, with the majority of the papers on technical matters, it was these topics that provided the most interest. Tokyo has been mentioned as a possible venue for the next Symposium, to be held in 1965. Again, technical matters will be to the fore. It was, therefore, agreed that an adequate number of technical experts be included in the delegations.—*By arrangement with Petroleum Press Service.*

MODI SPINNING AND WEAVING MILLS CO. LTD.

SPEECH OF CHAIRMAN, MR. GUJAR MAL MODI

HIGH CLASS CLOTH PROJECT TO BE SPEEDILY IMPLEMENTED

THE Modi Spinning and Weaving Mills Company Ltd. is taking steps to implement speedily the project for the manufacture of high class cloth out of cotton linters. This was disclosed by Mr. Gujar Mal Modi, Chairman of the Company, when he addressed the Sixteenth Annual General Meeting of the Company held at Modinagar on Wednesday, 31st October 1962. The Company, Mr. Modi said, had already made arrangements to procure machinery and technical know-how from renowned American firms which would not only supply know-how and machinery but also invest Rs. 25 lakhs in the project. The rupee resources required to pay customs duties, forwarding and clearing expenses, cost of building and erection charges, would be Rs. 5 crores. Mr. Modi stated that some capital had to be raised by issue of equity and preference shares. And he assured the existing shareholders that they would be given the first preference in the allotment of new shares.

The following is the full text of Mr. G. M. Modi's speech:

"LADIES AND GENTLEMEN,

"It gives me great pleasure to welcome you all to this Sixteenth Annual General Meeting of the Company. The Directors' report, the profit and loss account and the balance-sheet of the Company for the year ended 30th April 1962 have been circulated to all of you and have been in your hands for some time. I, therefore, need not now elaborate on the same and, with your permission, take them as read.

Efficient Working

"It would be observed that, during the year under review, the gross profit has been Rs. 68.06 lakhs, as against the previous year's profit amounting to Rs. 67.61 lakhs. I am confident you will appreciate our efficient working and steady progress during the year, in spite of heavy economic odds like the high prices of cotton, increased cost of stores and wages bills.

"The present crisis on our northern borders brought about by the aggression of the Chinese, based upon covetousness, injustice and selfishness, tends to create a tension in the economic field. At this hour of great peril, every citizen of India is to face the crisis with courage and confidence. It is our clarion call to the national total efforts. No sacrifice for the upkeep of our freedom and maintenance of our historic traditions can be too great. On behalf of your Company and myself, I assure the Hon'ble Prime Minister, his Government and the armed forces that this Company will do within their humble resources to increase the production of all their products and thus to meet the challenge of the Chinese intruders with will and determination that the honour of the nation demands.

Foreign Exchange

"The other foremost factor which requires immediate attention is the dwindling foreign exchange resources of the country. The country's shortage of foreign exchange has highlighted the necessity to explore all resources to stimulate exports for earning foreign exchange, as no nation can afford to depend on borrowings permanently. The cotton textile industry has always been a big earner of exchange. The textile exports in the year 1957 were of the value of Rs. 59.63 crores but went down to Rs. 41.22 crores in 1958, slightly improved in 1959 to Rs. 55 crores and were steadily maintained at Rs. 54 crores in 1960. The same have now shrunk to Rs. 46 crores in 1961. During the last eight months, the textile exports have been to the tune of Rs. 28 crores and, with this speed, the total exports in 1962 are expected to be near about Rs. 42 crores. This sharp fall in the export figures of textiles during the current year is alarming.

"To boost the country's export performance, it has been made compulsory that the textile mills should export 12½ per cent of their annual turnover of cloth and 3 per cent of yarn, otherwise they are liable to pay a penalty at the rate of 12½ per cent on shortfall of their obligations. Besides, the textile mills, which produce coarse and medium cloth and consume indigenous cotton, have to pay an export cess at the rate of Rs. 5 per bale on their total consumption of this cotton. Under this scheme, such factories which are using Indian cotton are paying near about Rs. 2.5 crores per year as contribution to the Textile Association. As stimulation of the exports is the prime responsibility of the nation, its burden must be shared by all, irrespective of what type of cotton cloth is produced. As such, if this levy is imposed on spindle basis instead of penalising the Indian cotton, it would be more efficacious and resourceful.

"At present, India can export cloth only at a loss of about 35 per cent based on internal prices. To compensate this loss, the Government has allowed certain incentives to the exporting mills in the shape of import licences of foreign cotton, dyes and chemicals, and machinery. But these incentives are subject to certain conditions whereby only a limited percentage of these import entitlements are allowed to be utilised by the exporters, the rest have to be surrendered on a fixed margin. After taking all these factors into consideration, the exporting mills still suffer a loss of 15 per cent. Thus the mills are interested to export only to the extent of their legal obligations. This policy has proved a boon to mills which dabble more in exports, as their extra exports are transferable at profits. Under the present arrangement, there are a few firms which were exporting prior to the compulsory export scheme and, in some cases when their exports were more than 12½ per cent, they are not to export extra under the compulsory drive. It would have been proper if the directive would have been to export 12½ per cent or their average exports of preceding three years, whichever may be more.

Superfine Cloth

"The production of superior fine cloth in the country was 259 million metres in 1951 which has gone down to 200 million metres in 1961. The demand on account of the higher purchasing power is more for superfine cloth, while the production of this variety has not increased. As such the prices of this quality are rising and causing much dissatisfaction.

"How to satisfy the public? The production of larger quantities of superior cloth would mean a welcome relief to the public. Superfine cloth could only be produced with imported cotton as, at the moment, India does not produce such quality of cotton out of which superfine cotton cloth could be manufactured. For imports of cotton, we require more foreign exchange, and that can only be earned by increasing more and more exports. If the restrictions on the use of disposal of the import entitlements earned by export of cloth are removed, then it becomes economic to export cloth and stimulate further production of finer cloth by other mills. Thus, the removal of restrictions will not only speed up the export but will also help to increase the production of superfine cloth. The implications of Britain's entry into the Common Market have further complicated the export affairs. It will mean:

1. Imposition of high tariffs on Indian goods;

2. drop in the sales of Indian tropical products through tariff-free competition from associated overseas territories;

3. favouring of European industries by duty-free import of raw materials from associated overseas territories which may tend to affect Indian exports of cotton textiles, jute, leather, carpets, coir mats, etc; and

4. increase in competition with Indian goods in associated overseas territories.

"So far as we are concerned, we have decided to export more and more, in spite of the odds, and we are establishing various selling centres in different countries. This year we have exported cloth worth Rs. 18 lakhs, as against last year's export of Rs. 15 lakhs.

"To enable us to produce cloth of better finish, we have spent more than Rs. 45 lakhs for raising the standard of our quality of cloth and many of our products today are at par with the best manufacturers.

Man-made Fibres

"To make India self-sufficient in the matter of cotton and particularly of fine quality, it will take a very long time. Should we then to depend for long on the imported cotton piecegoods? The easiest and most desirable method is to produce fine quality of fabric by an alternate method, more commonly known as 'man-made fibre.' There are various qualities of such fibres out of which the acetate fibre is said to be the best. What is the acetate fibre? It is nothing but an extra superfine cotton fibre, which, instead of being produced in ordinary way, is produced chemically. As you know, on the outer surface of the cotton seed, 8 to 10 per cent of the fine cotton linter still adheres to it. Such seed could be delinted mechanically and cotton removed. It is known as 'lint.' This lint, when dissolved into chemical produced from molasses, can be utilised for the production of high class cloth. For producing such acetate yarn, we have got ample material and, to tap these raw materials we have installed one factory at Jagadhari for producing ethyl-alcohol from molasses and one factory for delinting at Abohar (the biggest cotton producing centre in the Punjab). The Government of India have placed this project of ours on higher priority and, in the very near future, we expect a loan of Rs. 5 crores (10.4 million dollars) from the Agency for International Development, U.S.A. We have already made arrangements to procure machinery and technical know-how from renowned American firms. They will not only supply know-how and machinery but have also agreed to invest Rs. 25 lakhs in the project.

Fresh Equity Issue

"Our demands for Indian currency will be for Rs. 5 crores to pay custom duties, forwarding and clearing charges, the cost of the building and erection charges. Steps are being taken by your Board for the speedy finalisation of the Plan. Some capital has to be raised by issue of the equity shares and preference shares. Of course, the first preference will be given to the existing shareholders.

"Before I close, it is my pleasant duty to thank my colleagues on the Board for their esteemed co-operation and to express my appreciation to the executives, staff and workers of the Company for their sincere services. I am also thankful to all of you who have been kind enough to attend this annual function of ours. I assure you that all your advice and suggestions will ever receive our great attention and appreciation.

"Thanking you."

N.B.—*This does not purport to be a record of the proceedings of the annual general meeting.*

MONEY DEARER

(From Our Own Correspondent)

BOMBAY, 31*st October*

There was a spurt in inter-bank call rate from 2 per cent to 3½ per cent towards the close of this week. The spurt was due to the temporary decline in floating funds following subscriptions to Oil India's Rs. 30-crore debenture issue which opened yesterday (Tuesday the 30th inst.). The market had thought earlier that call money might be dearer still. But this was not to be, as fresh money from some source or other was reported to have come into the market and any amount could be had at 3½ per cent. The rate at Calcutta also went up from 2¼ per cent to 3¾ per cent. It may be noted here that, normally, the busy season commences on 1st November, but it will be delayed this year by two to three weeks consequent on the delay in the movement of 1962-63 agricultural crops.

As against an invitation for Rs. 2 crores, the amount offered against Government of India's 91-day Treasury Bills sold under the tender system on Tuesday this week was slightly larger than in the previous week, being Rs. 2.04 crores, as against Rs. 2.00 crores. There was, however, no change in the average rate of accepted tenders, namely, Rs. 2.350 per cent per annum. The amount accepted remained unchanged at Rs. 2 crores. The Intermediate Treasury Bills, which were on tap from the 24th to 27th inst., fetched only Rs. 49 lakhs, as against Rs. 1.40 crore last week.

India's foreign assets declined by Rs. 1.78 crore to Rs. 92.57 crores during the week ended 26th October 1962, according to the Reserve Bank's statement for that week. The whole of this loss was accounted for by balances held abroad which fell from Rs. 6.27 crores to Rs. 4.49 crores, whereas foreign securities held in the Issue Department were unchanged at Rs. 88.08 crores. The scheduled banks' borrowings from the Reserve Bank in the week under reference rose by Rs. 7.82 crores in marked contrast to the drop of Rs. 8.82 crores in the week preceding it (namely, that ended 19th October). The bulk of the rise was under usance bills, the actual outstanding of which increased from Rs. 90 lakhs to Rs. 7.39 crores. In spite of such large borrowings, the deposits of scheduled banks with the Reserve Bank declined by Rs. 8.90 crores to Rs. 79.17 crores.

The consolidated statement of scheduled banks for the week ended 19th October 1962 discloses a sharp contraction of Rs. 16.25 crores in advances, the total outstanding of which as on that date being Rs. 1,375.70 crores. Inter-bank borrowings were also lower by Rs. 6.33 crores.

Barring some stray transactions, the Gilt-edged market ruled dull. 3 per cent 1986 Conversion loan dropped 50 nP to Rs. 65.50. 3½ per cent 1969 eased by 10 nP to Rs. 97.90 and 3¾ per cent 1974 by 5 nP to Rs. 98.30. Among State loans, 4½ per cent 1969, 1970 and 1971 Maharashtra loans shed 30 nP to Rs. 99.15. All others were maintained at last week's levels.

The rupee in the foreign exchange market improved in terms of the dollar, the actual T.T. and D.D. selling rate today being Rs. 477.75 per $100, as against Rs. 478 a week ago. The banks' buying rate (clear T.T. and bills) for dollars was unaltered. In New York, sterling was easy in terms of dollar in the initial sessions of the week. Although it firmed up later, the latest available spot rate was lower than that a week ago: 280.080-280.150 cents per £, as against 280.110-280.150 cents, while three months' forward was a shade better at 279.810-279.850 cents, as against 279.770-279.810 cents. Apparently, the international crisis caused by the storm over Soviet missile bases in Cuba has had no perceptible effect on the pound sterling against U.S. dollar.

* * * *

FRESH CREDIT CURBS

The Reserve Bank of India has, according to a Press *communique* issued today, notified all scheduled banks of the following changes in the system of quotas and lending rates, for both bills and Government securities, regarding the borrowings of banks from the Reserve Bank. As at present a bank will be able to borrow upto 100 per cent of its basic statutory reserve at different rates upto 6 per cent, as follows:

Rate	*Quota for borrowing*
4 per cent ...	25 per cent of statutory reserve
5 per cent ...	Another 25 per cent of statutory reserve
6 per cent ...	Another 50 per cent of statutory reserve

But the Reserve Bank will not permit any borrowing beyond this limit, namely, 100 per cent of a bank's statutory reserve normally. Should any bank find itself in a special situation requiring further assistance over and above its ceiling limit, the Reserve Bank will consider the grant of such assistance only after making a detailed assessment of the bank's overall position and satisfying itself that the additional accommodation is justified. A penal rate of interest will also be charged by the Bank for such special accommodation.

The Bank at present grants additions to basic quotas of individual banks (namely, 25 per cent of statutory reserve which is permitted to be borrowed at Bank Rate) equivalent to the excess of a bank's lending to small industries and co-operatives during each half-year over the corresponding half-year of the previous year. This is intended to stimulate the supply of bank credit to this sector, based on current performance of banks in improving the flow of credit to small industries and co-operatives. It is necessary to ensure, says the Reserve Bank, that the overall ceiling set by the Bank on banks' borrowing from the Reserve Bank is not extended, owing to operation of this scheme of additions to basic quotas. Arrangement is, therefore, being made to offset the addition to basic quota of a bank by adjustment in its borrowing quota at the higher slab rates (namely, at 5 and 6 per cent).

IRREGULAR TREND IN BULLION

(From Our Own Correspondent)

BOMBAY, 31*st October*

An irregular trend developed in the bullion market this week. Initially, prices were depressed on spot house selling and bull liquidation induced by fears of possible official measures to curb hoarding bullion following statements by prominent leaders, including the Finance Minister, that the people should give gold and gold ornaments to build up the emergency National Defence Fund. Later in the week, however, such fears receded on second thoughts that, in view of the current disturbed political situation, no drastic measures to obtain the hoarded bullion were likely, at least for the time being. Following such realisation and due to the underlying war sentiment in the market, prices rallied from mid-week and recovered quite swiftly thereafter on renewed bull support and short-covering to close a shade under the week's best levels. Nonetheless, both spot and forward gold finished with further small losses, though silver prices showed further moderate gains over the week. Trading was active, but turnover limited. *Muhurat* trading on Sunday, the 28th inst. was characterised by restricted activity and narrow movements.

Against the previous week's close of Rs. 120.20, gold *Margashir* opened lower on Thursday the 25th inst. at Rs. 119.40, declined to Rs. 117.55 on the 27th inst. but recovered thereafter to Rs. 119.90 today, before finishing at Rs. 119.55. Ready gold fluctuated between Rs. 118.55, Rs. 116.45 and Rs. 119.45 to close 75 nP lower over the week at Rs. 119.10. The premium commanded by the futures contract over the spot metal was 75 nP on the 26th inst. and widened to Rs. 1.10 on the 27th inst. It narrowed down, however, to a mere 45 nP at the close. Daily arrivals averaged 12,000 tolas, as against 8,000 tolas in the previous week, but offtake remained unchanged at 7,000 tolas.

Silver *Margashir* commenced on Thursday the 25th inst. at Rs. 224.30, that is, 5 nP lower than the previous day's closing level. After edging forward to Rs. 225.10 on the next day, it broke down sharply to Rs. 223 on the 27th. Subsequently, however, it started looking up and recovered to as much as Rs. 225.15 today and closed 50 nP higher over the week at Rs. 224.85. Ready silver declined at first from Rs. 223.90 to Rs. 222, but recovered to Rs. 224.45 today and closed at Rs. 224.15, as against Rs. 223.75 a week ago. Daily arrivals, which averaged 31 bars in the previous week, declined to 16 bars during the week, but offtake at 9 bars was the same as in the previous week.

Interest in the London bullion market and the New York silver market lessened following the easing of the Cuban situation. Prices receded slightly and closed a shade lower over the week, after being up to or a little higher than the previous week's best levels during mid-week. Spot gold in London rose further to 251*s.* 3½*d.*, as against 251*s.* 1*d.* in the previous week, but reacted to close at 250*s.* 9½*d.*, as against 251*s.* 1*d.* a week ago. After being done at 104*d.*, which was the previous week's highest as also the closing level, ready silver declined to close at 103¼*d.* and so did forward silver from 105⅝*d.* to 103⅝*d.* Silver in New York declined by one cent to 121 cents.

The following table shows the trend of prices during the week under review:

		31-10-62 (closing)	High	Low	24-10-62 (closing)
		Rs.	Rs.	Rs.	Rs.
GOLD					
Ready (.99 fine)	..	119.10	119.45	116.45	119.85
Margashir *	..	119.55	119.90	117.55	120.20
Sovereign	..	95.50	96.50	95.50	96.75
SILVER					
Ready (.996 fine)	..	224.15	224.45	222.00	223.75
Margashir †	..	224.85	225.15	223.00	224.35
London—					
Gold	.. ..	250*s.*0¼*d.*	251*s.*3½*d.*	250*s.*0¼*d.*	251*s.*1*d.*
Silver Ready	..	103½*d.*	104*d.*	103.½*d.*	104*d.*
Silver Forward	..	103¾*d.*	104¼*d.*	103½*d.*	104¼*d.*
New York—					
Silver ..	..	121.00 cents	122.00 cents	121.00 cents	122.00 cents

* 11th December settlement. † 12th December settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

Explaining the reasons that prompted the Reserve Bank to take the aforesaid measures, the Bank says:

"In recent months, economic trends in the country have given evidence of some inflationary pressure. With a fairly high rate of increase in money supply and a comparatively slow expansion in production, prices have hardened. The external payments situation remains difficult. The recent turn of events on the northern border makes it all the more incumbent to take adequate precautionary measures to ensure stable economic conditions for both development and defence effort. One of the measures necessary is to prevent any excessive impact of money supply on the economy. The rate of deposit accretion to the banks has in the recent past been fairly satisfactory. The prospect of future growth of banks' deposit resources is also rated as good. In view of this, it appears clearly advisable that the credit policy in the impending busy season should, to start with, be operated in terms of a ceiling for banks' access to the Reserve Bank. The ceiling could be relaxed, if necessary, on a detailed assessment of its operations and credit requirements in any particular case. This policy should cause little difficulty to banks, as, by all indications, they should be able to meet the normal demands for expansion of credit during the forthcoming busy season with only marginal recourse to the Reserve Bank. On the other hand this policy will ensure that banks will renew and sanction advances only where they feel it is fully justified and thus restrict their access to the Reserve Bank to the minimum necessary. The Bank expects that these measures, *inter alia*, will, in the current situation, strengthen the incentive of the banking system to mobilise deposits further."

DULL TRADING IN COTTON

(From Our Own Correspondent)

BOMBAY, 31*st October*

Moorat trading in both forward and spot cotton held on Sunday, 28th inst. and Tuesday, 30th inst., respectively, was a tame affair. As compared with previous years turnover was small. In the futures section hardly 7,000 bales changed hands, while in the ready section turnover was even lower at between 5,000 and 7,000 bales. Price trend was barely steady in futures, while in spot most of the varieties commanded ceiling prices plus 2 per cent sales tax and 1½ per cent commission.

The dull trading and the tendency of futures to recede were attributed to reports of low offtake in the cloth market, the general uncertainty caused by large-scale Chinese aggression on India which induced mills to be cautious and restricted in their purchases and the expectation of a good crop. In fact, after a steady start at Rs. 745, the Jarilla March contract receded to Rs. 744 at close which was 50 nP lower than the previous day's closing quotation and Rs. 4 below the level touched on Thursday, the 25th inst. In subsequent sessions, the trend remained quietly steady.

In the spot market, mill interest centred mainly around new crop varieties such as 197/3, L.147, Wagad and Kalyan. Prices ruled at the ceiling rates.

The Textile Commissioner had earlier notified that cotton quotas would not be available to those mills to whom letters had been addressed by him in connection with their reported purchases of new crop cotton prior to 19th October 1962. Such mills were required to obtain permission from the Textile Commissioner before making any purchases. The Textile Commissioner is in consultation with the Indian Cotton Mills' Federation about the measures to be taken against such mills. However, pending a decision on the point, it has been decided that such mills be given their quotas on their placing with the Indian Cotton Mills' Federation deposit at the rate of Rs. 100 per bale of new crop cotton purchased by them prior to 19th October 1962. The mills are required to make the payments to the Federation and produce the receipts in the Office of the Textile Commissioner when quota letters will be issued to them. Their quotas will be adjusted to the extent of the purchases of the new crop cotton made by them prior to 19th October 1962.

Although export demand for Bengal *Deshi* did not revive to any appreciable extent, shippers bought sizable quantities of Bengal *Deshi*. Business in foreign cotton comprised mainly stray buying of selected East African varieties and lower Sudan cotton. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri: Vijay 1,251; Co2 1,801; Busoga (UNUG) 1,210; B.P. 52 1,211; Jinja 1,110; Sudan XG5S 1,386.

Easy conditions prevailed in the Karachi cotton futures market during the week. Profit-taking attracted by the higher levels reached last week and fresh selling prompted by slackness of export demand and slow domestic mill offtake resulted in a decline in price. The January contract eased from Rs. 68.75 last week to Rs. 67.10 and the March contract from Rs. 69.10 to Rs. 67.60. Spot prices too tended to recede. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 71.50; Punjab *Deshi* 65; 4F Punjab Roller 65; S.G. 70; LSS Punjab Roller 65; S.G. 70; N.T. Roller 73.40; S.G. 79.40; 289F Punjab Roller 72.00; S.G. 81.00.

Quiet conditions prevailed in the Liverpool cotton futures market. Values moved narrowly in thin trading and closed showing small gains over the week. Inter-month switchings and transfer of December hedges for more forward position accounted for most of the business. Sudan cotton contracts were neglected. Values remained unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

October 23.60; December 23.85; November (Sudan) 29.50.

Uncertainty about Government legislation on cotton continued to affect business in New York cotton futures market. Prices declined owing to lack of support in the wake of scattered selling. The December contract declined to 33.08 cents per lb. and the March contract to 34.12 cents per lb., as compared with 33.92 cents and 34.48 cents respectively, last week-end. New York spot was, however, steady at 34.85 cents.

YARNS DRIFT LOWER

(From Our Own Correspondent)

BOMBAY, 31*st October*

The previous week's improvement in the yarn market proved to be short-lived, as prices drifted lower again this week on scattered selling and lack of any significant demand at higher levels. Both the futures staple 40/2 October and December contracts closed lower over the week, the former by Rs. 23 at Rs. 691 and the latter by Rs. 18 at Rs. 718. Spot art silk yarns also turned easy during the week. The 150 denier National Rayon declined from Rs. 13.20 to Rs. 13.11 and the 120 denier from Rs. 17.80 to Rs. 16.98. Likewise, 150D S.I. Viscose moved down from Rs. 13.27 to Rs. 13.20 and 120D from Rs. 17.80 to Rs. 17.53. Century 'A' 100D eased from Rs. 17.80 to Rs. 17.60 and 75D from Rs. 21.71 to Rs. 21.50. Cotton yarn prices were steady, with the exception of 10s Podars which receded from Rs. 18.75 to Rs. 18.50.

During the *moorat* trading on Sunday, the 28th inst., the market was steady, though business was limited.

The Union Government announced on Tuesday this week that imports of staple fibre (man-made) from the U.S. would be allowed under Loan

No. 217. Licences will, however, be granted subject to the conditions set out by the Government in the notification dated 26th June last. As the item staple fibre has already been advertised in *International Commerce* of the U.S., the "submission of notice" to the American business by the licensee is not necessary. The names of the American suppliers who may be interested in selling staple fibre will be announced by the Government later and licences will be issued only on receipt of an intimation from the consuming units accepting the terms and conditions laid down by the Government.

OILSEEDS IMPROVE

(From Our Own Correspondent)

BOMBAY, 31*st October*

Oilseeds suffered a marked setback in values earlier in the week under review, following the declaration of the state of national emergency. Operators had the thought of Chinese aggression uppermost in their minds during the *moorat* session on Sunday evening. Except for some brisk buying in the spot section, *moorat* trading was a colourless affair. In fact, futures contracts moved down on persistent heavy bull liquidaion, and the session closed on a dull note. The sentiment of the market, however, improved somewhat subsequently on reports of halt in Chinese advance on the N.E.F.A. area and news regarding supply of armaments by the U.S. and the U.K. Over the week, groundnut futures were markedly lower, thanks to reports that new crop groundnuts would start arriving within a few days. Encouraged by some export business in castor oil, spot castorseeds and oil put on a cheerful appearance, although futures contract closed on a subdued note. Cottonseeds were well maintained. But linseed and oil ruled week.

Operators welcomed the decision of the Karmahon Conference Lines to withdraw the recent increase in freight rate on oilcake (10*s.* per 1,000 kgs.), following representation by the Indian shippers and the Government of India. This move is likely to give a fresh boost to export of oilcake.

Groundnut Khandesh quality rose by 30 nP over the week to Rs. 45.87. Oil ex-mill put on 25 nP to Rs. 19.35. Oil railway receipts, too, improved by a like amount to Rs. 19.15. Groundnut January 1963 fell from Rs. 233.50 to Rs. 225, before improving to Rs. 230.87. The net loss was Rs. 2.62. Oil January 1963 contract closed 35 nP lower at Rs. 31.45.

Among castorseeds, Madras small and Kanpur bold rose by 12 nP each to Rs. 33.62 and Rs. 32.37, respectively. Oil commercial hardened by 25 nP to Rs. 12.90. Oil B.S.S. strengthened by 15 nP to Rs. 13.90. Castorseed March 1963 contract, however, fell by 63 nP to Rs. 169.87.

Cottonseed non-white improved by 50 nP at Rs. 25. March 1963 contract was steady at Rs. 105.50.

Linseed March 1963 contract declined by 44 nP to Rs. 40.12. Bold ready eased by 13 nP to Rs. 42.12. Linseed oil shed 10 nP to Rs. 17.10.

The following table shows the closing prices of oilseeds and oils on Wednesday, 31st October as compared with those of the two previous weeks:

	31-10-1962	24-10-1962	17-10-1962
	Rs.	Rs.	Rs.
Groundnut			
Groundnut January 1963 ..	230.87	233.50	231.37
Nizam bold	45.25	—	47.00
Khandesh quality ..	45.87	45.57	46.75
Oil ex-mill ready* ..	19.35	19.10	19.50
Railway receipts*	19.15	18.90	19.30
Castorseed			
Castorseed March 1963	169.87	170.50	166.62
Ready Madras	33.62	33.50	33.25
Ready Kanpur	32.37	32.25	31.87
Oil B.S.S.†	13.90	13.75	13.35
Oil commercial†	12.90	12.65	12.40
Linseed			
March 1963	40.12	40.56	40.12
Bold ready	42.12	42.25	42.00
Oil ready†	17.10	17.15	17.35
Cottonseed January 1963 ..	105.50	105.50	102.50
Niger seed	36.50	36.00	36.25
Kardi seed	28.50	28.00	28.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

GOOD DEMAND FOR BRIGHTER TEAS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 25*th October*

A total of 515,000 kgs. was offered in sale No. 42 held on Tuesday the 23rd inst. Quality showed a seasonal decline. There was good demand for the brighter teas on offer, but others were generally easier. Highgrown brokens were lower with quality and elicited only limited support, but their fannings were sold well at about steady rates. The brighter good medium and medium brokens were fully firm and sometimes dearer, while others were about steady. Fannings in these categories were also well supported. Low medium brokens were irregular and easier, particularly the plainer liquoring kinds. Fannings followed a similar trend. Plainest descriptions registered a decline. Black leaf varieties were strong and often dearer. Whole leaf grades attracted better support but at irregularly easier rates. Teas of unorthodox manufacture followed the general trend of the market and were lower. Tippy teas were well supported.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.50-4.20	3.85-4.15
Mediums	4.20-4.70	4.15-4.40
Good mediums	4.75-5.70	4.40-5.20
Nilgiri B.O.P.	5.00-8.00	5.20-8.10

The average price realised in sale No. 42 was Rs. 4.46 per kilo, as compared with Rs. 4.50 a week ago and Rs. 4.78 in the corresponding sale last year.

A total of 279,000 kgs. was catalogued in sale No. 42 held today. Good general demand prevailed throughout the sale. Highgrown and black grainy dusts met with keen competition at advanced rates, while the better liquoring clean leaf mediums were firm to dearer. Wynaad sorts came to a barely steady market, but the more fibrous Travancores eased by up to 20 nP and the same applied in the case of residual descriptions. Milled types, however, were about steady. C.T.C. and legg-cut dusts ruled easier, whereas C.T.C. types were about firm.

The average price realised in dust sale No. 42 was Rs. 3.87 per kilo, as against Rs. 3.82 a week ago and Rs. 4.52 in the corresponding sale last year.

Colombo: Just over 5 million lbs. were offered. There was fair demand with best Dimbulas easier but the lesser kinds were firm, although similar fannings were lower. Uvas were easier with quality, particularly sorts and fannings were easier. Lowgrowns ruled firm.

London: *North Indian and other growths*: In Monday's sale, there was strong demand for all descriptions at fully firm rates. Plain broken pekoe is quoted at 2/8*d. Ceylon and South Indians*: 25,128 packages were offered in Tuesday's sale of which 8,922 packages came from South India. There was good demand for South Indians which were sold at around last rates, best liquoring kinds registering advances. Ceylon highgrown, however, eased by 3*d.* to 6*d.* Light liquoring kinds also were lower by 1½*d.*

As we go to press, Messrs. Forbes, Ewart and Figgis wire as follows:

"Sale No. 43 was held on Tuesday, 30th October. Offerings amounted to 481,000 kg. Strong demand. Poorest low mediums about steady. All other mediums dearer. Highgrowns were steady, with quality unorthodox much higher."

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 29*th October*

Sugar prices here were depressed this week, despite local buying support for *Divali*. Demand from outstations was absent. Saurashtra, Gujarat, M.P., Rajasthan and Delhi abstained from buying. The Government of India's decision not to extend time limit for unsold sugar had also a depressing effect. Spot delivery prices were almost stationary around Rs. 106 per quintal, while mill delivery eased fractionally to be quoted at the week-end at: Amroha (D 29) Rs. 102.80, Dhampur Rs. 102.98, Seohara Rs. 102.48, Meerut Rs. 104.50, Simbhoali (E 29) Rs. 104.50, Dhampur Rs. 102.64, Bijnore Rs. 102.32, a quintal.

Slack demand from upcountry centres accounted for an easy trend in the Muzaffarnagar market during the week. Gujarat, Saurashtra, Rajasthan and M.P. abstained from buying. Punjab and Delhi were buyers on a small scale. Mills continued to be anxious sellers and prices fell by 25 nP to 50 nP per quintal. Bold crystal was held at a nominal premium over the former controlled commanding higher rates. Forward delivery was not in demand. In the spot section, prices ruled steady in the early part of the week as demand was pretty brisk, but reacted by 25 nP towards the close, as demand shrank.

Despite good local buying support for *Divali*, *Khandsari* prices were also depressed in sympathy with the decline in sugar. Week-end prices were: *Khandsari* inferior Rs. 80.38 to Rs. 85.74, superior Rs. 93.77 to Rs. 99.13, crystal Rs. 93.77 to Rs. 98.57 and boora Rs. 96.45 to Rs. 104.50, a quintal.

New *gur* prices eased by about Rs. 5.34 per quintal due to pressure of arrivals which mounted to an average of 3,000 maunds daily, which, however, were readily lifted mostly by Gujarat. The week's offtake was 30 wagon loads. Prices for the best quality were Rs. 65.64 a quintal. The average quality was quoted at Rs. 64.30 a quintal and the dara quality between Rs. 50.91 and Rs. 53.58. New *shakker* arrivals were poor at an average of 25 to 50 maunds and were lifted at improved prices. Total *gur* arrivals during the current season were about 25,000 maunds; the corresponding figure for the last year being 4,000 maunds.

Gur futures moved both ways in active trading. Opening at Rs. 21.73 on last Monday, the contract touched the highest and the lowest levels of Rs. 21.76 and Rs. 21.43, respectively, in the mid-week and closed yesterday at Rs. 21.45.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 29*th October*

Foodgrain prices here ruled quiet this week. *Rabi* sowings were in full swing and expected to be completed in a few days.

Better outside buying support coupled with local demand for seed purposes accounted for a steadier trend in wheat. Wheat prices improved by 32 nP to 67 nP a quintal according to quality and were quoted between Rs. 40.53 to Rs. 40.87. Red wheat was stationary at Rs. 38.18 a quintal. During the week, two wagons were despatched. Arrivals were poor, around 200 to 300 maunds daily, and local stocks declined to 50,000 maunds. Rice prices were stationary, as arrivals of new produce from Eastern U.P. were better. Demand was slack. Week-end prices were: Rice *basmati* superior Rs. 80.38 to Rs. 96.45, *sela basmati* Rs. 75.02 to Rs. 85.74, mainpuri *sela* new Rs. 54.92, *ramajwayan sela* new Rs. 58.94, raimunia Rs. 61.62 and *gadda* new Rs. 48.23, a quintal.

Gram improved on better demand. The Punjab quality was quoted at the week-end at Rs. 44.21 and the local produce at Rs. 43.86 a quintal. Arrivals were almost *nil*, and stocks declined to 10,000 maunds. Maize was done between Rs. 29.47 and Rs. 32.15. Arrivals here rose to 400 maunds daily. Old maize stocks were thin and its prices were held between Rs. 26.79 and Rs. 28.13 a quintal. Barley and *bejhar* prices sought lower levels to Rs. 26.12 and to Rs. 26.79, respectively, being lower by Rs. 2.01 and Re. 1.34, respectively, over the week. *Jowar* and *guwar* stayed steady. *Methi* registered an easy trend on slack demand. *Bajra* and oats were listless. Week-end prices were: *Juwar* Rs. 45.55 to Rs. 48.23, *guwar* Rs. 37.51, *methi* Rs. 58.94, *bajra* Rs. 37.51 and oats Rs. 32.15, a quintal.

KIPS FEATURELESS

(From Our Own Correspondent)

MADRAS, 29*th October*

Arrivals of tanned stocks from the tanneries in the local market this week were restricted due to incessant rains. Clearance was small. Prices in the local market remained unchanged. Demand from the U.K. was good, with emphasis on prime tannages and increased prices were obtained in some cases. Sales were patchy due to importers' resistance to the increased prices. Cow calf was in good demand for all weights, but the available stocks were small. Inquiries for buff calf were extensive both for shipment to the U.K. and the U.S., and prices hardened further, as raw prices were out of tanned parity. Market for buff hides was quiet.

Business in tanned goat skins was quite difficult, as there was a gap of 3*d.* to 6*d.* between buyers' and sellers' ideas in Superior tannages. Secondary classes were in demand from the Continent and small quantities were sold. There were moderate inquiries for better class sheep skins, but middle class skins were neglected. Due to the rains, tanners have not been keen buyers in the raw skins centres. The prices quoted last week for all-round lots in the local market remained unchanged.

WHAT'S YOUR CHEQUE FOR ?
Rs. 25,000 — Rs. 1,000 or only Rs. 10 ?
Whether you're withdrawing money to buy a flat or only to buy a shirt..... the same courteous and extra-prompt service awaits you at the counters of the State Bank of Jaipur.
Your State Bank of Jaipur specialises in offering you every type of banking service including Foreign Exchange. No investor is too small...none too big!
Branches in important cities and towns in India.

			1960	87	7,535	3,295	326.44	431.70

* Relate to State of Andhra Pradesh, Bombay (Gujarat and Maharashtra), Madhya Pradesh, Madras, Orissa, Punjab, Uttar Pradesh, West Bengal and Delhi Administration as constituted in the respective years. From 1957 and onwards Mysore and Kerala States are also included. The figures given above are deficient due to incomplete registration. Monthly birth death rates are based on incomplete data from some of the states only. Registration obtains in the remaining part of the country but recording being comparatively more incomplete, their vital statistics are not included here.
§ Excluding still-births. † Provisional.

All preference shares are taxable unless otherwise stated.

*** These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent (cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating upto 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares receive 6 per cent dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of Income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent on 6 months' notice. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. *i*—*Interim Dividend.*

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

Credit Control Tightened

THE latest credit curb imposed by the Reserve Bank of India on commercial banks, limiting their capacity to borrow from the lender of last resort, has failed to earn the appreciation of market circles and banks. They feel that the Reserve Bank has rushed in with a control without paying much thought to its implications to production. The new procedure for rationing central bank credit (*vide* page 784 for details) will, it is feared, prove cumbersome and banks will find it pretty difficult to get a smooth flow of assistance from the Reserve Bank at the time they want it. Industries and workers are being urged to work hard and produce more. This can be done, it is argued, only if industries and trade get sufficient credit. Businessmen wonder as to how this will be possible when banks are subjected to a ceiling on central bank credit which can be lifted only at the discretion of the Reserve Bank. The need for controlling wasteful use of bank credit is conceded, but this, they say, could have been better ensured through selective credit controls.

Chinese War and Commodity Markets

The Chinese aggression does not seem to have led to any marked increase in commodity prices during the last fortnight. Although a war psychology has gripped the markets, there seems to have been no attempt on the part of traders to corner stocks and indulge in other anti-social activities. The overall market sentiment, however, remains bullish. Prices of some of the major commodities, including foodgrains, oilseeds and fibres, have gone up, but the increase has been quite moderate. The prices of *gur* and sugar have, in fact, gone down perceptibly on account of large supplies. The only group of commodities which have registered a sharp increase in prices is non-ferrous metals. This is attributed to the operators' fear that imports of non-ferrous metals for civilian consumption will be further reduced.

The following table shows the latest quotations for select commodities, as compared with those last week, two weeks ago and a year ago:

(In Rs. per quintal unless otherwise stated)

	Latest Available Quotations	A week ago	A fortnight ago	A year ago
Foodgrains				
Rice *Basmati* ..	91.14	91.19	91.19	89.50
Wheat farm quality.	44.88	45.21	43.87	47.80
Jowar	46.89	46.89	46.89	30.00
Gram	43.54	43.86	43.54	38.00
Oilseeds†

Lead	156.00	156.00	156.00	142.00

† Per 50 kgs. * Per maund. ** Per candy.

Among foodgrains, wheat has tended to look up. In the Hapur market, farm quality has gone up from Rs. 43.54/44.21 two weeks ago (that is, just before the commencement of the massive Chinese invasion) to Rs. 44.21/45.55. In view of the large stocks lying with the Government and the U.S. assurance of further supply of wheat under P.L. 480, the possibility of any marked increase in prices is remote. Rice has been ruling fairly steady, with the arrivals of new crop at terminal centres tending to have a restraining effect on hoarders. *Jowar* and gram have also been well maintained. More or less the same trend is in evidence in the oilseeds market. Castorseeds Madras small has improved by just 37 nP over the last fortnight to Rs. 33.62 per 50 kgs. Similarly, linseed and cottonseeds have also moved up a little. Groundnuts have actually turned easy, thanks to the movement of new crop to consuming centres. Among fibres, while cotton futures have been ruling firm, the spot quotations are well within the ceiling level. There has not been any notable change in the jute market.

A Commendable Move By W. Germany

India and other developing countries are greatly gratified at the latest move of the West German Government to provide fresh incentives to promote German investments in developing countries. A package of tax privileges to encourage private investors is currently being discussed in Bonn. So far, tax laws in Germany have not sufficiently taken into account the various political and economic risks which investors in developing countries are confronted with. The basis of West German development aid is, therefore, proposed to be broadened. While, in previous years, Government aid represented the bulk of West German development assistance, it is now intended to mobilise private investment on a large scale. West German sources say that such a move is required, especially in the context of the strained position of the West German budget which no longer allows the provision of large amounts for development aid.

One of the tax incentives under discussion pertains to the grant of a special depreciation allowance for investments in developing countries. Since the risks in the various countries are different and since the developing countries especially suitable for investment are to be favoured, it is intended to introduce a regional sliding scale. It is expected that the depreciation allowance for investment in African developing countries will be twice as high as that in the other extra-European developing countries or in the European developing countries. After a special depreciation allowance has been introduced, the present possibility to build up reserve items deducted from taxable profits is also proposed to be maintained. The percentage of the reserve is to be raised from the present level of 33⅓, together with the extension of the period during which the reserve items are to be dissolved.

The present tax legislation favours only investments used for the purchase of capital assets or representing capital assets themselves. The West German industrialists have repeatedly demanded that all kinds of assets should enjoy tax privileges. Judging from the present state of discussions, it appears probable that the stocks of goods necessary to run the enterprise, too, will become tax-favoured items. The movable assets and production equipment of agricultural and forestry enterprises are likely to be added to the list of tax-favoured items. At present, only industrial enterprises are enjoying these tax privileges.

The grant of tax privileges providing for special depreciation allowances and formation of special reserve items in respect of West German investments in developing countries is now subject to the decision of the Finance Ministers of the individual West German States (Laender). Bonn's development aid experts are discussing whether this subject should be placed under Federal legislation.

Meanwhile, the politicians in Bonn are considering whether the tax authorities should abstain from uncovering secret reserves, if the goods that are already written off partly are transferred to a foreign company having its seat in a country which has an anti-double taxation agreement with West Germany. The privileges are also proposed to be granted for the loans extended by the Reconstruction Loan Corporation and the Development Corporation, as well as for loans which serve investment in developing countries. This move is intended to strengthen the working capital of the two institutions. Reduced income-tax and corporation tax rates are to be applied to such loans.

The profits arising from investment in developing countries in the first five years will be tax-free, if they are reinvested in the foreign enterprise. Corresponding rates and a maximum amount are to be fixed. This tax privilege is expected to be granted to participations in both partnership enterprises and joint-stock companies. Another concession pertains to special income-tax reduction for purchases from developing countries. The present regulations provide for a tax rate of 25 per cent on foreign incomes. This rate is to be revised. The West German experts who have been working in developing countries for at least 18 months are also to enjoy tax privileges. In the first three years following their return from abroad, they will be granted a substantial tax allowance. A large number of experts, we are told, will enjoy this tax privilege. Tax allowances will be extended to include the West German enterprises which are training students from developing countries. The allowances will, however, be limited only to the training of nationals from extra-European countries.

The aforesaid incentives will undoubtedly accelerate the pace of West German private investments in developing countries which are experiencing a persistent shortage of capital. Although the economic position of West Germany has improved remarkably in the past few years, the quantum of fresh private capital invested in developing countries continues to be negligible. During the calendar year 1961, for instance, the total flow of West German private capital (excluding private export credits for five years and less amounting to $11.1 million) was no more than $210 million which was actually less than the previous year's flow of $221 million. Even here, only $156 million represented direct investment, including reinvested earnings, and other private capital and portfolio investment. Guaranteed private export credits for more than five years accounted for $57.5 million.

"Key Currencies" Scheme

An interesting scheme designed to correct imbalances in the payments position of the principal Western trading countries in a more natural and automatic manner has been formulated by Prof. S. Posthuma, one of the Managing Directors of the Netherlands Bank, in a memorandum drawn up and presented by him to the European Common Market's Monetary Committee at Brussels. Briefly summed up, the scheme accords the status of "key currencies" to the U.S. dollar, the pound sterling and the currencies of the six Common Market countries. All the countries concerned are urged to hold at least 40 per cent of their reserves in the form of these key currencies and the balance in gold. The foreign key currencies held by national authorities should, according to him, be fully covered by a gold guarantee. This means that the central banks of the eight countries guarantee their own currencies in the sense that anyone holding such currencies as part of their reserves can, in case of need, exchange them for gold at the standard rate. It may be noted here that, at present, only the dollar is a key currency and sterling enjoys an international status approaching that of a key currency.

Prof. Posthuma claims that the implementation of his scheme will set right what he calls the unhealthy asymmetrical payments situation. In such a situation, the European countries with balance of payments deficits make them up largely by paying out dollars, so that any U.S. attempt to improve its balance of payments results not in gold flowing back to the U.S. but in the European countries holding fewer dollars, whereas the other side of the picture is that the U.S. can cover any deficits in its balance of payments only by paying out gold. According to the assessment made by Prof. Posthuma, similar deficits on either side of the Atlantic lead to the following quite different consequences:

Any U.S. deficit causes gold to accumulate on this side of the Atlantic, while the immediate effect of European deficits is a fall in European dollar holdings. This difference also leads to widely diverging national policies when attempts are made to restore the national balance of payments equilibrium. In the case of the U.S., this aspect of the exchange problem is putting a severe and apparently permanent strain on the domestic economic situation. Repeated American attempts to improve the U.S. balance of payments have, for the reasons given, failed to restore the American gold reserves. The Administration dares not create the internal monetary conditions which would allow the present considerable slack in domestic productive capacity to be taken up, because this would, if anything, increase rather than diminish the balance of payments deficit. This is a vicious circle, since, obviously, the best way to increase foreign exchange earnings would be to expand production. The fear of losing even more gold compels the Administration to give a higher priority to the conservation of its reserves, thereby restricting the domestic economy, than to expansion at home, which would be desirable from almost every other point of view.

In the considered opinion of the Dutch banker, the symmetry of the situation on either side of the Atlantic would be restored, if both sides were to treat each other's currencies as key currencies. In that case, he argues, the U.S. can make up any balance of payments deficits by paying out European currencies rather than gold. Prof. Posthuma does admit that his scheme will not help the U.S. immediately, inasmuch as this country is not now in a position to build up stocks of European currencies. But he hastens to add that the U.S. balance of payments will not "run into the red for ever." When once the U.S. regains a surplus position, the "key currencies" scheme will, he claims, yield three major advantages: to reduce greatly the pressure on the U.S. gold reserves, to bring some improvement to the general world liquidity situation, and to allow the normal compensating efforts of payments surpluses and deficits to operate more quickly and smoothly.

Oil World's Knight-errant

In the death of Signor Enrico Mattei, founder-President of the giant, State-owned Italian oil combine E.N.I. (National Hydrocarbon Agency), Italy has lost its most outstanding industrialist and the world of oil one of its dynamic leaders. As the virtual father of the internationally famous and highly successful public sector oil industry in Italy, Signor Mattei must have been an inspiration for Mr. K. D. Malaviya, India's Minister for Oil, whose ambition is, it seems, to fashion India's public sector in oil on the pattern of the Italian giant. E.N.I. has also been a source of direct assistance to India, as it has been to many countries, including Britain. It has extended a credit of Rs. 46.15 crores for the establishment of petroleum projects in the public sector. Among the projects for which E.N.I. is rendering assistance are construction of a product pipeline connecting Barauni, Calcutta and Delhi, a gas fractionation plant in Assam, a liquid petroleum bottling plant and distributing facilities, supply of production and distribution equipment and contract drilling.

It is, in a sense, a measure of Signor Mattei's competence and an indication of the pivotal role he occupied in E.N.I. that the Italian Government is hard put to find a suitable successor who will provide the kind of dynamic leadership which has developed E.N.I into what it is today. E.N.I.'s activities are not confined to oil. They cover a wide field, ranging from ready-made garments to nuclear power. Signor Mattei literally salvaged Italy's first oil company in the public sector, started by the Fascist Government, from the financial mess in which it found itself after World War II and built it up to be the world's first successful public sector oil industry under democracy. And thereby hangs a tale of industrial adventurism and fortitude which has few parallels in history. Signor Mattei's career itself has all the elements of a medieval romance. Son of a minor police official, Signor Mattei started working at the young age of 14 and, by sheer dint of hard work, enterprise and business acumen, rose to a position that earned for him such epithets as "Oil Tsar," "Oil Cæsar," "Italy's Oil Sheikh," "the most Powerful Roman since Augustus," and "Italy's Industrial Cromwell." He successfully competed with major international oil companies not only in Italy but also in Middle East which was their exclusive preserve till recently. He may, therefore, be aptly described as a hero who bearded the lion in its den. His hard work for E.N.I. was motivated not by the prospect of any personal gain but by the desire to put Italy on the oil map of the world. He never drew a salary and worked for 14 hours a day and all seven days in the week.

Perhaps the only failing of Signor Mattei was that he did not believe in delegation of powers and responsibility. He had himself personally handled all the important negotiations E.N.I. was having with a dozen countries in Asia and Africa. Consequently, it is said, no one in the Company knows the extent and nature of the international commitments of E.N.I. In his death, India has lost a good friend.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2691 BOMBAY, 10th NOVEMBER 1962 PRICE Rs. 2

GOLD BONDS WELL THOUGHT OUT

...or mobilising the gold held by the ...ple for financing the country's war effort, ...mphasised in our journal last week, seems to have been fully realised by the authorities even as we were writing about it. For, twenty-four hours after our last issue was published, Mr. Morarji Desai announced, in a country-wide broadcast over All-India Radio, certain measures for garnering the people's gold. The promptness with which the Union Finance Minister moved in this matter is admirable. Some may feel that he should have waited for several days, allowing the appeal for voluntary gold contributions to the National Defence Fund to bring the maximum possible results it could. They argue that the Finance Minister's offer would tend to dry up voluntary contributions, as those who wish to part with their gold for financing war effort would naturally prefer to invest in the gold bonds now offered rather than give it away as outright gift. This contention ignores human nature and exaggerates the scope for voluntary contributions. Besides, there is no point in exploiting the fervour of patriotism rekindled by Chinese aggression to an extent where persons of modest means feel impelled to give up their savings in yellow metal without taking compensation whatever. The National Defence Fund is there for those who still want to give gold donations.

The method adopted for attracting the people's gold without infringing the regulations of the International Monetary Fund reflects the ingenuity of the Finance Ministry and its advisers. Likewise, the price and other terms offered suggest that much careful thinking and cold calculation have preceded the announcement. The first impression of the terms of the gold bond is such as to describe them unattractive. But a deep study reveals that the authorities have tried to find a solution that reconciles, as best as possible, the conflicting problems involved. They have, in the first place, avoided embarrassment to the International Monetary Fund which would have arisen had they sought an exemption from its rules. By fixing the rate of interest on the 15-year gold bonds at 6½ per cent per annum, which is about two points (that is, nearly 50 per cent) higher than the yield available on corresponding maturities of the Central Government, they have avoided the necessity to offer a price that would have been higher than the equivalent of I.M.F. parity, namely, $35 per fine ounce, or Rs. 53.58 per 10 grams (or Rs. 62.50 per tola). The incentive given in the form of higher interest rate is akin to the subsidy given by the Governments of gold-producing countries to their domestic gold-mining companies (as, for instance, Canada and Australia) in order to offset the high cost of production and ensure a reasonable return on the investment. Ever since its inception, the Fund has recognised this subsidy as a legitimate incentive for sustaining and ...reloping gold production. India can thus ...im to have abided by the I.M.F. rules in ...ter and spirit alike even in a grave emer...ncy like war.

A ticklish problem confronting the authorities in the task of mobilising the people's gold was fixation of the buying price at a level that would not encourage smuggling without at the same time making it unattractive to the seller. The solution they have worked out and are trying now is a mixture of many things: higher interest rate, amnesty to black-marketeers, profiteers and tax-evaders who are keeping their ill-gotten wealth in gold, provision of an outlet for displaying one's patriotism, warning and threat of imposition of a ceiling on gold holdings, as well as of more penalties to smugglers, and a fervent appeal to the people to refrain from fresh purchases of gold till the Chinese are beaten back. The initial reaction of the bullion market shows that this solution, when fully implemented, may yield results far greater than generally expected. The price of ready gold has already fallen from Rs. 121.50 per ten grams on the eve of Mr. Morarji Desai's broadcast last Saturday to the neighbourhood of Rs. 105 at the time of writing. At one time this week, it was as low as Rs. 102.50. It may be noted here that, as compared with a peak of Rs. 129.90 touched on 29th August 1962, there has been a depreciation of about 20 per cent in the value of gold in a period of a little over two months This is sufficient to show that, even as a store of value, gold is not a haven that can guarantee peace of mind to an investor.

In order to judge the prospects for the gold bond issue, one must first consider the motives that influence purchases of gold. There are those who buy gold as a store of value. These people —here we are having in mind not the ignorant masses but the rich and knowledgeable investors in urban centres—believe in keeping a portion of their savings in gold as a hedge against inflation and fall in the purchasing power of money. Their number cannot be very large. Secondly, there are those who keep a part or whole of their ill-gotten wealth in gold and, though they may be larger in number than the first category, none can say how much gold they possess. Thirdly, there are those who buy gold for making ornaments and jewellery; these are mostly middle class and rich people. Fourthly, there are the masses of agriculturists and industrial workers who buy gold either for storing their surplus funds or for making jewellery or for both. Fifthly, there are the princes and places of worship who have inherited gold in various ways. And, lastly, almost every household in India buys gold for religious purposes, for giving dowries and for making presentations. One can straightaway say that it is beyond the scope of a democratic nation to eradicate the last-mentioned motive even during war-time. At best, it may be possible to minimise the use of gold for presentations and dowries by appealing to one's sense of patriotism. Temples and other places of worship may be reached through the Endowment Boards and the trustees concerned and persuaded to exchange the bulk of their gold for the gold bond. Princes and the rich people who have deliberately chosen gold as a store of value may not part with their stocks, unless a ceiling on the amount of gold that an individual can possess is imposed. This applies to the gold held by the vast majority of middle-class people as well. It is assumed here that they are all law-abiding citizens and would not like to find themselves on the wrong side of the fence. The fourth class, namely, the masses, may not respond at all, barring a few exceptions.

There now remain the hoarders of ill-gotten wealth in gold, falling into two categories, (*a*) the corrupt officials and self-employed non-businessmen (as, for example, doctors, lawyers and cinema stars) and (*b*) businessmen. For them, the gold bond provides a golden opportunity to turn a new leaf and convert their black money into white, with little or no loss. The Government has clearly stated that no questions about the origin of wealth will be asked when gold is surrendered. It has further stated that gold bonds will not be subject to wealth tax and that any capital gains made on the sale of bonds will be free from capital gains tax. These are not insignificant concessions. To take the (*b*) category, namely, businessmen. Let us suppose that the average cost of gold for the businessman is Rs. 107 per ten grams of .995 fineness. When he tenders it, he will receive from the Government Rs. 53.58 in bonds carrying interest at 6½ per cent per annum (subject to tax), payable half-yearly. Since these bonds are transferable, they can be easily marketed. And, since the prevailing yield for a 15-year loan is approximately 4.55 per cent (Government is paying 4.25 per cent on the ten-year National Defence Bond), these bonds may be expected to command a market value of Rs. 120 or Rs. 122, that is, a premium of 20 to 22 per cent. On this basis, the businessman concerned can realise a little over Rs. 65 on the 10 grams sold to the Government. The net capital loss for him is thus Rs. 42 or roughly 40 per cent. This is not too high a price to pay for converting his black money into white, considering that, nowadays, even a nominee charges 25 per cent for taking over black-market profits of a trader. As the businessman will use the funds thus released from his gold hoards in his regular business, he can easily wipe out the 40 per cent capital loss in less than three years. The assumption here is and it is no exaggeration—that a businessman usually earns 15 per cent per annum. Even if he merely lends the money to the indigenous money market, he can get 10 to 12 per cent per annum. On this basis, it may even be worthwhile for those businessmen who are hiding their ill-gotten wealth in currency notes to buy gold at or a little over Rs. 100 with that money, convert that gold into gold bonds, sell these bonds in the market and invest the proceeds in their business.

The hoarders of black money, who are not businessmen and will, therefore, be unable to recoup their capital losses in the manner thus described, will also find the gold bonds a convenient way of rectifying their position. If they keep the bonds till maturity, they will receive in all, even on a simple interest basis, Rs. 90 per 10 grams of gold given to the Government. Since they will also be able to earn interest on the interest received on gold bonds, the actual amount they will have received by the end of 15 years will be much more, perhaps, over Rs. 100. Thus, their capital loss will be much less than that of those described earlier. Only, they will have to wait patiently for 15 years. In fact, if their average cost of gold is Rs. 100 or less than Rs. 100 per 10 grams, as it very well could be for those who have accumulated gold over a period of years, there will even be a capital gain.

It follows from the foregoing analysis that those who have hidden their black money in gold or even in currency can conveniently regularise their wealth by availing themselves of the opportunity now offered by the Government, an opportunity which will give them the additional satisfaction of having helped the motherland to throw out the invaders. The earlier they do so the better, for two reasons: (1) though the bonds will be on sale for six months from 12th November 1962, the Government has the option to close the list earlier any time it chooses; and (2) the country is urgently in need of foreign exchange for both war and economic development. Accordingly, purchases of gold bonds now will be of immense help. Even those who have gold acquired out of their taxed reserves and therefore whose possession is legitimate could, nay should, exchange their surplus gold for gold bonds, without waiting

for the Government's announcement restricting the amount of gold that an individual, or family, can keep. This they must do as their patriotic duty. One may ask as to what we mean by saying "surplus gold." The surplus here means the gold in excess of one's requirements for a fair amount of jewellery and religious purposes as, for instance, marriage. It is for each one of us to decide, as Mr. Morarji Desai rightly observed in his broadcast to the nation, the amount of gold to be exchanged for bonds. As has already been shown, one hardly suffers a loss by doing so, if the average cost of one's gold is in the neighbourhood of Rs. 100. If one does not wish to wait for 15 years to get full value for one's gold in this manner and desires to take full advantage of the prevailing market price of the metal, one is welcome to sell one's surplus gold in the open market. One will thereby make an indirect contribution to the war effort, for such sales will discourage smuggling of more gold into the country and reduce the loss of foreign exchange that occurs through this illegal traffic. Those who wish to follow this way out would be well advised to dispose of their surplus gold before the Government imposes a ceiling on gold holdings.

If those who have bought gold with their legitimate capital and income consider the gold bonds unattractive, having regard to the possibility of a fall in the purchasing power of the rupee in the coming years, they cannot be blamed. To them one can only appeal that they should make a certain amount of sacrifice for protecting the independence of this country as a democracy. They must realise that the enemy who is threatening the freedom and integrity of the country is not an old colonial power with a democratic government but a ruthless communist power, with no respect for international law and individual liberty. Of what avail their gold possession will be if the country goes under the suzerainty of such a power? These investors in gold should, therefore, ponder carefully and extend their maximum support to the gold loan. This task will be relatively easy, if they content themselves by regarding the subscription to gold bond as an interest-free loan to the Government for fighting the war. There are, of course, many persons of modest means among such genuine investors in gold. They may feel that they cannot afford to make even this sacrifice. The least that they can do is to respond faithfully to Mr. Morarji Desai's call not to buy any more gold, until the last invader is thrown out from the Indian soil. Indeed, if every one in this country, be he rich or poor, abstains from buying gold either for making jewellery or for storing savings, the price of gold will go down to such low levels as to render smuggling uneconomic. If the people of this country were to achieve this goal, they would stop an annual drain of Rs. 40-50 crores in foreign exchange, besides making available the equivalent rupee resources for productive investment and employment for their own benefit. To sum up, therefore, if one cannot exchange one's gold even for the gold bond, one must at least refrain from buying gold.

ECONOMIC MOBILISATION

THE nation is indubitably on the march and all roads seem to be leading to the Himalayas. It may be deemed hyperbolical to describe in this manner the mobilisation of men, money and material that is under way for defending the country against the Chinese invaders. But it is not quite so, for the entire Indian nation, including the larger section of the Communist Party, has found its soul and attained, overnight as it were, a surprisingly high level of emotional integration. There can be no better psychological asset than this for the defence effort, for it signifies the determination of a united nation to defend its own honour, integrity and sovereignty. That this is the most basic of all assets, including Prime Minister Nehru's great leadership, is clear enough. So far, so good. But the nation's morale, like that of the Army, cannot be expected to be maintained and strengthened for a possible protracted war except through an economic mobilisation of the kind that took place in Britain in the dark days of 1940 when that country refused to accept defeat at Hitler's hands. Any such mobilisation would involve a supreme effort to produce more on the farm and in the factory and a cheerful acceptance of curtailed or controlled consumption on the part of the people. By all accounts, the real cost of this war—undeclared though it may be—between India and China is going to be much heavier than is currently foreseen.

In a way the magnitude of the economic task that lies ahead has been recognised by the National Development Council. The momentous declaration adopted by the Council, at its two-day meeting which ended on the 5th instant at New Delhi, has the following to say on the supreme need for economic mobilisation:

"Our soldiers at the front will have to be backed by the productive efforts of the people in the field and factories. The N.D.C., therefore, considers the country's plans of development as an integral part of the national defence.

"In this context, the successful and speedy implementation of the Plan, with the necessary reorientation to meet this emergency, becomes all the more imperative. Resources for this can come only through savings and savings would necessarily mean sacrifices in the present for the sake of the future. The Government, at the Centre and in the States, will have to take adequate and effective steps to foster the proper atmosphere for greater savings in the community and utilise those savings towards the national effort, with economy and efficiency.

"The Council takes note of the present situation regarding supplies of food and essential commodities for civilian consumption, and affirms its determination to prevent hoarding and profiteering and to check any undue rise in prices of commodities. Co-operative channels of distribution will be developed. Vigilance committees everywhere will stand watch."

The reference to the Plan in the above declaration follows the line laid down earlier by Prime Minister Nehru in his address to the Council. Mr. Nehru's view, incidentally, was to the effect that the Plan was already a selective one and that, on most of the things it had to do, the country could not relax. The programmes for agricultural and industrial production, power and technical training, in particular, he said, were of the utmost importance for winning the war as well as winning the peace. He, of course, conceded that some non-essentials would have to be cut down not only in the Plan but also in non-Plan activities. But the Council, while broadly approving the Prime Minister's approach, has not indicated in what specific ways the Plan can be integrated with national defence and its priorities reordered so as to release more money and materials for the war effort.

It may be supposed that the Planning Commission's proposals for re-arranging certain priorities to meet the defence requirements and for strengthening the Plan in several other directions would be accepted by the State Governments. These proposals, incidentally, pertain to greater emphasis on the maintenance of essential supplies and prices, irrigation, power and industrial projects, roads and road construction, savings, training programmes and agricultural production. The States would have no alternative to so rephasing their 1963-64 Plans and to reducing their non-Plan expenditures, for Central assistance to them for 1962-64 is going to be reduced from the originally-proposed Rs. 450 crores to Rs. 400 crores. It should not be too difficult for them to effect some economies not only by reducing non-Plan and non-development expenditure but also by increasing efficiency in implementing Plan programmes. The State Governments are rightly expected to work out the details of rephasing forthwith, so that they can implement the 1963-64 Plans promptly and efficiently from their very start.

It is to be hoped that the State Governments, which, according to Mr. S. K. Patil, Union Minister for Food and Agriculture, have not given top priority to agriculture, will realise that both the Army and the nation will be marching on their bellies in war-time. One has only to recall, in this connection, the experience of Britain which, before the war, used to import the larger part of its food requirements. Through intensive cultivation and agricultural mechanisation, that country succeeded in producing nearly two-thirds of its food requirements during war-time, thereby forging the will to fight. Agriculture in this country would likewise have to be placed on a war footing.

Intensive cultivation, for which adequate irrigation water and fertilisers (organic and inorganic) are required, can be given a big boost, provided the States take prompt advantage of the Planning Commission's latest proposal to raise the third Plan target for minor irrigation from 12.8 million acres to about 19 million acres. As the Union Food and Agriculture Minister has also promised to provide funds to the extent required for implementing the physical programmes for minor irrigation and soil conservation, the State Governments should lose no time in expanding their minor irrigation programmes in the light of this assurance. A massive effort, as suggested by Mr. C. M. Trivedi, Member, Planning Commission, at the N.D.C. meeting, is also required for excavating field channels so that the irrigation potential of major and medium projects could be utilised fully. Without more irrigation water, it would be idle to think of intensive cultivation on a larger scale. Equally important would be the multiplication of improved seeds and their timely distribution to farmers.

As far as dry lands are concerned, the currently proposed revision in the target for soil conservation so as to cover 16 million acres (as against the originally proposed 11 million acres) is accompanied by the assurance that more funds would be made available for the purpose. Likewise, by revising the target area for the adoption of improved dry farming techniques from 22 million acres to 50 million acres, the Planning Commission has underlined the need for achieving higher productivity in dry lands as well. Improved cultivation or conservation farming on dry lands will go a long way towards increasing their output even under conditions of uncertain or insufficient rainfall. With 80 per cent of the country's cultivated area continuing to be unirrigated, this programme for soil and moisture conservation and improved dry farming certainly deserves pursued as a matter of high priority. It is significant, in this context, that Mr. S. K. Dey, Minister for Community Development, has proposed that, from now on, village level workers should devote exclusive attention to agricultural programmes in C.D. Blocks. With better co-ordination between the Agriculture, Irrigation and Community Development Departments in the States, it should be possible to impart greater vigour to the campaign for growing more food and more agricultural raw materials for industries.

Unless food and raw material production is stepped up, the prices of wage goods are bound to go up in a situation of mounting defence expenditure (both direct and indirect). The consequent pressure on cost of living is bound to lead to additional wage demands and result in more purchasing power being released by way of dearness allowance. A wage freeze will thus become an elusive ideal so long as there is no restraint on the prices of foodgrains including wheat flour, agricultural raw materials, and other essential commodities listed by the Federation of Indian Chambers of Commerce and Industry. These other commodities are sugar and *gur*, cotton piecegoods, woollen piecegoods, *vanaspati* and other edible oils, footwear, paper, drugs and pharmaceuticals, coal and coke, and cement. If, as suggested by the F.I.C.C.I., the central organisations of manufacturers of these commodities can make arrangements to see that they reach the ultimate consumers at prices no higher than what they are expected to pay, it will be very good indeed. But supposing they fail to maintain the prices and supplies of these essential commodities by such self-regulation, what will happen? Surely at the retail end availability of goods at fair prices, howsoever displayed or marked, is not going to be that easy. So, it would be prudent on the part of the authorities to prepare plans quietly for swift physical control, as and when necessary, of stocks of all essential commodities, including foodgrains, and for their distribution through statutory, or informal, or fair-price, shops and co-operative channels.

Controlled distribution of essential commodities at fair prices may thus become necessary not only for maintaining supplies for civilian consumption at a bare minimum level but equally for restraining living costs in the interests of that savings mobilisation on which the N.D.C. has laid so much emphasis. But, in the ultimate analysis, the price line cannot be effectively maintained so long as the bottlenecks on the production side continue to push up industrial costs in a variety of ways. The F.I.C.C.I. has, therefore, done well to tell the Union Finance Minister the other day that at least five things should be done on an emergency basis. These relate to the supply of raw materials and industry, improvement in transport capacity basis as to balance military and civilian transport needs, removing impediments to fuller use of man road transport, stockpiling strategic materials like steel, non-ferrous metals and petroleum products by securing them from friendly countries, and amending labour laws suitably so as to allow working of three shifts and additional hours. Although we are broadly in agreement with the Federation's approach, we cannot help entering a caveat in so far as the labour question is concerned. It is that labour cannot be reasonably expected to accept sacrifices cheerfully so long as it sees no visible proof of similar sacrifice by capital. Whether those who provide capital will accept some sort of control on dividends, for instance, is a matter that deserves examination. In a society of conflicting classes, economic mobilisation for the war effort would necessarily involve equitable sacrifices all round for at least psychological reasons, if not for anything else.

MARKET GOSSIP

Whither Equities?

MANY an investor in shares and stocks must naturally be worried as to what he should do now. "Must I cash my investments or stick on to them?" The Union Finance Ministry has already issued a Press note saying, in effect, that it would be unwise to sell away one's investments in the present panicky state of affairs. With that broad advice, we fully agree. One should not forget the well-known stock exchange adage that tops and bottoms are for fools.

The easiest thing for one to do is to give advice. Nevertheless, on occasions such as the present emergency, it is necessary, to proffer it, if for no other consideration than at least to sustain the morale of investors. Such advice, if it is to be useful, must be straightforward without too many hedges.

Not long ago, an investor cared more for capital appreciation than for a reasonable yield. It is this mentality that kept the boom going. Today, his main worry is security of capital. The feeling of insecurity is due predominantly to political uncertainty. Confidence is a tender plant which gets easily shaken by emergencies such as the one through which this country is now passing.

Who can say with any degree of certainty that the Chinese have been definitely contained? Ultimately, of course, the aggressor will be beaten, but, meanwhile, there may be more losses and more destruction. An investor who cannot take such reverses with equanimity has no choice but to cash his investments when the going is good and keep the money in fixed deposit with banks. He may do so, especially if his original capital is still intact. So long as there are such weak holders, the stock exchanges cannot attain stability. It is only courage and not timidity that brings capital profits in equities.

Investors who have guts and plenty of surplus funds may pick up blue chips and shares of new companies which are engaged in promising industrial projects. There is no doubt that, barring a few exceptions, almost all the industries in this country will have plenty of orders—defence and civilian alike—that will keep them fully engaged. The country is now faced with the necessity of attaining both military and economic strength at top speed. And, under the pressure of this urgency, most of the bottlenecks that have been standing in the way of production may get broken quicker than expected. The understanding reached between the representatives of employers, on the one hand, and those of workers, on the other, on industrial peace is also a helpful development. Other things remaining the same, the prospects for industrial expansion and profits are, therefore, bright and with that the prospects for equities too.

But will other things remain the same? When this question is posed, a number of doubts starts crowding in one's mind. What additional taxation will be imposed in the name of war effort? Will there be a control on dividends? Will the war be used as a pretext to inject a fresh dose of socialism? These are some of the gnawing doubts causing sleepless nights to investors. They can be dispelled only by the Government. Accordingly, the sooner the Government clarifies its economic policy for the emergency, the better for the health of stock markets.

At the same time, the Government must take steps to introduce compulsory war risks insurance on a country-wide basis and give an undertaking that appropriate compensation will be paid in respect of property destroyed during the war. Such a step, too, will infuse confidence among investors and restrain selling pressure on stock markets. It is true that, at present, the fighting is going on with only guns and mortars in two corners of India. But what certainty is there that this will not spread and yield place to aerial warfare? Surely, one has to be prepared for the worst.

The swiftness with which the U.S., the U.K., Canada and other Western democratic countries have responded to India's request for arms aid has been an encouraging factor. But investors will rest assured, if the authorities in this country show more convincing evidence of their awareness of the danger posed to this country by Communists both in India and outside. To make a long story short, they are now worried whether India can become a strong military power to defeat the Chinese without the active collaboration of, and massive aid from, the Western world. The weakness of share markets reflects the weak spots exposed by the Chinese in India's military strength. That is the basic cause of the collapse of share markets. When this defect is rectified, the markets too will improve. We have no doubt that this will be done sooner or later. The exit of Mr. Krishna Menon from the Union Cabinet may be taken as a straw in the wind. And so those investors who have patience and stick on to their holdings will fare better in the end than if they sell out in a hurry now.

Raw Jute

The Jute Commissioner's latest order compelling the mills to buy nine million maunds (or 1.8 million bales) of raw jute during the months of November and December is, to say the least, regrettable. It is true that the raw jute prices are currently ruling below what is considered to be a fair level, namely, Rs. 30 per maund (basis Assam bottoms), and that the Jute Commissioner is rather anxious to safeguard the interests of growers by stabilising prices. But one wonders whether it would be right to subject the jute mills to undue hardship as a result of the compulsion to purchase more raw jute when all their godowns are bursting with heavy stocks of raw jute. The total of these stocks (including the fibre in transit and agencies) is put at as much as 1.75 million bales, a quantity that is sufficient to last for 4½ months. A further quota of 800,000 bales, we are told, is yet to be delivered and contracts covering another 2.6 million bales have already been concluded. How then can official circles accuse the jute mills of deliberately postponing purchase of raw jute with a view to depressing prices further? If the mills are to buy more fibre, they must first have proper godown facilities which are not available now. Surely, the mills cannot store the fibre in the open yards, as its quality will deteriorate and affect production of hessian and sacking. There is also the question of finance. The purchase of 1.8 million bales of jute as stipulated by the Jute Commissioner involves an expenditure of nearly Rs. 27 crores. The financing of this additional purchase is all the more difficult in the present context of tight money conditions.

Viewed thus, it is not surprising that the Indian Jute Mills Association has urged the withdrawal of the compulsory purchase order which is described as an extraordinary one. The Association points out that, with the heavy pressure on transport, the enforcement of the order will bring about an unsatisfactory gap between prices at Calcutta and in other parts. Moreover, it is feared that compulsory buying will benefit hoarders rather than growers. Even so, the Association has assured the Government that its member-mills would be prepared to stretch themselves to the utmost to implement the Jute Commissioner's order, provided arrangements are made to clear the accumulated jute stocks from Assam where prices are lower than at Calcutta.

New Stimulus to British Economy

In a bid to give a new stimulus to the economy and reduce unemployment, which is now of the order of 501,000, the British Chancellor of the Exchequer, Mr. Reginald Maudling, announced three major measures in the House of Commons on the 5th inst. These are: (1) increased investment allowance for industry, (2) accelerated 'write-off' for heavy capital goods which at present have a long life, and (3) cut in purchase tax on cars from 45 to 25 per cent. Making the announcement, the Chancellor pointed out, while opening the debate on the Queen's speech, that what Britain needed was not so much a general stimulus to consumption as special encouragement for the industries and areas where there are unused resources. The weakest sector of the British economy at present is the manufacturing industry. A stimulus to investment demand through increased investment allowance and shortened "write-off" will give, according to Mr. Maudling, a much-needed fillip to this industry. The cut in the purchase tax on cars, which will reduce the average retail price of a car in the home market by one-eighth, and the consequent boost to the home market and the economies of scale resulting therefrom will enable manufacturers to increase their exports.

Details of the Chancellor's proposals in respect of investment allowance and depreciation are as follows:

The investment allowance in respect of capital expenditure on new plant and machinery will be increased from the present rate of 20 per cent to 30 per cent. The investment allowance in respect of capital expenditure on new industrial buildings and structures will be increased from 10 per cent to 15 per cent. These concessions are expected to cost the Exchequer £8 million this year and £50 million in the full next year. Besides qualifying for the increased investment allowance of 30 per cent, capital expenditure on new plant, machinery and buildings for scientific research can, in future, be written off wholly in the first year instead of being allowed, as at present, at 60 per cent in the first year and 10 per cent in the next four years. The cost of this encouragement to scientific research is estimated at £4 million to £5 million in the full first year.

The proposed changes in annual depreciation allowance, details of which are yet to be worked out, will reduce substantially, in some cases by more than one-half, the nominal working life of a wide range and types of plant which are at present assumed, for depreciation purposes, to have working lives of periods up to 45 years. The cost to the Exchequer of the higher depreciation allowance, though small in the first year, will be £15 million in 1964-65 and may rise to £55 million annually in a few years' time. The combined cost to the Exchequer of the three concessions is estimated at £110 million in a full year.

The reduction in the purchase tax on cars from 45 to 25 per cent, though difficult to estimate because of the impossibility of calculating the resulting increase in demand, is expected to cost the Treasury anything between £50 million and £60 million in a full year. The new price in pounds sterling of some of the popular models of cars, calculated on the basis of the reduced tax rate, are as follows, the figures in brackets being the old price at the higher tax rate:

Austin Mini 448 (509); Ford Anglia 514 (585); Ford Zodiac 970 (1,105); Hillman 617 (702); Humber Super Snipe 1,353 (1,541); Jaguar 2.022 (2,301); Morris 593 (674); Mercedes-Benz 1,700 (1,926); Rolls Royce Silver Cloud 5,524 (6,278); Vauxhall 823 (936); Volkswagen Saloon 630 (717).

The aforesaid proposals, which should normally be included in the budget, will be incorporated in the next Finance Bill, but they will have retrospective effect from the date they are announced. The aim of this novel device is to make their effect felt immediately on the economy.

It is noteworthy that these concessions are not temporary measures designed to deal with a short-term situation. It is true they will have immediate, beneficial effects, but their objective is essentially long-term—to stimulate investment and exports. It is significant that the most liberal concession in terms of investment allowance and depreciation has been given to research assets, for it is scientific research that constitutes the backbone of industrial progress.

Latest Step for Uniting Europe

What is appropriately described as the biggest monetary venture since the creation of the U.S. Federal Reserve System on 23rd December 1913 has just been announced. It is the move to establish by 1970 a full-fledged monetary union comprising all the European Common Market countries. The programme of action as proposed by the E.E.C. Commission at Brussels envisages fixed rates of exchange among all the member-currencies with only small freedom to fluctuate within certain limits. The Rome Treaty, it will be recalled, did not provide for any common monetary policy. Drawing attention to this deficiency, the E.E.C. Commission declares that the gap must be filled. Apparently, the Commission feels that the appearance of a European reserve currency will greatly facilitate international monetary co-operation and, indeed, the reform of the present system itself. As a means to bring about a complete monetary union in the Common Market, the Commission has urged the immediate implementation of six important measures. Briefly summed up, the measures are:

1. There must be a continuing monetary review by a Council of Central Bank Governors which would join in meetings of Economic Ministers in the E.E.C. Council.

2. Whenever a member-State proposes to take any important monetary decision, such as changes in exchange rate, bank rate and other short-term interest rates, liquidity ratios or policy on open market operations, prior discussions with other States must be held; this system should be in place by the middle of next year.

3. Members can join in addressing monetary recommendations to another member whenever they feel the need to do so.

4. Recourse to the International Monetary Fund by a member must be preceded by Community consultations. The members should work out a common position with regard to the present world monetary system and the reforms to be carried out by the end of 1963.

5. Mutual aid will be given to a member in difficulties, if it fulfils certain conditions. The members will earmark a fixed proportion of their gold and foreign currency reserves for this purpose, as was originally suggested by M. Jean Monnet who mooted the idea of a European Reserves Union nearly two years ago.

6. As these objectives are progressively secured, such capital movements as are now prohibited or limited should be freed.

Alongside of the aforesaid measures, the E.E.C. Commission has recommended, as an approach to a 1964-68 Community programme, centrally co-ordinated planning economies until such time as these cease to be plural and become one economy. The

(*Continued on page 834*)

GOVERNMENT OF INDIA

4¼ per cent National Defence Bonds, 1972.

Subscriptions to the Bonds will be received at the following places with effect from 10th November 1962:—

(a) **Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi.**

(b) **Branches of the Subsidiary Banks of the State Bank of India conducting Government Treasury work; and**

(c) **Branches of the State Bank of India at other places in India.**

The subscription will be received for a period of 6 months but the sale of the Bonds may be stopped earlier, if so decided by the Government.

Subscriptions will be in multiples of Rs. 100 and will be paid in the form of cash or cheque. All the Bonds, irrespective of the date of sale, will be repaid at par on 10th November 1972.

Interest on the Bonds will be paid at the rate of 4¼ per cent per annum on 10th May and 10th November every year. On the Bonds sold after 10th November 1962, the first payment of interest will be for the broken period from the date of sale to the 9th May 1963 inclusive. The interest paid will be liable to tax but tax will not be deducted at source in the case of Bonds held by individuals.

TREND OF SHARES

'CRISIS' WEEK ENDS WELL

(From Our Own Correspondent)

BOMBAY, *8th November*

THE past seven-day period on the stock exchanges, characterised as the 'crisis' week, has ended on a slightly better and confident note, thanks to suspension of trading in some markets, especially Bombay Stock Exchange, the shot-in-the-arm like the Finance Ministry's note assuring investors of bright prospects for investments and the national economy and some sizable, though belated, purchases by the L.I.C. in some leading counters in both Bombay and Calcutta. Although absolute confidence is still clearly lacking, it seems that the panic created by the China war and fear of heavy war-time taxation has abated and the rot has been checked at least temporarily. While the measures taken by the market authorities have succeeded in no small way in restoring some stability to the markets, it is the solid support reported to have been extended by the L.I.C. that has changed the sentiment and produced a quick recovery in the leading counters from the lowest levels touched generally on Monday, the 5th inst. According to unconfirmed reports current in the market, the L.I.C. bought during the week 23,500 Tata Ordinary at between Rs. 120 and Rs. 121.75, 10,000 Bombay Dyeing around Rs. 56.50, 80,000 Indian Irons, 75,000 Hindustan Motors, 5,000 T.E.L.Co., and fairly good lots of Svadeshi, Kohinoor, A.C.C. in Bombay and of Dunlop Rubber, Indian Aluminium, Kesoram Industries, Union Carbide and Indian Cable in Calcutta. Market circles contend that had the L.I.C. made the bulk of its purchases through open market operation instead of through private deals, the market sentiment would have improved to a much greater extent.

Some dramatic developments in recent stock market history took place on Monday, the 5th inst. On that day the market authorities in Bombay and Ahmedabad suspended trading for an indefinite period. Business was also suspended for the day in Delhi within half an hour of trading and the Board fixed minimum prices for both cleared and non-cleared shares. The minimum prices for cleared shares were fixed at arbitrary levels, while those for non-cleared shares were pegged at the closing rates on Saturday, the 3rd inst. The Board also imposed an automatic margin of Rs. 2 per share on all outstanding sales and purchases in Indian Iron, Hindustan Motors, D.C.M. and Modi Spinning and a margin of one rupee per share on the other scrips in the forward list. The Board announced that a fine of Rs. 2,000 would be imposed on any member found trading below the fixed rates. Minimum rates were also fixed in Madras for both cleared and non-cleared shares at the closing prices on Friday the 2nd inst.

As expected, the Governing Board of the Bombay Stock Exchange announced compulsory carry-over of unadjusted business on a party-to-party basis at the turn of the current settlement on Friday, the 9th inst. The Board fixed making-up prices and regulated carry-over charges at 9 per cent per annum. It also announced that the market would open on Friday only for the settlement and remain closed until further notice. However, in view of the recovery staged by the leading counters in the kerb deals during the past three days, it was expected that the authorities would lift the present order of suspension of trading on Monday, the 12th inst. In addition to fixing the making-up prices and carry-over charges, the Board also decided to suspend the "selling out" rule in regard to unsettled contracts for the purposes of the settlement and notified the rules for the conveyance of the "buyer's ticket," representing the actual deliveries of shares to be taken by the buyers.

The Committee of the Calcutta Stock Exchange met informally on Tuesday, the 6th inst., after the close of business and expressed satisfaction over the steps it had already imposed recently to arrest bear pressure in the market. The Committee decided, therefore, to maintain the *status quo* until further notice.

The Finance Ministry note issued on 6th November gave the impression that the Central Government was unshaken in its conviction that the setback in share values was only a temporary phenomenon and that the basic outlook for investment remained unmistakably bright. The note clearly assured the investing public that "the markets will steady themselves and that normalcy will be restored soon." Reproduced below to the readers' advantage is one significant paragraph from the text of the Press note:

"The equity markets in all countries have their own uncertainties and share prices their ups and downs. There should, therefore, be no cause for undue concern, if, owing to causes like external aggression and internal adjustments of the economy which have to be undertaken as a result, share prices show a sagging tendency for a few days or even a few weeks. That the whole country is united in its determination to meet the aggression effectively has been amply proved by recent events. The unity of endeavour may mean certain readjustments of production lines and greater emphasis on certain goods than on others. *But there is no doubt, on the whole, the tempo of industrial and economic activity in the country will increase very rapidly and not slide back at all nor would it be realistic to harbour the fear that, while industry increases its production, the remuneration for its genuine efforts will be unreasonably low.*" (Italics ours.)

* * * *

Selling pressure continued to be unabated in Dalal Street and values sank to yet new low levels in the 40-minute trading on Monday, after which trading was suspended by the authorities. The extent of the fall in leading counters in both cleared and non-cleared list since the Chinese aggression on 18th October 1962 is indicated in a table on this page. Those counters which are not included in the table also recorded some further moderate losses this week. For example, Shree Niwas and Swan, in Textiles, declined by Rs. 9 to Rs. 231 and by Rs. 12.50 to Rs. 245, respectively. Alcock, among Engineering issues, came down by Rs. 7 to Rs. 288, Andhra Valley declined by Rs. 20 to Rs. 1,005, Mukand Iron fell by 48 nP to 18.76 and Associated Bearing and Chemicoat, in Cash List, declined by Rs. 16 to Rs. 115 and by Rs. 17 to Rs. 144, respectively. However, following L.I.C. buying, some of the market leaders staged a fair recovery in the past three days' unofficial trading, after declining further from the lowest levels touched in Monday's official session. Tata Ordinary, for instance, looked up from Rs. 116 to Rs. 121, Indian Iron from Rs. 21.40 to Rs. 23, Hindustan Motors from Rs. 14.68 to Rs. 16, Century from Rs. 535 to Rs. 562, National Rayon from Rs. 395 to Rs. 420 and T.E.L.Co. from Rs. 240 to Rs. 260.

* * * *

Although the market in Calcutta was officially open throughout the week, trading was limited, after the collapse. Yesterday, however, saw some revival of confidence. But closing prices showed losses over the week. Among Forward shares, the principal losers were G.K.W. which declined by 50 nP to Rs. 34.87, Dunlop which receded by 44 nP to Rs. 36, Rohtas Industries which showed a loss of 69 nP at Rs. 12, Shree Gopal which came down by 50 nP to Rs. 23.25 and Indian Aluminium which slumped by Re. 1.06 to Rs. 32.75. Trading in Cash shares was extremely poor, and only a few counters showed changes over the week. Thus, among Textiles, Dunbar showed a gain of 37 nP at Rs. 27.37 and Jay Shree of 25 nP at Rs. 16.50. Among Jutes, Barnagore recovered four points at Rs. 180. But, in the Miscellaneous section, Associated Battery fell by 81 nP to Rs. 28.06. Hindustan Aluminium and J.K. Synthetics showed a loss of 25 nP each at Rs. 13.56 and Rs. 12.19, respectively. Other sections were unchanged.

GOVERNMENT OF INDIA

Gold Bonds

Subscriptions for 6½ per cent Gold Bonds 1977 will be received from the 12th of November, 1962, in the form of gold, gold coins and/or gold ornaments.

The value of the gold will, after assaying, be calculated at the rate of Rs. 53.58 nP. per 10 grammes of .995 fineness equivalent to Rs. 62.50 nP. per tola of the same fineness.

Interest on the Bonds will accrue from the date of issue and will be payable half-yearly on the 12th of May and the 12th of November. Interest will be liable to tax but no tax will be deducted at the time of payment of interest on the Bonds held by individuals if the holder gives a declaration that the total nominal value of the Bonds held by him, or on his behalf, does not exceed Rs. 10,000.

The Bonds will be exempt from Wealth Tax and any capital gains from their sale will not be subject to Capital Gains Tax.

Subscription lists will open on the 12th of November, 1962 and close on the 11th of February, 1963 or earlier without notice.

Applications for the Bonds will be received at:—

(a) **Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;**

(b) **Branches of the subsidiary banks of the State Bank of India conducting Government treasury business; and**

(c) **Branches of the State Bank of India at other places in India.**

For full particulars apply to any of these receiving offices or branches.

WORLD DIAMOND POSITION

SHORTAGE OF SUPPLIES FEARED

WORLD deposits of diamonds have been depleting steadily for sometime now and, if the trend were to persist, it is feared, a serious supply-demand imbalance would develop in the not-too-distant future. Indeed, a South African diamond magnate, Mr. Harry Oppenheimer, has warned that the existing diamond mines will be completely exhausted within 20 to 25 years. The position will, of course, be different if new deposits are discovered. But the prospect of such discovery are currently somewhat uncertain, if not bleak. Diamonds, it is common knowledge, are of considerable industrial and strategic importance. The diamonds which are colourless and transparent are being used as gemstones. As much as two-thirds of the world output of damonds are consumed by various industries. Inferior varieties find use in drilling, as in diamond drill bits, and for dies for drawing fine wire, glass cutting, etc. Some of the inferior varieties are used in diamond drills for deep boring in several processes connected with the manufacture of motor parts and diamond-set lathe tools, as well as in the trueing of abrasive wheels. In view of their various industrial applications, it is not surprising that the scare of shortage has stimulated great interest in the development of synthetic diamonds. Although scientists have still not been able to develop a perfect substitute, the manufacture of small synthetic stones suitable for certain industrial uses has already been undertaken in some of the industrialised countries.

The aggregate output of natural diamonds in the world (excluding Russia) was 27.3 million metric carats in 1960, the latest period for which data are readily available. Industrial diamonds alone accounted for 20.7 million carats, the balance representing gems. The total output in 1960 was lower by 1.1 million carats, as compared with the record production of 28.4 million carats attained in 1958. There was a distinct setback in the production of industrial diamonds which went down from 22.4 million carats in 1958 to 20.8 million carats in 1959 and further to 20.7 million carats in 1960. Taking the post-war period as a whole, however, production has gone up sizably. It may be recalled that, in 1948, the total output of natural diamonds was no more than 10.3 million carats, of which industrial diamonds accounted for 7.8 million carats. The continent of Africa continues to be the largest producer of natural diamonds, its actual share in the total world output being over 95 per cent. Congo alone accounts for half of the world's output, the quantity actually produced in 1960 being 13.45 million carats, the bulk (13 million carats) of which represented industrial diamonds. The production of diamonds in some of the other major countries (in million metric carats) is as follows: Ghana 3.3; South Africa 3.1; Sierra Leone 2.0; Guinea, Angola, Liberia and South West Africa about 1.0 each.

As compared with the aforesaid countries, India's output is very modest, being only about 1,000 carats in 1960. But, until a few years ago, India was producing at an annual rate of 2,000 carats. In the history of diamond industry at any rate, India has a unique place, for it was the only producer of diamonds in the world before the eighteenth century. Golconda in Andhra was the centre of a flourishing trade in diamonds for centuries. Several world-renowned diamonds, such as *Kohinoor, Pitt (Regent), Orloff* and *Florentine* are of Indian origin. Although diamond deposits are found in several places in India, Madhya Pradesh is the major diamond producing State, with about 95 per cent of total output coming from Panna. The Panna Diamond Corporation is entrusted with the task of mining and refining diamonds. It has put up a fairly modern crushing and recovery mill, installed a mechanical washing plant and taken measures for the mechanisation of mining operations. Further prospecting is under way in the diamond bearing areas of Panna which are expected to increase domestic production. The third Plan has set apart Rs. 1.5 crore for the exploration of the Panna area. Meanwhile, India has been dependent on foreign countries for meeting a part of its requirements of diamonds. During the year 1961-62, the country imported Rs. 14 lakhs worth of industrial diamonds and Rs. 8 lakhs worth of natural diamonds (cut and uncut). If the third Plan schemes for raising production of diamonds are implemented expeditiously, the dependence on imports will be reduced, an important aspect in the context of the anticipated shortage of supplies in world markets.

SOIL CONSERVATION

BOTH man and nature have been responsible for extensive soil deterioration in India. It is estimated that almost a fourth of the country's land surface is suffering from soil erosion. The yields of crops, especially on vast extents of dry land, have therefore either declined or not increased at all. Hence the need for adopting soil and moisture conservation measures like contour bunding and terracing, propagation of improved dry farming techniques, rain water conservation, weed control, strip cropping, use of organic manures including green manures, reclamation of alkaline, usar and ravine lands, and control of soil erosion in hilly areas and denuded forest tracts. The third Plan has provided as much as Rs. 72 crores for such soil conservation measures. Though this allotment is very small in relation to the magnitude of the soil erosion problem, it must be recognised that it is much more generous than the actual expenditure of about Rs. 18 crores on soil conservation works during the second Plan period. If the proposed expenditure of Rs. 72 crores is actually incurred, the most important of the physical achievements will be contour bunding covering 10 million acres, adoption of moisture-conserving dry farming techniques on 20 million acres, reclamation of 40,000 acres of ravine lands and control of soil erosion on 700,000 acres covering hilly areas and denuded forests. These are quite realisable targets, for soil conservation measures involve little or no foreign exchange expenditure and can be executed with local manpower resources, the supply of which is plentiful.

But the soil conservation programme as a whole runs the risk of not being executed fully and enthusiastically, because of its diffused and widespread character. The Programme Evaluation Organisation of the Planning Commission, in a study just published, has probably taken this factor into account while pleading for soil conservation the same order of importance as is accorded to irrigation. This is a perfectly sound plea, for soil conservation is the only land improvement measure applicable to the vast unirrigated area, particularly in the drier parts of the country. In the light of its survey covering 22 selected districts the Programme Evaluation Organisation has also suggested that the policy-making and executive agencies in the States be strengthened with a view to achieving the third Plan targets under the programme.

The P.E.O.'s suggestion pertaining to the policy-making side is that those States which have not yet set up Soil Conservation Boards should constitute such bodies. It is also suggested that suitable soil conservation legislation be enacted in those States where this has not been done so far. The recommendation pertaining to the execution side is that effective co-ordination of the soil conservation activities of various agencies be achieved by entrusting the responsibility for soil conservation to a single authority. The programme, it is further suggested, should adopt the kind of integrated approach that has proved successful in the D.V.C. area of Hazaribagh District (Bihar) where soil conservation work was planned and carried out co-ordinatedly and jointly by forestry, engineering and soil conservation extension sections under one Director. There is also need for integrating the soil conservation programme with extension activities in Community Development Blocks. Such integration would involve the preparation of the people for constructing soil conservation engineering measures and the extension of conservation farming practices to the lands covered by soil conservation treatment.

It is noteworthy, according to the study, that cultivators in the majority of the districts realise the usefulness of soil conservation treatment and that, in quite a few areas, an increase in the yield per acre from treated land, as compared with that from untreated land, has been reported. Where soil conservation is thus demonstrably useful in improving agricultural productivity, all that remains to be done is extensive propagation of the knowledge and technique relating to conservation and to get the cultivators to adopt them. This is essentially a problem of administration in which most State Governments have been found wanting.

ROCHE CHEMICALS PLANT

The inauguration of a new chemicals plant of Messrs. Roche Products Ltd. at Thana, near Bombay, marks the beginning of a new chapter in Indo-Swiss co-operation. The plant has a capacity to produce 10 million mega units of Vitamin A every year in both acetate and palmitate forms from lemon grass oil available in large quantities in the Kerala State. The total outlay on the project is estimated at Rs. 2 crores. With few exceptions, the entire plant is made of stainless steel. There is also wide application of pneumatic control, guarding against excess temperature and pressure by means of acoustic signals. In order to ensure strict quality control of its products, two modern laboratories have been set up. The plant will meet the growing demand for Vitamin A in the field of pharmaceuticals, food fortification, particularly in *Vanaspati*, and animal feeds, apart from exporting a part of its products. It is claimed that Roche plant will help save foreign exchange to the tune of Rs. one crore annually. The Planning Commission has estimated the total domestic requirement of Vitamin A at the end of the third Plan at 20 million mega units. It may be noted here that the Glaxo Laboratories also commissioned near Thana a Vitamin A plant early this year, with an annual installed capacity of 10 million mega units.

The products of the Swiss firm, Roche of Basle, a pioneer in pharmaceutical industry, have been well known in India for several years. Its entry into the Indian market began with the import of finished pharmaceutical products and bulk vitamins by Messrs. Volkart Brothers (subsequently Voltas Ltd.). Later, Roche commenced local manufacture of its two pharmaceutical specialities, *Saridon* and *Sirolin*, and other products. The next step was the conclusion of an agreement in 1957 with its Indian partners, Voltas Ltd., for the manufacture of Vitamin A and other pharmaceutical specialities. The new plant is the outcome of this agreement. It may be recalled here that Vitamin A manufacture was actually started by the firm on a small scale in February 1959. The new plant will benefit from the valuable research facilities and technical know-how acquired by the Swiss firm over the last 65 years of its existence. Roche has three major research centres, one each at Basle in Switzerland, Nutley in America and Welwyn in the U.K., employing about 600 chemists, doctors and pharmacists. Mr. Leybourne Callaghan, Managing Director of the Roche Products Ltd., has stated that a large number of Indians will be trained in Switzerland and that they will ensure progressive Indianisation of technical personnel. A number of workers has already been trained in Switzerland and assumed charge of several key technical posts in the new plant

VOLUNTARY INDUSTRIAL TRUCE

A commendable decision was unanimously taken by the representatives of employers and workers, to maintain industrial peace and spare no effort to achieve maximum production in order to strengthen the economy to face the Chinese aggression, at a joint meeting of all central organisations of employers and workers held at New Delhi on the 3rd inst., under the chairmanship of Mr. G. L. Nanda, the Union Minister for Labour. It was, indeed, inspired by a high sense of patriotism. By pledging that nothing would be allowed to come in the way of the single-minded and concerted endeavour in support of the defence of the country, employers and workers have demonstrated that they can forget sectional interests and sink differences of opinions as to their rights and obligations at a time of grave national danger.

The meeting adopted a comprehensive resolution embodying certain principles in regard to industrial peace, production, price stability and savings. The resolution emphasised that, in no circumstances should there be any interruption in or slowing down of production of goods and services and called upon both employers and workers to exercise voluntary restraint and make the utmost sacrifice in an "equitable manner." It laid the greatest emphasis on voluntary arbitration for settling disputes and suggested that labour administration at the Centre and in the States should be streamlined to settle industrial disputes promptly and to ensure the maintenance of cordial relations between workers and employers. The resolution enjoined upon trade union leaders and employers strongly to deplore absenteeism and negligence of duty or disturbance to normal production by workers, as well as any lapse on the part of management that contravened the spirit of the defence effort.

In order to step up production, the resolution called for the removal of all impediments in the way of better and fuller utilisation of men, machinery and materials. Establishments were asked to work, whenever possible, extra shifts, extra hours or on Sundays and holidays by mutual agreement. There should be no idle plant capacity or waste and maximum economy in operations should be achieved. The resolution also urged that all advantages accruing to industry from the extra effort of workers should go to the consumer and/or be made available for defence efforts. In order to check the rise in price, it was suggested that the supply of essential commodities at reasonable price should be ensured through opening consumers' co-operatives in each industrial undertaking.

All the aforesaid measures and more are necessary if the country is to face up to the challenge to its security posed by the Chinese. But there is a limit to what human effort, however organised and intense, can do. More and better work can certainly increase production. But there are other limiting factors also. Shortage of raw materials, power, transport bottleneck, etc., all inhibit production. It is for the National Development Council to examine what concrete steps and modifications in policy are necessary to make the best use of the available scarce resources in men, materials and money.

The resolution rightly emphasised that the benefits of extra effort put in by workers should go to the consumer or be made available for defence efforts. In other words, the fruits of the increased effort should be utilised to reduce prices or at least to prevent them from rising. This is a sensible decision. To the extent it is implemented in actual practice, it will benefit every section of the community, including workers.

PROFIT IN SOVIET PLANNING

A fierce economic controversy is currently raging in the U.S.S.R. Curiously enough, it relates to the role of profit, which has so far been regarded as anathema by socialists of all hues, in totalitarian planning. Prof. J. Liebermann, a noted Soviet economist, set the ball rolling by condemning outright, in a full-page article, entitled "Plan, Profit, Premium" published in *Pravda*, the Soviet Communist Party newspaper "the cumbersome, centralised planning" and "pusilanimous regimentation of enterprises by bureaucratic planners" and the practice of "influencing production by means of administrative instead of economic measures." In this article he suggests that factories should be freed from the absolute control of the centralised planning authority and made into "independent, autonomous economic units," with the former being responsible only for fixing the overall production targets. He recommends that, instead of the arbitrary premium or bonus system hitherto in vogue, another yardstick, namely profitability, should be applied to measure the efficiency of an enterprise. According to Prof. Liebermann, the present practice (held sacred by the Communists) of the Soviet central planning authority drawing up detailed plans for each and every enterprise, involves a vast amount of absolutely unproductive paper work. In order to prepare detailed plans, directors and managers of enterprises are flooded with an unending stream of instructions and questionnaires which interfere with their work. The premium or bonus system, in his view, does not encourage production, because it is not based on productivity or profitability but on the criterion whether, and to what extent, enterprises have accomplished the plan or standard norm set for production by the central planning authority. This system encourages directors of enterprises to struggle hard to get only the minimum norms set for them. The norms are laid down on "report-basis," that is, on the basis of the performance of an enterprise in the previous year. The result of this practice, we are told, is that inefficient enterprises get "easy plans," while the efficient ones get "difficult plans."

Prof. Liebermann has suggested that profitability should be the criterion of everything in economic activity. Accordingly, he says that, depending on net profits, as revealed in the balance-sheet of an undertaking, funds should be made available to it, as kind of premium, to achieve real profits or surpluses. For this purpose, Prof. Liebermann has compiled a profitability table from which premium payable to different enterprises could be calculated. The Professor believes that, if the new system is adopted, factories will, in their own interest increase the capacity utilisation of available equipment and machinery and work more efficiently.

Soviet economists have been quick to react to Prof. Liebermann's thesis. More than a hundred opinions have already been expressed, most of them enthusiastically welcoming and supporting Prof. Liebermann's views. "Profit," observed a planning expert, "is the most important coefficient on which the entire work of the collective must be concentrated. This coefficient must be the very basis of all our future work."

It remains a mystery whether Prof. Liebermann's thesis was inspired by the Soviet Communist Party leaders or whether he expressed his opinion on his own. The latter is a rare thing in a dictatorship and it is hard to believe that *Pravda*, which is the mouthpiece of Premier Khrushchev, would have published the article in question if it did not carry the endorsement of the powers-that-be in Moscow. Prof. Liebermann's suggestion is as bold as it is revolutionary for the classical communist and, if accepted by the Party and the Soviet Government, would radically change the Soviet system of planning and production. This, in turn, will have far-reaching, favourable effects on the Soviet economy.

LEAD AND ZINC

Two more primary metals, lead and zinc, are expected to come within the purview of a world inter-governmental commodity agreement presumably on the lines of the existing Tin Agreement. A move to this effect has been launched by the U.N. International Lead and Zinc Study Group, which held its sixth session in Geneva a fortnight ago. Apparently, the Study Group believes that, unless Governments of both producing and consuming countries take effective and co-ordinated measures, it would not be possible to ensure stability in world lead and zinc markets in the long run. Accordingly, a suggestion made by Mexico at the session for the creation of an inter-governmental agreement for these two commodities was endorsed by other delegates. In pursuance of this suggestion, the Group has already made arrangements to proceed with the work for outlining the principles on which the proposed inter-governmental commodity agreement should be framed. Its special Working Group has been assigned the responsibility for studying the reactions of the various countries to the move and collating such information. This Group will also examine technical problems connected with production, consumption and trade in lead and zinc. This is, of course, a welcome move, in that any agreement on a world scale should be based on a study of the detailed data about supply and demand prospects. Data on output, consumption and stocks of these two metals are at present relatively scanty, except for a few advanced countries.

The Study Group, which is in its third year of operation, has already laid the foundations for any concerted inter-governmental action to stabilise prices of lead and zinc. It has a well-developed organisational structure. Its Standing Committee meets periodically in New York to consider the problems of supply and demand conditions. There is also a statistical committee, besides the Special Study Group. This committee proposes to arrange for publication and distribution of a monthly Statistical Bulletin. There are now 23 members in the Study Group embracing most of the major producers and consumers, including India, the U.S., the U.K., Russia, Mexico, Australia, Canada and West Germany. The organisational framework already built up will facilitate the conclusion of a formal international agreement, which will ensure the evolution and implementation of more effective steps for stabilisation of the two commodities.

The proposed world agreement is intended for tackling the long-term problems connected with the two metals. This does not mean that it has not given sufficient attention to the immediate difficulties facing these metals. The Study Group appears to be quite optimistic about the short-term outlook for the commodities. It is mainly on this account that it has not made any proposals for curtailment of output in 1963 of either of the commodities. It feels that the present supply and demand situation is better than that anticipated during the previous session in May. There has, of late, been some improvement in regard to lead, and its consumption is expected to rise by over 5 per cent to a record level during the current year (1962). The supply of lead, however, has been lower, thanks mainly to curtailment of mining and metal production. Accordingly, demand during this year is expected to exceed new supplies by about 75,000 tons. This is quite encouraging, in that in 1960 and 1961, there were surpluses of over 100,000 tons. Producers' stocks have also fallen by 66,000 tons since the beginning of the year and are now high only in the U.S. On the question of the outlook for the first half of 1963, the Study Group has stated that supply and demand will be in approximate balance. Mine and metal production and metal consumption are all expected to rise, though consumption may not continue to grow at the high rate of 1962.

The position of zinc does not seem to be as satisfactory as that of lead. No doubt, the Study Group expects the total mine and metal production and consumption to establish new records in 1962. But a small statistical surplus of new supplies over demand is said to be quite likely during the latter part of the year. This imbalance, according to the Study Group, is

THE CASE FOR TAX REFORM IN U.S.

FACTS EMERGING FROM WORLD COMPARISON

WHEN the Eighty-eighth U.S. Congress, for which the elections have just taken place, convenes in January next, it is expected to discuss changes, including cuts in personal and corporate income-tax rates, that are likely to be proposed by President Kennedy. As comprehensive tax revision is currently on everyone's mind in the United States, the *Monthly Letter* of the First National City Bank, New York, has provided, in its issue of November 1962, a broad review of the facts pertaining to American taxation, in comparison with the position in selected foreign countries, for facilitating public discussion. This factual review is of interest to India, too, for it contains a comparative picture of personal and corporate income taxation in a number of countries.

An outstanding feature of the American tax system, the review points out, is its heavy reliance on taxes on income. Whereas the Central Governments in other major countries derive less than two-thirds of their tax revenues from levies on income, 83.4 per cent of the U.S. Federal Government's tax receipts in 1960 came from this source, as will be seen from Table I below.

Even when the State and local governments in the United States are added to the comparison, the conclusion that that country makes heavy use of taxes on income is not altered. According to the *Monthly Letter*, for all levels of government in the United States, taxes on income made up as much as 63.5 per cent of fiscal 1960 tax collections—a figure that no other major country could match.

An idea of the trend of taxation in the United States since the beginning of the present century can be had from Table II. The figures will speak for themselves. Suffice it to say that the role of taxes on income in American public finance is substantially greater today than even a decade ago.

The international comparison provided by the *Monthly Letter* is very revealing. The maximum rates on additional income (that is, "marginal rates"), which provide an index of the extent to which various nations go in discouraging people from earning additional income, are given in the second column of Table III. It will be seen therefrom that the United States has the highest marginal rate (91 per cent) of personal income taxation. This maximum rate in the United States has remained virtually unchanged from its war-time peak, whereas in Canada and the United Kingdom, for instance, top rates have been lowered significantly in the last decade. The case for reducing the maximum rate in the United States rests on the fact that, as of 1960, as much as 86 per cent of the entire revenue from the federal individual income-tax revenue is derived only from the initial 20 per cent rate to which all taxpayers are subject. It would thus appear that high rates and heavy reliance on income taxation do not necessarily go together. With lower rates the same amount might be obtained, for, in all likelihood, reported income would rise when the pressure to avoid progressive rates is not there.

In the matter of taxation of corporate income, the United States, again, maintains high rates. It is out of step with practices in other leading countries in the taxation of corporate profits paid out as dividends to shareholders. The British, the Dutch and the French assess higher rates against distributed corporate profits than the United States does; but the former countries allow far more generous credits for these taxes to the shareholder (*vide* columns 3 and 4 of Table III). In the matter of taxation of undistributed profits, too, the U.S. rates are among the highest in the world (*vide* column 5 of Table III).

In the light of its comparative review of conditions in different countries, the *Monthly Letter* has presented the case for a tax cut in the United States as follows:

"In recent months there has been growing support for a tax cut early in 1963. There are three persuasive arguments for tax reduction at this time. First, while business is making new records in the aggregate, there is idle capacity in men and plants. Allowing taxpayers to keep more of the money they earn could take up slack.

"Second, a tax cut would stimulate individual effort by making work more attractive relative to leisure. Faced with high tax rates, some Americans have decided that extra work is no longer worthwhile. And, in view of the elaborate array of generous welfare programmes, even those in the lowest brackets sometimes find that, after-tax, wages are hardly worth the effort. A tax cut would help induce people to take jobs offered to them.

"Third, a tax cut would provide new thrust to the economy by stimulating expansion, modernisation and the undertaking of new business ventures—not simply in 1963 but for years to come. Attainment of this goal will require high levels of saving and investment, an economy in which technological innovations are abundantly conceived and readily implemented, a labour force eager to work hard for enlarged incomes, and—above all else—a large number of people who are willing to accept the risks of entrepreneurial activity.

"It is becoming widely recognised that the federal tax system, as it now stands, works against growth and efficiency in several ways:

The heavy taxation of corporate profits damages the incentive to invest by lowering the expected return on capital.

The high rates of individual income taxation make it extremely difficult for would-be entrepreneurs to accumulate risk capital for the formation of new enterprises.

Our steeply progressive income-tax encourages a slackening of productive effort, or even total withdrawal from the labour force, by some of our ablest people.

High rates distort business judgment and invite shrewd minds to turn attention from earning taxable income to saving on taxes.

Finally, our punitive tax rates have led to the enactment of countless special reliefs that have complicated the tax laws and made them costly and difficult to administer and obey."

The *Monthly Letter* has expressed the emphatic view that, in the final analysis, well-designed income-tax rate reductions may be the only way to deal effectively with the problems of incentive and growth. The need of the hour, it says, is an imaginative new fiscal combination even at the initial cost of some continuance of budgetary deficits. And the clinching argument, in this connection, is that easier taxes on enterprise could invigorate the economy, build a bigger base of taxable income and, at the same time, reduce the reliance on more Government spending to prop up economic activity.

footnotes :—
(*a*) The individual, if subject to surtax rates on his personal income-tax return, must, however, pay the surtax on the gross dividend declared rather than the net dividend actually received.
(*b*) Includes 3 per cent. tax for old age security contribution.
(*c*) In addition, there is a 15 per cent. tax on profits in excess of 6 per cent. of capital and reserves.
(*d*) Includes a 3 per cent. tax on investment income.
(*e*) Includes a 6 per cent. complementary tax on non-wage income.
(*f*) Credit is 6 per cent. against taxable income and 18 per cent. against personal tax liability.
(*g*) Deducted at source and credited to individual shareholder.
(*h*) Includes tax levied on reserves of accumulated profits.
(*i*) There is an additional 10 per cent. tax on retained profits of closely held corporations.
(*j*) Taxes paid in previous years are deductible in determining taxable income, thus lowering the effective burden.
(*k*) Tax applicable depends on source of income.
(*l*) Ignoring the variable effect on the tax base of property tax on net worth.
(*m*) Effective maximum, allowing for deductibility of previous year's tax where income is stable.
(*n*) An extra 25 per cent. tax is levied on profits (beyond certain limits) not distributed.

Your market outside is discerning

As an exporter of engineering goods you must be aware that in the export markets, for the buyer to select your goods in preference to those of other industrially advanced countries you have to compete on QUALITY of goods and services and of course price.

If you exercise strict quality control in the manufacture of your goods, maintain regular supplies, produce according to buyer's specifications, arrange for after-sales service facilities you will earn much-needed foreign exchange and enhance the country's prestige.

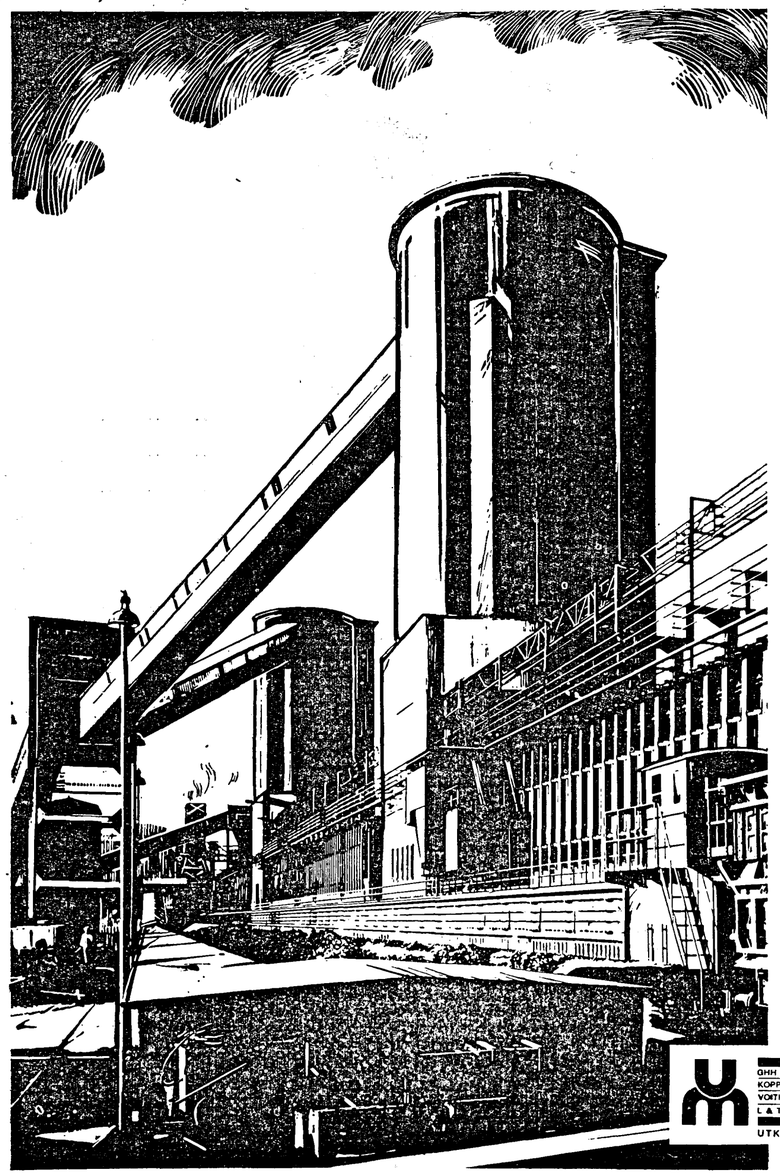
KOPPERS
FIRST
IN FUEL
TECHNOLOGY



In more than 60 years of successful work in the field of fuel refining Koppers have attained world renown.

Heinrich Koppers are recognized as top-ranking experts in the coking industry. They established the technical basis of modern coke ovens by introducing the system of single or cross regenerators.

Koppers originated many improvements in the recovery and processing of by-products. Outstanding among these is the semi-direct process of 1904 for recovering ammonium sulphate. It was according to this that 90 per cent of all German coking plants were operated at one time. For the economical recovery and processing of tar, benzole and sulphur, Koppers have opened up new roads of technology. Their new processes have been hailed as pioneering achievements.

With the continuously operated vertical chamber oven, Koppers introduced a versatile oven system particularly for the low temperature carbonisation of coal.

Koppers were the first to gasify coal dust with oxygen and steam to produce synthesis gas and to develop a universal gasification process for solid and liquid fuels of all kinds. Synthesis gas plants operating by this system have been constructed for nitrogen plants in Belgium, Finland, France, Greece, Japan, Portugal and Spain.

Other development work by Koppers promoted the design and construction of plants for the chemical industry, the planning of oil refineries, plants for water preparation and sewage purification, the construction of industrial furnaces and the automation of production procedures for mechanical operations and chemical processes of all types.

At Kansbahal, Orissa, three leading German firms—Gutehoffnungshuette Sterkrade AG., J.M. Voith G.m.b.H. and Heinrich Koppers G.m.b.H. — and a reputed Indian company, Larsen & Toubro Limited, have pooled their vast resources and experience to set up UTMAL, a major undertaking for manufacturing heavy machinery. UTMAL will play a significant role in the rapid industrialisation of our country, by supplying a wide range of industrial machinery.

LONDON LETTER

INDIA FROM LONDON

SIGNIFICANCE OF LEND-LEASE

(From Our Own Correspondent)

LONDON, *2nd November*

APART from the Communist Party in this country which has been denouncing the support which the Communist Party in India is giving their Government, there is country-wide and Party-wide sympathy for India's position; nor has there been any tendency to criticise India for past unpreparedness, that sort of thing being felt to be India's own problem. Instead, there is a desire to help the Indian Government to meet its requirements of defence supplies.

In some quarters, it might have been expected that India's non-alignment would come in for criticism and that it would be suggested that, when help was given, it should be on the understanding that India should be aligned with the West. But all responsible interests have eschewed such suggestions and the different organs of opinion are busy congratulating each other on the desire to help India without strings.

Nor is all this the reaction against a Communist China. Far from it, for all those on the Left who have immense sympathy with the Chinese own vast task of reconstruction regard the war as one of aggression and it would be fair to say that India, by the unity which in London appears to have gone right through the country, has attracted a genuine friendliness which has not been seen since the policy of non-alignment developed. There is, of course, also a certain amount of satisfaction over the uncertain attitude of other Governments either in the Eastern half of the world or non-aligned. At least, it is said that the non-aligned Governments should have given their immediate support to non-aligned India!

More importantly, the question is being asked of how India is to pay for supplies which the U.K. may be able to make available. India's stocks of gold in private hands are estimated at £1,400 million. Again, it is India's problem as to how some of these resources may be mobilised—and then there are India's sterling balances. But it has been suggested that Britain and the United States—and possibly Canada—should immediately make a gesture of Lend-Lease to India for all essential supplies. Before long, this may become a very essential method of providing for these needs and it is as well to see what is involved.

Lend-Lease was, of course, an American scheme for assisting the U.K. during the war to unable the United States to defend her own interests by lending and by leasing for the duration of the war, without charge, anything and everything from foodstuffs to armaments. It was a political device to use the expression "Lend-Lease," instead of "Gift"; there could have been criticism before America herself entered the war if she had simply given away vast supplies, but, by lending, she could say that what was not used, or what had been used but was still serviceable, should be returned. And there was also the underlying theory that, even where foodstuffs were lent, maybe they would be repaid in kind at some time. All these fictions were of no significance to Governments; the U.K. accepted all the supplies in the knowledge that they would not, in fact, have to be reimbursed in any way and also with the knowledge that they must only be devoted to the essential conduct of the war. Clearly, the United States had a right to check on what was done with the supplies which she was lending.

The same suggestions are now being made in respect of supplies by the U.K. to India. It would mean, in short, that arms would be shipped without payment being expected.

Since the facts of Britain's balance of payments are broadly known, the question arising from this proposition is: "Can the U.K. afford to finance India's war?" The immediate answer is, as regards shipments of existing arms, that there is no real economic cost if these are put straight into India's hands. The United States has already taken this sort of action over war supplies held in Germany. It is only when the flow of supplies involves additional production that any question of economic stress arises.

Furthermore, there is at the moment a substantial lag in the U.K. economy; unemployment is at the highest figure for four years; the steel industry is in the doldrums; and there can be no question that production could be expanded and substantial supplies made available to India without depriving either the domestic market or the market for essential exports; in other words, the British economy could make available armaments and other requirements to India without real economic cost to herself—up to a point. It is against that background that the question of Lend-Lease must be seen; if supplies can be made available without the need to replace those supplies by purchases from overseas, then quite clearly those supplies are suitable for Lend-Lease treatment. In short, if the U.K. has unused capacity and devotes this unused capacity to the assistance of India, she can afford to do it without effective payment.

The only impediment in the way of putting the policy of Lend-Lease straight into effect is its novelty to the Government, but behind the scenes the pressure for some such imaginative act is growing.

ANNOUNCEMENT REGARDING THE ISSUE OF 110,000 EQUITY SHARES OF Rs. 10 EACH AT PAR IN TERMS OF THE PROSPECTUS.

A Copy of the Prospectus together with the documents required to be attached thereto has been duly filed with the Registrar of Companies, West Bengal.

WELLMAN INCANDESCENT INDIA LIMITED

Registered Office: **8, HARINGTON STREET, CALCUTTA - 16.**

EXISTING AND PROPOSED ACTIVITIES

The object of the Company with reference to the proposed issue will be to undertake the design, production and sale of all types of oil fired, gas fired, coal fired and electrically heated furnaces, ovens mechanical handling and allied equipment.

With the approval of the Ministry of Steel and Heavy Industries, Government of India, a Technical Assistance Agreement has been entered into between the Company and the Wellman Smith Owen Engineering Corporation Ltd. of London with its subsidiaries including Incandescent Heat Groups of Companies, the largest designers and manufacturers of industrial furnaces and heat treatment equipment in the world. Under the agreement the Company is given the right to manufacture in India the products designed by the Wellman Incandescent Group of Companies. The technical consultants will assist and advise the Company in the preparation of design drawings, specifications and other technical data, in tendering for contracts and for the construction, erection and commissioning of the products and the purchase of components and equipment required to be imported in India.

LOCATION OF THE INDUSTRY

Part of the fabrication and manufacture will be undertaken by the Company itself at the plant located at the Howrah Industrial Estate in West Bengal. A major part of the fabrication and manufacture will be sub-contracted to various other manufacturers.

BOARD OF DIRECTORS

Name and Address of Directors and their occupation	*Description*
(1) MAHARAJA SIR P. C. BHANJDEO OF MAYURBHANJ (*Chairman*), 3, Rainy Park, Calcutta. Company Director.	*Director of:* Burn & Co., Ltd., The Hooghly Docking and Engineering Co., Ltd., The Indian Iron and Steel Co., Ltd., Union Carbide India Ltd., India Steamship Co., Ltd., etc., etc.
(2) DONALD ALLEN HUME, 107 Leigham Court Road, London, England. Business Executive.	*Director of:* The Wellman Smith Owen Engineering Corporation Ltd., Robinson and Kershaw Ltd., England.
(3) GEORGE DALLIMORE WRIGHT, 39, Woodside Way, Redhill, Surrey, England. Business Executive.	*Director of:* Incandescent Limited.
ALBERT EDWIN CRAWLEY, 57/1, Ballygunje Circular Road, Calcutta. Consulting Engineer.	Alternate Director to Mr. G. D. Wright.
(4) BARENDRA PRASAD RAY, 2A, Dhanada Ghosh Street, Calcutta-5. Solicitor.	*Director of:* Baghmari Tea Co., Ltd., Rewa Coal Fields Ltd., Kumardhubi Fireclay and Silica Works Ltd., Eagle Rolling Mills Ltd., Ganges Printing Ink Factory Ltd. *Partner of:* Orr Dignam & Co., Calcutta, etc., etc.
(5) BRYAN ALLAN HARPER, 8, Harington Street, Calcutta-16. Thermal Engineer.	*Managing Director.*
(6) SANTOSH KUMAR BASU, P-141, Lake Road, Calcutta-29. Chartered Secretary.	*Secretary of the Company.*

SHARE CAPITAL

AUTHORISED	
500,000 Equity Shares of Rs. 10 each	Rs. 5,000,000
ISSUED AND SUBSCRIBED	
70 Equity Shares of Rs. 10 each	Rs. 700
PRESENT ISSUE	
249,930 Equity Shares of Rs. 10 each	Rs. 2,499,300
OUT OF THE PRESENT ISSUE :	
(*a*) The Wellman Smith Owen Engineering Corporation Ltd. of London have agreed to take up and will be allotted 125,000 Equity Shares of Rs. 10 each at par.	Rs. 1,250,000
(*b*) The Directors, their associates and their friends have agreed to subscribe for and will be allotted 14,930 Equity Shares of Rs. 10 each at par	Rs. 149,300
(*c*) **NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION**	
110,000 Equity Shares of Rs. 10 each	Rs. 1,100,000
	Rs. 2,499,300

DATES OF THE OPENING AND CLOSING OF THE SUBSCRIPTION LIST

The Subscription list will open at the commencement of Banking hours on 19th November 1962 and will remain open until the close of banking hours on 24th November 1962 unless closed earlier at the discretion of the Directors but not before the close of banking hours on 21st November 1962.

APPLICATION FOR SHARES AND ALLOTMENTS

Application forms along with copies of the prospectus can be had from the registered office of the Company or from the Bankers and Brokers whose names and addresses are given below :

BANKERS

(1) Mercantile Bank Ltd., Calcutta, and its branches at Delhi, New Delhi, Bombay and Madras.

(2) The Bank of India Ltd., Calcutta, its head office at Bombay, and its Branches at Delhi, Madras, Hyderabad, Ahmedabad and Indore.

BROKERS

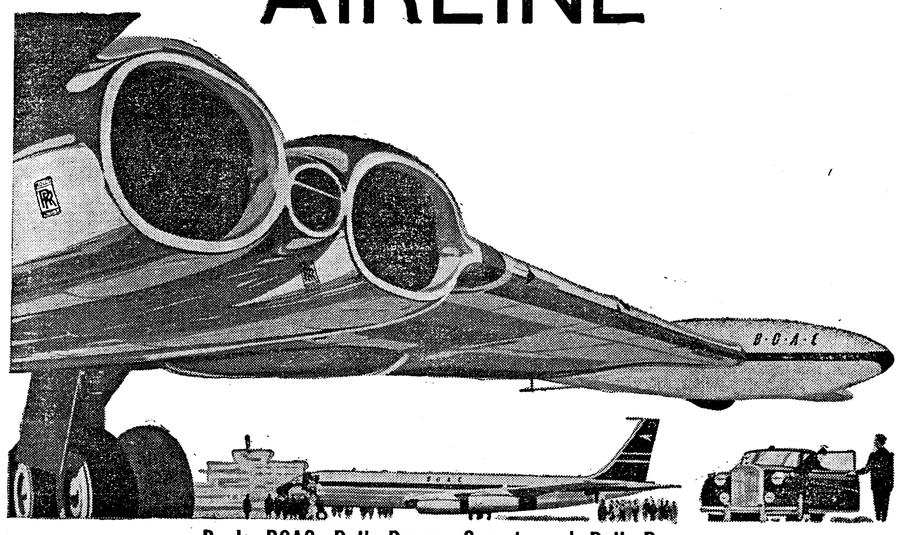
You can depend on BOAC

THE ROLLS ROYCE AIRLINE



Book BOAC Rolls-Royce Comet and Rolls-Royce 707 for Reliability and Clockwork Regularity.

All over the world Rolls-Royce is a by-word for sheer quality, for sumptuous comfort, for perfection in travel. This you'll find as soon as you step aboard a BOAC flight. Rolls-Royce means utterly dependable precision engineering. It is Rolls-Royce engines that supply the mighty power for BOAC Rolls-Royce Comets and Rolls-Royce 707s. That's how BOAC have won their big reputation for reliability and for on-schedule-flying. You can be sure you're in good hands when you fly BOAC!

ALL OVER THE WORLD B·O·A·C TAKES GOOD CARE OF YOU

BRITISH OVERSEAS AIRWAYS CORPORATION WITH AIR-INDIA AND QANTAS

MERITS OF NEW SERIES OF PRIZE BONDS

ATTRACTIVE PRIZES—REPAYMENT WITH PREMIUM

EVEN when the Government of India decided last summer to stop the sale of prize bonds, which were in vogue than, with effect from 1st July 1962, it had announced that a more attractive type of bonds would soon be announced. It will not, therefore, be correct to say that the new scheme of prize bonds known as Premium Prize Bonds, announced towards the close of last week, was the result of the imperative need for mobilising the savings of the people to fight the Chinese intruders. But it will be true to say that the Chinese aggression has hastened the announcement. The new prize bonds, as readers are doubtless aware, constitute only one of the means to mobilise financial resources for national defence. The Bonds will be put on sale with effect from 1st January 1963 at the offices of the Reserve Bank, branches and subsidiaries of the State Bank, treasuries, sub-treasuries and post offices. The details of the bonds, as given in the Press note issued by the Union Finance Ministry, are as follows:

The bonds will be in the form of bearer Bonds for which no applications will be required and will be in denominations of Rs. 5 and Rs. 100. Every bond will be repaid five years after the date of its sale with a premium of 10 per cent. Thus, the value of a Rs. 5 Bond on maturity would be Rs. 5.50 and of a Rs. 100 Bond is Rs. 110.

In addition, the bond-holders will be eligible to participate in two draws for prizes to be held in the year 1964. For each Rs. 1 crore worth of bonds, the prize money will amount to Rs. 5 lakhs in each draw for each of the two denominations and will be distributed in 243 prizes in the case of Rs. 100 denomination bonds and 568 prizes for Rs. 5 denomination bonds, as detailed below:

		Rs.
Rs. 100 denomination:		
1	Prize of Rs. 50,000	50,000
2	Prizes of Rs. 25,000 each	50,000
5	Prizes of Rs. 10,000 ,,	50,000
10	Prizes of Rs. 5,000 ,,	50,000
75	Prizes of Rs. 2,000 ,,	1,50,000
150	Prizes of Rs. 1,000 ,,	1,50,000
243	Total	5,00,000
Rs 5 denomination:		
1	Prize of Rs. 15,000	15,000
2	Prizes of Rs. 10,000 each	20,000
10	Prizes of Rs. 5,000 ,,	50,000
25	Prizes of Rs. 2,000 ,,	50,000
200	Prizes of Rs. 1,000 ,,	2,00,000
330	Prizes of Rs. 500 ,,	1,65,000
568	Total	5,00,000

The number and amount of prize money will not be limited but will increase with every increase in the sale of bonds. For sales of fractions of a crore of rupees, both the number and amount of prizes would be suitably adjusted.

Unsold bonds will be completely eliminated for purposes of winning a prize and all prizes will be awarded amongst the sold bonds only.

Both the premium and the prize money will be free of income-tax.

A comparison of the above details with those of the erstwhile prize bonds issued between 1st April 1960 and 30th June 1962 reveals similarity only in two respects. One, both are five-year tax-free bonds. Two, they are in the form of bearer bonds in denominations of Rs. 5 and Rs. 100.

More Popular

In its anxiety to net in maximum amount through the sale of new bonds, the Government has, of course, sought to make them more popular than the old bonds by offering a premium of 10 per cent on maturity, whereas the old bonds will be repaid at par. Thus, the premium of 10 per cent that a buyer of new bonds will get on maturity will, in fact, work out to a simple interest of no more than 2 per cent per annum. As regards prizes, while the chances of the buyer winning a prize are considerably reduced, this is more than compensated by the increase in the quantum of prizes. The holders of bonds issued in 1963 will be eligible to participate only in eight draws for prizes to be held—two draws each in the years 1964, 1965, 1966 and 1967—whereas each bond sold in the first quarter of 1960-61 was eligible for participation in all the draws held after the expiry of two calendar months from the month of its sale. What is more, each old bond has a number of chances of winning a prize—the first series had 20 chances—but also all the prizes declared at all the draws, if it is a lucky one, for a bond that draws a prize once is not excluded from subsequent draws.

Both the number and the quantum of prizes in respect of the new bonds are, however, bigger than in the case of old bonds. The total number of prizes to be offered to the holders of winning bonds worth Rs. 1 crore in 1964 will be 243 of the aggregate value of Rs. 5 lakhs and 568 of equal aggregate value in respect of each series of Rs. 100 and Rs. 5, respectively. The corresponding figures in the case of old bonds were only 40 and 278. The prize amount will vary from Rs. 1,000 to Rs. 50,000 for Rs. 100 bonds and from Rs. 500 to Rs. 15,000 for Rs. 5 bonds, whereas, in the case of the old bonds, the amounts were Rs. 500-25,000 and Rs. 50-7,500.

The most important advantage which the new prize bond holder will have over the old one is that, unlike under the last scheme, the unsold bonds in a series will be completely eliminated for purposes of winning a prize.

Bonds in Britain

A brief reference as to how the new premium prize bonds compare with their counterparts in the U.K. may be made here. The British bonds, known as the Premium Savings Bonds, were first introduced in November 1956. They are issued in units ranging from £1 to £500. In Britain, the premium bonds are registered in the name of the holder who must be an individual, but, in India, the bonds can be purchased even by institutions and corporate bodies. Again, the bonds are not transferable in Britain, unlike in India where they will be issued in the form of bearer bonds. They are also encashable at any time in Britain, whereas, in India, they have to be held till maturity. The Government of India's announcement does not say whether there will be any limit on individual holdings. Such a limit, however, does exist in Britain. Thus, no person in that country can hold more than £800 worth of bonds. The other features of the British bonds are:

At each monthly draw, prizes are paid from a fund made up by the interest carried into the draw by each eligible bond. The interest is currently (February 1961) calculated at an annual rate of 4½ per cent; it was at 4 per cent prior to 1st August 1960. A bond becomes eligible for the draw three clear calendar months after the end of the month in which it was purchased; in effect, that bond carries three months' interest into the prize fund for that month. The bond then goes into every subsequent draw whether or not it has won a prize and takes with it one month's interest. Every complete £100,000 of prize money in the fund is divided into the following prizes: 1 prize of £5,000, 10 prizes of £1,000, 10 prizes of £500, 20 prizes of £250, 30 prizes of £100, 200 prizes of £50, and 2,480 prizes of £25. After calculating the number of prizes in this way, any remaining sum of less than £10,000 is also distributed as prizes of £25. The present maximum prize of £5,000 was first introduced in the draw in November 1960. Prior to that date, the maximum prize had been £1,000. No bond is allowed to win more than one prize in any one draw, but the holder of more than one bond may win more than one prize. The prizes are free of income-tax.

The issue of prize bonds in Britain would appear to have met with notable success. Thus, between November 1956 and 1st August 1961, bonds of the value of £324 million had been invested in this form of savings. In India, too, the initial response to the old prize bonds issued was pretty good. The actual receipts from these bonds during the financial year 1960-61 aggregated as much as Rs. 15.77 crores, though they fell short of the Budget estimate of Rs. 25.00 crores by over Rs. 9.23 crores. The receipts, however, declined considerably later to just Rs. 3.35 crores in the year 1961-62. In view of the poor response thus, the Government announced, in March 1962, the discontinuance of the sale of prize bonds with effect from 1st July 1962. During the three months ended June 1962, the receipts from bonds amounted to about Rs. 1.10 crore.

As compared with the erstwhile prize bonds, the bonds under the new scheme may evoke more encouraging response from the public. Quite a large number of people will doubtless buy the new bonds on a large scale at least out of patriotic fervour, if not for anything else. They will, of course, have the satisfaction of having contributed their mite to the massive effort called for to drive out the Chinese aggressors from our frontiers. Apart from the patriotic fervour and satisfaction, some of those who want to preserve their hard-earned savings may also be eager to invest a sizable part of these savings in prize bonds which carry a premium. There will be wide support, too, from persons who, as we mentioned in our last issue (*vide* page 755), wish to try their luck at earning a large sum in one stroke without running the risk of losing the principal and interest. An investment of just Rs. 5 may, if the person is lucky, get a cash (first) prize of as much as Rs. 15,000 which will be free of income-tax. It is needless to mention here that people with such speculative mind abound in all classes, rich and poor alike. It is to be hoped that, unlike last time, the Government will maintain a good supply of bond certificates, so that maximum sales could be effected when the enthusiasm of people runs high, as it usually does, in the initial stages.

What will be the cost to the Government as a result of the new prize bond issue? Every crore of rupees that the Government gets now by sale of bonds will involve, after maturity five years later, a total cost of Rs. 30 lakhs (excluding administrative and other incidental expenses)—Rs. 10 lakhs by way of premium and Rs. 20 lakhs by way of prizes, since, for each Rs. 1 crore worth of bonds, the prize money will amount to Rs. 5 lakhs in each draw for each of the two denominations. The cost thus works out to a simple interest rate of 6 per cent per annum, while, in the old scheme, it was 3.68 per cent per annum. This comparison would give one an idea of the extent to which the Government has gone to make the Premium Prize Bonds more attractive than its immediate predecessor. Further, the higher cost is in consonance with the fact that, since March 1960, interest rates have hardened considerably. It is, indeed, cheaper than the 6.25 per cent that is offered on the 12-year National Defence Certificates.

SURVEY

(*Concluded from page* 803)

not significant in relation to world metal consumption which is now about 2.75 million tons per year. Stocks have also declined slightly in recent months. Little change in the overall situation is expected in the first half of next year. Output and consumption are expected to rise further. But it should be noted that consumption has been growing at present at a smaller pace than in previous years.

The Study Group's *communique* does not give the actual figures of production and consumption of either lead or zinc. According to a reliable source, however, the total output of primary lead was 2.31 million tons last year, as against the total consumption of 2.28 million tons. Regionwise, North America produced 785,000 tons, Europe 685,000 tons, Asia and the Soviet Union together 420,000 tons, Australia 230,000 tons and South America 120,000 tons. The output of slab zinc in 1961 was 3.15 million tons and consumption 3.08 million tons. North America accounted for an output of 1.11 million tons, Europe one million tons and Asia and the Soviet Union together 770,000 tons.

The position with regard to consumption of lead and zinc, on a region-wise basis, in 1961 is shown in the following table:

(In '000 tons)

	Primary lead	Slab zinc
North America	750	950
Europe	850	1,175
Asia and Russia	550	800
South America	50	45
Australia	50	80
Total (including others)	2,280	3,080

The overall impression one gets from the Study Group's discussion is that the supply and demand position of the two metals has tended to be more or less in balance during this year. But it is still disconcerting to find that prices of both lead and zinc have fallen markedly during this year, touching the lowest levels of the post-war period. At the London market, lead is quoted at around £53 per ton, as against £62 a year ago; some time back, the price was as low as £50. It may be recalled that the average price in 1951 was as high as £162. The price of zinc is £67 per ton now, as against £71 a year ago. The extent of depression in this commodity can be gauged from the fact that its price stood at as high a figure as £171 in the beginning of the 'fifties.

One of the important reasons for this setback in prices is the fear of disposal of U.S. stockpiles. It was, in this context, quite encouraging to hear from the U.S. delegate that "there was no practicable prospect that any significant amount of lead and zinc from non-commercial surplus stocks would be put on the market as long as world lead and zinc prices remain at depressed levels." In any event, according to him, the U.S. Government would take no action which could disrupt commodity markets. From his observations, it would appear that the U.S. will give due attention to the Study Group's plea that, if and when these metals are disposed of, the U.S. Government should hold discussion with it in time and take its views into account.

GOLD FOR DEFENCE

In normal times, we use gold for adornment. But today, when the country's security is threatened by a ruthless invader, GOLD means precious foreign exchange for more armaments, ammunition and other vital equipment for our brave jawans who are fighting to rid our soil of the aggressor.

THE STATE BANK OF INDIA

will gratefully accept at all its offices, and those of its subsidiaries, donations from the public in GOLD and GOLD ORNAMENTS, for the

NATIONAL DEFENCE FUND

set up by Government, in addition to donations in cash or by cheque.

In this hour of peril, the State Bank of India joins in the appeal to all citizens to participate in the great task of

1st *November* 1962.

To

THE SHAREHOLDERS,

IT is notified for the information of the Shareholders of the above Company that the Directors of the Company have resolved to make the 1st Call and 2nd Call each of Rs. 3 inclusive of the premium of 50 nP. per Share. The first and second calls are payable as follows:—

1st Call	..	Rs. 3 per Share inclusive of premium of 50 nP.—2nd January 1963
2nd Call	..	Rs. 3 per Share inclusive of premium of 50 nP.—31st March 1963

the dates mentioned against each call being the last date fixed by the Directors for payment of the calls.

Shareholders are requested to make the payments promptly. Shareholders are further requested to note that if the sums in respect of the Call moneys are not paid on or before the aforesaid respective due dates, interest at 6 per cent. per annum shall be charged from the date appointed for the respective payments to the time of actual receipt of Call moneys without prejudice to the Articles of Association of the Company, whereby the Shares are liable to forfeiture in case of non-payment.

A combined notice in respect of 1st Call and 2nd Call is also being sent to Shareholders individually.

By Order of the Board,
C. V. RAMACHANDRA RAO,
Secretary.

FINANCING OF COTTON MILL COMPANIES

BORROWINGS DOMINATE THE POSITION

THE Department of Company Law Administration has published the results of its interesting study of the cost of alternative methods of financing of cotton mill companies in India. Although the study, prepared by Mr. N. D. Joshi, does not cover all the companies, it is sufficiently representative in character and may be taken to depict the general financial pattern of the industry as a whole. Thus, the study is confined to 65 mill companies (with a paid-up capital of Rs. 50 lakhs and above) which together account for 56 per cent of the aggregate paid-up capital of all the public limited companies engaged in the cotton textile industry during the years 1955-60. In view of the dominant position occupied by the mill industry of Maharashtra and Gujarat, more than half the companies (35 units) covered in the study are those situated in these two States. The findings of the study reveal (*a*) the relative costs of the different types of finances, (*b*) how far these costs influence the financial structure of companies, and (*c*) how this pattern of costs compares with the rates of return earned by the companies by the use of such funds.

The impact of cost of financing on the cotton mill industry has been examined with reference to the rates of return on the combined equity of shareholders and long-term lenders and on total tangible assets. The difference between the two rates is accounted for by the short-term financing of recurring nature such as deferred payments to creditors for purchases or services of which no specific interest has to be paid. Owing to this type of finance, the rate of return on combined equity is generally higher than that on total tangible assets. The distribution of 65 mill companies according to both these rates brings out that, with higher rates of return on tangible assets, the rate of return on combined equity is generally rising more proportionately, the maximum difference of over 5 per cent between the two rates being recorded in the group where the return on tangible assets falls between 9 and 11 per cent. The difference between the two rates is described as the by-product of the balance between the terms of credit secured by a company and those given by it. The balance is tilted in favour of the company if the rate of return on combined equity is more and against it if the return is less. Thus, either for a promoter or for a would-be investor, the balance of terms of credit is important, besides the rate of return on tangible assets, as it will facilitate computation of the expected return from their angle *vis-a-vis* that on total tangible assets.

Cost and Return

The cost pattern of the different types of finances in the cotton mill companies has also been studied with reference to the return on tangible assets. An interesting conclusion which emerges from the study is that, by skilfully operating the non-interest-bearing liabilities and by striking the balance of credit terms favourable to the company, the management can increase the rate of return by as high as five per cent over and above that earned on total tangible assets. The break-even point where cost of finances raised by cotton mill companies is equal to the rate of return earned is found to be around six per cent. The companies earning this return or above it are considered to be justified in the use of all non-equity funds even on economic grounds. The cost pattern, if studied in the light of the terms and conditions under which funds are normally secured, discloses apparent contradictions. An attempt has been made to explain these contradictions. The relevant extract from the C.A.L. staff paper is reproduced below:

"Preference share-cost was found to be cheaper than that of debenture. It was mainly due to the fact that companies incurring losses skipped for one or two years dividends on preference shares which brought down the average dividend paid on these shares over five years. The same reason accounts for the cost of equity cheaper than that of preference capital in certain cases.

"The cost of funds is found to be decreasing generally as the rate of return goes up except that of equity funds. The exceptions to this trend may be explained by the fact that, even though a company may be earning a high rate of return, it undertakes an expansion programme which requires it to tap all types of resources to their maximum extent, then such a company will have to pay a much higher cost, as the cost, though it depends upon the risk, also depends upon the size of the fund required.

"Amongst the suppliers of funds, the shareholders received the lowest return, if yield is used as a measure of return to them. This will mean that the shareholders, who undertake maximum risk, have got lower return than the lenders who undertake relatively less risk. This contradiction is, however, not real. The low values of yield are mainly ascribable to more than proportionate rise in share prices as compared to that in dividends distribution. The latter can have relevance to current or past profits, but the former not only reflects the current return but also depends on the estimates of future return to shareholders in the form of capital appreciation, bonus issues or rights issues at less than market price.

"Further, where shareholding is concentrated in very few hands, the proprietors of such companies might have accepted major part of return on their investment in the form of interest, commissions, salaries, etc., as the scheme of company taxation allowed such payments as business expenditure. Even the remaining part of the return on their investment, they might not have liked to receive in the form of dividends to avoid incidence of higher rates of income and super tax and might have preferred to receive it in the form of capital income such as bonus issues."

Uneconomic Financing

The author of the study has also examined the case of cotton mill companies which are burdened with uneconomic pattern of finance. A number of companies are found to be indulging in costly finances. Over the five years from 1955 to 1960, as many as 50 out of 65 companies used bank loans and other borrowings on which they paid interest more than the return they earned by employing either of these funds. Loans from the Industrial Finance Corporation also proved to be costly for 40 companies. For finding out the uneconomic use of bank loans, 8 per cent interest is presumed to have been paid on such loans. Even on the basis of 6 per cent, the number of companies using bank loans uneconomically will be 47. The companies registered prior to 1900 are proportionately more in the group using bank and I.F.C. loans in an uneconomic manner. Among the companies burdened with costly debentures and preference shares, those floated during 1900-14 are proportionately more. The management pattern discloses that board of directors type management is more averse to use of funds uneconomically, while companies managed by managing agents are found to be proportionately more in the group using costly finances.

The proportion of the net worth of cotton mill companies to the total finance raised by them varies between 50.9 and 73.9 per cent. The share of bank borrowings, it is stated, does not necessarily decline in the case of companies earning higher and higher rates of return on tangible assets. The share of debenture finances varies between 9.2 and 15 per cent. The companies earning less than 3 per cent rate of return have resorted to borrowings from the I.F.C. and other institutions to the tune of 8.6 per cent of their total finance. But with higher and higher rates of return, the companies have not dispensed with this source for financing their needs, as is evident from the fact that the companies earning a rate of return above 9 per cent have borrowed to the extent of 25 per cent of their total resources from the I.F.C. and others. Probably because of the comparative cheapness of I.F.C. loans, the companies earning a return higher than 9 per cent on tangible assets are still using I.F.C. loans which account for about 25 per cent of their total resources.

Net worth	61.83	59.50	57.77	60.81	71.23
Debentures	11.56	12.22	12.50	12.50	13.21
Bank loans	28.73	28.19	31.67	28.52	41.98
I.F.C. and others ..	10.24	10.16	10.26	10.21	10.75
Total loans	39.15	39.18	39.10	37.12	30.36

Note: 1. The return on equity net worth is the ratio of profits after interest and preference dividend to equity paid-up capital plus reserves.

2. Earning yield is a ratio between profits after interest and preference dividend per ordinary share and its market value.

3. Yield means dividend per ordinary share as a ratio of its market value.

4. Return on combined equity of shareholders and borrowers is a ratio of profits before interest to paid-up capital and reserves plus borrowings.

5. Rate of return on tangible assets is a ratio between profits before interest to total assets as given in the balance sheet, excluding depreciation and intangible assets such as deferred revenue expenditure or accumulated losses, etc.

Time Pattern

Mr. Joshi has analysed next the time pattern of rates of return and that of cost of financing. The actual patterns are depicted in Table A. The table shows how the rate of return on tangible assets has tended to decline. The decline is attributed to two factors. One, the cotton textile industry experienced great marketing difficulties during the years 1956 and 1957. Two, new schemes of expansion and modernisation were undertaken by the textile companies which resulted in augmenting substantially the value of fixed assets. This addition was obviously not yielding any return in the initial period. In the years 1958 and 1959, some of these schemes were completed and started showing results which, consequently, improved the profitability position of companies. Despite the unfavourable financial results of 1956 and 1957, the textile companies did manage, according to Mr. Joshi, to maintain dividend distribution more or less at the same level as in the past. The industry, being one of the oldest, has sufficient reserves to fall back upon to maintain dividend on preference and ordinary shares. In the year 1957, the companies utilised large reserves accumulated in the past years to distribute dividends.

The cost pattern of finances in respect of old and new companies does not disclose that, with maturity, companies can have favourable borrowing terms. But older companies are found to be more generous in the distribution of dividends.

Impact of Cost

The author of the study has also sought to assess the impact of cost of financing on the financial pattern of companies. The only noticeable change noted during the period 1955 to 1960 was the slightly reduced importance of equity finance and the correspondingly increased use of loans for financing the needs of companies, as is evident in Table B. This is attributed to the higher rate of return earned on the equity net worth as compared with the low rate of interest required to be paid on bank loans. The difference between the two, in the opinion of the author, is a clear profit from trading on equity. This also augments the reserve position and improves in the long run the contribution of net worth in the total finances of companies without equity shareholders making any contribution whatsoever. The pattern of finances *vis-a-vis* the cost of finance shows that the companies took recourse to loans, particularly bank loans which, being comparatively cheaper, were available in large amounts, thanks to the phenomenal growth of deposits. Since equity capital was costly and since its raising involved the management in the risk of losing control over the management, it accounted for a lower proportion in the total finances raised during the period 1955-60.

The static nature of the financial pattern of companies is considered to be of great interest, in view of the fact that the companies raised substantial resources in the aforesaid period without materially affecting the structural pattern of the finances raised through various sources. This may perhaps be due to the adherence by companies to certain fixed percentages of various types of finance as the desirable ideal. The yardsticks used by banks and financial institutions in advancing finances to companies may also have a similar impact on the financial pattern. The results from a case study of the structure of financing of companies with very high and very low rates of return do not bring out a standard type of financial pattern peculiar to each of them.

TEXTILE INDUSTRY WAGE AWARD SOON

CLOTH IMPORTS UP, EXPORTS DOWN

From Our Special Correspondent

MANCHESTER, 30*th October*

IN his final report to union members after 27 years as the General Secretary of the Card-room Workers' Association—one of the big three cotton unions—Sir Alfred Roberts suggested that a solution to the "intolerable" burden of cheap imports was to change the Lancashire cotton industry's merchanting system. "What is really needed here," he said, "is the same sort of set-up that applies in the United States and many European countries where merchanting is linked much more closely to production; where in fact, merchants have a financial stake in manufacture and concentrate on selling their own productions instead of looking for sources of cheap imports."

MANCHESTER LETTER

Trade in Lancashire had continued to be poor, he added. There was still no sign of any sustained buying improvement in the near future. Although many other countries in Europe were suffering from a lack of orders and had in some cases curtailed output, their position was more fortunate than Lancashire's, said Sir Alfred. He added: "They have no import problem to deal with and any upsurge in demand will be wholly to their benefit and to them alone. In our case, we have this intolerable weight of Commonwealth imports which could quite easily be increased in the event of an improvement in demand and still leave us in the doldrums."

Cotton Wage Talks

Employers and trade union leaders argued for nearly six hours in Manchester recently over cotton workers' wages and their demand for a pay increase. They were trying to settle a demand for a 10 per cent rise put forward 15 months ago on behalf of 156,000 spinning and weaving workers. The employers first rejected the claim; then offered a 3 per cent rise, which the unions turned down.

Now the Industrial Court—an independent body—is to make an award. After hearing both sides, Sir Roy Wilson, the Chairman, said that the Court's decision would be published in about three weeks' time.

Geneva Agreement on Textiles

At the recent Cotton Board Conference held at Harrogate, delegates were informed of the background to the Geneva talks by Mr. Michael Grey, a leading employer and a member of the British team of textile experts who attended the meeting. He pointed out that the basic year on which imports were calculated in the short-term arrangement was in fact about the worst possible year for the United Kingdom and a particularly good one for the United States. "It is also interesting to note," he added, "that, as soon as the arrangement came into effect, the United States—with a promptitude which we would like to see reflected in the British Government's attitude, took immediate action against imports in a number of categories, principally from Hong Kong, which had begun to rise above the levels of the base year." The United States actually effected over 60 individual actions under the short-term arrangement.

Turning to the long-term pact, Mr. Grey explained that, having claimed disruption, any country invoking this clause against another participating country could restrain imports at the level during the 12-month period ending three months before the month in which the request for consultation was made. The significance of this point is that any subsequent limitation will be based on a period of "normal" trading, before the sudden surge of imports occurred which caused the complaint to be raised in the first place.

Opening the Door

During the Geneva talks, Lancashire's industrial advisers to the Government were anxious to find out how wide the European door to supplies from abroad would be opened. At a fresh round of meetings which began late last month, Mr. Grey reported that agreement had been reached under which the E.E.C. countries had conceded an increase of 88 per cent but it was not yet known how this global increase would be shared individually. The percentages of growth, he went on, were obligatory but, as in the case of the inter-industry agreements between Britain and Hong Kong, India and Pakistan, they merely established ceilings, which need not necessarily be fulfilled by the exporting areas. Equally important, Mr. Grey emphasised, that even a 100 per cent increase in a market share of one per cent still meant that only two per cent of that market would be supplied by imports, whereas already about 30 per cent of the British home market consumption consisted of foreign arrivals.

Lancashire's experience, he continued, had clearly made its mark on the other countries of the Western Community. Their Governments obviously had no doubts about the wisdom and necessity for protecting their own domestic textile industries on a permanent basis.

Trade in Textiles

Nothing in the September returns dealing with overseas trade in cotton goods was calculated to reassure the industry in Lancashire. For the second month in succession, exports of cloth dipped sharply below the 20,000,000-yard mark which seemed to have been established during the first half of the year. The actual figure of 16,410,000 yards was 100,000 yards below the August total.

On the otherhand, an expansion occurred in imports, which exceeded 50,000,000 yards for only the third month this year. It was duly noted that the September 1962 arrivals of 59,351,000 yards were actually higher than corresponding shipments in the same month last year—the first time this has happened for a long time back.

Although arrivals of grey cloth still remain far below the 1961 levels, now being 323,169,000 yards, as against 470,426,000 yards, receipts of finished fabrics are very little lower than last year, being 103,975,000 yards, as against 117,782,000 yards. Nor is it difficult to see why Pakistan is objecting to the maintenance of current import ceilings on her shipments to this country. Imports of grey cloth from this source have almost doubled compared with 1961, the current figure being 31,024,000 yards, as against 16,562,000 yards.

In the case of Hong Kong, arrivals show little change, being 69,693,000 yards, as against 71,234,000 yards, but Indian shipments have dwindled from 148,541,000 yards to 113,381,000 yards. Outside the Commonwealth the main change has been in purchases from Japan which have slumped from 51,524,000 yards to 19,456,000 yards.

One aspect of the export scene which sometimes escapes notice is the way in which shipments of man-made fibre yarns have gained in comparison with the falling off in sales abroad of similar cotton goods. A sharp improvement has occurred this year in yarns spun from man-made fibres, the latest returns being 50,299,000 lbs. valued at £20,335,000. This compares with exports of 37,675,000 lbs. worth £515,194,000 in the same period last year and a total of only 11,224,000 lbs. of cotton yarns, earning £4,031,000.

Enormous Home Market

Delegates at the Cotton Board Conference heard Mr. A. M. Alfred, head of the Economics Department of Courtaulds, forecast that 1968 may see the end of all tariffs within Europe, assuming that Britain joins the Common Market. He said that the United Kingdom market was considered the most attractive "plum" in Europe. Textile consumption might grow by 30 per cent or more in this decade and, contrary to the belief in some quarters, textiles were successfully fighting other consumer goods.

Although Mr. Alfred believed that more liberalisation by the West towards imports of manufactured goods from underdeveloped countries was inevitable, he contended this need not be catastrophic. The United Kingdom appeared on average to have running and capital costs considerably above Continental levels. "We do not suffer from high wages but principally from low machine utilisation," he declared.—*All Rights Reserved.*

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

CHINA'S POSITION IN PETROLEUM

DOMESTIC OUTPUT SIX MILLION TONS—IMPORTS OF RUSSIAN OIL THREE MILLION TONS

ALMOST unnoticed by the outside world, the Government of Communist China has now decided on a major shift of emphasis in economic policy. In contrast to their early high optimism born of revolutionary success and fervour, the authorities have now been compelled by harsh realities to acknowledge that the road to a Communist industrial society in China will be a long and arduous one, taking scores of decades, if not longer. The main emphasis is now to be upon the development of agriculture and only second place given to the light, chemical and agricultural machinery industries, while other industrial developments are relegated to the background. Because of the significance of petroleum products in the whole range of economic activity, including agriculture, the oil industry will continue to be developed, but there will be no large-scale investment in the heavy industries which, not so long ago, were regarded as the backbone of the emerging new China. Also, the authorities are again contemplating birth control, in view of the continued explosive population growth which literally eats up the gains from economic progress.

The Government still insists, of course, that it has always in the past provided correct leadership, even though it is now obvious that the impossible was attempted. The warnings provided by the history of the early years of the Russian revolution went unheeded and quite

CHINA : OIL SUPPLY
(Thousand metric tons)

	1958	1959	1960	1961

From U.S.S.R.—products ..	1,335	2,412	2,395	2,928(*e*)
From Rumania—all products	122(*d*)	235	312	59
From others—all crude (*c*) ..		11	21	55
Total Imports ..	2,629	3,294	3,296	3,042

(*a*) Including oil from shale and coal. Figures for 1958 and 1959 according to official Chinese sources, for 1960 according to a U.S.S.R. publication. For 1961 and 1962—see text.

(*b*) Source of imports from U.S.S.R.—Russian trade statistics; for Rumanian and "other" imports—Suez Canal statistics. Imports from non-Communist sources are small.

(*c*) The 1958-60 imports are not clearly specified and may conceivably include small shipments from non-Communist sources; those in 1961 were all from Albania.

(*d*) Possibly including small quantities of Russian oil transported via the Suez Canal. (These quantities would then be double-counted.)

(*e*) Of which: gasoline 1,325; kerosine 512; diesel fuel 841; lubricating oils 218, etc.

inaccurate assessments were made of the speed with which fundamental changes can be brought about in such a vast spread-out society still at a low level of modern economic development.

It will be recalled that the Chinese Communists—now thirteen years in power—decided in the late 1950s upon a vastly accelerated programme of industrialisation, and on the amalgamation of the previously formed collective farms into larger, and highly streamlined, "rural communes." This policy, the Great Leap Forward, seemed at first to bring some astonishing rewards. But make-do methods of making steel and refining shale oil in backyards, proved to be an ephemeral if imaginative venture. It is now implicitly admitted that the achievements of this period were not solidly founded, and that the tempo was too feverish for the economy as a whole. Also, in the past two years, China has experienced a series of droughts, floods, and other natural calamities which are by no means unusual but the effects of which the new economy has found difficult to withstand. Furthermore, the politico-philosophical quarrel with the U.S.S.R. resulted in the withdrawal from China of large numbers of sorely-needed Russian technical experts.

Ensuing economic dislocations and grave food shortages have gradually forced the Government, over the past two years or so, to modify the programme of the Great Leap Forward but, until quite recently, this retreat was represented as being temporary and tactical. Now, however, it is conceded to be an adjustment of long-term economic strategy. Many millions who recently became urban dwellers have now been transferred back to the country-side so as to raise agricultural production, while the rural commune experiment has been quietly abandoned. Some industries, probably including steel, have been reduced in size though an exact appraisal of these cuts is impossible in view of the almost complete statistical black-out. This year's harvest seems to be better than in 1960 and 1961—earlier reports of new disasters seem to have been exaggerated—but the Government is now cautious in its promises and forecasts only slight improvements in living conditions.

What has been the course of oil production and demand in these ups and downs of the Chinese economy? Production of crude oil, which in the local terminology includes oil from shale and coal, went up from about 300,000 tons in 1951 to nearly 1,000,000 tons in 1955, 3.7 million tons in 1959 and 5.5 million tons in 1960, probably reaching by the end of that year a level equivalent to an annual output of over 6 million tons. Subsequently, production seems to have dropped somewhat as a result of the general economic dislocation and the shut-down of oil wells last year in the important Dzungaria area of Sinkiang. But Chinese officials now expect that a production level of some 6,000,000 tons will again be reached towards the end of this year. The now defunct 1958-62 five-year plan originally envisaged a crude oil output for 1962 of between 5 and 6 million tons, though expectations were subsequently pitched much higher.

Four Major Areas

In addition to announcing a crude oil target for the end of the current year, the Chinese authorities have recently stated that the (unpublished) plan for all oil industry operations in January-August 1962 was over-fulfilled by 11 per cent, but no absolute figures were given. Also, refinery output of gasoline, in comparison with January-August 1961, is stated to have risen by 29 per cent, and kerosine output by 28 per cent, while the output of lubricating oil is said to have doubled, though, in view of the figures of local crude production, it would seem that these advances may, in part, merely be making good past deficiencies. The re-appearance of at least some official statistical figures on oil industry operations may perhaps be counted a promise of more to come; for most other industries no statistical information whatever is published at present.

It is estimated that, roughly, two-thirds of China's crude oil production of, say, 6 million tons a year, consists of natural crude, and most of the remainder of shale oil. Apart from some relatively small scattered fields, there are now four major areas of natural crude oil production: the old-established remote Yumen and Dzungaria areas, the newer but similarly remote Tsaidam area in Tsinghai, and the more easily accessible area of Central Szechwan whose development was probably the main factor responsible for the jump in China's crude oil production in 1960. The largest refineries in China are the two one-million ton plants at Lanchow and Shanghai, and the new Nanking plant whose designed capacity (possibly not yet reached) was at one time stated to be 3,000,000 tons. The country's oldest shale oil centre is at Fushun in Manchuria, in the north, and there is now a new major shale oil plant at Mowming in the south. The exploitation of China's oil obviously involves considerable transport, and for this reason alone it is especially susceptible to the effects of any serious economic dislocation.

Supplies from U.S.S.R.

About a third of China's oil needs is now met by imports, to the extent of about three million tons a year, but the Government still hopes to achieve complete self-sufficiency in oil by 1967. Oil imports from other Communist countries—almost nine-tenths from the U.S.S.R. —totalled about 3.3 million tons both in 1959 and 1960, and just over 3 million tons in 1962. Due to the U.S. ban, oil imports from Western-controlled sources have been negligible, while imports of crude ceased last year except for minor quantities from Albania. Deliveries of

WORLD SUGAR COUNCIL MEETS

CLOSE SUPPLY-DEMAND BALANCE NEXT YEAR EXPECTED

THERE is every likelihood of a close statistical balance between world sugar supply and demand during the calendar year 1963. This, in substance, is the assessment made by the Statistical Committee of the International Sugar Council. Endorsing the viewpoint of the Committee, the Council, at its meeting held at London on Friday the 2nd inst., estimated the world free market's sugar requirements in 1963 at 11.5 million metric tons and the U.S. imports at 3.6 million tons, bringing the total world market requirements to just over 15 million tons. The supplies of sugar likely to be offered to the market, it was stated, would equal the estimated requirements. The Council also held a preliminary discussion of arrangements for the negotiation of a new international sugar agreement to succeed the 1958 agreement which is due to expire towards the close of next year. The *communique* issued by the Council does not, however, give any details pertaining to the discussions. All that it says is this: "It (the Council) agreed that the matter should be further discussed and, in the interval, Governments have been invited to bring their attention to bear on the problems involved."

At the meeting, the Council is believed to have renewed its plea for the resumption of the agreement. Only a few days prior to the Council's meeting, its Executive Director, Dr. Stedman, had declared, in the course of a Press statement, that, since the free price of sugar, sold particularly to Japan and non-member nations (such as Iran and Iraq), continued at a rate far below the cost of production and with a view to raising this price, resumption of the World Sugar Agreement was imperative. He had even warned that the alternative to such a move would be the gradual elimination of commercial sugar production in countries depending on free market sales.

Will the International Sugar Council's assessment of the close statistical balance between the world supply of, and the demand for, sugar prove correct in fact? It is rather difficult to give a categorical answer to the question, in view of two factors: one, absence of a reliable estimate of the 1963 sugarcane crop and, two, uncertainty as to whether and to what extent Cuba, the world's largest exporter of sugar, will appear on the free world market. Drawing attention to the first factor, Messrs. F. O. Licht, the well-known international firm of sugar traders in London, point out that Cuba will produce 4.6 to 4.8 million tons of sugar in 1962-63 (season commencing from September), rather than 4.0 million tons. They also expect the next year's world sugar output to be higher than the 1961-62 production of 52.22 million tons. On the issue of Cuba's entry in the free sugar market, they say that, in the event of low production in Cuba, the Soviet Union will renounce a part of its sugar imports from Cuba, in order to enable the latter to supply sugar to the free market. Nevertheless, they are inclined to feel that Cuban offers on the free market would by no means exceed the quantities sold hitherto, so that no essential disturbance need be feared in the world sugar market. Messrs. Licht do not also expect any major change in world sugar production. Their latest assessment of the position is as follows:

Statistical Position of World Sugar

(In million metric tons—raw value)

	September-August		
	1961-62	1960-61	1959-60
Opening stocks*	18.76	14.63	13.77
Production	52.22	56.93	50.08
Of which :			
Cane sugar	29.66	31.19	29.77
Beet sugar	22.56	25.74	20.31
Total supply ..	70.98	71.56	63.85
Consumption	54.79	52.80	49.22
Closing stocks*	16.19	18.76	14.63

* As on 31st August.

The European sugar beet acreage in 1962-63 is nearly the same as in the previous year, but crop prospects in all European countries are mediocre. Therefore, no excessive pressure of European sugar on the world market need be feared. On the contrary, it can be expected that several European countries will have to import more sugar than in the year before. Thus, the European beet sugar production in 1962-63 will not disturb the balance on the world sugar market. In the U.S., a four per cent increase in crop is expected. It can, therefore, be said that the total 1962-63 world sugar beet production will be a stabilising factor on the sugar market.

In the opinion of Messrs. Licht, generally, world sugar production in 1962-63 will not differ considerably from that in 1961-62. This would mean, however, that requirements would again exceed sugar production, as a result of which stocks would decrease further. Both these facts would, of course, have a stabilising influence on the free world market, unless disturbed by the East bloc countries.

The current sugar season, according to Messrs. Licht, started with normal stocks. The total of these stocks as on 31st August 1962 stood at a little over 16.19 million metric tons (raw value), as against 18.76 million tons a year before. The reduction in stocks was due to the fall in production, on the one hand, and rise in consumption, on the other, as the accompanying table shows.

The London sugar firm estimates the aggregate world sugar consumption to be 57 million tons in 1962-63. The estimate is made on the assumption that the rate of increase in consumption will be the same as the average yearly rise of two million tons during the last ten years.

A review of the recent trends in the position of sugar in some countries, as made by Messrs. Licht, reveals that cane sugar production will increase in the U.S., while there will be no essential changes in the Dominican Republic and Haiti. Marked changes are hardly to be expected in Africa, whereas, in Australia, sugar output will register an appreciable rise as a consequence of the increased demand from Japan. A slight improvement in production is anticipated in the Philippines. Referring to India, Messrs. Licht merely say that the country "plans to produce in 1962-63 the same quantity as in the year before." This assessment is, however, too vague and does not seem to be correct. The Government of India has no doubt abolished the ten per cent cut in production enforced in the 1961-62 season. Even so, the sugar output is expected to be markedly lower—around 2.4 million tons, as against 2.7 million tons—in view of the sharp setback suffered by the cane crop in several parts of the country and the prospects of large-scale diversion of supplies to the manufacture of *gur* and *khandsari* which are commanding pretty high prices.

"SUGAR PRICE LINKING FORMULA"

At long last the Government of India has announced the basis for determining the share of cane growers in the additional sugar price realised by the factories in the four season 1958-59 to 1961-62. It will be recalled that the Tariff Commission submitted what is called the sugar price linking formula as far back as in June 1961, but it was not until the end of August this year that the Government released its report together with its resolution thereon. The decisions of the Government was incorporated in the Sugarcane Control (Additional Powers) Bill which was passed by the Lok Sabha on 4th September and by the Rajya Sabha two days later. The Bill merely

LIQUIDITY AND WORLD TRADE

THREE IMPORTANT POINTS TO PREVENT DEFLATION

By Per Jacobsson

MANAGING DIRECTOR, INTERNATIONAL MONETARY FUND

I DO not think that there is any need today for one to emphasise the importance of trade, either domestic or foreign. A number of books have been written about the Roman Empire, which ascribe its decline largely to economic reasons; one, in particular, I remember pointed out that, as the Roman Empire grew and grew, its foreign trade became less and less, until the Empire eventually comprised almost the whole known world, and then it had no foreign trade at all and its economy collapsed. Now this, of course, is economics made altogether too simple, and, besides, it is not altogether true, for there was always some trade with the East. But there were nonetheless important economic factors contributing to the decline. After the second century, excessively bureaucratic control, heavy taxation, and an overdose of regulations, all contributed materially to a falling off of trade within the Empire. Even if this cannot be said to have been the sole cause of the ultimate collapse of the Empire, it was certainly a symptom of its gradual decline. Flourishing internal and external trade is usually indicative of an active and vigorous society.

Trade Promotes Tolerance

Trading communities have contributed much to present Western culture. Athens, the font and origin of that culture, was a trading city. Other cities in later periods, famous for their art and learning and fresh flowering of our Western culture, were the Renaissance towns of Florence and Venice, and later Amsterdam, Paris, London, and also Boston and New York. All of these derived much of their wealth and importance from trade, as well as being at the same time political centres of considerable importance. I would even venture to say that our civilisation has more than anything else developed through the activities, and often the peoples, of our great trading cities. The relations which are established by trade bring in their train more sweeping considerations than mere gain or profit. Trade widens horizons; it makes people aware of customs and ideas elsewhere; it both sharpens and broadens the mind, and almost inevitably promotes tolerance. In our day, too, I think we can find that freeing of trading relations has had a liberating effect on people's minds.

We have been fortunate that, after the Second World War, the volume of trade has increased almost without interruption—in sharp contrast to what has generally happened after previous great wars. From 1950 to 1960, the volume of international trade rose by 78 per cent; in 1961 by 4 per cent; and it seems that, from the first half of 1961 to the first half of 1962, the increase has been at the rate of some 6 per cent. This is a remarkable performance and a very real achievement, but it has not come about by itself; a number of factors are required to create a climate conducive to an increase in trade. There has to be greater production, for products are exchanged for products; there have to be the resources available to finance the trade; and, in a post-war period, the war-time barriers to trade have to be dismantled or at least reduced. Over the years, many efforts have been made to achieve these conditions, with a considerable degree of success. In part, this success has been due to the work of international agencies: the Marshall Plan with the European Payments Union, and such organisations as the G.A.T.T., the World Bank and the International Monetary Fund. Much also has been achieved through the efforts of individual countries to restore proper trading conditions. Efforts to expand world trade further have, if anything, recently been intensified. The European Common Market has in important respects advanced its time-table for the reduction of tariffs; Great Britain is applying for full membership in the Common Market; and in the United States, Congress has adopted, and the President has signed, the Trade Expansion Act.

High Degree of Cohesion

These are all evidence of a high degree of cohesion in policies in the general economic and commercial field among the different countries—a greater cohesion, perhaps than there has ever been, and certainly more so than at any time since the outbreak of the First World War in 1914. The European Common Market, its extension to countries in Europe other than the Six, and the Trade Expansion Act are, taken together, measures which should give a new orientation to trading relations in the Western world, and will make it possible for the benefits of reduced tariffs to be enjoyed not only by the industrial countries but also by the the wider group of developing countries.

In the financial and monetary field, too, common measures have been agreed upon. Last week, the borrowing arrangements of the International Monetary Fund came into force, according to which ten of the leading industrial countries undertake to provide the International Monetary Fund, in case of need, with supplementary resources. When adherences have been received from all ten countries, these resources will amount in all to $6 billion. The ten countries are the United States, the United Kingdom, France, Germany, Italy, the Netherlands, Belgium, Sweden, Japan, and Canada. Only Canada and Belgium have still to announce their adherence. The amounts available under the borrowing arrangements will be in addition to the existing resources of the Fund which total the equivalent of some $15 billion. Most of the industrial countries have, of course, substantial reserves of their own; and further protection can be provided by a system of reciprocal credits between central banks. So, formidable defences have been built up against any setback to individual currencies or the international monetary system as a whole, and I think we can by now feel sure that speculators can no longer determine monetary policy by their movement of funds.

It involves no disparagement of the political leaders to say that it has been difficult to arrive at agreed lines of action in the political field, for here so much is influenced by countries' relations with the Communist world. Arrangements in the economic and financial field, on the other hand, have been made primarily among countries whose economies are all more or less based on the market system, and this has greatly facilitated the attainment of positive results. I think that, in such matters, one can now to a large extent take goodwill for granted, and the will and the willingness to co-operate which such an atmosphere generates. Now these remarks embrace, of course, the whole complex of problems relating to world trade, which is indeed a very vast subject. But I will confine my remarks here mainly to one particular aspect, namely, the relation between liquidity and world trade.

Main Subject Matter

May I first say a few words about the concept of liquidity. Unfortunately, economic terms are rarely unambiguous, and the term "liquidity" is no exception. There are, in fact, two distinct meanings given to this term—and, I am afraid, that, very often, it is not clearly indicated which meaning is being used in a particular context, and this makes it difficult to be sure exactly what the idea is that the writer is intending to convey.

One concept of liquidity may be taken to be the availability of the facilities in national currencies for financing trade and other business. As you know, Keynes, in his *General Theory*, was very much concerned with the state of liquidity in its relation to economic activity, and he thought of it in terms of the credit facilities in national currencies. On reading recently through some Congressional reports on the credit position here in the United States, I again found that the use of the term "liquidity" most often referred to the availability of funds in dollars in the national economy.

There is another kind of liquidity—often referred to as "international liquidity"—which is concerned with the reserve position of countries, that is, with the magnitude of their gold and foreign exchange reserves, as supplemented by other facilities, such as drawing rights in the International Monetary Fund and the various forms of reciprocal and other credits agreed between central banks.

These two concepts of liquidity must be clearly distinguished, for, otherwise, confusion is bound to arise. The need for such distinction is not least needed because there is an interrelation between them—between, on the one hand, the liquidity in national currencies and, on the other, the international liquidity in terms of monetary reserves.

Domestic Credit and External Reserves

As trade increases—either domestic or foreign trade—enlarged credit facilities are required in national currencies to ensure adequate financing. Domestic trade is of course financed in national currencies, and foreign trade is financed largely in the currencies of the main industrial countries. Thus, an expansion in foreign trade is financed through the credit mechanism in individual countries. Under the old gold standard, the creation of credit in the various countries was closely linked to movements of gold, and, in quite a number of countries, changes in the volume of credit have continued to depend, to a large extent, on changes in their balance of payments, as reflected in their monetary reserves. But despite this link, one should guard against implying that no increase in the credit volume can occur without an addition to monetary reserves. In the United States, for instance, credit has been expanding over the last ten years, despite the considerable decline in the gold stock. In Germany, too, credit has expanded over the last two years without an increase in reserves. And, if I may refer to a classical example, the Bank of England, before 1914, was virtually the centre of the world's credit system and was able to hold this position on the basis of surprisingly slender reserves, which never amounted to more than the equivalent of $400 million at present-day values. So the link is not absolute; there can be no question of any inherent parallelism between the expansion of credit and growth of reserves.

If we examine the credit systems of the various countries, we find that, in many of them, modern techniques, not least through the initiation of open-market operations, have given greater flexibility to credit management than was possible previously. The monetary authorities can avail themselves of these possibilities, and can do so more decisively, if they have a relatively strong foreign exchange position. Fortunately, partly through the deficits in the U.S. balance of payments, a redistribution of reserves has occurred in recent years, so that most of the principal industrial countries have what they may regard as a sufficiency of reserves, and they have also the other facilities available to them which I have mentioned, among them access to the International Monetary Fund. These are valuable, not only as lines of defence, but also as permitting the authorities a freedom of action not otherwise sustainable.

Case for Co-operation

Even so, in matters of credit policy, there are limits to the extent that countries can safely move alone. They have in a measure to keep in step with each other. Given present circumstances, in which there is a better basic balance in the world position, at least in the industrial countries, and, indeed, greater possibilities for concerted action, there are more than ever good reasons to intensify the useful co-operation which has been initiated among the monetary authorities. This co-operation can be pursued in a number of ways: through the International Monetary Fund, through the O.E.C.D. in Paris, through the Bank for International Settlements, and among the Common Market countries, all of these should be welcomed. The policies which may be needed, and which are, therefore, appropriate to be discussed in such places, may not always be policies aimed in the same immediate direction. Situations may arise in which different countries have to pursue contrasting, though complementary, policies, involving a more cautious policy in one country or one group of countries, and a more expansionary policy in others. The choice of the right combination of policies should be the subject of common discussion and co-ordination. But the objective of all these efforts must be to provide to the individual countries, and thus to the world as a whole, the volume of credit creation required to meet the legitimate needs of growing economies.

Needs of Developing Countries

It is sometimes questioned whether there are at present sufficient credit facilities to meet the needs of growing economies and, in particular, the needs of an increasing world trade. As I have already mentioned, the volume of foreign trade rose from 1960 to 1961 by some 4 per cent, and it seems that, from the first half of 1961 to the first half of 1962, the increase has been at the rate of 6 per cent. Such increases would surely not have occurred had adequate financing not been forthcoming. Indeed, I think most of those competent in these matters would agree that foreign trade is not likely to be stifled by any lack of credit facilities, especially as interest rates seem to be declining rather than rising in the leading centres.

It would be good if this were all that need to be said about this question; but I am afraid it is not. There is, I think, another facet of the problem with which we have to be concerned. It is not only that in some countries—particularly in the United States, and to some extent Great Britain—there are unused facilities of production and an undesirable level of unemployment. We have really to ask ourselves whether there is not now a more general slackening in the rate of economic expansion—a slackening which may also be beginning to affect countries on the Continent of Europe and which, if it conitnues, could lead to another recession and perhaps even set off deflationary tendencies, which then would have to be counteracted by, among other things, an expansion of credit. For three years, wholesale prices both in the United States and on the world markets have been remarkably stable, evidencing the end of the post-war inflation. Supply has caught up with demand; and, as productive capacity continues to increase, a downward pressure on prices may well be intensified in a wide range of products—raw materials, semi-manufactured, as well as finished manufactured products.

Cost Increases

There is, however, another point, even more appropriate to present conditions. Deflation can undoubtedly be brought about by mistaken monetary policies, but, in the present situation, it is well to remember that it can also result from the effects of continuous cost increases. In the post-war period, when prices could be raised without any significant reduction in sales or even with an upturn in sales, cost increases were not really a source of worry but became rather an accepted part of the inflationary process. But, when prices can no longer be increased because of intense competition, cost increases may have a very different effect. They will tend to reduce profit-margins—and the lower profit-margins may slow up the rate of investment, with the result that savings may not be fully invested, idle funds may accumulate, and a deflationary process may be set off. So, if profit-margins are reduced by cost increases, they may give rise not to inflation but to deflation.

There is nothing new in this analysis. If you read W. C. Mitchell's famous book on Business Cycles, published some thirty years ago, you will find that he described the phase of the business cycle which leads to the downturn as one in which costs continue to rise while prices can no longer be increased, so that profit-margins are reduced, and even losses incurred, with all the accompanying results of such a trend.

It is also useful to remember that Keynes defined liquidity in terms of wage units. It is true that he argued against a reduction of wages, even in a period of unemployment, for he feared that such a step would give rise to expectations of continuous further decreases, both of wages and prices. But he was explicit in his argument against any increases in wages in such a situation, since, if the cost of labour were to rise, the increase in liquidity which he recommended would lead to less absorption of the unemployed.

There is sufficient agreement between the views of these two great economists for us to conclude that, in situations in which the objective is to counter a relaxation in business activity and to promote recovery, cost increases should be avoided to the utmost. We may well have such a situation in the near future, and, therefore, these precepts of moderation in cost increases should be taken very seriously.

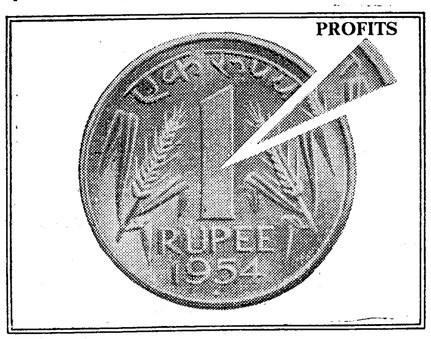
Situation in the U.S.

Turning to the present position in the United States, I think it would be a great mistake to underrate the recovery in business activity which has taken place over the last eighteen months. After all, the gross national product has risen in that period by some 7 to 8 per cent; and, furthermore, this increase, it should be noted, has been accompanied by an improvement in the balance of payments. That is in itself an achievement, for it is not often that internal recovery and an improvement in the balance of payments go together. At the annual meeting of the Fund and the Bank, which took place in September, European bankers expressed increased confidence in the dollar and looked forward to the restoration of equilibrium in the U.S. balance of payments in the course of next year. There are several reasons for the improvement that has taken place in the position of the dollar, but there is no doubt that the most

The Truth about Rayon...1

Is the Rayon Industry really making HUGE profits?

CONTRARY to popular belief the Rayon industry is, in fact, making very moderate profits. The Reserve Bank's survey of 1001 leading companies shows the average of profits as percentage of net worth to be 10.8%. Against this, the rayon yarn spinners average less — a modest 9%.



The selling prices of Rayon have been arbitrarily pegged down since 1957, and have in effect been reduced by absorption of excise duty In addition, rising production costs and a high rate of obsolescence...have made further inroads into profitability. The demand for more clothing will become increasingly pronounced over the next decade, and a serious crisis could result if the Rayon industry is not given incentives to produce more.

Our Prices Among World's Lowest

Although comparatively young, the Rayon industry has made rapid strides over the last decade. Qualitatively, it is equal to the world's best—in price, Indian-made rayon yarn of all deniers is cheaper than most, as the following table will show:

Domestic prices of 150 denier yarn in Rs./kg

Switzerland	9.08
U.S.A.	8.79
Britain	8.27
Italy	7.80
Sweden	7.80
France	7.76
India	**6.94**
Japan	5.05

Controlled Price and Distribution

The Rayon yarn prices and distribution are controlled by the mutual authority of the Textile Commissioner and a committee of both spinners and weavers. This ensures supplies of yarn to the consumers at fixed prices which are some 40% below the market value of these yarns. 75% of yarn goes to organised textile units and the balance to handlooms, doublers, twisters, etc.

The truth is, moderate profits — not huge profits — is the reward of the manufacturers of Rayon... the fibre that serves you so well.

For our basic needs...

Rayon!

fundamental is that, in the last few years, wage costs have risen at a much quicker rate in the countries on the Continent of Europe than in the United States. German wages, for instance, have risen by some 30 per cent in three years, while the increase in the U.S. has been less than 10 per cent in the same period. I might add that this strengthening of the position of the dollar has been reflected in the quotations on the exchange markets, and these markets have behaved, and continue to behave, very well.

Looking at the economic situation this autumn, I certainly see no sign of an immediate dip in business in the U.S. Sales and output of automobiles are well-nigh at record figures, and many branches of industry and trade are doing really well. But the picture is not uniform; somehow, one has the impression of business activity moving along on a plateau, with no clear indication of any fresh stimulus exerting its beneficial effects. This is not a satisfactory situation, and it is, therefore, up to us to see to it that conditions for a re-stimulation of business should be provided, to the largest possible extent. It seems widely agreed that present high rates of direct taxation act as a drag on business, and that steps should be taken to reduce those rates. Such steps could form part of a broader expansionist policy in the fiscal and credit field—a policy for which there is, I think, much support in the U.S. at present.

Situation in Europe

At the same time, on the other side of the Atlantic, I think one can take it for granted that the British authorities are also anxious to pursue expansionist policies—and will move in that direction as far as they feel they can safely do so.

How will these policies in the United States and Great Britain relate to conditions in the countries on the Continent of Europe? If the boom in these countries continues more or less unabated, the expansionary policies in the United States and Great Britain would complement the continued expansion on the Continent of Europe. There have, however, been some signs of a decline in the rate of expansion in Europe. Should this tendency be intensified, it is very likely that the European countries would fairly promptly consider steps to avoid a serious downturn, and do so in co-operation with the authorities in the United States and Great Britain. There were indications, in the course of last summer, that an increasing number of Europeans were interested in the launching of more expansionist policies in the United States, in so far as that could be done without retarding the improvement in the U.S. balance of payments. Since the U.S. dollar's position has gone on improving, while the business situation inside Europe has become rather more uncertain, the European interest in U.S. expansionary policies is likely to be now even stronger.

Whatever situation may develop on the Continent of Europe, therefore, there is every reason for continuing close co-operation among the authorities on the two sides of the Atlantic, in order to arrive at a full understanding as to the policies that should be pursued. At the very least, such understanding can be useful in eliminating distrust, but it can, of course, do much more.

Three Important Points

I think I might sum up by saying that there are three important points on which I would hope there would be broad agreement:

1. The pursuit of expansionist policies, to a greater or lesser degree, according to the business trend that emerges;

2. The avoidance of cost increases, which presupposes moderation in wage increases; and

3. Intensified co-operation in the monetary, economic, fiscal and trade fields among the authorities of the various interested countries.

It may be easier to arrive at results under the first and the third than under the second heading, but it is by the proper combination of action under each one of these three headings that success is most likely to be attained.

I would like to make it clear that, while the policies which have been outlined above are those to be discussed among and adopted by the industrial countries, they would nevertheless be greatly to the benefit of the developing countries also. For the pursuit of these policies is likely to increase especially the demand for primary products and, at the same time, to counteract any tendency for the prices of these products to decline further.

In recent months I have mentioned more than once the word "deflation." It is not because I want deflation, or even expect it to come about; just the contrary. Let me mention what a very wise Swedish banker, the late Marcus Wallenberg, once said to me. He said that it was often his role in life to be considered to have been wrong in his judgment. When he saw the signs of some dangerous situation developing, he would go around warning people of the danger, and indicating the measures which, in his opinion, should be taken to avert it. If then the proper measures were taken and the danger was averted, he would be told that he had been wrong; but nobody could be more pleased than he when such a thing happened.

Finally, I would like to point out the fact that business this year has shown great resilience in the face of often adverse circumstances. Usually a sharp fall on the stock exchange has been the forerunner of a distinct setback in business activity, but this year business on the two sides of the Atlantic seems to have taken the fall on the stock exchange well in its stride. Business has also gone steadily on its way, unperturbed by politics, relating its action to economic realities on which it may exercise its judgment with some confidence.

Defences Strengthened

It is particularly interesting to observe the movements on the foreign exchange markets, for these are usually the most sensitive to rumours of all kind. For the greater part of this year, these markets have been very calm, probably calmer than at any time since before the outbreak of the Second World War. Such variations as have occurred in the exchange rates seem to have been increasingly determined by the basic conditions of the balances of payments in individual countries (e.g., the relation of exports to imports, and the like) and less by movements of capital funds from one centre to another. One reason for this is, of course, that the international balance of payments position is now in better equilibrium than it has been for several years. But another reason is surely to be found in the fact that the monetary authorities in the various countries now co-operate more closely together, and that the defences against sudden pressures have been greatly strengthened.

At the same time, with a more soundly based economy, many countries have gained more freedom in the pursuit of their fiscal and credit policies. The important thing is that they use this freedom wisely. But to be wise of course does not mean to do nothing; real wisdom requires readiness for action when the need for such action occurs. Moreover, it requires that attention should be paid to all aspects of a problem, and should include a readiness to adopt those policies which are often difficult to apply. I think that, in general, there is a greater understanding of the problems involved and awareness of the greater opportunities which now present themselves. The fault is not in the stars but in ourselves if we should fail—but why should we fail? Why should we not be resolute in pursuing those policies which would ensure a steady rate of growth in our economies and an expansion in world trade? Much good work has been done. Much work remains to be done. But let us agree to do it!

Note: *The above article has been adapted from Mr. Per Jacobsson's address to the National Foreign Trade Council, Inc., New York on 29th October 1962.*—ED.

I.F.C. INVESTMENT IN COSTA RICA

The International Finance Corporation has announced its first investment in Costa Rica. The Corporation will invest $270,000 in Productos de Concreto, S.A. to add to the company's working capital and to enable it to expand its capacity to manufacture stressed and other concrete products for which there is a growing demand. It will lend the Company $194,000 and will buy 5,000 shares of common stock of 100 colones par value each (equivalent to about $76,000). Bamerical International Financial Corporation, New York, a wholly-owned subsidiary of the Bank of America, N.T. & S.A., is participating in the investment in the amount of $90,000. The loan is represented by unsecured notes, bearing interest of 8 per cent and repayable in 16 semi-annual instalments beginning December 1963.

The I.F.C.'s investment in permanent working capital provides financing of a kind extremely difficult to obtain in Costa Rica. Its investment in shares should make it possible for the Company to attract new shareholders, and will thereby contribute to the development of a capital market.

CANNED FOR CONVENIENCE After a tiring day's work how pleasant it is to relax, sipping your favourite fruit juice from a chilled small can! How convenient these 5½ oz cans are! They are easy to handle and take less storage space ■ Poysha, one of the leading tin container makers in the country, pioneered the manufacture of these cans. This made possible greater utilisation of our fruits and vegetables and helped create a new export item. First marketed a year ago, hundreds of thousands of these containers, made by Poysha, have already been used by leading canners to export fruit juices to the Middle Eastern countries ■ Poysha are thus helping India develop new industries and also earn valuable foreign exchange.

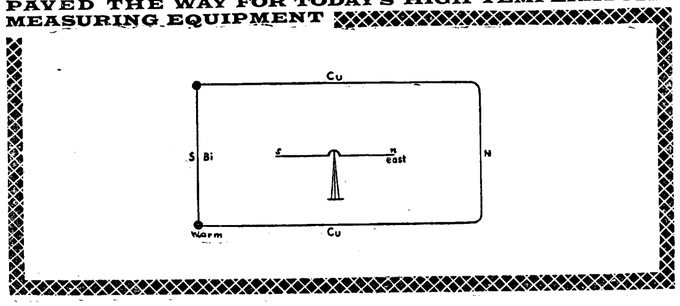
THE
THERMOCOUPLE CIRCA 1800

THE TRAIL-BLAZING OF A DEDICATED SCIENTIST PAVED THE WAY FOR TODAY'S HIGH TEMPERATURE MEASURING EQUIPMENT



Today's electric high temperature measuring equipment owes much to the pioneering of an early 19th century scientist. Seebeck's discovery—like most great findings—stemmed from a simple experiment. He joined a copper wire and bismuth wire at each end, heated one junction and discovered that an electric force was generated... Seebeck had made the first thermocouple and the principle for electric high temperature measuring equipment was established.

In 1826, another scientist, Becquerel, converted the principle to practical use. He joined two strips of dissimilar metals, immersed one junction in a bath of mercury and attached the other to a dial indicating instrument. He heated the mercury, checking its temperature with a thermometer. The electric force thus generated caused deflections in the dial indicator. By relating these deflections to the thermometer readings Becquerel calibrated the dial indicator up to 300°C. He further extrapolated temperatures up to 1350°C. Seebeck's and Becquerel's experiments paved the way for the modern thermocouple.

Negretti and Zambra too, have pioneered in the field of temperature. Over a century's experience lies behind their range of electrical indicating, recording and controlling instruments. To industry worldwide, the name Negretti and Zambra means instrumentation of faultless workmanship and trusted reliability.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

SIR WILLIAM LAMOND'S REVIEW

EVERY EFFORT MUST BE MADE TO EXPAND GENERATING CAPACITY

THE Sixty-fifth Annual General Meeting of The Calcutta Electric Supply Corporation, Ltd., was held on 1st November 1962 at Victoria House, Vernon Place, London, W.C., Sir William Lamond, Chairman, presiding. The following is his review, which had been circulated with the report and accounts:—

It is with very deep regret that I have to record the death on 19th November, 1961, of Sir Harry Burn who had been a member of your Board since 1947 and was Chairman from 1954 until his death. Sir Harry worked tirelessly in the interests of the Company and his experience was of great value. He is missed by all his colleagues. The Board elected me to succeed him—an honour which I greatly appreciate. Mr. I. A. Macpherson has been appointed Deputy Chairman.

To fill vacancies on the Board Sir Owain Jenkins and Mr. A. R. Colley were appointed to be Directors. Both Sir Owain and Mr. Colley with their wide experience in their respective spheres will give valuable assistance to the Board. Those two appointments now come up for confirmation.

It is also with deep regret that I record the death on 1st July, 1962, of Dr. B. C. Roy, Chief Minister of West Bengal. Successive Chairmen and Agents of this Company have been honoured by his friendship and have been privileged to have the benefit of his advice and guidance.

In the Chairman's Review for the year ended 31st March, 1961, mention was made of the series of breakdowns of plant that occurred at our New Cossipore Generating Station towards the end of that year and at the beginning of the year 1961-62. These breakdowns had a twofold effect in the year under review: first, to the extent to which the output of the machines which were out of action could not be covered by increased generation elsewhere or by increased import from the Damodar Valley Corporation, the demand on our system was unsatisfied and the consequent load shedding involved us in loss of Revenue; and secondly, to the extent to which these outages could be covered by increased generation with less efficient plant elsewhere in our system and by increased import (which in fact happened to a substantial degree) they involved us in enhanced Revenue Expenditure, quite apart from the actual cost of repairing the damaged machines. This abnormal Revenue Expenditure is, under the provisions of the Electricity (Supply) Act, 1948, being recovered from the Contingency Reserve Fund.

Serious as were the effects of these breakdowns on our Revenues they were equally serious for our consumers, particularly our industrial consumers, who had to bear the brunt of the drastic load shedding that was necessary and I welcome this opportunity of expressing once more the Board's great appreciation of their co-operation during this difficult period. The load shedding and the load spreading which were then necessary unfortunately still persist, as was predicted last year, though of course not to the extent that was the case when our New Cossipore machines were out of action.

Expanding Economy

India is on the threshold of an industrial revolution which obviously generates pressures within an economy, the expansion of which has of necessity been planned against the background of an acute shortage of foreign exchange. One of these pressures is a shortage of power which has for some years now been manifest throughout the country. We can regard this as one of the growing pains of an expanding economy, but, whilst it persists, the electricity supply industry must make every effort to expand its generating capacity, and at the same time, to ensure maximum utilisation of existing capacity.

In Calcutta we are doing both: the latter through the instrumentality of the Electricity Supply Control Advisory Committee on which our industrial consumer interests are represented and which makes recommendations to Government with regard to load spreading and also to the amount of, and the conditions under which, new load should be connected to our system. But, of course, the real remedy lies in the increase in generating capacity which is so desperately needed in the area.

New Cossipore Extension

Last year you were informed that Government, reversing its previous decision, had at last authorised our 50 MW extension at New Cossipore. During the year under review great progress has been made on the foundation raft and the new pumphouse monolith, both of which were completed ahead of time; the plant manufacturing programme in this country is also well up to schedule and I have every confidence that this new machine will be on commercial load in October of next year—about the same time as we have been promised the first tranche of the power we shall be importing in increasing quantity from the West Bengal Government State Electricity Board in the future. The present shortage will thus continue for at least another year and the position between now and then can only be alleviated by an increase in the import of power from the Damodar Valley Corporation hitherto pegged at the contractual figure of 105 MVA. Any surplus in the Damodar Valley Corporation system which can be transmitted to Calcutta, even if only during the evening peak hours when our own system is so hard pressed, brings great relief to industry in the area and particularly to the jute industry which is of such national importance from a foreign exchange earning point of view.

We realise that the Damodar Valley Corporation is at times itself hard pressed and often has the same difficulty that we have experienced in taking plant out for overhaul. It is, therefore, with pleasure that I record our appreciation of the fact that the Damodar Valley Corporation has recently been able to increase its export to us; we are grateful to them and to the officials in Government and the State Board whose good offices have made this possible.

Year of Expansion

It will be noted from the Report of the Directors that during the year ended 31st March, 1962, there were increased sales of energy for Power Purposes, Lights and Fans, Public Lighting and Bulk Supplies. 80 per cent of the energy sold for Power Purposes is supplied to High Tension Industrial consumers and the effect of the load shedding, to which I have already referred, has been almost entirely confined to those consumers. Consumers using energy for Lights and Fans and those receiving Bulk Supplies suffered only slightly. Thus, if there had been no load shedding the energy sold for Power Purposes would have shown a much larger increase.

In addition to large industrial consumers energy sold for Power Purposes covers a large number of small industries supplied at Low Tension. It also includes energy sold for Domestic Power Purposes the demand for which again showed a substantial growth due to the popularity of small air-conditioning units in residences and offices. Although the jute industry holds its predominating position as our largest industrial consumer, supplies to that industry were less than the previous year owing to the severe shortage of raw jute in the middle of 1961. But in recent months the demand from the jute mills has greatly increased, as supplies of raw jute became more plentiful. Other important industries on our supply are Rolling Mills and Engineering Workshops, Cotton Mills, Chemical Works and Paper Mills, and with the exception of the last mentioned, their consumption has increased.

Sales of Energy

Sales of energy for Lights and Fans again increased. Various housing estates, both in the Calcutta suburbs and in other parts of our area, are still being developed.

Almost all of the increased sales for Public Lighting were for the Calcutta Corporation. Our sole consumer for traction purposes is the Calcutta Tramways Company Ltd., whose demands are not likely to show any appreciable increase.

The West Bengal State Electricity Board, which distributes entirely outside the Company's licensed area, takes 95 per cent of our Bulk Supplies. The large increase was almost entirely for that Board whose demands will continue to expand. Most of the sales under Special Contracts were at our special tariff to owners of large office and residential buildings, public institutions, cinemas and hotels. Demand from such consumers was little changed and is not likely to show much increase in the near future.

Revenue Account

The Revenue Account shows that gross revenue from the sale of current at £10,494,687 was just short of £700,000 more than last year—an increase of 7 per cent. This compares with percentage increases of 11 per cent in 1960-61 and 8.9 per cent in 1959-60 and reflects the effect of load shedding on our power sales, already mentioned. On the other hand, Revenue Expenditure has increased by about £1,120,000 owing for the most part to an increase of some £870,000 in the cost of power imported from the Damodar Valley Corporation. It must be realised that the price paid for bulk supplies necessarily includes interest and depreciation charges whereas such charges are not included in our own operating expenditure, being shown separately in the Accounts. The large increase in the import from the Damodar Valley Corporation has thus resulted in a disproportionate increase in our total operating expenditure.

Cost of Generation, Transmission and Distribution is about £190,000 up on last year, despite a saving of about £75,000 in the cost of coal, brought about by the breakdowns at New Cossipore, as a result of which the output of our generating stations, at 1,666 million units generated, was some 177 million units less than in 1960-61. This net increase can be attributed, for the most part, to increased salaries and wages arising out of a general revision of scales of pay which came into effect from 1st September, 1961. In 1960-61 our purchases from the Damodar Valley Corporation totalled 390.4 million units at a cost of £1,070,194; in the year under review the figures were 664.9 million units and £1,940,775. Administration and General Establishment Charges increased by about £60,000, due again, for the most part, to higher salaries and wages.

I deal now with the Net Revenue Account. Despite the uninterrupted increase in sales, the Company's rates have in recent years produced insufficient revenue to meet the increasing costs and, in addition, to earn the full Reasonable Return to which we are entitled by statute; the shortfall has been made good by transfers from reserves accumulated in the past specifically for this purpose. As is explained in the Directors' Report, the shortfall in revenue this year was £515,618 which has been reduced to £327,802 by the transfer of the balance remaining in the Tariffs and Dividends Control Reserve, namely £187,816. These reserves being now exhausted, we have, in the future, to look to current revenues to earn our Reasonable Return. We are hopeful that our recently revised rates, which I refer to below, will have this result. The Indian tax charge at £945,310 for the year is some £220,000 less than last year, due of course to the fact that, for the reasons referred to above, the balance on the Revenue Account at the end of the year was some £458,000 less than last year. This tax charge does not take into account certain demands we have received from the Indian taxation authorities, which we are contesting, and which are referred to more specifically in the notes on page 10 of the directors' report. After providing for Debenture Interest and making the other usual appropriations, including the transfer of £300,000 to Special Appropriations for Plant Expansion, Replacements and Contingencies and providing for dividends on the same scale as last year, the balance on Net Revenue Account, including £124,585 brought in, amounts to £100,524.

Balance Sheet

The Balance Sheet shows a decline in our holding of Treasury Bills of some £400,000 as compared with last year. This represents funds used in London for the purchase of plant exported to India and for the payment of Sterling Debenture Interest, Dividends, etc. Apart from the normal expansion of the transmission and distribution system which involves capital expenditure averaging £1¼ million per annum paid, for the most part, from depreciation monies and other sources of internal finance, the extension to our New Cossipore Generating Station is estimated to cost £3½ million. To the extent by which our liquid resources are insufficient to meet the cost of this plant, when this would normally be payable, it will be met by finance specially arranged with our Bankers in India and by deferred payments which have been negotiated with certain British manufacturers. Capital Expenditure during the year amounted to approximately £1.4 million of which about £225,000 was on account of the extension at New Cossipore.

Revision of Rates

I have referred above to the recent revision of our rates which, because of the increasing cost of imported power and of rising taxation, could no longer be delayed. Despite the continual rise in all costs since the war, our existing rates for lights and fans and for domestic power have remained unaltered for over fifteen years and other rates have altered only to the extent necessary to reflect the greatly enhanced cost of coal. In fact, our rate for high voltage industrial power was, for energy supplied from coal-fired plant, almost the lowest in the world for which statistics are available. We have endeavoured to revise our rates on the general principle that each class of consumption should bear its proper share of the cost of production and distribution. For many years now our industrial high voltage consumers have not provided an adequate share of our overall cost and so our first call has fallen on this class of consumer whose rates have been increased by about 17½ per cent on average. For the present, our other very important rate, that for lights and fans, will remain unchanged, as will also the rate for the smaller low voltage power users. The rate for the larger low voltage power users has, however, been increased by about 17½ per cent on average and our rate B (high voltage energy for domestic and commercial supplies) by about 13½ per cent. In addition meter rents have been increased. It was also our intention to increase the rates for low voltage domestic power and for distributing licensees, but at the express request of the State Electricity Board we have agreed to forgo, for the time being, the increase contemplated in these two rates. We have, however, the right to review the position.

Although the impact of the charge for Indian taxation is not always predictable year by year, we hope that this revision of rates, which came into effect from the beginning of May, this year, will result, in a full year, in more nearly equating our Clear Profit with our Reasonable Return than has been the case in the recent past. Whether it does so or not will depend also largely on the cost of imported power. If the State Board from whom, as from a year hence, we shall be importing power on an increasing scale, is able to let us have this power at a basic price, comparable to that now charged by the Damodar Valley Corporation, then our present cost structure will not be radically disturbed—otherwise a further increase in rates in 1965 when the State Board supply is expected to be fully available, may be necessary.

Visits to Calcutta

During the year Mr. Macpherson and Sir Owain Jenkins visited Calcutta where they had the great benefit of discussions with the Chief Minister, the Chairmen of the State Electricity Board and the Damodar Valley Corporation, officers of the Government of West Bengal and leaders in commerce and industry in Calcutta. They inspected all sections of our organisation and were satisfied that all was being conducted with efficiency and economy. Despite the anxious period through which we have passed and are still passing, because the power shortage still persists, the prestige of the Company in the City remains high—a tribute to the efficiency and devotion with which the Company's affairs are conducted by our Staff in India who have the great responsibility entrusted to them of running this important public service.

Our thanks are again due to the Electricity Council, the Area Boards and the various manufacturing companies who have provided facilities in this country for the post-graduate training of young Indian Engineers under our Technical Training Scheme. This scheme was introduced shortly after the war and has been a great success. It gives me much satisfaction to record that some of our earlier trainees are now holding responsible positions with our undertaking in Calcutta.

Tribute to Staff and Employees

In conclusion I would remind shareholders of the debt we owe to our Staff and Employees in Calcutta. It is difficult for anyone who was not in Calcutta at the time to appreciate the difficulties with which the breakdowns of our plant at New Cossipore confronted them—difficulties which, because of the continuing power shortage, still persist. It gives me the utmost satisfaction to report that, ably led by our Agent in Calcutta, Dr. Bowker, by our Chief Engineer, Mr. Kanga, and by our Commercial Manager, Mr. Pugh, the staff proved equal to the severe calls that were made on them. Mr. Pugh has since retired after nearly 26 years with the Company in India, the last 10 in the important position of Commercial Manager. We wish him many happy years of retirement. I also wish to record the Board's appreciation of the able manner in which Mr. Colley has discharged his responsible duties as Secretary.

The report and accounts were unanimously adopted and an alteration to the Articles of Association was approved.

Note.—*The above statement is not a report of the proceedings of the Annual General Meeting referred to.*

49 years ... not even a scratch

The rate of industrial accidents in India has increased from about 24 per thousand workers in 1938 to about 44 in 1959. Every year, over 93,000 workers are involved in accidents and 250 lives are lost. Also wasted annually are a million man-hours—enough to produce 170 broad guage locomotives or 700 coaches for the Indian Railways.

Safety has always been Tata Steel's watchword as efficiency is hardly possible without it. 'No-accident month' as an annual feature, safety exhibitions, training in safety, safety awards, safer working conditions, a continuing campaign under the direction of joint councils to turn safety into a habit... these are some of the means adopted in Jamshedpur to prevent accidents in the Plant.

Safety, however, depends largely on the worker himself because about 75 per cent of industrial accidents are found to be caused by human negligence. This is where men like Jamuna Dube, the oldest employee in Tata Steel, come in. He has worked for 49 years without ever sustaining an injury, not even a scratch.

The importance of safety was one of the first things that Jamshedpur taught Dube when he arrived in the Steel City half-a-century ago ... a city where industry is not merely a source of livelihood but a way of life.

WEST EUROPEAN COAL AND STEEL INDUSTRIES

SURVEY OF INVESTMENT AND PRODUCTION TRENDS

FOR the tenth year in succession, the High Authority of the European Coal and Steel Community (consisting of France, Italy, Federal Republic of Germany, Belgium, the Netherlands and Luxembourg) has conducted a survey of past and future investment in coal mining, iron ore mining and steel plants and its foreseeable effects on production potential. This survey, relating to the period from 1954 to the close of 1961, covers all but a few very small enterprises accounting, among them, for less than 0.7 per cent of the Community's total coal production and less than 1.8 per cent of its total steel production. For all practical purposes, therefore, the survey may be taken to have covered the coal and steel industries in their entirety. An idea of the magnitude of capital expenditure incurred by these industries during the eight-year period can be had from the relevant agreegates emerging from the survey.

The aggregate investment, in the period 1954-61, for instance, has come to $9,100 million, representing an annual average of $1,140 million. The iron and steel industry has accounted for 59 per cent of this investment, the coal industry for 37 per cent, and iron-ore mining for 4 per cent. But the consolidated figure of $9,100 million masks the uneven or declining trend of investment in the coal industry, the relevant figures for the end-years being $445 million (1954) and $378 million (1961). Investment in iron-ore mining, on the other hand, has increased from $30 million in 1954 to $49 million in 1961. The most spectacular increase in investment, however, has taken place in the iron and steel industry, the relevant end-year figures being $453 million (1954) and $1,122 million (1961). It is also significant that investment in the iron and steel industry has registered a steep increase from $775 million in 1960 to $1,122 million in 1961. What is even more significant is the continuing high level of investment in this industry, the estimated figures for 1962 and 1963 being $1,500 million and $1,092 million, respectively. This trend in the iron and steel industry is in striking contrast to that in the coal industry with its estimated capital expenditure of $439 million and $373 million in 1962 and 1963, respectively.

Actual Production

Thanks to the high level of investment upto 1961 in the iron and steel industry, high rates of increase have been maintained in actual production of pig iron and steel. The coal industry's actual production, on the other hand, has declined partly on account of the closure of pits. The following figures given in the survey report are relevant:

Product	Actual production		
	1952 (Million tonnes)	Mean annual rate of increase (Per cent.)	1961 (Million tonnes)
Hard coal	237.4	—0.4	228.9
Coke	16.5	—1.6	14.4
Iron ore	65.3	+4.4	95.9
Pig iron	34.7	+5.2	54.6
Crude steel	41.8	+6.4	73.2

What the current (1961) and future (1965) production potentials of the aforesaid industries, with their continuing capital expenditures, are, may be seen from the following figures:

	Production potential		
	1961 (Million tonnes)	Mean annual rate of increase (Per cent)	1965 (Million tonnes)
Hard coal	246.8	+0.1	248.0
Coke	14.4	—0.7	14.0
Iron ore	104.5	+2.5	115.4
Pig iron	60.1	+6.8	78.1
Crude steel	79.9	+5.5	98.9

It will be noted from the above figures that there will be a negligible increase in the production potential of coal industry over the next five years, whereas the iron and steel industry will register fairly high rates of increase in this respect.

Another interesting result of the survey pertains to the relation between actual production and production potential in the different industries. The relevant figures, given below, show that actual production is well below capacity.

	Actual production as per cent of production potential	
	1955	1961
Hard coal	94.9	92.7
Coke	93.2	85.3
Iron ore	95.4	91.7
Pig iron	96.3	90.9
Crude steel	95.8	91.7

It will be seen from the above figures that utilisation of production capacity in all the industries is considerably less at the present time than in 1955.

Coal Production Potential

Other interesting findings of the survey relate to the future. As far as coal industry is concerned, the production potential of 248 million tonnes in 1965 may be set against the Community's 1961 consumption of 247 million tonnes, of which 97.5 million tonnes was the share of coking plants and 44.5 million tonnes of power stations. The report's finding, in this connection, is that consumption outlets for coal are becoming more and more concentrated on electricity generation and iron and steel industry. It is estimated that coal's share (65 million tonnes) in the *production of thermal current* in 1965 will be about 60 per cent, with that production increased to about 270,000 million kw.h. The maximum production of the *coking plants* in 1965, given 96 per cent utilisation of their aggregate production potential, is estimated at about 85 million tonnes, representing an input of about 111 million tonnes of coking coal. It is unlikely, according to the survey, that demand from coke consumers *other than* the blast furnaces and sintering plants will go above its 1961 level of approximately 24 million tonnes. This would leave about 61 million tonnes available for the iron and steel industry. In the *iron ore mines*, extraction potential in 1965 is unlikely to amount to much more than 115 million tonnes.

In the iron and steel industry, the year 1965 should, given 96 per cent utilisation of capacity, see a maximum production of about 75 million tonnes of pig iron. Given a utilisation rate of 96 per cent, maximum production of steel in 1965 is expected to work out at 95 million tonnes, which squares very neatly with the estimated maximum demand of 94 million tonnes. The breakdown of potential, *by production processes*, is reckoned at 36 per cent for basic Bessemer, 31 per cent for open-hearth, 11 per cent for electric furnace and 22 per cent of oxygen steel. In the *rolling mill* sector, which accounts for close on half the capital expenditure of the iron and steel industry, the maximum-production estimates, it is noteworthy, nicely cover the requirements forecast in the *General Objectives for* 1965. Given 96 per cent utilisation of potential, the output of sections will be 37.4 million tonnes (including 8.3 million tonnes of wire rod), finished flat products 33.0 million tonnes and wire strip 20.3 million tonnes.

SMALL CAR WITH ALUMINIUM ENGINE

Thanks to research carried out by the Birmingham Aluminium Company on behalf of the Reliant Company controlled by Gwent and West of England Enterprises, an all-aluminium engine is to figure on a new small car, the *Reliant Regal* 3/25 *3-wheeler*. It is claimed, in this connection, that techniques for the low-pressure die casting of an aluminium cylinder head have been perfected. The proved advantages of these techniques are that material waste is cut, machining reduced to a minimum and extremely fine tolerances made possible through the elimination of the porosity usually associated with aluminium.

The new engine and gearbox unit used in this 4-seat saloon is a 4-cylinder 600 c.c engine with overhead valves and removable wet cylinder liners in cast iron and developing 24.2 b.h.p. There is a four-speed gearbox. A top speed of over 70 m.p.h. is claimed, with fuel consumption of 65 m.p.g.

The chassis, welded from steel tubes, carries a glass fibre two-door body. The controls are as on a conventional four-wheel car and the Reliant's appearance, with modern "squared-off" lines, is also similar but for the single front wheel. Windscreen washers are standard and a heater and radio are offered as extras. Provision is made for spare wheel in the luggage boot although the wheel itself is an optional extra.

The price, £450 including tax, is £8 more than that of the preceding model. Road tax on a three-wheeler is £6 a year. A van version of the Regal 3/25 is also introduced, with a virtually identical specification to the saloon except for the utility body work. It is priced at £356.

BRITISH COMPANY DESIGNS STANDARD SHIPS

In a breakaway from the traditional shipbuilding practice of building to customers' orders, the British shipbuilders, Camell Laird, have designed six standard vessels to meet general shipping requirements. The aim is to cut manufacturing and marketing costs and still retain a world-wide reputation for reliability.

The standard range consists of motor cargo vessel, 3,150 to 4,000 tons deadweight; motor cargo vessel, 8,500 to 9,500 tons deadweight; motor cargo vessel, 10,500 to 12,500 tons deadweight; diesel bulk carrier, 23,000 tons deadweight; diesel bulk carrier, 56,000 tons deadweight; diesel oil tanker 57,400 tons deadweight.

The prices of the standard ships would be substantially less than those for comparable non-standard ships. If orders were placed fairly quickly, the company, according to its Chairman, would be ready to offer shipowners an even more attractive price. The Company has a specialised commercial department which can not only arrange credit but also, in co-operation with London merchant bankers, arrange barter deals—a facility regarded as especially valuable to developing countries short of currency. In these deals part-payment could be made in commodities.

U.K. GOVERNMENT'S PLEDGE TO SHIPPING

The British shipowners, according to the President of the U.K. Chamber of Shipping, when he spoke recently at the annual dinner of the Chamber, had been seeking to "get some sense into the business of international shipping." But there was a limit, he said, to the extent that they could expect to hold their own against the practices adopted by an increasing number of countries in supporting the building and operation of unnecessary ships. A categorical assurance was given by Mr. R. A. Butler, First Secretary of State, at the dinner meeting that no British Government could ignore serious threats to so vital an industry as shipping, in which enormous quantities of capital had been invested. He went a step further and gave the pledge that the U.K. Government would not allow the interests of commerce of any country to take precedence over the interests of the commerce of the U.K. Mr. Butler also expressed the firm opinion that self-regulation through the Conference system alone would be in the best interests of world shipping and trade.

NUCLEAR POWER STATION IN WEST GERMANY

The first full-size nuclear power station of the Federal Republic of Germany is to be built on the Danube with a gross output capacity of 250,000 kw. The U.S. General Electric Co. and two German concerns will be associated with its construction. It is reported that all preparations have already been made for starting on-site construction work this month. This new station will be equipped with a boiling water reactor just like the Kahl Atomic Power Station near Frankfurt/Main, which has already sent out more than 80 million kw.h. to the grid system.

WORLD AIRLINES PROPOSE FARE INCREASES

As a result of talks held during the last few weeks by the airline-members of the International Air Transport Association, small increases in many return air fares throughout the world will become effective for two years from April 1963, subject to Government approval. The increases will be achieved by reducing the normal discount on a round-trip fare from 10 per cent to 5 per cent. On the other hand, the airlines have voted to spread new low group fares, already introduced on the North Atlantic, round the world, and to provide a wide variety of other new discounts to help develop and expand tourism.

NEW PRODUCTS AND PROCESSES

Aluminium Blankets for Covering Oil Tanks

LOSSES from evaporation have long plagued the petroleum industry. It has been estimated that 3 per cent of crude production can disappear into the air before the gasoline made from it is used. In recent years it has been proved that "blankets" floating on the petroleum in storage tanks have cut vaporisation loss by 80 to 95 per cent. Original blankets made of plastic deteriorated rapidly and contaminated the oil. Now an aluminium deck, developed by Laroche Bouvier & Cie. of France is being marketed internationally. Known as Aludeck, hundreds of these aluminium blankets are in use in France and many other countries. They are tailored to fit the designated tank and move up and down on the surface of the oil. Buoyancy is provided by roll-welded floats. Encircling the deck is a light reinforcing angle and a Z-shaped edge seal of glass fibre coated with polyester resin to provide gas tightness. Self-supporting posts beneath the deck keep it above the intake pipe when the oil level drops. As they provide a conductor to lead electric charges away, the metal blankets lessen the risk of fires and their construction makes extinguishing easier. The decks can be installed in existing tanks easily and quickly with low labour costs. A similar type of aluminium vapour conservation blanket built for the Shell Oil Company of South Africa at Durban uses 6-in. aluminium tubing as a framework and to provide flotation.

Glass-filled Nylon

A new material to bridge the gap between plastics and metals has been developed by the plastics division of Imperial Chemical Industries. It is a glass-filled nylon, coded Maranyl A190, which does not have the disadvantages of the comparatively high thermal expansion and low rigidity of other plastics materials. Glass-filled nylon is based on type 66 nylon, the strongest and most rigid of the nylon types available; the glass strands are fully dispersed in the nylon, thus ensuring mouldings of uniform appearance and reproducible properties. The incorporation of glass fibre into nylon improves many of the mechanical and thermal properties, for example, the rigidity of mouldings made from Maranyl A190 is more than twice that of similar mouldings made from unfilled type 66 nylon, and yet the impact strength of A190 is similar. Maranyl A190 can be satisfactorily dry-coloured by tumbling with the appropriate pigments, and mouldings are perfectly uniform in colour as there are no visible bundles of glass strands. The properties of Maranyl A190 make it particularly suitable for the replacement of metal parts, and also for use in conjunction with metals where the difference in expansion between metal and glass filled nylon does not present a problem. Some examples of possible applications are: housings for electrical equipment, handles, hinges, rollers and replacements for metal die-castings.

Electronic Seed-sorter

A new machine produced by a British firm, R. W. Gunson (Seeds) Ltd., specialising in electronic colour sorting of seeds is claimed to be twice as fast as any in their range with only as light increase in size. The machine provides accurate sorting of peas, garden beans, coffee beans and other commodities of similar size. It lies on a highly sensitive photo-electric system which activate a rejection system for unwanted articles. Seeds are fed from a hopper to a moving belt on which they are automatically assembled in single file, and are then "scanned" from four sides against a background of standard colours. If any seed varies from standard by more than a pre-set amount, the change in illumination activates an electro-magnetically controlled air valve which deflects the seed into a separate outlet. The good or accepted seeds continue their fall into an adjoining outlet. Because of the facilities for colour analysis which the system provides the machines detect very slight colour variations in otherwise perfect seeds.

Lubricating Die Faces

An automatic lubricator developed by Foundry and Metallurgical Equipment Company, of Netherby, Surrey, England, is claimed to ensure accurate and consistent lubrication of die faces by applying pre-set amounts of lubricant from spray nozzles mounted on the die platens. Lubrication is initiated by a control valve which can be fixed on the die casting machine in such a position that it is operated at the right moment by a moving part of the machine. Operation of the control valve opens an air-blast valve within the lubricator unit to provide air to operate injector pumps. These pumps force a metered quantity of lubricant into the spray nozzles where it is mixed with an air-blast which sprays it on to the die faces. At the end of a pre-set time the blast ceases automatically and the pumps recharge in a few seconds ready for the next operation. The lubricator can be arranged to feed from two to eight spray nozzles which are supplied complete with mounting blocks for fixing in suitable positions around the die platen. The nozzles are made of copper and chromium plated, and can be adjusted by hand to alter the direction of the spray.

Electroplating Thin Wire

There has always been difficulty when plating thin wire, such as copper wire with a diameter of 0.001 of an inch, in maintaining uniformity in the composition of the electrolyte and attaining an even thickness in the plating. Ultra Electronics, of Western Avenue, London, W.3., is reported to have put an end to this situation with a process which uses a small lathe with driven pin chucks holding the wire to be plated at each end and maintaining it in a state of tension. While it is being rotated, the wire is sprayed with an electrolyte, from a nozzle or jet, kept at a suitable electric potential which is different from that of the wire. The jet is made of glass with the anode inside. The electrolyte is run or pumped from a reservoir through the moving jet on to the rotating wire, with a voltage applied between the jet anode and the wire. It is claimed that by this means fast plating can be achieved and that because the electrolyte composition is always kept constant and is continually being replaced the thickness of the coating is kept event at all times.

Multidose Jet Injector

In the world of modern medicine, the use of needles for injections has become widespread. Equally widespread is the aversion of the average human being to having himself punctured by a needle. A part of this problem appears to have been solved by the Scientific Equipment Manufacturing Corporation of New York, currently marketing a Multidose Jet Injector, used for such things as vaccines and immunizing agents not needing to be injected into a vein. Made of aluminium, the unit works on the high-pressure principle to penetrate the skin and inject the medication to the required depth. Because of its low weight, it can be worked at great speed, making it possible for one operator to treat as many as 1,400 persons in one hour.

Anti-vibration Mounting Unit for Freight Rolling-stocks

Of considerable interest to railway administrations building freight rolling stock is the B.T.R. 120-3004 anti-vibration mounting unit which combines maximum strength with minimum weight. Weighing only 40 lb. (18 kg.), it has a loading range of 1,500 to 3,500 lb. (680 to 1,588 kg.). As the measure of deflection obtainable on these units is considerable, any bending or twisting occurring in the chassis is not transferred to the tank, and a light-weight vessel can be used. A device relieves sheer stress on the bolts and strain on the chassis members. Major advantages of the unit are: ready absorption of shock-loads; good stability; long service life; and elimination of maintenance.

Preservative for Mackerel

Propionic acid at a concentration level of four cent has been suggested as an effective chemical preservative for salted and dried mackerel. Mould growth and reddening can be brought under control even up to 62 weeks in the treated samples, as against a normal shelf life of 15-20 weeks in the untreated controls, according to research work carried out at the Central Institute of Fisheries Technology, Ernakulam. Reddening caused by halophilic bacteria and growth of moulds, popularly known as "dun," constitute the main types of spoilage in fish, particularly under tropical conditions. Reddish discoloration has been noticed in 2-3 months in Indian commercial fish samples. Although several preservative chemicals like sodium acid phosphate, sodium benzoate, boric acid, etc. have been recommended, none of them are found to be really satisfactory and even sorbic acid, considered by Canadian workers as the most effective fungistat for cured fish was found to be inactive under Indian conditions. On the other hand, promising results have been obtained by using propionic acid as chemical preservative especially in the case of wet salted and pickled fish. Further investigations on the use of propionic acid in the dry salting of mackerel have been reported which yield equally encouraging results with a modified procedure. Results of these studies reveal that salted and dried mackerel could be preserved for over one year without any microbial attack.

Cigarette Vendor

The "Slim Jim," a single-column cigarette vendor with a packet-stacking method which has been specifically designed by British Automatic Company Ltd., London, for installation in the corridor of a railway carriage, is 3ft. high, 9in. wide, and 1¾in. deep (91 cm. by 23 cm. by 44.4 mm.) and can hold 14 packets of 10 cigarettes. With a collapsible handle on one side, the machine is easily portable. It is locked in position on a steel plate attached to the corridor wall.

Use of Assam Tea Waste

Investigations at the Regional Research Laboratory at Jorhat in Assam have shown the possibility of recovering 95 per cent of the caffeine from the alkaline tea cutch by extraction with ammoniacal chloroform. Tea waste containing 3-4 per cent caffeine and 6-7 per cent tannin is accumulating to an extent of 9 million pounds annually in Assam and its utilisation is of considerable economic interest. Also the residual alkaline cutch could possibly be utilised as a drilling additive with certain types of muds in the petroleum industry. Acacia cutch used at present in the Assam oil drilling operations is costly and has to be procured from outside the State.

"Helipod"—A Fly-it-yourself Plane

Yet another solution to traffic jams is offered to battle-weary citizens. This time it's the "Helipod," a single-seater, fly-it-yourself "vertical take-off and landing, shielded rotating wing biplane." Unlike a helicopter, the helipod rises and descends by virtue of six shielded wings which, combined with an engine of only moderate power, enable it to use only about the same amount of gas and oil as an automobile. If its engine fails, the helipod is still safe because its wings adjust to a slow rotation so that the craft lands gently. If it lands on water, its light aluminium and glass fibre structure combined with foam plastics will keep it afloat.

For Faster, Economical Materials Handling

YALE

WAREHOUSER STRADDLE TRUCK

Modernise and speed up your materials handling jobs with Yale Warehouser Straddle Trucks. Incorporating the latest engineering and design advances, these compact, easily manoeuvrable and robust Yale trucks assure safety, speed and efficiency in all materials handling operations around the factory, workshop, warehouse or railshed.

VOLTAS, Sole Distributors for the complete line of YALE Industrial Lift Trucks and Hoists, will be glad to offer expert advice on your materials handling problems.

VOL. 753A EVEREST

EMPLOYMENT IN INSURANCE BUSINESS

L.I.C. PROVIDES JOBS FOR 16,176 PERSONS IN FIVE YEARS

IN spite of the significant advances made in the collection, compilation and organisation of statistics during the first and second Plan periods, many vital gaps still exist in regard to data relating to important sectors of the economy. It is true that planning, by its very nature and the processes it entails, automatically leads to better organisation of available information and data. But planning also raises new problems in the solution of which field investigations, analytical enquiries and research are effective aids. The Central Statistical Organisation (C.S.O.) has been assiduously engaged in filling up the existing gaps in Indian statistics. It has, through its investigations and analyses, shed much light on certain dimly-lit sectors of the economy and has interpreted, in statistical terms, certain crucial problems. One field which has been illuminated by the C.S.O. is employment position in insurance, both life and non-life.

The C.S.O.'s estimate of employment position in insurance during the year 1960-61 is published in a recent issue of the *Monthly Abstract of Statistics*. It brings up-to-date the earlier C.S.O. estimate in respect of the years 1958-59 and 1959-60. According to the information submitted to the C.S.O., the Life Insurance Corporation of India had, on its payroll, 40,244 employees in India on 31st December 1960, as compared with 37,341 on 31st March 1960, an increase of 6.9 per cent during the nine-month period. The number of employees was 27,672 on 1st January 1957 and 37,341 on 31st December 1959. According to the annual report of the Life Insurance Corporation of India for the year ended 31st December 1961, the number of employees on the Corporation's payroll as on 31st December 1961 was 43,848. It will thus be seen that, during the five-year period January 1957 to December 1961, covering the post-nationalisation period, the number of employees increased from 27,672 to 43,848, an increase of 16,176 or 58.4 per cent.

The following table gives an occupational classification of L.I.C. employees as on 31st December 1961, with comparisons for 1960, 1959 and 1957.

(As at the end of December)

	1961	1960	1959	1957*
Class I Officers	2,162	1,852	1,479	903
Field Officers	7,128	5,808	5,188	5,000
Clerical and Supervisory ..	28,625	26,706	24,652	16,100
Subordinate Staff	5,933	5,878	6,022	4,709
Total ..	43,848	40,244	37,341	27,672

* At the beginning of January.

A breakdown of employees as on 31st December 1960, according to salary range, shows that the largest concentration is in the group Rs. 51 to Rs. 100 which accounted for 36.2 per cent of the total number of employees. The majority of employees, however, draw a salary of more than Rs. 100 per month. Persons drawing more than Rs. 300 per month form 9.1 per cent while those drawing a salary of over Rs. 1,000 form only 0.3 per cent.

Employment in General Insurance

Non-life or general insurance provides employment to only less than half the number employed by the Life Insurance Corporation of India. Employment in general insurance business has been worked out by the C.S.O. thus: Of the 126 companies, which submitted returns of employment as on 31st March 1961, 114 had also submitted returns as on 31st March 1960. In this identical set of 114 companies the number of persons employed increased from 11,015 on 31st March 1960 to 11,698 on 31st March 1961, an increase of 6.2 per cent. But 11 companies went out of business in 1960 and of these only one company reported employment as on 31st March 1960. Total employment in these 11 companies is estimated by taking into account the proportion of the net premium receipts of these companies, which constitute 0.7 per cent of the total net premium receipts of all companies. Deducting the estimated employment of the 11 companies from the estimate for the 176 companies actually in operation at the end of 1959 and applying to the residual, the 6.2 per cent increase in employment observed in the case of 114 identical companies, employment in the 165 companies doing general insurance business in 1960 is estimated at 17,590 as on 31st March 1961. After making *pro rata* adjustment in respect of one company licensed during 1960, employment in non-life business in 166 companies is estimated at 17,700 as on 31st March 1961.

The following table gives an occupational classification of employment in non-life business:

Category	March 1961 (126 companies) No.	March 1961 (126 companies) Per-centage	March 1960 (128 companies) No.	March 1960 (128 companies) Per-centage
Officers	1,191	10.0	1,279	11.0
Field staff (salaried) ..	2,362	19.9	2,126	18.3
Professional and technical staff other than officers ..	82	0.7	186	1.6
Clerical and supervisory staff ..	6,265	52.7	6,077	52.4
Attendants, Peons etc. ..	1,591	13.4	1,792	15.5
Building staff	40	0.3	48	0.4
Others	355	3.0	93	0.8
Total ..	11,886	100.0	11,595	100.0

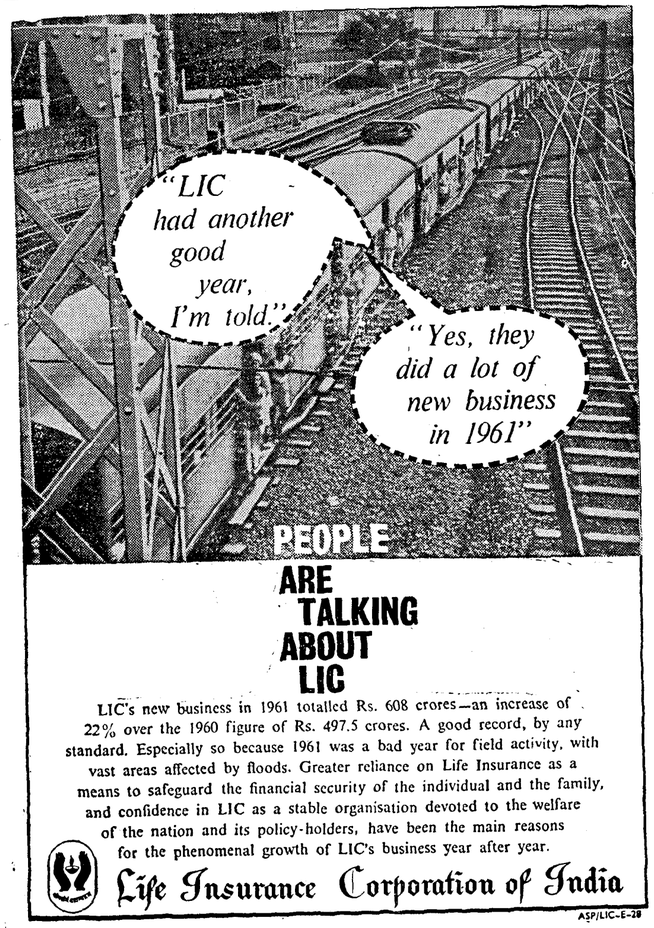
It is evident from the above table that the pattern of employment in non-life business was more or less the same in 1961 as in 1960. A little more than half the number of employees in non-life business, 52.7 per cent, to be precise, are in the clerical and supervisory category, as compared with about two-thirds in the Life Insurance Corporation. The percentage of officers, excluding field officers, in non-life business, is, however, more than double the number in life insurance. Thus, officers comprise 10 per cent of the total employees in general insurance companies, while they account for only 4.6 per cent of employees in the Life Insurance Corporation of India. General insurance companies also employ a higher percentage of field staff than the L.I.C. This is, perhaps, due to the fact that general insurance is a competitive business, while life insurance is a monopoly of the L.I.C.

The employment position in the field of insurance as a whole may now be summed up. Life and non-life sections of insurance taken together provided employment to about 58,000 people in 1960-61, of which the L.I.C. accounted for 40,200 and general insurance companies for 17,700. This compares with 54,300 persons employed in 1959-60 (37,600 in life and 16,700 in non-life) and 51,100 in 1958-59 (34,900 in life and 16,200 in non-life). These figures exclude the number of insurance agents. Total number of licences issued to general insurance agents in force at the end of 1961 was 260,050. The number of licensed agents of the Life Insurance Corporation of India was 155,890 as on 31st December 1961, as against 139,821 as on 31st December 1960. Of this, however, only 125,000 agents were active.

COLLECTIVE AGREEMENTS

Wages and conditions of employment of industrial workers in India are regulated by a combination of legislative enactments and voluntary collective agreements. That the rapid proliferation of labour laws has not diminished the importance of voluntary agreements is the conclusion of a monograph entitled *Collective Agreements—A Study* published by the Employers' Federation of India (Army and Navy Building, 148, Mahatma Gandhi Road, Bombay 1). Three reasons have been ascribed to the growing importance of collective agreements, especially since 1947. They are: (1) growth of trade unions and employers' organisations, (2) efforts made by the State to encourage collective agreements, and (3) the emergence of a new managerial class. A significant finding of the Study is that collective agreements have a beneficial influence on labour-management relations. But as a factor in the determination of wages and working conditions, the influence of collective agreements is, according to the publication, only marginal. This, it says, is the result partly of the weakness of trade union organisation and largely of the Government's tendency to resort to adjudication without giving full trial to collective bargaining process.

The monograph is based on an analysis of 114 agreements concluded between 1954 and 1961 in establishments in 12 major industry-groups, covering about 450,000 employees.



ARE TALKING ABOUT LIC

LIC's new business in 1961 totalled Rs. 608 crores—an increase of 22% over the 1960 figure of Rs. 497.5 crores. A good record, by any standard. Especially so because 1961 was a bad year for field activity, with vast areas affected by floods. Greater reliance on Life Insurance as a means to safeguard the financial security of the individual and the family, and confidence in LIC as a stable organisation devoted to the welfare of the nation and its policy-holders, have been the main reasons for the phenomenal growth of LIC's business year after year.

Life Insurance Corporation of India

U.K.-E.C.M. NEGOTIATIONS

PROSPECT OF EARLY TRADE AGREEMENT WITH INDIA

IN view of the preoccupation of the Press with the Chinese invasion of India and the Cuban crisis, the latest meeting of the Ministers of the Common Market countries and Britain at Brussels has not received sufficient attention in this country. The meeting was concerned mainly with the proposals for safeguarding the trade of India, Pakistan and Ceylon, when the U.K. becomes a member of the Common Market. An important outcome of the meeting is the willingness of the Six to accept the British proposal that they should open negotiations for comprehensive trade agreements with India, Pakistan and Ceylon immediately on Britain's accession to the Common Market, instead of waiting till 1966, as was originally proposed. The Six, however, have not agreed to the suggestion that the common external tariff should be suspended in the case of imports from the three countries until the comprehensive agreements were finalised. The Common Market countries have also maintained that it would not be possible for them to provide for *nil* tariffs on nine products of importance to these countries.

Thus the Common Market countries have made it clear in no uncertain terms that they are not prepared to make any sizable concessions to safeguard Commonwealth preferences applicable to India and other Asian countries. It is, of course, true that they have agreed to start negotiations with India, Pakistan and Ceylon, soon after the U.K. joins them. Apparently, this is a concession granted to these countries in that under the provisional agreement reached in July last, the negotiations were to be commenced by the end of 1966 the latest. The objective of the proposed comprehensive agreements is, it is said, to develop trade in such a way as to maintain and increase foreign exchange earnings of India, Pakistan and Ceylon. In order to serve this objective, the trade agreements would embrace tariff policy, quota policy, export policy and measures to facilitate the promotion of private investment and the provision of technical assistance.

The Government of India has always welcomed the move for such a trade agreement. Its reaction to the latest proposal for speeding the time-table for it, however, is not available at the time of writing. Although the move for concluding a trade agreement with the Common Market earlier than was intended is a step in the right direction, there is serious doubt in certain quarters whether this arrangement will at all benefit India to any significant extent. They feel that, if India waits for a longer period, it may be able to get better terms, as, by that time, Britain's influence over the Common Market will be better than it would be immediately after she joins it. This line of reasoning is supported by the present system of voting in the Common Market.

Questionable Presumption

At present, any member has the power of veto to invalidate any decision endorsed by the other members. But this system is eventually to be replaced by unanimity rule which will make such veto ineffective. The presumption of those who argue thus is that, when the provision for veto lapses, Britain will not only support the proposals put forward by India, Pakistan and Ceylon, but also successfully canvas the support of other members. How far such a presumption is correct is open to question. It is not Britain's friendship for this sub-continent that is in doubt but its ability to carry the other members of the Common Market with it. If India is to be successful in expanding its trade to Europe, it is better that it establishes direct contacts with all the members of Common Market and convinces them of the need for providing it with appropriate terms and conditions for selling its goods to them. That will actually strengthen Britain's hands also. Again, now that the other members of the Common Market are not willing to agree to a continuance of the Commonwealth preference by Britain during the interval pending the conclusion of a trade agreement, any prolongation of this interval may have an adverse effect on India's exports to the Continent. The Common Market countries' refusal to accommodate this reasonable request imposes a serious obligation on them to come to a fair arrangement with India and its two Commonwealth neighbours. Failure to do so will seriously affect the latter's balance of payments situation.

Mr. Edward Heath, leader of the British delegation, made it clear to the Six at the meeting that the apprehensions of the Indian and Pakistani Governments were real. He also emphasised the importance to the economy of these countries of goods that "might seem to European countries to be minor items of trade." Mr. Heath also stressed the political necessity of avoiding damage to Indian and Pakistani trade while trade agreements were being negotiated. It is to be hoped that Mr. Heath's plea will not fall on deaf ears.

No Tariff Suspension

It is a matter of no little concern that the Six have decided not to accede to Britain's proposal for suspension of common external tariff during the period of negotiations for the comprehensive trade agreement. According to the Six, such tariff suspensions will upset the balance of the provisional agreement already reached. We are told that they did not however, exclude the possibility that, at the end of the present negotiations for Britain's entry, "some way might be found of improving the trade arrangements for India and Pakistan." They had in mind that it might at that stage be desirable to simplify the "decalage arrangements" (that is, for the gradual application of the common external tariff of the Community) in all the provisional agreements so far reached. In that case, it is said, India and Pakistan would be given "the most favourable possible treatment."

At this stage, it is worthwhile to recall some of the important features of the provisional agreement reached between the U.K. and the Six on the question of trade with India, Pakistan and Ceylon. Under that agreement, tariff on tea would be reduced to *nil* (as against the common external tariff of 18 per cent). In respect of cotton textiles, the common tariff of 18 per cent will be made applicable in four stages. Accordingly, 20 per cent of the external tariff will be imposed on the occasion of the U.K.'s accession to the Community, another 20 per cent eighteen months later, a third step of 30 per cent a year thereafter, and a final step of 30 per cent when the common external tariff applies throughout the community. Provision was also made for restoration of trade in cotton textiles in case there was any setback to it during the period of progressive application of the common tariff, pending the conclusion of the comprehensive trade agreement. It was also agreed that, in the case of most of the other manufactured and processed goods, common tariff will be applied in four stages, 15 per cent of appropriate rate on Britain's accession, another 15 per cent on 1st July 1965, 20 per cent on 1st January 1967, another 20 per cent on 1st July 1968 and the final step on 1st January 1970.

Shellac and Handloom Products

At the time of the July agreement, consideration of nine items of interest to India, Pakistan and Ceylon was postponed. Discussion on these items took place at the latest ministerial meeting. The British suggestion was that *nil* tariffs should be granted for East India kips, heavy duty jute goods (jute bags), carpets, coir mats, castor oil, linseed oil, lemon-grass oil, shellac and handloom products. The Six have not completely agreed to Britain's proposal. But they have agreed, subject to technical arrangements, to provide for *nil* tariffs for shellac, lemon-grass oil and handloom products. They have no objection to grant moderate reduction in tariffs to some of the other products until the completion of the comprehensive trade agreements. Thus, during this period, common external tariff on East India kips will be reduced from 9 to 6 per cent, on new jute bags from 23 to 20 per cent, on used jute bags from 11 to 9 per cent, on hand-knitted carpets from 32 to 28 per cent, on coir mats and matting from 25 to 20 per cent and on castor oil from 8 to 7 per cent. There was no proposal from the Six on linseed oil.

These proposed tariff reductions, though a welcome gesture of the Continental countries to this sub-continent, are very small and disappointing, as Mr. Heath himself aptly remarked. Mr. Heath has offered to submit to the Six a fresh memorandum about British interests in these products with a view to securing better concessions on these products. Further discussions on these products will take place at the next Ministerial meeting due to take place later this month.

SHIPS ON CREDIT

Novel devices are being pressed into service by the world shipping industry to make purchases of ships more and more attractive. An instance in point is the offer of ships on long-term credit by a British shipbuilder, Messrs. Cammel Laird. Under this scheme, a range of standardised ships can be bought from this company on credits for longer than ten years. In certain cases, the Company will retain an operating interest in such ships. The Company's Chairman and Managing Director, Mr. Robert Johnson, unveiled last week a range of six standard ships built to suit the specific requirements of owners. A similar scheme has been evolved by another U.K. shipbuilder, Messrs. Swan Hunter and Wigham Richardson. This news is certainly of more than academic significance to this country, in view of the imperative for an early augmentation of its mercantile marine. In the present context of aggression by China, the Government is more anxious than before to encourage private shipers in this country to acquire more ships, both new ones and second-hand, either on deferred payment or self-paying basis. The latest reports from New Delhi suggest that the Government is in favour of raising further the revised third Plan target of 1.25 million tons.

D.C.M. SUFFERS DUE TO COST INFLATION

P.V.C. PRODUCTION NEXT YEAR

DESPITE a further handsome rise of Rs. 2.63 crores (Rs. 4.10 crores in the previous year) to Rs. 38.52 crores in its sale proceeds during the year ended 30th June 1962, the Delhi Cloth and General Mills Company Ltd. (Managing Agents: Messrs. Bharat Ram Charat Ram (Private) Ltd., Delhi) has suffered a set-back in gross profit from Rs. 433.30 lakhs to Rs. 426.82 lakhs due to increase in the cost of materials, higher wage bill and other expenses and a heavier burden of excise duty, cane cess and royalties. The increase in costs was more pronounced in wages and staff expenses which shot up by Rs. 40 lakhs to Rs. 571.64 lakhs and in other expenses which soared from Rs. 646.63 lakhs to Rs. 720.87 lakhs. Raw material costs went up from Rs. 18.83 crores to Rs. 18.85 crores. The burden of excise duty, cane cess and royalties increased by Rs. 64.77 lakhs to Rs. 343.78 lakhs.

In the light of such considerable increases in costs and other charges, the decline in profit (which is only by Rs. 6.48 lakhs) is understandable and can be overlooked. Likewise, one may ignore the one point drop in the profit-margin (ratio of gross profit to sales) to 11 per cent. However, against the background of the Company's working in the previous year and in recent times, the results for the year under report appear to be rather disappointing. In the previous year, for instance, turnover had expanded by Rs. 4.10 crores to Rs. 35.89 crores, gross profit by Rs. 145.48 lakhs to Rs. 433.30 lakhs and profit-margin by three points to 12 per cent. Way back in 1954-55, turnover declined from Rs. 19.42 crores to 18.87 crores. Since then, it has continued to be upward. Nevertheless, setback in gross profit occurred in 1956-57, when it declined from Rs. 253.28 lakhs to Rs. 227.09 lakhs.

Net profit for the year under report at Rs. 143.97 lakhs is also lower by about Rs. 21 lakhs because of higher essential provisions. Depreciation has claimed Rs. 90.85 lakhs (as against Rs. 77.80 lakhs a year before) and taxation Rs. 174 lakhs (Rs. 171 lakhs). Managing Agents' remuneration has naturally declined from Rs. 20.12 lakhs to Rs. 18 lakhs. Although lower than last year, the net profit is sufficient to cover the ordinary dividend (after paying the preference shareholders) which is unchanged at 13 per cent per annum on the Rs. 25 fully paid shares, to which level it was raised from 12 per cent paid for 1959-60, and also allow a transfer of Rs. 95.30 lakhs to reserves. But the amount of profit thus conserved is Rs. 19.70 lakhs lower than that set apart last year, as will be noted from the progress table below:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sales proceeds	38.52.02	35,88.76	31,78.63	30,08.00

* Transferred to general reserve.
† Subject to deduction of tax.

The Company's export performance of during the year was well maintained, notwithstanding the adverse trading conditions and the downward trend in the industry's total exports. We are told that the working of the silk section, chemical division (including *vanaspati*) and the sugar and distillery factories was satisfactory. An important development last year was the setting up of the nucleus for the chemical plant manufacturing section which is also undertaking fabrication and supply of equipment against outsiders. Two sulphuric acid plants, each of 50-ton capacity, have been designed, fabricated and delivered against such orders. One of them has started operations and is reported to be working very satisfactorily.

Among the new projects, the one for the manufacture of P.V.C. at Kota is said to be progressing according to plan. It is designed to produce 20 tons of P.V.C. daily together with ancillary units of calcium carbide and caustic soda. Machinery and equipment are at site. The caustic soda plant is expected to go into production shortly, while it is proposed to market P.V.C. sometime next year. The Company has another project on hand to set up a 10-ton-a-day capacity plant for the manufacture of high tenacity rayon tyre-cord yarn. A loan of Rs. 4.68 crores (9.8 million dollars) was obtained during the year from the United States Agency for International Development for meeting the foreign exchange requirements of this project. Orders for the imported machinery and equipment have been negotiated. Preliminary erection work has been taken in hand. An American expert, who has been engaged for this project, has arrived in India. While this is the development in the field of diversification, the Company is going ahead with its programmes for renovation and modernisation of its textile and other units. Moreover, a licence for setting up another spinning unit at Hissar with a capacity of 23,000 spindles has been obtained. Plant and machinery have been ordered and production will start early next year.

During the year under review the Company raised fresh equity, as well as loan, capital. It issued Rs. 250 lakhs 6.5 per cent 1972-76 debentures and redeemed Rs. 100 lakhs 5.25 per cent 1962-66 debentures with the consent of debenture-holders. The new debentures are to be redeemed at par in five equal instalments beginning from 15th December 1972, with the option to redeem on 15th December 1972, or at any time before 15th December 1976, the outstanding issue at a premium of ½ per cent by giving six months' prior notice. The Company also issued 400,000 ordinary shares of Rs. 25 each at a premium of Rs. 5 per share and offered them as right shares to the existing shareholders. Of these, 399,731 shares were allotted and are paid up to the extent of Rs. 10, excluding the premium of Rs. 5 which has also been paid. These new shares did not rank for dividend for 1961-62, but will be eligible for dividend from the current year onwards. It will be recalled that the Company was also authorised last year to issue 200,000 redeemable cumulative preference shares of Rs. 25 each at par. This issue is pending.

The paid-up share capital of the Company has, therefore, increased from Rs. 410.76 lakhs to Rs. 450.76 lakhs and is composed of Rs. 379.34 lakhs in ordinary shares, Rs. 69.31 lakhs in preference shares and Rs. 2.11 lakhs being calls paid in advance. As against this, reserves and surplus aggregate Rs. 713.27 lakhs. Following the debenture and equity issues, the Company not only redeemed the old debentures but succeeded in reducing bank borrowings from Rs. 507.19 lakhs to Rs. 180.60 lakhs. Aggregate secured loans amount to Rs. 438.01 lakhs as against Rs. 609.82 lakhs in the previous year. Current liabilities and provisions amount to Rs. 342.02 lakhs. Including bank borrowings, the short-term indebtedness to outsiders comes to Rs. 522.62 lakhs, which has about a threefold cover in current assets, loans and advances which total Rs. 15.33 crores. Investments total Rs. 28.46 lakhs, of which Rs. 25.09 lakhs are quoted and command a market value of Rs. 25.47 lakhs. The gross block, which increased during the year from Rs. 15.69 crores to Rs. 16.41 crores, has been very conservatively written down to Rs. 6.72 crores.

The Rs. 25 fully paid ordinary shares of the Company are currently quoted at Rs. 47 *cum-div.* On the *ex-div.* basis, they offer a yield of 5 per cent per annum, free of tax, which is quite attractive in view of the bright prospects for the Company.

TUBE INVESTMENTS FARE WELL

APPROPRIATION POLICY CONSERVATIVE

THANKS to the well diversified field of its activities and the ever-increasing demand for its principal products, the Tube Investments of India Ltd. (Chairman: Dr. A. Ramaswami Mudaliar, Madras) has fared well during the year ended 31st July 1962, notwithstanding further increases in production costs and such bottlenecks as power cut and shortage of water. Readers will be aware that the Company owns T. I. Cycles of India, Tube Products of India (incorporating cold roll division), Wright Saddles of India and T. I. Metal Sections. Although different, the activities of these four firms are mutually complementary and cover the entire bicycle industry, from spares, componets, tubes and metals to the final product. It is because of this unique advantage of a well-diversified field of activities that the Company has been able to forge ahead, the shortcomings and difficulties in one unit being balanced by better performance by another.

Sale proceeds have improved again from Rs. 573.13 lakhs to Rs. 619.25 lakhs. Gross profit has also gone up from Rs. 140.44 lakhs to Rs. 146.44 lakhs, but the improvement is in no way comparable with the rise of Rs. 53.47 lakhs recorded in 1960-61. The failure of profit to rise in consonance with sales is clearly attributable to sizable increases in costs which are detailed in the following table. For the same reason again, profit-margin (ratio of gross profit to sales) has shrunk to 23.6 per cent from 24.4 per cent to which level it had improved in 1960-61 from 22.9 per cent in 1959-60. The Directors have continued to follow a conservative policy for appropriating profit. At Rs. 37.11 lakhs, depreciation has claimed about Rs. 10 lakhs more than last year. Provision for taxation is slightly lower at Rs. 44.60 lakhs as compared with Rs. 48 lakhs in the previous year. After making these allocations, the net profit amounts to Rs. 64.73 lakhs which is almost the same as in 1960-61. As much as 58.3 per cent (Rs. 37.76 lakhs, to be precise, as against Rs. 30.71 lakhs in the previous year) of this profit has been retained in business, while the return to shareholders has only been maintained at 10 per cent per annum, taxable, on the Rs. 100 fully-paid ordinary shares. Since it became taxable in 1958-59, the return has been unchanged at 10 per cent, though the total amount absorbed by it has increased from 1959-60 onwards, when the 100-rupee 115,400 shares, which until then called and paid-up up to Rs. 25 each, were made fully paid. It may be recalled that the dividend was raised from 6 per cent, tax-free, for 1955-56 to 10 per cent, tax-free in 1956-57 and maintained at that level in 1957-58. As against this, the taxable return for the past four years gives a net return of 7 per cent.

In the table below is mirrored the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st July			
	1962	1961	1960	1959
Sale proceeds	619.25	573.13	379.08	323.82

Low	265.00	256.50	230.00	223.00

† Subject to deduction of tax.

Production of cycles during the year under report maintained its upward trend and reached nearly the target set for the factory. Output of spares and components was, however, below the 1960-61 level, due to inadequacy of raw materials. Exports of bicycles and components, in spite of the best efforts of the Company, were not satisfactory. But efforts to increase them are being continued. A substantial quantity of saddles manufactured during the year was well received in the market. Improved techniques and additional equipment employed by Tube Products resulted during the year in a diversification of production and greatly improved the demand for all the products, but power cuts and strip shortage prevented full utilisation of the installed capacity of the plant and exploitation of all the increased demand. The Directors are hopeful of overcoming the problem of shortage of strip this year, but fear that transport difficulties and other problems may hinder the working of the transformer, boiler and cycle industries. Production in the cold roll mill, including the annealing furnaces, started only in March 1962. The whole plant had remarkably few teething troubles so far. There is, however, the problem of insufficient supplies of rolled strip, although it is expected to improve this year. Progress on the scheme for the manufacture of cold formed metal section is restricted due to delay in the issue of an import licence for plant and machinery.

The subsidiary unit, T. I. Diamond Chain Ltd., has already started production of bicycle chains in the new factory at Ambattur and the preparatory work for the manufacture of industrial chains has been completed. Production of industrial chains will start early next year. Construction of the main lamp factory at T. I. Miller Ltd., another subsidiary of the Company, is well under way and may be completed by December next. Orders for plant and machinery have been placed and production is expected to start around March 1963.

The financial position of the Company is pretty sound. The paid-up capital of Rs. 250 lakhs is backed by reserves and surplus aggregating Rs. 200.57 lakhs. Secured loans, representing bank borrowings, have receded from Rs. 145.72 lakhs to Rs. 101.55 lakhs, but unsecured loan from Tube Investments Ltd. of Birmingham has increased from Rs. 67.59 lakhs to Rs. 93.33 lakhs. Current liabilities and provisions amount to Rs. 141.05 lakhs. Excluding the parent company's loan, the total short-term indebtedness to outsiders works out to Rs. 242.60 lakhs, as against which are available current assets, loans and advances aggregating Rs. 306.26 lakhs and investments of Rs. 42.60 lakhs (Rs. 18.53 lakhs a year before), of which Rs. 2.93 lakhs are quoted and command a market value of Rs. 2.92 lakhs. The gross block, which increased during the year from Rs. 397.55 lakhs to as much as Rs. 533.22 lakhs, has been written down to Rs. 403.45 lakhs. Adding to this capital-work-in-progress amounting to Rs. 34.20 lakhs, one gets a net block of Rs. 437.66 lakhs.

The Rs. 100 fully-paid ordinary shares of the Company are well held and currently quoted at Rs. 269 *cum-div.* On the *ex-div.* basis, they give a net yield of 2.6 per cent per annum

(*Concluded from next column*)

covered by current assets and loans and advances which aggregate Rs. 93.77 lakhs. With the acquisition of some minor assets, the block account has risen to Rs. 81.98 lakhs and on deducting the amount of depreciation of Rs. 44.69 lakhs provided so far, the net block stands at Rs. 37.29 lakhs.

As for the prospects, immediate as well as long-term, the Directors' report says that the supply position of billets has improved to some extent in recent months but production is still restricted by the ceiling imposed by the low Billet Entitlement as at present fixed by the Iron and Steel Controller. Representations have been made to the authorities concerned and all possible steps are being taken to obtain a revision of Billet Entitlement commensurate with the productive capacity of the mills. On the wire mills side, demand for mild steel wire has been on the decline. But the Directors expect that this can be offset by increased production and sale of high tensile steel wire against requirements from Government departments and the private sector. As for the ropery section, demand for steel ropes continues to be satisfactory but it may not be long before the effect of competition from the new licensed units makes itself felt perceptibly. Meanwhile, orders have been placed for balancing plant and most of the essential items are due to be supplied early next year.

The Rs. 10 fully paid ordinary shares of the Company are quoted at present at Rs. 21.37 *cum-div.* On an *ex-div* basis, the net yield works out to about 5.2 per cent.

Messrs. Pandyan Brick Works have been licensed to produce table moulded bricks by mechanised process. The industrial licence provides for an annual capacity of 15 million units. Negotiations for the import of plant and machinery from Czechoslovakia are said to be over. Production is scheduled to commence next year. Pandyan Brick Works, which have been in brick business for a fairly long time, have brick manufacturing kilns at Maduraivayal, seven miles from Madras, which is an ideal location from the point of raw of materials, transport and labour. Production is by manual process.

NATIONAL ROLLING AND STEEL ROPES

PROFIT LOWER—DIVIDEND SAME

COMING after the record performance of the preceding two years, the results of the National Rolling and Steel Ropes Ltd. [Managing Agents: Messrs. Associated Industrial Development Co. (Private) Ltd., Calcutta] for the year ended 30th June 1962 are sure to come as a considerable disappointment to the shareholders. Gross realisation from the sale of products has declined to Rs. 124.13 lakhs from Rs. 137.89 lakhs during the previous year and the gross profit has gone down by about 25 per cent, from Rs. 34.35 lakhs to Rs. 26.05 lakhs, to be precise. The net profit has likewise decreased by Rs. 2.67 lakhs to Rs. 8.98 lakhs and the only comforting feature is that the dividend has not been reduced. At 15 per cent per annum it is the same as that for the previous year which was 2 points better over the dividend for 1959-60.

The reasons for the setback in results are several. The shortage of billets for re-rolling which had acted as a serious deterrent to growth in the Company's production and sales in 1960-61 took a very serious turn during the year under review. In fact, for the entire industry, which has been passing through some anxious times during the past few years, 1961-62 proved to be the worst in its history and individual units had to work at a fraction of their installed capacity. As for the Company, it had to resort to a temporary closure of the rolling mills for a period of about three and a half months while the wire mill and ropery sections had to be worked considerably below their normal capacity. Moreover, production was also affected by the restrictions to, and interruptions in, electric power supply. Though the decrease in output resulted in some saving in the cost of raw materials and stores consumed, expenditure under other heads, particularly salaries, wages and employee benefits, showed an increase, thereby lowering further the already reduced profit-margin. As a combined effect of all these factors—they were all beyond the management's control—the Company had had to be contented with a lower turnover and a lower gross profit for the year under review.

In consonance with the fall in gross profit, the provision for Managing Agents' remuneration has been pruned from Rs. 2.71 lakhs to Rs. 1.99 lakh and so also that for taxation from Rs. 13.00 lakhs to Rs. 11.65 lakhs, despite the rise in the rate of corporate taxation from 45 to 50 per cent. Provision for depreciation has also been lowered by Rs. 3.56 lakhs to Rs. 3.43 lakhs. On making these essential provisions, there is left a net profit of Rs. 8.98 lakhs which is almost the same as that earned back in 1958-59. Naturally, the transfers to various reserves also have been reduced by more than half from Rs. 6.57 lakhs to Rs. 3.01 lakhs. An ordinary dividend at 15 per cent subject to deduction of tax has been proposed and this claims, as during the previous year, Rs. 6.00 lakhs. The carry forward is Rs. 35,985, as against Rs. 39,258 brought in.

The Company's results for the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sale of products	124.13	137.89	139.68	93.41
Other income	5.88	4.25	2.60	1.60
Closing stock	8.07	11.99	9.02	12.26
Excise duty	1.13	..	..	..
Raw materials and stores consumed	75.20	88.71	84.21	60.79
Salaries, wages and benefits ..	15.61	13.62	13.02	10.72
Other expenses	8.10	8.43	7.53	6.94

Market price of ordinary shares in rupees :	1962	1961	1960	1959
High	49.23	39.12	39.50	33.00
Low	21.37	25.50	25.62	23.56

† Subject to deduction of tax.

The Company's financial position continues to be sound. There has been no change during the year under review in the paid-up share capital which stands at Rs. 40.00 lakhs, all in ordinary shares of Rs. 10 each. The reserves have gone up by nearly Rs. 3.00 lakhs to Rs. 40.13 lakhs. Current liabilities and provisions, on the other hand, have declined from Rs. 55.61 lakhs to Rs. 50.96 lakhs and are very adequately

(*Continued in previous column*)

PERSPECTIVES ON SINO-SOVIET FOREIGN TRADE AND AID—I

HIGH PRICES—LOW QUALITY—DELAYED DELIVERY

By Leonard Lalo

LESS than a decade since it started, the Soviet bloc's trade and aid programme with the developing nations of the world is in serious trouble. This is the conclusion of economists who have studied the question and gauged the results in various recipient countries. The difficulties, these experts say, are due primarily to four factors: **(1) high prices, (2)** poor quality, (3) mistakes in planning, and (4) unreliable trade practices. Uneconomical functioning of Communist industry accounts for the fact that products exported to the developing nations are priced considerably above equivalent goods from non-Communist suppliers.

Communist leaders often admit that their industry's labour productivity is lower and other costs of production higher than in the advanced non-Communist countries. These high production costs are reflected in the steep prices of most bloc-manufactured products. The costs, **whenever possible,** are passed along to consumers, domestic as well as foreign. The foreign recipients often find themselves paying more for goods than they would have if they had placed their orders elsewhere. An Indonesian expert, for example, recently estimated that Soviet industrial equipment delivered to his country cost about 80 per cent more than similar Japanese or German merchandise. Czech knitting machines sent to Brazil turned out to be defective as well as overpriced. Their cost —about $600 per unit—was $200 more than for a similar U.S. product.

Experience of Aircraft

A classic case of hidden costs on Soviet-produced aircraft has been reported from a number of countries. Ilyushin-18 transports, "bargain-priced" in initial cost, have turned out to be far more expensive to operate than equivalent planes from other manufacturers. Spare parts for the IL-18 are so high-priced that, in some cases, the cost of stocking those needed has exceeded the value of the plane itself. Additional expensive characteristics of the IL-18 and other Soviet planes are the high rate of fuel consumption and the need for major engine overhauls after 200 hours of flying time, instead of the 1,000 to 1,800 hours possible for comparable models produced elsewhere. Discovery of such hidden costs may well account for the fact that Ghana is currently replacing its Soviet IL-18's with British Viscounts, which are more economical in the long run.

Another persistent problem experienced with products from the Soviet bloc is the comparatively poor quality of many of the goods destined for civilian use. This, again, is a familiar characteristic of Communist output. With industry geared to fill the needs of the military, manufacturing for the consumer is neglected. The populace within the Communist countries has no choice and must take what goods it can get. But foreign recipients, who can compare Soviet bloc products with those of other countries, have been complaining bitterly. Merchants in Baghdad still remember the Soviet sugar which was of such poor quality that it was unsaleable. Egyptians recall the green-coloured bread made of Soviet "wheat"—which, on analysis, turned out to be animal fodder. And no Arab who had the unhappy experience will forget the canned "mutton" from Communist China which was discovered, in fact, to be dog meat.

Even more serious have been the many instances in which equipment and machinery from the Communist countries has broken down. The construction of Egypt's Aswan Dam, for example, has been delayed because of poor Soviet drill bits and inefficient compressors and jack hammers. Automotive equipment supplied to countries with hot climates has often stood up poorly to the heat, according to a number of complaints from Asian and Latin American countries. Windshields on Soviet jeeps sent to Indonesia became so distorted by the heat that it was hard to see through them. Because of a lack of spare parts, Soviet and Czech buses supplied to Argentina became immobilised and useless. An Indian consulting engineer, writing in a Bombay newspaper in April 1962, called attention to the fact that a continuous wire-drawing plant imported from East Germany had either failed to work or had given less than 10 per cent of the promised production. Instead of the expected 15 tons in daily output, the plant could at best produce, he reported, one and one-half to two tons.

Planning Errors

Frequent blunders in planning by Soviet bloc suppliers are, perhaps, the most disappointing feature of economic relations between the newly developing nations and the Communist countries. Because of the centralised character of the Communist economies, Soviet bloc trade and economic assistance could be expected to be carefully conceived and co-ordinated. Instead, recipient countries have often experienced such poor planning that the assistance given has been almost worthless economically. Interminable delays in deliveries have made the problem worse.

One well-known instance of a planning blunder has left some persons in the African country of Guinea wondering whether they are being assisted or merely used as a dumping ground for substandard Soviet equipment. Thousands of toilet bowls are stockpiled on the road between Conakry airport and the city. The bowls were shipped by the Soviet Union without seats, fittings or tanks which would make them usable. Other Soviet bloc blunders in Guinea include the shipment of 2.5 million screwdrivers, for a population of three million, and a shipment of snowplows, for a tropical country located 10 degrees above the equator. Millions of roubles worth of electrical and building equipment is rusting away in further silent testimony to unplanned and unco-ordinated programmes, started without regard to the country's economic needs or its absorptive capacity. Moussa Diakite, the Governor of Guinea's Central Bank, recently stated publicly that many of the Soviet-supplied machines are "not appropriate to our requirements and it is impossible to use them."

Whether because of planning errors or internal economic difficulties, Communist nations also have earned the reputation of not fulfilling many trade and aid commitments. Argentina finally terminated its bilateral and trade and payments agreement with the U.S.S.R. in May 1962, because it had derived no particular benefit from the relationship and, in fact, found itself consistently financing Soviet imports of Argentine goods. Brazil, on the other hand, found in 1960 that three countries of the Communist bloc bought little more than 55 per cent of the Brazilian goods they had promised to purchase. A formal agreement called for the U.S.S.R., Poland and Czechoslovakia to buy $95 million worth of products from Brazil, but actual sales amounted to only $53 million.

Specific instances underscore the hardship and damage caused by such unreliable practices. Early in 1961, an epidemic of diphtheria took many lives in Cuba. Medicines promised by the Soviet bloc countries to fight the disease never arrived. Also in 1961, Czechoslovakia promised to construct a briquette factory and washing plant in Afghanistan. Coal samples were sent to Prague and approved. A year passed and nothing happened. When a message arrived, it merely requested additional samples for testing purposes. Countries which became heavily dependent on Soviet petroleum supplies experienced shortages when promised deliveries failed to arrive. During the past few years the United Arab Republic, Afghanistan, Guinea and Cuba were among the victims of this delinquency.

It would be premature to write off the Soviet bloc trade and aid programmes with the developing nations as complete failure, economists say. But until these programmes come up to accepted world standards in terms of price, quality, planning and reliability, their value to the new nations will remain in doubt.

Domestic Shortages

It was harvest time somewhere in Iraq. Nature had been kind, and the farmers of the village were ready to bring in a bountiful crop. Only one thing was missing: the much-needed tractors and other mechanical farm equipment long ago promised by the Soviet Union. When the machinery finally arrived, it was too late for the harvest.

This is a small incident, to be sure. But it is one which reflects the difficulties of Communist countries in meeting their foreign assistance and trade commitments. Related to the difficulties are the considerable internal troubles encountered by the Communist countries, particularly in the last year.

Shortages and lagging production in certain sectors of the bloc economy, along with an imbalance between civilian and military output, appear to be affecting aid and trade programmes of the U.S.S.R. and its allies. These factors may well be the answer to the delayed delivery of the Soviet tractors to Iraq and unfulfilled contracts in many other countries.

For years, domestic shortages of farm machinery have been cited among the principal causes of the poor showing of Soviet agriculture. In March 1962, Premier Khrushchev told a plenum of the Communist Party Central Committee that the number of tractors would have to double within two or three years if agricultural production plans were to be met. However, he said, the actual trend had been the other way: 208,000 tractor cultivators were supplied to Soviet agriculture in 1957, but only 79,000 were supplied in 1960.

Inadequate maintenance and repair of existing farm machinery has been another critical problem for Soviet agriculture. Invariably, production failures are blamed in part on a lack of spare parts or improper maintenance of agricultural machinery. This year, just before the harvest in the rich grain-growing regions of Kazakhstan, a joint Government-party decree reported that about half of the combines needed were still unusable. In past years, the decree noted, "many thousands of machines were not repaired and did not participate in the harvest." Such breakdowns in the production of machinery and spare parts are only the surface manifestations of more basic problems in the Soviet economy. For one thing, the Soviet economy is by no means growing as fast as it did even a few years ago. Official Soviet statistics put the decline in the growth rate at four per cent between 1953 and 1961.

Another reason for the repeated problems in the civilian sector of the economy is the heavy concentration on military production. As a result of this focus, non-military projects suffer from chronic shortages of investment capital and materials. Last year's Communist Party Congress decreed a nation-wide moratorium on new construction in the hope of cleaning up thousands of incomplete projects cluttering the countryside.

Finally, in comparison with the most advanced industrial countries, the Soviet Union still has a narrow industrial base, despite achievements in certain branches of manufacturing and science. The most striking evidence of the narrowness is the pattern of Soviet imports. This shows, for example, that, in 1960, the U.S.S.R. still imported roughly three machines for every two it exported to other countries. All these factors lead to the conclusion that the ability of the U.S.S.R. to extend foreign assistance is severely limited by its own internal economic problems. How these problems can be resolved without a massive shift of resources away from non-productive military investments is hard for economists to see.

China and East Europe

In addition to the U.S.S.R., other countries of the Soviet bloc also are experiencing internal economic problems which are affecting their ability to fulfil foreign commitments. Communist China's severe agricultural setbacks and industrial breakdown have forced Peiping to reduce or cancel export commitments to a number of countries, including other Communist nations. A recent serious meat shortage in Czechoslovakia, for example, has been partly attributed to China's failure to deliver pork exports under a formal trade agreement. Other dislocations have resulted, particularly in Asia, from economic projects initiated but never completed by the Chinese Communists.

Official reports from almost all the smaller Communist countries likewise indicate shortfalls in reaching industrial goals and serious shortages in agriculture. Czechoslovakia, one of the most highly industrialised of the East European Communist nations, reported failure to reach production goals for the first half of 1962 in heavy industry, transport, housing and agriculture.

NEWS IN BRIEF

A BURMESE trade delegation will visit New Delhi towards the close of this month for negotiating a new Indo-Burmese trade agreement.

The Board of Trade is scheduled to meet at New Delhi on the 24th inst. to devise urgent measures to boost exports with a view to meeting defence import requirements.

India and Hungary have signed a trade protocol providing for a significant increase in trade turnover next year. A similar protocol has been signed with Czechoslovakia.

A leading firm of Singapore has placed orders for the purchase of 70,000 tons of white sugar from India. The actual shipment of this quantity is expected to be completed before the end of December next.

The Andhra Government has announced full remission of purchase tax in respect of cane crushed by factories for manufacturing sugar for export. This measure is in pursuance of the recommendation made by the Mudaliar Committee on foreign trade.

The Reserve Bank of India has cancelled the licence of the Bank of China to carry on business in India. The Bank has two offices in Calcutta and one at Bombay. On an application by the Reserve Bank, the Calcutta High Court has appointed provisional official liquidator with directions to take the custody, possession and control of the entire assets and properties of the Bank's offices.

The third gift consignment of 42 American cattle arrived in Bombay last week. This is the last shipment of young Jersey bulls and heifers presented to the Government of India by Heifer Project Inc., of North Manchester, Indiana. Meant to be used for upgrading Indian breeds so as to increase their milk yield during the third Plan, these cattle were collected by Heifer Project from various donors and presented to the Indian Council of Agricultural Research, New Delhi. The Council will later distribute them to various parts of the country.

The President has promulgated an ordinance to enable companies to make prompt and generous contributions to the defence effort. Under the ordinance, the board of directors of a company can, irrespective of the provisions of its memorandum and articles, make contributions to the National Defence Fund and other funds approved by the Government for the purpose of national defence in excess of the limit of Rs. 25,000 or 5 per cent of its profits without obtaining the approval of its shareholders as was required under the Companies Act.

The International Bureau for the Standardisation of Man-made Fibres (B.I.S.F.A.) has recognised the Laboratories of the Silk and Art Silk Mills' Research Association (S.A.S.M.I.R.A.) as a Neutral Testing House for carrying out tests at the customer's request. The B.I.S.F.A. which has its headquarters in Switzerland, is an international authority on the testing of man-made fibres and prescribes rules for the standardisation of man-made fibres from time to time.

In order to assess the position regarding spurious as well as sub-standard drugs in the market, the Government of India has constituted the Drugs and Equipment Standards Committee, with Dr. D. S. Raju, Union Deputy Minister of Health, as Chairman. The Committee will also study the possibility of meeting the requirements of drugs and equipment from indigenous sources and suggest minimum standards. It will recommend measures to tighten the provisions of the Drugs Act so as to make its implementation more effective. The existing legislation on drugs, including related legislation such as the Dangerous Drugs Act, the Poisons Act, the Medicinal and Toilet Preparations (Excise Duty) Act and the Prevention of Food Adulteration Act, will be examined by the Committee to suggest ways and means to bring about consolidation of the law and its uniform enforcement. Further, the Committee will study and report on the existing control machinery at the Centre and in the States available for testing facilities and the adequacy of staff for control work.

* * * *

From Abroad

West Germany and Morocco have signed an agreement under which Morocco will receive West German capital aid worth DM 80 million for financing important infrastructure projects.

The population of France is 47.1 million, as against 42.9 million in 1954, or an increase of 8.2 per cent in eight years, according to the Census taken earlier this year. There are in France 14.63 million households with an average of 3.1 persons

---

Italy has granted a ten-year loan of $10 million to Tunisia. The loan, which will carry an interest at 4.5 per cent, is to be handled by a group of Italian banks through the Instituto Mobiliare Italiano. It will be used for the industrial plant and machinery in Italy.

A recent forecast by the U.S. Department of Agriculture estimates the aggregate world cocoa bean crop in the 1962-63 season 10 per cent higher at 2,818 lbs. The output is put at 1,030 million lbs., as against 918 million lbs. in 1961-62 in Ghana, at 500 million lbs. (427 million lbs.) in Nigeria and at 350 million lbs. (331 million lbs.) in Brazil.

Advertising expenditures of industry and private business in West Germany amounted to 1.5 per cent of the West German Gross National Product. Thus West Germany is holding third place in this respect, trailing the U.S. and Britain. West German industrial enterprises and private business spent about DM 2,200 million for advertising in 1961.

The British Government proposes to introduce in Parliament a Bill providing for better conditions of safety and welfare of people working in offices, shops and railway premises. The provisions in the Bill will cover cleanliness, overcrowding, temperature, ventilation, lighting, sanitary facilities and washing facilities in the offices, shops and railways. The Bill will vest with the local authorities the responsibility for inspecting most shops.

Pakistan proposes to buy 25 new ships. The Government has invited shipbuilders to tender for the orders worth Rs. 26 crores in foreign exchange. It is proposed that the vessels should be paid for either on suppliers credit or under the "pay as you earn" schemes. The Government also proposes to establish a shipping corporation, with a part of the capital contributed by the private sector, for the purchase of vessels. Pakistan has at present 43 ships used for coastal and external trade.

PERSONAL

MR. J. Balasundara Rao, a Director of the Railway Board, has been appointed Additional Member (Commercial) of the Board.

Mr. B. N. Sinha, a former Director of the Extension Services, Government of Bihar, has been appointed Secretary of the Indian Central Jute Committee.

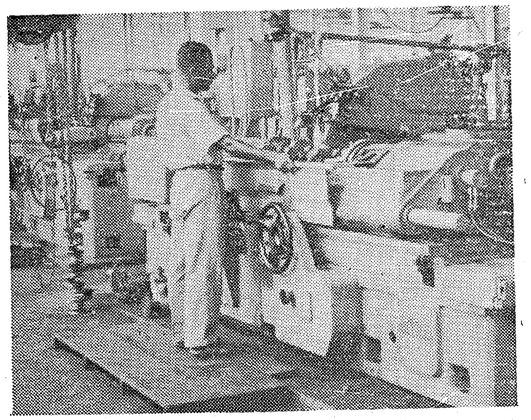
Mr. S. P. Godrej, Chief of Messrs. Godrej and Boyce Manufacturing Co. (Private) Ltd., has been appointed a Director of the Bank of India Ltd. with effect from 1st November 1962.

Mr. Marcello Boldrini, Vice-President of the E.N.I., the Italian State-owned oil company, has been appointed President of the Company vice Mr. Enrico Mattei, who died in an aircrash a few days ago.

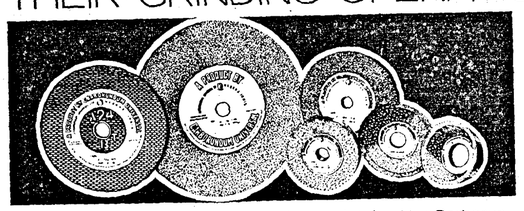
Mr. M. J. Hicks has been appointed the regional representative for India and Ceylon of the Marconi International Marine Company, Ltd., in the place of Mr. G. A. Dwyer who will take up another appointment with the Company.

Mr. F. J. Philips, President of N.V. Philips Gloeilampenfabrieken, Holland, has left Bombay, after a week tour of India. During his visit, he explored the possibilities of expanding the already elaborate manufacturing programme of the Company in India.

Mr. K. Gopinath Pillay, Fisheries Advisor to the Government of India, has been elected Chairman of the Indo-Pacific Fisheries Council for the next two years at a meeting held recently in Korea under the auspices of the F.A.O.'s Fisheries' Division.



SIMPSON AND COMPANY USE
CARBORUNDUM UNIVERSAL ABRASIVES
FOR THEIR GRINDING OPERATIONS



"We are pleased with the high standard maintained by Carborundum Universal Ltd., in their Grinding Wheels and Honing Sticks which we have been employing widely in our Production and Assembly lines with satisfactory results for producing components of the world-famous "P-Series" Perkins Diesel Engines in our Plant 1 at Madras."

SIMPSON & CO. LTD., Madras.

IN ANY INDUSTRY ... FOR ANY GRINDING OPERATION ... YOU CAN RELY ON GRINDING WHEELS BY CARBORUNDUM UNIVERSAL

Besides Grinding Wheels our other items of manufacture include Carboflex Reinforced Depressed Centre Wheels, FERROCARBO Briquettes, Mounted Wheels and Points and Bonded Abrasives Specialties.

Notices

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE

AT A MEETING OF THE BOARD OF DIRECTORS held today, the Directors have recommended payment of a final gross dividend for the year ended 31st March, 1962, of 8 per cent or Re. 0.80 per share on the Ordinary Share Capital subject to deduction of tax at the appropriate rates. This final dividend, which awaits sanction by the shareholders at the Annual General Meeting to be held on Tuesday the 11th December, 1962, along with the interim dividend of eighty naye paise gross per Ordinary share being at the rate of eight per cent declared by the Directors on the 31st July, 1962, will amount to a total dividend of 16 per cent or Re. 1.60 per share on the Ordinary Share Capital for the year ended 31st March, 1962.

The net profit after provision of Rs. 3,35,24,699 for depreciation, Rs. 3,95,50,000 for taxation, and net transfer of Rs. 2,98,38,026 to Reserves is Rs. 2,24,90,390. For the previous year the net profit was Rs. 2,22,68,363, after provision of Rs. 2,96,46,835 for depreciation, Rs. 1,66,00,000 for taxation and net transfer of Rs. 3,11,13,302 to Reserves.

As announced at the time of declaration of the interim dividend, the final dividend if sanctioned will be paid to those shareholders whose names appeared on the Register for Ordinary Shares on the 13th August, 1962. Payment will be made to such shareholders or their mandatees on or after the 12th December, 1962.

By Order of the Board,

MARTIN BURN LIMITED,
S. GUPTA,
Managing Director,
Managing Agents.

Registered Office:
12, MISSION ROW,
CALCUTTA 1.
Dated the 30th October, 1962.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED

Registered Office:
Power House, Tennur High Road
TIRUCHIRAPALLI

NOTICE

1. The Directors at their meeting have sanctioned the payment of an *ad-interim* dividend for the year 1962-63 of 4½ per cent on equity shares and 2¾ per cent on preference shares plus 30 per cent thereon both subject to the deduction of tax.

2. The warrants will be made out in the names and addresses of shareholders standing registered in our books as on 24th November 1962 or holders of mandates, and posted on and after 19th December 1962. The shareholders are requested to notify immediately any change of their address to the Company.

3. The Register of Members and Share Transfer Books of the Company will be closed from 24th November 1962 to 5th December 1962 (both days inclusive).

4. Such of those shareholders who are not liable to pay income-tax may apply to the concerned Income-tax Officers for Income-tax Exemption Certificate under the proviso to Section 194 of the Income-tax Act and file the same with the Company on or before 1st December 1962. In such cases of compliance, no deduction of Income-tax will be made from the dividends.

N.B.—Holders of Blank Transfers are advised to have the shares registered in their names in time before closure of books.

(By Order),

SESHASAYEE BROTHERS (PRIVATE) LIMITED,
Managing Agents and Chief Engineers.

TIRUCHIRAPALLI,
1st November 1962.

AIR INDIA LIMITED

(In Voluntary Liquidation)

A GENERAL MEETING OF THIS COMPANY will be held in the Board Room, 4th Floor, Bombay House, Bruce Street, Fort, Bombay, on Thursday, 6th December 1962, at 4.30 p.m., when in accordance with the provisions of Section 496 of the Companies Act, an account of the acts and dealings of the Liquidators and of the conduct of the winding up for the year ended 30th September 1962 will be laid before the Meeting together with the prescribed form of statement with respect to the proceedings in and the position of the Liquidation.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

AIR INDIA LIMITED,
(In Voluntary Liquidation),
By Order of the Liquidators,
K. C. BAKHLE,
A Liquidator.

ESPLANADE MANSION,
FULLER ROAD,
BOMBAY-1.

To all Shareholders of Air-India Limited (In Voluntary Liquidation) and particularly to:—

Atmaram Shivarao Kalambi, Joseph Theoffilus Almeida, Amrutha Pandu, Miss Candida Dhunbai Backhaus, Bashir Niazi, Alan Joseph Chaves, Chulananda Upali de Silva, Ginigalgodaga Peeton De Silva, Mrs. Doulat Khanum, Arthur Horace Sidney Fernandes, Farrokh Erachshaw Shroff, Mrs. Barbara Flatt, Sydney Joseph Fernandes, Gunja Man Singh, Donald Reginald Cavendish Hartley, Karson Narain, Kaikhoshro Pherozeshah Mehta, Mrs. Mary Kostka, Stanislaus Lawrence Maxim Lobo, Mrs. Mariam Ahmed Jaffer, Wilhelm A. The transfer books of the Company will remain closed from 15th November 1962 to 22nd November 1962, inclusive.

By Order of the Board.
ASPINWALL & CO. (TRAVANCORE) LTD.,
Secretaries.

ALLEPPEY:
29th October 1962.

CALL RATE 4 PER CENT

(From Our Own Correspondent)

BOMBAY, *7th November*

The short-term money market continued to rule firm during the week under review. Interbank *call* rate went up further in the past week, from 3½ to 4 per cent. Early in the week, floating funds were somewhat scarce, while demand was on a large scale. Today, however, the supply-demand position was almost balanced, though the improvement was not so much as to bring down the call money rate. At Calcutta also, the rate rose from 3¾ to 4¼ per cent, though some transactions were reported to have been put through at 4 per cent per annum.

The amount offered against the Government of India's 91-day Treasury Bills sold under the tender system on Tuesday this week was Rs. 2.04 crores, but the amount accepted was as usual equal to that invited, namely, Rs. 2 crores. The average rate of accepted tenders was slightly higher at Rs. 2.360 per cent per annum, as against Rs. 2.350 per cent. The Intermediate Treasury Bills, which were on tap from 31st October to 3rd November, fetched no more than Rs. 13 lakhs, as against Rs. 40 lakhs a week before and Rs. 1.40 crore two weeks before. The sales of both types of Bills are continuing, the Intermediates from today to the 10th inst.

There was a slight improvement of Rs. 1.05 crore to Rs. 93.62 crores in India's foreign assets during the week ended 2nd November 1962, according to the statement of the Reserve Bank for this week. The improvement was accounted for entirely by balances held abroad in the Banking Department which amounted to Rs. 5.54 crores. Foreign securities held in the Issue Department was unchanged at Rs. 88.08 crores. The total of advances made, available by the Reserve Bank to scheduled banks was lower by Rs. 3.37 crores at Rs. 5.97 crores; advances against usance bills alone declined from Rs. 7.39 crores to Rs. 4.19 crores.

The volume of credit made available by scheduled banks to their clients spurted by Rs. 9.06 crores during the week ended 26th October 1962, in contrast to the sharp fall of Rs. 16.25 crores in the week preceding it. The total outstanding of advances as on that date stood at Rs. 1,394.76 crores. The aggregated deposits of banks declined by Rs. 11.87 crores to Rs. 2,182.22 crores, while interbank borrowings rose by Rs. 3.11 crores to Rs. 36.27 crores.

Central Government loans in the Gilt-edged market continued to drift downward. 3 per cent 1986 conversion fell by Re. 1.50 to Rs. 64. 3 per cent 1970-75, 3½ per cent 1967 and 4 per cent 1981 dropped 15 nP each. There was a loss of 10 nP in the case of several others and of 5 nP in some. State loans were all unchanged at last week's levels.

In the foreign exchange market, the banks' selling rate for U.S. dollar is unchanged, the actual T.T. and O.D. rate being Rs. 477.75 per $100. Their buying rates are also unaltered except in the case of O.D., 60-day and 120-day bill rates which improved by 25 nP. In New York, sterling has improved slightly in terms of the dollar, the latest available spot and three months' forward rates being 280.120-280.150 cents and 279.840-279.870 cents per £, respectively: the corresponding rates last week were 280.080-280.120 cents and 279.810-279.850 cents.

* * * *

NATIONAL DEFENCE BONDS

The Defence Bonds, which will be on sale with effect from the 10th of this month, are issued at par in multiples of Rs. 100 and carry interest at 4½ per cent per annum. The issue will be kept on tap for a period of six months from 1st November 1962, but may be closed earlier if the Government of India so decides. All the bonds, irrespective of the date of their purchase, will be repaid at par on 1st November 1972.

Interest will be paid half-yearly on 11th May and 10th November each year, but, in respect of the bonds sold after 10th November 1962, the half-yearly payment of interest shall be for the broken period from the date of sale to 9th May 1963, inclusive. Interest will be liable to income-tax, but, in order to attract small investors, tax will not be deducted at source at the time of payment of interest in the case of bonds held by individuals.

Applications for the purchase of these bonds will be received at the offices of the Reserve Bank of India and branches of the State Bank of India and its subsidiary banks. Subscriptions can also be made through all recognised banks which will arrange to forward the applications to the nearest receiving office.

DEFENCE DEPOSIT CERTIFICATES

The Defence Deposit Certificates have also been placed on sale with effect from the 10th inst. Issued in multiples of Rs. 50, they carry interest at 4½ per cent payable annually. The principal will be repaid after ten years from the date of purchase. Interest will be free of income-tax. The maximum amount that may be invested in these certificates, including the investment in the treasury savings deposit certificates, is Rs. 25,000 for individuals and Rs. 50,000 for joint holders. Deposits for the purchase of these Certificates are accepted at all the offices of the Reserve Bank of India, branches of the State Bank of India and its subsidiary banks conducting Government treasury business and at treasuries and sub-treasuries. These certificates can also be purchased through authorised agents.

The existing four per cent 10-year treasury savings deposit certificates have ceased to be issued with effect from the close of business on the 9th inst.

NATIONAL DEFENCE CERTIFICATES

The National Defence Certificates will be available for sale from the 15th inst. at all post offices transacting savings bank business. They can also be purchased through authorised agents. They will be issued in denominations of Rs. 5, Rs. 10, Rs. 50, Rs. 100, Rs. 500, Rs. 1,000, Rs. 5,000 and Rs. 25,000. They will be repaid on maturity after 12 years at a premium of 75 per cent of the issue price yielding a return of 6.25 per cent per annum simple or 4.75 per cent per annum compound. A certificate of the value of Rs. 100 would fetch Rs. 175 after 12 years, as compared with the maturity yield of Rs. 165 on the existing 12-year National Plan savings certificates. The yield will be free of income-tax. The maximum amount of investment in these certificates, inclusive of the investment in the earlier postal savings certificates, will be Rs. 25,000 for individuals and Rs. 50,000 for two persons jointly.

Pending the availability of new certificates which are under print, post offices will issue temporary receipts which will be exchanged for new certificates.

The sale of existing 12-year National Plan savings certificates will be discontinued with effect from the close of business on the 14th inst.

The purchasers of the existing certificates on or after the 1st inst. will have the option to get them exchanged for the new certificates of an equivalent amount. In other words, the advantage of the increased return on the new Certificates will be available to those purchased on or after 1st November 1962.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, *7th November*

The cotton futures market, after having ruled firm till Saturday, the 3rd inst., turned easy on Monday. Persistent bear hammering and selling by local and upcountry operators resulted in a sharp break in prices. A partial recovery was in evidence yesterday, thanks to shortcovering and some fresh support attracted by the low levels. The undertone of the market was easy today.

The earlier firmness was influenced by the news of unwanted rains in Berar and fears that transport difficulties will delay movement of new crop. The Jarilla March 1963 contract met with sustained support and rallied from the last week-end rate of Rs. 743.25 (per three quintals) to Rs. 747.50 on Saturday. However, the Textile Commissioner's order, issued on the 5th inst. prohibiting movement of cotton, in ginned or pressed form, from the Khandesh area, the suspension of trading in the share markets and the general weakness of the commodity markets made operators nervous, resulting in a wave of selling. The Jarilla March contract sharply declined to Rs. 738 on Monday and further to Rs. 733.50 yesterday. The subsequent recovery made good a part of the earlier losses. Even then, today's closing of Rs. 734 is Rs. 9.25 lower than last week-end quotation.

The firmness witnessed in the spot market early in the week gave place to easiness following the Textile Commissioner's order. It was feared that other tracts would also be similarly sealed off. New crop Khandesh 197/3, which was quoted at a high premium over the official ceiling, tended to decline, thanks to the Textile Commissioner's order and larger arrival. Prices of Kalyan, Wagad and Co2 also receded. The declining trend of prices induced mills to defer purchases.

Demand for foreign cotton was slack. Bengal *Deshi* prices declined due to absence of foreign interest. Meanwhile, the E.I.C.A., which had decided to permit trading in transferable specific delivery contract in Bengal *Deshi*, has approved of certain amendments to the by-laws for the purpose of regulating such trading. There will be three contracts available for trading: (1) M.G. Bengal fine, (2) M.G. Bengal superfine A, and (3) M.G. Bengal superfine B. The unit of trading is 100 bales and transactions are subject to settlement clearing. Delivery months are December, January, February and March.

Amendments to other by-laws have also been made to conform to the Textile Commissioner's recent order to appoint supervisors. Names of 66 supervisors have so far been officially announced. The following are the latest available quotations—in rupees per candy of 784 lbs.—from spot market at Sewri:

Bengal *Deshi* (F) 670; Co2 1,500; B.P. 52 (new) 1,200; Jinga (new) 1,090; Busoga (new) 1,182; Sudan G5S 1,365; California 1-5/32" 1,218.

Cotton futures in Karachi suffered a further setback during the week. Selling continued unabated while support was lacking even at lower levels. Consequently, both the January and March contracts were marked down further, the former from Rs. 67.10 to Rs. 66.40 and the latter from Rs. 67.60 to Rs. 67.10. Spot prices, however, ruled steady. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing in Karachi:

Sind Deshi 71.50; *Punjab Deshi* 65; 4F Punjab Roller 64; *N.T. Roller* 74.35; *S.G.* (new) 79.35; 28F Punjab Roller (new) 80.85; *S.G. (new)* 87.35.

Cotton futures in Liverpool ruled quiet during the week. Values of both the American and American type contracts remained practically unchanged in dull trading. Sudan cotton futures were neglected. The following are the latest available quotations—in pence per lb.—from Liverpool: December 23.85; March 65; November (Sudan) 29.50.

Trading on the New York Cotton Exchange was featureless during the week, thanks to lack of incentives and the intervening holidays. The nearby December contract receded from 33.68 cents to 33.65 cents. The March contract was quoted at 34.12 cents and the May contract at 34.24 cents, same as last week-end. New York spot ruled unchanged at 34.85 cents per lb.

BULLION PRICES CRASH

(From Our Own Correspondent)

BOMBAY, *7th November*

Bullion prices, especially of gold, crashed heavily this week on nervous bull liquidation and aggressive selling pressure touched off by Finance Minister Morarji Desai's broadcast on Saturday (3rd November) night that the Central Government had decided to issue special 15-year gold bonds bearing interest at the rate of 6.5 per cent per annum. Although the news came late in the evening at 8-30, it shook the market almost immediately, and in an orgy of selling, gold *Margashir* slumped in unofficial deals to Rs. 110 per 10 grams from the day's official closing level of Rs. 120.75 and rallied subsequently to Rs. 113. Silver *Margashir* receded in Saturday's after-close deals from Rs. 224.85 to Rs. 224 per kilogram. Prices declined further from Monday onwards and, on Tuesday, gold *Margashir* sank to Rs. 104.25 and silver *Margashir* to Rs. 218.75, as against the week's highest level of Rs. 120.90 (on the 3rd inst.) and of Rs. 225.55 (on the 1st inst.), respectively. Today, prices rallied from the lowest levels touched yesterday on some bear covering and absence of fresh selling, with gold futures closing at Rs. 106.75, as against Rs. 119.55 a week ago, and silver futures finishing at Rs. 219.75, as against Rs. 224.85. Spot gold fell during the week from Rs. 121.65 to Rs. 102.50 to close at Rs. 105.75, as against Rs. 119.10 a week ago. Likewise, ready silver declined from Rs. 224.55 to Rs. 217.75 to close at Rs. 218.75, as against Rs. 224.15. The week's heavy shake-out pulled down spot gold prices to the lowest level touched in the past three years. In the financial year (April to March) 1961-62, the lowest level was Rs. 115.85; in 1960-61, it was Rs. 107.12; and in 1959-60, it was Rs. 99.88 per 10 grams. The setback during the week under review invited a margin of Rs. 6 per 10 grams of gold in the futures contract against bears on Monday and led to a special clearing in both gold and silver on that day. On Tuesday, there was again a special clearing in gold following a fall of more than Rs. 5 from the previous day's clearing rate.

While the slump in prices was by far the sharpest in recent times, it did not create any undue panic among either the authorities of the Bombay Bullion Association Ltd. or the marketmen. In fact, at a meeting held on Monday, the market authorities decided not to take any emergency measures, as they felt that the market was technically in a healthy position. The ability of the market to survive the fall could be attributed to the fact, for quite sometime, marketmen had anticipated some official measures for attracting hoarded gold. Therefore, before the Finance Minister's broadcast, the market had been in an oversold position which on the decline in prices got corrected. Some upcountry operators, however, who nourished a bull position mainly on the China war, liquidated about half their holdings. Although no state of emergency was declared, the market authorities decided to extend the date of inward payment of the first clearing from 6th November to 7th November, so that payments for both ordinary and special clearings could be done simultaneously. The President of the Association was also authorised by the Board to call an emergency meeting whenever he felt it necessary to do so.

In contrast to the Bombay Bullion Exchange, the authorities of the Delhi Bullion Exchange decided on Monday to order squaring up of all outstanding transactions in gold futures at Rs. 117.50. They also decided to suspend temporarily further trading in gold futures and fixed floor and ceiling prices for the current silver *Margashir* contract. Such special measures taken in Delhi—the only other active futures market in gold—led to some heavy upcountry selling in the market in Bombay.

Sovereign in Bombay declined during the week from Rs. 96 to Rs. 80 and closed at Rs. 82, as against Rs. 95.50 a week ago. Daily arrivals in gold were steady around 8,000 tolas, while offtake continued to be limited to 3,000 tolas. Inflow in silver was rather heavy at 25 bars on an average per day, as against an offtake of 10 bars.

Subscription lists for the 15-year gold bonds will open on 12th November and close on 11th February 1963, or earlier without notice. The interest on the bonds will be paid twice a year, on 12th May and 12th November. Subscription will be in the form of gold, gold coin or gold ornaments and the bonds will be treated as issued on the date the gold is tendered at the receiving office. The interest will be subject to tax, but, in the case of individuals, tax would not be deducted at source, if the holders declare that the total nominal value of bonds held by them or on their behalf do not exceed Rs. 10,000. The bonds will be exempt from wealth tax and tax on any capital gains from their sales. The value of gold will be calculated at the rate of Rs. 53.58 per 10 grams of .995 fineness equivalent to Rs. 62.50 per tola of the same fineness.

The marketmen's reactions to the bond announcement were that the Government decided to fix a higher rate for gold for the purpose of investing in the bonds the issue would have a better chance of succeeding. The marketmen also bemoaned that the assurance given by the Finance Minister in his broadcast to the effect that the Government would not force the depositor of gold to declare the source of origin of such gold was not carried out in the details of the issue announced on Sunday. It was also contended by marketmen that the bonds should have been proposed as bearer bonds. Opinion differed on how far the authorities would succeed in getting ill-gotten gold from the tax-evaders. Some contended that on a comparable return of 4.25 per cent per annum on Government securities, investment in gold bonds would be tempting only if gold was available at about Rs. 80 per 10 grams. Some others argued that, considering that, at the end of 15 years, investment in gold bond would have fetched in all Rs. 104 by way of principal and interest on com-

pound basis, the prevailing rate of gold would attract people to deposit it in bonds.

Small losses were recorded in bullion prices in both London and New York on profit-taking following the slight easiness in the Cuban situation. Sentiment was also influenced by the satisfactory position of the sterling area's gold and convertibility reserves in October which stood at £1,800 million. Spot gold in London declined over the week from 250*s.* 9½*d.* to 250*s.* 6¾*d.*, ready silver moved down from 103½*d.* to 102½*d.* and silver futures eased from 103¾*d.* to 103*d.* In New York, spot silver receded from 121 cents to 120.50 cents.

The following table shows the trend of prices during the week under review:

	7-11-62 (closing)	High	Low	31-10-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	105.75	121.65	102.50	119.10
Margushir * ..	106.75	120.00	104.25	119.55
Sovereign	82.00	96.00	80.00	95.50
SILVER				
Ready (.996 fine) ..	218.75	224.55	217.75	224.15

New York—				
Silver	120.50 cents	120.75 cents	120.50 cents	121.00 cents

* 11th December settlement. † 12th December settlement.
N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

WEAK TONE IN YARNS

(From Our Own Correspondent)

BOMBAY, *7th November*

The yarn market displayed a weak tone this week in the absence of buying support. Sentiment was influenced mainly by the pronounced weakness of the stock and bullion markets, as well as easiness of cotton and oilseeds futures markets. Staple fibre futures 40/2 December declined over the week from Rs. 718 to Rs. 708. The newly opened February contract closed at Rs. 720. Spot art-silk yarns were easier. National Rayons 150D declined from Rs. 13.11 to Rs. 12.65. 120D moved down from Rs. 16.96 to Rs. 15.95. S.I. Viscose 120D receded from Rs. 17.53 to Rs. 16.98 and so did 150D from Rs. 13.20 to Rs. 12.85. Centurys 100D were unchanged at Rs. 17.60, but 75D softened from Rs. 21.58 to Rs. 21.32. Among cotton yarns, Finlay 60s were easy at Rs. 71.12, while Podars 10s ruled steady at Rs. 18.50.

It was announced on Saturday the 3rd inst. that exporters under the Export Promotion Scheme who had not submitted their export application for indigenous art silk yarn against exports effected during the quarters April-June, July-September, and October-December 1961 so far, in accordance with the Trade Notices dated 28th July 1961 and 7th May 1962, should immediately submit their applications separately for each quarter to the Secretary, Indigenous Art Silk Yarn Distribution Committee, Resham Bhavan, Bombay 1.

The Union Government proposes to revise the rate of drawback on exports of staple fibre yarn and fabrics and mixed fabrics containing staple fibre yarn and art silk yarn. The revised rates are as follows:

Staple fibre yarn and fabrics made from it, including fabrics containing a mixture of yarn and other than art silk yarn: Re. 1.14 per kg. of staple fibre yarn content.

Fabrics containing staple fibre yarn and art silk yarn: Re. 1.14 per kg. of staple fibre yarn; the rate as specified in serial No. 1 of Schedule 1 to the Customs and Central Excise Duties Export Drawback (General) Rules 1960 on the art silk yarn content.

Draft rules framed in this regard will be finalised after 4th December 1962.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	7-11-1962	31-10-1962
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	15.95	16.98
Century 75D	21.32	21.50
S. I. Viscose 150D	12.85	13.20
Staple fibre yarn (40 × 2)—		
October (per 90.72 kg.)	—	691.00
December (,,)	703.00	718.00
February	720.00	—
Kohinoor (per kg.)	8.87	9.06
Century	7.63	7.77
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.50	18.50
32s Century	24.50	24.25
30s Bradbury	27.00	27.00
40s T.T. Conn	37.25	36.25
60s Finlay	71.12	—

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

NEW CEILINGS ON SEEDS?

(From Our Own Correspondent)

BOMBAY, *7th November*

The Board of the Oilseeds and Oil Exchange has suggested to the Forward Markets Commission that maximum prices (ceilings) should be fixed for hedge contracts in oilseeds in order to curb and prevent soaring of prices. The actual ceilings proposed are Rs. 236 per 250 kg. in respect of January 1963 contract, Rs. 181 per 250 kg. for castorseeds March 1963 contract, Rs. 42 per 250 kg. for linseed March 1963 contract, Rs. 111 per 250 kg. for cottonseed January 1963 contract and Rs. 32.50 per 16 kg. for groundnut oil January 1963 contract. In addition to the fixation of ceilings, imposition of a penalty in the event of non-delivery is also suggested. The actual penalty is put at Rs. 5 each in the case of groundnut and castorseed contracts Rs. 2 in cottonseed, Re. 1 in linseed and 40 nP in groundnut oil. The implementation of these suggestions is expected to prove more effective than the existing restrictions on the weekly fluctuations. The Forward Markets Commission has not taken a decision on these suggestion. It is reported to be of the view that the ceiling levels should be lower still.

The move to improve ceilings and penalties made bulls nervous. There was sizable liquidation leading to a sharp fall in futures which in turn weakened spot prices. The panicky conditions in the local Stock Exchange and the subsequent suspension of trading also led to a fresh wave of of selling. Groundnuts suffered a distinct setback in values. Revised bearish private estimates also acted as a damper. These estimates place the 1962-63 groundnut crop at about 2.8 million tons (in kernels), as against about 2.7 million tons in 1961-62. The estimate is based on the expectation that Andhra Pradesh would have a bumper crop, which would offset any decline in Gujarat's output. In a declining market, *vanaspati* manufacturers and crushers were hesitant to extend any appreciable support.

Groundnut January 1962 contract rose initially from Rs. 230.87 to Rs. 232.62, but gave way subsequently to Rs. 226.50, with net loss of Rs. 4.37. Nizam bold lost 25 nP to Rs. 45.50. Oil January 1963 contract improved from Rs. 31.45 (per 16 kg.) to Rs. 31.65, before closing lower at Rs. 31. Oil ex-mill and railway receipts declined by 30 nP each to Rs. 19.05 and Rs. 18.85, respectively.

Castorseed March 1962 contract, which had gone up from Rs. 169.87 to Rs. 171, early in the week, fell to Rs. 167, the net loss being Rs. 2.87. Madras small eased by 62 nP to Rs. 33. Kanpur also lost a like amount to Rs. 31.75. Oil B.S.S. shed 5 nP to Rs. 13.85. Oil B.S.S. improved from Rs. 12.90 to Rs. 13.15 in earlier sessions, but fell back later to the last week's closing level.

Linseed March 1963 contract lost a rupee to Rs. 39.12. Bold ready moved down by 62 nP to Rs. 41.50. Linseed oil fell by 35 nP to Rs. 16.75.

Cottonseed January 1963 contract suffered a setback of Rs. 3 to Rs. 102.50. Non-white was quiet at Rs. 25.

The following table shows the closing prices of oilseeds and oils on Wednesday 7th November as compared with those of the two previous weeks:

	7-11-1962	31-10-1962	24-10-1962
Groundnut	Rs.	Rs.	Rs.
Groundnut January 1963 ..	226.50	230.87	233.50
Nizam bold	45.50	45.25	—
Khandesh quality	46.00	45.87	46.57
Oil ex-mill ready*	19.05	19.35	19.10
Railway receipts*	18.85	19.15	18.90
Castorseed			
Castorseed March 1963	167.00	169.87	170.50
Ready Madras	33.00	33.62	33.50
Ready Kanpur	31.75	32.37	32.25
Oil B.S.S.†	13.85	13.90	13.75
Oil commercial†	12.90	12.90	12.65
Linseed			
March 1963	39.12	40.12	40.56
Bold ready	41.50	42.12	42.25
Oil ready†	16.75	17.10	17.15
Cottonseed January 1963 ..	102.50	105.50	105.50
Niger seed	35.75	36.50	36.00
Kardi seed	28.50	28.50	28.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER ERRATIC

(Messrs. Parekh and Co.)

BOMBAY, *7th November*

Malabar black pepper moved both ways erratically according to day-to-day developments on the U.S.A.-Cuba front. News from the Sino-Indian front had had a comparatively minor effect. During the earlier part of the week, ready garbled improved to Rs. 310, in view of the news that U.Thant's mission to Cuba apparently failed and that New York dealers paid $0.35 for Malabar black for November shipment. The improvement, however, proved to be a passing phase when New York dealers refused to follow up and the Indian exporters showed their anxiety to shed their price to test the market. Though arrivals of new crop have started, the quality is not upto the mark suitable for the export.

December delivery, after improving to Rs. 322, came down to Rs. 300, as bulls preferred to await developments.

Trade's estimate of the new crop is placed at 30,000 to 32,000 tons. The future of the market depends on the political developments both in Cuba and on the Sino-Indian border.

Ready demand was poor, as sellers were not willing to sell goods on credit, owing to the uncertainty in the border areas, particularly in Bengal and Punjab, some of the biggest consumers of pepper in India. Spot in New York, after rallying to $0.44, came down to $0.38, as grinders withdrew after covering their immediate requirements. Now they hold off and prefer to wait for a new incentive.

Black pepper in Singapore was also marked down to $117½, as foreign inquiries faded at higher rates. Short covering having been finished, the dealers there revised lower their buying ideas.

Ready pepper in Bombay is nominally quoted at Rs. 166 per 50 kilos.

WHOLE LEAF TEA DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *1st November*

A total of 481,000 kgs. was offered in sale No. 43 held on Tuesday, 30th October. Quality from the Nilgiris generally showed a seasonal decline, whilst others were sometimes brighter. Demand was strong and prices were irregular and generally dearer. Low mediums and mediums attracted useful support and were often much dearer. Plain and stalky kinds under this category, however, met with less support and these may be quoted about steady. Good medium brokens elicited keen competition at higher rates. Similar fannings did not receive the same support and were sometimes easier. Highgrowns were irregular, the low-priced brokens sold at dearer rates. Fannings met less demand than brokens and inclined little easier. Clean black leaf descriptions were well supported and sold at around last rates. Whole leaf grades were firm to dearer. Tippy teas continued in demand and realised useful prices. There was strong competition for unorthodox descriptions which advanced substantially.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.65-4.35	3.85-4.15
Mediums	4.40-4.80	4.15-4.40
Good mediums	4.85-5.85	4.45-5.50
Nilgiri B.O.P.	5.20-8.00	5.20-7.80

The average price realised in sale No. 43 was Rs. 4.59 per kilo, as against Rs. 4.46 a week ago and Rs. 4.73 in the corresponding sale last year.

Dust Sale No. 43 was held today. A total of 310,000 kgs. was offered. The market opened to a good demand but showed an easier tendency towards the close. At the beginning of the sale low mediums and mediums were fully firm and often dearer, but, towards the close these types sometimes turned easier. Good mediums were well supported and generally sold at higher rates. Highgrowns opened firm to dearer but closed a little easier. Residuals met with keen competition and were the strongest feature of the sale. Clean black grainy descriptions evoked good inquiry at fully firm rates. There was strong demand for unorthodox teas, but these also shared in the general trend of the market.

The average price realised in dust sale No. 43 was Rs. 4.07 per kilo as compared with Rs. 3.87 a week ago and Rs. 4.40 in the corresponding sale last year.

Colombo: This week's sale met with improved demand. Brokens from western districts were dearer by 5 to 15 cents and so were mediums. Plainer Uvas were also dearer. Best, however, were lower with quality. Fannings though they met with strong support, were irregular.

London: North Indian and other growths: In Monday's sale there was strong demand. Prices were fully firm and plain descriptions advanced by 2*d.*

Ceylon and South Indians: 24,704 packages were offered in Tuesday's sale, of which 8,250 packages were from South India. Ceylons met with better demand. Low mediums were dearer by ½*d.* to 1*d.* South Indians continued strong, particularly the lowest which tended dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No. 44*: 698,000 kgs. offered. Strong and excited demand. Low mediums and mediums, particularly brokens, 30 to 40 nP dearer. Good mediums 15 to 20 nP higher. Highgrowns lower with quality. Unorthodox firm."

TEA STEADY

(From Our Own Correspondent)

CALCUTTA, *6th November*

The grim prospect of delay in the transport of Assam tea against the background of the Government's urgent need for transport to cope with military requirements was reflected in Calcutta tea auctions as elsewhere. The steady conditions in yesterday's export sale was due to the fall in arrivals of tea from Assam following strike by the workers of steamer companies. At the same time, arrivals from other areas fell, due to reduced transport facilities for the reason already stated. This practically brought forward booking of tea to a standstill. Such of the foreign buyers as had hitherto only paid attention to immediate requirements and had postponed entering into commitments against stock replenishment in expectations of a decline in price, having regard to the earlier forecasts of an increase in output, found themselves today with the rather unpleasant realisation that they had missed the bus and failed to cover their needs when prices had touched the season's lowest levels. This explains the rise in prices recorded in yesterday's export auctions held here. Even domestic bidders found themselves placed in the same unpleasant situation, as witness the prevalence of steady support accorded in the internal auctions held last week, leading to a rise in prices.

As the season progresses, the shortfall in the North Indian crop only widens. As at the end of September, this was some 20 million lbs. and the fond hope was expressed then that, since in the month of October one more good cropping month remained, there was the possibility that the shortfall would be lessened. However, such expectation has so far been belied. The North Indian crop up to 15th October aggregated 486.41 million lbs., revealing a decline of 22.71 million lbs. as compared with the corresponding period last year. The decline gives an answer to the changed trend in Calcutta auctions against both domestic consumption and export offerings. However, it should be noted that the output is higher by 15.33 million lbs. as compared with the 1959-61 average of 448.38 million lbs. for the same period.

London reports of firmer conditions in last week's Mincing Lane auctions were not altogether a surprise here. In any abnormal situation such as the one that exists today, in view of the Chinese menace, overseas buyers are bound to accumulate stocks in order to provide themselves for any delay in receipts. Considering that North Indian contribution in U.K. imports of tea is always sizable—in the nine months to September last, the share of India was 169.3 million lbs. out of the total of 400.7 million lbs. the anxiety of the British stockist to hold an adequate quantity is understandable. An idea of this anxiety is available in the report that, in last week's auctions at Mincing Lane, strong demand pushed up the price of plainest teas to 2*s.* to 3*s.* 11*d.* from 1*s.* 9*d.* to 3*s.* 8*d.* in the previous week.

So far as everything goes, it is only good to the tea industry in India, as it can look forward to better economic working of the gardens and contribute sums to defence funds and also to pay greater attention to replanting and extension of acreage. However, the optimism should stop at this stage, as the industry in this part of the country is also anxious that it should not lose overseas markets. This apprehension arises from the difficulty to get teas to the port in time. Already, Mincing Lane auctions have shown the tendency of demand diversion, howsoever unpalatable to the industry in this part of the country. For London bidders showed keenness to procure Ceylon as well as South Indian teas. In the former, medium teas rose by about 1*d.* a lb. and, in the latter, plainer sorts added about 2*d.* a lb. It should also be noted that, in the last week's auctions held at Cochin and Colombo, active demand was in evidence and prices for quality teas gained over those for the previous week. Another anxiety of the tea industry in N.E. India is the unpleasant prospect of an increase in the production costs of tea in border areas.

In the conflict with the Chinese, India has received sympathy and support from several freedom-loving countries. If, as a result of this, some countries apply economic sanctions against China, the demand for tea from non-producing countries on countries other than China would increase. And this only emphasises the imperative need for India to step up production. Adequate funds should be placed at the disposal of gardens to increase production by extending acreage as well as by intensive cultivation. The industry's case for a rational tax structure is never stronger today than before.

The very pleasant prospect of India deriving benefit from the proposal, if executed finally, to have a free trade zone in Port Said for Indian tea on the same lines as the existing coffee store house in Beirut for Brazilian coffee was hinted by the U.A.R. Minister for Supply, Dr. Kamal Ramzi Stino, who, as leader of his country's trade delegation to India, was at Calcutta last week. The Minister said that his country followed a policy of keeping down prices and at the same time raising people's purchasing power. This, he said, had resulted in more prosperity for the U.A.R. in recent years. He, therefore, expressed the hope that India would be able to increase its exports of tea to his country. The U.A.R., which is the second biggest consumer of Indian tea overseas, imports annually about 22,000 tons of tea, of which 15,000 tons or 68 per cent are from India, 5,000 tons or 23 per cent from Ceylon, and 2,000 tons or 9 per cent from China.

Dusts amounting to 30,310 packages met with improved general demand during the internal sale held last week. The strongest feature was provided by legg-cut teas, which attracted ready buyers even after the price went up by 25 nP from the previous rate. Steady support was extended to plain and medium orthodox teas, with some selected lines recording a dearer trend. Keen competition was accorded to medium C.T.C.s., but prices were irregular. Good C.T.C.s found ready buyers. The earlier weakness in powdery descriptions gave way as the sale progressed and the grainy descriptions closed higher on balance. The quotations (in rupees) per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust 6.20 to 6.70; medium Assam C.T.C. dust 5.50 to 5.85, legg-cut dust 4.90 to 5.40; medium Assam dust 4.45 to 4.90; and plain orthodox dust 4.00 to 4.40.

Leaf on offer during yesterday's export sales amounting to 69,767 packages met with strong general demand. Legg-cut teas were a strong feature and rose by 10 to 30 nP. A liberal addition was recorded in the prices of medium C.T.C. teas, with B.Ps being in particular favour. The best sorts were unchanged but were firm. Among Darjeelings, the best lots were featureless, but other descriptions hardened. Lower-priced whole leaf grades commanded higher prices, while better lots and tippy teas were about firm at last rates. Useful competition was accorded to plain orthodox teas, prices of which rose by 10 to 30 nP. Fannings were in good demand. Prices for medium Assam B.O.Ps and fannings rose significantly, but the best liquoring teas were about firm. The quotations (in rupees) per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings 6.50 to 7.00; medium Assam C.T.C. fannings 5.80 to 6.50; best Assam C.T.C. B.P. 6.50 to 6.80; medium Assam C.T.C. B.P. 5.80 to 6.50; clean plain pekoe 4.60 to 4.80; plain fannings 4.40 to 4.80, and plain B.P. 4.00 to 4.40.

JUTE GOODS HARDEN

(From Our Own Correspondent)

CALCUTTA, *6th November*

Stimulated by sustained buying against both consumption and speculative holding, hessian and sacking goods have hardened further in the past week. It must, however, be emphasised that prices are just equivalent to cost of production, though, in respect of hessian constructions, the profits are somewhat reasonable. It is essential that prices should be kept within reasonable limits. If the rising trend were to continue, it is apprehended, consumers both within the country and abroad would revive their search for substitutes, and bulk handling methods and paper bags would be at a decisive advantage. It is also significant that overseas consumers have been purchasing a greater quantity against ready or near delivery. In other words, they are refraining themselves from entering into forward commitments, as they desire to watch the price trend. Bull support has been freely accorded for delivery upto the middle of next year, leading to the rise in prices. But for a long time now, mills have been incurring losses in their output of heavy goods constructions and these losses are being good in hessian. A factor calling special attention is that, in recent months overseas interests have been showing much caution while entering into commitments.

This week's reasonable rise in prices of sacking goods was due to the Australian order for a substantial quantity earlier. This led to expectations that, with India involved in an undeclared war against the Chinese communists and the earlier setback in the international political situation following the Cuban episode and after, there would be a certain amount of stockpiling overseas. At the same time, there was an order placed by the Government of India for seven million sandbags, which, though it is small as compared with the output of mills, generated the feeling that more such orders were in the offing in view of the emergency. As these expectations, however, failed to materialise, a sagging tendency developed in the market during mid-week and the earlier gain in B. twills was completely lost. But as the week progressed, there was much covering demand in hessian and, in sympathy, sacking made good the mid-week recession.

It is realised in the market that, with the rejection of President Nasser's peace proposals, China is in no mood to vacate aggression unless thrown out by force. Naturally, as India's attempt to push back the Chinese gets momentum, Government orders for jute goods would significantly increase. There would be steady demand for all the sacking and hessian mills can produce, and thus the country's bumper jute crop would be put to full use. In hessian, support from U.S. buyers continued to be steady. This was not unexpected and it is usually at this time of year that replenishment in the U.S. takes place.

Such steady support for goods as accorded during this week has not affected fibre prices. Lower grades continue to be offered at below the minimum prices. With the increased need of the Government for wagons, movement of fibre from the agencies has received a serious setback, and this is why the rising trend in goods has not been reflected in fibre prices. Stocks are mounting up in the agencies, but the demand for higher grade fibre is not fully met. The tendency to mix lower grade fibre with good quality assortments is pronounced, and mills are finding it difficult to determine quality by colour only. This year's crop has increased the proportion of lower grades, and steps are essential to ensure that quality improves in the next season. The absence of adequate facilities for retting has been given by cultivators as the reason for the increase in the lower quality fibre this season.

Fibre arrivals in Calcutta and mills' stations in the three months up to September aggregated 1,207,595 bales (1,182,900 bales from India and 24,695 bales from Pakistan), representing an overall increase of 167,995 bales as compared with the corresponding period last year. While Indian arrivals increased by 220,200 bales, those from Pakistan decreased by 52,225 bales, indicating the diminishing dependence of Indian mills on Pakistan fibre. It should be noted that arrivals in September 1962 at 498,450 bales (489,800 bales from India and 8,650 bales from Pakistan) showed a total rise of 48,270 bales as compared with the revised figure for August 1962, but showed a fall of 30,650 bales as compared with the figure for September 1961, inasmuch as receipts from India increased by 5,950 bales and those from Pakistan fell by 36,600 bales. The increased nature of arrivals make no doubt of the bumper crop, and that explains the continued weakness in lower grade fibre prices. During the week under review, mills displayed limited interest. They are finding it difficult to find adequate storage space for fresh purchases. The quotations during the week were unchanged as follows: Daisee bottoms Rs. 32 a maund, Assam bottoms Rs. 30.00 and northern bottoms Rs. 29.50, all against November-December delivery.

The goods section opened steady on Tuesday last, and business was done in hessian for ready a well as near delivery. Forward business was extremely limited. Ready hessian 40″ 10 oz. improved from Rs. 55.00 to Rs. 55.65 and ready B. twills from Rs. 117.40 to Rs. 117.80. The higher prices were resisted by buyers and, as a result, B. twills eased to Rs. 116.25 and hessian 40″ 10 oz. to Rs. 55.60 on Wednesday. Soon, there were reports of Government interest in hessian and, on Thursday, hessian 40″ 10 oz. firmed up to Rs. 56.40. In sympathy, B. twills rose to Rs. 118.00. Covering business followed, but, though genuine business was limited, hessian 40″ 10 oz. gained to Rs. 57.60 and B. twills to Rs. 119.00. Over the week-end, conditions, stirred by the persistent buying in the futures market, turned fully steadier and ready hessian 40″ 10 oz. at Rs. 59.00 and ready B. twills at Rs. 121.15 added liberal gains. Overseas buying during the week as a whole was, however, limited, as the interests concerned were keenly observing the price trend and developments. The week-end's rise in price was purely speculative, and present conditions do not raise the hope that overseas buyers would follow the rise. Trading yesterday was generally quiet, as, apart from covering business for ready goods, there was nothing else significant. Hessian 40″ 10 oz. was steady at Rs. 59.10, with B. twills being slightly lower at Rs. 120.70.

TIN ADVANCES

(From Our Own Correspondent)

CALCUTTA, *6th November*

The announcement of the six-monthly import policy, once postponed till the end of last month to allow time for the Finance Minister to return to New Delhi from his visit abroad and to enable him to re-assess the foreign exchange resources in the light of aid promises made to him, has been delayed further, as it is believed that, in the light of the changed needs of imported equipment for Defence, the Government of India would be re-formulating the import policy. Against this background and the expectation of further curbs on imports, steady conditions were in evidence in the local metal market during the week under review. The spontaneous donations of gold and jewellery to the National Defence Fund and expectations of impressive subscriptions to the gold bonds, however, raise the expectation that sufficient foreign exchange would be made available, so that the country's economy would progress. Note was taken of the Prime Minister's declaration that the Plan would not be pruned and that the execution of the Plan was essential to push the enemy back. There was, therefore, the hope that the Government would be able to provide adequate foreign exchange for the import metals which are very essential for the industrial development planned. Apprehensions of shortage raised the price of utensil copper scrap from Rs. 546.00 to Rs. 549.25. On the London Metal Exchange, spot copper returned to £234 a ton, after the situation over Cuba cooled down. The 3 months' position opened at £233½ and, after being higher at £233¾, returned to £233½.

Some confusion would appear to have arisen over the levy of an excise duty of Rs. 100 per metric tonne of copper ingots, alloys, scrap and copper in any crude form. The imposition of the duty was announced on 24th April last in the new Finance Bill, and it was evident that stocks of copper ingots, etc., with consumers, manufacturers and other stockists as on that date would be treated as duty-free pre-excise stock. This recognition was, of course, accorded by excise authorities, but soon it was stated that the alloys manufactured from these duty-free ingots, etc. would attract a duty of Rs. 100 p.m.t., even if these alloys were meant for further processing, such as by extrusion, into finished products or semi-manufactures. It was further stated that the payment of Rs. 100 p.m.t. on copper alloys, including billets containing 50 per cent, or more copper, would be refunded on production and sale of excisable copper and copper alloy products made from these duty-paid copper alloys, which in turn had been manufactured from non-duty-paid copper ingots, etc.

Industry circles state that, since duty at the rate of Rs. 300 p.m.t. is being paid on copper and copper alloy products and no refund is claimed on sales of products made from non-duty-paid copper ingots, the insistence by the excise authorities on payment of a duty of Rs. 100 p.m.t. on copper alloys made from non-duty paid copper ingots, etc., would only increase paper work without bringing in more revenue to the Government. The point stressed is that excisable copper and copper alloy products made from non-duty-paid copper ingots, etc., attract a duty of Rs. 300 p.m.t. and to reduce this to Rs. 200 p.m.t. and charge the difference of Rs. 100 p.m.t. on the alloy or billet stage mean the same thing. A clarification on this point is urgently called for.

The L.M.E. price of cash copper remains unchanged at £234 a ton for several months now, and it has been claimed that this stabilisation has been due to recent production cutback in several mines. If European consumption remains at the present level, no further cutback would be necessary. In London, tin opened at £868 a ton and, after rising to £875, influenced by the rising trend in Singapore, closed at £870. Malayan concern of the present unsettled conditions in tin as a result of the U.S. releases has been represented to the U.S. Government. In Calcutta, apprehensions of shortage pushed the price from Rs. 2,620 per 100 kgs. to Rs. 2,660. Virgin lead was unchanged here at Rs. 141 per 100 kgs., while electrolytic zinc eased from Rs. 279 per 100 kgs. to Rs. 274. In London, zinc closed lower at £67 a ton, as against the opening of £67-3/8, while spot lead was unchanged at £53¼ a ton.

SUGAR DRIFTS LOWER

(From Our Own Correspondent)

HAPUR, *5th November*

Sugar prices here drifted lower this week on selling by factories due to the Government's order that the time limit for sale of sugar released under the quota for open sale would not be enhanced. Small business on *Divali* eve in *Moorat* trading at reduced rates was done on account of Punjab, Gujarat, Rajasthan, Saurashtra and M.P. But business later was again dull due to uncertain political situation following the Chinese invasion in the North and North-East. Mill delivery prices eased further. New production has commenced in some factories in the district. Week-end prices here were: Spot delivery Rs. 108 per bag of one quintal, mill delivery (per quintal) (D 29) Amroha Rs. 102.99, Dhampur Rs. 102.66, Seohara Rs. 102.18, Meerut Rs. 104.25, (E 29) Simbhauli Rs. 104.50, Bijnore Rs. 102.48 and Dhampur Rs. 102.32.

Sugar prices were depressed during the week also in the Muzaffarnagar market on poor buying support. Uncertain political situation and selling pressure by factories were the main depressing factors. In spot section, demand was slack after the *Divali* rush and prices eased up 25 nP to 75 nP per quintal in almost all sections.

Restricted demand coupled with beginning of arrivals of new produce in the markets accounted for an easier trend in *khandsari* prices during the week. Most of the crushers, however, still preferred to manufacture *gur*. Week-end prices here were: Non-crystal Rs. 92.43 to Rs. 99.13, crystal Rs. 92.43 to Rs. 97.79 and crystal Boora Rs. 107.17 to Rs. 108.51 a quintal.

Ready *gur* prices here sagged heavily by about Rs. 7 per quintal on pressure of arrivals which averaged about 5,000 maunds daily, as against 1,000 maunds at this time last year. Total arrivals of *gur* here during the current season so far were about 50,000 maunds as against 15,000 maunds during the same period last year. *Gur* arrivals are likely to fall now, as cane would be diverted to factories which had commenced their production season. Crushers were now purchasing cane at Re. 1.12 to Re. 1.25 a maund. For the 1962-63 sea-

son, the purchase price has been fixed by the Government at Re. 1.50 to Rs. 2.13 a maund according to quality. Week-end prices of *gur* here were: Superior Rs. 53.58 to Rs. 54.57, average Rs. 45.55 to Rs. 48.23. Demand for *gur* was fairly brisk at lower rates. The week's offtake aggregated 40 wagonloads mostly to Gujarat. *Gur* arrivals have also increased to an average of 3,000 maunds daily at Gulaothi and 2,500 maunds in the Siana mofussil markets. But, as arrivals were being lifted, there had yet been no stock building.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *5th November*

A quiet to easy trend was witnessed in foodgrain prices here this week. *Rabi* sowings were nearly complete, and first reports indicated that germination had been satisfactory. Demand for wheat and gram was slack.

While the average quality wheat was unchanged at Rs. 40.19 to Rs. 40.87 the farm quality eased by 67 nP a quintal to Rs. 43.54 to Rs. 45.55 a quintal. Red wheat was quoted between Rs. 37.51 and Rs. 38.18 a quintal. Arrivals were around 200 maunds a day, and stocks were around 48,000 maunds. Rice ruled depressed on increased arrivals of new produce. Prices declined by 67 nP to Re. 1.34 per quintal according to quality. Old stocks were reported to be small around 4,000 maunds. Week-end prices (in quintal) were: Rice *basmati* superior Rs. 80.38 to Rs. 96.45, *sela basmati* Rs. 75.02 to Rs. 80.38, mainpuri *sela* new Rs. 52.92, *ramajwayan* new Rs. 57.60, *raimunia* new Rs. 61.62 and *gadda* Rs. 50.24.

Gram eased slightly on slack demand. The Punjab quality was quoted at Rs. 43.54 and the local produce at Rs. 42.87. Arrivals were negligible and stocks were poor around 9,500 maunds. Maize attracted good demand and was quoted higher at Rs. 30.14 to Rs. 32.82 a quintal. Maize stocks were poor around 4,000 maunds. *Juwar* remained stationary at Rs 45.55 to Rs. 48.23, while *guwar* eased by Re. 1.34 per quintal to Rs. 34.83 to Rs. 37.51 per quintal. Barley and *bejhar* prices sought higher levels at Rs. 26.79 to Rs. 28.13 and Rs. 27.46 per quintal, respectively, due to poor stocks. Other grains were listless. Week-end prices were: *Methi* Rs. 61.62, *bajra* Rs. 37.51, maize old Rs. 26.79 to Rs. 28.13 and oats Rs. 32.15, a quintal.

In pulses, peas ruled steady on better outside demand, with dara quoting at Rs. 32.15, farm at Rs. 33.49 to Rs. 34.83 and peas *dal* at Rs. 36.17 a quintal. Arrivals were small and stocks declined to 38,000 maunds. The week's offtake was four wagons to the South. *Arhar* also ruled steady to be quoted at Rs. 57.60 a quintal. New *urd* prices drifted lower on increased arrivals from producing areas. *Moong* prices were almost stationary, while *massoor* prices sought lower levels in sympathy with *urd*. Week-end prices were: *Arhar dal* Rs. 69.66, *moong* Rs. 50.91 to Rs. 53.58, *moong dal* Rs. 58.94, *massoor* Rs. 50.91, *malka* Rs. 54.22, *massor dal* Rs. 58.94, *moth* Rs. 40.19, *moth dal* Rs. 48.23 and gram *dal* Rs. 49.57, a quintal.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, *5th November*

The Madras hides and skins market remained firm in the kips section this week. Tanners were not keen to sell because of the enormous delay in the transport of their raw stock purchases in North India. Demand was good for standard marks in cow hides, but buyers were not willing to pay higher prices quoted by the tanners. Lower grade kips were steady. Cowcalf ruled firm due to smallness of stocks. Increased prices were paid by importers of buffcalf for small quantities, and sellers were reserved and cautious in view of the likelihood of delayed deliveries against contracts for shipments made earlier.

Trading in the tanned skin section was patchy. Buyers' resistance to price increases demanded by sellers was great, especially in superior tannages. Continental buyers were interested in secondary marks of goat skins and a few orders were booked. Prime sheep skins market was steady, but middle class weak.

In the German Auctions held last week, 35 per cent of the goat skins catalogued for sale were sold at about 6d. below the Madras levels; and only 10 per cent of sheep skins were cleared, which were mostly suitable for suede work.

Shipments (in bales) during October were: 1,310 of tanned cowhides, 143 of cowcalf, 10 of buff hides, 103 of buffcalf, 286 of goat skins and 193 of sheep to U.K. ports; 79 of cow hides, 15 of cowcalf, 9 of buffcalf, 620 of goat and 338 of sheep skins to Continental ports; 4 of cowcalf, 10 of buffs, 25 of buffcalf, 142 of goat and 2 of sheep to U.S.A. ports; 11 of goat and 63 of sheep skins to Japanese ports.

MARKET GOSSIP

(Concluded from page 799)

persons responsible for the economic and financial policy of each State, it is suggested, should meet each autumn under the auspices of the Commission to compare national income and State budget forecasts for the following year and discuss the effects of, and possible corrections to, their economic policies. It is further suggested that national delegates should meet to discuss and compare national wage policy, based on discussions among officials, employers and trade unions, in an attempt to achieve a more equitable share-out of the fruits of expansion. Meanwhile, the Commission has undertaken to draw up, by the middle of next year, the first combined programme aiming to make the fullest use of the Community's resources without inflationary tensions. It has also made new proposals envisaging a common policy governing company mergers, subsidies to industries, purchase tax, transport, social security, aid to less developed countries, capital movements and tariff cutting negotiations with the U.S. Included, too, is a recommendation for the removal of all tariffs and other obstacles to trade, as well as national tariff-free quotas, by the end of 1966, instead of 1969 as originally foreseen.

The proposals of the E.E.C. Commission are so far-reaching in character that they will doubtless be subjected to wide discussion in financial circles the world over. The implications of these proposals will have to be carefully examined to assess the exact impact on the world economic system. Commenting on the proposals, the London *Economist* says that they represent work for a myriad of Eurocrats and that they follow from the conviction that progress towards an economic union is at the same time progress towards political union.

Notices

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

DRAWING OF 5 PER CENT RUPEE DEBENTURE STOCK, 1970 FOR REDEMPTION

HOLDERS OF 5 PER CENT DEBENTURE Stock (Indian Issue) are hereby advised that a Drawing will be held on Tuesday, the 4th December, 1962, at 10.30 a.m.

By Order of the Board,
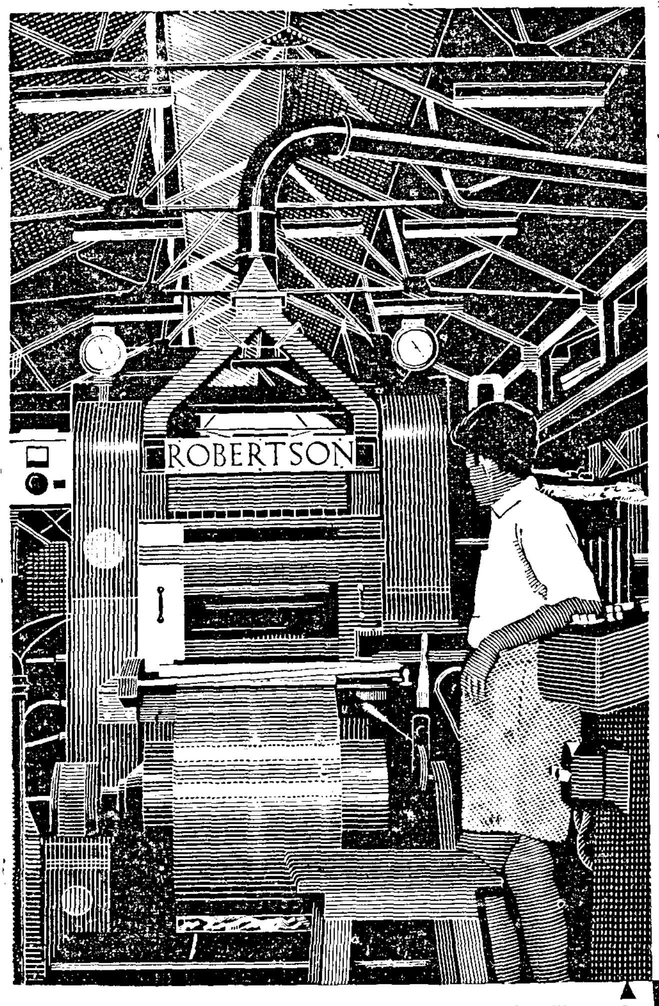
For NEW CENTRAL JUTE MILLS CO. LTD.,
G. S. MAHESHWARI,
Secretary.

Dated, CALCUTTA,
the 31st October, 1962.



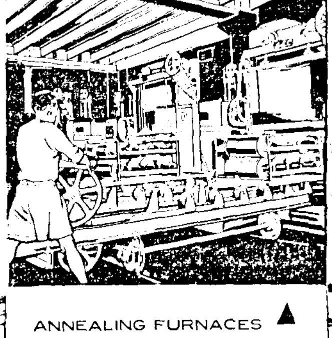
ROLLING OF FOIL

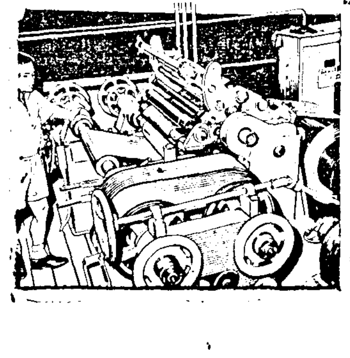
The making and shaping of aluminium foil is an extremely skilled process. It calls for rigid control in rolling to gauge. Special techniques in applying scientifically formulated coatings. Skill and know-how when mounting foil on carefully selected substrates. Machine techniques, and material and production quality control demand the highest order of technical knowledge and experience—the kind of experience that India Foils have acquired in 60 years.

The first step in foil manufacture is the cold-rolling of .45 mm gauge aluminium foil stock. Each pass reduces the gauge of the foil by approximately fifty percent.

India Foils Limited
(Incorporated in Great Britain)
CALCUTTA BOMBAY MADRAS NEW DELHI

OPENING THE WEB
Often lighter gauge foil is rolled as a double web. Here the double web is being separated into two single webs each .006 mm in thickness, revealing the shiny and mat surfaces.





ANNEALING FURNACES
Annealing restores the molecular pattern rendering the foil dead soft and leaving the surface spotlessly clean and organically inert.

Foil reels rolled to the required gauge awaiting further processing.

PERSPECTIVES ON SINO-SOVIET FOREIGN TRADE

(*Concluded from page 828*)

Domestic shortages explain the increasing public resentment against expensive foreign aid programmes which has been noted by travellers to the Soviet bloc. As promises of better living standards at home remain largely unfulfilled, the resentment occasionally erupts into the open. This is what happened last year, for example, when Russian dock workers in the port city of Odessa staged a protest strike against loading scarce butter destined for Cuba. The strike was quickly put down, but not until assurances of relief were given to the workers. Resentment at a higher level was expressed in 1959 by V. Ye. Dymshits, newly appointed Chairman of Gosplan, the highest Soviet planning authority. Formerly Chief Engineer of a Soviet-built steel plant in India, Dymshits alluded to the foreign aid problem at a Central Committee meeting: "Comrades Brezhnev and Mikoyan occupied themselves with the delivery to India of electrical equipment from Kharkov and Zaporozhya. It was beautiful equipment, simply wonderful.... And then I came home and asked, 'Is such equipment going to our own plants?' It is not. Why does this happen?"

In Poland, where the Press is less severely controlled than in the other Communist countries, the problem of foreign aid has been discussed openly in the weekly publication *Zycie Gospodarsze* (Economic Life). Said a writer in that publication: "It is an open question whether, in our position, the granting of major credits to underdeveloped countries is not too much of a burden to us. Granting a credit abroad always means a temporary freezing of assets which could otherwise be used for improving our internal economic potential." Referring to Poland's business transactions with Latin America, he concluded: "Even if, let us say, the exchange of ships for coffee might be worthwhile to a certain degree, an excessive expansion of such transactions might perhaps benefit our blood pressure but less so our country's economic situation."

With insufficient goods for domestic consumption, the people of the Communist countries in the past have paid the price for their Governments' politically-inspired foreign aid and trade programme. As internal pressures multiply and resentment grows, these Governments must increasingly balance the price they are exacting domestically against the hoped-for political benefits abroad. Meanwhile, the domestic resentment and the chronic disequilibrium between the civilian and military sectors of the bloc economy help explain the widespread complaints abroad regarding the overall quality and reliability of Sino-Soviet foreign economic programmes.

CHINA'S POSITION IN PETROLEUM

(*Concluded from page 812*)

Russian products to China, totalling 2.9 million tons, were valued 108.6 million New Roubles f.o.b. (2.52 N.R.=£1), representing almost exactly one-third of the value of Russia's total exports to China, of 330.6 million N.R. Incidentally, China's own exports to the U.S.S.R., totalling 496.3 million N.R., were last year considerably in excess of her imports, probably owing to the repayment, in goods, of former loans. Altogether, the import-export trade with Russia is said to have accounted last year for 38 per cent of China's total trade with all foreign countries.

Most of the oil delivered from the U.S.S.R. is sent either overland from the Ural/Volga region via Irkutsk in Eastern Siberia, where a new refinery is working, or by tanker from near-by Sakhalin. The overland deliveries to Irkutsk and beyond still go by the Trans-Siberian railway, the completion of the 2,300 mile crude oil pipeline from Tuymazy in the Urals to Irkutsk having been delayed. Relatively small quantities of Russian oil (198,000 tons) were sent last year to China via Suez, which, of course, is also the route of the smaller shipments from Rumania and Albania.

Inland consumption of petroleum products in China in 1960 was previously estimated in these columns at around 8 million tons or an average of 3 Imperial gallons per head and statistics prepared by the Secretariat of the United Nations' Economic Commission for Asia and the Far East for the recent Symposium in Teheran show an identical estimate. Consumption per head is among the lowest in the world, and demand in 1962 will, if anything, be even lower than in 1960. But this basis of comparison can be misleading. The economy is geared to a low use of petroleum products, and it is worth recalling that she is now using yearly about seven times as much oil as she was before World War II, a higher multiplier than can be applied to some other countries. China has, of course, immense coal resources which can be produced with less investment than is involved in the search and development of oil; production was assessed at 425 million tons for 1960, which was somewhat higher than the output in the U.S.A. The use of fuel oil for electricity production in Shanghai has ceased in recent years in favour of coal.

The fact remains, however, that a modernising economy needs a far greater permeation of oil use than now exists in China if any noteworthy economic advance is to be made in the face of a rising population. There is no doubt that the Government will want to foster some uses of oil products, notably in agriculture, as far as this can be done under the present strained conditions. In the whole of China, there are not more than about 80,000 farm tractors in use, but the output of tractors in Chinese factories is stated to have reached the equivalent of 40,000 15-h.p. units (probably rather less in terms of actual physical units) in 1961. Nevertheless, the point is being stressed in official pronouncements that agriculture in China will continue to depend primarily on draught animals for a long time to come. China also has a small motor vehicle industry whose latest output figure was 19,360 vehicles of all kinds in 1959. The dearth of motor roads, a wide if thin railway network, and the intensive use of cheap water transport, make it most unlikely that road transport will get any high priority in the new order of things. In this, it seems inevitable that the example of the U.S.S.R., with its very low development of road transport, will have to be followed.

Even so, the aim to become entirely independent of any foreign oil supplies by 1967 is an ambitious one, in view of the dire necessities in other sectors of the economy. It means that both crude oil production and refining capacity will have to be raised by 50 per cent to around nine million tons annually within the next five years and transport facilities raised in greater or lesser degree, even if consumption did not go up over this period. To the extent that it did rise, then expansion would have to be even faster. With proved reserves of natural crude estimated, some time ago, at 200 million tons, higher output is technically feasible, and there is much potential oil territory to explore. But it will certainly not be easy to create, unaided, within a relatively short period of time all the necessary facilities to these ends, even giving full credit for traditional Chinese resourcefulness.—*By arrangement with Petroleum Press Service.*

SUGAR

(*Concluded from page 814*)

authorised the Government to amend the provisions of the Sugarcane (Control) Order relating to additional payments to cane growers prospectively and retrospectively. The changes actually made by the Government in the formula for making additional payments to cane growers for the aforesaid four seasons have now been notified in a *Gazette Extraordinary*, *vide* the one dated 1st November 1962. The three principal changes effected are:

1. The schedule of costs given by the Tariff Commission in its report of 1959 has been used for purposes of determining the ratio which the cost of sugarcane bears to the cost of sugar (excluding taxes). There is a provision for the costs to be brought up-to-date.

2. Three-fourths of the amount earned by sugar mills by way of rebate of excise duty for their production during the 1959-60 and 1960-61 seasons will be taken into account for determining the additional price to be paid to cane growers. This amount will, however, be shareable in the same manner as other receipts.

3. An allowance for the purposes of rehabilitation has been made admissible to such factories as may have actually spent a certain amount on rehabilitation or transferred such amounts as reserve to a special rehabilitation account during the year.

The *Gazette* notification does not contain any reference to the machinery required to determine the amount which may become due to cane growers from the sugar mills in the various parts of the country. The Government says that such a machinery will be set up shortly. It is intended to complete this process as soon as possible, though it would involve the scrutiny of accounts and other data, pertaining to the period of four years, of all factories.

The sugar price linking formula, as readers are already aware, has ceased to be in operation since the commencement of the current season on the 1st inst. The cane prices are now linked to both the recovery per cent and the quantity as such in accordance with the new formula. The price per maund of cane under the formula varies from the minimum of Re. 1.50 for cane with sucrose-content of 9 per cent to a maximum of Rs. 2.13 for cane with sucrose-content of 10.14 per cent and above. The sugar mills are no longer liable to pay to cane growers a share in the price of sugar realised by them in excess of what is regarded by the Government as the fair ex-mill prices.

WEEK'S STOCK EXCHANGE TREND

VOL. CV. No. 2692 BOMBAY, 17th NOVEMBER 1962 PRICE Rs. 2

HOLDING THE PRICE LINE

EVER since the massive invasion by China about a month ago, the Government of India has been quite alive to the necessity of keeping prices under check. The strategy to be followed was outlined by Mr. Gulzarilal Nanda in a statement to Parliament early this week, supplemented by Mr. S. K. Patil in a broadcast to the public on Monday. Broadly speaking, the plan is to rely mostly on the voluntary co-operation of producers, distributors and consumers and on official controls only to the minimum. This is a realistic approach, for no amount of controls by the Government can serve the purpose effectively in a vast country like India with a population of nearly 440 million, 70 per cent of which lives in rural areas, if public co-operation is lacking. All sections of businessmen have expressed their readiness to work in concert with the Government and agreed not to raise the prices. They have also given an undertaking to form vigilance committees and accept lower profit-margins. The Government spokesmen in charge of food and clothing have already had talks with the representatives of businessmen concerned. In the last four weeks, prices of foodgrains, *gur* and fruits, as well as of vegetables, have receded. The index number of wholesale prices for all commodities is well below the highest level witnessed in September last. This was, of course, expected, because, with the new crops coming in for marketing, the upward trend was bound to be reversed. It is, however, significant that the Chinese invasion and the prospect of a prolonged war have not prevented the earlier expectation from materialising. This development suggests that, so far, the mercantile community has not tried to exploit the national emergency and that the public has not yielded to panic. It is to be hoped that this will not prove to be a temporary phase born of the patriotic upsurge whipped up by China's perfidy and that, on the contrary, the national sense of responsibility will firmly prevail as long as the emergency lasts.

Under the Defence of India Rules, the Government has enough powers to introduce price and physical controls. It has also a fairly good idea of the machinery to be set in motion for holding the price line in case voluntary efforts and restraints fail to work. It is, however, up to the business community and consumers to see that the necessity for doing so does not arise. If consumers refrain from hoarding the necessaries of life and if traders do not hold back stocks, avoid the temptation of buying their supplies from producers at prices in excess of those indicated as fair and work on a slightly reduced profit-margin, there need not be any rise at all in prices. Everyone in this country will do well to realise that enforcement of controls by the Government will cost a lot of money, that such expenditure is unproductive and that, in order to finance it, money will have to be either created or collected from the people by way of additional taxes. Whichever way the money is found, it will be a heavy burden on the people, a burden that can be avoided, if businessmen and consumers are determined to play fair. Just imagine the amount of paper work that would be involved if licensing were to be introduced. All that paper and ink, let alone the man-hours, can be more profitably used in the cause of educating the millions of children that are added to our population every year. We have no doubt that, in this hour of peril, the people of this country will give their wholehearted co-operation, if the wasteful implications of controls are properly dinned into their ears.

It will, however, be naive to presume that none will try to take undue advantage of the situation in which supplies may be scarce and the purchasing power plentiful. Realising this weakness in our society, the Government has made provision for increasing the fair-price shops and consumer co-operative stores. While this precaution is not unnecessary, care must be taken to see that the broadening of this distributive channel does not mean reduced supplies to the retail shops that already exist. Further, country-wide publicity must be given to what is considered as fair prices, especially of prices of consumer essentials. The suggestions made by the Committee on Fair Trading Practices of the Board of Trade on this subject are quite pertinent. Mr. Shriyans Prasad Jain, who is the Chairman of the Committee, deserves to be complimented for the vigorous initiative taken by him for rousing the business community to the realities of the situation and its sense of duty to the country. The Committee has recommended the adoption of a code of fair trading practices by all chambers of commerce, manufacturers, export promotion councils and commodity boards. This code should become part and parcel of their by-laws, or rules and regulations. The Committee has also suggested the fixation of fair prices for a large variety of consumer goods, including conventional necessities and durables, and their display through price-tagging, price-stamping, advertising and notice boards in every shop. Nothing but good can come by faithfully implementing these suggestions. The selection of a large list of goods for fair-price fixation reflects the realisation on the part of the Committee that, to hold the price line and cost of living, it is not enough to take care of food articles alone but also of other goods such as footwear, electric fans, sewing machines, cycles, drugs, pharmaceuticals, soaps, electric lamps, storage batteries, paints and varnishes, clocks and watches, and kerosene oil. If the prices of these consumer goods also can be firmly held, inflation will be well under control. This suggestion must be fully and honestly tried before it is condemned as impracticable.

The success of voluntary price control depends, to a very large extent, on the vigilance and determination of consumers. Every consumer must take the trouble of finding out the fair prices of goods that he wishes to buy and resist the temptation to pay a higher price. Equally important is the need for forming vigilance committees to protect the interests of consumers. There should be a committee for every compact area of consumers. It should be easily accessible to all consumers and it should take the trouble of verifying and redressing their complaints. The business community should, in its own interest, take the initiative to promote the formation of vigilance committees, for it is their fair name that is at stake. Besides attending to the complaints of consumers, such committees can also look into the difficulties of retailers in getting adequate supplies at regular intervals and try to minimise them by taking up the matter with the appropriate authorities.

While relying on the active support and participation of trade, industry, and consumer organisations for holding the price line, the Government has also taken certain precautions. It has already decided to license wholesale trade in foodgrains, rice mills and flour mills. They will all have to submit regular returns of their business and stocks on hand. So far as cloth is concerned, the millowners have been asked to stamp prices on the manufactures in consultation with the Textile Commissioner, to open more fair-price shops and to have an eye on their dealers. The Textile Commissioner has been told to take steps to regulate the movement of cloth and the stocks to be held by mills. There will be a watchdog in the Finance Ministry, known as the Committee on Price Stabilisation; this Committee will keep a close and continuous watch on price trends and formulate proposals for further action as and when necessary. It will work in co-operation with all the economic sections of the Ministries concerned and the Reserve Bank of India. Steps are being taken to improve the machinery and system of collecting information on retail prices from all parts of the country. The existing agencies and the C.S.O. are being strengthened for this purpose. In order to provide a check on profiteering by retailers, the Government has sanctioned a programme for building up a large network of co-operative and other consummer stores which will supply not only foodgrains but also other essential commodities. To begin with, it is proposed to set up about 200 wholesale and central stores, with about 4,000 branch and primary stores. These, we are told, will cover all metropolitan cities, State capitals and industrial towns—cities with a population of 100,000 or more—and a number of smaller towns. Besides, trade unions and other voluntary organisations, as well as Government departments and agencies, are being asked to open fair-price shops. All this is a sound plan, but whether and to what extent it will be successful will depend on efficient implementation. Honest and devoted workers must be attracted to man the consumer stores, if waste and corruption are to be prevented.

Neither voluntary nor statutory controls can function effectively, even if administered by devoted workers, unless the supply side is taken care of. Production, transport and storage are the three principal facets of the supply problem. The first aspect has been discussed in these columns more than once in recent weeks. Suffice it to say that both Mr. Nanda and Mr. Patil have assured the country that they will do everything that lies in their power to accelerate production. Mr. Patil has further stated that imports of P.L. 480 wheat and rice from the U.S. are being stepped up and that negotiations will be initiated with Burma and Egypt for buying more rice. It would be a good thing if a long-term agreement could be concluded with these countries, as well as Thailand, for supply of rice in exchange for some of the goods which they need and India can supply. The object should be to facilitate

stockpiling of rice on the assumption that the conflict with China will be a long-dawn-out affair. Such an arrangement should and need not mean that India could slacken its efforts at raising domestic production of rice through intensive cultivation. It is obvious that transport capacity has to be substantially increased. As there are serious limitations to raising the production of transport equipment quickly, trucks, locomotives, and ships (for coastal trade) may be obtained on a lend-lease basis from the Western countries which at the moment have plenty of surplus capacity. In addition to this arrangement, these countries should also be requested to release plant and machinery as well as maintenance imports to enable domestic manufacturers to expand their capacity and to work to their full capacity. The storage aspect requires to be so handled as to reduce (a) unnecessary movement of goods from one part of the country to another and (b) loss of goods through defects in godowns and methods of preservation. Mr. Nanda disclosed in Parliament that the implementation of the programme for construction of godowns would be expedited so as to complete the third Plan target a year in advance and that a number of small storage units would be located at suitable places. A lot more effort than one has witnessed so far will be required if this goal is to be reached in time. Besides, the storage accommodation will have to be built on scientific lines, as it will be needed on a permanent basis. So speed in construction should not be at the expense of quality.

Both Mr. Nanda and Mr. Patil have stated that steps woud be taken to increase the production of meat, fish, eggs, vegetables, fruit, and milk and other dairy products, too. This reiteration is welcome, for foodgrains alone do not constitute man's food. It would, however, be more encouraging, if the Gofernment were to draw up and publish a crash programme for raising the output of these vital articles of food also. The Central and State Governments should get together for this purpose without any delay.

STEEL INDUSTRY'S NEEDS

THE state of steel industry in the private sector, with its outstanding problems and its vital requirements for survival and growth, has just come in for treatment very exhaustively in Mr. Biren Mookerjee's statement to the shareholders of the Indian Iron and Steel Company Ltd., and rather briefly but pointedly in Mr. J. R. D. Tata's statement to the shareholders of the Tata Iron and Steel Company Ltd. The two statements have much in common. They reflect, for instance, an identical stand on the question of steel retention prices. Both the statements refer to the crucial shortages and deficiencies in raw materials and transport—factors over which the industry has no control and which stand in the way of 100 per cent capacity production. They have also characterised as unreasonable the Government's expectation that its special advances to them for expansion be repaid out of an issue of fresh capital. Above all, they have both rightly questioned the wisdom of flouting the recommendations of an independent, semi-judicial and expert body like the Tariff Commission.

By giving the pride of place in their statements to the question of steel retention prices, both Mr. Biren Mookerjee and Mr. J. R. D. Tata have brought out the grave injustice of the Government's recent decision to fix the average fair retention price of steel at Rs. 522.50 per tonne, instead of at Rs. 550.00 per tonne recommended by the Tariff Commission, for the period 1st April 1960 to 31st March 1962. The Government's action in changing the basic formulæ for calculating the retention prices payable to the main producers has been cogently criticised in the statements. Mr. Tata's clinching counter-argument, in this connection, is that "the Tariff Commission's recommendations were based not on estimates, theories and assumptions relating to a period still in the future, but on actual known figures, facts and conditions, about the truth and reality of which there could be no argument." By far the most serious departure made by the Government from the Tariff Commission's recommendation has been in respect of the formula for calculating the incidence per tonne of depreciation and return on gross block. The value of the block considered fair by the Commission for this purpose, it may be recalled, had the special advance of Rs. 10 crores to each company included in it. And it was also based on the assumption of 90 per cent capacity utilisation—a rate which was not unduly generous, considering the "teething" troubles of the expansion projects of the two companies and the bottlenecks in transport and raw material supply. By excluding the special advance from gross block and by arbitrarily assuming operational efficiency at 100 per cent of capacity, the Government has denied Rs. 16.50 per tonne to the companies on both the counts and thus, in the words of Mr. Tata, "unfairly deprived both the steel companies of the full depreciation and return prescribed by the Commission."

The Government has been patently unjust in all this. To take the question of operational efficiency first. Mr. Tata's comments on it are:

> "Government, although well aware that the inability of the steel plants to make more steel was largely due to the appalling quality of unwashed market coal allocated by the Coal Controller and the deficiencies in transport, for both of which they were themselves mainly responsible, decided that the steel plants should have worked at 100 per cent of capacity during these two years (1960-62) and deserved to be penalised for not having done so."

The T.I.S.Co., it may be noted incidentally, had not done too badly in the two years of critical shortages or deficiences in transport and raw materials, namely, 1960-61 and 1961-62, when its actual production of saleable (finished) steel worked out to 84 per cent and 88 per cent, respectively, of the relevant installed capacity. The Company's performance in 1961-62 was better than in 1960-61, because the washed coal from its own two washeries rose during the year by about 140,000 tonnes to a total of 1,202,000 tonnes. But the performance could have been still better if the ash content of the total coking coal mixture, including purchased market coal, had not increased to an average of 17.94 per cent, as a result of the allotment to the Company of unwashed market coal of even poorer quality than before. It is, indeed, a disappointment to the Company that it has been directed to make itself self-sufficient in respect of its washed coal requirements (2.4 million tonnes in all for the two-million ton programme) and not to count on supplies from the Government's Bhojudih Washery (not yet in commercial operation) for more than a few years. Capacity production in the T.I.S.Co. will thus be an elusive ideal so long as its full requirements of washed coal are not ensured. This is a relevant point for mention here, for there is a fear that the *provisional* retention price to be fixed from 1st April 1962 onwards will be based, among other things, on the assumption of 100 per cent capacity utilisation—a rate attained not even in Britain in the last eight years. It may be recalled, in this connection, that the Government's resolution on steel retention prices for the two-year period 1960-62 has stated that these prices "should also be applicable provisionally beyond the period 1st April 1962, subject to certain changes which are necessary on account of (a) the recent increase in the statutory price of coal, and (b) the increase in the railway freight from 1st July 1962." There is no reference here to other factors or any suggestion that the changes effected by the Government in the basic norms and formulæ adopted by the Tariff Commission will be reconsidered. In the circumstances, therefore, Mr. Biren Mookerjee has also done well to criticise, at some length, the Government's unreasonable and unrealistic assumption of 100 per cent capacity utilisation.

To take the question of special advance next. Mr. Tata's vigorous protest against the Government's rejection of the Tariff Commission's recommendation for the provision in the retention price of a special element of Rs. 8 per tonne towards the repayment of the special advances is accompanied by a forthright rejection of the alternative course suggested by the Government. This is what Mr. Tata's statement and the T.I.S.Co. Directors' report say on the question:

> "Government's reversal of their previous decision that the retention price should include an element for the repayment, with interest, of their special advances in terms of their agreements with the two companies is disturbing, although it may not immediately affect our financial position. However, their announcement that, as an alternative, they are considering the possibility of a part of the special advances being repaid out of fresh capital, raises fundamental issues of grave concern to the companies and their shareholders." (Mr. Tata's statement.)

> "(The) Directors consider that, taking into account the additional share capital amounting to no less than Rs. 21 crores issued since 1955, the limitation imposed by the retention prices fixed by Government on the Company's ability to pay adequate dividends even on the existing share capital and the condition of the share market, a further issue of capital in the foreseeable future would be impracticable as well as grossly unfair to the shareholders. The Company, whose concurrence would be required under the agreement with Government covering the special advance have, therefore, informed Government that they would be unable to agree to a further issue of capital for this or any other purpose at the present juncture or in the foreseeable future."

The I.I.S.Co. Chairman is no less forthright in his criticism of the Government's approach to this question of special advance. The long inner story behind this "special advance," which Mr. Biren Mookerjee has narrated in his statement published elsewhere in this issue, is very revealing. It shows conclusively that the special advance would have to be repaid only out of a "special element" to be added to the normal retention price. In the light of this stand taken by the two companies and in view of the legal consideration that the alternative of issuing fresh capital would require the concurrence of the companies, the guess may be safely hazarded that the Government will ultimately revise its present decision regarding the special advance and make a special provision therefor in the retention price.

Unless the Government reconsiders the whole matter of retention price and adopts the Tariff Commission's formulæ and norms, it is difficult to see how the two companies will be able to do adequate internal financing of the continuous process of replacement and development essential to maximum efficiency. While Mr. Tata has specifically referred to his Company's need for more retained earnings to service and repay fresh borrowings for its Jharia project which is to be shortly undertaken for doubling the Company's coal output, he has not explicitly referred to the possibility of further expansion of the Company's iron and steel plant as such. Mr. Biren Mookerjee, on the other hand, while pleading for a fairer and higher retention price so as to enhance the possibility of greater internal financing of growth, has given a very encouraging piece of information. It is that the Colliery Expansion Scheme of the I.I.S.Co., for which the World Bank has given a loan of about $20 million, will bring about such an improvement in the quality of washed coal that the balancing and future expansion of the Burnpur plant could be effected with greater ease. The Company has recently submitted to the Government a two-phase scheme of expansion in this connection. The first phase, which will balance the existing plant by using better coal, can increase the production of saleable steel by about 250,000 tons. The second phase is designed to bring the total output of I.I.S.Co. to two million tonnes of ingots (as against the one million tonnes capacity at present) or 1.6 million tonnes of finished steel. The fact that the Phase I project, which will add 250,000 tonnes of finished steel to the Company's output, will cost no more than Rs. 12.2 crores, is a conclusive argument in its favour. That Phase II project, for which no cost estimate has yet been made, and Phase I project will, together, cost relatively much less than an entirely new one-million ton plant is a safe guess.

In view of the Sino-Indian war emergency which calls for a greater and speedier expansion of steel production in the next few years than had been thought sufficient earlier, the Government should lose no time in encouraging the I.I.S.Co. to go forward with its expansion plans and also in interesting the T.I.S.Co. in possible further expansion of its two-million-ton plant. One of the best ways of providing this encouragement would be to adopt a more liberal price-fixing policy which will not be subject to the caprice and arbitrariness of administrators. If retention prices are fixed from time to time at levels that assure producers a fair and adequate return, the ability of steel industry to raise fresh capital for expansion will be greatly enhanced. After all, this industry, which has been compelled all these years to accept much less than the world market prices for steel, deserves to have a fairer deal.

MARKET GOSSIP

Stock Exchange Jungle

THERE are some bitter complaints about the way in which speculation on stock exchanges has been sought to be restrained since the Chinese shot their way through the McMahon Line. The most important of them pertains to the piecemeal and belated manner in which each stock exchange took action to stop bear raids. The second complaint is that there was no co-ordination of the measures introduced by them. And the third complaint is that, at a time when the bulls ought to have been given a relatively lighter handicap than the bears because the trend was sharply downward, they have been placed on par with the bears. This, it is said, is most unfair, if not absurd, because the bears have already reaped a rich harvest; they have not only made huge profits but are also getting the settlement differences, as also the *badli*, in their favour on their outstanding businesses. On both scores, the bulls are heavy losers. One could understand these irrational features if there was no Central control over the stock exchanges as was the case in the distant past. But, for some years now, the Government of India has been controlling the stock exchanges; there is a special director, under the Finance Ministry, to look after them. There is, therefore, no excuse for the defects briefly outlined above.

The Chinese invasion had begun even before the *Moorat* day, providing the bears on stock exchanges a heaven-sent opportunity to make piles of money. Why did not the Government immediately disallow short-sales on all the stock exchanges? Instead, it gave several days of freedom for the bears. Again, when the Calcutta Stock Exchange imposed minimum prices and introduced compulsory carryover of outstanding business, the Bombay Stock Exchange did not follow suit. This provided an opportunity for the Calcutta operators to carry out their deals through Bombay. Why was this discrepancy allowed? Even now the minimum prices for inter-market scrips are lower in Bombay than those at Calcutta. When Bombay was free and Calcutta subjected to minimum prices, some of the Bombay brokers are said to have bought scrips from Calcutta at distress prices and resold them to the L.I.C. at higher levels on the basis of those prevailing in Bombay, thereby making a large packet of money overnight. This was one result of unco-ordinated controls on stock exchanges.

If such faults in the implementation of economic controls are not to be repeated in future, it is necessary to institute an enquiry to find out as to who were responsible for the delays and glaring lack of co-ordination. It is equally necessary to enquire into the large transactions that have taken place, after China had attacked us, with two objectives in mind: (a) whether the mismanagement of controls on stock exchanges has anything to do with the speculators who had sold short and made large profits and (b) that those who have made so much easy money duly pay the taxes due on it.

The way in which the L.I.C. has been buying in the share markets is also being questioned in market circles. It is contended by some that, if the objective of L.I.C. in buying equities is to impart a certain amount of steadiness to the stock exchanges, it should buy openly in the trading ring just as the Bank of England does in the London Gilt-edged market. The very presence of L.I.C.'s broker in the ring will, it is argued, infuse confidence in the market and the objective could be served on a smaller volume of investment than under the present system of secret deals. On the face of it, the suggestion is attractive, but its merits must be clearly established by careful examination before it is implemented. The Board of Directors of L.I.C. will, therefore, do well to study it.

Forward Trading in Bullion

The Government has done well to ban forward trading in gold, but it is not clear why it has left out silver from such a ban. For several years past, this journal has contended that there was no case for continuing futures trading in either of these two precious metals. Now that the Government has appealed to the people of this country not to buy gold but to sell what they have against gold bonds, there is no need to provide any hedging facility for those who have investments in the yellow metal. Besides, the banks which have given advances against bullion have been asked to call back the loans. Such advances are believed to be of the order of Rs. 50 crores. If there is anyone who has large stocks of gold and feels uncertain about their future, all that one should do is to dump the gold on the market when the going is good or convert it into gold bonds.

It is too early to talk about the success or failure of gold bond scheme. If the Government is serious about getting from the hoarders the maximum amount of gold possible, it should see (a) that prices stay well below Rs. 100 per 10 grammes and (b) promptly amend the tax law in order to put in black and white the meaning of the Finance Minister's assurance that those who tender gold will not be asked to disclose the origin of their wealth. It is felt that, unless this is done, those who are keeping their black money will not feel encouraged to convert it into white for fear of being troubled by income-tax authorities at a later date.

Why should not the Government think of mobilising the silver hoards also for war effort? Instead of silver bonds, as suggested by some, the Government could allow exports of silver against imports of essential plant and machinery, raw materials, spare parts and stores (that is, maintenance imports). It is true that, in spite of the sharp rise that has taken place in the world price of silver during recent months, the price of silver in India is higher to some extent. But, if an incentive is given in the form of import licences for goods absolutely essential both for war and economic development, many businessmen will find it worthwhile to export silver. An important prerequisite for this purpose will be abolition of futures trading in silver, for, otherwise, the speculators will push up the prices to such an extent that the objective will be defeated.

Outlook for Tea

In the context of the present emergency following Chinese aggression, the need for stepping up exports of tea assumes special urgency, for the country needs more foreign exchange now than before. Tea, as is well known, is one of the staple earners of foreign exchange. Every million pounds of tea sold abroad will add, on current level of prices, Rs. 27-28 lakhs to the country's external assets. India does have a fairly large exportable surplus of tea. But the disposal of this surplus at a reasonable price has turned out to be pretty difficult lately, what with the keen competition in world tea markets. After assessing the recent trends in the world tea markets, Mr. J. F. E. Gilchrist, Chairman of Messrs. Harrisons and Crosfield, a well-known British company in the tea and rubber plantations in Asia, has this to say, in his customary annual statement on the prospects for the coming year:

> "The pattern of production for the first nine months of 1962 has changed with a reported total of 1,015 million lbs., 4 million lbs. less than in 1961. With North India and Pakistan, owing to inclement weather conditions, showing a fall of 30 million lbs., only in South India, Ceylon and East Africa are crops going ahead. It appears unlikely that the shortfall in North India and Pakistan will be made up, but, as it is virtually counterbalanced by the increased production in other countries, the total available is likely to be about the same as last year. The urgent problem remains that of expanding existing markets or finding new markets for the increased total which will undoubtedly be forthcoming in the future. The internal market in India is at present apparently well supplied and, though the market there is capable of almost unlimited expansion, the policy of the Government of India is still directed firmly to the encouragement of exports. Indeed, in April of this year, the Finance Minister reduced the duties levied on tea exported and increased the excise payable on tea consumed locally. Now the future is clouded by the Chinese aggression."

The general level of tea exports from India so far in the current year has no doubt been quite satisfactory; the actual shipments during the first nine months ended September aggregated 291.16 million lbs., as against 289.21 million lbs. in the corresponding period last year. But the value of exports was lower at Rs. 75.22 crores, as against Rs. 80.57 crores. In other words, the average export price of tea was markedly lower at Rs. 2.58 per lb., as against Rs. 2.78 a year before. Only the best quality teas have been fetching higher prices, while the common and low medium varieties continue to be quoted at considerably lower levels. It may be noted here that the major portion of the Indian tea crop consists of cheaper descriptions.

As against the reduction in the average export value of tea, the prices of tea leaf sold for domestic consumption have registered a slight rise. The average price realised by North Indian tea leaf during the first nine months of 1962 was Rs. 2.59 per lb., as compared with Rs. 2.45 in the same period of 1961. The rise was, however, neutralised by the decline in the average price of dusts from Rs. 2.30 to Rs. 2.18 per lb. Although the prices of common and low medium varieties have recovered to some extent in recent weeks, the improvement may not be sufficient to compensate the North Indian tea producers in particular for the loss in crop and it is unlikely that they will fare as well as they did last year. The estimated 1962 tea crop is put at 583 million lbs., as against the actual output of 599 million lbs. in 1961. So far as tea producers in South India are concerned, it is true that both the production and exports of tea have gone up. The quantity actually plucked in the ten months ended October 1962 was 150 million lbs., as against 138 million lbs. in the same period last year, and the exports during the first three quarters of the year amounted to 60.25 million lbs., as against 50.60 million lbs. Nevertheless, the financial position of the South Indian tea industry does not appear to have shown any improvement. On the contrary, it will not be surprising if the results of working of many companies for the current year reveal a setback, in view of the persistently low prices of common teas, on the one hand, and higher cost of production, on the other.

The Chairman of the Tea Board, Mr. A. S. Bam, is reported to have stated at Calcutta recently that more steps designed to augment tea exports are being proposed. He has not indicated the nature of these steps, but it is hoped that they will include the complete abolition of export duty. The need for such abolition is considered imperative especially now in view of the unpleasant prospects of an increase in production costs of tea in border areas. Incidentally, the poor output per plant and the rapid deterioration of quality when the plant is cropped from time to time are attributed to unscientific planting and absence of drainage facilities, both of which result in accumulation of rain water and lead to erosion, thereby destroying surface roots. Such instances must not be repeated. It is necessary that replanting is done much deep in the soil. Proper drainage facilities are equally necessary. There is also the need for ensuring adequate supplies of fertilisers and bringing into use extensive research and intensive cultivation methods. All these require large-scale non-recurring investment. Viewed against this background, the tea industry's plea for a rational revision of taxation structure seems justified.

World Rubber

Natural rubber prices have been fluctuating rather erratically for some time now. From about 25½d. per lb. at the end of last year, the quotation in the London market declined to below 23d. early in January 1962 but recovered to 25¾d. a month later. After moving irregularly between 21⅞d. and 25¾d., it is currently standing at 23⅝d. Such an irregular trend of the rubber market is not at all surprising in that it reflects the conflicting assessments of the overall prospects for natural rubber made from time to time by the spokesmen for the rubber industry. A section of rubber growers is greatly pessimistic about the future of their product, in view of the growing versatility of synthetic rubber and the increasing supplies of polybutadiene. There are, however, others who point out that the markets for natural and synthetic rubbers are not easily inter-changeable, that the newly planted high-yielding trees which are coming into production will enhance the competitive capacity of natural rubber from the point of view of price and that the world demand for rubber is expected to increase in the next decade by 180,000 tons a year, faster than the rate of expansion of natural rubber output. To this group belongs Mr. Gilchrist, Chairman of Messrs. Harrisons and Crosfield of London. In his latest annual statement, he observes:

> "In the long-term, there is a general consensus of opinion that increasing demand for all rubbers over, say, the next decade, is so promising that, although synthetic, which has spare capacity, may take much of it, every pound of natural will be absorbed at a competitive price. That price may well be governed by the production cost of the new stereo rubbers, especially as the American stockpile will be eager to take advantage of any upward movements. The task remains unchanged and the natural rubber industry must depend on itself. So long as we have an unrivalled material at a fighting price, we can face the future, but there must be no relenting on production and research. Higher yielding trees and better quality rubber at a cheaper price backed by basic research will enable any challenge to be faced from any quarter."

The immediate outlook for natural rubber also seems to be quite encouraging. Stocks held at present are small in both producing and consuming countries. Several consumers in the U.S. are buying larger quantities of natural rubber for stock purposes. Soviet Russia continues to make large purchases. A large part of rubber supplies in Singapore is believed to have already been earmarked for shipment to Russia. Further, Communist China is expected to buy rubber from Malaya again. Viewed thus, it looks as though the world rubber market will continue to rule distinctly firm, unless the U.S. and British Governments release large quantities from their stockpile supplies.

Economic Trends in W. Europe

Contrary to earlier fears of the possibility of a deflation or a recession in economic activity in Western Europe, there is at present a marked renewal of confidence in continued economic expansion. In fact, discussions at the two-day meeting of the Economic Policy Committee of the Organisation for Economic Co-operation and Development (O.E.C.D.), held at Paris last week, reflected a more encouraging economic outlook for Western Europe now than was anticipated earlier. It was, however, recognised by the experts assembled at the meeting that there would still be "structural" problems to be solved, the major one being the disappointing trend of business investment and its possible repercussions on the economy in general. One reason for the slowing down in the rate of investment is the rise, in most countries of W. Europe, of wages in excess of the increase in productivity and the resultant fall in profit margins. The increase in wages have been most striking in W. Germany where mounting wage costs have put profits under strong pressure. According to the Bundesbank's estimate, in its latest quarterly report on the economy, retained profits in W. German business enterprises during the first half of 1962, aggregating DM 5.100 million, was 22.1 per cent lower as compared with the corresponding period last year. This has reduced the scope for self-financing by enterprises of additional investments at a time when the scope for raising outside capital is narrowing. In fact, a survey by the Bank revealed that 40 per cent of the enterprise polled would place fewer orders for investment goods this year than last.

Barring this limiting factor, the outlook is generally promising. Industrial production in W. Europe during the first six months of 1962 was 4 per cent higher than a year earlier. In the six countries of the E.E.C., production had risen by 6 per cent. Expansion is expected to continue throughout the remainder of 1962 and more slowly during 1963. An autumn revival in business has already been reported and production has shown a marked upswing after the summer lull. In W. Germany, industrial production in September last was 5.4 per cent higher than in the same month last year, and the figure for the first nine months represents an improvement of 4 per cent over that in the comparable period of 1961.

Economic activity in the first half of the year in W. European countries reveals certain signi-

TREND OF SHARES

DULL, DREARY AND DRAB

(From Our Own Correspondent)

BOMBAY, 15*th November*

TRADING in shares this week was dull, dreary and drab. It could not, however, have been any different either in the light of the various emergency measures taken by authorities of the different markets to stem the fall in values, especially those which ban any long purchases or short sales except for adjusting the unadjusted speculative business. Sales in cash shares are allowed, but only at minimum prices. Only investment buying could, therefore, create any change in the pattern of trading. But such buying was conspicuous by its absence, and naturally so in view of the great uncertainties of all sorts created by the Chinese war. During the week, even support from the L.I.C. seemed to have dried up, and the outcome of the scheduled meeting of the Corporation's investment committee at Calcutta on Friday, the 16th inst., was eagerly awaited.

Price changes during the week were, therefore, minor and discernible only in some of the active leading speculative counters. Cash shares were almost totally neglected. Over the week, prices closed either unchanged or with generally small changes either way, simply because the authorities of the principal markets had fixed minimum prices for both cleared and non-cleared shares and prohibited trading below these levels. The fixation of minimum prices gave a look of deceptive steadiness to the markets, for even at a small discount over such levels buyers were hard to find, while, but for the limitations on fresh selling, sellers would have been only too anxious to press sales.

Investors continued to sit on the fence, although quite a few popular shares fetched at their current levels attractive returns of 5 to 6 per cent per annum, free of tax. Prospective investors are apparently unsatisfied with official assurances on acceleration of economic development and industrial growth in the country to fight the seemingly inevitable war with the Chinese. Indeed, they are concerned more about the cost of the war and its resultant damage. The defence expenditure for the current year, we are told, is to be raised by Rs. 95 crores from Rs. 375.90 crores to Rs. 470.90 crores. This additional expenditure will be met to a certain extent from contributions to the National Defence Fund and subscriptions to the defence bonds and gold bonds. Some cushion will also be provided from actual realisations from the various taxes imposed under the last budget, the estimated returns from which can reasonably be expected to have been fixed at lower levels. Nonetheless, some heavy additional taxation may be in the offing, and one will be only too mindful of the next step of the Finance Minister. At any rate, however bright the long-term outlook for investment in shares be, the uncertainties about the near future constitute a great deterrent. One would not, however, be totally ruined if one were to make small and selective investment.

The week under review saw the re-opening of the Bombay Stock Exchange on Monday, the 12th inst., after suspension of all trading for a week. The decision to re-open the market was taken by the Governing Board of the Exchange at its meeting on Friday the 9th inst. The Board fixed minimum prices for both forward and cash shares at the closing levels of Saturday the 3rd inst. Trading below such levels has been prohibited. Speculative business has been restricted only to the adjustment of outstanding business. But buying on cash basis can be done to any extent. The main objective of these measures is to reduce the load on the market gradually. Disinvestment in forward scrips has been prohibited, and, the contract in shares being the buyer's contract, a seller cannot enforce delivery of shares, though a buyer can insist on delivery. Those members who hold large sales or purchases may attract heavy margins, if they fail to square them up within a reasonable period of time. Jobbing has been prohibited altogether. Likewise, members have been warned that they cannot enter into transactions between broker and broker and between constituents and constituents. Business in cash scrips has to be done on the basis of spot delivery and at the minimum prices. Transactions put through on Monday, Tuesday and Wednesday will have to be settled on Thursday and those done on Thursday, Friday and Saturday will have to be settled on Monday by giving or taking delivery of shares and making actual payment. Transactions in cash shares, which involve delivery over a long period, are to be treated as null and void.

The Governing Board has reserved the right to amend the minimum prices from time to time in the light of any change in circumstances. The Board was scheduled to meet today to review the position in the market. The meeting has, however, been postponed to tomorrow (Friday, the 16th inst.).

In the meantime, on Tuesday, the 13th inst., the Board met to review the market's position and decided to relax one of the above measures. It permitted members to square up not only their net outstanding positions but also a portion of the transactions effected between principal and principal and between constituents and constituents. Previously, such business between principal and principal and between constituents and constituents was disallowed. However, under the permitted relaxation, once the business is squared up, no fresh purchases or sales will be permitted. The squaring up of such business is according to certain fixed quotas. But business exceeding the fixed quotas can be squared up with the permission of the President of the Exchange. India United ordinary and deferred, Indore Malwa, Morarjee and Bombay Burmah (old) have been freed entirely from restrictions for squaring up of business, presumably because of some noticeable improvement in these shares. In the case of Morarjee, genuine holders of shares are now permitted to disinvest, provided they furnish the number of shares and tender the same shares for delivery.

While the stock exchange authorities struggled hard to restore stability in the markets, the Government followed up during the week its spadework in that direction in the form of a reassuring note for investors, which was issued on 6th November. On Friday, the 9th inst., the Government issued a Press note warning bears on stock exchanges against spreading wild rumours about the border situation and taking advantage of the panic created by their own propaganda. It also urged operators to square up their positions by taking advantage of the opportunity given to them by the stock exchange authorities and warned them that, if they failed to do so in the common interest of the market, the Government would be forced to take action under Section 6(3) (*b*) of the Securities Contracts (Regulation) Act, 1956 and carry out enquiries into the affairs of each of such operators and members of the markets and take severe action against him. The said section of the Act reads as under:

"Appoint one or more persons to make an inquiry in the prescribed manner in relation to the affairs of the governing body of a stock exchange or the affairs of any of the members of the stock exchange in relation to the stock exchange and submit a report of the result of such inquiry to the Central Government within such time as may be specified in the order, or in the case of an inquiry in relation to the affairs of any of the members of a stock exchange, direct the governing body to make the inquiry and submit its report to the Central Government."

* * * *

Trading on Dalal Street was featured by a spurt of Rs. 33 to Rs. 623 in Bombay Burmah following the announcement of a bonus issue and of Rs. 38 to Rs. 500 in Morarjee on expectations of better working during the current year. The tightly held India United Ordinary bulged by Re. 1.25 to Rs. 26.25 and the deferred shares gained 16 nP at Rs. 3.22. Indore Malwa were up by three points at Rs. 198. Some other market leaders were also better over the week on bear covering. Thus, standard recovered 30 points at Rs. 785, Svadeshi 13 points at Rs. 244, Poly-Chem Rs. 13.75 at Rs. 142.50, Colour-Chem Rs. 23.75 at Rs. 340, Premier Automobiles Rs. 8 at Rs. 100, Hindustan Motors Re. 1.12 at Rs. 16.12, Kirloskar Cummins 11 points at Rs. 85, Associated Bearings Corporation Rs. 16 at Rs. 131 and Permanent Magnets Rs. 45 at Rs. 220. These were the few shares to show some noticeable improvement over the minimum prices which were Rs. 596 for Bombay Burmah (old), Rs. 468 for Morarjee, Rs. 25.60 for India United ordinary, Rs. 3.12 for India United deferred, Rs. 195 for Indore Malwa, Rs. 782 for Standard, Rs. 237 for Svadeshi, Rs. 135 for Poly-Chem, Rs. 316.25 for Colour Chem, Rs. 96.50 for Premier Automobiles, Rs. 16.04 for Hindustan Motors, Rs. 74 for Kirloskar Cummins, Rs. 122 for A.B.C. and Rs. 175 for Permanent Magnets. Other shares were held at or slightly above the minimum levels. The annual statements of the T.I.S.Co. and I.I.S.Co. Chairman, underlining sizable growth prospects for steel industry in view of the Chinese aggression failed to leave any encouraging impression on the market sentiment. Tata Ordinary closed at the minimum level of Rs. 121 and showed a gain of one point and so did Indian Iron at Rs. 22.96, with a gain of 12 nP over the week.

* * * *

In Calcutta, only some cleared shares attracted activity around the minimum prices fixed at the closing levels as on 24th October last. However, some scattered inquiry was also discernible for some selected cash scrips. Net changes in prices were small, and the list generally closed at the minimum levels. Over the week, Birla Jute were down by 13 nP at Rs. 30.37, as against the minimum price of Rs. 30, Indian Cable showed a loss of 50 nP at Rs. 34.50, which is the minimum price and Indian Aluminium closed 25 nP lower at the minimum level of Rs. 32.50, while Dunlop showed a gain of 37 nP at Rs. 36.37, as against the minimum level of Rs. 36. In cash section, Nuddea improved from the minimum level of Rs. 54.75 to Rs. 55. Other sections were generally unchanged.

* * * *

Activity in Madras also was confined largely to forward shares which tacked on small gains over the week. At Rs. 2.40, Blue Mountains showed a gain of 5 nP over the minimum level which was the closing price in the previous week, similarly, Periakaramalai showed a gain of 3 nP at Rs. 2.90 and Ouchterlony Valley also of 3 nP at Rs. 3.88. Ashok Leyland edged forward from the previous week's closing price and the minimum level of Rs. 7.43 to Rs. 7.50 and so did India Cements from Rs. 6.10 to Rs. 6.13. Among Cash shares, Chembra gained 8 nP at Rs. 3.53, as against the minimum level of Rs. 3.45 and Nonsuch 30 nP at Rs. 22.55 as against the minimum level of Rs. 22.25.

RIGHTS SHARES FROM SEN-RALEIGH

The Sen-Raleigh Industries of India Ltd. has received the permission of the Controller of Capital Issues to issue 650,000 ordinary shares of Rs. 10 each at a premium of Rs. 4 per share. Out of these 650,000 additional shares, the Company proposes to issue 334,000 shares to its consultants and technical advisers, namely, Raleigh Industries Ltd. of Nottingham, England, and the balance of 316,000 shares as rights shares to the existing shareholders of the Company. As the present authorised capital of the Company, amounting to Rs. 1 crore and composed of 30,000 5 per cent cumulative preference shares of Rs. 100 each and 700,000 ordinary shares of Rs. 10 each, is fully issued and paid up, it is proposed to raise the authorised capital to Rs. 2.25 crores by the creation of 1,250,000 new ordinary shares of Rs. 10 each to give effect to the proposal to issue 650,000 additional ordinary shares.

A general meeting of the shareholders of the Company is convened for Monday the 19th inst., in order to approve first the proposal to increase the authorised capital and then the proposal to issue additional ordinary shares in the manner as stated above. Sen-Raleigh of England has agreed to subscribe for 334,000 new shares on the condition that it will be permitted to disinvest, out of these shares, 135,000 shares at the end of five years from the date of subscription.

The proceeds of the issue will go to finance the Company's programme of expansion and diversification, with the British firm's subscription providing the scarce foreign exchange. It is proposed to install balancing equipment and modernise existing plant and machinery in order to make greater use of the installed capacity. The Directors hope that, with the new equipment which will be installed, bicycle production will improve by about 50 per cent and that it will be possible to reduce wastage substantially. The additional capacity proposed to be created may help increase the bicycle chain output to more than one million units a year. It is also proposed to diversify production by taking up the manufacture of electrical equipment, especially house service meters, for which the necessary industrial licence has been obtained.

WELLMAN INCANDESCENT INDIA LTD.

Wellman Incandescent India Ltd., incorporated in West Bengal on 30th May 1962 has offered for public subscription 110,000 ordinary shares of Rs. 10 each, the list of which will open on the 19th inst. These are out of the total issue of 249,930 shares, of which 125,000 shares (including 39,885 shares for consideration other than cash) are to be taken up by the Wellman Smith Owen Engineering Corporation Ltd. of London and 14,930 shares are to be subscribed for by the Directors, their associates and their friends.

The Company has a project to undertake the design, production and sale of all types of oil-fired, gas-fired, coal-fired and electrically heated furnaces and ovens and allied equipment, including charging and discharging gear, electric overhead travelling cranes of all types, gas producers, coke oven machines, foundry plant and handling equipment for steelworks. To operate this project, it has entered into technical and financial collaboration with Wellman Smith of London which enjoys a world-wide reputation as the leading manufacturer of steelworks plant, furnaces and cranes. The capital outlay on the project is estimated at Rs. 50 lakhs, including Rs. 39.87 lakhs as working capital and Rs. 3.80 lakhs being the cost of plant and machinery.

As the Company's total block assets will be less than Rs. 5 lakhs, the Company does not require a licence under the Industries (Development and Regulation) Act 1951 at this stage. While approving the Company's project, the Government has laid down that the average indigenous content of the products should be 70 per cent. No capital equipment will ordinarily have to be imported, but the Company will be permitted to import special components and equipment. Part of the fabrication and manufacture of the products will be undertaken by the Company itself at its factory in the Howrah Industrial Estate in West Bengal. But a major portion of the fabrication and manufacture will be sub-contracted to other manufacturers in India, as there is sufficient production capacity available for this purpose, which it will be advantageous for the Company to make use of by selecting such producing centres as are close to places where the products will have to be installed, thereby eliminating problems of transportation. The Company is promoted by Wellman Smith of London, with Maharaja P. C. Bhanjdeo of Mayurbhanj as the Chairman.

DEBATE ON CONTROLS

Mr. B. R. Bhagat, Union Deputy Minister for Finance, writes, in a letter to us dated 25th October 1962, as follows:

"In your leader captioned 'Debate on Controls' published in the 20th October issue of *Commerce* you have quoted from my speech at Madras as under:

'if we do not have the courage to implement controls, we should give up planning',

while the correct report should be as was published by the *Financial Express* of 30th September and other papers:

'If we cannot administer controls efficiently, we do not have a right to administer the plans.'

Since you have taken objection to this statement and drawn a totally unwarranted conclusion from it, I wish to inform you that what I pleaded was not comprehensive controls but controlling the strategic economic position. I had emphasised that the entire question of controls should be judged on merits and the solution should be selective and not general.

"You are very correct to say that the Finance Ministry is administering a few controls but you have not appreciated that whatever controls we have been constrained to apply either over foreign exchange or something else have been dictated by the necessities of the situation and have been carefully thought out. There may be some unseen loopholes, but our effort is to foresee them and to plug them as soon as they are discovered. To say that, because there are loopholes, controls should not be exercised is tantamount to saying, because there are thefts, police vigilance must stop. The crux of the matter in all such things is that all policies of controls should be carefully worked out and must be administered efficiently. To find fault with a stray sentence, not correctly reported, in my speech is hardly fair, if not misconceived."

[We welcome the aforesaid clarification by Mr. Bhagat. In the article under reference, we have, however, not stated that, if controls cannot be free from loopholes, they should not be introduced. All that we tried to show was that even financial controls are not being efficiently implemented.—ED.]

PERSPECTIVES & PROJECTIONS

By Mercator

Unshuffled Portfolios

PRESIDENT Radhakrishnan's visit to the forward areas in N.E.F.A. last week was an imaginative act, for which the Indian Press has not, I think, paid sufficient tribute. We may not know from where the initiative for the step came, but one can be certain that our fighting men in the front lines and the wounded lying in Tezpur hospital derived much solace from seeing the President in their midst. The supreme command of the Defence Forces of the Union is vested in the President; in practice this constitutional principle was honoured on many ceremonial occasions such as the Republic Day celebrations. But probably it extended no further; otherwise, there need not have been so much controversy over the Defence portfolio in recent years. It is an extraordinary coincidence that the President's visit materialised immediately after the change in the Defence Ministry; but whoever holds charge of Defence in future, public confidence will be greatly strengthened by the knowledge that both the Prime Minister and the President are closely in touch with matters pertaining to our armed forces.

It now looks that defence production will not be a separate portfolio, after all the talk regarding creation of a Ministry of Supply and Production for co-ordinating all efforts in the public and private sectors. It is a pity that many overlapping jurisdictions are left undisturbed; one example is the anomaly of the Minister for International Trade dealing with the woollen industry, long after its primary object has changed from exports to supplies for our Army. A radical reshuffle of all portfolios in the Union Cabinet is necessary; but so is a reconstitution of the entire Cabinet, so that austerity, like charity, may begin at home, in order to impress its importance upon those to whom appeals are made for simplicity. Punjab has made a beginning in this respect but many other States have to do likewise. It is very puzzling that at the Centre (where a Government reshuffle was indicated long before the present emergency was thought of), the change in the Defence Ministry has not been used as an opportunity for forming a new Cabinet, cutting out much of the accumulated deadwood. Since there will be no by-elections during the emergency, one of the arguments for not finding suitable berths for some unwanted Ministers has lost all its force.

Apart from the improvements that may be possible in a reshuffle, a more compact and smaller Cabinet can also have a profound psychological effect on the country; even if there is to be no national coalition, the Congress Party can co-opt some independent senior administrators (like Mr. C. D. Deshmukh). With many tasks ahead for which the supply of talent from within the Congress Party seems limited, Mr. T. T. Krishnamachari has not yet found (or been helped to find) a portfolio to which he can devote his undivided attention. The only heartening development is the general appreciation of Mr. Y. B. Chavan's appointment as Defence Minister. It is not insignificant that both the two recent entrants to the Union Cabinet—Mr. Subramaniam and Mr. Chavan—had to be drafted from the States, proving the paucity of talent in the Central Parliamentary Party. (Perhaps, some seniority questions will again arise for solution by the Prime Minister.)

* * * *

Economic Overlord?

Of the many curious developments in the allocation of responsibilities in the Union Cabinet is the emergence of Mr. Nanda as the super-Minister (overlord according to British political terminology) on Economic Affairs. At the last session of Parliament, Mr. Nanda took complete charge of the debate on the third Plan in both Houses and no other Minister responsible for implementation of Plan policies seemed to have anything to add to or qualify Mr. Nanda's statements. It is, of course, desirable that the Government should not speak with many voices and, since Mr. Nanda's sincerity makes an excellent impression on his critics inside Parliament, it may be sound strategy to let him make all his confessions without prejudicing the Government's prestige. Sometimes doubts arise whether those remaining in the background are merely cynical and feel free to pursue their ways in practice. Mr. Nanda has presented the latest statement on the first phase of action on the Government's price policy; it covers a wide range of matters like foodgrain procurement by levy, control over rice mills, cloth production and prices and bank credit on all of which the Government is committed to certain lines of action in consultation with the Price Stabilisation Committee; it is obvious that all Ministries, including Finance, have to toe the new line.

This, however, was not the position when Mr. C. D. Deshmukh and Mr. T. T. Krishnamachari held charge of the Finance Ministry; their control of the Department of Economic Affairs entitled them to have a say not only on all aspects of economic policy but also on planning. Mr. Desai, on the other hand, has limited his role to the annual presentation of the Union Budget and piloting of the Finance Bill, besides, of course, the usual reports on his foreign tour to assure the Indian public that everyone abroad is sympathetic to our case. The question is not whether Mr. Desai is entitled to keep his counsel when he chooses to do so but whether the Department of Economic Affairs should not more properly be linked to Planning, to make co-ordination between the Planning Commission and the Government much more real. For example, though some mention has been made of credit control in relation to prices, fiscal policy, including taxation, will determine how much stability will be possible in the present circumstances. It is conceivable, for example, that the recommendations of the Price Stabilisation Committee might take the form of pleas for restricting non-essential spending, deficit financing or avoidance of taxation of certain goods. Control over stock exchanges does not seem conspicuously good and Mr. Desai's gold bond scheme came as an afterthought, after his appeal for gold donations. One of the points to be remembered in any future Cabinet reorganisation, therefore, is the ending of the present anomalous division between Planning and Economic Affairs, whoever holds them; at least during the present phase, in which planning is bound to be subordinated to the overall needs of defence and mobilisation of resources or both, a close relationship seems imperative.

* * * *

Plus Three for Pension

The proper age of retirement for Central Government servants was fully discussed when the Second Pay Commission revived and strongly supported the First Pay (Varadachariar) Commission's plea for raising it to 58. The Government then seemed firm in its resolve to maintain the present position and, curiously enough, there has not been any strong criticism from staff unions, presumably because the younger elements which predominate there were not quite sure about the effects of a higher retirement age on recruitment and promotion opportunities. The Government of its own accord has now reconsidered the matter and perhaps Mr. V. T. Krishnamachari's report which favoured a higher age has tilted the scales. There are indeed many sound reasons for adopting a higher age; a longer life expectation and increased longevity among pensioners (which show better physical fitness), larger family responsibilities at 55 due to late marriages and the Government's own need for senior experienced personnel which now compels it to extend the services of retiring officers or re-employ them, are the main considerations in favour of raising the age limit. The Home Minister has said that the present emergency is an additional argument; it is true that, in the last war, extension of service was liberally granted by the Government to retain experienced men. Even now, a good proportion, nearly 7 lakhs (out of 17.74 lakhs) of Central Government employees are not subject to the 55-year rule and can normally continue in service up to 60. So no new principle will be introduced if 58 is adopted for all classes instead of 55 and 60. Many feel that re-employment or extension at the discretion of the employing authority has led to favouritism and demoralisation and that it is also necessary to discourage the unhealthy tendency of Government servants to look to the private sector for employment after retirement.

The main argument against any change is that employment opportunities will suffer; Mr. Shastri said that, for the first three years in which retirements are postponed, new recruitment will be less by 12,000 a year and thereafter the position will be the same. There seems to be a snag here, since an increase in the total duration of service is bound to restrict the number of jobs; but the Government is entitled to say that other recruitment during the emergency will make up for the shortage of jobs. But all these calculations, however, proceed on the basis that only the Central Government services will be affected; but, once the new rule is enacted, it will be difficult for State Governments to resist demands for extension of the rule to their services. In U.P., the rule has already been changed in favour of 58 and the efforts of the Chief Minister to rescind it have been thwarted and will now have to be given up. So the Union Home Minister cannot in fairness disown responsibility for States whose position will be weakened by his decision; this is a matter on which a national policy has to be formulated.

Seeing many active men around in their sixties, I cannot argue that efficiency invariably declines at 55 though it is also true that many usually begin to mark time some time before they are due to retire. Admitting this objection, the Pay Commission pointed out that this was purely relative to the age of retirement whatever it be; as Parkinson would say, the point of marking time seems to begin at R-3 (where R stands for the age of retirement). Disraeli observed that, when a man fell into anecdotage, it was a sign for him to retire from the world; listening to commuters on suburban trains one may be tempted to apply this test to many, irrespective of their actual age. But I really feel that men in their forties, who wish to get on to positions of responsibility when they have reserves of energy, may feel frustrated if they have to wait too long to get to the top. A melancholy succession of frustrated men arriving at the top only to wait for their pension is not an encouraging prospect and some safeguards seem necessary, if the rule is to be changed to 58.

Personally, I would not regret the re-employment of pensioners in larger numbers in the private sector where their knowledge of procedure, rules and administrative organisation may have a healthy influence. Now that the minimum age for recruitment to Government service has also been lowered, the prospect of men coming out after more than 35 years of Government service, with all their initiative sapped by long pursuit of bureaucratic ways, is not indeed pleasant. In rural areas, where a pension *plus* an honorarium may be still adequate for a quiet life, retired men can be employed in many fruitful lines to man post offices, branch banks, organise insurance business or co-operatives and do many other things not done now for lack of personnel. Perhaps, the change to a rural atmosphere will not be easy always, but these are only illustrative of the uses to which retiring officers can be put in the national interest, if they continue to be fit.

Inevitably, decisions in vital matters like this are taken by men who are themselves near the deadline, if they are in the service, or those well past it if they are Ministers who okay what senior civil servants consider proper so long as politics is not involved. Gerontocracy is a word which has not gained currency in this country, though it fits it well.

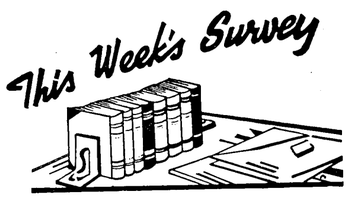
SINDRI'S PRODUCTION PICKS UP

Production in the old ammonium sulphate group of plants at the Sindri Fertiliser Factory of Fertiliser Corporation of India has been restored to their full rated capacity. The Expansion Plants are now being operated at nearly the maximum possible capacity consistently with the current limitations on availability of coke-oven gas due to insufficiency of lean gas for firing the coke-ovens and insufficiency of supplies of high volatile coal from Dishergarh coalfields. An all-out effort organised during the last few months has yielded these substantial results.

The production of ammonia during October from the old group of plants was 8,890 tonnes, exceeding the monthly rated capacity by about 500 tonnes and establishing an all-time record. The production of ammonia in the Expansion Plants during the month was 3,450 tonnes. This works out to nearly 90 per cent of its current production capacity, considering that the new ammonia plant receives no more than only 70 per cent of its feedstock in the shape of coke-oven gas.

In order to produce 600 tons of coke per day to feed the gas plant and at the same time to make available the requisite quantum of coke-oven gas to the Expansion Plants, Sindri needs about 1,000 tonnes of coking coal per day in the proportion of 60 per cent of its supplies from Dishergarh and 40 per cent from Jharia. A blend of 60 per cent Dishergarh coal is essential for a yield of 10 million cu. ft. of coke-oven gas for use in the Expansion Plants. Adequate supplies of this type of high volatile coal have not been forthcoming. The other limiting factor in the Expansion Plants is that the entire quantum of coke-oven gas cannot be processed for the production of ammonia since, due to insufficiency of lean gas, a part of the rich gas has to be used for underfiring the coke-ovens.

The total production of ammonium sulphate during the month of October was 30,463 tonnes which is appreciably in excess of its monthly rated capacity. The production of urea during the month was 1,849 tonnes, nearly 90 per cent of the rated capacity of the Urea plant. The production of double salt has also improved within the limitations imposed by restricted production of ammonia in the new Ammonia Plant. It is said that efforts are continuing to improve further Sindri's performance so far as the Expansion Plants are concerned.



BRITAIN AND COMMON MARKET

THE two-day debate in the British House of Commons on the U.K.'s proposal to join the Common Market last week did not spring any surprise. The official motion urging the Government to make "every effort to bring the negotiations to a conclusion acceptable to Parliament" was passed without any amendment. The Labour Party had, no doubt, moved an amendment, which while supporting the Government move to join the Six, wanted to ensure that adequate safeguards were provided for in any agreement, particularly in respect of British agriculture, Commonwealth and E.F.T.A. But the amendment was rejected by 319 votes to 221. Although there was no unanimity on the terms agreed to between the U.K. and the Common Market, all the parties have, as Mr. Heath, Lord Privy Seal, observed, general agreement that it is in the interest of the entire Commonwealth that the U.K. should join the Six. It is of some significance that, contrary to earlier expectations, the Labour Party did not choose to take an inflexible stand against the Government's move. This strengthens the hands of Mr. Macmillan in pursuing the "formidable negotiations ahead," apart from showing to the Six and other countries that Britain is united in its desire to join the Common Market and serve the cause of European unity.

In a strong defence of the agreement already reached with the Six on safeguards to Asian Commonwealth countries, Mr. Heath observed that the proposed comprehensive trade agreement was a solemn obligation by the seven countries to develop mutual trade and increase the foreign currency receipts of these countries. He added that such an agreement would safeguard the trade of these countries not only into Britain, but into the whole of the enlarged community. This is the first time, he said, that an offer of a trade agreement with a binding obligation of this kind had been made to any country. Turning to the provisional agreements already reached, Mr. Heath referred to the proposal for introducing *nil* tariffs for tea. Thus, for the first time, tea would be cheaper than coffee in some parts of the Community. This obviously is advantageous to India and Ceylon, which are the major exporters of tea. Mr. Heath explained at length the transitional and special arrangements which had been made for dealing with specific trade items. Cotton textiles had been the most difficult single item. He explained the special and gradual application of the tariff in four stages that would take place, and stressed that the important part of this arrangement was the proviso to the effect "that, if trade in these items from these countries suffers in the United Kingdom, then remedial action has to be taken in order to redress that balance." The arrangements already agreed with the Six covered all but nine per cent of India's trade, and all but four per cent of Pakistan's trade. They were now negotiating with requests for all tariffs on a number of other items. The Six had offered to review the situation, at the end of the Brussels negotiations, to see whether an improvement could be made in the interests of India and Pakistan by simplification of tariff arrangements.

Mr. Heath, however, did not minimise the difficulties involved in arriving at agreed solutions to trade of industrial goods from the Commonwealth. In this context, he said that there was a limit to the concessional arrangements and that the U.K. and the Six alone could not solve all the problems of developing countries. He wanted the developing countries themselves to explore markets for their goods. While this is an unexceptionable argument, one fails to understand how they will be able to export their industrial products to European countries, if they are discriminated against by means of preferential tariffs and quantitative restrictions. All that the developing countries want is equality of opportunity to trade. Anyway, the authorities in India will do well to bear in mind that industries in this country will have to be far more efficient than they are today and that they must take appropriate measures in this direction.

Although the problems of Commonwealth countries came up for consideration at the hands of various members, they were almost side-tracked by the elaborate discussions on the question of safeguarding domestic agriculture. Britain is asking for a transitional period for integrating its agriculture with the Common Market. During this transitional period, the U.K. would maintain the existing pattern of producer subsidies through deficiency payments. But the Six have not agreed to this proposal. They, particularly France, are of the view that the U.K. should switch on to the Continental system of target prices and import controls soon after the U.K. joins them. Explaining the difficulties on the agricultural front, the *Financial Times*, London, says as follows:

"The difficulties over agriculture are ones of both detail and principle; and they are sharpened, as the Commonwealth debate was not, by the fears that these difficulties could be reflected in lost votes in a number of evenly balanced agricultural constituencies. The difficulties of detail concern the Government's pledges under the 1957 Agriculture Act. This, it was promised, would not be repealed during the life of the present Parliament; yet the Government intends, if at all possible, to join the Common Market before holding a General Election, and this would only be compatible with its pledge, if the Six were to grant a transitional period between accepting U.K. membership and the switch by the British from deficiency payments to the Continental system of target prices and import control. This the Six, in the last tough session at Brussels, seemed unwilling to do.

"The matters of principle on agriculture go deeper. Switching to the Continental system of farm support, with the considerably higher prices this would mean for certain basic types of food, would be unpopular with the electorate; the Six's proposals, unless scaled down, could also lead to difficulties in fulfilling pledges made to the Commonwealth on temperate foodstuffs. The conflict here is partly between French ambitions to provide a growing share of Europe's food needs and the Commonwealth's desire at least to keep its present share of the market; it is this, more than anything, that has lain behind French reluctance to grant special treatment to New Zealand, with whose dairy products the French will be competing. Partly, too, the conflict is between a price level for, say, wheat which on the one hand would safeguard the small European peasant, and on the other would not encourage production on larger farms to such an extent that the Australians would eventually be squeezed from the market. These questions—hard ones at the best of times—will form the nub of a good deal of the bargaining at Brussels for the next few months."

The question of agriculture was again discussed at the Ministerial meeting of the U.K. and Six a few days ago. But the two parties have failed to agree. Unless France makes a retreat from its present stand, this question is bound to impede an early agreement between the U.K. and Common Market. Besides, British public opinion will not favour any agreement which does not take into account the genuine difficulties of domestic farmers. Some solution, however, is bound to be found, for the desire to get together and present a solid front for protecting democracy in the West is quite strong.

AWARD ON OIL ROYALTY

The ten-month-old dispute between the Government of Assam and Oil India Limited over the rate of royalty payable to the former on crude oil extracted by the latter has just been happily resolved by Prime Minister Nehru who, as arbitrator, has given his award. Thanks to this award, which the Assam Finance Minister is reported to have described as "fair," the State Government will get a royalty of Rs. 7.50 on every ton of crude oil produced in the State over the next four years. The new rate represents an increase of 30 nP over the pre-June 1961 rate of Rs. 7.20 per ton which was the equivalent of the customary 10 per cent of the then well-head value of crude oil. But it will also be seen that the rate fixed under the Nehru Award represents an increase of as much as Rs. 2.70 per ton over the reduced rate of Rs. 4.80 per ton which Oil India was to have paid as a sequel to its June 1961 agreement with the Central Government—the agreement under which the well-head value of crude oil from the Nahorkatiya oilfields was reduced from Rs. 72 per ton to Rs. 48. The Nehru Award has thus more than fully conceded the Assam Government's stand that the loss of revenue (estimated at Rs. 75 lakhs annually on the present production of crude oil in the Nahorkatiya oilfield), which would have resulted from a fall in the yield of royalty from Rs. 7.20 per ton to Rs. 4.80 per ton, should be fully compensated. We advisedly say "more than fully," because, in the coming years, the production of crude oil in Assam will register a manifold rise, yielding a handsome revenue to the State. Assam has thus had a generous deal.

The Award, it is noteworthy, has also recognised the right of the State Government to be associated in the fixation of royalty on crude oil produced from Assam wells. This recognition is implicit in the Award which, incidentally, is based on the Union Finance Minister's report wherein it had been stressed that the Government of India should not have reduced the royalty to Rs. 4.80 per ton unilaterally without reference to the Assam Government. It is also implicit in the Award's recognition that the State Government has a certain proprietary right in the oilfields within its territory. Another point won by the State Government is that Oil India Ltd. should pay the royalty at the enhanced rate with retrospective effect. This means that the unilaterally reduced rate of Rs. 4.80 per ton would not apply even to the period from June 1961 to 7th November 1962 (the date of the Award). Perhaps the most significant feature of the Award is that it has made a departure from the usual practice of calculating oil royalty at the substantial foreign market price of crude oil. In other words, the price of crude to be calculated has been delinked from the international price in relation to which, for instance, the well-head value of Nahorkatiya crude has been reduced to Rs. 48 per ton. The Nehru Award has now laid down the principle that, for the purposes of royalty, the price of crude oil should be calculated at a flat rate on the basis of cost of production in India.

The Nehru Award has certain all-India implications, too, for it is stated that the royalty of Rs. 7.50 per ton has been fixed as a uniform rate of royalty for the whole of India and that it will remain in force for four years. This means that the Oil and Natural Gas Commission of the Government of India will have to pay royalty on oil at this rate to the Gujarat Government also, for instance. The Assam Oil Company which, too, has refused to pay, on account of its Digboi oilfields, anything more than Rs. 4.80 per ton as royalty with effect from June 1961, would, likewise, have to respect the Award, since it is applicable uniformly to all oil-extracting enterprises in the country. It is thus clear that the Assam Government, by winning its specific case against Oil India, a Central Government concern, has simultaneously benefited all other States having petroleum resources which are currently or potentially exploitable.

DEVELOPMENT ASSISTANCE

Rs. 33 at one end and Rs. 119 at the other: This is the gap between the average rate of growth of *per capita* income in the underdeveloped and developed countries. The gap is too wide and may become wider still, thereby increasing the imbalance in world economic growth. Mr. Gerhard Merzyn, Director of the Institute for Economic and Political Sociology, Hamburg, West Germany, who is now on a visit to India, was certainly voicing the opinion of a vast section of the intelligentsia when he declared in Bombay early this week that, since the wide gap was a danger to mankind and world peace, it should be eliminated. The industrialised countries have, of course, fully realised the imperative need for reducing, if not eliminating altogether, the gap, as witness the grant of large-scale economic assistance to underdeveloped countries. But the best effect of such assistance cannot be ensured, unless the industrialised countries commit themselves to make specific contributions for many years to come to economic aid programmes covering a wide range of underdeveloped countries. The well-known columnist of the London *Financial Times* "Lombard," has, therefore, done a signal service to the cause of underdeveloped countries in strongly advocating such a course of action. A machinery must be devised, he says, for varying the total burden on individual capital exporting countries from year to year to minimise the risk of such expenditure adding materially to the embarrassment caused by temporary changes in balance of payments patterns. The scheme which "Lombard" has proposed may be summed up thus:

> If some countries feel that they have become over-committed in respect of aid, they must be helped by arranging a temporary reallocation of aid, thereby avoiding a cutting-back of assistance to underdeveloped nations. Such an arrangement is not at all considered difficult, because, when some of the capital-exporting countries are experiencing difficulty in the balance of payments field, others will be faring a good deal better than they need to. When, in due course, the payments pendulum swings in the other direction, it will be possible for countries that had previously fallen into arrears with their aid commitments to get themselves up-to-date.

The introduction of the above system, one may argue, would enable slothful countries to shift the burden of their aid commitments on to the shoulders of others in permanent fashion, since there would be no way of ensuring that the debts incurred on this account would be repaid. To this argument, "Lombard's" reply is that, in practice, if a country were to show a tendency to abuse the system in the way just described, the obvious thing would be to conduct a general investigation of its circumstances to discover whether the trouble arose through negligence or because its share of the total burden had been unduly large in the first case. "This (the new scheme)," to quote him, "would be a big improvement on the present system under which we find a major country effectively transferring a sizable part of its aid burden to other countries without consultation by leaving them with no alternative but to stockpile the proceeds of its resulting overall payments deficit."

In effect, the scheme outlined by "Lombard" has one distinct advantage: to facilitate an improved distribution of the burden of common aid effort. It may be recalled here that the O.E.C.D. Development Assistance Committee has, in its first annual aid review, urged that, while the factors determining the appropriate size of aid contribution of individual countries are too complex to permit a simple arithmetic allocation of the desirable share of each D.A.C. country in the common aid effort, substantial differences in effort do persist and require correction. Incidentally, the new system, as "Lombard" emphasises, will enable the capital-exporting countries themselves to form a fairly clear picture well in advance of the amount of money they will have to allocate for financing development abroad and to plan the rest of the external budget accordingly. So far as the aid-receiving countries are concerned, the co-ordination of aid effort on long-term basis will enable them to frame their development programme in the knowledge that the greater part, if not all, of the foreign exchange they need for financing capital goods imports will be forthcoming when the time comes.

JOB EVALUATION

The Bombay branch of the Productivity Centre of the Government of India deserves to be congratulated on having organised, in association with the Institute of Industrial Engineers, a practical course in job evaluation. The course, which concluded this week in the city, was attended by twenty-one participants drawn from different organisations. A unique feature of the course was that it did not confine itself to giving a series of lectures by experts but offered practical instruction in the methods and problems faced in job evaluation. The object was to give the participants, who, at one time or another, were expected to introduce, or assist in the introduction of, job evaluation in their respective establishments, firsthand knowledge and experience in the practical problem of job evaluation.

The course served to focus attention on the advantages and limitations of job evaluation as a method of evolving an equitable and scientific wage structure. The problems of defining and fixing suitable wage relationships between groups of jobs and workers are of considerable importance to the theory and practice of wage determination. In many countries, job evaluation has been applied to deal with comparative equity in wage determination mainly, though not exclusively, at the level of the individual firm or plant. Its aim is to provide a means of establishing a wage structure acceptable to workers and management and which, as far as possible, is fair or equitable in the sense of ensuring equal pay for equal work. Defined simply, job evaluation is an attempt to determine and compare the demands which the normal performance of particular jobs makes on normal workers without taking into account the industrial abilities or performance of the workers concerned. In other words, job evaluation rates the job, not the man.

Though simple in its basic principle, practical application of job evaluation often raises complex technical questions. Moreover, in so far as wages are sought to be related to the "ranking" of jobs, job evaluation also gives rise to human problems affecting workers and management in general as also different categories of employees. Consequently, disputes about job evaluation and wage fixing, like other industrial disputes, become the subject of adjudication. Opposition to job evaluation, which is not confined to workers alone, is based on the fear that job evaluation will upset the existing wage structure. This fear, however, is unfounded, according to Mr. Justice Gokhale of the Bombay High Court. Addressing the participants in the advanced course in job evaluation, Mr. Gokhale pointed out that the intrinsic worth of a job was not the only factor that determined wages for a job. The minimum wage fixed under law, for instance, was outside the purview of job evaluation. That wage was inescapable and was imposed, so to say, by economic and social consideration. In his opinion, the recognition of the need for a minimum wage need not, therefore, be an impediment in the way of the introduction of job evaluation.

But even if job evaluation were introduced on a wider scale, it could not be an answer to all wage administration problems. This point was stressed by Dr. Palekar, a labour economist, who pointed out that job evaluation did not attempt to fix the money equivalent of various jobs, but only to determine their relative worth. In India, where there was at present certain rigidity in wage scales, consequent on industrial awards, change in wage structure, especially downward revision, would be difficult to introduce.

The opposition to job evaluation will diminish if its significance and implications are properly understood by workers and management. Work studies and job evaluation techniques could be utilised to eliminate inequities in wage structure. And once suitable job gradations and job differentials are formulated, it should not be tampered with by tribunals, except in cases where there is a clear case for adjustment. In such cases, adjustment should not be piecemeal but should cover the entire gradation of jobs.

While the minimum wage is unaffected by job evaluation, wages above the minimum can and should be based on an evaluation of job content, so that jobs demanding greater effort and sacrifice could be given greater rewards. Though manual jobs lend themselves more easily to evaluation, non-manual, clerical and administrative jobs, including even top executive positions, could be studied and their job content assessed. In support of this view, it is said that the nature and importance of professional qualities that completely defy description and analysis might be found to be much smaller than is sometimes assumed. But this proposition has yet to be proved. So far as factory workers are concerned, it can be said that, to the extent job evaluation helps to give practical expression to two principles of fairness, namely, equal pay for equal work and differential reward for discernible differences in effort and sacrifice, which are so widely recognised that they cannot be regarded as subjective assertion by group interests—it deserves wider study and application wherever feasible. A note of caution, however, needs to be sounded here. In trying out any system which appears fair and deserving on paper, care must be taken to ensure that the experiment does not lead to unrest and discontentment. If it does, it would be a case of the remedy being worse than the disease, for one cannot expect higher productivity from a discontented labour force.

BOMBAY PORT

The quantum of trade handled by the docks and bunders of Bombay suffered a small decline during the year 1961-62. Thus, according to the latest *Administration Report* of the Bombay Port Trust, the aggregate weight of cargo handled by docks and bunders fell from 14.72 million d.w. tonnes to 14.55 million d.w. tonnes, the actual decline being 1.73 million d.w. tonnes. The decline is largely the result of smaller imports, particularly of foodgrains, during the year under review. There was, however, a modest increase in the volume of total exports. Most of the major export items shared in the increase, particularly ores (other than manganese), petroleum products, raw cotton and sugar. The only exception was manganese ore, shipments of which were perceptibly lower, having fallen by about 108,000 tonnes to 269,000 tonnes.

The following table shows the weight of cargo handled by the Bombay docks and bunders since 1961-62:

(In million tonnes)

Year	Imports	Exports	Total
1951-52	5.90	1.70	7.60
1952-53	4.77	1.97	6.75
1953-54	4.85	1.98	6.83
1954-55	5.72	1.99	7.71
1955-56	6.82	3.66	10.47
1956-57	8.37	3.80	12.17
1957-58	9.45	3.87	13.32
1958-59	8.55	3.39	11.94
1959-60	9.56	3.79	13.36
1960-61	10.80	3.93	14.72
1961-62	10.41	4.14	14.55

Despite the decline in cargo handled, the financial position of the Port Trust continued to be satisfactory. The general account for 1961-62 closed with a larger surplus of Rs. 392

AMERICAN LETTER

ALL AMERICANS SOLIDLY BEHIND INDIA

TAX RELIEF CONSIDERED MOST ESSENTIAL

From Our Special Correspondent

NEW YORK, 10*th November*

THE crisis over Cuba and its effect on the United States economy which were the topics of my last despatch have greatly diminished in magnitude since. U.S. naval vessels patrolling the seas have actually observed missiles being carried back on Russian freighters. While this is not regarded as the final answer to the problem, it could be the beginning of a *modus vivendi*. A second disturbing factor, or a potential one, which is more or less routine were the Congressional elections and the elections of Governors of the various States. Here again nothing has happened to upset the equilibrium of the U.S. economy. However, a very grave view is taken of the Chinese invasion of territories of India. I intimated in my last despatch that the U.S. State Department was fully prepared to extend a helping hand to India with military and other supplies. This has materialised already. Moreover, public opinion in the U.S. is strongly behind India in its present struggle.

This view is shared in the United Nations. But domestic and foreign sources here alike are perturbed that a relatively large-scale war between India and Red China may disrupt the long-range planning of the Government of India in constructive economic spheres. This was one of the last thoughts of Mrs. Eleanor Roosevelt before she passed away and before she was honoured by the U.N. not only as a citizen of the U.S., but as a citizen of the world. Even Russia concurred in this view.

U.S. Business Prospects

The business outlook is fairly good and the forthcoming holiday spending spree is regarded as promising, internal and external crises notwithstanding. Perhaps, the most eloquent thing which can be said at this time is that stability has not been perturbed and that nothing important has worsened.

At the present time, there is more talk of deflation rather than inflation. This does not apply to the U.S. alone, but to other countries as well. Reasons for apprehensions in this respect are based on what are regarded as inadequate profit-margins here and abroad and, thus, an inadequate growth rate.

The corporate profit trend is somewhat elusive. For the first nine months of the year, the trucking industry made the most spectacular gain by increasing its earnings more than 100 per cent over 1961. Three other industrial groups registered gains of more than 60 per cent. These are: textiles and apparel, automobiles and parts, and, finally, the railways. But all three were so depressed last year that the rise can be considered as just a natural comeback.

So far as the future is concerned, two industrial groups are felt to be outstanding contenders for success—the electrical and electronic groups. They are being helped by the communications' space satellite Telstar, by new marketing successes of colour television and by a very high volume of space and military orders for equipment which are apt to continue and to increase.

The other side of the coin—and that goes back to the deflationary sentiment—is that prices can no longer be increased. Competition is too keen, both domestic and foreign. And substantial industrial capacity remains unused as before.

At the pace the U.S. economy is going, the question arises as to what is expansion and what is a recession. The unemployment ratio remains stubbornly at about 6 per cent of the labour force. The President's Council of Economic Advisers feels that, under the circumstances, nothing the Government does could possibly be inflationary.

In fact, there is a downward pressure on prices in the face of gradually increasing costs of labour and services. It is again a question of profit-margins. Monetary and fiscal policies can help up to a point, but they cannot remove basic inadequacies and rejuvenate economies.

The Federal Reserve system, for example, has done all it could for the maintenance of interest rates at a level which should inhibit an unsupportable outflow of gold. After all is said and done, the main burden of future economic planning seems to rest on tax policies. This is not just a domestic U.S. problem. It applies to every free country in the world. Taxes can kill the goose which lays the golden egg. Tax reductions, therefore, are being more than seriously considered in this country. Statements supporting such a course have been issued by spokesmen of the Common Market in Europe, by the International Monetary Fund and by the President's Council of Economic Advisers. Such measures are, of course, not necessarily a panacea. They may remove the danger of deflation caused by inadequate capital spending on psychological grounds—and they may lead to inflation.

So far as the overall picture is concerned, stockholders of publicly-owned corporations may get as much as $3,000 million in dividends in December which compares with $2,750 million last year. While there was a decline in steel dividends, other companies upped their payments to stockholders, notably Standard Oil (N.J.) which has 217 million shares.

One of the brightest spots in the U.S. economy, at this moment, is the automobile industry. Car production in the last few months reached new record highs and so did sales. General Motors captured 52 per cent of the domestic market. Output continues brisk and the overall auto industry operation is, of course, strongly supported by defence orders.

There has been no clear cut pattern in the stock market which is supposed to forecast future events. When the threat of war over Cuba appeared imminent, defence stocks were trading favourites; after the Russian back-down, stock prices rose. The outcome of the Congressional elections did not change that pattern either.

During the crisis period, the international payments position of the U.S. mounted again on the deficit side. Commercial exports were lower than expected. But, at the same time, gold prices fell from their crisis-highs to just a little above the official U.S. gold price of $35 an ounce. This was generally regarded as an encouraging note.—*All Rights Reserved.*

(Concluded from next column)

to British industry. But is there any reason why it should not be established for all time that all investment expenditure should not be written off right away? This would indeed be a long-term stimulus to investment, with the advantage that it would, in fact, cost the Treasury nothing over the years since, over the years, long though they sometimes are, all investment can be written off. On top of this, a bonus—the investment allowance—could still be given from time to time, permitting something in excess of 100 per cent of the capital expenditure to be written off, since such an allowance is definitely a reduction against overall taxes that a firm suffers. And it is a little difficult to see any justification for putting this kind of allowance on a permanent and fixed basis.

One other significant thing about Mr. Maudling's empiricism is that his predecessor's "economic regulator" appears to have gone by the board. This was the power taken to raise or lower in between budgets the rate of purchase tax within limits. This so-called "regulator" was intended to stimulate all buying or inhibit all buying on a wide range of consumer articles. Mr. Maudling has decided that this is not the right approach; his own preference is for the discriminatory tax relief, that is by reducing a particular tax to boost a particular industry rather than encourage spending generally over all industry. It is empiricism instead of principle, but there is little criticism against the Chancellor on this score.

But what does all this add up to? *The Economist* has calculated that, if national production is to rise at the rate of 4 per cent per annum, over £1,000 million consumer purchasing power must result. What Mr. Maudling has done with his two boosts is to pump in a potential £200 million. There is nothing very inflationary about this. Certainly, the car industry will be stimulated; certainly prospective investors in capital equipment will be grateful; but is it anything like enough to reverse the rising trend of unemployment? The general feeling here is that it is not.

LONDON LETTER

STATE OF ECONOMY

BUDGET OR BOOST?

From Our Own Correspondent

LONDON, 9*th November*

THE Chancellor of the Exchequer, Mr. Maudling, has now had his second puff at livening up the British economy. This latest one is worth about £100 million a year—rather more than half of it by a reduction of nearly 50 per cent in the purchase tax on motor cars and the rest through bonuses for capital expenditure. Because this puff affects all capital investment and the motor car industry, it has been suggested that the Chancellor was really introducing a second Budget. In fact, he has been most anxious that his actions should not be interpreted that way which is the principal reason why he has adopted such an empirical approach to tax relief.

It will be recalled that, a month ago, the Chancellor decided to make refunds of special war-time taxes to a slightly younger age group. This meant that something like £40 million of purchasing power per annum would be pushed into circulation, that is, if the people concerned were to spend the money. Unfortunately, in those particular age groups, it is more likely that they would save it! In addition, public investment was to be increased by about £70 million a year—this was a promise of real injection of purchasing power into the economy.

There are two things to note about the present empirical measures. So far as motor cars are concerned, the Chancellor said that he was going to give substantial relief, because the industry was relatively depressed. Since the announcement was made, there has been a promise of increased expenditure on roads; certainly the two go together, for the idea of lower tax on motor cars is to make more motor cars and, therefore, to congest still more the already heavily overloaded British road system. But there is still no true road policy relevant to the likely demands on road space in, say, ten years' time.

The bonuses on capital expenditure are in a different category. These are intended to encourage businessmen to scrap obsolescent plant and buildings in order to keep abreast of Continental and American competition. It is now possible to write off 130 per cent of any given capital expenditure. The first 50 per cent (until now only 20 per cent) is with an investment allowance. If, say, a unit of plant is purchased at the cost of £1,000, then, in calculating the firm's liability to tax, an allowance of £300 will be made off the profits of the firm. This is quite independent from depreciation allowances where the tax rules may permit an item to be written off at the rate of, say, 5 per cent per annum for 20 years. There, the Chancellor has shortened the length of time over which particular plant items may be written off. This would not affect the accounting processes of individual firms, for each firm will, in any case, make its own computations and write off every year whatever it thinks appropriate. But what it thinks appropriate may not be regarded as appropriate by the tax authorities and the virtue of the recent changes is to bring authorised annual deductions for tax more up to what individual go-ahead firms think is right. The net effect of all this is to permit commercial enterprises to write off out of profits each year more than has hitherto been permitted for a given capital expenditure.

So far as the investment allowances are concerned, their effect is the same as that of a reduction in the tax on profits. But, while a reduction in the tax on profits would benefit all profits, but not necessarily provide any stimulus to investment, this particular basis only gives a bonus to those firms who go in for new investment.

Of course, businessmen are grateful that their taxes—that is assuming that they are businessmen who are investing in new capital—should be reduced. The criticism is that there is no kind of long-term pattern encouraging businessmen to think in terms of investment over the years. Whether it is possible to have such a pattern is another matter but it has often been urged in this country that what the economy needs is a long term stimulus to investment, e.g. that, if a firm spends X pounds on new plant and equipment, it should be allowed to write off those X pounds whenever it likes out of profits. This can now be done for plant and buildings used for research purposes—a belated but useful recognition of the value of research

VOITH the LARGEST manufacturers of pulp and paper machinery in Europe!

Voith are one of the leading manufacturers of paper plant in the world. With almost a century of experience in the field, Voith's outstanding contributions to the development of basic paper machinery and equipment are recognized the world over.

Voith build an almost complete range of machines for the production of groundwood and chemical pulp, the refining of paper stock and the manufacture of all grades of paper. Over 800 Voith paper making machines are in operation all over the world today.

One of their latest achievements is the successful installation and operation of Europe's widest newsprint machine—rated capacity 375 tons per day, wire width 8,300 mm, design speed 900 m/min.

Hydraulic turbines and transmissions represent another important field where Voith have done pioneering work. They made major improvements in the design of the Francis Turbine and the Pelton Wheel...built the first Kaplan Turbine...developed the Voith-Schneider propellers.

Voith have so far designed, constructed and supplied 17,500 hydraulic turbines with an aggregate output of 27.5 million HP, for projects in different parts of the world!

At Kansbahal, Orissa, three leading German firms—Gutehoffnungshuette Sterkrade AG., J.M. Voith G.m.b.H. and Heinrich Koppers G.m.b.H. —and a reputed Indian company, Larsen & Toubro Limited, have pooled their vast resources and experience to set up UTMAL, a major undertaking for manufacturing heavy machinery. UTMAL will play a significant role in the rapid industrialisation of our country, by supplying a wide range of industrial machinery.

AND NOW UTMAL MANUFACTURES VOITH PLANT AND EQUIPMENT IN INDIA

MONETARY POLICY: AN AMERICAN VIEW

THE ANTIPODES OF RADCLIFFE?

By D. Krishnaswami Rao

FEW writers could have exercised on contemporary economic thought and policy an influence so great as to be termed a "Revolution," but such precisely was the work of the late John Maynard Keynes who in the field of thought gave a new explanation of the level, in terms of income and employment, of economic activity, and in the sphere of policy helped to overthrow the primacy of monetary policy as the single established instrument of State action in controlling economic activity in the aggregate. Monetary policy which was thus pushed into abeyance in the early 1930's in both Britain and the U.S. (in common with many of the countries of Western Europe) was not resuscitated and put into use in either country till the early 1950's when the persistence of inflationary pressures long after the close of the war and the impracticability of tackling them with the fiscal weapon made it imperative to resort to the monetary instrument again. After all, monetary policy as an instrument of economic stabilisation had met its Thermopylæ in dealing with the unparalleled depression of the nineteen-thirties; it might nevertheless prove to be serviceable in controlling the post-war boom which took a more unhealthy turn with the beginning of the Korean war; possibly also it might be useful, in reverse, to stimulate the economy, if it were to run into such mild recessions as could be envisaged in the over-stretched conditions of demand of our times.

For a decade now, monetary policy has, therefore, been in active use both in Britain and the U.S., and it would be interesting to know what has been the experience of the two countries with their revived exercise, no doubt in greatly changed circumstances, of an old and once-trusty weapon. We have available to us for this purpose the much-discussed views of the Radcliffe Committee whose report on the working of the monetary system in the United Kingdom was published in August 1959 and, for the American experience, we can refer to the findings of the Commission on Money and Credit whose report, submitted to President Kennedy in June 1961, has only recently been available in this country.

The Radcliffe Committee was a body appointed by the Government. It had a membership of nine, of which two were bankers and two academic economists. It took two years over its work (May 1957 to July 1959) and submitted a unanimous report. The U.S. Commission on Money and Credit (which we shall henceforward refer to as the C.M.C.) was a body selected and sponsored by the Committee for Economic Development, an organisation of enlightened American businessmen, President Eisenhower's attempt to set up an official commission of inquiry not having found favour with the U.S. Congress. It began with twenty-five members in 1958, of which two resigned and five died during the course of its three years' labours, so that, with two later appointments, twenty signed the report—each dissenting frankly, in footnotes, at any point on which he differed from the majority of the Commission. As the Commission itself says, the report "represents the deliberations of a diverse group of American citizens." The American report, therefore, lacks that quality which has set scholars in two continents wrangling over the analysis and the conclusions of its British counterpart.

Objectives of Monetary Policy

On the objectives of monetary policy, the C.M.C. and the Radcliffe Committee differ little. The former regards "an adequate rate of economic growth, sustained high levels of production and employment, and reasonable stability of prices" as the three central objectives; together with them are also to be sought "adequate national security, maintenance of harmonious international economic relations and contributions to economic development abroad." Rather strangely, equilibrium in the balance of payments finds no mention among the primary objectives. The C.M.C. holds that the three main goals "can be achieved simultaneously" and that they are basically compatible, "if we do not expect the impossible for each." The Radcliffe Committee lists the following as the possible objectives of monetary policy: "a high and stable level of employment; reasonable stability of the internal purchasing power of money; steady economic growth; some contribution to the economic development of the outside world; and a strengthening of London's international reserves." Then comes the warning: "in listing these five objectives, we have to acknowledge that there are serious possibilities of conflict between them. The choice between them, where choice has to be made, is one that Governments have to face."

It is, however, when we turn to their assessments of the working of monetary policy in their respective countries that we find the two bodies of inquiry apparently taking contrastingly different positions. The Radcliffe Committee's evaluation of monetary policy in the United Kingdom in the years after its revival in 1951 is found in the now famous chapter VI of the report, bearing the heading "The Influence of Monetary Measures," a chapter that has verily drawn a hundred economists into the battle of intellects that has since raged over its purport. In trying to paraphrase it, one has, therefore, to be very wary, for this is ground on which angels would tread with care.

Impact on Demand

The Radcliffe Committee analyses the impact of monetary measures on the total level of demand for goods and services as working, theoretically, in two ways. First, by bringing about a change in rates of interest, the monetary authorities can, in theory, change the incentive to invest in either fixed capital (plant, machinery and buildings) or stocks of commodities. This the Committee calls the *interest incentive effect*. Secondly, the monetary authorities can bring about a change in the liquidity position of financial institutions, business firms and people generally, "so that those wanting money to spend (whether for capital development or other purposes) find it more (or less) difficult to get than it was before": this the Committee describes as the *general liquidity effect*. The two effects are, obviously, complementary to each other.

The Radcliffe Committee is not convinced of the presence of the interest incentive effect in recent years. Its analysis of the use of monetary measures in the United Kingdom since 1951 leads them to the conclusion that only very limited reliance can be placed upon the ability of interest rate changes to affect the incentive to invest in either stocks of commodities or fixed capital goods. The Committee concedes to changes in short-term interest rates of the type that are signalled by a rise in British Bank rate, the power to bring about a big and immediate improvement in the country's foreign exchange reserves—which, of course, was often the all-important objective of the authorities. But even in this regard, it emphasises the symbolic effect of a rise in British Bank rate: it is a warning to overseas opinion (particularly to speculators in foreign exchange who have precipitated more than one sterling crisis in recent years) that the exchange value of the pound would be defended at all costs, however unpleasant. The consequent reduction of forward speculation against sterling and the improvement in the external reserves would, therefore, be more the result of a historical reflex than the outcome of a dispassionate assessment by foreigners of the position and prospects of the £.

Interest Rates

The Committee is, however, sceptical of the effect of interest rate changes on the internal economy, because it is convinced of the unimportance of interest changes in relation to other costs and the risks involved in the case not only of fixed investment but even of holding stocks of commodities. It also points out how taxation halves the effective burden of a rise in interest charges. No doubt it came across firms which reported reductions in turnover and in their investment programmes as a consequence of the steep rise in interest rates which was caused by the raising of Bank rate to 7 per cent in September 1957. But the Committee is inclined to ascribe such reductions more to expectations of a decline in business activity than to the rise in the rate of interest—perhaps again a psychological effect. It is, therefore, the Committee's finding that, in the conditions of the 1950's, a rise in interest rates could not by itself have directly caused a sufficient curtailment of demand. Its conclusion regarding the effects of reductions in interest rates in the period is analogous: that they did not directly stimulate demand to an appreciable extent, although they may have had some part in inducing an expansionist outlook on the part of business firms.

In its analysis of the general liquidity effect of monetary measures, the Committee explains, though not with sufficient clarity, its concept of "the wider structure of liquidity in the economy" of which it regards the supply of money as only a part. Liquidity includes not only a person's or an organisation's holdings of ready cash but also anything which can be turned into cash, for example, capital assets which can be sold, and his (or its) borrowing power. It, therefore, also depends upon "the methods, moods and resources of financial institutions and other firms which are prepared (on terms) to finance other people's spending."

The monetary authorities can affect the liquidity structure of the economy by changes in the long-term rates of interest, because these would alter the capital values of many assets held by financial institutions. A rise in interest rates would make some more reluctant to lend, because the capital values of their own assets have fallen, while, with a fall in interest rates, assets would appreciate in capital value and thus encourage their owners to lend more. The Committee regards the power of the monetary authorities thus to alter the availability of funds to borrowers as "altogether more preemptory" in its influence on total demand than changes in the cost of borrowing to which it does not attribute the power to effect even a "marginal adjustment" in the pressure of demand.

If the monetary authorities were free to play upon interest rates, they could exercise a powerful sway on the entire liquidity position of the economy and thus upon total demand. At certain times, especially if they are "inhibited" in their manipulation of interest rates, they may decide to strike at key points in the liquidity structure, as, for example, through restriction of bank advances (popularly known as a "credit squeeze"), control of capital issues, and restraints on hire-purchase credit. The Committee does not, however, recommend these measures for use in ordinary times as they have certain limitations. It found from British experience that a tighter rein on bank advances evoked resort by borrowers thus baulked to other sources of credit like finance companies, building societies, accepting houses and discount houses, and to a greater use of trade credit. A control of capital issues which to be effective would have to be of the quantitative type would be useful as an emergency measure, but it would be neither desirable nor easy to operate as a normal instrument for regulating the volume of investment. Controls on hire-purchase finance have a quick and significant effect on total demand, but resort to them should be minimised in normal times, because they hit bluntly and hard one small group of industries, namely, automobiles and durable household equipment, which thus have to suffer a black eye and a bloody nose every time aggregate demand gets out of hand in the economy.

Main Conclusion

The Radcliffe Committee's summing up of its views on monetary policy is given in a paragraph which Mr. Peter Thorneycroft, the then Chancellor of the Exchequer who appointed the Committee, has called "the heart and centre of the report" and one that "deserves to be quoted and read in full."

> "It will be seen that our review of monetary measures has not led us to any positive and simple recommendations. No method, new or old, provides the remedy for all our troubles. . . . we cannot recommend any substantial change in the rules under which the banks operate; we do not regard the capital issues control as useful in ordinary times; and we believe that there are narrow limits to the usefulness of hire-purchase controls. On the other hand, we believe that the authorities could make more deliberate use of interest rates. . . . although many effects of changes in them are slow to work, some effect comes fairly rapidly through liquidity disturbances created by these changes. But, when all has been said on the possibility of monetary action and of its likely efficacy, our conclusion is that monetary measures cannot alone be relied upon to keep in nice balance an economy subject to major strains from both without and within. Monetary measures can help, but that is all."

U.S. Commission

We turn now to the views on monetary policy of the Commission on Money and Credit (U.S.) whose report, as we have suggested earlier, is much smoother sailing in both thought and exposition.

To the C.M.C., monetary policy means control over the supply of money, meaning currency and demand deposits at commercial banks, exercised by the Federal Reserve System through control over the reserve position of commercial banks. Not for them the Radcliffean spectrum of liquidity whose limits defy demarcation, but which nevertheless the monetary authorities must seek to influence, because it is more crucial to the level of economic activity than the supply of money, itself in the Radcliffe view an undefinable entity.

The Federal Reserve has three instruments to control the reserve position of commercial banks: it can alter the ratio of reserves that member commercial banks are required to hold; it conducts open market operations which alter the volume of reserves available to the banks; and it can change its discount rate, thus altering the terms on which member banks may borrow from the "Fed" to meet a shortfall in reserves.

The C.M.C. is clear that a policy of credit restriction followed by the Federal Reserve can restrain bank lending. Nor is it worried, as the English Committee was, that a reduction of bank lending might be frustrated by a greater resort by borrowers to other sources of credit. It finds that monetary restraint causes the non-bank lenders also to raise interest rates and to apply stricter standards of creditworthiness. Tight money, according to it, results in a substantial volume of loans refused or reduced.

Contrary again to the findings of the English Committee, the U.S. Commission finds that monetary restriction reduces total expenditures in the economy. It finds it markedly so in the case of housing and to a lesser extent in the case of the capital expenditures of State and local Governments. As regards the alleged unresponsiveness of business investment to higher credit costs, it feels that the usual arguments about the insignificance of interest charges as compared to other costs and the uncertainties regarding future sales and profits, and about the tax deductability of interest charges, are overdone. It points out that taxation reduces not only net interest costs but also the net profits of investment. It is the Commission's view that investment in highly durable capital assets and investments for modernisation and cost reduction, which can be postponed to take advantage of cheaper credit, are sensitive to the raising of interest charges, and that investment in commodity stocks seems also to be "somewhat sensitive," provided price increases are not expected. Almost immediately, however, it add, "despite some sensitivity of borrowers to higher interest rates, the direct effects of a restrictive monetary policy appear to work mainly through the reduction in the availability of funds to would-be borrowers."

Monetary Ease

The Commission recognises that a policy of monetary ease may not be as effective in stimulating a much-needed increase of expenditures as a restrictive policy is in curtailing them, because the demand for credit may not increase in a time of slump, in spite of its increased availability and at lower rates of interest. This view, of course, is common ground with all who have made any study of monetary problems in the past forty years.

It is the Commission's belief that a flexible monetary policy is a useful instrument for counter-cyclical stabilisation of business activity. It alludes, in support of this faith, to the restraining effect of restrictive monetary policies in 1955-57 and again in 1959, though it does not, on the other hand, cite any period when an expansionary monetary policy induced a business recovery.

The Commission is not much impressed by the common complaint that monetary measures, because of the time-lag in their working, might have perverse effects—restrictive action taking effect when a recession has already set in due to other causes, or monetary expansion making itself felt when the economy has just swung into a boom. It feels that the problem of time-lags could be avoided, if the monetary authorities were to keep their measures continuously in use, varying them in either direction as early as necessary, changing gradually in the direction of restriction before excessive demand can build up, and relaxing restrictions gradually before aggregate income has actually fallen. To use a Radcliffean metaphor, monetary policy would then be like the gentle hand on the steering wheel that keeps a well-driven car in its right place on the road.

The great contribution of the United States to central banking technique has been the fashioning of *selective* credit controls, that is those which, unlike the *general* credit controls, seek to regulate the volume of credit used for specified purposes such as credit extended for the purchase of durable consumption goods, for the purchase or carrying of stock exchange securities, or for new residential construction. At present, the only selective instrument in the hands of the "Fed" is the control over lending (not only by banks) for dealings in stock market securities.

The C.M.C. has considered at some length the suggestion often made that, for strengthening monetary control, more use should be made of selective weapons. It feels, however, that the usefulness as a regular counter-cyclical device of control over credit granted for the purchase of consumer durables is severely limited by the difficulty of efficiently administering the control which can be easily evaded. As regards control over residential housing credit, it recommends that it would be sufficient, if the terms of housing loans insured or guaranteed under the Federal Government programmes were varied in support of the stabilisation policies of the monetary authorities. The Commission concedes the desirability of selective credit controls to regulate business investment in plant and inventories but is staggered by the difficulties of setting up and administering such controls, and contents itself with recommending that possible methods "be investigated by the Government"!

General Controls Preferred

The Commission's own preference is for the *general* controls over credit, with "major reliance" on the use of open market operations in Government securities of varying maturities as the normal instrument of general monetary policy, changes in the discount rate being used to strengthen the effectiveness of open market policy. Changes in reserve requirements for member banks, being more drastic but uneven in their impact upon different banks, are less delicately adjustable than open market operations and are, therefore, to be used only "sparingly." The Commission's assessment of monetary policy is best summed up in its own words:

> "The Commission does not advocate placing sole reliance on monetary policy for stabilisation purposes. Because of its reversibility and the possibility of changing policy by small steps, monetary policy can be used in many circumstances when discretionary fiscal policy changes should not be used, because the need for so powerful an instrument has not yet become clear. In summary, the Commission believes that monetary policy is a valuable and effective instrument of stabilisation policy."

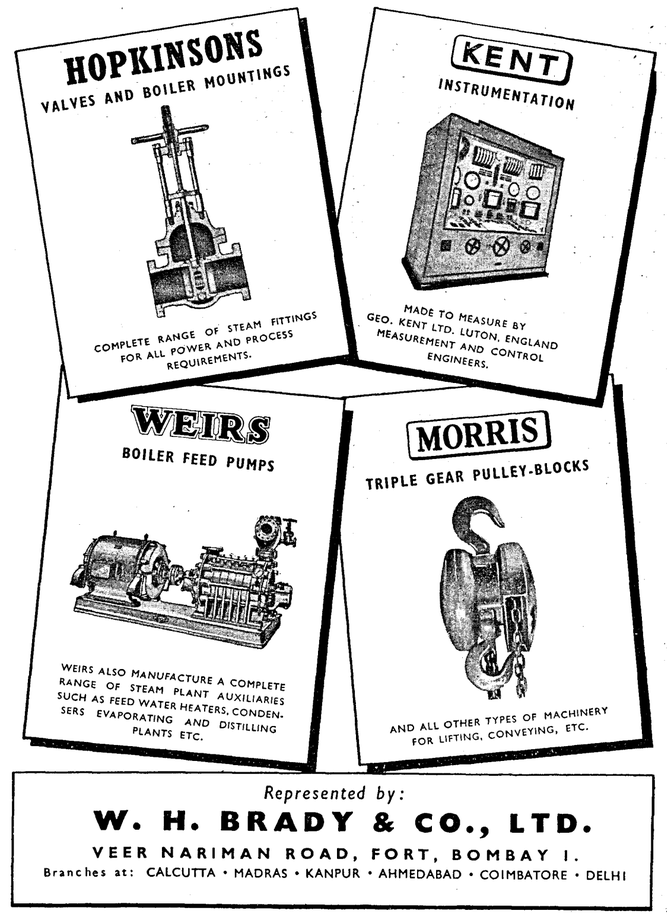
We now come to a question of some importance which is implied in the sub-title of this article. The Radcliffe Committee makes no secret of its scepticism regarding the effectiveness of monetary policy. The Commission on Money and Credit, on the other hand, has been taken to "vindicate almost in entirety the economic rationale on which monetary policy has been formulated over the past decade and, in large measure, the tools through which it has been effectuated." Could it really be that two countries, both with equally well developed money markets and techniques of central banking, have fared so differently in the decade of the 1950's in their use of the monetary weapon? If anything, the monetary authorities in the United Kingdom should have done better of the two, because the British economy has been less subject to cyclical fluctuations than the American and the Bank of England has the advantage, unparalleled elsewhere, of complete and voluntary co-operation between a close-knit banking system and the central bank.

It could be that the Radcliffe report, bearing as it does the impress of a small group of intellectuals, exhibits the questioning mind's difficulty in accepting as of proven merit anything that does not pass its searching tests; and that the American report, being an ensemble of the views of practical men, avoids the deeper issues of monetary policy and hence finds more to be satisfied with its practical working.

A More Basic Reason

But, possibly, there is a more basic reason. The Radcliffe Committee seems to require that monetary policy "alone" or "by itself" should be able to keep the economy in perfect balance. Even in the United Kingdom, monetary policy could have performed this feat only in the halcyon days of the gold standard before the First World War. A more generally acceptable criterion of judgment in the totally different economic environment of the middle years of this century would be whether monetary policy could contribute something significant to what

(*Continued on page 885*)



WORLD CONSUMES MORE MAN-MADE FIBRES

PRODUCTION IN INDIA RISING

THE past decade has witnessed a remarkable expansion in the production and consumption of man-made fibres in the world. The actual aggregate output in the calendar year 1961 was as high as 7,981 million lbs.—an all-time peak level—representing a rise of over 114 per cent as compared with the 3,723 million lbs. produced in 1950. Such a marked rise in output has followed the increasing demand for fabrics produced from man-made fibres, thanks partly to the persistent growth of population and partly to the shift in consumer preference for clothing which is not only light and warm but also easy to wear and care for. Indeed, out of every 100 lbs. of fibres that go into the making of apparel used today, man-made fibres account for 23 lbs. The share a decade ago was no more than 18 lbs. The growing popularity of man-made fibres has been at the expense of natural fibres (cotton, wool and silk). Thus, between 1950 and 1961, the proportion of cotton in the total world fibre production has gone down from 71 per cent to 67 per cent, though, in terms of actual quantity, there has been a rise. The percentage share of wool also has declined from 11 to 10. Production of silk is a nominal percentage of the total. The following figures compare the position in 1961 with that in 1950 and 1930:

(In million lbs.)

Fibres	1961	1950	1930
World production of all fibres	33,394	20,650	15,740
Of which: Cotton	22,374	14,662	12,907
	(67)	(71)	(82)
Wool	3,339	2,271	2,361
	(10)	(11)	(15)
Man-made fibres	7,681	3,717	472
	(23)	(18)	(3)

Source: *Textile Organon*. Figures in brackets relate to percentage shares in the total output.

The notable improvement in world production of man-made fibres during the period 1950 to 1961 is accounted for by all the three principal groups, that is, cellulosic fibres, non-cellulosic fibres and textile glass fibres. The production of cellulosic fibres has risen from 3,546 million lbs. in 1950 to 5,935 million lbs. in 1961. The production of non-cellulosic fibres has gone up from a bare 153 million lbs. to 1,833 million lbs. and that of glass fibres from 24 million lbs. to 213 million lbs. The cellulosic fibres include viscose rayon yarn, acetate yarn and staple fibre (viscose and acetate). The trend of output of these, as well as that of non-cellulosic fibres (comprising polyamide, polyacrylic, polyester and others) and textile glass fibres during the last three years and in 1961 is indicated below:

(In million lbs.)

	1961	1960	1959	1950
Viscose rayon yarn	2,073	2,076	2,002	1,464
Acetate rayon	470	428	417	456
Staple fibre	3,392	3,236	3,140	1,626
Non-cellulosic fibres	1,833	1,565	1,272	153
Textile glass fibres	213	239	190	24
Total	7,981	7,544	7,021	3,723

Out of the total world production of man-made fibres amounting to 7,981 million lbs. in 1961, the share of staple fibre alone was 39 per cent. Viscose yarn accounted for 27 per cent, acetate yarn for 6 per cent, non-cellulosic fibres for 25 per cent and glass fibres for 3 per cent.

The United States ranks today as the largest producer of man-made fibres in the world, accounting as it does for one-fourth of the total output. It is followed by Japan with 17 per cent. The percentage share of other countries is 9 for West Germany, 7 each for U.K. and Soviet Russia, 6 for Italy, 4 each for France and East Germany, 1 for India and 20 for others. The following table gives the details of production in the "free" countries:

(In million lbs.)

	1961	1960	1959	1950
India	109	94	81	8*
U.S.A.	1,981	1,882	1,959	1,404
Japan	1,342	1,235	1,039	254
W. Germany	695	669	618	359
U.K.	567	592	515	372
Italy	486	438	403	224
France	405	381	328	184
Total	7,981	7,544	7,021	3,723

* Relates to 1952.

Among the man-made fibres, the non-cellulosic fibres have gained in importance in the past decade. The actual production of these, which was a bare 153 million lbs. in 1950, spurted to 582 million lbs. in 1955 (a rise of 280 per cent in five years) and further to 1,833 million lbs. in 1961, showing an increase of 1,100 per cent over 1950. The output of 1,833 million lbs. in 1961 includes 1,027 million lbs. of polyamide, 311 million lbs. of polyacrylic, 307 million lbs. of polyester and 188 million lbs. of others. While the production of non-cellulosic fibres continues to rise in the principal producing countries such as the U.S., the U.K. and France, the production of cellulosic fibres has remained more or less same in the last few years. This, it is said, gives an indication that the demand for cellulosic fibres has either reached its maximum or shifted in favour of non-cellulosic fibres because of certain advantages of the latter. The trend of output in the main producing countries is given below:

(In million lbs.)

	Cellulosic		Non-cellulosic		Glass fibre	
	1961	1950	1961	1950	1961	1950
India	109	8*	..	..	..	..
U.S.A.	1,095	1,259	742	122	144	23
Japan	982	253	337	1	23	..
W. Germany	539	357	144	2	12	..
U.K.	419	362	148	10	..	..
Italy	382	227	96	1	8	..
France	274	180	113	4	18	..
Others	2,135	908	253	13	8	1
Total	5,935	3,546	1,833	153	213	24

* Relates to 1952.

The man-made fibre industry in India has also registered a significant expansion in the past few years. The actual production of rayon filament (viscose and acetate) yarn is currently running at an annual rate of nearly 60 million lbs., as against 52 million lbs. in 1961 and a little over 5 million lbs. in 1951. The staple fibre output is now of the order of 65-66 million lbs., as against 57 million lbs. in 1961 and 5 million lbs. in 1954 (the first year of production). Following the marked expansion of output of rayon filament yarn and staple fibre, the quantity of rayon (art silk) fabrics produced has risen from 175 million yards in 1951 to as high as 462 million yards in 1961. The output in the first four months of 1962 was about 143 million yards. The progress achieved by the rayon industry has been phenomenal particularly during the second Plan period, as the following table shows:

	1962*	1961	1956	1951

* January-June. ‡ January-April.
† Relates to 1957. N.A.—Not available.

It will be seen from the above table that the appreciable increase in rayon yarn production has enabled the weaving sector to produce more fabrics for catering to the expanding domestic requirements and exports. During the year 1961, India had shipped 78.61 million yards of rayon fabrics, bringing for the country foreign exchange to the tune of Rs. 6.74 crores. Despite the appreciable rise in the output of rayon yarn, imports continue to be pretty heavy. Last year, India imported 40.22 million lbs. of rayon yarn valued at Rs. 10.23 crores and 4.29 million lbs. of other synthetic yarn valued at Rs. 2.82 crores. In order to reduce the dependence on imports and with a view to meeting the expanded requirements of the domestic weaving sector, the third Five-year Plan has fixed high targets of production: 140 million lbs. of rayon filament yarn and 75 million lbs. of staple fibre, as against the actual output of 47 million lbs. and 48 million lbs., respectively, in 1960-61.

MAINTAINING PRICES OF COTTON TEXTILES

A seven-point programme to step up production of cotton textiles and to ensure their supplies to the community at reasonable prices was announced by Mr. Gulzarilal Nanda, Union Minister for Planning, in the Lok Sabha on Saturday last week. The programme forms part of the Cabinet's decisions on the measures for maintaining the prices of essential commodities, in view of the emergency caused by Chinese aggression. The programme covers the following steps:

1. A scheme for supervised marketing of cotton has been introduced by the Textile Commissioner. Cotton can be purchased by mills only through approved supervisors who survey the cotton and determine appropriate prices. No mill will be permitted to maintain stocks in excess of requirements for a prescribed period.

2. The relative production of cloth in the lower ranges and of the more popular varieties will be increased. The medium category, now classified into lower medium and higher medium, is proposed to be divided into three parts—lower medium, middle medium and higher medium. It is hoped to raise production in the coarse and lower and middle medium range to the extent of about 250 to 300 million yards a year.

3. With the approval of the Textile Commissioner, the Indian Cotton Mills' Federation, through its regional associations, will appoint 'nominees' for wholesale distribution. The 'nominees' will hold stocks of common varieties of cloth and arrange for distribution according to the Textile Commissioner's instructions. Mills whose cloth is in popular demand are being asked to open retail shops on a more extensive scale and also bring considerably larger numbers of retail dealers on their approved lists.

4. Prices to be stamped on cloth will be specifically approved by the Textile Commissioner, who would also indicate selling margins at the wholesale and retail levels.

5. To ensure supplies to consumer stores, fair price shops, etc., a prescribed proportion of the output of textile mills will be distributed under the specific instructions of the Textile Commissioner. This proportion may ordinarily be up to 10 per cent, but, if necessary it may be raised.

6. The Textile Commissioner will take steps to impose restrictions to the extent necessary on stocks held by mills and on the movement of cloth by both rail and road.

7. State Governments are being requested to take urgent steps to strengthen the co-operative sector in the handloom industry and to bring as many handlooms as possible into co-operatives. They are being asked to establish the necessary arrangements for placing orders, providing specifications and technical guidance, supplying raw materials and other facilities, financing production, and organising marketing. To facilitate development along these lines, sales of yarn to handlooms will be regulated and free market sales will be progressively reduced. State Governments will thus be in a position to exercise greater direction and control over production and marketing in the handloom industry and to take the necessary steps for ensuring that prices of handloom products are maintained at reasonable levels.

In Greater Bombay, the Maharashtra Government has decided to open soon 100 fair price shops for cloth. The millowners have agreed to make available 10 per cent of cloth production for distribution through such shops.

WOOLLEN INDUSTRY

The woollen industry in the country has been switched over to defence production with effect from the 20th of this month, all the mills and factories in all the sectors being geared for meeting defence needs. Important decisions in this regard were taken at a meeting of the representatives of the woollen industry held at New Delhi on Saturday under the presidentship of the Minister for International Trade, Mr. Manubhai Shah. The industry offered its full support to all the steps to be taken for efficient and increased production and supply of woollen goods.

Control over the distribution and price of woollen yarn and fabrics is to be tightened. All stocks of specified varieties of woollen cloth and fabrics in the possession of mills, producers or manufacturers are to be sold only against the indents of the Director General of Supplies and Disposals. All yarn produced by the spinning mills will be distributed to hosiery and small-scale sectors through the D.G.S. and D. In order to help the defence effort, knitting yarn will be made available at such places and quantities as may be required by the voluntary organisations engaged in knitting garments for the Defence Forces.

The Government of India has appointed a Woollen Controller to implement and supervise the various measures decided upon. A Woollen Production Advisory Committee, consisting of Mr. R. K. Birla, Mr. V. Calloway, Mr. B. M. Grover, and Mr. G. K. Singhania, will advise the Controller in fixing the production schedules of each of the composite and spinning mills. Two other committees will assist the Controller in the work regarding the hosiery and small-scale weaving sectors.

Officers will be posted to look after power-loom production in Amritsar, Panipat and other areas, hosiery production in Ludhiana and other centres, and mill production in the northern region. It has also been decided that early steps should be taken to modernise the existing woollen industry. The wool combing capacity is to be increased to make the country self-sufficient in combing.

All future imports of raw wool and wool tops, except to the extent already covered by irrevocable commitments, will be in those varieties a list of which will be drawn up by the Woollen Controller in consultation with the Textile Commissioner. To cope with the shortage of imported wool, the maximum utilisation of Indian wool for the production of fabrics and knitting yarn for which it is suitable is to be arranged by the Woollen Controller.

TEXTILE EXPORTERS OUTSTRIPPED

PLEA FOR REDUCING PRICE-RISK ELEMENT IN COTTON TRADING

From Our Special Correspondent

MANCHESTER, *6th November*

MANCHESTER LETTER

FEW reports which have reached Lancashire for many a long day have had anything remotely optimistic to say about export prospects. In the fifty years since Britain achieved its peak as a world supplier of cotton goods, the almost uninterrupted decline in shipments has been one of the most disconcerting aspects of the local scene—and one which most outside observers have persisted in dragging out into the open.

Details from the latest returns shown in the Cotton Board statistical review draw a comparison between U.K. exports and those of her rivals. A better degree of clarification has now been achieved by the provision of a new series of figures for exports which show the totals in thousand quintals as well as million square yards. This enables a direct comparison to be drawn, on the one hand, between British shipments and those countries which still work on a yardage basis and also with those (mainly in Europe) which use the quintal measure.

The latest statistics are given in the table at the end. Some adjustments have been made to allow for incomplete returns, but these are suitably annotated.

The major omissions in the figures given in the table concern the countries of the Indian subcontinent. Returns are available for only the first three months of this year, and it is believed that considerable reductions in exports have since taken place. For the first quarter, India shipped 140.6 million yards of cotton cloth abroad and 19.6 million yards of rayon fabrics. Pakistan's exports consisted of 7.85 million yards of cotton goods.

On the above showing, Lancashire's exports continued to diminish in quantity, but, in comparison with 1961, many other countries also faced considerable difficulties in disposing of their products overseas. All Britain's traditional competitors have outstripped local exporters, with Japan so far ahead of the field that the others are left trailing well behind.

In view of the vital talks now in progress on the future of the European Common Market, the comparative figures against Continental shippers make the most impact. In this section, France remains well in the lead with Lancashire still precariously holding second place in cotton goods alone. Big shipments of rayon and synthetic fabrics from Italy and Germany give them a pull in this direction and, although the returns for Belgium are based on the first quarter only, it must be assumed that when cotton and rayon goods are combined, Britain takes fourth place among her Continental rivals.

"In nearly every commodity, price fluctuations play a large part in trading. The primary commodities are generally more susceptible to price movement and, among these, raw cotton has always been renowned for its extreme volatility of price." With this introduction Mr. W. B. Hutchinson, a regular contributor to many journals on raw cotton affairs, presents in the current issue of the *Empire Cotton Growing Review*, a case for a new system of reducing the price-risk element in cotton trading. His suggestion is that a futures contract based on a standard quality of cotton yarn might prove of more value to the industry than the time-honoured system of raw cotton futures trading which was revived in 1954 after the war-time State trading system.

Explaining the basic reasons for the decline in futures markets dealing with the raw material, Mr. Hutchinson describes how the pre-war position of the United States as unchallenged cotton producer and exporter has since been undermined. Cotton production in other countries increased and textile industries, faced in many cases with problems of hard currency shortage, learned to make use of many alternatives to American cotton.

Artificial restriction of international trade, he continues, now threatens to become more or less permanent as far as cotton crops are concerned. In most producing countries, cotton is a cash crop of considerable importance to the national trade balance and, in many cases, with the United States as a classic example, the cotton farmer is too important politically to be allowed to suffer unpredictable alternations of prosperity and poverty which are the natural concomitant of a crop which is particularly sensitive to the various hazards of cultivation and whose price in world markets can vary alarmingly.

The inability of cottons of similar use-value to find a common market price had destroyed the normally stable relationship between the price of futures and of actual cotton, adds Mr. Hutchinson. There is no longer the same assurance that an open position will move price-wise on a course parallel to a balancing position in futures. As a result, a futures transaction may now have to be regarded not so much as a hedge but rather as a counter-speculation with the possibility that, instead of achieving a balance, a loss or a gain could emerge on both transactions.

Taking stock of the position, Mr. Hutchinson makes the points that, despite great progress in plant breeding and agricultural methods, the size and quality of world cotton crops remain liable to great fluctuation; demand for textiles continues to be particularly subject to periods of boom and recession; widespread interference by Governments in cotton marketing can bring about price movements more unpredictable and of greater magnitude than any attributable to the ordinary factors of supply and demand; and that artificial stabilisation of cotton prices, as in America, can only be achieved by enormous expenditure of public money.

"If and when the United States does pull out of state control of cotton prices the price-risk element in all stages of cotton trading will again be as great as, and probably greater than it ever was," warns Mr. Hutchinson. "On the assumption that spinners will buy the cheapest growth of cotton suitable for making a particular quality of yarn, a futures contract based on a standard quality of cotton yarn might avoid the weakness of raw cotton contracts."

Operational details of such a contract would require considerable study, he admits, but there seems to be no reason why any difficulty should be encountered which has not been successfully surmounted in raw cotton contracts. The launching of such a project would, however, require not only an enterprising central organisation but the sustained interest of both traders in cotton and yarn and professional dealers in commodity markets.—*All Rights Reserved.*

THE WEATHER OUTSIDE

is difficult to predict and impossible to control.

The weather indoors is a different matter.

If you are planning to construct or renovate a large building, *plan* the weather in it to your requirement with

TRANE

Central air-conditioning equipment.

You can control the weather with special advantages like separate air-conditioning for each room, positive circulation and complete filtering of all air.

TRANE systems are extremely flexible too. You can shut down parts of the system without power wastage.

And if you haven't quite decided just how big your building is going to be, a TRANE central plant is still your answer, since it can be shifted, adjusted or expanded without rebalancing.

SUGAR CONSUMPTION RISING STEADILY

MANY COUNTRIES PUTTING UP NEW MILLS

NOT only children throughout the world are interested in sugar but politicians also have to deal with the "sweet business." Sugar is one of the basic foodstuffs; furthermore, it keeps the whole economies of some countries running. For overseas countries, cane sugar is as important as coffee. Beet sugar production in Europe is nothing more than a result of the British "continental blockade" during the Napoleonic wars.

Sugar consumption is steadily rising. But sugar production is increasing at a faster rate. Today, there exist sugar-producing countries which have all along been buyers on the world market. They have embarked on sugar cultivation to save foreign exchange for imports. In the initial stage, the domestic sugar production can be absorbed by the home market. However, the position will change quickly. And very soon, the newcomer among the sugar producers will contribute to augment the world's sugar surplus. But this is no problem to worry about in the current sugar year. Cuba, the world's main sugar producer, will produce less than in previous years.

The sugar-producing countries are increasingly switching to process sugarcane in domestic factories. Sugar refineries and factories are being built in many developing countries.

The first stage of a new sugar factory at Edfu in Upper Egypt has started operating. Initial production is 50,000 tons per season. Expansion to 80,000 tons is planned. Another sugar plant with a capacity of 80,000 tons a year is to be set up at Dishan. Long-term plans envisage establishment of new sugar factories in Koy—negotiations on the supply of production equipment have started—and in the Aswan and Kena Provinces.

The Sudan's first sugar refinery at Guneid on the Blue Nile has begun producing (50,000 tons annually). West Germany has supplied tehnical and financial aid. A cane sugar plant is planned to be built at Kashm el Girba.

Morocco is building a sugar factory at Sidi Slimane in the centre of 7,000-hectare beet growing area. The total cost is estimated at 58,400,000 Dirhams. Processing capacity is 300,000 tons of beets per season and sugar production will amount to 40,000 tons a year, with employment for 7,000 people.

A sugar factory is proposed to be built at Kpong near Akuse in Ghana. CEKOP, the Polish foreign trade organisation, will provide financial assistance.

Ivory Coast will expand its sugar production. The scheme is part of a Government programme to increase domestic food production in order to save foreign exchange for imports.

Uganda has placed an order with the Gutehoffnungshuette Aktienverein of Oberhausen for the blueprints and the construction of a sugar factory at Lake Victoria. Initial production with a daily rate of increase of 500 tons is to begin in the first half of 1964. The estimated cost is 9,000 million D-marks. Long-term payment terms have been granted by West German authorities.

Syria is building a sugar factory in the Ghab region. The planned output of 4,000 tons of raw sugar is to be processed by the Homs and Damascus factories.

Thailand is expanding the capacity of a sugar plant to about 150,000 tons a year. The project is supported by Japanese firms.

Japanese assistance is being used by Indonesia to build a sugar factory which will process domestic raw material in Southern Sumatra. A pilot plantation for cane sugar (9,000 hectares) is expected to start production in the spring of 1963. The sugarcane plants will come from Java and Thailand.

Burma plans to set up a sugar factory with a daily production of 1,500 tons of cane sugar under the country's four-year plan. It is estimated to cost 20 million kyats.

Pakistan has launched an extensive construction programme to increase the installed capacity of its white sugar factories to 30,000 long tons by 1965. Present plans provide for the construction of three new factories in each Western and Eastern Pakistan. The plants in Khanpur and Bannu, Western Pakistan, and Nawabshah, Eastern Pakistan, are to have an annual capacity of 15,000 long tons, those at Jaipurhat and Harian, Western Pakistan, and at Jagati, Eastern Pakistan, a capacity of 10,000 long tons each. Other plans provide for the construction of sugar factories at Ishurdi, Eastern Pakistan, and in the area of the Ghulam-Mohammed Dam in Western Pakistan. In 1960-61, Pakistan produced 108,000 long tons of sugar, as against 35,600 long tons 10 years ago.

The Azucarera Haina C.p.A. sugar company, the Dominican Republic's largest sugar producer with its eight mills and presently working under State administration, plans to increase its Quisqueja plant to enable a rise in the plant's output from 2,000 tons of cane sugar now to 3,000 tons a day.

"INDIAN SUGAR"—SPECIAL NUMBER

The special number of the *Indian Sugar* (Editor: Mr. J. S. Mehta), published by the Indian Sugar Mills Association, India Exchange, Calcutta 1, contains several interesting articles on the sugar industry written by experts. The subjects covered in the articles are those pertaining to sugar manufacture, sugar technology, confectionery, and cane and its problems. Special mention may be made of the articles on "Economic Growth of Sugar Industry in India" by Mr. V. D. Jhunjhunwala, "Technique of Manufacturing Standard Quality Raw Sugar under Indian Conditions" by Mr. B. B. Gairola and "Improved Cultivation of Sugarcane in Uttar Pradesh" by Mr. Kirtikar. The number contains a statistical section, too, giving comprehensive data relating to the various aspects of sugar industry.

JUTE INDUSTRY IN INDIA AND ABROAD

PAKISTAN GOING AHEAD WITH LARGE EXPANSION PROGRAMME

IT is not so much the growing use of packing materials such as paper and plastics bags or bulk handling as the keen competition from Pakistan that seems to hold a great threat to the export trade in Indian jute goods which rank as the ace earner of foreign exchange. Pakistan is making an all-out bid to expand its jute industry with a view to carving for itself a larger share of world trade in jute goods. The actual output of hessian, sacking and other jute manufactures is expected to go up from the present level of about 260,000 tons to as much as 490,000 tons in 1964-65. Excluding the anticipated domestic consumption of 90,000 tons, the exportable surplus of jute goods by 1964-65 will be of the order of 400,000 tons, representing almost half the export target of 500,000 tons fixed in India's third Five-year Plan. In order to achieve the estimated production of 490,000 tons fixed for 1964-65, the Government of Pakistan recently decided to permit installation of 2,000 additional looms, besides the 4,000 looms envisaged in the second Plan. With the installation of these looms, the total number of looms in Pakistan in 1964-65 will be 14,000, as against 8,000 in the beginning of the second Plan. It is also proposed to continue the intensive utilisation of capacity; the jute mills there are currently working on 2½ shifts basis.

Distribution of Looms

The jute industry in Pakistan has expanded considerably in the past ten years. Thus, between 1952 and 1962, the number of looms in place has risen from a bare 1,000 to 8,726, the country's share in the aggregate world jute loom capacity jumping up from just 0.80 per cent to 6.85 per cent, according to the latest *Loom Statistics* published by the Indian Jute Mills Association, Calcutta. It is true that jute industry in India has also expanded, but the pace of expansion is much less marked than Pakistan's. The number of looms in India has gone up from 68,557 in 1952 to 72,916 as on 1st January 1962, the percentage share in the world total increasing from 56.00 to 57.22. The changes in the distribution of jute looms in other countries are indicated below:

Country	No. of looms		Per cent of world total	
	1962	1952	1962	1952
India	72,916	68,557	57.22	56.00
Pakistan	8,726	1,000	6.85	0.80
U.K.	6,682	11,151	5.24	9.10
Brazil	4,512	4,937	3.54	4.10
France	3,953	7,698	3.10	6.30
Spain	3,836	800	3.01	0.70
W. Germany	3,814	6,349	2.99	5.20
Belgium	3,414	4,807	2.68	3.90
Italy	3,203	4,631	2.51	3.80

Japan	1,000	615	0.78	0.50
Other countries ..	8,409	8,244	6.61	6.60
World total ..	127,434	122,510	100.00	100.00

N. A.—Not available.

The total number of looms within the member-mills of the Indian Jute Mills Association has risen from 67,564 on 1st January 1960 to 68,447 early this year. The rise is due mainly to the Kedarnath Jute Mills having joined the Association. For the same reason the number of looms outside the I.J.M.A. has declined from 4,561 to 4,439. Out of the total 72,916 looms at the beginning of 1962, hessian looms accounted for 43,322, sacking looms for 25,722, "Onemack" looms for 96 and other looms (classified as webbing, cotton bagging, carpet, broad, etc.) for 3,776. The actual loom strength of member and non-member mills of the I.J.M.A. according to types is given in the following table:

	Hessian	Sacking	Others	Total
I.J.M.A. Mills:				
W. Bengal	41,062	23,375	3,163	66,696*
Other States	349	1,432	Nil	1,781
Total ..	41,411	23,807	3,163	68,477*
Mills outside I.J.M.A.:				
W. Bengal	1,636	729	613	2,978
Other States	275	1,186	Nil	1,461
Total ..	1,911	1,915	613	4,439
Grand total ..	43,322	25,722	3,776	72,916*

* Including 96 "Onemack" looms.

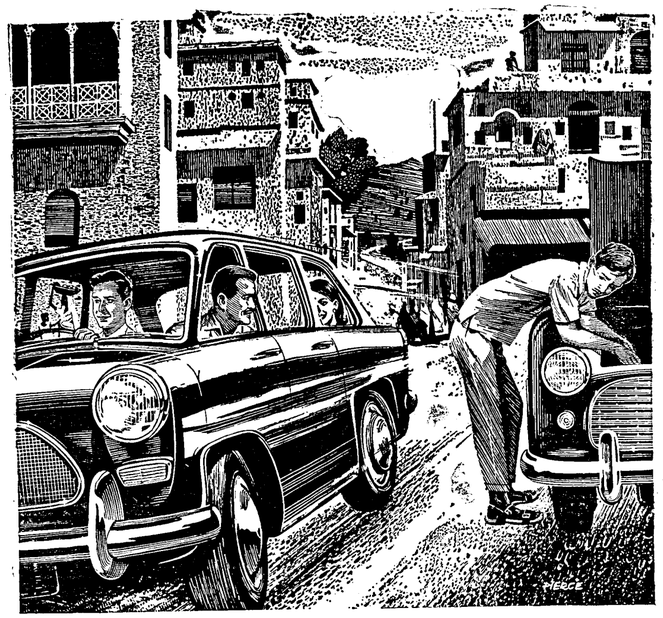
During the period 1st July 1955 to 1st January 1960, the number of steam-driven looms in the I.J.M.A. mills had declined from 16,545 to 6,554, that is, 60 per cent of these looms had been converted to electrically-driven looms. In the subsequent two years, another 34 per cent of the looms was converted from steam to electrically-driven looms, so that the number of steam looms receded to 4,312, while the number of the electrically-driven looms rose from 58,540 to 61,002. In the case of mills outside the I.J.M.A., all the 3,826 looms are electrically driven. A few circular looms have also been installed on an experimental basis. The reed space of looms in jute mills varies from 40" (102 cm.) to 120" (305 cm.) in the case of hessian looms and from 32" (81 cm.) to 39½" (100 cm.) in respect of sacking looms.

Modernisation

Alongside the expansion of weaving capacity in jute industry in the past few years, there has been notable progress in the modernisation of the industry. By the end of the second Plan (March 1961), modernisation upto the spinning stage had been virtually completed; 293,970 spindles, equivalent to 84 per cent of the spinning capacity needed to match the single-shift output of working looms, were supplying sliver-spun yarn (in 59 out of 82 mill companies). The total investment in modernisation was Rs. 30 crores, the bulk of which was during the second Plan period. This amount included the utilisation of Rs. 4.5 crores given as loans by the National Industrial Development Corporation which had altogether sanctioned Rs. 6 crores to 27 mill companies. At the end of 1958, the total investment in the jute industry was Rs. 78.3 crores, comprising fixed capital of Rs. 40.2 crores and working capital of Rs. 38.1 crores.

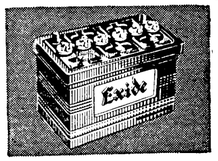
Some uneconomic jute mills together having 4,183 registered looms were closed down during the second Plan period. The looms were transferred to other units which were thus enabled to work their looms partly on double shift. The system of one-operator for two looms was extended to about 16,000 looms. By these measures and on account of the introduction of modern machinery, the labour strength of jute mills has been progressively reduced.

The third Five-year Plan envisages the modernisation of jute mills' equipment for the post-spinning stage. The old winding equipment is expected to be largely replaced by new high-speed machines and additional pre-beaming equipment will be installed to augment productive efficiency. For the modernisation of weaving process, the choice is said to be between (*a*) rendering the existing flat-bed looms semi-automatic by the use of cop-changers and warp-stop motions, (*b*) replacement by automatic circular looms, and (*c*) replacement by automatic shuttleless looms. The leading mill groups have been experimenting with these three methods of loom automatisation for some time now. By early 1962, they were expected to be in a position to draw up their modernisation programmes. It is not known whether this has been done. The phasing of the whole programme, to be determined in consultation with the Government, will depend on the availability of foreign exchange, the indigenous output of modern jute mill machinery and the probable impact of loom automatisation on employment. The requirement of foreign exchange for machinery imports till a complete range and adequate level of indigenous production is attained, as well as for imports of spare parts and stores the manufacture of which in India is not considered to be economic, is estimated at Rs. 6.5 crores only for the third Plan period. The estimated total investment in the industry in the same period is put at Rs. 12 crores, towards which the N.I.D.C. may have to contribute by way of loans to the extent of a few crores of rupees. Meanwhile, the National Productivity Council has undertaken technical studies designed to increase productivity in all the sectors of the jute industry, to reduce costs and thus improve the competitive position of jute goods in world markets.



Exide Batteries still keep going when the rest have stopped

Everywhere you go motorists agree Silver Exide are the strongest, most reliable batteries under the sun. They are made from the finest materials and are quality tested at every stage of production. . that's why you're sure of a long and trouble free life. Exide Batteries are known and trusted all over the world. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—fit the finest battery money can buy and you'll still keep going when the rest have stopped.



SILVER Exide

A product of Chloride and Exide Batteries (Eastern) Limited.

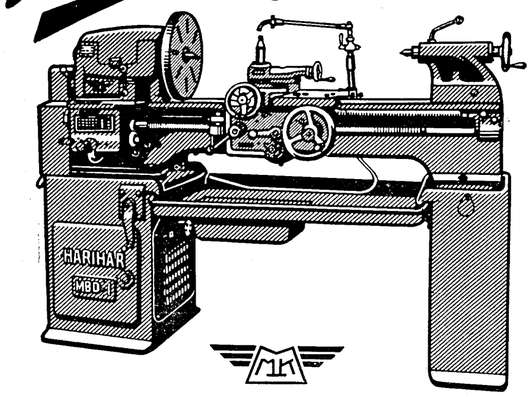
Kirloskar a MUST for small Industrialists



GRADE 1 CENTRE LATHES MODEL 'MBD' 165 mm CENTRE HEIGHT

built to high precision. Inspected and stamped by Government of India. Available in two sizes:

MBD 1 - Distance between Centres 600 mm
Bed Length 1350 mm

MBD 2 - Distance between Centres 1000 mm
Bed Length 1800 mm

Motor drive situated underneath the bed in steel cabinet.

Machine fitted with Norton type quick-change gearbox enabling screw-cutting by simply changing levers thus avoiding tedious process of changing gears for different pitches.

Manufacturers:

THE MYSORE KIRLOSKAR LIMITED

Regd. Office: YANTRAPUR P.O., (MYSORE STATE).

GENERATION OF THERMAL POWER

SAVING COAL THROUGH IMPROVED FUEL EFFICIENCY

JUDGED by the trend of raisings in the eight-month period January-August 1962, India's coal production in the whole of the current year will be just around 60 million tons. As much as a seventh, or 8.5 million tons, of this aggregate output would represent the year's consumption of coal in steam power stations. On the basis of the third Plan's power programme, it has been estimated that thermal stations will require 20 million tons in 1965, representing a little more than a fifth of that year's targeted output of coal. If, for any reason, the third Plan's coal production target is not achieved in full, it may be that supplies of high-grade coal to thermal stations will be reduced, notwithstanding the consideration that power generation is a high-priority industry. Such a possible situation, however, can be confidently faced if more vigorous efforts are made from now onwards to improve fuel efficiency in thermal stations. It would also be necessary to utilise low-grade coals and also immature coals like lignite on a larger scale than at present in power generation. Both approaches, however, involve technical considerations by way of adaptations and innovations. It is in this context that a studied article entitled "Coal Saving in Thermal Stations" in the October 1962 issue of *Bhagirath* (published by the Central Water and Power Commission, Union Ministry of Irrigation and Power) acquires some topical significance.

Older Plants

The author of the Article, Mr. J. B. Singh, who is on the staff of the Central Water and Power Commission, has emphasised, at the very outset, the fact that high-grade coals, which are localised almost exclusively in Bengal and Bihar coalfields, cannot be adequately raised even for the third Plan period. He then recalls that, so far as the generation of electric power is concerned, power stations in India, especially those installed in the first three decades of this century, were designed exclusively for operating on the highest grade coals, and those prepared in the fourth and fifth decades were made to work on somewhat lower grades of coal. Serious efforts have been made only since 1950 to build power stations based on really low grade coals. These newer thermal stations are entirely suitable for operating on sub-grade (high ash) coals, and on by-products from coal benefication plants like slack and dust coal, washery middlings, and so on. Beginning with the D.V.C.'s Bokaro thermal power station which was designed for using low-grade coal, the pace of construction of similar steam power plants has been accelerated. An aggregate capacity of 1.9 million kw. of such plants has been installed by the end of the second Plan. The third Plan will add a further 4.1 million kw. of capacity through thermal stations of that kind.

New Thermal Stations

It is encouraging to know from the article that the significant advances made in the West in the effective utilisation of low-grade coals have been kept in mind while designing large new power stations in India too. These technical advances, incidentally, are:

(i) Adoption of higher operating steam temperatures and pressures by new steel alloys capable of withstanding them.

(ii) New designs of boiler furnaces and heat transfer surfaces in treatment and circulation of boiler water and improvements in thermal efficiencies of turbine plants.

(iii) Automatic control of combustion processes, chiefly by electronic method.

(iv) Firing by powdered coal as the most efficient type of coal burning.

(v) Adoption of the "cyclone furnace" which is a modification of the pulverised fuel-fired furnace. (But this new type of furnace can be adopted in India only if the difficulty of high ash fusion temperatures of Indian coals is overcome.)

While the newer steam power plants in India can thus utilise low-grade coals on a large scale, the problem of fuel efficiency as such will continue to demand attention in all thermal stations, whether old or new. Fuel efficiency is of particular importance, for, according to the British fuel efficiency experts who were invited by the Government of India some time back to report on the question, consumption of coal, whatever be its grade, can be thereby cut down substantially. The U.K. team has given the finding that fuel savings ranging from 15 to 50 per cent are possible. The current low efficiency of conversion of heat to electricity in a few of the larger thermal stations of conventional design may be noted in the following table:

Station	Designed heat rate B. Th. U. K.w.h.	Actual heat rate B. Th. U. K.w.h. (January to October 1961)	Loss of efficiency (Per cent.)
Ahmedabad ..	12,000 to 14,000	16,200	26 to 14
Kanpur ..	13,000 to 15,000	19,100	32 to 22
Madras ..	11,000 to 14,000	20,850	47 to 33
Calcutta ..	11,000 to 13,500	18,400	40 to 27
Delhi	13,000 to 14,500	23,500	45 to 38

As bad management is the widespread cause of fuel waste, the experts have recommended the following measures for adoption:

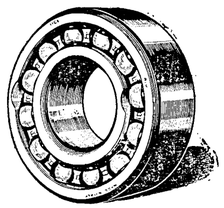
(i) Saving of fuel by such "first-aid measures" as lagging and thermal insulation, recovery of condensate heat, prevention of steam leakage, economic loading of heat-consuming plant, and the use of steam at lowest possible pressures. These elementary measures, involving little by way of capital expenditure, can help save 10 per cent of fuel.

(ii) The lack of adequate instrumentation for measuring, and thus regulating combustion, steam-rising and thermal processes would have to be remedied.

(iii) No matter how efficient a boiler plant may be, the efficiency will be of little consequence if steam is subsequently wasted or inefficiently used. Hence the need for ensuring higher productivity in the steam-using plant. More fuel can be thereby saved than even in the boiler house directly in the first instance.

Specialised Service

All these fuel economy measures will be within the competence of the staff manning small and medium-sized steam power plants. Highly developed techniques of fuel efficiency, which will be applicable to larger modern power stations, will, however, call for the establishment of a centralised Fuel Efficiency Service manned by highly specialised technical personnel. It is stated, in this connection, that steps are already being taken to set up a fuel efficiency unit as a nucleus for such a service which, obviously, cannot be created overnight. Meanwhile, it is expected of every thermal station to adopt whatever fuel economy measures are immediately possible so as to maximise power generation from the available supplies of coal.



get your bearings right with RIV

The ultimate utility of a bearing is proved in its performance and life. That is why more and more industries are changing over to RIV. You can count on the wide range of RIV Ball and Roller-Bearings to provide exactly the size you are looking for.

O.E.C.D. SETS UP SPECIAL COMMITTEES

The Council of the Organisation for Economic Co-operation and Development has just decided to set up special committees for each of the main sectors of energy and industry in Europe. The special committees in the field of energy will cover coal, electricity, oil and gas, while those in the field of industry will be concerned with iron and steel, non-ferrous metals, pulp and paper, textiles, chemical products, machinery, timber, hides and skins and cement. The establishment of these committees, it is said, meets the desire to maintain constant close contact between government delegates and non-governmental circles represented by trade associations and trade union organisations. Their main work will be to study specific problems arising in the various sectors of industry and energy in the light of the objectives of the O.E.C.D. and to solve these problems through international co-operation.

The special committees may also constitute an additional instrument in the hands of O.E.C.D. member-countries for attaining the growth target laid down by the first Ministerial Council of the O.E.C.D. on 17th November 1961, namely, 50 per cent growth in the gross national product of member-countries combined between 1960 and 1970. They will also be a means of enabling the developing countries to profit from the experience gained by the industrialised countries in the industry and energy sectors. Finally, the special committees will give the O.E.C.D. an opportunity of mitigating the consequences of any international economic crises, through co-operation among member-countries.

DURGAPUR AND ROURKELA STEEL PLANTS

The public-sector steel plant at Durgapur registered all-round improvement in production in October 1962, according to an official press release. At the coke ovens, the output during the month came to 118,000 tonnes, representing 96 per cent of their rated capacity. The blast furnaces produced 94,000 tonnes of pig iron—a new monthly record for the plant—representing 85 per cent of their rated capacity. At the steel melting shop, the highest output of 58,735 tonnes was obtained during the month, and this represented 70 per cent of its rated capacity. The rolling mills also maintained a creditable level of performance in different units. The merchant mill, for instance, operating on 16 mm. rounds, notched up a new monthly record of 13,800 tonnes. In the section mill, too, there was good progress on a number of products.

The other public-sector steel plant at Rourkela is the first to be put on "a war-footing," for it is the only steel plant which can be adapted to manufacture materials for immediate defence purposes. Its flat steel products like plates, sheets and strips are vital for the production of armaments, trucks and armoured vehicles. The present steps ordered by Hindustan Steel call for the achievement of 90 per cent capacity production at the plant by the end of this year. Full capacity output is proposed to be reached by the middle of next year.

NEW VERSION OF AVRO 748

The Series 2 version of the Avro 748, the British turbo-prop aircraft being built under licence in India, has been granted a full Certificate of Airworthiness by the British Ministry of Aviation, according to an official announcement in London on the 6th instant. The Series 2 differs from the Series I version only in that it has more powerful engines which give the aircraft a vastly improved performance. Maximum take-off weight is increased by more than 2,000 lbs. to 42,000 lbs. At this weight, safe take-off can be achieved on only one engine with a take-off field length of 3,650 feet.

The aircraft's maximum payload of 12,600 lbs. is equivalent to 48 passengers plus their baggage and 2,800 lbs. of additional freight. This load can be carried over a stage-length of 700 nautical miles. Maximum range, with 40 passengers and their baggage, is 1,500 nautical miles. Because of its high permissible landing weight, the Avro 748 Series 2 can operate over a number of short sectors with full payload without the need for refuelling. Exceptional airfield performance makes it ideal for operation under tropical conditions.

The U.S. Agency for International Development has announced two loans amounting to $24.4 million (Rs. 11.5 crores) for financing the development of thermal power in India. The loans will be made to the Government of India and will be repayable over 40 years, with a grace period of ten years. They are interest-free, but there will be a service charge of three-fourths of one per cent. One of the loans, amounting to $16 million, will be utilised for the expansion of the Delhi "C" thermal power station currently under construction, with an installed capacity of 36,600 kilowatts, and the other for the expansion of the Ramagundam thermal project in Andhra Pradesh. The bulk of the foreign exchange costs of adding a further 180,000 kilowatts to the capacity of the Delhi power station will be met by the new loan. The Andhra thermal project has now a capacity of 37.5 megawatts. The new loan will be used to install one 60-megawatt turbo-generator with associated boiler and other facilities. The A.I.D. plans to provide loans from the sales proceeds under Public Law 480 to finance the local currency costs of these two projects which are presently estimated at Rs. 12 crores.

NEW PRODUCTS AND PROCESSES

Flash-drying Technique for Chemical Pulp

THE Swedish Cellulose Company recently inaugurated a new, 70,000 tons-a-year production line at their Obbola sulphate mill, near Umea on the Gulf of Bothnia, which has brought the mill's productive capacity up from 40,000 to 110,000 tons of unbleached sulphate per annum. Obbola is the first plant in Europe to have adopted the flash-drying technique in the production of chemical pulp. This process, of Canadian origin, is claimed to be more economical and also, in certain respects, results in better quality of pulp than conventional drying methods. The pulp, with a dry basis of about 50 per cent, is rubbed into pieces and conducted through a system of ventilators and cyclones while being exposed to hot air. After the treatment, the pulp has the appearance of dry cotton and is conveyed to presses where it is pressed into slabs of a thickness of about 10 cm. Some six or seven such slabs are piled to form a bale, which is weighed, pressed and wrapped up.

Synthetic Rubbers

The *Financial Times*, London, reports that a new range of synthetic rubbers based on copolymers of butadiene and acetylene derivatives and claimed to have properties in some instances better than the high performance nitrile rubbers, has been developed in Britain. One facet of this work has been the development of a new large group of hydroxyl compounds of acetylene capable of polymerisation and of copolymerisation with butadiene to form the new range. The acetylene-based materials described as glycols of the isopropenyl acetylene series, can also be compounded with methyl methacrylate and other acrylics to produce new plastics with interesting properties. Qualities claimed for the new synthetic rubbers are high resistance to rupture, great elasticity and resistance to cracking—making them specially suitable for industrial applications.

World's Thinnest Wrist Watch

The Citizen Watch Company, a leading Japanese watch maker, has started the sales of its new wrist watch, which the company claims is the thinnest wrist watch in the world. The new model, a 3-needle wrist watch, is only 2.3 mm thick and provided with a thin "parashock" device to assure its accuracy. This watch is presently being manufactured at a rate of about 5,000 units per month.

Electric Power from Sea-waves

A wave-power generator that produces enough electricity to light a navigational-aid buoy has recently been developed by an army officer attached to the Technology Research Headquarters of the Japanese Defence Agency. The source of energy for the generating device, about three feet in diameter, is the undulation of waves. A pendulum, some cogwheels and a generator are inside the device, which is topped by a lamp. This buoy-like device is floated on the ocean and secured by an anchor. An oil drum filled with sea water hangs from one side of the device and a lead weight from the other. The two weigh the same in the water but their mass difference makes one move slower than the other when buffeted by waves. Thus the cogwheels attached to the pendulum activate the generator to produce electricity, which lights the lamp. There is also a device to regulate power output and keep the flow of electricity at a constant level. A storage battery inside the wave-power generator automatically stores extra electricity, which is necessary since the generator will be idle when the sea is calm. Similar experiments to develop wave-power generators have been carried out overseas, but none has reportedly been developed to the point where it is ready for production on an industrial basis.

Instant Housing

Aluminium-clad homes, fully-equipped and completely finished at the factory like an automobile, and so designed that they can be moved to their destination by road, rail or ship to provide comfortable and convenient housing on short notice, mark a major step in the use of this light metal for modern dwellings as well as in real progress towards true factory prefabrication. They are being produced at the rate of three or four a day by the Canadian Car Division of Hawker Siddeley Canada Ltd., at Montreal and Fort William. Aluminium-clad homes are built to the design of the Royal canadian Air Force, which has bought several hundred such homes. The Canadian Car unit provides, at minimum cost, a well-built, insulated dwelling fitted with the most modern housekeeping equipment and suitable for the climate in any part of Canada. The houses are built in two halves divided on the long axis of the building, in order to facilitate transportation. Upon arrival at the site the two halves are joined on a foundation, the centre-line junction of the roof and the end walls being covered by a joining strip. Water, sewer and electrical connections of plug-in simplicity are made and the house is ready for occupancy, all in a few hours. A separate "package" provides an aluminium "car-port" to be attached on the site. Regardless of the foundation materials available at the site, each house-half is solidly built in the factory on its own substantial steel floor frame. This steel base provides the necessary rigidity for proper alignment of the walls, enables moving by overhead crane within the factory or during transport—and on delivery allows the units to be towed to their final location by truck or tractor on wheels temporarily attached to the base.

Construction is based on an assembly-line technique, familiar in the contractor's modern factory for the mass production of railroad cars. Units are moved from one work-station to the next on flat-cars, with major components fed in laterally. Roofs and walls are prefabricated independently in areas alongside the main production line, then moved by crane into position for assembly. After this the prepainted aluminium siding is fixed to the exterior, as appliances, plumbing and wiring go in, and the interior is finished in every detail. The homes being built by Canadian Car have three bedrooms in an overall living area of 900 square feet on one floor. Plumbing, heating furnace, refrigerator, washing machine and drier, hot water heater and tank, stove and other electrical appliances are built in at the factory and are ready for use as soon as the house has arrived at the building site. If no longer needed in one location, these homes can be moved readily to another—a principle which also has application in today's changing industrial world. Aluminium is used to functional advantage in the Canadian Car home. Painted aluminium siding of Alcan metal provides a variety of colourful exteriors that will not need maintenance for many years. Aluminium roofs, complete with rain-gutters, give weathertight coverings of maximum durability, and in addition provide reflective insulation both summer and winter. Aluminium doors and double window sash with screens, weathertight but easy to operate in cold weather or hot, add to the well-insulated comfort of these homes in any climate. In addition to these major uses, the metal is seen in many other familiar applications in the miscellaneous installations and services.

Vacuum Moisture Tester

A vacuum moisture tester which estimates the amount of moisture in a wide range of materials, quickly and accurately, has been devised by a British firm, Townson and Mercer Ltd. Time taken depends on the sample, but can be as little as two minutes. Materials which can be tested this way include processed cheese, beverage powder, ice cream, crushed coal, cotton fabrics, depolariser powder, spent oxide and tinned food. The sample is placed on the pan of a torsion balance and dried in vacuo by infra red heat, then the balance beam is restored to its original null position by rotating a drum, calibrated directly in percentage loss. Since the whole balance mechanism and the heating lamp are enclosed in the vacuum chamber, no errors due to moisture take-up after drying or air currents during the weighing of the hot sample are introduced.

Pneumatic Platen Press

A pneumatically powered platen press for bonding friction surfaces to metal backing plates, plastics curing, and many other adhesive bonding applications requiring controlled heat and pressure, has been developed by a British firm, Automatic Equipment Ltd. Nottingham. The unit consists of a floor-mounted fabricated steel console cabinet with in-built work bins. Separately controlled, double-headed platen presses are mounted on pillars fitted to the cabinet, and all the electronic control gear is totally enclosed. Operator instrumentation is housed within an eye level control panel in which the ram cylinders and sequence timing equipment are contained. The electrically heated platens are coupled directly to the rams of the pneumatically operated presses, and an infinitely variable process time cycle is fitted. The electronically controlled platen temperatures are also infinitely variable within ranges set by the process involved. The machine gives consistent process times, even with unskilled labour, and special features include an intricate safety circuitry which incorporates warning lights that are automatically switched on if the temperature falls below the required working conditions. Individual control switches are provided for each press, and safety devices prevent the machine being started before the operator's hands are clear of the platens.

Leakproof Valve

A British company, Teddington Aircraft Controls Ltd. has introduced a miniature leakproof valve—"Pigmy"—for use in pipelines handling radioactive and other dangerous fluids. Not much bigger than a matchbox, the valve is said to be suitable for pressures up to 1,000 lb. per sq. in. and temperatures up to 450°C. The valve is available in various materials; connections are butt-welded and leakage to the atmosphere is zero.

Cool and Hot Air Generator

A French manufacturer has developed what is claimed to be the first cool and hot air generator operating with swirl tubes and enabling the ambient temperature of a space to be regulated between −50°C and +100°C. To some extent, this appliance is the first material implementation of the observations made in 1933 by the Frenchman Georges Ranque on the particular characteristics of the swirl expansion tube, the principle of which is explained below. If compressed air is injected into a tube fitted with a diaphragm, via a nozzle which is perpendicular to the axis of the tube and tangential to the cross-section of the tube, at one of the end of the tube air at a lower temperature than that of the injected air is obtained, while at the other end of the tube air at a higher temperature is obtained. The cool and hot air generator consists of a swirl tube fitted with a heat-exchanger which considerably improves the output. This device enables a low-temperature refrigerating power to be obtained for a very small cost price. It should be pointed out that the prototype of this new appliance is essentially designed for laboratory use.

STRENGTHEN THE I.A.F. QUICKLY

DELAY WOULD BE DISASTROUS

By Our Aviation Correspondent

ONCE joined, hostilities between great nations are seldom of short duration. And so, unless there is concrete evidence that the Chinese are prepared to negotiate on the kind of terms already suggested by India—which include, of course, complete withdrawal of the Chinese forces from Indian territory—the present conflict is something the country may have to endure for a long time to come.

Perhaps the most remarkable phenomenon of the fighting to date has been the absence of any offensive action in the air. That is a point to which one will return later. In the meantime, let us deal, very briefly, with the land fighting. Detailed information is hard to come by. It would appear, however, that, on the north-east front, the Chinese attack was on a far more massive scale than had been anticipated. They were thus able to exploit, to the fullest possible extent, the element of surprise. Once the initial impetus had spent itself, however, they were brought to a halt and are now, presumably, re-grouping and resting their forces preparatory to another series of frenzied mass attacks. That would conform to the tactics which they invariably adopted during the Korean war.

Substantially reinforced and re-armed with modern infantry weapons from British and American sources, Indian forces should now be in a position to make any further Chinese advance almost prohibitively costly. The problem of supply which, by all accounts, was a major factor in the overrunning of Indian forward positions, should now be considerably eased. As communications between Tezpur and the present fighting line are developed, so should the logistic situation progressively improve.

The Chinese, on the other hand, no longer have roads and airfields immediately behind them. Their lines of communications lie over the very difficult terrain through which they have advanced. With the winter months approaching, their supply position, one imagines, cannot but be causing the Chinese command very considerable anxiety. In short, so long as the Indian forces can stabilise and maintain their positions near Towang and Walong—the threat at the latter seems, at present, to be the greatest—the Chinese situation is by no means so favourable as their initial successes might lead one to expect.

It is too often imagined that, with a standing army of some 2½-3 million men, the Chinese are in an overwhelmingly strong position. The bulk of that army is—and must remain—many hundreds of miles from the present threatre of war. The imagination boggles at the concept of transporting large forces from China, through Tibet, and keeping them fed, clothed, sheltered, and munitioned during the approaching winter. Transport and supply—or so one understands—have never been a very strong point of Chinese armies. There are, of course, other routes. From Kunming, through northern Burma, for example, and thence, by way of Imphal, to the Assam Valley. Such a route, however, would need to be prepared.

The position on the Ladakh front is rather more obscure. It is in this sector—or so one is led to believe—that Chinese territorial ambitions really lie. It is on this front, too, that their gains have been greatest. The general impression, however, is that, in this sector, winter operations are impracticable. It seems likely, in the circumstances, that the situation will remain more or less static till the spring.

One is inclined to believe, then, that the north-eastern front is the one on which, at the moment, everything depends. If the position can be stabilised, and any further Chinese advance blocked, the general situation will become progressively unfavourable for the Chinese. Aggression which is demonstrably successful is, doubtless, beneficial for the leaders of a totalitarian State. Failure, or only very limited success is, of course, another and very different pair of shoes. Chinese leaders will have to pull something out of the bag. Chinese face will have to be saved.

It is this aspect of the matter, one suggests, which should not be ignored. Baulked at one point, the Chinese will certainly try to break through elsewhere. A land attack through Burma is certainly a possibility. What seems to be more probable, however, is an offensive by the Chinese air force. An attack on New Delhi, for example, would serve a double purpose—a blow at India's civilian morale and good propaganda for the Chinese people. India, incidentally, would be unable to retaliate in kind.

Military intelligence has, presumably, fairly accurate information on China's air strength. The ordinary observer has, perforce, to rely on such information as is forthcoming from foreign—mainly American—sources. From these accounts, the Chinese air force is comparatively small and not remarkably up-to-date. It is said, for instance, that China has few, if any, supersonic fighters; the standard service fighter is said to be the MIG 15—a sub-sonic fighter which compares unfavourably with India's Hunters. One is strongly inclined to take all this with the proverbial pinch of salt. One would certainly expect the Chinese to be armed with the MIG 21 and, probably, with a fairly formidable bomber force too.

That remains, of course, to be seen but now, one suggests, is the time to augment the present strength of the Indian Air Force to the maximum extent that time and resources permit. Some time ago, when, in fact, India was considering the purchase of Russian MIG 21, the Western Powers, alarmed by India's apparent tendency to turn to Russia, made counter-offers of comparable equipment. The British, for example, offered the 'Lightning'—one of their latest and most effective fighters. Since then, offers of lease-lend aircraft have been made. Here is an opportunity which should not be missed. If it comes to negotiations, strength in the air is the card which may do the trick.

There are other and obvious deficiencies in India's air fighting strength. Air-to-air guided missiles, for example, for the Hunters and Gnats. These weapons are available and must be procured. Additional transport aircraft, too, are a very high priority requirement. Let alone operational tasks such as supply-dropping, the movement of troops, paratrooping, and close support, the country's civil communications have to be maintained. Judging by the withdrawal of many of I.A.C.'s services, and the realignment of others, it appears that the strain, even at this early stage of what may be a long-drawn-out affair, is beginning to tell.

Super-sonic fighters, guided missiles, transport aircraft—these will all be essential, if, and when, the present limited form of warfare is extended to the skies. The cost of providing even minimum requirements will be high. Even under lease-lend terms, this will impose a grievous strain on the country's economy. Failure to provide, however, may be more than costly—it could be catastrophic.

ANGLO-FRENCH SUPERSONIC AIRLINER PROJECT

The Governments of France and Britain have given sufficient indication that they will give formal approval at the appropriate time to the Anglo-French joint effort to produce supersonic airliners. It may be recalled that the British Aircraft Corporation in the U.K. and Sud Aviation in France have drawn up a scheme for producing a supersonic airliner (Mach. 2.2) capable of flying at 1,400 miles per hour. It is planned to produce two versions of this aircraft, one for long-hauls such as non-stop transatlantic operations, and the other for medium hauls, each seating 100 passengers. The aircraft would, according to the Air Correspondent of the *Financial Times*, London, be powered by four Bristol Siddley turbo-jet Olympus engines. The cost of the project is tentatively estimated at £200 million spread over a period of five years (from 1962) by which time a prototype is expected to be ready for experimental flight. Further funds will be required later for enabling commercial production of this supersonic aircraft.

In view of the big expenditure involved in this project, it cannot be implemented without financial help from the respective Governments. The French Government has already agreed to finance the project and has set apart new franc (N.F.) 125 million for 1962, N.F. 110 million for 1963 and an eventual total of N.F. 1,400 million (£100 million). The British Government, too, has been helping the B.A.C. with funds, though the exact amount is not known.

STABILISING THE PRICE LEVEL

FISCAL POLICY NEEDS REORIENTATION

By P. C. Jain
UNIVERSITY OF ALLAHABAD

THE rising prices of foodgrains, industrial raw materials and consumer's goods pose a difficult problem for the planners in India. It was a great relief that, after an average annual rise of 6 per cent in prices during the second Plan period, the General Index of wholesale prices in India registered a decline of some 3 per cent in 1961-62 and the annual average of weekly indices showed only a nominal rise of 0.2 per cent "indicating that the rise in the earlier part of the year was neutralised by the decline or narrow fluctuations in the remainder of the year." It was partly for this reason and partly for the fact that, in the case of most commodities, the consumers actually paid much higher prices than the wholesale price indices indicated that the public resentment against the recent rise in prices was greater than during the second Plan period, even though the rise in prices during that period, especially towards the end, was of greater magnitude. Another important fact to be noted is that, in contrast to the experience during the second Plan, India's national income in 1961-62 increased by only 2.2 per cent which is less than the current rate of increase in India's population, thereby slightly reducing our *per capita* income. Rising prices are always unwelcome to the people and they are still more unwelcome if the rise occurs when there is an actual fall in money incomes. Not only for the successful implementation of India's third Plan but also to fight the war against the Chinese successfully it is essential for us to stabilise the price level.

There is no denying the fact that deficit financing, though it has been at a smaller annual rate during the first two years of the third Plan than during the second Plan period, has increased the purchasing power in the hands of consumers thereby increasing their demand for different commodities. At the same time, there has been a fall in the rate of increase in industrial and agricultural production in 1961-62, and possibly in the current financial year too. This has reduced the available supply of goods in the market, thereby tending to push up the price level. But, although these are general underlying causes of an inflationary rise in prices in India, it would not be correct to argue that it is these causes which have been responsible for pushing up the price level since April 1962.

Between April and August 1962, whereas the General Index of wholesale prices increased by 6½ points (from 124.7 to 131.1) and that of manufactured goods increased by 2 points (from 127 to 129) the index of food prices increased by 10½ points (from 121.3 to 131.5). The present rise in prices was heralded by a rise in food prices and even now the main cause of anxiety is the high level of food prices in the country.

Why has there been a rise in food prices since April 1962? The fact that the foodgrains output in India during 1961-62 was of the same order as during 1960-61, namely a little less than 80 million tons, while the country's population increased by about 2¼ per cent does not altogether explain the trend of rising prices. It cannot be argued that an overall shortage of food supply was responsible for the higher prices, because, taking internal production, imports and Government's reserve stocks of foodgrains together, there was in the country, in the beginning of the current financial year, an adequate supply of foodgrains relatively to the demand. The frequent announcement by the Union Food Ministry that the minimum prices of agricultural commodities—especially rice and wheat—would not be allowed to fall below a certain limit in the interests of the farmers might have had the result of 'freezing' the higher prices once prices had risen, but such announcements and the actual implementation of the Government's price support policy could not possibly have the effect of actually pushing up the price level.

At the time the food prices began to rise, some important events took place which might throw some light on the rising prices. A number of State Governments presented deficit budgets to the State legislatures and indicated that taxes would be imposed to cover these deficits and subsequently this was actually done. It was natural for people to believe that higher taxation, especially of the rural people, would result in higher costs of cultivation and consequently higher food prices. This probably resulted in an increase in hoarding of foodgrains both by farmers and traders, which, in the case of the latter, was helped by liberal brank credit. Another important event was the announcement by the Government, without an adequate increase in production, that better quality rice and pulses would be exported to earn foreign exchange and to help Indian nationals residing abroad. In the beginning, the exact quantity to be exported was not announced and it was only subsequently that it became known that only 25,000 tons of each would be exported in the current financial year. This vague announcement about exports resulted in some hoarding and helped to push up the price level. Finally, although there has all along been a shortage of transport in the country, the situation early in 1962-63 deteriorated still further in the sense that the new wheat crop as also rice and pulses could not be moved to the consuming centres sufficiently quickly because of the non-availability of wagon space for the purpose. This created an artificial imbalance between supply and demand in the consuming centres—especially in West Bengal and Orissa—and helped to push up the price level.

It is gratifying that, during the past two months, the food and other prices have somewhat declined. The index number of food articles, for instance, has gone down from 131.5 in August 1962 to 128.5 by the middle of October last. But the threat of rising prices continues and there might be a further spurt in the price level in the near future, if the Indo-Chinese hostilities develop still further, as they well may.

What then should be done by the Government to stabilise the price level? The greatest danger now is that, in its desperation, the Government might introduce rationing and price control in the country. These methods have a chance of succeeding, if the prices are deliberately and artificially kept high by producers and traders and there is only a temporary imbalance between supply and demand. But, if there is a persistent shortfall in production, if the costs of production are constantly rising due to higher taxation and other causes, and if there is a defective distribution of the available supplies because of lack of transport and proper organisation, the only result of price control and physical controls such as requisitioning and rationing would be to increase hoarding and black-marketing of the available supplies. Such a development would only make the situation worse. Moreover, under a regime of price control, while the people might get supplies at controlled prices, the quality of the controlled commodity progressively deteriorates, thereby resulting in payment by consumers of higher 'actual' prices. Finally, we in India were lucky that the war-time price control and rationing were boldly removed, thanks to the foresight of Rajaji and the late Mr. Rafi Ahmad Kidwai but, if price control and rationing were reintroduced, there would be no getting away from them for decades to come. With weak administration and lack of proper organisation, price control and rationing, apart from encouraging dishonest practices, would cause greater hardship and suffering to the consumer than rising prices could possibly do.

It cannot, however, do much harm if price tags are attached to a selected 20 or 25 or more commodities, if the number of fair price shops and co-operative consumer's stores is increased and if licensing of traders and other regulatory methods short of physical control are introduced. But these methods could not possibly succeed in checking the rising prices, because the rise in prices in India is due to some fundamental causes and not merely to the greed and shortsightedness of producers and traders in charging high profit-margins. Unless these fundamental causes are removed, the price level could not possibly be stabilised.

What are these fundamental causes and how could they be removed? In the development planning of an economically backward country like India, it is inevitable that greater investment should be made in capital goods industries than in consumer's goods industries, thereby increasing the supply of consumer's goods at a smaller rate than the increase in people's purchasing power and demand for such goods. It is also inevitable that the level of taxation should increase in order to increase the Government's revenue resources for further investment. But it is not at all necessary that taxation should result in a considerable increase in the costs of production of commodities. It is an unfortunate fact that some of the taxes recently levied by the Union and State Governments have increased the costs of production of agricultural and industrial goods in India. The first thing in order to stabilise the price level is to withdraw all such taxes or at least to very considerably reduce their incidence on costs of production. In any case, a halt should be called to further taxation by declaring a tax holiday for a period of, let us say, ten years. The existing level of taxation brings annual revenues to the Government exceeding 10 per cent of the national income and as India's national income increases the existing level of taxation would create an increasing amount of resources for public investment, thereby accelerating the country's rate of economic growth. If the rate of taxation is continuously increased, it not only adds to 'cost' inflation but creates undue uncertainty and dislocation in the economy and actually reduces the rate of economic growth.
