Financially, the Company is in excellent shape. The share capital of Rs. 60.00 lakhs, all in equity shares of Rs. 100 each fully paid, enjoys the backing of Rs. 30.23 lakhs in reserves. Loans are conspicuous by their absence and current liabilities and provisions totalling Rs. 46.52 lakhs are covered more than two and a half times by current assets, investments and loans and advances aggregating Rs. 121.86 lakhs. It is interesting to note that cash and investments, which are entirely in Government securities, alone form nearly 50 per cent of all assets excluding the fixed assets. Gross block at cost is worth Rs. 69.87 lakhs and has been written down to as low as Rs. 14.89 lakhs.

The financial strength of the Company and its reputation as a good dividend payer are reflected in the current market price of its share which even in the present depressed state stands at as high as Rs. 400 *cum-div*., against a book value of about Rs. 150 per share. On an *ex-div*. basis and at the current rate of dividend the net return on the scrip works out to a little over 4 per cent per annum.

SIMPLEX MILLS' RESULTS IMPRESSIVE

HANDSOME RETURN TO SHAREHOLDERS

THANKS to an all-round improvement in the working of the mills and a further stabilisation of production of the new qualities of textiles introduced during the preceding year, the Simplex Mills Company Ltd. (Chairman and Managing Director: Mr. S. R. Damani, Bombay) has been able to achieve encouraging results during the year ended 31st March 1962. Thus, whereas gross sales declined by Rs. 11.77 lakhs to Rs. 366.49 lakhs, the gross profit has continued to rise and has expanded by as much as Rs. 20.32 lakhs to Rs. 54.73 lakhs. The equity dividend, which had been suspended last year in favour of a bonus scrip issue of one for five, has been resumed at 22 per cent per annum on a higher capital of Rs. 60 lakhs, as against Rs. 50 lakhs before. The realisation of these impressive results has been possible because of (1) a better utilisation of raw materials, stores, spares, etc., which has resulted in bringing down the expenditure on this account to Rs. 149.40 lakhs from Rs. 170.74 lakhs previously, (2) a reduction of Rs. 7.47 lakhs to Rs. 94.45 lakhs in the wage bill, and (3) the maintenance of other expenses virtually at the previous year's level.

Out of the aforesaid gross profit, essential provisions take away Rs. 27.64 lakhs, of which depreciation on fixed assets gets a slightly lower sum of Rs. 16.14 lakhs as against Rs. 16.21 lakhs during the previous year, while taxation, provided for the first time during the past three years, claims Rs. 11.50 lakhs. These leave a net profit of Rs. 27.09 lakhs, an increase of 48 per cent as compared with Rs. 18.21 lakhs earned in 1960-61. It is heartening to note that the Directors have continued the prudent policy of augmenting the reserve position of the Company and have accordingly transferred a substantial sum of Rs. 13.90 lakhs to the development reserve. From the balance, including the carry forward from the previous accounting period, an ordinary dividend of Rs. 11 per fully paid and consolidated share of Rs. 50 each, subject to deduction of tax, has been proposed. This absorbs Rs. 13.31 lakhs.

The progress made by the Company during the period 1959-62 both years inclusive, is revealed by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales (gross)	366.49	378.26	354.69	285.62
Other income	11.76	12.08	12.61	9.19

Carry forward	0.27	0.39	—3.50	—5.14

Market price of ordinary share (in rupees):	1962	1961	1960	1959	1958
High	182	216	187	193	186
Low	158	157	142	146	152

* Subject to deduction of tax.

† No dividend was paid, but a bonus share of Rs. 50 each fully paid was given for every five shares held.

Some encouraging trends are apparent in the above table. The gross sales have maintained a clear upward trend and, even though a modest fall has been witnessed during the year under review, there is no ground to suspect a general recession. Closing stocks of cloth, yarn and waste have shown a most welcome reduction and at Rs. 25.43 lakhs are the lowest for any of the past five years. Consequent on the renovation and modernisation of plant and machinery, there has been a marked decline in the cost of raw materials and stores consumed and its relation to gross sales has shown a contraction from 55.4 per cent in 1959 to 40.8 per cent in 1962. Thanks to the increase in operating efficiency, the gross profit has increased ten times and, despite heavier depreciation and taxation charges, a net loss of Rs. 4.76 lakhs has been turned into a net profit of Rs. 27.09 lakhs. Although during earlier years, the management followed a short-sighted policy of depleting the reserve position with a view to facilitating the payment of ordinary dividends, there has been a complete reversal of this policy during succeeding years and reserves have been strengthened by a net credit of Rs. 15.43 lakhs after allowing for the withdrawals.

The programme for the renovation and modernisation of the mills gained momentum during the year and new assets worth Rs. 18.39 lakhs were acquired. The process is by no means over and orders for machinery aggregating Rs. 61.73 lakhs were outstanding as on the last day of the year. Moreover, plans for extensive repairs to the mill building and flooring have been drawn up and a start has been made with the weaving shed. The folding department has been shifted to a new building constructed during the year and automatic looms are being installed in the space so made available.

The financial position of the Company is quite sound. Following the issue of bonus shares during the year, the paid-up share capital has risen to Rs. 60.48 lakhs and is supported by reserves and surplus amounting to Rs. 37.95 lakhs. Secured and unsecured loans have decreased substantially and stand at Rs. 97.87 lakhs (inclusive of Rs. 66.43 lakhs in 6¼ per cent debentures), as against Rs. 139.89 lakhs at the close of the previous year. Besides these, there are current liabilities amounting to Rs. 48.93 lakhs. On the assets side, a gross block of Rs. 250.89 lakhs has been written down by nearly half to Rs. 127.75 lakhs, while investments, current assets, loans and advances aggregate Rs. 120.68 lakhs. Debenture issue expenses yet to be written off stand at Rs. 1.40 lakh.

The present market quotation for the Rs. 50 paid ordinary shares of the Company is Rs. 163 *cum-div*. The net return, on an *ex-div*. basis, works out to nearly 5 per cent per annum.

(*Concluded from next column*)

From what Mr. Hobbs has observed, the increase in costs has been largely due to the interim wage rise of 15 nP per day per adult male worker and adult woman tapper and of 11 nP per day per adult woman worker other than tappers on the Company's Kerala estates and the raise of Rs. 10 in the monthly wages of staff members on all the estates of the Company, which were granted with effect from 1st December 1961 according to the Wage Board recommendations. We are told that statutory obligations arising from the plantations labour legislation have made it difficult for the Company to make much headway in reducing expenses. Mr. Hobbs has regretted that, while accepting the proposal for interim relief to workers, the Government should have turned down another recommendation of the Wage Board to the effect that an adequate increase in the price of rubber to compensate for the increase in the cost structure of the industry should be granted. The cost per unit for the current year's crop estimate of 1.15 million kgs. is placed still higher at 316.35 cents. While purchase of latex and scrap rubber helped the Company to realise a larger turnover last year, further expansion in this direction has been rendered difficult owing to restrictions on the import of the requisite machinery. The Company replanted 244.26 acres last year and obtained Rs. 82,892 by way of replanting subsidy. But the amount was insufficient to cover the expenditure made during the year and hence Rs. 1,30,000 were transferred from the year's profit. In 1961-62, the Company incurred a capital expenditure of Rs. 3.65 lakhs. During the current year, it will spend Rs. 4.97 lakhs, including Rs. 1.80 lakh being the unfinished work carried forward from the preceding year.

The financial position of the Company is satisfactory. Its paid-up capital of Rs. 28.04 lakhs, of which Rs. 26.91 lakhs are in equity shares and Rs. 1.13 lakh in preference shares, is supplemented by reserves and surplus aggregating Rs. 19.77 lakhs. Current liabilities and provisions make a total of Rs. 19.77 lakhs and are exceeded slightly by current assets, loans and advances aggregating Rs. 20.15 lakhs, of which no less than Rs. 10.34 lakhs represent cash and bank balances. The gross block of the Company increased during the year from Rs. 55.26 lakhs to Rs. 58.34 lakhs and has been written down to Rs. 47.27 lakhs. Inclusive of capital work-in-progress shown at Rs. 16,444, the net block stands at Rs. 47.44 lakhs.

PROFIT OF COCHIN MALABAR DOWN

DIVIDEND, HOWEVER, SAME

PLANTING have been particularly weak on the Madras Stock Exchange this year, and the ordinary shares of the Cochin Malabar Estates Ltd. have been no exception. Indeed, declining from Rs. 7.38—the year's highest so far, which was touched in 16th January 1962—to Rs. 6.50 *cum-div*. (final, 11 per cent, taxable, per annum) as of 20th of this month, the Rs. 3 fully paid shares are among the weakest spots in the group, for, at that level, they are lower than the lowest level of Rs. 6.88 and Rs. 6.95, reached in 1961 and 1960, respectively. At Rs. 6.50, the shares offer, after taking into account the taxable interim dividend of 9 per cent per annum, a net annual yield of not less than 6.7 per cent. And yet weakness persists in these shares, because the results of the Company (Managing Agents: Messrs. Peirce Leslie and Company Ltd., Calicut) for the year ended 28th February 1962 have been very disappointing due to the Company getting back in the groove of higher production costs and lower average price realised in relation to the previous year which had seen a handsome rise in profit owing to a dramatic cut-down in costs following a sharp rise in the crop harvested in that year. The crop harvested by the Company during the year fell from 1,264,304 kgs. to 1,159,898 kgs. and resulted in a sharp rise in per unit costs from 239.77 cents to 296.83 cents, the effects of which got accentuated by the perceptible fall in the average price realised from 392.21 cents to 358.30 cents per kg. The lower crop has resulted in a setback in sales realisation from Rs. 49.58 lakhs to Rs. 41.56 lakhs. However, total sale proceeds have improved from Rs. 61.26 lakhs to Rs. 72.94 lakhs because of a larger income of Rs. 31.38 lakhs (as against Rs. 11.67 lakhs a year before) from bought latex and scrap. But the larger turnover has been attained at relatively much higher costs as can be seen from the increase in total expenses from Rs. 39.94 lakhs to Rs. 56.53 lakhs. The result has been a sharp setback in gross profit from Rs. 21.59 lakhs to Rs. 16.57 lakhs. The provision for depreciation at Rs. 1.53 lakh is almost the same as a year ago. The tax liability is naturally lower, the provision made being only at Rs. 8.92 lakhs as compared with Rs. 10.46 lakhs a year before. The total dividend on ordinary shares has been maintained at 20 per cent per annum to which level it had been raised in the previous year from 15 per cent for 1958-59 and 17.5 per cent for 1959-60. The reserves have been credited with Rs. 1.30 lakh, as against Rs. 3.50 lakhs last year, but, as Rs. 50,000 have been withdrawn at the same time, the net addition is only Rs. 80,000.

A fair idea of the Company's working in the past four years can be had from the comparative table below:

(In rupees)

	For the year ended February			
	1962	1961	1960	1959
Sale proceeds	72,94,207	61,25,886	49,00,653	47,42,957

Market value of equity share (in rupees):	1962	1961	1960	1959
High	7.38	8.05	8.80	7.25
Low	6.50	6.88	6.95	4.03

* Subject to deduction of tax.

Mr. J. N. A. Hobbs, Chairman of the Company, has said in his statement to the shareholders that the crop harvested during the year was higher than the estimated 1.14 million kgs. and the second highest (the maximum was in 1960-61) since the inception of the Company in 1930. However, the average yield per acre declined over the year by two points to 254 kgs. Weather conditions during the year were not very favourable—a long dry spell was followed by the most violent monsoon for over 30 years.

* This represents a sum of Rs. 5,075 transferred from reserve for stores.

† This represents Rs. 87,296 being commission paid in the previous years recovered.

Extracts from the Directors' report: The Directors are grateful to the Committee of Directors consisting of Sri G. Purushothama Naidu, Sri A. V. Srinivasalu Naidu and Sri K. Govindarajulu for the indefatigable efforts taken to set right the Company's affairs and in getting the working results so bright as to wipe out the huge brought forward loss and to declare a good dividend.

The Directors did wish that this Committee should continue to carry on the affairs of the Company but the Central Government was in favour of its continuance only upto 30th June, 1962 or the date of this meeting whichever was earlier. The Directors, therefore, thought fit to look after the affairs of the Company themselves till the appointment of Managing Agents becomes necessary.

In order to keep pace with the technological developments and to maintain competitive capacity the Company has started to replace the old machineries. Under Export Incentive Scheme the Company has to its credit about Ten Lakhs of rupees for importing machineries. Negotiations are going on with Bankers for better accommodation and deferred payment system. It is in this process of raising funds apart from ploughing back the profits, that the Directors have thought fit to issue the remaining 8,462 shares. As the market was quoting Rs. 82.50 nP per share they have thought fit to issue the shares at a premium of Rs. 15 per share. The Directors hope that the members would respond and take up their respective right shares offered to them.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,76,900	Gross block ..	1,35,16,544
Reserves and surplus..	27,223	—Depreciation ..	96,54,808

		Investments	18,287
		Cash	12,853
	Rs. 1,22,99,556		Rs. 1,22,99,556

* Paid-up capital consists of 41,538 equity shares of Rs. 50 each. Of this 27,692 equity shares are allotted as fully paid-up bonus shares by capitalisation of reserves.

Indian Rayon Corporation Ltd.

(*Managing Agents*: Veraval Rayon Industries Ltd., Bombay.)

Registered Office: Junagadh—Veraval Road, Veraval, Gujarat.

5*th Annual General Meeting*—10th August 1962.

Working Results:

	For the year ended 15th February (In thousand rupees)	
	1962	1961
Sales	Nil	34
Gross profit (+) or loss (—)	—1,00*	—37*
To provision for taxation	44	40
Adjustments (credit)	1†	Nil
Loss brought forward from previous year ..	—1,18	—77
Final debit balance carried forward	—2,16	—1,18‡

* Loss after providing for taxation.

† Represents a sum of Rs. 1,423 being excess provision for taxation.

‡ This includes Rs. 3,802 being taxation for previous year.

Extracts from the Directors' report: The Company during the year incurred an expenditure of Rs. 10,11,190 out of which a sum of Rs. 8,23,000 being expenses of capital nature has been capitalised, bringing the total expenditure under this head to Rs. 1,60,19,356.20 nP. A further sum of Rs. 66,64,000 has been spent during the current accounting period upto the date of this report. Since the close of the financial year, the 6th and the final call of Rs. 12.50 nP per share on original equity and preference shares was made. The Company has earned a sum of Rs. 70,932 by way of interest on bank deposits.

Capital: Out of 1,05,000 equity right shares of Rs. 100 each offered to the shareholders in April 1961, 56,435 equity shares were taken up by the shareholders. The balance of 48,565 equity shares was underwritten and partial allotments had to be made for the number of shares available against larger applications, out of which 14,000 equity shares were allotted to the Life Insurance Corporation of India. A sum of Rs. 75 per share has been called up so far on the new shares by way of application, allotment and first call money and the remaining balance of Rs. 25 per share will also be shortly called up to make the shares fully paid up to rank *pari passu* with the original shares.

Additional Finance for Expansion and Pulp Plant: The negotiations carried on by the Company to obtain financial participation by the Chase International Investment Corporation of New York, one of the foremost financial Institutions in the U.S.A., much to the directors' regret, had to be abandoned, because their terms were not approved by the Government of India who have instead, approved of the loan for the full amount of $4.7 million from the Export-Import Bank of Washington D.C. against the Company's original proposal to borrow $3.45 million from the Exim Bank and $1.25 million from the Chase International Investment Corporation.

The directors are, however, glad to report that the negotiations for a total loan of 4.7 million dollars required for financing the expansion of the productive capacity of the Company's factory from 5 to 10 tons of *Viscose Rayon yarn* and 15 tons of *Rayon Grade Pulp* per day are being finalised with the Export-Import Bank of Washington D.C.

Construction: The construction of the factory buildings is very nearly completed and the final finishing touches are now being given. The buildings have been designed and constructed to accommodate the plant and machinery for the 10-ton daily capacity. Necessary staff quarters have also been constructed. The Gujarat State Housing Board have placed at the Company's disposal the existing labour tenements for the initial use of the Company's staff. Steps for the construction of a large permanent housing colony for future requirements have been taken in hand in accordance with Government's Industrial Housing Scheme. The construction of river intake and cut-off wall and laying of water pipe line is nearing completion, and has been carried out quite economically.

Power: The two diesel generators imported by the Company are under installation at the Power House at Veraval for meeting the normal frequency power requirements of the Company's factory.

The machinery, including the *Sulphuric Acid Plant*, and the *Steam Turbo Generators* required for high frequency power generation, Boilers etc., for the initial start up of the factory has been received. Erection work of the plant and equipment is proceeding. Technicians of U.S. Technical Collaborators at the site are supervising the erection of the machinery.

It is expected that, subject to unforeseen circumstances, the plant will be ready for initial production before the end of the current year.

Accounts in brief as at 15th February 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	2,04,04,562	Gross block ..	1,60,19,356

		Cash	4,67,520
		Miscellaneous expenditure ..	3,12,213
		P.L. a/c deficit ..	2,15,966
	Rs. 2,19,67,868		Rs. 2,19,67,868

Sone Valley Portland Cement Co., Ltd.

(*Chairman*: Mr. A. K. Jain, Calcutta.)

Annual General Meeting—Held on 23rd June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales	2,11,64	2,10,11
Closing stock	25,87	12,24
Excise duty paid	40,83	52,29
Gross profit	21,03	10,96
Transfer to depreciation	4,74	4,61
,, provision for taxation	5,70	Nil
Net profit	12,59	6,35
Adjustments	1,11*	3,62†
Appropriations :		
Total available balance	13,70	9,97
Transfer to development rebate reserve ..	25	1,65
,, general reserve No. 2	8,50	5,00
Proposed dividend (taxable) equity	4,50 (6%)	3,00 (4%)
Carry forward	45	32

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

* This includes Rs. 80,000 transferred from general reserve No. 1.

† Includes an amount of Rs. 3,00,000 transferred from general reserve No. 1.

Extracts from the Directors' report: In view of the losses of the earlier years brought forward in tax assessments, it is anticipated that a sum of about Rs. 3,70,000 only would represent distributable income out of the year's taxed profits. The Directors propose payment of dividend for the year at 6 per cent (taxable) amounting to Rs. 4,50,000, to the extent of Rs. 3,70,000 from the year's profit and the balance of Rs. 80,000 from General Reserve No. 1 constituted out of previous year's taxed profits. A sum of Rs. 8,50,000 out of the year's profit is transferred to General Reserve No. 2. A sum of Rs. 45,303 is proposed to be caried forward against Rs. 31,640 brought forward.

Production and despatches have been as under:

(Tonnes)

	Production		Despatches
	Clinker	Cement	Cement
1960	1,95,451	2,12,051	2,21,414
1961	2,00,438	2,03,694	1,98,451

Production and despatches of cement during the report year would have been higher with a more satisfactory position in regard to movement of coal and availability of wagons for cement. The Company's kilns have had to be stopped a few times due to the failure of the Railways to move the allocated coal. From the current year, certain quantities of coal are being moved by road which has helped to increase production to some extent but adding considerably to the costs on account of the higher incidence of transport charges. There are limitations in respect of utilisation of road transport and can only be resorted to for supplementing the rail transport to a marginal extent. Acute shortage of wagons for movement of cement also continues due to which, during the last six months especially, the Company has been carrying on stocks of clinker and cement to the brim and consequently production rate has had to be slowed down at times.

The long awaited announcement of cement price by the Government on the recommendations of the Tariff Commission came during the report year. The Government changed the basis of price fixation recommended by the Tariff Commission and also severely curtailed the price recommended as a result of which the price of cement payable to this Company was reduced from Rs. 76.25 to Rs. 72.50 per tonne, making a net reduction of Rs. 3.75 per tonne. Further, the price increase was given effect to from 1st November 1961 instead of 1st July 1961 which was recommended by the Tariff Commission. This has resulted in a loss of Rs. 1.51 per tonne over a period of 3 years. Such a price policy is unrealistic and unfair to the producers. The Company has represented to the Government for reconsideration of their decision. The Cement Manufacturers' Association has also placed before the Government a revised formula for price fixation.

Disregarding the needs of rehabilitation, the Government have reduced the rate of rehabilitation allowance recommended for this Company by the Tariff Commission from Rs. 4 to Rs. 2 per tonne and further earmarked out of it 20 nP for expenditure on research.

Negotiations are in progress with the Government of India for the grant of import licence for the manufacture of *slag cement* as also for installation of another kiln. Further steps in this direction can be taken only after the grant of import licence. The fulfilment of the project will naturally depend on the amount of foreign exchange sanctioned to this Company, which will in turn depend on the total allocation to the cement industry.

Since the increase in price covered only two months in the report year, the full effect of the benefit of increased price will be reflected only in the working of the current year. With the expected increase in production in the current year, there should be further improvement in the working results.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	75,00,000	Gross block ..	2,37,73,007
Reserves and surplus..	30,80,303	—Depreciation ..	1,68,11,421
Other liabilities ..	69,35,471		
		Net block	69,61,886
		Current assets ..	1,01,35,880
		Investments	1,16,245
		Cash	3,02,063
	Rs. 1,75,15,774		Rs. 1,75,15,774

* Paid-up capital consists of 15,00,000 equity (ordinary) shares of Rs. 5 each fully called up.

Sri Ramakrishna Mills (Coimbatore) Ltd.

(*Managing Agents*: Messrs. S. N. Rangaswamy Naidu Sons, Coimbatore.)

15*th Annual General Meeting*—30th July 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sale of finished goods	88,01	79,73
Sale of waste	1,48	72
Closing stock of finished goods, raw materials, etc.	16,72	11,72
Gross profit	18,39	15,68
Transfer to Managing Agents' remuneration ..	1,21	1,06
,, ,, depreciation	4,70	4,30
,, ,, provision for taxation	4,50	3,85
Net profit	7,98	5,97
Adjustments*	3	19†
Appropriations :		
Total available balance	8,01	6,16
To donations and charity	13	13
To bonus paid in respect of previous year ..	1,20	81
Transfer to development rebate reserve ..	1,88	75
,, ,, machinery modernisation reserve.	99	Nil
,, general reserve	Nil	65
,, ,, provision for employees' gratuity.	25	25
Proposed dividends (taxable) equity ..	3,53 (23%)	3,53 (23%)
Carry forward	3	4

* Adjustments represent the balance brought forward from the previous year and other credit items if any.

† This represents a sum of Rs. 18,944 transferred from provision for contingency.

Extracts from the Directors' report: During the year under report, there was voluntary fixation of ceiling prices for staple fibre yarn. The prices of cotton yarn of the counts which the Company's mills spun were not encouraging during the earlier part of the year. However, the prices improved during the latter part. Inspite of this setback in the selling prices, the Company was able to earn fair profits and the Directors consider that the profits earned during the year are very satisfactory.

During the year of account, the American make *Whithin Combers* have been installed and commissioned to production. The erection of *Humidification Plant* in the Combing department was also completed and the same commenced working during the year.

A levy at the rate of Rs. 10 per bale of 400 lbs. on the variety of Indian cotton which the Company's Mills consume has been brought to effect from 1st January 1962 which is an additional expenditure during the current year. The directors anticipate that there will be voluntary price control over the prices of the yarn of the counts above 40s during the current year. This may result in reduction of profits.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,36,890	Gross block ..	96,65,156
Reserves and surplus..	6,80,439	—Depreciation ..	58,74,981
Other liabilities ..	57,82,541		
		Net block	37,90,175
		Current assets ..	32,24,065
		Investments	9,82,875
		Cash	2,755
	Rs. 79,99,870		Rs. 79,99,870

* Paid-up capital consists of 14,923 equity shares of Rs. 100 each 4,459 equity shares of Rs. 10 each.

MONEY UNLENDABLE

(*From Our Own Correspondent*)

BOMBAY, 25*th July*

Extremely easy conditions are prevailing in the short-term money market. Banks are having plenty of surplus funds which are unlendable. The inter-bank call money rate is back again at $\frac{3}{4}$ per cent, the rate that was prevailing before the flotation of the new loans of the Central Government. Some of the banks have started investing their surplus resources in short-dated Government securities which have a better marketability than the high-yielding long-dated securities. The 91-days Central Treasury Bills have also been in keen demand. Sales of Intermediate Treasury Bills (giving a yield of 2.316 per cent per annum) during the four days ended 21st July 1962, for instance, fetched Rs. 3.37 crores, as against only Rs. 10 lakhs sold from 9th to 14th July. The response to Bills sold through the tender system was markedly better than in the previous week. The amount invited was the usual Rs. 2 crores. The offerings were as much as Rs. 3.10 crores, that is Rs. 110 lakhs more than those in the previous week. The average rate of accepted tenders was lower at 2.376 per cent per annum, as compared with 2.390 per cent per annum a week before. The tender limit for the next week has, however, been kept unchanged at Rs. 2 crores, so that those banks which want to be sure of getting Treasury Bills will have to take up those that are available on tap. The yield on these Bills to be sold from 25th to 28th July has been fixed at 2.236 per cent per annum.

The Reserve Bank's statement for the week ended 20th July shows a further decline in foreign assets, the exact fall being Rs. 2.61 crores; the total of these assets now amount to no more than Rs. 93.85 crores.

Indicative of the extremely easy money conditions is the increase of Rs. 18.32 crores in the deposits of scheduled banks with the Reserve Bank and a decline of Rs. 1.62 crore in their borrowings from the Reserve Bank which now stand at the nominal level of Rs. 63 lakhs.

There has been an increase of Rs. 26.04 crores in the Reserve Bank's investments in the Banking Department. This gives one an idea of the extent of support given by the Bank to the new loans of the Central Government.

In the Gilt-edged market, the new long-dated loan issued last week, viz. 4½ per cent 1985, has gone into a premium of 20 nP due to substantial buying by institutional investors, especially the Provident Funds. There has also been a rise of 15 nP in both 3½ per cent 1968 and 4 per cent 1972. The Conversion Loan, however, has fallen further, by 25 nP on top of a decline of Re. 1.40 in the past week. It now stands at Rs. 68.75. 3 per cent 1970-75 also has fallen by 20 nP to Rs. 89.20. There has been good demand for short-dated securities, but the rates have remained unchanged. All State loans, however, have been quiet. There has been some selling in the 4½ per cent loans, in particular, resulting in losses ranging from 5 nP to 15 nP.

The £ sterling has been a shade quiet in the foreign exchanges. In New York, it has come down over the week by 0.140 cent for spot and 0.090 cent for three months forward. The former is now quoted at 280.600-280.640 cents and the latter at 280.060-280.100 cents per £. In keeping with this trend, the rupee-dollar rate has gone up by 25 nP to Rs. 477 per 100 dollars which is the banks' selling rate. Their buying rate, however, has remained unchanged at Rs. 473.50.

LINSEED FIRM

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 23*rd July*

Firm conditions persisted in the local linseed market during the past week due mainly to shortage of supplies. Business reported was negligible. Millers were buyers daily for ready and forward positions, but sellers were reserved at the prevailing rates. The oil section was steady. Stocks were running low. Local buyers were interested daily due to high prices of mustard oil, but sellers were reluctant to do much business as the seeds arrivals were still very small. The oilcake market was firm with good local demand. But stocks with mills were negligible. The latest quotation for the July delivery was Rs. 81.72 per quintal.

SILVER PRICE ON NEW BASIS

With effect from 2nd August 1962, the price of silver published daily by Messrs. Handy and Harman of New York will be quoted on a new basis. At present, this quotation represents the price paid by this firm for silver in unrefined materials and is widely used by various smelters and refiners for determining the purchase price of silver contained in ores and other silver-bearing materials; this price is one-quarter cent below the price of refined silver. On the new basis, the quotation will be published without this one-quarter cent deduction. It will be the actual price at which refined silver, in commercial bar form of acceptable brand and quality, is offered to Messrs. Handy and Harman for nearby delivery at New York in quantities sufficient to meet daily requirements. This change is a technical one only. Settlements for silver in unrefined silver-bearing materials will continue to be made by the firm on the same basis as before, that is, at a discount (currently one-quarter cent) below the price for refined silver. This discount is in long-standing recognition that such silver at the time of purchase is not available in commercial bar form for nearby delivery at New York and is designed to cover carrying, selling, delivery and other charges involved in the marketing of refined silver.

BULLION FIRM

(*From Our Own Correspondent*)

BOMBAY, 25*th July*

The bullion market depicted a firm trend during the major part of the week under review. There was good buying support inspired by reports of serious situation in Ladakh. The Calcutta interests who had sought to press sales in silver last week were covering their positions, with the result that the metal staged a notable recovery in values. Reduced pace of arrivals also imparted some strength. The daily average arrivals were 33 bars, as against 53 bars in the previous week. Offtake was, however, restricted, being 6 bars on an average, as against 8 bars. In sympathy with silver and following seizure of about 2,400 tolas of gold in Bombay on the 19th inst., gold also tended to move up. The rise in price would have been more marked but for increased arrivals, the daily average being 6,800 tolas, as against 5,750 tolas. The average daily offtake was higher at 4,800 tolas, that in the previous week being 4,500 tolas.

In gold, the *Bhadrapad* (15th September) settlement advanced from Rs. 125.25 to Rs. 125.55 yesterday. At this level, profit-taking set in and the settlement declined to Rs. 125.10 today before finishing at Rs. 125.20. The net gain over the week was just 5 nP.

Ready gold continued to command a premium over the forward, though the premium declined from 65 nP on Wednesday last week to 50 nP today, when the closing rate stood at Rs. 125.70, as against Rs. 125.90, the highest level touched being Rs. 126.35 yesterday.

The *Bhadrapad* (17th September) settlement in silver began the week at Rs. 214.25, as against the previous close of Rs. 213.5, and moved up to touch a high of Rs. 215.00 yesterday. Opening at Rs. 214.35 today, the settlement receded to Rs. 214.00 today but finished at Rs. 214.25. The net gain over the week was Re. 1.10.

Ready silver met with good buying enquiries and spurted from Rs. 212.90 to Rs. 214.05 on Monday the 23rd inst. After declining to Rs. 213.55 yesterday, it eased to Rs. 213.00 but rose again to Rs. 213.25 towards the close. At this level, the discount under the forward was Re. 1, as against 25 nP last week-end.

The dollar price of gold in the London bullion market rose further from $35.12½ to $35.14½ during the week. Ready gold also improved by ½*d.* to 250*s.* 4½*d.* Both ready and forward silver scored handsome gains, the former rising from 87½*d.* to 88¾*d.* and the latter from 87¾*d.* to 88¾*d.* The rise followed the marked increase in silver price at New York, from 102.75 cents to 104.75 cents.

A notable development of the week was the U.S. President's order (issued on the 20th inst.) asking all U.S. citizens to bring back to the country or to dispose of any rare gold coins they now hold abroad before 1st January next. This action has been taken "to prevent large-scale counterfeiting and restriking of rare gold coins" which has been taking place in Italy, West Germany, Holland, Switzerland and Argentina. The U.S. Administration has reiterated its intention not to raise the price of gold from the present level of $35 per fine ounce. At a Press Conference in Washington on Monday this week, the President was asked as to why the U.S. should not permit foreign holders of its currency to exchange it for gold. Replying to the question, the President said:

"If the U.S. refused to cash in dollars for gold, then every one would go to the gold standard and the U.S., which is the reserve currency of the whole free world, would all be dependent upon the available supply of gold which is quite limited. Obviously, it is not enough to finance the great movements of trade today, and it would be the most backward step the U.S. has taken since the end of the Second World War.... We are not going to devalue, and we are going to be able to bring our balance of payments into balance by the end of next year, and I feel that those who hold dollars abroad have a good investment and we have over another billion dollars held by American citizens in investments overseas and this country is a very solvent country. So I feel that it requires a co-operative effort by all of those involved in order to maintain this free currency, the dollar, upon which so much of Western prosperity is built. I have confidence in it and I think that, if others examine the wealth of this country, they will feel that the dollar is a good investment and as good as gold."

The following table shows the trend of prices during the week under review:—

	25-7-62 (closing)	High	Low	18-7-62 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine) ..	125.70	126.35	125.50	125.90
*Bhadrapad** ..	125.20	125.55	124.85	125.25
Sovereign ..	98.00	98.00	97.75	97.75
SILVER				
Ready (.996 fine) ..	213.25	214.05	212.85	212.90

London—				
Gold	250*s.*4½*d.*	250*s.*4½*d.*	250*s.*3*d.*	250*s.*3½*d.*
Silver Ready ..	88¾*d.*	88¾*d.*	87¾*d.*	87¾*d.*
Silver Forward ..	88¾*d.*	88¾*d.*	87¾*d.*	87¾*d.*
New-York—				
Silver	104.75 cents	104.75 cents	102.75 cents	102.75 cents

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (65.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RECOVER

(*From Our Own Correspondent*)

BOMBAY, 25*th July*

After last week's sharp decline, a recovery was bound to occur in the cotton futures market if for no other reason at least on technical grounds. And the market did stage a smart recovery, thanks to shortcovering and fresh buying attracted by the low level. Although weather news was generally satisfactory, reports of excessive rain in Indore and Ujjain areas and cloudy weather in Akola and Nagpur prompted speculative support which imparted strength to the market. The apprehension that, as the new crop was late, mills will have to depend upon current crop, stocks of which are limited, for at least the next three to four months also aided sentiment. The Jarilla March 1963 contract rallied from Rs. 716 (per three quintals) last week-end to Rs. 728 before finishing lower at Rs. 721.50 today, a net gain of Rs. 5.50 over the week.

The current (1961-62) season's crop estimate has been revised upwards by a prominent cotton firm from 4.3-4.4 million bales of 400 lbs. each to 4.6 milion bales. Gujarat, C.P./Berar and Western Comptah areas account for the bulk of the increase. The higher crop would improve the anticipated end-season carryover by about 200,000 bales to 1.43 million bales—a welcome development in the context of the current shortage of cotton.

The same firm sums up the new crop position at the end of last month as follows:

"In the Punjab, sowing operations were practically over by the first week of June. Resowings, necessitated by locust, were also completed by the middle of the month; stray showers proved very beneficial but further rains are a necessity to assist progress. The condition in general is satisfactory in this area and plants are making good headway. The rain-fed areas in the Oomras and Gujarat did not receive adequate rains for proper commencement of cotton sowings. Dry sowings in the Vijay tract proved a partial failure resulting in re-sowings of some areas. The following is a comparison of end-of-June sowings with those of last year at the same time:

(Percentages)

Areas	30-6-1962	30-6-1961
Punjab	100	100
U.P./Rajasthan	100	100
Khandesh	20 to 25	70 to 80
C.P./Berar	5 to 10	30 to 75
Madhya Pradesh ..	Nil	70 to 100
Moglai	Just started	50 to 70
Broach/Surat	75	100
North Gujarat	5 to 10	70 to 80

"Should July produce adequate rains, there are still hopes for a good crop; one thing, however, is certain that the crop is having a late start."

A suggestion for converting the East India Cotton Association, Bombay, into an all-India body came up for discussion last week at the weekly Board meeting of the Association. The Board could not take any definite decision on this question, thanks to divergence of opinion amongst its members although the need to form a federation of all cotton interest was unanimously conceded.

In contrast to last week's easiness, firm conditions prevailed in the Karachi cotton futures market during the week. The firmness was induced by the scarcity of tenders against the expiring contract. Switchover of purchases to the new crop contract and fresh speculative support were responsible for the strength of the January 1963 contract. N.T.R.G. July rose from Rs. 72.75 last week-end to Rs. 75.25. The January contract firmed up from Rs. 73.70 to Rs. 74.05.

Traders' attention is centered on the export policy announcement for the new crop expected to be made shortly. There is speculation whether the duty of Rs. 75 per bale on American-seed cotton and Rs. 25 per bale on *Deshi* cotton would be abolished to stimulate exports. In view of the uncertainty, trading was cautious.

Productions of cotton in Pakistan during the year 1961-62 is estimated at 1,840,000 bales (1,615,000 American and 225,000 *Deshi*), as against 1,712,00 bales during the previous year, an increase of 7.5 per cent over last year. The area under cotton was 3.48 million acres, an increase of 7.6 per cent. As regards the 1962-63 crop, given favourable weather conditions, the crop could exceed the 1961-62 output. The Karachi Cotton Association estimates that stocks of raw cotton as on 5th July amounted to 241,000 bales, as against 117,500 bales on the same date last year.

Cotton futures in Liverpool suffered a further setback during the week. Values declined on persistent selling by spot and Commission Houses. Mill demand was moderate. Advices from the yarn and piecegoods market were not encouraging. Both the American and American type contracts eased. Sudan contract was quiet and nominally unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 23.10; October 23.35; December 23.30; March 23.45.

American cotton mixed growth contract: July 24.20; October 23.20; December 23.65.

Sudan contract: July, September, November 29.50.

Caution was the keynote of trading on the New York Cotton Exchange during the week.

Operators were inclined to await details of the new export programme. Transactions were few and far between and price movements narrow. Occassional short covering and some buying by spot interest led to a slight improvement in futures. Spot rates, however, tended to decline.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	24-7-62	17-7-62	10-7-62
New York Spot ...	36.00	36.05	36.15
July	—	—	33.50
October	33.87	33.69	34.01
December	33.98	33.83	34.13

STAPLE FIBRE YARN DECLINES

(From Our Own Correspondent)

BOMBAY, *25th July*

Forward trading in foreign art silk yarn will continue to remain suspended. For the Forward Markets Commission is understood to have denied permission to the Bombay Yarn Merchants Association and Exchange for resumption of business in forward deliveries. It would appear that this decision has been prompted by the persistent acute scarcity of supplies. The decision did not, however, have any effect on the market. Actually, Amilon (20 x 1) yarn August contract moved up under impetus of bear covering from Rs. 4,600 to Rs. 4,700, while spot indigenous yarns drifter lower. National Rayons 150 Bt. cones 1st grade declined by 13 nP to Rs. 14.21. 120 Bt. cones 1st grade dropped a like amount to Rs. 16.63.

Staple fibre yarns suffered a further setback in values, owing to selling by tired bulls. Business put through was limited. (40 x 2) August settlement receded by Rs. 4 to Rs. 820. October position eased by Rs. 3 to Rs. 841. Spot Kohinoors fell by 22 nP to Rs. 9.06. Centurys lost 9 nP to Rs. 9.02.

Cotton yarns tended to rise on hopes of a possible upward revision in ex-mill ceiling prices of yarns of 40 counts and above which are due to take effect from 1st August next; details were given in last week's report. Eighty counts Maduras hardened by 25 nP to Rs. 81 and Mahendras by 50 nP to Rs. 59.25. Ten counts Podars spurted by 38 nP to Rs. 18. Moderns were firm at Rs. 17.37. Thirty counts Simplex gathered 25 nP to Rs. 30.25. Forty counts Minaxis, however, shed 25 nP to Rs. 35.50.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	25-7-1962	18-7-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
August	4,700.00	4,600.00
Nat. Ray. 150 Bt. 1 (per kg.)	14.21	14.34
Nat. Ray.120 Bt. 1 (per kg.)	16.63	16.76
Staple fibre yarn (40 x 2)—		
August	820.00	824.00
October	841.00	844.00
Kohinoor (per kg.)	9.06	9.28
Century	9.02	9.11
Cotton yarn (per bundle of 10 lbs.)	18.00	17.62
10s Podar	—	22.00
20s Podar	30.25	30.00
32s Madura	35.50	35.75
40s Madura	72 50	72 75
60s Finlay	81.00	80.75
80s Madura		

Note: Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *25th July*

Oilseeds and oils which had suffered some setback towards the close of last week staged a smart rally this week. In particular, groundnuts were buoyant, thanks to firm conditions in the spot section, following good offtake by *vanaspati* manufacturers and crushers. The good overseas demand for groundnut extraction imparted further strength. Active conditions prevailed in castorseeds also, as a result of renewed enquiries for castor oil by the U.S. Linseed ruled distinctly steady on reports of export business by the State Trading Corporation and firm advices from North Indian mustardseeds markets. Cottonseeds were well maintained.

Groundnuts September 1962 contract, which had fallen initially from Rs. 219.75 to Rs. 219.62, firmed up to Rs. 227.75. January 1963 contract rose by Rs. 3.75 to Rs. 220.50. Bold ready hardened by 87 nP to Rs. 47.62. Oil July 1962 contract gathered 60 nP to Rs. 19.20. Oil railway receipts improved by 5 nP to Rs. 19.05.

Among castorseeds, September 1962 contract advanced by Rs. 2.35 to Rs. 166.75. March 1963 contract rose by Re. 1.63 to Rs. 169.50. Ready Kanpur put on 75 nP to Rs. 32.75. Castor oil finished at Rs. 13.90, after rising by 10 nP earlier.

Linseed September 1963 contract moved up by Re. 1.75 to Rs. 42.25. March 1963 contract closed higher at Rs. 40.50, as against Rs. 38.87. Bold ready was higher by 25 nP at Rs. 41. Linseed oil hardened by 40 nP to Rs. 16.90.

Cottonseed January 1963 contract strengthened by 50 nP to Rs. 100. July 1962 contract was maintained at Rs. 105.50. Berar and non-white were fully steady at Rs. 22.25. But white lost Re. 1.75 to Rs. 20.75.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 25th July, as compared with those of the two previous weeks:

	25-7-1962	18-7-1962	11-7-1962
	Rs.	Rs.	Rs.
Groundnut			
July 1962	226.50	219.75	221.75
September	227.75	219.75	222.00
Nizam bold	47.62	46.75	46.50
Khandesh quality	48.12	47.50	46.75
Oil ex-mill ready*	19.40	19.40	19.35
Railway receipts*	19.05	19.00	19.00
Oil July 1962	19.20	18.60	18.85
Castorseed			
September 1962	169.50	167.87	165.37
Ready Madras	33.75	33.50	32.50
Ready Kanpur	32.75	32.00	31.12
Oil B.S.S.†	13.80	13.80	13.35
Oil commercial†	12.80	12.90	12.45
Linseed			
September 1962	42.25	40.50	40.56
Bold ready	41.00	39.75	39.37
Oil ready†	16.90	16.50	16.10
Cottonseed July 1962	100.00	102.00	102.75
Niger seed	37.00	36.50	35.75
Kardi seed	27.00	27.50	25.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER EASIER

(Messrs. Parekh and Co.)

BOMBAY, *25th July*

Malabar black pepper ruled easier during the fortnight for want of foreign inquiries. East European countries, Europe and the U.S. are out of the market, as all these countries are reported to be getting their supplies either from Indonesia or from Sarawak direct at cheaper prices. Panicky conditions prevailed on the Cochin Exchange, because the bulls came to liquidate their August purchases, as they failed to see any silver lining on the horizon. Shorts refused to cover, as they expected that the market might go down or they never wanted to lift their hedge unless they found buyers for their ready goods. Despite very good export to date, most growers are bearishly inclined. It may be due to the fact that the final outturn of Malabar black for 1961-62 crop may be bigger than generally estimated. Or they may not have any faith in the present level of prices, in view of the movement of the new production of Sarawak and the proximity of harvesting seasons in Lampong and Brazil.

Despite strong holding of Lampong at Singapore, the market in the island is reported soft and slowly slipping down owing to lack of foreign buyers who are withholding in expectation of early fall in the prices, as they are suspicious of the holding capacity of the Indonesian Agency, in view of the proximity of harvesting season in Lampong. Black came down from Str.$115 to Str.$110 and white from Str.$152½ to Str.$150.

There are unconfirmed reports that the Indonesian Agency at Singapore has disposed of its holding to the U.S.S.R. and the U.S.A. at undisclosed prices. It is doubtful whether any dealer in New York will take the risk of buying a big quantity unless at his own price and with the condition that the Indonesian Agency shall not sell any pepper for shipment to New York until December. Nobody however, gives any credence to such reports unless pepper is actually shipped.

Spot in New York came down from $0.36 to $0.33½, with grinders' demand slow, while London is comparatively steady, as this year Sarawak produced more black and less white.

The future of the market appears to be uncertain, as New York dealers are persisting in their hand-to-mouth buying policy. The market appears to be suffering from slow poison effects, as the Indonesian Agency are very slow in taking the decision.

Ready garbled moved down from Rs. 310 to Rs. 279 and ungarbled from Rs. 300 to Rs. 272. August delivery saw a precipitous fall from Rs. 314 to Rs. 280, with buyers holding off, as no speculators are evincing interest in view of the dropping prices at every next trading month. In the falling market, inland demand is so small that it does not encourage local dealers to accumulate stock.

Ready pepper in Bombay is nominally quoted at Rs. 154 per 50 kilos.

TEA BOOKINGS HEAVY

(From Our Own Correspondent)

CALCUTTA, *24th July*

Bookings here of tea for the London auctions were again heavy during the week under review. Tea offered keen competition to occupy as much available liner space as possible. However, shipments to other destinations were much below the offers of space. Reflecting the heavy bookings in recent weeks, stocks in the U.K. rose to 119.4 million lbs. for the week ended 13th July from 117.8 million lbs. for the previous week. The increased stocks and the prospects of larger arrivals in the coming weeks were reflected in the auctions held in Mincing Lane in the last week, when the average price realised was only 44.42d. per lb., representing a fall of 1.98d. over the previous week and of 2.81d. over the corresponding period of last year.

The fall in the London price is significant. For, this represents expectations of a rise in world output this year. Although the rise in output should not be greater than the expected rise in consumption, it is but natural that reports of rising output should affect the price. On the other hand, it is expected that, with the proposed entry of the U.K. into the E.C.M. and the expected reduction in duty, European consumption of tea should increase. The Government of India's efforts to persuade West Germany for sympathetic consideration of the Indian viewpoint have continued, and the interviews, which Mr. Morarji Desai had with West German officials, have raised expectations here. The duty on tea in West Germany is so high as to make prospects for increase consumption very bleak at present. However, if the duty is reduced to a reasonable level (and there is every hope for this), consumption in that country would increase, with a similar improvement in other areas of the E.C.M.

Evidently, it is in the U.K.'s interest to allow tea in the E.C.M. duty-free. The U.K. is by far the largest consumer of tea, and, since tea is a "must" beverage in almost all British households, any increase in its price will be resented by the people. However, it has been reported that the E.C.M. is disinclined to allow any commodity into the area duty-free, and as such it now looks as though the U.K. would have to put up with a duty on tea.

The report from Pakistan that it expects its acreage under tea in the current season to show an increase of 3.8 per cent has been noted here. In the last year, the area totalled 78,000 acres and is estimated higher this year at 81,000 acres. Like Pakistan, all other producing countries are increasing their crop both by extension of the area and intensive cultivation. There is, therefore, much substance in the recent analysis by F.A.O. of trends in producing countries, according to which tea would be surplus by 1966. Tea circles here stress that India should take advantage of this report, and should devote greater attention to improving quality rather than emphasising on a striking increase in output.

Tea gardens are only too alive to their responsibilities in this regard; however, their attempts to improve quality have been thwarted by inadequate allotment of fertilisers and the great difficulty to get import licences for machinery to replace old and worn-out equipment. Time and again, the industry has presented its claim to get fertilisers at lower prices as is the case with other agricultural industry.

The recent wage increases for tea garden workers in Assam and West Bengal will raise the cost of production. While the industry is always eager to pay the workers reasonably in order to enable them to lead a contented life, it is unfortunate that prices of daily necessities are rising. It should be noted that tea is gradually becoming a buyer's market all over the world, since all producing countries are increasing their acreage. There is, therefore, a strong point in the industry's claim that at least any further increases in wages be related to productivity.

At yesterday's export sales here, offerings totalled 37,047 packages. Generally, demand was good, and Darjeelings were one of the strongest features. The flavoury lots were sold at higher rates. Plain liquoring orthodox teas were quiet, while the brighter teas met with good support. An irregular trend was recorded by C.T.C. teas while the best met with good support, but medium teas eased. Legg-cut teas were fully steady, with the brighter teas being a particular feature. Tippy teas were quiet. The quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings 7.20 to 8.20, best Assam C.T.C. B.P. 7.20 to 8.20, medium Assam C.T.C. fannings 5.70 to 6.60, clean plain pekoe 4.50 to 4.70, plain fannings 3.90 to 4.20, plain B.P. 3.90 to 4.10 and medium C.T.C. B.P. 5.80 to 6.40.

MEDIUM TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *17th July*

In sale No. 29 held today, 840,000 kgs. were offered. The teas on offer were generally brighter than last week and quality of teas from the Nilgiri district showed slight improvement. The market met with good general demand. Brighter low medium and medium brokens evoked strong enquiry and were fully firm to dearer while others were barely steady. Cleaner fannings under this category were also well sought after and were firm and sometimes much dearer, but others, although meeting better support than last week, were easier, with some withdrawals. Good mediums elicited useful support and sold at around last rates, occasional invoices selling at rates above last. There was strong inquiry for highgrowns, particularly brokens which were dearer with quality. Similar fannings received better support than last week, particularly those with improved quality which were dearer. Clean black leaf descriptions were also well supported and advanced in price. Unorthodox teas met with good competition and prices advanced considerably over last. Whole leaf grades and tippy teas met with useful inquiry.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low medium	3.10-4.00	4.45 4.60
Mediums	3.60-4.20	4.60-4.70
Good mediums	4.20-5.30	4.70-5.10
Nilgiri B.O.P.	4.20-6.45	4.55-5.95

The average price realised in sale No. 29 was Rs. 4.00 per kg., as against Rs. 3.94 a week ago and Rs. 4.68 in the corresponding sale last year.

No dust sale was held this week; sale No. 29 will be held on Thursday the 26th inst.

Colombo: This week's offerings met with good general demand. Improved quality Western brokens, although opening 10 to 15 cents easier, received better support as the sale progressed and these closed at considerably dearer rates. Mediums were also well supported at dearer rates, whilst lowgrowns were irregular. The buyer for U.S.S.R. operated in this sale.

London: North Indian and other growths: In Monday's sale, the market met with good demand. Doars were steady, while the best Africans were quoted firm. Poorer kinds, however, met with less support and were easier.

Ceylon and South Indian: In Tuesday's sale offerings amounted to 26,259 packages of which 8,457 packages were from South India. There was good demand. Best Ceylons and South Indians were firm. This liquoring and poorer leaf descriptions were a weak feature.

BRISK DEMAND FOR SUGAR

(From Our Own Correspondent)

HAPUR, *23rd July*

The local sugar market displayed a steady to firm tendency this week. Demand was brisk from the Punjab, Rajasthan, Gujarat and Madhya Pradesh. Spot delivery prices were marked up by Re. 1.25 to Rs. 107.50 per quintal on good demand in the face of poor supply position. The release of increased quantity of 2.25 lakh metric tons for open sale failed to check the upward trend in prices because of rosy export prospects. Mill delivery sugar prices also advanced by 19 to 50 nP a maund on better demand. Week-end prices (in rupees per maund) were:—(D-29) Amroha 39.06, Dhampur 39.19, Meerut 39.75, Seohara 39.06, Simbhauli (E-29) 39.62, Bijnore 39 and Dhampur 38.94.

Sugar continued to display a steady to firm tone also in the Muzaffarnagar market. Although demand from Gujarat, Punjab, Rajasthan, Saurashtra and Madhya Pradesh was not very brisk, mills were unwilling to reduce prices in view of poor *gur* and *khandsari* stocks in the producing centres. Steady Kanpur advices and better outlook for export also imparted strength to the market. Prices of different varieties rose from 6 nP to 28 nP a maund. The rise was more pronounced in smaller crystals than in the bold, as the latter were already fetching high prices. At the close of the week, various crystals were commanding premia, ranging from 90 nP to Rs. 2.25 a maund over the former controlled prices.

The latest mill delivery prices (per maund) were:—A29 Iqbalpur Rs. 41.85; Daurala Rs. 41.62; Samli Rs. 41.66; Lhaksar Rs. 41.47; A29 Mansurpur Rs. 41.66; Iqbalpur Rs. 41.29; Rohana Rs. 41.57; Shamli Rs. 41.28; B29 Deoband Rs. 40.84; Lhaksar Rs. 40.63; Mawana Rs. 40.78; Rampur Rs. 40.20; Shamli Rs. 40.68; Mansurpur Rs. 40.84; C29 Mansurpur Rs. 40.28; Deoband Rs. 39.97; Daurala Rs. 40.03; Seohara Rs. 39.19; Saharanpur Rs. 39.84; Modinagar Rs. 40.00; Jagadhri 39.83; Buland Rs. 39.51; D29 Amroha Rs. 39.06; Mansurpur Rs. 39.66; Meerut Rs. 39.75; Seohara Rs. 39.06; Dhampur Rs. 39.19; Sakoti Rs. 39.37; Modinagar Rs. 39.62; E29 Simbhauli Rs. 39.50; Bijnore Rs. 38.94; Kashipur Rs. 38.56 and Bazpur Rs. 38.94.

Khandsari continued firm, as demand was fair from Rajasthan and the Punjab. Prices advanced by Re. 1.34 a maund. The rise was attributed mainly to lower stocks. Non-crystal and crystal qualities were both quoted at Rs. 93.77 to Rs. 101.81. *Khandsari* galawat was quoted at Rs. 85.74 to Rs. 91.09, crystal boora at Rs. 107.17 and *khandsari* boora at Rs. 98.46 to Rs. 101.14.

Gur displayed a firm tendency during the week. Prices of the superior quality advanced by Rs. 2.67 a quintal on brisk demand from Gujarat. Stocks were very poor at 2,000 maunds. During the week, two wagons of *gur* were loaded to Gujarat. *Gur* pansera was steady at Rs. 56.26 to Rs. 58.94 a quintal, kotha dry wet was sold at Rs. 50.91 to Rs. 53.58. Shakker prices ruled steady at Rs. 66.98 a quintal.

Slackness in demand at higher levels from Gujarat and Rajasthan accounted for a fall in *gur* prices during the week by 25 to 50 nP a maund in the Muzaffarnagar market. Chaku lost 50 nP for the dry kotha quality to be quoted from Rs. 23 to Rs. 25.50. Chaku wet was quoted at Rs. 21 to Rs. 21.50. Rasket khurpa eased to Rs. 8 to Rs. 11.50. Shakker dara red quality was quoted lower by 20 nP at Rs. 25.75 to Rs. 26.75. Shakker masala was unchanged at Rs. 26.50 to Rs. 28. Dana minja fetched from Rs. 23 to Rs. 26 on demand from Rajasthan and Jammu and Kashmir. *Gur* masala was firm at Rs. 30.00.

Gur futures moved both ways during the week. The *Fagun* contract opened at Rs. 20.80 on 16th July, touched the highest and the lowest levels of Rs. 20.93 and Rs. 20.32, respectively, in the midsession and was quoted today at Rs. 20.93.

FOODGRAINS STEADIER

(From Our Own Correspondent)

HAPUR, *23rd July*

Foodgrains were steadier here this week on reports of near drought conditions in east U.P., where *zaid* crop of maize and *guwar* had been almost completely destroyed and prospects of late paddy sowings appeared uncertain. Wheat, gram and rice prices registered modest gains. Other grains were also steady.

Wheat superior prices registered gains during the week to be quoted at Rs. 43.54 to Rs. 46.89 a quintal. Average quality prices also improved by Re. 1.34 a quintal on good consumer demand to be quoted at Rs. 40.87 to Rs. 41.53 per quintal. Red quality prices also improved by Re. 1.34 and were quoted at Rs. 40.19 a quintal. Arrivals during the week declined to an average of 200 maunds daily due to monsoonish conditions and stocks with the trade were placed around 70,000 maunds. Thanks to timely rains here, *kharif* crop prospects appeared fairly good. Gram prices also registered a hardening tendency and advanced 67 nP to Re. 1.34 a quintal on good inquiries from Madras. Arrivals were almost *nil* and stocks dwindled to 21,000 maunds. The Punjab quality gram was quoted at Rs. 42.20 and the local produce at Rs. 41.53 a quintal.

Rice displayed a steadier tendency during the week. The *mainpuri* quality and *gadda* quality advanced by 67 nP a quintal on good consumer demand. Arrivals were small, largely from *mainpuri*. Week-end prices were: Rice *basmati* superior Rs. 80.38 to Rs. 96.45, *sela* Rs. 75.02 to Rs. 80.38, *mainpuri* Rs. 54.92 to Rs. 56.26, *ramajwayan* Rs. 64.30, *raimunia* Rs. 66.98 and *gadda* Rs. 54.22 a quintal.

Bejhar was well held at higher levels, but barley declined in the absence of demand. Barley arrivals continued poor, and stocks were put at 10,000 maunds. *Jowar* and *guwar* were steady, but other grains ruled quiet. Week-end prices were: Barley Rs. 28.13 to Rs. 29.47, bejhar Rs. 28.13 to Rs. 30.81, *jowar* Rs. 46.89 to Rs. 50.91, *guwar* Rs. 40.19, *methi* Rs. 61.62 and maize Rs. 29.47 a quintal.

In pulses, peas prices advanced by 67 nP to Re. 1.34 a quintal to Rs. 34.16 for *dara* and Rs. 36.17 to Rs. 37.51 for the farm quality on brisk Madras support. During the week, three wagons of peas were despatched to Madras, and stocks declined to 73,000 maunds. *Arhar* prices also advanced sharply due to good demand for conversion into *dal* as also owing to poor arrivals. *Urd* and *moong* ruled firm during the week in sympathy. But *moth* and *masoor* were quiet. Week-end prices were: *Arhar dara* Rs. 56.26, farm Rs. 61.62, *dal* Rs. 66.66 to Rs. 75.02, *urd* Rs. 80.38, *dal* Rs. 93.77, *moong* Rs. 53.58, *dal* Rs. 64.30, *masoor* Rs. 42.87 to Rs. 50.91, *dal* Rs. 53.58, gram *dal* Rs. 48.23, *moth dal* Rs. 44.21 and peas *dal* Rs. 37.51.

METALS RISE FURTHER

(From Our Own Correspondent)

CALCUTTA, *24th July*

Reports of a successful aid mission of the Finance Minister, Mr. Morarji Desai, led to expectations were that the recent cuts in metal imports would be withdrawn soon. Despite such expectations, however, firmer conditions continued to prevail in the local metals market during the week under review, and prices recorded more gains. The forthcoming meeting of the Aid-India Club in Washington is looked forward to with interest, as its proceedings would clearly indicate whether Mr. Desai's mission has been a success or not. The firmer conditions in the market were as a result of acute shortage in the face of renewed demand which is a feature of this season. At the same time, reports of surplus in some of the metals contributed to easier conditions in the important world markets.

On the London Metal Exchange, copper was maintained at £234 a ton. It would be noted that the price for the cash metal is being maintained at this rate for several weeks now, despite clear indications of surplus production and the U.S. inclination to release a sizable quantity from the strategic stockpiles. A 5 per cent reduction in output has been effected by several important mines in Africa, the United States and Chile. Kennecotts, the biggest producer of copper in the U.S., is, however, yet to announce a cut in production. This firm is currently negotiating with labour for the change in output schedule. After a mid-week fall in price on the New York Commodity Exchange, the price recovered and in fact crossed the week's opening rate. The movement either way was only fractional and insignificant. However, it was sufficient to narrow the backwardation.

In India, the absence so far of receipt of import licences for copper by actual users beyond September has caused serious anxiety to the nonferrous metals industries. The uncertainty going with the delay in New Delhi's decision on the subject can be easily understand in the light of the difficult foreign exchange situation the country is facing. Viewed thus, the report that the U.S. Government has assured Congress that its desire to cut aid to India by 10 per cent would be respected, although such a measure would not enter the Statute, only contributed to increasing the alarm. Copper supplies against D.L.F. import licences continued to arrive, but were inadequate to meet demand. This explains the continued keen demand for copper scrap, as a result of which utensil scrap also hardened from Rs. 562 per 100 kgs. to Rs. 568. Clean wire scrap was also accordingly a few points higher at Rs. 567.

Tin opened at £865 a ton in London and declined to £855 following lower demand and easier conditions in the Malayan market. The fall in the price was as a result of uncertainty in regard to the policy the U.S.A. would adopt on the proposed releases from stockpiles. Recently, it had been indicated that the releases would be spread over a period of four or five years. It had been urged on behalf of the producing countries that the U.S. should not only release the surplus in stages but also that the releases should only be made as and when the world price tended to rise above the ceiling fixed by the International Tin Council. Although it was reported that the U.S. Government was not likely to accept the recommendations of the Council in this regard, the Council decided at its recent meeting to send a delegation to Washington to put forward its view more elaborately before the American authorities. The delegation will be in Washington on 14th August. Note was taken of the Bolivian tin industry's plea to Washington that the latter's releases should not be at a price lower than £965 a ton. The uncertainty in regard to releases, it is feared, is gradually wiping out marginal producers. The fact that world output in the first quarter this year was lower than consumption is significant. According to figures released by the I.T.C., world output in the first quarter totalled 36,100 tons as against consumption of 40,500 tons. These figures do not, of course, include production of the U.S.S.R. and other Communist countries.

Tin, in Calcutta opened at Rs. 2,096.25 and gradually moved up to Rs. 2,110 per 100 kgs. The price of Rs. 2,160 per 100 kgs. in Bombay was a new record. The rise, despite easiness in world markets, was due to keen demand. On the other hand, demand for lead was at a lower level for a time, but in sympathy with the upward trend in other metals, the price moved up from Rs. 157.50 to Rs. 158.50 per 100 kgs. But the price was lower in London. Electrolytic zinc opened at Rs. 293.25 per 100 kgs. and closed at Rs. 309 in Calcutta. Demand was good. In London, an easier trend was in evidence.

KIPS FEATURELESS

(From Our Own Correspondent)

MADRAS, *23rd July*

There was no significant change in the hides and skins market here this week. Export business was patchy. Tanners held up their price ideas, while importers anticipated lower prices during the staggered August holidays and, therefore, displayed no keen interest. But there was some demand for light weight kips and lower selections in all averages. Inland demand for inferior cowhides was also in evidence. The market for buffhides and calf was dull. Arrivals of cowcalf were low and sellers were reserved, quoting fancy prices which did not attract business.

There were several inquiries from importers for tanned goat skins 5½/6 lbs. and 11/12 lbs. average, but 8/9 lbs. remained neglected. Export trading, however, was small, as tanners did not meet buyers' price ideas. Good demand persisted for heavier weight goat skins, but shippers had been in an oversold forward position. Prime and semi-prime sheep skins remained more or less neglected, but medium classes were in good demand, especially in higher average weights which had been arriving in smaller quantities.

The following were the ruling prices (in rupees) for all-round parcels, per lb. in the local market:—Tanned cowhides 8/8½ lbs. average 2.00 to 2.06, tanned cowcalf 1½/2 lbs. average 3.70 to 3.80, tanned buffhides 12/14 lbs. average 1.65 to 1.75, tanned buffcalf 1½/2 lbs. average 3.00 to 3.15.

JUTE GOODS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, *24th July*

The feeling among overseas buyers of jute goods that Indian prices had risen too high and that a break was necessary to enable them to enter into further commitments was duly reflected in the local market during the week under review inasmuch as their interest declined and prices, in turn, recorded a liberal fall. Reports that flood waters in Assam had started receding and the belief that earlier reports of damages to crop as a result of the floods had been exaggerated contributed to quiet conditions in the fibre market, and prices of most varieties, including the superior ones, recorded a fractional decline.

As was to be expected, the report of the heavy fall in the U.S. burlap consumption in the month of June had a bearish effect. Consumption was only 61 million yards, representing a decline of 12 million yards as compared to the previous month. This accounted for the rather heavy increase in the U.S. burlap stocks at the end of June to 234 million yards from 240 million yards at the end of the previous month. Throughout the week, only sparse interest was shown in bears on behalf of American buyers. This kept market circles guessing, especially because it is usually in the months of July and August that the U.S. lifts sizable quantities and enters into forward commitments. There was, therefore, the apprehension (not, of course, well-founded) whether this had any close connection with this week's bearishness on Wall Street and talks of the much feared slump. However, the majority in the trade refused to share this apprehension, and attributed this week's poor interest shown by the U.S. to their feeling that prices had risen rather high and that a lull may bring down prices to a more reasonable level. The same feeling explains why, after last month's heavy purchases, Argentina has been keeping out of the market.

However, now that prices have declined rather to levels more than perhaps desired by overseas buyers, the trade is optimistic that both Argentina and the U.S. would show interest in covering their requirements. The U.S., it was expected, would lift about 40,000 bales for July-September shipment.

It may be of interest to note that during a single day this week, prices for duty-paid 7½ oz. and 10 oz. 40" hessian fell by 10 cents to 10.20 cents and 14.20 cents per yard, respectively, in the New York burlap market. As in the last week, the U.K. was again a buyer of small quantities of hessian here and there. These factors explain this week's rapid fall in the price of hessian 40" 10 oz. from Rs. 57.50 to Rs. 53.10. It would be remembered that last month there was a time when buyers on behalf of Argentina desired to enter into further commitments at only below

Rs. 58. This was when the price was quoting Rs. 64. As such, it is reasonable to expect fresh support from Argentina, especially because the price has dropped even much below what Argentina had desired. It was thought reasonable that Argentina would soon lift about 15,000 bales for shipment in July-August.

During the week, ready B. twills fell from Rs. 128.50 to Rs. 123.50. That the fall has not been as pronounced as that in hessian should be noted. This has been so because prices of heavy goods had risen recently at a much slower pace than hessian. Besides, overseas inquiries, during the week, continued to be received in a fair number. Australia bought both B. twills and cornsacks for August-September shipment. The quantities involved were below earlier expectations in the market, and, as a result, further deals were thought to be in the offing. The quantities of heavy goods lifted by other countries, including West Africa, South America and Burma, were also of a hand-to-mouth nature. Purchases by the Government of India against its recent tender are for August-September shipment. There was great disappointment over the absence of Cuban interest, and this lent support to earlier fears of a setback in farm output in that country. It should be noted that Cuba has yet to cover its requirements for the year, and, although in view of the reported fall in agricultural production its purchases would be lower, it is expected that that country would show interest for fair quantities for August-December shipment. The small quantities now being lifted by foreign buyers affected the market sentiment, but there was optimism that overseas interest would get widened in the near future. It was also expected that more tenders from the Government of India would shortly be issued.

Meanwhile, it is unfortunate that traders continue to experience difficulties in getting customs clearance of shipments, especially those meant for the U.S. This is delaying shipments and leading to disappointment both at home and abroad. As already reported before, the customs authorities insist on clearance to be based on prices prevailing on the day shipping bills are presented. If the market prices are lower, obviously there is no difficulty. It has been pointed out on behalf of overseas buyers that, when customs authorities are refusing clearance of goods on lower-priced contracts, the former do not also desire to enter into commitments at higher prices. It is, therefore, obvious that, if the clearance difficulties continue, India's reputation for prompt delivery is at stake. The U.S. is India's best customer for hessian, and it is in regard to shipments to that country that delays are occurring as a result of the customs difficulties. The trade has urged that it is high time higher authorities intervened in the matter. Another source of anxiety to the mills and trade alike is the apprehension of a power cut. Although the proposed cut by 15 per cent has been postponed by the Calcutta Electric Supply Corporation Ltd. in deference to the Government's desires, it is to be noted that shedding has now become oftener than before. However, jute mills have been spared from this shedding. It is, therefore, good news that the negotiations, which the Government of West Bengal is conducting for increased supplies from the Damodar Valley Corporation, are reported to have been successful.

Some of the West Bengal districts, which had been experiencing inadequate rain and fearing difficulties for retting, had heavy showers during the week under review. This coupled with reports of recession of flood waters in Assam led to quiet conditions in the fibre market, with sellers keen for business at discounted rates. Mills showed only little interest. New crop arrivals increased in the agencies. The Sept Oct. daissee bottoms fell from Rs. 35 to Rs. 34.50, the Aug-Sept. northern bottoms lost Re. 1 at Rs. 31 and Assam bottoms declined by 50 nP to Rs. 31.50. Export business to the extent of 15,000 bales in lower varieties of the old crop materialised during the week. The crop has been estimated at 7 million bales, which, together with the carry-over of about 2½ million bales, is considered sufficient to meet requirements of mills as well as the export quota of 200,000 bales. The crop in Pakistan is also expected to total about 7 million bales and the carry-over in that country is placed in the vicinity of 2 million bales. Fibre prices in Pakistan were quiet during the week. Reports that as a result of the floods the crop would be affected, were circulated by interested parties, but, despite this, demand did not show any sign of revival. However, it should be stated that arrivals of new crop have been rather slow because of which loose jute was steady. Pucca bales hardly drew attention. The visit to Dacca of the Central Pakistan Minister of Commerce was followed by his assurance that the Government would do all in its power to ensure a reasonable price to the grower.

The feature on Tuesday last in the goods market was further buying of B. twills on Government account for August delivery. However, since business from other quarters was only nominal, ready B. twills eased from Rs. 128.50 to Rs. 128. Ready hessian 40" 10 oz. dropped from Rs. 57.50 to Rs. 56.75 in the absence of overseas inquiries. On Wednesday, conditions were unchanged, with the late recovery in B. twills to Rs. 128.65 attributed to exaggerated reports of floods in Assam and Pakistan. Hessian 40" 10 oz., however, eased to Rs. 56.50. At these levels fresh overseas business was lacking, and B. twills on Thursday receded to Rs. 127.10 and hessian 40" 10 oz. to Rs. 55. The futures market came under selling pressure, and, as a result, ready B. twills moved down to Rs. 124.75 and hessian 40" 10 oz. to Rs. 53.25 on Friday. Over the week-end, lower levels attracted buying support as a result of which B. twills recovered to Rs. 125.75 and hessian 40" 10 oz. to Rs. 53.75. But, with overseas inquiries lacking, trading was featureless yesterday, with ready B. twills quoted at Rs. 123.50 and hessian 40" 10 oz. at Rs. 53.10.

TARIFF CHANGE KEY TO GREATER ECONOMIC GROWTH

(*Concluded from page* 150)

to look more fully into the solid accomplishments and great potentialities of the United Nations in the vital task of promoting development.

"In conclusion, I would like to summarise what I have been saying and then give you my guess as to the progress which can be expected in the United Nations Decade of Development. I have asserted that, in the countries in transition, we are faced with one of the great revolutionary movements in all human history; that progress in this decade in speeding their development, particularly in the agricultural sector, may well be the determining factor in whether the world moves towards peace with justice or towards chaos; and, finally, that satisfactory progress can be achieved but only with intensified effort on the part of all the modernising countries and substantially improved administration of external aid programmes.

"Now for my forecast. I believe that fifteen, perhaps twenty, of the less-developed countries will make a break through from poverty to decent living standards by 1970. And nothing is so much needed today as examples of countries which, under free institutions, have achieved such a break through. Further, the momentum built up in achieving this goal would assure further gains in the decades ahead and perhaps make a reality of this century's greatest dream—and that is that, by the year 2000, poverty, illiteracy and chronic ill-health will have been wiped from the face of the earth."—*P. G. Krishnayya's News Service.*

BANKING

(*Concluded from page* 152)

Some of the other important suggestions of the Seminar are: (1) A credit information bureau be organised jointly with the State Bank of India and the Exchange Banks' Association. (2) A clearing house be provided at all places having about five banking offices if the volume of cheques warranted it.

Finance for Foreign Trade

After examining the need for and the methods of, financing foreign trade, the Seminar made the following recommendations which have a direct bearing on export promotion:

The procedure prescribed for borrowing by banks from the Reserve Bank against export bills under the Bill Market Scheme should be simplified so that refinance is available (i) on the aggregate amount of export bills outstanding at any time, (ii) on a single signature of the Bank, and (iii) for a period upto 180 days.

Refinance required for medium and long-term export credits should be provided by the Refinance Corporation for Industry.

The coverage extended by the Export Risks Insurance Corporation (E.R.I.C.) in respect of packing credit policies for pre-shipment advances by banks should be extended from 50 per cent. to 85 per cent. of the risk involved.

E.R.I.C. should consider the possibility of providing post-shipment cover whenever required by the banks without the intervention of the exporter.

To provide adequate incentives, the E.R.I.C. should consider granting a "no claim bonus" to the exporter.

In order to bring about greater co-operation between E.R.I.C. and the banks, frequent consultations between the two should take place on matters of mutual interest, including the settlement of claims. For this purpose the Indian Banks' Association should constitute an Advisory Committee of banks.

To provide more incentives private commercial banks, which finance exports from the stage of manufacture to the point of shipment, should be given the due share in the resultant foreign exchange business even though such exports might subsequently be channelled through the State Trading Corporation.

The Seminar adopted a resolution recommending the introduction of consumer and personal loans as and when conditions justified them. It advised banks to consider the feasibility of introducing gradually some of the services rendered by banks in other countries such as prompt payment or Teller System, drive-in-banks, night safe service, personal money orders, festival clubs, gift cheques, collection of salary and pension bills, preparation of income-tax returns, etc. Perodical surveys of customers opinions were also suggested. The Seminar felt that, since the pay scales and conditions of service of bank employees are laid down on an all-India basis by comprehensive awards by Tribunals, banks should be exempt from the numerous State enactments relating to labour. It adopted a resolution urging the Indian Banks' Association to make suitable representation of the Government in this regard.

Notices

BRITISH PAINTS (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company, 32 Chowringhee Road, Calcutta-16, at 11 a.m. on Tuesday the 21st August, 1962, to consider and, if thought fit, to pass the following resolutions with or without modification:

(*a*) AS A SPECIAL RESOLUTION:

"That in view of the proposal contained in the next succeeding resolution that Mr. Robert Alfred Godwin be appointed a Director of the Company, consent be and is hereby accorded to Mr. Robert Alfred Godwin holding and continuing to hold an office or place of profit under the Company as Technical Director or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration and otherwise as the Directors may from time to time determine, subject to the Central Government's approval and, in the meantime, on the terms set out in the Resolution of the Board of Directors passed on the 27th June, 1962, a copy of which has been laid on the table and signed by the Chairman for the purpose of identification."

(*b*) AS AN ORDINARY RESOLUTION:

"That due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Robert Alfred Godwin be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the said Act, as a Director of the Company."

By Order of the Board,
BRITISH PAINTS (INDIA) LIMITED,
S. R. ROY,
Secretary.

CALCUTTA, 20*th June*, 1962.

N.B. (1) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and vote, instead of himself and the Proxy need not be a Member.

(2) Explanatory Statement as required by the Companies Act, 1956, has been posted to the Members along with the notice.

PHILLIPS CARBON BLACK LIMITED

31, NETAJI SUBHAS ROAD, CALCUTTA

AMENDED NOTICE OF BOOK CLOSING IN RESPECT OF ISSUE OF RIGHT SHARES

THE REGISTER OF MEMBERS AND SHARE Transfer Books of the Company will be closed from 13th August to 16th August 1962, both days inclusive, instead of 30th July to 16th August 1962 as published previously.

By Order of the Board,
DUNCAN BROTHERS & CO., LTD.,
Secretaries & Treasurers.

23*rd July*, 1962.

MADRAS STOCK EXCHANGE OFFICIAL YEAR BOOK

From 1952 to 1961, the authorities of the Madras Stock Exchange, which will be celebrating its Silver Jubilee in September next, have been regularly bringing out every year the *Official Year Book* to render useful service to the investing public and help it assess the strength and merits of its holdings in shares, securities and debentures. And it goes without saying that, during all these nine years, the *Year Book* has been another valuable guide for investors in the country. Way back in 1933, when trunk telephone facilities were established, Madras and the surrounding principal cities came to be in constant touch over the telephone with the main financial centres of Bombay and Calcutta. The sphere of interest and activity on the Madras Stock Exchange has broadened since then. Rightly therefore has the *Year Book* not confined itself to the corporate sector in the South but covered all the leading companies of the country, old and new alike. The recently brought out ninth edition of the *Year Book* is in keeping with its rich traditions. It contains systematically revised and up-to-date information on companies, details relating to the Central and other State loans, schedule of income-tax, rates of estate duty and other taxes, official quotations of securities on the Bombay, Calcutta, Madras and other stock markets on selected dates to help wealth tax and capital gains tax assessments and the text of the Securities Contracts (Regulation) Act, 1956 and the rules framed thereunder. At Rs. 12.50, it is priced Rs. 2.50 higher than the eighth edition, but then its size has also been increased by 33 pages to 1,141 pages.

MORE REALISM NEEDED IN WESTERN EUROPE

REPORTS from Brussels and London on the treatment to be accorded to Indian goods by the European Economic Community (E.E.C., for short; also known as the Common Market) when Britain joins it are not reassuring. They show that, despite the reiteration by the Governments of Common Market countries of their appreciation of India's need for an expanding export market, their deputies at the negotiating table have taken an inflexible attitude. Notwithstanding all the explaining done by India's Finance Minister, Mr. Morarji Desai, to the top members of the British and Common Market Governments, the position seems to be where it was before he went to Europe. As early as on 13th June, the spokesmen of the E.E.C. were reported to have taken the stand that imports of Indian cotton textiles into the U.K., which are now duty-free, should be subjected to an import duty right from the beginning of Britain's entry into the Common Market and that the full external tariff common to all the E.E.C. countries should be brought into force by the end of the transitional period, which, it was believed, would be 1970. In making this condition, they were only accepting *in toto* the proposal put forward by the British Government. So far as the other goods were concerned, as, for instance, tea, tobacco, hides and skins and jute manufactures, they were unwilling to accept even the British proposals, let alone those of India. Their contention was that these should be subject to negotiations for a trade agreement with the countries concerned. One report claimed that, as against the British proposal of no tariffs on imports of tea from the Commonwealth nations, the E.E.C. spokesmen wanted that commodity also to be treated more or less in the same fashion as cotton textiles. This attitude suggested that they were prepared to accept only those British proposals that suited them and reject the rest.

It was hoped in this country that, as a result of Mr. Morarji Desai's talks with the Ministers of Common Market countries and the suggestions made by Mr. K. B. Lall, Indian Commissioner-General for Economic Affairs in Europe, a liberal stand would be taken towards India and other Asian members of the Commonwealth. But from what Mr. Lall said in Brussels on Wednesday this week, it looks as though this hope will not be fulfilled, unless, of course, the Ministers reverse the decisions taken by their deputies. This prospect is not in consonance with the favourable outcome of the Aid-India Club meeting at Washington on 30th and 31st July. At that meeting, the European members of the Consortium recognised India's need for foreign aid, but the same members are reluctant to concede even those measures that are designed to make sure that India's export trade does not suffer as a result of Britain becoming a member of the Common Market. Actually, it will not be enough if India only maintains its exports to Britain and the members of the European Economic Community. It has to increase them by 15 to 20 per cent if its development plans are to be successfully implemented. How can it do so, if fresh impediments of the type proposed by the E.E.C. are placed in its way?

Full details of the proposals made by the deputies of the Common Market countries are not available. But even the little that is known is sufficiently disturbing. Thus, it is said that Britain should impose the common external tariff on cotton textiles in three stages as was proposed by that country itself in its note submitted in June, that is, 30 per cent of the external tariff which is 18 per cent as soon as Britain joins the Market, another 30 per cent 18 months later and the balance by the time the E.E.C. countries themselves apply the final external tariffs, that is, 1970. The only new feature is the inclusion of an arrangement to guarantee a specified quantity of textile imports till 1966, but it is not known what this quantity will be. On all other manufactures from India, the common external tariff should be made applicable in a period of seven years at the rate of 15 per cent every year. This would mean that, by 1970, all the preferences which India is now enjoying in Britain will be eliminated. The position in regard to tea, jute and oilseeds is still not clear, while a modest reduction in the common external tariff from 9 to 5 per cent is proposed in regard to kips.

The implications of the stand now being taken by the Common Market countries were briefly and yet clearly stated by Mr. Lall in a talk with Pressmen in London and Brussels. The net effect would be a shrinkage in India's exports to Britain (which amount to about a third of its total exports), with no clear prospect of any improvement in its exports to the expanded Community as a whole. The negotiators for the Common Market do not realise that India is being asked to accept a major change in its pattern of trade and assume a large risk. They have, of course, proposed that the Community, on the one hand, and India, Pakistan and Ceylon, on the other, should enter into a comprehensive trade agreement. This proposal technically satisfies the requirements of G.A.T.T., but "the declaration of intent concerning this agreement," to quote Mr. Lall, "is too vague." "While the progressive application by Britain of the Community's common external tariff on goods imported from India, Pakistan and Ceylon has been specifically laid down, any measures which would benefit the trade of these countries are left in the air. There is not even an implied indication of the lines on which the new trading arrangement with the developing Asian nations of the Commonwealth would be based." This approach, to say the least, is most unfair. Mr. Lall was, therefore, perfectly justified in asserting that "a country which has to depend on export earnings needs some definite assurances before it could be expected to forgo the beneficial arrangements it has been enjoying." We in this country are unable to understand as to why the Common Market countries hesitate to give adequate and satisfactory assurances to safeguard India's reasonable trade needs (as well as those of Pakistan and Ceylon). They are rich in every sense of that word and can afford to take some risks, whereas India is poor in every sense of that word, with no reserves left to face the prospect of a setback in its exports. The European countries are free from unemployment, whereas India is suffering from heavy unemployment. Besides, they have no population problem of the type confronting India. The Commonwealth preference system has not stood in the way of their economic growth and prosperity. It is not India which wants this system to be eliminated but the members of Western Europe. They feel that it would do them good if they united themselves politically and economically. India has no objection to their thus getting together. All that it wants is a fair opportunity to trade. What appears to be a fair commercial policy for a developed country, it needs to be added here, cannot be equally fair to an underdeveloped country. It is neither realism nor far-sightedness for the rich European countries to believe that they can safeguard their high living standards for ever by putting up a high tariff-cum-quota wall against the goods of over-populated and relatively underdeveloped countries. They do give aid, of course, liberally to some countries and grudgingly to others. But, even where it is liberal, the aid covers only a part of the foreign exchange requirements of the developing countries. Further, as aid is mostly in the form of interest-bearing loans, it imposes on the recipients obligations to pay the interest regularly and return the principal as and when it falls due. Aid thus implies that the countries giving it must be prepared to permit more imports from the countries taking it.

A PLAN FOR RURAL INDUSTRIES

NEITHER industries connected with the processing of agricultural commodities nor a few large industries established in the rural areas would involve "rural industrialisation," as the term has come to be understood in the last one year. Originally conceived by Mr. Jayaprakash Narayan and recently concretised, in terms of a practical plan, by the Rural Industries Planning Committee of the Planning Commission, this concept of rural industrialisation connotes "an even spread of (small) industries throughout the countryside all over the country," based on local resources and local needs. It is fundamentally akin to the Gandhian concept of "villagism," as developed by Dr. Bharatan Kumarappa in the forties, in that it says that the raw materials for rural industries should be *mainly* obtained from the locality around, that is, at the most, an entire district, and such industries should *primarily* meet local needs. But it is also different from the Gandhian concept in one vital respect, namely, that it should, according to Mr. Jayaprakash Narayan himself, involve "no preconceived limitations or inhibitions of a doctrinaire or sentimental type in regard to such matters as the use of power and technology."

Gandhians, incidentally, have displayed a salutary deviation from their orthodox approach to the use of power in village industries, as will be evident from the Khadi and Village Industries Commission's policy statement of 15th February 1962 on the subject. According to this statement, the use of electrical or mechanical power for any operation or process under any of the Commission's programmes would be encouraged or permitted by

the Commission on the twin condition that the level of productivity and the income of the workers would be raised thereby and that such use of power would not be detrimental to the concepts of self-employment and decentralised production. But, then, the Commission has whittled down this concession by urging that power itself should be produced, on a decentralised basis, from *locally* available sources of energy, such as waterfalls, flowing streams of water, wind, the sun, cowdung, and night soil to boot! It is, however, significant that "decentralised production of power as a primary village industry" does not figure in the illustrative list for "area development" of village and small industries given in the report (July 1962) of the Rural Industries Planning Committee, of which Mr. V. L. Mehta, Chairman of the Khadi and Village Industries Commission, was also a member. Obviously, the Committee has thought only in terms of a centralised source of power for most of the industries listed by it for "area development," though it does not seem to have ruled out the possibility of rural electrification with the help, wherever possible, of small hydro units of upto 100 kw. capacity in preference to diesel-alternator sets. Whether the common source of power for a certain rural area selected for intensive development of small industries is a relatively large-scale or a relatively small-scale enterprise does not seem to be quite so important to the Committee as the consideration that the programme for rural industries and the programme for rural electrification should go hand in hand. The Committee has, of course, recommended, probably for the purpose of comparative evaluation, that some of the areas to be selected should be those which are not expected to be electrified to any extent in the next few years. But, by and large, the availability of power from a common source is a pre-condition for the launching of the first series of "rural industries projects" recommended by the Committee.

The principal objective of these projects is to create, maintain and expand non-agricultural employment in rural areas where the continuing additions to the labour force are absolutely too large to permit of their wholesale absorption in large-scale industries in urban areas. Although the 46 projects (two or three for each State, except in the case of Uttar Pradesh which is to have five) just approved by the Planning Commission are not called "pilot projects," they are intended, all the same, to provide the necessary experience so that the lessons thereof may be more generally applicable. It is also envisaged that the projects for rural industries should form part of a wider and well co-ordinated plan of local development. Such co-ordination with local or regional development plans is probably intended, among other things, to provide a ready market for some of the products of the "rural industries projects" in the other local projects. It will be seen from the Rural Industries Planning Committee's illustrative list of industries, given in the following paragraph, that several industries could cater to the needs of other local projects and several others to the needs of local consumers, while many modern small-scale industries in category (ix) would compete with the products of large-scale industries in urban areas.

The illustrative list of village and small industries to be developed in a project area (covering a complete development block with a population of 300,000 to 500,000) shows nine major categories, namely, (i) traditional village industries, (ii) handicrafts, (iii) khadi, (iv) handloom and powerloom, (v) sericulture, (vi) agricultural processing industries, (vii) industries using local raw materials such as tanning, ropes and bonemeal, (viii) industries meeting local needs such as agricultural implements, Persian wheels and buckets, roofing tiles, brick kilns, domestic utensils, soap, and construction of doors and windows, and (ix) small-scale industries to be developed in association with large-scale industries, or independently with common service and marketing facilities, such as sports goods, bicycles and parts, leather footwear, surgical instruments, scientific glass apparatus, leather goods industry, electric motors, diesel engines, plastic goods industry, cutlery, paints and varnishes, fountain pens and nibs, domestic electrical appliances, builders' hardware, assembly industries of various kinds, forge shops and machine shops.

As the projects for the "intensive and integrated" development of "all kinds" of aforesaid small industries over a period of upto 10 years are proposed to be liberally financed at the rate of an assured minimum of Rs. 20 lakhs for each project in the four-year period 1962-66 (in addition to funds available from the State Plan and the all-India Boards, loans and credits from financial and co-operative institutions and under the State Aid to Industries Act, and further provisions according to need), the output of these industries may be expected to eat, to some extent, into the market for large-scale industries in some lines and to have to face the competition of large-scale industries in some other lines. The output of rural industries, if developed over the whole countryside in the light of experience gained from the present 46 projects, will be substantial in quantity. It, however, remains to be seen whether or not the measures proposed for educational and training facilities and industrial extension and technology will actually bring about quality production at relatively low unit costs. If the latter results in terms of good quality and comparative cheapness do not follow, the idea of according protection to the rural industries is bound to be canvassed vigorously, all the more so because many or most of the rural industries in the project areas will be organised on co-operative lines. It may be recalled, in this connection, that, in his original proposals of August 1961, Mr. Jayaprakash Narayan had stated as follows:

"In view of the accepted aims of social and economic justice, private-profit interests should not be allowed, as far as possible, to exploit the field of rural industry and commerce. A well-planned approach might create a rural industrial and commercial sector that would be predominantly socialist in character.

"The extremely important question of providing protection to the rural industries from the competition of urban industries will have to be tackled.

"The appropriate agencies at the ground level that will have to carry through the programme of rural industrialisation .... should be co-operatives and *panchayat* institutions...."

Both the Rural Industries Planning Committee and the Planning Commission are, of course, silent on the idea of protection for rural industries. On the question of co-operative organisation, however, they have both clearly laid down that the projects "are intended to promote the development of a co-operative agro-industrial economy." While it may be argued that a growing co-operative sector in industry will be a counterpoise to the private industrial sector, its growth is bound to bring to the fore, at some stage or other, the question of possible protection of the kind envisaged by Mr. Jayaprakash Narayan. We are not suggesting here that no such protection should be accorded to rural industries, for that is a question for debate only if and when it crops up. For the present, we are merely highlighting this possibility, for there is no point in slurring over a potentially controversial aspect of the matter.

COMMUNITY DEVELOPMENT

A GREATER agricultural bias is now sought to be imparted to community development—at least on paper and in official discussions. Mr. Gulzarilal Nanda, Minister for Planning, has just told the Annual Conference on Community Development and *Panchayati Raj* this week at New Delhi that agriculture is the most important single factor in the country's economic situation and that it would have to be "our major concern for many years to come." In his presidential address to the Conference, Mr. V. T. Krishnamachari has pointed out that, with the large expansion of industrial programmes in the third and fourth Plans, a much stronger agricultural base would be necessary. The objectives of doubling, by 1971, the agricultural production as it stood in 1961 and doubling *per capita* agricultural production by 1976, according to him, would call for much greater efforts on a national scale. The Conference itself has expressed the opinion that the preparation of village agricultural production plans should be the principal means for involving all cultivators in the village in the agricultural effort. As general statements, all these opinions are unexceptionable.

But it is at the practical level of implementation and organisation in tens of thousands of villages that difficulties arise. Mr. Nanda has done well to emphasise that the problem is essentially one of organisation of available resources and the timely supply of materials like fertilisers. But his conclusion that any agricultural shortfalls would not be due to deficiency in resources is a little difficult to understand in the context of the known inadequacy of physical resources. For instance, the quantity of improved seeds distributed in C.D. Blocks has not increased; in 1960-61 (October 1960 to September 1961), it was only 267,000 tons, as compared with 304,000 tons in the previous year. Over the country as a whole the availability of improved seeds still represents only a very small proportion of the annual seed requirements. As for chemical fertilisers, the quantity distributed in C.D. areas was 741,000 tons in 1960-61, as compared with 540,000 tons in 1959-60. The increase in the offtake of fertilisers in 1960-61 was, however, not commensurate with the demand for them. That the inadequacy of fertilisers in the country as a whole is a continuing phenomenon should be clear from the following passage in the 1961-62 Report of the Union Ministry of Food and Agriculture (Department of Agriculture):

"Fertilisers and manures are among the key supplies necessary for raising agricultural productivity. The demand for nitrogenous fertilisers has been increasing rapidly in recent years, but it has not been possible to meet it in full due to inadequacy of internal production and shortage of foreign exchange needed for imports. The demand for nitrogenous fertilisers during 1961-62 amounted to about 2.7 million tons in terms of ammonium sulphate, while their availability, including internal production and imports, has been estimated at about 1.5 million tons. The deficit has to be met largely by imports, while, side by side, every effort is being made to raise the level of internal production by establishing new fertiliser factories."

In the field of minor irrigation, there is no reliable estimate of the additional area covered in recent years, though figures of expenditure are available. For instance, the expenditure on minor irrigation from out of block funds in 1960-61 was Rs. 12.5 crores, as compared with Rs. 10.4 crores in 1959-60. No official report—whether it be of the Ministry of Food and Agriculture or of the Ministry of Community Development and Co-operation—has provided figures of additional acreage covered by minor irrigation. Merely to say that minor irrigation under both Agriculture and Community Development programmes will benefit an additional area of 12.8 million acres in the third Plan period is not enough. Perhaps the experience of the first and second Plan periods, when many older minor irrigation sources had silted up and become useless at the same time as newer sources were being created, is being repeated now. What *net* addition to the area under minor irrigation has taken place in recent years? That is the most relevant question, for which the answer can only be in the nature of a wild guess.

It would thus appear that Mr. Nanda's view that there are "enough resources under several programmes—seeds, minor irrigation, etc."—cannot stand close scrutiny. While more *effective* organisation of available resources and *efficient* administration of production aids, especially in the Community Development areas, are certainly called for, it must be recognised that they cannot wholly make up for the large deficiencies in physical resources as such. A much bigger drive for producing more urban compost, rural compost and green measures could add substantially to the manurial resources in terms of organic nitrogen in the next two or three years. The supply of improved seeds could be greatly increased year after year, if all the well-to-do farmers in a village are prevailed upon to multiply on their holdings the approved seeds required for the entire village. The villagers, through their *panchayats*, should also be persuaded to undertake specific commitments in regard to maintenance of irrigation sources, afforestation and soil conservation. Everything cannot be pumped into agriculture from above for all time. The incidence of land revenue at the present time is so little in relation to income from land that there is enough scope for mobilising more resources locally for use in agriculture.

MARKET GOSSIP

Aid-India Consortium

IT may sound paradoxical if it is said that the outcome of this week's meeting of the Aid-India Consortium at Washington is both encouraging and disappointing. Nevertheless, the description is apt. Thus, while the meeting has taken, unlike on two previous occasions, a firm decision on the quantum of aid for the second year of the third Plan, albeit four months after its commencement, and the quantum itself is higher than the initial commitments announced in June 1961, the aggregate matching contributions from the members other than the U.S. is short of the U.S. pledge of $500 million by $65 million, notwithstanding the addition of four new members who have agreed to contribute $79 million. One would ask: is the amount representing the gap so large as to be beyond the means of the countries? Certainly not. Moreover, the U.S. did not, contrary to the hopes expressed by some, announce its commitment of $500 million, even though the "full" matching contributions were not available, though it is gratifying that the U.S. has indicated that it is still prepared to match any further commitments which the other member-countries may make in the 1962-63 fiscal year upto a total U.S. contribution of $500 million for this year. What is worse, no indication was given at the meeting as to how much of the promised aid would be given in the form of untied credits, an aspect which, as will be shown presently, is very important in the context of the pressing "current" exchange needs of the country.

The one gratifying feature about the Aid-India Consortium meeting is the recognition, by the majority of members, of the urgency of giving assistance to India. The four new countries that have joined the Consortium as members are Italy, the Netherlands, Belgium and Austria. Their combined contribution is $79 million, made up of $53 million by Italy, $11 million by the Netherlands, $10 million by Belgium and $5 million by Austria. This contribution, together with the increase in commitments by the other members (excepting West Germany), the World Bank and the International Development Association, has raised the total commitment for the second year to $1,070 million (Rs. 509 crores) from the initial figure of $930 million (Rs. 443 crores). The table below shows at a glance the authorisations made by the Aid-India Consortium members:

(In million U.S. dollars)

	1961-62 final authorisations	1962-63 Initial commitment	1962-63 Authorisations now announced	Total for two years Initial commitment	Total for two years Authorisations now announced
U.S.A.	545	500	435	1,045	980
U.K.	182	68	84	250	266
W. Germany ..	225	139	139	364*	364
Japan	50	30	55	80	105

Belgium	..	..	10	..	10
Austria	..	..	5	..	5
World Bank and I.D.A.	250	150	200	400	450
Total ..	1,295 (616)	930 (443)	1,070 (509)	2,225 * (1,059)	2,365 (1,126)

* Exclusive of $61 million offered for the period covering 1963-64 to 1965-66.
Figures in brackets are in crores of rupees.

West Germany is the only country among the original members that has not improved upon its previous pledge of $139 million for the second year. This is surprising. Indeed, if there is any country which can afford to be more generous in extending aid to India, it is West Germany. For the economy of West Germany is highly prosperous, with a high level of production and plentiful holdings of gold and foreign exchange. Since India, too, has contributed quite significantly to the economic prosperity of West Germany, it can justifiably expect this country to be more liberal in aiding India's development programmes. India has been one of the major outlets for a number of goods, especially capital goods, produced in West Germany. Thus, between 1950-51 and 1960-61, the total value of imports from West Germany has gone up from a low of Rs. 10.21 crores to as high as Rs. 122.52 crores (Rs. 118.21 crores in 1961-62), whereas India's exports to that country have risen from Rs. 8.86 crores to just Rs. 18.94 crores (Rs. 19.85 crores in 1961-62), with the result that India continues to have heavy deficits in balance of trade. The actual deficit was Rs. 103.58 crores in 1960-61 and Rs. 98.37 crores in 1961-62. These figures give one an idea of the colossal amounts of foreign exchange India has spent to import goods from West Germany all these years.

The total authorisations by the Aid-India Consortium for the first two years of the third Plan, as already noted, now comes to $2,365 million Rs. 1,126 crores), which is no doubt over 90 per cent of the estimated foreign exchange requirements of India ($2,600 million or Rs. 1,238 crores) for the two years. But this estimate is an old one, based on the level of prices prevailing nearly two years ago. Taking into account the rise in prices that has taken place since then, the requirements will be much higher than the figure of $2,600 million, so that the gap between authorisations and the actual requirements (for the first two years) is wider than $235 million. The *communique* issued by the World Bank at the end of the Consortium's meeting does not hold out any prospect of the gap being filled. All that it says is this: "A further meeting of the ten nations to consider *later* (italics ours) requirements of India's third Plan would be held at a future date—probably next winter—after consultation with the Government of India." Apparently the word "later" means to imply only the aid requirements of India for the remaining three years of the Plan. Incidentally, it may be noted that the Aid-India Consortium has so far confined itself only to the first two years of the Plan, whereas the Aid-Pakistan Consortium has covered three years.

There is no indication yet of the nature of the aid that would be extended by the Consortium members. This is a very vital point because of the supreme urgency of financing maintenance imports which cannot be paid for from out of the aid given either by the Consortium members or by the Soviet group, inasmuch as the aid is to a large extent country-wise and project-wise. The member-countries of the Consortium would certainly be helping India considerably if they were to make available a part of the aid in the form of untied credits. Needless to say that India is no longer in a position to draw down its foreign assets to finance its development and, unless adequate untied credits are obtained, it will be hard put to keep its existing industries going. It may be noted here that, in their calculation of foreign exchange requirements for the third Plan, its authors have estimated that the country will require Rs. 500 crores out of the foreign aid for maintenance imports.

The aid-giving countries would also do well to hasten the process of releasing for actual use the funds already authorised. This aspect has to be specially stressed, because, although full seventeen months have elapsed since the third Plan began, quite a sizable part of the authorisations made for the first year has still not been released. An official spokesman is reported to have very aptly remarked: "Almost half of the second year of the third Plan would have gone without the full support of the projected foreign aid and, in the second half, good span of time will be taken in the completion of formalities and procedures to transform the belated commitments into practical aid operations. In view of these delays, we wonder what is going to happen to imports in the next year and the remainder of the Plan period for which no advance commitments are yet in sight." We would only add to this remark that the long delay between the date of aid authorisations and the date of actual release has been due as much to the procedural delays in the release of funds by the aid-giving countries as to the red-tapism and lack of high level efficiency in administration at both Central and State levels in India. How else is one to explain the gross under-utilisation of the credit offered for the year 1961-62, not to mention the underutilisation in the second Plan? As against a total amount of Rs. 1,158 crores of external assistance (including the second Plan carryover of Rs. 707 crores) that was available, the amount actually spent in 1961-62 was no more than Rs. 278 crores, leaving an unutilised balance of Rs. 880 crores as on 31st March 1962!

Plan To Strengthen U.S. Economy

A ten-point plan to improve the competitive position of the U.S. in world markets and to correct the disequilibrium in its balance of payments has been put forward by a group of top American businessmen. The plan, submitted to President Kennedy last week, was prepared by a Committee of the U.S. Chamber of Commerce constituted by the Chamber's President, Mr. H. Ladd Plumley. The Committee, Mr. Plumley pointed out, was concerned with the re-emergence, after many years, of an international competitive order and the necessity of fitting the U.S. economy to the requirements of that order, without sacrificing the commercial principles in which the U.S. believed.

The Committee found that the situation in respect of U.S. trade and balance of payments was "serious and urgently so," although it was not "immediately critical" because of the U.S. gold stock and convertible currency holdings as well as the world's willingness to hold dollar assets. It recommended the following ten-point programme of policy guidelines for dealing with the situation:

Continued efforts to develop multilateral co-operation for strengthening the international financial structure.

Reassessment of U.S. unilateral governmental transfers and military spending abroad to eliminate unnecessary drains.

Increased efforts to persuade major Allies (of the U.S.) to shoulder a greater share of the common burden of free world defence and aid to developing areas.

Rejection of any move towards limiting the U.S. as a capital market.

Adoption of an interest rate policy flexible enough to bring U.S. rates into line with those of its major trading partners, whenever necessary.

Maintenance of the present dollar price of gold.

Forthright rejection of inflationary monetary and fiscal policies.

Increasing efforts along the lines set forth in the Trade Expansion Act to reduce tariffs and other barriers to world trade.

Reduction and revision of U.S. tax schedules to stimulate investment at home and abroad.

Continued encouragement of U.S. companies to compete more actively abroad.

The future balance of payments position of the U.S., in the Committee's view, would be determined primarily by one thing: the ability of American business to compete successfully and adequately in all markets of the free world. The present balance of payments situation threatened the U.S. and world monetary arrangements. Despite its big reserves, the U.S. could not sustain for long gold losses on the scale witnessed in recent years.

The Committee emphasised that the U.S. must be preserved as a free and unrestricted market for the flow of capital funds to preserve the integrity of the dollar. It pointed out that interest rate was an essential part of the balance of payments adjustment mechanism. If the freedom of capital movement was to be preserved and if interest rates in the U.S. were too low in relation to those abroad, either the U.S. rates must rise or the foreign rates must decline. While it is of the utmost importance that the principle of interest rate flexibility should be accepted in the other major countries also, the U.S., the Committee pointed out, could not avoid the same discipline, if the dollar were to be retained as a key unit of international exchange. In the present context, this observation of the Committee means that interest rates in the U.S. must be allowed to rise. It is a rare phenomenon to see businessmen advocating higher rates of interest. It only shows that American businessmen are not hide-bound and that they are realistic enough to recognise the force of circumstances.

U.K. Repays I.M.F. In Full

Britain has made a substantial contribution to the maintenance of the revolving character of the resources of the International Monetary Fund by repaying the entire amount of $1,500 million which it had borrowed last year from the I.M.F. in less than a year. The final instalment of $512 million was repaid on 31st July 1962. The U.K., it may be noted, was under no obligation to repay the entire drawing, which, incidentally, was the largest which the Fund had ever granted to any country, in so short a period. In fact, it did not have to repay the amount in less than three to five years, the normal period allowed for repayments.

The U.K. has, however, entered into a stand-by arrangement with the I.M.F. which authorises drawings upto the equivalent of $1,000 million during the twelve-month period beginning on 8th August next. This is only a short-term arrangement designed to provide continuing protection against temporary pressures which might develop against the pound sterling. In requesting the stand-by arrangement, the U.K. Government has assured the I.M.F. that it would continue the policies necessary to maintain a satisfactory balance between demand and resources. One of the principal objectives would be to keep the growth of money incomes within the limits set by the long-term rate of increase in output. It has pointed out that its economic policies are designed to provide a sound basis for growth and further strengthening of the balance of payments position.

It is pertinent to note, in this connection, that Britain would not have been able to score this major achievement but for the firm but unpopular policies followed by Mr. Selwyn Lloyd, the erstwhile Chancellor of the Exchequer, who was unceremoniously dropped out of the Cabinet by Mr. Macmillan. His policies had been criticised as having failed to stimulate economic growth at a faster rate, but they certainly did strengthen the sterling without resulting in any drop in the standard of living of the British people.

Spurious Drugs

Adulteration of foodstuffs and pharmaceuticals and drugs has been going on undeterred for the last several years in this country. But it now appears to be growing so fast as to result in a virtual national calamity. The instances of widespread distribution of spurious and sub-standard drugs, which have been brought to light in Kerala and Maharashtra, are only illustrative of the anti-social activities indulged in by a section of unscrupulous drug manufacturers. It is believed that most of these drugs are manufactured in and around Calcutta both by licensed and unlicensed units. Following the receipt of complaints from various States, the Government of West Bengal has set up a committee "to investigate drug manufacturing, in general, in the State and the spurious drugs racket, in particular." Nobody need, however, be deluded into the belief that a committee of this sort alone will spell the end of adulteration and manufacture of spurious drugs in that State, not to speak of the whole country. It is not unknown to the Governments, both Central and States, that the malady has been prevalent in this country on an extensive scale. How unashamedly the Planning Commission itself concedes this fact in the third Plan report! The relevant statement appearing in the chapter on health and family planning is as follows: "A proportion of the drugs sold in the market, specially biologicals, are of sub-standard quality. Spurious drugs are also being *frequently* sold." This, characteristically enough, is an understatement.

Despite this knowledge of the real state of affairs, Central and State Governments have done pretty little to stem the tide of this growing menace. Occasionally a raid here or a raid there takes place with a fanfare of publicity, as has been the case this week. But that is no solution to the problem. What is required is constant vigilance by the drug control authorities. The Centre may pass on the blame to States, which are responsible for the administration of the Drugs Control Act. But, under the amendment to the Act passed in 1960, the Central Government has assumed concurrent responsibility over the manu-

TREND OF SHARES

EQUIPOISE REGAINED

(From Our Own Correspondent)

BOMBAY, *2nd August*

STAGING a smart recovery, stock exchanges regained their equipoise this week. Prices improved all-round and in unison. Turnover expanded on the rise in prices, as brokers rushed in with more and bigger buying orders. "Buy and sell" and not "sell and buy" was the order of the day, thanks to some fast-moving operators having changed their positions and turned bullish around the recent low levels. As these operators tightened their grip on the markets, shorts could no longer sit on the fence and were forced to cover at higher levels. Sellers on margins failed to see lower levels and squared up at the stop-loss limits. The small fry merrily walked into its favourite counters. As a result, prices advanced swiftly and, at close today, were around the highest levels of the week, underlying thereby the confidence of the markets about the short-term trend. Although, at the week's closing levels, the leading issues showed a recovery of about 45 per cent from the recent two-and-a-half-month-old slump which ended on 19th July last, the trend seemed to be distinctly upward, subject to occasional corrective reactions.

With no adverse development across the Northern borders, every thing seemed to favour the rise in values. The main prop, however, was provided by the satisfactory outcome at the Aid-India Consortium's meeting, foreseeing which the professional operators had started changing their positions from the middle of last month. Needless to say, the operators succeeded in making the best use of the prop from Washington. Basically, they succeeded because of a healthy technical position of the markets as reflected in the low *budla* charges at the turn of the settlement in both Bombay and Calcutta. The three-week new settlement in Bombay came in handy for bulls to exploit an ideal situation for a rise in prices.

The I.I.S.Co. interim dividend of 80 nP for 1961-62, as against a total dividend of Re. 1.60 for the previous year, to be followed by a final dividend subsequently, created mixed reactions at first but was well received later, as it was clarified by the Company that the books would be closed only once and not twice as earlier announced. The dividend announcement revived speculation that the announcement of the increase in steel retention price was imminent, as it was felt that the final dividend, expected to be announced six weeks hence, would be determined in the light of the increase to be granted in the price. The breaking of I.I.S.Co's divided into two parts also sustained hopes of a possible increase in the total dividend.

Clearly, bears have lost the initiative to bulls. Sentiment, which always counts most in the markets, has undergone a change. The urge to sell at any and all levels is not there now, while the general expectations are that the present recovery marks the resumption of the upward trend. However, there is a visible fly in the ointment, which is the continuing anxiety over the situation in the border areas.

* * * *

Textiles and selected Miscellaneous issues were the show-pieces of the week in Bombay. Having established themselves at low levels, bulls succeeded in producing a swift rise in these shares. Century staged a smart rise from Rs. 613.50 to Rs. 637.50 and, in the process, ignored renewed selling by the prominent industrialist-operator between Rs. 625 and Rs. 630. At close, the shares showed a gain of Rs. 25.50 at Rs. 636. Some strong built-in bull position of a couple of prominent operators kept National Rayon in demand, particularly from mid-week, and the shares closed with a gain of Rs. 23.50 at Rs. 521.50. Standard were a hot favourite and gained as much as Rs. 84 at Rs. 942. Kohinoor rose by Rs. 14.50 to Rs. 315.50 on support based on expectations of a higher interim dividend. Realising pared off maximum gains in Bombay Dyeing, the scrip closed one point higher on balance at Rs. 68.20. Morarjee rose from Rs. 400 to Rs. 419 and Khatau were up by Rs. 12.50 at Rs. 475. Other cleared Textiles showed moderate gains. Cash scrips in this section were also steadier, with Mafatlal recording a gain of Rs. 21.25 at Rs. 826.25. Baroda Rayon of Rs. 5.50 at Rs. 142.50 and Gwalior Rayon and Indian Rayon of Rs. 2.50 each at Rs. 62 and Rs. 106, respectively.

In the Miscellaneous section, Bombay Burmah shot up from Rs. 657.50 to Rs. 678 and closed Rs. 18 higher over the week at Rs. 673. Wimco showed a gain of Rs. 13 at Rs. 285. Indian Dyestuff were 35 points up at Rs. 497.50. Amar Dye-Chem recorded a gain of 10 points at Rs. 288.75. Further sharp rise of Rs. 11.50 to Rs. 250 in Belapur featured trading in Sugar shares. Cements and Shippings showed moderate gains. Hindustan Motors shed maximum gains on corrective profit-taking and closed 12 nP higher at Rs. 20.08.

Telco rose further and at Rs. 333.50 showed a gain of Rs. 11.50 over the week. As against the heavy bull position of a certain operator during the recent sharp fall, market circles now talk of a considerable bear position of a certain operator in this scrip. Alcock showed a gain of 16 points at Rs. 340. Voltas, among other Engineering shares, improved by Rs. 9.50 to Rs. 277. Among Steels, Indian Iron were active. The proximity of the dividend announcement and reports in a section of the Press that the Union Ministry of Steel and Heavy Industries had recommended the Company's proposal to double the capacity to 1.6 million tons kept the shares in demand. At close, they showed a gain of 65 nP at Rs. 26.45. Tata Ordinary were up by Re. 1.50 at Rs. 148.50.

Revival of investment demand produced small to moderate gains in the Cash section. However, Rallis advanced by Rs. 19 to Rs. 167, New India Industries by Rs. 20 to Rs. 352.50, Camphor by Rs. 12 to Rs. 104, Bajaj Auto by Rs. 12 to Rs. 89, T. Mansklal by Rs. 15 to Rs. 645 and Fit Tight by Rs. 9 to Rs. 181. Star Textile Engineering were exceptionally firm and shot up by Rs. 35 to Rs. 142.

* * * *

Gains were widespread, but modest in Calcutta. In the Forward List, Orient recovered 90 nP at Rs. 41.20, Dunlop 50 nP at Rs. 40, G.K.W. 37 nP at Rs. 38.37 and Kesoram 65 nP at Rs. 28.37, but Shree Gopal closed exceptionally lower at Rs. 23.25 as against Rs. 25.12 a week before. Among Cash Textiles, Bowreah rose by Re. 1.50 to Rs. 26 and Dunbar by Re. 1.06 to Rs. 30.50. Active official measures to improve the working of coal companies kept their shares in demand. Bengal improved from Rs. 344 to Rs. 346, Central India from Rs. 11.12 to Rs. 11.62, East Indian from Rs. 50 to Rs. 50.62, and N. Beerbhoom from Rs. 21.69 to Rs. 22.50. Jutes were quiet, but Engineering shares were in demand, with Burn rising by 20 points to Rs. 690, Braithwaite by Re. 1.12 to Rs. 35.87 and Kumar Dhubi by 44 nP to Rs. 7.50. Alkali Chemical staged a brisk improvement from Rs. 42 to Rs. 44.87. The Miscellaneous section showed widespread gains. Dr. Paul moved up from Rs. 18.75 to Rs. 19.50, Goodyear from Rs. 43.85 to Rs. 45 and N.I. Cable from Rs. 29.25 to Rs. 30.81. Papers were easy, with Bengal reacting from Rs. 33.12 to Rs. 32.50. Tea shares were listless.

* * * *

In active trading, values tacked on small gains in Madras. Textiles were particularly in demand. Lakshmi were up by Rs. 3 at Rs. 156, S.I. Viscose by Rs. 3.75 at Rs. 170, Travancore Rayon by Rs. 2 at Rs. 37.50 and Buckingham by Rs. 4 at Rs. 268. Among Miscellaneous issues, Dalmia Cement improved swiftly from Rs. 12.25 to Rs. 13.60, Madras Rubber and Aluminium Industries showed a gain of 25 nP each at Rs. 21.50 and Rs. 23.90, respectively. Mettur Chemical recovered from Rs. 12.97 to Rs.13.25, Ashok Leyland were up by 17 nP at Rs. 8.22 and India Cement showed a gain of 13 nP at Rs. 6.33. Among Sugars Cauvery improved by 4 points to Rs. 107. E.I.D. showed a gain of 50 nP at Rs. 40.37 and Travancore of 27 nP at Rs. 7.20. Plantings showed a small recovery, with Periakaramalai gaining 6 nP at Rs. 3.38 and Kil Kotagiri 30 nP at Rs. 4.95.

CAPITAL MARKET NEWS

NEW ISSUES

THE **Ravalgaon Sugar Farm Ltd.** is to issue and offer for public subscription 7 per cent 4,500 debentures of Rs. 1,000 each. The subscription lists will remain open for a week from the 10th inst., but may close earlier, on the 13th. The debentures will be redeemed in the whole after 12 years from the date of allotment, but the Company reserves the right to redeem them at any time after 10 years by giving six months' notice. They are being issued to provide for repayment of the existing debentures of Rs. 20 lakhs (Rs. 10 lakhs 6 per cent first mortgage debentures 1952-62 and Rs. 10 lakhs 4 per cent second mortgage debentures 1959-64) and for liquidation of the existing short-term borrowings of Rs. 25 lakhs. Of the existing two series of debentures the first were due to be redeemed on the 1st of this month and the second are to be redeemed on the 1st October 1962. As soon as they are redeemed, the debentures to be issued now will have the first charge on the mortgaged properties. The interest will be payable in equal half-yearly instalments on 1st April and 1st October every year. The first payment of interest is to be made on 1st October this year and will be calculated from the date of allotment.

The whole of the new series of debentures is offered to the public, subject to a preference in allotment to the holders of the existing debentures and the equity shareholders of the Company. The issue price of Rs. 1,000 per new debenture is to be paid on application and the holders of the existing debentures will pay it either by surrendering the old debentures or by payment in cash. The issue has been entirely underwritten by four banks and one insurance company a stock brokers' firm in Bombay. The underwriters will get a commission of 2 per cent. The expenses of the issue, including the underwriting commission and brokerage, are estimated at Rs. 2.5 lakhs, and will be borne by the Company.

* * * *

About five months from now, a new sugar mill with a daily cane-crushing capacity of 800 tons will go into production at Chitalenagar in the Sholapur district of Maharashtra State. The mill belongs to the **Chitale Sugar Works Limited,** promoted by Messrs. S. D. Chitale and W. D. Chitale. The factory is expected to produce 138,000 bags of sugar in a season of 150 (working) days and the average sugar recovery is placed at 11.5 per cent which, we are told, may even go as high as 12 to 13 per cent. The estimated capital cost of the project is Rs. 89.81 lakhs, half of which is accounted for by plant and machinery. The project does not entail any foreign exchange expenditure. Excluding the Industrial Finance Corporation loan of Rs. 32.00 lakhs and own funds and borrowings together amounting to Rs. 28.97 lakhs, the balance of Rs. 28.84 lakhs is proposed to be raised by way of a public issue, due to open for subscription for cash at par on the 27th of this month. The issue will consist of Rs. 20.19 lakhs equity capital (in 201,919 shares of Rs. 10 each) and Rs. 8.65 lakhs preference capital (in 8,648 cumulative redeemable preference shares of Rs. 100 each carrying a dividend of 9.285 per cent free of Company's income-tax but subject to deduction of tax at source at the prescribed rates). The entire issue has been underwritten by the Union Bank of India Ltd.

Apart from the proximity of the commencement of production by the factory and the comparatively cheap price at which capital equipment is claimed to have been bought, the management claims that the factory enjoys three distinct advantages. One, cane supplies are plentiful. Two, the cost of production will be low, in view of high recovery per cent and the Government's new system linking cane price to recovery. And three, the management has rich experience in cane growing, sugar technology and factory management. The Company has also an influential Board of Directors headed by Mr. Murarji J. Vaidya, a well-known industrialist of Bombay.

RIGHTS ISSUE

Mukand Iron and Steel Works Ltd. is to raise further equity capital of Rs. 1.00 to 1.25 crores in stages before the end of 1963. It has yet to make an application to the Controller of Capital Issues for this. Meanwhile, it proposes to issue shortly rights shares of Rs. 10 lakhs. The Company, having a paid-up capital of Rs. 81.89 lakhs (Rs. 80.64 lakhs equity and Rs. 1.25 lakh preference), has under consideration several schemes for expansion, which include the manufacture of processed end-products, foundry equipment and machinery and components and steel castings.

STEELAGE INDUSTRIES TO EXPAND

Steelage Industries (Private) Ltd. of Bombay, which has been associated under a royalty agreement with Messrs. Chubb and Son's Lock and Safe Company Ltd. of London, a world-famous manufacturer of security equipment since 1952, and is manufacturing such equipment to Chubb's specifications and designs, is now expanding the scope of its production to cover the manufacture of a wide range of security products, such as fire and burglar-resisting safe cabinets and files, record protection files, ledger cabinets, etc. The Company has already obtained the industrial licence to effect the substantial expansion, which will be carried out jointly with the British firm. The Company also proposes to raise its capital for the purpose and offer apart of the additional capital to Chubbs, which the latter has agreed to take up. The British firm has also agreed to assist Steelage in exporting the products through its worldwide network of experienced agents. The Company manufactures at present, under the brand name of *Chubb Steelage*, vault doors, tangbar reinforcements, safe deposit lockers, etc.

MARKET GOSSIP

(Concluded from previous page)

facture of drugs. One would have thought that this amendment of the Act would tone up the machinery for drugs control. But this still remains a hope.

It is well known that there are two reasons for the laxity in implementing drug control measures, namely, inadequacy of inspection staff and want of proper facilities for analysing random samples of drugs. Except for the Central Drugs Laboratory at Calcutta, there are no laboratory facilities worth the name in any part of the country for testing drugs and medicines. Equally deplorable is the inadequacy of administrative machinery. Although the Central Government has assumed powers, under the aforesaid amendment in 1960, to appoint its own inspection staff, it has so far done very little in this direction. It has not made available inspection staff to States except, perhaps, to two of them. Even in Calcutta, where there is a large number of units engaged in producing spurious drugs, the Drug Licensing Office has only nine inspectors to look after no less than 500 drugs units and other related matters. It is also said that licences are granted, if a firm follows only half of the regulations. In practice, the small units hardly follow any regulations. The State Government, it is alleged, only winks at these lapses, the reason given for this strange attitude being the desire to buttress the dwindling pharmaceutical industry in the State. An officer of the West Bengal Government is reported to have told a staff reporter of the *Statesman* that, if all the provisions of the Drugs Control Act and its rules were to be strictly enforced, the pharmaceutical industry in the State would be liquidated. If this is true, the West Bengal Government deserves to be pulled up by the Centre. Be that as it may, the Governments should at least publish the names of erring parties and blacklist them, so that the public can avoid buying their products. For some unknown reasons, in the latest cases, the State Governments concerned have even refused to divulge the names of the Calcutta units guilty of manufacturing sub-standard goods.

It is equally essential to restrain any infringement of patents and trade marks, apart from strictly enforcing standards and quality control in the manufacture of drugs. In this connection, one is at a loss to know why the Ayyangar report on Patent Law, submitted as early as in 1960, is still kept in cold storage.

The drive against spurious drugs manufacture is only the negative aspect of the problem. The real solution lies in increasing the supply of quality drugs at reasonable prices. It has been said that the prices of drugs in India are the highest in the world. The basic reason which prompts people to produce spurious drugs is the prospect of making easy profits. This prospect is strengthened by the shortage of standard drugs and the consequent exorbitant prices for them. The ultimate solution, therefore, depends upon the speedy implementation of drug projects in the country. There are already ambitious plans to expand the production of basic drugs, including antibiotics, synthetic drugs and those of vegetable origin, both in the public and private sectors. But the progress of these plans is disheartening. The scheme consisting of four major drug projects (estimated total cost being Rs. 30 crores) proposed to be put up in the public sector in collaboration with Russia has not made any headway so far. Although these projects are part of the second Plan, it is doubtful whether they will be commissioned even by the end of the third Plan.

NEWS IN BRIEF

THE first unit of the lignite-based power station at Neyveli in the Madras State will be inaugurated by President Dr. Radhakrishnan tomorrow (5th August).

The proposal for the export of superior quality rice has been dropped, following objections from the U.S. Government that a country receiving P.L. 480 aid should not export its own grains.

The Government of India has approached the Petroleum Association of Japan to find out whether the Japanese oil industry is interested in undertaking oil exploration in the Cauvery basin in the South.

The Government of India has released a quota of 200,000 tons of bauxite for export from all ports, including Goa, over and above the export ceiling of 350,000 tons fixed for the current financial year from Bombay, Calcutta and Saurashtra.

Four more power plants, in addition to the existing two, will be set up at Durgapur, according to the Chief Minister of West Bengal, Mr. P. C. Sen. Two of them will be completed next year and the other two by the end of 1964.

The Department of Company Law Administration has announced that the preliminary, intermediate and final examinations of Company Secretaries will be held on 1st, 3rd and 4th October next, at Bombay, Calcutta, Delhi, Ernakulam, Hyderabad and Madras.

The findings of a survey conducted by the Bihar State *Sarvodaya Mandal* reveal that 75 per cent of the land donated for the *Bhoodan* movement is unfit for redistribution. The survey covered an area of 1.2 million acres (out of the total of 2.3 million acres donated in the State), of which 950,000 acres have been found unfit.

The Government of India proposes to establish six more low temperature carbonisation plants—one each in Orissa and Himachal Pradesh and two each in Maharashtra and Singrauli in Madhya Pradesh—besides the one at Ramgarh. These plants will have the capacity to produce about 1,500 tons of coke from non-coking coal per day.

Messrs. Dastur and Company, Calcutta, have been appointed technical consultants to prepare a detailed project report for the establishment of an iron and steel plant in Madras based on lignite available at Neyveli. The report, which will deal with the location of the plant, raw materials to be used, size of the plant and product mix, etc., will be submitted to the Government within a year.

The Union Government has appointed an official committee to study various proposals and make recommendations in respect of compulsory insurance of motor vehicles against third party risks. The Committee has been asked to survey and report how far the existing provisions relating to compensation, third party insurance and claims tribunals serve the purposes for which they are meant.

The Kanpur-built AVRO-748 ("Subroto") will soon leave India on a tour of demonstration flights in the South-East Asian countries with a view to assessing the interest in that area for this type of aircraft. "Subroto," flown by Indian Air Force test pilots, will visit Burma, Malaya, Singapore and Indonesia. It will be the first time that an AVRO-748 will be visiting these countries. The tour of demonstration flights will last one month.

The Government of India has issued a licence for setting up an aluminium plant at Mangalore at a cost of about Rs. 80 crores. The factory will be an Indo-American venture, the foreign firm contributing nearly 40 per cent of the share capital, besides providing technical know-how. A recent investigation has revealed that nearly two million tons of bauxite ore is available in Belgaum district, besides deposits in Maharashtra and Saurashtra from where the ore, it is said, could be transported to Mangalore.

The U.S. has announced a five-year $71,843 rupee grant to the National Dairy Research Institute of Karnal in the Punjab to finance a study of the properties of concentrated milk products. The grant is a step toward the development of concentrated milk foods which, when reconstituted, take on again the flavour and texture of fresh milk. This will involve basic studies of proteosepeptone proteins. The grant has been made from the rupee fund obtained from the sale in India of U.S. agricultural commodities.

The third agricultural labour enquiry will begin this winter with its scope widened to cover rural labour employed in agriculture as well as industry and crafts. The enquiry will cover about 9,000 villages spread over all the States and Union territories, as against 3,600 villages surveyed under the second agricultural labour enquiry of 1956-57. The third enquiry, which will form part of the 18th round of the national sample survey, is expected to help fill gaps in the data thrown up by the second enquiry and facilitate a comparative study of the economic conditions of agricultural labour in the last six years.

The State Trading Corporation has entered into an agreement with the Jordan Phosphate Mines Company for the import of 150,000 metric tons of rock phosphate. Against this, India will export to Jordan tea, coffee, spices, footwear, leather goods, shellac, textiles, engineering goods, cotton yarn, chemicals and pharmaceuticals. The agreement is valid up to the end of 1961. In order to facilitate Indian exporters to get their payments under this agreement, all contracts and orders entered into by Indian exporters with Jordanian importers will have to be registered with the S.T.C.

Small-scale industries in the country will soon be in a position to obtain Japanese machinery on hire-purchase basis through the National Small Industries Corporation, according to Mr. T. Mseda, Acting Consul-General for Japan. He told pressmen in Bombay last week that, under an agreement signed recently at New Delhi, a sum of Rs. 30 lakhs was set apart under the yen credit for the purchase of machinery by the National Small Industries Corporation. Earlier, Mr. Joichi Honda, Director of the Japan Machinery Centre, and Mr. Yoshio Morikawa, Chief Engineer of the Centre, took pressmen round the various new items of machinery, equipment and appliances recently received by the Centre which is set up by J.E.T.R.O., the Japanese export promotion agency.

With a view to simplifying the procedure under the Export Promotion Schemes, the scheme for enrolment of exporters has been abolished. No enrolment certificate will hereafter be asked for from any exporter in connection with his application for registration or for incentive licences under any export promotion scheme. An exporter will hereafter have only to register himself with an export promotion council, a commodity board or the export promotion officer at the port (as the case may be), in order to avail himself of the benefits of an export promotion scheme. An exporter once registered will not have to apply for registration every year. The present procedure of exporters having to re-register themselves annually will discontinue. In order to expedite the issue of incentive licences against exports, the export promotion councils have also been authorised to recommend direct to the licensing authorities imports of such raw materials, components and spares as an exporter is permitted to import as per his latest actual user licence.

The Assam State Electricity Board has placed an order for a complete 60,000-kilowatt gas-turbine power plant costing $7 million with the Westinghouse Electric International Company, of the U.S. Scheduled for completion by the end of next year, it will be the largest gas turbine power installation outside the Western hemisphere. Under the contract, Westinghouse will design the plant and will supply three 23,000-kilowatt gas-turbine generator units, controls, and associated equipment to be located at Namrup. The plant will use natural gas supplied through a 13-mile pipeline from the virtually untapped Naharkatiya and Moran gas fields. The station will serve as part of an industrial complex to be built in the Namrup area which will include fertilisers, synthetic rubber, synthetic plastic, and carbon black plants, as well as smaller domestic enterprises. Two of the gas-turbines will be equipped for automatic dual fuel operation, using either natural gas or distillated oil. The waste heat from these units will be used in generating process for a proposed fertiliser plant.

From Abroad

Spain has offered a credit of $10 million to the Philippines for financing development programmes.

The Syrian currency, piastre, has been devalued. The new exchange rate is 380 piastres to a dollar, as against 357-358 piastres formerly.

France produced 785,000 motor vehicles during the first six months of 1962, showing an increase of about 17 per cent over the corresponding half of 1961. Exports went up only by 8 per cent.

New copper ore deposits aggregating 50 million tons have been discovered in Chile by the Pan-American Union. These are said to be the world's richest copper deposits.

The number of unemployed in West Germany fell to less than 100,000 in June for the first time since the currency reform in 1948. Only about 97,500 jobless were counted in the month under review.

The European Investment Bank has obtained permission from the E.E.C. Commission to grant a loan of $4.8 million to a Canadian company for the setting up of a wood-pulp mill in south-eastern Belgium.

The Japanese Government has reduced the waiting period for repatriation of foreign capital invested in Japanese stocks from two years to six months. This relaxation is said to be a sequel to the improvement in Japan's balance of payments position.

The European Common Market proposes to evolve a common policy towards Latin America, on the basis of a report prepared by the E.E.C. Council setting out certain recommendations on commercial and financial policy as well as technical co-operation in so far as they affect Latin America.

The International Wool Secretariat (I.W.S.) has decided to send a three-man delegation, under the leadership of Mr. William Gunn, Chairman of the I.W.S., to Communist China, by the end of this year.

The Development Advisory Service, established by the World Bank, has started functioning. The Service is designed to serve as economic and financial advisers to the Governments of the developing countries, particularly for the preparation and execution of development programmes.

PERSONAL

MR. J. W. Sinclair, General Manager of the India-Burma-Ceylon division of Esso Standard Eastern, has been appointed Vice-President of the Company for the South Asia-Africa region. Mr. C. B. Thomas, Assistant General Manager (Marketing), has succeeded Mr. Sinclair as General Manager.

Mr. Richard W. Reuter has been appointed Director of the U.S. Food for Peace Programme *vice* Mr. George McGovern, who has resigned to seek election to the U.S. Senate.

Mr. Sushil K. Dey, Director of the U.N. Food and Agriculture Organisation's Rural Institutions and Services Division, has been appointed Director of the Programme Appraisal and Development Division of the F.A.O. World Food Programme.

Dr. I. G. Patel, Chief Economic Adviser to the Union Finance Ministry, has left for Washington to discuss with the I.M.F. authorities matters relating to withdrawal of the $100 million stand-by credit granted to India.

Mr. C. S. Ramachandran, Joint Secretary in the Ministry of Commerce and Industry, left for New York on Friday this week to attend the concluding session of the conference convened by the U.N. to consider the question of a long-term international coffee agreement.

Mr. Prabhu V. Mehta of the Calico Industrial Engineers has been elected President of the Textile Machinery Manufacturers' Association for the current year. Mr. L. T. Gholap of the National Machinery Manufacturers Ltd. and Mr. K. H. Shah of the Vasant Industrial and Engineering Works have been elected Vice-Presidents.

Mr. A. A. Garthoff of the U.S. and Dr. A. W. O. Bock of South Africa has been elected Chairman and Vice-Chairman, respectively, of the International Wheat Council, which will administer the new Wheat Agreement which came into force on the 1st inst.

Dr. S. K. Dhar, an economist and first officer with the International Atomic Energy Agency, Mr. P. M. Mathew of the Planning Commission, and Mr. P. S. Narayan Prasad, Economic Adviser to the Government of Nigeria, are the three Indians among the fifteen experts appointed by the Development Advisory Service constituted by the World Bank.

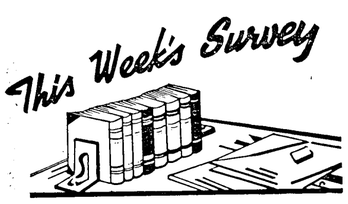
The Government of Saudi Arabia has issued a decree seeking to entrust all trade and representation of foreign firms and the capital of companies to Saudi citizens only. The new law allows non-Saudi agents two years in which to liquidate their business and hand them over to Saudis. The new law will become effective within three months.

The total foreign trade of all member countries of the Organisation for Economic Co-operation and Development (O.E.C.D.) aggregated $160,000 million in 1961. Both exports and imports amounted to $80,000 million each. Imports were 4.5 per cent and exports 6.5 per cent higher than in the previous year. The foreign trade of the U.S. ($35,000 million), West Germany ($24,000 million) and Britain ($23,000 million) together accounted for about half of the total foreign trade of all O.E.C.D. members.

The joint industry campaign of the Tea Council of the U.S.A. Inc. has been revitalised on a new basis stressing educational, promotion, public relations and publicity programmes. The financial support for an annual operation of about $500,000 is said to have been assured from India, Ceylon and Indonesia which together would put in $350,000 and from the U.S. tea trade which expects to raise at least $150,000. The U.S. trade support has been finalised on a new formula: 1 cent per pound on tea sold for packers, 1/100 cent per pound on tea sold for importers, agents and brokers.

An agreement has been signed between the Government of Nigeria and the B.P.-Shell Petroleum Company of Nigeria under which the latter will put up and operate an oil refinery, the first of its kind in the country. The refinery will cost about £8 million. Initially, the Federal and regional Governments together will have 50 per cent of the shareholdings, the remaining 50 per cent being shared equally by the B.P. and Shell. But, after commercial production begins, the local people will be permitted to take up 20 per cent of the capital by reducing the total Government share to 40 per cent and the two companies' shares to 20 per cent each.

The common farm policy of the European Common Market, adopted in January last, has been enforced. The products involved in the policy are cereals, pig-meat, eggs, poultry, wine, fruit and vegetables. An extension of the policy to beef, milk, dairy products, sugar and rice has already been proposed. The main feature of the common system is that a levy will be applied at national frontiers for farm products imported from both member and third countries, replacing all other forms of protection, such as quotas. But, while this levy will gradually disappear in the seven-and-half year transitional period for trade within the community, levies on imports from non-member countries will continue in the final stage beginning on 1st January 1970. A European Agricultural Fund, which will be used to stabilise prices, will be financed by levies on imports.



MALAYSIA

THE U.K. has given the green signal to the formation of Malaysia. The move envisages the establishment of a federation in South East Asia with the merger of five Asian constituents of the Commonwealth—Malaya, Singapore, Brunei, North Borneo and Sarawak. The concept of Malaysia, which owes its origin to Malaya's Prime Minister, Tunku Abdul Rahman, is no longer a dream. Following protracted negotiations between the Malayan Prime Minister and British Government representatives for the last three weeks at London, an agreement has been reached between the two parties on the various aspects of building up Malaysia. A question that naturally comes to one's mind is whether this move is a prelude to a South-East Asian Common Market. This poser is not unwarranted, viewed against the background of the recent statement by the Philippines President Macapagal that his country proposed to seek entry into Malaysia. He envisages what is called a Greater Malaya which will supersede the Federation. Malaya and the Philippines (along with Thailand) are already members of the A.S.A. (Association of the South-East Asian States), which was formed in July last to promote regional co-operation among the three countries. The expansion of Malaysia, of course, may be a long-term objective and it is certainly premature to talk about it even before Malaysia is born.

If the plans now worked out go through, Malaysia will come into being before 31st August 1963. The five countries in the proposed bloc together account for an area of 130,000 sq. miles, the largest unit being Malaya (51,000 sq. miles) and smallest Singapore (224 sq. miles). Their total population is over ten million, with Malaya alone accounting for about eight million. The rate of growth of population is among the world's highest for the region, being 3-4 per cent, or perhaps more, in Malaya and Singapore. While Malaya and Singapore are independent countries, Sarawak and North Borneo are British colonies and Brunei is a British-protected self-governing Malay State.

Apparently, the majority opinion in the self-governing countries favours the concept of Malaysia. Even in Singapore, where some of the leftists have decried the move, the Referendum Bill on the question was passed by the Singapore Legislative Assembly recently. Meanwhile, the Governments of Malaya and Singapore have agreed to go ahead with plans for Malaysia. In order to ascertain public opinion in the two colonial territories of North Borneo and Sarawak a commission of enquiry, headed by Lord Cobbold, a former Governor of the Bank of England, (appointed by the British Government), spent two months in the territories recently and submitted a report to the U.K. Government. Although the Commission's report has not yet been published, reports from London indicate that the majority favours the concept of Malaysia.

The cultural affinity of the peoples in the proposed bloc provides a reasonable basis for closer political and economic co-operation among them. The present economic ties and prospects for complementary economic growth are further arguments adduced in favour of Malaysia. Intra-regional trade forms about 32 per cent of their total trade. In 1960, the total exports of the five countries aggregated Malayan $7,371 million, of which $2,365 million went to other countries of the bloc. The trend in imports too has been similar. Out of their total imports of Malayan $6.932 million in 1960, $2,214 million came from the other members of the proposed bloc. As is well-known, Malayan economy depends on the export of rubber and tin. Its rubber estates, covering an area of 3.5 million acres, produce annually 700,000 tons of rubber or a third of world output. Besides, its 500 tin mines produce about 46,000 tons of metal annually. It also produces about 4 million tons of iron ore, entirely for export to Japan. Malaya has certain other major products also namely, rice, palm oil, copra and pineapple, of which the last three are mainly exported. Singapore, which specialises in entrepot trade, has a unique position in East-West trade. Sarawak exports crude oil, petroleum products, rubber and sawn hardwoods. North Borneo's shipments include mainly rubber, but also tobacco, copra and manila fibre.

The impact of the proposed Malaysia on the economies of neighbouring countries like India will depend mainly on the trade policies to be pursued by it, which cannot be gauged precisely now. If Malaysia, in its enthusiasm for industrialisation, takes up production of such goods as textiles and light engineerings, Indian products will naturally face a setback in these markets. The possibility of the development of such agricultural products as spices, particularly pepper in Sarawak and to some extent tobacco is also of some concern to exporters in this country. But the prospects for increase in the standard of living in Malaysia will open out an expanding market from which countries like India may benefit, given a liberal tariff policy. It may be noted that India's exports to the five amounted to no less than Rs. 15.25 crores in 1961-62 (as against Rs. 13.12 crores in 1960-61) with Singapore alone accounting for Rs. 8.30 crores and Malaya for Rs. 6.80 crores. India imported goods worth Rs. 13 crores from Malaya in 1961-62 (Rs. 13.5 crores in 1960-61) and Rs. 9 crores from Singapore (Rs. 10.42 crores). Imports from the other three territories were negligible.

STEEL IMPORTS AND EXPORTS

The Union Steel Ministry has recently re-estimated the country's aggregate requirements of steel for the third Plan period at about 29 million tons. But the currently estimated indigenous production of steel is only of the order of about 22 million tons over the same period. There will, therefore, be a gap of 7 million tons. It is assumed that this gap will be bridged entirely by imports. Will the foreign exchange situation permit this to happen? It does not appear to be possible, for, in the estimated five-year maintenance imports of Rs. 3,650 crores, the provision made for the purpose of importing mild and special steels is only Rs. 220 crores, as against the required amount of Rs. 715 crores. There is no certainty that D.L.F. loan assistance will be available to the required extent for the purpose of steel imports from the United States. Even if such assistance is made available to meet the larger part of the deficit (Rs. 715 crores *minus* Rs. 220 crores), steel imports from the United States will cost 40 to 50 per cent more, as compared with the international price level.

That is one side of the picture. The other side pertains to the slow pace of increase in steel production in the country. It may be recalled that the output of steel in 1961-62 (the first year of the third Plan) was no more than 2.8 million tons as against the expectation of 4.5 million tons. Let us suppose that at least in 1962-63 (the second year of the third Plan) the Planning Commission's expectation of 4.0 million tons will be achieved. The aggregate output in the first two years will thus be 6.8 million tons. That would mean that a total production of 15.2 million tons (22.0 million tons *minus* 6.8 million tons) will have to be achieved in the remaining three years of the Plan. Will this happen? That too is doubtful, for production will have to be at an average annual rate of a little over 5 million tons. When the Durgapur steel works are fully completed, the total productive capacity itself will only be of the order of 4.5 million tons of finished steel (or 6 million tons of steel ingots). As of today, the prospects of achieving production at this full capacity are not very bright, thanks to the 'trio' of crucial shortages. Indeed, even the supposition that 4 million tons will be produced in the current year may not turn out to be correct. The crisis on the supply side will, therefore, be much worse than that indicated in the first para of this note, unless, of course, the demand for steel slackens owing to non-materialisation of some other projects included in the Plan. But, as it is, the gap between demand and supply is widening and this is more pronounced in the case of items like plates, sheets, forging rounds, free cutting bars, electrical steel sheets, tinplates, skelp and cold rolled strips than in the case of other steel items.

If shortages in these items are to be mitigated, their imports should not be curtailed below the minimal requirements. It is here that possible exports of such items of iron and steel as are in relative surplus may be expected to earn some foreign exchange which will help ease the position in respect of steel imports. The fact that iron and steel exports in 1961 (upto September) were to the tune of 138,000 tons (pig iron 68,000 tons; blooms, billets, slabs, etc. 58,000 tons and finished steel 12,000 tons) is encouraging in this context, although the immediate export prospects are not quite good. But the Planning Commission's iron and steel export target of 200,000 tons per annum may not be impossible of fulfilment in the years to come if the export prices of Indian steel are aligned to the fluctuating international price levels. The latter price levels at present are so low that India will find it extremely difficult to have a stable export market for steel year after year. A comparison of the Indian steel prices with those of the export prices of Japan and Europe for representative categories has been made, in this connection, by Mr. K. Ramachandran in his presidential address at the fifth annual general meeting of the Steel Importers Association of India held at Calcutta on 30th July 1962. The relevant figures are given below:

(In rupees per ton)

Material	India	Continent		Japan	
		F.O.B.	Landed cost	F.O.B.	Landed cost
Reinforcing bars ..	665	345	487	357	500
Plates ..	774	470	635	432	596
Black sheets ..	842	538	707	514	683

It is, therefore, a question of Indian steel being able to withstand international competition. An export market can be developed and maintained if the demand and supply position is correctly assessed from time to time to permit exports of particular items in surplus and if, as Mr. Ramachandran has suggested, a minimum quantity of steel is set apart for exports at subsidised prices. That a subsidy can be given by linking exports with imports is the view of Mr. Ramachandran. His line of reasoning is as follows:

"Subsidy on exports should be given to exporters from the Steel Equalisation Fund. The exporters could be authorised to utilise the foreign exchange earned by them for importing categories of steel which are in short supply, in accordance with the specifications approved by the Iron and Steel Control Office. Since the cost of imported steel will be well below the present statutory selling price in India, the surcharge collected on such imports could be credited to the Equalisation Fund in order to offset the export subsidy. I trust Government will give due consideration to this suggestion."

If the aforesaid suggestion is accepted by the authorities, it will be a good thing. After all, the quantity of steel that can be exported will only be small, for this country itself will need, for several years to come, almost all the steel that it produces. Already the Board of Trade has accepted the idea of steel importers switching over to exports. It only remains for the Government to evolve a suitable export subsidy scheme, thereby enabling steel importers, with their knowledge of world market conditions and of steel specifications of different countries, to do their part.

TEA INDUSTRY

Few would remain unimpressed with the way in which Mr. E. J. C. Menzies, the retiring Chairman of the Association of Planters (Madras State), surveyed the problems confronting the tea industry when he addressed the ninth annual general meeting of the Association held at Coonoor on Wednesday this week. Mr. Menzies not merely indicated lucidly what these problems were but also suggested clear-cut solutions to them. If, in so doing, he expressed a "traditional lament of oft-repeated complaints," he is not to be blamed. For the complaints continue to remain unheeded, thanks to considerations other than economic that have been imported into the examination of the problems of tea industry. This is unfortunate, especially because the tea industry earns for the country quite a bit of foreign exchange every year, contributes substantially to the public coffers through a variety of taxes, supplies a good beverage to the teeming millions and maintains high labour standards for a large workforce. Even if one ignores the vital role thus played by tea, one cannot overlook the odds against the industry such as increased world production, keen competition and falling prices, for, unless these odds are met properly and in good time, a vital limb of Indian economy will be paralysed. Accordingly, Mr. Menzies indulged in no exaggeration when he said that "the industry is faced with a formidable task" and candidly added: "There is great need for objectivity and no room for politics, sentiments, misplaced sympathies or expedient compromises. In this endeavour, there is a great necessity for co-operation between Government and industry in formulating sound policies on the basis of realism rather than ideology or dogma."

It is a simple economic truth that, in a highly competitive export market, any buyer of a commodity will be interested not in what it costs the particular supplying country to place its product on sale but only in the lowest price at which he can secure his requirements, whatever be the source of supply. Tea is no exception to this truth. In fact, it is one of the commodities the world trade in which is governed purely by the operation of the forces of supply and demand. But, unfortunately, this basic fact is either not understood or ignored by those who think that every element in costs inclusive of taxes can easily be passed on to the consumer. Drawing attention to this aspect, Mr. Menzies observed:

"With the availability of greater quantity and variety for the buyer to choose from, it is progressively proving to be more difficult to maintain our share of the world markets and compete with other producers, particularly in the market for common teas. The present trends in the world tea market would indicate that the wherewithal of the industry would have to be earned through a small margin of profit per unit of product over a large volume of sales. In fine, we have to be more cost-conscious than ever and the extent to which we succeed in lowering or even maintaining costs would be the measure of our success in the export market. It is well known that our competitors, particularly the producing countries in Africa, do enjoy a distinct cost advantage. We may hope to compete against them and augment our earnings only if, through the conjoint efforts of Government, industry and labour in this country, costs are kept down and prices stable. It is particularly within the province of Government to adopt policies which would achieve the dual object of cost reduction and maintenance of stable prices. With the fear of overproduction and glut in the world markets lurking in the background, it would be prudent to think of keeping in readiness the machinery to revive the International Tea Agreement, provided other exporting countries, which would doubtless be troubled by the same problems, are also willing to be signatories."

The need for ensuring as much supply of quality tea as possible at a reasonable price is no less urgent from the point of view of domestic consumption, since it is the internal market that provides an invaluable safeguard for the industry against any violent fluctuations in world prices. Mr. Menzies was only mildly critical when he remarked that the Government's policy of discouraging the internal market by an increase in excise duty with a view to encouraging exports "is somewhat short-sighted." Rightly urging a reconsideration of the policy, he said:

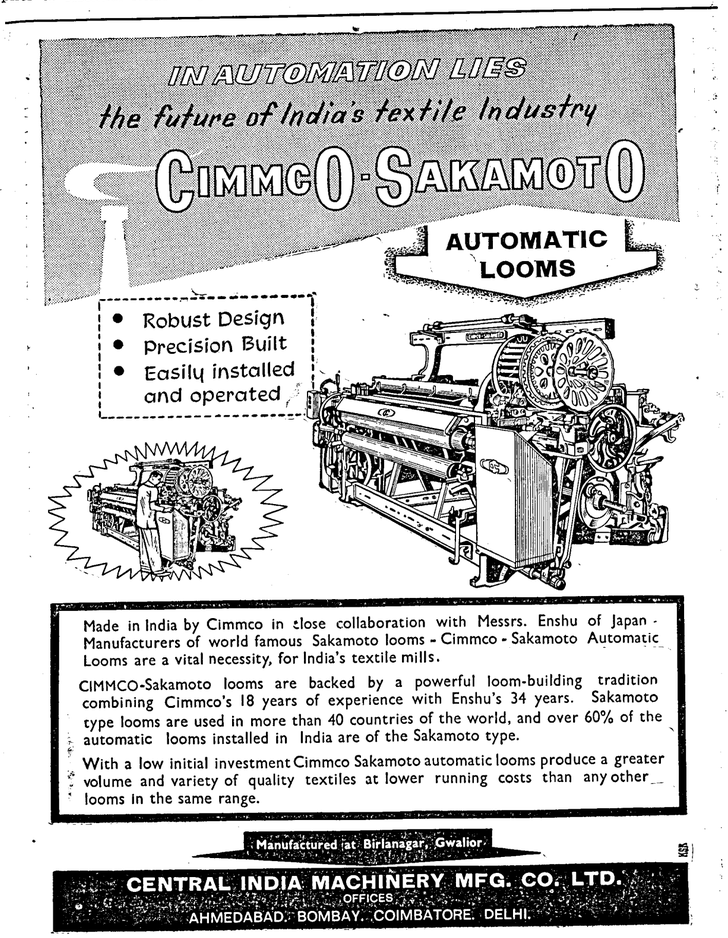
"There is no assurance that an increase in exports in quantitative terms would itself enhance our foreign exchange earnings, since the very weight of supplies may so depress prices that the anticipated results may not be achieved. It is, therefore, important to pay attention to demand within the country and to balance the allocation of supplies to the export and internal markets to optimum advantage by keeping close watch of trends in the world market."

There is considerable force in Mr. Menzies' statement that, from the cost angle, the competitive ability of Indian tea is best strengthened by a rational tax policy. He did admit that the reduction of export duty in the last budget would go some way towards improving the position, but made it clear that this measure would prove effective only if it was ensured that the benefit of the drawback of excise duty accrued to the producer. In this connection, his plea for grant of drawback of enhanced excise duties on several articles used by tea factories such as plywood and aluminium linings is quite a justifiable one. And there is no exaggeration whatever in the note of warning administered by Mr. Menzies to the effect that, if the tax policy at all levels (Central, State and local bodies) is not rationalised, the day will come when, for lack of finance, the tea industry will be unable to replace (or replant) worn out tea areas, as well as obsolete machinery, and then be unable to maintain its position in the world tea market without substantial assistance from the Government. Equally justified are the three other pleas put forward by him, namely, (a) regular and adequate supplies of essential items like fertilisers, cement and machinery, (b) requisite power supply, and (c) "more liberal administration" of various forest laws such as those relating to timber transit, forest leases and permits.

Mr. Menzies dilated at some length on the role of labour. Inasmuch as the wage bill and fringe benefits account for over 40 per cent of the total production cost of tea, the cost of labour is, as Mr. Menzies said, a crucial factor influencing the industry's competitive capacity. Mr. Menzies was surprised that no less a person than the Union Labour Minister had made a public pronouncement that labour in India had not yet had a fair deal. He did not wish to enter into a controversy over the issue, since the wage structure in the plantation industry is currently under the consideration of the Wage Board. But he did well to highlight the important fact that any dogmatic or sentimental tinkering with the wage structure resulting in irrational increases in wage costs would render the tea industry extremely vulnerable in a competitive market.

DEADLOCK IN U.K.—E.C.M. TALKS

The high hopes entertained by the U.K. Government that an amicable settlement of the terms of its entry into the Common Market would be finalised by the end of July have not been fulfilled. On the contrary, a virtual stalemate has developed in the negotiations between the U.K. and the E.E.C. at the latest ministerial meeting at Brussels. The impasse is a sequel to the wide differences between the two parties on the question of safeguarding the trade outlets for temperate foodstuffs. The temperate foodstuffs are mainly wheat, mutton, butter and cheese, which are exported to the U.K. at present in large quantities by Australia, New Zealand and Canada. The U.K. delegation, led by Mr. Edward Heath, Lord Privy Seal, and assisted, among others, by the well-known economist, Eric Roll, impressed upon the Six last week the need for granting comparable outlets for temperate foodstuffs in an



expanded Common Market. But the Six do not seem to be willing to make any compromise in its agricultural policy to accommodate the Commonwealth interests. It may be noted here that the agricultural policy of the Community, which was agreed upon after protracted negotiations among the Six early this year, has come into force with effect from the 1st inst. only. Under this policy, the Six propose to ensure for their farmers a price which is substantially higher than world prices for agricultural products. Through the imposition of import levies, the price of imported products into the Community will be kept high in consonance with internal prices. The Continental policy of granting protection to farmers, it may be further noted, has always been substantially different from the British stand which relies upon granting direct subsidies to farmer (rather than maintaining high prices) and permitting imports on liberal terms.

It is mainly the price policy that has become a source of acute differences of opinion between the U.K. and the Common Market. The Six have, of course, offered to evolve a "reasonable" price policy. But the implications are not clear. The U.K. insists that the definition of the "reasonable" price policy to be followed by the expanded Common Market should include a provision that prices will not be fixed so as to stimulate a further increase in production within the Community. This provision, according to the U.K., should be accompanied by an assurance that Commonwealth suppliers will continue to enjoy access to the Six on liberal terms. Another demand of the U.K. is that the Commonwealth exporters of temperate foodstuffs should not suffer any discrimination in the U.K. market as against farmers within the Common Market until the end of the transitional period. It has also pleaded against the imposition of any quota restrictions on cereals against Commonwealth exporters until "traditional quantities" have been supplied.

It is the contention of the Six that the Community cannot be expected at any time to place the interests of outside producers higher than those of its own farmers. France, in particular, is staunchly against any concession which may amount to a contingent obligation to hold down output within the Six in the interests of non-Community producers. The major hitch about temperate foodstuffs (unlike some of the tropical products) is that they are produced within the Common Market itself. In particular, Australian wheat which will compete with that produced in Europe, is the major bone of contention. About 35 per cent of Australian exports comprise temperate foodstuffs. Of its annual wheat exports amounting to £250 million, the U.K. accounts for £100 million. The dependence of New Zealand on the U.K. market is much more pronounced. About 60 per cent of New Zealand exports consist of temperate foodstuffs, namely, mutton, lamb, butter and cheese, of which as much as 80 per cent goes to the U.K. These data, coupled with the fact that the white nations of the Commonwealth (Canada, Australia and New Zealand) have close kinship with Britain and are loyal supporters of the Crown and all that it stands for, are sufficient to explain why the British public, irrespective of party affiliations, is clamouring for safeguards to these products. There is still some hope of a settlement on these issues; for the U.K.-E.E.C. negotiations have not been finally called off. Talks are scheduled to be resumed on Wednesday (1st August) this week and to last upto Saturday. The possibility of an agreed formula being worked out during this series of talks cannot be entirely ruled out, though the difficulties in the way are formidable.

TRADE WITH WESTERN EUROPE

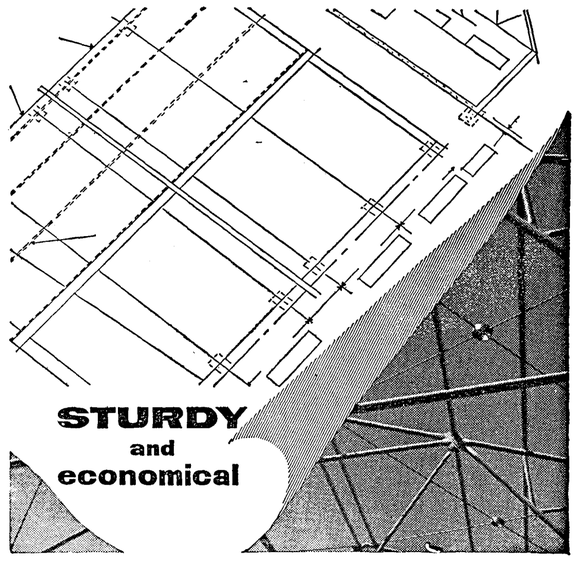
A welcome decision taken by the Government of India in the field of export promotion relates to the creation of a Council to be in specific charge of trade with Western Europe. The Council will undertake an extensive study of the problems of trade with Western Europe, draw up export targets for that region and give practical suggestions for achieving those targets. The decision was taken at a meeting of chairmen of various Export Promotion Councils and representatives of exporters convened by the Department of International Trade. The Council will consist of representatives of the Export Promotion Councils and the Commodity Boards interested in exports to Western Europe. Each Export Promotion Council and Commodity Board has been asked to set up a small sub-council consisting of exporters actually interested in the West European market. These sub-councils will draw up export targets for individual items along with their suggestions for realising them. The export targets drawn up by the sub-councils will be consolidated by the Council into a plan for exports to West Europe.

The move for devoting close attention to West European market has come not a day too soon. For the last several years, India has had a large adverse balance of trade with these countries. High tariffs, quota restrictions and other measures of discrimination practised by those countries in respect of Indian goods have circumscribed the scope for promoting exports to that part of the world. The inception of the European Common Market and the European Free Trade Association and the move by the U.K. to seek the membership of the former bloc have put new impediments to India's efforts at stepping up shipments to that region. This situation calls for extreme vigilance. The creation of the Council is also welcome in so far as it reflects a new realisation by the Government of the need for focussing attention on export problems on a region-wise basis. This journal, it may be recalled, had emphasised the need for regional councils for promoting exports (*vide* the note on "Diversification of Exports" in *Commerce* dated 23rd June 1962, page 1107). The Government will now do well to create such regional councils for Asia and Africa also, with which India's trade has been either stagnant or declining in recent years. The need for exploiting the vast potential markets in the neighbourhood cannot be overemphasised.

Another constructive step taken in a bid to promote exports is the constitution of an Export Inspection Advisory Council. This Council will advise the Government on all matters relating to quality control and pre-shipment inspection of export goods. The Council, set up after consultation with the Board of Trade, will prepare an operational programme for quality control on export goods with priority for pre-shipment inspection measures. The Special Secretary (Commerce) in the Ministry of Commerce and Industry will be the Chairman of the Council. The appointment of the Council is in pursuance of a suggestion made by the *Ad-Hoc* Committee on Quality Control and Pre-shipment Inspection (Chairman: Dr. Lal C. Verman, Director, Indian Standards Institution) to the effect that the task of improving the quality of export goods would be facilitated, if the Union Government had available to it the advice of persons intimately concerned with the day-to-day problems of quality control and with export promotion generally.

While the move is in the right direction, one cannot help feeling that it is of little importance until some of the other valuable recommendations of a complementary nature made by the Committee are brought into force. The Committee, in fact, wanted the Government to acquire legislative powers to enforce the scheme of quality control and pre-shipment inspection on export goods. It is a pity that the recommendations contained in the report, which was submitted to the Government as early as in March 1961, have yet to receive the serious attention they deserve. Apparently, the Government is not in favour of imposing compulsion in respect of quality control on exports.

The Indian Investment Centre has set up an advisory committee of 16 industrial experts to guide the Centre in drawing up industrial surveys and feasibility studies for certain important industries to be developed under the third Plan. The first meeting of the Advisory Committee will be held at Bombay on the 7th inst. The Indian and foreign technical advisers of the Centre, in consultation with industrial experts, will seek to find gaps in the country's industrial structure or sectors where development has so far tended to be slow. After the preliminary investigation is over, the Committee will select specific industries for surveys and feasibility studies.



STURDY and economical

prefabricated tubular structures

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 13 ft. 4 in.
SLS/44	44 ft.	10 ft. 1/8 in. and 13 ft. 4 1/8 in.

'Of course we can let you have it!'

When you buy equipment from VOLTAS, you have the assurance that essential spare parts are always available. At VOLTAS, an elaborately organised SPARE PARTS DIVISION uses the most modern business methods to ensure that your order is promptly executed, and that replacements are quickly despatched. The VOLTAS SPARE PARTS DIVISION has more than 70,000 items in ready stock!

Briefly, Voltas' activities comprise:-

Marketing and Distribution of Goods:
Representing leading manufacturers, both foreign and Indian, Voltas supplies a wide range of goods—Electrical, Mechanical, Air Conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.

Manufacture and Development:
Air Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery... and the list is growing!

Service:
Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation.

Name the spare and VOLTAS IS THERE!

AMERICAN LETTER

BUSINESS INDICES UP, BUT SENTIMENT DOWN

PRESIDENT KENNEDY'S SOCIALISM UPSETS MANY

From Our Special Correspondent

NEW YORK, 28*th July*

EXCEPT for the uncertain and hesitant action of the stock market, overall economic statistics continue favourable. All the experts say so. Yet, while this is proven by overall statistics, these figures do not tell regional stories of boom and regional stories of hardship. They also cannot take into account the apprehensions and fears which only manifest themselves by hesitancy and lack of action by individuals and corporations.

This state of affairs shows up in many ways. People wait until the last moment to pay their bills. Lawyers and physicians have a difficult time collecting their fees this time. Companies postpone hiring new personnel or replacements, because they are uncertain of the future. These are some of the little developments which do not show up. The question may be asked why the hesitancy, why the doubts and why the apprehensions with overall statistics creeping up?

Essentially, it boils down to this. America is a business community, mainly, with its good and bad points. Everyone wants to make a profit and have some future security. Some of those seeking these goals are reasonable in their requests, others are greedy. Most business and professional men are conservative, they may be Republicans or conservative Democrats so far as the two parties are concerned. The conflict arises, as previously stated in other contexts, because the Washington Administration, led by the very energetic Kennedy family, wants, in the opinion of business and industry, to superimpose on this business structure progressive social concepts of human welfare which business considers too radical and unsound.

Here again, there are two sides to this question. What is radical and what is conservative? This ranges from the visionary elements of a new future for more people to the *status quo*. There is no philosopher in the world who could define what is right and what is wrong. Perhaps, it boils down to the old cliché namely, "what is good for the greatest number of people." But even that has to be qualified by the question "in what strata of society and in the strata's most useful for the preservation of the present system?"

The present American economy, like other civilisations of the past, has to be viewed in this light, particularly by people overseas. It may sound quite complex, but it really is not for the trained observer. There are at least two sides to every question. Both sides may be entirely logical, depending on what side of the fence one sits. Yet, the net result of the controversy may be baffling, sometimes even disastrous. Needless to say, most situations work out in the long run, for better or worse, because of foreseen, or unforeseen, circumstances.

To get back to the conventional approach, economic expansion continued in May and June but at a somewhat slower pace than in preceding months. Comparisons with the figures of 1961, naturally, are still highly favourable in almost every sector of the economy, but there have been some recessions from recent highs.

A notable example are corporate profits. In the first quarter, they ran at an annual rate of $51,500 million, as compared with $40,000 million 12 months previously. But they did not come up to the $52,100 million for the final quarter of 1961. The last quarter of the year is the one when final adjustments are made for taxes and write-offs but the discrepancy is held to be too large for comfort.

The ebbing corporate profit flow, probably, was a contributing factor in the decline in stock prices, but personal income continued its upward climb reaching an annual rate of $440,000 million in May which was $27,000 million higher than the rate a year earlier and there were few inflationary influences except higher Government spending. Wages and salaries accounted for 75 per cent of the increase and a major portion of this was in State and local government pay-rolls and in the service industries. In fact, personal income has risen so far every month of the year.

Employment was up sharply last month, but, as many students out of school entered the labour force, the unemployment rate rose slightly to 5.5 per cent of the labour force in June from 5.4 per cent in May. Progress in this area continues to be disappointing.

And so is the story of steel. There was a sharp decline in steel output. At the same time, industrial production as a whole rose to 118 per cent of the 1957 average. Gains in the production of other industrial materials, consumer goods and industrial equipment more than offset the steel decline. This is one example of what I meant by the comparisons of overall figures with regional and sectional ups and downs.

$13 Million Credit to India

The International Development Association, an affiliate of the International Bank for Reconstruction and Development, has extended a development credit equivalent to $13 million to India. These funds are designed to help complete a project to irrigate about 152,000 acres in the Purna river valley in the State of Maharashtra and to provide a 15,000-kilowatt hydro-electric power station. According to the planners, it would provide for the first time irrigation to that drought-stricken area in the western part of the Indian high plateau.

Projections are that the project could result in increasing production of fruits and vegetables and in introducing new crops, so that the value of production in the area may be six times the present volume, thus augmenting farmers' food supplies and income.

This last credit of I.D.A. is the sixth extended to India by the association. The total dollar amount involved is $56.5 million. The money is used primarily for the development of agriculture in widely scattered areas such as Punjab, Uttar Pradesh, Bihar, Gujarat and Maharashtra.

The Purna project includes the construction of two dams on the river, one at Yeldari and the other downstream at Sideshwar. The power plant is to be built at the foot of the Yeldari dam. The State of Maharashtra will operate the programme with the help of a consultant who will pay attention to the establishment of ground-water observation wells, the cropping pattern and control of the application of water. The State will also provide services to farmers in that area to improve agricultural practices and to meet requirements for fertilisers and for credit.

Construction on the irrigation works and power station, according to I.D.A., is the responsibility of the State's Department of Power and Irrigation which will also operate the irrigation system. The power station will be operated by the State Electricity Board. Work was started some years ago and, by the end of the second Five-year Plan, the equivalent of about $9 million had been expended. The I.D.A. credit is part of the 60 per cent of the required financing provided by the Government of India towards the total project. The State provides the remainder. The I.D.A. credit is for 50 years at no interest. Repayment will begin in 1973 at the rate of 1 per cent annually. There is a service charge of ¾ of one per cent per annum on the amount withdrawn and outstanding.—*All Rights Reserved.*

fear that lack of reflation may bring stagnation and; it is clear that, if the Government does not take action, it will be under pressure to do so before long from both industry and its economic advisers.—*All Rights Reserved.*

LONDON LETTER

AN INCOMES COMMISSION

MR. MACMILLAN TAKES FOUR STEPS

(*From Our Own Correspondent*)

LONDON, 27*th July*

THE speculation about whether a change of Chancellor of the Exchequer would mean a change in monetary policy continues unabated. It is, however, becoming increasingly evident that a gradual change will take place.

The change-over in Chancellors was immediately followed by a meeting with the Chairmen of Regional Industrial Boards who unanimously made it clear that they were very disturbed about the future prospects of British industry. They felt that the Government's policy had effectively damped down demand and they saw no signs of an improvement. The universal glumness which overcast this meeting seemed to indicate both the need for expansion, on the one side, and to arouse complementary fears that an unwise expansion might take place, on the other.

In defending his Cabinet changes the Prime Minister set down four heads of policy of which the first was "securing a faster rate of economic growth by encouraging a rapid and orderly transfer of manpower from declining to expanding industries by better educational and apprenticeship arrangements and the fullest use of modern and logical development." There was nothing here in the slightest unconventional, but it is inevitable that the opening words "fastest rate of economic growth" will be seized on, apart from their context for the City, for one is convinced that expansion is in the air.

In one respect, Mr. Macmillan appears bent on pursuing the previous Chancellor's policy: Mr. Lloyd's principal monument is NEDDY (National Economic Development Council) whose function is to consider the long-term trends of British economy and advise accordingly. The Trade Unions reluctantly joined the Council. To it Mr. Macmillan has now added a National Incomes Commission (apparently to be called NICKY which will no doubt get abbreviated to NIC or even to OLD NICK which is a very well-known expression for the Devil).

The Trade Union Congress has already rejected NICKY as hopeless and useless and it seems clear that the Prime Minister is not going to get much help from the Unions. The function of this body is to examine individual cases for wage increases as opposed to the N.E.D.C.'s function of examining general wage policy. NICKY is to look into current pay claims in either the public, or *the private*, sector by agreement with the parties to the dispute. Since the Unions have already given their forthright views about NICKY, it would appear that, wherever Union influence was strong, labour would refuse to let NICKY look at them. On the other hand, the Secretary of the Trades Union Congress has said they would always be ready to give evidence to the new Commission as presumably they would be to any other body.

The Government also proposed that this Incomes Commission should examine retroactively wage claims which appear to have been settled contrary to national interest. The Government's idea here is to brand such settlements as against public interest and draw odium on both the employers and employees concerned.

If it is right that the country is in for a gentle period of expansion for which the productive capacity exists, the early life of the Incomes Commission will not be difficult. By that time the Government will have reached the end of its political life and the future of NICKY will then depend on the results of the General Election.

One cannot conclude this review without drawing attention to the fact that, as yet, there has not been one single positive action on the part of the Government towards reflation and that, in spite of talk about expansion, there are doubts in the most conservative (in an economic sense) quarters whether the Government indeed do propose to take any positive action—in the field of tax, money policy or any other. At a time when demand is in need of stimulation throughout the world generally, although particularly in America as evidenced by the renewed debate of an upward revaluation of the price of gold, there are among the economists, real doubts whether the Government is wise to lag behind the rest of the world. There is a real

(*Continued in previous column*)

The Third Five Year Plan; Bird-Heilgers' part in it...)

Rs. 1900 CRORES FOREIGN EXCHANGE BILL FOR THE THIRD PLAN

The foreign exchange bill for the Third Plan is the highest ever—more than Rs.1900 crores. Clearly, the economy's pressing need is to find means of earning and saving more foreign currency. To bring this about, the Third Plan is implementing a clear-cut policy: stepping-up exports, cutting down imports. To stimulate exports, controls on most products have been relaxed, export duties abolished or reduced, promotion councils set up and trade agreements concluded with 25 countries.

Export—a priority with Bird-Heilgers

Among export commodities, jute is high on the list of the Plan's priorities—and tops the list of Bird-Heilgers exporting activities. Between 1957 and 1961 the group's exports of jute earned well over Rs. 94 crores—a significant addition to India's foreign exchange earnings. During the Third Plan, the group hopes to better this effort by intensifying and widening the scope of its export drive.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...earn and conserve foreign exchange...join the national drive to economic independence.

INDIAN BANKS' ASSOCIATION

SEMINAR'S SUGGESTIONS FOR REORGANISATION

VARIOUS suggestions to make the Indian Banks' Association more representative of the banking system in the country than it is today and to increase the scope and effectiveness of its activities, were made by the Bankers Seminar held at Bombay recently. As some of the main resolutions and recommendations of the Seminar require for their implementation (if and when they are accepted by the managements of the banks and Government) a more effective body, the Seminar did well to examine this question in some detail. For instance, the Seminar envisaged for the Banks' Association such important roles as preparation of a programme of branch expansion to the 1,400 unbanked areas in the country on the basis of a priority list, promotion of closer co-operation and greater understanding among banks, preparation of a black list of undesirable customers and research in needs and motivations of people at all economic levels in order to popularise the discharge of debts through banks.

The Seminar recommended that the membership of the Association should be enlarged to bring within its fold (1) every functioning bank which has not been refused licence by the Reserve Bank of India, (2) the State Bank of India, (3) the State co-operative banks and through them the central co-operative banks, (4) all foreign banks having their places of business in India and (5) the Reserve Bank as an observer, whenever necessary. It suggested that the exact manner of giving representation to these institutions should be examined by a special committee to be appointed by the Managing Committee of the Association and that the name of the Association be appropriately changed to reflect the change in its composition. The Seminar made the following further recommendations in regard to the functioning and organisation of the Association:

(1) Adequate representation be given to all classes of banks on the Managing Committee of the Indian Banks' Association.

(2) In order to implement the decisions of the Indian Banks' Association, one or more standing committees be appointed.

(3) The Association should undertake the work of publishing books and open centres for imparting training all over the country.

(4) The Association should organise a commercial intelligence and statistics department to collect information.

(5) The Association should take up the work of standardisation of forms and procedures.

(6) The Association should open branches at various State capitals and other important centres.

Reorganisation of the Association is necessary if it is to be instrumental in promoting greater co-operation and understanding between banks and healthy banking practices in the country and to integrate and revitalise the banking system. At present, only 38 out of 67 Indian scheduled banks are members of the Association, although the 38 account for 96 per cent of the deposits of the Indian scheduled banks. A large number of commercial banks, especially non-scheduled banks, are not members of the Association. Thus 29 scheduled banks and 222 non-scheduled banks are not members. The State Bank of India, owing to its special position and responsibilities, is not a member of the Association, though its subsidiary banks have joined the Association. The foreign banks in India have a separate association of their own called the Exchange Banks' Association. But there is no reason why the State Bank of India and the foreign banks should not be members of the Indian Banks' Association. The latter can have their own association to take care of their special interests, but this need not stand in the way of their participation in the Indian Association.

While it is desirable to enhance the representative character of the Association from the point of view of the deposits as well as the number of banks, care should be taken to see that it does not degenerate into a body to develop a system of cartels among banks or into one that represents a strange assortment of credit institutions and therefore incapable of doing anything to revitalise and integrate the commercial banking system.

INDIAN BANKS IN PAKISTAN

The Government of India, in a note delivered to the Pakistan Government at Rawalpindi, has sought exemption for Indian banks in Pakistan from the provisions of the recent ordinance requiring all foreign banks to deposit with the State Bank of Pakistan Rs. 20 lakhs each or 5 per cent of their total time and demand liabilities, whichever is higher, out of funds to be transferred from outside the country. The Government of India has pointed out that the Indian banks had never been allowed to repatriate their profits like other foreign banks. Had they been allowed, the note points out, they would have brought it back to Pakistan to satisfy the new requirements regarding deposits. Since unrepatriated profits were lying in Pakistan, it is argued, they should be accepted as deposit.

The Press Trust of India despatch from Rawalpindi, containing this news, does not indicate whether the Government of India had cited any other ground for exemption. Why the Government of India did not release the note to Pakistan to the Indian Press is a mystery. If the reason mentioned in the P.T.I. report is the only one advanced by the Government of India, it has made out a very poor case. In fact, it is an implied acceptance of the relevant provisions of the ordinance as fair and just. In addition to seeking exemptions for Indian banks, it should have strongly protested against the provisions themselves, which are unjust, discriminatory and extraordinary. That they have been imposed on top of the clear case of discrimination against Indian banks patently evident in the prohibition of repatriation of profits by Indian banks is a measure of that country's anti-Indian spirit. Actually, the Government of India should have taken this opportunity to draw the attention of world public opinion to this patently discriminatory measure solely designed to spite India. Here is another instance of bungling and spoiling a good case by the Government of India.

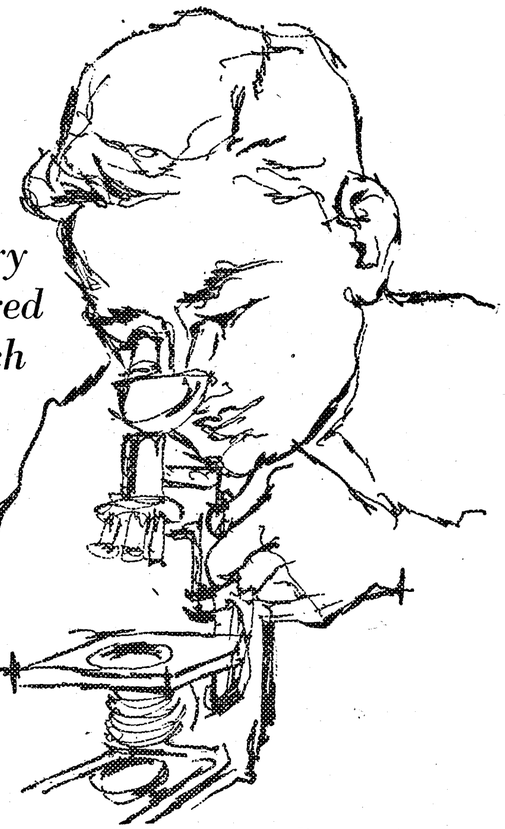
An Industry
Nurtured
by Research



'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

COMMUNIST COUNTRIES ON WORLD TEXTILE MAP

PRODUCTION AND EXPORTS CONTINUE TO RISE

COMPETITION from Communist countries in world cotton textile trade is getting keener of late. It is estimated that the combined share of these countries (Bulgaria, China, Czechoslovakia, East Germany, Hungary, Poland, Rumania and Soviet Russia) in the aggregate world exports of cotton goods (yarn and piecegoods) is as much as 19-20 per cent, as against a bare 4.5 per cent a few years ago. Statistics relating to the actual shipments of cotton cloth at present are not available, but the overall trend seems to be upward, the rate of exports being higher than that in 1960 when the Communist countries together exported 1,119 million yards of cloth (representing 16.6 per cent of the total world exports of 6.759 million yards), as compared with 284 million yards (representing a little over 5 per cent of the total world exports of 5,463 million yards) in 1954. This persistently upward trend in textile exports has been rendered possible by the continuously rising production of cloth in these countries which in 1960 aggregated 17,015 million yards, as against 12,834 million yards in 1954. During the same period, the output of yarn rose from 2,142,500 metric tons to 3,137,000 metric tons. The rise in the production of cotton goods thus follows the notable expansion in the spinning and weaving capacities. Between January 1953 and December 1960, the number of spindles installed in all the Communist countries went up from 19.59 million to 26.88 million and that of looms from 528.000 (July 1952) to 532.681. The place occupied by the Communist countries together on the world cotton textile map is highlighted in the following statement:

	World total	Communist countries	Percentage share of Communist countries
Spindles (In thousands):			
January 1953	129,330	19,589	15.1
December 1960	125,867	26,878	21.4
Looms (actual number):			
July 1952	2,730,400	528,000	19.3
December 1960	2,581,336	532,681	20.6
Production:			
Yarn (thousand metric tons):			
1954	7,235	2,142	29.6
1960	8,986	3,137	34.9
Cloth (million yards):			
1954	44,212	12,834	29.5
1960	53,240	17,015	32.0
Exports of cloth (million yards):			
1954	5,463	284	5.2
1960	6,759	1,119	16.6

Metric ton = 2,205 lbs.

The production of cotton textiles and consumption of cotton in Eastern Europe and Soviet Russia, according to an interesting review of the trends in this region contained in the June 1962 issue of *Cotton*, the monthly publication of the International Cotton Advisory Committee, Washington, continue to rise, the largest percentage gains being in Hungary, Poland and Rumania. As for man-made fibres, their output in Czechoslovakia, Russia and probably elsewhere also continues to rise quite rapidly. In the case of silk fabrics, the production is declining except in Czechoslovakia and Hungary.

The table below indicates the trend of production of all types of textiles in Soviet Russia and East European countries during the last three years:

Country	1959	1960	1961 Plan	1961 Actual	1962 Plan
Bulgaria (million metres):					
Cotton fabrics ..	209	218	213	226	234
Woollen ,, ..	18.6	18.7	16	17	17.2
Silk ,, ..	9.5	10.7	..	10	10.1
Czechoslovakia (million metres):					
Cotton fabrics ..	441.6	463.9	461.5	466.6	..
Woollen ,, ..	45.6	46.2	46.6	47.6	..
Silk ,, ..	60.6	65.1	71.4	73.0	..
Linen ,, ..	65.1	67.0	66.7	68.4	..
Man-made fibres ('000 tons) ..	58.1	62.3	69.7	69.0	..
Hungary (million sq. metres):					
Cotton fabrics ..	226	240	252	256	..
Woollen ,, ..	24.9	27.6	29.2	29.8	..
Poland (million linear metres):					
Cotton fabrics ..	637	667	680	710	705

1 metre = 1.0936 yard.

The twenty-year plan adopted last year in Russia calls for quintupling national income between 1960 and 1980 and raising the average *per capita* consumption to 3½ to 4 times the 1960 level. The production of textiles is expected to be doubled by 1970 and trebled by 1980 over 1960. The projected annual compound rate of increase in textile production during the 20-year period will be 6 per cent, as compared with 8.5 per cent for consumer goods, generally, and 9.7 per cent for all industrial goods. It is estimated that the population of Russia will rise from 216 million in 1960 to 248 million in 1970 and 274 million in 1980 and the object is to raise the *per capita* annual consumption of all textiles from about 40.00 square metres (that is, 43.74 square yards) at present to 47.5 metres (51.95 yards) in 1970 and 65.2 metres (71.30 yards) in 1980. These figures indicate that a greater expansion in *per capita* consumption is contemplated in the 'seventies than in the 'sixties. More rapid percentage increases are apparently planned for wool, silk and linen fabrics than for cotton fabrics. Nevertheless, the cotton fabrics will still account for 60 per cent of the total consumption of fabrics in 1980.

Target for Textiles

The production target for textile (all) piecegoods to be achieved by Russia in 1970 is 13,600 million square metres which will be higher still at 20,000-22,000 million square metres in 1980, as against the actual production of 6,600 million square metres in 1960. In order to achieve this target, the output of raw cotton, man-made fibres and wool is proposed to be stepped up considerably as shown in the table below:

	1960	1961	1965	1970	1980
Textile fabrics (in billion sq. metres)..	6.6	—	—	13.6	20–22
Fibres (in '000 million tons):					
Cotton	1,480	1,528	1,970 to 2,100*	2,760	3,450 to 3,800
Man-made ..	211	250	666	1,350	3,100 to 3,300
Wool	357	—	548	800	1,045 to 1,155

Source: Economic Survey of Europe, 1961.
—Not available.
Calculated from seed cotton targets on the basis of 34 per cent lint content.

The agricultural programme of Russia envisages an increase in cotton production from 7.0 million bales (of 478 pounds net weight) in 1961 to at least 9.1 million bales in 1965, 12.7 million bales in 1970 and 15.9 million bales in 1980. The Kara Kum Canal in Central Asia (this is a 500-mile waterway, 100 to 150 ft. in width, taking water from the Amu Darya river), which has already been completed, is expected to double the water supply and contribute greatly to cotton production in Southern Turkmenia. The production of man-made fibres is to be stepped up from 1.2 million bales in 1961 to 3.1 million bales in 1965 and 6.2 million bales in 1970 and it is hoped to double wool output by 1970 from the 1960 level of 1.6 million bales.

Imports

Soviet Russia imported last year (1961) 653,000 bales of cotton, as compared with 891,000 bales in 1960. The cut was effected mainly in imports from the United Arab Republic, the principal source, from 512,000 bales in 1960 to 423,000 bales in 1961. Imports from China, too, declined from 216,000 bales to 55,000 bales. Imports from Sudan, however, rose from 25,000 bales to 28.000 bales. Besides, Russia imported 28,000 bales of cotton from Brazil, from which it had not bought any cotton in 1960. Whatever cotton Russia imports is only of the types that are either not produced there or produced on a small scale. Actually, Russia is a next exporter of cotton. The total quantity actually shipped in 1961 was 1,765 000 bales which was slightly less than in 1960, with little change in the quantities sent to most destinations. The bulk of Russian cotton exports went to Eastern Europe. Some cotton was also exported to Western Europe (215,000 bales), Cuba (69 000 bales), North Korea (46,000 bales) and Japan (38,000 bales).

Exports

Soviet Russia exported last year 197 million metres of piecegoods which is about the same as in 1960. The principal destinations were Bulgaria, Indonesia, Mongolia, Malaya, Afghanistan and Thailand. In the same year, Russia imported 60.9 million metres of piecegoods, a quantity which was substantially less than that (143.3 million metres) imported in 1960. Of the latter figure, China alone accounted for 100 million metres. How much was from there in 1960 is, however, not known.

COTTON TEXTILE INDUSTRY IN INDIA

In the last session of the Lok Sabha, Mr. Manubhai Shah, Union Minister for International Trade, gave some interesting details regarding the allotment of cotton spindles, automatic looms, handloom industry and powerlooms in the course of his replies to questions raised by members. The details are given below:

Allotment of spindleage: The number of spindles carried over from the second to the third Plan period was 378,856. In addition, it has also been decided to license immediately during the third Plan three million spindles. The total availability is, therefore, 3,378,856 spindles. The State-wise position of licences issued (upto 16th May 1962) is as follows:

State	No. of applications received	Licences issued: New units: No. of units	New units: Spindles	Substantial expansion: No. of units	Substantial expansion: Spindles
Maharashtra ..	116	..	..	8	74,264
Gujarat	125	7	84,000	..	..
Assam	6	1	25,000	1	12,500
Bihar	40	13	182,000	..	..
Madhya Pradesh ..	48	8	114,000	..	..
Punjab	60	9	120,000	7	78,000
Orissa	24	4	84,100	2	35,500
Rajasthan	55	9	108,000	6	34,728
U.P.	85	8	122,000	2	30,020
W. Bengal	62	7	97,000	..	..
Andhra	124	..	..	..	..
Kerala	119	..	..	..	..
Mysore	59	..	..	..	..
Madras	324	..	..	..	..
Total ..	1,247	67	936,100	26	265,012

A large number of licences have already been issued. The delay in the disposal of others is due to the need for careful scrutiny of applications from the technical point of view. No applications have been returned to the State Governments, though, in a few cases, there has been correspondence with them for clarification of a few points.

Automatic looms: Automatic looms are being licensed both for expansion and for replacement. In the former case, under the present policy, applicants who undertake to export 75 per cent of the production of these looms are being given preference. Although Indian textiles are meeting with increasing competition in foreign markets, it is expected that the units equipped with modern automatic machinery will be in a better position to sell their goods in such markets than units without such equipment.

Reopening of mills: Fourteen of the cotton mills shut down for some reason or other restarted working during the year 1961. Financial assistance to cotton mills is channelled through the agency of the National Industrial Development Corporation. Of the 14 mills, the Corporation has sanctioned loans amounting to Rs. 49.50 lakhs to one mill and Rs. 13 lakhs to another.

Handloom industry (21st May 1962): The handloom industry is still in receipt of subsidies from the Central Government. The actual subsidies amounted to Rs. 350.39 lakhs in 1961-62, as against Rs. 366.32 lakhs in 1960-61 and Rs. 518.58 lakhs in 1959-60. The Government's object in giving financial assistance to the handloom industry is to strengthen and rehabilitate it. There is no single proposal whereby the industry can be made self-supporting. But the overall effect of the various schemes now being adopted is progressively to improve its economic condition and competitive capacity which, in the long run, should help to make the industry stand on its own feet.

Powerlooms: There are 82.805 powerlooms—25,718 cotton and 57,087 non-cotton. New licences are not given except for purposes of imparting vocational training. No prosecutions for setting up unauthorised powerlooms were launched in 1961. The number of unauthorised powerlooms in existence during 1961-62 was 64,286. Information regarding powerlooms regularised State-wise is being collected (as of 2nd May 1962). The following table indicates the progress made in the conversion of handlooms into powerlooms upto the end of December 1961:

State	Looms sanctioned	Looms ordered	Looms received	Looms installed
Maharashtra and Gujarat	3,100	1,725	1,200	1,195
Assam	230	150	50	64
Bihar	1,300	900	900	723
Kerala	1,500	500	500	500
Madhya Pradesh ..	467	258	258	153
Madras	15	15	15	15
Mysore	2,000	2,000	1,280	852
Orissa	1,200	768	490	360
Punjab	500	188	188	180
Rajasthan	400	330	330	75
U.P.	1,000	268	268	152
W. Bengal	1,005	745	745	735
Delhi	26	16	..	..
Manipur	1	1	..	..
Pondicherry	125	30	..	..
Total ..	13,469	7,894	6,324	4,944*

* Of this total, 3,456 powerlooms were installed during the second plan period and the balance in the first nine months of 1961-62.

The Government has decided not to permit any more installation of powerlooms in the handloom sector. The decision was taken after an inquiry.

TROUGH OF DEPRESSION IN COTTON INDUSTRY

MORE MILLS TO CLOSE?

From Our Special Correspondent

MANCHESTER, *24th July*

TO the complications already existing in no small measure in the cotton industry in Lancashire has now been added a further disconcerting factor—political uncertainties which reached their climax in a series of Government changes. Buyers at the moment need little enough excuse to restrain their activities and the new wave of disillusionment which swept the country during such a wholesale switch of key Ministers was the signal for most distributors to withdraw still further into their shells.

MANCHESTER LETTER

The height of the summer is scarcely a time when much business is usually negotiated, yet traders are searching their memories for an occasion when incentives were so far distant. To economists and others, who rely on theory rather than practice, sentiment seems an odd way of describing market vacillations, but to the business man such intangible aspects are recognised in their true worth.

Ever since the big wave of over-buying, which proved the aftermath of the scrapping scheme which ended over two years ago, textile traders in this country have been short of confidence. Producers were able to "live on their fat" for many months, but the subsequent trough of depression into which the trade has now sunk has exceeded in intensity its many predecessors.

Curtailment of Output

For the moment, the regular curtailment of output in the different districts, due to the holiday season, is sufficient to keep excess supplies within check. Even so, almost from week to week reports of pending mill closures come to hand and at least a score of firms have decided to shut their premises since the beginning of the year. To predict that this movement will not only continue but quicken in pace in the months ahead is not a difficult task. It has already been announced that the Devon Mill at Oldham, Lancashire—owned by the Cyril Lord group—is to close down. Notices have been posted to the 240 workers and the fifty-year-old mill will cease yarn production shortly.

Already the labour force in the spinning and weaving branch has fallen to below 160,000 and, in the first five months of the year, the rate of wastage was nearly 2,000 a month. It is interesting to note that manpower in the mills now represents only half those employed at the peak of the post-war "bulge" early in 1952.

Small comfort can be gained in Lancashire from learning that, as has happened so often in the past, the diminution of trade is widespread, if not world-wide. The Cotton Board's summary of conditions in the first quarter indicated the brighter tone prevailing in North America and isolated European countries, but, in many other areas, the tale is much the same as in Britain.

Common Market Hopes

Although conditions in the British textile trade were extremely difficult, Mr. George Spencer, Chairman of British Cotton and Wool Dyers' Association Ltd., told the annual meeting at Manchester, that the Directors were fully aware of the "enormous opportunities" which would be created if Britain joined the European Common Market. At the same time, they were aware of the highly competitive aspect of the project which meant that rivalry would become even more intense.

Competition in textiles as a whole, he said, was getting fiercer and fiercer and it should be recognised that the textile industry was in a weak position, because it was a service industry. Margins continued to shrink and this tendency was accentuated by vertical textile organisations which were able to employ their own dye houses and not to bother greatly about the profit made on the process, whereas firms such as British Cotton and Wool Dyers had to work on a commission basis.

A warning that Britain must be careful when considering restricting imports from overseas was given to British businessmen—many of them in cotton—at Manchester by Mr. Alan Green, the newly-appointed Minister of State, Board of Trade. Addressing a luncheon of the Manchester Chamber of Commerce and the Manchester branch of the Institute of Export, Mr. Green said that, although Britain could take powers to change the pattern of imports, they had to take care that such powers were not used to restrict and reduce the world trade on which growth depended. Trade was not "a one-way street" and could not be conducted exclusively at home. "We must adopt both the markets overseas and at home, or if we fail the world will certainly pass us by and we shall belong only to history," he said.

Exports

On the subject of exports, Mr. Green said that he wanted to see "a growing body of ambassadors" to relate the nation's needs on overseas trade to the thoughts and deeds of ordinary people. "It isn't very easy, if you are a postman, a teacher or a pensioner, to relate the needs of the nation to your particular circumstances, yet this relationship must be established, if democracy is not to run itself into the ground by demanding more consumption than it pays for by production and service," he said.

Diversion of Activities

Diversification of former cotton business is not always the answer to falling profit margins. This is made clear in a report published by the chairman of Taylor and Hartley (Holdings) Ltd., one of the big spinning and weaving groups in Lancashire, which has lately switched output towards the garment trade as well as taking over several local motor distributing firms. Mr. William T. Sutcliffe blames the Government for failing to restrain "unfair foreign competition," saying that there is no encouragement to put further capital at risk in the plain manufacturing section of the textile trade. Spinning and plain weaving, he said, had been the worst-hit during the past year when the pre-tax profit of the group fell from nearly £453,000 to £297,000. There were still no signs of improvement, he added.

While imports of yarn and cloth, either subsidised or from low wage cost countries, were allowed to enter the home market at the peak level reached in 1961, the spinning and plain weaving units must operate uneconomically. In fancy weaving, however, a more prosperous basis had been established, but rising costs were depleting profit margins.

More and more concentration was being centred on the expansion of the outer garment trade. This, said Mr. Sutcliffe, was steadier and less susceptible to climatic conditions and the whims of fashion. The motor vehicle distributing sections had suffered a lean year because of the prolonged strike at one of the big motor manufacturing groups as well as restrictions on credit and the removal to new premises.—*All Rights Reserved.*

British women are still busy breaking all knitting records. In the first five months of this year, they used about 12 per cent more hand knitting yarn than in the same period of the record year 1961. With the severe winter acting as a spur to demand, worsted mills in Britain produced 20 million lbs. of hand knitting yarn between January and May. Average monthly figure was 4.0 million lbs., as compared with 3.5 million lbs. for the corresponding period of last year. The value of all-wool yarns, which comprise about 85 per cent of the total, was about £24 million, estimated on an average retail price of 1s. 6d. an ounce. (Re. 1 per ounce).

THE PENNY BANK

(no admission for adults)

Mrs. Priscilla Wakefield of Tottenham started the first Penny Bank in 1798. Children under 20 were invited to bring pennies every month to the Female Benefit Club which she sponsored. The money was paid back when needed for apprenticeship fees, clothes for service, or other good objects.

Banking has become more complex and better organised since the Penny Bank. But the concepts of friendliness, service and social benefit have survived in modern institutions such as the Union Bank of India. The Union Bank prides itself on its unique *personalised service* under which every depositor is treated as a Very Important Person.

The Union Bank Helps People

SERVICES OFFERED: Current, Savings Bank and Cumulative Deposit Accounts; Fixed Deposits and Three-year Cash Certificates; Inland Bills, Demand Drafts and Telegraphic Transfers; Letters of Credit and Guarantees; Foreign Bills and Remittances; Loans, Overdrafts and Cash Credits; Sale and Purchase of Government Securities and Shares and Safe Custody; Standing Instructions accepted; Credit Reports and Trade Information; Safe Deposit Vaults; TELEX contact with countries all over the world.

U.S. RAW COTTON PRICES

TREND DURING PAST TWO YEARS

SINCE India is a large importer of U.S. cotton these days, prices of that cotton are of direct interest to mills in this country. A comprehensive review of the cotton price trends in the U.S., contained in the latest (June 1962) issue of the monthly bulletin of the International Cotton Advisory Committee, Washington, indicates the pattern of price movements in the past two seasons and points to the probable trend of prices in the new season which began on 1st August 1962.

The price of cotton in the U.S., the review points out, depends not only on the supply and demand situation but also on Government policy with regard to price support, resale of old crop cotton and exports. During the 1961-62 season, just ended, U.S. Department of Agriculture returned to a single support-by-loan programme from the Choice A and B systems of the previous two seasons. Under the former A and B systems, which expired in July 1961, most of the cotton was grown by farmers who stayed within their acreage allotment (Choice A) and thus were eligible to sell their cotton to the Government at 32.42 cents per pound for Middling one inch in 1960-61. This cotton the Commodity Credit Corporation resold at a loss, at not less than a minimum price rising from 29.29 cents in August and September 1960 to 31.19 cents, with the addition of carrying charges, by July 1961. The C.C.C. minimum resale price for Choice A cotton was the principal determinant of the domestic price of cotton in the U.S. in 1960-61. It is estimated that about 10 million bales (of 478 lbs. each) were grown under this option and less than 5 million bales under Choice B. The Choice B cotton was supported by a loan programme at 26.63 cents for Middling one inch cotton, but, as the supply of Choice B cotton was small in relation to the total demand for American cotton, Choice B farmers had little difficulty in disposing of their cotton at or near the Choice A resale level. Consequently, very little Choice B cotton entered the Government loan.

U.S. Dilemma

The legislation approved in 1958 by the U.S. Congress had provided that the Department of Agriculture should revert to a single support-by-loan system in 1961-62. In setting the support level for the season, the Department of Agriculture faced a dilemma. If it kept prices to farmers as high as the Choice A price, which most farmers had received in 1960-61, there would be a substantial rise in the cost of cotton to domestic mills. On the other hand, if the price to the mills was kept the same, it would mean a serious loss in income to the farmers. The Department, however, decided in January 1961, to take the first course and set the loan rate for the 1961-62 season at 33.04 cents for Middling one inch cotton. This level was actually a little higher than Choice A purchase price of 32.42 cents and considerably higher than the C.C.C.'s resale price for the 1960-61 season.

The announcement that support prices for the 1961-62 season would be higher than that in the previous season caused a heavy wave of selling of 1960-61 crop by farmers and, by August 1961, stocks in private hands aggregated 5.7 million bales, as compared with 2.5 million bales a year ago. Farmers producing the 1961-62 crop, which aggregated 14.2 million bales of upland cotton, were, of course, able to place their cotton in the loan at 33.04 cents for Middling one inch cotton.

C.C.I. Cotton

The Commodity Credit Corporation owned only 1.5 million bales of cotton as on 1st August 1961, the smallest stock in many years. This cotton has not been available for sale during the 1961-62 season except at 115 per cent of the loan rate plus carrying charges or higher. Consequently, the minimum price at which this cotton could be sold was 38 cents in August and September 1961, 38.10 cents in October, rising at 20 points per month to 39.90 cents in July 1962. At these prices, this cotton has in effect been sealed off the market and practically none has been sold this season.

While the domestic price for cotton was rising last season—in fact, the price of Middling one inch cotton rose from 33.11 cents in August 1961 to 33.70 cents at the end of May 1962, as compared with 31.80 cents in May 1961—the price of rayon staple declined from 33 cents to 27 cents per lb. But the increased domestic price of cotton has been largely offset, so far as the export market is concerned, by an increase in export subsidy from 6 to 8.5 cents. On this basis, the effective price for export cotton at the end of May 1962 for Middling 1" cotton was 25.40 cents, as compared with 25.80 cents in May 1961.

Current Season

As regards the current season, which commenced on 1st August 1962, the review makes the following observations:

"The support price for 1962-63 for Middling one inch cotton was set at 32.47 cents per pound, as compared with 33.04 cents in 1960-61 season. Farmers have no reason to sell below this price and whether the market price rises above this level will depend on how strong demand is in relation to supply. If farmers place much of their cotton in the loan, the necessity of paying interest and carrying charges, totalling around 20 points per pound per month, to bring this cotton back into the market must be taken into consideration.

"While there is a question as to whether the coming crop will be sufficient to meet all demands, there is no question that the coming crop plus the expected carryover of around 7.5 million bales should be sufficient to meet any expected need. Interest then centres on the prices at which this carryover will be available.

"It now appears that the C.C.C. will still own on 1st August around 1.5 million bales from the 1960-61 and earlier crops. This cotton will only be available at a minimum of 115 per cent of this season's loan rate plus carrying charges which would mean a minimum price for Middling 1" of 38.64 cents in August, declining to 37.44 cents in October, and thereafter rising to 39.24 cents by July 1963.

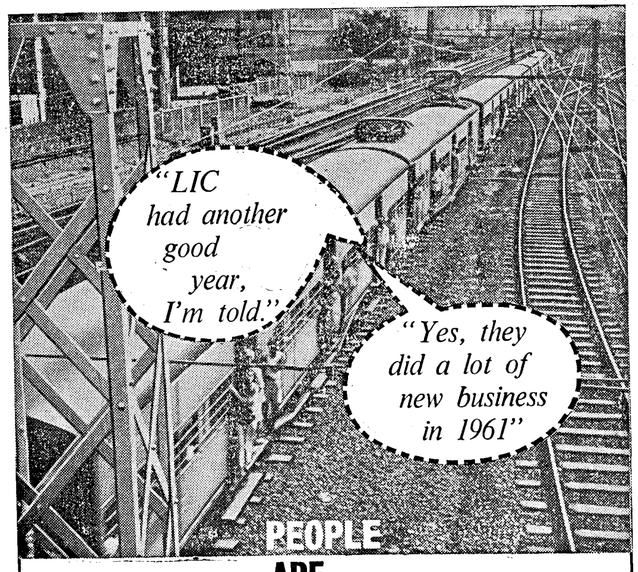
"Also, if present administrative regulations are not changed, the C.C.C. would take title to around 3.5 million bales of this season's cotton on 1st August which would only be available at the above prices.

"At such prices, C.C.C. stocks would presumably be sealed off from the market and would not be a supply factor in the market. Of course, if the trade thought there would be a shortage of cotton in the early months of this season, they could redeem cotton from this season's loan programme prior to 1st August but for cotton placed in the loan last November, the cost by July would be close to 35 cents for Middling one inch.

"There are two steps the Department of Agriculture could take administratively under the present law if they wished to ease any shortage of supply. First, they could hold off on taking title to this season's loan cotton on 1st August. The cotton would continue to belong to the farmers but it would be necessary to pay the mounting carrying charges. Second, they could again sell cotton from C.C.C.-owned stocks directly for export at the competitive world price as was done in 1958-59. Whether or not anything of this nature will be done is uncertain at present.

"The Department of Agriculture has already announced that the export subsidy will continue at 8.5 cents this season. The Department reserves the right to change this at any time in order to keep American cotton competitive on world markets but, in actual practice, in the past, it has not made changes once the subsidy for a season has been announced."

The above assessment is based on the price of Middling one inch cotton, the base quality. But the supply and demand situation for various qualities of cotton can be quite different from that for cotton, in general. During the last two or three years, the demand for lower grades and shorter staples has been strong in relation to supply. There is currently in the U.S. a shortage of low quality cotton and both the C.C.C.-owned and C.C.C. loan stocks consist almost entirely of higher qualities. Whether the pendulum of demand will slowly swing back to the higher qualities, as had happened in the past, remains to be seen.



ARE TALKING ABOUT LIC

LIC's new business in 1961 totalled Rs. 608 crores—an increase of 22% over the 1960 figure of Rs. 497.5 crores. A good record, by any standard. Especially so because 1961 was a bad year for field activity, with vast areas affected by floods. Greater reliance on Life Insurance as a means to safeguard the financial security of the individual and the family, and confidence in LIC as a stable organisation devoted to the welfare of the nation and its policy-holders, have been the main reasons for the phenomenal growth of LIC's business year after year.

Life Insurance Corporation of India

Your market outside is discerning

As an exporter of engineering goods you must be aware that in the export markets, for the buyer to select your goods in preference to those of other industrially advanced countries you have to compete on QUALITY of goods and services and of course price.

If you exercise strict quality control in the manufacture of your goods, maintain regular supplies, produce according to buyer's specifications, arrange for after-sales service facilities you will earn much-needed foreign exchange and enhance the country's prestige.

RAISING PRODUCTIVITY OF RAW JUTE

NEED TO ENSURE STABILITY IN PRICES

WHOEVER speaks or writes on the jute industry, India's ace earner of foreign exchange, one can doubtless expect a pointed reference to the problems of raw jute development. This is because of the fact that the fortunes of the secondary stage of jute economy (that is, manufacture of hessians, sackings, etc.) are so closely linked to those of the primary stage (jute cultivation) that any setback to the latter is bound to affect adversely both production and exports of jute goods. It is essential to bear in mind this vital factor, especially now when the Indian jute goods are experiencing severe competition in world markets not merely from Pakistan, which is making an all-out bid to expand and modernise the industry, but also from growing substitute packing materials (such as paper and plastic bags) and bulk transport of goods. While it cannot be disputed that efforts have been made in India to improve the conditions in jute economy in the past few years, the fact remains that the results actually achieved have not been quite encouraging. Striking evidence of this fact is the poor productivity of land devoted to raw jute. The average all-India per-acre yield of jute, though it has risen from 2.33 bales (of 400 lbs. each) in 1950-51 (base year of the first Plan) to 2.77 bales in 1961-62 (first year of the third Plan), is well below what is obtained in Pakistan, namely, 3.71 bales and the third Plan target of 3.5 bales. The accompanying table indicates the trend of area, production and per-acre yield of jute in India and Pakistan since 1950-51.

The relatively small quantity of raw jute raised in a given area of land in India must be attributed to a number of factors to which Dr. Ram Subhag Singh, Union Minister for Agriculture, did well to draw attention when he addressed the fifteenth meeting of the Central Supervisory Body for Jute held at Calcutta last week. In the first place, the spread of improved seeds is still restricted to a small fraction of the total jute area. Secondly, the use of fertilisers is on a very limited scale. Thirdly, the damage caused by pests and diseases, as well as the toll taken by weeds, is very extensive. Again, the lack of suitable sowing drills is preventing the quick adoption of line sowing. Further, the Agriculture Departments of State Governments are not energetically implementing the programmes of development. Take, for instance, the model scheme for supplying running water. It is disquieting to hear from Dr. Singh that, although the scheme was sent to the State Governments some months ago, only one State (Bihar) has so far submitted detailed concrete proposals. The model scheme, it may be noted here, envisages construction of links for joining retting tanks with canals, rivulets and tube-wells so as to assure a constant supply of running water. The revised scheme for providing retting facilities include provision of loans and subsidies according to the size of the holdings of jute growers. This, according to Dr. Singh, would be more liberal in the case of small and medium growers. And, finally, there is the absence of a suitable machinery to prevent violent fluctuations in prices.

Higher Yields Imperative

Since raw jute accounts for the major part of the cost of jute goods production, the need for augmenting per-acre yield, improving the quality of the fibre and reducing its price cannot be stressed too strongly. Dr. Singh certainly struck a note of realism when he urged that all future increase in jute output should be achieved exclusively by increasing the yield per acre and not by expansion in area. Needless to say that, to the extent this objective is realised, more land can be released to the production of other agricultural crops. There is, as Dr. Singh said, great scope for improving the acre-yields of jute, as the various intensive cultivation measures which count for increased production have not so far been fully harnessed. It is gratifying that the Government of India is making available special quotas of fertilisers for the jute crop. But the question is whether the Governments of the jute growing States will show enough enthusiasm and speed in lifting the quotas allotted to them and making arrangements for their prompt distribution to agriculturists.

The past ten years have witnessed, as the table on this page shows, marked variations in raw jute production—from 2.93 million bales to 4.68 million bales in the first Plan period and from 4.03 million bales to 5.18 million bales in the second Plan period. Unless such wide variations are eliminated by stabilising production at a level that will cover the country's requirements, the jute manufacturing industry and thereby the export trade of India will suffer heavily. Emphasising this point, Dr. Singh declared that it was imperative to make a close study of the factors responsible for the variations in the size of the crop, for it was only by pinpointing the causes that appropriate remedies could be found. "We must know," he said, "if the fault lies exclusively with unfavourable weather conditions or if there are other factors like prices which are equally responsible."

Raw Jute Prices

Referring to the price aspect, in particular, Dr. Ram Subhag Singh observed:

"There is intimate relationship between the price and the quantum of production of commercial crops. Such a relationship has been clearly demonstrated in the past few years in a number of crops, and jute cannot be an exception. The effect of prices on the production of jute has also been quite obvious during the past decade. As the fluctuations in prices are the main hindrance to planned production, the Government has given in the past very careful consideration to the question of fixing a statutory minimum price for raw jute. It has, however, been realised that, in a commodity the price of which is dictated by the international market like jute, the fixation of a minimum price is not without complications. At the same time, it is necessary to ensure that jute growers get a fair and economic price for their produce, so that adequate incentives are provided to them for adopting intensive cultivation measures for realising the maximum yield per acre."

The observations of Dr. Singh on the issue of raw jute prices are, indeed, carefully worded. The need for avoiding violent fluctuations in raw jute prices and ensuring some sort of stability is, as this journal has ere now emphasised, as much in the interest of cultivators as in that of jute goods producers. For, while any undue rise in prices will have a serious impact on the cost of manufacturing jute goods, a sharp fall in it will hit the growers hard and adversely affect the jute industry itself through scarcity of raw material. Unless the jute growers feel that the return they secure on their crop is an economic one, they will simply not bother to put in efforts to produce more and improve the quality. The formation of growers' co-operatives and provision of storage capacity in primary markets which Dr. Singh suggested to help in avoiding distress selling on the part of growers. Even so, one wonders whether it would not be better to make the Buffer Stock Agency a more effective body, instead of encouraging creation of innumerable jute growers' co-operatives. There are two ways in which this could be done. First, the responsibility for running the Agency, which is now on the shoulders of jute millowners, should be taken over by the Governments, Central and State. Secondly, the Agency must have regional offices in primary markets for keeping up parity prices.

Mesta

The prospects of raw jute price stability in the current (1962-63) season, which began on 1st July, are said to be "very good." This at any rate is the opinion expressed by Mr. Ajit Mazoomdar, Jute Commissioner, at the meeting of the Central Supervisory Body for Jute. For, according to Mr. Mazoomdar, the "market" consumption is likely to be about 7.1 million bales plus 200,000 bales for domestic and small-scale production of ropes, mats, etc., or a total consumption of 7.3 million bales. As against this, the supply available is expected to be about 9.0 million bales, comprising 2.5 million bales of carryover and 6.5 million bales of raw jute. In addition to this supply, there is the production of mesta. No estimate is still available about the mesta crop in the current season. In 1961-62, the mesta crop amounted to 1.71 million bales, as against 1.13 million bales in the previous season. Mesta, it may be noted here, is very similar to jute—it is in no way inferior to jute as regards colour—though it is somewhat coarser and not quite so strong. Sometime ago, it was feared that the growing mixture of mesta with jute in the manufacture of finished goods would spell disaster for the Indian jute industry in the quality-conscious export markets made more competitive and discriminating by the larger availability of manufactured goods from Pakistan. Such fears have since been dispelled. Mesta, we are told, spins well on jute machinery in admixture with jute. In view of this and considering that the colour of mesta is in no way inferior to that of jute and that its price is lower than jute, the jute mills are using larger and larger quantities of mesta. There is, however, a limit to the use of mesta, thanks to its "too obvious" defects of coarseness and brittleness.

Jute economy in India and Pakistan

MOTOR VEHICLES TAXATION IN MADRAS

PROPOSED LEVIES TOP HEAVY

THE already heavily-taxed road transport industry in Madras is being called upon to contribute further revenue to the State exchequer. The latest increases in taxation on buses and goods vehicles in various slabs of mileage, weight, etc., as proposed in the recent Madras Budget for 1962-63, are designed to net in an additional revenue of Rs. 2.0 crores in the rest (9 months) of the financial year and Rs. 2.6 crores in a full year. The proposed tax increases in M. V. Tax (that is, tax under the Madras Motor Vehicles Taxation Act of 1931) and in T.P.G. (that is, tax under the Madras Taxation of Passengers and Goods Act of 1952) are pretty steep in the case of bus transport, as will be seen from the following figures which compare the rates charged hitherto with the proposed ones:

(In rupees per bus per annum)

Mileage slab and tax category	Present	Proposed	Increase
132 miles and below:			
M. V. Tax	6,000	7,000	1,000
T.P.G. Act at Rs. 25 per seat per quarter	2,500	5,000	2,500
	8,500	12,000	3,500
132 to 169 miles:			
M. V. Tax	6,000	8,000	2,000
T.P.G. at 72 nP. per year per seat on the daily standard mileage	3,211	6,084	2,873
	9,211	14,084	4,873
Over 169 miles:			
M. V. Tax	6,000	9,000	3,000
T.P.G. at Rs. 35 per seat per quarter	2,500	7,000	4,500
	8,500	16,000	7,500

It will be seen from the above figures that the increase in taxation on a bus will range from Rs. 3,500 to Rs. 7,500, depending on the mileage. With this increase, the combined incidence of all Central and States taxes (direct and indirect) on a diesel-driven 58-seater bus in a year, for instance, will range from Rs. 24,000 to Rs. 27,000, representing nearly 70 per cent of its gross revenue. The figures worked out by Southern Roadways Private Ltd. in respect of taxes paid on a 58-seater bus to the Central and State Governments in 1961 show that their combined incidence in that year was Rs. 19,298, or, roughly, Rs. 19,500. The details are given below:

(In rupees)

Central Taxation:		
(a) Import duty on component parts imported for assembly of the chassis, engine—approximate landed cost Rs. 15,000 duty at 30 per cent spread over an assumed life of 7 years. 4,500/7	643	
Levy of excise duty Rs. 3,044 spread over a period of 7 years	435	1,078
(b) Duty at Re. 1.05 per gallon on 4,210 gallons of diesel oil (annual consumption)		4,421
(c) Import duty on spare parts utilised (consumption per year Rs. 3,000)—		
Approximate value of goods imported Rs. 1,000 duty at 40 per cent on landed cost of Rs. 714 .	286	
Approximate value of goods purchased from dealers Rs. 2,000 duty at 40 per cent on Rs. 1,016	406	692
(d) Excise duty on tyres and tubes (825 × 20 all-round) Consumption at 1 set for front and 1½ sets for rear. Tubes 1 set. At Rs. 99.22 for 8 tyres and Rs. 11.41 for 6 tubes		862
		7,053
State Taxation:		
(a) Annual incidence of Sales Tax at 7 per cent on cost of diesel bus chassis, Rs. 2,242 spread over an assumed life of 7 years	320	
(b) Sales Tax at Re. 0.35 per gallon on 4,210 gallons of H.S.D. Oil	1,474	
(c) Incidence of Sales Tax on spare parts at Re. 0.07 per rupee on Rs. 2,000 purchases from dealers. .	140	
(d) Sales Tax at Re. 0.07 on cost of new tyres and tubes on Rs. 2,156	151	
(e) Motor Vehicles Tax at Rs. 30 per seat per quarter under the Madras Motor Vehicles Taxation Act	6,960	
(f) Tax at Rs. 12.50 per seat per quarter under the Madras Motor Vehicles Taxation of Passengers and Goods Act, 1952	2,900	
(g) Stand fees collected by Municipalities and Local Bodies	300	12,245
Grand Total .. Rs.		19,298

Bus transport in Madras, it is contended, is not in a position to bear the heavy incidence of additional taxation. The Southern Roadways Private Ltd., for instance, had a net profit of Rs. 17.6 lakhs in 1961-62 on its aggregate fleet of 359 buses, but is expected to incur a net loss of Rs. 19.5 lakhs in 1962-63, on the basis of existing fares, for the proposed additional taxation means a burden of Rs. 28.5 lakhs on the Company. Besides, it has to meet the increases in dearness allowance and amenities for transport workers to the tune of Rs. 8.6 lakhs. If this is the position of a big operator, the plight of small operators, who do not enjoy credit facilities from commercial banks at advantageous rates and who have to pay more for their spares, tyres and accessories, may be easily imagined. It would be a case of penalising efficiency if the Madras bus transport industry, which has partly met the 50 per cent increase in operating cost since 1952 by various measures of technical efficiency, such as reconditioning of spares, retreading of tyres and preventive maintenance and reclaiming of engine oil, is subjected to any hardship. By all accounts, this industry, which has not increased the fares on many of the routes of the Madras State in spite of a 50 per cent increase in operation cost from 75 nP per bus mile in 1952 to 112 nP in 1962, deserves to be treated with greater consideration. The present state of the industry, which is far from satisfactory, is better described by Mr. S. N. Ramaswami, who has been associated with its fortunes. This is what he has to say:

"In addition, depreciation allowance permitted under the Income-tax Law has been reduced from 70 per cent for the first year and 50 per cent for the subsequent year to a flat 25 per cent with effect from 1st April 1958.

"It is a fact that the operator has controlled the outgo in the controlable items of expenditure by retreading, reconditioning, etc. But the operator is helpless in the matter of taxation, price of chassis and other bills of expenditure. Secondly, neither the increase in population nor the increase in national income has generated a proportionate increase in the gross takings of a bus. So, there is a squeeze between cost and revenue. This squeeze has compelled the postponement of replacement of aged vehicles. It is sad and distressing that the accidents on the roads with increasing fatalities are on the increase. The accidents are there, because the earnings per bus have not kept pace with the increase in and recurrence of the bills for chassis, taxation, etc. There is an ever-present threat of nationalisation and resultant insecurity of business."

The increase in tax proposed by the Madras Government for lorry transport also is stated to be excessive. An enhancement of about 50 per cent in the existing levels of taxation in category A (110 cwts.—150 cwts. and 150 cwts.—170 cwts.) and a new slab of tax on goods vehicles coming under the category B (above 180 cwts.) have been proposed. As 95 per cent of the trucks produced in India since 1954 fall under the category of over 9 tons (180 cwts.) and a 25 per cent extra load on the gross vehicle weight has been permitted, the new slab virtually means, according to Mr. T. S. Santhanam, who has been intimately associated with the road transport industry in Madras, almost doubling the tax on lorries. So it has been represented to the Madras Government that the category of over 9 tons should not be introduced and that the increase in taxation both under the Motor Vehicles Tax and the T.P.G. Tax should be limited to the extent to which the goods transport industry can reasonably bear. Mr. Santhanam, who recently submitted a memorandum to the Madras Government on behalf of bus and lorry operators, has made out a cogent case for not increasing the tax burden on motor vehicles. His arguments are:

"The budget figures of the Madras State under the Motor Vehicles Taxation will disclose that the revenue under this head has been increasing at a faster rate than other sources of income. In our State over the past ten years, larger seating capacity buses have replaced smaller seating capacity buses. Trucks with larger carrying capacity have been put on the road replacing pre-war and war-time vehicles with smaller load-carrying capacity. More vehicles have come on the road for passenger and goods transport. As a consequence of the increase in the number of vehicles and the increase in the carrying capacity and seating capacity, the revenue is increasing at a faster rate than under other sources of income.... The average annual increase in motor vehicle revenues is more than 10 per cent. When we project it over the next 4 years of the third Plan, Government will get much more than their estimate in the budget proposals.

"We submit that the proposed tax burden on the road transport industry is very heavy, will almost ruin the industry, will drive the marginal operator out of business, will discourage truck and bus owners in operating on uneconomical routes, pioneering new routes and opening up new villages and will discourage the small income group from entering this business. We earnestly plead with the Government that the tax burden should be reduced very considerably and fixed at a reasonable level, so that this industry, which is mainly owned by people from the middle income group, which is labour-intensive and which is necessary for the economic growth of our country, is allowed to grow on sound and healthy lines and maintain and preserve the reputation of our State as owning the best system of roads and the best system of road transportation."

The argument that there is a buoyancy in the yield of motor vehicles taxation is a perfectly valid one, for the total tax revenue under "motor vehicles" in Madras has increased from Rs. 5.4 crores in 1957-58 to Rs. 7.4 crores in 1962-63 (Budget estimate, without taking into account the additional yield expected from the proposed measures). The increase in revenue, to the tune of Rs. 2 crores, since 1957-58 has been due largely to an average yearly increase of 400 in the number of buses and an average yearly increase of 370 in the number of public carriers. But heavy additional taxation now may only discourage the road transport industry from adding substantially to its fleet of vehicles. If the disincentive of additional taxation is not there, the industry is bound to expand faster and provide all the additional revenue that is now expected from the proposed levies.

The Madras Government, it is gratifying to know, has just announced some concessions in its original proposals for additional levies on passenger buses and goods vehicles. In the case of buses, for the middle and upper slabs the rates of taxation have been reduced to Rs. 65 and Rs. 70 per seat per quarter, respectively, from the originally proposed rates of Rs. 75 and Rs. 80. In the case of lorries, the revised proposal is that lorries with laden weight exceeding 10½ tons would be taxed at Rs. 800 per quarter (as against Rs. 900 which was originally proposed), with no progressive levy thereafter. At the same time, the Government has reduced the rates of taxation originally provided for slabs ranging from 7½ to 10½ tons. The bulk of the lorries, it has been claimed by the Madras Finance Minister, would fall under the category of above 10½ tons. The representations made on behalf of the road transport industry have thus not been wholly in vain, although the aforesaid concessions seem to be only marginal. The Finance Minister himself has admitted that the additional taxation, even after revision, would reduce the profit-margin of operators. The concessions have fallen very much short of the expectations of transport operators. The reduced levy of Rs. 800 in the case of lorries with laden weight exceeding 10½ tons, according to them, would still be 75 per cent more than what has been charged hitherto. And their opinion on taxation of passenger buses is that anything more than a uniform rate of Rs. 60 per seat per quarter would be excessive.

ROAD CONSTRUCTION IN WEST GERMANY

Today not only the large German cities seem to burst in their seams and to be unable to hold the large flood of motor vehicles in their narrow streets, but also the large long-distance roads in the Federal Republic and even the German Autobahns, which twenty years ago were a sensational novelty in road construction for all of Europe, have become too narrow for present-day traffic. And even a further expansion of the road net work, pushed forward with all possible speed, can hardly remedy the situation. The word of a traffic expert seems to be really justified when he said: "Road construction lags behind rapid motorisation."

Nevertheless, about 250 kilometres of Autobahn are being newly constructed every year. In 1945, at the end of the war, there were no more than 2,000 kilometres of operable Autobahns in the territory of the Federal Republic of Germany; by the end of 1962 there will be more than 3,000 kilometres, by the end of 1966 almost 4,100 kilometres and by 1970 there will be more than 5,000 kilometres of Autobahn. This construction plan requires thousands of millions of marks, if one considers that today one kilometre of Autobahn costs approximately 3.3 million Deutsche Marks. With this rate of construction of Autobahns, the Federal Republic of Germany takes the third rank in the world after the U.S.A. and Canada. In addition to Autobahn construction, there are plans for many hundreds of kilometres of new long-distance roads and other hundreds of kilometres of primary roads.

And yet all this construction work is insufficient, because the number of motor vehicles increases too rapidly. Today there are almost 5.5 million private cars in the Federal Republic and four million other motor vehicles (buses, lorries, motorbicycles, agricultural vehicles and the large motor pools of the police, border police, the customs authorities and the federal armed forces). By 1965, experts expect an increase of ten million private cars and by 1975 the responsible authorities fear an increase of 20 million private cars (one private car for every third inhabitant). This means that the motor vehicles will increase in fact twice as rapidly as the roads. Therefore, the most frequented sections of the Autobahn are to be broadened from four lanes to six lanes while the long-distance roads and primary roads are to be widened from their present two lanes to four lanes.

An even more difficult problem than long-distance traffic is the traffic situation in the large cities, for which experts see the only solution in the construction of two and three-level speedways. For it is possible today to fly with scheduled jet airliners from Rome to Munich within 90 minutes, while it takes almost one hour to get from Munich airport through to the city centre by bus or car.

NEW PUBLICATIONS

Land and Labour in India. By Daniel and Alice Thorner. Published by Asia Publishing House, Bombay. Pages: viii + 227. Price : Rs. 16.00.

ALTHOUGH at first sight the book gives the impression of having a central theme, in reality it is but a collection of some fifteen articles written by the authors over a period of eight/nine years (1952-60). Quite a few of them (e.g. the essays on the Sarda Canal and the Agrarian Regions) strike the reader as disjointed and hardly relevant to the purpose the authors have in view. The same could be said about the six essays contained in the third section of the book entitled "Census and Sample Surveys." These are more in the nature of criticisms of the methods by which social and economic data were gathered in the Census of 1951, the Census of Landholding, the Agricultural Labour Enquiry, and the Rural Credit Survey, and do not throw much light on the central problem of agricultural production in India.

Subject to the above remarks, some of the essays, particularly those in the first section of the book, are excellent, providing as they do an insight into the relationship between the agrarian structure and agricultural production. In the first essay entitled "The Agrarian Problem in India Today," the authors have pinpointed the fact that the various land reforms measures adopted since independence have not yet succeeded in their central and announced purpose of bringing the actual cultivator into direct relationship with the State. Non-tilling absentee cultivators still own the major part of the land which continues to be cultivated by landless labour in various types of bondage and servitude—a point further amplified in the third essay, "Employer-Labour Relationships."

The essays in the second section do not deal specifically with the problems of "Land and Labour." They are more in the nature of history, dealing with India's economic development since 1760 and the "de-industrialisation" that took place between 1881 and 1931. From these there is a sudden jump to long-term trends in agricultural output and an analysis of the Report of the Ford Foundation Team on India's Food Crisis. The section is rounded off by a criticism of the agricultural output figures published by the Government of India, but one misses the connecting link between such criticism and the "problem of Land and Labour."

The book would have gained considerably in value if the authors had done some screening and revision before rushing into print. A collection of articles written in different contexts over a period of eight/nine years does not constitute a "book," howsoever informative and intelligent each of them may be separately.

The Appraisal of Management for Executives and Investors. By Jackson Martindell. Published by Messrs. Harper & Brothers, 49 East 33rd Street, New York 16, N.Y. Pages : 204. Price : $4.75.

Within any given industry, the best managed company provides the soundest investment. There can be no safety where there is poor administration. These are well-known considerations. At the same time, more and more people are convinced that there should be some standards with which to judge the best managed company. The American Institute of Management had been conducting management audit of commercial corporations and lately it had participated in the development of investment theory based on good administration and thus establish a true value of shares, in order to predict their probable future value. The attempt is to discover the best opportunities by research and not by intuition. The results have been none too bad, as in the case of Eastman Kodak and Sprague Electric Company.

Mr. Jackson Martindell, in his earlier book, *The Scientific Appraisal of Management* (published in 1950), had drawn up and refined a system by which the organisational defects can be spotted. The present publication is an extensive revision of the earlier volume and incorporates the experience of the American Institute of Management during the period. It centres on how to assess management—whether large or small business and also non-business management.

The problems in the complex field of evaluation are to decide exactly where to start; what to observe; by what process of logic to classify the observations; how to resolve the classified factual observations into definite concepts of what we are trying to evaluate; and, finally, how to select standards that will facilitate objectivative evaluation. In this evaluation, the individual's ultimate test of good corporate management and investment is "adequate" annual profits on invested capital. The problem is important, because corporate activity in the larger enterprises has been largely severed from ownership control through the need to employ professional managers and because no citizen of our modern world can live outside the influence of a joint-stock company. The assurance of a superior management is the story of a long-term investment programme. The executive is also concerned with gauging the relative strength and weaknesses of his management.

In the chapter on assessing the investment value of management excellence, the author points out that mere reference to the earnings record does not indicate investment merit in the company's securities. The philosophy of investment procedure has a considerable bearing on this point and postulates ten basic tenets in the good management approach to investment. There must be long-term growth possibilities, consistent with the past record and without evidence of unfavourable Government restrictions. At the same time, the management must give evidence of continued improvement. The rewards obtained from the company in the past ten years should be calculated and so also the possibilities during the next ten. Sales vigour should be such as to double in each decade, but without resulting in any reduction in the profit-margin. It should also be possible to retain sufficient earnings to meet the expanding capital requirements without a large bonded indebtedness. Also, the enterprise should have made efficient use of new capital raised in the past.

An investor should not sell a security that has carefully been bought for reasons of market price alone. He should also not risk a chance of forced sale by borrowing on margin over a long period. And constant checking of the prospects of the industry and management capability are necessary.

Corporate development is a significant part of an economy and investment has to be broad-based. There will have to be more and more investors in this country and they will have to learn the technique of investing in the corporate sector if they are to be successful. The management of the corporate sector by paid officials who do not have a stake in the ownership of companies is also expanding. They, too, should get conversant with the art of good, sound management. The book, providing as it does the outlines of a system for constant evaluation of management worth, will be found useful by both investors and managers.

Some Aspects of Industrial Finance in India. By Dr. George Rosen. Published by Asia Publishing House, Bombay. Pages : 144. Price : Rs. 9.50.

This book is the second by Dr. Rosen on the problems of industrialisation of India. The first, namely, *'Industrial Change in India'* (reviewed in *Commerce* dated 11th July 1959), dealt with the industrial growth, capital requirements and technological change in Indian industries during the period 1937-55. A striking conclusion of that book was that capital was apparently not scarce and interest rates were low for the larger firms in India. This raised the question of how industry raised capital. This is the subject matter of the present book.

Like the first book, which perhaps represented one of the first attempts to apply the modern tools of research to the study of industrial experience in India, and unlike most of the writings on the subject by Indian authors, which are largely descriptive, the book under review is an analytical study of some vital aspects of industrial finance. It attempts to present a theory of the structure and development of capital market in underdeveloped countries and, within the framework of that theory, evaluates the contribution of two of the major financial agencies, namely, the organised banking system and the insurance system in the financing of industries. It also examines the operation of the special financial institutions such as the I.F.C. and I.C.I.C.I. and the Refinance Corporation set up in part to deal with the needs which the banking system had not met and estimates the future financial requirements of the private sector and suggests certain means and methods for improving the existing system to meet those demands. The conclusion reached by the author may be summarised as follows:

The Indian banking system has a reasonably satisfactory mechanism for providing working capital finance to most existing firms once a certain minimum size is reached, but the system is only incidentally related to the growth needs of the economy. The banks are still hobbled by criteria of behaviour based on outmoded theories supported by only slowly changing legal concepts of liability for debt and by traditional financial and accounting practices of firms. In recent years, there has been, in practice, some breakaway from these past criteria. Traditional loan-deposit ratios have been exceeded and loans on a longer-term basis are being made although often under other guises. Until recently, there have been only very few and limited sources of long-term capital. Some of the demand has been fulfilled by the special financial institutions established since 1948 which have had a significant total (direct and indirect) effect upon Indian capital market. Certain gaps, however, still exist, especially in the supply of finance for medium-size firms started by new entrepreneurs without past experience in industry, a class which will and should increase with industrialisation. This gap could be filled in part by a more positive policy towards new firms. Such a policy should be encouraged by permitting the special institutions to charge above their current interest rates which do not allow for greater risks, by less detailed legislative supervisions of the operations of the special institutions and by a greater willingness on the part of financial institutions to take risks and to make loans on the basis of potential income of their customers rather than their past records or regulation. The L.I.C. might also contribute indirectly through the existing special institutions.

Apart from filling the gaps referred to above, the organised sector would require, for playing the role assigned to it in the third Plan, a substantial increase in its normal short-term financing by banks and in longer-term financing of special institutions through the security markets and to some degree by the commercial banks. The author indicates some steps to stimulate the increase in the supply of both long- and short-term finance for industry. The most notable of them are: (1) introduction of a system of credit guarantees and a greater use of joint underwriting and participation techniques, (2) expansion of technical and economic facilities to evaluate loan applications and preferably a separate institute for such a service.

The author is fully conscious of the limitations of the study. For one thing, it is concerned only with the organised section of the industrial finance system. In so far as it excludes the unorganised capital market, which plays not an insignificant part in the financing of industry, the picture presented is incomplete. Moreover, banks, insurance companies and the specialised institutions are only the mobilisers of the people's savings. The quantum of savings available depends on the savings habit and the income levels of the people and a study of these are essential to gain a true insight into the ultimate springs of industrial finance. Such studies and investigations in related fields have already been initiated and, when their results become available, one could have a more authentic picture of the sources and uses of industrial finance, as well as their mechanism. Nevertheless, Dr. Rosen's study provides a workable framework for a deeper analysis of industrial finance, indicates both the direction and magnitude of the changes occurring in India's financial institutions, and raises further questions for analysis and research. The book would prove profitable reading to all serious students of industrial finance in India.

Towards "Take Off". Prepared and Distributed by Esso Standard Eastern, Inc., Bombay.

This illustrated summary of India's third Five-year Plan is a layman's introduction to the subject. It presents, through tables, illustrations and well-written text, an outline of the third Plan. It is distributed by Esso Standard Eastern, Inc. (formerly Standard-Vacuum Oil Company), with a view to educating the public on the basic objectives and programmes of the Plan. The value of such educational effort cannot be overemphasised, for an understanding of the Plan, what it stands for and seeks to achieve, is essential to bring forth the co-operation of the public without which the Plan cannot succeed. That a non-official body and that too a business firm should volunteer to do its mite for educating the public on the Plan is a tribute to its spirit of public service. And such effort is not new to Esso. It may be recalled that, at the time of the last General Election, Esso (then known as Stanvac) brought out a brochure *You and the Ballot Box*, explaining the significance of the popular vote in a democracy. It also published and distributed during the Tagore Centenary celebrations a booklet *Rabindranath Tagore and Universal Humanism*, as a homage to the memory of the great Indian poet. One may say that the object of this type of service is not selfless, for it is a means of publicity for Esso. True it is, but it has the distinct advantage of serving public interest which is absent in other forms of publicity.

FIRST FIVE YEARS OF COMPANIES ACT, 1956—VII

INVESTIGATIONS AND PROSECUTIONS—NEW PRACTICES—SOCIALIST WIND

By A Special Correspondent

NEVER before in the history of the administration of Companies Act in our country, the work relating to investigations into the affairs of companies and prosecution of companies and their managements for their lapses and wrongs has been so stoutly and strictly pursued as during the past few years by the present Administration. The principal causes for the neglect of these aspects of administration of the Act in the past were the inadequate powers available under the old Act to the Government and the Inspectors appointed under the provisions of the Companies Act to investigate into the affairs of companies. Then, there was no proper administrative machinery to direct and follow up these cases as also those relating to prosecution arising from the defaults committed under the law. The State Prosecutors did not take sufficient interest in the company prosecution cases, because of their multifarious duties and the volume of work they were required to handle.

Provisions relating to starting investigations into the affairs of companies are contained in Sections 235 to 249. The object of writing these provisions into the law "has been to create and develop a sense of respect for law in those sections of the business community which are not very scrupulous about methods and practices but not to cause needless worry to well-managed companies and law-abiding managements by ordering investigations merely on the basis of light-hearted complaints unsupported by facts capable of verification and *prima facie* calling for information."

Unlike the 1913 Act, the Companies Act, 1956, has, to a very great extent, strengthened the hands of the Government to order an investigation into the affairs of a company *suo motto* in the circumstances enumerated in Section 237(*b*) of the Act. With the permission of the Government an inspector can extend his investigations into the affairs of the related companies/or the managing agents or their associates, if he considers it relevant to his main investigation. Under the enlarged powers, an inspector can now examine the officers and agents or managing agents or secretaries and treasurers of the company. The Amendment Act of 1960 has given further powers to the Registrars of Companies and inspectors with regard to obtaining books of account, etc., which, before the amended Act, could not at all be got by the inspector if the concerned management adopted a defiant and hostile attitude towards the investigation proceedings. Now, on the basis of the inspector's report, the Central Government can not only launch prosecutions against the individuals guilty of offences under the Act but also initiate on behalf of the companies concerned, proceedings against them in a court of law for the recovery of damages in respect of any fraud, misfeasance or other misconduct committed by them in connection with the promotion, formation or mismanagement of these companies or take steps for the recovery of any property of such companies which may have been misapplied or wrongly applied.

Complaints

During the five-year period, 1956-61, about 120 complaints were received for the appointment of inspectors and, out of these, Government appointed inspectors in only about 40 cases. The Government have announced that it was their policy not to "order investigation under these sections as a matter of course but appoint inspectors only in those cases where there is *prima facie* evidence of mismanagement, fraud, misfeasance, etc., and where the findings of the preliminary investigations warrant such appointment." Since the appointment of inspectors to conduct investigations into the affairs of a company very considerably affects, its reputation as also that of its management, it is but right that Government do not allow themselves to be hustled into ordering investigations and that they should give the fullest possible consideration to all the facts of the case. Thus, the one-third proportion of cases into which investigations have been ordered during the past five years is reasonably low.

In the course of investigations, the Government, however, came to face a number of difficulties such as the lack of suitable personnel possessing technical knowledge to detect offences "often carefully masked in a maize of complicated accounts," the withholding of books of account or refusal of the management to appear before the inspector, the possibility of destruction or removal of books of accounts and records by the company, the absence of a satisfactory arrangement with the police in the State to give a continuous support to the investigating authority in tracing the offenders and compelling them to appear before the authority, and, lastly, the delays caused by the filing of writ petitions in the High Court praying the stay of investigation proceedings. With enhanced powers under the Amendment Act of 1960, with the raising of a body of trained, high-level expert personnel in the Department and with the arrangements made with the State Governments for the necessary police help, the Central Government, as the Statutory Reports say, are today better equipped and prepared to handle cases requiring careful investigations. As regards the last difficulty, namely, the filing of writ petitions, the solution is yet out of sight. It even baffles the High Courts themselves, as is clear from the observations of the Madras High Court, which, in a case, said, that "it is not easy to see how these difficulties could be overcome within the existing framework of the judicial institutions but the problem requires urgent and careful consideration, so that the law may not be brought into contempt by the dubious and dilatory tactics of those who indulge in practices which are *prima facie* objectionable."

Beneficial Ownership of Shares

Finally, in regard to investigations, it may also be mentioned here that, during the period 1956-61, only three investigations were ordered under Section 247 of the Act to find out the beneficial ownership of shares. Full findings of these investigations, however, have not yet been published by the Government. Further, the Government have not yet ordered any special audit under Section 233A of the Act which was introduced into the scheme of the 1956 Act when it was amended in 1960. It is, however, to be hoped that the Government would take the same cautious line as they have taken in the case of other sections conferring powers on them to order investigations.

Coming to the prosecutions, as has been seen in the case of investigations, the Department of Company Law Administration pursued the prosecution work with "growing vigour and effectiveness" by deploying its own senior staff clothed with the powers of public prosecutors to follow up the cases in the courts of law. With about 16,000 prosecutions instituted during the five-year period 1956-61, of which about 11,000 ended in conviction, accounting for about 80 per cent of the cases disposed of by the courts, one could not now possibly reproach the Government and say that "the Companies Act was one of the least administered of the Central Acts." Of the 16,000 prosecutions instituted 3,000 were for failure to hold the annual general meetings, 3,200 for failure to lay the annual accounts before the general meetings, 4,600 for failure to file annual returns, 3,100 for failure to file authenticated annual accounts with the Government and 780 for the failure of liquidators to file their annual statements with the Government. One hundred and twenty prosecutions were launched after the scrutiny of the inspectors' reports submitted to the Government during that period. Thus, an overwhelming number of prosecutions was for technical defaults, which, in the past, had not energetically been dealt with. The attitude of the present Administration towards the technical defaults is quite strict, as is clear from the following observations in the Second Statutory Report:

> "... the seemingly technical defaults were actually of very great importance in company practice and company management, for it is only through the scrupulous observance of the provisions of the law relating to general meetings and the presentation of company accounts that the management of companies can be kept alive to their fiduciary responsibilities and obligations and the erring elements in management can be brought to book through the enforcement of their statutory accountabilities to their shareholders. Laxity in complying with these provisions had been a potent source of evil in the past and, if permitted as in the past, may generate tendencies and attitudes which would not only dull the sense of shareholders' responsibility but also permanently damage the basic concept of corporate accountabilities."

It is with this approach that the Department has been pursuing prosecution matters during the last five years or so and has warned company managements of further strictness in the matter. In this regard, the remarks contained in the Fifth Statutory Report deserve notice. It says that "there can, however, be no relaxation in the efforts of this Department to wean away the average company management from their old habits of lethargy and indolence, for it is only through the continued exercise of vigilance, supported by vigorous action under the law, where necessary, that lasting improvements in average standard of corporate conduct can be achieved.

Imposition of Fines

But enough support has not yet been forthcoming to this approach of the Government from the courts of law which continue to impose light fines for breaches of provisions of company law. In an overwhelming number of cases decided by the courts, fines imposed by them did not exceed Rs. 25, whereas the maximum fine that could be imposed was even as high as Rs. 500 per day of the continuance of the default. The lowest fine imposed by the courts came to 3 naye paise per day of default as against a fine of Rs. 500 per day that could be levied under the relevant penal provisions of law.

Some of the High Courts, however, have taken an alarming view of the lightness of the fines imposed by the lower courts. The Kerala High Court, for instance, has recently said that to disregard the offences and "to award nominal sentences would have the result of reducing the prosecutions itself to a mockery and thus defeating the very objects of the penal provision." Similarly, a judge of the Madras High Court is reported to have said that "the importance of the provisions of the Indian Companies Act which have been violated are so potent and defaults in performance of those statutory duties bring about such grave consequences not only in the administration of joint-stock companies but also on the community of the country as a whole and the interests of the citizens who are contributories to the companies as shareholders that violation of those sections need to be viewed with grave concern and, unless deterrent punishments are awarded, the defaults are not likely to be made up until after the prosecutions have been lodged."

An obvious result of the light fines is that many unscrupulous company managements still "prefer to pay the nominal fines rather than disclose the affairs of companies which they manage in good time either to their shareholders or to the Registrar of Companies." Looked at from both the Government's and company managements' angles, one would conclude, from an analytical study of the trend of prosecutions under the Companies Act, that, while respect for law has necessarily to be created and the conscience of the company managements has also to be aroused towards their fiduciary responsibilities to their shareholders, a large-scale prosecution drive against the companies and their managements should be avoided. Instead, the Government should try to achieve its objectives by intensifying the drive to educate company managements in regard to the duties they owe to the shareholders and the public. Had this approach been adopted in the past it would have saved much rancour and regret now in evidence in business circles.

New Company Practices

In the dynamic and live field of business and corporate activity, inhabited by the community's most virile and ingenuous core of the society, it would be too presumptuous on the part of any administration to say that it has devised a perfect and foolproof law and geared up its machinery so very cleverly that not only any resurgence of the old bad company practices could not take place but also the birth of new abuses have become an improbability. It is, therefore, not surprising that, in spite of the legal dome of 658 sections in the Companies Act with all its attendant rules and regulations, forms and returns and policies and decisions made by the Government, there is a continuous flow of new types of company practices which by-pass the legal provisions and rap the spirit of the law. A vigilant Administration would, of course, not allow them to become rampant and general, but these bad practices would encourage the Government to make the law more and more rigorous and rigid and, in the result, more irritating to the honest business management. An instance in point is the resignation of some managing agents from the management of some companies to take up the sole selling agencies of those companies soon after the 1956 Act came into force in April 1956. While for some time the practice was allowed to go unchecked in law, though frowned by the Administration, the law was tightened in this regard at the first opportunity the Government got for amending the Act in 1960. Similarly, the other new devices adopted by company managements to compensate themselves for loss of income as a result of the enforcement of statutory maxima relating to managerial remuneration have been checked by the tightening of the law in 1960.

A number of new company practices which are frowned upon by the Government are listed in the Statutory Reports prepared by the Department of Company Law Administration. Some of these are: extension of undue benefits to relatives of managerial personnel, appointment of unqualified and uneducated persons as directors, sanctioning exorbitant donations to trusts belonging to the 'same group' of companies, conversion of public companies into private companies, following the rejection of applications for appointments of managing agents made to the Government, keeping of current account by companies with the partnership firms or with the companies in which directors are interested instead of with banks, changes in valuation methods for valuing fixed assets, boosting of promotional expenditure, payment of guarantee commissions at high rates to managing agents, allotment of shares to managing agencies and their associates at unduly favourable rates, manipulation of share values, and of lending operations to hoodwink the provisions relating to loans, etc. Some of these practices have already been checkmated by the amendment of the law in 1960, while others, judged by the present attitude and temper of the Government, must be under their close observation. It would be no surprise to the informed sections of the society, if the law were further tightened to meet many of the practices listed as unsound and unhealthy company practices in the Statutory Reports when the question of amending the Companies Act is taken up again.

Judged by the past history of company legislation in this country which has followed the developments in the U.K., the next attempt to amend the Companies Act could not be very far, now that the Jenkins Committee Report in Britain has been published and a further amendment of the British Companies Act is in the offing. With all this background and development and also after taking note of the increasing stress laid on the need (*a*) to equalise the disparities in wealth and incomes, and (*b*) to reorientate the outlook of institutions in all spheres, whether they are commercial or industrial in nature or otherwise, towards the needs of the society, one could safely expect a further tightening of the provisions of the Companies Act and even radical changes therein to widen the framework of law so as to go beyond protecting the interests of shareholders and creditors and cover the interests of workers, consumers and the society, in general. In other words, it is quite possible that an attempt may be made to harmonise the provisions of the Company Law with the concepts of "social justice" and "socialist order of society." The wind is blowing in that direction and one has only to wait and see.

(Concluded)

DIGVIJAY CEMENT'S SHARE OFFER TO U.S. COLLABORATOR

The share offer by Shree Digvijay Cement Company Ltd. to its American collaborator, Messrs. John Manville International Corporation, for its asbestos project has been finalised by the Company. The offer consists of 13,500 equity shares of Rs. 100 each at a premium of Rs. 50 per share, as approved by the Controller of Capital Issues, to the American company, which has agreed to take them up at the set terms. The issue will raise the Company's capital to Rs. 148.50 lakhs. It will be recalled that the Company is setting up, near Ahmedabad, an asbestos cement pipes and sheet making plant, with an initial capacity of 32,000 tons a year. The plant is expected to go into production early in September next. John Manville is a world-renowned firm in the line and is providing both technical and financial collaboration for the project. Incidentally, the financial collaboration was first rejected by the Government, but approved in principle later on further representation by Shree Digvijay Cement.

NEW PRODUCTS AND PROCESSES

Longer Life for Bearings

TWO new methods of electrically applying hard metal to soft metal to reduce bearing wear have been developed in the United States. One method takes place in a low pressure gas. Current flows from an electrode to a piece of soft steel in a mixture of 90 per cent nitrogen and 10 per cent hydrogen. The atoms of gas are charged and attracted to the steel, where the force of their collision heats the metal. The heated surface and the speed of the gas atoms gives a quick diffusion of nitrogen into the surface layers of the steel. This results in a hard, nitrided surface. The process is said to be quicker than ordinary nitriding and to avoid the formation of the undesirable white nitride layer found in ammonia-process hardening. The other system hardens soft steel by bombarding it with sparks from a tool steel of carbide anode. The movement of sparks transfers a little of the hard anode to the softer metal, giving it a hard outer surface. One drawback to this process is that the finished surface is quite rough, although it can be burnished.

Plastic-coated Steel

The high degree of corrosion-resistance in Stelvetite plastic-coated steel has been demonstrated under practical conditions at the plant of the British company, John Summers and Sons Ltd., which produces it. In the pickle fan house, where Stelvetite sheeting forms part of the outlet fan ducting, galvanised steel sheets used in the past have had to be replaced after five or six weeks because of the effect of the acid fumes. Sheets of the plastic-coated steel, however, which were in the same position for as long as 14 months, have recently been removed for inspection and found to be still capable of further prolonged use. This part of the works, where the steel sheets go through a cleaning process, has a particularly severe corrosive atmosphere; chemical analysis at the Stelvetite ducting has shown a sulphuric acid content as high as 7,400 milligrams per 100 cubic metres, as compared with an average of 13 milligrams in an area of open countryside some miles away from the steelworks. The firm are using Stelvetite for wall sheeting in plant where conditions are generally wet and acidic, also as part of a shed wall by an ammonia storage tank and as roofing material in other sections of the steelworks. These sheets have already been in position for up to 18 months in these severe conditions without any cause for replacement.

New Design for Tyres

A tyre factory in U.S.S.R. is completing preparations to start mass production of tyres of a radical new design, with a radial distribution of cord straps in the carcass and with a removable tread. During tests a "Gas-51" truck shod with such tyres covered a total of 256,000 kilometres. The first batch of the new tyres which have been given the trade mark of "RS" is undergoing running tests since the spring of 1960 on the roads of the Ukraine, Russia, Caucasus and the Crimea, Estonia, Byelorussia, Moldavia. Everywhere in most difficult conditions they are claimed to have demonstrated their high qualities. Besides the first batch which covered 200,000 kilometres and more, 225 new tyres rolled up from 80-130 thousand kilometres each and are still in good and serviceable condition. The "RS" tyres are said to be convenient in exploitation. It takes only 10-12 minutes to assemble and dissemble them and to change the tread. The tread can be changed without taking off the wheel. With a set of treads of different designs, the drivers can easily adapt the trucks operating in any season of the year. The new tyres, it is claimed, will make for a great saving of cord and rubber, and simultaneously facilitate the maintenance of automobiles, their road qualities and cut gas consumption.

Odourless Paint

A Dutch paint factory has produced a range of lacquers and paints which, both in the tin and during application, are odourless. Under normal conditions of ventilation, no nuisance is experienced from the smell of paint drying. The paint is of a composition specially designed for indoor work and can be applied on any normal surface. Its lack of smell renders it particularly suitable for use in occupied premises, such as houses, offices, workshops, cafes, hotels, hospitals, etc. It is light and easy to work with. Large areas can be covered without any trouble from laps or brush marks. The paint dries completely in 8 to 12 hours. On an average, 10 to 15 square metres can be covered with one litre of paint. It produces a strong finish which can be cleaned with conventional detergents. Generally speaking, no thinner need be added as the paint is supplied ready for use. Only in special cases, for instance, at very low temperatures or on highly absorbent surfaces, may a small quantity of odourless thinner be added. The paint will also tolerate normal thinning agents, though they naturally destroy its odourless characteristics. The paint is supplied in white and a range of basic hues can, if desired, be mixed with the white. The white paint is supplied in tins of 1, 5 and 10 litres. The basic colours come in 1-litre tins.

Flexible Tanks for Liquids

Pillow-shaped "tanks" made of lamination of nylon and synthetic rubber are being used to carry and store water in desert areas, but their properties and versatility suggest many other applications. The containers come in sizes from 500 to 30,000 litres but have walls only two millimetres thick, thanks to the high bursting strength of the lamination. This also has excellent heat insulation properties and is coated on the outside with a pigment incorporating aluminium which also helps to reflect heat and prevent formation of static electricity. Filling and emptying is rapid, thanks to fire hose type connections on the top inlet valve and the outlet valve at the side. The shape eliminates the need for side supports when the full tanks are carried on lorries. Empty and rolled into a compact bundle, the 30,000 litre tank weighs only 300 kilogrammes, including valves and fittings. Other applications sugested include transport and storage of petrol, fuel oil, and various liquid chemicals.

Automatic Milk Analyser

An automatic milk analyser which will determine the fat, protein and lactose content of milk within a minute, has been developed at Britain's National Institute for Research in Dairying at Reading, southern England. The result of five years' research by Dr. J. D. S. Goulden of the Institute's Physics Laboratories, it was shown to the public for the first time at the Institute's golden jubilee open days recently. The analyser can be used for checking on solids-not-fat content of milk and also for analysing ice cream and cream. Analysis is based on spectroscopic methods, each sample of milk is homogenised and pumped into a special cell through which a beam of infrared radiation is passing. The intensity of radiation is measured in turn at three wavelengths where the absorption gives a measure of the fat, protein and sugar concentrations separately. Solids-not-fat can be found by adding a small constant to the protein plus sugar value. The instrument is to be tested by Britain's Milk Marketing Board and is expected to go into production next year. The cost is likely to be £2,000.

Spectrometer for Alloy Analysis

When a beam of high energy X-rays falls on an alloy sample it emits secondary radiation (X-ray fluorescence). The wave-lengths of this secondary radiation are characteristic of the elements in the sample. An instrument which makes use of this effect for analysis is a recently introduced X-ray fluorescence spectrometer by a British firm of scientific instrument specialists, Hilger and Watts Ltd., London. The equipment is intended for routine industrial analysis of metal alloys where the volume of work does not justify a fully automatic instrument, and for establishing research techniques and making production control investigations where a wide range of parameters is essential. It has particular application in the measurement of high concentrations—the upper limit being 100 per cent. The lower limit depends on the element concerned, but is about 0.01 per cent. The instrument analyses almost all kinds of materials, including nonconductors and those substances which are difficult to excite by other means of spectrochemical analysis. The technique is non-destructive—an important consideration in the maintenance of standards and in the analysis of rare specimens. Samples can be solid, powder, or liquid; and all elements of atomic number 12 (magnesium) and higher can be determined. The instrument is self-contained, with a spectrometer, vacuum pump, gas cylinders (feeding the flow-proportional counter) EHT (Extra High Tension) unit, measuring and monitoring circuits, and the control and display panels all in one unit. Read-out is usually from Dekatron counters, but a potentio-meter or count-ratemeter can be used if required.

New Type of Welding Machine

A new type of welder that uses friction instead of a hot metal bead to join cylindrical pieces of metal has been developed by the American Machine and Foundry Company. Friction welding has been used successfully to weld aluminium, steel, copper, brass, titanium and ceramics, and the entire operation takes only a few seconds. In the process, one of the pieces is spun at up to 10,000 r.p.m., and pressed end-to-end against the other. The rubbing generates intense heat which joins the two pieces.

Welding with Water

An American company is reported to be now producing a welding torch which uses only water and electricity—no gas. The electricity is used to convert the water into oxygen and hydrogen. These are then burned at the tip of the torch, giving a temperature of some 3,000 degrees Fahrenheit. A small 30 lb. 300 Watt model uses ½ ounce of water per hour and sells for $199.

'Uperised' Milk in Cartons

Three Swiss firms co-operated in the planning and setting up in Berne of the only plant in the world for the 'uperisation' and treatment of milk for home consumption. The process adopted consists in suddenly raising the temperature of milk to 150° C, and equally suddenly cooling it, thus destroying all the bacteria. The liquid is then poured directly into pyramid shaped cartons by a process guaranteeing complete freedom from harmful germs. The whole plant requires only three men to run it; its output is 3,600 cartons an hour. 'Uperised' milk can be kept much longer than pasteurised milk, which makes it ideal for sale, for example, in automatic slot machines and in shops with greatly varying turnovers.

Centrifugal Pump

A centrifugal pump which can give an output of 280 gallons (1,272.6 litres) per minute at a 200 ft. (60.9 m.) head, has been specially designed for overhead irrigation purposes by a British firm, H. J. Godwin Ltd. The only moving parts are the impellor and shaft. In this connection, renewable bronze wear rings are provided to save wear on the pump body and cost little to be replaced. When used in conjunction with a Fordson Super Major tractor the pump can be operated off the pulley, thus leaving the P.T.O. (Power Take Off).

HOVERCRAFT—A NEW MODE OF TRANSPORT

INDIA MUST TAKE UP ITS MANUFACTURE

By Our Aviation Correspondent

UNHERALDED, unsung and, indeed, almost unremarked by the world at large, a new mode of transport, with the most exciting possibilities, has, within the short space of three years, been developed and demonstrated. As its name implies, the Air Cushion Vehicle—now more usually designated by its initials—is simply a vehicle which rides on a cushion of air. One has no space for technicalities, but, very briefly, this air cushion is created by an engine, or engines, mounted in the vehicle; the air is ducted round the periphery of the underside of the body or hull. In some vehicles, the same engine, or engines, also provide propulsion.

The idea of the A.C.V. was first conceived by a Mr. Cockerell in the U.K. and, so promising did it seem, that the British National Research and Development Council created a subsidiary—Hovercraft Development Ltd.—to deal with its development. Four commercial firms were appointed licensees to work on the project. Of these, the well-known aircraft firms of Saunders Roe and Vickers Armstrong have now advanced to a stage where their respective vehicles have a practical application. A brief description of the SR N2 and the VA-3 may, therefore, be of interest.

The SR N2, so far as the hull is concerned, resembles a conventional sea-going launch. 64.5 feet in length and 29.5 feet in the beam, it is constructed entirely of aircraft materials. Its four gas-turbine engines mounted in pairs, provide both air cushion and propulsion—the latter by driving propellers mounted fore and aft in the centre line of the superstructure. At an all-up weight of 27 tons, the SR N2 can accommodate 70 passengers, or ten tons of freight, and can cruise at 70 knots. The makers are at pains to emphasise, however, that this is still an experimental stage. The aim is to build considerably bigger, because, in the case of an A.C.V., the larger the vehicle, the better seems to be its operating efficiency.

Carrying Capacity

The Hovercraft developed by Vickers Armstrong, and designated VA-3, can carry 24 passengers, or two tons of freight, and can cruise at 60 knots. Smaller than the SR N2, it also differs in certain other respects. Lift and propulsion, for example, are entirely separated, although each is provided by a pair of Bristol Siddeley Turmo turbine engines. The appearance of the two vehicles is also somewhat dissimilar; the VA-3 has its two propellers mounted to port and starboard as in a twin-engined aircraft.

The feature of special interest about the VA-3, however, is that it is already in commercial service. A joint venture by Saunders Roe, British United Airways, and Shell, the VA-3 commenced, on 21st July, operation of a ferry service across the estuary of the River Dee between Rhyl and Wallasey. The former is, of course, a popular holiday resort and the latter is an important port and industrial area close to the city of Liverpool. The distance of 19 miles is covered in 25 minutes. The quickest rail connection takes more than two hours and, according to the state of the traffic, the journey by private car or motor coach occupies upwards of an hour and a half. Will we, like Stephenson's 'Rocket' and the Wright Brothers biplane, one day see the VA-3 enshrined in a museum!

The Hovercraft makes twelve return trips daily and it is planned to continue the service for the remainder of the holiday season. It has proved immensely popular and operates at 100 per cent capacity. The object of the exercise, however, is not primarily commercial; the main purpose is for all three partners to gain experience in operations of this nature. So far as Vickers Armstrong is concerned, that experience will, doubtless, be used in their next model—the 200-passenger VA-4—which is now in process of construction.

Cushion Craft 2

Whilst both the SR N2 and the VA-3 are essentially marine craft—though they can, of course, operate over land—another rather interesting British project, built by a third licensee, Britten Norman Ltd., is the Cushion Craft 2. This is designed as an amphibious vehicle and has been built for a specific purpose—the transportation of bananas from the plantations to the vessels of Elder and Fyffes. The idea is to save transhipment, from road vehicles to lighters, which is entailed in present circumstances.

Although the British conceived the idea and have been the first to exploit it commercially, they have, of course, no prescriptive right to the principle involved. There have been, consequently, a number of A.C.V. projects activated in various parts of the world. The Russians, for example, claim to have designed an A.C.V. capable of accommodating 250 passengers and of travelling at speeds up to 110 knots. The Russians also plan to use A.C.Vs for many agricultural purposes—particularly, of course, in areas where road construction is difficult or costly.

Notable amongst American projects is that of the Ford Motor Corporation. Their FMC/ACV-1 is a fully 'skirted' model, that is to say, it has a flexible 'skirt' or 'curtain' around the periphery of the body within which is contained the air cushion. Fords claim that this concept is more efficient, in that it cuts down the escape of air from under the vehicle and, thus, reduces the engine power required to lift it. The flexibility of the skirt permits the vehicle to move freely over such obstructions as rocks, bushes, ice, and waves.

Another American designer, Dr. Bertelsen, brought his 'Aeromobile 1' to the Indian Industries Fair at New Delhi where its demonstration created widespread interest. Dr. Bertelsen's company has now produced the Arcopter GEM 3 The initials GEM stand for Ground Effect Machine, an alternative to A.C.V. which the Americans seem to favour. The GEM 3 has an all-up weight of 2,500 lbs. and, powered by a 150 h.p. Lycoming aeromotor, will carry four passengers at a speed of 70 knots. Thus, amongst present developments, we have models ranging from the private air cushion car to vessels capable of carrying 250 passengers.

So much for the A.C.V., still in its early and experimental stages. What is probably of more interest to the general reader, however, is some account of the kind of uses to which it is likely to be put. Here, perhaps, it is appropriate to quote Mr. Cockerell, its originator. Speaking on a recent occasion, he said, *inter alia*: "It has been authoritatively stated that, eventually, the Hovercraft industry will be as big as the aircraft industry.... We should set about developing and exploiting our new form of transport in all its various applications.... The possibilities include river hovercraft, channel ferries, ocean hovercraft, land hovercraft, tracked hovercraft and many industrial applications, quite apart from military hovercraft of all kinds..."

The American Chamber of Commerce, in their *Transport Review and Outlook*, 1961, also make a long reference to A.C.V. possibilities. "One of the most exciting developments in transportation for the future," the article reads, "is the vehicle which incorporates the air cushion principle.... It is capable of operating over land, water, sand, swamps, snow, or thin ice, with equal ease. There is a long and growing list of ultimate specialised tasks it could perform.... The military branch has shown considerable interest in its development...." Many other favourable opinions have been expressed and there are responsible authorities who believe that, eventually, ocean-going A.C.V. of 5,000 to 10,000 tons will replace present surface vessels on ocean routes all over the world.

A.C.V. for India

One cannot but be struck by the possibilities of the A.C.V. in India. With its vast plains poorly served by roads, its rivers of immense length and breadth where bridges are few and far between, its hundreds of miles of coastline sparsely dotted with good harbours, the A.C.V. seems almost specially designed to solve many of the country's diverse and difficult transportation problems. It has been demonstrated to be eminently practical; it is comparatively cheap to develop and construct; it can, presumably, be built almost exclusively of indigenous materials; its applications are almost endless.

Here, then, is a practically virgin field for the ingenuity and initiative of Indian scientists, engineers, technicians and craftsmen. The development of the A.C.V. may not be so spectacular as space exploration, or the manufacture of trans-sonic aircraft, but, so far as the masses are concerned, it is likely to prove infinitely more beneficial and rewarding. What an opportunity for such undertakings as H.A.L., the Hindustan Shipyard, and others, jointly or severally, to get in, as it were, on the "ground floor" and to build up what is certain to become a large-scale and important industry. Now is the time to start.

FORWARD MARKETS BULLETIN

(Monthly)

Published by **Forward Markets Commission**
Government of India, Bombay

REGULAR FEATURES

* A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
* Special articles on technical aspect of forward trading
* Extensive information relating to developments in futures markets
* Detailed commodity market reviews
* Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
* About 200 pages in print in crown ¼ size
* Attractive get-up

Annual subscription		Single copy	
In India ..	Rs. 24.00	In India ..	Rs. 2.50
Abroad ..	Rs. 40.00	Abroad ..	Rs. 4.00

CONSUMER PRICE INDEX

NEW SERIES UNDER PREPARATION

A NEW series of consumer price index numbers for working class are under construction by the Labour Bureau of the Ministry of Labour, Government of India. The new series, with 1960 as the base year, will replace the existing index (base: 1949=100). In view of the fact that dearness allowance of industrial workers in the major industries and employees in commercial establishments is linked to the cost of living, as measured by the consumer price index, the introduction of a new series of index, if and when it materialises, will be a development of gerat significance.

Consumer price index, as is common knowledge, is a statistical measure of economic magnitude—namely, the cost of average quantity of goods and services consumed by an average family in a given year, called the base year. Changes in the index are supposed to reflect changes in the cost of living. The present index based on the consumption pattern in 1949 has long ceased to be an accurate measure of changes in the cost of living. Apart from the fact that consumption pattern varies so widely from place to place as to render any all-India index, howsoever recent, unrealistic, there is also the important consideration that, the consumption pattern ' itself has considerably changed since the index now in use was formulated. This has made the index completely unrepresentative. Nevertheless, in the absence of a better measure, it continues to be used to determine the magnitude of adjustments in dearness allowance. It is used by most of the wage-fixing authorities, including the Pay Commission, to determine the dearness allowance payable to the employees and is still used as the authoritative measure of consumer prices for purposes of Plan calculations. In view of the wide uses to which consumer price index numbers are put and of the fact that it determines the money wages and standard of living of millions of employees, it is very necessary that the index should reflect as truly as possible the actual pattern of consumption.

Undue Delay

The sixth International Conference of Labour Statisticians discussed this question and recommended that the base year of the consumer price index should be fairly recent and that, in order to have up-to-date weighting patterns, family budget surveys should be carried out at least once every ten years. The second Five-year Plan also recommended that fresh family budget inquiries should be conducted at important industrial centres for compiling an up-to-date and reliable series of consumer price index numbers for industrial workers on a uniform basis. In pursuance of this recommendation, family living surveys among working class were conducted at 50 important industrial centres during 1958-59. The tabulation of data collected by the survey, a task which was entrusted to the Indian Statistical Institute, has not so far been completed. Even allowing for the complexity of the task, the time taken for the survey and tabulation has been unduly long. In the absence of relevant information, it is not possible to say who has been at fault. But the fact remains that too much time has been taken than is strictly necessary. After all, there was the National Sample Survey to do field work and agencies of the State Governments to collect the data regarding retail prices.

Now that work on the reconstruction of index has been taken up in right earnest, it should be expedited as quickly as possible. All technical and other details of the proposed new series of consumer price index numbers have been discussed and approved by a Technical Advisory Committee on Cost of Living Index Numbers. As noted above, the calendar year 1960 has been chosen as the base year. The weighting pattern is based on the consumption expenditure revealed by the survey. Uniform methods of construction and maintenance are being adopted for all the 50 series of consumer price index numbers.

The new series of index numbers is being compiled according to a detailed classification of items by groups and sub-groups. The classifications are as under:

1-A. *Food (including non-alcoholic beverages).*
- (*a*) Cereals and cereal products.
- (*b*) Pulses and pulse products.
- (*c*) Oils and fats.
- (*d*) Meat, fish and eggs.
- (*e*) Milk and milk products.
- (*f*) Condiments and spices.
- (*g*) Vegetables and fruits.
- (*h*) Other food.

1-B. *Tobacco, pan-supari, and intoxicants.*

II. *Fuel and light.*

III. *Housing.*

IV. *Clothing, bedding and footwear.*

V. *Miscellaneous.*
- (*a*) Medical care.
- (*b*) Education, recreation and amusement.
- (*c*) Transport and communication.
- (*d*) Personal care and personal effects.
- (*e*) Others.

The item-content and coverage of each new series will be maximised to the extent possible. The new series will attempt to give due representation to seasonal variations in consumption and prices of fresh fruits and vegetables according to a special technical method which has been adopted by the Technical Advisory Committee. The new index for factory centres will also take into account changes in house rent through periodical rent surveys which will indicate six-monthly changes in house rent. These rent surveys are being conducted continuously through the agencies of the National Sample Survey. The coverage of the price data for the new series has been enlarged and price collection techniques have been reorganised on scientific lines.

Linking Factor

Many of the centres, for which new series of working class consumer price index numbers are being built up, are those where already such a new series exist on an old base and is compiled either by the State authorities concerned or by the Union Labour Bureau. It has been decided that, when the new series for the centres is published, the existing series on old base for the same centre will be discontinued. As the dearness allowance of employees at many centres is at present being paid on the basis of existing consumer price index, a linking factor for estimating index numbers on the base of the old series will also be published simultaneously with the new series, so that the existing arrangements for linking dearness allowance may continue till such time as there is a complete changeover to the new series. The technical method for obtaining the linking factor is being worked out in consultation with the Technical Advisory Committee.

The Union Labour Bureau has already compiled new indices for 27 centres for 1961 and have referred them to the State authorities concerned and the Central Statistical Organisation for their comments on technical details. By August 1962, the new series for another 13 centres will be referred to the State authorities concerned, bringing the total to forty. By the end of September next, the new series for all the fifty centres will have been completed and sent to the State Governments for comments. On the basis of the comments received, the index numbers will be finalised with the approval of the Technical Advisory Committee. This is expected to be over by January 1963 and the whole series to be ready for publication by March 1963. A new series of all-India cost of living index for industrial workers with base 1960=100, which will replace the existing series on base 1949=100, will also be compiled and published by June 1963 on the basis of the new series of indices for each of the 50 industrial centres.

Notice

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the 71st Ordinary General Meeting) of the Shareholders of the Britannia Biscuit Company Limited, will be held at the registered office of the Company, 15, Taratola Road, Calcutta-27, on Wednesday the 29th August, 1962 at 10 a.m., for the following purposes:

1. To receive and consider the report of the Directors with Statement of Accounts and Balance Sheet and to read the report of the Auditors thereon.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. *As Special Business*:—The consideration of the following Resolutions which will be proposed as Ordinary Resolutions.
   - (i) Resolved that Mr. A. P. Chanda be and is hereby appointed a Director of the Company.
   - (ii) Resolved that Mr. J. H. Kirk be and is hereby appointed a Director of the Company.
   - (iii) Resolved that Mr. G. R. Garratt be and is hereby appointed a Director of the Company.
   - (iv) Resolved that Mr. N. K. Roy be and is hereby appointed a Director of the Company.

The Share Transfer Books of the Company will be closed from the 14th August to 29th August, 1962, both days inclusive, and warrants for such Dividends as may be declared will be issued directly to the Registered Shareholders or their Mandatees, whose names appear in the Company's books on the 29th August, 1962.

By Order of the Board,

A. P. CHANDA,
Director and Secretary.

15, TARATOLA ROAD,
CALCUTTA, 20*th July*, 1962.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

An explanatory statement as required under the Companies Act, 1956 is being forwarded to the members of the Company.

Notices

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

Registered Office:
METTUR DAM R.S.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE register of members of the Company will be closed from 14th August, 1962 to 1st September, 1962, both days inclusive, in connection with the Twenty-fifth Annual General Meeting of the Company convened to be held at the Registered Office of the Company at Mettur Dam R.S. on Saturday the 1st September 1962 at 4 p.m. to transact the ordinary business and special business set out in full in the notice of the meeting, which has been posted individually to the Members.

The Directors at their meeting held on 15th July, 1962, have recommended the payment of the following dividends to the members for the year ended 31st March, 1962.

6¼% subject to tax final dividend on equity shares, which with the 7½% subject to tax interim dividend (inclusive of Silver Jubilee dividend of 1¼%) already paid makes a total dividend of 13¾% subject to tax on equity shares.

3% tax-free on the preference shares as per provisions of The Preference Shares (Regulation of Dividends) Act, 1960, final dividend which together with the 3% tax-free interim dividend on preference shares as per provisions of The Preference Shares (Regulation of Dividends) Act, 1960, already paid makes a total dividend of 6% tax-free on preference shares as per provisions of The Preference Shares (Regulation of Dividends) Act, 1960.

Members are requested to attend the meeting either in person or by proxy. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(By Order of the Board of Directors)
SESHASAYEE BROTHERS (PRIVATE) LIMITED,
Managing Agents.

METTUR DAM R.S.
15th July 1962.

Note:—1. The dividends, if sanctioned, will be payable on or after 8th September, 1962.

2. The Income-tax Officer, Salem, has under Section 197(3) of the Income-Tax Act, 1961, determined the appropriate proportion of the dividend at about 45.95% on which tax is not payable by the recipients, under the provisions of Sections 85 and 101 of the Income-Tax Act, 1961.

ORIENT PAPER MILLS LIMITED

Registered Office:
BRAJRAJNAGAR (ORISSA)

NOTICE

THE SHARE REGISTERS AND TRANSFER Books of the Company will be closed from the 16th August to 29th August, 1962, both days inclusive, for the purpose of payment in due course of dividends on Shares in the Company for the year ended 31st March, 1962. The dividends when declared, will be paid to those Shareholders whose names appear on the Company's Register of members on the 29th August, 1962, or to their mandatees.

By Order of the Board,
Per Pro BIRLA BROTHERS PRIVATE LIMITED,
G. MAKHARIA,
Managing Agents.

CALCUTTA, *the* 21*st July*, 1962.

Announcement regarding the proposed issue of 7 per cent Debentures of Rs. 45,00,000/-

THE RAVALGAON SUGAR FARM LTD.

(INCORPORATED UNDER THE INDIAN COMPANIES ACT VII OF 1913)

Registered Office: **Construction House, Ballard Estate, Fort, Bombay**

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company, Construction House, Ballard Estate, Fort, Bombay-1. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them."

A copy of the Prospectus together with the documents required to be attached thereto has been duly filed with the Registrar of Companies, Maharashtra, Bombay, for registration.

An application will be made to Stock Exchange, Bombay, for enlisting these Debentures on the Exchange.

The subscription list will open in Bombay at 12 noon (S.T.) on the 10th day of August 1962 and will be closed without notice immediately the total amount is subscribed for but not earlier than 13th August 1962 but in any event the list will be closed on the 17th day of August 1962 at the close of business hours.

EXISTING AND PROPOSED ACTIVITIES

The Company's principal business is sugarcane plantation and manufacture of sugar and confectionery.

The Company had at the beginning sugar crushing capacity of 110 tonnes which had been raised to 800 tonnes and recently the Company had carried out the expansion so as to increase the same to 1,200 tonnes per day.

The Company has also undertaken the manufacture of confectionery and the confectionery manufactured by the Company is receiving good response and market due to quality of confectionery. The Company is also manufacturing sugar candy which is praised highly because of the purity and is well received in the market for Pharmaceutical.

The Company has also been licensiated under the Industries (Development & Regulation) Act, 1951 to manufacture sugar machinery and the Company has recently undertaken the manufacture of sugar mill machinery and its components.

LOCATION OF INDUSTRY

RAVALGAON, DISTRICT NASIK

BOARD OF DIRECTORS

1. SHRI GULABCHAND HIRACHAND, (Ex-Officio Director & Chairman), Merchant, Munim Villa, Narayan Dabholkar Road, Bombay-6.
2. SHRI LALCHAND HIRACHAND, Merchant, Neela House, Peddar Road, Bombay.
3. SHRI RATANCHAND HIRACHAND, Merchant, Ratna Villa, 26-A, Nepean Sea Road, Bombay.
4. SHRI GOVINDJI RAOJI, Merchant, Mangalwar Peth, Sholapur.
5. SHRI PRANLAL GIRDHARDAS PAREKH, (Debenture Director), Merchant, 165, Bazar Gate Street, Fort, Bombay.
6. SHRI VALCHAND DEOCHAND, Merchant, Madhukunja, Navroji Cross Lane, Ghatkopar, Bombay-39.
7. SHRI ANANT VISHWANATH GHARPURE, Engineer, 520C, Adenwala Road, Bombay-19.

MANAGING AGENTS

WALCHAND & CO. PRIVATE LTD.,
Construction House, Ballard Estate, Fort, Bombay

Authorised Capital = Rs. 1,04,00,000
Divided into:
20,000 5½% Cumulative Preference Shares of Rs. 100 each.
30,000 Preference Shares of Rs. 100 each
1,00,000 Ordinary Shares of Rs. 50 each.
8,000 Deferred Shares of Rs. 50 each.

Issued Capital = = Rs. 54,00,000
Divided into:
20,000 5½% Cumulative Preference Shares of Rs. 100 each.
60,000 Ordinary Shares of Rs. 50 each.
8,000 Deferred Shares of Rs. 50 each.

Subscribed Capital = Rs. 53,99,400
Divided into:
20,000 5½% Cumulative Preference Shares of Rs. 100 each.
59,988 Ordinary Shares of Rs. 50 each.
8,000 Deferred Shares of Rs. 50 each.

Proposed Issue:

The whole issue of Debentures of Rs. 45,00,000 divided into 7% Debentures of Rs. 1,000 each at par is offered for public subscription, provided that preference in allotment will be given to the holders of existing two series of Debentures of Rs. 10 lakhs each and to the holders of equity shares of the Company to the extent of their present holding as per suggestion from Stock Exchange. However there is no contract or arrangement entered into in respect of any preferential right. No preference will be given to any person or persons.

TERMS OF PAYMENT

The issue price of Rs. 1,000 per Debenture is to be paid on application by surrendering old Debentures under Debenture Trust Deeds dated 25th June 1942 and 13th September 1944 or by payment in cash.

UNDERWRITERS

The whole issue is underwritten by the following Underwriters to the extent as shown against their names:—

	Underwriters	*Amount Underwritten*
1.	The Bank of Maharashtra Ltd., Poona	Rs. 5 lacs.
2.	Messrs. Devkaran Nanjee Banking Co. Ltd., Bombay ...	Rs. 5 lacs.
3.	The New Great Insurance Co. of India Ltd. Bombay ...	Rs. 5 lacs.
4.	The Bank of India Ltd., Bombay	Rs. 5 lacs.
5.	The Bank of Baroda Ltd., Bombay	Rs. 5 lacs.
6.	Messrs. R. R. Nabar & Co. Bombay	Rs. 20 lacs.

APPLICATION FOR DEBENTURES

Application forms along with copies of the Prospectus can be had from the Registered Office of the Company or from the Managing Brokers Messrs. Devkaran Nanjee & Co., Share, Stock & Finance Brokers, 5, Hamam Street, Fort, Bombay.

Application forms properly completed in accordance with the instructions given on the reverse thereon must be lodged, together with the amount payable thereon or together with the existing 6% and 4% Debenture Bonds duly discharged, with the Managing Brokers to the issue or with Devkaran Nanjee Banking Co. Ltd., Horniman Circle, Fort, Bombay.

COST INFLATION REDUCES FURTHER TATA OIL'S PROFIT-MARGIN

AMBITIOUS SCHEMES FOR DIVERSIFICATION

IT is not really the increase in turnover, but the cost at which it is attained that counts, when it comes to measuring the prosperity of a company. This is stating the obvious, but to fully grasp its meaning one has to take a look at the working results of the Tata Oil Mills Company Ltd. [Managing Agents: Messrs. Tata Industries (Private) Ltd., Bombay], whose efforts in the recent past towards sales maximisation have unfortunately been accompanied by reduced profit-margin not as a result of lower prices for consumers, but due chiefly to a ceaseless rise in costs accentuated more than anything else by heavy restrictions on imports of raw materials. Gross sale proceeds of the Company for the year ended 31st March 1962 increased again by Rs. 106.74 lakhs (Rs. 175.69 lakhs in the previous year) to Rs. 10.92 crores, thereby maintaining the uptrend seen from 1959-60, when they shot up by Rs. 158.21 lakhs to Rs. 8.09 crores, after having got stuck around Rs. 6 crores in the preceding three years. The net improvement (that is, minus excise duty paid) in sales works out to Rs. 98.51 lakhs at Rs. 10.36 crores, as against Rs. 171.05 lakhs at Rs. 9.37 crores in the previous year. But all this improvement during the year has resulted in an increase of barely Rs. 3 lakhs in gross profit at Rs. 60.37 lakhs and only further shrinkage in profit-margin (ratio of gross profit to gross sales) from 5.7 per cent to 5.5 per cent. The current upward trend in sales had been gainful to the Company only at its start, that is, in 1959-60, when the profit-margin had improved from 8.4 per cent to 9.1 per cent. Since then, it has been going down. The net profit for the year under review has, however, been sufficient to maintain the equity dividend at 23 per cent, taxable, as well as the transfers to reserves.

The synopsis of the Company's working results in the past four years is presented in the comparative table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds (gross) ...	1,091.72	984.98	809.29	651.08

* Inclusive of excise duty, which amounted to Rs. 56.22 lakhs for 1961-62, Rs. 47.99 lakhs for 1960-61, Rs. 43.35 lakhs for 1959-60 and Rs. 39.06 lakhs for 1958-59.
† Subject to deduction of tax.

According to the Directors' report, prices of groundnut and mowra oils rose, during 1961-62, by 9 per cent and 16 per cent, respectively, and of coconut oil and palm oil by 7 per cent. The import of copra of the value of Rs. 2 crores was chanelled, for the first time, through the State Trading Corporation of India, and the soapmakers in the organised industry were required to pay a heavy premium of 37 per cent to the Corporation for their import quota. A 30 per cent cut in import licences for raw materials compelled the Company to consume appreciably larger quantities of higher priced indigenous oils.

The cost inflation had its bearing not only on the profit but also on sales through consumer resistance, for, in order to offset it partially, the Company had to raise the selling prices of its principal products. Thus, *vanaspati* sales improved by a mere 11 per cent, as against 52 per cent in the previous year; sales of soaps were higher by 8 per cent, as against 13 per cent, with laundry soap showing an improvement of 11 per cent, as against a fall in toilet soap; and glycerine sales rose by 13 per cent, as against 16 per cent. In regard to the last item, the Company was actually unable to cope fully with the growing internal demand owing to inadequate supplies of crude glycerine. Toilet product sales showed a small improvement, but eau-de-cologne sales suffered a serious setback owing to a steep rise in the excise duty from Rs. 3.50 to Rs. 19.80 per case. The quantity of copra crushed at Tatapuram was nearly the same as in the previous year, but, in Bombay, the operations were seriously affected by reduced imports and a lower crop of mowra seeds. Earnings from exports increased by Rs. 10 lakhs to Rs. 71 lakhs, but the improvement was mainly due to larger exports of groundnut meal and copra cake, while sales of the Company's branded products fell by 20 per cent owing to unsettled conditions and restrictions on imports in the countries concerned.

Revenue by way of sales agency commission shrank from Rs. 29.23 lakhs to Rs. 16.99 lakhs due to a substantial reduction in the imports of caustic soda and soda ash, the adverse effects of which could not be overcome by an increase in the sales of Tata Chemicals' products.

Mr. J. R. D. Tata, Chairman of the Company, has referred, in his statement to the shareholders, to the great deterioration in the situation in regard to the availability and cost of raw materials and urged for effective measures to arrest the present trend, as it would have serious repercussions on the country's economy. The basic fact, according to Mr. Tata, is insufficient production of oilseeds and inadequate measures to increase it. He has suggested cultivation of seeds and fertilisers on a large organised scale as against by small farmers as at present and proposed to the organised sector of agriculture, as represented by planting companies, to consider his suggestion. He has, however, conceded that no plantation company can be expected to venture into such costly and long-term ventures without encouragement and direct support from the Government.

Mr. Tata has termed the latest threefold increase in the import duty on copra from 5 per cent *ad valorem* on a tariff value of Rs. 1,400 per tonne to 15 per cent *ad valorem*, or from Rs. 70 to Rs. 210 per tonne, as excessive in relation to even a 10 per cent duty on other industrial raw materials, particularly because, as against the c.i.f. value of Rs. 800 per tonne of imported copra, the tariff value for the purpose of duty is fixed as high as Rs. 1,400 per tonne. Moreover, the higher duty has pushed Indian copra out of world parity further due to the resultant increase of Rs. 200 per tonne in its price. Thanks to the realisation by the authorities that the discriminatory level of excise duty levied on the organised sector of the soap industry only resulted in a loss of revenue, the anomalous situation has been removed partly. A revision in the rate of excise duty on small manufacturers, made in the last budget, will now bring under duty the small units producing upto 204 tonnes of soap in a year. Further, as a result of the budget proposals, all factories manufacturing between 100 and 300 tonnes of soap per annum are now liable to pay the duty at the rate of Rs. 51.50 per tonne; the duty will be at its full rate of Rs. 103.50 per tonne on production higher than 300 tonnes. According to Mr. Tata, this revision will bring about 2,000 out of 4,000 small-scale units into the excise net and will fetch Rs. 150 lakhs to the Exchequer. This revision in the soap excise is welcome. In the case of *vanaspati*, however, the concessional rate of duty, which was payable on a slab system on the first 3,000 tonnes produced in a year, has been withdrawn and the duty is now being collected at a uniform rate of Rs. 200 per tonne on the entire production. This will mean an additional burden of Rs. 80,000 per annum to the Company.

Both Industrial Perfumes Ltd. and Lakmé Ltd., a subsidiary of the Company, have shown further improvement in their working. The former has made a profit of Rs. 1.83 lakh during 1961, as against Rs. 1.51 lakh in 1960, and stepped up the taxable dividend from 9 per cent to 11 per cent per annum on the Rs. 100 fully paid shares. The Company has introduced a new product, namely, betaionone, made from indigenous lemon grass oil, for use in the manufacture of vitamin A. The equity capital of the Company has been increased from Rs. 10 lakhs to Rs. 16 lakhs for financing the manufacture of several new aromatic chemicals, and Tata Oil is taking up all the rights shares offered to it. Orders for additional plant and equipment have been placed and the Company will manufacture some of the new products from next year. Lakmé's sales rose only by about 20 per cent as against the expected 50 per cent owing to the heavy excise duty of 25 per cent *ad valorem* on toilet products. The gross profit increased slightly from Rs. 1.26 lakh to Rs. 1.76 lakh and enabled the Company to write off in full the preliminary expenditure, the balance of previous losses and partially the deferred revenue expenditure. The Company's future progress depends on the pace at which indigenous raw materials and packing materials of suitable quality become available for manufacturing and packing high quality cosmetics. The Company plans to introduce in the current year other types of cream, as well as a line of eye cosmetics.

Apparently frustrated by high costs and diminishing profit-margin in its present lines of manufacture, Tata Oil has come out with an ambitious scheme for expansion and diversification. The scheme has six broad features, namely, (1) setting up a new factory near Ghaziabad in U.P. and equipping it with the latest type of machinery for the manufacture of soap and glycerine, (ii) starting a plant for the manufacture of fruit juice and fruit and spice flavours in powder form in technical collaboration with a Japanese firm, (iii) erecting a solvent extraction plant for extraction of oils from rice bran, cottonseed, coconut cake, etc., (iv) setting up a synthetic detergent plant, (v) promoting Tata-Finlay (Private) Ltd. in collaboration with Tata Sons (Private) Ltd. and James Finlay and Company Ltd. for blending, packaging and marketing tea, and (vi) modernising certain plants and equipment, in order to keep abreast of the latest technological improvements. The scheme will require about Rs. 350 lakhs for meeting the capital expenditure and additional working capital over the next few years. The Company expects to provide Rs. 250 lakhs from internal sources and loan funds leaving a deficit of about Rs. 100 lakhs to be covered partly by equity capital and partly by debentures. An immediate issue of 140, 150 further ordinary shares of Rs. 25 each at a premium of Rs. 15 per share to the existing shareholders in the proportion of one new share for every two shares held by them has been announced. This will bring in Rs. 56.06 lakhs. At the same time, the Company is issuing additional debentures of Rs. 50 lakhs, carrying interest at the rate of 6.5 per cent per annum, subject to tax. These are redeemable in 10 to 15 years. The Company's investment in Tata-Finlay, which may also pack and market food products, is placed at Rs. 12.50 lakhs. Incidentally, the Company had raised its capital way back in 1946-47, since when the gross block has increased by Rs. 282 lakhs to Rs. 360 lakhs, the turnover has expanded from Rs. 3.27 crores to Rs. 11.19 crores and fresh investments in shares of subsidiary and associated companies have totalled Rs. 13 lakhs. Funds to finance all this expansion had come from borrowings which have risen during the period from a mere Rs. 10.50 lakhs to Rs. 318 lakhs.

During the year, a part of the *vanaspati* plant belonging to the newly acquired Amrut Oil Mills was put into operation at the Bombay factory, while the remainder of the plant is being reserved for the North Indian factory. Building plans for the soap plant of the latter factory were finalised and construction work has begun. Application for the import of the latest type of soap plant for this factory has been made. At the Tatapuram factory, the first of the new boilers was erected and put into commission and the second is being erected. Late delivery of locally fabricated equipment delayed the erection of the fat splitting and fatty acid distillation plant, which is now expected to go into production this year. The new soap cooling and drying equipment, installed during the year in the Bombay factory, is working satisfactorily. The plant for the manufacture of edible groundnut flour has been erected and trials have been started. The Calcutta factory's glycerine distillation plant was installed and went into production in February last.

The financial position of the Company is sound. Its paid-up capital of Rs. 99.96 lakhs is made up of Rs. 29.89 lakhs in 4½ per cent cumulative preference shares and Rs. 70.07 lakhs in equity shares. The equity capital includes 88,000 shares of Rs. 25 each fully paid issued for consideration other than cash and 11,030 shares issued as fully paid bonus shares. Reserves and surplus aggregate Rs. 61.14 lakhs. Borrowings, including debentures (first issue) of Rs. 50 lakhs and interest due thereon of Rs. 1.50 lakh, have increased during the year from Rs. 305.89 lakhs to Rs. 317.59 lakhs. Current liabilities and provisions total Rs. 200.02 lakhs. Excluding debentures and interest thereon, the total indebtedness to outsiders works out to Rs. 466.11 lakhs, which, though considerably high, is covered by stock-in-trade, book debts and other current assets aggregating Rs. 482.67 lakhs. In addition, there are investments, all of them unquoted, of Rs. 13.10 lakhs. The gross block expanded from Rs. 320.58 lakhs to Rs. 359.58 lakhs. Total depreciation provided on it amounts to Rs. 176.65 lakhs. The block is thus well written down to Rs. 182.94 lakhs.

The Rs. 25 fully paid ordinary shares of the Company are currently quoted at Rs. 73 *cum-div.* On the *ex-div.* basis and without taking into account the forthcoming rights issue, they offer a net yield of 5.8 per cent per annum.

COURT APPOINTS NEW CHAIRMAN FOR B.I.C.

Mr. Satish Chandra, a former Union Deputy Minister of Commerce and Industry, has been appointed the chairman of the managing committee of the British India Corporation Ltd., in place of Mr. H. S. Chaturvedi, who is retiring shortly. The appointment was made on the 27th inst. by Mr. Justice W. J. Broome of the Allahabad High Court, on an application presented to the Court on behalf of the Central Government, L.I.C. B.I.C., and Messrs. Haridas Mundhra and Tulsidas Mundhra that Mr. Chaturvedi, who was appointed by the Court as Chairman of the committee, had taken leave and expressed his desire to retire. To fill up the vacancy, it was suggested by the counsel for the parties that Mr. Satish Chandra be appointed as Chairman. When the application came up for orders on 23rd July 1962, Mr. S. N. Kacker and Mr. S. C. Khare expressed their desire to file objections to that proposal on behalf of some shareholders and were allowed to do so by 26th July. As no objections had been filed by the said date, Mr. Justice Broome accepted the suggestion made by the counsel for the parties in their application and appointed Mr. Satish Chandra as the Chairman of the committee. It will be recalled that the managing committee was appointed by the High Court to look after the affairs of the British India Corporation Ltd. for a specified period on an application by the L.I.C. under Sections 397 and 398 of the Companies Act.

INDIAN OVERSEAS BANK EARNS MORE

The net profit of the Indian Overseas Bank Ltd. for the half-year ended 30th June 1962, subject to audit, is slightly higher at Rs. 19.83 lakhs, excluding Rs. 2.23 lakhs brought in, as compared with Rs. 18.05 lakhs, excluding Rs. 1.92 lakh brought in, for the corresponding period of the previous year. The Bank's deposits and advances as on 30th June last were over Rs. 35 crores and Rs. 23 crores, respectively, as against Rs. 31 crores and Rs. 20 crores as on 31st December 1961.

INDIAN BANK LIMITED

The profit (before taxation) of the Indian Bank Ltd. for the half-year ended 30th June 1962 has amounted to Rs. 21.04 lakhs, as against Rs. 21.01 lakhs for the corresponding period in the previous year. The Directors have declared an interim dividend of 5 per cent and cash bonus of 2.5 per cent, subject to deduction of tax (same as in the previous year), on the Rs. 100 fully paid shares for the year ending on 31st December 1962.

H.M.T.'S RESULTS SPECTACULAR

HALF THE PROFIT RETAINED IN BUSINESS

RETAINING about half the distributable profit for the year ended 31st March 1962 in business (to be precise, Rs. 62.56 lakhs out of a total of Rs. 128.92 lakhs, including Rs. 1.39 lakh brought in) for the first time ever in its career, the nine-year old State-owned and managed Hindustan Machine Tools Ltd. (Chairman and Managing Director: Mr. M. K. Mathulla, Jalahalli, Bangalore) has now got off well on the road to steady progress and prosperity. Indeed, the previous year itself saw a considerable improvement in the working of the Company and had earned for it the distinction of being adjudged as the most outstanding and the best among the public sector undertakings by a special committee appointed by the Government as also the highest Presidential award of a shield in silver and copper and the Presidential certificate for efficient performance. But the results for the year under review in particular assume real significance as, in addition to the transfer to the statutory development rebate reserve, made possible from 1958-59 onwards, which itself has been raised substantially from Rs. 1.95 lakh to Rs. 22.56 lakhs, the Company has been able to set apart for the first time as much as Rs. 40 lakhs for general reserve. In other words, it has now shown the healthy sign of being not only a profit-earning but also a profit-saving enterprise.

The year's results show a considerable all-round progress and bear ample testimony to the belief that, with the abundant resources in terms of both finance and talents at its disposal, a public sector undertaking can easily be an economically viable unit, if it is given the necessary efficient management. Sales rose during the year by Rs. 138.11 lakhs (Rs. 113.75 lakhs a year before) to Rs. 494.91 lakhs. The gross profit, which had increased from Rs. 74.75 lakhs for 1959-60 to Rs. 119.77 lakhs for 1960-61, has improved further to as much as Rs. 192.54 lakhs. This is a creditable performance, for the domestic sale prices of all H.M.T. machines were progressively reduced and maintained at 10 to 20 per cent below the landed cost of foreign machines of equivalent quality and the export prices were regulated as required to compete successfully in world markets. The profit-margin (ratio of gross profit to sales) has improved from 33.5 per cent to 38.9 per cent.

The provision for depreciation has been stepped up from Rs. 45.73 lakhs to Rs. 65.01 lakhs. No income-tax is payable for the year under review also, as there is a sufficient balance of past losses for tax purposes yet to be set off. The net profit shows an improvement of nearly Rs. 54 lakhs to Rs. 127.53 lakhs. The percentage of net profit to share capital has improved from 1.02 in 1956-57 to 24 in 1961-62. It was 7.15 in 1958-59, 8.22 in the following year and 13.90 in 1960-61. The dividend on the Rs. 1,000 fully paid shares has been maintained at 10 per cent per annum, and absorbs Rs. 53.10 lakhs. As the dividend is payable to the Government of India, the owner of the Company, there will be no deduction of tax from the dividend. In addition, the Government has received Rs. 8.49 lakhs (Rs. 7.74 lakhs a year before) by way of interest on its loan. The carry forward is Rs. 3.10 lakhs against Rs. 1.39 lakh brought in.

The comparative table below gives a clear idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales and self-consumption ..	494.91	356.80	243.05	227.44

* Income-tax for 1953-54.
† Wealth tax for 1958-59.
‡ Excluding wrist watches.
Note:—The dividend is tax-free.

From the table above, it will be clear that the higher increases during the year were due to, and in keeping with, the increase in production. The higher cost of raw materials and stores consumed at Rs. 207.07 lakhs, as against Rs. 180.91 lakhs in the previous year, includes Rs. 6.53 lakhs spent on the purchase of components for the new line of wrist watch manufacture. The Company produced 14,439 wrist watches and despatched 10,738. Over the past six years, the Company has diversified its production by introducing new lathes and machines. In the past six years, the indigenous content of high precision lathes has improved from 93 to 97 per cent. Similarly, such in milling machines has risen from 35 to 94 per cent in the past five years, in radial drills from 30 to 91 per cent in the past four years and in low priced lathes from 57 to 95 per cent. In the case of grinders and turret lathes, the production of which was taken up only in 1960-61, the indigenous content has remained unchanged at 43 per cent and 95 per cent, respectively.

The selling prices of the Company's products last year compare with the landed cost of comparable imported machines given in brackets thus: High precision lathe Rs. 33,000 (Rs. 46,660), milling machine Rs. 39,500 (Rs. 50,770), radial drill Rs. 36,000 (Rs. 42,999), low-priced lathe Rs. 19,250 (Rs. 22,096), grinder Rs. 35,000 (Rs. 50,712) and turret lathe Rs. 44,000 (Rs. 56,294).

Since 1959-60, the Company has been employing no foreign technicians. Their number was 86 in 1956-57, 54 in the following year and 31 in 1958-59.

The number of employees has progressively increased from 1,373 in 1956-57 to 4,670 in 1961-62; last year itself saw an addition of 470. The minimum monthly earnings of the lowest paid employee have risen in the past six years from Rs. 32 to Rs. 111 and the average monthly earnings have similarly gone up from Rs. 116 to Rs. 186 (the latter figure excludes emoluments to trainees).

The increase in production of machines during 1961-62 from 1,002 units to 1,251 units is attributed by the Directors to the commissioning of the second machine tool factory, designed to double the output to 2,000 units per annum. It was constructed in a record time of 14 months—10 months ahead of schedule—and was entirely financed from the internal resources of the Company. Built by Indian engineers, it was inaugurated by Prime Minister Nehru on 28th July 1961. The commissioning of the factory earned for the employees rationalisation and enhancement of their wages, with effect from 1st June 1961, in addition to the merging of most of the dearness allowance with the basic pay following the recommendations of the Second Pay Commission. An *ex-gratia* payment of Rs. 175 each was also made to the employees drawing a salary of Rs. 500 and below. Besides, each worker with a year's service to his credit, was presented with a H.M.T. wrist watch. All this was in addition to the regular incentive bonuses, free uniforms, subsidised meals, transport and housing and free education to the employees' children

The Company is to build a third machine tool factory with a township at Pinjore in the Punjab at an estimated cost of Rs. 10 crores. Approximately 850 acres of land is being acquired in stages and ground levelling operations are in progress. Orders for imported machinery and equipment have already been placed. A 'Master Plan' for the main factory as well as the township has been prepared and the construction work must have begun by now.

It is well known that construction of the watch factory was delayed by several months last year as a result of an unforeseen defect in the title to the originally acquired land. However, construction was started in September last at a new site, with the first phase of the factory building expected to be completed in September this year. Manufacturing operations are to start in October next. Orders for the machinery for the watch factory were placed to the value of Rs. 91.5 lakhs, and the equipment, said to be specially manufactured on order, has started arriving at the site for installation. The assembly of watches from imported components commenced, however, in June 1961 and the first 700 watches were released by the Prime Minister on 28th July 1961.

An advance of Rs. 150 lakhs was received from the Government for the construction of the watch factory buildings and other civil works valued at Rs. 25.2 lakhs, imported machinery worth Rs. 91.5 lakhs, for which letters of credit have been opened, and for working capital for the assembling operations. Of this advance, Rs. one crore have been converted into share capital from 5th May 1962 by the issue of 10,000 additional shares of Rs. 1,000 each to the President of India.

The Company entered the world market for the first time during the year by the export of machine tools to West Germany and Switzerland. In view of the acute shortage of foreign exchange and the necessity to increase exports to the maximum, it is undertaking an extensive export promotion programme in respect of machine tools both in Europe and the U.S.

Financially, the Company is now on sound lines. As per the balance-sheet as at 31st March 1962, it has an issued and paid-up capital of Rs. 531 lakhs (including 7,122 shares of Rs. 1,000 each, issued as fully paid without payment being received in cash) out of an authorised capital of Rs. 12 crores. It has received advances to the tune of Rs. 125 lakhs (Rs. 50 lakhs a year before) from the Government, of which Rs. 25 lakhs are for the third machine tool factory and the balance of Rs. 100 lakhs for the watch factory, which have since been converted into share capital. As against this, reserves and surplus total Rs. 73.65 lakhs. Bank borrowings, which are secured, have increased during the year from Rs. 27.64 lakhs to Rs. 86.61 lakhs. Unsecured loans from the Government towards working capital have gone up from Rs. 175.18 lakhs to Rs. 225.18 lakhs. Then, there are current liabilities and provisions amounting to Rs. 190.52 lakhs. Excluding the loans and advances taken from the Government, the Company's total indebtedness to outsiders works out to Rs. 277.13 lakhs and is comfortably covered by current assets and book debts aggregating Rs. 537.24 lakhs. With the installation of the second machine tool factory and some work done for the third factory, the watch factory and on the industrial estate, the gross block of the Company has grown sharply from Rs. 459.02 lakhs to Rs. 754.76 lakhs. It has been written down to Rs. 611.39 lakhs.

POLYCHEM'S PROFIT DOWN

OUTLOOK PROMISING

FREE licensing of imports of polystyrene to meet a part of the domestic demand and the imposition, for the first time, of an excise duty on the material appear to have had a deleterious effect on the earnings of Polychem Limited (Chairman: Mr. Ramdas Kilachand, Bombay) during the year ended 31st March 1962. Sales realisation has no doubt risen somewhat from Rs. 153.07 lakhs to Rs. 163.72 lakhs, but a part, equivalent to Rs. 30.76 lakhs, thereof, merely represents the inflation due to the inclusion of the quantum of excise duty in the selling prices. There has been, as such, no gains accruing to the Company and, if one were to reduce the sales figures to a comparable basis, the turnover actually shows a decline of some Rs. 20.00 lakhs. The Company's contention that it could have put up an inspiring show had the Government given it additional licences for import of raw materials instead of allowing imports of polystyrene finds support in the fact that its closing stocks of finished goods have increased out of all proportion by Rs. 21.30 lakhs to Rs. 39.53 lakhs. In spite of some saving in expenses, therefore, the gross profit has declined to Rs. 39.88 lakhs and is well below the average level of approximately Rs. 48.00 lakhs achieved during the preceding two years.

Provision for depreciation has been raised to Rs. 7.06 lakhs from Rs. 4.89 lakhs last year but there has been a corresponding saving in the provision for taxation, which, because of a lower taxable profit, has gone down by Rs. 2.00 lakhs to Rs. 15.50 lakhs. All the same the net profit shows a decline parallel to that in the gross profit and stands at Rs. 17.32 lakhs as compared with Rs. 26.30 lakhs for 1960-61. Out of this a sum of Rs. 9.23 lakhs, as against Rs. 22.97 lakhs last year, has been transferred to reserves, while Rs. 3.33 lakhs have been earmarked for the payment of preference dividend. In view of the unsatisfactory profit position, the Directors have only proposed to maintain the ordinary dividend at Rs. 7.50 per share, or 15 per cent per annum, subject to tax. This absorbs Rs. 6.94 lakhs, leaving Rs. 1.19 lakh as a carry-forward against Rs. 1.88 lakh brought in.

The working results of the Company for the past four years are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales less rebates	163.72	153.07	153.12	105.72

* Subject to deduction of tax.

Although the performance of the Company during the year under review has been below expectations, prospects for the future appear to be more cheerful. Additional facilities for increased production of colour materials have been made and facilities for expansion of the production capacity of the polystyrene plant are being implemented. It has been stated earlier that the Company's sales were adversely affected due to the free licensing by the Government of imports of polystyrene in the country. Since further licences for imports are not being issued now and the stocks of imported material in the market are fast declining, an improvement in the turnover of the Company in the current year can be anticipated.

Moreover, orders for most of the equipment for the Styrene monomer project have been placed and the project work is progressing satisfactorily. The plant is expected to go on stream early in 1963. Similarly, the contract for the alcohol distillery has been awarded and

SYNOPSES OF COMPANY REPORTS

Balancor Tea and Rubber Co., Ltd.

(*Managing Agents*: Young India Agencies Private Ltd., Madras.)

Twenty-fifth Annual General Meeting—Held on 21st July 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sale of tea, rubber, coffee and pepper ..	17,09	13,88
Closing stock of tea, coffee, etc. ..	3,99	6,05
Gross profit	4,10	4,54
Transfer to Managing Agents' remuneration ..	37	37
" " depreciation	38	39
" " development rebate reserve ..	1	4
" " provision for taxation ..	76	1,45
Net profit	2,58	2,29
Adjustments	17	4
Appropriations:		
Total available balance	2,75	2,33
Transfer to general reserve	Nil	14
" " dividend equalisation reserve ..	75	50
Proposed dividends (taxable) preference ..	20	20
" " equity ..	1,32 (12%)	1,32 (12%)
Carry forward	48	17

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: *Crop and Cost.* The tea crop for the year was 2,60,310 kgs. as against the previous year's crop of 2,25,168 kgs. All in cost of production was Rs. 3.04 per kilogram as against Rs. 3.09 per kg. last year and the average sale price realised Rs. 4.55 per kilogram as against Rs. 4.34 per kg. last year. The coffee crop during the year was 124=039 tonnes as against the previous year's crop of 215 tons. The rubber crop for the year was 16,023 kgs. as against the previous year's crop of 17,523 kgs.

Estimate for 1962-63: Tea crop is estimated at 2,60,000 kgs., Coffee 171½ tonnes, rubber 4,800 kgs., and pepper 40 kgs.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	13,48,990	Gross block	18,03,952
Reserves and surplus..	6,08,419	—Depreciation ..	4,15,754

* Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report:

Additions to Plant and Machinery: During the year under review, a sum of Rs. 41.44 lakhs has been spent by way of additions to the existing plant and machinery. The main items are as under: (1) 6 *Warp* and 24 *Weft Ring Frames* at a cost of Rs. 14.78 lakhs, (2) *Whitin Comber* Set of 6 *combers* at a cost of Rs. 6.89 lakhs, (3) *Barber Colman Winding and Warping equipment* at a cost of Rs. 5.75 lakhs, (4) *Artos Hot Air Stenter* at a cost of Rs. 3.73 lakhs and (5) *Shearing and Cropping Machine* at a cost of Rs. 1.02 lakhs.

Renovation and Expansion Programme: For the current year also, the Company has on hand plans for further modernisation of plant and machinery. The Company has obtained permission from the Government for replacement of 112 plain looms by 144 automatic looms.

Purchase of the Block of Hutheesing Mills: In January 1962 an agreement was entered into between the Company and the major shareholders of the Hutheesing Manufacturing Co., Ltd. whereby the block of the said company was to be purchased by this Company. As the possession of the said Hutheesing Manufacturing Co., Ltd. was in the hands of the Government under the relevant provisions of the Industries (Development and Regulation) Act, 1951, efforts were made to obtain the possession, but the Government did not agree to possession unless the shares of the said Hutheesing Manufacturing Co., Ltd. were purchased. As the proposal of purchasing the shares was not in the interests of the Company, the agreement was brought to an end on 3rd April 1962 on which date the period of 3 months envisaged in the agreement for obtaining the possession from the Government had expired.

Further Projects: As stated in the last year's report, the Company holds a manufacturing licence for the Cast Iron Spun Pipe Factory. The Company has applied to the Central Government for issuance of the necessary import licence for this project. The directors are quite anxious to take up this project in hand as quickly as possible.

The Company's application for setting up a textile mill at some suitable place in Gujarat could not materialise. The State Government had first recommended the application, but later on they revised their decision.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	26,14,625	Gross Block	1,64,52,000
Reserves of surplus ..	61,47,083	—Depreciation ..	72,52,095

Proposed dividend (taxable) equity ..	4,50 (9%)	3,75 (7½%)
Carry forward	1,19	15

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.
* This includes Rs. 11,287 being development rebate reserve transferred on sale of fixed assets.

Extracts from the Directors' report:

Raisings and Workings:	1960-61 Tonnes	1961-62 Tonnes
Raisings	3,47,475	3,74,968
Despatches	3,05,953	3,78,442
Colliery consumption	9,178	10,386

As will be seen from the above figures, the Company has maintained satisfactory progress.

Working in the new Jambad Pit of the Moira Colliery is progressing satisfactorily and some of the machinery ordered out for the working of this seam have now started to arrive. During the year, this colliery was declared to be gassy and consequently the Company has had to invest large amounts in replacing the non-flame-proof equipment used and providing new flame-proof equipment. During this period of changeover, the mine was completely shut down for about a week and was worked on a restricted production for over a month. All these have affected the raisings for the year to some extent. Approximately 45 bighas of coal bearing land belonging to East Kajora Colliery Co. is being amalgamated with the Moira Colliery. Workings at the Samla Manderboni Colliery were also satisfactory. Workings at both the collieries after the end of the year continue to be satisfactory.

The last year was a difficult one for the coal industry and the overall increase in coal production in 1961-62 over 1960-61 has been extremely negligible. A foreign exchange loan has been negotiated with the World Bank to meet the needs of the Private Sector in the third Five-year Plan and this company has also been allotted sufficient funds to meet its foreign exchange requirements during the Plan period. However, due to several formalities and other things, issue of licences under this loan has been very much delayed and are only now being issued. This company is planning to increase its output and in order to finance its expansion schemes is negotiating for issue of debenture stock for a total value of Rs. 30 lakhs.

The Managing Agents of the Company, Messrs. Hindusthan Investment Corporation Ltd., who have been Managing Agents since the inception of the Company, have tendered their resignation, subject to their being re-appointed as Secretaries and Treasurers of the Company. This was approved in an Extraordinary General Meeting of the Shareholders held on 8th June 1962, and an application has now been made to the Government to accord its sanction to this change.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,98,000	Gross block	1,05,82,162
Reserves and surplus..	7,28,217	—Depreciation ..	42,25,012

		Current assets ..	47,59,167
		Investments	2,08,513
		Cash	61,107
	Rs. 1,13,85,937		Rs. 1,13,85,937

* Paid-up capital consists of 4,99,800 equity shares of Rs. 10 each fully paid up in cash.

Chemicoat Ltd.

(*Chairman*: Mr. A. N. Kilachand, Baroda. Managing Director: M. C. Chhatrapati, Baroda.)

First Annual General Meeting—18th August 1962.

Extracts from the Directors' report for the period from 21st March 1961 to 31st March 1962:

Progress of the Project: Import licence for machinery to be supplied by Messrs. Metal Coating Establishment, Vaduz, the Company's technical collaborators, was received by the middle of December 1961 after persistent efforts made therefor from 22nd March 1961, the date on which the application for licence was made. A formal agreement for foreign exchange loan of U.S. $2,75,000 from the Industrial Credit and Investment Corporation of India Ltd. was signed on 5th January 1962; and the first payment of U.S. $64,000, being 25 per cent of the total value of the order for machinery, was made early in February 1962, after completing other necessary formalities. The machinery suppliers accepted this first payment, though as per terms of agreement with them, the first payment was to be made by 15th April 1961. Considerable delay having thus occurred in making first payment, the supplier's willingness and assurance to ship machinery by October 1961 could not be availed of.

It is indeed very perplexing that the issue of an import licence should take about 9 months for a project for which industrial licence was issued as early as 9th September 1960, and for which foreign exchange loan had been sanctioned in principle by I.C.I.C.I. early in March 1961. All this delay has taken place although at no stage in this period, the Ministry of Commerce and Industry raised any serious queries regarding the plant and equipment to be imported.

Inspite of inordinate delay in receiving import licence and consequent delay in remitting advance payment for machinery, the Company's suppliers have not charged any increase in price; on the contrary, they are making their best efforts to have the machinery shipped by December 1962. The purchase contract stipulates delivery period upto twelve months from the date of receipt of advance payment.

The factory buildings are under construction, and the directors expect to have them ready by the end of September 1962. Order for a generating set of 200 Kva. has been placed. The suppliers expect to ship the same in September this year, and its installation will be completed in December. The directors are pleased to report that the total project cost will be within the estimates.

General: Metallised paper is one of the products to be manufactured by the Company. Metallisation is the technique of depositing a thin layer of metal, usually aluminium, on the surface of paper, plastic, films, etc., under a high vacuum. These can be used for packing tea, biscuits, cigarettes and many other industrial products like electrical goods; toy and fancy goods; as protective clothings, etc.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	14,82,250	Block	2,85,240
Secured loan ..	3,04,640	Expenditure during construction ..	91,030

		Cash	10,45,743
		Miscellaneous expenditure ..	1,18,099
		P.L. a/c deficit ..	1,743
	Rs. 18,66,212		Rs. 18,66,212

* Paid-up capital consists of 20,000 equity shares of Rs. 100 each—Rs. 75 per share called up. Allotment and call money in arrears amount to Rs. 17,750.

Devon Tea and Produce Co., Ltd.

(*Managing Agents*: Young India Agencies Private Ltd., Madras.)

Twenty-fifth Annual General Meeting—Held on 21st July 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sale of tea, coffee, etc.	12,50	7,43
Closing stock of tea, coffee, etc. ..	2,57	3,37
Gross profit	2,47	1,95
Transfer to Managing Agents' remuneration ..	21	13
" " depreciation	29	27
" " development rebate reserve ..	2	1
" " provision for taxation	24	24
Net profit	1,15	1,00
Adjustments	13	4
Appropriations:		
Total available balance	1,28	1,04
Proposed dividends (taxable) preference ..	17	17
" " equity	7,4 (12%)	7,4 (12%)
Carry forward	30	13

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: *Tea*: There was a record crop of 1,90,192 kgs. during the year as against the previous year's crop of 1,38,386 kgs., an excess of over 51,000 kgs. All in cost of production was Rs. 2.98 per kilogram as against Rs. 3.58 per kg. last year and the average sale price realised Rs. 4.47 as against Rs. 4.26 per kg. last year.

Coffee: The Coffee crop during the year was only 56.106 tonnes as against the previous year's crop of 111 tons.

Estimate for 1962-63: The Tea crop is estimated at 1,70,000 kgs. and Coffee crop at 100 tonnes.

Devon Plastics: The new plastic factory started production in July 1961 and reached full production by January 1962. The total sales of plastic goods amounted to about Rs. 1,90,000 and the profit has been round about Rs. 24,000. Devon plastics are meeting with increasing demand and the factory is being expanded.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	8,74,650	Gross block	12,27,345
Reserves and surplus..	3,63,436	—Depreciation ..	2,75,238
Other liabilities ..	3,77,681	Net block	9,52,107
		Current assets ..	4,45,605
		Investments	9,905
		Cash	2,08,150
	Rs. 16,15,767		Rs. 16,15,767

* Paid-up capital consists of 67,465 equity shares of Rs. 10 each and 2,000—7½ per cent. tax-free cumulative preference shares of Rs. 100 each. Of the equity shares, 24,963 shares are issued as bonus shares.

WEST ASIAN OIL COUNTRIES WANT HIGHER PRICES FOR CRUDE

GENEVA CONFERENCE DECISIONS

THE Governments of the oil exporting countries want a bigger share of the profits of the oil business. This, in a nutshell, is the meaning of the principal resolutions passed at O.P.E.C.'s fourth conference held at Geneva in June. These resolutions, published on 2nd July, and the Secretary General's explanatory Press *communique* issued in Teheran, were couched in conciliatory and diplomatic terms. The fact remains that what appears to be envisaged by the Governments—who are naturally pitching their demands high for bargaining purposes—is a renegotiation of some of the basic terms under which the oil companies in the Middle East operate, with all the adjustments going one way. It is difficult to see how the companies, in the present state of the oil business, could afford to accede to the demands which are apparently now to be made upon them.

Three of the seven resolutions passed were concerned with administrative matters and with the admission of Libya and Indonesia to membership of the O.P.E.C. club. (The admission of Algeria and Colombia may follow before very long.) The other four resolutions made reference, respectively, to posted prices, to royalties, to "selling expenses," and finally to the creation of co-ordination and conservation bodies in each country on the lines of those already existing in Venezuela. The Iranian and Saudi Arabian Governments have been designated to open discussions immediately with the Consortium and Aramco. The results of the negotiations are to be reported to the next conference of O.P.E.C., which will open at Riyadh on 17th November.

One of the first objectives of O.P.E.C. is to restore posted prices for Middle East crudes at least to the levels prevailing before August 1960, when reductions ranging up to 10 cents per barrel were made by the exporting companies. The protagonists of O.P.E.C. have long claimed that posted export prices for crude oils should be altered by the companies only after consultation with the Governments of the producing countries and, presumably, only with their agreement. Not only does the relevant resolution (that is, No. 32) in effect, reassert this, but by implication the Governments now envisage the imposition of a crude oil pricing policy of their own devising. In so far as such attitudes imply restraints on the exporting companies' normal commercial activities, they appear to conflict with the inherent trading rights conferred by the concession agreements. Moreover, the aim of establishing unilaterally a higher level of crude oil prices appears to disregard the true nature and condition of the crude oil market.

Producers Protected

Since the demand for crude oil is entirely derived from the demand for petroleum products, crude oil export prices must necessarily be related to final product prices. And these are determined not by edict of oil companies or Governments, but by all the forces of the market. When oil supply potential in the free world outside the U.S.A. (including exports from Russia) began, after the Suez emergency, to outrun effective demand, the resulting condition of surplus was reflected in falling product prices. It was also reflected, directly and indirectly, in lower effective selling prices for crude. But, in the interests of preserving the maximum stability in their economic relationships with the Governments of the producing countries, the companies met the situation—against their own self-interest—by delaying the downward adjustment of postings for crude oil upon which 50/50 profit-sharing is based. To a large extent, the companies thus insulated the producing countries from the harsh realities of the market.

The very modest reductions in Middle East postings in August 1960, which preceded the creation of O.P.E.C., represented an attempt to restore a little more realism to the crude oil pricing picture. They did not, however, go far enough to bring postings into line with average selling prices, and this situation still persists. The result is that companies in the Middle East continue to pay taxes on the basis of posted prices which are well above average commercial values—to the great advantage of the producing countries. Thus "fifty-fifty" profit-sharing, which seemed equitable and stable only a few years ago, has been tilted significantly in the Governments' favour.

The situation is somewhat different in Venezuela, where taxation is based on actual export sales prices, and the heavy burden of taxes resulted in 1961 in an average Government "take" of approximately 70 per cent of the companies' profits. The Venezuelan Government has set its face against what it regards as abnormal discounts from a level of crude oil postings generally unchanged since 1959. And Venezuela has an interest in raising selling prices in the Middle East, thus reducing the competitiveness of Middle East crudes *vis-a-vis* Venezuelan crudes.

There appears to be no possibility at the moment of a significant general increase in effective selling prices for crude or, in general, for products—except, of course, by a full-scale restriction scheme to create an artificial scarcity, which O.P.E.C. has so far not contemplated. Hence the call for higher posted prices is in effect a demand for a still larger share of the industry's profits. And it must be viewed in this light.

The same resolution also directs the Board of Governors to prepare a comprehensive study on the basis of which "a rational price structure" could be devised. If such a study were to lead to a better understanding of all the factors determining prices—including the competitive nature of the oil business, to which so much progress is attributable—it would do nothing but good. In so far as it achieves this purpose, it will reveal the impracticability of devising a formula to link crude oil prices with price indices for manufactured goods imported by the member countries, to which the resolution refers.

Price Stability Achieved

Many people in the U.S.A. and Europe are conscious that some of the underdeveloped countries have suffered in recent years from the wide fluctuations in the prices of primary products, and from the generally downward course of these prices in relation to those of manufactured goods. Had crude oil production been solely in the hands of a large number of local producers without assured markets, its price might have been expected to follow a similar erratic course. But, in fact, the reverse is true. Because crude oil is mainly produced by affiliates of international groups, each of which undertakes responsibility for developing market outlets and co-ordinating all its operations as far as conditions permit, gross overproduction has been avoided and remarkable price stability achieved.

To an impartial observer, it would surely appear that, alone among the underdeveloped countries, the oil-producing nations have no cause for complaint, but much cause for self-congratulation, about the course of prices of their most important export. When account is also taken of the vast increase in the volume of these exports, they must be rated among the most favoured of nations. The stability of posted prices, combined with the dynamic growth of sales, has brought Middle East Governments as a wholle a sixfold increase in their oil revenues (to a present level of over $1,500 million a year) in the short space of ten years.

Royalty Payments

Besides price-determination, the O.P.E.C. resolutions open up another major issue: that of royalty payments. The original Middle East concession agreements provided that the companies should pay the host Governments a fixed royalty for every ton of oil produced. When (in the 'fifties) the question of a redistribution of the proceeds in favour of the producing countries was under consideration, the Middle East Governments agreed to a relatively modest royalty—generally 12½ per cent of the posted price, unaffected by trading profit—to be supplemented by an income-tax. The latter is so applied as to raise the Governments' total receipts, including royalty, to 50 per cent of the notional production profits calculated on the basis of posted crude oil prices.

The O.P.E.C. Governments now want a uniform rate of royalty, which could imply a levelling up to the highest royalty rate generally received by an O.P.E.C. member, namely, the Venezuelan rate of 16⅔ per cent; this, in itself, would not currently involve higher payments by the companies, since the 50 per cent Government share substantially exceeds the amount of royalty. But the Governments also want to have the the royalty paid in addition to, instead of as part of, their 50 per cent share of production profits. Presumably royalty payments would be chargeable as an expense in computing divisible profits, so that on the basis of present posted prices, the Governments' nominal share might rise from 50 per cent as at present to nearer 60 per cent, while a realistic computation based on current average marget prices might well approach 70 per cent.

Another resolution refers to the provision common in Middle East concession agreements of granting the companies for tax purposes an allowance as a contribution to "selling expenses." The proposal to withdraw this allowance, though a comparatively minor matter, naturally means a further increase in tax payments out of company profits. Finally, the member Governments are, by a separate resolution, recommended each to create a body analogous in functions to the Venezuelan Co-ordinating Commission. The latter has on the whole worked harmoniously with the local oil companies; but the value of similar bodies in other countries would seem to depend on whether the functions they exercised were, in practice, constructive or purely restrictive.

Four Parties

The O.P.E.C. resolutions must be judged in the light of the fact that four parties are interested in the international oil business: exporting countries, Governments of importing countries, actual consumers, and oil companies. The potentially conflicting interests of the four must be reconciled if the orderly development of the business is to be assured. While the final sentence of the Press *communique* issued on 2nd July gave verbal recognition to this point, the resolutions themselves show a little appreciation of any interests save those of the exporting countries.

None will quarrel with the aspirations of the host Governments, which have certainly been realised during the past ten years, for increasing oil revenues so as to promote or nourish their countries' social and economic development. But the days when oil companies could be regarded as having bottomless purses are long past; and the objective of higher revenues cannot be attained apart from a continued expansion of the world oil trade. Attempts to raise crude oil prices without regard to market conditions will frustrate this purpose and thus, in the long run, harm the interests of the producing countries.

Such attempts, if successful, would certainly be resented by consumer interests. Many of the oil-importing countries, after all, are far poorer than the oil exporting countries, with a desperate need for cheap energy to promote their own development. India, Ceylon and the emerging countries of Africa are cases in point. Moreover, in the industrialised nations of Western Europe, increases in oil prices and, particularly, any suspicion that prices were being manipulated in the interests of exporting countries, would strengthen the hands of those who favour greater reliance on home-produced energy—coal, gas and nuclear power.

Common Interest

The oil companies have a common interest with the producing countries in working for the maximum expansion of the world oil trade. It cannot be too strongly emphasised, however, that this expansion must be founded not only on efficient and low-cost operation, so as to give the consumer value for money, but also on continued large-scale investment by the companies in producing, refining, transport and marketing facilities. We quoted last month an estimate that an investment of £90,000 million will be needed during the next 15 years to sustain a growth rate of 5 per cent per annum in free world oil consumption; of this total, almost three-fifths will be needed in sectors other than exploration and production. The necessary capital must be provided, either from oil companies' earnings—and by companies which are reasonably confident that their inevitably somewhat risky investments will pay off—or by investors who have sufficient confidence in the future of the business.

The surest way to frustrate the growth of the oil trade, from which all parties tend to benefit, is to encroach still further on company profits, to discourage new investment, and to undermine confidence in the future of the industry. This, despite the Secretary-General's soothing words, is precisely the end result to which the O.P.E.C. resolutions would appear to lead. No one, probably not even O.P.E.C.'s members, expects that the new claims could be accepted as they stand.—*By arrangement with Petroleum Press Service.*

FOREIGN ASSETS JUMP UP

(From Our Own Correspondent)

BOMBAY, *1st August*

This has been a dull week for the short-term money market. There has been no change in the extremely easy conditions that were prevailing last week. If anything, they are easier. The inter-bank call money rate, for instance, fell to ½ per cent on Tuesday, after remaining at ¾ per cent till then. The short-term deposit rates are unchanged at the ceiling levels under the inter-bank agreement.

The response to sales of 91 days Treasury Bills was greater this week than in the past week. Between 25th and 28th July 1962, Rs. 6.72 crores of Intermediate Treasury Bills (yielding 2.236 per cent per annum) were absorbed by the market. This is nearly twice as large as the sales of these Bills during 18th to 21st July 1962. As regards Bills sold under the tender system, the amount offered increased from Rs. 3.10 crores to Rs. 3.50 crores, with the amount invited remaining unchanged at Rs. 2 crores. The average rate of accepted tenders has gone down further, from 2.376 per cent to 2.350 per cent per annum. A fortnight earlier, the rate was 2.390 per cent per annum. Sales of both the types of bills are being continued. The rate for the Intermediate Bills to be sold from 1st to 4th August has naturally been fixed slightly lower at 2.076 per cent per annum.

Foreign assets held by the Reserve Bank as of 27th July 1962 have jumped up by Rs. 9.25 crores to Rs. 103.10 crores. This is presumably due to the utilisation of a part of the I.M.F. stand-by credit. It is said that the Government has withdrawn $25 million out of the $100 million stand-by credit. This means that of about Rs. 12 crores taken out of this credit, Rs. 2.75 crores had been spent during the week ended 27th July 1962.

Scheduled banks' borrowings from the Reserve Bank during the week ended 27th July are practically *nil*, being only Rs. 25,000, though their deposits with the Bank have shrunk by Rs. 5.80 crores to stand at Rs. 101.04 crores.

In the week ended 20th July 1962, total deposits of scheduled banks shot up by Rs. 34.76 crores as compared with the previous week, to touch a high level of Rs. 2,166.19 crores. A year before, they were Rs. 1,869.60 crores, so that the rise over the year is as much as Rs. 296.59 crores. In the same week, bank credit contracted by Rs. 15.94 crores and so also inter-bank borrowings by Rs. 20.05 crores. Investments shot up by Rs. 41.39 crores to Rs. 620.05 crores. This apparently reflects the interest taken by the scheduled banks (including the State Bank of India) in the Central Government's new loans.

The Gilt-edged market was listless, with very limited turnover. There were some enquiries for the short-dated loans of the Central Government 3½ per cent 1965 and 3½ per cent 1968 improved by 10 nP and 15 nP respectively, while the medium-dated 3 per cent 1970-75 fell by 10 nP. Long-dated 4 per cent 1981 lost 5 nP. Only the 3 per cent 1986 Conversion loan, which had suffered heavily in the previous two weeks, picked up some strength to close 30 nP higher at Rs. 69.05. Among the State loans, 4½ per cent 1972 issues (for instance, of Maharashtra, Andhra, Orissa, Madhya Pradesh and Rajasthan) retreated further, the decline ranging from 5 nP in the case of Andhra to 65 nP in the case of Maharashtra. The latter's loan, which was at a premium of 20 nP a fortnight ago, is now at a discount of 75 nP, obviously because of the expectation that the new State loans that are in the offing will offer a distinctly better yield.

In New York, the pound sterling was a shade quiet thanks to President Kennedy's firm declaration that the dollar would not be devalued on any score. The rate for spot sterling went down by 0.110 cents to 280.490-280.530 cents per £. The fall in three months' forward was much less, being only 0.020 cent, the latest available rate being 280.040-280.080 cents per £.

FIRM TONE IN SUGAR

(From Our Own Correspondent)

HAPUR, 30th *July*

Steady to firm conditions continued in the sugar market this week. Although demand from the consuming areas was not at all brisk, mills withheld stocks on expectations of higher prices in view of the paucity of *gur* and *khandsari* stocks. New season's production of *gur* would not commence before mid-October, while, in the meantime, the festive season would push up demand. Steady advices from Kanpur and prospects of exports of about 2 lakh tons of raw sugar next season also helped the sentiment. Mill delivery prices improved by 12 nP to 25 nP per maund and spot delivery prices gained Re. 1.25 per quintal. Week-end prices were: Mill delivery (D-29 per maund) Amroha Rs. 39.87, Meerut Rs. 40.31, Seohara Rs. 39.69, Dhampur Rs. 39.69 Simbhoali (E-29) Rs. 40, Bijnore Rs. 39.75 and Dhampur Rs. 39.50.

In spite of the easy supply position in the Muzaffarnagar market, prices of crystal sugar sought higher levels there on brisk demand. The small grains C-29, D-29 and E-29 recorded a bigger rise as compared with A-29 and B-29 varieties. Despite the release of a bigger quota for free sale, the factories in west U.P. have been allotted lower quantities. Consequently, brisk buying by Delhi and Rajasthan led to sharp gains. Although offtake in the spot section was slack, prices improved by 25 nP to 67 nP a quintal in sympathy with the trend in the ex-mill delivery section. Despatches during the week were higher.

Brisk trading following good demand from Rajasthan, western U.P. and Punjab strengthened the sentiment in the Kanpur sugar market during the past week. Spot and ex-mill prices were maintained at their recent high levels. Produce of the western U.P. mills was marked up by 38 nP to 50 nP to Rs. 106.50 a maund. In the spot section, popular varieties ruled firm around Rs. 106 to Rs. 107 a maund.

Khandsari continued to rule steady, as demand from Punjab and Rajasthan was well maintained and the stocks at the producing areas were fast running down. While inferior *khandsari* was quoted Rs. 85.74 to Rs. 91.09, the superior quality was lifted at Rs. 93.17 to Rs. 101.81. Crystal *khandsari* was quoted at Rs. 95.11 to Rs. 103.25 and *boora* at Rs. 99.13 to Rs. 107.17 per quintal.

Ready *gur* ruled firm, as stocks left with the trade were meagre and demand was still there, particularly from Gujarat. New season's production would not commence before mid-October. Stocks here were nominal, around 500 maunds. They were reported to be small also in the mofussil markets of Saina, Gulaothi and other centres. *Shakker* prices also hardened during the week on Rajasthan demand in the face of poor stocks. Prices improved by Re. 1.34 a quintal. Week-end prices were:—*Gur* superior Rs. 65.64 to Rs. 66.31, kotha selected Rs. 65.64, dry wet Rs. 50.91 to Rs. 53.58, *shakker* Rs. 68.28 a quintal.

In the Muzaffarnagar market, *gur* prices advanced on persistent Gujarat and Rajasthan buying. The stock position was poor. Dry *gur* chaku rose by one rupee to Rs. 2.50 to be quoted at Rs. 24 to Rs. 28 at the week-end. Dana minja was in demand from Rajasthan and Jammu and Kashmir at Rs. 23 to Rs. 26. *Shakker* prices were marked up by 25 nP to 50 nP a maund.

Gur features displayed a bullish trend on sustained buying, influenced by paucity of ready *gur* stocks and insufficient rains so far. The *Fagun* delivery crossed the highest limit fixed by F.M.C. for the second consecutive week under which only a maximum advance of 60 nP is allowed in a week. *Gur Fagun*, having opened at Rs. 20.93 on Monday last week, touched the highest at Rs. 21.80 on 27th July, and was quoted today at Rs. 21.62.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, *1st August*

Both gold and silver suffered a setback in values during the week under review. Some tired bulls were anxious to liquidate a part of their outstandings. There was also scattered selling by professional interests. But buying inquiries were poor. Short-covering was in evidence occasionally, though it did not induce any recovery. Consequently, the week's closing rates were below those prevailing on Wednesday last week. The undertone was distinctly easy.

The daily average offtake of gold during the week was less than that in the previous week, being 4,400 tolas, as against 4,800 tolas, while that of silver was higher at 11 bars, as against 6 bars. Arrivals were at an average rate of 6,200 tolas of gold per day (6,800 tolas last week) and 32 bars of silver (33 bars). The floating stocks of the two metals in the local market are estimated at 20,000 tolas and 700 bars, respectively. About 240 tolas of contraband gold were confiscated in Bombay on Saturday, 28th July.

The *Bhadrapad* (15th September) settlement in gold began the week at Rs. 125.10, as against the previous close of Rs. 125.20, and moved down to Rs. 144.45 on Thursday, 27th July. After recovering to Rs. 125.15 on the following day, the settlement declined again and touched Rs. 124.65 today before finishing at Rs. 124.80.

Ready gold met with good support on the opening day, that is Thursday, 26th July, and advanced from Rs. 125.70 to Rs. 126.10. Thereafter, it drifted down and touched Rs. 125.30 today. At this level, it commanded a premium of 50 nP over the forward, same as last week.

In silver, the *Bhadrapad* (17th September) settlement encountered selling and receded from Rs. 214.25 last week-end to Rs. 213 today before closing at Rs. 213.30.

Ready silver continued to be quoted at a discount under the forward, though the actual discount declined in the course of the week from Re. 1 to 20 nP. The closing spot rate today was Rs. 212.50, as against Rs. 213.25, or a drop of Re. 1 over the week.

The dollar price of gold in the London bullion market which had gone up from $35.12½ to $35.14¼ last week, fell back to $35.11⅞ this week, due to predominance of sellers following President Kennedy's assertion that there would be no increase in the U.S. gold price and no devaluation of the dollar. Ready and forward silver, however, continued unchanged at 88½d. and 88⅞d., respectively, as also silver in New York at 104.75 cents.

The following table shows the trend of prices during the week under review:—

	31-7-62 (closing)	High	Low	25-7-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine) ..	125.25	126.10	125.10	125.70
*Bhadrapad** ..	124.55	125.15	124.45	125.20
Sovereign	98.00	—	—	98.00
SILVER				
Ready (.996 fine) ..	212.05	213.20	212.00	213.25
Bhadrapad† ..	212.85	214.20	212.80	214.25
London—				
Gold	250s.3⅞d.	250s.4½d.	250s.3⅞d.	250s.4½d.
Silver Ready ..	88½d.	—	—	88½d.
Silver Forward ..	88½d.	—	—	88⅝d.
New York—				
Silver	104.75 cents	—	—	104.75 cents

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

FURTHER RISE IN COTTON

(From Our Own Correspondent)

BOMBAY, *1st August*

The recovery witnessed in the cotton futures market last week gathered further momentum during the week under review. The fresh wave of selling induced by reports of excessive rains, particularly in Saurashtra and Kathiawar areas, led to a rally in prices. The global import quota for 175,000 bales of cotton of staple length 1-1/16" and above announced on Friday last had no bearish effect on the market as the cotton will be available only in January 1963. The firmness of spot prices and the apprehension that arrival of new crop will be delayed also imparted strength to the market. Under pressure of buying by both local and upcountry operators, the March 1963 contract firmed up from the last week-end close of Rs. 621.50 (per three quintals) to Rs. 629.75 yesterday, before finishing at Rs. 629. Both the spot and futures markets were closed today on account of the death anniversary of Lokamanya Tilak. The March contract was quoted in private at Rs. 630.

In the spot market at Sewri, good mill demand was reported for popular varieties such as CO2, Laxmi, L-147, Kalyan 197/3, Moglai and Wagad. This was because the fear that the new crop would be delayed prompted many mills to go in for available lots of good quality cotton. Some are reported to have asked the Textile Commissioner to requisition cotton for them on the ground that they could not get sufficient quantities at the ceiling prices.

Export demand for Bengal *Deshi* was poor. Shippers are disappointed at the apparent unwillingness of the Government of India to issue a fresh quota for Bengal *Deshi*. The East India Cotton Association is reported to have decided to request the Government to issue an export quota of 50,000 bales of Bengal *Deshi*, both old and new crop. The ceiling (shippers' share) in respect of the export quota of 70,000 bales of Bengal *Deshi* issued in March last was reached over a week ago.

Interest in foreign cotton was moderate. Pakistan, Sudan and selected East African varieties evoked enquiries. The Government announced on Friday, the 27th July, an import quota for 175,000 bales of cotton stapling 1-1/16" from any area. The shipment period will be from 1st January to 31st May 1963. The quota announcement was a pleasant surprise although mills regret that the cotton will not be available for use in the current season.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 6; Wagad 645; Gadag Laxmi 1,291; CO2 1,380; B.P. (U.N.U.G.) (New) 1,270; Pakistan Ac 1,180; Sudan G4S 1,441.

Traders have noted with interest the recommendation of the two-day conference of agricultural experts, convened by the Planning Commission and the Ministry of Food and Agriculture at New Delhi this week that extension of plant protection measures and introduction of package programme for cotton are immediate steps required to raise cotton production.

The experts approved the proposal for the introduction of package programme for cotton in several areas in the Punjab, Rajasthan, Uttar Pradesh, Gujarat, Madhya Pradesh, Maharashtra and Madras. As regards extension of cotton to new areas, it was suggested that, having regard to the increasing irrigation facilities that would result from the Rajasthan canal project and excellent climatic conditions, maximum area should be earmarked for growing long-staple cotton in Rajasthan. The possibility of setting up large-scale State farms for cotton, mechanised if possible, in the irrigated areas of Rajasthan should be examined. It was suggested that additional technically-qualified agricultural staff should be provided which should be fully integrated with the normal agricultural staff.

Another recommendation related to the arrangements for storage of buffer stock of fertilisers before the commencement of the season. The Ministry of Food and Agriculture agreed to bear interest and storage charges of such stocks. It was felt that fertiliser loans should be given only in kind as that would check its misuse for other purposes and would increase fertiliser consumption.

Karachi cotton futures ruled firm during the week. The switchover of purchases from the July contract, which went off the board on the 25th July, and fresh support imparted strength to the new crop January 1963 contract which rallied from Rs. 74.05 to Rs. 75.20. The March contract rose in sympathy to Rs. 74.40.

The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi: Sind *Deshi* 72; Punjab *Deshi* 65.50; 4F Punjab Roller 82; S.G. 86; L.S.S. Punjab Roller 83.50; S.G. 87.50; N.T. Roller 85.50; S.G. 88.50.

Modest gains were recorded by cotton futures in Liverpool during the week. Both the American and American type contracts edged higher on occasional short-covering and scattered Commission House support. Sudan contracts were quiet and unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 23.80; October 23.40; December 23.35; March 23.65.

American cotton mixed growth contract: July 24.20; October 23.75; December 23.70.

Sudan: July, September, November 29.50.

Trading in the New York cotton futures market continued to be cautious. Operators were

inclined to await further developments, including the first official estimate of production during the 1962-63 season and details of the export sales programme. Futures values moved narrowly, showing small gains over the week.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	30-7-62	24-7-62	17-7-62
New York Spot	35.90	36.00	36.05
October	34.08	33.87	33.69
December	34.49	33.98	33.83
March	—	34.22	34.08

ART SILK YARN ADVANCES

(From Our Own Correspondent)

BOMBAY, *1st August*

There was a handsome rise in the values of art silk yarn during the week under review. The rise followed large buying support induced by hopes of better demand for consuming centres. The hopes were based on rumours that the Government of India was contemplating to fix overall ceilings for rayon fabrics exports at Rs. 15,000 per loom per year, as against the existing basis of Rs. 10 per loom per shift. As a result of the proposed revision, exports of fabrics were expected to improve, leading to an increase in the offtake of yarn. Amilon (20 x 1) yarn August contract jumped up by Rs. 100 to Rs. 4,700. Spot National Rayons 120 Bt. cones 1st grade advanced by 42 nP to Rs. 17.05. 120 Bt. cones 1st grade rose by 5 nP to Rs. 14.26. Centurys 100 Bt. cones hardened by 75 nP to Rs. 8.69 and 75 Bt. cones by 6 nP to Rs 11.25.

Staple fibre yarns did not depict any definite trend. (40 x 2) August contract dropped by Rs. 3 to Rs. 817, while the October delivery gathered a rupee to Rs. 842. Among spot yarns, Centurys receded by 9 nP to Rs. 8.93. Kohinoors, however, strengthened by 16 nP to Rs. 9.22 on special support.

Cotton yarns ruled dull. Business put through was limited, with values moving narrowly. Only eighty counts elicited enquiries, Finlays rising by Re. 1 to Rs. 73.50 and Mahendras by 25 nP to Rs. 59.50.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	31-7-1962	25-7-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
August	4,800.00	4,700.00
Nat. Ray. 150 Bt. 1 (per kg.)	14.26	14.21
Nat. Ray. 120 Bt. 1 (per kg.)	17.05	16.63
Staple fibre yarn (40 x 2)—		
August	817.00	820.00
October	842.00	841.00
Kohinoor (per kg.)	9.22	9.06
Century	8.93	9.02
Cotton yarn (per bundle of 10 lbs.)		
10s Fodar	18.00	18.00
32s Madura	80.00	80.25
40s Madura	86.00	85.50
60s Finlay	73.50	72.50
80s Madura	81.00	81.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

OILSEEDS IMPROVE

(From Our Own Correspondent)

BOMBAY, *1st August*

Oilseeds and oils registered further gains during the week under review, thanks to sustained speculative support. In particular, groundnuts were firm, as supply position was tight, while spot demand was large, following good offtake by *vanaspati* manufacturers and crushers. Good overseas enquiries for groundnut meal also induced strength. Prices might have gone up still further but for reports of favourable rains in Saurashtra. Cottonseeds also ruled strong on account of sizable purchases by shippers. Active conditions prevailed in linseed on reports of oil exports through the State Trading Corporation and encouraging advices from North Indian mustard markets. Cottonseeds moved up in sympathy.

The Karmahon Conference announced this week an increase in freight on oilcake exports to the U.K. by Rs. 8 (12s.) per 100 kgs. with effect from 1st October next. Simultaneously, the Malabar Coast-U.K.-Eire Conference and the Malabar Coast-Continental Conference announced a revised freight rate of Rs. 85 (12$\frac{1}{2}$s.) per 100 kgs. of oilcake.

July contracts in groundnut, groundnut oil and cottonseeds went off the board yesterday. With about 75 tonnes tendered yesterday, the total tenders against the July groundnut contract amounted to 1,225 tonnes. Groundnut oil July had tenders for 60 tonnes and cottonseeds for 325 tonnes.

Operators took note of the recommendation, made at an expert conference in New Delhi, for raising the number of package programme units for expanding groundnut production through the adoption of intensive farming techniques from eight at present to 24. The conference also called for extending the programme to cover the entire groundnut-growing areas, and not four years as previously envisaged. Another suggestion was the programme should not be confined to irrigated areas only, but be extended to other areas as well.

Groundnut January 1963 advanced by Rs. 4.62 to Rs. 225.12; it had even touched Rs. 226.37 earlier. Nizam bold rose by 25 nP to Rs. 47.87. Oil Railway receipts improved from Rs. 19.05 to Rs. 19.30, before finishing at the opening level. Oil September 1962 contract was maintained at Rs. 19.05. Oil July 1962 contract ran off the board at Rs. 19.10, as against Rs. 19.20 last week-end.

Castorseed September 1963 firmed up initially from Rs. 166.75 to Rs. 171.65, but declined slightly and closed at Rs. 170. The net gain over the week was Rs. 3.25. Madras small improved by 12 nP to Rs. 33.87. Oil B.S.S. rose from Rs. 13.80 to Rs. 14.10, before closing at Rs. 13.85. Oil commercial closed higher at Rs 12.85, as against Rs. 12.80.

Linseed bold ready spurted from Rs. 41 to Rs. 41.50 before finishing at Rs. 41.12. Linseed oil hardened by Rs. 17.05. March 1963 contract closed steady at Rs. 40.50, after rising to Rs. 41 earlier.

Cottonseed September 1962 contract put on 50 nP to Rs. 106. Both Berar and non-white were fully steady at Rs. 22.25, as also white at Rs. 20.75.

The following table shows the closing prices of oilseeds and oils on Tuesday, 31st July, as compared with those of the two previous weeks:

	31-7-1962	25-7-1962	18-7-1962
Groundnut	Rs.	Rs.	Rs.
July 1962	—	226.50	219.75
September 1962	228.50	227.75	219.75
Groundnut January 1963 ..	225.12	220.50	216.75
Nizam bold	47.87	47.62	46.75
Khandesh quality	48.12	48.12	47.50
Oil ex-mill ready*	19.30	19.40	19.40

MEDIUM TEAS STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *26th July*

A total of 429,000 kgs. was offered in dust sale No. 29 held today. The market met with strong general demand. There was keen competition for commons and low mediums which advanced by up to 30 nP and the better descriptions under this category sometimes registered further advances. Mediums and good mediums were also well supported and sold at considerably enhanced rates. Highgrowns attracted useful support and sold around last rates. Unorthodox descriptions evoked strong inquiries and were dearer by 20 to 30 nP. Clean, black leaf types were also generally dearer.

The average price realised in dust sale No. 29 was Rs. 3.23 per kilo as compared with Rs. 2.91 a week ago and Rs. 4.67 in the corresponding sale last year.

Colombo: The market met with good general demand. Brokens from western districts were irregular but generally steady on last rates. Uvas came to a strong market and were dearer with quality. Best and mediums were easier by 5 to 10 cents while others were dearer. Low growns received irregular support.

London: *North Indian and other growths*: Monday's sale met with good demand. A few new season's Assams sold well, but these were sometimes below valuations while other descriptions were barely steady.

Ceylon and South Indians: There was good general demand in Tuesday's sale. Low growns and plainest declined by a penny to 3*d*. In Wednesday's sale, Ceylons were steady, whereas South Indians were fractionally easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Offerings in sale No. 30 (held on 31st July) aggregated 679,000 kgs. Strong general demand. Low mediums and mediums irregularly dearer by 10 nP. Good mediums fully firm to dearer. Highgrowns strong and considerably dearer, following quality. All fanning grades evoked better demand."

TEA SHIPMENTS RESTRICTED

(From Our Own Correspondent)

CALCUTTA, *31st July*

Tea shipments from here this week were below prior bookings, although demand for the available space for forward sailing was as brisk as in the past week. The result was that some vessels, which were declared full before, had to leave Calcutta port with vacant space. The difficulty in utilising fully the booked space was believed to be due to arrivals having fallen below earlier expectations.

In the internal sale, held last week, dusts on offer totalled 23,015 packages, which met with a selective demand. A strong feature was provided by the rise in prices of the C.T.C. bright liquoring and small powdery teas; otherwise, conditions were generally quiet. Legg-cut teas eased by 20 to 30 nP. However, keen competition was offered to the poorer fibrous teas, which realised satisfactory prices. Other C.T.C. teas met with good support at lower prices. Plain orthodox grades eased, but following an improvement in quality the few bright liquoring Assams were dearer. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.60 to 7, medium Assam C.T.C. dusts 5.70 to 6.20, medium Assam dust 4.20 to 4.50, legg-cut dust 3.80 to 4.30 and plain orthodox dust 3.50 to 3.80.

In recent months, the Tea Board has taken a series of steps to popularise tea in foreign countries. A tea centre is proposed to be opened at Vienna. Vienna is an international centre and attracts a large number of foreign tourists. At present, coffee is the main beverage of people in Vienna, but some Ceylon and Darjeeling teas are also being sold by the London merchants. It is felt that Vienna offers good scope for Indian tea, and the trade has welcomed the step proposed by the Tea Board.

The Tea Board has arranged to send a delegation to South East Asian countries. Having regard to the economic development now taking place in these countries, it is felt that good possibilities exist there for popularising tea. The delegation headed by Mr. A. S. Bam, Chairman of the Tea Board, which recently returned from the United States and the Continent is optimistic that India would be able to increase tea exports to these countries, where plenty of goodwill for Indian tea exists. The delegation has rightly felt that the U.S.A. offers considerable scope for marketing and popularising instant tea, and Mr. Bam has advocated the manufacture of that tea in India. The trade would desire that the Tea Board opened more tea centres in Europe.

Note has been taken of the hitch that has developed in Britain's negotiations with the E.C.M. over the steps necessary to protect the Commonwealth trade in the event of the U.K. joining the Community. It had been earlier reported that the E.C.M. was disinclined to treat tea imports as duty-free. At present, the duty on tea in the European countries varies, with West Germany levying the highest rate. A reduction in duty would help tea compete favourably with other beverages.

According to an estimate prepared by the U.S. Department of Agriculture, world tea production in 1962 is estimated to total 2,255 million lbs. that is, higher by 2.5 per cent as compared to the output of 1961. Asia's share in the total output would be 2,119 million lbs. The Department expects expansion of tea acreage in both South America and Africa. The production figures evidently include estimates for the U.S.S.R., Red China, and other communist countries. For, earlier it had been stated that world production in 1961 totalled 1,460 million lbs., which, incidentally, had been consumed in its entirety.

The area under tea in the world in 1959 was estimated at 2,405,000 acres, representing a rise of 664,850 acres, or 27.5 per cent, as compared to the area in 1946. India's share in that increase was about 5.7 per cent, attained mostly by intensive cultivation. This means that there is still considerable scope for expansion of the acreage in the country. In the same period, Ceylon's acreage increased by 4.6 per cent, Turkey's by 516 per cent, Iran's by 385 per cent, Brazil's by 276 per cent, Japan's 96 per cent, Africa's by 186 per cent, and the U.S.S.R.'s by 22 per cent.

The industry in India is one with the Government on the latter's view that the target of 900 million lbs. is fair and reasonable, excepting its singular reservation that the target be realised with adequate safeguards against a glut in the market.

All the producing countries are paying keen attention to increasing their exports. India's share in the increase in world consumption in 1961 is reported to have been proportionately lower. With appropriate fiscal measures, India should have been able to secure a proper share. Against such a background, the trade and industry would again and again urge the Government to abolish the export duty, and revive promotional efforts for increasing internal consumption which would serve as a cushion in case the apprehension of the F.A.O. that by 1966 tea would become a surplus were to prove correct.

Export offerings during yesterday's sales here totalled 48,921 packages, which met with fair demand. Excepting flavoury Darjeelings which were fully steady on good demand, other teas were generally easy. Whole leaf grades were extremely quiet, with the higher-priced teas receiving very little attention. Tippy teas were difficult to be pushed. Prices of the best bright liquoring Assams, both orthodox and C.T.C., eased by 20 to 40 nP, and those of the ordinary plain grades eased by 30 nP. Dooars orthodox and C.T.C. grades were also easy. Non-wither legg-cut teas showed the least decline of 10 to 20 nP. The quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings 7.20 to 8.20, best Assam C.T.C. B.P. 7.20 to 8, medium Assam C.T.C. fannings 5.60 to 6.20, clean black pekoe 4.40 to 4.60, medium Assam C.T.C. B.P. 5.70 to 6.20, plain fannings 3.80 to 4 and plain B.P. 3.80 to 4.

JUTE GOODS RECOVER

(From Our Own Correspondent)

CALCUTTA, *31st July*

The outstanding feature of trading in jute goods during the week under review was the revival of interest in hessian at lower levels on behalf of both the U.S. and Argentine and, as a result of actual business with these two countries, prices recorded a modest recovery. In the heavy goods section, the Cuban entry into the market was hailed with much enthusiasm and prices gained. In fibre, mills showed little interest and, while the old crop was offering at below the minimum prices, the new crop was maintained despite reports of more arrivals in the agencies. However, a firmer tendency in both old and new crops set in over the week-end, when the possibility of the Union Government taking over the buffer stock operations was hinted at by Mr. Shriman Narayan, a member of the Planning Commission. Mr. Narayan said that the Government was concerned with the lack of stability in fibre prices despite the existence of the Buffer Stock Agency, and alleged that the Agency had failed to achieve the purpose for which it had been set up. On what ground he based his conclusion was not, however, indicated. The jute mills industry has repeatedly declared its eagerness to ensure a fair and reasonable return to growers. It has been due largely to buffer stock purchases and the policy of mills for increased purchases that a decline in fibre prices has so far been prevented.

It should be noted that, as compared to the prices in Pakistan, the prices which the Indian cultivator is obtaining are far higher. If only mills had slowed down their purchases, prices here would have moved down to the same low levels as in Pakistan. When it is remembered that the industry has to compete in overseas markets with Pakistan where not only fibre prices are lower but labour charges are also cheaper, the question naturally arises whether the mills in India can afford to continue purchasing fibre at the present minimum level of Rs. 30 a maund basis Assam bottoms. As was rightly pointed out by Dr. Ram Subhag Singh, Union Minister for Agriculture, who addressed the Central Supervisory Body for Jute here a few days ago, the real problem is to maintain reasonable prices in producing areas in parity with the ruling prices at Calcutta. The Minister attributed this state of affairs to the fact that the Buffer Stock Agency operated only in Calcutta. The trade would point out that the remedy lay in a proper investigation to determine what the farmer would consider a reasonable price. It was about a year ago that the minimum prices were fixed, but the rapid fall in prices in Pakistan and the keen competition of Pakistan mills in overseas markets call for a revision of the minimum prices. In any system of prices, it is difficult to maintain a parity between mofussil and Calcutta rates. The former would always be lower, since they would not include storage charges and transportation expenses and a percentage for normal trade risks and interest on capital.

Increasing production is said to reduce costs of production. It is also an economic truism that a unit increases its production only at decreasing marginal costs till an optimum point is reached. If this is applied to raw jute, it is a fair estimate that the farmer, by increasing his produce, is able to reap a larger profit. This factor should necessarily be considered when determining what level of prices would be fair and reasonable to the farmer. While the trade and the mills are one with the Government in the view that wide fluctuations in prices should be avoided, it is pointed out that, unless fibre prices bear a close economic relation to prices of goods, all talk of increasing exports of goods would be idle. If only the farmer is enabled to improve the quality and attain a higher yield, a significant step towards solving the frequent complaints that the farmer is getting low prices would have been taken. Against such a background, it is good news that the Government of India has decided to provide special fertiliser quotas to the jute farmers.

During the week under review, prices of goods increased as a result of good business done with overseas countries. U.S. buyers evinced keen interest at lower levels. Although earlier advices from the New York burlap market revealed buyers' hesitation for long-term commitments and their inclination to cover only urgent requirements, prices there improved subsequently. Thus duty paid 40" 7$\frac{1}{2}$ oz. hessian spot recovered from 9.90 cents a yard to 10.10 cents, and the 10 oz. from 13.50 to 13.75 cents. The U.K. continued to buy in small quantities. Support from Argentina was revived during the week, but, in view of foreign exchange difficulties, inquiries were only for small quantities. It is stated that importers there have to deposit full value of the goods. It is to be hoped that, since Argentina imports hessian to facilitate exports of its farm output, this requirement would be relaxed. In the heavy goods section, Australia bought increased quantities, and the much-delayed entry of Cuba, which lifted as much as 25,000 bales for September shipment, was the moving force behind the recovery.

On Tuesday last, prices eased, since business that took place was insignificant. Ready hessian 40" 10 oz. fell from Rs. 53.10 to Rs. 52.25, and B. twills from Rs. 123 to Rs. 122.50. At this stage, Australia showed interest in small quantities of cornsacks for forward shipment. This led B. twills to recover to Rs. 124.10. At the same time, substantial business was done with the U.S. in hessian, as a result of which hessian 40" 10 oz. recovered to Rs. 52.75. This was on Wednesday. On the following day, Argentina showed interest in hessian for prompt and near deliveries. The U.K. also placed orders. This pushed up the price of hessian 40" 10 oz. to Rs. 54.37. In sympathy, ready B. twills improved to Rs. 124.65. Covering business took place on Friday on a restricted scale, but overseas business was insignificant. The latter feature should be attributed to overseas buyers' anxiety to prevent prices from rising as a result of their continued support. Hessian 40" 10 oz. was firm at Rs. 54.60, while B. twills eased to Rs. 124.35. Over the week-end, with B. twills at Rs. 124.25 and hessian 40" 10 oz. at Rs. 54.50, quiet conditions were in evidence. In the futures market, August B. twills touched a high of Rs. 124.80, after opening at Rs. 122.10. The week's low was Rs. 121.30 and the closing rate was Rs. 122.40. August hessian 40" 10 ozs. opened at Rs. 51.66 and soon rose to a high of Rs. 53.82 before closing at Rs. 52.14. There was selling pressure yesterday, and ready hessian 40" 10 oz. eased to Rs. 53.40 and B. twills to Rs. 123.90.

The feature in the fibre market was that, for a time, sellers demanded prices at above the minimum rates. This was when increased overseas business in goods set in a recovery in goods. However, mills were disinclined to pay higher prices. New crop arrivals increased and the combined arrivals of the old as well as new crops should be placed at about 50,000 maunds a day. New crop quotations for August-October delivery were as follows: Daissee bottoms Rs. 33.50 a maund, Assam bottoms Rs. 30.50 and northern bottoms Rs. 30.00.

METALS RULE FIRM

(From Our Own Correspondent)

CALCUTTA, *31st July*

Firm conditions continued to prevail in the metals market here during the week under review. Mr. Morarji Desai's statement that he would consider marginal relaxation of some of the import restrictions imposed in recent years in the light of his expectations (since largely realised) that the European members of the Aid India Club, would meet the shortfall in the aid to match America's contribution was noted with enthusiasm. However, Mr. Desai has warned that the relaxations to be proposed would be only marginal and, in the final analysis, trade and industry should depend on export earnings for increasing imports. It had been indicated that the foreign aid would be used only for importing capital goods required for the execution of the projects included in the third Plan. Thus, maintenance imports, which exceed the country's total export earnings by about Rs. 100 crores, would have to be made only from larger exports.

The trade feels that any sudden change in imports, said to be mooted in New Delhi at present, would hamper industrial production. The change, if any, should be gradual in the larger interests of the country. The country as a whole is presently facing an acute copper crisis and, although cable manufacturers are gradually switching on more and more to aluminium, copper will have to be imported for such essential products as castings and semis, like sheets, tubes, rods, electrical sections, etc. Any decline in the production of these semi-manufactures would have to be met by imports. Thus a reduction in the import of virgin copper would mean the allocation of more foreign exchange for importing the essential semi-manufactures, which are required by several industries. It is time that the Government reviewed the situation and granted early the actual user licences so that production may be planned without hindrance.

On the London Metal Exchange, copper was unchanged at £234 a ton. Demand from the industry was reported to be fair. Earlier in the week, the backwardation for the three-months position was £3$\frac{1}{4}$, but it narrowed down to £3 by the end of the week. Tin opened at £857 a ton and, after being higher at £861, closed at £855$\frac{1}{4}$, i.e. £1$\frac{1}{4}$ lower on balance due to the uncertainty about the price at which the proposed U.S. releases would be effected, which was reflected in easier advices from the Far Eastern markets also. The outcome of the negotiations that are at present being carried on by the International Tin Council with the U.S. Government was awaited with interest.

Although world output of tin in the first quarter of this year was lower than consumption, production at 36,100 tons was higher by 2,500 tons, as compared with the output in the corresponding period of the previous year. Increases in production were recorded by Malaya, Bolivia, Indonesia, Nigeria, and the Congo. Shipments from Malaya in June totalled 6,073$\frac{1}{2}$ tons, of which as much as 2,393$\frac{1}{2}$ tons were shipped to the U.S.A. alone. The surplus in the U.S. stockpiles is now believed to total 164,000 tons, which means even after disposing 50,000 tons as permitted by Congress, a surplus of as much as 114,000 tons would remain. It is felt that such a huge surplus would continue to affect the world market trend.

Spot zinc closed at £66 a ton in London as against the week's opening at £65$\frac{1}{4}$. Spot lead was mostly unchanged at £52$\frac{3}{4}$ a ton. There was the news from the U.S. that the largest zinc smelting firm in that country proposed to cut the production of prime western slab zinc by about 10 per cent.

RICE AND PEAS ADVANCE

(From Our Own Correspondent)

HAPUR, *30th July*

Foodgrains continued to rule steady to firm here this week due to reports of inadequate rains in the growing centres. Rice, peas and arhar prices advanced considerably, whereas wheat and gram recorded modest gains.

Rice prices registered an upward tendency due to good buying support in the face of meagre stocks. Prices of *basmati superior* and *mainpuri* quality moved up by Rs. 5.36 and Rs. 3.35, respectively. Week-end prices (in rupees) were: Rice *basmati superior* 85.74 to 96.45, *sela basmati* 75.02 to 80.38, *mainpuri* 58.94, *ramajwayan* 64.30, *raimunia* 66.98 and *gadda* 56.26.

Peas prices advanced by 67 nP to Rs. 1.43 on better demand. The *dara* quality was quoted at Rs. 34.16 to Rs. 34.83 and farm at Rs. 36.17 to Rs. 37.51. *Peas dal* was quoted at Rs. 38.85 a quintal. During the week, six wagons of *peas* were despatched to Madras. Arrivals were very poor and the stocks declined to 68,000 maunds. *Arhar* prices also hardened by Rs. 2.67 to Rs. 5.34 on better demand for conversion into *dal*. Stocks were poor at 8.000 maunds. *Urd* and *moong* also ruled firm on brisk buying in the face of poor stocks. *Moth* prices were stationary, while *masoor* prices improved modestly in sympathy with *peas* and *arhar*. Week-end prices (in rupees) were: *Arhar* 56.26 to 61.62, *dal* 66.98 to 72.34, *urd* 83.06 to 84.42, *dal* 96.45, *moong* 54.22, *moong dal* 64.30, *masoor* 46.89 to 50.91, *massor dal* 56.93, *gram dal* 49.57, *moth* 36.17 and *moth dal* 44.21 a quintal.

Wheat prices improved by 67 nP to Rs. 1.34 a quintal on good consumer and outside demand. Arrivals were poor at an average of 200 maunds daily. Local stocks ran down to 66,000 maunds. The average quality wheat was quoted at Rs. 41.53 and the superior quality was placed at Rs. 43.54 to Rs. 46.89. Red wheat was done at Rs. 40.19. During the week, two wagons of wheat were loaded to Poona and Sholapur. Gram prices also improved by 67 nP to Rs. 1.34 on firm Madras and Punjab advices. Arrivals during the week were almost *nil*, and the stocks ran down to 18,000 maunds. Punjab quality gram was quoted at Rs. 43.54 and the local produce at Rs. 43.54.

Bejhar and *barley* prices advanced by 67 nP and Rs. 1.34, respectively, on better demand and poor arrivals. *Guwar* prices were stationary, but *jowar* gained Rs. 4.02 on brisk demand and poor stocks. *Methi* prices also sought higher levels. Other coarse grains were quiet. Week-end prices (in rupees) were: *Barley* 29.47 to 29.79, *bejhar* 30.14 to 30.81, *methi* 61.62, *maize* 29.47, *jowar* 46.89 to 50.91, *guwar* 40.19 and *bajra* 37.51 a quintal.

SLOW CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, *30th July*

Arrivals of E.I. tanned hides in the local market this week were moderate and of calf small. Clearance from the market was slow; only lower grade cowhides were in demand from the local trade at prices which overseas importers were not prepared to pay. Export trading was difficult, as there was a gap of twopence between buyers' and sellers' price ideas. The seasonal holidays in August act as a damper to business, especially with the U.K.

In the tanned skins section, importers showed slightly more interest in the traditional lines of 5$\frac{1}{2}$/6 lbs. and 11/12 lbs. average weight goat skins of all grades and occasionally in 8/9 lbs. top selections. Demand for heavier weights was persistent, but stocks were small, and the market remained in an oversold position. Medium weights in middle class sheep skins were in good demand, and prices advanced slightly. If prices improve further, the volume of demand would decline, as higher levels would be uneconomical for the Continental dressers. Better class tannages ruled quiet. Trading was negligible, but tanners were holding firm to their last price ideas. Raw markets were steady especially in the goat section due to steady purchases of pickled goat skins by exporters.

COMPANY AFFAIRS

(Concluded from page 208)

production is expected to commence by the end of this year.

With the issue during the year of 32,000 ordinary shares of Rs. 50 each at the premium of Rs. 75 per share, the issued share capital of the Company has increased to Rs. 96.00 lakhs of which Rs. 40.00 lakhs are in preference share of Rs. 50 each. This is supplemented by Rs. 70.76 lakhs in reserves, of which Rs. 24.00 lakhs are standing to the credit of share premium account. Outstanding amount of the loan from the I.F.C. is placed at Rs. 13.75 lakhs and current liabilities and provisions aggregate Rs. 71.65 lakhs. On the assets side, the gross block, inclusive of the additions of Rs. 18.74 lakhs made during the year, is shown at Rs. 83.74 lakhs and, on deducting therefrom Rs. 24.12 lakhs being the depreciation provided so far, the net block stands at Rs. 59.62 lakhs. There is besides capital work-in-progress at Rs. 2.76 lakhs. Investments, current assets and loans and advances all together amount to Rs. 189.77 lakhs.

The present market quotation for the Rs. 50 fully paid ordinary shares of the Company is Rs. 190 *cum-div.* The net yield, on an *ex-div.* basis, works out to no more than 2.9 per cent per annum.

Notice

BURMAH-SHELL REFINERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE register of the Company's 5$\frac{1}{2}$ per cent Debentures 1965-69 will be closed for transfers from 17th August 1962 to 31st August 1962 both days inclusive.

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935.
—Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1966 or later at the option of the Government after three months' notice.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

VOL. CV. No. 2678 BOMBAY, 11th AUGUST 1962 PRICE Rs. 2

PROGRESS AT BRUSSELS

IF everything had gone according to plan at Brussels, the negotiations relating to Britain's entry into the European Common Market should have virtually concluded by the end of July last. As things have just turned out, no comprehensive agreement between Britain and the Six on the conditions governing the former's entry into the Common Market has been reached. The future farm price policy of the enlarged European Economic Community and the financial regulations of its common agricultural policy have been discussed but not settled. Britain's request for nil duties on a number of key commodities—aluminium, lead, zinc and newsprint—also remains to be discussed at ministerial level. But there has been no deadlock as such at Brussels, for a good deal of progress has in fact been made till the 5th instant. One of the outstanding problems in the negotiations has been resolved by the agreed offer to nearly all Britain's dependent territories of association with an enlarged Community on the same terms as the existing associate members. An outline of a considerable part of the negotiations as far as the Commonwealth is concerned has also emerged. Pending the next ministerial session to be held at Brussels in the first week of October, the forthcoming Commonwealth Prime Ministers' Conference in September will, therefore, have something useful to discuss. The provisional arrangements so far agreed upon between Britain and the Six relate to exports of temperate foodstuffs from Canada, Australia and New Zealand and exports of particular products from India, Pakistan and Ceylon into an enlarged Community. Whether these arrangements will be found acceptable to the Commonwealth Prime Ministers concerned and whether Britain will be able to take the whole Commonwealth with it are currently the most interesting questions. There can, however, be no precise answers to these questions pending the Prime Ministers' Conference. Much will depend on how official, as well as non-official, opinion develops, between now and September, in the respective Commonwealth countries on the proposed provisional arrangements.

The guess can still be hazarded that the Commonwealth question is not likely to prejudice the chances of Britain's entry into the Common Market. Already much ground has been covered in the process of giving satisfaction to Commonwealth countries. A general agreement in principle, for instance, has been reached between Britain and the Six on association for independent Commonwealth countries in Africa and the Caribbean, although a specific formula covering this remains to be worked out. This is in addition to the full agreement on the question of British dependent territories, whereby such territories or colonies, with the exception of a limited number falling into special categories (like Malta, Gibraltar, Hong Kong, Aden Colony and Protectorate, Basutoland, Swaziland and Bechuanaland Protectorates), are now immediately eligible for association on Britain's accession to the Community. It will thus be seen that the problems posed by six Commonwealth countries alone—Canada, Australia and New Zealand, on the one hand, and India, Pakistan and Ceylon, on the other—have presented difficulties so far.

Of these six Commonwealth countries, the first three, namely, Canada, Australia and New Zealand have been able to win some very important points in regard to their exports of temperate zone foodstuffs. One such point gained is that the enlarged Community shall shape its farm price policy in such a way as to afford reasonable export opportunities for producers outside. Another assurance given to these countries is that the consultation procedure, to be followed if major exporters in this category suffer a severe loss of trade during the transitional period, would be tightened up. Thirdly, an enlarged Community would commit itself to finding special solutions to New Zealand's problems arising from its heavy dependence on the U.K. market. Above all, the agreement on the objectives of geographically restricted arrangements on major foodstuffs in the absence of world-wide ones is also calculated to favour Canada, Australia and New Zealand. All these points won by the three Commonwealth countries represent a considerable movement by the Six from their starting position. Since a broad measure of agreement between Britain and the Six has been established on the various arrangements pertaining to trade in temperate foodstuffs, presumably in consultation with Canada, Australia and New Zealand, it may be supposed that these countries will raise no further serious objections.

The other three Commonwealth countries—India, Pakistan and Ceylon—have also won some concessions at Brussels. The most important of these is that there would be a nil duty on imports of tea. This will certainly be of great advantage to India and Ceylon, as tea represents 45 per cent of the former's and some 90 per cent of the latter's trade with Britain. In the enlarged Community's market for tea, it will thus be a question of competition between India and Ceylon on equal terms without any tariff impediments standing in their way. The elimination of the duty on tea from the common external tariff is a distinct gain to both the countries. The second concession given to the three countries is that there will be a nil duty on a number of products like cashewnuts in which India does a considerable trade, mango chutney, curry powder, some spices, handloom products, certain sports goods including cricket bats and polo sticks, and a number of tropical products. There will also be a suspension of duties till 1966 on cinnamon, pimento, capsicum and citronella. Many of these products, to which duty-free treatment will be given throughout the enlarged Community from the date of the U.K.'s accession, can, of course, be exported by India. But they will not be of much consequence except in the case of tea. But, if and when the Six agree to accord duty-free treatment, as asked for by Britain, to East India kips, coir mats and matting, certain heavy jute goods used for packing, and hand-knitted carpets, this country in particular will stand to benefit further. There is, however, no certainty, as of today, that these four items will be included in the category of products to be given duty-free entry. Likewise, there is uncertainty over the fate of items such as coffee, tobacco, and a number of tropical products, including vegetable oils, in all of which India is vitally interested.

These uncertainties apart, what has caused India the greatest concern is that the present common external tariff of the Community is proposed to be applied, in stages right from the date of U.K.'s accession, on a wide range of products like cotton textiles, jute goods, other manufactured goods and processed foodstuffs. This would mean, as Mr. Morarji Desai, India's Finance Minister, pointed out in his statement in the Lok Sabha this week, the emergence of new restrictions where none existed before in the U.K. market. In the case of cotton textile imports into the U.K., a fifth of the common external tariff is proposed to be applied on Britain's entry, a further fifth 18 months later, 30 per cent a year after that, and the final 30 per cent when the common external tariff applies throughout the Community. There is, of course, the guarantee here that the Community would "take without delay the necessary steps to restore the situation, if, as a result of the application of the tariff, exports were to show a drop in relation to the base level established for such exports to the enlarged Community." The occasion for applying this guarantee is likely to arise, for, as Lala Bharat Ram, Chairman of the Indian Cotton Mills' Federation, has pointed out in his statement this week, "not only will the volume of exports go down but our export earning per yard of cloth or pound of yarn will also go down by our having to reduce our quotations to the extent of the tariff." That India can be given special treatment, without prejudice to the interests of the Community's textile industry, has been convincingly brought out by Lala Bharat Ram in the following passages:

"It is really difficult to understand how continued imports of Indian textiles into Britain on a duty-free basis should cause any alarm to the E.E.C. countries, as our exports consist mostly of grey cloth in the coarse and lower medium categories which do not fall in the same superior class of goods manufactured by Western countries and hence do not offer any real competition to them...

"In any case, no country, much less the E.E.C. countries, need have any fear of their markets being swamped by imports of Indian textiles, as, due to the rising domestic standards of living, our exportable surplus is strictly limited. The third Five-year Plan puts the target of exports for 1966 to all destinations at no more than 800 million yards and the attainment of even this modest target depends on our ability to reach, by 1966, a production of 9,300 million yards from the present figure of 7,700 million yards. Furthermore, our exports to Britain are already regulated by an agreement."

As for jute goods, the common external tariff is to be applied by Britain "progressively at the normal speed." It has also been agreed between Britain and the Six that the enlarged Community must develop a common policy on jute. How these special arrangements are going to be worked out is not clear yet. In the case of other manufactured goods and processed foodstuffs, the provisional agreement has laid down that the common external tariff would be applied in five stages. These steps are: 15 per cent on Britain's accession; 15 per cent on 1st

July 1965; 20 per cent on 1st January 1967; 20 per cent on 1st July 1968, and the final step on 1st January 1970. It will be seen from the provisions regarding cotton textiles, jute goods, other manufactured goods and processed foodstuffs that the Six have rejected Mr. Morarji Desai's plea for which there was British support. The Indian Finance Minister, it may be recalled here, had urged, during his recent visit to Europe, that consideration be given to the idea that Indian exports should pay no duty or only a token duty, at least in Britain, until such time as trade agreements had been concluded. But the Six have chosen to apply the common external tariff from the beginning, albeit in stages, to the aforesaid products on the specious ground that it would help the Indian economy to develop and become fully competitive.

The only remaining hope for India, Pakistan and Ceylon is held out by the provision for comprehensive trade agreements between the Community and the three countries, at the latest by the end of 1966. The objective of these agreements has been defined as "the development of mutual trade for the purpose of maintaining and, as much as possible, increasing the level of the foreign currency receipts of these countries and, in general, facilitating the implementation of their development plans." Tariff policy, quota policy and export policy will figure in these agreements which could also include other measures, such as the promotion of private investments, the development of financial relations and the provision of technical assistance. Now that something has been gained, it is for the Union Ministry of International Trade to begin straightaway preparations for future negotiations directly with the enlarged Community. Any such agreement, as Mr. Morarji Desai has strongly urged, should take into account four most relevant factors, namely, the large volume of India's current duty-free exports to Britain, the importance of bridging the gap in India's trade with the Community, the undesirability of discrimination between one developing country and another, and the G.A.T.T. Declaration on the Trade of Developing Countries adopted last year. A special trade agreement between India and the E.E.C. on these lines may enable this country to make on the roundabouts what has been lost on the swings.

MR. NANDA STRIKES A NOTE OF REALISM

AN unusually realistic note was struck by Mr. G. L. Nanda, Union Minister for Labour, in his speech at the twentieth session of the Indian Labour Conference held at New Delhi this week, in refreshing contrast to his speech at the last annual meeting of the All-India Organisation of Industrial Employers at New Delhi a little over three months ago. His forthright remarks about the challenges and problems of labour in the country were well-balanced. They show that, on certain occasions, Mr. Nanda can be objective, successfully overcoming his passion for serving the cause of workers, and view the interests of industrial labour against the background of general economic conditions in the country. The deliberations of the Labour Conference have come to have a profound influence on industrial relations and cover a wide range of questions touching directly and vitally employers, workers and the community in general. Mr. Nanda knows that his attitudes to and opinions about specific questions would affect the tone and direction of the discussions as also the conclusions reached at the Conference. This explains the emphasis he placed on certain vital aspects of labour policy in the country.

The emphasis laid by Mr. Nanda on higher production and productivity is a typical instance of the realism that characterised his opening address to the Conference. Industrial wages have to be viewed in the wider perspective of economic development and not merely from the standpoint of giving a decent standard of living to workers. The former requires that wages should be fixed in relation to production and productivity. But in this country, for obvious reasons, the abstract concept of social justice has often prevailed in wage determination. Mr. Nanda's observations should put the issues in the proper perspective. He categorically and rightly stated that no amelioration of the lot of the masses, in any real and enduring sense, was possible without a very substantial increase in the total output of the nation. In other words, if the working class and the rest of the community similarly situated are to move rapidly towards the attainment of a reasonable standard of living in conditions of full employment and price stability, there would have to be a very large increase in production as well as in the levels of agricultural and industrial productivity throughout the economy. He underscored the compelling need for these prerequisites in the following eloquent words:

> "Without this, no persuasion or pressure, no resolutions however cogent and no amount of agitation or industrial conflict can bring within the reach of the working class as a whole the levels of living to which they are entitled as human beings and as partners in the economic activity of the nation. There is no escape from the challenge which is inherent in the economic situation of the country and which, in concrete terms, is at present related to the successful implementation of the third Five-year Plan. On that depends the realisation of its target of employment, inadequate as it is, and the promise of a modest improvement in living standards of the people. The Plan has reached a difficult stage in its course. It is important that the resources needed for carrying it out are raised. It is even more essential that the most effective use is made of the available resources so that every unit of investment yields the largest possible output and return. Granting that all the foreign aid envisaged in the Plan will come to us, we are still faced with a constant struggle to meet our total obligations in respect of the imports which we cannot do without. We must, therefore, develop our competitive capacity to enlarge our share in the export markets. The costs of production, therefore, should not be allowed to rise. They should be brought down."

In a country where there is widespread unemployment, there is an apparent conflict between the interests of those who are already gainfully employed and those who are unemployed. In terms of practical policy, the issue boils down to one of higher wages *versus* more employment. Consideration of the possibilities of raising the wage levels cannot be divorced from the need for expanding employment opportunities. Mr. Nanda did not indicate how these two conflicting interests could be reconciled. He did emphasise, of course, that consumption standards of those for whom jobs were available had to be adjusted to the need for securing genuine savings for the purpose of investments at a level which could help to absorb, in course of time, the whole of the labour force in productive occupations. But he did not make it clear how the adjustment could be made in practice. Is he suggesting that this should be done through restraint on wages until such time as investment increases sufficiently to absorb all the unemployed? In other words, is he recommending a wage pause? Or is he suggesting that there should be controls on prices and distribution at the consumer end? Or does he want both the means to be tried simultaneously? If so, are they acceptable to the public? How we wish Mr. Nanda had elucidated his statement!

Few will disagree with Mr. Nanda's insistence that the achievement of high levels of production should be the most immediate and most important aim. For this it is necessary that employers and workers should jointly explore every possible avenue of increasing productivity and make a dispassionate, continuous and systematic study of all the factors that hamper the maximisation of output, including workers' participation in management in the limited sense the Government has been advocating it. Mr. Nanda believes that it should be possible for workers of the country to bring this about provided they are imbued with enthusiasm and possess the determination to make their best contribution. But this will be forthcoming, according to him, only if the requisite conditions are created and the well-being of workers as producers takes precedence over other things. Workers' welfare has thus a functional aspect. Another condition for generating enthusiasm among workers is, according to Mr. Nanda, again, a sense of assurance that they are getting a fair deal as an incentive for playing their part well. All this sounds perfect on paper but will prove a complicated problem when one attempts to translate it into action. From the political angle, there are some politicians who are bent upon creating disaffection between workers and employers in order to serve their goals. From the economic angle, there are serious limitations to what an employer can do in an economy where price stability is lacking and population pressure is high.

Mr. Nanda seems to imply that a need-based minimum wage for each and every worker can be taken as a fair deal. A rough calculation indicates that the wage bill will have to be increased by a minimum of 20 to 25 per cent and a maximum of 40 to 45 per cent to ensure the minimum wage required for reaching the standard recommended by the Indian Labour Conference. If this minimum wage were to be made applicable to all sections of the working population, including agricultural labour, it would call for an increase in national output of about 60 per cent over and above what is envisaged in the third Plan. Clearly, this is impossible. And it is, therefore, futile to bargain for a need-based minimum wage for a long, long time to come. Accordingly, the non-payment of such a wage does not mean that labour has not been given a fair deal. It is sheer common sense that, if frustration among workers is to be avoided, they should not be led to expect things that are not feasible. So politicians and trade union leaders would be making a substantial contribution to harmonious industrial relations if they desisted from equating a need-based minimum wage with a fair deal to workers.

An issue which has a direct bearing on production is stoppage of work due to industrial disputes. Although there has been a progressive decline in the number of man-days lost since 1958, strikes and lockouts still constitute a major source of production loss. The number of man-days lost in 1961 was 4.8 million. The country, as Mr. Nanda rightly pointed out, cannot afford the loss of even a single day's production and no price is too much for preventing it. The Union Labour Minister was hopeful that the man-days lost would decline to 2.4 million by the end of the third Plan. But this calls for a closer adherence to the Code of Discipline and more faithful observance of its provisions. Since, of late, there is a tendency for strikes and work stoppages to occur more frequently in the public sector undertakings than in the private sector, a solution to the problem seems to lie primarily with the former sector.

Mr. Nanda was understandably concerned at the poor progress of the scheme of workers' participation in management. He regretted that some resistance to the scheme had been developing of late. He averred that there was nothing radical about the scheme. It had three main ingredients, namely, supply of information to workers about the working of the concern, consultation with workers regarding major developments in the enterprise and association of workers with management of certain welfare activities. None of these, in his view, "can cause pangs of conscience even in countries which are not committed to socialist ideas." He is right, of course, in this contention. Why then has the scheme not made much headway? A closer look will show what is wrong with it. Simply, the atmosphere is not conducive to the working of a scheme, limited though it is in scope, which calls for a spirit of understanding and responsibility from both management and workers. How is one to expect these conditions to prevail when there is unhealthy trade union rivalry and when a good part of workers in this country is under the influence of political parties which do not have any faith in private enterprise and which think that the business community deserves to be liquidated?

Moreover, it is an emotional and not functional role that is assigned to the scheme. The Union Labour Minister thinks that his solution will provide a temporary solace to workers, who cannot hope to gain large material benefits immediately, by giving them a sense of participation in that activity which forms the foundation of their well-being and their family. Experience in other countries, however, has shown that workers are more concerned with their material gains than with the emotional satisfaction supposed to flow from association with management. Enough evidence has not accumulated in this country to show that Mr. Nanda's reading of human nature is right. Nevertheless, one cannot afford to sit with folded hands in the hope that the problem will somehow solve itself. Employers have to recognise that there is a new social ferment in the country and that, unless they endeavour to channel it along right lines by taking positive steps, they will one day be overwhelmed by it. The basic objective of Mr. Nanda's policy is to prevent this from happening. They must, therefore, co-operate with him and find out workable ways and means of carrying the workers with them.

MARKET GOSSIP

Fourteen States to Borrow

THE terms of State loans announced this week—*vide* page 232 of this journal—are in keeping with market expectations. It was obvious even when the Central Government issued a 4½ per cent loan repayable 23 years hence (that is, 1985) that the States would have to offer the same rate of interest with a slightly higher redemption yield, though the maturity of their loans would be shorter. Accordingly, the values of existing State loans started adjusting themselves to a higher yield basis. It was also clear from the States' budgets that the total amount required by them this year would be substantially greater than last year, that is, in the neighbourhood of Rs. 100 crores. The State loans announcement, therefore, contained no element of surprise.

All the States of the Indian Union, except Jammu and Kashmir, are now in the market. The total amount sought by them is Rs. 93.50 crores. Maharashtra and Madras are the heaviest borrowers, the former requiring Rs. 12.50 crores and the latter Rs. 12 crores. They are followed by Andhra Pradesh which wants Rs. 10 crores, Uttar Pradesh Rs. 9 crores, Orissa and West Bengal Rs. 7 crores each, Mysore and Gujarat Rs. 6 crores each, Madhya Pradesh Rs. 5 crores, Rajasthan Rs. 4.50 crores, Bihar and Kerala Rs. 4 crores each, Punjab Rs. 3.5 crores and Assam Rs. 3 crores. As usual, the State Governments have reserved their right to retain subscriptions upto 10 per cent in excess of the notified amount. Considering the great need for funds by all the State Governments, there is no doubt that they will exercise this right. Consequently, if the response is quite good and every State loan gets oversubscribed at least by 10 per cent, if not more, the total offtake by these Governments may well be Rs. 102.85 crores. At any rate, it looks as though the States will have borrowed this year about Rs. 100 crores, as anticipated earlier.

Subscriptions will be in both cash and maturing loans. The position of the latter is as follows:

Maharashtra Rs. 7.99 crores; Madhya Pradesh Rs. 1.02 crore; Madras Rs. 3.01 crores; Uttar Pradesh Rs. 1.86 crore; and West Bengal Rs. 1.75 crore. Total of maturing loans: Rs. 15.63 crores.

It will be noted that Maharashtra, which has taken over the outstanding obligations of the bilingual Bombay State, has heavy repayments to make and, if allowance is made for them, its net borrowing will be only Rs. 4.51 crores. Madras, too, has a sizable amount of maturing debt, so that its net borrowing will be Rs. 8.95 crores, but, considering that Andhra Pradesh is raising Rs. 10 crores without any maturities, this Southern State ranks as only the second largest net borrower this year. The total net borrowings by all the States, assuming their issues will be fully subscribed, work out to Rs. 77.87 crores. The exact amount will, however, be known only when the final results are available.

Last year, 13 States entered the market for an aggregate sum of Rs. 80 crores, with Assam staying out. The total amount offered was Rs. 91.84 crores—Rs. 86.89 crores in cash and Rs. 4.95 crores in conversions. The State Governments accepted Rs. 85 crores in all and, since the loans that matured aggregated Rs. 12.94 crores, the net borrowing was of the order of Rs. 72.04 crores.

Under the third Plan, the States are expected to raise, by way of borrowings, a net amount of Rs. 325 crores in five years. In the first two years, they will have gathered, on the basis of aforesaid calculations, approximately Rs. 150 crores, or a little more, leaving a balance of Rs. 175 crores to be covered in the remaining three years of the Plan. Considering the encouraging growth in the capacity of Indian capital market, the targets for borrowings by both the Centre and the States will, it seems, be hit without much difficulty.

As readers are aware, borrowers have had to pay a higher rate of interest, though banks are still able to hold down their rates of interest on deposits through an agreement among themselves. The Central Government gave the signal in the first week of July by putting up its borrowing rate for a long-term loan from 4 to 4½ per cent. The Reserve Bank then revised in an upward direction the rates at which it would lend money to member-banks, that is, it raised the effective Bank rate. This development, coupled with the award for bank employees proposing higher emoluments, induced the banks to raise their rates of interest on loans and advances by ½ per cent, even though conditions in the money market were pretty easy. Then on 20th July, the Industrial Finance Corporation raised, with the prior approval of the Government of India and with effect from 19th July, its rate of interest on its loans and advances from 7 per cent to 7½ per cent, subject to the usual rebate at ½ per cent for punctual repayment of principal and payment of interest. A day later, the Government of India put up the rate of interest on Post Office Savings Bank accounts by ½ per cent. As a result, since 1st August, the Post Office pays 3 per cent on savings bank deposits upto Rs. 10,000 in individual accounts (and upto Rs. 20,000 in joint accounts) and 2½ per cent on the balance in excess of these amounts, as also on public accounts. A few days ago, some of the State Financial Corporations, too, announced an increase of ½ per cent in their lending rates. The L.I.C. also soon came out with an increase in its minimum rate of interest on mortgage loans against immovable properties. On 30th July, it said that, with effect from 18th July, it had raised this rate from 7 per cent to 8 per cent. For those who repay promptly, the effective rate, however, would remain unchanged at 7 per cent, as the rebate for this purpose was raised from half to one per cent. If the Bank rate were to go up, the minimum rate would automatically rise, as it is fixed at 3 per cent above the Bank rate.

All borrowers are thus paying more this year. How could the State Governments alone be an exception? The Local bodies, too, will have to offer more when they approach the capital market which they usually do after the States' borrowing programme is through. The extent to which the States are paying more on their loans this year will be evident from the following facts:

	1959	1960	1961	1962
Rate of interest (%) ...	4	4	4½	4½
Duration of loan (*years*)	12	9	11	12
Issue price (Rs.) ...	100 to 99	100 to 99½	100 to 99½	100 to 99½

It will be noted that, as compared with 1961, the rate of interest is up by ¼ per cent. It is true the duration is longer but only by one year. Again, as compared with 1959, the States are paying a clear ½ per cent more on loans of identical duration.

While the rates of interest have thus moved up, the increase is by no means substantial having regard to the fall in the purchasing power of the rupee and the growing demand for capital.

To come to the loans of individual States. We have grouped them into three categories according to their issue price in order to indicate the yields on them:

1. *At par, current and redemption yields are the same, namely, 4.50 per cent*: Maharashtra and Gujarat.

2. *At Rs. 99.75, current yield 4.51 per cent and redemption yield 4.53 per cent*: Madras, Mysore, Uttar Pradesh and West Bengal.

3. *At Rs. 99.50, current yield 4.52 per cent and redemption yield 4.55 per cent*: Andhra Pradesh, Assam, Bihar, Kerala, Madhya Pradesh, Orissa, Punjab and Rajasthan.

From the point of view of safety, the loans of all State Governments are equally good, in that default by any of them is unthinkable. Further, they all have the implied guarantee of the President of India. If, nevertheless, some States are rated better than the others by the market, it is one of the idiosyncrasies of capital markets all over the world. Those who are prepared to ignore this irrational factor will doubtless take up the loans of States giving the highest redemption yield.

As the money market is passing through quite comfortable conditions, as the volume of funds to be invested by the L.I.C. and Provident Funds other than those covered by the Industrial Disputes Act is larger, as the State Governments themselves go out of their way to canvass subscriptions for their respective loans, and as the number of persons dependent upon State Governments for licences and other favours is greater than ever before, there is no doubt whatsoever that all the State loans will get fully subscribed. It is just possible that, while most of them will be oversubscribed, a few may lag behind. But, in the case of the latter, the Reserve Bank is there to fill the gap.

Mr. Patil's Strange Logic

It is now definite that there will be no reduction in the excise duty on sugar. A categorical statement to this effect was made by Mr. S. K. Patil, Union Minister for Food and Agriculture, while inaugurating the twenty-ninth annual meeting of the Indian Sugar Mills Association at New Delhi on Wednesday the 8th inst. Mr. Patil has, of course, every right to say what he feels and few would dispute such a right. But what one expects is that the opinion expressed by a responsible person like Mr. Patil should have a rational basis. Unfortunately, this basis was lacking in Mr. Patil's statement. Here are the three reasons which he adduced in support of the continuance of the present high level of excise duty on sugar: (1) The country has lost about Rs. 15 crores in excise duty on sugar exports, though it has earned Rs. 13 crores in foreign exchange; (2) in case the excise duty were reduced, it would not increase consumption within the country, since India is already consuming Rs. 500 crores worth of sweetening agents and at least half of the amount is accounted for by white sugar; (3) in India, sugar is costly because of the low per-acre yield of 11 to 15 tons of sugarcane, coupled with poor sucrose-content.

The aforesaid statement is not only not convincing but greatly surprising. Was it not, we would ask, the same Mr. Patil who had on more than one occasion urged the reduction in excise duty on the score that it was necessary to boost domestic consumption? It may be true that, despite the heavy excise duty, sugar consumption has gone up from about 2.1 million tons in 1960-61 to 2.4 million (estimated) in 1961-62, but it must be mentioned that a large part of the increase in consumption represents a switch-over from *gur* and *khandsari* following the marked rise in their prices. Moreover, there is the pertinent point that white sugar consumption might have been much more if the excise duty had been cut to a reasonable level. By no stretch of imagination can one argue that the incidence of excise duty on sugar which, be it noted, is an article of daily necessity, is not heavy. On every pound of sugar costing 54 nP (retail), the consumer is paying by way of excise duty as much as 13 nP, representing over 24 per cent of the price—the tax burden will be heavier still, if cane cess, etc., are also taken into account—as against *nil* in Australia and South Africa, a bare 1 per cent in Mexico, 4 per cent in Hawaii, 5 per cent in Lousiana, 6 per cent in Nicaragua, 7 per cent in Jamaica, 8 per cent in West Germany and 16 per cent in Cuba. But Mr. Patil says that sugar in India is costly not because of excise duty but because of low yield of cane and poor sucrose-content! This type of argument is no consolation indeed.

The argument of Mr. Patil that the Government has lost about Rs. 15 crores in excise duty on sugar exported is also fallacious, for the simple reason that a considerable part of this loss has been made good by higher excise proceeds from the increase in sugar consumed within the country. Taking the estimated sugar consumption of 2.4 million tons in the 1961-62 season, the excise yield aggregates Rs. 70 crores, as compared with Rs. 61 crores in 1960-61. Needless to mention that the yield would be higher still if, as a result of reduced excise duty, a larger quantity of sugar were consumed within the country. Incidentally, to the extent the consumption of white sugar rises, there will be less demand for *gur* and *khandsari* and more economic utilisation of sugarcane.

It may sound too elementary if it is said that there is a lot of wastage involved in the manufacture of *gur* and *khandsari* where the recovery of sugar from cane is 50 to 60 per cent of that obtained in the factory producing white sugar. Even so, this aspect has to be specially stressed in the present context of the steeply upward trend in the prices of *gur* and *khandsari* as is indicated in the following table which gives the rates prevailing in two of the major markets in India, that is, Hapur and Muzaffarnagar:

"Gur" Shoots Up
(In rupees per maund)

	Latest available	Three months ago	A year ago
Gur:			
Hapur (superior) ..	24.61	19.99	17.00
Muzaffarnagar (chaku quality) ..	25.75	19.25	18.35
Khandsari:			
Hapur (crystal)	37.61	34.73	35.75
Muzaffarnagar (Soora)	38.00	34.73	34.75
,, (Galwat) ..	33.00	32.23	29.25
,, (Crystal boora) ..	40.56	34.73	36.50

Note:—Only average rates are taken.

It will be noted that, over the year, the price of *gur* has shot up by more than Rs. 7 per maund, that is, by as much as 41 per cent, and that the major portion of this rise has been in the last three months. The increase might, perhaps, have been more appreciable but for the fear of official intervention. The Forward Markets Commission, we learn, has already been alerted by the Government and the Commission is keeping a close watch on the situation. What is required, however, is not observation but swift action to curb speculation. Why is the Commission sleeping over this matter? Surprisingly enough, the politicians are not at all concerned about the rising trend of *gur* prices. Whenever the white sugar prices advanced even by a negligible amount, they raise a hue and cry and make all sorts of allegations (profiteering, exploitation, etc.) against the business community, but not so when *gur* prices advance, albeit steeply. In fact, the increase in *gur* prices should cause more concern than that in sugar prices, because it is the *gur* that is more widely consumed, especially by persons with low incomes. The need for bringing down *gur* prices is urgent, for, otherwise, supplies of sugarcane to mills will be affected in the coming season (November 1962-October 1963), as the agriculturists will find it more profitable to convert the cane into *gur* himself, instead of supplying it to mills.

The impact of such a development will all the more be severe, if the cane crop turns out to be, as is feared, smaller than in the current season. The latest reports aver that the sugarcane crop in Uttar Pradesh may be affected by acute shortage of rain and dry weather and, in the Deccan region, the crop is said to have been damaged to some extent by a pest attack. A prominent sugar millowner in Bombay puts the coming season's all-India sugar output at no more than 2.5 million tons (Mr. Patil's estimate is 2.7 million tons), as against 2.7 million tons produced in the current season and the peak output level of almost three million tons in 1960-61. The estimated output of 2.5 millllon tons is well below the industry's present capacity of 3.56 million tons on a duration of 140 days which was the average for the second Plan. In other words, this means that a sizable part of the sugar industry's rated capacity will remain idle in the coming season. We do not know what Mr. Patil meant when he stated at a Press conference in New Delhi on Sunday this week that "the process of adjustment of production with demand is progressing fairly satisfactorily and the sugar position in the country will be completely under control in a couple of years." But, against the background of our analysis above, one can easily infer what he meant. It is indeed a cruel waste of resources to allow an industry to expand, involving large capital investment, and then compel it to work short-time by keeping down the consumption of its production through heavy taxation. And when this is done in respect of an article of food the *per capita* consumption of which is well below the norm, the plan development for creating a Welfare State becomes a mockery.

The claim of Mr. Patil that the new cane price policy is designed to place the entire sugar industry on a "scientific basis" is clearly exaggerated, although it must be admitted that the policy marks a welcome improvement over the present system of linking cane price only to weight irrespective of quality. For not only will the present high minimum price of Re. 1.62 per maund continue but it will also be payable for cane with a lower recovery of 9.8 per cent, as against the usual basis of 10 per cent that has been regarded as the norm all these years. The high price of cane has already resulted in a significant expansion in the area devoted to the crop—the actual rise in acreage in the U.P. alone has been 20 per cent in the past three years—and the trend will continue even under the new cane price policy, however much Mr. Patil and his colleagues desire to discourage extensive cultivation (in contrast to intensive cultivation) of cane. If the authorities are really anxious to

TREND OF SHARES

IRREGULAR AND QUIET

(From Our Own Correspondent)

BOMBAY, *9th August*

AN irregular and quiet tone developed on the stock markets this week owing to professional realising at bulges. Fluctuations were narrow, turnover was limited and activity was confined to selected speculative counters. Sellers were generally reserved. Closing prices, therefore, disclosed small changes either way, but losses were more pronounced than gains. The undertone, however, was steady.

With the pivotal issues having recovered 50 per cent of the ground lost in the recent slump, buyers were inclined to book profits. Sentiment was also influenced by reports on Saturday that the understanding reached by the Inner Six of the E.C.M. and Britain on exports of cloth and jute from India to the U.K. in the event of the latter joining the Common Market would be detrimental to the interests of this country. Therefore, after some initial hesitancy around the high levels at which they commenced the week, equities gave way slowly on small but persistent realising by the professional operators.

However, the markets were not particularly disturbed by the understanding reached at Brussels, for, though it was dubbed as very serious, the Union Finance Minister did not rule out the possibility of negotiating a satisfactory long-term trade agreement with the E.C.M. Besides, Prime Minister Nehru's statement on the border issue with China was received by the markets with guarded optimism. It was because of these two factors, as also of the previous week's smart recovery, that sellers were reserved; they were, in fact, inclined to look for an opportunity to cover their sales.

The Lok Sabha would debate the border issue and the E.C.M. in the coming weeks. But, as against this, there is the possibility of announcement of both the steel retention prices and the T.I.S.Co. dividend for 1961-62. The markets might, therefore, conveniently ignore the Lok Sabha debates, unless they bring to the forefront any new adverse factors.

* * * *

The highly speculative issues were particularly affected by realising in Bombay. Thus, Standard came down by Rs. 27 to Rs. 915, Century by Rs. 8 to Rs. 628, National Rayon by Rs. 7 to Rs. 514.50 and Bombay Burmah by Rs. 9 to Rs. 664. The annual statement by Mr. Arvind Mafatlal, Chairman of the Indian Dyestuff Industries Ltd., that the Company did not propose to issue any right shares in the near future produced a fall of Rs. 32.50 to Rs. 455 in the Company's shares. Amar Dye-Chem, too, recorded a sharp fall of Rs. 18.75 to close at Rs. 270. Other Textiles and Miscellaneous issues showed minor changes either way. But Swan spurted by Rs. 17.50 to Rs. 310.

The small improvement in the output of the two steel companies in July from 106,900 tonnes to 114,500 tonnes of saleable steel in the case of T.I.S.Co. and from 56,938 tonnes to 63,006 tonnes of saleable steel in the case of I.I.S.Co., did not have any particular influence on the trend of the two shares. Supported by Calcutta, Indian Iron closed with a gain of 10 nP at Rs. 26.55, but Tata Ordinary slipped back to Rs. 147.50 and showed a loss of one point at that level. In a slightly easy Sugar section, Belapur reacted rather sharply from Rs. 250 to Rs. 242. Cash scrips were dull and quiet, excepting Permanent Magnets which receded sharply by 25 points to Rs. 227.50.

* * * *

Trading was unexciting in Calcutta, except for some conspicuous gains in Paper shares. Both the cleared shares, Shree Gopal and Orient, staged a smart rise, the former from Rs. 23.25 to Rs. 25.19 and the latter from Rs. 41.20 to Rs. 42.05. Titaghur, in the Cash section, rose from Rs. 39 to Rs. 41.31. Among other cleared shares, Birla Jute closed with a gain of 62 nP at Rs. 33.37, but Rohtas Industries showed a loss of 68 nP at Rs. 14.44 and J.K. Cotton suffered a big setback of Re. 1.38 at Rs. 17.12. Cash counters in Textiles, however, were better, with Bharat Commerce improving further from Rs. 26.12 to Rs. 27.81 and Dunbar from Rs. 30.50 to Rs. 31.75.

Among Coals, Amalgamated moved up from Rs. 21.06 to Rs. 21.87 and so did N. Beerbhoom from Rs. 22.50 to Rs. 23.37. Jutes were neglected, but Champdany gained three points at Rs. 141 while Reliance lost Re. 1.38 at Rs. 22.62. Engineering and Miscellaneous disclosed small changes either way. Exceptions were Dr. Paul which rose by Rs. 3.25 to Rs. 22.75, Hindustan Lever which gained Rs. 3.25 at Rs. 48, Indian Oxygen which rose by Rs. 3.13 to Rs. 48.50, Martin Burn which showed a gain of Rs. 2.50 at Rs. 32.37 and Burn which reacted by nine points to Rs. 681. Among Tea shares, Bishnauth moved down from Rs. 18.06 to Rs. 17.50 and N. Dooars lost five points at Rs. 205, while Hantapara gained four points at Rs. 110 and Grob rose by 62 nP to Rs. 9.12

* * * *

In restricted dealings, values showed small changes in Madras. Thus, among Textiles, Lakshmi were up by one point at Rs. 157, Madura gained 75 nP at Rs. 35 and Travancore Rayon edged forward by 25 nP to Rs. 32.75, but Coimbatore Pioneer eased from Rs. 278.50 to Rs. 276 as did S.I. Viscose from Rs. 170 to Rs. 167.50. In the Miscellaneous section, Aluminium Industries rose by 72 nP to Rs. 24.62, Mettur Chemicals moved up from Rs. 13.25 to Rs. 13.62 and Madras Rubber gained Re. 1.37 at Rs. 22.87, but Travancore Chemicals declined from Rs. 24.50 to Rs. 22.25 and Tube Investments reacted from Rs. 277 to Rs. 272. Sugars were steady, with Deccan improving from Rs. 10 to Rs. 10.56 and E.I.D. from Rs. 40.37 to Rs. 41.25. Plantings were dull, but Highland showed a gain of 20 nP at Rs. 12.50 and United Nilgiris moved up from Rs. 20.25 to Rs. 20.37 while Coffee Lands slipped down from Rs. 14.60 to Rs. 14.40 and T.R. and T. showed a loss of 40 nP at Rs. 9.25.

CAPITAL MARKET NEWS

NEW ISSUES

THE **Amalgamated Electricity Company Ltd.** is to raise fresh equity capital of Rs. 28.63 lakhs in shares of Rs. 10 each at par and offer it simultaneously to the public and to its shareholders. The lists for susbcription will open on the 23rd of this month. As at 31st March 1961, the issued capital of the Company was of Rs. 134.06 lakhs, comprising Rs. 81.56 lakhs in equity shares, Rs. 24.15 lakhs in 5.5 per cent, tax-free, cumulative preference shares of Rs. 100 each and Rs. 28.35 lakhs in 5 per cent, tax-free, cumulative preference shares of Rs. 100 each. Out of this, the entire equity and 5.5 per cent preference capital was fully subscribed, but the 5 per cent preference capital was subscribed to the extent of only Rs. 20.31 lakhs. The total paid-up capital thus amounted to Rs. 126.03 lakhs. The additional equity capital is being raised to provide the finance for the Company's solvent extraction plant and the extention and development programme.

* * * *

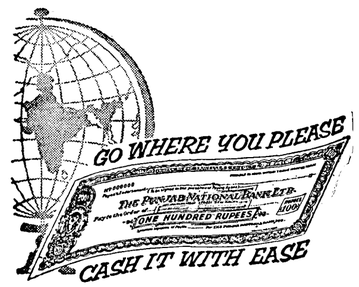
Rightly has Mr. A. N. Haksar, Chairman of the **Bombay Suburban Electric Supply Ltd.**, observed in his statement accompanying the thirty-third annual report of the Company for the period ending 31st March 1962 that short-term bank borrowing is not an entirely satisfactory method to meet long-term development which is a continuing process in the electric supply industry. To provide finance for its immediate development, therefore, the Company has decided to issue, subject to the sanction of the Controller of Capital Issues, debentures of Rs. 187.5 lakhs in two parts, one for Rs. one crore, carrying interest at the rate of 6.5 per cent per annum, subject to tax, and another for Rs. 87.5 lakhs, carrying interest at 6.25 per cent per annum, subject to tax, with an option to convert the second part into ordinary shares in the proportion of one for one during the period from 1st April 1963 to 31st March 1965. While arrangements are being made to underwrite the entire issue, the second part of the debentures will be offered first to the existing shareholders.

RIGHTS ISSUE

The Directors of the **Central India Spinning, Weaving and Manufacturing Company Ltd.** have decided, with the consent of the Controller of Capital Issues, to issue 46,875 new ordinary shares of Rs. 100 each at par and offer them as rights shares to the existing shareholders in the proportion of one for one. The new shares will rank *pari passu* with the existing shares, except that they will be entitled to any dividend that may be declared for the Company's financial year ending on 30th June 1963 *pro rata* the amount paid-up per share.

OUTLOOK FOR INDIAN COPPER

The mild recession suffered by the Indian Copper Corporation Ltd. last year was disappointing, particularly as it came after the excellent progress attained in 1960. Viewed in this context, the statement of Mr. J. W. Easson, Chairman of the Corporation, at its thirty-eighth annual general meeting, held at Calcutta on Wednesday this week, is reassuring, for it not only confirms the belief that last year's setback was nothing more than a passing phase in the history of the Corporation but also suggests that the outlook for it is basically good. In fact, Mr. Easson said, "the current level of profit-margin is satisfactory and the outlook for the immediate future appears to be bright."



PNB TRAVELLERS CHEQUES

- The safest way of carrying cash during travel
- Exchangeable with cash at any of our over 425 offices and a net-work of agencies all over India
- Can be obtained from all important branches of the Bank
- Available in convenient denominations of Rs. 100/-, Rs. 50/- and Rs. 25/-

THE PUNJAB NATIONAL BANK LTD.

HEAD OFFICE: PARLIAMENT STREET, NEW DELHI

It is well known that, due to the nature of its operations, the fortunes of the Corporation are determined by conditions not only in India but also abroad to easily foresee which is not always possible. However, it is interesting to hear from Mr. Easson that copper prices on the London Metal Exchange have been remarkably stable since June 1961. The difference between the highest and lowest quotations has narrowed down to £5 a ton as against £61 in 1960 and £33 in the first half of 1961. This unusual stability is the result of a balance between supply and demand, which has been achieved by close co-operation among some of the largest producers who have reduced their output and given a fair measure of support to the London Metal Exchange price. The cut-back in production at 15 per cent of capacity may be varied to keep the world copper output in balance. Thus, Mr. Easson has hoped that the price would continue to rule around the present level of £234 per ton. A stability in world prices to which the Corporation's selling prices are linked is, therefore, to be welcomed.

Incredibly enough, the situation in India is not as clear as it is abroad. Shortages of all sorts seem to be a regular feature now in this country. Of particular concern to the Corporation are the shortages of explosives and drill steel, because of which development had to be suspended or curtailed in a number of areas last year. But, despite the reduction in the footage developed, the ore reserves rose by 110,000 tonnes last year and reached a record figure of more than 4 million tonnes. A reduction in the number of working days resulted in a setback of 574 tonnes to 8,336 tonnes of the output of refined copper last year, but the percentage recovery was higher at 2.192 as compared with 2.083 a year before. The output of grass and yellow metal sheets and circles depends entirely on the availability of zinc which has to be imported, and Mr. Easson does not expect any relief in the severe restrictions on the import of the base metal in the near future in view of critical foreign exchange position in the country.

The electrolytic copper refinery project, however, will be completed not before the end of 1963. This is an ambitious new project for the manufacture of electrolytic copper and wire bar. But till it is completed, the shareholders will have to be content with the current level of the Corporation's profit-margin. Their expectations of any additional capital issue, by way of either a rights share or a bonus share, or both, will also have to be deferred by at least two more years, while it is still a matter of guess whether their hopes would materialise at all, for Mr. P. E. G. W. Parish, the predecessor of Mr. Easson, had discounted, in his statement last year, the possibility of issue of additional capital in the near future and ruled out a bonus issue even at the reduced rate of taxation.

FISONS ACQUIRE RALLIS INDIA

The purchase price of the acquisition of 45 per cent of the equity capital and more than 50 per cent of the preference capital of Rallis India Ltd. by Messrs. Fisons of the U.K. is estimated at over £1 million sterling. Fisons have purchased in all 101,495 equity shares and 40,145 six per cent, taxable, cumulative preference shares, both of Rs. 100 each fully paid-up, out of a total of 225,000 equity shares and 75,000 preference shares issued and fully paid-up of Rallis. Percentagewise, Fisons have acquired an interest of 45.11 in the equity capital and 53.52 in the preference capital. The British firm proposes to transfer upto 50 per cent of its equity holdings in Rallis to Tatas, who are its associates in Tata Fison Ltd. Tatas would purchase the shares in rupees and distribute them to their group of companies, excepting Tata-Fison Ltd.

Rallis India Ltd. is a long-established trading concern which, in recent years, has expanded its activities in the manufacture and distribution of pharmaceuticals, fertilisers and agricultural chemicals. The Company is said to have secured a licence for putting up a large-sized fertiliser unit, involving an investment of several crores of rupees. Now Fisons are a leading firm in Britain in the field of pesticides, chemicals and fertilisers. Their present investments in India include Tata-Fison Ltd., one of the leading pesticide manufacturers in the country having commenced production in 1957, the Benger Laboratories (India) Ltd., manufacturers of pharmaceutical specialities whose factory at Kennegar, near Calcutta, is nearing completion, and Whiffens (India) Ltd., which manufactures Emetine.

The acquisition of a substantial interest by Fisons in Rallis is in furtherance of their policy of expanding their manufacturing and marketing activities in India. It is expected to enable Rallis to go ahead with its fertilisers project. At the same time, the distribution of 50 per cent of Fisons' holdings in the Company to Tatas will bring in rupee finance.

Thus, the deal will be welcomed by all concerned. It does not involve any loss of foreign exchange to the country. Evidently, the deal was privately negotiated. But in fairness to its shareholders and in general interest, Rallis India Ltd. ought to file the necessary details of the deal with the authorities of the Bombay, Calcutta or Madras Stock Exchanges where its shares are officially listed.

It may be recalled here that, some time back, two parties in India had submitted their offers to Ralli Brothers of U.K. to acquire the shares held by them in Rallis India. It is believed that their purchase prices were higher than that offered by Fisons. They, however, could not succeed in putting through a deal, because of the difficulty of getting foreign exchange to pay for their purchases. Fisons have succeeded in acquiring the shares by virtue of their being a British firm and, therefore, being in a position to pay in pounds sterling, without causing any drain on India's foreign exchange reserves.

UNDER SEC... 13 AUG 1962 PUBLIC DEPARTMENT

NEWS IN BRIEF

THE Union Ministry of Health is contemplating to amend the Drugs Act in such a way as to make deterrent punishment for offences more stringent.

A formal agreement has been signed in Bonn covering the West German Credit of DM 470 million granted for the second year of India's third Plan.

Indian ships will receive a larger share of trade with Czechoslovakia, as a result of an agreement signed last week at Prague between an Indian official delegation and the representatives of Czechofracht.

The assistance of Japanese insurance experts has been sought by the Government of India for the compilation of data pertaining to the crop insurance scheme. Meanwhile, the Punjab Government is working out details of its pilot scheme for crop insurance.

The All-India Stainless Steel Industries Association is understood to have worked out a programme for the manufacture of stainless steel on co-operative basis. The programme envisages the establishment of a plant with an annual capacity of 15,000 tons, at a cost of Rs. 5 crores.

The Damodar Valley Corporation has agreed to raise its supply of power to the Calcutta Electricity Supply Corporation by 4 m.w. over and above its contractual obligation. This has been done to remove power shortage for the jute industry in particular.

Tenders have been received for the construction equipment for the Farruka Barrage in West Bengal, according to Mr. O. V. Alagesan, Minister of State for Irrigation and Power. Orders for the supply will be placed within the next few months. The Barrage is expected to be completed by 1969-70.

The U.S. Ford Foundation has announced a grant of $350,000 to the Government of India for the establishment of an institute of applied manpower research. The institute, which will be a semi-antonomous body, will study human resources in the country in relation to economic growth and stability.

There is no proposal to set up a steel plant in Goa in the third Plan period. Making this statement, Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, said in the Lok Sabha the other day that the question of establishing such a plant in Goa in the fourth Plan period would be considered by a steering group of the Planning Commission recently constituted.

In a bid to prevent adulteration of foodstuffs, the Government of India proposes to enforce the Prevention of Food Adulteration Act and to impose a minimum fine of Rs. 500 in the case of first offence of adulteration. This move is in pursuance of the recommendation made by a sub-committee of the Planning Commission for prevention of adulteration.

The Government of Maharashtra has now fixed the minimum acreage of Government waste lands to be granted to a co-operative society at 50 to 60 acres, as against 90 to 100 acres so far. The decision has been revised by Government in view of fixing the minimum size of co-operative farms at 50 to 60 acres under the co-operative farming scheme.

Exports during the second quarter of 1962 (April to June) were lower by Rs. 2 crores at Rs. 154 crores, as compared with the corresponding quarter of 1961. The decline, according to Mr. Manubhai Shah, Union Minister for International Trade, was due to the 17-day strike at Calcutta port and the relative fall in prices of jute and other goods in world markets this year.

A seven-member productivity team on non-ferrous metal industry has left on a nine-week study tour of the U.S. and the U.K. The team will study the techniques of production, plant and equipment used and optimum productivity achieved in the non-ferrous metal industry. The team is led by Dr. B. R. Nijhawan, Director of the National Metallurgical Laboratory.

The Reserve Bank of India has decided to grant foreign exchange facilities to a limited number of students who wish to proceed to the U.K. to serve articleship with firms of chartered accountants with a view to appearing in the examinations conducted by the Institute of Chartered Accountants of the U.K. Candidates should be graduates with good records and must have made arrangements with firms of chartered accountants agreeing to accept them as articled clerks.

An agreement has been signed between the National Coal Development Corporation and the Soviet firm, Tjazhprom Export for the supply of machinery for working two mines at Banki and Surakachar in Korba field in Madhya Pradesh. Under the agreement, special Soviet mining equipment called tunneling combine, to drive drifts, will be used for the first time in India. The agreement was signed under the provisions of the Indo-Soviet credit agreement for 500 million roubles signed on November 1957. The Soviet firm will provide technical assistance for two years for construction, erection and commissioning of the two mines, which are expected to achieve their rated capacity of 1.7 million tonnes per annum by April 1965.

The call-queueing equipment for trunk booking is proposed to be initially installed at the four trunk exchanges at Bombay, Calcutta, Delhi and Madras. The equipment is designed to ensure that all signals received by operators were answered in the order in which the calls were originated by the subscribers. The call-queueing equipment is initially being installed at Bombay, Calcutta, Delhi and Madras. Of these the installation at Madras was completed in January 1962, while that at the other stations are expected to be completed in the coming few months. The total cost of installing call-queueing facility at those four stations is Rs. 81,000 which involves no foreign exchange element. This facility is proposed to be extended gradually to other stations where auto-exchanges have been installed.

From Abroad

Argentina has abolished the retention tax of 10 per cent on exports of wool, including grease and scoured wools and sheepskins.

Copper output in Chile is expected to reach a record of 595,000 tons in 1962, an increase of 8 per cent over last year.

East Germany has renewed its request to West Germany for a long-term credit of DM 2,000 million. The request was first made two months ago.

A Yugoslav firm of engineers and consultants, Polgrad, has signed a contract with the Ghana Government for the building of a naval harbour at Sekondi in Western Ghana.

A team of U.S. economists has recommended to President Kennedy a five-year programme of economic aid to Indonesia, amounting to $390 million, of which the U.S. share would be $235 million.

In order to boost oil production, Australia proposes to drill 70 new oil wells during the year 1962-63. This programme is second only to the previous peak in oil exploration during 1959, when 61 oil wells were drilled.

The West German Government has decided to increase its compensation guaranteed on private German investment in developing countries from 80 to 90 per cent. The guarantee covers the capital invested and up to 24 per cent of the profits from that capital.

An agreement has been reached between Mexico and Italy, under which the latter will buy Mexican tobacco worth £143,000 annually over a period of five years. Meanwhile, efforts are being made in Mexico to grow burley-type white tobacco.

The number of persons remaining unemployed in the U.S. last month was at the lowest level for over two years at about 4.02 million, constituting about 5.3 per cent of the total labour force as compared with 5.5 per cent in June and 5.4 per cent in May.

The U.S. revenue receipts during the year ended 30th June 1962 aggregated $81,400 million and expenditures $87,700 million, thus resulting in a deficit of $6,300 million. This was $700 million less than had been estimated in January, mid-way in the fiscal year. The figures are subject to a slight further revision before they become final.

Japan will import 40,000 tons of crude sugar from Indonesia during the period November 1962 to February 1963. It will also make larger purchases of sugar from South Africa, as against about 125,000 tons now being bought annually. A Japanese delegation has recently visited Johannesburg in this connection.

The average American factory worker earned a record-high take-home pay in June last. The typical worker with three dependents earned $85.91 a week, an increase of 18 cents over the previous month. These earnings are after deductions for federal income and social security taxes. Living costs during the month were at the new record high level.

A Japanese plastic firm, Sekisui Chemicals, has decided to send a two-man mission to the U.S. to negotiate with the North Carolina Government a plan to establish a factory in the State. The move follows a recent invitation extended by U.S. Government to Japanese firms to build factories in the less developed areas of the U.S.

U.S. Government aid to the less-developed countries in 1964 will be higher by 50 per cent, as compared with 1961, according to the Development Assistance Committee of the O.E.C.D. Almost all countries of the Committee have increased their aid in 1962, though the extent of the rise is modest in respect of France and the U.K.

The Italian Government proposes to appoint a 20-member Economic Planning Board shortly. The Board which will draft a new plan for development, will consist of trade union leaders, representatives of industry and trade and financial experts. The Board will be assisted by an Institute for Planning, which will collect statistical data on resources and make detailed studies.

World wool consumption last year touched a record of 3,314 million lbs. (clean weight), representing an increase of 9 million lbs. over the previous year, according to the Commonwealth Economic Committee. Wool represents 9.7 per cent of the aggregate world consumption of all apparel fibres, the percentage shares of other fibres being 67.6 in the case of cotton, 17.3 in rayon, 5.3 in other man-made fibres and 0.1 in silk.

The number of foreign workers employed in West Germany has increased by 41 per cent over the past one year to 672,000. Of these, the number of Italians is 272,000, followed by Spanish 90,000 and Greeks 70,000. The majority of the foreign workers consist of single men between 20 and 35 years of age. Federal authorities have earmarked DM 200 million for construction of housing for transient foreign workers, most of whom spend two to three years in West Germany.

The number of motor vehicles produced in Italy during the first six months of 1962 rose by 24 per cent to 465,225, as compared with the corresponding half of 1961. Exports increased by as much as 34 per cent to 163,398 vehicles. The rate of increase in production was the highest in Italy among the Common Market countries. Of the total exports, as many as 91,000 went to the other Common Market countries, particularly to West Germany and France.

A draft directive for removing restrictions on wholesale trade has been submitted for approval to the Common Market Council of Ministers by its Executive Commission. The Commission's draft would require the member-State to abolish restrictions of two kinds, namely, those which prevent foreign traders from setting up in business and supplying services on the same conditions and with the same right as nationals, and those arising from administrative practice which have the effect of discriminating against foreign nationals.

Two consortia for development aid to Greece and Turkey have been set up by the O.E.C.D. Britain has joined the Turkish corsortium but not the Greek one, because of Greece's failure to repay her foreign debts. The Chairman of the Greek consortium is Mr. James Riddleberger, the American Chairman of the Development Assistance Committee, and the Chairman of the Turkish consortium is Herr Wilheim Ripken, a former Secretary of State in the West German Government. The consortia will meet in September to begin discussions about how much aid they are to give towards the Greek and Turkish five-year development plans.

The equivalent of a 2 per cent increase in all the basic wages and salaries of about 6 million employees of Italian industry and trade took effect from the beginning of this month. This is the result of the increase, over the last three months, in the cost-of-living index to which wages and salaries are linked. Since the beginning of the year, increases in the cost-of-living index have resulted in a 5 per cent increase, including the present increase in basic wages and salaries. The additional cost to Italian industry's wage and salary bill will be about £4.3 million a year as a result of the latest pay rise.

The scope of the British Colonial Development Corporation, previously limited to colonial dependencies, is to be extended to countries after they have achieved independence as members of the Commonwealth, particularly Jamaica, Uganda, Trinidad, Tobago, etc. It is to be renamed the Commonwealth Development Corporation. Britain gave nearly £26 million for development and welfare schemes in oversea territories in 1961-62. It also approved Exchequer loans of nearly £16 million for colonial development programmes. The largest total of grants and loans approved for development and welfare schemes was in the economic field, and amounted to £7.8 million. Grants for education aggregated £4.7 million.

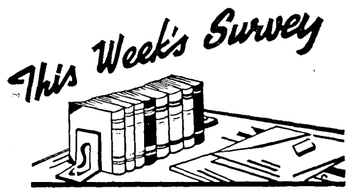
The total planned expenditure of U.S. businessmen on plant and equipment for the full year 1962 is $37,200 million or 8 per cent above the actual investment in 1961, according to a survey conducted by the U.S. Department of Commerce and the Security and Exchange Commission. Manufacturing firms are currently estimating their 1962 plant and equipment purchases at $14.700 million, about $1,000 million higher than last year. Most of the increase is accounted for by durable goods industries despite downward revisions by steel and automobile companies since the March survey. The non-durable goods producers now expect to increase their investment by 4 per cent. Commercial and communications companies anticipate a one-eighth increase in investment in 1962; the railroads report a larger percentage rise over last year's low total.

PERSONAL

MR. D. J. Bell, Resident Director of the British consortium, I.S.C.O.N. Ltd., which has put up the Durgapur Steel plant, has been appointed General Superintendent and Deputy General Manager of the Steel plant. His services have been made available to Hindustan Steel Ltd. under the Colombo Plan.

Mr. K. Padmanabhan, Sales Manager, Industrial Rubber Products and Dunlopillo, Dunlop, has taken over charge as General Sales Manager *vice* Mr. H. R. J. Taylor who has been transferred to Dunlop, U.K. Mr. N.S. Bedi, Administrative Manager, Industrial Rubber Products and Dunlopillo, succeeds Mr. Padmanabhan as Sales Manager, Industrial Rubber Products and Dunlopillo. Mr. J. J. Gullery has been appointed Sales Manager, Tyres, Dunlop.

Mr. P. U. Patel, Chairman of the Universal Fire and General Insurance Company Ltd., has been re-elected Chairman of the Indian Insurance Companies' Association for 1962. The other members of the Committee are: Mr. P. A. Advani (New India), Mr. K. C. Desai (Vulcan), Mr. J. X. de Souza (Pandyan), Mr. H. V. Ghandhi (Devkaran Nanjee), Mr. S. R. Idgunji (Alco), Mr. M. G. Mody (New Great), Mr. E. J. Poncha (Hercules) and Mr. T. M. Telang (Indian Trade). Two more members are to be co-opted to the Committee.



POWER GENERATION AND SUPPLY

THE demand for power throughout the country continues to be running ahead of available generating capacity. Unless the pattern of power development is drastically changed to meet this growing need, there will be no relief from power shortage even by the beginning of the fourth Plan. In the Bombay-Poona region, for instance, even after the completion, in the next few years, of the first and second stages of the Koyna Hydro-electric Project and the installation, before 1964, by the Tata Hydro Companies of a fourth thermal generating set of 125/150 M.W. at Trombay, the power situation is not going to change appreciably for the better. As the prospects for further hydro-power in this region are limited and the proposed nuclear power station at Tarapore—which can be expected to be commissioned during the fourth Plan period—can bring only some marginal relief to the region, energetic forward planning is called for in the direction of large-scale thermal expansion. It is for such expansion that Mr. A. N. Haksar, Chairman of the Bombay Suburban Electric Supply Ltd. (Managing Agents: Killick Industries Ltd.) has strongly pleaded in his review appended to the Company's annual report and accounts for 1961-62. The Company's offer of co-operation in this big task of thermal expansion suggests that the private sector can still play a bigger role in the field of power generation as in that of power distribution. The steadily rising cost of coal—it rose, for instance, from about Rs. 48 per tonne in April 1961 to Rs. 58 per tonne in October 1961 in the area of the Surat Electricity Company Ltd., managed by Killick Industries Ltd. and will tend to rise further in the coming years—should not be brought in as an argument against thermal expansion. If only coal could be transported more regularly and adequately to Western India, the electricity industry is not likely to mind its higher cost.

But will the private sector be in a position to raise, from the market, the needed capital for further development? This is an issue which, by and large, is bound up with the proposal now under the Union Government's consideration for liberalising the conditions under the Electricity (Supply) Act. It is the industry's hope that the process of amending the Act will be completed at least by April next year, if not earlier, and that the amended Act will provide for adequate incentives to the investor —incentives which will enable the electricity undertakings to raise new finance for development and also encourage the existing investor not to disinvest his holdings. The electricity undertakings, it may be noted in this context, are now faced with the anomalous position of having to pay on the new moneys invested a rate of interest higher than the "standard rate" which they are permitted to charge. It is this unsatisfactory position—which, if allowed to continue much longer, will lead to a further loss in equity value—that needs to be fully rectified by an amendment to the Electricity Supply Act.

NEYVELI POWER STATION

President Dr. Radhakrishnan inaugurated on Sunday this week the first of the five 50,000-kw. units of the thermal power station, which forms part of the Rs. 113-crore integrated Neyveli Lignite Project. The inauguration was, of course, a formal one, inasmuch as the unit had actually commenced operation much earlier —in May 1962—and has already supplied over 18 million kw. hours of power to the Madras Power Grid. Nevertheless, the function is quite significant for three important reasons. In the first place, it gives one the impression that, after all the delay in the execution of the power section of the Lignite Project leading to an increase in cost—the latest estimate of the outlay on the power station (comprising five generating stations of 50,000 kw. capacity each) is Rs. 28 crores, as against the original estimate of Rs. 20 crores—things have at last begun to move fast. Another unit is expected to begin functioning in November and the other units after that, at an interval of about five or six months. Secondly, the inaugural function raises hopes that the supply of power from the thermal station will facilitate the setting up of a number of medium and small-scale industries around Neyveli. And, thirdly, the function reminds the workers and technicians engaged not merely in this particular project but also elsewhere of the need to develop, as Dr. Radhakrishnan emphasised in his speech, a "sense of participation" in a project and to feel themselves "emotionally involved" in it.

The Neyveli power station, it will be recalled, is a product of Indo-Soviet economic co-operation, involving both technical and financial assistance from the Soviet Union. There are at present at the site more than 50 Soviet specialists who are not only helping to construct the power station but also training Indian personnel in operating its complicated equipment. Under the 112.5-million rouble credit agreement entered into between the Governments of the two countries in November 1957, it was envisaged that the power station would have a capacity of 250,000 kw. (of five units of 50,000 kw. each). Later, under the agreement of February 1960, a provision was made to step up the capacity by 150,000 kw. by the end of the third Plan; the Soviet Union agreed to supply additionally one turbo-generator of 50,000 kw. capacity and another of 100,000 kw. capacity. In all, therefore, the power station will have seven generators with an aggregate capacity of 400,000 kw. It will thus be the biggest thermal power station in the whole of India. Incidentally, this is the first power station in the country working on lignite—or "brown coal" as it is called—which is claimed to be much cheaper than coal. Located in close proximity to the lignite mine, the thermal plant is fed with lignite scrapped from a seam 150 feet below ground level by a giant bucket wheel excavator; a 6,000-foot belt conveyor brings lignite fresh from the pot to the plant.

When thermal power station at Neyveli is fully commissioned, the pace of industrial development in Madras State, which has all along been retarded as a result of erratic hydel power supply and its remoteness from India's coal basins, is bound to be accelerated. The Madras State, as readers are probably aware, does not have any coal (black) deposits. So its requirements of coal have to be hauled over long distances—over 1,000 miles, that is, from West Bengal and Bihar—entailing heavy freight charges. This void is now being filled, to some extent, by the Neyveli thermal power station which will also help, as Mr. T. M. S. Mani, Managing Director of the Neyveli Lignite Corporation, stated in his welcome speech, in conserving the equivalent coal resources for use elsewhere in the country.

TRUCKS FOR ROAD TRANSPORT

When the Chairman of the Tata Engineering and Locomotive Company Ltd., a leading manufacturer of commercial vehicles, pleads vigorously for greater encouragement to road transport, it may be thought that his is an interested plea. But it would be most uncharitable to take it so, for the facts pertaining to road transport are indisputable and objectively verifiable. For instance, the fact that road transport capacity can be built up more quickly and at a much lower cost than any other method of transportation has been established by now beyond the shadow of a doubt. Its extreme flexibility and large employment potential are also matters of common knowledge. India's planners have, of course, broadly recognised these special advantages and potentialities of road transport. But they are still in two minds about the extent to which this mode of transport can be developed, as witness their procrastination in the matter of evolving a long-term transport policy for the country. Sooner or later—sooner rather than later—they should evolve such a policy. They would do well, in this connection, to ponder seriously the following observations of Mr. J. R. D. Tata in his statement to the shareholders of T.E.L.Co. published elsewhere in this issue:

"In these days of acute transport shortage pointing to the urgent need for providing greater freight and passenger carrying capacity, road transport deserves, in my view, a higher priority and more sympathetic consideration than it has received so far. It seems, instead, to have been specially selected for a cascade of impositions and taxes as well as of innumerable restrictions and impediments in its intra-State and inter-State operations, in addition to the limitations imposed by the inadequacies, both in mileage and quality, of the country's road system. A vigorous development of the latter, coupled with an adequate and balanced production of commercial vehicles, would yield immeasurable benefits to our entire national economy."

But that is not all, for there is the additional factor pertaining to the financial contribution which road transport already makes and will continue to make to public revenues. It is something fantastic, for instance, that, out of the price of about Rs. 34,000 which the purchaser of a Tata Mercedes-Benz chassis pays in Bombay, as much as Rs. 10,000 goes to pay for duties and taxes to the State and Central Governments. What is more, every commercial vehicle continues, during its many years of operation, to be a fruitful source of revenue through fuel taxes and a variety of other taxes. This factor, namely, contribution to the public exchequer, and that on a relatively greater scale than by the railways, should not also be overlooked in determining relative priorities for the different modes of transport. It is good to find that Mr. J. R. D. Tata has lent his weight to the case for road transport by his forceful and cogent arguments.

The problem of according a higher priority to road transport will not, however, be solved unless the national highways are more systematically developed and the indigenous manufacture of commercial vehicles is more adequately increased. More I.D.A. credits would have to be sought for the purpose of highways development, although the foreign exchange component of highway projects is relatively small. Substantially more foreign exchange would be required for the manufacture of commercial vehicles, for the achievement of complete self-sufficiency in raw materials, components and ancillary products is not within the control of T.E.L.Co or of any other automobile manufacturer, for that matter. So long as the manufacture of special steels and of ancillary and proprietary products do not keep pace with the growth of capacity in the automobile industry, imports of such raw materials and components, to varying extents, will continue to be necessary. This, however, should not be taken to mean that automobile manufacturers have not been doing their best to achieve higher and still higher levels of indigenous content. It is heartening to know that T.E.L.Co. alone, thanks to the high level of indigenous content attained by it, was responsible for a saving of Rs. 12.5 crores in foreign exchange last year. Since 100 per cent indigenous content seems to be well-nigh impossible in the foreseeable future, some expenditure of foreign exchange on imported raw materials and components is inevitable. To think of reducing the foreign exchange allocation for this purpose would be to slow down further the rate of production of trucks which had actually registered a fall from 20,961 numbers in 1960 to 19,517 in 1961. This downward trend needs to be arrested and reversed, if Mr. K. D. Malaviya's plan for breaking the transport bottleneck is to succeed.

COTTON SUPPLY

The Cotton Advisory Board, at its meeting held in the city on 2nd August under the chairmanship of Mr. W. R. Natu, Textile Commissioner, took a close look at the present and prospective trend in the supply position of cotton and made certain specific recommendations to meet the shortage of cotton in the country and to ensure equitable distribution of available supplies. Although the Board did not take an alarmist view of the situation, it was seized of the problem of continuing shortage of cotton. The Board felt relieved that the critical situation envisaged earlier in respect of the months September to November 1962 had been averted due mainly to "timely imports and proper husbanding of the internal resources," but it was of the view that the carryover stocks at the end of the current season, namely, 1961-62, were still at a precariously low level. The crop prospects for 1962-63 were discussed and, though it was too early to make any firm estimate, the Board felt that the crop might not be larger than 5.2 million bales of 400 lbs. each even under favourable circumstances. The Board therefore recommended the import of at least one million bales of foreign cotton to be carried out in such a way that the cotton could arrive early in the next season. It also emphasised that, even with this import, the closing stocks at the end of the next season beginning on 1st September 1962 would be smaller than even the closing stocks of the current season. While the Board did not consider it advisable to release any further export quotas for Bengal *Deshi* during the current season (export quota so far released aggregate 278,000 bales), it recommended that a sizable quota should be announced for the next season sufficiently early as was done in the current season.

As the Board had thus no doubt about the precarious position of the supply of cotton, it unanimously recommended that the existing control measures such as compulsory survey, requisitioning, quota system, etc. should not only be continued but actually tightened up. Further, it suggested certain modifications in the machinery for implementing the control measures, the most notable of them being the replacement of the existing multiplicity of the regional survey committees by a few large, strong and expert zonal committees consisting of experienced surveyors.

It is evident from the foregoing account that one million bales is what the Board considers to be the minimum import requirement on the assumption of a crop of 5.2 million bales, as against the revised estimate of 4.6 million bales for the current season. Should production in the 1962-63 season fall short of the Board's estimate, all available indications at present are that imports would have to be correspondingly raised. But even then, stocks at the end of the next season would be lower than the opening stocks which themselves are expected to be thin at 1.43 million bales, as compared with 1.8 million bales at the beginning of the current season. If the stock position is to be maintained intact, imports should be of the order of 1.5 million bales even if the crop turns out to be a good one of 5.2 million bales. This indicates the magnitude of the import requirement and, since the foreign exchange position is by no means favourable for facilitating an import of even one million bales, the cotton position is precarious indeed.

The Government, according to Mr. S. K. Patil, Union Minister for Food and Agriculture, is making arrangements for a minimum buffer stock of 300,000 bales (he would prefer to have a buffer stock of as much as 5 million bales). If this requirement is also taken into consideration, the total imports in the next season will have to be roughly 2 million bales. Clearly, imports of such magnitude are definitely not possible for the reason just mentioned. One may hope that in the next season the U.S. will be more generous than it has been in the current season in supplying P.L. 480 cotton. But the grim fact remains that a good part of the requirements will have to be met through normal commercial imports. Well may Mr. Patil claim, as he is reported to have done, that he keeps everybody happy by giving them food but he certainly cannot say that he makes everbody happy by giving them clothing too.

PAPER INDUSTRY

Despite several handicaps, such as unremunerative prices and shortage of transport facilities for moving raw materials and finished products, the paper industry has made fairly satisfactory progress in recent years. The total output of paper and paperboard is estimated to have gone up from 350,000 tons in 1960-61 to 370,000 tons in 1961-62. Recent trends in the expansion of capacity have also been encouraging, the additional capacity licensed in 1961-62 being as much as 850,000 tons bringing the total licensed capacity to 1.26 million tons. If the licensed units are commissioned expeditiously, consumers will not have much difficulty in getting their requirements of paper at reasonable prices. But it is essential to ensure that production is diversified in such a way as to cater to the specific requirements of consumers. It may be recalled, in this connection, that the Tariff Commission, in its report of 1960, had recommended the production of common varieties of paper in the ratio of 60 : 40 with other varieties of board and paper. In suggesting this, the Commission was prompted by the acute shortage of common varieties of paper at that time. But the situation seems to have changed since then. This at least is what the traders say. Mr. C. C. Mukharji, President of the Calcutta Paper Traders' Association expressed the view, at the Association's meeting last week, that "the

4½ PER CENT

GUJARAT STATE DEVELOPMENT LOAN, 1974

ISSUE PRICES Rs. 100/- PER CENT

OPENS FOR SUBSCRIPTION ON 27th AUGUST 1962

The loan will be closed as soon as a total of approximately **Rs. six crores** has been subscribed, and in any case not later than the close of business on 1st September, 1962.

THE LOAN WILL BE UTILISED TOWARDS THE DEVELOPMENT PROGRAMME OF THE NEW STATE OF GUJARAT. ALL ARE REQUESTED TO SUBSCRIBE GENEROUSLY TO THE NEW LOAN.

The loan applications will be received at—

(1) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi.

(2) State Bank of India, Patna.

(3) State Bank of Hyderabad, Hyderabad.

(4) Branches of State Bank of India and State Bank of Saurashtra conducting Government work in the State of Gujarat.

(5) Treasuries and Sub-treasuries in Gujarat (at places not covered by (4) above).

APPLICATION FORMS AND FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE ABOVE OFFICES.

Pipework installations

by S&L

We undertake fabrication and installation of pipework, as well as the design work entailed in the engineering of piping systems.

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers, and draughtsmen, many of them trained abroad, now provides,

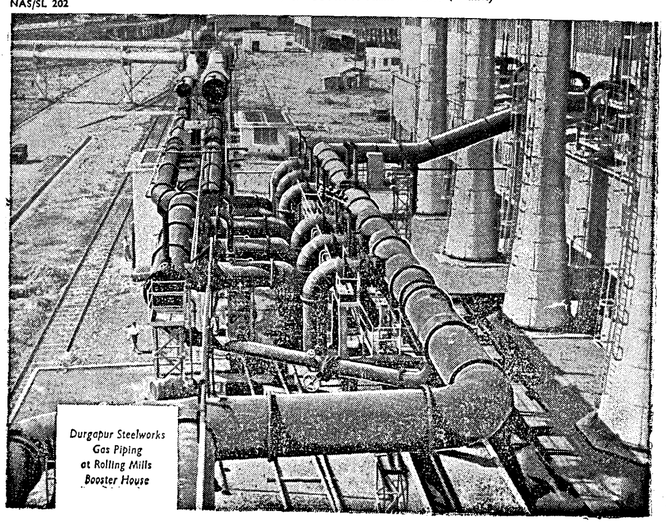
* fabrication of all types of pressure pipework,
* fabrication of bent boiler tubes, superheater elements and coils for all purposes,
* the installation of piping systems for all pressure and temperature conditions.

Whatever your project—a Steel Plant, Power Station, Paper Mill, Chemical Plant, a single item or a complete installation—call for S & L.

STEWARTS AND LLOYDS OF INDIA, PRIVATE LIMITED

41, CHOWRINGHEE ROAD, CALCUTTA-16 Phone:- 44-2311 (11 lines)

NAS/SL 202



market is now surfeited" with common varieties of paper. He added that there had been, of late, a consistent demand from the consumers for better quality and a larger variety of paper.

There may be something valid in Mr. Mukharji's broad finding. It should not, therefore, be ignored of hand by the manufacturers and the Government. Although his remaks are not supported by sufficient statistical data, they should be given due attention, as traders who are in touch with consumers are likely to be in the know of consumer preferences. In support of his argument for enhancing the output of better quality paper, Mr. Mukharji observed as follows:

"The toils and troubles of the Indian Standards Institution would be in vain, if a situation conducive to the production of quality paper is not created in this country. Moreover, the country having been allowed to import top grade printing presses, it would be all to the waste now, if the types of paper necessary for use in such presses are not produced, particularly when many of our mills are well equipped for the purpose too."

The production of paper of better quality will certainly help paper exports, too, which are currently at a relatively low level. Shipments of paper and paperboard rose from Rs. 56 lakhs in 1960-61 to Rs. 64 lakhs only in 1961-62. If the quality of the paper is improved and prices maintained at competitive levels, there is no reason why India's export of paper, particularly to some of the Asian and African countries, should not increase substantially. In this connection, Mr. Mukharji made a plea to the Government of India to give effect to the recommendations of the Mudaliar Committee on foreign trade for granting tax concessions and other incentives. This plea, too, is, *prima facie*, worthy of consideration.

FISHERY INDUSTRY

The growth of fishery industry on modern lines is only of recent origin in this country. The industry admittedly has bright prospects ahead, considering the scope for exploiting the vast potential resources of fish in the Indian Ocean, for increasing consumption within the country and for promoting exports. The total catches in India have been rising steadily, as a result of increasing adoption of mechanisation of fishing vessels and the use of trawlers by some of the organised units. In 1960, the latest year for which figures are available, India's fish catches touched a record of 1.40 million tonnes. Although production has tended to go up, the recent trends in exports have not been uniformly encouraging. In fact, exports of fish suffered a distinct setback during the year ended March 1962, being only Rs. 3.91 crores, as compared with Rs. 4.62 crores in 1960-61 and as much as Rs. 5.83 crores in 1959-60. This is particularly disturbing, viewed against the ambitious export target of Rs. 12 crores per year laid down in the third Plan. The decline is mainly the result of a drastic setback in the two traditional markets, namely, Ceylon and Burma, for dried fishes. India's export of dried fish to Ceylon, for instance, fell sharply from about Rs. 248 lakhs in 1960-61 to just about Rs. 100 lakhs. Import restrictions and, to some extent, the development of the domestic industry in Ceylon and Burma account for their smaller offtake. While these are things beyond the control of producers or authorities in India, the Government can still make some efforts to persuade these two neighbouring countries to avoid further disruption of the traditional pattern of trade. If the present trends are allowed to continue, Indian fish exports to these countries are likely to be completely wiped out.

The only reassuring feature of fish exports is the upward trend in the shipment of frozen, and to some extent canned, prawns, mainly to the U.S. The total export of prawns (frozen) rose from no more than Rs. 146 lakhs in 1960-61 to about Rs. 215 lakhs in 1961-62. The offtake by the U.S. alone increased from Rs. 52 lakhs to Rs. 69 lakhs, by Australia from only Rs. 3 lakhs to Rs. 13 lakhs and by Hong Kong from about Rs. 8 lakhs to Rs. 10 lakhs. The diversification of the pattern and direction of fish exports is certainly welcome and deserves to be encouraged by all means. The U.S. is, perhaps, the world's largest market for shrimps and prawns. Although it produces annually about 140 million lbs. of shrimps, it imports a much larger quantity, that is, about 230 million lbs. per year (as of 1959). The U.S. imports its requirements from about 55 countries, of which eleven countries account for 90 per cent. India is said to be the sixth largest supplier, but its total supply is no more than five million lbs., being only a fraction of the total U.S. imports. The U.S. being a highly competitive market, it is of the utmost importance to ensure that fish and fish products sent to that country are of the highest quality, with attractive packing, etc. In this connection, one wonders what has been the fate of the proposed Fish Control Order, which the Government has been thinking of bringing into force for a long time. The Order was intended to enforce quality control on processed fish right from the stage of catching to packing. The earlier the Government gives effect to this order, the better. For, unlike in the past, when fish was exported to some of the neighbouring countries, Indian products are now entering the highly competitive markets like the U.S. and Australia. Unless Indian fish earns a name for its quality, it cannot have smooth sailing in these markets.

Steps are, of course, being taken in the country for the development of marine fisheries. A large number of mechanised crafts has also been pressed into service. There are now about 1,900 mechanised fishing boats, as against only 850 in 1957. A number of private parties, some with foreign collaboration, has taken to power fishing and introduced mechanised fishing on a large scale, especially in the Kerala coast, as also in Maharashtra. F.A.O., T.C.M. and the Norwegian Government have also been helping India in various ways in the development of fisheries on modern lines. Although these measures are undoubtedly welcome, they are not sufficient. As pointed out by Mr. K. R. P. Shroff, Chairman of the New India Fisheries Ltd., Bombay, in his statement circulated among shareholders in connection with the seventh annual meeting of the Company, there is an urgent need for conducting marine surveys in this country for assessing the potential and also for finding out the extent and reason for the disappearance of certain varieties of fishes from Indian seas. According to him, mackerel and the well-known Bombay duck, in particular, have been disappearing from India's west coast region. It is to be hoped that the forthcoming survey organised by the International Indian Ocean Expedition, involving 40 ships and participation of more than 20 countries, will result in a better knowledge of the Indian Ocean, the least-known ocean-bed in the world.

The smaller catches of mackerel and sardines have affected, to some extent, the profitability of the industry, as will be evident from the financial results of the New India Fisheries. This Company has, no doubt, registered some progress in expanding its operations by acquiring more trawlers, but its total catches declined from 4,313 tons in 1960-61 to 3,864 tons in 1961-62. Consequently, its sale proceeds have fallen from Rs. 26.93 lakhs to Rs. 26.38 lakhs. The net profit of the Company is also lower at Rs. 3.35 lakhs, as against Rs. 4.94 lakhs in the previous year. The prospects for the Company, which is run in collaboration with a leading Japanese fisheries concern, the Taiyo Fishery Company, Ltd., of Tokyo, are, however, good, with its plans for buying more trawlers and for expanding its operations for deep sea fishing.

4½ PER CENT STATE GOVERNMENT LOANS, 1974

State	Amount (In crores of Rs.)	Issue Price Per cent
1. Andhra Pradesh	10	Rs. 99.50
2. Assam	3	Rs. 99.50
3. Bihar	4	Rs. 99.50
4. Gujarat	6	Rs. 100.00
5. Kerala	4	Rs. 99.50
6. Madhya Pradesh	5	Rs. 99.50
7. Madras	12	Rs. 99.75
8. Maharashtra	12½	Rs. 100.00
9. Mysore	6	Rs. 99.75
10. Orissa	7	Rs. 99.50
11. Punjab	3½	Rs. 99.50
12. Rajasthan	4½	Rs. 99.50
13. Uttar Pradesh	9	Rs. 99.75
14. West Bengal	7	Rs. 99.75

All the State Governments reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

All the above loans will be repaid at par on 27th August 1974.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON MONDAY, 27TH AUGUST 1962 AND CLOSE ON SATURDAY, 1ST SEPTEMBER 1962 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 27th August 1962.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

Securities of 3 per cent Bombay Provincial Development Loan, 1962 and 3½ per cent Bombay State Development Loan, 1962 will be accepted AT PAR for conversion into the new loan of the Government of Maharashtra. Securities of 3½ per cent Madhya Pradesh Loan 1962, Madras Government 3½ per cent Loan 1962, 3½ per cent Uttar Pradesh Loan 1962 and 3½ per cent West Bengal Loan 1962 will also be accepted for conversion AT PAR into the new loans of the respective State Governments.

Interest on the securities of 3 per cent Bombay Provincial Development Loan 1962 tendered for conversion will be paid at the rate of 3 per cent per annum upto 31st July 1962 inclusive and at 4½ per cent per annum for the period 1st to 26th August 1962 inclusive. Interest on the other securities tendered for conversion will be paid at the rate of 3½ per cent per annum upto and inclusive of 26th August 1962.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS, NAGPUR AND NEW DELHI, THE BRANCH OF THE STATE BANK OF INDIA AT PATNA AND THE BRANCH OF THE STATE BANK OF HYDERABAD AT HYDERABAD.

Applications will also be received at OTHER PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) Branches of the State Bank of Bikaner, State Bank of Hyderabad, State Bank of Indore, State Bank of Jaipur, State Bank of Mysore, State Bank of Patiala and State Bank of Saurashtra, conducting Government work.

(ii) Branches of the State Bank of India at places where there is no branch of its Subsidiary Banks conducting Government work.

(iii) Treasuries and sub-treasuries (except in the States of Assam and West Bengal) at places not served by the aforesaid banks.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering applications at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi will, in the event of oversubscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans which may still be open for subscription. To avail of this facility, the applicants should complete the "Special Option Form" copies of which are available at any of the abovementioned offices of the Reserve Bank of India.

GOLD AND MR. KENNEDY

A NOVEL IDEA REGARDING I.M.F.

(From Our Own Correspondent)

LONDON, *3rd August*

LONDON LETTER

SINCE the United States, in spite of its present image of poverty, still holds 40 per cent of the "free world's" gold, their views on how to handle the International Monetary Fund and what is to happen to the price of gold are as significant as ever. This country herself is also in a predominant position from the point of view of influence for the meeting of the International Monetary Fund next September by having paid off the £183 million balance of its drawing from the I.M.F. of a year ago. Although the U.K. still maintains a credit line with the I.M.F. which has been increased by each repayment of its debt, this is not the same thing as using the credit line.

Britain is not, then, a debtor in the I.M.F. and the fact that she is undoubtedly a debtor in a very substantial amount to a great number of unknown holders of sterling does not have the same significance, especially as the U.K.'s reserve at over £1,000 million is £165 million higher than it was a year ago. And to this must be added the fact that, for two quarters now, the U.K. has been running an active balance of payments.

The U.K. could, of course, come under heavy currency pressure, if for any reason the holders of the hot money balances decide to cash in and that is when the I.M.F. line of credit would have to be brought back into play. The United States, on the other hand, has probably suffered the worst of the lack of confidence in the dollar and President Kennedy's world-wide announcement in the Telstar television interchange between the U.S. and Europe that the dollar would not be devalued has in fact put an end to speculation on that score.

But the American President has not been satisfied with affirming the strength of the dollar *vis-a-vis* other currencies; he has added that he sees no point in a depreciation of the dollar in terms of gold accompanied by a like depreciation in all other currencies. A comment by the London *Economist* that any increase in the price of gold to less than $100 per ounce would bring more trouble than relief (the current price is of course $35.00 per ounce) seems somewhat extreme. An increase in the price of gold of under 50 per cent to, say, $150.00 per ounce would be of enormous world significance by correspondingly increasing the currency value of the world's gold reserves. It would make a tremendous addition to every country's liquidity and it is certain that the member-countries of the I.M.F. will not at their next meeting lightly dismiss the idea of a substantial upward revaluation in the price of gold in terms of all currencies—although the advantages that would accrue to the U.S.S.R., which is probably the world's largest gold producer today, might be decisive in causing the rejection of the idea.

There is unfortunately no reason to suppose that the world's central banks are yet ready for the introduction of an international currency unit by the I.M.F. backed by the I.M.F.'s holding of its members' currencies and therefore as effective as an increase in its gold stock. But an alternative suggestion is being canvassed: that is that the national currencies held by the I.M.F. should be guaranteed in terms of gold by the countries concerned—that is, the U.K. would guarantee the gold value of all sterling held by the I.M.F. America would guarantee the gold value of dollars held by the I.M.F., etc. This would mean that every country holding currencies with the I.M.F. could regard these currencies as the equivalent of gold and equally the I.M.F. could regard its holdings of all currencies as the equivalent of gold.

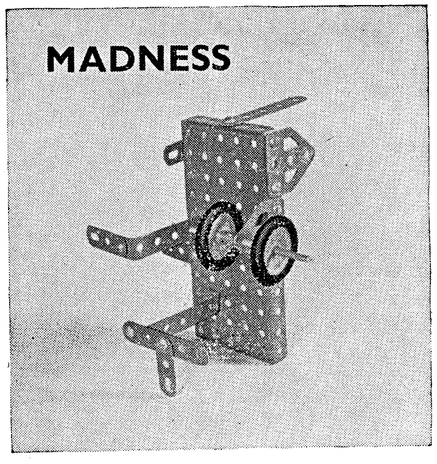
The suggestion would be of even greater value if the gold clause protection were extended to international currency balances held by central banks. That is, it should not be necessary if the Bank of England holds francs for those francs to be deposited with the I.M.F. for the gold clause protection to apply. After all, central banks can hold gold apart from their I.M.F. deposits and, if the idea is to extend the potential credit basis, then international currencies (to which the I.M.F. has given the seal of its approval, that is the seal of free transferability into gold) held by central banks should have the same security as gold, without it being necessary to deposit these currencies with the I.M.F. in order to acquire that security.

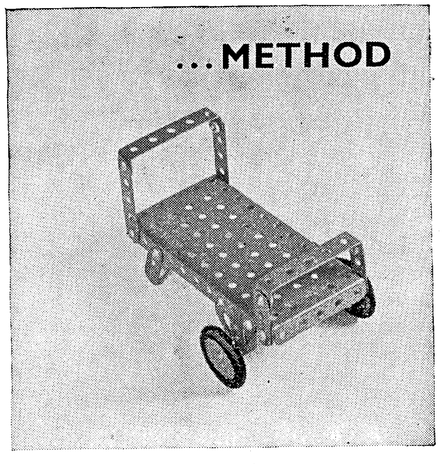
From Mr. Kennedy's point of view, this suggestion is purer than the thought of an upward revaluation in the price of gold. No one would be able to wag their heads and say: "But, after all, the dollar has been devalued in terms of gold while the rouble has not." But there is no doubt that the "eastern world" which does not suffer from the risks of capital movements could cash in on a "western" devaluation in terms of gold. An idea has already been put into practice by the Federal Reserve System in its application to certain dollar holdings of central European banks at a time when the Federal Reserve System wished to acquire foreign currencies to combat flight from the dollar. There is, therefore, no practical difficulty, although, in its world-wide application, the idea would be novel. It would also take time for the essentially conservative central banks to think of their reserves of foreign currencies as being indeed the equivalent of gold. Nor does all this pump more liquidity into a Western world, which is hovering on the brink of recession, but it does provide a credit basis which will enable currency measures to combat recession and to bring about progress unimpeded.

AUSTRIAN SCHILLING

The Government of Austria has accepted, effective from 1st August 1962, the obligations of convertibility for its currency, as set forth in Article VIII of the Articles of Agreement of the International Monetary Fund. The Austrian schilling was made externally convertible at the beginning of 1959 and since then the country's balance of payments and reserve position has continued to improve, reflecting the increased strength of the country's economy. These developments have permitted the removal by Austria of nearly all restrictions on current international payments.

Article VIII provides that members accepting its obligations are required to avoid the use of restrictions on current payments, multiple exchange rates and discriminatory currency practices, unless prior approval has been obtained from the Fund. The move by Austria to Article VIII brings to 22 the number of Fund members which have now accepted the Article VIII obligations.





It's not enough to have the parts. They must be fitted together according to a plan.

We are talking about your records. All the lists and ledgers and notes, the files and folders and references. They are there. But they are not working for you as they should—unless of course you have a Remington System.

Remington Systems can be tailored to your business, so that your records and information are not only arranged for easy reference—they provide an automatic Control of your operation. They can tell you when to act—promptly and effectively.

Remington Systems are well planned—there are many years of research in many countries behind them. But they are simple to use. And you do not have to be a big businessman to use a Remington System. You just have to be a good businessman.

MAKE YOUR RECORDS WORK FOR YOU

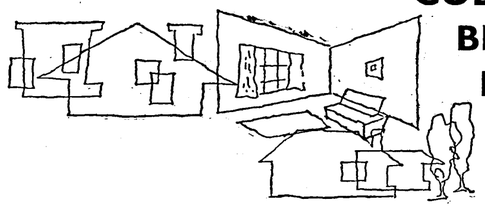
JENSON & NICHOLSON-1962



COLOUR TO BRIGHTEN INDIA'S HOMES

LOOK UP NOW!

Chances are you'll be looking at a painted surface. Since time immemorial, the history of man has been coloured by paint. No one can safely say when it was first made. It may have been used to scar the skin of a primitive warrior, or

brighten the walls of his home. One fact is certain. Paint was a discovery as useful as fire, as important as the wheel.

J & N has produced paints for India's homes since 1922. The company has always believed that colour is vital to happy living. J & N use paint as a medium to reflect individual personality, to create mood and atmosphere, to enhance the warmth of a home...Towards this end, J & N has produced a range of decorative finishes second to none. It extends from the widely used Umbrella paints to Robbialac—a brand that spans the world.

LUCA DELLA ROBBIA—AN ITALIAN GENTLEMAN

Little is known about Robbia the man—but Robbia the artist has achieved lasting fame. He began his professional career circa 1500, as apprentice to a Florentine goldsmith. His talent carried him swiftly to sculpture. From there he passed on to terra-cotta and spent years of painstaking experiment before producing what the world was to know as 'Della Robbia Glaze'. A contemporary used the words 'endless durability' in describing Robbia's work. The first John Nicholson had admired Della Robbia's art ever since he received an order for a 'blue white...as in the Della Robbia Glaze'.

The day came when J & N produced a new product—an enamel of exceptional hardness, lustre and durability. It was fittingly named Robbialac, after the Italian with whom perfection was a norm.

Today, in the remotest corners of five continents, J & N equates with *'Maker's of Robbialac'*.

DID YOU KNOW ABOUT BERENICE?

She was an impulsive, golden-haired Cyrenean princess. One day she discovered Religion, cut off her tresses and dedicated them to the goddess Venus. To an angry husband she explained that the stars had stolen her locks. We now have a group of stars called Coma Berenices. The lady has yet another claim to fame. Her name was bestowed on a certain amber—widely used today in paint manufacture. Berenice is now pronounced 'Varnish'.

When next you buy a J & N paint, think of Berenice...

Q. WHAT HAS BUCKINGHAM PALACE IN COMMON WITH NO. 1 M. GANDHI ROAD?
A. J & N DECORATIVE FINISHES

Churches, hospitals, offices, cinema houses, universities, public buildings—all have been treated with J & N finishes. The list is international. It includes such historical landmarks as the Houses of Parliament, Buckingham Palace and the Tower of London, the Grand Theatre of Mexico City and the Stock Exchange, Valparaiso. At the Vatican, Rome, the private apartments of his Holiness, the Pope, are finished with J & N coatings. Among the many buildings in India treated with J & N finishes are Rastrapati Bhawan, the Prime Minister's residence, Parliament House, the World Health Organisation, National Museum, Vigyan Bhawan and the American Embassy, in New Delhi; Raj Bhawan, Tea Board Building, Telephone Bhawan, Woodlands Nursing Home, Calcutta Club, Statesman House and Firpo's, in Calcutta; 'Adelphi',

Metro Cinema, Bank of Baroda, Chartered Bank Building, Nataraj Hotel and Glaxo Laboratories in Bombay. The list is always increasing. There is no finer tribute to the consistent excellence of J & N decorative finishes.

WHEN IT'S A QUESTION OF COLOUR...

...for your flat or office, get in touch with J & N. Our Colour Advisory Service is specially organised and staffed to help you. The Service is managed by a Colour Consultant—an expert in interior decoration—and provides colour schemes *free of cost and without obligation to use J & N paints*. Though colour is largely a question of individual taste, the scientific use of colour is a precise and delicate skill. Correctly employed, colour can add warmth or coolness to a room, impart an illusion of space, transform a drab flat into a warm, inviting home.

FROM TOY TRAINS TO THE TAJ MAHAL HOTEL

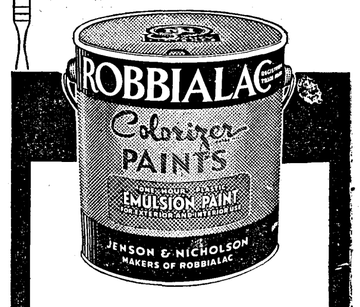
Or, for that matter, from tables to ten-storey buildings—J & N has a paint for *every* decorative need. Enamels, emulsions, dry-distempers, porcelain lacquers, cement coatings...the range is exhaustive. It covers such national brands as Robbialac, 3 Umbrella, Jhilmil, Jensolin—leaders in their fields.

Behind the success of these brands lies J & N research. At the J & N factory near Calcutta, a fully-equipped laboratory, staffed with skilled chemists, pursues an unceasing programme of research, development and testing. Each batch of paint is tested to precise standards before leaving the factory. The result of all this care: *you take quality for granted in a J & N paint.*

*

FEELING BLUE?
In which of J & N's shades?

*



ROBBIALAC PLASTIC EMULSION is excitingly different. It applies easily—brush marks *vanish as you paint—and dries in an hour.* It leaves a smooth, lustrous, extremely durable finish that will stand repeated washing and scrubbing. Robbialac Plastic Emulsion is especially suitable for decorating walls, ceilings and woodwork.

When planning your new colour scheme, consider Robbialac Plastic Emulsion—choose from 120 delightful shades.

QUALITY SELLS J & N COATINGS

WORLD BANK COMPLETES SIXTEEN YEARS

INDIA LARGEST BENEFICIARY

THE International Bank for Reconstruction and Development has just completed its sixteenth year of operations. Its activities during the fiscal year ended 30th June 1962 indicate that, with every passing year, the Bank's contribution to the broadening stream of financial and technical assistance to the less developed countries has been increasing. New lending during the fiscal year ended 30th June 1962 amounted to $882 million in 29 loans, bringing the total number of loans granted by the Bank since its inception to 321 and the total amount of loan commitments to $6,673 million in 60 member-countries and territories. In the preceding fiscal year, it may be recalled, the Bank had made 27 loans covering a commitment of $610 million. The amount of loans sanctioned during the year under review is the highest on record in the Bank's history of sixteen years. Over the year, the loan commitments show a spectacular increase of $272 million or 44 per cent.

The countries to which loans were made during 1961-62 are: Argentine, Australia, Austria, Finland, Ghana, Iceland, Israel, Japan, Kenya, Peru, Trinidad and Tobago, Venezuela (one loan for each), Colombia (2 loans), Costa Rica (2 loans), Ethiopia (2 loans), India (five loans), Mexico (2 loans), Philippines (2 loans) and South Africa (2 loans). Actual loan disbursements during the year were also higher at $485.4 million, as compared with $398.5 million in the previous year, bringing the cumulative disbursements during the sixteen-year period (1946-47 to 1961-62) to $4,805 million.

The World Bank's new affiliate, namely, the I.D.A., which has just completed two years, has also had an active year. During 1961-62, it provided no less than 18 credits covering $134 million, bringing the total number of credits provided by it to 22, involving $235 million. It will be interesting to note here than the World Bank itself did not attain this rate of momentum in the initial years of its existence even though its resources were incomparably larger than those of the I.D.A. The following table gives the number and amount of loans provided by the Bank and the I.D.A. since their inception:

(In million dollars)

Fiscal year	World Bank		
	No. of loans	Amount	Disbursements
1946-47	1	250	92
1947-48	5	263	378
1948-49	10	137	56
1949-50	12	166	88
1950-51	21	297	78
1951-52	19	299	185
1952-53	10	179	227
1953-54	26	324	302
1954-55	20	410	274
1955-56	26	396	284
1956-57	20	388	332
1957-58	34	711	499
1958-59	30	703	583
1959-60	31	659	544
1960-61	27	610	398
1961-62	29	882	485
Total	321	6,673	4,805
I.D.A.—			
1960-61	4	101	..
1961-62	18	134	..
Total	22	235	..

Two-thirds of the Bank's lending so far has been for basic investment in transportation and electric power. Thus, out of the total net loans sanctioned amounting to $6,545 million, as much as $4,293 million, or 65.6 per cent, have been for developing transportation facilities and electric power generation. Of the balance, industry accounts for $1,017 million, agriculture and forestry for $504 million, reconstruction for $497 million, and general development for $205 million. The pronounced slant in favour of public utilities is evident in the programme of lending by the I.D.A. too. In fact, the I.D.A. is meant for assisting those projects which may not fully satisfy the tests applied for the loans to be given by the World Bank. Thus out of the total credit of $235 million provided by the I.D.A., $126 million was for transportation, $79.2 million for agriculture and forestry and $18 million for reconstruction, $6.4 million for water supply and only $5 million for industry.

A country-wise analysis of the loans given by the World Bank shows that the largest number of loans—30 to be exact—was provided to India for a total amount of $846 million ($817 million net, after taking into account cancellations, refundings and terminations). Japan was given 24 loans, but the amount involved is only slightly more than half of that sanctioned to India, being $488 million ($482 million net), Columbia ranked third according to the number of loans (20) though the amount involved is very much less than that of India or Japan, being only $270 million. The following are the principal recipients of loans, the figures in brackets being the original amount of sanctioned loans in million dollars. Australia (418); Pakistan (256); Brazil (292); Mexico (406); Peru (107); South Africa (222); Austria (106); Finland (127); Italy (300); Rhodesia and Nyasaland (147); Iran (194); Thailand (129); France (250); the Netherlands (244); Norway (120); Argentina (143) and Chile (113).

India is also the largest beneficiary of I.D.A. credit, both in terms of the number and the amount of loans. Thus, India was given 7 credits for $122 million out of the credits of $235 million, that is, more than 50 per cent. Pakistan ranked second with 3 credits involving a total of $21 million.

The Bank's gross income, exclusive of loan commissions amounting to $30 million, was $188.3 million, as compared with $166.6 million in the preceding year. Expenses, which included $99 million for interest on Bank borrowing and other financial expenses, aggregated $118 million, as compared with $103.4 million last year. The net income was $70.3 million, which together with loan commissions, was credited to the reserves, the total of which now stands at $699.3 million. At this level, the reserves provide a cover of 18.7 per cent to total loans outstanding.

Repayments

Repayments of principal received by the Bank during the year amounted to $104 million and repayments to purchasers of parts of loans amounted to $121.6 million. This brings total principal repayments to $1,075.4 million as on 30th June 1962, consisting of $542.5 million repaid to the Bank, and $532.9 million repaid to the purchasers of borrowers' obligations sold by the Bank.

The outstanding funded debt of the Bank as on 30th June 1962, amounted to $2,520.8 million, reflecting a net increase of $292.3 million in the past year. During that year, there was a gross increase in borrowings of $463 million. This consisted of the following: Public bond issues: an Italian lire issue in the amount of Lit. 15 billion (U.S. $24 million), a $100 million U.S. dollar issue and a Swiss franc issue in the amount of Sw. F 100 million ($23.3 million); the private placement of an issue of $100 million of U.S. dollar bonds; the drawing down of the Swiss franc borrowing of Sw.F 100 million ($23.2 million) of October 1961; the drawing down of U.S. $120 million and the balance of DM. 250 million ($62.5 million) of the German borrowing of August 1960; and the delivery of $10 million of bonds which had been subject to delayed delivery arrangements. The funded debt was decreased by $170.7 million, as a result of the maturing of $122.7 million of bonds, the redemption of Sw.F 100 million ($23.2 million), the revaluation of the Canadian dollar issues by $3.2 million, $4.5 million of unissued bonds which were subject to delayed delivery and sinking and purchase fund transactions amounting to $17.1 million.

It is clear from the foregoing account that the scope of the Bank's operations is truly world-wide. Five new countries became members of the Bank during the fiscal year ended 30th June 1962. They are Laos (capital subscription, $10 million), Liberia ($15 million), New Zealand ($166.7 million), Nepal ($10 million) and Cyprus ($15 million). The Dominican Republic was readmitted to membership in the Bank with a capital subscription of $8 million. Syria resumed separate membership in the Bank with a capital subscription of $20 million. With the addition of these countries, the membership of the Bank has increased to 75 countries, as on 30th June 1962 with capital subscription aggregating $20,484.8 million.

DEPRECIATION OF MONEY

For some years now, the First National City Bank of the U.S. has been publishing, once a year, a unique table giving the comparative rates of depreciation of money in a large number of countries over a ten-year period. This year's table, included in the August 1962 monthly *Letter* of the Bank, indicates the decline in the value of money in 44 countries during the decade 1951-61. The decline in value is measured, reciprocally, by the rise in official cost of living or consumer price indices. Figures are given for annual rates of depreciation, compounded, not only for the ten-year period as a whole but also for the two five-year periods. The table below indicates the rates of depreciation of money in 44 countries:

	Indices of value of money			Annual rates of depreciation (compounded)		
	1951	1956	1961	1951-56 %	1956-61 %	1951-61 %
Philippines	100	111	101	—2.1	1.9	—0.3
Ceylon	100	100	96	..	0.8	0.4
Guatemala	100	94	96	1.2	—0.4	0.4
Venezuela	100	99	92	0.2	1.5	0.9
El Salvador	100	89	91	2.4	—0.6	0.9
Portugal	100	97	91	0.6	1.3	1.0
Belgium	100	96	90	0.8	1.3	1.0
Ecuador	100	97	90	0.6	1.5	1.1
Switzerland	100	95	89	1.0	1.3	1.1
Lebanon	100	105	88	—1.0	3.4	1.2
Germany	100	96	88	0.8	1.8	1.3
Canada	100	96	87	0.8	1.9	1.3
United States	100	95	87	1.0	1.9	1.4
India	100	100	83	..	3.6	1.8
Italy	100	89	82	2.3	1.6	1.9

Bolivia	100	4	1	48.6	20.8	36.2

Note: Depreciation computed from unrounded data and measured by reciprocals of official cost-of-living or consumer price indices.

It will be seen from the above table that the only currency which appreciated over the period is the Philippines pesos, the percentage increase in value being 0.3 per cent per annum. The rates of depreciation ranged from 0.4 per cent in Ceylon and Guatemala to as much as 36.2 per cent in Bolivia. They ranged from 5 to 10 per cent in five countries and exceeded 10 per cent in eight countries. The decline in the value of the U.S. dollar is 1.4 per cent a year over the decade, that of the pound sterling 3.3 per cent and that of the Indian rupee 1.8 per cent. The economists of the Bank make the following comment on the regional difference in the fall in the value of money:

"South America remains the major free world area most seriously afflicted with the inflation disease. In a few cases, rates offered on savings accounts substantially offset the annual losses in real value of their paper currencies, so that it is possible for people to save money even though the benefits of compound interest are lost. Elsewhere in the Southern continent, for the most part, capital accumulation through saving money is denied to people. This is a key to social unrest which, paradoxically, liberal Governments attempt to combat with public spending projects. These, financed by the printing press, feed the fires of inflation and perpetuate the problem."

In drawing any conclusion from the above table the following qualifying comment by the economists of the Bank must be borne in mind:

"In reviewing the table, it must be understood that the stability of money in some countries is more apparent than real, affected by the limited coverage of official indices or by Government policies directed at holding down prices of specific items that have large weights in cost-of-living indices. Contrariwise, there are some cases where indicated losses in buying power of money are more apparent than real. For example, the French figures for 1956-61 reflect President de Gaulle's financial reforms, which included removals of subsidies on cost-of-living items and a freeing of markets to a point where the French citizen today enjoys not only relative price stability but also the widest choice of products in the history of the nation."

DENA BANK OPENS THREE MORE BRANCHES IN SUBURBAN BOMBAY

The Devkaran Nanjee Banking Co., Ltd. has opened on Friday and Saturday this week three more branches in suburban Bombay at Malad (East), Jogeshwari and Wadala. With the addition of these three branches, the total number of the Bank's offices in Greater Bombay has reached 35—the largest among the banks in the City. Dena is also the first bank to open branches in East Malad and Jogeshwari and has now a branch in every suburb in West Bombay. The Bank's branches provide all the banking services and the facility of a safe deposit vault. The Bank promises to open more branches, whenever and wherever feasible.

HONGKONG AND SHANGHAI BANKING CORPORATION

The Hongkong and Shanghai Banking Corporation has declared, for the period January-June 1962, an interim dividend of five shillings a share, the same as for the corresponding period of the previous year, on its paid-up capital of £4,940,383 in 3,161,845 shares. The dividend absorbs £790,461. The Corporation is the parent company of a group comprising the Mercantile Bank Ltd. and the British Bank of the Middle East.

SOME SIGNIFICANT DEVELOPMENTS IN BRITAIN

MR. MAUDLING IN NO HURRY TO REFLATE

By W. T. C. King
EDITOR, *THE BANKER*

LONDON, *4th August*

IF we exclude the uncertainties inherent in the decisive phase of the negotiations between Britain and the Six in Brussels, by far the most important new question raised for the City of London and the business world generally in the past month (July) has been that posed by the Prime Minister, Mr. Harold Macmillan's drastic and dramatic reconstruction of his Government. A sudden announcement on 13th July disclosed that seven Cabinet Ministers out of the total of 21 had left the Cabinet and had been replaced. And, when the reconstruction was completed a few days later, it was found that eight Ministers outside the Cabinet had been replaced, and an even larger number of junior Ministers, the whole process having permitted the promotion of younger men within the former team as well as the bringing in of an unusually large number of back-benchers.

Since the outstanding change was the departure of Mr. Selwyn Lloyd, who had been Chancellor of the Exchequer for the previous two years (he has now returned to the back-benches) and since the correspondence made clear that the Prime Minister had asked for his resignation, it seemed evident that economic policy had bulked large in the motivation of the changes. Many City observers, and a number of prominent commentators in the Press, promptly jumped to the conclusion that a major shift of economic policy must be afoot. I must emphasise forthwith, however, that, on one important aspect of that policy, there was virtually no such speculation. Significantly, there had been no change in the Ministers directly responsible for the negotiations with the Common Market, and whilst Mr. R. A. Butler had been moved from the Home Secretaryship to the new post of Deputy Prime Minister and the First Secretary of State, it had been made clear that he would continue to lead that ministerial group. It was on the future of domestic economic policy that City speculation mainly focussed.

The First Major Crack

In the period after the first major crack on Wall Street, as I pointed out in the last letter in the monthly series, much public discussion had been taking place about the risks of repercussions on Britain's economy. Special attention was being given to any indications of a sagging of demand, and the arguments of the reflationists were commanding a wider, and rather more sympathetic, hearing than previously. It was already high time, the pundits of this school of thought were proclaiming, to abandon the remainder of the restrictive measures operating on the economy and to take vigorous steps to stimulate additional demand. Many people of moderate views who remained unconvinced of this had, nonetheless, become persuaded that a good case could be made, and that the decision whether to apply new stimuli or not, and if so to what extent, was one requiring a delicate appraisal of the available economic data and a nice judgment in projecting the forward trends.

It was in such an atmosphere as this that the City learned of the sudden departure of the Minister to whose lot it had fallen to take the sharp disinflationary measures imposed in July 1961, and who had since played a vital and central part in administering the incomes policy then launched—the unpopular wages "pause," followed since last March by the aims of wage restraint with the help of the so-called "guiding light." Upon the news that Mr. Lloyd had been replaced by Mr. Reginald Maudling, a popular and buoyant personality, who at 45 is one of the youngest Chancellors of modern times, many commentators, not very surprisingly, concluded that Mr. Macmillan had been won over to the reflationary school—in spite of his broad assurances to Mr. Lloyd, in response to the latter's letter of resignation, that "we intend to continue on the path that you have prepared."

The investment markets, however, did not follow these views very far. Before the Cabinet changes, the London equity market had not responded fully to the fair rally on Wall Street, and, afterwards, it moved up only modestly in the interval before the new team faced its first major debate in Parliament—only to relapse again after the Prime Minister and the new Chancellor had spoken. By end-July the ordinary share index compiled by the *Financial Times* had dipped below 261, as compared with 266 at the date of my last letter and 265 on the eve of the debate.

The Prime Minister was not, it is true, very explicit about the future of economic policy. He contended himself with saying that the first phase of the battle that opened 12 months ago—the phase necessitated by the run on sterling involving measures that had his support—was now over. "We have achieved," he said, "a sound basis for growth, and we must confirm that and move to a new phase." Mr. Maudling's more detailed statement seemed to suggest, however, that this new phase was not to be any very different one from that envisaged by his predecessor at the time of the last Budget. Mr. Selwyn Lloyd himself, the new Chancellor recalled, had predicted a substantial expansion of the economy this year, reckoning upon an increase in exports and in public expenditure, a resumption of stockbuilding, and a growth of consumption over the year by about 4 per cent. If this hoped for expansion did not occur, Mr. Maudling affirmed, "we shall do something about it." But he saw no reason yet to dismiss the original hopes.

Exports Rising

Exports have, indeed, been rising well this year. An increase has been shown in each month, after allowing for seasonal fluctuations. And in June, the latest month for which figures are yet available, they rose more sharply, to a new high point. Public expenditure, meanwhile, had been "rising vigorously," and although the rise in consumption had fallen "a bit behind what we thought," Mr. Maudling still thought it "by no means certain that our estimates will be falsified." This conclusion was reached after taking due account of the fact that there is now spare capacity available in British industry and also on some sectors a distinct lack of confidence. But these factors, the Chancellor thought, could easily be exaggerated—in particular, the degree of slack was a good deal less than might be deduced from the availability of physical capacity in the factories. Because of the limits set by the supply of skilled labour, the economic indicators are, indeed, more than usually hard to interpret at the present juncture. Two of the more important ones could even be regarded as pointing in different directions.

Production Better

The latest available index of production—that for May—showed a sharp advance. After correction for seasonal influences, it jumped from 114 to 116 (1958: 100), as compared with the low point of 111 reached last January, and it was thus restored to the peak touched in July 1961. On the other hand, as the reflationary school of thought has been persistently emphasising, the trend of unemployment has been steadily upwards for some months past. After falling less than seasonally in the spring, it actually rose slightly at the mid-July count, so that, over a five-month period, it had shown a true increase of fully 70,000 (excluding movements in juveniles newly brought on to the registers). The aggregate at mid-July was just over 400,000 but this was still no more than 1.8 per cent of the labour force, as compared with 1.2 per cent 12 months previously, that is, just before the disinflationary measures were imposed.

Unemployment

The fact that unemployment has been rising whilst production has been recovering is partly explained by the growth in the total labour force. But it is also a characteristic of a phase in which spare capacity has arisen and

DISQUIETING TRENDS IN COTTON INDUSTRY PERSIST

FOUR MORE BIG MILLS CLOSE DOWN

From Our Special Correspondent

MANCHESTER, *31st July*

MANCHESTER LETTER

AT the half-way stage in 1961, overseas trade in cotton goods was dominated by the unprecedented arrivals of foreign cloth which had entered British ports in the first quarter of the year. During the subsequent twelve months, as is well known, there has been a substantial reduction in purchases from abroad owing to the very depressed state of the industry and the difficulty in disposing of goods through the normal distributive channels.

These trends are fully illustrated in the returns now available for the first half of the current year, during which there has been no sharp alteration in the movement of supplies either in or out of this country. The figures for the past three quarters, in fact, are relatively stable, showing, in the case of cotton cloth, imports running at rather more than twice the comparable rate of exports. The table at the end gives the current situation, with corresponding figures going back as far as the post-war shipment peak.

Foreign Trade in Textiles

(Cloth in thousand sq. yards; yarn in thousand lbs.)

	Cotton cloth		Rayon, etc., cloth		Cotton yarn	
	Exports	Imports	Exports	Imports	Exports	Imports
1949 ..	903,578	348,800	160,708	51,600	82,061	1,960
1953 ..	709,905	98,640	176,826	44,400	41,920	3,360
1958 ..	384,078	386,763	84,404	47,171	26,797	14,637
1959 ..	347,637	537,145	63,725	37,764	22,921	21,512
1960 ..	327,090	727,707	54,355	58,419	21,113	38,648
1961 ..	286,660	731,026	48,894	69,825	14,658	43,723
1961						
1st quarter.	82,201	225,297	13,019	18,137	4,606	11,781
2nd quarter.	72,507	195,616	12,713	16,405	4,273	11,684
3rd quarter.	65,949	167,295	11,271	15,960	2,709	10,355
4th quarter.	66,003	142,818	11,891	19,323	3,070	9,903
1962						
1st quarter.	64,977	147,194	12,279	20,172	3,536	9,748
2nd quarter.	58,417	140,710	14,332	15,520	4,163	7,297

Total arrivals of foreign cloth during the first half of this year were 133 million yards smaller than in the same period of 1961, but the vast majority of this reduction was accounted for by lower imports of grey cloth, which fell by 120 million yards. Accordingly, the supplies of finished goods reaching this country were not very much smaller than twelve months previously.

Within the grey cloth import total, arrivals from India were reduced by 30 million yards at 80,504,000 yards and Hong Kong provided 36,897,000 yards, a fall of nearly 12 million yards. On the other hand, arrivals from Pakistan increased from 10,035,000 yards to 17,555,000 yards. Outside the Commonwealth, grey cloth imports from Japan were sharply cut to below 12 million yards, as against 35 million yards, while undesignated foreign countries sent barely 37 million yards, as against 94 million yards in the first half of last year.

Import Costs Cut

The cost of all imports of cotton yarns and manufactured goods this year has been cut by a quarter, the half-yearly total being £29,231,117, as against £40,300,076 in 1961. The value of imports of man-made fibre goods, however, has increased slightly from £7,534,694 to £8,409,012.

Meanwhile, the fall in both earnings and volume of exports of cotton goods has continued and no real improvement can be predicted. In the half-year, the value of exports was reduced from £30,855,272 to £24,685,006. Cotton yarn shipments fell from 8,879,208 lbs. to 7,698,880 lbs. and cloth exports were cut by a further 20 million yards from 154,708,000 yards to 123,394,000 yards.

On the Credit Side

Exporters of man-made fibre cloth managed to retain their markets by shipping 26,611,000 yards, as against 25,732,000 yards in the same period last year, but, on the credit side, a sharp gain was recorded in business in man-made fibre yarns with foreign outlets. Shipments in the half-year reached 34,226,000 lbs., as against 25,135,000 lbs. in 1961.

The most encouraging feature of this trade in man-made fibre yarns is the wide range of markets to which supplies have been sent. Among the countries which have absorbed more than 1,000,000 lbs. during the half-year are India, Australia, the Irish Republic, Sweden, Norway, Poland, Switzerland, South Africa, Syria and China.

In contrast, the limited range of outlets for cotton cloth is a disturbing factor. In the six months, only Australia, South Africa and Rhodesia and Nyasaland have taken more than 10 million yards of fabric shipped from Lancashire. In cotton yarn, only Australia and Canada have imported more than 1,000,000 lbs. from this country.

Four Mills to Close

One of the biggest mill closure operations outside the Government-sponsored cotton reorganisation scheme has been announced by the Lancashire Cotton Corporation, the giant spinning combine. In a brief statement from its Manchester headquarters, the Corporation, which owns more than 50 mills, said that four of them, affecting about 700 workers, will cease production "as soon as their present order book commitments have been provided for." The mills concerned are the Argyll, at Failsworth, Manchester; the Durban, at Hollinwood, Oldham; the Pilot, at Bury and the Welkin, at Woodley, Stockport. "Every effort will be made to absorb the displaced operatives into other units of the group," said a spokesman for the Corporation.

Difficult trading conditions in the cotton industry have resulted in more than a score of mills closing their doors since the beginning of the year—an average of nearly one a week. When the huge scrapping scheme was carried out early in 1960, half the machinery was broken up and upwards of 300 mills shut down.

The Corporation plans to concentrate its output in its own "little scrapping" scheme. The official statement disclosing the policy said: "Production will be concentrated into other units of the group engaged on similar yarns where re-equipment has reached a more advanced stage and where plans are in hand for a greater degree of shift working. Overall production should not therefore be affected."

Trade union leaders were shaken by the closure announcement. Mr. James Milhench, Secretary of the 120,000-strong United Textile Factory Workers' Association, said: "This is the biggest batch of sackings since the start of the industry's reorganisation scheme three years ago. Everything we told the Prime Minister recently about insecurity in the industry is borne out by this decision. People are getting out while the going is still good." He added: "There are bound to be more closures."

The Cotton Board in Manchester said: "This is really in line with the general policy of the reorganisation scheme which is designed to produce the same output from less capacity."

Mr. John McCann, leader of the militant Textile Action Group, which organised two "Save Cotton" marches to London, commented: "This proves to the people who took a jaundiced view of our campaign that we weren't shouting for nothing. Sooner or later this absorption will reach the limit, then there will be big unemployment."

New Methods to Ease Import Burden

A hint that Lancashire cotton men may now try to put renewed pressure on the merchanting section of the trade to stem the flow of cheap textile imports, was given by Sir Alfred Roberts, General Secretary of the 38,000-strong National Association of Cardroom Workers. Writing in his quarterly report, he said: "Now that we have had this last rebuff in Parliament, we must turn our attention to other methods of safeguarding the livelihood of our members and it may well be that a much closer examination of buying will provide means of further action and be more rewarding than our efforts to prevent selling have been."

Although imports were running at a lower figure than in 1961, this was undoubtedly because of a saturated market and the present recession. The probability was that, when trade began to improve, imports would get the benefit of a revival rather than Lancashire "unless we can find some means of persuading merchants otherwise."

Sir Alfred said that Hong Kong manufacturers, who had apparently found "a soft market" in this country because they had unrestricted entry with low-wage costs, had been able to sell because some merchants were willing to buy and make larger profits. In a bitter attack on the Board of Trade—which he suggested should be re-named the Board for the Restriction of the Cotton Trade—Sir Alfred said that they did not believe that the recent offer to maintain textile import ceilings came from Hong Kong, and added: "In our view, the initial proposal to do so came from the Board of Trade, who seem to have a tender regard for the well-being of the mainly Chinese industrialists in Hong Kong and a callous disregard for that of their countrymen and women in Lancashire."—*All Rights Reserved.*

TRENDS IN SUGAR INDUSTRY AND TRADE

OBSERVATIONS OF MR. S. K. PATIL AND I.S.M.A. PRESIDENT

SOME stray remarks on the sugar situation in India were made by Mr. S. K. Patil, Union Minister for Food and Agriculture, at a Press conference at Delhi last week-end. Mr. Patil claimed that the conditions in sugar industry and trade would be "normal" in a year or two. In support of this claim, he pointed to the bright outlook for exports, decline in unsold stocks with mills, regulation of sugar output, expected reduction in the cost of manufacture following the new sugarcane price policy, under which the cane price is linked to sucrose-content, and fall in the retail prices of sugar. Lest this journal should be mistaken for not reporting Mr. Patil's observations correctly, we quote below, *in extenso*, the report as it has appeared in the daily Press:

"Things have brightened up on the export (sugar) side. About 350,000 tons have already been exported recently. India will have an exportable surplus of 500,000 tons. The Government has already concluded a deal for the export of 300,000 tons annually to Canada and Japan. And it would be quite easy to contract for the export of the balance of 200,000 tons. India hopes to have new markets for sugar. The U.K. is likely to evince interest in Indian sugar.

"The output of sugar mills has been reduced from 3,000,000 tons to 2,700,000 tons. The excess acreage under sugarcane has gone back to other crops and no new production restrictions will be imposed. The surplus stock of sugar has dwindled from 1,200,000 tons at the beginning of the year to less than 900,000 tons at present.

"I expect the price of sugar to fall by about one rupee per maund, assuming that there will be no increase in excise duty. The linking of cane prices to sucrose-content will result in a reduction in the cost of (sugar) production, and the Government proposes to pass on the benefit to consumers.

"The average price of cane will roughly work out to Re. 1.62 per maund in Maharashtra, Gujarat, Madras, Andhra and West Bengal. In other words, the revised prices will benefit growers in these areas. In Uttar Pradesh, on the other hand, growers will suffer a loss, since the average price here will work out at Re. 1.57 per maund. In Assam and Kerala, the price will be much less than in Uttar Pradesh (in the neighbourhood of Re. 1.50 per maund). In these areas, sugar mills will have to pay less for cane than in the past and, to this extent, the cost of production will go down.

"The Government will be able to bring about a reduction in the retail price of sugar by regulating releases from mills."

No Cut in Excise Duty

An important conclusion emerges from the aforesaid remarks of Mr. Patil. It is that the Government of India is not at all contemplating to reduce the high excise duty of Rs. 10.70 per maund on sugar; it proposes merely to pass on to consumers the benefit (?) of the reduction in the production cost of sugar following the linking of cane price to sugar recovery. The Government's persistent refusal to lower the excise duty is deplorable. Apart from the fact that the heavy incidence of taxation, which accounts for a third of the consumer price of sugar, is acting as a drag on consumption, the high excise duty has generated an economic disparity between the different users of cane—vacuum pan factories, on the one side, and *gur* and *khandsari* manufacturers, on the other. This aspect was impressively brought out by Mr. D. D. Puri, the retiring President of the Indian Sugar Mills Association (I.S.M.A.), in his speech at the twenty-ninth annual meeting of the Association held at New Delhi on Wednesday this week. Mr. Puri would have no objection to a high level of excise duty, if it did not undermine the stability of sugar industry, affecting everyone concerned, including the cane growers. But he reminded the audience that a major factor contributing to the instability, that is, the swing between shortages and surpluses of sugar, was the Government's inflexibility in regard to its tax on consumption. Elucidating this point of view, he observed:

"About one-third of the cane grown in the country finds its way to the vacuum pan sugar factory. The rest goes into the manufacture of *gur* and *khandsari*. There is no duty on *gur*. The duty on *khandsari* is nominal. Vacuum pan sugar alone bears this heavy burden. Whenever there is shortage of cane, the factories are unable to pay the price that *khandsari* and *gur* manufacturers can. In times like these, cane which is normally supplied to factories, is diverted to *gur* and *khandsari* manufacture. This is a national loss, for the factory is able to extract between 33 and 50 per cent more than the *gur* and *khandsari* manufacturer is able to. And it leads to idling of capacity, on the one hand, and an overall loss of sugar, on the other.... The phenomena act most acutely when there is a shortage and aggravate this shortage. This situation leads to control and control, in its turn, inhibits production. Sugar has swung between regularly recurring cycles of shortage, control, decontrol, glut and control again. In the three seasons ending 1955-56, we imported 13.17 lakh tons sugar and later had over a million tons to export. No one can look back with satisfaction on these violent fluctuations or on this almost perpetual state of crisis with which the sugar industry has lived over the last 15 or 20 years. Even at this time when stocks in hand stand at an all-time high figure, there is uncertainty in the air."

The above extract admirably sums up the position that has been obtaining in the Indian sugar economy for the last decade or two. And there is no exaggeration whatever in the note of warning struck by Mr. Puri that, if the present disparity perpetuates itself, the sugar industry will never be able to get out of regularly recurring cycles of surplus and shortage, for, while the vagaries of weather are bad enough by themselves, the man-made disparity created by high excise duty aggravates these vagaries, resulting in a perpetual state of instability, almost of crisis. Mr. Puri minced no words when he declared: "Pray do not imagine our sugar export programme can remain immune from these crises. Excise duty has to be reduced drastically. This Gordian knot has to be cut. No cheaper solution is available."

Three Basic Facts

As was only to be expected, the I.S.M.A. President dilated at some length on the sugarcane price aspect. He prefaced his reference to this subject by drawing attention to the disquieting consequence of the excessively high price of cane (Re. 1.62 per maund, as against Re. 1.44 prevailing in 1959-60). Within two years after the increase, he said, the area under cane registered a rise of 20 per cent in the Northern zone alone. The President warned that the rapidly expanding area under cane will, unless checked, lead to disaster. It was in the context of cane price that he stated the three basic facts of life in the sugar economy. They are:

"One, sugar is produced in the field; the factory only processes it. If India is one of the highest cost sugar producers in the world, the causes and the cures will have to be sought in the field.

"Two, when cane is sold, it is the sugar in cane that is or should be paid for. The rest is trash, literally and metaphorically.

"And three, the grower has to be helped into a correct concept of the common objective and provided with the wherewithal to achieve it."

New Cane Price Formula

In the light of these observations, Mr. Puri welcomed the recent decision of the Government to fix Re. 1.50 per maund as the minimum price of cane upto a recovery of 9 per cent and increasing it by a figure corresponding to the rise in recovery. He, however, suggested an improvement: a mechanism could be built into the scheme whereby factories should be enabled to pay a higher than minimum price for cane, at a time when competition from *gur* is particularly fierce, and adjust this additional payment later on without in any way deviating from the average minimum price payable to the growers. On behalf of the industry, he held out the assurance that the industry "is prepared to give it (the new policy) a fair trial so as to be able to make constructive suggestions after working it for one season." Mr. Puri would have done better if he had urged the fixation of the minimum price at a much lower level, retaining the present minimum as the maximum to be paid for cane with the highest sucrose-content, say, 11 per cent, if not 12 per cent. His silence on this issue gives one the impression that the scheme as devised now is wholly acceptable to the industry, even though it marks a fundamental departure from the industry's original suggestions.

Moreover, it has to be stressed that the policy of linking cane price to recovery alone will not lead to any significant improvement in the productivity of cane lands. What is equally wanted is more energetic action on the part of the State Governments in the sphere of cane development. Mr. Puri certainly did not flog a dead horse when he alluded to the "tragic fact" of these Governments continuing to spend a large part of the proceeds from cane cess for purposes other than cane development. "The most important single factor that can put sugar production on a sound footing," to quote him, "is the utilisation of cane cess for cane development. The biggest beneficiary, if this ever happens, will be the cane grower." It is gratifying to learn from Mr. Puri that the Punjab Government has already announced that the entire cane cess would be spent on cane development in the State. Details of the manner in which it will be spent are not available. They are even more important than the acceptance of the principle. The amount collected by way of cane cess is so large that the term is a misnomer. It is literally an excise duty. Anyway, this large amount can be spent not only on sugarcane research but on a variety of schemes designed to raise the output of more sugar per acre. Uttar Pradesh and Bihar, for instance, can use a part of the cane cess proceeds for providing better irrigation (even by tube-wells, if need be) facilities in those areas where they are not available now. Land development may be another useful avenue for spending cane cess.

Sugar Exports

A detailed reference was also made by Mr. Puri to the question of sugar exports. Making it clear that the stage of ifs, buts, and whethers has passed and that an all-out effort should be made to promote exports, he urged the removal of procedural difficulties, etc., in the refund of cane cess on sugar exported abroad. Mr. Puri also made special mention of the need for raw sugar manufacture for export. He said:

"It is not for me to dwell upon the ethics of sugar economies all over the world. We have to recognise the fact that a large part of the sugar that sells abroad is in the raw state. As more and more countries establish refineries, the raw market is expanding at the cost of white. The seller has no choice. He has to produce what the buyer wants.... It is clear that, with the exacting specifications demanded by some of the importers, the switch-over is not an easy matter. Apart from production, there are the problems of storage, handling and deterioration in transit. Nevertheless, I am confident that, with co-operation and understanding at the hands of Government, the industry will and it must make an all-out effort to produce two lakh tons of raw sugar in the next season. Personally, I have no doubts whatsoever that the target will be achieved and valuable experience gained for expanding this production in later years."

Since the question of raw sugar manufacture has been dealt with extensively only recently—in our issues dated 21st and 28th July 1962—it is unnecessary to refer to it again. Suffice it to say, once again, that, inasmuch as the net saving that can be achieved in raw sugar production in the case of factories having a high recovery per cent of sugar is negligible, it would be better if the scheme were confined only to mills having low recovery of white sugar, instead of being compulsorily enforced on all the mills.

SUGAR PRODUCTION AND STOCKS

Sugar production in India during the month of June 1962 was 41,370 metric tons, as against 43,000 tons in the same month last year. Total production for the season 1961-62 upto 30th June 1962 amounted to 2,710,000 tons (including 56,000 tons produced prior to November 1961 for the current season), as against 2,997,000 tons in the corresponding period last season (including 55,000 tons produced prior to November 1960).

The offtake of sugar from factories during the month of June was 243,000 tons (including 40,000 tons despatched for exports), as against 184,000 tons (11,000 tons for exports), the total despatches upto 30th June 1962 being 1,771,000 tons (173,000 metric tons for exports), as against 1,446,000 metric tons (109,000 tons for exports) in the same period last season.

The total closing stocks of sugar with the factories as on 30th June 1962 was 2,084,000 tons, as against 2,099,000 tons on the same date last season.

SUGAR EXPORT TO CANADA

The State Trading Corporation has concluded an agreement for the sale of approximately 100,000 tons of Indian crystal sugar to Canada next year (1963). Half of the sale proceeds will be utilised by the Corporation to import from Canada items such as newsprint, wood-pulp and fertilisers at international prices. The balance will be earned in cash in foreign exchange.

The agreement has been concluded on the normal Commonwealth contract terms with the average London daily price as the basis. The sugar will be supplied to the refineries in Canada. This arrangement is expected to put the sales of Indian sugar in Canada on a steady and scientific basis.

The thumping of giant presses, the whine of the whirling lathe, the beat of the punch press, the rumble of the conveyor... metal and machines rolling smoothly, producing rapidly, satisfying India's industrial needs, fulfilling the nation's dynamic urge for economic progress... and behind it all, the tiny but indispensable tool, an exclusive JOHN BAKER precision product.

INDIAN TEA EXPORTS TO U.S. AND CANADA

FINDINGS OF THE DELEGATION

THE report of the Indian Tea Delegation to the U.S. and Canada is brief but to the point and quite valuable. In less than 32 pages of bold print, it contains the findings of the study of two markets by a competent delegation comprising one official and three experts on tea, namely, Mr. A. S. Bam (Chairman, Tea Board), who was the leader, Mr. N. S. Coldwell and Mr. C. V. Subbu, both planters from South India, and Mr. V. V. Parekh, a Director of a number of tea companies in North India. It is also an authentic document, in that it is based on the discussions which the delegation had with a cross-section of the tea trade and packing industry in the U.S. and Canada, as well as with the Tea Councils of the two countries, the Indian High Commissioner in Canada and other commercial officers at Ottawa, Indian Consuls-General and other officers at New York and San Francisco. The value of the report lies in the fact that it gives one a clear picture of the latest trends of the market for tea in the two countries, highlights some of the handicaps in the way of boosting exports of Indian tea, and makes suggestions for improvement. It is to be hoped that the findings of the Delegation will merit the attention they deserve at the hands of not only the Indian tea interests (that is, both producer and exporters) but also the Government of India.

The Tea Delegation's report is, indeed, quite timely, in the present context of the supreme urgency of stepping up India's exports. Tea, as is well known, is the second largest earner of foreign exchange preceded by jute goods; actually, it held the first place before 1960-61. The value of tea exported in the financial year 1961-62 was over Rs. 122 crores, representing almost one-fifth of the aggregate exports (Rs. 657 crores) of all commodities. It is true that the combined share of the U.S. and Canada in the total tea exports from India (about 440 million lbs. annually) is a bare 8 per cent or approximately 36 million lbs., but the prospects of raising this share are good, provided India launches a more vigorous export promotion drive. This proviso is important, as there is a danger of the existing share itself being reduced further and further as years roll by, thanks to the keen competition from other tea producing countries and other beverages. The percentage share of Indian tea in the total imports into the U.S. and Canada has already gone down markedly: from 40.0 in 1951 to 25.8 in 1961 in the case of the U.S. (it was lower still at 20.7 in 1960) and from 49.2 to 35.4 in respect of Canada. Table A shows at a glance how India's tea exports to the U.S.A. and Canada have fared *vis-a-vis* those from the other supplying countries in the past decade, while Table B indicates the trend of *per capita* tea consumption in the two countries.

A glance at Table B will show that, as compared with 1950, imports of tea into the U.S. have actually fallen, despite the 22 per cent increase in population, that is, from 150 to 183 million. The net addition to the U.S. population during this period is equal to 52 per cent of Britain's total population of some 53 million which consumes about 500 million lbs. of tea in a year.

Peculiarities of U.S. Tea Market

In assessing the outlook for Indian tea exports to the U.S. and Canada, it is necessary to bear in mind certain peculiarities in these two tea markets. The Tea Delegation has done well to pinpoint them lucidly. Briefly summed up, the peculiarities of the U.S. market are as follows:

1. The U.S. is essentially a coffee-drinking nation, with annual imports aggregating 2,300 million lbs., as compared with the imports of 108 million lbs. of tea.

2. The influence of tea importers is tending to diminish, with the packers resorting more and more to direct purchases largely from the countries of origin.

3. The share of tea bags has increased considerably in recent years (70 per cent of total), while sales of packaged tea are on the decline (24 per cent of the total) except in the South. Instant tea (6 per cent of the total) is also fast gaining in popularity, owing to convenience of preparation and labour-time saving factors. Instant tea is considered by some as a new drink and as such should assist towards increased sales of tea without any shift from the tea bag or package sales.

4. The increase in the use of tea bag has resulted in the housewife not being able to see the leaf which possibly may have led to the packing of lower standard teas. Such teas, because of price considerations, have been imported largely from countries other than India over the past few years. This naturally has had an adverse effect on India's exports to the U.S., though most packers find it necessary to use a proportion of Assam C.T.Cs in their blends.

5. Lower-priced teas, which form the bulk of U.S. packers' requirements, are obtained mostly from Ceylon, East Africa, Formosa, Indonesia and even Argentina. This trend is very likely to continue, so long as equivalent Indian teas are more expensive.

6. The majority of large packers now produce of market instant tea. Because of the future potential of this line, large sums of money are being spent on research so as to improve the quality of instant tea. The present standard of instant blends available in this country (and methods of preparation and serving especially in restaurants) are not considered to be satisfactory and research, therefore, assumes great importance in an endeavour to produce a more palatable beverage and thus promote larger sales.

7. Advertising is vitally necessary in the marketing structure of the U.S. and large sums of money are spent by all packers in promotion of their brand names through media advertising, point of sale material, publicity and public relations, etc. The expenditure on this account amounts to roughly 25 per cent of the annual budget of each company.

8. Of the retail price of tea in the U.S., the value of tea as such, we are told, accounts for only one-third, the balance representing the costs of packaging, marketing and administration (one-third) and advertising and sales promotion (one-third).

It is thus obvious that Indian tea has to be highly competitive. Emphasising this point, the Delegation says in its report:

"The large number of packers, importers and traders that the Delegation had the opportunity of meeting more or less unanimously pointed out that it was the unfavourable price factor which stood in the way of improved Indian exports to this market. While Indian quality teas were being purchased up to a certain degree at a premium to tone up the standard of the blend, this amounted to but a small percentage of the total purchases, and the bulk of the cheaper descriptions was often available at considerably lower rates from other producing area. The seasonal aspect of North Indian production also was slightly to the detriment of India, as regular supplies throughout the year were not available, which was not the case with Ceylon. They feared that, if Indian prices were to continue to be higher than those of other countries for equivalent teas, it was quite possible that India would lose still further ground."

The Delegation's inquiry about the possibility of holding auctions in the U.S. revealed that this would not be to the advantage of the producing countries, inasmuch as they would be completely at the mercy of the local buyers. It, therefore, seemed pointless to ship teas to the U.S. market on a consignment basis. The tea trade did not believe that introduction of auctions in this market would in any way assist the promotion of Indian tea.

Canada

As regards Canada, the Tea Delegation has drawn attention to the following trends:

Though the population of Canada has gone up considerably since the war, tea consumption has remained more or less static. This has been primarily due to the fact that a large proportion of the immigrants into Canada came from countries in Europe which are coffee-drinking.

Additionally, the switch to the tea bag, which now constitutes about 73 per cent of the total consumption, has had an adverse effect on the quantity of tea consumed. Although, as in the U.S.A., more liquid tea is now being drunk in Canada than before, consumption of packaged tea amounted to 26.5 per cent of the total, and the balance of 5 per cent is in instant tea.

Instant tea has not made much headway in Canada primarily because Canada, unlike the U.S.A., is essentially a hot tea-drinking nation. It is unlikely that iced tea will gain in Canada largely for climatic reasons.

The packers in Canada obtain their supplies in the same manner as packers in the U.S.A., although in comparison to the U.S.A. a rather greater proportion of the supplies was obtained through re-exports from the United Kingdom. Some of the Canadian packers also obtain supplies through their offices in New York which control purchase.

Although (as in the U.S.A.) most of the packers use some *quality* Indian teas, here again the proportion is relatively small. However, quite a number of packers use Indian teas particularly in the Maritimes. Nevertheless, because of the high prices of Indian *mediums* and low *mediums*, buyers have been looking elsewhere for their supplies of these types. Obviously, India's position has been sharply affected because of the advent of the economy pack or, as it is called, the private label, which is marketed at less than two-thirds the price of the standard pack. If, as is anticipated, the demand for private label pack continues to increase, it is feared that the imports of Indian tea into Canada may continue to decline.

Prospects for Indian Tea

It is against the background of the aforesaid market situation in the U.S. and Canada that the Bam Delegation has assessed the prospects for Indian teas in these markets. The Delegation does admit that quality teas (for which adequate substitutes from other producing countries are not available) have enjoyed a good demand and will continue to do so regardless of price consideration, but points out that such teas form only a small proportion of the total requirements. The types greatly in demand are common and low medium teas. The Delegation has drawn attention to the substantial ground India has lost in this sphere in favour of other producing countries, owing to the comparatively high prices. May be, prices of these types of tea may decline as production increases in India. It would, however, not be desirable to rely solely on higher production and what is wanted is, as the Delegation has rightly stressed, positive action to meet the situation. It is in this connection that the Delegation has urged a reduction or complete abolition of export duty which "would," to quote it, "be a step in the right direction and should help create a very favourable psychological atmosphere for Indian teas. There is no doubt in the minds of many American importers that the export duty is inconsistent with India's desire to increase its exports and is responsible for the high prices

(Continued on page 249)

TABLE A: *Tea Exports to U.S.A. and Canada*

(In thousand kg.)

From	To U.S.A.				To Canada			
	1961	1960	1959	1951	1961	1960	1959	1951
India	9,719	8,585	10,556	13,670	6,433	6,892	7,233	8,854
Pakistan	43	8	42	478	22	28	34	214

TABLE B: *U.S. and Canada—Population and Tea Imports*

	1961	1960	1959	1958	1957	1956	1950	1940
U.S.A.—								
Population (millions)	183.60	180.67	177.10	174.78	174.00	168.09	150.70	131.67
Tea Imports (million lbs)	109.34	118.24	109.68	103.42	102.23	100.52	114.59	98.96
Per capita consumption (in lbs) ..	0.59	0.65	0.61	0.59	0.58	0.59	0.76	0.75
Canada—:								
Population (millions)	18.20	17.81	17.04	17.05	16.50	15.97	13.71	11.68
Tea Imports (million lbs)	44.90	42.86	44.66	43.69	45.92	45.62	54.88	42.09
Per capita consumption (lbs) ..	2.41	2.40	2.62	2.56	2.76	2.85	4.00	3.60

Note: It may be noted that the average per capita (annual) consumption of tea in the U.S.A. was as high as 1.016 lb. during the years 1916-20.

REFINING PETROLEUM CRUDE

MAXIMISATION OF THROUGHPUT DIFFERENT FROM EXPANSION

THE recent decision of the Government of India to allow, with effect from 1st July 1962, the Burmah-Shell and Esso Refineries to increase their throughputs *provisionally*, that is, pending a mutually satisfactory revision of the refinery agreements of 1951-52 by 30th September 1962, has been welcomed on the ground that it would lead to a valuable saving in foreign exchange expenditure on imported petroleum products. Thanks to this decision, the Burmah-Shell Refinery is now in a position to refine at the rate of 3.5 million tonnes of crude per annum (as against 2.9 million tonnes in 1961) and the Esso Refinery at the rate of 2.4 million tonnes (as against 2.0 million tonnes in 1961), respectively. In the present critical energy situation in the country, this is a boon to consumers of petroleum products. It is also a relief to the two refineries, in that it will enable them to attain the optimum throughput levels rendered possible by flexible operations and technical improvements and modifications. In short, such maximisation of throughput is a reward for technical enterprise and innovation, for which the Refineries can justly claim credit.

The allegation made in some quarters that the two Refineries had created, at the very beginning, *higher* "inbuilt" capacities than the permitted ones or that they had expanded them subsequently without the knowledge of the Government has to be examined in the light of some technical facts pertaining to the types of crude oil and the refining processes. Let us, for instance, take the case of the Burmah-Shell Refinery. The crude distillation unit of this refinery was designed to process not less than 6,000 tonnes per day of *normal Middle East* crudes or 2.13 million tonnes per annum. But its throughput now is 3.5 million tonnes per annum. No additional distillation unit and other facilities, involving material capital expansion, have been established, but yet the Refinery's actual throughput has been maximised much beyond its original capacity. How has this "miracle" taken place?

A Gradual Process

It is not so much a miracle as a gradual process of "maximisation of throughput," achieved over the last seven years at a negligible total cost. In 1955, when the Burmah-Shell Refinery commenced its operations, the crude intake was 1.8 million tonnes. It rose to 2.3 million tonnes in 1957, 2.5 million tonnes in 1959 and 2.9 million tonnes in 1961. This gradual but substantial increase in throughput year after year has been rendered possible (i) by the kind of "flexible" plant with which the Refinery had started and by the choice of different types of crude oil which could not only provide different product patterns according to demand but also make maximum use of the plant available, and (ii) by minor technical modifications whenever bottlenecks in processing have been revealed in practice.

The first method has consisted in different proportions of crude being used in different years in the flexible plant of the Refinery. For instance, in 1955, the proportion of Iranian crude was 42½ per cent, that of Kuwait crude 30½ per cent, and that of Qatar crude 27 per cent. In 1957, the proportion of Iranian crude was 55 per cent and that of Kuwait crude 45 per cent In 1959, Iranian crude represented 74 per cent and Kuwait crude 26 per cent. In 1961, it was 100 per cent Iranian crude. Currently, in 1962, it is 90 per cent Iranian crude and 10 per cent Ankleshwar crude. It may be noted here that the maximisation of throughput of a refinery depends on the type of crude oil available to it. In fact, a refinery is usually designed to process a particular type of crude and with reference to a particular pattern of product yield which is required by the market. Changes in either the crude or the product yield desired would mean alteration of output. For example, the Burmah-Shell Refinery, which has been designed to process Middle East crudes, would have to lower its total throughput if it were to include more than the optimum proportion of a totally different type of crude oil, say, the Ankleshwar type. Ankleshwar crude oil yields a lower residual content, as its residual content is lower than that of Middle East crudes; this means the under-utilisation of the pipes, pumps and columns handling residue. But the position is different with the motor spirit content; Ankleshwar has a larger motor spirit fraction which would be in excess of the capacity of the gasoline columns. Consequently, intake of a high proportion of this type of crude would mean a reduction in the maximum capacity of the Refinery for this particular mixture. However, the impact of this will not be too great as the proportion of Ankleshwar crude in the total throughput of the Refinery is expected to be only around 10 per cent.

Middle Distillates

That the different combinations of crude in different years have actually led to the maximisation of middle distillates in accordance with the changing pattern of demand will be seen from the following table:

Percentages by Weight

	1955	1957	1959	1961	*(Possible current and future product yield pattern)*
Burshane	..	0.07	0.17	0.3	0.4
Motor spirit	22.0	19.5	14.0	13.6	10.6
Motor spirit for export ..	..	..	0.7	1.7	4.8
Light naphtha	..	..	..	..	0.5
Kerosine	14.7	13.6	15.3	18.8	21.6
H. S. D.	10.8	14.2	19.2	19.5	17.0
J. B. O.	..	..	..	1.3	1.5
L. D. O.	5.0	5.1	5.5	6.0	6.0
Fuel oil	29.4	33.8	29.2	24.9	23.9
Bitumen/Cutbacks ..	4.3	7.2	10.2	10.0	8.1

Secondly, the technicians of the Refinery have constantly endeavoured, by a process of trial and error, to determine the various bottlenecks in the different units, so that these can be removed as and when additional capacity in the different sections is required. This process of "debottlenecking" has rendered possible a higher throughput than was originally envisaged. The various "simultaneous and subsequent" processes, all based on chemical engineering principles, have been adapted perfectly to variations, thereby maximising throughput. Higher throughputs in the individual sections of the plant have also resulted from technological investigation and minor material modifications to the plants and accessories. Minor additions to equipment have included the addition of tubes to furnaces and the transfer of various heat exchangers to more tactical services. Further, the standby facilities have also been put to the maximum productive use.

By these methods, the Burmah-Shell Refinery has been able to increase its crude intake capacity. Such a thing is quite common in the oil refining industry. The Government-owned refinery at Nunmati, for instance, has provision for an additional 10 per cent increase in capacity "without any cost." There is also the recent achievement of British Petroleum which has completed the expansion of processing capacity at its Aden refinery from 5.5 to 6.8 million tons a year purely "by modifications and minor additions to existing units, re-allocation of tankage and modifications and additions to pipelines," and not by the addition of any new processing plant. Processes like these call for time, experience, skill and continuous research. But the margin for further increases in crude intake capacity diminishes as each step is achieved, though the scope for a higher rate of capital productivity is certainly greater in a processing industry like oil refining than in many other manufacturing industries.

The technical facts given in the foregoing paragraphs should serve to meet the kind of uninformed criticism which has been made about the "creation" of additional capacity in the refineries. Nothing stealthy or mysterious seems to have taken place. The Government, it is reliably learned, was advised by the Burmah-Shell Refinery in January 1961 that it was capable of handling a throughput at the rate of 3.0 million tonnes a year. Again, in September 1961, the Refinery had advised the Government that it could manage 3.5 million tonnes a year. What is surprising is that the Government has taken ten months to give the sanction to the Refinery to increase the throughput to 3.5 million tonnes and, that too, provisionally for three months. Since the overall average saving of foreign exchange is about Rs. 3.25 crores *per million tons of crude* processed and the rate of saving is tending to increase, the Government would be well advised to make the "provisional" sanction permanent, whether or not a mutually satisfactory revision of the Refinery agreements is brought about in the next few months. Even if the current negotiations between the Government and the two Refineries fail by any chance, the Government should think twice before ordering reversion of throughputs to the 1960 levels to which they had been pegged before. To allow the two Refineries to operate permanently at their full capacity (nearly 6.0 million tonnes in all) would be to avoid annual imports of an additional 1.2 million tons of products, and import crude instead. The difference between the total cost of 1.2 million tons of products and that of equivalent crude imports would represent the saving in foreign exchange.

NICKEL IN "TELSTAR"

The world's first experimental communications satellite, "Telstar," which has been orbiting the earth since 10th July, contains nickel-cadmium batteries. The satellite, capable of amplifying ground signals 10 billion times, draws power for its electronic circuits directly from 19 rechargeable nickel-cadmium cells of the type used in flashlights, but specially designed with solid nickel cases for the space environment. They will be recharged by 3,600 solar cells on the skin of the satellite. The solar cell system will convert sunlight into electricity at the initial rate of about 15 watts when the satellite is on the sunny side of the earth. Whether the satellite is transmitting in full sunlight or in the earth's shadow, it is dependent on nickel-cadmium batteries for power. When in sunlight, half or more of its transmitting power must come from the batteries; while in the earth's shadow, all power must be drawn from the batteries.

The sintered plate type of nickel-cadmium battery is a scientific development perfected in recent years which makes use of a special high-purity, low-density, nickel powder. Noted for their mechanical ruggedness and long life, and unlike conventional storage batteries, nickel-cadmium batteries can be hermetically sealed to eliminate maintenance requirements and permit operation in the high vacuum of outer space. Apart from its role as an active electro-chemical material in the battery, nickel is used for the plates and cell cases, because it offers the corrosion resistance and mechanical and electrical properties required to provide maximum performance and durability.

COMMONWEALTH CABLE PROJECT

Six Commonwealth countries (the Federation of Malaya, the State of Singapore, Australia, New Zealand, Canada and Britain) have just reached an agreement on the capital contributions they will make to the cost of the £19-million South-East Asia section of the round-the-world Commonwealth telephone cable. It is envisaged that communications facilities under this project would be available to other countries also on suitable terms.

A management committee, on which each of the six Commonwealth countries concerned is to be represented, will be responsible for the rapid and efficient construction of the cable and for bringing it into service as an important part of the modern comprehensive Commonwealth cable system. Britain's representatives will be Col. D. Macmillan, of the General Post Office, and the Managing Director of Cable and Wireless Ltd., London. Cable and Wireless will be the owners of the British share, which will be approximately half.

It may be recalled here that the transatlantic section—called CANTAT, linking Britain and Canada—of the Commonwealth Cable was opened last December. Work has been proceeding on the trans-Pacific (COMPAC) section of the cable, with the Australia-New Zealand link just completed. As soon as COMPAC is completed, work on the South-East Asia section (SEACOM) will be taken up.

SEACOM, it is stated, will be capable of carrying 80 telephone calls simultaneously. A spur will connect the main Commonwealth cable at Jesselton, in North Borneo, with the Cable and Wireless Far Eastern centre in Hong Kong. The Singapore-Jesselton-Hong Kong section will be ready for service by about the middle of 1964, the part between Singapore and Jesselton being completed first.

FERRO-ALLOYS INDUSTRY

ITS IMPORTANCE—PLANS FOR DEVELOPMENT

By V. S. Swaminathan

IN our modern age of machines, steel spells power and progress. The nation that has the various raw materials from which steel and alloy steels can be made, as well as equipment for effecting their conversion into ploughshares or swords as the case may be, possesses the essentials for wielding power. It is not enough for a country to have iron ore, coking coal, refractories and fluxes. It must also possess, or have uninterrupted access to, or stockpile, a dozen or more key metals used in making tool, alloy or special steels or in providing corrosion-resistant coats to steel. Some of the ferro-alloying elements and the uses to which they are put follow.

From a strategic standpoint, the lack of a ton of manganese is just as bad as the lack of eighty tons of steel. Manganese is as vital for the production of steel in its finished form as yeast is for making bread. And every time new steel is made the manganese required must be forthcoming. Nearly 90 per cent of this mineral is consumed in the production of ordinary steels, special manganese steel or in foundry work.

Chrome ranks next only to manganese in regard to tonnage needed, and has important metallurgical, refractory and chemical applications. Chromium and its salts are vital for the production of stainless steel for naval construction, armour-plate, armour piercing projectiles, food manufacturing, petroleum processing and chemical plants, leather, dyeing military clothing, etc.

Compared to manganese or chromium, the amount of nickel needed is relatively small, but the qualities imparted by it to steel are such that it has acquired an importance out of all proportion to the quantity involved. Apart from an exceptionally wide range of industrial applications, the metal and its alloys are indispensable for armour-plates, gun forgings and as catalysts for accelerating a host of chemical reactions.

While manganese is used in the production of all steels, and chromium and nickel have found their way into a wide variety of ferrous and other alloys, the applications of tungsten are confined to a few types of special steel—high-speed tool steels and super-hard cutting tools which are of incalculable value in peace and war.

Molybdenum is a satisfactory partial substitute for tungsten, and is also valued in the construction of highly stressed parts of motor vehicles, aero-engines, drilling, pumping, oil refining and steam generating equipment.

Vanadium is a useful substitute for molybdenum in certain industrial applications, and is an indispensable catalyst in the manufacture of strong sulphuric acid (the life-blood of chemical industry) by the contact process.

Metal cutting and magnetic steels and all stellite alloys call for cobalt, which is also a versatile catalyst. Other significant ferro-alloying elements are titanium, tantalum, niobium, silicon and phosphorus.

Tin comes under a different category, however. Before steel stole its thunder, cannon made of bronze (an alloy of tin and copper) was in universal service. Today fighting forces carry their iron rations in tinned cans, and the tin opener is now to be found in most households. As bearing and type metals, tin alloys subserve the transport and printing industry.

A Symposium

Early in 1962, a symposium on "Ferro-alloy Industry in India" was held at the National Metallurgical Laboratory (N.M.L.), Jamshedpur. Its object was to focus attention on the latest technological and research developments in the field of ferro-alloy industry in India during the third Plan period with particular reference to domestic production. Based on the annual target of ten million tons of steel ingots envisaged for 1965-66, the iron and steel industry will demand requisite indigenous availability of ferro-alloys both in terms of quantity and range of quality.

The N.M.L. has embarked on some major research and development projects to study the availability of domestic ores for the production of diverse ferro-alloys to exact specifications and needs based on the application of the latest metallurgical techniques to yield economical production desiderata. A pilot smelting plant, with submerged electrode electric arc furnace with a capacity of producing one ton of ferro-alloy per day, has been installed at the N.M.L. to assess the customer's raw materials on contract basis for investigating their amenability to electro-thermal reduction, formulating smelting techniques *vis-a-vis* products aimed at, assessing electric power and electrode consumption, determining recovery yield data, etc. It is hoped that the technical data so obtained would result in an accurate appraisal of what could be expected on a large-scale industrial plant considering that indigenous resources for industrial production of certain types and qualities of ferro-chromium, ferro-titanium, ferro-vanadium, ferro-phosphorus are far from negligible.

The delegates (Indian and foreign) taking part in the symposium discussed the following five themes:

(1) The suitability of raw materials in terms of metallurgical quality, and reserves for the production of different grades of ferro-alloys in India.

(2) Beneficiation of raw materials for the indigenous ferro-alloy industry.

(3) Evaluation of electro-thermal, alumino-thermic, pyro-metallurgical techniques and other specific processes for the production of various types of ferro-alloys.

(4) Latest advances in the production, technology and utilisation of by-products obtained; standard specification for different grades of indigenous ferro-alloys based on corresponding specification of the raw materials needed.

(5) The present status of ferro-alloy industry in India, and future expansion plans during India's successive Five-year Plans in the general background of world production.

During and prior to the second Five-year Plan, the growth of the country's ferro-alloy industry has been slow and disproportionate in relation to the projected development in alloy, tool, special and stainless steel industry, and the production targets set forth in the Plans. The existing capacity is approximately 10,000 tons a year. For the manufacture of alloy steel castings and such steel alloys as do not need specialised rolling equipment, the capacity currently to hand is nearly 50,000 tons. It is therefore of basic importance to establish the industry covering the manufacture of as many types of ferro-alloys as possible to meet the multitude of indigenous requirements. India lacks an integrated industrial unit producing different ferro-alloys which have to be imported, except for the local output of ferro-silicon, ferro-manganese and sporadic production of some other ferro-alloys by the Tata Iron and Steel Company Ltd. (T.I.S.CO.).

Programme in Third Plan

The third Five-year Plan has set a production target of 200,000 tons of alloy, tool and special and stainless steels annually. This goal is proposed to be achieved by the output of 130,000 tons in the public sector, and the balance in the private sector. The demand for ferro-alloys can be gauged from their requirements from the alloy steel plant in the public sector being set up at Durgapur with an initial capacity of 80,000 tons. The ordnance factories of the Ministry of Defence are expected to function as a second source of supply, so that 85,000 tons of alloy and special steel can be obtained by 1965 from the public sector units at Durgapur and the ordnance factories. The rest of the output of alloy and special steels will come from the private sector, and the Government have granted licences for a further capacity of 120,000 tons, in addition to the 49,000 tons of finished alloy and tool steels already granted to T.I.S.CO. The anticipated demand of various categories of alloy, tool and special steels is reckoned to exceed 300,000 tons by 1965-66.

The Durgapur alloy and tool steel plant will account for an output of 48,000 tons a year. It has, however, a built-in capacity in certain primary units so that it could rapidly be expanded to 100,000 tons. This plant will incorporate some of the latest equipment and processes for the manufacture of these products developed recently in the West. It is proposed to install electric soaking pits in preference to gas-fired pits. The desirability of using sponge-iron instead of scrap as the starting raw material and of introducing continuous casting facilities is being kept in view in connection with further expansion of this plant. In the first phase of development, it is planned that the installation should draw supplies of pedigree scrap from the adjacent Durgapur Steel Works. Outlay on the project is estimated at Rs. 50 crores, of which Rs. 20 crores would be the foreign exchange component.

According to the latest available information, the Union Government have sanctioned eleven different projects for the manufacture of special and alloy steels with an estimated aggregate capacity of 185,200 tons a year. Of these, the three special alloy and tool steel projects, sponsored by T.I.S.CO., Mahindra and Mahindra Ltd. and All Steel Industries Corporation Ltd., stand out.

T.I.S.CO. has been granted a licence to set up a new undertaking at Jamshedpur for the manufacture of 49,000 tons of tool and alloy steels a year. The individual items comprise carbon tool steels 10,000 tons, direct hardening alloy steel 7,000 tons, case hardening steel 2,000 tons, high grade spring steel 2,000 tons, high-speed and tungsten tool-steel 3,000 tons, other quality alloy and high carbon steel 5,000 tons and stainless steel 20,000 tons. Mahindra and Mahindra Ltd. propose manufacturing alloy constructional steel and case hardening steels with a combined capacity of 15,000 tons. The All Steel Industries Corporation Ltd. visualise the manufacture of tool steels, 7,000 tons, constructional steels 12,500 tons, other alloy steels 17,600 tons and alloy steel castings 12,900 tons.

Based on the trends of demand, the requirements of alloy steels by the end of the fourth Plan are likely to be: free cutting steels, spring steels, etc. 150,000 tons, tool steel 70,000 tons, constructional steels 240,000 tons, stainless steels 70,000 tons, other high-grade alloy steels 10,000 tons and alloy steel castings 50,000 tons, making a total of 590,000 tons. While low-alloy steels are normally made in open-hearth furnaces and by Bessemer process, those with high alloy content are prepared in the electric furnace. The Central Government has decided to license capacity for special steels with the fourth Plan targets in view, as it generally takes more than three to five years for such plants to be installed and to achieve optimum production.

Experience of the U.S.

Now that the Indian ferro-alloy industry is in the throes of a vast expansion programme, it cannot fail to profit by the experience of its American counterpart. In 1961, the U.S. had over thirty producers of ferro-alloys, who supplied 1,900,000 gross tons, the three leaders in the field being the Union Carbide Metals Company, the Vanadium Corporation and the Pittsburgh Metallurgical Company. While the industry turns out over one hundred alloys, its three major products in terms of tonnage are ferro-manganese, ferro-silicon and ferro-chrome. Although the domestic steel industry is the principal market for ferro-alloys, automobile plants, iron foundries and aluminium fabricators use some 15 per cent of the industry's output.

Until World War I, most ferro-alloys used in the United States were imported. During that emergency, the U.S. Administration encouraged the growth of a domestic industry by permitting more rapid amortisation. The phenomenal progress of the automobile industry during the inter-war period, World War II, and the Korean War contributed greatly to the growth of the industry, which was also helped by the Government's policy of stockpiling strategic ores. The decline in domestic steel production following the strike of 1959 was a severe setback to the American ferro-alloy industry.

Instead of waiting for miracles to happen, the industry took prompt steps to put its house in order by trimming capacity and modernising the surviving units. The plants were located near deep water sites to reduce transport charges on imported ores. Other works were moved to areas of inexpensive thermal power, chiefly in the Ohio River basin, to bring down power costs. With a view to achieving economy in smelting, the industry designed furnaces which raised output by as much as 90 per cent while recovering a part of the scrap for re-use in the heating cycles. Automatic equipment mixes ores for feeding into the furnace. The Union Carbide has even put computers to work for analysing the many factors involved in making up a melt. Most American alloy producers still buy their ores abroad, and use their ingenuity to turn out superior finished products.

The biggest domestic market for ferro-chrome is stainless steel. The Union Carbide has designed a special vacuum furnace to turn out increasingly pure chromium under the trade name "Simplex." The latest product containing less than 0.01 per cent carbon impurities is said to be "revolutionising stainless steel technology." Other manufacturers are using pure manganese for a special form of stainless steel in place of nickel. Silicon is in growing demand for special electrical steels for the power generating industry. It is also finding increasing application in die-casting aluminium products.

The progressive firms are on the look out for new alloys that will withstand the rigours of the "space age." Already the steam generating industry has doubled its temperatures. The airline companies are talking of flying passengers at speeds of Mach 2 and even Mach 3. A space age furnace powered by a gun of electron beams, which generates very high temperatures, is on trial. In fine, by installing new and modern furnaces, by improving the quality of products, by cutting costs all down the line, by paying greater attention to customer services and by taking steps to meet the needs of tomorrow, the U.S. manufacturers of ferro-alloys have put the industry in good heart.

Standardisation

Realising the importance of developing the steel industry on right lines, the Indian Standards Institution took up in 1956 a programme of standardisation and rationalisation of carbon and alloy steels for use in India. The Technical Committee responsible for this work has brought out an Indian Standards Schedule for wrought steel for general engineering purposes which covers the following schedules:

Schedule I—Steels specified by tensile properties but without detailing chemical composition.

Schedule II—Carbon steels with specified chemical compositions and related mechanical properties.

Schedule IIA—Carbon steel wires with related mechanical properties.

Schedule III—Carbon and carbon-manganese free cutting steels with specified chemical properties.

Schedule IV—Alloy steels (other than stainless and heat resisting steels) with specified chemical composition and related mechanical properties.

Schedule V—High alloy steels—Indian Standards specifications for materials.

Only steels included in these schedules are expected to be produced in India in the future.

Notice

THE INDIAN IRON & STEEL COMPANY LIMITED

IT IS NOTIFIED THAT THE BOARD OF Directors of the Indian Iron and Steel Company Ltd., in meeting held on the 31st July 1962, have declared by way of interim dividend a first distribution of dividend in respect of the year ended 31st March 1962 of 80 nP gross per share on the Ordinary Share Capital, being at the rate of 8 per cent per annum. This action has been taken in view of the fact that closure of the Accounts for the year is unavoidably delayed pending notification by Government of the final sales retention prices of steel and iron to apply in respect of the two-year price fixation period ended the 31st March 1962. Payment of this dividend will be made under deduction of tax at the prescribed rates to those Shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 13th August 1962 or to their mandatees.

On closure of the Accounts the Directors will recommend the further and final distribution of dividend for the year on the Ordinary Share Capital for declaration by the Shareholders at the Annual General Meeting of the Company to be convened in due course. This further dividend, when declared, will be payable also to those registered as Shareholders on the 13th August 1962. In the meantime, in case of necessity, the Registrar of Companies, West Bengal, has granted an extension in the first instance of one and a half months from the 30th September 1962 of the last date for holding of the Annual General Meeting for the current year.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office:
12 MISSION ROW,
CALCUTTA.
31st July 1962.

INDIAN INSURANCE COMPANIES' ASSOCIATION

MR. P. U. PATEL SURVEYS CURRENT PROBLEMS

"INDIAN insurance is an integral part of the national economy and it is in the interests of the nation itself that our insurers should be helped to strengthen themselves," said Mr. P. U. Patel, Chairman of the Indian Insurance Companies' Association, in Bombay on 6th August, 1962.

Fire Premium Rates

Mr. Patel, who was addressing the thirty-fourth annual general meeting of the Association, discussed at some length the recent cut in the fire premium rates, coming on top of a similar reduction made 18 months ago. He disclosed that, as in the past, the present cut had been effected under official pressure and felt that the cut was bound to add to the Industry's difficulties. He stated that the continuous slashing of rates in the Fire Department would prevent Indian insurers from building up their reserves as fast as they would like to. "It is my fervent hope that we shall not be called upon to effect any further cut in our fire premium rates for years to come," he said.

Financial Guarantees

Proceeding, Mr. Patel referred to the practice adopted by some insurers of granting financial guarantees in favour of banks and other financial institutions with a view to acquiring a sort of "monopoly" control over the insurance business of new and old clients. This practice had prevented medium-sized and small insurers from having a fair and legitimate share in the fruits of the country's expanding economy. "It is my submission that it is no part of our business to furnish 'working' capital to the industries in general. The granting of a guarantee cover by an insurer, say, in favour of a bank in relation to somebody's overdraft account is certainly tantamount to providing 'working' capital in an indirect manner," he observed. Accordingly, Mr. Patel called for a healthy restraint on the part of insurers and the adoption of the motto of "live and let live."

While on this subject, Mr. Patel also referred to the practice of insurers participating in the capital structure of new industries. "While one does not question the right of any insurer to invest his funds in any manner he likes or on merits, it is certainly debatable whether it is fair for only a few insurers who are in possession of huge funds to try to create conditions of monopoly for themselves by this sort of financial tie-up," he said. His appeal to insurers was: "Invest your funds in any manner you like. But please desist from being aggressive. Leave the client free to select his own insurer."

After welcoming the growing demand for machinery-*cum*-erection insurance, Mr. Patel deplored the low and uneconomic rates being quoted nowadays for this type of cover. He believed that a stage had been reached where they should seriously think in terms of tariffing this business in the interests of all concerned. Indeed, he would go further and suggest that, to the extent it was practicable, they ought to tariff a major portion of their marine business.

Taxation of Reserves

Mr. Patel reiterated the plea made by his predecessors year after year for fiscal concession designed to build up reserves on a higher scale than allowed so far. He appealed to the Government to be realistic in this matter and permit insurers to accumulate tax-free reserves equal to 100 per cent in the fire and miscellaneous departments and 200 per cent in the marine department. He was convinced that the long-term gains from stronger insurance institutions would far outweigh any temporary loss to the exchequer through tax relief.

Latest Development

A development of far-reaching significance to general insurance, according to Mr. Patel, was the scheme adopted by the Executive Committee at its meeting held in Simla in May last. Under this scheme, the existing administrative machinery is to be considerably enlarged and it will be empowered to check all receipts and payments by insurers in relation to transactions taking place on and after 1st July 1962. Insurers controlling more than 80 to 85 per cent of the direct gross premium income in the country had already furnished or would shortly furnish an undertaking to implement the scheme. "Speaking for myself, I welcome this move and I am confident that it will go a long way in placing the industry on sound and healthy lines," he said. In this connection, he paid a well-deserved tribute to Mr. E. Kolet, Chairman of the Executive Committee of the General Insurance Council.

POLISH WAX FROM WOOL GREASE

Wool grease extracted from industrial effluent may become an important source of wax for floor, furniture and other polishes. Scientists who have been working on a project for three years at Leeds University, Yorkshire, claim to have developed ways of refining the wax from wool grease. They have shown that the grease, which is washed out of wool in the earliest stages of processing, can be substituted for traditional beeswax at much less cost. Beeswax costs about £500 a ton in Britain, but processed wool grease could sell at nearly half the price. Many products are already derived from wool grease. The best known is Lanolin, used mainly for cosmetics.

TATA ENGINEERING AND LOCOMOTIVE CO. LTD.

CHAIRMAN, MR. J. R. D. TATA'S ANNUAL STATEMENT

NEED FOR VIGOROUS DEVELOPMENT OF ROAD TRANSPORT STRESSED

MR. J. R. D. Tata, Chairman of Tata Engineering and Locomotive Company Ltd., has stressed, in his annual statement, circulated along with the seventeenth annual report of the Company covering the year ended 31st March 1962, the need for a vigorous development of the country's road transport system, which, together with an adequate and balanced production of commercial vehicles, would yield "immeasurable benefits to our entire national economy." Mr. Tata is not unaware of the "urgent need to improve and add" to the rail transport system, but has wondered whether our planners have sufficiently appreciated the special advantages and potentialities of road transport, for instance, a relatively quicker building of its capacity at a much lower cost than any other method of transportation as also its extreme flexibility and large employment potential. In this connection, he has regretted that road transport seems to have been specially selected for a cascade of impositions and taxes as well as innumerable restrictions and impediments in its intra-State and inter-State operations, in addition to the limitations imposed by the inadequacies, both in mileage and quality, of the system.

The following is the full text of Mr. Tata's statement:

"The Company's performance during the past year has been good and sales and earnings have maintained their upward trend. During the course of the year, the Company's manufacturing facilities have been further improved and its capacity for the efficient production of high grade engineering products has been substantially enhanced. The details of output in each of the divisions and the present status of the projects under expansion are indicated in the Directors' report.

"The Company's operations during the past year have made substantial contributions to the national revenue and to the transport industries of the nation. Last year, the operations of this Company alone contributed to the national revenue by way of customs duties, excise, sales, income and other taxes as much as Rs. 13 crores, which incidentally is almost 1 per cent of the total tax revenue of the Central and State Governments combined.

Profit and Appropriations

"Although the gross profit for the year has exceeded the previous year's figure by Rs. 66 lakhs, the disposable profit for the year is about the same as last year's because of the larger provision for taxation necessitated by the increase in the taxable profits and also by the higher rates of tax under the Finance Act, 1962. The amount set aside for depreciation is higher by Rs. 39 lakhs, the increase being attributable partly to the amount provided on new assets created during the year and partly to depreciation being provided for a full year on fixed assets which, in the previous year, had qualified for depreciation for a few months only. The increase of Rs. 21 lakhs in interest charges is due to the higher interest rates paid as well as to large bank borrowings necessitated by increased manufacturing activities.

"As there is no appreciable increase in the net profit available for payment of dividends, your Directors have recommended the same dividend as in the previous year, namely, 14.5 per cent or 10.15 per cent tax-free, per share, subject to tax relief under Section 84 of the Income-tax Act, 1961, which will be somewhat higher than in the previous year. In viewing the dividend recommended this year, it is necessary to bear in mind the present uncertainties particularly in regard to the availability of foreign exchange, which may impede production in the current year, and the need to retain within the Company a reasonable share of current earnings to finance the further growth of the Company. It may also be noted that a good deal of the expenditure already incurred on various projects has not yet fructified and that it will be only during subsequent years that we shall be able to earn a return on our investment in production facilities now being set up.

"Substantial additional funds will be needed for the expansion and diversification of our manufacturing facilities. A part of these funds will be available from retained earnings and it is proposed to secure the balance partly from a long-term foreign credit which is being negotiated with the Agency for International Aid (A.I.D.), Washington, in consultation with the Government, and partly from an issue of Rs. 5 crores convertible debentures. The terms and conditions of the issue, including the conversion terms, are still under discussion with the Government, but I may mention that our intention is to offer the debentures for public subscription by prospectus, after reserving a proportion for direct subscription by holders of ordinary shares. The Directors have chosen this method of raising capital in the long-term interests of the Company and its shareholders.

"Last year, I gave an indication of the various schemes approved or under consideration for expanding and diversifying the Company's activities. I am glad to say that all of them are now taking concrete shape. The manufacture of Tata-P&H power shovels has been firmly established and high-grade capacity created for the production of machinery for paper and pulp. Apart from the major expansion of the automobile division about which I shall have more to say in subsequent paragraphs, the construction of factory buildings and services and the enlargement of the capacities of our foundries and forge shops are under way. All efforts are being directed towards increasing the efficiency and productivity of our manufacturing facilities and reducing our dependence on imported materials and components.

Automobile Division's Expansion

"You will note from the Directors' report that the Agency for International Development (A.I.D.) has under consideration a loan to this Company of $13.65 million, required for implementing the first stage of the automobile division expansion programme which, when completed, will step up the capacity of this division from 12,000 to 18,000 units per year.

"As stated in the Directors' report, the expansion programme of this division is being carried out in two stages at the specific request of the Government in the light of the current balance of payments crisis. As the production of commercial vehicles is a high priority element in the country's development plans, we hope that the Government will find it possible to sanction the second stage of the plan in time to avoid a costly hiatus between the two stages of the complete programme.

Foreign Exchange

The critical foreign exchange situation prevailing in the country today is a matter of deep interest to us. The vehicles we manufacture at Tatanagar contain an appreciable proportion of parts made from the imported raw materials and also some imported components and ancillary products. Our capacity to maintain the present level of production, let alone to increase it, must, therefore, at least for the time being, depend on adequate allocations of foreign exchange for such imports. Our foreign exchange allotments for the licensing periods April-September 1962 and October 1962-March 1963 have not yet been communicated to us, but from preliminary indications received, there is a possibility of some reduction in the foreign exchange allotment to us in respect of these two licensing periods.

"We are fully conscious of the gravity of the balance of payments position in the country and the imperative need to save foreign exchange. We hope, however, and have represented to the Government accordingly, that the revised allocations of foreign exchange during the two licensing periods mentioned earlier, will take into account the fact that, although we were the last to enter the automobile field, our output of commercial vehicles is by far the largest in the country and also has the largest indigenous content. This is reflected in the fact that in 1961-62 we were allotted 35 per cent of the total foreign exchange made available to the industry for the manufacture of such vehicles, while we produced over 50 per cent of the entire country's output. It is clear from these figures that, for every rupee by which our allotment is cut, the loss of production will be the largest and will have the most adverse impact on the country's economy. I might also mention that, since we began production of the Tata Mercedes-Benz vehicles, we have saved the country over Rs. 35 crores in foreign exchange, of which nearly Rs. 12½ crores were saved last year alone.

No Cause for Anxiety

"The shareholders will no doubt be concerned about the likely effect on our rate of production of any cut in foreign exchange. While such effect cannot be predicted until the exact extent of the cut, if any, in our foreign exchange allocation and the period for which it will apply, is known, there is in my view no cause for anxiety or pessimism. The Government is fully aware of the Company's performance and the consequences to it and to the economy as a whole of any substantial or prolonged cut in production at Tatanagar. They are to my knowledge as anxious as we are to see full production of our vehicles maintained. We have, therefore, every reason to hope that, if any cut is imposed upon us, it will be a relatively small one and of short duration.

"Before I leave this subject, I wish to point out that the achievement of complete self-sufficiency in raw materials is not within our control and only partially so in the case of components and ancillary products. Whatever our own efforts, we can never make ourselves every part and component entering into our vehicles, and like every other automobile manufacturer in the world, we shall always have to depend largely on outside supplies for our raw materials and for certain components and ancillary products. It is therefore of crucial importance that capacity for the manufacture of essential raw materials, particularly steels of the specifications and qualities required for the manufacture of automobiles and trucks and of ancillary and proprietary products, keep pace with the growth of the automobile industry. While substantial progress has already been made in this direction, a considerable gap still remains to be filled, and I would urge that the Government give their full and urgent support to the rapid development of these industries.

Exports

"Apart from the steps we are taking to increase still further the indigenous content of our vehicles, we have also launched a vigorous export drive as a further contribution to the solution of the country's foreign exchange problem. For exporting the products of our Company, not only from the automobile division but also from the other divisions, we have to face stiff international competition and also to surmount national barriers from industrially advanced countries. Despite the formidable obstacles in our way, we have already made a modest beginning and have secured a few orders from South Viet Nam, Malaya, Ceylon, Pakistan and Sweden.

"Although the Company's export field for commercial vehicles is restricted to certain territories in terms of our agreement with Messrs. Daimler-Benz, I have every hope that with its understanding and co-operation we shall before long be in a position to achieve a sizable volume of export business.

Road Transport

"In these days of acute transport shortage pointing to the urgent need for providing greater freight and passenger carrying capacity, road transport deserves, in my view, a higher priority and more sympathetic consideration than it has received so far. It seems, instead, to have been specially selected for a cascade of impositions and taxes as well as of innumerable restrictions and impediments in its intra-State and inter-State operations, in addition to the limitations imposed by the inadequacies, both in mileage and quality, of the country's road system. A vigorous development of the latter, coupled with an adequate and balanced production of commercial vehicles, would yield immeasurable benefits to our entire national economy. While India has one of the largest railway systems in the world, the mileage and quality of our roads and the number of commercial vehicles plying over them, are grossly inadequate to the needs of a developing economy such as ours. While there can be no question as to the urgent need to improve and add to the rail transport system of India, I wonder whether our planners have sufficiently appreciated the special advantages and potentialities of road transport: for instance, the fact that road transport capacity can be built up more quickly and at much lower cost than any other method of transportation; also its extreme flexibility and large employment potential. In this connection, the following conclusion by the National Council of Applied Economic Research in a detailed study made by them of the subject is worth quoting in full:

'The conclusion that emerges is: that the financial contribution of the road transport industry is far from negligible. Indeed, it is greater than that of the railways in absolute terms and in terms of return on capital invested. This is true for net as well as gross contribution (deducting the cost of offsetting payments made by the Government, for example, in road construction). Some items in the calculation may possibly be challenged, but the margin is so great that any adjustment that is conceivable is hardly likely to alter the main conclusion.'

"Quite apart from the immense value and importance of road transport to the physical needs of a developing economy, the financial contribution which road transport already makes and will make in future to public revenues is tremendous. For instance, out of the price of about Rs. 34,000 which the purchaser of a Tata Mercedes-Benz chassis pays in Bombay, as much as Rs. 10,000, or only slightly less than 30 per cent, go to pay for duties and taxes to the State and Central Governments. In addition, every commercial vehicle, during its many years of operation, continues to be a favourite source of national revenue through crushing fuel taxes and a variety of other taxes. These factors seem to be sometimes overlooked in determining relative priorities to be given to different types of transport.

Excavators

"The manufacture of Tata-P&H excavators has been established on a sound basis, your Company being the first in the country to produce this heavy line of equipment. We have started with the production of 2½ cubic yard machine. Our present output of three such machines a month will be increased to four from about September this year onwards. Our machines have received an excellent reception from users and are in operation in various locations in the country. The demand is a large and growing one; our order books are full for the next 12 months and we do not anticipate any difficulty in disposing of our total output.

Labour

"Whereas last year there was no interruption to production caused by action on the part of our workers, there was a brief stay-in strike in a few shops of our automobile division during the year under review.

"During the current year, the workmen as well as the management will have to face the challenge posed by the reduction in vehicle output which has been forced on us by external circumstances. There is need to consolidate still further our position to enable us to implement rapidly the expansion programmes and make the most intensive use of the expensive plant and machinery that will be installed. I earnestly hope that we shall have the co-operation of our union and our workmen in facing these problems.

"In conclusion, I wish on your behalf to thank all those responsible for the Company's operations and progress during the past year—workers, staff, supervisors and top management, particularly our General Manager, Mr. R. G. da Costa. Mr. Hans A. Stoehr, who was in charge of our automobile division from its very inception, retired from the Company's service during the year under review on being recalled by Messrs. Daimler-Benz for an important assignment in Germany. Mr. Stoehr's exceptional abilities, drive and leadership were largely responsible for the growth and success of the automobile division since its early beginnings in 1954 up to its present pre-eminent position. I would also like to record our appreciation of the valuable part played in the Company's growth and development over a period of 11 years by Mr. A. B. Parakh, who recently relinquished charge of the Company's head office in Bombay on taking up a senior appointment in Voltas Ltd."

NEW PRODUCTS AND PROCESSES

Illuminating Fuels from Coal Tar

A PROCESS for the production of middle distillates (kerosene substitutes) and diesel fuels from coal tar and its fractions has been developed at the Regional Research Laboratory, Hyderabad. The process consists in the extraction of coal tar and its fractions, before or after removal of tar acids and bases, by organic solvents or solvent mixture. The extract is distilled to recover the solvent for re-use. The residue is hydrogenated under pressure and the hydrogenated product is again extracted with suitable organic solvents to remove the bulk of saturated hydrocarbons. The raffinated oil thus obtained can be used in wick lamps as illuminating fuel. It can also be used as diesel fuel. A distinctive feature of the process is that the luminosity and smoke point of the fuel can be controlled by adjusting the solvent. The production of middle distillates from coal is expected to bring about a marked change in the oil economy of the country. At present middle distillates, like diesel, kerosene and bitumen, are in short supply and India imported in 1960-61, diesel and kerosene oil valued at Rs. 27 crores. The third Five-year Plan estimates that even after the two public sector refineries are brought into operation, the deficit in kerosene supply would be about 300 million gallons.

Decolourisation of Glass

Selenium has long been used for decolourising glass melted in tank furnaces. The Indian glass industry consumes about five tons of imported selenium annually for this purpose. A new process developed by the Central Glass and Ceramic Research Institute, Calcutta, does away with the use of selenium and uses instead a base mix containing cerium dioxide, cobalt oxide and manganese dioxide. A glass free from colour is thus obtained, and it can be fabricated to the desired shape by blowing, pressing or drawing or by a combination of these processes. The articles are then annealed at the appropriate temperature range.

Plasters from Gypsum

Specific end-uses of plasters from three different varieties of gypsum, namely, rock gypsum, have been suggested on the basis of studies on the specific characteristics of the gypsums carried out at the Central Salt and Marine Chemicals Research Institute, Bhavnagar. Plaster from rock gypsum being quick setting, can be employed for structural purposes; it also meets with the requirements of B.P.C. surgical plaster. Plaster made from marine salt works gypsum, although slightly lighter than that from rock gypsum, is also useful for structural purposes. Plaster prepared from precipitated gypsum, being lighter than others, is suitable only for preparing special moulds and decorative articles.

Leather-protecting Silicone

A silicone specifically prepared to protect leather against attack by rot, insects and fungus in tropical countries, or where high humidity calls for extra protection, has been developed by a British firm manufacturing water repellent silicones. Silicone Treatment Ltd., Sussex, England. The firm specialises in air-drying, self-curing silicones for fabrics, leather and carpets. Virtually indestructible, they can withstand temperatures up to 400° (204.4° C); and as low as −96° F (minus 67.8° C); they are inert, non-toxic, non-abrasive and invisible. When these silicones are used on fibrous materials, the penetrating solvent carries the silicone to each fibre of a thread. The surface tension of the fibre is thus lowered, and the liquid "beads" and rolls off. The silicone does not interfere with the normal passage of air through the material. As liquids are repelled, any dirt or stain media within is retained by the water or water-based liquid and is similarly repelled. If liquids containing dirt or stain dry on the materials, they are not absorbed and can be removed by sponging.

Soil Steriliser for Tomato Growing

A new soil steriliser in powder form, which needs no specialist equipment, has been developed for tomato growers by a British firm of chemists, Boots Pure Drug Co., Ltd. It is believed that the new chemical method of sterilising glass-house and market garden soils is the first to give the tomato grower the application advantages of a soil steriliser in powder form. It has been proved effective against soil fungi, nematodes and weeds. As a soil fungicide, the soil steriliser is recommended for use against Verticillium, Fusarium and Corkey Root of tomatoes, and the firm says that as a herbicide it is effective against many weeds, among them chickweed and oxalis. Another of its successful applications is against potato root eelworm. The use of a steriliser in powder form greatly simplifies application, since there is no need for the specialist metering equipment that is necessary to ensure accurate use of liquid soil sterilisers. Because the powder is visible, even distribution over the whole soil surface is more easily ensured and there are no objectionable fumes when the powder is applied.

COMPETITION IN GENERAL INSURANCE

CALL FOR POLICY OF "LIVE AND LET LIVE"

IN a brief but forthright speech at the Thirty-fourth Annual General Meeting of the Indian Insurance Companies' Association, held at Bombay on Monday, 6th August, the Chairman, Mr. P. U. Patel, drew pointed attention to two recent trends in general insurance in the country which, according to him, are not conducive to its healthy growth. The first is the provision by certain insurers, with substantial financial resources at their command, of guarantees in favour of banks or other financial institutions, "with the sole aim of acquiring a sort of monopoly control" over the insurance of several new and old clients. This practice, according to him, had resulted in the complete denial of a fair share of the business accruing from the expansion in the economy to the small- and medium-sized companies as also in the loss of many of their old and valued clients. These companies are either unwilling or unable to furnish covers involving financial guarantees; unwilling because this type of business is regarded as unsound and unable because they do not have the resources to cover such risks. This is a recent development and was not heard of six or seven years ago. Mr. Patel was not sure whether the clients themselves asked for such covers, or the insurers volunteered to give them of their own accord. But he was certain that it was being mercilessly used by certain insurers to the detriment of the trade as a whole. It was detrimental, because it was not part of an insurer's function to supply working capital to industries and provision of such guarantees was, he averred, tantamount to providing working capital, albeit in an indirect manner.

Mr. Patel went on to point out that the very fact that financial guarantee cover was granted only if the client concerned agreed to place his entire business with the company providing such cover showed that it was not deemed something desirable in itself. If it were otherwise, he contended, such covers would be provided without any strings attached.

Risky Business

Admittedly, this is a hazarduous business. Mr. Patel did not mean to question the competence of those who dabbled in it. Nor did he object to their right to pursue whatever underwriting policy they thought fit. He was only concerned with the element of unfairness involved therein as it was used as a weapon to capture more and more of the desirable business. In this connection, he made the following further observations:

"What we are primarily concerned with is the manner in which the interests of several insurers are affected, because of the financial guarantees granted by two or three 'big' insurers who have huge funds at their disposal. It is legitimate to expect that the solicitude which is so often expressed by certain people for the welfare of others must be translated into actual practice. Indian insurance can grow on sound and healthy lines, only if all of us exercise 'a healthy restraint' on our own ambitions to expand. I think, I am mentioning the obvious, when I suggest that 'live and let live' must be the motto of everyone who has the real welfare of Indian insurance at heart. It appears to me that the only practical solution to the problem is to evolve a voluntary agreement aimed at severely restricting the issue of such covers subject to well-defined conditions or, better still, to stop issuing them altogether."

The Chairman also referred to another development which has close resemblance to the provision of financial guarantee and has the same end-result, namely, "grabbing" as much business as possible. This development is participation by a general insurer in the share capital of new industrial undertakings and, occasionally, of the right issues of even old ones. There, too, Mr. Patel was not questioning whether the insurer had a right to do so but whether it was fair for certain insurers, who were in possession of large funds, to try to create conditions of monopoly for themselves. He did not think that a proper analogy could be drawn between industrially advanced countries and India on this point, because of the wide disparity obtaining in the insurance sphere of the two regions. Thus, while in the West, there was not one but several insurers having large investible funds, in India the field was dominated by two or three insurers who were in a position to build up themselves by keeping out all others. He, therefore, appealed for fair competition.

This is no doubt an eloquent plea on behalf of the smaller fry for a fair share of the business. But will the so-called big insurers pay heed to it? And could anybody find fault with them, if they do not? After all, they are playing the game of competition and they cannot be accused of unfairness if they use their funds and the influence which money commands to get more business for them, so long as they do not violate the laws governing the use of funds. If the small insurers find it difficult to complete with the larger ones because of lack of funds they could pool their resources, and put up a united front against the giants or endeavour to attract and retain clients by offering better services such as prompt settlement of claims and personal attention to the needs of the clients.

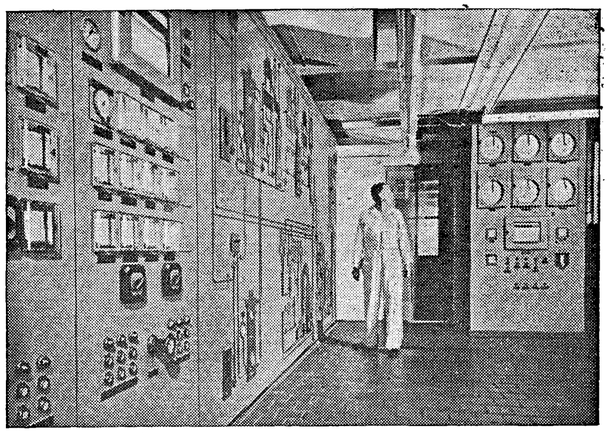
The fact that, even in advanced countries of the West, small insurers thrive alongside giants shows that smallness is not a disadvantage. Smallness is not desirable for its own sake in much the same way as bigness in itself is not bad. There is no virtue in having a large number of small companies struggling for existence and incapable of providing variety and efficiency in their service to policyholders. It is by the service provided, not by the size, that an insurer should be judged. And if an insurer is prepared to offer additional facilities and services, why should it be taken to task merely because others cannot afford it? Whether a particular type of business is sound or unsound depends on one's view of soundness. There may be some loss in one type of cover, but it may be more than offset by the gains from other businesses which the provision of that cover brings to the insurer concerned. In a competitive business, it must be left to the buyer to decide from whom he should obtain his requirements. The vast majority of the buyers of general insurance cover are shrewd businessmen competent enough to decide what is good for them without requiring the protection and guiding hands of the Government. If they make mistakes, they are strong enough to bear the cost involved.

The most important question that needs attention in the sphere of general insurance is the existence of unduly large number of small- and medium-sized insurers. Mr. Patel seems to have conveniently skipped this issue. Since there is no plan or concerted attempt to merge them into viable units to suit the requirements of a modern industrial nation, the only way of achieving this goal seems to be full-fledged competition, which will ensure survival of the fittest. The best thing to do, therefore, is to remove the vast majority of controls on general insurance, irrespective of whether they are voluntary or official.

Cut in Fire Premium Rates

Referring to the recent cut in fire premium rates, which came into effect from 1st July 1962, Mr. Patel said that though he did not question the theoretical soundness of the argument that one department ought not to subsidise another, the continuous slashing of premium rates in a department, whose profits were being used to offset losses in others, would prevent insurers from building up their reserves as fast as they could. This is a practical viewpoint which has consistently been ignored by the Government obsessed as it has been with the idea that there is too much profit in the fire department and that it is this which is the root cause of rebating and other malpractices widely prevalent in the trade. The very fact that successive reductions in fire premium rates have not eliminated malpractices shows that the basic cause lies elsewhere.

The Chairman of the Association welcomed the scheme devised by the Executive Committee of the General Insurance Council to regulate general insurance. The scheme, an outlone of which was given on page 24 of *Commerce* dated 7th July, envisages (1) the prohibition of deflection of field staff and transfer of business from one company to another by unfair means, (2) the establishment of a Mutual Assistance Pool, and (3) reorganisation of the Administrative Machinery of the Code of Conduct for insurers in order to implement the scheme. Considering that scheme is of great significance, and is likely to produce far-reaching effect on the industry, one naturally expected from Mr. Patel more than a passing reference to it. One was also eager to hear from him as to what had happened to the scheme of Non-Diversion and Mutual Assistance, to which his predecessor had referred and in the formulation of which Mr. Patel himself had played an active role. But he preferred to maintain a discreet silence. Perhaps, he was inwardly happy at the tribute to the Non-Diversion and Mutual Assistance Scheme implied in the incorporation of some of its basic principles in the Executive Committee's scheme.



Look what you get with

HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise Instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

NEW INSURANCE PLAN TO AID U.S. EXPORTS

The United States has inaugurated a new export insurance system as part of that country's continuing efforts to increase its trade surplus and thus close its balance of payments deficit. For the first time, U.S. exporters will be able to insure against both credit and political risks on export credits of up to five years simply by applying to their insurance agent or broker. The U.S. Government's Export-Import Bank will assume all of the political risk. The Government and private insurance companies will share the credit risk. The export insurance is being offered through the Foreign Credit Insurance Association, set up last year by private U.S. insurance companies at the suggestion of the U.S. Government. The Association is open to all qualified U.S. insurance companies and operates in co-operation with the U.S. Export-Import Bank.

The Foreign Credit Insurance Association has been offering export insurance, on credits up to 180 days, since February. Now it will also offer insurance on medium-term export credits of 181 days to five years. Under the medium-term insurance, American exporters will be insured against losses of up to 85 per cent of the credit they extend to foreign buyers. The political risks covered by the policies include such actions as currency convertibility restrictions, war, civil commotion and expropriation.

The Export-Import Bank, in announcing the new arrangement, said that the export insurance is designed to "help American exporters meet increasing competition from foreign exporters who, for the most part, have the benefit of export credit insurance plants abroad." The Export-Import Bank provided some short-term political risk export insurance before the Credit Insurance Association was set up, but on a very small scale, as compared with the Association's programme. Since its short-term insurance programme came into effect five months ago, the Association has received 1,500 applications and written 700 policies covering $350 million of U.S. exports.

MOTOR INSURANCE

The Government of India has appointed a committee to make recommendations regarding compulsory insurance of motor vehicles against third party risks. The Committee has been asked to examine, among other things, how far the existing provisions relating to compensation, third party insurance and claims tribunals serve the purposes for which they are meant. It will also make specific suggestions regarding the following: (1) extension of the time limit for filing applications before claims tribunals, (2) the amount for which third party insurance policies should be taken, (3) the minimum and maximum compensation payable to third parties depending upon the nature of the loss sustained, (4) making the insurer a party in the compensation proceedings before claims tribunals and (5) authorising claims brokers to contest claims on behalf of aggrieved parties before claims tribunals.

Several suggestions had been received by the Government for amending the provisions of the Motor Vehicles Act relating to compulsory insurance of motor vehicles against third party risk. Since these involved substantial changes in the existing provisions in the Act, the Government thought it fit to appoint a committee to examine the issue thoroughly from the point of view of the insurer, the insured and the public. The Committee consists of six members, of which four are officials and two non-officials. The non-official members are the Chairman, Miscellaneous Section of the Insurance Association of India and President of the Council of Safety First Association of India.

PLANTING

(*Concluded from page 242*)

for Indian teas." The Delegation minces no words when it says:

"India can only improve her exports to the United States and Canada primarily by being able to offer the required teas at fully competitive prices; by fullest co-operation with the trade through the Tea Councils; by personal visits and contacts at all levels by the representatives of the industry and trade in India; by the appointment of a knowledgeable Indian tea expert in New York and by continuing to take all steps to improve the quality of her production."

The special plea for fullest co-operation with trade through the Trade Councils is clearly understandable. For, if India were to withdraw from the Councils, the vacuum created by such withdrawal, as the Delegation has warned, would be filled by Ceylon principally to India's detriment, not to speak of the great deal of consequent ill-will which will adversely affect the sale of Indian teas in this market. The Delegation categorically says that it cannot recommend withdrawal from the U.S. Tea Council and its replacement by a uninational promotion campaign for Indian tea in the U.S.

The expensive nature of uninational campaign and doubts regarding support for such campaign from U.S. tea packers apart, the point is that the Council would continue in being with the support of Ceylon and Indonesia, even if India were to withdraw. The Council may even be prompted to intensify its tea promotional activities on behalf of Ceylon and Indonesia. It is thus obvious that India's *continued* participation in the Tea Council is essential. The Delegation has forcefully driven home this aspect. Indeed, it recommends that India should exercise greater influence on the Council's activities through its representatives and generally take greater interest to put the Council to the best possible use.

In this connection, the Delegation has commended for acceptance five suggestions. One, it should be the endeavour to attract non-members of the tea trade to the Council and to enlist the support of the other producing countries which are not presently represented on the Council but which are benefiting from the Council's activities. Two, India should request investigation as to how the tea centres can be put to more effective use, thereby reaching a larger number of potential consumers. Three, it should be India's endeavour, through its Tea Adviser, to distribute (from the Tea Centre at New York) literature published by the Tea Board and to exhibit films not only on tea but on other cultural activities and thereby associate tea more directly with India than ever before. Four, there should be a free exchange of views and closer liaison between the Tea Councils of the U.S. and Canada. Five, a small working committee (composed of one representative each of India, Ceylon and Indonesia, one from the trade, and the Executive Director of the U.S. Tea Council) must be constituted to meet frequently and encourage the Council to greater activity in the right direction.

The findings of the Tea Delegation and the series of suggestions made by it merit, as mentioned at the outset of the article, due consideration of all the interests concerned. If action is launched on the lines indicated by the Delegation, there is no reason why one should be despondent of India's prospects for tea in the U.S. and Canadian markets. It is, however, necessary to qualify this remark by adding that the tea industry in India should spare no efforts to produce quality tea at an economic cost and that, in these efforts, the industry should receive a helping hand from the Governments, Central and State.

4½ PER CENT

MAHARASHTRA STATE DEVELOPMENT LOAN, 1974

ISSUE PRICE AT PAR

OPEN ON MONDAY, THE 27TH AUGUST 1962

The loan will be closed as soon as the total amount of Rs. 12½ crores has been subscribed and in any case not later than the close of business on the 1st September 1962.

The applications for the loan will be received at—

(a) the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi,

(b) the branch of the State Bank of India at Patna,

(c) the branch of the State Bank of Hyderabad at Hyderabad,

(d) the branches of the State Bank of Hyderabad conducting Government work within the State of Maharashtra,

(e) the branches of the State Bank of India within the State of Maharashtra except at Bombay and Nagpur and at places covered by item (d),

(f) the Government treasuries and sub-treasuries in the State of Maharashtra at places not covered by items (d) and (e).

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE OFFICES MENTIONED ABOVE.

EXPORT PROMOTION MEASURES IN JAPAN

NATURE AND ROLE OF INCENTIVES

JAPAN has made spectacular strides in the fields of industry and foreign trade during the post-war period. Its recovery in, and expansion of, foreign trade, in particular, has been the envy of several countries endowed with richer resources of men and materials. The total exports from Japan advanced by over three times, being as much as U.S. $4,236 million in 1961, as against only $1,355 million in 1951. This compares well with the total increase in world exports of about 55 per cent (or from $76,990 million to $118,500 million). What is the secret of Japanese success in export promotion? This is a question that is being asked, with understandable curiosity, by all other countries which have been making efforts to step up their exports. It is precisely this question that is sought to be answered in a booklet entitled *Export Incentives—A Study of Japanese Methods*, brought out by the Engineering Export Promotion Council, Calcutta (price Re. 1). The Council, it may be recalled, had made a similar study in 1958. The present study seeks to take into account the changes made in Japanese export promotion measures since then and to provide a detailed account of various measures of aids and incentives extended to exporters.

The success of the Japanese exporters, according to the study, is due to a combination of several factors arising out of organisational efficiency and incentives given from time to time. A striking feature of Japanese export promotion measures is the vigorous efforts being made at the levels of both Government and industry and their close co-ordination. At Government level, organisations like J.E.T.R.O., which have been set up with necessary financial support, carry out market research and other promotional work. At the level of industries, the Chambers of Commerce and export trade organisations have been playing an important part not only in creating export-consciousness among manufacturers but also in helping them by every possible means to step up exports. Taking all these factors into consideration, the Study observes that "the export apparatus in Japan has been perfected to a great degree of precision." Export houses, for instance, have sprung up in every branch of trade. Shipping, banking and insurance institutions have been established on a sound basis. The manufacturing firms themselves are not necessarily exporters; but bigger units have set up "export divisions" for the exclusive purpose of organising export. The export of goods produced by small and medium-sized firms is arranged by the export houses. A special branch of the Ministry of International Trade and Industry takes special care of the problems of the small-scale units.

Income-tax Relief

The creation of specialised bodies alone cannot be said to have contributed to the expansion of trade. This step has been supplemented by various direct and indirect incentives. An important incentive is income-tax relief. Trading companies are allowed to deduct from their taxable income one per cent of the proceeds from their export contracts, and manufacturing companies are allowed 3 per cent of the proceeds from export sales contract (5 per cent is permitted for the export of complete plants). In either case, the maximum amount deductible should not exceed 80 per cent of the income arising from such exports. Deduction is also allowed for the export of know-how upto the amount of 50 per cent of the proceeds therefrom (or the net income, whichever is less).

Another important benefit enjoyed by the exporter is the facility of accelerated depreciation. Under this system, if the percentage of export sales to total sales in a particular half-year is increased, say, by 10 per cent, over the percentage of export sales to total sales in the previous half-year, the depreciation allowance will also be raised by 10 per cent. The maximum for the special depreciation allowance is 50 per cent of the total sales. Under this scheme, "although the machinery or plant is merely depreciated over a shorter period so that the greater charge against tax in the earlier years is balanced by the fact that deduction to cover the profit is possible in later years because the asset has been wholly written off, assuming that the rate of corporation tax does not increase during the life period of the asset, the accelerated depreciation for exporters amounts to an interest-free loan to them at the time when depreciation is accelerated." In addition, there is provision for retention for foreign exchange earned from exports. Although this facility is reported to have been withdrawn, exporters are allowed to retain 5 per cent of the value of total exports which they could utilise for import of luxury items and are free to sell and make profit on them. It may be noted here that the G.A.T.T. has, it is said, informed the Government of Japan that as the payment position of the country has vastly improved, the continuance of the scheme for foreign exchange retention is not justified. Among the other export incentives, mention may be made of refund of import duty and excise duty on raw materials and components used in articles meant for export and other facilities for ensuring adequate supplies of raw materials.

Activities of J.E.T.R.O.

Apart from these direct incentives, several measures are adopted in Japan for promoting exports, particularly in the field of credit facilities, market research, publicity, etc. The key organ which deals with export promotion is J.E.T.R.O. (originally known as "Japan External Trade Recovery Organisation," but now rechristened "Japan External Trade Organisation). J.E.T.R.O. seeks to co-ordinate and effectively carry out export promotion measures. Its functions are: (1) research on matters of foreign trade, including research on industrial designs and publication of this information, (2) introduction and publicity on various industries and merchandise, (3) facilitation of trade transactions, (4) issue and distribution of various publications on foreign trade, (5) holding or participation in exhibitions, trade fairs and the like, or assisting in the holding of or participation in the same, (6) activities on promotion of trade with which J.E.T.R.O. is entrusted by the Government, and (7) other enterprises or activities deemed necessary to attain the foregoing objective.

J.E.T.R.O. has a capital of two billion yen, all from the Government. It also receives a subsidy every year for its activities. Its head office is in Tokyo with a branch in Osaka and sub-branches in eight other cities in the country. It has also a Design House in Tokyo and foreign trade information and service centres in more than 15 cities. Outside Japan, J.E.T.R.O. has trade centres in New York, San Francisco, Los Angeles, Cairo, Toronto, Bangkok, Hamburg, Sydney and trade offices in Chicago, Hongkong, Singapore. It has also two Machinery Centres, one in Bombay and the other in Mexico. It has also "Researcher's Offices" in more than 40 cities throughout the world. More than 400 employees are working at the head office and at branches in Japan. About 120 staff and non-staff members are working at the offices outside Japan. The total budget for the fiscal year of 1961-62 was 2 billion and 700 million yen (approximately U.S. $7,500,000) out of which one billion and 500 million yen was covered by Government 'subsidy.' The balance was collected from the following sources: (*a*) interest on the capital of 2 billion yen at the rate of 6.5 per cent, (*b*) voluntary contribution from the industry, and (*c*) special revenues arising out of exhibitions, sales of publications, etc.

Market Research

Research on matters of foreign trade, particularly on the markets of various commodities in foreign countries, is one of the fundamental objectives of J.E.T.R.O. Research is conducted by the Research Division, together with the research staffs stationed at Japan Trade Centres, Machinery Centres and Researcher's Offices. As for research on industrial designs, the Design Section of the Overseas Activities Division and Japan Design House work on this. It is the main work of the Public Information Division to make public the results of this research. In order to introduce and publicise industries and merchandise to foreign countries, the Overseas Activities Division works with "Japan Trade Centres" and other overseas organisations. "Japan Trade Centres" may, therefore, be of service to those in foreign countries who are interested in trade with Japan. Trade Information and Services Division and its local centres help those in Japan who are interested in trade with foreign countries. The Publications Division is in charge of issuing and distributing various publications on foreign trade for those in Japan and in foreign countries. The Exposition Division executives work in connection with the holding of and participation in exhibitions, trade fairs and the like or assisting in the holding or participation of them.

The Public Relations Department of J.E.T.R.O. is making valuable efforts in securing new markets abroad. Its work covers production of colour films, advertisement in foreign magazines and inviting foreign Press representatives to visit Japan. In the U.S. and Canada, the Department seeks the aid of television network for familiarising consumers with Japanese products. While industrial brand publicity is done by the firms concerned, the Department is engaged in general publicity for select Japanese products. J.E.T.R.O. also brings out over 25 illustrated publications, which are sent free to overseas customers. What is more, its offices abroad act virtually as agencies for overseas market research.

Credit Facilities

But for the facilities for adequate credit on concessional terms, exporters would not have probably taken advantage of the aforesaid measures of aids and incentives. While the city banks provide short-term loans (normally upto 180 days), the Export-Import Bank grants long-term loans for financing exports. The Exchange banks provide short-term finance either prior to shipment or after the shipment to exporters at a rate which is 3 to 4 per cent lower than the normal rate for borrowings. The Export-Import Bank, set up in 1950, provides long-term credit for accelerating the export mainly of capital equipment and heavy machinery, for promoting overseas investments and supply of technical know-how, besides other requisites for exports and imports. Its loans to exporters carry an interest rate which is 3 to 4 per cent lower than the rate at which other borrowers get loans. Its loans, which go upto a period of even 15 years, are subject to the condition that the application will be submitted through the Exchange banks and that the latter have individually or jointly guaranteed at least 20 per cent of the total finance required. The bank funds consist of its own capital and borrowings from Government.

The Bank of Japan is also assisting exporters to get loans. Under the export trade bill system, it finances exporters indirectly at low rates of interest by accepting the bills as security (in case of bills suitable for collateral securities) or by rediscounting them. Advances under this system are made according to the following arrangements:

(i) *Bill suitable for Collateral Securities:* A six-month bill prior to shipment may be accepted by the Bank of Japan as a bill suitable for collateral security against financing organ. The interest rate to be charged by a commercial bank on an exporter or a manufacturer against such a bill is Y. 0.017 per diem for Y. 100. The interest between the Bank of Japan and a commercial bank is Y. 0.016. The amount to be loaned against a collateral security is 85 per cent.

(ii) *Bill suitable for Rediscounting:* A three-month bill before shipment for which an L/C is received already may be rediscounted by the Bank of Japan. The discounting rates are Y. 0.016 per diem of Y. 100 between a commercial bank and an exporter or a manufacturer, and Y. 0.015 per diem between the Bank of Japan and the commercial bank.

There is another useful scheme operated by the Bank of Japan. This is the system under which it lends yen fund at low interest rates to an authorised foreign exchange bank that accepts a usance export bill, so that the latter may easily accept such usance bills. All these facilities enable a Japanese exporter to quote favourable credit terms in regard to both rate of interest and period of repayment.

Quality Control

The popularity of Japanese goods in the post-war era owes its origin to a large extent to their high quality. After the war, Japan had to live down its pre-war reputation as an exporter of cheap goods of unreliable quality. The Japanese Government, therefore, paid great attention to the quality of goods and insisted upon their manufacturers adopting high standards for this purpose. Without any hesitation, it introduced compulsory inspection of goods before they were shipped. As a result, 145 major export goods, accounting for about

SIMPLEX MILLS COMPANY, LIMITED

SPEECH OF CHAIRMAN, MR. S. R. DAMANI

MODIFICATION OF EXPORT INCENTIVES SCHEME URGED

A MODIFICATION of the existing export incentives scheme for cotton textiles was urged by Mr. S. R. Damani, Chairman of the Simplex Mills Company Ltd., in the course of his speech at the Fiftieth Annual General Meeting of the Company, held at Bombay on Thursday, 2nd August 1962. Mr. Damani suggested that the cotton entitlement of 66⅔ per cent of the f.o.b. value of the exports should be allowed to be retained by the exporting mills which might consume it either in full or in part or sell it in the open market. He urged that the present system of licensing of cotton to the actual users be abolished and such mills, which require foreign cotton, be allowed to earn it through the export of either their own products or those of others.

The following is the full text of Mr. Damani's speech:

"GENTLEMEN,

"It gives me great pleasure in welcoming you today to the fiftieth annual general meeting of the Company. In keeping with the practice of the Company, the meeting has again been convened at the mills, the registered office of the Company, so that you may be apprised of the progress further made in your mills.

"The Directors' report and audited accounts for the period ended 31st March 1962 have been with you for quite some time and, with your permission, I shall take them as read.

"I am happy that my forecast, contained in my last year's speech about the working results for the year ended 31st March 1962 has come true. In view of the unforeseen rise in expenses and in particular high prices that had to be paid for cotton towards the last quarter of the year, the results should be considered very satisfactory.

"The gross profit has jumped up from Rs. 34.42 lakhs to Rs. 55.43 lakhs. Sales are slightly lower at Rs. 3.22 crores as against Rs. 3.32 crores in the previous year, but the gross profit on sales has risen sharply from 10.4 per cent to 17.2 per cent. Consumption of cotton in relation to sales is less by 5.7 per cent at 37.9 per cent and a saving of Rs. 7.48 lakhs has been made under the head salaries and wages after additional payments on account of retrenchment compensation and retirement gratuity amounting to Rs. 5.83 lakhs. Cost of repairs has gone up by Rs. 2.64 lakhs due to extensive repairs to the building and machinery and the same will continue further in a phased manner to accomplish the plan drawn in that regard.

Production

"The production programme launched by the management got momentum during the year, and all the qualities produced by the mills were in good demand. As a result, quick deliveries were effected and the stock of finished goods with the mills was reduced to a low figure of Rs. 25.31 lakhs. Total production during the year comprised 42 per cent wearable qualities, 34 per cent industrial qualities and 24 per cent yarn.

"Modernisation is a continuous process and the management has been progressively equipping the mills with the most modern machinery. A sum of Rs. 18.39 lakhs was spent during the year and orders for further machinery aggregating to Rs. 61.73 lakhs are outstanding and, with the installation of these machinery, your mills will be adequately modernised.

"The relation between the management and workers continued to be most cordial, and I feel certain that both will work together in the mutual interest and progress of the institution.

Export

"It must be admitted that the industry's efforts on the export front during the year 1961 have been disappointing, despite increased production by 93 million yards at 5,141 million yards. Export stood only at 572 million yards, worth Rs. 46 crores, as compared to 692 million yards, worth Rs. 54 crores, in 1960 and 810 million yards, worth Rs. 55 crores, in 1959. The estimates for the first six months' performance during the current year at 258 million yards are also not very encouraging. Further, the U.K.'s entry into the European Common Market will accentuate the problem, unless some safeguards for our exports are guaranteed.

"In view of the great strain on foreign exchange and the dwindling of the sterling balances which have gone below Rs. 100 crores, a vigorous export drive has to be initiated. While I appreciate the new scheme of compulsory exports by mills of 12½ per cent of their turnover of cloth and 3 per cent of the turnover of yarn, unless total production increases, the compulsory exports, as envisaged, will create other complications and have far-reaching repercussions. The scheme would lead to shortage of cloth for internal consumption, which would make it difficult to hold the price line. The crux of the problem, therefore, centres round increased production. In order to achieve higher production, it is necessary to liberalise the licensing policy for automatic looms and new spindles in favour of the existing units.

"I further suggest that, in order to meet increasing export and local demand for printed fabric, it is essential that the printing quota be freely allowed to the needy mills, with an export obligation attached. There should also be no difficulty in registering transfer of such quotas to the name of such mills having no such quota. Additionally, the existing regulation of allowing 25 per cent of the exports of printed fabric for local consumption should be substantially increased to, say, 50 per cent. This would have an overall favourable impact, as it would promote export and also enable mills to cater to the local demand.

Cotton

"According to me, the present export incentives require modification. The cotton entitlement of 66⅔ per cent against the f.o.b. value of export should be allowed to be retained by the exporting mills. It should be left to such mills whether to consume in part or in full and/or to sell in an open and free market the cotton entitlement. The present system of licensing of cotton to actual users should also be abolished and such mills which need foreign cotton be allowed to earn it through export of its own products or products of others. This would achieve the twofold objective and, therefore, the suggestion deserves due consideration.

"It is well known that a serious crisis in the availability of cotton has developed during recent months. Unless the Government takes radical steps to increase the production of cotton and, in particular, long-staple cotton, a great problem shall confront the industry.

Rising Cost and Government

"The rising cost structure of the industry has become an eye-sore. Prices of cotton and stores have sharply risen. The wages, the D.F.A. payable to the workers and staff, and the contribution to the Employees' State Insurance have also increased. This will naturally contribute to the higher cost of production. Further, the question of cost structure of the cotton mill industry was referred to the Tariff Commission quite some time back to ascertain fair ex-mill prices for various types of cloth and yarn. I hope the Tariff Commission would take into consideration the changing circumstances of the industry, while submitting its recommendations.

"The high cost of production and increase in corporate taxation from 45 to 50 per cent would leave much less for the industry for its modernisation programme. I am doubtful whether the industry would be able to put Rs. 80 crores out of the Rs. 180 crores during the five-year period as envisaged under the scheme of modernisation by the working group for the textile industry.

Prospects

"With the new machinery put into operation in the mills, I am confident that further economies would be effected. With the few months' results of the current year, I can say that the working results for the whole year are expected to be satisfactory.

"The members of the staff of the mills and selling agent deserve all praise and appreciation for their hard, sincere and efficient work, and I thank them all very sincerely and heartily."

CAUVERY SPINNING AND WEAVING MILLS LTD.

MODERNISATION PROGRAMME TO BE COMPLETED BY 1963

SPEECH OF MR. C. S. LOGANATHA MUDALIAR

ADDRESSING the Fifteenth Annual General Meeting of the shareholders of the Cauvery Spinning and Weaving Mills, Ltd., held at Madras on Monday, 30th July 1962, the Chairman, Mr. C. S. Loganatha Mudaliar, disclosed that the modernisation programme undertaken by the Company would be completed by the end of 1963. The installation of combers during the year had facilitated the manufacture of high quality yarn and contributed to the improved working results of the Company.

The following is the full text of Mr. Loganatha Mudaliar's speech:

"GENTLEMEN,

"I have very great pleasure in extending to you all a very warm welcome to the fifteenth annual general meeting of the Company.

"The audited balance-sheet and the profit and loss account for the year ended 31st March 1962, along with the auditors' report, have been in your hands for some time and, with your permission, I take them as read.

"I regret very much to report the unexpected death of Sri C. R. Srinivasan, who had been the Chairman of the Board since the inception of the Company and who has rendered valuable services in guiding the destinies of the Company especially during the many difficult years.

Net Profits Up

"I am glad to inform you that the Company has kept up the usual progress in its working results and the net profit of Rs. 7,88,879.47 earned during the year after providing full depreciation and managing agency commission, is an improvement over the previous year, in spite of considerable increase in the cost of production.

"During the current year, these costs tend to mount up still further, owing to increased levy of E.S.I. contribution, increase in dearness allowance, 30 per cent surcharge on electricity, premium on cotton purchases and many other things.

"The results achieved have been partly made possible by the modernisation programmes taken up by the mills and implementing by the installation of combers during the year, facilitating the manufacture of high quality fine counts of yarn.

Modernisation

"Steps are now being taken to further modernise the equipment of the mills to improve the efficiency and productive capacity. As has been reported during last year, the fourteen new ring frames to replace the old ring frames in the mills are due to be delivered in August/September 1962, and will be installed and put into production before the end of the year. I expect, this replacement will further improve the working efficiency of the mills. We have also now taken on hand the renovation of the old preparatory machinery. Three drawing frames and one slubber inter of Swiss manufacture, for which we obtained import licences under the export incentive scheme, have been ordered for, and are also expected to be delivered early next year, which again will add to the efficiency of your unit. Steps are also being taken to replace the remaining old drawing and speed frames and also modernise the drafting system of the old ring frames. When all these things are completed, which we hope to do before the end of 1963, your unit will be completely modernised and will further improve the working efficiency.

Shortage of Cotton

"During the year under review, i.e. 1961-62, owing to crop failures, a variety-wise distribution scheme and control of prices of cotton have been introduced and this has resulted in many difficulties in the procurement of adequate quantities and also suitable qualities of our Indian cotton requirements.

"You are also aware that there has been in existence a voluntary control on prices of yarn for counts 40s and below since 31st December 1960, and even though the cotton prices have increased very much after the fixation of prices, I very much regret to say that there has been no revision of yarn prices. Just at present, there is no parity between the cotton prices and the yarn prices of counts 40s and below and an upward revision of prices is immediately necessary and also justifiable.

Tariff Enquiry

"You are also aware that the Government have now appointed a Tariff Commission to go into the entire price structure of cotton yarns and also cloth and it is expected that the Tariff Board will submit their report before the end of August and a revision of prices will be announced at least before the end of September.

"I have also to bring to your notice that the Government have now made it compulsory that all spinning mills should export at least 3 per cent of the value of their production during the year based on the total turnover of the previous year. Your mills are anxious to co-operate with the Government in fulfilling their quota of exports to augment the foreign exchange resources of the country, and we have already begun to export 3 to 4 per cent of our production.

"I am also happy to inform you that our relations with the labour continue to be cordial. I also take this opportunity to thank the technical and administrative staff of the mills, and also at the head office for their kind co-operation."

N.B.—*This does not purport to be a report of the proceedings of the meeting.*

NEW STANDARD ENGINEERING

DIVIDEND MAINTAINED ON HIGHER CAPITAL

THANKS to the satisfactory working of its steel structural works to full capacity more or less throughout the year, there has been further progress in the operations of the New Standard Engineering Company Ltd. (Chairman: Mr. R. G. Saraiya, Bombay) during the year ended 31st March 1962. Sales and gross profit which were on the rise ever since the Company became a public limited concern in May 1959, have reached new high levels. Gross sales realisation at Rs. 158.87 lakhs is 33.4 per cent higher than the previous year's figure of Rs. 119.09 lakhs. During the past four years, they have more than trebled. The gross profit shows an even better improvement and amounts to Rs. 22.48 lakhs, as against Rs. 18.05 lakhs for 1960-61 and only Rs. 6.47 lakhs for 1958-59.

A large proportion of this growth in the gross profit position has, however, been neutralised by higher essential provisions, that for depreciation claiming Rs. 8.01 lakhs, as against Rs. 5.92 lakhs last year and for taxation Rs. 5.50 lakhs, as against Rs. 3.10 lakhs. The net profit is, therefore, slightly lower at Rs. 8.97 lakhs as compared with Rs. 9.03 lakhs a year ago. Nevertheless, the Directors have found no need to modify their policy of strengthening the final position of the Company through the retention of a substantial part of the profit in business. They have accordingly credited the various reserves with an agregate of Rs. 4.84 lakhs, or more than 50 per cent of the earned profit. It is true that a sum of Rs. 2.55 lakhs has been withdrawn from reserves and provisions, so that the net addition to reserves out of the profit for the year under review is only Rs. 2.26 lakhs. Even so, it is large enough to sustain our comment on the appropriation policy of the Company. A sum of Rs. 2.25 lakhs has been set aside for payment of preference dividends and of Rs. 4.50 lakhs for paying an ordinary dividend of 9 per cent subject to deduction of tax. Although the rate of dividend on the equity shares has been maintained, the amount required to meet it is actually higher since a full year's dividend has become payable on the new equity shares issued during the preceding years which had been eligible for only a proportionate amount previously. An interesting fact to note, however, is that only half the amount of dividend in respect of the year will be subject to deduction of tax, since the balance is being paid out of the tax-exempt profits earned by the Company.

The rapid progress made by the Company during the past four years is well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales less returns	158.87	119.09	92.83	51.98
Other income	3.31	1.98	0.95	1.52
Closing stocks	23.88	18.09	7.12	5.10
Raw materials and stores consumed	83.20	69.88	49.84	29.97
Salaries, wages and bonus	42.14	31.33	26.22	13.32
Other expenses	20.10	12.78	8.44	3.93
Gross profit	22.48	18.05	11.30	6.47
Provision for—				
Depreciation	8.01	5.92	2.23	1.15
Taxation	5.50	3.10	3.90	1.75
Net profit	8.97	9.03	5.17	3.57
Withdrawls from reserves and provisions	2.55	..	..	3.73
To reserves	4.84	4.50	1.60	0.34
Dividends—				
Preference	2.25	1.55	0.09	..
Ordinary	4.50 (9%)†	3.72 (9%)†	2.81 (12½%)†	2.00 (9%)

Market price of ordinary shares in rupees:	1962	1961	1960	1959
High	262.00	210.00	182.00	..
Low	205.50	146.00	108.00	..

† Subject to deduction of tax.

The financial position of the Company as revealed by its balance-sheet as at 31st March is moderately strong and needs further strengthening. The gross block at cost is worth Rs. 113.44 lakhs and, even though this has been written down to Rs. 85.34 lakhs, the net block still very nearly equals the total of share capital at Rs. 74.90 lakhs and reserves and surplus at Rs. 12.62 lakhs. The Company is thus quite obviously starved of sufficient working capital and has had to resort to borrowings. The outstanding amount of such loans is Rs. 40.69 lakhs, over and above current liabilities aggregating Rs. 76.12 lakhs. Current assets, loans and advances and investments totalling Rs. 119.00 lakhs are just sufficient to cover all liabilities to outsiders.

The year under review witnessed satisfactory progress in the manufacture of blow room lines for textile mills, which was initiated towards the close of the previous year. As against one blow room supplied during the previous year, the Company was able to turn out and supply five lines during the year. Unfortunately, the same rate of progress could not be maintained in other collaboration projects due to the delay in the receipt of relevant licences for the import of the required prototypes and components and it was not possible to get started on the manufacture of electric furnaces and an extended range of power hammers and drop forgers. In order to widen the range of products further, the Company has entered into technical collaboration with yet another British firm for the manufacture of threading and screwing machines.

The present market quotation for the Rs. 100 fully paid ordinary shares is Rs. 232.00 *cum-div.* On the *ex-div.* basis, the net yield works out to a little over 3.4 per cent per annum.

T. STANES & CO., LTD.

The change in the accounting year which was made effective during 1961 naturally precludes a direct comparison between the working results achieved by T. Stanes and Company Ltd. (Managing Director: Mr. E. H. Stanes, Madras) during the half-yearly period ended 31st March 1961 and those for the year to 31st March 1962. One fact, nevertheless, emerges on a scrutiny of the figures and it is that the steady upward trend in the Company's turnover and profits still continues unchecked. Sales less returns for the year under review amounted to Rs. 90.18 lakhs, as compared with Rs. 42.29 lakhs for the preceding accounting period of six months and are, incidentally, the highest on record so far. Placed on a comparable basis, there was a slight decrease in other income which amounted to Rs. 9.56 lakhs for the year as against Rs. 5.53 lakhs for the preceding half-yearly period. Total receipts thus were of the order of Rs. 99.74 lakhs as against Rs. 47.82 lakhs for 1960-61. The increased trading activity, however, failed to bring about any saving in expenses which at Rs. 90.55 lakhs formed about 90.8 per cent of total receipts as against 89.4 per cent previously. The gross profit for the year under review thus amounts to Rs. 9.19 lakhs, as against Rs. 5.06 lakhs for the half-year, thereby showing a fall of about a lakh of rupees on a comparable basis.

After providing Rs. 0.66 lakh (Rs. 0.33 lakh) for depreciation and Rs. 3.81 lakhs (Rs. 1.55 lakh) for taxation, the net profit for the year under review works out to Rs. 4.71 lakhs as against Rs. 3.18 lakhs for the preceding half-year. The Directors propose to recommend an ordinary dividend of 32.5 per cent in respect of the year under review, as against 30 per cent previously. Although this appears on par with what was paid for 1959-60, it is to be remembered that the dividend paid during that year included a centenary bonus of 5 per cent gross and that the actual dividend was only 27.5 per cent. Despite a slight deterioration in the profit position, the Directors have stepped up the dividend for the second year in succession.

The working results of the Company for the three and a half years ended 31st March 1962 are presented synoptically in the comparative table below:

(In lakhs of rupees)

	For the year ended 31st Mar.	For six months ended 31st Mar.	For the year ended 30th September	
	1962	1961	1960	1959
Sales less returns	90.18	42.29	80.88	68.04
Other income	9.56	5.53	9.98	7.94
Expenses including raw materials, finished goods and trading stocks consumed, purchased and sold	90.55	42.76	81.96	68.83
Gross profit	9.19	5.06	8.90	7.15
Provision for—				
Depreciation	0.66	0.33	0.65	0.56
Taxation	3.82	1.55	3.25	2.35
Net profit	4.71	3.18	5.00	4.24
Withdrawals from reserves and provisions	0.11	0.10	0.04	0.83
To reserves	1.01	1.00	1.13	1.76
Dividends—				
Preference	0.09	0.05	0.09	0.11
Ordinary	3.76 (32½%)	1.73 (30%)	3.76 (32½%)*	3.18 (27½%)
Carry forward	0.72	0.92	0.41	0.42
Market price of ordinary shares in rupees:	1962	1961	1960	1959
High	31.50	33.75	35.10	25.00
Low	30.63	24.10	24.10	23.00

Dividends for individual years are subject to deduction of tax.
* Includes centenary bonus of 5 per cent., subject to tax.

Financially, the Company is in good shape. The share capital of Rs. 13.06 lakhs, of which only Rs. 1.50 lakh are in preference shares of Rs. 100 each, is supported by reserves amounting to Rs. 18.32 lakhs. Current liabilities and bank loans aggregate Rs. 26.75 lakhs and are well covered by current assets totalling Rs. 37.84 lakhs. Investments, mostly in subsidiaries, are valued in the Company's books at Rs. 13.41 lakhs. The net block is worth Rs. 6.88 lakhs against a gross block of Rs. 14.80 lakhs.

The Directors report that the working of the Company and its subsidiaries during the year under review has been satisfactory. A new fully owned subsidiary company, was formed during the year to take over the assets and liabilities of Tyresoles Division of Stanes Motors (South India) Ltd. and will operate under the name Stanes Tyre and Rubber Products Private Ltd.

The Rs. 10 fully paid shares of the Company are currently quoted at Rs. 31 *cum-div.* The net yield, on an *ex-div.* basis, works out to 7.9 per cent per annum.

INDIA CEMENTS SELLS AND EARNS MORE

NET PROFIT, HOWEVER, LOWER

DESPITE a 10 per cent shortfall in the production of clinker and cement as compared with the rated capacity, India Cements Ltd. [Managing Agents: Messrs. Essen (Private) Ltd., Madras] has reported, for the year ended 31st March 1962, yet higher sales of Rs. 390.17 lakhs as compared with Rs. 355.59 lakhs in the previous year, a smart rise in gross profit from Rs. 74.89 lakhs to Rs. 94.79 lakhs and a welcome recovery in the profit-margin (ratio of gross profit to sales) to 24.3 per cent from 21.3 per cent to which level it had fallen from 27 per cent a year before. While higher sales reflect the improved conditions in the market and the improvement in profit is due, in addition, to some small savings in prime costs, what appears to have really bettered the profit and profit-margin is the coming into force of the increase in cement prices from November last. Had the revised retention price come into force from July last year as expected, the Company would have been able to give a better account of itself. Relief in production costs is only marginal as can be seen from the table below and other expenses have, in fact, continued to be higher at Rs. 125.08 lakhs as compared with Rs. 110.56 lakhs in the year before, the bulk of the increase being again due to higher packing and other charges of Rs. 74.59 lakhs as compared with Rs. 60.83 lakhs in 1960-61. It will be interesting to know that, in 1958-59, such expenses amounted to a mere Rs. 25.62 lakhs.

The net profit for the year under report has, however, shrunk again by roughly Rs. 6 lakhs to Rs. 26.62 lakhs due to further substantial increases in the essential provisions. Depreciation has claimed about Rs. 10 lakhs more at Rs. 40.33 lakhs and taxation roughly Rs. 14 lakhs more at Rs. 23.50 lakhs. Due to inadequacy of profit, the Company has drawn Rs. 5 lakhs in order to maintain the dividend at 12 per cent per annum, subject to tax, on the Rs. 5 fully paid equity shares. The dividend for the year under review, however, requires a larger amount, Rs. 26.93 lakhs, as compared with Rs. 20.18 lakhs last year, due to the increase in paid-up capital in the previous year by a right issue of one share for every two shares held at par. Reserves, which had had a net addition of Rs. 8.74 lakhs last year, have been depleted by Rs. 2.06 lakhs, as the amount credited this year is smaller than the amount withdrawn. Of the sum of Rs. 2.94 lakhs transferred now, Rs. 2.07 lakhs represents the addition to rehabilitation, research, etc., reserve. This transfer is in accordance with the stipulation in the revised cement prices that every company would transfer Rs. 2 per tonne, subject to adjustment for tax, to such a reserve. The carry forward is Rs. 1.39 lakh as against Rs. 1.19 lakh brought in.

The table below compares the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Cement sales	390.17	355.59	270.87	176.90

As regards the Vizag scheme of the Company, we are told that a survey conducted by its geologists has confirmed that adequate limestone suitable for the manufacture of portland cement is available in the region. But the scheme has been deferred, as the proposed railway line connecting the Borra Cave region to the Vizag port would be completed only by 1966.

(*Continued on page 264*)

T.E.L.CO.'S SALES AND PROFIT AT NEW HEIGHTS

NO CAUSE FOR PESSIMISM ABOUT OUTLOOK

A RECORD turnover, followed by a record gross profit and further improvement in profit-margin (ratio of gross profit to sales)—all in continuation of the previous year's striking all-round progress—highlights the working results of the Tata Engineering and Locomotive Company Ltd., T.E.L.Co., for short (Managing Agents: Messrs. Tata Industries (Private) Ltd., Bombay) for the year ended 31st March 1962. Sales, excluding excise, have improved by Rs. 3.66 crores (Rs. 6.24 crores in 1960-61) to Rs. 37.93 crores and the gross profit has gone up by Rs. 99.52 lakhs (Rs. 109.03 lakhs a year before) to Rs. 616.65 lakhs. Considering that the previous year's heavy growth in sales was quite an exception and emphasises that the Company has reached the take-off stage, the increase in turnover during the year under review can be viewed as satisfactory. Reassuringly enough, however, the profit-margin, which had just edged forward from 14.5 per cent to 15 per cent in the previous year, has moved up by more than a full point to 16.2 per cent during the year. This underlines that the year's higher production costs, which are detailed in the accompanying table, mainly reflects the larger output.

But the net profit at Rs. 190.65 lakhs is practically the same as that for the previous year, as all the improvement in gross profit has been absorbed by further sharp increases in the essential provisions. Depreciation has claimed roughly Rs. 39 lakhs more at Rs. 219.92 lakhs due partly to the amount provided on the new assets created during the year and partly to the provision being for a full year, as against for a few months a year before, on some of the fixed assets. Taxation has taken away nearly Rs. 65 lakhs more at Rs. 187.75 lakhs because of the increase in the taxable profits and the higher rate of corporate tax under the Finance Act of 1962.

The table below mirrors the growth of the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale of products and services, less excise	37,93.00	34,27.00	28,03.00	26,45.00

† Includes excise duty.
‡ Subject to deduction of tax.

With the distributable surplus showing hardly any improvement, the Directors had no choice in regard to the dividend but to maintain it at 14.5 per cent, taxable, per annum on the Rs. 100 fully paid shares, to which level, however, it was raised in the previous year from 12.5 per cent paid for 1959-60.

The net dividend, however, will be slightly higher than 11.33 per cent available a year before, because towards its distribution a larger amount (Rs. 47.61 lakhs as compared with Rs. 31.25 lakhs a year before) has been set apart from the past tax-free profits under Section 15C as also from the tax-free profit for the year under Section 84 of the Income-tax Act (the benefit under this section was *nil* in 1960-61). We are told that the dividend for the year has been recommended after bearing in mind the present uncertainties, particularly in regard to the availability of foreign exchange, which may impede production in the current year, and the need to retain in business a reasonable portion of the earnings to finance further growth of the Company. Besides, a good deal of expenditure incurred on various projects has not yet fructified. It is only in subsequent years that the benefits of this expenditure would be available.

Unlike the dividend to shareholders, bonus to workers has been raised to Rs. 53 lakhs from Rs. 51.09 lakhs paid for 1960-61. The profit retained in business is slightly lower than a year before; general reserve has got Rs. 5.14 lakhs less at Rs. 25 lakhs and development rebate reserve Rs. 4.78 lakhs less at Rs. 40.18 lakhs. The percentagewise distribution of the income as compared with the previous year figures for which are given in brackets is as follows:

Materials 48.1 (50), expenses 16.3 (15), freight, taxes and excise duties 14.3 (12.9), employees 11.7 (11.8), depreciation 5.2 (5.3), dividends 2.9 (3.3), and reserves 1.5 (1.7).

All the divisions of the Company are said to have been well employed throughout the year. The production of the Tata Mercedes-Benz vehicles, excavators, locomotives, foundry and forged products was up to schedule. The expansion plans in the various divisions also made satisfactory progress. From the table above, it will be clear that production of vehicles has been rising and that of locomotives declining in the past four years. After the completion of the 16-year agreement on 31st May 1961, the Railway Board has placed an order with the Company for 325 metre-gauge locomotives of the YG and YP classes to be delivered over a period of five years ending 31st March 1966. During the year, 72 locomotives were delivered. On the other hand, demand for trucks continues to be far in excess of supplies. Besides, the Company provides every assistance to the ancillary industries to produce quality products. During the year, a number of important ancillary components and parts produced in the country were incorporated as original equipment in the vehicles. We are told that there is scope for more expeditious development of a number of ancillary products. Efficient after-sales service was well maintained during the year. According to the Directors' report, there are now on the road more than 57,000 Tata Mercedes-Benz vehicles delivered from the T.E.L.Co. works. And, in order to maintain a steady and prompt supply of spare parts, 129 fully-equipped service centres have been located at strategic centres throughout the country.

The locomotives delivered during the year had an indigenous content of as much as 98 per cent. The proportion of the indigenous content even in the very first Tata-P & H excavator produced during the year was as high as 60 per cent. The demand for the excavators has continued to be satisfactory and their indigenous content would rise rapidly as soon as additional equipment on order is installed and commissioned. Production of spares for the excavators is making good progress and the business in them is bound to rise with the increasing popularity of the machines. The Company proposes to enter into an agreement with Voltas Ltd. for the distribution of the excavators, in view of the fact that Voltas had for many years been the distributors in India of the entire range of such machines produced by the Company's collaborators, Messrs. Harnischfeger Corporation, Milwaukee, U.S.A.

The Company produced and sold a number of standardised items of paper and pulp machinery, such as transport pumps, bamboo chippers, chipper discs, etc. Further orders for these items are on the Company's books and manufacture is in progress. It will be recalled that this line of activity was taken up only in June 1960, under an agreement with Messrs. A. Johnson and Company, Sweden. So far, the Company has not been successful in finding a buyer for large-scale paper and pulp plants. It, however, expects to secure orders for at least one large-scale pulp plant and one integrated paper and pulp plant in the near future.

There was an increase of 150 per cent in the output of the forge shops over that of the previous year. Production of forgings for the excavators has also commenced. Output of steel castings was better. In order to cater to an increasing demand from both the Company and outside parties, the capacity of the foundry is being raised from 500 to 700 tons a month. The heavy alloy iron foundry will start producing from the second half of the current year specialised high quality castings, such as rolls and cylinders for paper-making machinery. The use from the previous year of a part of the electric furnace capacity in the steel foundry for the production of special alloy steel ingots for leaf springs required for the diesel vehicles continued during the year, with the output exceeding 3,000 tons.

The Company's strenuous efforts to increase exports resulted in the sale of 60 diesel engines, five vehicles and spare parts to Ceylon and South Viet Nam. An order for steel castings was also secured from Malaya.

Discipline and morale of the employees continued to be high; the only interruption to production was the stoppage of work for a week in a section of the automobile division. The incentive bonus schemes worked satisfactorily in all the divisions. More than 500 additional quarters for the staff were completed during the year and the possibility of putting up more quarters under the subsidised industrial housing scheme is being explored.

The Company's major expansion plan for doubling the diesel vehicle output to 24,000 units a year is to be undertaken now, as desired by the Government, in two equal stages. In order to meet the foreign exchange cost of the first stage, the Company has submitted a revised application to the Agency for International Development for a loan of Rs. 6.5 crores ($13.65 million). The Government has agreed to release Rs. one crore from the "free" sources for the import of special items to be purchased from West Germany. The terms of the proposed issue of additional 5 per cent mortgage debentures of the value of Rs. 5 crores ranking *pari passu* in all respects, except the date of repayment, with the existing 1960-65 5 per cent Rs. 3 crores debentures, have been revised and facility of conversion of the stocks into equity shares provided. The terms and conditions of the issue are now under discussion with the Government. In addition, the Company has arranged for additional borrowings of Rs. 5.9 crores with its bankers to finance its expansion plans for the auto and other divisions.

Orders for the import of plant and equipment for the first stage of auto division's expansion will be placed as soon as the negotiations for the A.I.D. loan are completed. Meanwhile, the Chairman, Mr. J. R. D. Tata, has expressed the hope, in his statement for the year, that the Government would find it possible to sanction the second stage of the plan in time to avoid a costly hiatus between the two stages of the complete programme. According to Mr. Tata, the expansion and diversification schemes in hand are taking concrete shape. The manufacture of Tata-P & H power shovels has been firmly established and high-grade capacity created for the production of machinery for paper and pulp. The construction of the necessary factory buildings and services and the enlargement of the capacities of the foundries and forge shops are under way. The management is directing all its efforts towards increasing the efficiency and productivity of the works and reducing the dependence on imported materials and components.

Mr. Tata has thrown some light on the much-feared cut in the Company's foreign exchange allotments this year, which is a matter of deep concern to the management, as the vehicles manufactured at Tatanagar contain an appreciable proportion of parts made from imported raw materials and also some imported components and ancillary products. The allotments for the licensing periods April-September 1962 and October 1962 to March 1963 have not yet been communicated to the Company, but, from the preliminary indication received by it, there is a possibility of some reduction in the foreign exchange quota for the two periods. Therefore, until the exact extent of the cut, if any, is known, it is difficult to foresee its effect on the rate of production of the Company. However, Mr. Tata believes that there is no cause for anxiety or pessimism. For the Government is fully aware of the performance of the Company (it produced in 1961-62 50 per cent of the entire country's output of vehicles as against a foreign exchange allotment of 35 per cent and has saved the country, since it began the production of the Tata Mercedes-Benz vehicles, over Rs. 35 crores in foreign exchange, of which nearly Rs. 12.5 crores were saved in 1961-62 alone) and the consequences to it and to the economy as a whole of substantial or prolonged cut in production at Tatanagar. The Government is no less concerned than the Company's management to see that full production of the vehicles is maintained. There is, therefore, every reason to hope, as Mr. Tata does, that, if any cut is imposed upon the Company, it would be a relatively small one and for a short duration. Ruling out complete self-sufficiency in raw materials, components and ancillary products, Mr. Tata has expressed the view that, like every other automobile manufacturer in the world, the Company will always have to depend largely on outside supplies for some of its requirements.

It will be seen from the foregoing account of the Company's progress and its plans for the future that the pessimism, which characterises the current gossip in share market circles, is unwarranted. Those investors, who have patience, will find themselves rewarded in the years to come.

Financially, the Company's position is that of a growing enterprise, with a big expansion programme on hand. Its paid-up capital of Rs. 10 crores (Rs. 8 crores equity and the rest preference) is matched by the gross block of Rs. 28.27 crores (Rs. 24.51 crores in 1960-61), which has been written down by nearly 50 per cent to Rs. 14.91 crores and is shown, inclusive of capital work-in-progress of Rs. 1.27 crore, at Rs. 16.18 crores. Reserves and surplus aggregate Rs. 307.37 lakhs. The total loan liability, including debentures, increased during the year from Rs. 12.63 crores to Rs. 14.71 crores owing to increased manufacturing activities. Current liabilities and provisions totalled at the year-end Rs. 13.67 crores. Excluding debentures of Rs. 3 crores and the Bihar Government's housing loan of Rs. 95.35 lakhs, the total indebtedness to outsiders works out to as much as Rs. 24.43 crores. As against this, there are current assets aggregating Rs. 25.23 crores.

The average number of employees increased during the year from 12,664 to 13,454 whose average annual income per head went up from Rs. 3,320 to Rs. 3,390. The number of shareholders, however, contracted from 15,139 to 14,940, but those who held one to five shares numbered 5,941, or 39.8 per cent of the total, as against 4,951, or 32.7 per cent of the total in the previous year, while those who held 101 and more shares numbered 409, or 2.7 per cent of the total, as against 468, or 3.2 per cent of the total.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 331.50 *cum-div*. Taking the net dividend at 10.15 per cent per annum, the shares yield, on the *ex-div* basis, a net yield of 3.1 per cent per annum.

LARSEN AND TOUBRO LIMITED

PROFIT-MARGIN LOWER

THE most significant fact one has to bear in mind while commenting on the performance of Larsen and Toubro Ltd. [Managing Agents: Messrs. L. & T. (Management) Private Ltd., Bombay] during the year ended 31st March 1962 is that, despite the newly acquired but rapidly developing manufacturing side of its business, the Company still has a substantial interest in trading and construction work, an activity in which competition is keen and profit margins bear little relevance to the volume of turnover. During the year under review, for example, the Company's gross realisation on account of sales invoiced, charges for completed contracts and servicing and service fees expanded magnificently from Rs. 351.08 lakhs to Rs. 571.40 lakhs reflecting a rise of well over 60 per cent. But this improvement was hardly matched by a proportionate increase in gross profit which was of the order of only 6.5 per cent, from Rs. 55.53 lakhs to Rs. 59.13 lakhs. Reasons for this contraction in profit margin were several and have been aptly described by the Chairman in the following words:

"Market conditions and rising costs did not enable us to achieve a rate of profit as favourable as in previous years. There has been a general increase in expenses, mainly on, salaries, wages and bonus; employees' welfare, consumption of materials, power and fuel. The rise in expenses can be partly accounted for by growing production in our workshops, and is attributable, to a considerable extent, to major construction and erection jobs. The problems that arise in executing large contracts under difficult conditions, in the industrially undeveloped parts of India, are quite formidable and it is often impossible properly to forecast the ultimate results of such enterprises, even after the most careful estimates and planning.

"Moreover, during the year, large orders were secured, in the face of severe competition, for certain equipment imported on clients' licences, at narrow margins. These orders, the acceptance of which I feel was justified to keep ourselves established in those particular lines of business, increased our sales without showing a proportionate increase in the profit-margin. Towards the end of the year, last minute changes in procedures for importing equipment under Development Loan Fund allocations delayed the shipment of goods the sale of which would have added to the year's profit, the corresponding benefit of which will accrue to us during the current year."

As if this was not enough, there has been a further drag on the profit on account of higher essential provisions. Some saving, of course, has been effected on the Managing Agents' commission which has declined by Rs. 7,256 to Rs. 3.70 lakhs, but this has been quickly absorbed by the rise of Rs. 0.68 lakh to Rs. 12.20 lakhs in the provision for depreciation and of as much as Rs. 3.40 lakhs to Rs. 21.00 lakhs in that for taxation. These have, therefore, left a slightly lower net profit of Rs. 22.23 lakhs as compared with Rs. 22.84 lakhs earned for the preceding year. Nevertheless, the reserves have been further augmented by a total credit of Rs. 6.46 lakhs, as compared with Rs. 8.32 lakhs last year. The dividend on ordinary shares has been reduced to Re. 1.40 per share, subject to deduction of tax, from Re. 1.80 per share, subject to deduction of tax paid in the previous year. This reduction in the dividend is, of course, in keeping with the lower net profit, but the main reason is that an additional amount of Rs. 4.20 lakhs is distributable on the three lakh ordinary shares issued during 1960-61.

The rapid progress made by the Company during the past four years in terms of turnover, if not profit, will be clear from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales, servicing charges, etc.	571.40	351.08	320.65	278.25

* Subject to deduction of tax.

The Company's working during the year is described as having been highly satisfactory. The combined output from the Powai workshops of the Company and its subsidiaries increased by nearly 40 per cent over the previous year. The general machine and fabrication shops worked to full capacity throughout the year turning out a wide variety of factory plant and equipment.

The switchgear factory also continued to develop satisfactorily and produced an increasing volume of high quality products. On the contracting side of the business, contracts for the erection of the Gauhati Oil Refinery and one for the erection of machinery and equipment for the Worli Dairy project of the Government of Maharashtra were satisfactorily completed. The Madras Harbour extension works in which the Company is associated with another, progressed satisfactorily and is nearing completion.

As for the future, it appears well assured. The year 1961-62 witnessed substantial progress in further development and implementation of various production schemes partly in the Company's own account and partly on joint account with foreign manufacturers. Production facilities have been increased and further additions to fixed assets have been made. The Company is thus ensuring that the very capable selling organisation which has been so painstakingly built up over a number of years in the past continues to be in a position to offer the market with engineering goods of the highest quality.

The Powai workshop likewise continues to operate to capacity and a satisfactory backlog of orders appears on the Company's books. A considerable increase in the production of the switchgear factory has been planned for 1962-63 and sizable export orders have also been recently secured. The range of products is to be widened further by taking up the manufacture of flour milling, feed milling and the gram silo plants for which licences have been procured.

The financial position of the Company is satisfactory. The share capital which has remained unchanged at Rs. 129.00 lakhs (Rs. 15.00 lakhs in 5 per cent tax-free preference shares and the balance in equities) is supported by Rs. 44.74 lakhs in reserves. Borrowings appear on a higher side and amount to Rs. 195.20 lakhs in addition to current liabilities of Rs. 281.78 lakhs. But these are well covered by current assets, including loans and advances, aggregating Rs. 458.53 lakhs. Investments appear at Rs. 71.68 lakhs, which, incidentally, includes a further sum of Rs. 15.00 lakhs invested in shares of Utkal Machinery. During the year, new assets worth Rs. 31.77 lakhs were acquired and, consequently, the gross block has moved up to Rs. 150.58 lakhs. On this, the depreciation provided so far is Rs. 48.26 lakhs, so that the net block works out to Rs. 116.51 lakhs, including Rs. 14.22 lakhs being capital work-in-progress.

The Rs. 10 fully paid ordinary shares are now quoted at Rs. 30 to yield 3.5 per cent per annum net.

Notices

BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting within the meaning of the Companies Act, 1956 (being the Thirty-third Ordinary General Meeting) of BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED, will be held on Tuesday, the 28th August, 1962, at 3-30 p.m. or so soon thereafter as the Extraordinary General Meeting of the Company convened for the same day and place at 3-00 p.m. shall have been concluded or adjourned, at the Registered Office of the Company, Killick House, Home Street, Fort, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Statement of Accounts made upto 31st March, 1962.
2. To declare a Dividend.
3. To elect a Director in the place of Mr. N. K. Petigara who retires by rotation but being eligible offers himself for re-election.
4. To elect a Director in the place of Mr. Ambalal Kilachand who retires by rotation but being eligible offers himself for re-election.
5. To appoint a Director in the place of Mr. D. P. R. Cassad who holds office as a Director of the Company only upto 28th August, 1962, i.e. the date of the Thirty-third Ordinary General Meeting of the Company. The Company has received notice under Section 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:—

   "THAT Mr. D. P. R. Cassad be and is hereby appointed a Director of the Company."
6. To appoint a Director in the place of Mr. L. V. Apte who holds office as a Director of the Company only upto 28th August, 1962, i.e. the date of the Thirty-third Ordinary General Meeting of the Company. The Company has received notice under Section 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:—

   "THAT Mr. L. V. Apte be and is hereby appointed a Director of the Company."
7. To appoint Auditors until the conclusion of the next Annual General Meeting and to fix their remuneration.
8. To consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:—

   "THAT Killick Industries Limited, the Managing Agents of the Company, be and are hereby authorised to retain all commission or other remuneration to be received or earned by them at any time hereafter as Agents of the Hercules Insurance Company Ltd., in regard to any contract for fire, marine or miscellaneous insurance against all risks which may at any time hereafter be entered into between the Company and the said Hercules Insurance Company Ltd., provided the premium rates are not less favourable to the Company than the prevailing market rate or rates which are otherwise reasonable."
9. To consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:—

   "RESOLVED that the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956 and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301-304, 307, 356-360, 362, 370, 372 and Schedule VIII to the Act be kept open for such inspection by the persons entitled thereto to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid provisions, at the Registered Office of the Company between the hours of 11 a.m. and 1.30 p.m. on any working day except on Saturdays and on Saturdays between the hours of 11 a.m. and 1 p.m. except when the said Registers and Books are closed or the said documents are not available for inspection under the provisions of the Companies Act, 1956 or the Articles of Association of the Company, provided however that the register required to be maintained under Section 307 of the Act shall be open for inspection of the persons entitled thereto on the days and at the times mentioned above during the period prescribed by sub-section (5) (*a*) of Section 307."
10. To consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:—

    "RESOLVED that the consent of the Company under the provisions of Section 293(1) (*d*) of the Companies Act, 1956 be and is hereby granted to the Board of Directors of the Company to borrow moneys for the purposes of the Company from time to time so that the total amount of such borrowings outstanding at one time shall not exceed a maximum of Rs. 3 crores even though the moneys so borrowed together with the moneys already borrowed (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) may be in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."
11. To consider and, if thought fit, to pass the following resolution with or without modification as an Ordinary Resolution:—

    "THAT the authorised capital of the Company be increased from Rs. 2.5 crores to Rs. 5.00 crores by the creation of 250,000 Ordinary Shares of Rs. 100 each."
12. To consider and, if thought fit, to pass, with or without modification the following Ordinary Resolution:—

    "RESOLVED that the Company agrees and confirms that the Board of Directors be and is hereby authorised, subject to the consent of the Controller of Capital Issues, to issue Redeemable Debentures of the value of Rs. 1,00,00,000 carrying interest at 6½ per cent per annum, subject to tax, for deposit with financial institutions and the Board of Directors is hereby further authorised to issue Convertible Debentures of the value of Rs. 87,50,000 carrying interest at 6½ per cent per annum, subject to tax, which or any part thereof which, when offered to the shareholders of the Company in the ratio of one debenture for every two equity shares of the Company held by them, have not been so taken up, to any person or persons as the Board thinks fit."

SPECIAL RESOLUTIONS

13. To consider and, if thought fit, to pass, with or without modification as may be permissible, the following resolution as a Special Resolution:—

    "RESOLVED that, pursuant to the provisions of Section 81 of the Companies Act, 1956, and subject to the approval of the Central Government, the Company hereby approves of the term providing for the option being given to such persons who may be the holders of 87,500 Convertible Debentures of Rs. 100 each and carrying interest at 6½ per cent, subject to tax, to convert such Debentures into 87,500 Ordinary (Equity) Shares of Rs. 100 each in the Company in the ratio of one Ordinary (Equity) Share for every Convertible Debenture so held, such option to be exercisable within a period of two years commencing from 1st April, 1963, and ending on 31st March, 1965, and any Convertible Debentures not so converted within the stipulated period shall stand to be redeemed after the expiry of ten years of the date of issue."
14. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

    "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Central Government being obtained, the approval of the Company be and it is hereby accorded to a contract, or arrangement (in terms of the draft initialled by a Director of the Company for the purpose of identification and produced before the meeting for inspection of the shareholders), with effect from 1st September, 1962, proposed to be entered into between the Company on the one hand and Killick Industries Ltd., who are Managing Agents of the Company, on the other hand (subject to any amendments as may be suggested by the Central Government and accepted by the Board of Directors of the Company and by Killick Industries Ltd.) such contract or arrangement to include the following material terms:—

    (1) The staff of the Central Administration Department be notionally divided between (*a*) The Company and (*b*) The Surat Electricity Company Ltd. (of which Killick Industries Limited are the Managing Agents).

    (2) The salaries and other emoluments (except the Provident Fund and Gratuity) payable to the Staff assigned to do the Company's work be directly paid by the Company out of its own funds.

    (3) The Company shall deduct income-tax in respect of such salaries and emoluments, and the amount of tax so deducted shall be paid over to Killick Industries Limited in order to enable the latter to pay the same to the Income-tax Authorities.

    (4) The amount of Company's contribution of Provident Fund in respect of such employees as are assigned to do the Company's work as also deduction from their salary for such Provident Fund shall be paid by the Company direct to the Trustees of the Provident Fund of Killick Industries Limited.

    (5) The Company shall pay every year an adequate amount to Killick Industries Limited as its contribution to meet the liability for payment of gratuity to the said employees assigned to do the Company's work, it being understood that such amount shall be taken by Killick Industries Limited to Gratuity Fund specially created for the purpose.

    (6) This arrangement shall commence from 1st September, 1962, and shall remain in force until terminated by either party by one month's notice in writing given to the other."
15. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

    "RESOLVED that pursuant to Section 31 of the Companies Act, 1956, the regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by a Director of the Company, be and are hereby approved, adopted with such modifications, if any, as may be agreed to at this meeting, as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association thereof."

By Order of the Board,

For BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED,

Per Pro. KILLICK INDUSTRIES LIMITED,

R. P. AIYER,
Managing Agents.

BOMBAY, *5th July*, 1962.

N.B.—(*a*) *A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.*

(*b*) The Transfer Books of the Company will be closed from Wednesday, the 8th August, 1962, to Tuesday, 28th August, 1962, both days inclusive.

(*c*) The Dividend when declared, will be made payable at the Chartered Bank, Bombay on and after Thursday, the 30th August, 1962, to those shareholders whose names stand on the Register on Tuesday, the 28th August, 1962, to whom Dividend Warrants will be posted.

(*d*) Explanatory statements as required by Section 173(2) of the Companies Act, 1956, in respect of items Nos. 5, 6 and 8 to 15 inclusive, have been forwarded to the Members of the Company.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT A MEETING OF THE DIRECTORS HELD on 2nd August 1962, it was decided to recommend to the shareholders at the Annual General Meeting, to be held on 25th September 1962, the payment of a final dividend for the year ended 31st March 1962 of 4% (subject to tax), amounting to Rs. 60,64,000, on the issued Ordinary Shares, payable on 27th September 1962.

Two interim dividends, each of 2½% (subject to tax) amounting in total to Rs. 75,80,000, in respect of the year to 31st March 1962, were paid on 28th September 1961 and 11th April 1962 respectively.

The net profit for the year, after deducting all charges and expenses, and after providing for taxation amounting to Rs. 1,75,62,296, is Rs. 1,46,32,531 (previous year Rs. 1,87,99,207).

There has been a substantial reduction in net profits for the year, partly as a result of the retroactive increase in Company tax, but the Directors recommend that the total distribution should remain unchanged at 9% (subject to tax). In making this recommendation, they have taken into account the results of the last four months' trading and the good prospects for the current year and are confident that, subject to any unforeseen circumstances, they will be able to maintain a 9% distribution for the current year, at the same time appropriating an adequate sum to reserves.

The Directors also intend to declare a first interim dividend of 2½% (subject to tax) in respect of the year to 31st March 1963, payable on 27th September 1962.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on 25th September 1962 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on 26th September 1962. The share transfer books of the Company will be closed from 3rd to 25th September 1962, both days inclusive, and transfers received in order at the registered office of the Company up to 1st September 1962 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,

J. D. FARMER,
Assistant Secretary.

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA.

3rd August 1962.

THE KARANPURA COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE KARANPURA COLLIERIES LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta on Thursday, the 30th August, 1962 at 10.30 a.m., for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 28th February, 1962, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

AS A SPECIAL BUSINESS

5. To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution:

   "That in conformity with Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956, authority be and is hereby accorded to the continuance of a payment to the Directors of the Company of a Commission (to be divided between them in such manner as they shall from time to time determine) of 1 per cent of the net profits of the Company in each financial year over the period of five years extending upto and including the financial year of the Company ending on 28th February, 1967."

The Share Transfer Registers of the Company will be closed from the 16th August, 1962 to the 30th August, 1962, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

CALCUTTA, *26th July*, 1962.

Notes: (*a*) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 15th September, 1962, to those members so entitled whose names appear in the Company's books on the 30th August, 1962 or to their mandatees. No application for Dividend Warrants will be necessary.

(*c*) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above are being sent to the Shareholders.

THE KARANPURA COLLIERIES LTD

AT A MEETING OF THE BOARD OF Directors held on Thursday the 26th July, 1962, the Directors have decided to recommend to the forthcoming Annual General Meeting of the members the following dividends for the year ended 28th February, 1962, subject to deduction of tax.

On 5½% Cumulative (Taxable) Preference Shares at 4.579% per annum (being the dividend at the stipulated rate of Rs. 5.50 per cent, increased by 11% thereof and deducting therefrom Income Tax at Company's rate of 25% in accordance with the provisions of the Preference Shares (Regulation of Dividends Act 1960).

On Ordinary Shares at the rate of 10 per cent.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA.

SENDRA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT A GENERAL meeting of the Members of the Company will be held at its Registered Office, Chartered Bank Buildings, Calcutta, on the 31st day of August, 1962, at 11 o'clock in the forenoon, to consider the following resolution to be proposed as a special resolution:—

"THAT the remuneration payable to F. W. HEILGERS & CO. (PRIVATE) LIMITED as the Secretary of the Company to perform the duties which may be performed by a Secretary under the Companies Act, 1956, and any other purely ministerial or administrative duties shall with effect from the 1st day of September, 1962, for the unexpired portion of the period of five years terminating on the 31st day of December, 1964, be seven hundred rupees (Rs. 700) per month; the terms and conditions upon which F. W. HEILGERS & CO. (PRIVATE) LIMITED shall continue to hold office as Secretary shall be such as are contained in the draft agreement submitted to the meeting and signed by the Chairman thereof for the purpose of identification, which said draft agreement be and is hereby approved; and the Board of Directors be and is hereby authorised and directed to execute the said agreement in the manner prescribed in the Company's Articles of Association."

By Order of the Board,

W. G. EASSON,
Director.

CHARTERED BANK BUILDINGS,
CALCUTTA-1
Dated 31st July, 1962.

N.B.—(i) An explanatory statement is annexed to the convening notice issued to the members of the Company.

(ii) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

COMMERCE AND INDUSTRY

(*Concluded from page* 250)

50 per cent of total items of exports, are now covered by statutory export inspection. Of these, there are 25 items of machinery and metal goods, 52 items of textiles, 36 items of agriculture, forestry and marine products and two items of medicinal preparations. The Export Inspection Law authorises neutral and impartial inspection organs to conduct inspection of export goods in respect of their quality and wrapping and ban sub-standard goods. Inspection covers not only the quality of the final product for exports but also the manufacturing process and constitutent materials as well as the quality of wrapping.

There are six Government inspection organs and 39 private inspection organs. The Government organs comprise one dealing with mining and manufacturing, one with agricultural, forestry and fishery, one with medical supplies and two with transportation. The inspectors appointed by the six Government organs total as many as 1,001. Of the 39 private organs, seven tackle machinery and metal goods, 13 sundries, 15 textiles and 4 agricultural, forestry and fishery. The total number of staff engaged by them is 3,567. The private inspection organs, it may be noted, are public utility corporations, as they are required to conduct export inspection in a completely neutral manner. The law also stipulates that the executives and staff of such a private corporation should not be those who may hamper fair conduct of expert inspection. The quality standards are prescribed in accordance with the Japan Industrial Standard (J.I.S.).

Export Risk Insurance

A wide range of risks associated with exports are covered by insurance in Japan. The Government itself underwrites risks which are not insurable through private insurance companies. The salient features of export risks insurance are: (1) An Export Association can take a comprehensive policy, so that the entire export contracts made by members of the Association are automatically insured. Premia for this type of comprehensive policy are relatively low because risks can be distributed. The risk covered is 90 per cent (2) Goods sent on consignment can be covered by exporters and the risk covered is upto 80 per cent. (3) Exporters can get their advertisement and publicity overseas covered. Compensation is made to the extent of 50 per cent of the loss which the exporter has suffered as a result of the export not being sufficient to cover the advertisement expense. (4) Investments abroad, approved under the Foreign Exchange Control Ordinance, are covered and compensation granted is 75 per cent of the amount of the loss. (5) Losses accruing to investors from inability of getting remittance of dividends on their investments abroad for more than two years due to risks such as ban on remittance or any such cause is covered to the extent of 75 per cent of the amount of losses.

PATENTS FOR NEW INVENTIONS

As many as 5,289 applications for patents were made in 1961, as against 4,503 applications in 1960, according to the latest annual report of the Patent Office (the Government of India) published recently. Of these, the number of applications originating in India was only 774, as compared with 721 applications in 1960. Maharashtra and West Bengal together contributed more than 57 per cent of the indigenous applications. The inventions forming the subjects of the patent applications covered almost all fields of industry and technology. As in previous years, chemical industries contributed the largest number of applications. Preparation of dyestuffs, polymeric resinous materials, synthetic rubber, synthetic drugs, artificial fibres, yarns and films were the subjects of a large number of inventions originating abroad. The indigenous inventions related to preparation of a number of organic compounds mainly drugs, cellulosive materials and resins.

The U.K., the U.S. and West Germany contributed most of the inventions relating to the iron and steel industry. There was also a number of inventions concerning alloys for use in electric heating appliances and extraction and refining of metals like plutonium, uranium and thorium. Indian inventors have developed a few inventions relating to manufacture and refining or iron, gold, kilns and furnaces.

Industrial production in West Germany during January-June 1962 rose by 3.3 per cent, as compared with the first half of the previous year. This growth rate was achieved in spite of a sluggish beginning to the seasonal spring expansion due largely to bad weather. In June, when the building industry was once again strong, the index of industrial production (1950 equals 100) came to 28.5 which was 7.5 per cent better than in June 1961. Increase in the production of machinery was 7.3 per cent and electrical engineering products 5.2 per cent.

SYNOPSES OF COMPANY REPORTS

Patrakola Tea Co., Ltd.

(*Agents*: Messrs. Duncan Brothers & Co., Ltd., Calcutta.)

Fifty-first Annual General Meeting—Held on 8th August 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Gross proceeds of tea	72,95	34,86
Proceeds of tea and waste sold in Chittagong	6,14	3,06
Gross profit	47,76	19,24
Transfer to Agents' remuneration	3,32	2,36

Appropriations:		
Total available balance	20,74	19,14
Transfer to revenue reserve	3,75	5,00
,, ,, development rebate reserve	18	10
Provision for dividend (taxable) ordinary	14,40 (40%)†	11,70 (32½%)†
Carry forward	2,41	2,34

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 5,42,470 being excess provision of taxation for previous years no longer required and excess tax paid in previous years now recoverable amounting to Rs. 4,44,990.

† The dividend for 1961 and 1960 are payable when funds are available in India from Pakistan.

Extracts from the Directors' report: *Dividend*: A sum of Rs. 14,40,000 has been provided against a dividend distribution at the rate of 40 per cent (subject to deduction of tax) for season 1961, when funds are available in India. Funds have not yet been made available from Pakistan to pay the dividends in respect of the years 1956 (part) and 1957 to 1961, and the total amount that will now be outstanding is Rs. 52,20,000.

Crop: The outturns and average selling prices realised compare with those of the previous year as under:

Crop	1961	1960
	Kgs.	Kgs.
Patrakola	484,991	312,807
Madabpore	265,828	166,553
Kurmah	578,691	346,940
Champarai	622,492	397,357
Average selling prices per kg.	Rs.	Rs.
Patrakola	4.91	5.53
Madabpore	4.94	5.56
Kurmah	5.09	5.44
Champarai	5.07	5.46

Planted area is now 4,260 acres. Estimates for 1962 provide for a total crop of 18,51,000 kgs. at an outlay of Rs. 63,66,000 including inland freight and sale charges.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	36,00,000	Gross block	72,50,006
Reserves and surplus	77,69,111	—Depreciation	30,76,610
Other liabilities	1,12,24,308	Net block	41,73,396
		Block in progress	7,06,785
		Current assets	69,82,795
		Investments	9,451
		Cash	1,07,21,992
	Rs. 2,25,93,419		Rs. 2,25,93,419

* Paid-up capital consists of 36,000 ordinary shares of Rs. 100 each fully paid up. Out of this 30,000 shares are allotted as fully paid bonus shares by way of capitalisation of reserves.

Surat Electricity Co., Ltd.

(*Managing Agents*: Messrs. Killick Industries Ltd., Bombay.)

Forty-second Annual General Meeting—24th August 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Gross earnings from sale of energy	1,02,72	99,10

Transfer to contingencies reserve	46	43
,, ,, consumers' benefit (for previous year)	10	Nil
,, ,, development reserve (for previous year)	61	2,05
,, equalisation of dividends reserve	70	47
To dividends (taxable) preference	42 (8.45%)	42 (8.45%)
,, ,, ordinary	5,69† (8%)	5,69† (8%)
Carry forward	12	2

N.B.—Adjustments represent the credit balance brought forward from the previous year.

* Includes Rs. 61,438 being adjustment in respect of provision for taxation for the previous years.

† Dividend for 1962=3% interim plus 5% final.

‡ Dividend for 1961=2½% interim plus 5½% final.

Extracts from the Directors' report: There was no change in the basic rates of supply during the year under review. 1,528 new consumers were connected to the Mains bringing the total number to 32,312.

The following table indicates the development of sales of energy since the year 1959-60:

Kilowatt hours sold for the year ended 31st March	Public and private lighting and fans	Motive power and domestic purposes	Total	% increase on previous year
1960	9,261,494	43,584,044	52,845,538	11.75
1961	10,062,191	47,132,303	57,194,494	8.23
1962	10,471,223	47,945,575	58,416,798	2.14

The restrictions on the supply and use of electricity imposed by the Government of Gujarat in March, 1961, continued to operate throughout the year under review.

Gujarat Electricity Board:—The Company continued to purchase bulk supplies of power from the Board's Thermal Station at Utran, which were supplemented from time to time by the Company's Diesel Plant. The Company's maximum demand on the Board during the year under review, was 13,164 kw. and kilowatt hours purchased were 63,476,735 kilowatt hours self-generated were 531,810. To increase the firm capacity of the Company's new 22 kV receiving station to 10,000 Kva, an order for the third 5,000 Kva transformer has been placed.

System Peak:—The maximum simultaneous peak load on the Company's system as a whole was 13,600 kw. as against 13,900 kw. during the previous year.

Mains:—The Company's transmission and distribution systems were maintained in good order and gave trouble-free service. To relieve some of the overloaded distributors and to cater for new demands, several extensions and reinforcements were carried out. At the close of the year, there were 127.609 Km. of underground and 72,45 Km. of overhead Mains. Two new substations were added to the System.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	75,00,000	Gross block	1,81,93,935

Kingsley-Golaghat-Assam Tea Co., Ltd.

(*Board of Directors*: Mr. G. D. Kothari, Mr. K. C. Bagri and Mr. M. K. Saboo.)

Registered Office: 15, India Exchange Place, Calcutta 1.

Sixty-sixth Annual General Meeting—Held on 25th July 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sale proceeds of tea	30,29	21,36
Dividend from investments (net)	69	60
Closing stock of tea	15,17	14,81
Salaries, wages and bonus	10,06	9,51
Gross profit	5,78	3,24
Transfer to depreciation	1,24	1,50
,, ,, provision for taxation	1,90	61
Net profit	2,64	1,33
Adjustments	82	98
Appropriations:		
Total available balance	3,46	2,31
Transfer to development rebate reserve	4	5
,, ,, general reserve	1,50	Nil
Proposed dividends (taxable) preference	21 (8.57%)	21 (8.57%)
,, ,, ordinary	1,26 (35%)	1,26 (35%)
Carry forward	45	79

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: During the year under review the working results of the Company were satisfactory. Both exporters and local buyers showed keen interest in C.T.C. and good liquoring teas. The Directors have pleasure in informing the shareholders that a few lots of Gorunga Division of this Company were placed in the honour's list.

Total crop of tea harvested during the year was 5,52,301 kgs. as against the 1960 crop of 4,23,885 kgs. Average sale price of tea for the year was Rs. 5.10 per kg. compared with the 1960 average price of Rs. 5.39 per kg. Total value of tea exported during the year under review amounted to Rs. 12,57,812.

The area under tea is 1,226 acres. Plantation in all the three Divisions is in good condition.

In view of the greater demand for C.T.C. type of tea, 2 new C.T.C. machines were installed at Gorunga Tea Estate during the year under review.

Estimates for the Season 1962: These have been based on a crop of 5,08,000 kgs. at a total cost of Rs. 21,22,547.

Capital: As the directors want to expand the scope of activities of the Company it is thought desirable to increase its authorised capital to Rupees one Crore to meet the financial requirement of such new undertakings.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,00,000	Gross block	27,97,571
Reserves and surplus	17,07,807	—Depreciation	11,52,273

To adjustment of loss brought forward	2,59	5,53
Carry forward credit (+) or debit (—)	+47	—2,59

* Represents provision for doubtful debts no longer required and refund of taxes relating to previous years.

Extracts from the Directors' report: For the first time for a number of years it was found possible to work the coke plant without serious interruption and the production of hard coke, viz., 59,540 tons, was the highest achieved since the year ended 31st March 1957. There is an insistent and increasing demand in the country for hard coke of the quality produced by the Company and no difficulties were experienced in disposing of the output or in despatching it.

Reference was made in the last previous report of the Directors to the improvement in the performance of the sulphate of ammonia and sulphuric acid plants. An increased production of both commodities was achieved during the year but on account of their age the plants required continuous repairs and both had to be shut down for short periods.

Efforts continue to be made to effect economies in the cost of production, but it will be appreciated that having regard to the fact that the coke plant has been operating for upwards of forty years the expenditure on repairs is necessarily a heavy item. Furthermore, in order that it may be kept in production it is necessary from time to time to incur a large outlay on renovation. It is in these circumstances that the Directors have thought it prudent to make provision out of the profits for the year for some part of the heavy expenditure which will again have to be faced within a few years.

The Directors have under consideration a number of alternative schemes for the expansion of the Company's hard coke and by-product output. It will be appreciated that, in view of the very high cost of any additional installation of coke ovens, the feasibility of any of these schemes will depend upon the price policy for hard coke adopted by the Government of India, having regard to the cost of raising the finance required. There is no doubt that there is in the country today a shortage of hard coke and, as already indicated, a regular demand exists for coke of good quality.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,00,000	Gross block	41,39,531

		Investments	7,192
		Cash	6,87,198
	Rs. 39,85,572		Rs. 39,85,572

* Paid-up capital consists of 1,20,000 ordinary shares of Rs. 10 each, fully paid up.

Universal Electrics Ltd.

First Annual General Meeting—2nd August 1962. *Regd. Office*: 15, *India Exchange Place, Calcutta.* [*Secretary*: Mr. S. S. Banthia (Company Law).]

Extracts from the Directors' report for the period ended 31st March 1962: The Company was incorporated on 3rd February 1961 and completed its first year on 31st March 1962.

The Company has undertaken a project to manufacture *House-Service Meters* in collaboration with Messrs. Mitsubishi Electric Manufacturing Company, Ltd., of Japan. A public issue of its capital was made in January this year and was over-subscribed inspite of the list being closed on the fourth day.

Work at the factory site has since been begun and at present the building is under construction. The plant is expected to commence trial production by the middle of next year. Other necessary arrangements are also being made.

The expenditure as shown in the balance sheet under the heading "Construction Period Expenses" amounting to Rs. 63,284.49 will be allocated to the fixed assets on completion of the factory buildings and erection of the machinery.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,34,750	Fixed assets	3,07,742
Other liabilities	57,672	Construction period expenses	63,284
		Current assets	2,91,116
		Investments	7,89,756
		Miscellaneous expenditure	1,40,224
	Rs. 15,92,422		Rs. 15,92,422

* Paid-up capital consists of 20,000 equity shares of Rs. 10 each fully paid up and 3,30,000 equity shares of Rs. 10 each—Rs. 5 per share called up in cash. Calls unpaid amount to Rs. 3,15,250.

DEMAND FOR MONEY PICKS UP

(*From Our Own Correspondent*)

BOMBAY, *8th August*

There has been a slight revival of demand for funds in the short-term money market, especially since Monday this week. Even on Saturday last, there was some evidence that the extremely easy money conditions witnessed before were drawing to a close. For, on that day, a few banks were prepared to pay ¾ per cent per annum for inter-bank call money as against ½ per cent that had come to prevail since Tuesday 31st July. But, from Monday onwards, there was a perceptible increase in the demand for money, with banks willing to pay as much as 2 per cent for day-to-day money. The rate was higher still at 2½ per cent today. No precise explanation is, however, available for the reappearance of demand when the traditional slack season has still three months more to go. Obviously, what has happened is only the end of exceptionally easy money conditions.

There has been no change in the interest rates on short-term deposits.

The results of 91-day Treasury Bills of the Government of India sold under the weekly tender system are in keeping with the slight pull on the short-term money market experienced this week. Thus, the amount tendered against an invitation for Rs. 2 crores (same as in the previous week) was lower by Rs. one crore at Rs. 2.50 crores. The average rate of accepted tenders, which had consistently fallen in the previous fortnight, remained unchanged at 2.350 per cent per annum. Tenders for Rs. 2 crores of Bills have been invited for the coming week.

There was a heavy rush for the 91-days' intermediate Treasury Bills, but this was before the resurgence of the demand for money among banks. Sales of these Bills from 1st to 4th August fetched as much as Rs. 8.30 crores, as against Rs. 6.72 crores previously and Rs. 3.37 crores on 18th July to 21st July. The sales of these Bills during the week under review constitute a record high so far. They are being continued, albeit at a slightly higher rate of 2.296 per cent per annum.

A notable event of the week is the announcement by the Reserve Bank of the borrowing programme of 14 State Governments for the current fiscal year. The details can be found in the advertisement appearing on page 232. Our analysis of the terms, etc., also appears on an earlier page. Suffice it to record here that the total amount sought to be raised by the States (that is all except Jammu and Kashmir) is Rs. 93.5 crores that the rate of interest is uniformly 4½ per cent per annum for a usance of 12 years, that the redemption yield ranges from 4.50 per cent to 4.55 per cent as the issue price varies, Rs. 100 in the case of two States, Rs. 99.75 in the case of four States and Rs. 99.50 in the case of the remaining nine, and that the list will open on Monday 27th August and close on 1st September, or earlier.

Although the terms of the loans are ¼ per cent more favourable to the lenders, one does not find any significant setback in the value of the existing State loans since their announcement. This is not surprising, for they had been well anticipated and the values of State loans revised downward. As compared with the quotations a week ago, there has, however, been a drop of 10 nP in the 4½ per cent. 1972 loan of U.P. and Mysore and of 15 nP in that of Andhra. Among Central loans, 3 per cent 1964, 1966-68 and 1970-75 have picked up 10 nP, 15 nP and 10 nP, respectively. Similarly, both 3½ per cent 1964 and 1965 have gained 5 nP 3½ per cent 1969, however, has declined by 20 nP.

It was reported in these columns last week, that foreign assets held by the Reserve Bank had gone up by Rs. 9.25 crores in the week ended 27th July 1962, following the withdrawal of $25 million from out of the $100 million I.M.F. standby credit. In the week ended 3rd August 1962, there was a fall of Rs. 4.04 crores in these assets, so that they have once again fallen below Rs. 100 crores, to Rs. 99.06 crores to be exact.

There has been a further growth in the deposits of scheduled banks. This was Rs. 9.23 crores in the week ended 27th July; as against this, bank credit contracted by Rs. 9.45 crores and investments short up by Rs. 34.95 crores.

In the foreign exchange market, the rupee-dollar exchange rates remain unchanged at Rs. 477.25 and Rs. 473.75 per 100 dollars, the banks' selling and buying rates, respectively, for ready T.T. Abroad, the pound sterling has improved fractionally over the week in terms of the U.S. dollar. Spot sterling has moved up by 0.040 cent to 280.530-280.570 cents per £. The three months' forward, however, is a shade quiet at 280.000-280.040 cents per £.

SMALL BUSINESS IN KIPS

(*From Our Own Correspondent*)

MADRAS, *6th August*

In view of the August holidays in the U.K. and the Continent, export business in the local hides and skins market this week was small. There were inquiries for the light-weight cowhides and the inferior fifths cowhides in all averages, but business did not materialise because the overseas buyers were not prepared to pay the prices ruling here. There was good demand from the inland trade, which was a relieving feature to the stockholders. Tanned buffhides and buffcalf were neglected due to lack of support from the U.S. Arrivals from the tanneries were normal, but clearance was staggered.

Shipment business in tanned goat and middle class sheep skins was small and selective, as local prices hardened. There were several export inquiries for tanned skins, but only a few deals were put through after much bargaining. In view of the great resistance to the higher prices, the E.I. tanners will have to regulate their input, if they wish to stabilise prices at the prevailing levels.

Total shipments (in bales) during July were 2,850 of tanned cowhides, 358 of cowcalf, 33 of buffhides, 340 of buffcalf, 299 of goat skins and 238 of sheep skins to the U.K.; 98 of cowhides; 21 of cowcalf, 8 of buffcalf, 734 of goat skins and 309 of sheep skins to the Continental ports; 5 of cowcalf, 35 of buffhides, 159 of buffcalf and 330 of goat skins to the U.S. and one bale of goat skins and 159 bales of sheep skins to Japan. It will be noticed that shipments of tanned goat skins to the Continent were higher than those to the U.K. and the U.S. put together.

RECOVERY IN BULLION

(*From Our Own Correspondent*)

BOMBAY, *8th August*

The bullion market depicted a firm trend in the first two sessions of the week but developed a sagging tendency on Saturday which persisted till today when there was some recovery. The initial firmness was due to better offtake by upcountry interests, while arrivals were comparatively smaller. Consequently, both gold and silver registered a rise in values. On Saturday, the market turned quiet, thanks to lack of follow up support and reports suggesting heavy arrivals. The declining tendency of prices gathered further momentum in the subsequent two sessions also. At lower levels, profit-taking set in and a recovery was in evidence today. Not only were the earlier losses made up but the closing rates were higher than those at the end of last week except in the case of ready gold which was lower. The undertone of the market at the time of writing was firm.

Both the daily average offtake and the arrivals of the two metals during the week were lower as compared with the previous week. The relevant figures are given below:

	Week under review	Last week	Two years ago
Gold (tolas)			
Arrivals	6,100	6,200	6,800
Offtake	3,400	4,400	4,800
Floating stocks	20,000	20,000	30,000
Silver (bars)			
Arrivals	28	32	33
Offtake	6	11	6
Floating stocks	700	700	800

The *Bhadrapad* (15th September) settlement in gold met with good support early in the week and advanced from Rs. 124.80 to Rs. 125.30 on Friday the 3rd inst. Thereafter, the settlement receded and touched a low of Rs. 124.65 yesterday (Tuesday the 7th inst.), but recovered to Rs. 125 today before finishing at Rs. 124.95.

There was a sharp fall in the premium commanded by ready gold over the forward, from 65 nP on Wednesday last week to 10 nP yesterday, and today both were on a par. The spot rate, which had gone up from Rs. 125.45 to Rs. 125.70 on Friday, receded to Rs. 124,75 yesterday, but moved up again to Rs. 124.95 today.

In silver, the *Bhadrapad* (17th September) settlement began the week at Rs. 213.20, as against the previous close of Rs. 213.30, and, after rising to Rs. 214.35 on the 3rd inst., receded to Rs. 213.55 yesterday, but finished better at Rs. 214.05 today.

Ready silver fluctuated between Rs. 213.65 (3rd August) and Rs. 212.25 (2nd August) before winding up the week at Rs. 213.45, a rise of 95 nP as compared with the last week-end rate. At this level, it was quoted at a discount of 60 nP under the forward which was less than that (80 nP) prevailing a week ago.

The dollar price of gold in the London bullion market eased further from $35.11¾ to $35.11¼. But ready gold gained ¼d. to 250s. 4d. Ready silver moved up from 88¾d. to 89¼d. and forward from 88¾d. to 89¼d. The rise was in sympathy with the increase in silver price at New York from 104.75 cents to 105.50 cents.

The following table shows the trend of prices during the week under review:—

	8-8-62 (closing)	High	Low	1-8-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	124.95	125.70	124.75	125.45
*Bhadrapad**	124.95	125.30	124.60	124.80
Sovereign	97.50	98.00	97.50	98.00
SILVER				
Ready (.996 fine)	213.45	213.65	212.25	212.50
Bhadrapad†	214.05	214.35	213.00	213.30
London—				
Gold	250s.4d.	250s.4d.	250s.¼d.	250s.¾d.
Silver Ready	89¼d.	89¼d.	88¾d.	88¾d.
Silver Forward	89¼d.	89¼d.	88¾d.	88¾d.
New York—				
Silver	105.50 cents	105.50 cents	104.75 cents	104.75 cents

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

LINSEED RISES AGAIN

(*Messrs. A. Bradley and Co.*)

CALCUTTA, *6th August*

The local linseed market displayed an upward tendency again towards the latter part of this week, and there was an appreciable rise in prices. Arrivals from the upcountry were still very small and may not improve in the near future owing to the monsoon. The oil market was very firm. Only small ready business was done as stocks were very small. Sellers for forward position were not inclined to do any business at the current rates. The oilcake market was also firm. Local inquiries were good, but stocks with mills were limited. The latest quotation for the August-Sept. delivery was Rs. 87.08 per quintal.

COTTON FUTURES RALLY

(*From Our Own Correspondent*)

BOMBAY, *8th August*

Distinctly firm conditions prevailed in the cotton futures market during the week. Reports of unfavourable weather from certain growing regions and unsatisfactory crop progress and the apprehension that movement of new crop would be delayed prompted large-scale buying by local and upcountry operators. The recommendation of the Cotton Advisory Board that one million bales of cotton should be imported during the coming season had no bearish effect on the market. This was because it was generally felt that, even if this was possible, which was doubtful, the foreign exchange position being what it is, the supply position of cotton would still be precarious. Much, however, depends on the size of the new crop and, with the weather being none too satisfactory, the outlook for cotton is distinctly bullish. This consideration prompted large-scale support to the futures contract. Under pressure of persistent buying orders, Jarilla March contract rallied from last week-end's (31st July) closing of Rs. 730.25 to Rs. 745.75 on Monday. Profit-taking and some nervous selling prompted by the high price resulted in a mild setback and the contract finished today at Rs. 745, showing a net gain of Rs. 14.75 over the week.

In the spot market at Sewri, good mill demand was reported for such varieties as Laxmi, Co2, L.147, Kalyan, Wagad and 197/3. Disturbing crop reports from some of the growing areas prompted mills to quickly cover available lots of good quality cotton. Export inquiries were noted for superfine Bengal *Deshi*, and Zoda and Yellow Pickings. Announcement of an export quota for Bengal *Deshi* is expected to be delayed for sometime more as the Government seems to be anxious to assess the probable size of the crop. Demand for foreign cotton was confined to selected East African and Sudan varieties.

The second meeting of the reconstituted Cotton Advisory Board was held at Bombay on 2nd August under the chairmanship of Mr. W. R. Natu, the Textile Commissioner. The Board welcomed the Government of India's early decision to increase the ceiling prices for the 1962-63 season of the basic variety Jarilla Fine 25/32" by Rs. 35 per quintal (Rs. 125 per candy) with corresponding increases in the prices of other varieties. The Board recommended certain modifications in the basic staple length, definitions of varieties, change of groupings and premiums for improved varieties of Indian cotton for the 1962-63 season.

The question of the supply and demand of cotton was discussed. The Board felt that the crop may not be larger than 5.2 million bales even under favourable circumstances. It, therefore, recommended the import of at least one million bales of cotton so as to arrive early in the next season. As regards exports, the Board was of the view, that no quota of Bengal *Deshi* cotton should be issued during the current season. It, however, recommended that a statistical export quota should be announced for the next season early in the year as was done for the last season. The Board also suggested that instead of the existing multiplicity of the regional survey committees, a few large strong and expert zonal committees of experienced surveyors may be set up. It was of the view that the Textile Commissioner should exercise his powers for random requisitioning in an effective manner, and at his own discretion. There was general agreement that the quota system should be continued and suggestions were made for modifying the existing pattern of varietal distribution in certain respects. The timing and quantity for the first allocation of indigenous cotton to the mills was considered and the Board suggested that higher quotas should be given for the North Indian mills early in the season.

The following are the latest available quotations—in rupees for candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 770; Khamgaon 1,010; Gadag Laxmi 1,175; Co2 1,320; B.P. (U.N.U.G.) 1,262; Jinja 1,140; Giza 45, 1,975.

Dull conditions prevailed in the Karachi cotton futures market during the week. Uncertainty about the export duty and lack of mill support made traders cautious. Values moved in a narrow range, showing small change over the week. N.T.R.G. January 1963 receded from Rs. 75.20 last week-end to Rs. 74.90. The March contract was quiet at Rs. 74.45, as against Rs. 74.40 last week. The Karachi Cotton Association has urged the Government to abolish the export duty and sales tax on raw cotton so that growers might get a better return for their produce and export earnings increase.

Cotton futures at Liverpool suffered a mild setback during the week. Both the American and American type contracts declined on selling prompted by lower advices from New York and slack domestic mill demand. Sudan cotton contracts were quiet and nominally unchanged.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 23.35; December 23.30.

American cotton mixed growth contract: October 23.70; December 23.65.

Sudan: September, November, January 29.50.

Easy conditions prevailed in the New York cotton futures market. Selling influenced by bearish private crop forecast and lower advices from the spot market led to a sharp break in values. The first official crop forecast, scheduled to be issued on the 8th inst., was eagerly awaited by operators.

The U.S. Agriculture Department has nounced the details of its new programme to Commodity Credit Corporation stocks of available for export sale on a competitive Under the programme, C.C.C. cotton wil

UNDER SECRETARY 13 AUG 1962 PUBLIC DEPARTMENT 26

only when, in the judgment of C.C.C. the domestic market price of cotton is sufficiently above the support price so that sales under the programme will not interfere with the orderly operation of the price support programme and will not unduly increase the quantity of cotton placed under price support loans. Sales will be made on a competitive offer and acceptance basis, but no offer will be accepted at less than the price determined by C.C.C. to be equivalent to the world export market prices plus the cotton export rate in effect on the date the offers are accepted. Such minimum sales price will take into account the value to the purchases of the right of reclassification, substitution and other relative advantages of purchases from C.C.C. inventory. Exporters can purchase this cotton from C.C.C. stocks, provided an equivalent quantity of cotton is exported. It is not necessary that the identical cotton purchases from C.C.C. be exported.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	7-8-62	30-7-62	24-7-62
New York Spot	35.80	35.90	36.00
October	33.80	34.08	33.87
December	33.96	34.25	33.98
March	34.32	34.49	34.22

RECOVERY IN PEPPER

(Messrs. Parekh and Co.)

BOMBAY, *8th August*

After ruling weak owing to liquidation by weak bulls, Malabar black pepper steadied during the latter part of the fortnight ending today, in view of unwillingness on the part of growers and holders to press sales at lower levels. Ready garbled, after touching the lowest of the year at Rs. 270, improved to Rs. 292. Ungarbled rallied from Rs. 362½ to Rs. 285. August delivery, after touching the new low level of Rs. 270, rallied under pressure of buying by strong holders among bulls. They tightened their grip on the August delivery as well as on ready supply so as to force the shorts to cover, as the due date for August was coming nearer.

Singapore, after dropping to Str.$102½ for black, improved to Str.$110, owing to short-covering and, broadening of foreign inquiries and white from Str.$137½ to Str.$150. Strong holders of Lampong are unwilling to release their stock at lower level. As a result, there is a shortage of supply.

Some sales to New York are reported by Indonesia at $0.31 per lb. C.I.F., owing to lower check price. This made Singapore and India nervous.

New York, which went down to $0.32 under pressure of unsold consignments, improved to $0.34 after the liquidation of the major part of the unsold parcels from India and Singapore. Though demand from grinders is reported slow, dealers in general are expecting the broadening of buying by grinders during the next few days.

Future depends upon the attitude of Lampong and the buying tempo of grinders in New York and the replacement thereof by dealers. Middle East and Pakistan were reported to be buyers in the local market. This was responsible for the present improvement in ready in Bombay which is now quoted at Rs. 155 per 50 kilos, the lowest being Rs. 152.

METALS RISE FURTHER

(From Our Own Correspondent)

CALCUTTA, *7th August*

Reports of a satisfactory outcome at the Aid India Consortium's meeting and the Union Finance Minister's sober optimism that the remaining gap of approximately $80 million in the Consortium's commitments for 1962-63 was expected to be closed were noted with particular enthusiasm in the metal market here this week. The expectation that more imports of non-ferrous metals would be permitted led to an easier trend in prices during the week under review. Mr. Morarji Desai has stated that most of the future aid would be tied to specific projects. In other words, the aid from the U.S. would have to be used for importing essential industrial requirements in addition to capital goods for specific projects. A good portion of the U.S. aid is, therefore, expected to be utilised for imports of copper, zinc, fertilisers, and spares from that country.

Advices from the London Metal Exchange depicted an easier trend following the news that the U.S. Government was disinclined to consider favourably the suggestions offered by the International Tin Council in regard to the plan for release from the strategic stockpiles. Prices declined to as low as £849½ a ton, but a modest recovery to £852 was recorded following good support from the Buffer Stock Manager. An easier trend was also in evidence in the Far Eastern market. Although the U.S. has rejected the I.T.C. proposals, it is expected that Washington would not rush to the market and release the entire quantity at one stretch. The releases would be in small quantities at intervals. Time and again, it has been explained on behalf of the U.S. that it would ensure that releases were so orderly and gradual that no disturbance to the market trend would be caused. In Calcutta, tin opened at Rs. 2,185, and, in line with the easier advices from abroad and also due to the comfortable supply stock position, eased to Rs. 2,066.75, while in Bombay a three-point recession was recorded.

In London, electrolytic copper was firm throughout the week at £234 a ton, while the three-months delivery eased from £230 to £229½. It was expected that the backwardation would widen now that production in Chile had gone up. Besides, the European demand in London has not emerged. An easier trend was also recorded in New York. Continued tightness in copper scrap supplies was a feature in Calcutta. Although recently there have been good arrivals under the D.L.F. scheme, consumers are not able to keep up to their programme of production. Clean wire scrap was quoted at Rs. 615.50 and utensil scrap at Rs. 562 per 100 kgs.

Electrolytic zinc opened here at Rs. 307 per 100 kgs. and eased to Rs. 293.25. The easiness was attributed to expectations of larger imports. In London, the metal opened at £65¾ a ton and eased to £64⅞, but following moderate dealings recovered to £65. At Rs. 157.50 per 100 kgs., virgin lead eased by Rs. 2 in Calcutta. Demand was poor.

ART SILK YARN PRICES TO BE RAISED?

(From Our Own Correspondent)

BOMBAY, *8th August*

The yarn market is thick with rumours of an early upward revision in the ex-mill selling prices of indigenous art silk yarn by 25 nP per lb. It is believed that the Central Government has already taken the decision to permit the spinners to effect such an increase and an official announcement is expected any day. The proposed increase would appear to have caused disappointment to spinners who seem to feel that it will just cover the payment of a cess at 25 nP per lb. on indigenous rayon yarn which the Government wants to levy with the object of providing cash incentives to exporters of rayon fabrics and does not compensate the industry for the all-round increases in the prices of raw materials, stores and accessories and heavier wage bill. The rumours of higher ex-mill prices of indigenous art silk yarns, however, failed to have any effect on price trend in the market. Nor was the Government's announcement raising the maximum entitlement for art silk yarn under the Export Promotion Scheme of any avail. The Press *communique* (dated 4th August) issued by the Textile Commissioner says:

"Under the Export Promotion Scheme for art silk fabrics since July 1959, the manufacturer-exporters of art silk fabrics in the power-loom sector were permitted to receive maximum entitlement under the scheme for art silk yarn of Rs. 6,000 per annum, which was subsequently enhanced to Rs. 7,500 with effect from 1st April 1961. Since October 1961, however, the manufacturer-exporters of art silk fabrics were permitted to receive maximum entitlement under the scheme for art silk yarn at Rs. 10 per loom per shift. As a result of the representations received from the art silk weaving industry, the Government has now raised the maximum entitlement under the Export Promotion Scheme for art silk yarn to Rs. 15,000 per loom per annum for the period April 1962-March 1963. It is expected that the above measure will further stimulate exports of art silk fabrics."

Staple fibre yarns tended to move up on reports of encouraging offtake from consuming centres. Traders expected that the offtake would increase the freight rate on oilcakes, referred to tion was based on two grounds. One, the rise in prices of art silk yarn might induce weavers to use more of staple fibre yarn than of art silk yarn. Two, the exports of fabrics will register an improvement following the official relaxation of individual ceilings for exports and the reduction of 5 nP per yard in the export price effected by shippers. If, in spite of all these reports, yarn prices did not show a marked rise, it was apparently because of fears regarding official intervention to check the rising tendency in prices.

Cotton yarns continue to rule dull in the absence of any fresh encouraging news. The supply position was quite comfortable. Demand from consuming centres was at a low ebb.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	8-8-1962	31-7-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
August	4,800.00	4,800.00
Nat. Ray. 150 Bt. 1 (per kg.)	14.23	14.26
Nat. Ray. 150 Bt. 1 (per kg.)	16.92	17.05
Staple fibre yarn (40 × 2)—		
August	820.00	817.00
October	843.00	842.00
Kohinoor (per kg.)	9.28	9.22
Century	9.02	8.93
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.00	18.00
32s Madura	30.00	30.00
40s Gokak	35.50	36.00
60s Finlay	73.50	73.50
80s Madura	81.00	81.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, *8th August*

Buoyant conditions prevailed in the oilseeds market during the week under review. The buoyancy was the result of pronounced speculative buying. Groundnuts staged a smart headway mainly on reports of insufficient rains in Saurashtra area where it was feared that the *1962-63 crop* would be lower by 50 per cent, as compared with last year's output of about 700,000 tons. There was also good offtake by *vanaspati* manufacturers and crushers. Castorseeds also evoked active buying enquiries and values moved up further, despite unconfirmed reports regarding the disposal of about 5,000 tons of castor oil from the U.S. stockpiles. In sympathy, linseed and cottonseeds ruled distinctly firm.

The imposition of a ceiling on mustard seed August 1962 contract (which has been ruling distinctly firm for sometime past) in North India did not have any perceptible effect on the local market. The ceiling fixed is Rs. 41 per 40 kgs. at Delhi, Agra and Kanpur and Rs. 40 per 40 kgs. at Bhatinda.

The Bombay Oilseeds and Oil Exchange has conveyed, in a telegraphic communication addressed to the Union Government, its protest against the decision of the Karmahom Conference Lines to increase the freight rate on oilcakes, referred to in these columns last week. The Exchange has urged official intervention so that the Conference may revise its decision. It has clearly warned that the move to increase freight would adversely affect the export trade in oilcakes which has been picking up of late.

Groundnut January 1963 contract jumped up by Rs. 10.87 to Rs. 239.37. September 1962 contract advanced by Rs. 8.88 to Rs. 234. Khandesh quality spurted by Rs. 2.13 to Rs. 50.25. Nizam bold rose by Re. 1.63 to Rs. 49.50. Oil September 1962 contract gathered 95 nP to Rs. 20. Oil ex-mill put on 90 nP to Rs. 20.20 and Railway receipts 75 nP to Rs. 19.80.

Castorseed March 1963 contract strengthened from Rs. 170 to Rs. 172.25 before closing at Rs. 171.25. September 1962 contract finished higher at Rs. 172.10 last week-end. Madras small and Kanpur improved by 38 nP each to Rs. 34.25 and Rs. 33, respectively. Oil B.S.S. hardened by 15 nP to Rs. 14. Oil Commercial gained a like amount to Rs. 13.

Linseed March 1963 contract rose by 87 nP to Rs. 41.37. September 1962 contract improved by 56 nP to Rs. 42.56. Bold ready was higher by 38 nP to Rs. 41.50. Linseed oil picked up 15 nP to Rs. 17.20.

Cottonseed September 1962 contract advanced by a rupee to Rs. 107. White rose by 25 nP to Rs. 21. Rerar improved by a similar amount to Rs. 22.50. Non-whites, however, shed 25 nP to Rs. 22.

The following table shows the closing prices of oilseeds and oils on Wednesday, 8th August, as compared with those of the two previous weeks:

	8-8-1962	31-7-1962	25-7-1962
Groundnut	Rs.	Rs.	Rs.
September 1962	230.37	228.50	227.75
Groundnut January 1963 ..	234.60	225.12	220.50
Nizam bold	49.50	47.87	47.62
Khandesh quality	50.25	48.12	48.12
Oil ex-mill ready*	20.20	19.30	19.40
Railway receipts*	19.80	19.05	19.05
Castorseed			
September 1962	172.25	171.00	169.50
Castorseed March 1963	171.25	170.00	166.75
Ready Madras	34.25	33.87	33.75
Ready Kanpur	33.00	32.62	32.75
Oil B.S.S.†	14.00	13.85	13.80
Oil commercial†	13.00	12.85	12.80
Linseed			
September 1962	42.56	42.00	42.25
Bold ready	41.50	41.12	41.00
Oil ready†	17.20	17.05	16.90
Cottonseed September 1962 ..	107.00	106.00	105.50
Cottonseed January 1963 ..	—	102.00	100.00
Niger seed	38.00	37.00	37.00
Kardi seed	29.00	27.00	27.00

* Rates include excise duty but exclude sales tax
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEAS STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *2nd August*

A total of 679,000 kgs. was on offer in sale No. 30 held on Tuesday, 31st July. Quality showed a general all-round improvement. There was strong demand. Highgrown brokens and fannings advanced considerably in price, particularly those with improved quality. Good medium and medium brokens were well supported at dearer rates, especially the brighter kinds. Their fannings were irregular but generally dearer. Low medium brokens were generally firm to dearer, whilst their fannings, though meeting better enquiry, were irregular. The brighter lines in this category, however, registered advances. Plainest brokens were barely steady, but there was better support for fannings in this category than in recent weeks. Black leaf descriptions were well supported. Whole leaf grades followed the general upward trend of the market. Teas of unorthodox manufacture met keen competition at enhanced rates, but the poorer types were easier. Tippy teas sold well.

The quotations (per kg.) were:

	1962	1961
Low mediums	3.10-4.00	4.45-4.55
Mediums	3.80-4.30	4.55-4.60
Good mediums	4.50-5.35	4.60-5.15
Nilgiri B.O.P. ...	4.30-7.10	4.75-5.70

The average price realised in No. 30 was Rs. 4.28 per kilo as against Rs. 4.00 a week ago and Rs. 4.68 in the corresponding sale last year.

In dust sale No. 30 held today, 340,000 kgs. were offered. A strong demand prevailed throughout the sale and prices registered a further general advance. Highgrowns, although irregular, were often dearer, while good medium descriptions also appreciated. Wynaad sorts met with keen competition at higher rates and Travancore dusts were generally fully firm at 10 nP dearer. Black grainy kinds sold at enhanced prices. Unorthodox descriptions were keenly sought after and advanced quite considerably.

The average price realised in dust sale No. 30 was Rs. 3.42 per kilo, as compared with Rs. 3.23 a week ago and Rs. 4.62 in the corresponding sale last year.

Colombo: Approximately 7 million lbs. were offered and met with a strong general demand with highgrowns distinctly dearer following improved quality, especially Uvas. Mediums advanced 10 cents, whilst low growns were 5-10 cents dearer. Fannings were strong and dearer.

London: North Indian and other growths: In Monday's auction the few new season's North India teas came to a firm market. Clean plain black leaf and bright liquoring coloury Africans were about steady but all others were easier, especially the plainest stalky kinds.

Ceylon and South Indians: In Tuesday's auction, there was good demand for best Ceylons and South Indians which were firm to dearer but others were irregular and sometimes lower.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 31: 662,000 kgs. offered. Good general demand. Low medium and mediums 10 to 20 nP dearer, where quality improved. Good mediums fully firm to dearer. Highgrowns strong and dearer with quality unorthodox fully firm."

SUGAR PRICES ADVANCE

(From Our Own Correspondent)

HAPUR, *6th August*

An all-round buying spree, mainly from *khandsari* and *gur* consuming centres, due to paucity of stocks of these commodities there resulted in a further advance of more than a rupee a maund in sugar prices here this week. The improvement was more pronounced in the inferior quality small crystal. Forward trading in the next quotas to be released in August and September was being done at higher prices. Trade circles are said to be persuading the Government to release an additional quota to check the current upward trend in prices. Brisk buying support continued from all parts of U.P., Punjab, Rajasthan and Delhi. Spot delivery prices advanced by about 50 nP per quintal to be quoted at Rs. 109.50. Retail prices, too, were higher by Rs. 1.09 per seer. The mill delivery prices (per maund) were: D-29 Amroha Rs. 39.94, Dhampur Rs. 40, Seohara Rs. 39.68, Meerut Rs. 40.50, E-29 Simbhoali Rs. 40.25, Bijnore Rs. 39.75 and Dhampur Rs. 39.87.

The Muzaffarnagar sugar market ruled firm this week on brisk demand from Rajasthan, Punjab, Delhi and parts of U.P. The small grains rose by 13 nP to 50 nP a maund. Forward transactions were done even at higher rates. The firm trend in *gur* and *khandsari* and the bright prospects of sugar exports to Canada and other countries aided the rise in prices. Spot prices advanced by 50 nP to Re. 1.25 a quintal. Sugar prices rose also in Kanpur, thanks to the brisk buying support.

Persistent demand from Rajasthan and Punjab in the face of depleted stocks produced gains in *khandsari* during the week. While the inferior quality was quoted at Rs. 85.74 to Rs. 91.09 per quintal, the superior one was lifted at Rs. 96.54 to Rs. 105.83 per quintal. Crystal *khandsari* continued to be quoted higher at Rs. 95.11 to Rs. 107 as was boora at Rs. 99.13 to Rs. 104.37 per quintal.

Ready *gur* prices were at a new peak due to the poor stock position and brisk demand from the South. Cane crop prospects also were considered poor owing to insufficient rains over a wide area. Total arrivals of *gur* here during the current season were put at 4.29 lakh maunds, as against 4.72 lakh maunds last year. *Shakker* continued to attract support from Punjab and Rajasthan and its prices were also at the best level of the session. Week-end prices were: *Gur* superior Rs. 66.31, kotha Rs. 53.58 and *shakker* Rs. 68.28 per quintal.

Continued demand from Rajasthan and Gujarat in the face of the meagre stocks left with the trade accounted for a sharp rise in ready *gur* prices in the Muzaffarnagar market. Prices improved by 50 nP to one rupee per maund to be quoted at Rs. 24.50 to Rs. 27.50 for dry chaku and at Rs. 22 to Rs. 22.50 for the quality produce.

Gur futures moved both ways during the week on alternate bouts of buying and selling. *Gur* fagun opened at Rs. 21.93 on 31st July, touched the highest and the lowest levels at Rs. 22.17 and Rs. 21.65, respectively, and was quoted today at Rs. 22.01. Sentiment was bullish on support influenced by the absence of rains over a wide area, which has adversely influenced the cane crop prospects.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, *6th August*

Quietly steady conditions were witnessed in foodgrains here this week owing to the late and inadequate rains resulting in uncertain prospects of *kharif* crops, mainly of paddy. The food situation in the country has, however, been described as comfortable by the Union Food Minister, Mr. S. K. Patil, and self-sufficiency is expected to be attained by the end of the third Plan. The stock position was "quite comfortable" and the decision to accelerate imports from America under the P.L. 480 agreement was expected to improve the situation. The current stock was placed at more than three million tons of wheat and rice. By December, 1.50 lakh tons of rice would be imported from America and from October onwards three lakh tons of American wheat would be coming every month. Additionally, 3.50 lakh tons of rice are expected to be imported from Burma and other sources during the year.

Due to poor arrivals and continued consumer and outside support, the average quality wheat prices were marked up by 32 to 67 nP a quintal to Rs. 41.53. The farm quality, however, was stationary at Rs. 43.54 to Rs. 46.89. The red quality was sold at Rs. 38.50 to Rs. 40.19. Arrivals were poor, averaging 200 maunds daily, and the stock declined to 66,000 maunds. During the week, two wagons were loaded for Sholapur. Rice prices fluctuated narrowly. The inferior quality advanced modestly on good consumer demand. Arrivals were negligible and the stock at the week-end was meagre at 7,000 maunds. Week-end prices were: Rice *basmati* superior Rs. 85.74 to Rs. 96.45, sela *basmati* Rs. 75.02 to Rs. 80.38, *mainpuri* Rs. 58.94, *ramajwayan* Rs. 64.30, *raimunia* Rs. 66.98 and *gadda* Rs. 56.26 a quintal.

Gram prices were stationary at higher levels on improved advices from the Punjab and Rajasthan. Arrivals from Rajasthan totalled 500 maunds and the stock ran down to 17,500 maunds. The Punjab gram was quoted at Rs. 43.54 and the local produce at Rs. 42.87. Barley and bejhar registered small gains during the week on good demand. Prices were marked up by 67 nP in either case and at the week-end were quoted at Rs. 30.14 and Rs. 30.44, respectively. Stocks were meagre at around 8,000 maunds each. *Jowar* prices were stationary, but *guwar* prices tended to rise on good demand. Methi prices, however, drifted lower for want of support. Maize and other coarse grains were listless. Week-end prices (in rupees) were: *Jowar* 46.89 to 50.91, *guwar* 40.53, *methi* 58.94, *maize* 29.47, *bajra* 37.51 and oats 29.47 to 30.81 a quintal.

Among pulses, peas declined by 32 to 67 nP per quintal, as demand slackened. The dara quality was quoted at Rs. 34.48 to Rs. 34.83 and the farm quality at Rs. 36.17 to Rs. 37.51. Peas dal was quoted at Rs. 38.85. During the week, two wagons of peas was despatched to Madras. Arrivals were poor, at an average of 200 to 300 maunds daily, and the stock declined to 67,500 maunds. *Arhar* spurted by Rs. 2.67 to Rs. 5.34 on better demand against poor arrivals and meagre stocks. *Urd, moong* and other dals also sought higher levels in sympathy with peas and *arhar*. *Week-end prices* (in rupees) were: *Arhar* 57.62 to 64.30, *dal* 72.34 to 80.38, *urd* 83.06, *dal* 93.77, *moong* 52.25 to 54.26, *dal* 61.62, *masoor* 46.89 to 53.58, *moth* 36.17, *dal* 44.21 and gram *dal* 49.57 a quintal.

EASY TENDENCY IN TEA

(From Our Own Correspondent)

CALCUTTA, *7th August*

The easy tendency notice in last week's tea sales here for internal consumption has caused some anxiety in trade circles. The decline in prices should be attributed to the hesitancy of buyers who believe that there would probably be a glut in the market later this year. This has brought to the forefront the need for reviving the propaganda for increasing internal consumption. A continuous fall in prices would have a serious impact on the industry. India's inferior teas command only a very poor market abroad.

Although the discontinuance of internal propaganda and prospects of any large increase in domestic consumption should force the gardens to pay greater attention to increase the proportion of production of quality teas, there are so many difficulties in the way of producing quick results. Apart from the existence of several gardens which by virtue of elevation and other circumstances are capable of producing only common teas, shortage of fertilisers and the need to replace factory machinery together with financial stringency only leave two alternatives for the industry generally, namely, either to improve the quality or to restrict production. Restricting production would mean going against the interests of the country, as the Government has called upon the industry to make an all-out effort to realise the target of 900 million lbs. by 1966. Against such a background, the industry has time and again pointed out that only an increased internal market would act as a cushion in the event of a glut.

More governmental attention to providing adequate finance to the industry is needed, as certain gardens are facing acute difficulty in this regard and find it, therefore, difficult to expand their operations. For instance, the gardens in the Terai region have represented that their efforts to improve the quality of output have been hampered by lack of sufficient funds. Several gardens in the area, which are marginal producers, are unable to make use of the Government's offer of loans to purchase machinery, since they are unable to give the security demanded. Considering the Terai region's particular problems such as the high prevalence of plant diseases, the Government can relax the condition at least in the case of deserving gardens.

Dusts on offer in the sales last week totalled 29,628 packages. Demand was good at the start, but petered out as bidding progressed and, as a result, weakness developed. Orthodox teas eased by 20 nP and occasionally more; but good liquoring Assams were steady. Among C.T.C. dusts, the bright liquoring teas and the few small powdery lots were firm, but the rest were lower. Legg-cut teas were generally lower, but a few selected descriptions realised satisfactory prices. The quotations (in rupees) per one kg., inclusive of excise duty, were: good Assam C.T.C. dust 6.60 to 7, medium Assam C.T.C. 5.60 to 6.10, medium Assam dust 4.20 to 4.50, plain orthodox dust 3.40 to 3.70 and legg-cut dust 3.80 to 4.30.

After the recent conflicting news from Brussels, trade circles have been much relieved to note the latest information according to which the Ministers of the E.C.M. countries negotiating the terms with Britain for its entry into the Community, have now agreed on the desirability of abolishing Europe's common external tariff on tea. The prospects for increasing tea consumption in Europe once again look bright, and India for her part should leave no stone unturned in her efforts to conduct propaganda in the "Sixes." The present high tariff rates in some of the European countries make tea a costly drink.

According to the trade, another area which is capable of taking more tea, is East Europe. India has already bilateral trade agreements with some of the countries in that region, but, since there has so far been no striking results, it is emphasised that recourse be taken to more propaganda in these countries.

The industry's difficulties in securing import licences for replacement of the worn-out machinery are capable of solution, if the subject is linked with exports. For instance, the Government should examine the possibility of allowing a garden to make use of the foreign exchange it earns, if its exports exceed the best level of the last three years. Some such system would provide the gardens an additional incentive for increasing exports.

That there is going to be keener competition among producing countries in foreign markets is only natural in the face of increasing production. Reports suggesting the anxiety of the trade in Ceylon over the poor prices realised in the Colombo auctions in June last emphasise the same point. It is natural, therefore, that only improvement in the quality of output would attract more buyers. The recent trend in London auctions was that, although prices of quality teas hardened, poorer teas were neglected. With the knowledge that world production in this year is likely to exceed the very satisfactory figure of 1961, buyers can afford to be more discriminative.

In last week's auctions, held in London, the Assam teas rose above the brokers' valuations, while Dooars eased. African teas met with little attention. Tea stocks in the U.K. at 118 million lbs. for the week ended 27th July were slightly higher than the previous week. The increase reflected the commencement of arrivals of teas of this season, and, since bookings from Calcutta to the U.K. had been fairly heavy in the last three to four weeks, the U.K. stocks would continue to rise from now on.

During yesterday's export sales here, offerings totalled 50,828 packages, which met with good demand at lower prices. Keen demand was accorded to C.T.Cs and teas possessing bright liquor and clean appearance were about firm. However, prices for mediums eased by 20 to 40 nP. Legg-cut teas eased by 10 to 30 nP and there were withdrawals. Flavoury Darjeelings met with support at lower rates, but the plainer sorts were about firm. Orthodox teas eased by 20 to 40 nP; ordinary and plain sorts were quiet, but some selected lines recorded a hardening tendency. Bright liquoring Assams commanded fair attention. Whole leaf grades were quiet, and tippy teas met with little attention. The quotations (in rupees) per one kg., inclusive of excise duty, were: best Assam C.T.C. fannings 7 to 8, clean black pekoe 4.25 to 4.50, medium Assam C.T.C. B.P. 5.40 to 6, best Assam C.T.C. B.P. 7 to 8, medium Assam C.T.C. fannings 5.30 to 6, plain fannings 3.70 to 3.90 and plain B.P. 3.65 to 3.90.

GOOD EXPORT BUSINESS IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, *7th August*

Overseas business in jute goods was lively during the week under review. Although the volume was good, because this was interspersed by intervals of lull attributed to buyers' anxiety to prevent a rise in prices, this week's gains were only small as compared with the extent of support accorded. Fibre prices recorded a fractional recession, attributed to "very satisfactory" early arrivals of new crop in both India and Pakistan. New crop arrivals in India are estimated at 50,000 maunds a day on an average, those in Pakistan being 70,000 maunds a day. The lack of any encouraging news as to the future of jute goods exports to the U.K. and the European Common Market caused anxiety and, though, according to the latest news from Brussels, the problem of jute exports from India and Pakistan was referred back to the Ministers' deputies for further examination, Britain's consent to the Six to end preference on cotton textiles caused some apprehension that this would be a forerunner for jute goods too not in the matter of preference but with the level of duties. If the duty is raised, evidently Indian goods would have to compete for markets with a greater area.

Raw jute arrivals in India and Pakistan are higher for this time of the year, and this demonstrates that the earlier reports of serious damage to crop on account of floods had been exaggerated. At the same time, it should be emphasised that the quality of early arrivals is decidedly lower than usual. Hence, trade circles are inclined to feel that, though floods may not reduce the estimated total output, quality has been affected. Also good quality fibre for manufacture of hessian is difficult to be obtained, and a serious shortage in the superior fibre is apprehended later in the season. The same apprehension is extended to Pakistan too. This is truly reflected in the way prices of heavy goods and hessian moved during this week. While business in heavy goods with overseas countries was comparatively larger than in hessian, prices of the former moved up by a slow pace; on the other hand, any sign of business was sufficient to raise the quotation of hessian. Against this background, the prospect of a further widening in the price differential of hessian and heavy goods is foreseen. It may be remembered that, towards the end of the last

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings at the end of Mar., 1962 amount to 19.08 crores of rupees

SOME SIGNIFICANT DEVELOPMENTS IN BRITAIN

(*Concluded from page 238*)

new investment projects have come into operation that output can for a time be expanded without requiring any corresponding intake of labour by the expanding industries, whilst other industries may still be releasing labour.

Mr. Maudling, like his predecessor, is evidently prepared to give full weight to considerations such as these, and is not disposed to act on partial evidence. While promising to intervene if the economy flags unduly, he has equally committed himself not to put more impetus behind it, "until I am convinced that that can be done without prejudicing the prospects of steady growth in the future, particularly in exports." Thus, although the economy may, indeed, be moving to a new phase, no sharp line will be discernible between the phase of restraint and the phase of expansion, and any line that does become discernible will not coincide with the ministerial changes. The first relaxations in policy had, after all, been made by Mr. Selwyn Lloyd by the further cut in Bank Rate that followed the Budget, the release of special deposits that keep a brake on bank liquidity, and the reduction in the minimum down payments required in hire-purchase sales of most consumer durables.

The main change foreshadowed already by the new phase does not, indeed, relate to the broad balance of demand within the economy, but to the incomes policy—to the problem of keeping rises in incomes, and especially in wages and salaries, within the bounds set by increments of productions and productivity. The Government's latest thinking on this problem proceeds from two basic assumptions: First, that control of demand—necessary though that is—will never be pushed to the point at which the possibility of excessive wage increases is ruled out by the threat of unemployment. Secondly, that, in a free economy, there can be no direct Governmental control of wages. The only other means of achieving a due wage restraint, it is argued, is by self-discipline, which must depend on the degree of understanding shown by the parties concerned and on the force of an informed public opinion.

To promote sanctions of this kind, the Government now proposes to set up a National Incomes Commission (already christened "Nicky") to work alongside "Neddy"—the Development Council established early this year. The Commission is projected as a body of independent experts which would deal, unlike "Neddy," with specific but specially important wage claims, if referred to it by agreement of the parties concerned, and with wage settlements already reached which the Government regarded as not in the national interest. The special role of the N.I.C. would be to consider the specific case in relation to the wider interest, and in the light of the broad conclusions as to the relationship between incomes and growth that might have been reached by "Neddy."

This new body would not, however, have any power to enforce its findings. Nor would the Government take such power itself. The purpose simply would be to promote understanding and to bring the essential issues before the bar of public opinion.

The aims are understandable. But it remains to be seen whether real headway can be made in this way—for, unfortunately, the first outline of the project has aroused the suspicion of leading trade unionists.

COMPANY AFFAIRS

(*Concluded from page 253*)

Meanwhile, the Company is exploring the possibilities of putting up a cement factory in Ramagundam in Andhra Pradesh, about 150 miles from Hyderabad on the Madras-Delhi trunk line. A geological and technical survey is being conducted. Should the limestone deposits prove to be adequate, the Directors propose to set up a factory for 200,000 tons cement per annum in the area. In the meantime, the Company has obtained the authorities' permission to utilise the import licences obtained for the Vizag factory for the purposes of putting up a factory in the Salem District, where enough limestone deposits for a large-sized cement factory are available and for which the necessary industrial licence has already been received. Construction work would start as soon as land is procured for the Company by the Madras Government. The factory is expected to go into production by the middle of 1963.

In January this year, the Company increased its capital again by the issue of 2,511,050 equity shares of Rs. 5 each and offered them to the existing shareholders as rights shares in the proportion of five shares for every nine shares held by them as on 28th February 1962. (Of the Rs. 5 each, only Rs. 2.50 has so far been called up.) Therefore, in the balance-sheet as at 31st March 1962, the issued capital is shown to have increased from Rs. 258.50 lakhs to Rs. 383.50 lakhs (of which Rs. 33.50 lakhs are in preference shares). The paid-up capital, however, is unchanged at Rs. 258.14 lakhs, as the subscription to the new shares was not due by the close of March 1962. Reserves and surplus aggregate only Rs. 68.05 lakhs. The previous year's rights issue has resulted in a reduction in bank borrowings from Rs. 165.60 lakhs to Rs. 144.14 lakhs. Other secured liability is unchanged at Rs. 71.54 lakhs. Current liabilities and provisions total Rs. 101.08 lakhs. The total indebtedness to outsiders works out to Rs. 316.77 lakhs, as against which current assets, loans and advances aggregate Rs. 311.68 lakhs. Investments stand at Rs. 19.85 lakhs, as against Rs. 9.90 lakhs a year before. The gross block of the Company increased during the year from Rs. 466.64 lakhs to Rs. 485.37 lakhs and has been written down to Rs. 311.75 lakhs.

The Rs. 5 fully paid shares of the Company are currently quoted at Rs. 6.45 *cum-div.* On an *ex-div.* basis, the yield on them works out to about 7 per cent per annum, free of tax.

MARKET REPORTS

(*Concluded from page 261*)

season, an acute shortage of superior fibre pushed up the differential to as high as Rs. 500 a ton. Reports of very satisfactory crop have made overseas buyers of goods already discriminating, and mills have been forced to raise quality. However, in view of the deterioration in the quality of fibre, competition from Pakistan mills may be keener.

Prices of heavy goods may be affected by the surplus nature of the inferior fibre and the expected shortage of the good fibre. For overseas buyers can afford to go slow in their purchases with the sure knowledge that plenty of goods would be available as and when needed. This possibility should be disturbing to mills, and it would be in their own interests, if the State Trading Corporation and other exporters are directed to find out markets abroad for a fixed quantity of the inferior fibre even now. Such a step would not only encourage the cultivators but also prevent any sharp decline in prices of heavy goods. Another anxiety for mills is the present acute foreign exchange shortage in the country, since, if only the willing mills are allowed to modernise and diversify their production, their cost of production can be lowered. This subject has been represented to the Government of India, but no decision has yet been taken.

During the week, good business was done in hessian with the United States. For a possible surplus in hessian had been feared, and that accounted for August futures in hessian 40" 10 oz. to be as low as Rs. 51.36. However, as the week progressed, the rate gained to Rs. 53.32 to close firm at Rs. 53.08. In ready goods, there was moderate support from Argentina. In heavy goods, there was a moderate number of inquiries from abroad, and purchases for Africa, to which destination two vessels are likely in this month, were sizable. Cuba made further purchases, and Australian buyers were active for small quantities of woolpacks and cornsacks. On Tuesday last, ready B. twills at Rs. 122.60 were quiet, as against Rs. 123.90 on the previous day; but hessian 40" 10 oz. was firmer at Rs. 53.65, as against Rs. 53.40.

The U.K. was in the market only for small quantities throughout the week, but more business with the Continent was anticipated. On Wednesday, ready hessian 40" 10 oz. scored to Rs. 54, while B. twills declined to Rs. 122. The fall in B. twills and other heavy goods was attributed to the surplus offerings. The feature on Thursday was the keener activity in the futures market and, though ready goods moved up for a time, hessian 40" 10 oz. closed at Rs. 53.80. However, ready B. twills scored to Rs. 123.75. At this time, reports of keener activity were received from the New York burlap market, where the support Argentina accorded to Calcutta market despite the former's foreign exchange difficulties was a cue for the upward movement. Early in the week, the duty paid hessian 7½ oz. was quoting in New York at 10.00 cents but it rose to 10.10; similarly, the 10 oz. hessian rose from 13.55 cents to 13.70 cents. As this spurred the futures market in Calcutta to greater activity, ready hessian 40" 10 oz. gained to Rs. 54.75. In sympathy, ready B. twills scored to Rs. 124.25. However, by the week-end, reports of increased arrivals of the new crop retarded sentiment in heavy goods, and B. twills gave way to Rs. 123.75, but apprehensions of a possible shortage in superior fibre towards the end of the season made hessian 40" 10 oz. firm up to Rs. 54.90 on Saturday. Conditions yesterday were featureless; the market was closed and only very little trading took place. Ready hessian 40" 10 oz. was quiet at Rs. 54.85 and ready B. twills at Rs. 123.40.

With the prevalence of fine weather in the jute districts and increased fibre arrivals, prices were affected. Sellers were anxious for business and, though mills purchased a fair quantity, the lifting was lower than arrivals. Good assortment commanded a premium. Mills were also eager to buy more middles than low assortment. New crop Assam bottoms eased from Rs. 30.50 to Rs. 30.00 for August-September delivery, daissee bottoms from Rs. 33.50 to Rs. 32.50, and northern bottoms from Rs. 30.00 to Rs. 29.50.

MARKET GOSSIP

(*Concluded from page 227*)

reduce the present cane acreage and ensure a rise in the per-acre yield of higher sucrose-content cane, they must, at least from the 1963-64 season onwards, fix the minimum price at a much lower level, retaining the present minimum as the maximum to be paid for cane with the highest sucrose-content, say, 11 per cent, if not 12 per cent.

Elders On Export Promotion

The debate in the Rajya Sabha on the Report of the Import and Export Policy Committee (Chairman: Dr. Ramaswami Mudaliar), held on Wednesday, turned out to be unexpectedly disappointing. One would have thought that the elders in the Rajya Sabha would give a purposeful direction to export promotion efforts by taking stock of the measures so far implemented and suggesting constructive solutions for tackling the problem at hand. Instead, the participants in the debate, with rare exceptions, were either preoccupied with insignificant details or bent on importing ideological issues which had no relevance to the basic problem under discussion. The overall impression one gets of the debate is that it was neither realistic nor based on a thorough study of the problem. What was still worse, the occasion was deftly used by the Communist Party to have another dig at businessmen. This is not surprising, as the communists are out to discredit democracy in this country by hook or by crook. Communists and even Congress men complain that huge profits are being made by certain industries and want a part of this profit to be used by them for compensating the loss in export. What they forget is that the joint-stock companies are run by public money, contributed by a large number of shareholders, most of whom are of moderate means. It is only a natural tendency for the management of such companies, being custodians of public money, to shirk risky ventures for exploring overseas markets, when internal market itself offers scope for good profits. But still some of the industries have already undertaken the task of exports even at a loss. The acceptance by the textile industry of the proposal for compulsory exports is also an instance to prove that the business community is prepared to undergo sacrifices for a national cause.

There is no use blaming the industry and trade for stagnation in exports. The major factor inhibiting the growth of exports has been the prohibitive cost of production. This is the cumulative result of wrong economic policies pursued by the Government and the failure of production, both industrial and agricultural, to increase at the rate planned. The tardy progress in the output of such commodities as cotton and oilseeds has had a telling effect on exports. Another important reason for the setback in exports is the shortage of other raw materials and fuels, besides transport bottlenecks. It would appear that these basic causes were forgotten by the elders in the Rajya Sabha.

It is surprising that some of the ill-conceived ideas and baseless allegations made by a few members were not adequately dealt with even by Mr. Manubhai Shah, Minister for International Trade. His reply, however, was notable for the disclosure of some of the important measures proposed by the Government for promoting exports. In the first place, a full-time committee of experts will be appointed to make cost studies. The Committee will make confidential investigation into the cost structure of agricultural and industrial products, with particular reference to the extent of increase in cost resulting from lower productivity, Government policies, taxation and problems of management. It remains to be seen to what extent and when the Committee will fulfil this task actually. Even now, there is no dearth of data on production costs. The Tariff Commission has already studied the cost structure of several industries such as textiles, cement, steel, sugar and various chemicals. Although the Commission's studies are not exhaustive, they do indicate the broad factors that tend to increase costs. But the real solution will depend not upon recommendations made by committees but upon the specific actions the Government will take to remedy the situation. Actions called for involve the supply of raw materials, fuels, transport, etc., and monetary, fiscal and labour policies.

It is gratifying to hear from Mr. Shah that the Government has accepted the recommendation of the Mudaliar Committee for setting up an import-export stabilisation fund. The fund, which will have an initial capital of Rs. 10 crores, will seek to ensure effective utilisation of credits that are likely to be advanced by some foreign commercial banks for the import of raw materials for export industries. This move is welcome, though the amount now proposed for the fund is meagre. Had the fund been proposed about four or five years ago, when India's foreign balances were above Rs. 700 crores or so, it would have attracted several major foreign banks for the scheme. It may be recalled that the Government had set aside previously similar suggestions by foreign banks sympathetic to India. Now that the foreign exchange reserves are less than Rs. 100 crores, foreign bankers cannot be expected to be enthusiastic about this venture.

The Government of India is certainly justified in rejecting the suggestion of the Mudaliar Committee that compulsory quality control on exports should not be introduced. The Committee, in its report, made only a passing reference to quality control and took a stand against the suggestion of the Expert Committee on Quality Control headed by the Director of the Indian Standards Institution, which had submitted its report early last year. Mr. Shah has promised in the Rajya Sabha that a Bill to enforce quality control would be introduced shortly, in pursuance of the recommendation of the Quality Control Committee. The earlier this is done the better. Unless Indian products are subject to strict quality control and pre-shipment inspection, as in Japan, the confidence of overseas buyers cannot be easily won and sustained.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2679 BOMBAY, 18th AUGUST 1962 PRICE Rs. 2

FIFTEEN YEARS OF FREEDOM

FIFTEEN years cannot be regarded a long enough time in a nation's history for settling its destiny, but the eventful period since Indian Independence Day on 15th August 1947 has probably few parallels in history. In retrospect, it is evident that that day was as significant in the world's annals as in India's; it marked the changing phase of international relations in respect of colonial areas which has given birth to many newly independent countries and doubled the U.N. membership. In this part of the hemisphere, the retreat of the metropolitan powers from Indonesia and former Indo-China and the untenability of oil hegemony in Western Asia or control of strategic passes like the Suez Canal were the natural consequences of the exit of British power from the Indian sub-continent. This process has still to go some way before it can be regarded as complete, but its logic has been irresistible, even where resistance was as stubborn as in Algeria; it offers the best hope for those parts of Africa where the outlook is still dark. Another historical phenomenon first noticed in India but true elsewhere also was the softening of attitudes towards former colonial rulers and the willing acceptance of continued association on a new basis of equality and mutual trust; India's decision to remain within the Commonwealth even after the establishment of the Republic now stands vindicated by subsequent events.

These details are part of current history. In fifteen years, the face of India has changed and much has happened that could not have been anticipated. Partition was accepted then as the best way of ending a continuous feud, so that sustained cordial relations could be fostered between the two parts of the sub-continent; in the event, that has not happened. But some of the wounds inflicted by the drastic surgical operation—the distress of displaced persons, for example—have healed sooner than expected; economic inter-dependence of the two countries, broken deliberately by acts of Governments, has been replaced by new relationships with the rest of the world. Some other successes also have exceeded earlier hopes; integration of the former Princely States through a judicious blending of measures of conciliation and pressure before the inauguration of the Republic on 26th January 1950 was one such for which posterity will give an honoured place in history to Sardar Vallabhbhai Patel. It was an act of statesmanship which mocked British objections to self-government stated *ad nauseam* on earlier occasions and established the unity and integrity of the Indian Union firmly beyond question, except for the remaining Portuguese and French enclaves which called for different solutions and took long to be assimilated.

The Indian Constitution, framed with appropriate fervour in the dawn of freedom, has stood the test of time. On the basis of the universal franchise it conferred on the Indian people, three General Elections have been held, each giving a mandate not for mere governance of the vast country by Central and State authorities but for implementing plans for economic development. Thus, democracy and planning, either of which attempted singly might have been difficult enough in a country new to freedom, has been combined to make this the largest and most unique experiment in the world. That it has been carried on in conditions of stability is the most gratifying feature. In 1947, there was, perhaps, no more than a hope that the Army and the Civil Services, with their high traditions acquired under the British rule, and the Indian National Congress with its mettle tested by continuous opposition to it, would together provide the required stabilising influence; that has been more than fulfilled. In an age when military rule has easily superseded weak and amateurish administration in many underdeveloped countries and depressed the outlook for democracy, the Indian Army has upheld the highest traditions of deference to civil authority. The huge and expanding Indian administrative machinery has often creaked under the strain of new and growing responsibilities of a planned Welfare State but has shown no sign of cracking. The third General Election has proved that the Congress Party is still strong; it continues at the helm at the Centre and in the States, but it is clear that the change in its role from opposition to administration has caused a break with its earlier traditions. Its main source of inspiration was lost with the death of Mahatma Gandhi in 1948 and its internal cohesion has seriously suffered; though little efforts have been made to repair the damage, there is no reason to believe that it is irreparable.

Thus the Congress has succeeded in adding to its earlier historical roles as an instrument of Indian freedom and transferee of British authority, the credit for establishing the conventions and practices of parliamentary Government in this country. Not the least of them is the safeguarding of the Fundamental Rights of the citizen and the independence of the Judiciary. Every aggrieved person has free access to the courts to seek writs against executive wrongs and civil liberties have broadened with every judicial ruling. Even more significant is the impartial functioning of the election machinery and the acceptance of its non-partisan character even when political contention has been at its sharpest as it was in Andhra Pradesh, Kerala and Orissa in the mid-term elections. The Press in India is free, despite some early measures which gave rise to apprehension; though it has been very understanding and co-operative in its attitude to the Government—almost too obliging in the view of some observers—it has been able to take on the functions of constructive criticism, so essential in a vigorous democracy, to make up for the lack of a strong and united opposition party.

While the Rule of Law is ordained by the Constitution, the pursuit of economic progress, social justice and the welfare of its citizens is governed only by the Directive Principles of State Policy; though not justiciable, they have been taken as equally binding on the Government. The setting up of a Planning Commission in 1950 to facilitate this pursuit synchronised with the founding of the Colombo Plan at the international level; in the decade that followed, the country has been made Plan conscious and planning, despite its Marxian origins, has acquired such respectability abroad that the World Bank and the U.S. have made the preparation of meaningful plans a qualifying condition for aid. More countries are now emulating the Indian example and seeking lessons learnt in this laboratory; three Five-year Plans have defined the country's direction and constantly kept in view the objectives to be pursued and the methods of achieving them. They have shown that a nation's efforts could be maximised through careful planning; the Government's annual outlay on development has increased fivefold in the period, from Rs. 260 crores in 1951 to Rs. 1,446 crores in the current year. Difficulties, some of them serious, have arisen in this process, but there is greater confidence in meeting them and a disregard of the consequences of any failure in reaching ambitious goals.

Experience has had a chastening influence on attitudes all round, not merely of those responsible for implementation of plans. A softening of the approach to the question of foreign aid is a typical example; Mr. Desai's recent mission of persuasion to Europe for enlisting members and contributions before the Consortium meeting stands in contrast to the talk of "strings" and the querulous and ambivalent attitude towards aid which prevailed until the American Wheat Loan of 1951. The third Plan's dependence on external assistance seems almost excessive. This change is the economic counterpart of the transformation of political attitudes like the complete disillusionment with China, the slackening emphasis on anti-colonialism between Bandung and Belgrade, and the decision to grasp the Goa nettle even at some risk of injury to the moral postures adopted earlier. But non-alignment has remained basic throughout, though flexibly interpreted, just as in the economic sphere the mixed economy and the socialist pattern have remained integral parts of development, in spite of some modifications of doctrinaire policies and the acceptance of a pragmatic view on nationalisation and economic controls.

In concrete terms, the effects of political stability and economic endeavour over a decade and a half are seen in the doubling of industrial production and a 35 per cent increase in agricultural production; the latter, with the timely and generous assistance from the U.S. P.L. 480 surpluses, has banished the spectre of food shortages which haunted the economy until 1952. National income (at constant prices) has increased by 47 per cent since 1948-49 and, in spite of the rapid increase in population, *per capita* income has risen by 17 per cent during this period. Other indicators also confirm the story of substantial progress; electricity generated is more than three times its volume in 1950; goods transport by rail has been doubled; a wide range of consumer goods like cloth, sugar, paper, bicycles, electrical goods and drugs have been produced in larger quantities; at the same time, some progress has been made in establishing capital goods industries for producing steel, aluminium, heavy machinery, chemicals and electrical apparatus; and there has been considerable achievement in mining industries too. The number of students in schools has doubled in ten years. The average expectation of life at birth has increased by about ten years, compelling more urgent attention to methods of family planning.

Notwithstanding all these achievements, much yet remains to be done. Unemployment

and underemployment are still high. Prices and cost of living have risen by over 25 per cent in statistical terms but much more in terms of sacrifices imposed on vulnerable sections of the community. Exports have hardly increased in terms of value and recurring foreign exchange crises, after the decline of the external reserves accumulated during the war and early post-war years, have led to import restrictions which have hurt the economy at many points. Taxation is increasing on certain groups and, though it provides evidence of the ability of the country to raise resources for economic development, there is less assurance now that these resources are employed most effectively.

These shortcomings only emphasise the onerous tasks ahead. The transformation of a traditional into a modern society, containing within it seeds of economic growth and social progress, is not easy indeed, and even to the extent it has been achieved in this country, credit is due as much to Western influences under British rule and the capacity of its middle classes to absorb scientific, professional, commercial and industrial techniques as to the efforts of the Government. India's good fortune lay largely in the quality of its leadership, but this is an uncertain factor now and there is less assurance about its continuance in the future. Emotional integration of all groups—linguistic, regional and communal—is incomplete; despite laws against untouchability and enactment of social reform measures like the Hindu Marriage and Succession Acts, some disabilities remain. Externally, the policy of peace and neutrality has not succeeded in reconciling China and the integrity of our frontiers has been seriously threatened; internally, the war against poverty has not proved sufficient to subordinate parochial loyalties to language or caste which seemed to have been kept aside during the common fight for freedom from foreign rule.

Such thoughts must induce humility even in the midst of the commemoration of an event of great significance to India and all humanity. Transfers of power have ceased to be the exciting things they were, and planning is no longer a novelty; but the continued functioning of democracy on the largest scale practised in the world and the maintenance of stability, political and economic, will still attract notice and earn approval. That accounts for the continued world-wide interest in India's well-being and progress. The country can look forward with confidence to the future in the light of what it has been able to achieve so far; and for overcoming its imperfections it can still draw on the large reservoirs of spiritual and moral strength which sustained it in its progress towards Independence.

THE STATE OF U. S. ECONOMY

PRESIDENT Kennedy came into office a year and a half ago when the American economy was passing through a recession and the gross national product was just being sustained at an annual rate of around $500 billion. Thanks to the co-operation of the Congress which passed his anti-recession measures promptly, the economy has not only made a recovery but registered a steady, though slow, uptrend. The gains of the last 80 weeks, as recapitulated, with some justifiable pride, by the U.S. President himself in his radio-T.V. address in Washington on the 13th instant, are certainly impressive. The gross national product, for instance, has reached an annual rate of $552 billion (as of the second quarter of 1962), representing a 10 per cent increase over the period. Industrial production has gone up by 16 per cent and about a million previously unemployed people have found jobs, thereby bringing down the rate of unemployment by 23 per cent. Wages and salaries have gone up by 10 per cent and corporate profits, after taxes, by 26 per cent. The disposable personal income (that is, the amount of income after taxes) has also increased, by 8 per cent to be precise. All this has happened during a period marked, at the same time, by some price stability. The fact that the increase in disposable personal income has not been robbed by any undue increase in the cost of living means that inflation, which President Kennedy has described as the arch enemy of consumers and housewives, has not been allowed to raise its ugly head. But the President's claim that inflation remains no longer a serious threat may be disputed by a reference to the fact of "creeping inflation," that is, slow but steady, and almost invisible, depreciation of money. This kind of inflation, which has caused a shrinkage in the value of the dollar at the rate of 1.4 per cent a year over the decade 1951-61, is probably going on still, and the possibility of its developing into something more serious cannot be completely ruled out.

Although the threat of inflation cannot be lightly or facilely discounted, the fact nevertheless remains that the internal value of the dollar has been relatively stable under the Kennedy Administration. The external value of the dollar, which had been subjected to serious pressure because of the huge deficit in the balance of payments account aggregating $12 billion in the three years 1958, 1959 and 1960, has also remained relatively stable in the last 18 months. With a continuous reduction in this deficit to about $1.8 billion in 1961 and to a still lower annual figure in the first half of 1962, the balance of payments position, there is reason to hope, will right itself by the end of 1963. Already, the U.S. Government has taken steps to reduce its military expenditure abroad by a sizable amount. Although the dollar is still not 100 per cent "as good as gold," the next 12 to 18 months, which are expected to wipe out the payments deficit, may well restore fuller confidence in it. That, at any rate, is the President's hope. The supreme importance of the question of dollar stability to the free world will be evident from the following observations of *The Morgan Guaranty Survey* of New York:

"In the case of the United States, ... the approach to balance of payments calculation must recognise this country's function as the world's leading banker. It also must recognise that the dollar has a tradition of absolute, across-the-board convertibility, the full maintenance of which is a matter of immense importance. These circumstances dictate that the international financial position of the U.S. must be appraised with much the same kind of strictness as is applied to the balance-sheet of a commercial bank. Because large withdrawals are an ever-present possibility, there must be constant attention to the relationship between current liabilities and the current assets available for meeting them."

The idea of reducing foreign aid drastically as a means of reducing the payments deficit has, of course, been canvassed by some in the United States. But it has not caught on because neither the U.S. Congress nor the U.S. Government, nor, for that matter, any responsible section of opinion in that country has thought (mistakenly) in terms of "saving" dollars in that way. *The Morgan Guaranty Survey* itself, for instance, has taken the line that, in the balance of payments, a dollar saved on foreign aid is not necessarily a dollar earned, for outpayments tend to generate inpayments. Economic aid to foreign countries and military expenditures abroad, as the *Survey* continues, "put dollars in the hands of foreigners. Some of those dollars are used to buy U.S. goods, and some may be used to prepay debt owned to the U.S.; either course would, in part, thus neutralise the effect of the aid or military expenditures on the balance of payments." It goes to the credit of the Kennedy Administration that it has severely discountenanced the idea of reducing foreign aid as a means of bringing the balance of payments into balance.

That Administration has, instead, thought, and continues to think, in terms of enlarging its export markets. This it proposes to do through the trade expansion bill which, it is hoped, will enable the United States to sell more goods abroad and get into the great European Common Market which is being built up. A further increase in the "credits" side of the balance of payments—merchandise exports by the U.S. in 1961 were, incidentally, to the tune of $19.9 billion, as against $14.5 billion of merchandise imports by that country—is expected to come about from enlarged exports. In their turn, however, enlarged exports are expected to be rendered possible by a reduction in net U.S. private investment abroad ($4.0 billion, as of 1961), albeit in developed countries, so that there would be more investment internally in modernisation of plant and machinery. The idea here is not only that a reduction in the "debits" side of the balance of payments should be brought about but that modernisation in industry be advanced further with a view to improving the competitive position of American goods in foreign markets. It will be found, in this context, that the following measures urged by President Kennedy in his latest speech are inter-related:

"We need enactment of the investment tax credit which would stimulate business outlays for modern machinery, the kind of taxes they have used successfully in Western Europe to stimulate their economy. As we produce more, business buys more machines and with depreciated allowances should put us in a better competitive position.

"We need to enlarge our export markets through the trade expansion bill, so that we can sell abroad, so that we can get into the great common market which is being built up, so that we won't have our money going abroad to invest in plants overseas but invest here in this country."

The aforesaid investment tax credit proposal forms part of the Kennedy Administration's programme of comprehensive tax revision. The Administration has set its heart on tax reduction as the most effective means of spurring the American economy forward. It may be noted, in this connection, that, though gross national product was running at an annual rate of $552 billion in the second quarter of this year, it was well below the $570 billion predicted by the Administration. The American economy is still rather sluggish and lacks momentum. This situation is attributed by President Kennedy to the present tax system which "is a drag on economic recovery and economic growth, biting heavily into the purchasing power of every taxpayer and every consumer." The arguments put forward by the President in favour of a tax cut bill to be presented to the U.S. Congress in January next are compelling in their logic. One argument is that, at full employment and full-time working of all factories, the present federal tax system would bring in a $7-billion or $8-billion surplus—something far too heavy for the purposes of curbing inflation and far too heavy to encourage investment and enterprise and risk-taking which are necessary for stimulating growth and providing more jobs to take care of the annual addition to the labour force. A related argument is that a lagging economy, in the absence of "creative" tax cuts, would surely produce an even greater budget deficit in due course—greater than what would be initially lost in revenue as a consequence of tax reduction. Another argument is to the effect that the proposed Bill will, if enacted, remove tax roadblocks to new jobs and new growth and thus eventually more than make up in new revenue all that it will initially cost.

That, in short, is the rationale behind the proposed "across-the-board, top-to-bottom cut in both corporate and personal income taxes." What is visualised is not a temporary tax cut for preventing a possible new recession. There is a lot of logic in the contention that the present state of the U.S. economy does not call for an emergency tax cut of the kind. All available business indices show (*vide* our American letter on page 274 of this issue) that the position is not that bad, for it is resilient enough to respond, albeit modestly, to anti-recession measures, as it has done in the last 15 months. But it is not currently dynamic enough to add a further $30 billion to the gross national product as the Kennedy Administration expects of it. Tax cuts on a more permanent basis alone, it is thought, will improve the competitive position of American business, encourage investment at home instead of abroad in developed countries, and improve the U.S. balance of payments. In that situation, inflation will also cease to be a serious threat, for, as the August *Monthly Letter* of the First National City Bank of New York has put it, "the unique quality of money put into circulation by employers for production is that buying power and supplies of goods are equivalently increased." With fuller employment and fuller utilisation of plant capacity expected to result from tax reduction, there is bound to be greater buoyancy and growth in the American economy, the state of which will then be analogous to that of the European Economic Community. If the initial loss in revenue can be made good by the proposed economy measures in the Department of Defence, by the ending of postal deficit, by some saving on farm surpluses and by new economy moves in other spending departments, the budget deficit resulting from the tax cut in the year in which it is given will not be as heavy as is feared—a point that may ensure the smooth passage of the forthcoming tax revision bill in the U.S. Congress.

MARKET GOSSIP

What An Agreement!

THE agreement between the Centre and West Bengal on the latter's right to own, to prospect and to exploit coal mines in its territory reflects the attitude of a person who grudgingly concedes a point after an acrimonious debate. This impression is strikingly borne out by the fact that the test case before the Supreme Court on the mining rights of a State Government is not to be withdrawn. Evidently, neither party thinks that the agreement is quite satisfactory and both are hoping that the Supreme Court's ruling will be in their favour. The Centre may be nursing the hope that the Court's verdict will make the agreement appear to be more favourable than it actually is to the State Government, while the West Bengal Government may be feeling that it will concede more than the agreement does. There are, of course, other evidences, too, in the agreement to support our impression. There are, for instance, all sorts of conditions in regard to the State Government's right to mine coal and market it. One, the State Government can, under the agreement, raise coal *primarily* for the purpose of meeting the requirements of its own coal-based industries in the public sector. It can, of course, produce coal to meet the requirements of other projects included in the all-India Plan as finalised by the Planning Commission, but that is only a secondary objective. The language of this part of the agreement suggests that only if there is a surplus after meeting the needs of the State's own industries in the public sector, will the question of marketing it arise. There is another stipulation to the effect that, in case the State Government's coal production in any year falls short of the requirements of its industries, the Central Government will be under no obligation to meet such deficits. It will, of course, endeavour to do so, but only subject to the general scheme of distribution of coal by the Coal Controller and the availability of transport. Other conditions of similar nature are: the State Government itself will have to find the funds required for mining and distributing coal. It will also have to do prospecting on its own. For this purpose, it must not use any foreign agency, except with the permission of the Central Government, but develop its own team of geologists and other technicians, though the Centre would render such assistance as is possible to the State to build up such an organisation.

All these stipulations, taken together, are tantamount to the Centre telling the West Bengal Government, in a sullen mood, the following: "You want to mine coal, because some of the richest collieries are in your area. Is it not so? Well, we do not think you have the right to do so. Still, as you insist, you are welcome to take up that job. But you must do it on your own. Although we shall try to help you whenever we can, you must find the money yourself and so also the men and machines. Of the coal you produce, take what you want to feed your coal-based industries and do not go out of your way to bother about the needs of others. Mind you, if you fail to meet your requirements, it is your funeral. Do not bank on us to help you out of your difficulties. If you still ask us, we shall try, but only after satisfying everybody else's needs."

One wonders whether this was what the late Dr. B. C. Roy wanted for his State. If the demands made at the inter-State Conference on coal mining in January last (*vide* the first editorial of *Commerce* dated 3rd February 1962) are any indication, the arrangement concluded with the Bengal Government falls far short of his expectations and those of other States which have large mineral wealth. What these States want, if we have understood them correctly, is a share in the profits accruing to the public sector corporations engaged in mining in their respective areas. Their contention is that they should be associated as a partner in such public sector corporations. If this demand is to be conceded, there will have to be a public sector corporation in each State jointly owned and managed by the Centre and the State Government concerned. This would be a sensible arrangement, taking care of the legitimate ambitions of State Governments and providing for efficient administration. It would also minimise the risks and pitfalls involved in leaving the bulk of the mineral wealth to be developed by two or three monolithic corporations formed by the Centre and controlled by one mighty Minister at New Delhi. Such a vast concentration of economic power in the hands of one Minister is in the interest neither of the person who holds that august office nor of the country as a whole. This concentration of power can be conveniently decentralised without in any way losing its advantages such as pooling of men and money, placing of orders for plant and machinery in the most economic manner possible, uniformity of operational policies and procedures, co-ordination of transport arrangements, etc., etc.

There are two mischievous implications in the agreement now concluded with the Bengal Government, notwithstanding the insertion in it of certain safeguards to protect the all-India interest and to ensure conformity with planning and control by the Centre. A recital of the safeguards may first be made before stating the implications. In the first place, the West Bengal Government should operate its coal mines without prejudice to the overall authority of the Central Government to control production, distribution and pricing of coal. Its entire production would be considered as an integral part of the total availability of coal in the country, but the needs of the public sector projects of the State would be the first charge on such production. Secondly, the State Government must first assess its requirements, precisely specify the areas in which it proposes to take up the operations and submit its development programme to the Centre for approval. Once the Centre sanctions it, any change in it would be possible only through mutual agreement. Thirdly, the Centre has the right of periodical inspection and review of the working of the State's projects at such intervals as might be agreed upon. Fourthly, the State Government must implement its development programme through a corporation wholly owned by it. This Corporation will be subject to the provisions of the Central laws or rules governing mining operations. And, fifthly, the objective of the State Government in undertaking mining operations will be not only production for its immediate requirements but also optimum production on the basis of assessment of the potentialities of the areas selected for exploitation. It will thus be seen that the West Bengal Coal Mining Corporation, if one may name it thus in advance, will be fully subject to Central control, though owned and managed by the State and that there has been no infringement of the Centre's rights. It is presumed, though it is not yet actually stated, that, as a *quid pro quo* for this freedom, the State Government will place no impediments to the operations of the National Coal Development Corporations in areas which it does not propose to exploit. It remains to be seen when and to what extent such division of areas between the two Governments will take place.

Now for the two implications of the agreement mentioned earlier. These are important, because Mr. K. D. Malaviya, Union Minister for Coal and Mines, stated in the Rajya Sabha, where he disclosed the details of the agreement on the 10th inst., that any State would be welcome to develop its mines on the pattern set by the agreement with West Bengal, though it is not clear whether that pattern would apply to mines other than coal also. The first implication stems from the concession that the State Government would have the first charge on the coal it produces. The principle underlining this concession is injurious to the claims of other States over all the coal produced in West Bengal. Surely, in the case of a commodity allocated by the Centre among all the claimants, the State Government cannot be given a prior claim merely because it owns the mines and exploits them. This is not done in the case of coal produced by a joint-stock company the management of which also has coal-based industries. Nor is this principle recognised in the case of other industries in the private sector. Birlas, for instance, have factories producing staple fibre, rayon yarn and rayon cloth. Their requirements of staple fibre for spinning yarn or of yarn for weaving rayon cloth are not allowed to enjoy the privilege of first charge, leaving only the balance for distribution among other spinners and weavers. What justification is there then to give special exemption to State Governments? Was this exclusive right demanded by the six States that held the inter-State conference in January last? There is no indication of it in published reports. If there was, this journal would have certainly criticised it in its article of 3rd February 1962. One may say that, in actual practice, the concession given to West Bengal will in no way injure the interests of the other States. That may be so, but a principle is a principle and provides a precedent for other States and for other purposes.

The second implication flows from the condition that the coal produced by the State-owned Corporation has to be used to cover the requirements of only the State-owned industries. Simply stated, the mischief here is that it (the condition) is an open invitation to State Governments to establish more industries in the public sector. Apart from the threat it poses to the private sector, it also means that each State has a prior claim on the coal (and perhaps also other minerals) found in its territory for establishing such coal-based industries as thermal power stations, coal gas, fertilisers, and a variety of chemical industries. Unless, therefore, the agreement with the Bengal Government is suitably modified without any delay to remove these implications to the rest of India and to the private sector, seeds of a new inter-State conflict, analogous to the endless water disputes, will have been sown.

World Silver

Silver in the local bullion market has staged a sharp rise of Rs. 2.50 to Rs. 215.55 per kilogram (85.7 tolas) within two weeks. The rise reflects largely the sympathetic effect of the marked advance in silver prices abroad, though it is true that India is completely cut off from the world markets, because of the ban on imports and exports of silver. At New York, silver is now standing at 109.25 cents per fine ounce, an increase of 6.50 cents in less than a month. The price is the highest effective since 1920 when the rate had touched as high as 137 cents; the lowest level reached thereafter was a mere 24.25 cents in 1932. The swift rise in silver during the last few days is due to the extremely small volume of sales in the face of continuous heavy demand from industrial users. This phenomenon is explained thus: the speculative stocks built up earlier this year are not being put back into circulation to any appreciable extent and it is now thought that their holders have decided to wait in the hope that prices will rise even further.

London bullion circles feel that the autumn rise in silver anticipated by sellers' hold-off of the market following the general shortage on cessation of the U.S. official sales ten months ago is not yet by any means overdiscounted and that prices would rise even further. The one factor that points to such a rise is the persistent pressure of heavy demand on available supplies, since the pace of expansion of free world silver production continues to fall far behind the rate at which industrial, artistic and coinage uses are currently running; the actual gap last year was 140 million ounces, as against 64 million ounces in 1959. Even so, it is believed in London that the world silver market may not show signs of getting out of hand. There are hopes that Mexico, the world's largest producer of silver, may soon enter the market as a seller, if the price rises above 110 cents per ounce. Again, Communist China, which has so far exported far less silver to the West than it did (55 million ounces) in 1961, may decide to step up its shipments, in view of the present high prices. There are also substantial holdings of silver bullion with the U.S. Treasury—the total of these holdings as on 31st December 1961 was 1,863 million ounces—a part of which may be sold. And, what is more, with so much silver held in private hands throughout the world, it is, to quote the London *Financial Times*, always impossible to know when an improvement in values will lead to a sudden increase in supply.

State Financial Corporations

When the idea to set up State Financial Corporations was first mooted some years ago, it received considerable support and high hopes were expressed that the Corporations would greatly accelerate the tempo of activity in the small-medium industrial sector. But the hopes have still not fully materialised and the working of the Corporations, many of which commenced operations eight or nine years ago, has not been as satisfactory as one would wish, though it would be wrong to condemn them to be utterly inefficient, much less to underrate their importance in the field of institutional finance. The total amount or loans actually disbursed by 13 of the 15 Corporations since their inception comes to no more than Rs. 24.30 crores (up to the end of March 1962). Even here, the Corporations have acted merely as mortgage banks and neglected the function of underwriting. And the majority of them continue to depend on their respective State Governments for subventions to pay guaranteed dividends. What are the factors responsible for the slow progress made by the Corporations and what steps are required to improve their efficiency? These questions have been well examined by the Bharat Chamber of Commerce in a memorandum submitted to the Working Group on State Financial Corporations appointed by the Reserve Bank. The memorandum contains the Chamber's replies to the questionnaire issued by the Working Group.

The one major defect in the working of the Corporations pinpointed by the Chamber pertains to the absence of any intelligence wing to render guidance service, particularly to the small-scale industries. It is these industries that need such service most. It is not, therefore, surprising that the proportion of rejections and/or withdrawals to total loan applications is pretty high. "There is a feeling," to quote the Chamber, "that the S.F.Cs. have, by and large, so far been more negative to reject applications than positive to guide and assist an entrepreneur to obtain benefits from them." What is worse, publicity arrangements are inadequate and there is no regular dissemination of ideas and knowledge of the benefits of financial help that can be availed of by small industries, with the result that the funds of the Corporations have not been profitably utilised. Clearly, the need for organising guidance services, wide propaganda and publicity for availability of loans through regular distribution of pamphlets, brochures and leaflets, and frequent advertisements in the Press cannot be stressed too strongly.

The overall approach of the Corporations in the matter of taking security against the loans advanced leaves much to be desired. No one will dispute that there should be adequate asset protection behind a loan, but, in examining loan proposals, the Corporations will also have to take into account the character of the applicant and the commercial profitability of the projects for which assistance is sought, besides the security offered. Drawing attention to this aspect, the Chamber has urged relaxation of the rules and conditions in respect of margin requirement and nature of security. The five specific modifications in the onerous lending criteria of the Corporations which the Chamber has suggested merit due consideration. The modifications are: (1) Loans should be given on fixed assets, both industrial and non-industrial, without insisting on ownership or lease of land and building. (2) Instead of legal mortgage, equitable mortgage could be regarded as adequate. (3) The margin condition requires reconsideration; the 50 per cent margin, which is considered as onerous by a large number of concerns, should be reduced to 25 per cent. (4) The period of repayment must be extended; it should range from 15 to 20 years, instead of 10-12 years generally imposed by the Corporations. (5) The rate of interest should not be more than 6½ per cent, with flexible provisions for prompt payment of instalments and interest; the rate structure for loans of different sizes and different periods may be re-examined.

A general criticism levelled against the State Financial Corporations is that their procedures and practices are dilatory as well as costly. As the Chamber has rightly pointed out, not only should the delay caused in considering applications be minimised but the procedures also should be simplified. There is the need, too, for reducing the heavy incidental expenses, including survey charges, stamp duty, legal and registration fees, etc. The Chamber does not, however, seem to be justified in urging the complete remission of registration and stamp charges in respect of mortgages and other legal documents to be executed by the borrowers of the Corporations. There is a limit for giving free service to business concerns even on the ground that they are small. Excessive spoon-feeding will not be conducive to the growth of healthy entrepreneurs.

Besides liberalisation of service conditions, there is also said to be a need for diversifying the

activities of the Corporations. Drawing attention to this need, the Chamber has put forward some interesting suggestions. It has, for instance, pleaded for an amendment of the terms and conditions for granting loans so as to include the financing of small-scale industries situated in Industrial Estates also. The other suggestions cover extension of the upper limit for loans (Rs. 20 lakhs for a single industrial concern) to all types of enterprises (instead of only to public limited companies and co-operatives); provision of loans for meeting working capital requirements; joint participation even in the case of small projects, the institutions like the I.C.I.C.I. and I.F.C. providing foreign exchange and the State Corporations providing the rupee part of the capital; joint arrangements with banks and other institutions for underwriting shares of larger projects; experiment with underwriting issue of shares and debentures of medium-sized concerns; guarantee for deferred payment in respect of purchase of machinery and equipment from indigenous sources.

If the State Financial Corporations are to serve the purpose for which they have been set up, they must broaden the scope of their activities which was determined over a decade ago. The credit requirements of small and medium industries are pretty large and will be larger still in the years to come. The Corporations must play a more vigorous role in providing medium-term and long-term finance to the industries operating within the respective areas. The Corporations should also endeavour their best to utilise intensively both the resources they already have and those that can be raised additionally. This does not mean that the Corporations should not function on business lines. On the contrary, they should take particular care to avoid wastage of funds. They have to take risks, of course, but they will be well rewarded, if they are good judges of men and their projects.

A Blue Chip From Braithwaite

Thanks generally to that fateful "Blue Monday" of 28th May 1962 and the events that followed thereafter on Wall Street, as also other principal stock exchanges of the world, and particularly to the serious bottlenecks in India's economy, which have recently come to the surface one after another, investors in shares and securities in this country have, once again, been thinking in terms of yield. And at this stage has come for them an offer of a blue chip from the famous Braithwaite and Company (India) Ltd.

The Company has specialised in the fabrication of structural steel work to the highest standards for bridges and heavy workshop buildings. It has also developed the manufacture of rolling stock for the Indian railways and has expanded the capacity to produce larger types of wagons. It is a well-known manufacturer and supplier of pressed steel tanks and troughs. It has now decided to diversify its activities and go in for the manufacture of various types of cranes. Up till now, there has been a great shortage of manufacturing capacity for cranes, with a consequential heavy drain on the country's foreign exchange resources for the import of these items which are essential for the creation of the machine building and other heavy industries, an aspect on which great emphasis is laid in the third Plan.

A licence has been obtained by the Company for the manufacture of the various types of cranes. It has entered into a technical collaboration agreement with Messrs. Thomas Smith and Sons (Rodley) Ltd. for the manufacture of dockside level luffing cranes and railway break-down cranes. It has also entered into a similar agreement with Messrs. John Smith (Keighley) Ltd. for the manufacture of electric overhead travelling cranes of various lifting capacities. The two collaborating companies are members of the well-known British engineering group of Thomas W. Ward Ltd. of Sheffield and both have been supplying cranes to the Indian market for some years. To implement its diversification scheme, the Company has also acquired on a 99-year lease from the Angus Company Ltd. its engineering works, comprising a cast iron foundry, a machine shop and a forge shop. After having taken them over on 1st February 1960, the Company has considerably rehabilitated and modernised these works, which occupy an area of 16.724 acres. In addition, the Company has acquired 57.283 acres of adjoining land.

The total financial requirements for the purchase of fixed assets and for increased working capital for the purpose of this proposed programme of development and diversification are estimated at roughly Rs. 4.40 crores, of which Rs. 88 lakhs will be raised by way of foreign exchange loans from the I.C.I.C.I. and the Commonwealth Development Finance Company and Rs. 3.12 crores will be provided from the Company's existing resources, future depreciation provisions and retained earnings and from bank borrowings. The remaining balance of Rs. 40 lakhs is proposed to be raised by the issue of 40,000 nine per cent. taxable, redeemable cumulative preference shares of Rs. 100 each. The issue has been fully underwritten by the Life Insurance Corporation of India and Calcutta's leading stock brokers, Place, Siddons and Gough (Private) Ltd. Firm applications have been received from the underwriters and their friends for 20,000 shares, which will be accepted in full. The balance of 20,000 shares are now offered to the public. The subscription lists will open on the 28th inst. and close on the 30th inst., or later at the discretion of the Directors. Applications have to be made for a minimum of 10 shares and multiples thereof.

At 9 per cent, taxable, the net return on the shares works out to 6.3 per cent per annum, which is quite attractive. For small investors whose rate of taxation is less than the 30 per cent deducted at source, the yield on this preference share will be proportionately higher. What is more, the share is redeemable at par after 12 years and in any case not later than 15 years. What is more, on the basis of the average annual profits of the five years ended 31st December 1961, after deducting depreciation and taxation payable under the latest rates but without taking into account the interest payable in future on the proposed I.C.I.C.I. and C.D.F.C. loans, the dividend payable on the preference shares would be covered more than five times and eventually much more than that following the substantial capital expenditure envisaged which would result in increased profits. In fact, the net profit of Rs. 41.14 lakhs for the year ended 31st December 1961 covers the dividend more than ten times. If the estimated net proceeds of the proposed preference share issue are added to the net assets of the Company of Rs. 161.20 lakhs as at 31st December 1961, the amount of the issue is covered practically five times by net assets.

The Company has bright prospects. Its order book is at present in a satisfactory state and, subject to continued availability of raw materials and electric power supplies, it is anticipated that production during the current year will exceed the figure for 1961 and further increases are to be expected in 1963 and 1964. In the longer term, the Directors believe that, having regard to the progressive development of the Indian economy, there will be an increasing demand and, therefore, a ready market for the Company's products.

Another Feather in the Soviet Cap

"The most remarkable development man has ever seen." This was how Sir Bernard Lovell, one of Britain's foremost space scientists, acclaimed Soviet Russia's breath-taking scientific feat of hurtling two manned space ships into outer space one after another at an interval of 24 hours and bringing them back to earth at an interval of six minutes with astonishing accuracy. What marks out the latest triumph of Soviet space programme is not the endurance record set by the two cosmonauts but its conclusive demonstration of the possibility of matching orbits. Both the space ships, Vostoks III and IV, were projected into the orbit in succession and they circled close to each other, with their occupants, Major Andrian Nikolayev and Col. Pavel Popovich, being in visual and radio contact. They could also communicate back and forth with the launching site on earth. Thus a three-way communication took place. This is considered to be a signal achievement and a prelude to a space rendezvous which might make it possible for man to land on the moon much earlier than one had hoped hitherto. "Space rendezvous" technique, it is pointed out, has three distinct advantages. First, huge space ships, much larger than could presently be launched from earth, could be assembled in space. Secondly, these space ships could be used as stations to carry out explorations into other planets of the solar system such as Mars and Venus. Thirdly, the space stations could be used as space laboratories and observation outposts. The lunar landing, as and when it occurs, will only be one of the major step towards manned exploration of outer space and expanding the frontiers of knowledge in meteorology, electronics, communications, fuels, metals, air navigation and geophysics.

This latest achievement indicates that Soviet Russia is far ahead of the U.S. in space exploration. Russia has a series of firsts to its credit. It launched the first earth satellite and put the first man in space. It fired the first successful shot at the moon and had its spacemen stay longer in orbit. But the achievements of the U.S. are not inconsiderable. Indeed, it is said to be superior in certain respects. It has orbited more unmanned space vehicles than the U.S.S.R. and has developed more sophisticated instruments such as the Telstar which could be of more direct and immediate use to mankind. Moreover, none can yet say whether the lunar landing will be accomplished first by the U.S. or by Soviet Russia. Under the Project Apollo, the American National Aeronautics and Space Administration plans to send a three-man spacecraft to the moon and bring it back safely to earth by the end of this decade.

Will the Soviet feat have any impact on the U.S. space programme? It is officially stated in Washington that the N.A.S.A. will not alter its programme and that it will go ahead with its plans as scheduled. But the Soviet achievement is not unlikely to have repercussions elsewhere. It lends added urgency to the efforts now being made to strengthen the U.S. economy. For only an economically-strong U.S. can support an expanded space programme that might be called for without having to shirk its other responsibilities throughout the world. It must be remembered here that the space programme costs an enormous amount of money, running into billions of dollars. It can be done only by the richest country in the democratic world or by a dictatorship backed by scientific and engineering talent of the highest order.

While the competition for mastering space is raging fiercely between the two giants on earth, some rethinking is going on in the smaller countries as to the rationale of some of the defence projects that has been planned. Britain, for instance, seems to have had second thoughts on its Blue Water Missile Project—a project for the development of guided missiles with a nuclear warhead for army use—and has now decided to abandon it. The reason given by the British Defence Ministry for the decision is that the Government does not consider it justifiable to continue the Project, in view of the increasing number and yield of tactical nuclear weapons which are available to the N.A.T.O. countries. The cancellation of the Blue Water Project, which has already cost it over £100 million, is expected to result in a saving of £50 million. There is a section of opinion in Britain which thinks, and rightly so, that had a part of the money that is being put into defence projects which are constantly under threat of being rendered obsolete been utilised for helping the poorer countries, the advantage to Britain, in terms of goodwill and increased trade, would have been more direct and enduring.

4½ PER CENT ORISSA GOVERNMENT LOAN, 1974

Issue price Rs. 99.50 per cent

Opens on the 27th August, 1962

The loan will be closed as soon as a total of Rs. 7 crores has been subscribed and in any case not later than the close of the business on the 1st September, 1962.

Applications for the loan will be received at (a) the Offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore, (b) the branch of the State Bank of India at Patna, (c) the branch of the State Bank of Hyderabad at Hyderabad, (d) the branches of the State Bank of India located in the State of Orissa, and (e) the Government Treasuries and Sub-Treasuries.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE OFFICES MENTIONED ABOVE.

NEWS IN BRIEF

THE first blast furnace in the Rourkela Steel plant has been completely repaired and is expected to be commissioned by the end of this month.

The Soviet Union will supply the equipment for the 200 m.w. thermal power station at Korba. The Madhya Pradesh Electricity Board has signed the necessary agreement in this respect.

The Pharmacy Council of India proposes to set up a Central Institute of Pharmacy at Delhi at a cost of about Rs. 100 lakhs. The Government of India has agreed to contribute Rs. 20 lakhs towards the cost.

The U.K. Government has agreed to grant a loan of £22 million for buying plant and equipment required to increase the output of the Durgapur Steel plant from one million to 1.6 million tons annually.

A factory for manufacturing automobile gears is proposed to be set up with American collaboration at Faridabad in the Punjab. Besides meeting domestic requirements, the factory is expected to export about one-third of its output.

Large sedimentary rocks indicative of favourable conditions for the occurrence of oil have been discovered in Eastern Bihar and West Bengal. It is proposed to drill a deep exploration well in the area in the near future.

The proposed fertiliser factory, which was to have been put up in the private sector, in Madhya Pradesh, will now be taken up in the public sector. The Fertiliser Corporation of India is working out details of the project, the execution of which is expected to start early next year.

Two banks in the Madras State, the Karur Bank Ltd. and the Salem Ammapet Sengunder Bank Ltd. are being amalgamated with the Canara Industrial and Banking Syndicate Ltd. The agreements covering the amalgamation have already been signed by the parties concerned.

The Union Defence Ministry has entered into an agreement with a French firm for the manufacture of helicopters in India. The manufacture of components and spare parts will be taken up progressively by the firm. Although details of the agreement are not disclosed, it is stated that India will pay a reasonable licence fee, but no royalties.

A Bill seeking to repeal the Atomic Energy Act 1948 has been introduced in the Lok Sabha. The Bill makes it obligatory on persons discovering uranium or thorium to report about it to the Government. It also empowers the Central Government to impose certain terms and conditions on persons engaged in mining substances from which uranium can be isolated or extracted.

An agriculture-*cum*-demonstration centre was inaugurated near Surat in Gujarat by Dr. K. Matsudaria, Japanese Ambassador to India, last week. At this centre, four Japanese agricultural experts will train ten local cultivators every year over a period of three years in a ten-acre farm. The centre is the second in the series of four allotted under an agreement signed with Japan in April last. The first one was opened in West Bengal only a few days ago. The third will be located in Orissa and the fourth in Bihar; these will be started shortly. The entire cost of these centres, along with technical know-how, is expected to be met by Japan.

The Union Government has so far sanctioned Rs. 25.75 crores to State Governments under the low-income group housing scheme. Of this amount, Rs. 22.65 crores have been disbursed. Under the scheme, the State Governments and the Union Territories have sanctioned 46.841 houses, out of which 39,350 have been completed. The Punjab has constructed the largest number of houses (6,886) under the scheme. The number of houses completed in some of the other States is 3,767 in Kerala, 3,657 in Uttar Pradesh, 3,589 in Rajasthan, 3,070 in Mysore, 2,725 in Andhra Pradesh, and 1,994 in Delhi.

The Government of India proposes to appoint shortly technical consultants to examine the economics of the second shipyard to be set up at Cochin. Disclosing this in the Lok Sabha, Mr. Raj Bahadur, Minister of Shipping in the Ministry of Transport and Communications, stated that, although the economics of the shipyard had already been worked out with the available data, the consultants were expected to go into them "more thoroughly." Among other things, the consultants would prepare an estimate of the requirements of the yard in regard to training of supervisory personnel. Quite apart from this, the Union Government was taking steps to train a certain number of skilled workers at the training school at the Hindustan Shipyard, Visakhapatnam. A scheme to train more persons, coming out of the Industrial Technical Institutes in Kerala, in some industries similar to shipbuilding was also receiving attention. The technical consultants would be asked to design the shipyard so as to incorporate the latest techniques and facilities for hull constructions.

The Institute of International Education, New York, will administer two Indian fellowships of two years' duration each in the U.S. for Golodetz and Company. The sponsoring firm, which deals in international commodities, has been trading with India in sugar, manganese ore, jute goods and fertilisers, for a number of years. The grants will cover full costs for graduate study in any field beginning from September 1963 and continuing through June 1965. Other American firms trading with India are also being contacted by the Golodetz group to provide educational opportunities for deserving Indian students in the U.S. The U.S. Educational Foundation in India will assist in the selection of scholars for the Golodetz scholarships. The Institute of International Education, which will administer the Golodetz fellowships, is a non-profit agency engaged in educational exchange projects between the U.S. and other countries on behalf of the U.S. Government, foreign Government foundations, corporations and private individuals. It also serves as a clearing house for information on educational and cultural exchanges.

From Abroad

The Belgian Bank Rate has been reduced by ½ per cent to 3½ per cent, with effect from the 8th instant.

According to official estimates, Argentina's production of groundnuts in 1961-62 rose by over 45 per cent to 387,000 tons, as compared with the previous year.

Rubber exports from Malaya during January-July 1962 aggregated 681,500 tons, or an increase of 4.5 per cent above the corresponding period last year and the highest for that period since 1959.

A group of leading Japanese industrialists has left for Moscow to explore the possibilities of expanding exports to Russia. It may also assess the scope for negotiating a new bilateral trade agreement.

A pact providing for the association of Greece with the European Common Market will be formally ratified by the E.E.C. Council on the 24th inst. The association agreement, which was concluded in July 1961, will come into force from 1st November next.

Communist China had a favourable trade balance with Russia amounting to £66 million in 1961, as against £11 million in 1960, despite the decline in its exports to that country from £303 million in 1960 to £197 million. Russian sales to China fell more sharply, that is, by £161 million to £131 million.

(*Continued on page 308*)

PERSONAL

DR. S. P. Chablani, a former Joint Director of Export Promotion, Union Ministry of Commerce and Industry, has taken over charge as Managing Director of the Export Risks Insurance Corporation from Mr. T. C. Kapur, who has retired.

Mr. B. Barker, a former Secretary of the Bombay Chamber of Commerce and Industry, has been appointed Secretary of the Metal Box Company of India Ltd., *vice* Mr. F. P. Gilbert who is retiring.

Mr. Dharamsey M. Khatau, Chairman of the Associated Cement Companies Ltd., and Mr. Shanti Prasad Jain, Chairman of Ashok Cements Ltd., have been elected President and Vice-President, respectively, of the Cement Manufacturers' Association, Bombay, for 1962-63.

Mr. D. C. Baijal, a Member of the Railway Board, has been appointed Chairman of the Board and ex-officio Principal Secretary to the Government of India in the Ministry of Railways. He succeeds Mr. Karnail Singh who has retired. Mr. G. P. Shahani, at present General Manager, Diesel Locomotive Works, Varanasi, replaces Mr. Baijal as a Member of the Railway Board.

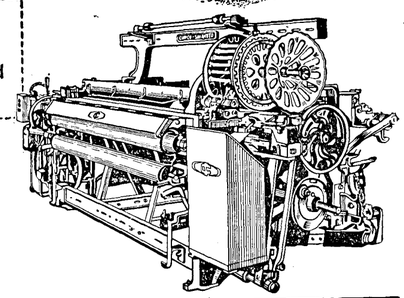
Mr. Salim Merchant, President of the Central Industrial Tribunal, has been appointed Chairman of the Wage Board for Coal Mining Industry, which will work out a wage structure based on the principles of fair wages as recommended by the Committee on Fair Wages. Besides the Chairman the Board will include Mr. P. R. Chakravarthy, M.P., Mr. S. S. Marathe (independent member), Mr. Rasiklal Worah, Mr. R. Lall (representatives of employers), Mr. Kanti Mehta and Mr. Devan Sen (representatives of workers). The Board will also consider the demands for an interim wage increase pending submission of the final report and for the introduction of a gratuity scheme on industry-wise basis. It has been asked to take into account the special features of the coal industry, its needs in a developing economy, the impact of the wage structure on the cost of production and the effect of these on other industries consuming coal. The Board will have its headquarters in Bombay. The terms of reference of the Board also include the study of the need for adjusting wage differentials in such a manner as to provide incentives to workmen for advancing their skill and the desirability of extending the system of payment by results.

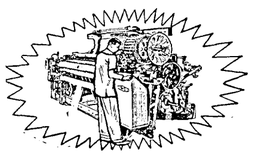
IN AUTOMATION LIES
the future of India's textile industry

CIMMCO-SAKAMOTO

AUTOMATIC LOOMS

- Robust Design
- Precision Built
- Easily installed and operated





Made in India by Cimmco in close collaboration with Messrs. Enshu of Japan. Manufacturers of world famous Sakamoto looms - Cimmco - Sakamoto Automatic Looms are a vital necessity, for India's textile mills.

CIMMCO-Sakamoto looms are backed by a powerful loom-building tradition combining Cimmco's 18 years of experience with Enshu's 34 years. Sakamoto type looms are used in more than 40 countries of the world, and over 60% of the automatic looms installed in India are of the Sakamoto type.

With a low initial investment Cimmco Sakamoto automatic looms produce a greater volume and variety of quality textiles at lower running costs than any other looms in the same range.

EXPORTS OF VEGETABLE OILS

AS a cumulative result of increase in domestic consumption of oils and fats and insufficient increase in the output of oilseeds, exports of vegetable oils have been steadily declining during the last five or six years. From as much as about Rs. 34 crores in 1955-56, foreign exchange earnings from non-essential vegetable oils have fallen to Rs. 8.54 crores in 1960-61 and still further to Rs. 5.83 crores in 1961-62. A part of this sharp decline reflects the ban imposed on the export of groundnut oil in 1957, except on the basis of special quotas, in order to conserve the supply to meet the domestic needs. But equally important is the setback in the two other major traditional export items, namely, castor and linseed oils, which are mainly used for industrial purposes. Indian oils have been consistently priced out of world markets, as a result of almost uninterrupted rise in domestic prices in the face of general weakness in world markets, induced by steadily increasing output in most of the other oilseeds producing countries.

In fact, the loss in India's export earnings from vegetable oils would have been still more marked, but for large purchases by Soviet Russia and other Communist countries from this country. In respect of castor oil, for instance, Soviet Russia became the largest buyer in 1961-62, for the first time ever, whereas the U.S., which had been the traditional market for this commodity, did not buy a single ton of oil. The growing dependence of India's traditional exports on Communist markets is of doubtful value, apart from the long-term uncertainties of a political nature involved in it. At any rate, exports to Communist countries do not always reflect the competitive capacity of Indian products, since these transactions are based on barter trade and liable to be influenced by extra-economic considerations. The total castor oil exports in 1961-62 was Rs. 400 lakhs (of which Russia accounted for as much as Rs. 192 lakhs), as against Rs. 671 lakhs in 1960-61 (with Russian offtake being only Rs. 92 lakhs). The export of linseed oil, too, fell in 1961-62, being only a mere Rs. 8 lakhs, as compared with Rs. 88 lakhs in the previous year. Export earnings from groundnut oil, however, recovered slightly from the very low level of Rs. 21 lakhs in 1960-61 to Rs. 103 lakhs in 1961-62. This recovery was due to the fact that the State Trading Corporation exported some oil rather stealthily giving no advance hint to a section of incorrigible speculators in forward markets. It may be noted, however, that shipments of hydrogenated groundnut oil (*vanaspati*) fell by 50 per cent during the same period to about Rs. 56 lakhs. The export of major oilseeds, in which India had a prominent place during the pre-war period has been generally banned, except mainly the hand-picked selected varieties of groundnuts. The export of H.P.S. groundnuts also were lower in 1961-62 at Rs. 397 lakhs, as compared with Rs. 495 lakhs in the previous year.

While both oils and oilseeds have continued to show disappointing performance on the export front, it is refreshing to note that there has been some improvement in the shipment of oilcakes. Even this improvement has been confined to groundnut deoiled cake, whereas exports of linseed cakes and coconut cakes, etc., have been shrinking. The groundnut extraction meal, in fact, has become the biggest export item in the oilseeds group and is still making perceptible headway. From only 27,000 tons in 1957, the shipment of meal has increased to 131,000 tons in 1958 and further to 269,000 tons in 1959, 295,000 tons in 1960 and 388,000 tons in 1961. The total value of its exports touched Rs. 14 crores in 1961-62, which compares well with Rs. 10 crores in 1960-61. As pointed out by Mr. R. M. Gandhi, President of the Indian Oil and Produce Exporters' Association at the annual meeting of the Association in Bombay last week, the export performance of groundnut meal has been creditable and is a sufficient proof that the official policy for encouraging solvent extraction industry within the country has been fruitful. According to Mr. Gandhi, there is still scope for expanding exports of oilcakes and meal to Europe, as also to some of the Communist countries. While he called for greater efforts to promote shipments to these markets, he cautioned against both barter deals and the interference by the State Trading Corporation in the export of this commodity.

A major handicap in the way of expanding exports of oilcakes has been the rather high freight rates. It is, therefore, disheartening to note that the Karmahom Conference has decided to raise further its freight rate on oilcakes and meal, which was referred to in this journal a fortnight ago. Emphasising that this measure would result in a setback to the export trade, Mr. Gandhi made a fervent plea to the shipping lines to reconsider their decision. It is to be hoped that the Government of India would take up the matter with the shipping lines concerned, as has already been suggested by the Board of the local Oilseeds Exchange. Mr. Gandhi was on firmer ground when he called for suspension of the deferred rebate system, which has led to the diminution of freedom of action by exporters. But for this system, the aforesaid increase in freight itself would not have been thought of by shipping lines without consulting the trade.

A review of exports of vegetable oils will be incomplete without a reference to production trends. It would appear that total production of five major oilseeds in the 1961-62 crop year was no more than the previous year's level of 6.53 million tons, in contrast to the increasing trend in world production. The official estimates of domestic output are available only for groundnuts so far; they show an increase of 330,000 tons to 4.68 million tons (in shell), as compared with 1960-61. Unofficial estimates place the output of rapeseed and mustard lower by a still greater margin, that is, by 380,000 tons at one million tons. The other three major seeds, castor, linseed and sesamum, are expected to show only marginal increases in output, if any. This is the position in the first year of the third Plan. The crop in 1962-63 is expected to be still lower, if the present reports of inadequate rains in groundnut growing areas like Saurashtra are true. It sounds ridiculous to talk of the question of achieving the third Plan targets for oilseeds production (9.8 million tons), when even the modest second Plan target of 7.6 million tons still remains to be fulfilled! So long as production lags behind and the domestic demand for edible and industrial purposes goes up, prospects for exports will remain bleak.

TEXTILE EXPORT PROMOTION

The Central Government's move to broadbase the functions of the Cotton Textiles Fund Committee, though belated, deserves to be welcomed in the context of the urgency of export promotion. The Government, Mr. Manubhai Shah disclosed while inaugurating a meeting of the Committee in Bombay last week-end, had approved of "a comprehensive self-contained" Bill to replace the Cotton Textiles Fund Ordinance of 1944. This Bill, which would soon go to Parliament for enactment, will ensure an independent status for the Committee, enlarge the scope of its work and enable it to continue to function in an efficient manner. Under such an enhanced status, the Committee can certainly be expected to play a more dynamic role in boosting the export trade in textiles, which, as is well known, constitute the third largest earner of foreign exchange, preceded by tea and jute manufactures. The Committee has already had seventeen years of rich experience in the field of textiles. It is this Committee that has (*a*) materially assisted the Ahmedabad Textile Industry's Research Association to develop and helped the establishment of the South Indian and Bombay Textile Research Associations; (*b*) aided, by means of annual grants, the Cotton Textiles Export Promotion Council; (*c*) provided facilities for pre-export inspection of textiles; and (*d*) undertaken market research studies in Indian cotton textiles in collaboration with the Cotton Council International (U.S.A.).

Even while the amending Bill is on the anvil, the Committee, it is gratifying, has put into operation a scheme of compulsory *ad hoc* survey inspection to assess the quality of cotton textiles for export. The scheme, as Mr. Manubhai Shah stated, is a good one, in that it will ensure that the quality of textiles produced for export by mills is upto the standard and, wherever it falls short of the standard, suggest rectification of defects. The need for making the scheme compulsory has become imperative, for the provision of free inspection facilities by the Committee has not been fully availed of by exporters and mills. The quantity of cloth actually handled by the Committee's Inspectorate, it may be noted, is now no more than 50 million yards (worth Rs. 5 crores) annually, which forms only a small percentage of the total exports of fabrics. In other words, a large bulk of the cloth is going out of the country without adequate inspection and this has obviously been responsible for the continuance of complaints from overseas importers regarding quality. Mr. Shah did well to draw pointed attention to this aspect. It would, he said, do immense good for the industry and trade if steps were taken to inspect all cloth and yarn prior to shipment. It must, however, be added that while the preshipment inspection of cotton textiles may obviate complaints regarding quality, there is no getting away from the fact that the competitive capacity of Indian textiles in world markets would ultimately depend on the price at which they are sold. The battle of cotton textile exports has, therefore, to be fought on the production front.

MATERIALS MANAGEMENT

The three-day Seminar on materials management, which concluded at New Delhi on the 10th inst., made three notable recommendations. They are: (1) Arrangements should be made for training materials managers and their staff in the scientific techniques of production planning, inventory control, materials handling and value analysis. (2) The Committee on Plan Projects of the Planning Commission should organise these training courses in collaboration with the National Productivity Council and other suitable agencies. (3) The Committee on Plan Projects should publish the results of its studies on inventory control in the form of case studies and distribute these widely, so that the various industrial concerns in the country may benefit by them.

The Seminar has served to focus attention on a vital but hitherto more or less neglected aspect of Plan cost. For it is not as widely realised as it should be that efficiency in the use of materials could lead to cost reduction far out of proportion to the effort made. This is especially important, because cost is a most important determinant of the competitive capacity of our products in world markets. An idea of what a rational materials management could do to reduce cost was given by Dr. A. N. Khosla, Member of the Planning Commission, in his address to the Seminar. According to him, in manufacturing and construction, costs of materials add up to more than 60 per cent of the total cost of production. Hence even a small change in materials cost could result in a loss or a saving of large sums of money. He illustrated this point by indicating the scope for economy through cost reduction in construction and manufacturing activities in the third Plan. Construction activities during the third Plan period, Dr. Khosla pointed out, would involve an expenditure of Rs. 3,600 crores, of which the cost of materials would account for more than Rs. 2,000 crores. In factory establishments, the consumption of materials is estimated to be of the order of Rs. 20,000 crores. Thus, in construction and manufacturing done, the outlay on materials is estimated to be about Rs. 22,000 crores. If, as a result of adoption of methods that will lead to a saving in the use of various materials, costs could be reduced by, say, five per cent, the total saving in cost to the economy would be as much as Rs. 1,000 crores. This in turn will enable the country to take up some of the projects which, for want of resources, had to be kept out of the Plan. Alternatively, it would go a long way towards keeping down the price levels.

Rational materials management is only one among the vast repertoire of tools that modern management could employ to achieve cost reduction. Full results, in the form of elimination of all avoidable expenditure and getting the maximum from the men, materials and machines employed can be achieved only if more attention is devoted to the other equally important aspects such as scientific selection and training of workers, evolution of work-loads and allotment of jobs, functional foremanship and planning, efficient cost accounting and quality control, and incentive wage payment. In fact, what is required for reducing cost and increasing production is less of unplanned, unco-ordinated and haphazard approach and more of what F. W. Taylor, an authority on efficient industrial administration, calls "scientific management."

COAL INDUSTRY

The problems of coal industry were discussed last week by the Union Minister for Mines and Fuel, Mr. K. D. Malaviya, with the Joint Working Committee on Coal—a high-level body consisting of representatives of the Indian Coal Mining Association, the Indian Mining Federation, the Indian Colliery Owners' Association and the Madhya Pradesh Vidharbha Mining Association. From the account given by the Minister of the discussions, it would seem that a turn for the better is coming about on the production front. The price increase recently ordered for higher grade coal, for instance, is a step in the right direction. But the increase is only modest, and this presumably explains the Government's readiness to grant some other concessions for increasing the production of higher grade coal. The Government has agreed in principle to various kinds of subsidies for meeting the difficulties in mining. The pattern of assistance for stowing in coal mines has recently been made more liberal. In the last two months, licences for the import of coal mining equipment and machinery against the loan of Rs. 17 crores given by the World Bank to the private sector of coal industry have been issued for the aggregate value of Rs. 15 crores. Mr. Malaviya has also done well to give the assurance that the Government would give favourable consideration to requests from the industry in connection with extension of mining to certain areas. He is also reported to have stated that the Government has no intention of nationalising the coal industry. If this is true, the assurance is most welcome, for his statement at Madras a few days ago that, ultimately, nationalisation of coal mines was inevitable, had given rise to misgivings among colliery owners and investors. No entrepreneur could work wholeheartedly for the development of an industry, if he is not sure about his future.

It is, however, feared that, in spite of all these measures the coal industry as a whole (in the public and private sectors together) might not be in a position to attain a higher level of production than 87 million tons by the end of the third Plan, as compared with the target of 97 million tons per annum. The Union Mines and Fuel Ministry itself is credited with this view in one report. If the Bokaro steel plant and some thermal power projects do not materialise in the third Plan period, the requirements for coal would be correspondingly less and so, it is said, a shortfall of 10 million tons in the coal production target would not be a disaster. This view seems to ignore that the Ministry itself, in consultation with the Planning Commission, had formerly suggested an upward revision of the target to about 107 million tons so as to provide for additional coal requirements. If the contingency about Bokaro Steel Project and some power projects does not arise, all that it would mean is that the need for a higher target felt by the Ministry would not be there. In other words, the original target of 97 million tons would more correctly reflect the country's expected requirements of coal.

On broader matters of this kind, in which the coal-consuming industries are vitally interested, Mr. Malaviya's Ministry should consult, without hesitation, representative commercial organisations like the Federation of Indian Chambers of Commerce and Industry. His stand that he would consult only the Joint Working Committee on Coal, though supported in a way by Mr. Pran Prasad, Chairman of the Indian Mining Association, does not seem to be quite pertinent. The coal industry's own organisations are presumably affiliated to the F.I.C.C.I. which can justifiably interest itself as much in coal production problems as in those of coal transport and distribution. But when Mr. Pran Prasad himself says that his and other organisations alone are directly concerned with coal production problems, and that they would not accept F.I.C.C.I. statements if these are likely to complicate matters with the Government, it is also difficult to disagree with him. What should the F.I.C.C.I. do in the circumstances? It would do well to issue public statements or make representations to the Government after fully consulting the four representative organisations of the coal industry. But, where it feels strongly on

any particular issue, its right to take the public into confidence or to represent to the Government cannot be questioned. If the Ministry concerned finds this freedom irksome, that cannot be helped. In a democracy, every one has the freedom to criticise the Government and, if the criticism is valid, it cannot be ignored merely on the ground that its source is not directly concerned with the interests affected.

INDIAN INVESTMENT CENTRE

It is, indeed, remarkable that the Indian Investment Centre—a very young organisation which came into full operation in New Delhi by September last year and opened its office in New York in the following month—has already made some striking progress in the pursuit of its main objective of attracting foreign private capital and techniques from the capital exporting countries. This progress is seen in the three types of services organised so far by the Centre. The first type of service relates to the supply of information on the various aspects of investment in India, such as Government's policy and rules and regulations governing investment of foreign capital, taxation, exchange control and other cognate matters. Another service which the Centre now offers fairly adequately relates to the provision of data on specific industries through industry notes containing particulars on target capacity, installed capacity, current production, demand, availability of raw material, power and other facilities. Under the third category, assistance is being given to Indian entrepreneurs in such a manner as would attract foreign investment and suitable partners are being sought, both in India and abroad, for possible joint-venture enterprises.

That all these services are being well availed of by Indian and foreign entrepreneurs is suggested by the triple fact that the Centre has received as many as 1,500 inquiries of various types so far, forwarded nearly 80 Indian proposals abroad for obtaining technical collaboration and financial participation and received 60 proposals from foreign firms. But that is not all, for the Centre has actually brought about collaboration between Indian and foreign businessmen in regard to three proposals and taken eight foreign inquiries to an advanced stage of negotiation. Thanks to the work of the Centre, some of the largest corporations have indicated their interest in coming to India and their inquiries have covered a very wide range of industries, including electronic small tools, piston pumps, plastic injection moulding machines, contraceptives, heavy chemicals, synthetic rubber machine tools, aluminium foil, glass-lined equipment, generators, and hydraulic equipment. It is against the background of these developments that Mr. G. L. Mehta, Chairman of the Centre, claimed, in his speech at the inaugural meeting of the Centre's Advisory Committee of Industrial Experts held on the 7th instant at Bombay, that "there is a growing interest among foreign firms in the industrial development of our country."

The Centre's task now is to sustain this interest. One of the ways in which this is sought to be done is to undertake industrial surveys and feasibility studies, with particular reference to certain sectors of the industrial structure which have been lagging behind. Such surveys and studies will be most useful, in that they can be elaborated in specific investment opportunities which both Indian and foreign entrepreneurs can pursue. The Centre, of course, maintains a list of (i) items in which capacity is still available for licence and (ii) items of industrial raw materials and components which could be taken up for indigenous manufacture. But further studies seem to be called for, if fuller information is to be made available to prospective foreign investors. The Advisory Committee, it is noteworthy, has just made a substantial beginning in this direction. It has constituted two sub-committees for studying the sectors in the economy where production is lagging behind the programme of development and for finding out the items suitable for manufacture by ancillary industries. One of these sub-committees will survey machinery and machinery parts. The other will survey raw materials needed by the chemical industry. Industrial surveys of machine tools, process and control instruments and a feasibility study of transport of coal by pipeline have also been approved by the Advisory Committee at its inaugural meeting. The Centre is thus taking on itself more practical responsibilities and getting into stride. It may be confidently expected that it will discharge such responsibilities efficiently with the assured assistance of foreign and Indian experts in diverse industrial fields.

LONDON LETTER

COMMON MARKET TALKS

THE REAL CRUX OF THE PROBLEM

(From Our Own Correspondent)

LONDON, 10*th August*

HOPE Deferred or Saved from the Abyss—that is how commentators and politicians are viewing the postponement of the negotiations of Britain's entry into the Common Market. Without subscribing to the latter view, it is nevertheless possible to say that the postponement of this last and difficult stage of the negotiations is undoubtedly all to the good. It is well known that the British Government had aimed to get general agreement and put this before the meeting of Commonwealth Prime Ministers in September and, although they have undertaken not to commit themselves to anything until both the Commonwealth and Parliament had agreed, it would have been the sort of commitment which is very difficult to get out of, because, naturally, the British Government would already be in agreement with the Governments of the Six.

Now the Commonwealth Conference will be presented not with a draft agreement but with a report on the negotiations in the course of which they will undoubtedly become far better informed than is so far the British Parliament. The Commonwealth Conference is not a public meeting and the truth in detail will be difficult and indeed unnecessary to evade. As far as Parliament and the country are concerned, however, these detailed truths have not so far emerged in any way to enable other than a very select few to understand what is going on. Some of the exchanges at question time in Parliament between Mr. Heath, the Minister charged with carrying on the negotiations, and Members of the House appear, except to initiates, highly esoteric.

Self-sufficiency, the Aim?

What then is the nub of the problem that is causing so much concentration on the terms of entry for Commonwealth foodstuffs? It is that there is a basic difference of approach between the Six and the United Kingdom on the development of the whole European economy. This country has always, while protecting a basic level of home agriculture, relied mainly upon overseas sources of supply of temperate foodstuffs. It had hitherto been assumed that there was no real intention on the part of the Six to change the existing pattern of trade but it seems that this assumption is wrong. Amidst all the discussions of preferences to the Commonwealth and so on, the underlying fact is that the Six wish to

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

A SIMPLE PHRASE...
...VITALLY IMPORTANT!

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

AMERICAN LETTER

STEADINESS AMID AIR OF UNCERTAINTY

STEEL PRODUCERS WANT PROTECTION

From Our Special Correspondent

NEW YORK, 10*th August*

OVERALL economic indices continue favourable amid an air of uncertainty. This is particularly reflected in the stock market where there has been considerable recovery from the price crash but trading has been mixed for some time at moderate volume. In fact, some of the price recovery in stocks has been remarkable, particularly in view of the preceding losses. For example, in May and June, prices for aluminium shares had fallen by about 17 per cent. The July recovery was nearly 15 per cent. Drugs had lost 25 per cent, but the comeback amounted to more than 10 per cent. Automotive shares, which had lost less than 16 per cent, bounced back by 9 per cent.

The resiliency of stock markets here has been much greater than in Japan, West Germany, Holland, Switzerland and France, where stock prices turned weak long before the New York crash. In this connection, it is interesting to note the interdependence of the valuation placed on equities among the free trading centres of importance.

Much of the uncertainty here is caused by contemplated and pending Federal legislation. Uppermost in mind of the business community is an across-the-board tax cut. July statistics showed an improvement over June and the general expectation is that tax reduction will be deferred until next year. In the meantime, the effect of the new more liberal depreciation allowances for industry will be studied as time goes on, particularly on expenditures for plant and equipment.

There are other legislative measures, labelled as urgent for action by the White House, which have deep economic significance. They include a Bill to set up a communications satellite system. It was prompted by Telstar and is highly controversial. Then there is a new Farm Bill, a Public Works Bill, Federal grants to aid urban mass transit, proposed action to buy a part of the $200 million United Nations bond issue, the Trade Expansion Bill and tighter control over drugs. The proposed curbs on pharmaceuticals have received much additional support since the wide international publicity about the crippling effect of thalidomide on unborn babies.

Quiet Buying of Gold

There have been several interesting developments in gold, foreign trade and the U.S. international balance of payments. The U.S. Treasury has been quietly buying gold from foreign central banks. It has been offsetting the outflow and resulted in June in the first month-to-month increase in Exchange Stabilisation Fund reserves since mid-1961. The average purchase price was $34.12¾ an ounce and the principal seller was Canada.

U.S. exports in June were at the second highest level on record, up 5 per cent from May and just below the previous peak reached during the Suez Canal crisis. This will naturally help in reducing the unfavourable international payments position of this country.

Imports continue at their previous levels, but protectionist sentiment is rising, being specially promoted by industries which are not doing so well, such as steel and textiles. The steel industry, in particular, is incensed over foreign competition. It is charging that foreign competitors are selling steel here below their home price levels. The industry is now making studies to prove it in the hope of having the Government invoke the anti-dumping laws. Foreign steel makers got their real foothold into the U.S. market during the last prolonged steel strike, when the U.S. economy was crying for steel products and when steel management was more interested in some minute details of contract terms with its workers than in the long-range consequences of a steel shutdown.

Personal incomes are continuing their upward climb. They are now running at a level which is $27 billion higher than last year. So far, the figures have been rising every month this year. The Federal, State and Local Governments, as well as the service industries, account for an ever-increasing share of employment and pay-rolls. There has been a sharp drop in unemployment which is considered gratifying but not enough. Idle hands, at 4 million, now are at the lowest in two years.

Discussions about interest rates continue to be in the news. Moves are now under way to remove the interest rate ceiling from foreign bank deposits here, in order to attract more funds as another measure to ease the imbalance in international payments. The trend of other rates seems enigmatic. The U.S. Treasury did not do so well with its recent offerings of long-term 4¼ per cent bonds, even though shorter maturities at lower rates sold very well indeed. There is a tendency among investment managers, notably pension funds, to accept a definite coupon rather than speculate on the maturity value of a security, say, 20 years hence. It is another sign of the uncertainty which is prevailing in financial quarters. Many of these doubts will probably be dispelled later in the year. For, in the last quarter, the economy always perks up.—*All Rights Reserved.*

LONDON LETTER

(*Concluded from page* 272)

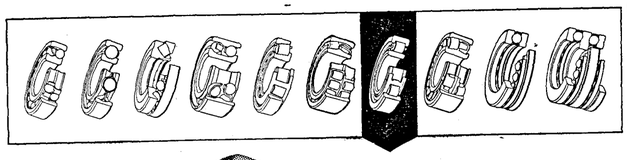
develop agriculture in their territories and, by increasing domestic output, reduce the market for imports. This has nothing to do with tariffs: tariffs may be used as a weapon to achieve this object and the fact that preference could be withdrawn from Commonwealth foodstuffs means that the weapon would apply as hardly against the Commonwealth as against other countries—but the really serious matter is this intent to change the economic pattern of Europe. Presumably a development of agriculture involving higher price for more expensively produced foodstuffs must mean that the European countries aim at a high level of self-sufficiency and this will also have its repercussions on the economy of the Commonwealth.

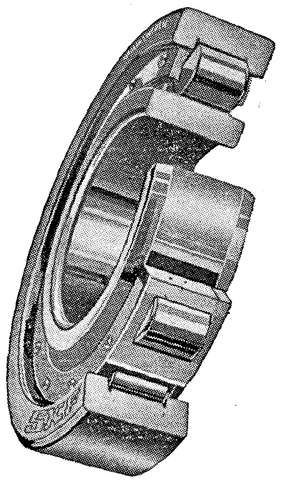
Admittedly, it is hard to believe that active steps would be taken to make a highly industrialised group of countries such as are the Six (or the Seven if one includes the U.K.) agriculturally self-sufficient and yet it is this philosophy which is at the root of the prolonged negotiations. Nor would it be possible for the U.K. to assist the Commonwealth countries to compete by reserving the proceeds of the import duties and using them to subsidise the primary producers. For it is proposed that the proceeds of the duties of agricultural products should be put into a common fund to be used for assisting the most hard-pressed farming communities. The proceeds of duty on Australian or Canadian wheat, for instance, might be used to encourage hill farming in Western Germany!

Commonwealth Preference Will be Gone

These financial provisions would make it impossible to preserve a Commonwealth preference even if there was no disagrement on basic philosophy. On the other hand, special arrangements might be made, as has been proposed for New Zealand, where a particular supplier would otherwise be seriously adversely affected. But this is a point which the Commonwealth could stomach, if given a reasonable period of time—after all, degrees of protection can never be regarded as permanent. But the philosophical approach which would, actually reduce the Commonwealth Market is something that they are bound to resist, and it is the British Government's appreciation of this that has slowed up these final stages. It is, therefore, all to the good that the Commonwealth countries should have a full opportunity at the forthcoming Conference to consider this philosophical problem and perhaps as a result to have the true issue more widely publicised. It is still possible for the Prime Minister of Australia to say that he cannot give a straight answer whether he does or does not favour Britain's entry, "because the position is confused." It is as well that, however confused the position, what is at stake should be fully and generally understood before commitments, however unofficial, are undertaken.

SKF *offer the widest selection of bearings*





Illustrated here is the **SKF** CYLINDRICAL ROLLER BEARING, one of the ten variants of the four basic types of rolling bearing manufactured by **SKF**. The cylindrical roller bearing has a low coefficient of friction and is therefore suitable for shafts operating at high speeds.

BRAITHWAITE & COMPANY (INDIA) LIMITED

(Incorporated in India with limited liability under the Indian Companies Act, 1913)

Registered Office: **4, CLIVE ROW, CALCUTTA-1**

The Company is one of the leading bridge and structural engineering companies and railway rolling stock manufacturers in the country and has heretofore specialised in the manufacture of structural steelwork to the highest standards for bridges and heavy workshop buildings. It has also developed the manufacture of rolling stock for the Indian railways and is well known as a manufacturer and supplier of pressed steel tanks and troughs. The capacity of the Company's wagon shops has been expanded in recent years to enable it to undertake the production of the larger types of wagons now required by the Indian railways and a further expansion of this activity is in progress.

The Company proposes to diversify its activities by undertaking the manufacture of dockside level luffing cranes, railway break-down cranes and electric overhead travelling cranes for which it has entered into technical collaboration agreements with two well-known British engineering companies who specialise in these types of cranes.

The business of the Company is carried on at its Hide Road Works, Calcutta, which extend to 13.872 acres and at Angus Works in the Hooghly District which extend to 16.724 acres with an additional area of 57.283 acres which is available for future development.

SHARE CAPITAL

Authorised		Issued, Subscribed and Fully Paid.
Rs.		Rs.
40,00,000	40,000 9 per cent Redeemable Cumulative Preference Shares of Rs. 100 each.	
1,00,00,000	10,00,000 Ordinary Shares of Rs. 10 each	1,00,00,000
1,40,00,000		1,00,00,000

NOW BEING ISSUED

	Rs.
40,000 9 per cent Redeemable Cumulative Preference Shares of Rs. 100 each at par payable in full on Application	**40,00,000**

In respect of the above issue, which has been fully underwritten, firm applications have been received from the Underwriters and their friends for 20,000 shares and these will be accepted in full. The balance of the shares is now offered to the general public.

These shares will confer the right to a fixed cumulative preferential dividend at the rate of 9 per cent per annum (without deduction on account of income-tax payable by the Company *but subject to deduction of tax under* Section 194 of the Income-tax Act, 1961) and in a winding up to repayment of capital and arrears of dividend in priority to the Ordinary Shares but shall not confer any further right to participate in profits or assets.

They will be redeemable in whole or in part at the option of the Company at par on or after 31st December, 1974 on three months' notice but in any event not later than 31st December 1977. In the case of partial redemption the shares to be redeemed shall be determined by drawings.

The subscription List will open at the commencement of banking hours on Tuesday, 28th August, 1962 and will remain open until the close of banking hours on Thursday, 30th August, 1962 or later at the discretion of the Directors.

Application forms along with copies of the *Prospectus*, on the basis of which alone the redeemable preference shares will be allotted, can be had from the Registered Office of the Company, or from the Company's Underwriters, Bankers and Brokers whose names and addresses are given below:

REGULATION OF BRANCH EXPANSION

RESERVE BANK'S CIRCULAR TO BANKS

THE Reserve Bank of India has, in a circular issued to all Indian scheduled banks in the country, asked them to draw up in advance their respective branch expansion programmes for the next three years for approval before the end of December next. To begin with, banks are required to submit their branch expansion programmes for the twelve-month period ending 31st August 1963 by the end of this month. On receipt of the programme of the individual banks, the Reserve Bank will, among other things, examine the programme, co-ordinate the requests and indicate to each bank a programme of expansion which, in its view, would be regarded as fulfilling the basic requirements under Section 23 of the Banking Companies Act. This section, it may be recalled, provides that a bank should obtain a licence from the Reserve Bank for opening a new office and that the Reserve Bank may require, before granting such a licence, to be satisfied about the financial condition and history of the applicant bank, the general character of its management, capital structure and earning capacity and the public interest to be served by the opening of the proposed branch.

It is stated that, subject to these basic requirements, it has been the Reserve Bank's endeavour in the past to regulate the opening of new branches of banks in such a way as to assist in the development of the banking system to enable it to meet the growing banking requirements of the country. But there has not been a definite or clear-cut policy as such in respect of branch expansion. Banks have been applying for permission to open new branches as and when desired by them and such requests have been dealt with as and when received. This policy, or perhaps the lack of a policy, has had no ill effect on branch expansion. For, on the Reserve Bank's own admission, development of branch banking during the past ten years has been "generally satisfactory."

The total number of offices of Indian banks increased from 4,055 in 1951 to 5,040 at the end of 1961, an increase of 985 during the period. Of this increase, more than 50 per cent was accounted for by the State Bank of India, the exact increase being as many as 555, bringing its total number of offices to 946. The number of branches of other Indian scheduled banks increased by 1,180 to 3,371 during the period, but as 750 offices of non-scheduled banks, closed down, reducing their total to 723, the net increase in the number of branches of Indian commercial banks other than the State Bank of India was only 430. During this period, the branches of foreign banks rose only slightly from 64 to 71. Even so, out of 3,018 towns (according to the 1951 census) about 1,400 are still without any banking facility. It is the extension of banking facilities particularly to these areas which is now proposed to be stimulated by the Reserve Bank of India by the adoption of a systematic and planned expansion plan.

The circular issued by the Reserve Bank does not spell out in detail a new policy of regulation of branch expansion. Only, it emphasises certain points to be borne in mind by banks in preparing their branch expansion programmes. First, banks are advised to take into account the need for extension of banking facilities to unbanked areas. It has also enclosed a list of the 1,400 towns where no banking facilities exist at present. Secondly, banks have been asked to bear in mind the need for maintaining adequate control by the head office over the branches. The Reserve Bank maintains that it is not often possible to exercise such control if branches are situated far away from headquarters.

The Reserve Bank has reiterated the urgent need for the provision of banking facilities in the vast rural and semi-urban areas not at present served by any commercial banks. Opening of new branches in these areas, according to it, could not only assist in the further mobilisation of deposits but also provide better service to the community, "if done in a co-ordinated manner."

On the face of it, the Reserve Bank's advice sounds correct. But one wonders whether adequate thought has been given to the issues which its acceptance will raise and the problems that will be encountered in its practical application. The Reserve Bank wants the scheduled banks to draw up their branch expansion programmes for the next three years. The feasibility of preparing such a plan is in doubt when one bank does not know what the other one will do. Further, the list of unbanked areas prepared by the Reserve Bank is based on the 1951 census figures. The figures of the latest census have yet to be tabulated and it will certainly show that the number of unbanked areas has not only increased but new centres, especially industrial townships, which have emerged during the inter-census period, have also changed the order of priorities. Any scheme drawn up on the basis of the 1951 census figures might result in areas most in need being denied of banking facilities.

Further, there is the question whether the Reserve Bank should assume one more responsibility when it has enough work in regard to the regulation of banking practices, weeding out sub-standard banks and prevention of failures such as those of the Palai Bank and Laxmi Bank. All these problems require the undivided attention of the Reserve Bank. The practice hitherto followed by it in regard to licensing of branches has been fairly satisfactory, in that it has not encouraged unhealthy expansion of branches. Some have doubts whether the Bank has been right in allowing a large number of branches to be opened in the suburbs of big cities like Bombay and Calcutta. But it is too early to make any dogmatic comment. One has to wait and see. May be, the Bank will turn out to have been right in its judgment. Too much of planning in regard to branch banking by the central banking authority—the present move seems to fall under that category—is not a healthy thing, as it will not be conducive to the growth of a healthy spirit of initiative, enterprise and inquiry by individual banks. Let each bank find out for itself, as it has been doing hitherto, the places where it can function efficiently and profitably. If the Reserve Bank finds that a particular town or suburb is badly in need of banking services, it may draw the attention of commercial banks to that place. If it finds that none is interested, it can ask the State Bank of India or its associates to fill the gap. Beyond that it need not go. To insist upon advance planning by each bank for a three-year period would be to place a condition which may not suit all banks. In actual practice, it may prove to be a handicap to the medium and small banks. Care must also be taken to ensure that, in the name of planning and co-ordination, the scope for healthy competition is not restricted. It must be remembered that such competition is required not only for mobilising the savings of the people but also for encouraging establishment of productive enterprises through provision of credit. A surplus of banking services in an area is not always a bad thing, for it invariably results in stimulation of economy activity in that area.

4½ PER CENT

ANDHRA PRADESH STATE DEVELOPMENT LOAN, 1974

Issue Price Rs. 99.50 Per cent

Open on the 27th August, 1962

The Loan will be closed without notice as soon as the subscriptions amount to Rs. 10 Crores approximately, and in any case not later than the close of business on the 1st September, 1962.

Applications will be received at (a) the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi, (b) the branch of the State Bank of India at Patna, (c) the branches of the State Bank of Hyderabad conducting Government work in the State of Andhra Pradesh, (d) the branches of the State Bank of India in the State of Andhra Pradesh at places not covered by item (c), and (e) the Government treasuries and sub-treasuries in the State of Andhra Pradesh at places not covered by items (c) and (d).

FULL PARTICULARS CAN BE OBTAINED

at any of the offices or branches mentioned above or at any treasury or sub-treasury in the State of Andhra Pradesh.

CONSUMER CHOICE OF NATURAL RUBBER

LOWER PRICES AND BETTER QUALITY IMPERATIVE

IT is only a cynic who can say that there is no future at all for natural rubber. May be, the production of synthetic rubber and its consumption are expanding pretty fast. Over half of the current world aggregate consumption of rubber is accounted for by synthetic rubber, as against 25 per cent in 1950. The world demand for rubber, which is now of the order of 4.9 million tons annually, including the estimated output within the Soviet bloc, is expected to reach as high as 6.4 million tons by 1970. As against this, natural rubber production is likely to rise from 2.0 million tons at present to just 2.7 million tons in 1970. The share of natural rubber will thus decline, but it will still be quite substantial. It is true swift technological developments are taking place not only to produce newer types of synthetic rubber but also to find fresh outlets for its use. This no doubt throws a challenge to natural rubber, but the challenge can be met and natural rubber can certainly hold its own against the impact of synthetic rubber, provided, of course, sustained efforts are made to enhance its competitive capacity *vis-a-vis* the new stereo-regular synthetic rubbers, particularly cis polybuto-diene which is finding increasing use in tyres, by lowering selling price through a reduction in cost of production and improve the quality. This at any rate is the conclusion that emerges from the perusal of two interesting papers read by well-known experts in rubber at the sixteenth meeting of the International Rubber Study Group held at Paris recently. The two experts are Dr. L. Bateman, Controller of Rubber Research, Malayan Rubber Fund Board and Mr. Dato H. A. Campbell, Managing Director, Socfin Co., Ltd.

In his paper, Dr. Bateman has focussed attention on the factors influencing the consumption and consumers' choice of natural rubber, while Mr. Dato Campbell has assessed the competitive prospects of natural rubber over the next ten years. The two papers are so interesting and contain so much valuable information that it is rather difficult to summarise them. Nevertheless, an attempt has been made to present in these columns the salient fatures of their papers.

Competitive Pressure

There are, according to Dr. Bateman, two dominant reasons for the formidable competitive pressure to which natural rubber has been subject for sometime now. The first is the failure of natural rubber production to keep pace with the large upsurge in total rubber consumption. Thus, between 1950 and 1960, the quantity of natural rubber actually produced has risen from 1.8 million tons to only 2.0 million tons per annum, whereas the world total consumption has gone up from 2.5 million tons to over 4.0 million tons, so that, necessarily, the large excess demand for rubber has had to be taken up by synthetic rubber. The second reason is that styrene butadiene synthetic rubber (S.B.R.) has been able to replace natural rubber in a number of large volume outlets, though not in all. Stating that the uniqueness of natural rubber has disappeared, Dr. Bateman has struck the following note of warning:

"No longer can it (natural rubber) generate a sellers' market; the buyer will be able to turn in other directions and the extent to which he does so will be determined (political and fiscal controls apart) by just those factors which determine the choice of everything in the same situation—price, availability, presentation and quality. The marketing of competitive synthetic rubbers has and will continue to set standards for these factors which will increasingly fashion the buyer's outlook and can only be ignored with penalty by the natural rubber industry. . . . The competitive strength of the natural rubber industry lies not in supplying a wide range of materials (whether these be tyres, grades, special or modified rubbers) but in providing the minimum variants on a single, versatile, general-purpose rubber, produced as efficiently, as cheaply and in as standardised a form as possible."

In the considered opinion of Dr. Bateman, the prosperity of the natural rubber industry will depend not on producing less and selling less at high prices but on producing and selling more at competitive and reasonably stable prices. It would seem prudent for the industry to plan to produce profitably for a selling price of 18 cents (U.S.) per lb., an objective which is considered to be well within the reach of efficient producers, especially with the agronomic advances still to be extensively applied; the reduced profit per lb. can be greatly offset by increased profit per acre. Further, the marketing of rubber must continue to be on the basis of visual grading system, though greater simplicity can be introduced; the recent move towards one international code of grades is a welcome first step. Again, special methods of control on export and shipment may be justified to counteract abuses such as iniquitous trading practices of all kinds from over-liberal application of bale coatings to "fiddling the grades" and to dockside "touching-up" of bale markings. As for quality, it is urged that particular attention be given to remove the two major defects commonly attributed to natural rubber, namely, dirtiness and variability.

Consumption of Rubber

Synthetic-Natural Usage Ratio

An important point that Dr. Bateman has made is the progressively less use of natural rubber in relative amount for many years which, he says, will be reflected by a further rise in the synthetic-natural rubber usage ratio, especially in those countries where stereo-rubbers are being developed. Elucidating this point, Dr. Bateman observes:

"Inevitably, there will be greater selectivity in using NR (natural rubber), with substitution by blends making considerable inroads. NR is likely to continue to be favoured in high quality applications where design, construction and performance factors have more weight, within reason, than mere raw material cost. These applications include high performance tyres of all kinds (subject to certain reservations) and a wide range of other, less conventional engineering products. Somewhat paradoxically, NR will also be sought for very cheap products, since its superior strength properties permit it to be more heavily diluted with cheap fillers and extenders to give low cost compounds. The significant and fundamental feature of rubber usage, however, is that it continues in the main to be based on NR-type materials. From the discovery of a new polymer or process, the development of radically new rubbers with revolutionary technologies has been prophesied. This has been realised in the foam field by the polythers, but, for other than a very small minority of solid rubber applications, this possibility seems as distant as ever. In fact, the development of the stereo-rubbers, coupled with the existence of large volume SBR plans, serves to fortify the present usage pattern into which NR fits so well. What its place will be in the future, and how valuable this will be, depends on the efforts of the plantation industry and its addenda to achieve cost and quality competitiveness. That such efforts are needed as never before cannot be questioned; that they are worthwhile can be judged from the remarks of a distinguished pioneer of the synthetic rubber industry: "I have always looked upon NR as the great model substance which with respect to some properties might be surpassed but hardly duplicated as regards the totality of its wonderful properties.'"

Prospects

Mr. Dato Campbell has assessed the competitive prospects of natural rubber against the background of its past history. His review reveals that, although evidence of the existence of rubber goes back as far as 55,000 years B C., it was after the advent of the nineteenth century that research workers in many lands strove to make rubber usable for a variety of purposes. The break-through came when Goodyear (in 1839) and Harcock (two years later) discovered the process of vulcanisation. Mr. Dato Campbell has also drawn attention to the stereo-regular synthetic rubbers and points out that the development of these synthetics at low production cost, having properties which, if still not the absolute equivalent of natural rubber, are extremely equal to them, require the reduction in the production cost of natural rubber. He has indicated how the rubber estates in Malaya have made great progress towards this objective during the last ten years. The four main lines of approach, referred to by him, cover the following:

1. Replanting of large areas of old and low-yielding trees using new and improved high-yielding material.
2. Development of tree stimulation to give much greater yields than were originally thought possible.
3. The realisation that high stem tapping and tapping systems of greater intensity can be safely used to increase yields and at the same time prolong the economic life of the trees.
4. Improvement and development of planting technique.

In addition, recent work indicates a considerable potential for the future when the nutritional

FERTILISERS FROM OIL AND REFINERY GASES

PROSPECTS FOR DEVELOPMENT

MORE than a third of the current world production of fertilisers consists of nitrogen compounds, of which some 80 per cent derive from synthetic ammonia in gaseous or liquid form. With almost 60 per cent of this ammonia now based on natural gas or oil, petroleum hydrocarbons thus provide roughly a fifth of all source materials for soil nutrients, but their share is certain to increase in the years ahead. For the mounting supplies of natural gas from newly opened prolific fields in Europe, North Africa and elsewhere, in conjunction with continuous advances in the technology of hydrogen manufacture from petroleum, will give added momentum to the shift in ammonia production from coke and coal to oil and gas. The beginnings of this shift date back to the early 1940s, when the United States started to use natural gas on a substantial scale for the synthesis of ammonia from nitrogen and hydrogen. It was, however, only during the past decade that petroleum hydrocarbons began to play a major part as basestocks for nitrogen production outside North America—a development which, in turn, considerably stimulated the expansion of ammonia and fertiliser manufacture as a whole.

In 1959, the global output of fertiliser nitrogen surpassed, for the first time, that of both phosphates and potash, the two other principal types of soil nutrients (but not producible from oil or gas). In the fertiliser year 1961-62 to last June, the world production of nitrogenous fertilisers was about 11⅞ million metric tons, as compared with some 4 million tons in 1950-51, while the output of phosphates rose during the same period from 5.8 million to just under 11 million tons, and that of potash fertilisers from 4.5 million to 9.6 million tons. These tonnages denote the respective nutrient contents of pure nitrogen, phosphoric acid and potassium oxide, which are the essential agents for plant propagation.

The most highly concentrated of the nitrogenous fertilisers is urea, with a nitrogen content of 45 per cent, but over half the world supply of fertiliser nitrogen is accounted for by ammonium sulphate and lime ammonium nitrate, both containing about 21 per cent of nitrogen. Other types include sodium and calcium nitrates, calcium cyanamide, aqueous and anhydrous (water-free) ammonia and combinations of ammonia with nitrate and urea dissolved in water, while so-called compound fertilisers contain nitrogen as well as phosphorus and/or potassium. In addition to the 11⅞ million tons of fertiliser nitrogen, about 2.2 million tons of nitrogen were produced last year for industrial uses in the manufacture of explosives, rocket fuels, plastics, fibres and in oil refining and metallurgical operations.

Routes to Ammonia Synthesis

The spectacular expansion of the nitrogen industry was, of course, sparked off in the first place by the inception in Germany, nearly 50 years ago, of the classical Haber-Bosch process for the synthesis of ammonia. Its subsequent introduction in many other parts of the world transformed the whole fertiliser scene by opening up vast new sources of raw materials for the large-scale manufacture of nitrogen compounds. Until then, these compounds had been available only in limited and insufficient quantities from natural substances, such as sodium nitrate (Chile saltpetre) and calcium carbide (cyanamide), or as by-product ammonium sulphate from coke-oven, blast furnace and other industrial operations. By the synthesis method, ammonia is produced directly by chemically combining ("fixing") the nitrogen from the atmosphere with hydrogen extracted from hydrocarbons and water by thermal or electrolytic means.

In the original German water-gas process the hydrogen needed was obtained by passing steam over red-hot coke, but it could also be derived from the distillation of liquefied coke-oven gases, or from water-gas made from lignite and brown coals. In countries where water power is abundant and electricity is therefore comparatively cheap, e.g., in Norway or Japan, it was found economically attractive to obtain the hydrogen by the electrolytic decomposition of water. All these sources of hydrogen, especially coal and coke, are still utilised to a considerable extent for the chemical fixation of atmospheric nitrogen, but since World War II their relative importance has rapidly diminished as they have been progressively displaced by natural gas, refinery gases and fuel oil.

According to the U.K. periodical *Nitrogen**, about 38 per cent of the world's synthetic ammonia capacity is now based in natural gas, 13 per cent on fuel oil, and seven per cent on refinery gas, while coal and coke provide 40 per cent, and other processes two per cent. So the contribution of coal and coke, which in 1939 was still over 90 per cent, has already fallen to less than half that proportion. But it has contracted even more sharply in countries endowed with abundant resources of natural gas.

In the United States, the combined share of coke-oven gas and water gas as raw materials for ammonia synthesis has declined to 10 per cent, while that of natural gas plus other gaseous and liquid hydrocarbons has risen to 87 per cent; in Italy, the respective proportions are at present roughly 20 and 80 per cent. In the Soviet Union, where natural gas provided less than one per cent of the total ammonia feedstock supply seven years ago, but nearly 30 per cent in 1960, its contribution is to be increased further to 65 per cent by 1965. Japan's ammonia industry proposes to reduce the use of coal- and coke-based source materials from 42 per cent in 1960 to 21.5 per cent in 1963, and that of electrolytic hydrogen from 11 to 2.5 per cent, while the share of crude oil, natural gas and refinery gases is to be raised from 47 to 76 per cent. On the other hand, Norway's entire production of synthetic ammonia rests on low-cost electrolytic hydrogen obtained from hydro-power.

The striking changes in the basestock pattern of ammonia manufacture during the past two decades bear an obvious resemblance to the equally rapid swing from coal and coal-tar derivatives to oil and gaseous petroleum hydrocarbon raw materials in the sphere of organic chemistry. But whereas in this latter field, both the hydrogen and the carbon components of olefins, paraffins, naphthenes and aromatics are transformed into an immense variety of organic chemicals, the importance of oil and gas for the synthesis of ammonia lies primarily in the utilisation of their hydrogen content for the fixation of nitrogen from the atmosphere.

Petrochemical Sources of Hydrogen

The cost of hydrogen has a very significant bearing upon the economics of ammonia production, and natural gas offers particular attractions as a source material as it combines the advantages of a high hydrogen content and of comparative cheapness in areas of ample supply. Indeed, natural gas was for some considerable time virtually the only petroleum hydrocarbon basestock used on a large scale for the fixation of nitrogen. The principal method employed for this purpose was, and still is, a methane reforming process by which the natural gas is reacted with steam over a catalyst. The synthesis gas thereby produced, a mixture of hydrogen and carbon monoxide, is then converted to ammonia by catalytically combining its hydrogen component with the atmospheric nitrogen in the air injected into that mixture. The carbon monoxide is transformed by further steam processing to a mixture of hydrogen and carbon dioxide, from which the carbon dioxide is subsequently removed. Alternative methods of ammonia synthesis involve the separation of nitrogen from the air under refrigeration in special fractionation plants.

In the United States, nearly two-thirds of the total domestic ammonia output is today based on steam methane reforming of natural gas, first introduced some 30 years ago; another 15-20 per cent is derived from more recently adopted processes for the partial oxidation of gaseous and liquid hydrocarbons. This latter route, by extending the range of source materials to refinery gases, crude petroleum, fuel oils and naphthas, has greatly widened the scope for producing nitrogen irrespectively of the local availability of natural gas. It, therefore, offered particular attractions for chemical and oil companies in European countries, where its technical development received initially its main impetus from Germany's former I.G. Farben, Shell, O.N.I.A. in France, and Montecatini in Italy. At present, however, the most widely applied version of this process is one brought into commercial use ten years ago by Texaco in the U.S., whose system is now used in over two-thirds of the fifty or more partial-oxidation plants in operation throughout the world.

Progressing Technology

While the partial-oxidation method has become the main route to the direct production of hydrogen for the synthesis of ammonia from liquid petroleum feed-stocks and refinery gases, it can also be used for obtaining hydrogen from natural gas. Steam reforming is, however, generally cheaper than partial oxidation, as the latter inevitably involves both higher capital expenditure and higher operating costs on account of its substantial requirements for high-purity oxygen and its greater energy consumption. As these factors adversely affect the overall economics of partial oxidation, further research on steam methane reforming sought to extend its range of application to other than gaseous petroleum hydrocarbons.

The notable success of these efforts is reflected in the fact that most of the modern steam reforming processes can now be used not only on natural gas but also on distillate fuels, residuals and refinery gases. These possibilities are already being exploited to an increasing extent. For instance, Britain's biggest producer of synthetic ammonia, Imperial Chemical Industries, which has long taken a prominent part in the development of steam reforming, has recently adopted its new process for making synthesis gas by continuous catalytic steam reforming of light oil fractions and hydrocarbon gases for its entire gas production at its previously coke-based fertiliser factory at Heysham. I.C.I., whose ammonia capacity currently totals about 475,000 tons a year, is carrying out similar conversions at its Billingham works, and will also use steam reforming at its new ammonia plant at Severnside. Shell's 75,000-ton ammonia plant at Shell Haven operates on the Company's own partial-oxidation process for making synthesis gas from oil.

Impact of Low-cost Natural Gas

On the European Continent, the switch from coal to petroleum hydrocarbon basestocks for ammonia-making has been progressing most rapidly in the countries with major resources of natural gas, whose unit costs per therm are invariably lower—in certain instances by over 50 per cent—than those of other sources of hydrogen. In Italy, where ten years ago nearly three-quarters of the domestic ammonia capacity was based on coke-oven gas and water gas, and a fifth on electrolytic hydrogen, over 60 per cent of the total production is now based on natural

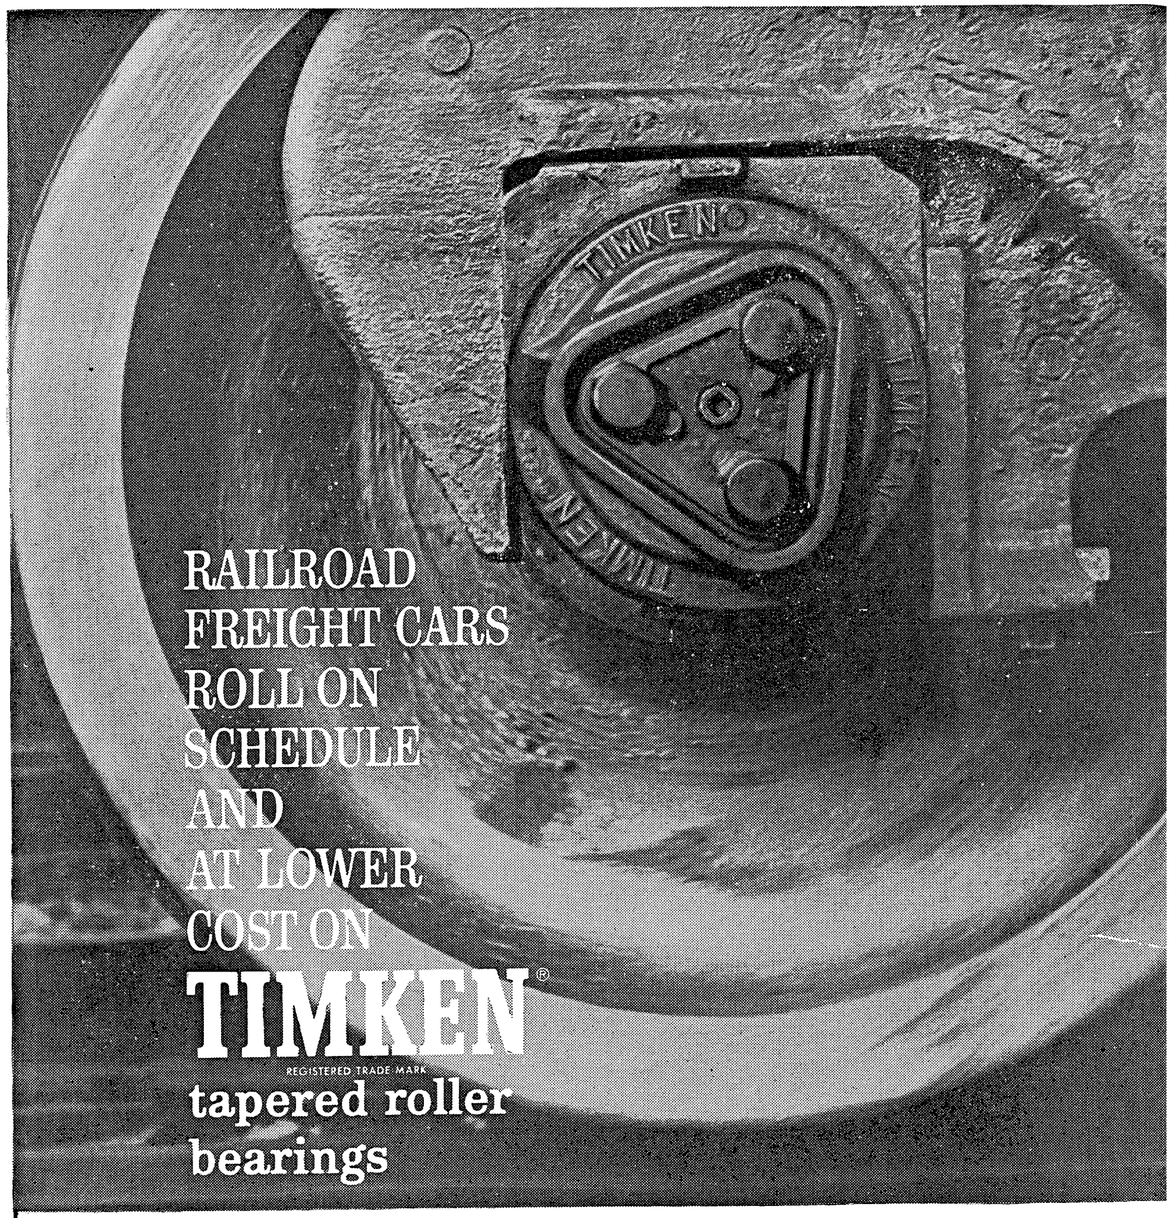
PUBLIC DEPARTMENT



You have to keep freight cars moving to make a profit. And Timken tapered roller bearings have been helping railroads do just that since 1927. These bearings solve the problem of overheating and virtually eliminate delays due to bearings. Timken bearings take any combination of radial and thrust loads and are practically friction free. Timken Company engineers have designed tapered roller bearing mountings for almost every kind of machine in the world.

The Timken Company pioneered case-hardened, nickel-rich steel for bearings to make them hard on the outside to resist wear, tough on the inside to resist shock. Timken bearings can help you lower costs, yet make a better product that requires less maintenance. The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable: "TIMROSCO." Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

gas, and nearly 20 per cent on refinery fractions and fuel oil. In France, the growing availability of Lacq gas has raised the contribution of natural gas to the country's ammonia feedstock supply from 18½ per cent in 1952-53 to some 30 per cent last year, while the share of refinery gas and fuel oil went up from 3½ to 15 per cent.

There have, however, so far been only minor departures from the traditional basestock pattern of ammonia manufacture in West Germany, the world's second largest producer of nitrogen and the largest exporter of nitrogenous fertilisers. Over 85 per cent of the country's current nitrogen output is still obtained from coke-oven gas and water gas, reflecting the German ammonia industry's high integration with coke production, mining and steel-making operations. Nevertheless, the prospect of wider use of petroleum hydrocarbon basestocks in the future is brought nearer by the possibility that part of the Netherlands' newly discovered huge reserves of natural gas at Slochteren, near the Dutch-German border, may be absorbed by Ruhr industries. In the Netherlands, the Verenigde Kunstmestfabrieken—recently set up as a joint venture of Mekog (B.P.M. and Hoogovens) and Albatros—are contemplating co-operation with Staatsmijnen for building a new ammonia plant based on gas from the Slochteren field, reserves of which are estimated at some 150,000 million cubic metres of gas.

More distant lies the prospect of supplying Europe by a large trunk pipeline system with natural gas from the Sahara's vast resources, of which the Hassi R'Mel reserves alone exceed 1,000,000 million cu. m. In that case, not only town gas concerns in Europe would benefit, but also petrochemical companies and ammonia producers might be induced to supplement their raw material supplies with Saharan gas, if this became available to them at lower cost than feedstocks from European sources. At its present well-head price of AF 1.80 per cu. m., which is equivalent to less than a penny per therm, Saharan gas is among the cheapest in the world. But the great expense of its long-distance transportation to Europe would raise delivered costs in European markets considerably above the prices charged to Algerian consumers, of which newly established industries in the coastal areas now enjoy preferential rates of AF 3.15-3.50 per cu. m. Algeria's first ammonia plant to operate on Saharan gas is now under construction at Arzew for Soc. Algérienne de l'Azote.

Growth of Ammonia Capacity

Whenever natural gas is in ample supply, the production of nitrogenous fertilisers is an early candidate for its use. In Mexico, Pemex recently commissioned its first natural-gas based ammonia plants at Minatitlan and Salamanca, whose output will suffice to meet the country's current nitrogen requirements, of which hitherto nearly four-fifths have been imported. In Trinidad where natural gas at the Penal oilfield costs as little as ¼d. a therm, W. R. Grace and Co. is erecting a new ammonia unit, whose output will be mostly exported in liquid form by refrigerated tankers. Intercol S.A. in Colombia is building at Cartogena a nitrogen plant to operate on refinery gas from Mamonal, and in Venezuela a fertiliser factory set up by the State-owned Institute of Petrochemicals is due for completion this year.

In the Middle and Far East, recent schemes for the inception of nitrogen production from oil and gas are now in operation or in varying stages of progress, *inter alia*, at Abul Floos in Iraq, at Homs in Syria, at Shiras in Iran, at Multan in West Pakistan, at Sylhet in East Pakistan, at Madras, Trombay, Nahorkatiya and other locations in India, and at Palembang in southern Sumatra. In Kuwait, the manufacture of ammonia is included in the programme of the newly formed Kuwait Petrochemicals Company, 80 per cent of whose initial capital is held in equal parts by the Kuwait Government and the Italian chemical engineering firm of Oronzio de Nora, and the rest by Kuwait National Petroleum Company, Kuwait National Industries and the general public.

With nearly three-quarters of the present world population of three billion people still subsisting on an inadequate diet, there is obviously a strong incentive for underdeveloped countries to produce low-cost fertilisers from their own resources of natural gas or oil. However, the commercial justification of such ventures depends foremost on suitable local preconditions for establishing ammonia plants. Vital determinants are, of course, the availability of capital, of technical skill and of adequate transport facilities and, not least, the scope for developing sufficiently large home and export markets for domestically produced nitrogen.

Sharpening competition already presents established ammonia producers with increasingly severe problems, which are bound to be aggravated by the steady influx of newcomers in countries that hitherto relied mainly on imported fertilisers. Global production of nitrogen has for some some time been running ahead of consumption by a widening margin, and the currently available plant capacity is far from being fully utilised. The excess of supply over demand within Western Europe, where it now finds its way into export markets, is currently as high as a million tons a year, though it is appreciably less for the world as a whole. This imbalance and the resultant heavy stock position in certain nitrogenous products are reflected in the downward trend of fertiliser prices, which producers strive to offset by economies in manufacture and by the increasing use of new low-cost processes based on petroleum hydrocarbons. Clearly, the least expensive feedstock is natural gas from fields close to major fertiliser markets.

In view of the growing availability of comparatively cheap petrochemical source materials for ammonia manufacture, the present overcapacity is unlikely to call a halt to the construction of new plants. All indications are indeed to the contrary, and this is hardly surprising. For, although the industry's supply potential today surpasses the global volume of nitrogen consumption, the level of demand still falls far short of actual needs for soil nutrients, especially in underdeveloped agricultural countries. Nearly four-fifths of the current world consumption of fertilisers is concentrated in Europe, North and Central America, and Australasia, while the remaining small proportion is absorbed in the much larger and densely populated areas of Asia, Africa, and South America, which between them contain two-thirds of the earth's arable land. This striking disparity serves to indicate the still immense scope for expanding ammonia production and for exploiting to a yet greater extent the advantages of using feedstocks from petroleum hydrocarbon sources.—(*By special arrangement with Petroleum Press Service.*)

Pilferproof packaging protects your health—your life

PUBLIC ENEMY NO. 1 is the racketeer trafficking in spurious drugs and foodstuffs. He exists—and flourishes—because you cannot always test the purity of your purchases.

Packaging in small pilferproof units, like this tablet bottle protected with a Roll Seal closure, is your surest guarantee of product purity. Roll Seal closures for bottled drugs and foods, foil diaphragms as on vanaspati and baby-food containers, sealed cans for processed foods, tear-off seals on pharmaceutical vials, heat-sealed plastic and laminated packs: these are some of the Metal Box packages which protect your health . . . your life.

Metal Box pilferproof containers and closures, with trade-marks and brand names indelibly printed directly on to the package, have helped to stimulate the manufacture and marketing of a variety of packaged consumer goods—by guaranteeing their purity, by prolonging shelf-life and by promoting brand identification. Today Metal Box packages go to 1,400 packers who pack well over Rs 100 crores worth of goods and employ more than 80,000 people.

An Industry Nurtured by Research

'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

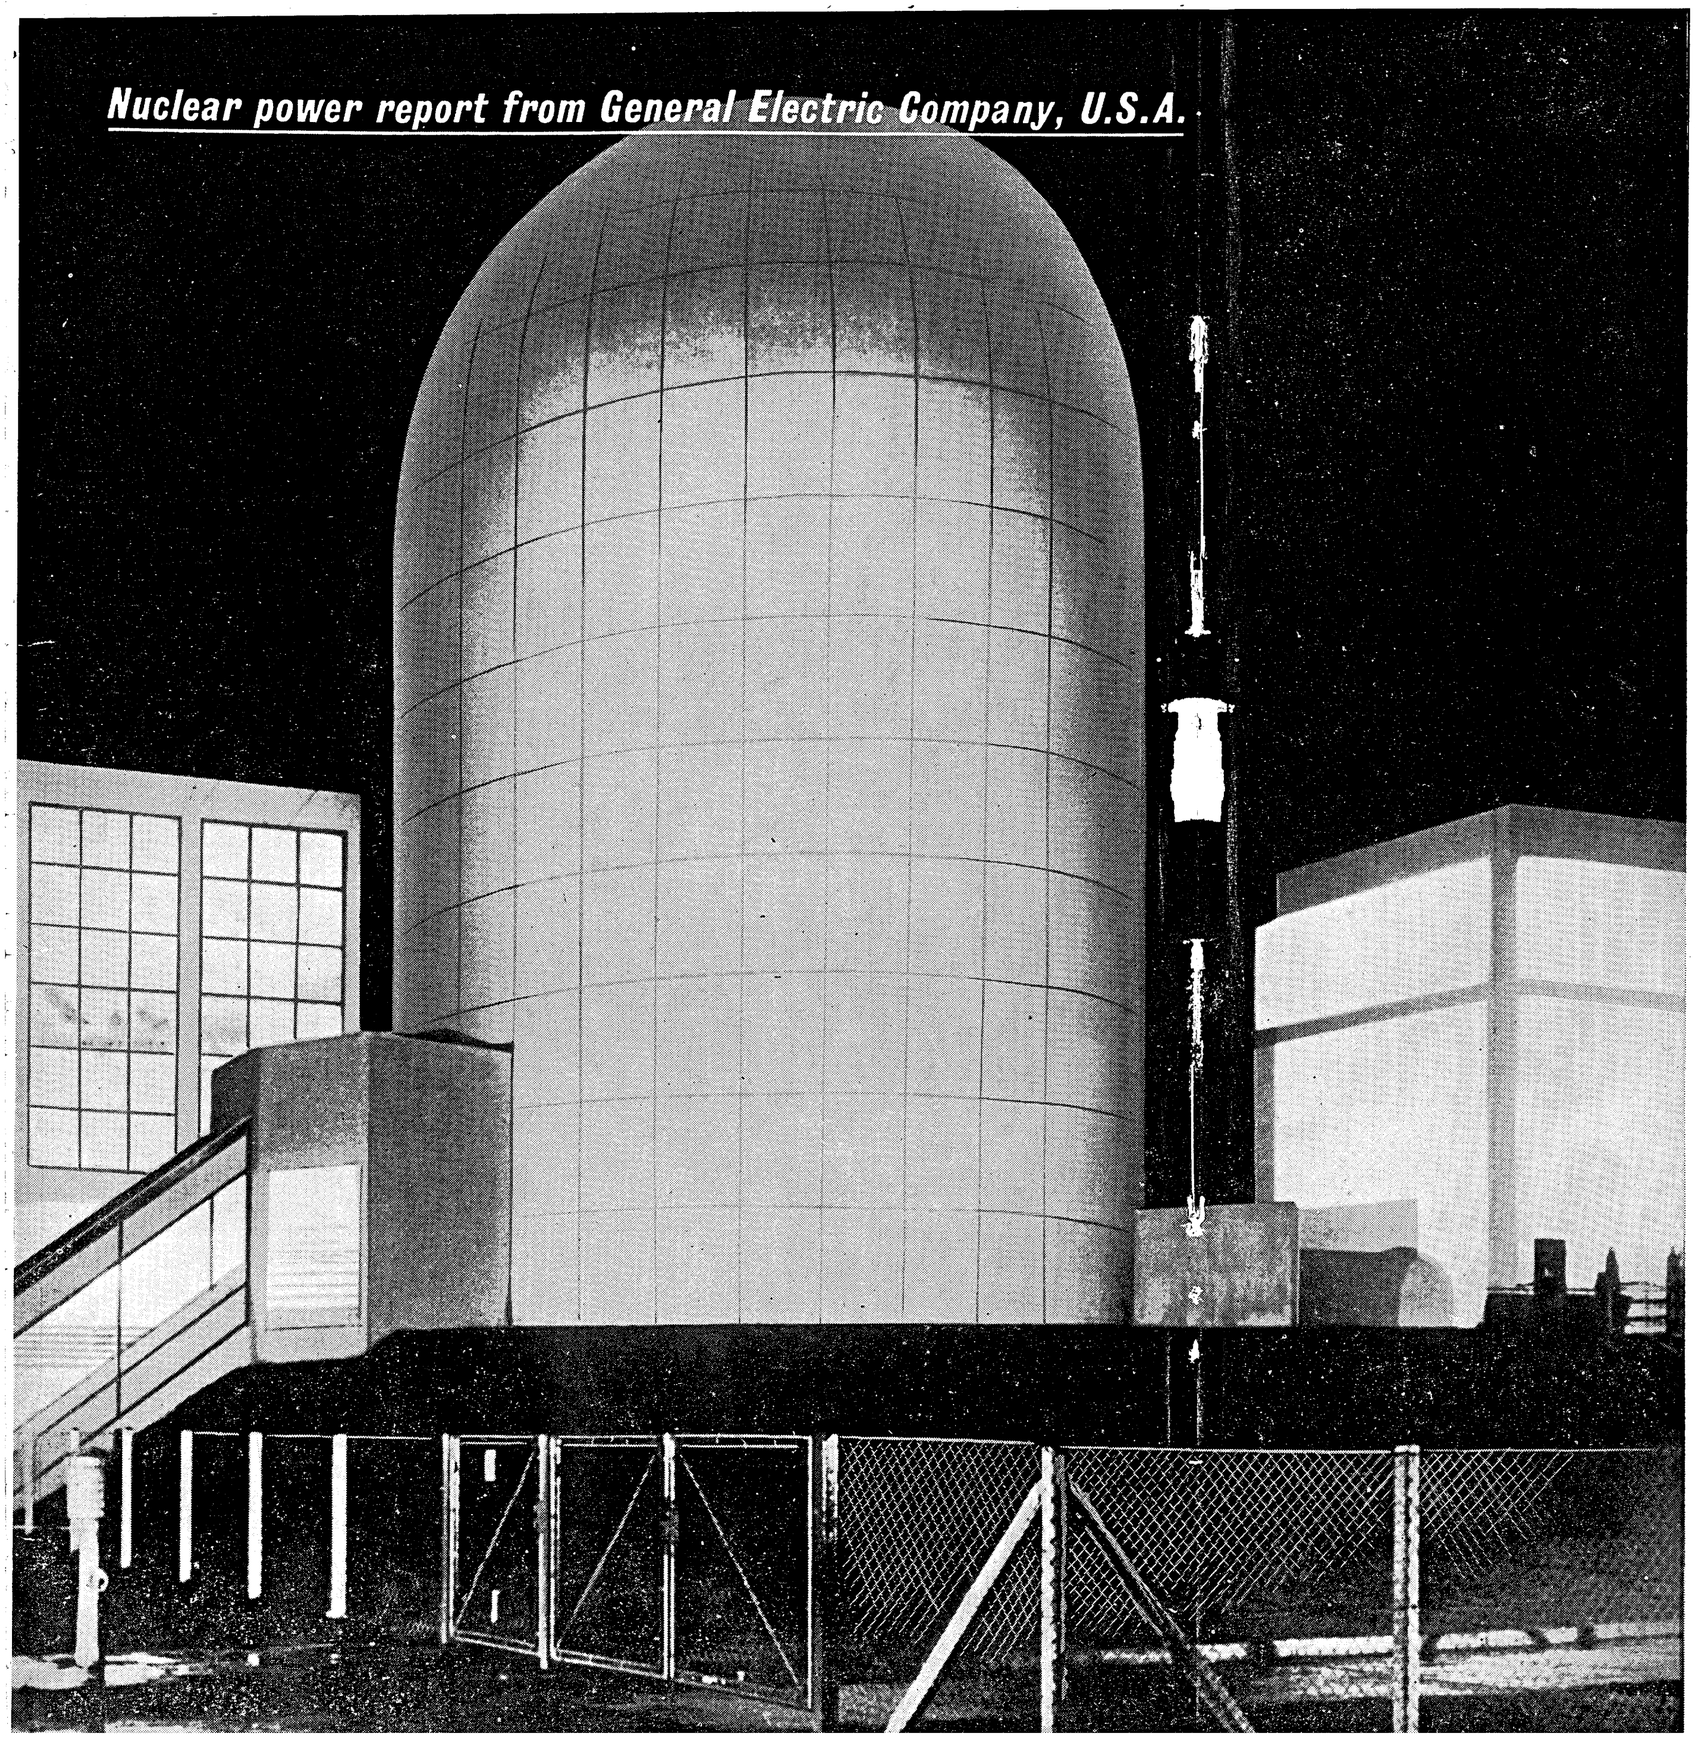
Nuclear power report from General Electric Company, U.S.A.



General Electric boiling water reactor powers West Germany's first atomic power plant

Kahl Nuclear Power Station, West Germany's first nuclear power station, completed in 1960, is now operating at full power and has generated approximately 75 million kilowatt hours. The station produced Europe's first privately financed atomic electric power in June 1961, and is being used for both power generation and research.

The heart of the 15,000 kwe plant is a G-E boiling water reactor which uses slightly enriched uranium oxide fuel. The plant, privately financed by two German utilities, Rheinisch-Westfaelisches Elektrizitatswerk and Bayernwerk (A.G.), is regarded as a forerunner of much larger nuclear power plants under consideration by German utilities.

In other parts of the world, other boiling water reactor power plants are under way. Near Naples, Italy, the 150,000 kwe Garigliano Nuclear Power Station for SENN, now more than 75 per cent complete, will be in operation next year.

In Japan, the 12,500 kwe BWR plant for the Japan Atomic Energy Research Institute (JAERI) is progressing on schedule. In the U.S.A., BWR plants are under construction for Consumers Power Company at Big Rock Point on Lake Michigan, and for Pacific Gas and Electric Company at the Humboldt Bay Power Plant site near Eureka, California. In addition, General Electric is building an experimental superheat reactor at its Vallecitos Atomic Laboratory in California in conjunction with the Empire State Atomic Development Associates.

Long identified as a leader in the development of nuclear power, G.E. is engaged in a widely diversified programme of nuclear application. BWR plants are now being offered up to 500,000 kwe, incorporating such advanced concepts as pressure suppression containment and internal steam separation. Other atomic products and services include reactor sub-systems, components, fuel, control and instrumentation, engineering studies, computer services, research, development and irradiation services. For further information, contact International General Electric Co. (India) Private Ltd., Thackersey House, Graham Road, Ballard Estate, Bombay-1.

International General Electric Company, Dept. 30-27R, 159 Madison Avenue, New York 16, N.Y., U.S.A.

◀ **The 15,000 KWE KAHL NUCLEAR POWER STATION —** the first for West Germany—is equipped with a General Electric boiling water reactor.

NEW PUBLICATIONS

Vegetable Oils and Oilseeds, 1962 (No. 12). Price: 10s. net (10s. 10d. post-free). Obtainable from H. M. Stationery Office or from the Executive Secretary, Commonwealth Economic Committee, Marlborough House, Pall Mall, London, S.W. 1— in India from the Sales Section, British Information Services, British High Commission, Chanakyapuri, New Delhi, 21.

WORLD vegetable oil supplies resumed their generally upward trend in 1961, when output is estimated to have increased by 5 per cent to a record 17.1 million tons, according to estimates contained in the latest edition of the Commonwealth Economic Committee's annual review *Vegetable Oils and Oilseeds*. Most of the increase took place in the edible group, where supplies rose to 12.6 million tons, following the heavier 1960-61 groundnut, sunflower, rapeseed and olive harvests. A continued high level of copra output in Asia was again the most important factor in the edible-industrial group (coconut, palm kernel and palm oils), where supplies again exceeded 3.2 million tons. In the industrial group, world supplies recovered to 1.3 million tons, thanks to heavier linseed and castor crops, but tung oil output again declined. Commonwealth total vegetable oil supplies, which had been low in the previous year, rose by 11 per cent to 3.8 million tons, largely owing to heavier groundnut crops in India and Nigeria and a record rapeseed harvest in Canada.

The latest available estimates indicate even heavier supplies of edible oils in 1962, largely on account of record 1961-62 crops of groundnuts, soya beans and sunflower seed. Copra output seems likely to be well maintained, but the prospects for linseed are still uncertain.

World trade in vegetable oils and oilseeds in 1961 did not reflect the improvement in supplies. In part, this was because the increases were in crops retained for domestic consumption, e.g., Indian groundnuts and Soviet sunflower seed. The main cause, however, of the reduction of 5 per cent in world trade in 1961 to 5.3 million tons in oil equivalent, its lowest level since 1958, was the decline of nearly 30 per cent in net exports of soya beans and oil. Shipments fell sharply from both the major suppliers, namely, China and the United States, from the former because of poor harvests, from the latter mainly as a result of switches by importing countries to cheaper items in the face of high soya prices. A further influence was some slackening in Western European import demand. In contrast to the decline in world trade in 1961, Commonwealth exports rose by 7 per cent to 1.4 million tons, in oil equivalent, the largest total since 1956; notable were larger exports from Canada, Ceylon, Malaya, Nigeria, and the Pacific Islands.

During 1961, imports by Western Europe were generally reduced. United Kingdom imports declined by 3 per cent to under 0.7 million tons in oil equivalent, the lowest level of the post-war period, while in the European Economic Community total imports of 2.25 million tons in oil equivalent were 6 per cent lighter than in 1960, although they were still well above the 1957-60 average. However, purchases by the Community in 1961 from Commonwealth sources, especially Nigeria, rose somewhat, accounting for 18 per cent of total imports as compared with only 15 per cent in the previous year.

An appendix to *Vegetable Oils and Oilseeds* analyses the European Economic Community's imports in 1960 and 1961 by types of oils and oilseeds, distinguishing between Commonwealth and non-Commonwealth sources, and also summarises the Commission's provisional proposals for the common policy in oils and fats announced in 1961. Other appendices are concerned with the tariffs and trade regulations of leading importing countries; annual available supplies of vegetable oils in various countries (including for the first time the Soviet Union); soap, margarine and compound cooking fat production; and whale oil production and trade. Among changes noted are the decline in Antarctic whale oil output in the 1961-62 season, and the growth in the usage of fish oils in margarine and compound cooking fat manufacture in 1960 and 1961.

The Third Five-year Plan and India's Economic Growth. Edited by B. C. Tandon. Published by the Chaitanya Publishing House, Allahabad. Pages: 324. Price: Rs. 15.

The book is a collection of essays on the various aspects of the third Plan, written by experts in their respective fields. The editor deserves to be complimented for having brought together in one volume several studies on the Plan, which appeared in different publications, to facilitate ready reference by the student community. The range of subjects covered includes monetary, fiscal and commercial policies, along with studies relating to general problems of development, agriculture, co-operation, population growth, employment and labour. The first article is by Vera Anstey, who examines the major impediments in the way of "take off" under Indian conditions and suggests solutions for overcoming them. There are two thought-provoking studies by Dr. P. S. Lokanathan, one on the problem of regional economic development and the other on taxation level in the country. In another article, Mr. B. C. Tandon examines, on the basis of certain readily available data, issues relating to inequality of incomes in India. A short, but critical, analysis of the means of financing the Plan forms the subject matter of the essay on "Resource Mobilisation" by Dr. K. N. Raj. "Fiscal Policy under Democratic Planning" by Mr. S. K. Mukerji, "Monetary Policy" by Mr. P. D. Hajela and "Comercial Policy" by Mr. S. L. Parmer are among the other very useful essays. The role of agriculture in the Plan has come in for critical examination in two excellent studies, one by Dr. C. H. Shah and Mrs. Tara Shukla and the other by Mr. G. C. Mandal and Mr. A. K. Gupta. The article on "Price Policy in a Developing Economy," by Khetramphan Patnaik, which appeared in *Commerce* sometime back, also finds a place in this volume. Among the other important topics dealt with mention may be made of "The Plan and Socialism" by Mr. A. K. Das Gupta, "Resources from the Rural Sector" by Mr. V. G. Ramakrishna Aiyar, "Price Stabilisation" by Prof. P. C. Jain and "Organisation and Administration of State Enterprices" by Dr. N. Das.

The book thus seeks to provide a rich fare of stimulating reading material on the various facets of the third Plan. It would have been more useful to students had the editor included in the volume some contributions appraising industrial development in the first and second Plans, investment pattern, planning models adopted in India and also such subjects as land reforms, transport and communications. The absence of a detailed introduction, with particular reference to the framework of the third Plan, is also conspicuous. This would have enabled lay readers to view the somewhat assorted collection of articles in the volume in the proper perspective.

Japan Trade Guide, with a Comprehensive Mercantile Directory—1962. Published by the Research Institute of Japan, c/o Jiji Press Ltd. (Jiji Tsushinsha), No. 2, Hibiya Park, Chiyoduku, Tokyo, Japan. Pages: 863.

The *Japan Trade Guide*, which is being prepared and published by the Research Institute of Japan every year, has already earned a good name as an authentic reference volume on Japanese industry and trade. Its twelfth edition, which has just been released, has incorporated the developments during the last one year in the field of Japanese foreign trade. The volume is divided into eight parts. The first part gives an account of major political and economic developments in Japan in 1961. The next chapter deals with the trends in production and shipment of the major export items. Included in this part is also general information on export services, such as aviation and shipping, advertising and the tourist industry. The next two chapters are devoted to an examination of Japanese laws and regulations affecting foreign trade. The sixth chapter contains statistical tables on certain economic indicators and production. It may be observed, in passing, that there is scope for expanding this short section to give a more detailed picture of recent trends in Japanese production and foreign trade. Making a detour, the seventh chapter takes us to some of the beauty spots and tourist centres of attraction in Japan. The last part is a "mercantile directory," containing a list of most of the industrial concerns in Japan. Printing and get up of the volume are excellent. The information given is sufficiently exhaustive and the language lucid and simple. It is indeed an ideal export trade directory.

A Survey of India's Export Trade. World Trade Department, Indian Chambers of Commerce, Calcutta. Pages : 117. Price: Rs. 5.

A Survey of India's Export Trade, brought out by the World Trade Department of the Indian Chambers of Commerce, Calcutta, is an analytical study of India's export trade over the last few years. This book examines the commodity-wise and country-wise trends in exports. It also contains some statistical tables. It is, however, disappointing to note that the analysis is rather scrappy. The book, of course, stresses the cliche that "stagnation in exports is not inevitable and, with energetic and appropriate measures, it should be possible to achieve a steady increase in India's export." Nowhere in the book is given a cogent and satisfactory thesis in support of this statement. What the authors have done is simply to collect the easily available data on exports and repeat well-known generalities on the basis of exoprt trends in the last three or four years. If the newly-created World Trade Department of the Chamber wants to be helpful to the business community, it should make a thorough study of the supply and demand prospects of Indian exports and related matters, examine the problems faced by some of the important export industries and suggest ways and means of solving them. It cannot claim to serve the cause of export promotion, if it contents itself with the easy task of merely compiling official figures and bringing them together in book form.

Yearbook of International Trade Statistics—1960. Prepared and Published by the Statistical Office of the United Nations, Department of Economic and Social Affairs, New York. Price: U.S. $7.00.

This U.N. publication gives a comprehensive statistical picture of the trends in, and pattern of, world trade over a period of thirty years, that is, 1930 to 1960. The wealth of data brought together in this volume includes those on the exports and imports of individual countries, along with the contribution of trade of each country to the trade of its region and to the world as a whole. What is more important, the *Yearbook* examines the trend of fluctuations in commodity prices and the movement in terms of trade between primary commodities and manufactures. The data are based on material published in the *Direction of International Trade*, issued every month by the Statistical Office of the U.N., the I.M.F. and the World Bank. For most countries, they represent official export figures converted to U.S. dollars. Another feature of the *Yearbook* is that it contains data on the foreign rade of communist countries—data based on official information given by the Governments concerned.

World exports, according to the *Yearbook*, touched a record of $127,500 million (f.o.b.) in 1960, as compared with $115,100 million in 1959 and $82,400 million a decade ago. (These figures exclude trade with one another of Mainland China, Mongolia, North Viet Nam and North Korea.) World imports, too, rose to a peak level in 1960 to $134,300 million, as compared with $120,300 million in 1959 and $87,200 million a decade ago. But the increase in trade has been accounted for mainly by developed countries during the last decade, their aggregate exports having gone up by as much as 65 per cent during 1951-60, that is, from $52,000 million to $82,300 million. On the contrary, the exports of underdeveloped areas were relatively stagnant, being $27,300 million in 1960, or an increase of just about 12 per cent over 1951 ($24,100 million). The terms of trade during the decade 1950-60 also moved unfavourably to the underdeveloped areas. Their terms of trade (unit value index of exports divided by unit value of imports; Base: 1953=100) deteriorated from 166 in 1950 to 96 in 1960. During the same period, the terms of trade of developed countries improved by 7 points to 105. This volume is available in India from (1) Orient Longmans, Bombay, Calcutta, Madras, New Delhi and Hyderabad, (2) Oxford Book and Stationery Company, New Delhi and Calcutta, and (3) P. Varadachari and Co., Madras.

JOURNAL OF LOCAL ADMINISTRATION OVERSEAS (ANNUAL SUBSCRIPTION: RS. 9.07)

On 1st January 1962 the Department of Technical Co-operation in Britain began publishing a quarterly journal, entitled the *Journal of Local Administration Overseas*. This is to be a professional technical journal aimed principally at local administrators, but it is also of value to workers and teachers in the field of contemporary history, anthropology, administration, government, rural economy, and the other social sciences. The aims of the *Journal* are: (*a*) to record developments, experiments, and experience in administration at the local level of Government; (*b*) to discuss problems and developments and compare them with similar problems and developments in other parts of the world; (*c*) to provide a link between research and administration; (*d*) to review current legislation, reports and other writings.

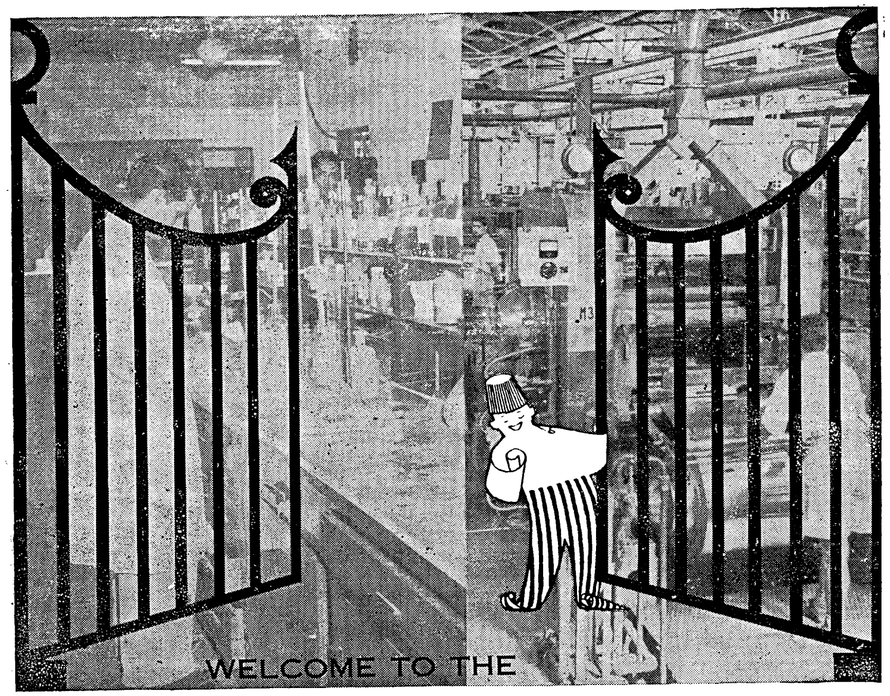
Lord Hailey in a recent message to the *Journal* said, "I gladly take the opportunity to commend it to all who may be concerned with the administrative aspects of Government at local levels as well as to those especially interested in local Government, land tenure, local courts and the development of customary law. I am delighted to know that the work of the former African Studies Branch and its *Journal* has now been extended to embrace a wider field than Africa alone and I hope that, through the medium of the *Journal of Local Administration Overseas*, information on all its subjects may be widely available. It will, I am convinced, prove to be information of exceptional value, for it will embody the experiences of those who have been personally engaged in the practical work of administration. The administrative experiences and experiments of India may well be relevant to the West Indies and those of Canada to Nigeria."

Local orders should be sent to the Sales Section, British Information Services, British High Commission, Chanakyapuri, New Delhi-21.

KOTHARI'S ECONOMIC GUIDE AND INVESTORS' HANDBOOK OF INDIA

Although delayed by a few months, the 1961 edition, which is the twenty-fourth in the series of what was formerly known as *Investors' Encyclopædia* and now rechristened as *Kothari's Economic Guide and Investors' Handbook of India*, is richer than the previous edition. The delay, we are told, was beyond the control of the compilers, Messrs. Kothari and Sons, the well-known share, stock and exchange brokers of Madras, as it was due to the "bottlenecks" in obtaining the necessary information and material. However, the time lost was not wasted. For the publication, in its present form, can be legitimately called the bible of investors in India. Addition of some considerable new information and a drastic revision of the entire publication have fattened its already bulky size by as much as 800 pages to 3,786 pages. In order to make it handy, this reference work has been divided into two volumes. The first volume confines itself to vital background information on industries and general economic development in India, which is appropriately illustrated by graphs, maps and charts. The volume carries for the first time some general articles by eminent persons in the field, including some Union Ministers. The second volume deals with information on, and progress statistics of, the innumerable companies in the country. Needless to say, the various particulars given have been revised and brought up-to-date. Even the data received after printing the main body have been included in the supplement to the first volume.

The compliers have also added in the edition under review information on a large number of companies recently floated, besides listing a sizable number of the existing companies whose details were lacking in the earlier editions. They have also given particulars of all new flotations separately as also a list of companies which raised capital in the market during the last two years. A number of companies on which only abstracts had been given in the previous editions, have been treated *in extenso* in the new edition. Besides, there are the usual details on the various taxes and the sources of industrial finance. The investor gets all this at a price of Rs. 50 as against Rs. 30 before. The publication has been edited and published by Mr. P. H. Parekh.



FIRST ALUMINIUM FOIL FACTORY IN INDIA

"Welcome to our Foil Factory," beamed Mr. Al Foil. "I promise you an interesting visit. You'll see how we make wraps, packs and caps so essential for our Nation's health. More, you'll see how our precision built machines, handled by experts, manufacture aluminium foil to the exacting specifications of industrial uses. Matter of fact, the industries which rely on aluminium foil make an impressive list.

"Your radio, fan and strip lighting, for instance, wouldn't work without foil condensers. And those marvellous electronic machines you hear so much about, they too need foil. As for Thermal Insulation and Refrigeration, Aluminium Foil is recognised as an absolute 'must' by modern engineers. These industries apart, structural engineers and photographic film manufacturers use industrial foil in many ways.

"Come now, I'll take you round the factory to give you an idea of the great technical skill and experience required for the manufacture of foil."

INDIAN COPPER CORPORATION LIMITED

CHAIRMAN, MR. J. W. EASSON'S ANNUAL SPEECH

STABILITY IN WORLD COPPER PRICES WELCOMED

ADDRESSING the shareholders of the Indian Copper Corporation Ltd., at their Thirty-eighth Annual General Meeting, held at Calcutta on Wednesday, 8th August 1962, the Chairman, Mr. J. W. Easson, C.A., welcomed the 'unusual' stability in copper prices on the London Metal Exchange from June 1961. According to Mr. Easson, the present stability in copper prices abroad is the result of a balance between supply and demand, which has been achieved by some of the largest producers who have reduced their output and given considerable support thereby to the price on the London Metal Exchange, Mr. Easson said there was no reason to believe that the present cut-back in production of 15 per cent of capacity would not be varied to keep the world copper output in balance.

The following is the full text of Mr. Easson's speech:

"GENTLEMEN,

"The annual report of the Directors and the accounts for the year ended the 31st December 1961 were submitted to you several weeks ago and I am sure you will agree that the results are not unsatisfactory despite the economic hazards which your Company, in common with many others, experienced during the year. This is the first occasion on which I have had the pleasure of addressing you and I would like to continue the practice of my predecessors and tell you something about your Company's trading throughout the year, the progress achieved and future prospects.

General Review

"From June 1961, copper prices on the London Metal Exchange have been remarkably stable, and the difference between the highest and lowest quotations has been as little as £5 per ton. This compares with a fluctuation of £61 in 1960 and £33 in the first half of 1961. This unusual stability is the result of a balance between supply and demand, which has been achieved by some of the largest producers who have reduced their output and given some support to the London Metal Exchange price. The cut-back in production now stands at 15 per cent of capacity and there is no reason to suppose that this percentage will not be varied to keep the world copper output in balance. As long as there is no violent fluctuation in the demand for copper or labour unrest among the larger producers, I expect the price of copper to remain around the present level of £234 per ton.

"The selling prices of your Company's products are linked to the world prices of copper and vary in accordance therewith. Thus, the price stability in the world markets, which I have mentioned, has been reflected in the steadiness of the price structure of our products in the Indian markets. At the present selling rates, and if our production is maintained at approximately the current level, the profit-margin can be regarded as satisfactory and I think we can view the immediate future with confidence.

Working Review

"You will have noticed from your Directors' report that production of copper dropped by 574 tonnes in comparison with 1960, in which year you will recall production reached a record level. The fall in production during the year was due to a reduction in the number of days worked as the 1960 annual overhaul, when the plant which had to be shut down, was postponed to January 1961 and had to be extended by several days in order to modify the ropeway. A further shutdown of a few days later in the year was caused by a shortage of coal.

"I am, however, pleased to be able to tell you that due to an improvement in the copper recovery percentage the rate of production was actually higher than in the previous year.

"Development and prospecting continued throughout the year, but on a considerably reduced scale. Certain essential stores, in particular explosives and drill steel, were in short supply and development had to be suspended or curtailed in a number of areas. Nevertheless, I am glad to be able to report that despite the reduction in footage developed, the ore reserves increased by over 110,000 tonnes during the year. These reserves at 31st December 1961 reached the record figure of more than 4 million metric tonnes.

"Last year, your Chairman drew your attention to the adverse effect on production of cuts in import licences. Your Company's output of brass and yellow metal sheets and circles depends entirely on the availability of zinc, which must be imported and, as a result of the serious foreign exchange position, our full requirement of zinc was not sanctioned in 1961. The output of rolled products, therefore, fell substantially in comparison with the previous year and, with India's foreign exchange position still critical, the prospects of any improvement this year are rather remote.

Infra-structural Shortages

"Like most industrial undertakings, your Company has been greatly concerned with the serious shortage of power, coal and transport, but the overall effect, I am pleased to say, was not as bad as had been expected. Nevertheless, the threat remains and it is to be hoped that every effort will be made to bring about a definite and permanent improvement in the supply of these utilities on which all industry depends.

"Your Company is fortunate in that it possesses its own generating plant to augment the electric power supply from the Damodar Valley Corporation and thereby has largely been able to counteract power cuts. As a result, the Company suffered no serious power shortage during the year, but I trust that there will be a considerable improvement before the end of 1963, when we shall require substantially more power.

"Your Company has suffered an acute shortage of coal throughout the year and, despite full co-operation received from suppliers and the Coal Controller, it has been impossible to build up stocks which have remained at dangerously low levels. The facts of the national coal shortage are well known to you all and need no repetition here. Suffice it to say that energetic action is now being taken by the authorities concerned and, while the scarcity will undoubtedly remain with us in the immediate future, I hope that it will get no worse.

"The shortage of coal has been aggravated by the difficulties of rail transport and in an effort to avoid a recurrence of a stoppage of work it has become necessary to augment supplies by the far more expensive method of road transport.

Transport Problem

"The rail transport problem has also been reflected in a decrease in the despatches of finished goods from the works and in consequence there has been a further increase in stocks. This accumulation of stocks is, I am afraid, locking up more of the Company's finances than is desirable, but I am pleased to say that there have recently been signs of an improvement in the wagon allotments and, if this is maintained, despatches should improve and the stocks should come down to a more satisfactory level.

"The overall cost of production has increased, principally due to the lower output, but the facts that raw materials are now more expensive and labour costs are higher and mining is generally being carried out at greater depths, have also added to the increase.

"Modifications to and replacement of the existing plant and equipment continued according to schedule in conformity with the plans to increase production, and I am pleased to tell you that alterations necessary to increase the capacity of the aerial ropeway were successfully completed during the year.

"I am happy to inform you that in place of Consolidated Goldfields of South Africa Ltd. which, for domestic reasons, had to relinquish its appointment as the Company's technical consultants, we were most fortunate in being able to appoint John Miles and Partners (London) Ltd. as consulting engineers and technical advisers for a period of five years from the 1st July 1961 and the appointment has received the approval of the Government of India. John Miles and Partners (London) Ltd. has already been of considerable assistance in the progressing of our expansion programme.

"I am pleased to report that good relations between the management and labour were maintained throughout the year.

Kyanite Dispute

"A particularly satisfactory achievement of the year was the settlement, by way of a compromise, of the long-outstanding dispute with our superior landlord, the State of Bihar, over our lease to mine kyanite. Our thanks are due to all those persons who have brought these negotiations to a successful conclusion. I am pleased to report that the State Government has granted to your Company a fresh lease of the property to mine kyanite ore for a period of 20 years from the 1st September 1961, with an option of renewal. The claim of the Bihar Government on your Company including mesne profits for the period between the date that the old lease expired in 1955 to the date that the new lease was granted in 1961, was Rs. 1 crore which, in terms of the compromise settlement, stands satisfied by the Company undertaking to pay agreed annual instalments throughout the period of the lease.

"Despatches of kyanite increased from 21,659 tons in 1960 to 27,460 tons in 1961. The export of kyanite continues to earn the much-needed foreign exchange and, with this in view, we have increased our efforts to improve overseas trade and we now have contacts in most countries of the free world.

Electrolytic Project

"I am happy to report that work on the electrolytic copper refinery is now progressing satisfactorily. Work has suffered from the shortage of cement and certain delays in the issue of licences for equipment being imported from overseas, but these difficulties have now largely been overcome and there is no apparent reason why the project should not be completed by the end of 1963.

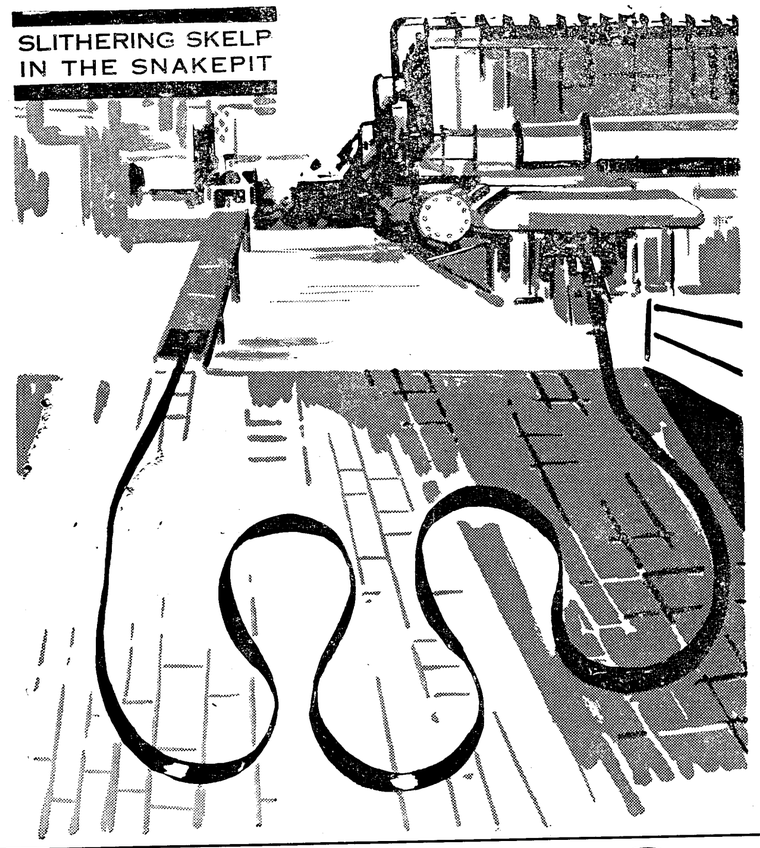
"Turning now to the accounts, the results disclosed reflect the conditions under which the Company has operated during the year and which I have outlined in my remarks to you today. The profit for the year before providing for taxation, depreciation and reserves amounts to £1,222,163 which compares with £1,307,982 for 1960. The provision for taxation requires £504,512, while your Directors have decided to place £165,000 to depreciation and £100,000 to general reserve. This year £56,250 goes to development rebate reserve.

"I mentioned earlier the settlement of the kyanite suit and you will no doubt have noticed in the balance-sheet that a sum of £280,964 has been transferred from general reserve to make provision against the decretal amount for previous years. In addition, £68,465 has been appropriated out of the profits for the year under review.

"The balance available for disposal, including the amount brought forward from the previous year, is £442,561 and your Directors are recommending the same dividend distribution as last year, namely 27 per cent, subject to tax. This will absorb £370,251, leaving a sum of £72,310 to be carried forward to next year.

"In conclusion, I am sure you will wish to join me in thanking Mr. N. A. B. Hill, the General Manager and the staff at the mines and at the works and all the workers for a year of loyal and industrious effort."

Note: This does not purport to be a record of the proceedings at the annual general meeting.



"It's exciting—it really does look like a giant snake slithering into a snakepit". This very apt description was given by a visitor who saw a continuous strip of skelp moving at 400 ft. per minute into the furnace of the Fretz Moon Mill of our Works at Jamshedpur.

The Fretz Moon Plant is a highly efficient and mechanised unit that manufactures continuous weld tubes from the best quality open hearth steel skelp.

How are these continuous weld tubes used? They have many applications, industrial and domestic. You will find them carrying gas, water and other liquids, and they are also used for structural and mechanical purposes.

TWENTIETH LABOUR CONFERENCE

ARBITRATION—RIGHTS OF UNIONS

THE Twentieth session of the Indian Labour Conference, held at New Delhi last week, made some important recommendations which have a vital bearing on industrial relations in the country. Significant among the recommendations is one relating to arbitration and another to recognition of unions. The Conference agreed that employers should accept voluntary arbitration invariably as the next step in the settlement of industrial disputes, if conciliation proceedings fail, except in cases where "arbitration might have repercussions in other sectors of the industry."

This conclusion was reached after considerable debate in which representatives of employers and workers advanced their respective points of view. Mr. G. L. Nanda, Union Minister for Labour, himself referred to the question of acceptance of voluntary arbitration as a method of settling disputes in his inaugural speech at the Conference. He said that complaints were flowing in from workers that employers, as a rule, did not accept arbitration on the failure of conciliation proceedings and that workers were consequently forced to have recourse to adjudication. He added that the question was often posed whether refusal to submit a dispute to arbitration was a breach of the Code of Discipline. In his opinion, arbitration was one of the important components of the Code and that employers were, therefore, bound to accept it. But he conceded that there might be occasions when the employers might have some grounds for preferring adjudication. But there were, according to him, numerous instances in which no justification whatever existed for not accepting arbitration. He seemed to suggest, albeit by implication, that a persistent refusal to go to arbitration, even in cases which involve no great stake to employers, was a violation of the spirit, if not letter, of the Code of Discipline.

It may be noted here that the Code only lays down that the existing machinery for the settlement of disputes should be utilised. Since both arbitration and adjudication form part of this machinery, preference of one method to another cannot be interpreted as a breach of the Code. But, as Mr. Nanda has always been at pains to emphasise, the Code had value only as long as it was observed in letter and spirit alike.

Panel of Arbitrators

Representatives of employers gave the assurance that employers were not opposed to arbitration and that every effort would be made to have increased recourse to arbitration with certain safeguards. But they maintained that the voluntary nature of arbitration should be preserved. This stipulation means that they should not be forced to accept arbitration. One of the main obstacles in the way of widespread adoption of arbitration for dispute settlement is that its scope is strictly limited. Its adoption, even in the limited field in which it could be usefully employed, is made difficult by political unionism, existence of a large number of unions and the absence of a panel of arbitrators which command the confidence of both the parties. The Conference, therefore, did well to recommend that a panel of arbitrators be selected on every State by the Labour Ministers concerned in consultation with representatives of employers and workers. This will obviate the difficulty of finding arbitrators acceptable to both the parties.

Another conclusion reached by the Conference pertains to the recognition of trade unions. The Conference recommended that employers should promptly recognise trade unions fulfilling the criteria for recognition as laid down under the Code of Discipline. Leading the discussion on the subject, the Labour Minister referred to complaints by trade unions that employers often refused to recognise any unions and pointed out that, as recognition of the majority union was one of the vital ingredients of the Code of Discipline, failure to do so was a serious breach of the Code. He, however, ruled out legislation to enforce recognition by employers.

The rights of recognised unions *versus* unrecognised unions formed the subject of a lively debate. In a working paper on the question prepared for the Conference, the Union Labour Ministry discussed the main issues involved. It has been contended, according to the working paper, that, in the absence of defined rights of a recognised union under the Code of Discipline, the very purpose of recognition is defeated. In some cases, it has happened that an unrecognised union raised disputes on issues which were settled by the management earlier with the recognised union. The conciliation machinery intervened and later the issues were referred to adjudication. This, it is pointed out, frustrates the very purpose of recognition and undermines the position of a recognised union. Certain rights of a recognised union are already prescribed under the B.I.R. Act, M.P. Industrial Relations Act and the Industrial Disputes (Rajasthan Amendment Act). If, therefore, recognition under the Code is to be purposeful, it is argued, it is necessary that the rights of a recognised union be defined.

Rights of Recognised Union

The Labour Ministry's suggestion, therefore, is that a union recognised under the Code should have the following rights:

To raise issues and enter into collective agreements with employers on general questions concerning the terms of employment and conditions of service of workers in an establishment or, in the case of a representative union, in an industry in a local area.

To collect membership fees/subscription payable by members to the union within the premises of the undertaking.

To put up or cause to put up a notice board on the premises of the undertaking in which its members are employed and affix or cause to be affixed thereon notices relating to meetings, statements of accounts of its income and expenditure and other non-controversial matters of general interest.

For the purpose of prevention or settlement of an industrial dispute:

(*a*) to hold discussions or meetings with the employees who are members of the union normally on open land outside the security zone of the office/factory premises of the undertaking and, in certain cases, also within the premises of the undertaking with prior consent of the management;

(*b*) to meet and discuss with an employer or any person appointed by him for the purpose, the grievances of its members employed in the undertaking;

(*c*) to inspect, if necessary, in an undertaking any place where any member of the union is employed.

To have the privilege of being given a premises—on certain conditions—by a management for the union's office.

To nominate its representatives on the Grievance Committee constituted under the Grievance Procedure in an establishment.

To nominate its representatives on joint management councils.

To nominate its representatives on non-statutory bipartite committees, e.g., production committees, welfare committees, canteen committees, house allotment committees, etc., set up by a management.

A registered union, which is not recognised under the Code, should have the following rights:

(i) to take up with the management grievance of its individual members, having no bearing on general principles applicable to other workmen; the management should negotiate with the union on such grievances but in no case should they enter into an agreement with it on matters of general interest. If a mutually agreed grievance procedure exists in an establishment, grievances of individual workmen must invariably be routed through that procedure.

(ii) to raise questions relating to violation of the Code of Discipline or of labour laws, awards, agreements and settlements with the concerned implementation machinery.

Exclusive Right

It will be seen from the above suggestions that the first and foremost exclusive right of a recognised union is to raise issues and enter into collective agreements with the employers on general questions concerning the terms of employment and conditions of service of the workers in an establishment or, in the case of a representative union in an industry, in a local area. This right conflicts with the right under the I.D. Act of 1947, whereby a registered but unrecognised (by management) union can raise an industrial dispute even on matters covered by an agreement mutually entered into by the management and the recognised union. This conflict can be avoided if all central organisations agree, on a voluntary basis, that an agreement between a recognised union and management on general questions will not be disturbed or challenged by an unrecognised union affiliated to any of them. Such an arrangement already exists in Bihar, *vide* the State Government's resolution dated 11th March 1959, which has the support of both employers and workers. Its main features are as follows:

"An employer should deal with all questions of general interest to the workmen with the recognised union only, but he shall not enter into any agreement with such union about specific grievances of individual character of workmen who are members of the unrecognised unions. The right of a recognised union will not debar and unrecognised union from taking up grievances of its individual members with the employer and from raising questions relating to the violation of the Code of Discipline, awards and agreements with the concerned implementation machinery. Further, cases of individual workmen, having no general application to others, can be brought up before an employer by a registered union of which the workmen are members even if the union is not recognised. It is obligatory for the employer to negotiate with such a union, but in no case can he enter into an agreement with it on matters of general interest."

It may be also noted that, at a tripartite meeting on labour-management relations in coal mines, held on 5th May 1962, it was agreed that if, in a colliery, a recognised union existed, the management should deal with that union only for general questions of terms of service and employment of workers. Unrecognised unions, if any, should not disturb the agreement on these questions between the recognised union and management.

During the discussions on the subject of the rights of recognised unions *vis-a-vis* those of

FISHING STORY

Despite every care, a driller's "string" of steel drillpipe may occasionally break and his heavy tools fall to the bottom of the well. The expensive process of recovering the lost equipment is called "fishing". Many types of recovery tools are on hand at every well site to deal with such an accident — some gripping the fish with steel fingers, some screwing into it with a fine tapering thread, some using a powerful magnet. Other tools, such as the junk basket, will collect small pieces of broken equipment from the bottom of the well and bring them to the surface.

Fishing experience is part of the know-how of trained drillers everywhere, for although the art of drilling has progressed greatly since the early days of the oil industry, it still presents many physical difficulties.

THE INDIAN SUGAR MILLS ASSOCIATION

MR. D. D. PURI REVIEWS SUGAR INDUSTRY'S PROBLEMS

"EXCISE DUTY HAS TO BE REDUCED DRASTICALLY"

THE important problems confronting the sugar industry and the ways of solving them were both highlighted by Mr. D. D. Puri, M.P., Chairman of the Indian Sugar Mills Association, in the course of his speech at the Twenty-ninth Annual General Meeting of the Association held at New Delhi on Wednesday, 8th August 1962. Mr. Puri's review covered a wide ground, including sugarcane price, manufacture of sugar, exports with special reference to raw sugar production, tax burden, coal supply, etc. Speaking on tax burden, he drew attention to the heavy excise duty which, he said, was a major factor responsible for the instability in sugar industry. He warned that, if the duty were maintained at the present level, the country might rapidly move into another crisis of shortage, even though the country was still overwhelmed by the problems of surplus stocks. If the present disparity perpetuated itself, the sugar industry, he went on to add, would never be able to escape the regularly recurring cycles of surplus and shortage. He, therefore, urged that the excise duty must be reduced drastically.

The following are extracts from Mr. Puri's speech:

Determination of Sugarcane Price

"For a realistic assessment of the problem of the sugar industry, it has to be borne in mind that the production of sugar in the world is much more than its consumption. The potential is even bigger than the production achieved hitherto. That is why most exporting countries and some importing ones, notably the U.S.A., have imposed statutory restrictions on cane and beet acreages. In India, however, control of this type would present insurmountable administrative problems because of the large number of growers involved. Here the only way to stabilise the production of cane is to fix its statutory price at a level that is not so low as to be unremunerative, as that would inevitably discourage cane cultivation and affect sugar production, and not so high as would divert additional land to cane cultivation and thereby disturb the economy of other food crops. Experience has proved that, whereas the price of Re. 1.44 was too low resulting in shortages in sugar production, the price of Re. 1.62 was definitely too high and caused the crisis of overproduction. The price was raised from Re. 1.44 to Re. 1.62 in 1959-60. Within two years, area under cane registered an increase of about 20 per cent in the Northern zone alone. Thus, in 1960-61, we produced 3 million tons of sugar when we consumed only 2.1 million tons. This rapidly expanding area under cane, unless checked, would lead to disaster. It would bring about a collapse of the sugar industry and with it widespread suffering to the millions of cane growers all over the country. That is why production of sugar had to be statutorily controlled in the last season. We have, therefore, to strike a balance between these two extremes to avoid measures like restriction on production becoming a recurring feature.

Basic Facts of Sugar Industry

"The basic concept of a statutory price of cane, irrespective of its sugar content, has been a major obstacle in the way of cane development. It has acted as an incentive in the wrong direction; it has encouraged the grower to grow cane without regard to the sugar content thereof. There is no getting away from some basic facts of life in sugar economy. Let me state these as clearly as I can.

"One, sugar is produced in the field; the factory only processes it. If India is one of the highest cost sugar producers in the world, the causes and the cures will have to be sought in the field.

"Two, when cane is sold, it is the sugar in cane that is or should be paid for. The rest is trash, literally and metaphorically.

"And three, the grower has to be helped into a correct concept of the common objective and provided with the wherewithal to achieve it.

"In the light of these observations I venture to suggest that the recent policy of Government fixing Re. 1.50 per maund as the minimum price of cane upto a recovery of 9 per cent and increasing it corresponding to increase in recovery is a welcome first step. One might be tempted into suggesting improvements even in this first step. For instance, a mechanism could be built into the scheme whereby factories should be enabled to pay a higher than minimum price for cane at a time when competition from *gur* is particularly fierce and adjust this additional payment later on without in any way deviating from the average minimum price payable to the growers. The industry, however, has an open mind on the scheme and is prepared to give it a fair trial so as to be able to make constructive suggestions after working it for one season. Later on, the scheme of incentives will have to be carried further to groups of growers and ultimately perhaps the individual grower.

Cane Development

"Alongside the quality incentive price scheme, we have to provide the grower with the wherewithal to improve the production of sugar in cane. State Governments raise crores of rupees every year on account of cane cess. They have done so for decades now. By and large, these moneys have not been spent on cane development. Let it be understood clearly and without doubt that diversion of cane cess to general revenues is carried out almost entirely at the expense of the grower. There is no getting away from the fact that cane cess was first proposed and levied in the name of cane development. The most important single factor that can put sugar production on a sound footing is the utilisation of cane cess for cane development. The biggest beneficiary, if this ever happens, will be the cane grower. And this step will bring about stability to all aspects of the sugar industry, including exports.

"I am happy to acknowledge here the welcome step taken by the Punjab Government when they announced that the entire cane cess would be spent on cane development in the State and sincerely hope other States will emulate the example. I also welcome the announcement of the Chief Minister, U.P., for setting up a high-power committee to suggest ways and means of improving the position of the industry in the State. I hope this committee will be formed soon, will go deep into the problems and suggest a corrective that could be implemented expeditiously.

Sugar Exports

"Moving now from sugarcane to sugar, I may express that an export target of 5 lakh tons for 1963 is a safe figure to start with. This could be improved upon progressively in the following years. Our national economy is entering a difficult phase. As time passes, the foreign exchange position is getting more and more difficult and there is no hope of checking the strain at least in the next few years. We, therefore, must export. Our failure on this front would rob our hard-won freedom of its content and meaning and deal an irreparable blow to our economic growth. We have passed the stage of ifs, buts and whethers and must get on with the job. My appeal to every one concerned is to make an all-out effort to promote exports.

Need to Produce Raw Sugar

"For the sugar industry, which is relatively a new-comer in this field, exports on a large scale will present many difficulties. Take raw brown, to start with. Technologically, switching over from the production of direct consumption white to raw brown, which has to undergo further refining, may appear to be a retrograde step. It may appear very easy. It may or may not be retrograde, but it is certainly not as easy as may appear at first sight. We have to recognise the fact that a large part of the sugar that sells abroad is in the raw state. As more and more countries establish refineries, the raw market is expanding at the cost of white. The seller has no choice. He has to produce what the buyer wants.

"This Association has given a very close look to the production of raw brown sugar. We convened two seminars followed by two meetings where the technologists discussed the problems involved. We have received valuable advice and assistance from the National Sugar Institute. As a result of all this, it is clear that, with the exacting specifications demanded by some of the importers, the switch-over is not an easy matter. Apart from production, there are the problems of storage, handling and deterioration in transit. Nevertheless, I am confident that, with co-operation and understanding at the hands of Government, the industry will and it must make an all-out effort to produce 2 lakh tons of raw sugar in the next season. Personally I have no doubts whatsoever that the target will be achieved and valuable experience gained for expanding this production in later years.

"During the last year, we exported about 2.47 lakh tons, of which more than half was for the U.S.A. and the balance for Malaya and other destinations in East and West Asia and East Africa. This was by far the largest quantity ever exported from India. Apart from affording some relief to the industry in disposing of its stocks, exports of sugar have enabled the country to earn a substantial amount in foreign exchange. Its contribution to the foreign exchange resources last year was about Rs. 13 crores at a time when the most unsatisfactory aspect of the country's economic situation, according to the Finance Minister, was 'the persistent attrition of our foreign exchange resources.'

"This year, we have already exported about 2.25 lakh tons and, according to the sales already contracted, should ship 1.10 lakh tons before the start of the next season. We have this year also made a first entry into the Canadian market by selling about one lakh tons there. This has given us confidence in being able to develop markets in far-off places also.

U.S. Quota

"I would also like to make a brief mention of our efforts to obtain a quota for our sugar under the new U.S. Sugar Act. I am sorry that our expectations in this regard have remained unfulfilled and that we have been able to secure only a nominal quota of 20,000 tons per annum for the next two and half years. We have not won a better quota in spite of our having successfully overcome the difficulties involved in shipping, bulk handling and making supplies available at short notice. I make bold to say, the performance of Indian sugar—and we have exported 1.37 lakh tons to the American Continent in a short span of three months—will bear comparison to that of any nation in the world, including those well established over decades in this business of exporting sugar to America.

Regulation of Releases

"Coming now to releases for sale within the country, we are at one with Government that a fair and stable price for sugar is desirable in national interest. We recognise that, in a large country like ours, transport and other problems tend to create bottlenecks leading to ups and downs in prices here and there. These limitations are inherent and have to be borne with patience, without panic. We believe that regulation of releases can help build a statutory corrective to the forces of instability. We thus state that the industry should be consulted at the time these releases are determined.

Reduction in Excise Duty Essential

"Excise duty on sugar was first levied in 1934 at 97 naye paise per maund. Over the years, it was increased to Rs. 4-12 per maund. In May 1957, this basic excise duty was doubled to Rs. 8.25 per maund. Further, an additional excise duty was levied in December 1957, in replacement of sales tax, which, together with the basic duty, amounted to Rs. 10.70 per maund.

"About one-third of the cane grown in the country finds its way to the vacuum pan sugar factory. The rest goes into the manufacture of *gur* and *khandsari*. There is no duty on *gur*. The duty on *khandsari* is nominal. Vacuum pan sugar alone bears this heavy burden. Whenever there is shortage of cane, the factories are unable to pay the price that *khandsari* and *gur* manufacturers can. In times like these, cane which is normally supplied to factories is diverted to *gur* and *khandsari* manufacture. This is a national loss, for the factory is able to extract between 33 and 50 per cent more than the *gur* and *khandsari* manufacturer is able to. And it leads to idling of capacity, on the one hand, and an overall loss of sugar, on the other. This phenomena acts most acutely when there is a shortage and aggravates this shortage. This situation leads to control and control in its turn inhibits production.

"Sugar has swung between regularly recurring cycles of shortage, control, decontrol, glut and control again. In the three seasons ending 1955-56, we have imported 13.17 lakh tons sugar and later had over a million tons to export. A major factor in this instability is the heavy excise duty on sugar and the economic disparity it generates between the different users of cane—vacuum pan factories, on the one hand, *gur* and *khandsari* manufacturers, on the other.

"The only way to get out of this vicious cycle is to reduce excise duty on sugar. If the basic duty is reduced to the 1957 level, a part of the loss of revenue would be offset by increased consumption. And yet the increase in production would easily take care of the increase in consumption, so that our export programme would not be endangered.

"If the present disparity perpetuates itself, the Indian sugar industry will never be able to get out of regularly recurring cycles of surplus and shortage. Vagaries of weather are bad enough by themselves. The man-made disparity, created by the excise duty, aggravates the climatic variations in both directions. This keeps every one connected with the sugar industry, the cane grower, the industry, the trade and the consumer in a perpetual state of instability, almost of crisis. Pray do not imagine our sugar export programme can remain immune from these crises. Excise duty has to be reduced drastically. This Gordian knot has to be cut. No cheaper solution is available.

Installation of New Units *vs.* Expansion of Uneconomic Units

"Another matter which I must touch is that, before licences for new factories are issued, the small uneconomic units must be allowed to expand to economic capacities. The latter must rank prior to the former.

Coal Shortage

"The country has been passing through a period of acute coal shortage due to which the coal quota of the sugar industry was drastically reduced to 185,000 tons for the season 1961-62, as against its demand for 250,000 tons. It was with considerable difficulty that the industry was able to carry on the season. For the year 1962-63, a drastic cut was again effected in the steam coal and hard-coke quotas of the industry from 711 wagons to 365 wagons per month. However, I am glad to state that, on repeated representations made, the cut in respect of steam coal has now been restored. But the cut on the hard-coke quota has yet to be restored. Hard-coke is essentially required by carbonation factories in the actual process of manufacture without which the factories cannot work. I would, therefore, like to urge upon the Mines and Fuel Ministry of the Government of India to reconsider the matter and arrange for early restoration of the cut in the hard-coke quota to enable the carbonation units to have sufficient supplies ensuring smooth and uninterrupted working during the coming season."

FORTHCOMING EXTRAORDINARY GENERAL MEETING

REFERENCE IS MADE TO THE NOTICE dated 25th July 1962 convening an Extraordinary General Meeting of the members of the abovenamed Company to be held on Friday the 24th August 1962.

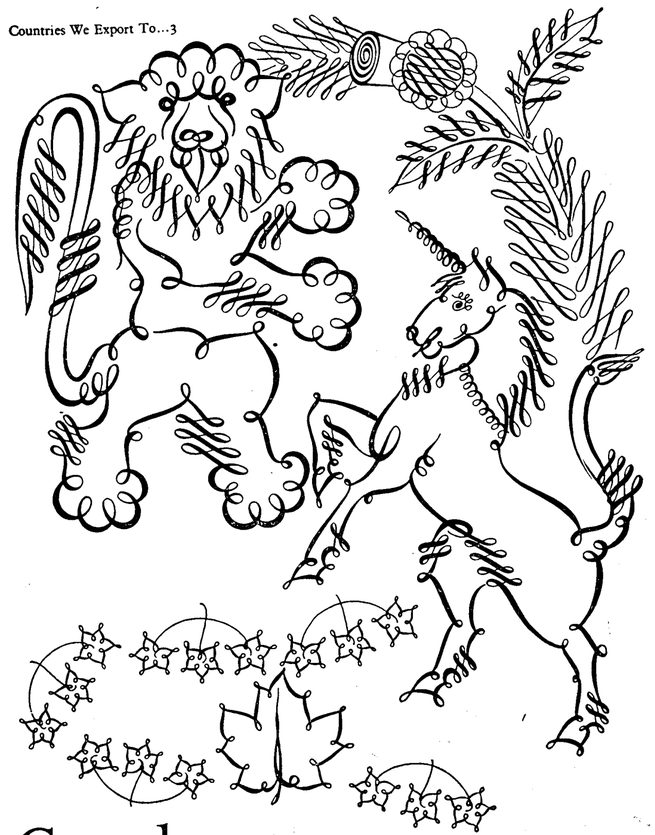
The purpose of that Meeting was to consider and, if thought fit, to pass certain resolutions to enable the subdivision of each equity share of Rs. 100 in the Company into 10 equity shares of Rs. 10 each.

It was announced in the Press on the 9th August 1962 that Fisons Limited have acquired a very large block of the shares of the Company, and that they intend to pass over some of those shares to other interests.

The Directors consider that it would be inopportune to pursue the proposal to subdivide the Company's shares while a large proportion of those shares is in the process of changing hands. Shareholders are therefore advised that it is the Directors' intention to adjourn *sine die* the Extraordinary General Meeting of the 24th August without transacting the business which it had been intended to put before the Meeting.

By Order of the Board,
KENNETH SHEPPARD,
Secretary.

11*th August* 1962.



Canada has from January to June 1962 purchased 396000 pairs of footwear from Bata India

PEOPLE'S CAR FIASCO

NO JUSTIFICATION FOR KEEPING HOPES STILL ALIVE

THE much-talked-of small car project was bound to end in a fiasco, as it has done now. This journal had no doubt about it right from the beginning, because the case for it was based on flimsy grounds. The project was something like promising *badam halva* (almond pudding) made in pure ghee as part of the daily menu for the teeming millions of a nation which is not in a position to provide even for two square meals a day. Otherwise called "small car" or "economy car," the project was something to the implementation of which the lower middle-class people were looking forward, or made to look forward, whether or not they had the wherewithal to purchase and maintain even a car of that kind. Their hopes, which were so assiduously roused in 1960-61 by Mr. Manubhai Shah, the then Union Minister for Industry, have just been virtually killed by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries. They have not been *completely* killed, for the Minister has sought to keep them alive by announcing that the "Government has decided that the small car project cannot be taken up for implementation *just now* and that the consideration of the project will have to be deferred." (Italics ours.)

Some at least of the "lower middle-class" people (for whom, Mr. Manubhai Shah had said originally, the small car was intended) may well ask now whether the project is worth pursuing even at some future date. To have roused hopes which were doomed to disappointment was bad enough. To keep alive these impossible hopes is worse still. If it has not been found possible so far to make good Mr. Manubhai Shah's promise that the manufacture of small cars would commence in the public sector from early 1963, there is still less chance of this being done in the foreseeable future, unless, of course, several related steps are taken to make "mass production methods," on Western lines, possible in the automobile industry and to develop large markets both inside and outside the country. Quite apart from the lack of foreign exchange resources required for a project of this kind, the crux of the problem is that, unless a large potential market for, say, 100,000 to 200,000 cars per annum can be reasonably foreseen, it will not be possible to adopt "mass production methods." If such methods are not adopted, it will not be possible to produce an economically cheap car, whatever be its other qualities. It would be far better to face this fact than to pursue visions of a "people's car" in the ex-factory price range of Rs. 5,000-6,000, exclusive of excise duty.

Government's Reasons

The reasons now given by Mr. C. Subramaniam, in his statement to the Lok Sabha on the 9th instant, for indefinitely postponing consideration of the project, which was to have been implemented in collaboration with the Renault Corporation of France, are as valid as they have always been and will continue to be so for a good many years to come. As stated by the Minister, these are broadly as follows:

"(1) In the context of our current economic situation both in regard to internal and external resources, the question is not whether the project is a good or sound one on merits but what its priority should be. Although the small car project had been approved by Government in principle before the third Five-year Plan was finalised, it had not been found possible to include the project in the Plan, because projects which were then judged to be of a higher priority added up to a larger figure than the resources in terms of rupees and foreign exchange which we could foresee. The position has not improved since. If anything, conditions have become more difficult. Consequently, the small car project cannot be moved up in any list of priorities.

"(2) The priority in the field of automobiles should, for some time to come, be definitely and overwhelmingly in favour of the manufacture of commercial vehicles which will provide the base for the transport of goods and for public passenger transport.

"(3) Although resources, particularly external resources, for this project appear to be in sight, the expectations in regard to export of cars abroad and of non-traditional goods to France are not absolutely certain; and, in the latter case, would impose a strain on our export surpluses which, on considerations of the priority of the project, it would be difficult to justify.

"(4) Although the credit offered for the project might be outside the French Government credits available to India under the Aid-to-India consortium arrangements, the size of present and future credits available to us from all sources would be based on the lenders' judgment of our overall capacity to make interest payments and payments on account of capital repayment. On this reckoning, any outgoings, whether in terms of foreign exchange, or in terms of goods on account of the small car project, would be a debit against our overall capacity to make payments.

"(5) The immediate implementation of the project would involve not only money resources—of which we are short enough in all conscience, especially in terms of foreign exchange—but also physical resources like building materials, steel (for production), power and transport. These are all in short supply and I do not see that we can expend any of these on what is, after all, not a project meriting high priority in our present situation."

Thus the project has been shelved, rightly in our opinion, after nearly three years of official effort and money spent on the preliminaries connected therewith. It may be recalled that the Jha Committee on the automobile industry set up in 1959 inquired into the possibilities of producing a low-cost car in India. That Committee was non-committal in its recommendations. Subsequently, in September 1960, the Pande Committee was appointed to examine the feasibility of producing a car which would be available to the major body of consumers at about Rs. 6,500, inclusive of all charges. It was also decided that, if the expert Committee's finding was in favour of the project, it would be undertaken in the public sector. This Committee, in its report submitted in June 1961, had expressed the view that it was possible to produce a car at about Rs. 5,100 ex-factory at a level of production of 50,000 cars a year and at about Rs. 6,150 ex-factory at a level of production of 20,000 cars a year, in both cases exclusive of excise duty. After making on-the-spot investigations in France the Committee had recommended that the "Dauphine" model of the French Government-owned Renault Corporation could be manufactured in India.

Wasted Effort

Thereafter, it may be further recalled, protracted negotiations were undertaken by the Government of India with the Renault Corporation. Proposals were worked out whereby it was envisaged that production of the "Dauphine" at the rate of 20,000 cars a year would be established in 3½ years after a comprehensive agreement was signed. Manufacture would commence with an indigenous content of 50 per cent and would be raised to 90 per cent in three years. The volume of production would also be increased to a rate of 50,000 cars a year within three years of *commencement* of manufacture, in order to bring down costs of production. It was also envisaged that the foreign exchange needed would be provided in the form of a 15-year credit, repayments starting five years after the commencement of production. An effort was to be made to earn the foreign exchange needed for interest payments, capital repayments and engineering fees by export, with the active co-operation of the Renault Corporation of about 71 per cent of the production of the factory. An effort was also to be made to pay for the components and other material imported in the first years by the export to France of goods in type and volume different from India's usual and traditional exports to that country.

But all this effort has now come to naught. The Government, however, has not abandoned the hope that more propitious conditions might emerge sometime in future. While this journal, too, would wish for the emergence of such conditions, it cannot help observing that whatever improvement comes about on the foreign exchange front should be availed of for the more vital purpose of developing the automobile industry on more efficient and economic lines. Possible amalgamation of the existing automobile manufacturing units into an economic unit with two large-scale "mass producing" factories —one for producing one model of truck in different sizes and weights and the other for producing one or two models of passenger cars —could be a way out of the present chaos of four or five uneconomic units in the automobile industry manufacturing different models of cars and trucks. To continue to think in terms of establishing another uneconomic unit, if future conditions permit, seems to be patently unwise and unrealistic. The objective of the authorities should be to get the cost of manufacture of the existing models reduced by bringing about amalgamation of the automobile manufacturing units in the private sector.

I.D.A. CREDIT FOR KOYNA PROJECT

The International Development Association (I.D.A.), affiliate of the World Bank, has just extended a credit of $17.5 million to the Government of India to help finance the second stage of the Koyna Hydro-electric Power Project which, when completed, will nearly double the capacity of the electricity system serving the highly industrialised Bombay-Poona region. The second stage is expected to increase the Project's capacity to 580,000 kilowatts. The United States Government, it may be recalled in this connection, has already given a loan and a grant totalling Rs. 11.5 crores to the Koyna Project from the sale proceeds of agricultural commodities supplied to India under P.L. 480.

Stage I of the Koyna project, assisted by a World Bank loan of $19 million given in 1959, is nearly finished. Its first 60,000-kilowatt unit came into operation in May 1962. But its three other 60,000-kilowatt generators are yet to be commissioned. Stage II envisages the installation of four 75,000-kilowatt units and one 40,000-kilowatt station. It is scheduled for completion by late 1967 at a total estimated cost of $35 million, of which the present I.D.A. credit represents exactly half. The I.D.A. credit, incidentally, is for a term of 50 years, free of interest, but a service charge at ¾ per cent per annum is payable on the amount withdrawn and outstanding. The repayment of principal will be annual at one per cent in the second ten-year period beginning from 15th January 1973 and at 3 per cent in the final 30 years. But the Maharashtra State Government will have to repay the rupee equivalent of the credit to the Central Government over a period of 20 years, after a ten-year period of grace, at a rate of interest to be determined annually; currently, the rate is 4½ per cent.

It may be of interest to know, in this connection, that the Bombay-Poona region already accounts for about 18 per cent of India's total use of electricity. At present, power for this region is supplied chiefly through an inter-connected system operated by the Tata Power Companies, which sell power wholesale to 178 large industrial consumers, 10 distribution companies and to the Maharashtra State Electricity Board. Some recent forecasts indicate that the demand for electricity in the Bombay-Poona-Koyna area will increase from 514,000 kilowatts at present to 1,060,000 kilowatts by the end of 1967. But these forecasts seem to be underestimates.

TRAINING FOR TOP EXECUTIVES IN ROAD TRANSPORT

A four-week training programme for the top executives of road transport undertakings, sponsored by the Union Ministry of Transport and Communications under the technical direction of the Management Development and Productivity Mission of the International Labour Office, was inaugurated on the 9th inst. at Bombay. The actual organisers of the programme are the Bombay Electric Supply and Transport (B.E.S.T.) undertaking and the Indian Institute of Road Transport. This programme is for senior managers from public and private road transport undertakings in India. It will enable executives participating in it to obtain an overall view of the B.E.S.T. enterprise in operation and the means of controlling its current performance and planning its future development. It will also enable them to improve their own faculties in policy-making and the taking of decisions in changing conditions through the use of exercises based on the development of a business over a period of years. The participants will obtain a fuller understanding of the influence of economic, social and technological factors, internal and external, on the conduct and performance of their organisations. It is claimed that the management exercises forming part of this programme represent the latest development in training methods for top management, as these exercises will be used to demonstrate the operation of the enterprise as an integrated whole.

MORE POWER FOR INDUSTRY

One of the largest thermal power station in India is now under construction at Chandrapura for the Damodar Valley Corporation, and will come into operation late in 1964. The Chandrapura station is in the 280-megawatt bracket and will feed power to the railways, new projects and to collieries in Bihar and Bengal. Although most of the equipment is being imported, the order for the clarification and filtration plants has been placed jointly with Paterson Engineering Co. (India) Private Ltd. and Bird & Co. (Private) Ltd., while the order for the demineralisation plant has been placed with Bird & Co., who are the leading designers and manufacturers of this type of equipment, having built similar plants for several other power stations in India. These plants will give, daily, a continuous supply of 8 million gallons of clarified, 1.8 million gallons of filtered water and 1,50,000 gallons of water demineralised down to the equivalent of "triple distilled" quality for make-up to the boilers operating at a pressure of 2,150 lbs. per square inch. The total value of the equipment ordered is Rs. 30 lakhs. A considerable saving of foreign exchange has been effected, as most of the equipment is designed and manufactured indigenously.

NEWS ABOUT STEEL

Question-hour in the Lok Sabha last week elicited the following information about the steel industry from the Treasury Benches:

(1) There is no proposal to set up a steel plant in Goa during the third Plan period.

(2) The West German Government has agreed in principle to grant a credit for meeting the foreign exchange cost (Rs. 50 crores) of the Rourkela Steel Plant Expansion Project, after certain action has been taken with a view to bringing the existing plant to full working.

(3) The U.S. Survey Team has not yet finalised its study of the economic and technical aspects of the Bokaro Steel Project.

(4) There is a proposal to evolve a scheme for the production of some special types of steel in the Bhadravati Iron and Steel Works.

(5) The technical committee set up by the Government of India to consider the question of setting up a big iron and steel plant in Andhra Pradesh is yet to submit its findings.

NEW PRODUCTS AND PROCESSES

Compositions for Derusting

A NEW process on compositions for derusting, surface treatment and temporary protection of ferrous surfaces has been developed at the Railway Testing and Research Centre at Chittaranjan in West Bengal. For derusting and surface treatment, the material is first mechanically derusted to remove the loose rust and degreased. The derusting solution is then applied with a hard brush and worked well, when dry, this is followed by wire brushing to remove the friable black iron tannate. Depending upon the thickness of the rust, the operation is repeated more than once. The composition for temporary protection against weathering is applied to naturally pre-rusted steel after mechanical cleaning to remove loose rust. To obtain satisfactory adhesion of the tannate film, good brushing by a hard brush is necessary. It has been found that a well brushed film coat gives a more durable film than that obtained by dipping or spraying. These films can withstand external weathering conditions for one to three weeks. The manufacture of the compositions has been studied on a pilot plant scale by making 5 to 10 gallon batches for surface trials on coaches and locomotives. Observations of painted coaches and panels, treated initially with these compositions, after two years, indicate that the condition of the paint is quite good from the point of adhesion and corrosion prevention.

The main raw materials for the process, namely, myrobalan and goran tannins are available indigenously. Formalin will, however, have to be imported for the time being.

Railways are likely to consume about 5,000 gallons annually for the treatment of coaches. The demand may be much more when this treatment is taken up for wagons, bridges, etc.

The process is simple and requires only a mixing kettle. Total capital outlay for a unit producing 100 gallons per day is estimated at about Rs. 42,000. Alternatively, all the ingredients without water can be mixed together and supplied in dry powder when the cost will come down.

Surgical Sewing Machine

The increasing use of stainless steel in hospitals is spotlighted in the manufacture of the semi-automatic "Stitch Gun"—the device for stitching up arteries after operations. It is "a surgical sewing machine" which can be employed by the surgeon for applying regular and consistent minute stitches at the completion of an arterial incision. It is designed to hold the needle and transfer from one "hand" to the other, so that at no time does the surgeon require both hands to do the job. At the same time, there is good clearance between the sewing point and the hand, making it easier to see where the stitches are being made. In the manufacture of the instrument, use is made of a number of stainless steel investment castings, produced at a precision foundry at Sheffield, in the English midlands.

Better Colours for Leather

A long period of research work at the Lancashire Tanning Co. Ltd., a leading British tannery, has resulted in the development of a new leather for ladies' shoes and accessories. Last year the company developed a special process which gave to the fashion world a leather with an exclusive pearlised finish which was as practical as it was elegant for it was completely stain and water repellent. Now they have gone a step further by producing an aniline two-tone effect which gives an unusual depth of colour to the leather and also includes the exclusive properties of the original development. Named Preciosa Calf, the leather is an important addition to the company's extensive range of top quality calf leathers.

Electroplating with a Brush

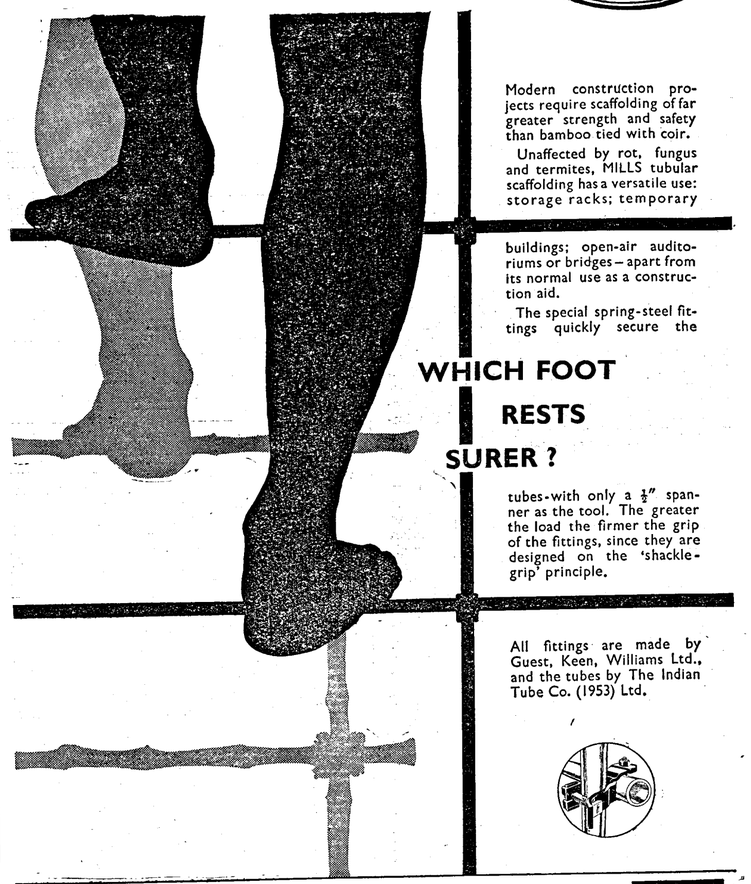
A method of applying metal coatings by means of a nylon brush has been devised by a Swiss company. The acid resistant bristles are dipped into a highly concentrated electrolyte solution of the metal being applied and a cathode clamp already wired to the brush is attached to the component. A direct current is then passed from a variable voltage supply as in ordinary plating. This "metallic painting" is claimed to make the coating of curved, uneven or almost inaccessible work pieces considerably easier. All the known plating metals can be deposited.

Flame-resistant Board

Negaflam is the latest addition to the range of insulating boards manufactured by a British firm, Powell Duffryn Timber Industries at its Queensferry, Flint mill. Each fibre is treated by flame retardant chemicals during production, resulting in a board with a Class I spread of flame protection under British Standard 476. The protection is not reduced, it is stated, if the board is cut or worked following manufacture. The board is available in thicknesses ranging from ¼ to 1 inch, in lengths from 4 to 12 feet and in widths of 2 and 4 feet.

Thread Cutter

An Austrian firm, Wolff and Co., Bregenz, has developed a thread cutting device for automatic circular knitting looms which puts an end to the time-wasting process of cutting threads. Whereas upto now the thread ends sticking out had to be shorn in two subsequent working stages, the new device cuts them during the knitting operation. The special arrangement of the knives of the new device permits, moreover, to cut the threads much closer to the material than was the case with the traditional shearing process. At the same time, any damage to the finished material, which formerly could never be avoided, becomes impossible.

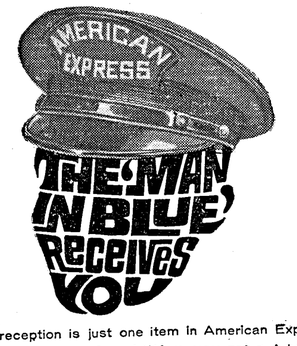


THERE'S NO LIMIT TO THE SUPPORT YOU CAN GET FROM MILLS

Send your enquiries to :

STEWARTS & LLOYDS OF (INDIA) PRIVATE LIMITED

41, Chowringhee Road, Calcutta-16



This warm reception is just one item in American Express Friendly Travel Service.—**In addition, you get** ■ Advance arrangements ready-made...no bother with hotel reservations, itineraries, transportation, tips. ■ Experienced travel Managers... selected for their travel knowledge and personality. ■ Finally a delightful and memorable holiday!

PROTECTION TO PLASTICS INDUSTRY

PRODUCERS PLEAD FOR FURTHER EXTENSION

THE phenol formaldehyde moulding powder, an important intermediate plastics material, has been enjoying protection for the last twelve years. Although the industry has availed itself of the advantage of protection to improve its position by expanding installed capacity, increasing production and diversifying the grades produced, it still does not feel confident that it can stand on its own and has pleaded for continuance of protection for a further period of at least three years. The main ground on which the plea has been made is that, as compared with its counterpart in foreign countries, the cost of production of the indigenous industry is high "because of low capacity, higher prices of raw materials and lower productivity of labour." The industry's case for protection was examined at a public enquiry held by the Tariff Commission at Bombay last week. In his opening speech at the enquiry, Mr. J. N. Dutta, a Member of the Commission, gave a succinct account of the present position of, and the problems faced by, the industry. Some of the important points raised by Mr. Dutta form the subject matter of this article.

The scope of the present enquiry covers only one sector of the plastics industry, namely, phenol formaldehyde moulding powder. The Government has also asked the Commission to examine the question of modifying the Indian Customs Tariff item no. 82 (3), so as to cover all phenolic moulding powders. It may be recalled here, that protection to the plastics industry was granted for the first time in 1950 on the recommendations of the then Tariff Board by levy of protective duties on phenol formaldehyde moulding powder and electrical assessories. The period of protection was initially fixed for two years but later extended from year to year in consultation with the Commission upto 31st December 1956. Buttons (made of dum nut, mother-of-pearl, metals and plastics) were brought within the scheme of protection in 1951 after a separate inquiry by the Tariff Board. Protection was, however, withdrawn in respect of buttons made of dum nut, mother-of-pearl and metals with effect from 1st January 1954 and continued only in the case of plastic buttons upto 31st December 1956. In 1956, the Commission undertook an inquiry into all the protected articles of the plastics industry, namely, phenol formaldehyde moulding powder, plastic buttons and electrical accessories and recommended continuance of protection upto 31st December 1959 for the first two items only. This was accepted by the Government. Following the last inquiry in 1959, the plastic buttons, too, were deprotected. Thus phenol formaldehyde moulding powder is the only section of the plastics industry now enjoying tariff protection, the current rate of protective duty being 35 per cent *ad valorem plus* a countervailing excise duty of 20 per cent *ad valorem*. Upto 8th December 1959, the industry was also assisted by refund of duty paid on imported phenol, formaldehyde and hexamine, the concession being limited to manufacturers of p.f. moulding powder with an annual production of not less than 200 tons. The current period of protection is due to expire at the end of December 1962.

Installed Capacity

There has been a notable increase in the productive capacity of the industry since the last inquiry in 1959. The number of units engaged in the production of p.f. moulding powder was only four in 1959. These were: the Industrial Plastics Corporation Ltd., Bombay, the Indian Plastics Ltd., Bombay, the Plastics Products of India Ltd. (renamed Rawji Amsari), Satara, and the Bharat Electrical Manufacturing Co. Ltd., Sihore, Saurashtra (renamed Saurashtra Electrical and Metal Industries Private Ltd.). A new unit commenced commercial production in March 1960. Another unit has also started experimental production recently. Three units have technical collaboration with foreign manufacturers and, in the case of two others, negotiations are said to be in progress for such agreements. According to the figures furnished by the producers, the aggregate capacity of all these six units in the industry is 2,640 tonnes per year as at present, which compares with 1,500 tonnes in 1959. The figure of present capacity furnished by the producers, according to Mr. Dutta, is at variance with that of the Development Wing. But he did not disclose the exact figure furnished by the Development Wing. Apparently, the difference is due at least partly to the fact that only three of the units are registered under the Industries (Development and Regulation) Act.

Side by side with the increase in capacity, the output has also steadily gone up. The total production of moulding powder rose from 1,881 tonnes in 1959 to 2,219 tonnes in 1960 and further to 2,245 tonnes in 1961. During the first half of 1962, it touched 1,154 tonnes, or an annual rate of 2,308 tonnes. The following table shows the grade-wise breakdown of production of p.f. moulding powder since 1959:

(Tonnes)

Grade	1959	1960	1961	1962 (Jan.-June)
G. P.	1,254	1,466	1,476	714
G. X.	530	559	525	241
Telephone ..	59	88	83	29
Radio cabinet ..	25	85	143	129
Others	13	21	18	14
Total ..	1,881	2,219	2,245	1,154

The proportion of G.P. grade has been about 65 per cent of the total output. It is, however, somewhat disturbing to note that the production of G.X. grade powder has declined since 1960; though the demand for it has been rising. Surprisingly enough, no explanation for the decline in production was given by Mr. Dutta in his speech. It may be noted here that the demand for p.f. moulding powder is affected by competing thermo-setting and thermoplastic materials, like urea formaldehyde moulding powder and polythene, polystyrene.

It is only natural that the overall demand for p.f. moulding powder should have increased, considering the expansion of the plastics moulding industry. The estimates of increase, however, vary. In 1959, the Commission had expected the domestic demand to be 1,800 tonnes and thought that it would go up 20 per cent every year during the next three years. The present estimates of demand vary from 2,500 to 3,100 tonnes for 1962, 3,300 to 3,750 tonnes for 1963, 3,700 to 4,700 tonnes for 1964 and 4,000 to 6,000 tonnes for 1965. The actual quantities available (both domestic production and imports) were 2,164 tonnes in 1959, 2,467 tonnes in 1960 and 2,699 tonnes in 1961.

Raw Materials

The major handicap of the industry is its dependence on imports for the essential raw materials. The principal raw materials required for the manufacture of p.f. moulding powder are phenol, formaldehyde, hexamine, wood flour and small quantities of sulphuric acid, stearic acid, lime, some dyestuffs, pigments, etc. Of these, the first three important chemicals continue to be imported. But efforts are now being made to produce them in India. Three units are reported to have been licensed for the manufacture of phenol with an aggregate annual capacity of 19,600 tonnes, two units for formaldehyde having a total capacity of 13,200 tonnes, and two for hexamine with an aggregate capacity of 600 tonnes. According to the information furnished by these licensees, production of formaldehyde by one of them has already commenced and that of hexamine by another is expected to commence in September this year and phenol in March 1964.

Apart from these three chemicals, cellulose pulp, carbon black, some dyes and pigments are also imported. Some of the dyes and pigments, such as phthalocyanine blue are now indigenously available to some extent. The other raw materials are also available indigenously. The industry, however, has complained about the persistent difficulties in getting wood flour of proper grade. The Commission had, in its last report, recommended that the Forest Research Institute, Dehra Dun, should give producers proper advice on suitable Indian timber

(*Continued on page 308*)

HINDUSTAN MOTORS FARES QUITE WELL

EQUITY CAPITAL SOARS ON PREFERENCE CONVERSION

JUST a token increase in the equity dividend from 12 per cent to 12.5 per cent per annum, subject to deduction of tax, proposed by the Directors of the Hindustan Motors Ltd., (Managing Agents: Messrs. Birla Brothers (Private) Ltd., Calcutta) for the year ended 31st March 1962 did appear quite intriguing to many when it was announced. But few had realised then that the dividend is on a substantially higher capital of Rs. 791.92 lakhs as against Rs. 496.13 lakhs a year before. The capital has soared by Rs. 295.79 lakhs, or 59.62 per cent, following the conversion during the year of 295,784 cumulative convertible redeemable preference shares of Rs. 100 each (6.57 per cent, taxable), out of a total of 321,485, into 2,957,840 equity shares of Rs. 10 each. As a result of the conversion, the amount required to pay the ordinary dividend has shot up, despite the nominal rise in the dividend, from Rs. 59.54 lakhs to Rs. 98.99 lakhs—an increase of Rs. 39.45 lakhs, or 66.25 per cent. It is true that the amount taken up by the preference dividend has at the same time come down from Rs. 27.55 lakhs to Rs. 2.20 lakhs, but the relief is clearly very limited. In fact, out of the total earnings of the Company, the share of dividend has gone up from 2.88 per cent to 4 per cent. It may be recalled here that the preference shares are redeemable at par at any time after 30th June 1963 at the option of the Company by giving three calendar months' notice. Although the holders of preference shares can get their shares converted into equity shares any time from 1st July 1961 to 30th June 1966, it would be to their advantage to notify their decision to the Company, if they choose to convert their holding, before they fall due for redemption.

The results of the Company for the year are quite impressive, despite a prolonged strike for two months and shortage of electricity supply. Of course, as a result of the strike, sales have declined sharply from Rs. 30.45 crores to Rs. 24.90 crores, reflecting a setback in production, which is confirmed also in a reduced inventory of Rs. 96.98 lakhs as against Rs. 110.05 lakhs a year before and a decline in the cost of materials, stores and spares consumed from Rs. 18.77 crores to Rs. 13.73 crores. But continuing its upward march, the gross profit has gone up from Rs. 363.91 lakhs to Rs. 398.24 lakhs. Consequently, the profit-margin (ratio of gross profit to sales) has jumped up from 11.9 per cent, to nearly 16 per cent. But, with an increase of roughly Rs. 10 lakhs to Rs. 73 lakhs in the provision for depreciation and of Rs. 38.50 lakhs to Rs. 152 lakhs in that for taxation, the net profit has slipped down from Rs. 166.59 lakhs to Rs. 158.32 lakhs. Notwithstanding this as also the increase in the distribution to the equity shareholders, the credit to general reserve has been maintained at Rs. 50 lakhs. The development rebate reserve, however, has got only Rs. 11.50 lakhs as against no less than Rs. 36 lakhs in the previous year. The carry forward is Rs. 1.26 lakh as against Rs. 2.76 lakhs brought in.

The following table, containing the salient features of the Company's working, facilitates a comparison of the year's results with those for the preceding three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	24,90.41	30,45.40	21,77.26	869.08
Closing stock of finished goods and goods under process ..	96.98	110.05	57.59	92.91
Other income	17.29	10.55	11.67	20.51
Materials, stores and spares consumed	13,73.43	18,77.06	16,98.10	649.11
Customs, excise, port charges and sales tax	459.79	631.16	..	89.57
Staff expenses	158.40	152.91	117.62	48.51*
Other expenses	104.77	83.37	100.25*	118.99
Gross profit	398.24	363.91	237.64	
Provision for—				
Depreciation	73.00	63.07	51.80	69.03
Taxation	152.00	103.50	68.00	4.25
Managing Agents' remuneration	14.92	20.75	18.74	2.13
Net profit	158.32	166.59	99.10	42.98
Excess provisions written back..	2.88	5.62	..	..
Development rebate reserve ..	11.50	36.00	30.00	8.10
To reserves	50.00	50.00	..	..
Dividends—				
Preference	2.20†	27.55†	26.00†	14.28
Ordinary	98.99 (12.5%)†	59.54 (12%)†	44.65 (9%)†	24.81 (5%)
Carry forward	1.26	2.76	3.63	5.19
Market value of equity shares (In rupees):	1962	1961	1960	1959
High	21.48	23.68	23.64	17.64
Low	18.28	17.68	14.32	6.44

* Includes customs, excise, etc.
† Subject to deduction of tax.

The percentage distribution of the income for the year compares with that for the previous year, figures for which are given in brackets, thus: Materials and services 59.75 (62.75), Union, State and local taxes 24.50 (24.37), staff expenses 6.37 (5.00), depreciation and development rebate 3.37 (3.37), dividends 4.00 (2.88) and working capital 2.00 (1.63).

Although the net profit is lower because of the setback in sales, the ratio of net income (after taking into account provisions written back and transfer to development rebate reserve) to sales for the year is higher at 6.01 per cent as compared with 4.46 per cent a year before. For the same reason, which has also meant a fall in other taxes (including customs, excise duty and other taxes) paid during the year from Rs. 631.16 lakhs to Rs. 459.94 lakhs, total taxes per ordinary share, (including taxes on dividends) have been lower at Rs. 8.11, as compared with Rs. 15.54 a year before. During the year, the number of ordinary shareholders increased from 23,014 to 24,859, while that of preference shareholders declined from 3,650 to 953. The year saw a rise in the net working capital from Rs. 459.31 lakhs to Rs. 503.96 lakhs, in the net real estate, plants and equipments from Rs. 498.56 lakhs to Rs. 513.92 lakhs and in the shareholders' net investment from Rs. 9.58 crores to Rs. 10.18 crores.

The Directors report that, after the strike was called off last year, every effort was made to increase production which reached a new peak of 2,365 vehicles in March 1962 and has since then been going on as scheduled. Demand for the vehicles is good and sales have been keeping pace with the production. During the current Plan period, demand would naturally rise further and the Directors feel that it is necessary to raise the Company's production. They have also spoken in the same tone as was done by Mr. J. R. D. Tata, Chairman of T.E.L.Co., last week, on the need for the fullest encouragement to road transport industry to overcome the problem of transport bottlenecks. They regret that, while the money spent on it is the least, the industry pays the highest tax in all forms to the Union and State Governments, as compared with any other industry and yet lacks the necessary encouragement. It is estimated by the Directors that, in addition to the taxes paid by the Company, buyers of its vehicles pay to the State another 10 per cent in the form of sales tax, road tax, registration fee, etc.

The Company could not make sufficient progress during the year in the production of shovels, scrapers, bulldozers and dumpers on account of the delay in getting import licences for components and raw materials. A part of the licences, however, was received in the last quarter of the year and orders have been placed with the suppliers for that part. Production of equipments must have commenced by now, as the first shovel was expected to be delivered in July last. Manufacture of cranes has been taken in hand and is making steady progress. The licence for the import of capital goods for the progressive manufacture and expansion of Bedford trucks in order to develop 80 per cent of their components locally, without which the Company would not be allowed to fit Bedford diesel engines into the trucks, has been delayed but expected to be received soon.

The application for a loan to the D.L.F. for the import of capital goods with a view to achieving the manufacture of a maximum number of components in India of cars and trucks as also to cover the production of shovels is pending with the Agency for International Development, U.S., which is expected to take a decision shortly. The loan is expected to enable the Company substantially to reduce the use of imported components. Meanwhile, machines already installed during the last two years have gone into production, resulting in improved working and reduction of foreign contents. In fact, the year saw a notable increase in the indigenous content of the vehicles. Besides, Bedford trucks have been fitted with gear boxes manufactured by it and would start using its rear axles shortly.

The financial position of the Company is satisfactory. Its paid-up capital of Rs. 819.60 lakhs is made up of Rs. 791.92 lakhs in equity shares, Rs. 25.70 lakhs in preference shares and Rs. 1.98 lakh being the amount of forfeited shares. As against this, reserves and surplus aggregate Rs. 198.28 lakhs. Borrowings declined during the year from Rs. 38.62 lakhs to Rs. 7.43 lakhs. Current liabilities and provisions are shown at Rs. 548.95 lakhs. On the other hand, current assets, loans and advances total Rs. 10.39 crores, excluding investments at Rs. 21.63 lakhs (Rs. 16.48 lakhs a year before), of which Rs. 5.19 lakhs are quoted and command a market value of Rs. 4.64 lakhs. The gross block, which increased during the year from Rs. 883.48 lakhs to Rs. 971.05 lakhs, has been written down to Rs. 513.92 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 20.32 *cum-div.* At this rate and, on *ex-div.* basis, they offer a net yield of 4.5 per cent per annum.

(*Concluded from next column*)

Current assets and loans and advances amount to Rs. 171.92 lakhs.

As regards the future of the Company, it is instructive to note what the Directors have to say in this respect. They report:

"The future is most vital. Our research division has been reorganised and expanded. A specially created department for forward planning and development is actively investigating new projects. During the year, a modern bread plant, manufactured in India, was brought into operation at Bombay and the sale of high quality bakery products has already made an important contribution to our overall results. Our export effort has been intensified and we have achieved further progress in overseas markets during the year. In spite of the losses we incur and regardless of the problems to be faced, we plan to achieve a significant increase in our exports during the current year."

The Rs. 10 fully paid ordinary shares of the Company are currently being quoted at Rs. 43.25 *cum* final dividend of 21 per cent. On an *ex-div.* basis the yield works out to 4.1 per cent per annum free of tax.

BRITANNIA BISCUIT

DIVIDEND WELL COVERED

WELL poised as the Company is to take advantage of the steadily rising standard of living in the country and to derive the benefits of prudent financial policy followed over a long period of years, there appears to be no reason why and where the upward trend in the sales and gross profit of the Britannia Biscuit Company Ltd. (Chairman: Mr. A. N. Khanna, Calcutta) should halt. During the ten-year period 1951-61 inclusive, the turnover of the Company nearly trebled from Rs. 90.93 lakhs to Rs. 271.57 lakhs and, even though the gross profit did not realise a parallel rise, its growth from Rs. 17.99 lakhs to Rs. 46.95 lakhs has, nevertheless, been impressive.

The year to 31st March 1962 has proved an equally propitious one. Realisation from sale has reached the record figure of Rs. 427.95 lakhs which is Rs. 98.46 lakhs or nearly 30 per cent higher than the previous year's level. Although costs of materials, supplies, wages and other expansions continued to rise and remained a cause of serious concern, they have once again been absorbed by improved efficiency in operation and proficient administrative procedures. These have been responsible for the further betterment in the gross profit by Rs. 18.97 lakhs to Rs. 81.36 lakhs. Unfortunately, by far the major portion of the improved gross profit has had to be set aside to cover the essential provisions for depreciation and taxation, the former getting Rs. 8.61 lakhs as against Rs. 6.71 lakhs during the preceding year and the latter as much as Rs. 38.26 lakhs in comparison with Rs. 24.00 lakhs a year ago. The rise in net profit has, therefore, been only marginal from Rs. 31.68 lakhs to Rs. 34.49 lakhs. One half of this amount has been retained in the business to replenish the reserves and only the balance has been utilised for payment of dividends. Although the rate of ordinary dividends has been maintained at 25 per cent, subject to deduction of tax, it has become payable on an enlarged number of shares following the bonus issue last year and consequently claims a higher sum of Rs. 17.24 lakhs. The amount carried forward at Rs. 2.84 lakhs is almost the same as that brought in.

The following comparative table clearly brings out the rapid progress made by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	427.95	329.49	271.57	204.35
Other income	0.44	0.03	0.53	0.70
Closing stocks of manufactured goods	10.34	8.19	6.99	5.56
Raw materials and stores consumed	206.29	154.41	129.16	94.05
Salaries, wages and benefits ..	61.95	51.04	45.10	35.71
Other expenses	80.94	62.88	52.32	39.06
Gross profit	81.36	62.39	46.95	35.79
Provision for—				
Depreciation	8.61	6.71	5.65	5.66
Taxation	38.26	24.00	19.40	16.78
Net profit	34.49	31.68	21.90	13.35
Transfer to reserves	17.24	17.16	10.42	6.93
Dividends—				
Preference	0.02	0.02	0.01‡	0.01
Ordinary	17.24 (25%)‡	13.79 (25%+ 15%)‡	11.49 (25%)‡	6.44 (14%)
Carry forward	2.84	2.84	2.14	2.16
Market price of ordinary shares in rupees—	1962	1961	1960	1959
High	65.00cr	45.00	29.50	20.56
Low	40.62xr	27.87	19.06	12.75

‡ Subject to deduction of tax.

It will be observed that sale proceeds more than doubled during the period and so did the closing stocks of finished goods. The gross profit, on the other hand, increased at a much faster rate, despite a marked rise in the cost of manufacture. This continued growth in the Company's business is predominantly attributable to four main factors. These are: (1) the relentless scientific and technical research which is devoted to manufacturing and marketing the products, (2) the persistent attention paid to maintaining the highest standard of value; (3) the care extended to improving methods and controlling operating costs; and (4) the constant efforts made to serve the customers, thus retaining their confidence and goodwill. In its endeavours to realise these objects, the Company has to run the factories in multiple shifts and operate the plant and machinery to full capacity, thereby placing considerable strain on the equipment. The problem of replacement and realisation will thus have to be tackled sooner or later. It is really disappointing to learn from the Directors that the Company still experiences extreme difficulties in obtaining import licences for essential plant and equipment, which are not yet manufactured in India.

The financial position of the Company is as strong as ever. Following the issue of bonus shares in the ratio of 1:2 made during the year under review, the share capital has increased to Rs. 69.11 lakhs—of this only Rs. 15,450 are in 8 per cent cumulative preference shares of Rs. 10 each and the balance in equities—but even then it is exceeded by reserves and surplus amounting to Rs. 70.82 lakhs. With the reappearance after a lapse of many years of a bank overdraft of Rs. 8.47 lakhs, secured loans have risen to Rs. 17.47 lakhs. In addition, current liabilities and provisions aggregate Rs. 117.35 lakhs. The net block is worth Rs. 101.23 lakhs and has been arrived at by reducing the gross block of Rs. 165.33 lakhs by the depreciation provided so far (amounting to Rs. 68.65 lakhs) and adding to it the balance of the cost (Rs. 4.55 lakhs) of buildings in progress.

(*Continued in previous column*)

METTUR CHEMICAL

SALES AND PROFIT HIGHER

THE production and offtake of main chemicals both maintaining satisfactory levels, there has been a further modest improvement in the working results of the Mettur Chemical and Industrial Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers Private Ltd., Mettur Dam R.S.) for the year ended 31st March 1962. The total realisation from the sales of chemicals and other products has expanded from Rs. 133.89 lakhs to Rs. 150.09 lakhs and the gross profit is up by Rs. 5.05 lakhs to Rs. 33.41 lakhs. The results would indeed have been better still had it not been for the reduction in output following the restriction on power consumption imposed by the Electricity Department of the Government of Madras.

Although the increased gross profit has necessitated a slightly bigger provision of Rs. 1.63 lakh, as against Rs. 1.58 lakh, for Managing Agents' commission and the provision for depreciation has also had to be higher at Rs. 12.83 lakhs, as compared with Rs. 9.47 lakhs earlier because of a very much bigger depreciable block and enhanced rates of depreciation, there has been a saving of as much as Rs. 3.75 lakhs in the provision for taxation put at Rs. 2.85 lakhs, which has resulted in inflating the net profit by Rs. 5.39 lakhs to Rs. 16.10 lakhs. Out of this, a sum of Rs. 10.00 lakhs has been transferred to development rebate reserve. Since the balance is found inadequate for the payment of dividends, the Directors have been obliged to withdraw a total of Rs. 6.41 lakhs from reserves and provisions. Ordinary dividend has been maintained at 12½ per cent, subject to deduction of tax, but a special dividend of 1¼ per cent, has also been proposed in commemoration of the silver jubilee of the Company. The total dividend distribution, which will be at the rate of 13¾ per cent, subject to deduction of tax, claims Rs. 11.00 lakhs, leaving Rs. 11,275 as a carry forward, as against Rs. 15,829 brought in. An interesting point to note is that nearly 30 per cent of the dividend will be free of tax, since it is being paid out of the tax-exempt reserves of the Company.

The progress made by the Company since the year ended 31st March 1959 is synoptically presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	150.09	133.89	117.32	121.37

† Subject to deduction of tax.

The year under review saw no change in the share capital of the Company which, as at 31st March 1962, stood at Rs. 100.00 lakhs, comprising Rs. 20.00 lakhs in 6 per cent tax-free cumulative preference shares of Rs. 10.00 each and Rs. 80.00 lakhs in equities. This is supplemented by Rs. 30.50 lakhs standing to the credit of various reserves. Bank and other borrowings have, however, increased from Rs. 58.01 lakhs to Rs. 68.47 lakhs and so have current liabilities and provisions to Rs. 44.63 lakhs from Rs. 25.11 lakhs a year ago.

With the acquisition of new assets worth Rs. 67.47 lakhs during the year, the gross block of the Company has expanded to Rs. 223.63 lakhs. On deducting therefrom Rs. 94.39 lakhs as the depreciation earned to date and adding Rs. 10.93 lakhs as the cost of machinery under erection and buildings under construction, the net block works out to Rs. 140.17 lakhs. Current assets and loans and advances aggregate Rs. 88.28 lakhs, besides investments valued at Rs. 15.15 lakhs.

The production of caustic soda during the year was 5,624 metric tonnes, as against 5,760 metric tonnes for the previous year. The output of stable bleaching powder at 6,760 metric tonnes was, however, 20 per cent higher than the previous year's level of 5,535 tonnes. The offtake of liquid chlorine and hydrochloric acid was well maintained around the level of the preceding year. There was no power cut but the restrictions imposed by the Electricity Department from time to time hampered production.

The expansion of the capacity of the caustic soda plant from 20 tonnes to 40 tonnes per day was almost completed and most of the sections were commissioned during the concluding month of the trading year. The remaining sections have since been commissioned, and the Company expects to reap full benefits of the augmented capacity during the current year.

The focal point of attraction from the point of view of the shareholders and investors, however, is the proposed issue of equity capital to be undertaken early in 1963. As readers are aware, the Company has under active consideration plans for the further expansion of the caustic soda capacity from 40 tonnes to 100 tonnes per day and for the manufacture of organic chemicals. The new venture is estimated to cost Rs. 3.00 crores which the Company proposes to finance partly by additional share capital and partly by borrowings. So far as the loan capital is concerned, the Company has already negotiated a loan of Rs. 140 lakhs with the Industrial Finances Corporation, inclusive of the foreign exchange quantum of the scheme. Out of the equity capital, Rs. 60 lakhs worth of shares, it will be recalled, were offered during 1962 and the offer was oversubscribed. The Company has now programmed to make a further issue of capital early in 1963 for the remaining finance required.

The Rs. 10.00 fully paid ordinary shares of the Company are currently priced at Rs. 13.62 *cum-div.* On an *ex-div.* basis, the net yield works out to 8.7 per cent per annum.

W. I. PLYWOODS

RESULTS ENCOURAGING

REFLECTING apparently a steady improvement in the demand for plywoods and hardboards in the country, the results of the Western India Plywoods Ltd. (Managing Director: Mr. A. K. Kaderkutty, Baliapatam, Kerala) for the year ended 31st March 1962 are encouraging. Sale proceeds have risen from Rs. 67.87 lakhs to Rs. 72.21 lakhs and the gross profit has improved quite appreciably from Rs. 19.91 lakhs to Rs. 24.08 lakhs. The higher profit has been due primarily to a decline in the cost of raw materials from Rs. 28.90 lakhs to Rs. 23.32 lakhs. The fact that the improvement in gross profit is much greater than that in sales is reflected in a sharp rise in the profit-margin (ratio of gross profit to sales) from 29.33 per cent to 33.34 per cent. The higher profit has attracted a larger provision for taxation, that is, Rs. 6 lakhs as compared with Rs. 3.75 lakhs a year before. But the provision for depreciation has been slightly reduced from Rs. 10.05 lakhs to Rs. 9.10 lakhs. With an improvement of Rs. 2.87 lakhs in the net profit at Rs. 8.98 lakhs, the Directors have been able to propose again a two-point increase in the gross equity dividend which is 14 per cent per annum on the Rs. 100 fully paid shares and set aside at the same time as much as Rs. 4.06 lakhs, as against a mere Rs. 1.85 lakh in the previous year, for reserves. The carry forward is some Rs. 10,000 against Rs. 7,000 brought in.

In the table below are compared the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds of finished goods and raw materials	72.21	67.87	58.01	59.22

Low	190.50	198.00	203.00	138.00

† Subject to deduction of tax.

The Company has been a steadily growing enterprise. In its past eight financial years (from 1955 to 1962), its paid-up capital has more than trebled from Rs. 11.59 lakhs to Rs. 37.64 lakhs, its profit, before taxation but after providing for depreciation and development rebate reserve, has improved nearly seven times from Rs. 2.36 lakhs to Rs. 14.82 lakhs, the dividend which was 9 per cent per annum, tax-free, for 1955 and maintained at 10 per cent per annum, tax-free in the subsequent four years was the same, but subject to tax, for 1960 and has been raised to 14 per cent per annum, taxable, in two equal instalments in the last two years and the profit retained in business, excluding transfer to development rebate reserve, has been progressively increased from Rs. 50,000 in 1955 to Rs. 3.90 lakhs in 1962.

The Company received a loan of Rs. 24.50 lakhs from the Industrial Finance Corporation of India in 1959, which increased to Rs. 30 lakhs the next year, but was brought down to Rs. 27.50 lakhs in 1961 and to Rs. 25 lakhs in 1962. Its financial position as at 31st March 1962 is quite satisfactory. The paid-up capital of Rs. 37.64 lakhs is made up of Rs. 6.18 lakhs in 6 per cent per annum, tax-free, cumulative preference shares of Rs. 100 each and Rs. 31.46 lakhs in equity shares is well supplemented by reserves and surplus aggregating Rs. 32.61 lakhs. As against nothing in the previous year, outstanding bank borrowings are shown at Rs. 9.28 lakhs at the end of last year, which, together with the I.F.C. loan of Rs. 25 lakhs, bring total secured borrowings to Rs. 34.28 lakhs. Then, there are unsecured loans of Rs. 5.19 lakhs, which, too, are higher as compared with Rs. 3.68 lakhs a year before. Current liabilities and provisions total Rs. 25.39 lakhs. Excluding the I.F.C. loan, the total indebtedness to outsiders works out to Rs. 39.85 lakhs, which, however, is comfortably covered by current assets at Rs. 71.20 lakhs. The gross block increased during the year from Rs. 102.79 lakhs to Rs. 108.39 lakhs and has been adequately written down to Rs. 63.90 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 203 *cum-div.* At this rate and on the *ex-div.* basis, they offer a net yield of about 5 per cent per annum.

SOUTH MADRAS ELECTRIC

DIVIDEND STEPPED UP

EXCEPTING a marginal setback in the realisations by way of sale of energy from Rs. 96.95 lakhs to Rs. 95.81 lakhs, the South Madras Electric Supply Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers (Private) Ltd., Tiruchirapalli) has maintained satisfactory progress in all other respects during the year ending 31st March 1962. In fact, despite the lower income, the gross profit has staged a modest improvement from Rs. 30.25 lakhs to Rs. 32.77 lakhs, thanks to a decline in the cost of distribution from Rs. 46.62 lakhs to Rs. 40.75 lakhs. A part of the benefits accruing from this development has, however, been offset by an increase in other expenses from Rs. 23.52 lakhs to Rs. 25.22 lakhs. Even after making slightly higher essential provisions as compared with the preceding year, the net profit has improved from Rs. 12.35 lakhs to Rs. 13.52 lakhs and enabled the Directors to step up the taxable equity dividend by one point to 10 per cent per annum on the Rs. 10 fully paid shares, at which rate, however, it is still lower by two points as compared with 9 per cent, tax-free, paid in 1959. A clear idea of the Company's working in the past four years can be had from the table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

Low	9.83	9.70	9.99	10.12

† Subject to deduction of tax.

During the year, the Company increased its transmission lines by 169 miles, installed 34 new substations and added 31 villages to its list, as against the corresponding increases of 79 miles, 15 substations and nine villages in the previous year. The total capital expenditure on rural and urban extensions was also higher at Rs. 19.88 lakhs as compared with Rs. 17.46 lakhs in the previous year. The Government disbursed to the Company Rs. 2.02 lakhs, being the balance of the loan of Rs. 12 lakhs sanctioned in 1960-61 and advanced a further loan of Rs. 13.22 lakhs for the year under review. The amounts sanctioned are for specific rural extension schemes named by the Government, work on which is said to have been taken up and is in vigorous progress. However, the Government has yet to pay the Company dues aggregating Rs. 77,241, against acquisition of property, which have been outstanding for nearly six years.

Besides the specific rural extensions carried out during the year, the Company has, we are told, considerable works to be executed in urban and developed rural areas, both in the nature of new extensions and of improvements to the existing systems to carry the increasing loads. These extensions and works involve considerable capital expenditure and do not rank for Government loan assistance as at present envisaged. The Directors are, therefore, considering ways and means of procuring funds to meet these obligations either by way of additional loan assistance from the Government or from other lending institutions or otherwise from the public by the issue of debentures.

Conscious of the urgency of rural electrification needs of the Madras State, the Company has agreed with the Government and the State Electricity Board on a readjustment of the boundaries of the area of supply, enabling the Board to take over and execute works in areas which are not contiguous to the Company's existing transmission system and as such not capable of immediate development by the Company.

The financial position of the Company is stable. Its paid-up capital amounts to Rs. 100 lakhs, of which Rs. 70 lakhs are in equity shares and the rest in preference shares. As against this, reserves and surplus aggregate Rs. 31.12 lakhs. The debenture liability was reduced during the year from Rs. 5 lakhs to Rs. 3 lakhs. But, with an increase in the loan liability, including interest accrued, to the State Government from Rs. 27.17 lakhs to Rs. 38.65 lakhs, the secured loans have gone up from Rs. 32.17 lakhs to Rs. 41.65 lakhs. Current liabilities and provisions total Rs. 74.17 lakhs to cover which are available current assets, loans and advances of Rs. 81.17 lakhs and investments of Rs. 4.26 lakhs, of which those quoted amount to Rs. 1.62 lakh and command a market value of Rs. 1.57 lakh. During the year, there was a net addition of Rs. 19.88 lakhs to the gross block at Rs. 242.78 lakhs, on which a depreciation of Rs. 81.28 lakhs has been provided so far. The net block, therefore, is shown at Rs. 161.50 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 10.15 *cum-final* dividend of 55 nP gross per share. At this rate and on the *ex-div.* basis, the shares offer a net yield of 7.1 per cent per annum.

SYNOPSES OF COMPANY REPORTS

McLeod and Co., Ltd.

(*Secretary*: Mr. C. Hockley, Calcutta.)

Annual General Meeting—Held on 14th August 1962.

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.
* This includes Rs. 75,194 being profit on sales of investments and 'rights' and Rs. 14,462 being excess development rebate reserve transferred.

Extracts from the Directors' report: *Trading*. The profit for the year shows a decline when compared with that of the previous twelve months, due chiefly to reduced dividend income and lower earnings from the Jute Mills and Tea Companies under this Company's management.

The agency department, however, expanded its activities and with the establishment of a branch office at Bombay considerably improved results were achieved.

Revenue from the railway and shipping departments and from miscellaneous trading was slightly higher, but again there was a reduction in the earnings of the insurance department. Income from the engineering department showed little change from that of last year.

Accounts in brief as at 31st December 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	95,00,000	Gross block ..	.. 32,81,864

,, ,, ,, equity ..	30 (5%)	60 (10%)
Carry forward	*	2

N.B.—Adjustments represent only the balance brought forward from the previous year.
* Only a small sum of Rs. 361.37.

Extracts from the Directors' report: *Crop, Cost and Prices*: A rubber crop of 1,72,771 kgs. was harvested at an estate cost of 212.76 nP per kg. against 1,88,372 kgs. at an estate cost of 220.72 nP, per kg. for the previous year. The crop was lower on account of adverse weather conditions, the north-east monsoon having failed. 35 acres replanted during 1954 have since come under tapping, and the crop is expected to show a substantial increase this year. The actual crop harvested till 30th June 1962 is 58,181 kgs. against 40,775 kgs. for the same period last year.

The tea crop harvested was 23,925 kgs. at an estate cost of 277.51 nP per kg. against 24,275 kgs. at an estate cost of 276.03 per kg. for the previous year.

The net average prices realised were 335.88 nP per kg. for rubber and 326.69 nP per kg. for tea, against 348.70 nP per kg. for rubber and 403.90 nP per kg. for tea for the previous year.

The maximum controlled price for No. 1 sheet remained at Rs. 155.75 per 100 kgs. during March and Rs. 164.80 per 50 kg. during the rest of the year (the liability of excise duty having been transferred to the manufacturers).

The estimates for the current year are for a crop of 1,86,185 kgs. of rubber at an estate cost of 202.10 nP per kg. and 25,000 kgs. of tea at an estate cost of 248.73 nP per kg.

Replanting: 9.03 acres have been replanted during the year, and the total acreage now replanted under the Rubber Board's subsidy scheme is 54.15 acres. 14.42 acres are being replanted this year.

Accounts in brief as at 28th February 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

N.B.—Adjustments represent the credit balance brought forward from the previous and other credit items if any.
* This includes Rs. 8,000 transferred from reserve for statutory compensation to employees.
† Balance brought forward is a small amount of Rs. 330.

Extracts from the Directors' report: The old *annealing chambers* are replaced by a modern type of *annealing lehr*, which will result in better annealing of the products and greater recovery of articles produced.

During the year under report, there was scarcity of Coal which is responsible for restricted production, and this situation is becoming graver and graver from time to time. Ways and means to change the type of furnace to the use of furnace oil are being thought of.

In order to finance expansion of the present unit by changing the type of furnace to the use of furnace oil instead of coal and increasing its melting capacity, it is necessary to sell the remaining part of the issued capital. 15,878 shares remaining unsubscribed from the issue of 80,000 shares of Rs. 5 each, are being offered to the existing shareholders.

Accounts in brief as at 31st March 1962 are as under:—

Carry forward	3	4

N.B.—Adjustments represent the balance brought forward from the previous years and other credit items.
* Includes Rs. 1,58,741 being excess provisions for taxation for the years ended 31st March 1945 to 1951 written back.
† This includes Rs. 1,46,284 on account of consumers' benefit (adjustments for previous years).

Extracts from the Directors' report: *Finance*:—In order to finance the heavy capital expenditure to be incurred over the next five years, it is proposed to raise finance by the issue of redeemable and convertible debentures totalling Rs. 1,87,50,000. It is proposed to increase the Authorised Capital of the Company to Rs. 5 crores.

New Connections:—17,455 new consumers were connected to the mains, bringing the total number to 1,09,421 which represents an increase of 18.98 per cent over the previous year.

Energy Purchased:—The number of units purchased from the bulk suppliers rose by 21.02 per cent.

Energy Sales:—The following table indicates, in terms of units sold, the progress in the sales of energy since the year 1959-60:

Year	Kilowatt-hours sold: Public lighting and general purposes	Power purposes	Total	% increase on previous year
1959-60 ..	53,518,883	67,751,791	121,270,674	21.43
1960-61 ..	58,230,224	86,593,668	144,823,892	19.42
1961-62 ..	69,508,978	104,723,470	174,232,448	20.30

System Peak:—The maximum load on the Company's system was 40,910 kws. as against 35,130 kws. during the previous year, an increase of 16.45 per cent.

Distribution:—The Company's transmission and distribution systems were maintained in good order, and continued to give trouble free service. At the close of the year there were 361 Kilometres of high tension and 483 Kilometres of low tension mains on the Company's system.

Development:—During the year 18 new substations were added (making a total of 267) and the transformer capacity of 11 existing substations was augmented.

Accounts in brief as at 31st March 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	1,75,00,000	Gross block ..	.. 5,11,22,126
Reserves and surplus..	1,[illegible]1,10,633	—Depreciation	.. 1,25,80,588
Other liabilities ..	1,94,51,374		
		Net block ..	.. 3,85,41,538
		Block-in-progress	.. 9,75,015
		Current assets	.. 76,79,604
		Investments ..	.. 14,71,669
		Cash	.. 2,51,219
		Miscellaneous expenditure	.. 1,42,962
	Rs. 4,90,62,007		Rs. 4,90,62,007

* Paid-up capital consists of 1,75,000 ordinary shares of Rs. 100 each. Of this 4,990 shares are allotted as fully paid up by way of bonus shares by transferring Rs. 1,70,020 from premium on shares and Rs. 3,28,980 from general reserve.

A TRIO OF SHORTAGES

(*Concluded from page* 285)

shortfalls that plague most industrial centres in the country.

The Union Minister of Irrigation and Power has recently given indications of his readiness to amend the Electricity Supply Act to permit a slight increase in the rate of return. This, I am sure, will be a welcome concession, but his continued insistence on meeting consumer demand from generating capacity in the public sector is, to say the least, unrealistic in the present circumstances. In fact, Government should encourage industrial units to step up their generating capacity. The cost in foreign exchange would be more than offset by the gains that should accrue from maintenance of production and fuller utilisation of capacity, both of which seem unlikely in many areas of shortage.

Talking of shortages, there seems little prospect of any early relief in this Eastern region. The Sachdev Committee has estimated that the shortfall may be as high as 171 MW in the Bengal-Bihar area. By far the greater part of this deficit—121 MW—is in the Calcutta region. The Planning Commission announcement sanctioning one more 75 MW unit at Durgapur was, therefore, particularly welcome, but this still leaves a gap of 46 MW to be met.

It is presumed a decision on the other West Bengal schemes has been deferred because of foreign exchange shortage. The dilemma of the planners is, indeed, very real. The foreign exchange crisis daily grows worse. In this situation, I appreciate how little room is left for New Delhi to manœuvre, but even now the foreign exchange budget could perhaps be readjusted with the consent of aiding countries provided the planners agreed to postpone some of their pet schemes and divert the funds to power. May I recall here the Sachdev Committee's recommendations that power projects for the fourth Plan should be sanctioned by 1962? This, of course, requires a fresh load survey, and I am glad to note that Government have enlisted World Bank assistance to have a countrywide assessment made.

I think all of us will agree to the proposition that the first charge on foreign exchange must be the needs of fuel, transport and power development. It is obviously pointless to make available components to an industry, if it cannot function for want of fuel or power, or cannot place its goods on the market for lack of transport.

Notices

THE MYSORE PAPER MILLS, LIMITED

BANGALORE 9

NOTICE

Notice

THE PULLANGODE RUBBER AND PRODUCE COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Annual General Meeting of the Shareholders will be held at 3 p.m. on Monday, the 17th September, 1962, at the Registered Office of the Company at Calvetty, Fort Cochin, to transact the following business:—

1. To receive and adopt the Audited Balance Sheet and Accounts for the year ended 31st March, 1962, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect a Director.

   Note: As Mr. A. D. Peacock, the retiring Director, is an Officer of the Managing Agents, a Special Resolution is necessary for his re-election. Special Notice has been received and is given of the following Special Resolution which will be moved as a Special Resolution:—

   "Resolved that Mr. A. D. Peacock, an Officer of the Managing Agents of this Company, be and is hereby re-elected a Director of the Company."
4. To appoint Auditors.

AS SPECIAL BUSINESS

5. *As a Special Resolution*: To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution:—

   "Resolved that the Regulations contained in the Printed Document submitted to this Meeting and for the purpose of identification signed by the Chairman of this Meeting, be and are hereby approved, and that such Regulations be and are hereby adopted as the Articles of Association of the Company for and to the exclusion of all existing Articles."
6. *As an Ordinary Resolution*: To consider and, if thought fit, to pass the following resolution with or without modification:—

   "Resolved that, subject to the approval of the Central Government, Messrs. Aspinwall & Co. Ltd. be and are hereby re-appointed Managing Agents of this Company for a further period of five years as from 1st April, 1964, on the existing remuneration and upon the terms and conditions mentioned in the draft Managing Agency Agreement produced before this meeting and signed by the Chairman for identification, which is hereby approved, and that the Directors be and are hereby authorised to execute the agreement on behalf of the Company with the Managing Agents in terms of the said draft Agreement but with such modifications, if any, as may be suggested by the Central Government."

The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 3, 5 and 6 above, as also a copy of the proposed draft new set of Articles of Association, are being posted to all members.

The Transfer Books and Register of Members of the Company will remain closed from 1st September, 1962, to 17th September, 1962, (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of himself, subject to the provisions of Section 176 of the Companies Act, 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

(By Order of the Board)

THE PULLANGODE RUBBER & PRODUCE CO. LTD.,

Per pro ASPINWALL & CO. LTD.,

J. JOSEPH,

FORT COCHIN,
13*th August* 1962.

Note: The dividend, if declared, will be paid on or after the 1st October, 1962, to those shareholders whose names appear in the Company's books on 17th September, 1962, or to their Mandatees

TREND OF MARKETS

NOTHING NEW IN MONEY

(From Our Own Correspondents)

BOMBAY, 16*th August*

This has been a short week for the money market, in view of two consecutive bank holidays on Tuesday and Wednesday. There have been no outstanding developments during the remaining days. Before the holidays, there was a fall in the demand for funds and the conditions were comfortable. The inter-bank call money rate, which had gone up to 2½ per cent a week ago, came down to 1½ per cent on Monday. Today, however, the rate looked up a little to 2 per cent after the clearing hours, due to some pull from Calcutta where the rate had jumped up to 3 to 3½ per cent.

Although sales of 91-days' Intermediate Treasury Bills from 8th August to 11th August had fetched as much as Rs. 4.40 crores, the response to 91-days' Bills under the tender system was poor. The amount offered at Rs. 2 crores was no more than that invited, as against Rs. 2.50 crores in the previous week. The average rate of accepted tenders was unchanged at 2.350 per cent per annum. It is true that sales of Intermediate Bills too were relatively less as compared with Rs. 8.30 crores collected from 1st August to 4th August; nevertheless, they were still quite sizable. Sales of both the types of Bills are being continued.

The Gilt-edged market was listless. Whatever buying inquiries there were were for the short-dated securities, while the long-dated ones had more sellers. Little interest was evinced in the loans of State Governments.

BULLION EASY AT CLOSE

Both silver and gold scored handsome gains during the week under review, though a large part of the gains was erased today due to liquidation by tired bulls. In the earlier sessions, silver met with strong support induced by a hectic rise in prices at New York and London, bullish advices from upcountry markets, and reduced arrivals. In sympathy with silver and following enlarged buying inquiries, gold ruled firm. Today, however, the market depicted a distinctly easy trend, with a shake-out in values. Over the week, ready silver recorded a rise of Re. 1.05 to Rs. 214.50—the rate was higher still at Rs. 215.70 yesterday—the forward (*Bhadrapad*) advancing by Re. 1 to Rs. 215.05. In gold, the ready rate rose from Rs. 124.95 to Rs. 126.05 and the forward from Rs. 124.95 to Rs. 125.80.

The daily average arrivals of silver and gold during the week were 24 bars and 5,800 tolas, respectively. The corresponding figures for last week were 28 bars and 6,100 tolas. The actual offtake was at an average of 5 bars of silver (6 bars last week) and 4,400 tolas of gold (3,400 tolas).

Ready silver in the London bullion market jumped up this week from 89½*d*. to 92*d*. and forward from 89½*d*. to 92⅜*d*. This sudden spurt followed the hectic rise of 3.75 cents to 109.25 cents in the price at New York. Ready gold in London gained 1½*d*. to 2505.5½*d*. The dollar price of gold rose from $35.11⅛ to $35.12⅜.

The following table shows the trend of prices during the week under review:—

	16-8-62 (closing)	High	Low	8-8-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	126.05	126.60	125.15	124.95
*Bhadrapad** ..	125.80	126.45	124.85	124.95
Sovereign	97.50	98.00	97.25	97.50
SILVER				
Ready (.996 fine) ..	214.55	215.70	213.20	213.45
Bhadrapad† ..	215.05	216.20	213.70	214.05
London—				
Gold	250*s*.5½*d*.	250*s*.5½*d*.	250*s*.3½*d*.	250*s*.4*d*.
Silver Ready	92*d*.	92*d*.	89⅝*d*.	89½*d*.
Silver Forward ..	92⅜*d*.	92⅜*d*.	89⅞*d*.	89½*d*.
New York—				
Silver	109.25 cents	109.25 cents	106.00 cents	105.50 cents

* 15th September settlement. † 17th September settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES SUBDUED

In contrast to the hectic trading and strident advance in values witnessed last week, the cotton futures market ruled subdued during the week under review. Reports of favourable rain in Khandesh and Berar tracts and other areas made bulls nervous. The fear that last week's rise was overdone also made for more cautious trading. Sentiment however, continued to be healthily bullish but it was tempered by the realisation that too steep a rise in price might attract some drastic measures from the F.M.C. Consequently, support was lacking at higher levels. Some profit-taking and selling by weak holders led to a decline in prices. The Jarilla March 1963 contract receded from Rs. 749 last week-end to Rs. 736.25 at close today, a net decline of Rs. 12.75 over the week.

The pattern of trading at the Sewri spot market remained practically unchanged from last week. Despite reports of favourable weather and satisfactory crop developments mills continued to be persistent buyers. Such varieties as Laxmi, Jaydhar, Co2, 197/3 and L147 were eagerly booked. Prices ruled firm. Export inquiries for Bengal Deshi were few and far between. Moderate demand was reported for foreign cotton. Lower grade Sudan cotton and selected East African styles attracted attention.

The folowing are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri: Ganganar 695; Kalyan 985; Nagar Co2 1,634. Sudan G6S 1,345; Jinje New 1,148; B.P.52 1,260-1,270. B.P. (U.N.U.G.) 1,275; Pakistan AC 134 New 1,150.

Publication of the first production estimate of the U.S. cotton crop was the most important development influencing the trend of cotton prices in New York and Liverpool during the week. The Department of Agriculture estimated the crop for the 1962-63 season, as on 1st August 1962, at 15.10 million bales of 500 lbs. each, as compared with last season's output of 14.32 million bales. This is to be harvested from an area of 15.72 million acres. The yield per acre thus works out to 461 lbs., as against 438 lbs. during the last season. The official estimate was higher than trade estimates which averaged about 14.85 milion bales.

Reacting to the news, cotton futures in the New York market eased slightly but they recovered the lost ground in subsequent dealings. Liverpool cotton futures market ruled fully steady. The bearish U.S. crop news had no adverse effect in Liverpool because futures prices there are already below parity with U.S. shipment offers.

ART SILK YARN RECEDES

There are conflicting reports in the yarn market about the upward revision in the ex-mill selling prices of indigenous art silk yarn for the purpose of providing cash incentives to exporters of rayon fabrics. Some continue to think that a general rise would be announced, while others totally discount such a possibility and a few feel that the rise would be made applicable only in the case of new units such as South India Viscose. At any rate, it is thought that there is no basis for the rumours (referred to in this report last week) of an early increase of 25 nP per lb. in price. Persistent selling has, therefore, ensued and prices have suffered a distinct setback. National Rayons 150 Bt. cones 1st grade has declined by 46 nP to Rs. 13.77 per kg., 100 Bt. Centurys by 36 nP to Rs. 18.96 and S.I. Viscose 120 deniers by 28 nP to Rs. 16.70. 20×1 Amilon August settlement is quiet at Rs. 4,800. Staple fibre yarn, however, has registered a handsome rise in values, thanks to reports of excellent offtake in consuming centres. 40×2 October delivery has risen by Rs. 10 to Rs. 853. Spot Kohinoors have advanced by 49 nP to Rs. 9.77. Cotton yarns continue to rule dull. Business put through is limited, with values moving narrowly.

OILSEEDS DECLINE

Oilseeds suffered a marked setback during the week under review. The break in the steadily upward trend noted for over a month followed reports of renewed rains in Gujarat and the South. Groundnuts rose initially to peak levels of the season, but encountered heavy bull liquidation on bearish crop reports towards the close. The decision of the Government of India to reduce Central excise duty on groundnut oil (produced by solvent extraction method) from Rs. 110 to Rs. 68.90 per tonne did not have any perceptible effect. The move, designed to provide an incentive for exports of deoiled cake, is said to be of only marginal significance, if any. Castorseeds moved down in the absence of good export inquiries for castor oil. Linseed ruled easy, thanks mainly to weakness of mustard seeds in the North. Cottonseeds too lost considerable ground.

The following table shows the closing prices of oilseeds and oils on Thursday, 16th August, as compared with those of the two previous weeks:

	16-9-1962	8-8-1962	31-7-1962
Groundnut	Rs.	Rs.	Rs.
September 1962	240.00	239.37	228.50
Groundnut January 1963 ..	228.37	234.00	225.12
Nizam bold	49.00	49.50	47.87
Khandesh quality	49.75	50.25	48.12
Oil ex-mill ready*	20.00	20.20	19.30
Railway receipts*	19.80	19.80	19.05
Castorseed			
September 1962‡	169.75	172.25	171.00

Cottonseed September 1962 ..	104.50	107.00	106.00
Cottonseed January 1963 ..	103.00	—	102.00
Niger seed	38.00	38.00	37.00
Kardi seed	29.00	29.00	27.00

* Rates include excise duty but exclude sales tax
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

QUALITY TEAS IMPROVE

CALCUTTA, 14*th August*

Fair demand was in evidence during the tea export sales held here yesterday. But, while prices of quality teas gained, those of others declined. Although there was good demand during last week's internal sales, prices eased noticeably with the exception of those for the bright liquoring Assams. Note was taken of the fall in the U.K. tea stocks from 118 million lbs. to 117 million lbs. for the week ended 3rd August 1962.

The weak conditions in sales for internal consumption have become a matter of anxiety for the industry. It was not surprising, therefore, that, speaking at an extraordinary meeting of the Terai branch of the Indian Tea Association, the I.T.A. Chairman, Sir Richard Duckworth, emphasised the importance of plain and common teas as a balancing factor not only for the industry but also for the trade. He said that the industry was making all-

UMESH YOGA DARSHAN

(First Part)

In Four Languages: English, Hindi, Gujarati and Marathi

(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

out efforts to increase exports in accordance with the national interests and hoped that the propaganda now being made in foreign countries in favour of Indian tea would result in expanding markets to match with the industry's efforts to increase production. However, the tendency in foreign countries is to go in more and more for quality teas. All producing countries are engaged, therefore, in not only increasing production but also improving quality.

In the internal sales held here last week, dusts on offer totalled 29,794 packages, which met with a good general demand. The bright liquoring Assams were the strongest feature of the sale, and their prices appreciated. Plain orthodox dusts, however, eased by 20 nP and Medium C.T.C. dusts by 20 to 30 nP. Good support was accorded to the good C.T.C. dusts, prices of which were, however, lower by 30 to 40 nP. Non-wither legg-cut dusts were steady. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 6.80, medium Assam C.T.C. dust 5.50 to 6, medium Assam dust 4.60 to 5, legg-cut dust 3.80 to 4.30 and plain orthodox dust 3.30 to 3.60.

During yesterday's export sales, leaf on offer totalled 53,584 packages. Demand being poor, prices eased. Liquoring B.O.Ps were a strong feature, but generally orthodox teas eased by 10 to 30 nP. Darjeelings followed the general trend eased. Medium C.T.Cs also eased, while the best teas were fully firm. Legg-cut teas eased by 10 to 20 nP. Whole leaf grades were quiet. The quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings 7 to 8.20, best Assam C.T.C. B.P. 7 to 8, clean plain pekoe 4.10 to 4.40, medium Assam C.T.C. fannings 5.20 to 5.90, plain fannings 3.50 to 3.75, plain B.P. 3.40 to 4.70 and medium Assam C.T.C. B.P. 5.20 to 5.90.

MEDIUM TEAS ADVANCE

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *9th August*

A total of 662,000 kgs. was offered in sale No. 31 held on Tuesday, the 7th inst. Quality was generally maintained and there were a few invoices showing improvement. The market opened to a good general demand which continued throughout the sale. Low mediums and mediums met with good competition, particularly those which showed improvement and advanced by 10 to 20 nP. Good mediums elicited useful support at fully firm to dearer rates. The plainest kinds were barely steady. There was strong demand for highgrowns which were dearer, buyers following quality. Clean black leaf descriptions were a strong feature of the sale. Unorthodox teas were well competed for and the majority of them sold at rates above last. Leaf grades under this category however were easier. Whole leaf grades were irregularly dearer while a small selection of tippy teas sold readily.

The quotations per kg. were:

			1962	1961
			Rs.	Rs.
Low mediums	...	...	3.10-4.10	4.45-4.55
Mediums ...	...	...	4.00-4.50	4.50-4.60
Good mediums	...	...	4.50-5.40	4.60-5.20
Nilgiri B.O.P.	...	...	4.40-7.70	4.65-6.15

The average price realised in sale No. 31 was Rs. 4.38 per kilo, as against Rs. 4.18 a week ago and Rs. 4.82 in the corresponding sale last year.

Dust sale No. 31 was held today, whereat 341,300 kgs. were offered. There was good demand. Prices, although a little irregular, were generally firm to dearer, but there was a slightly easier tendency towards the close. Low mediums and mediums were well competed for and opened dearer by 5 to 10 nP but at the close these were barely steady. Wynaad types, however, did not receive the same support. Good mediums sold readily and sometimes appreciated. Plain fibrous kinds also shared in the upward trend of the market. There was strong inquiry for highgrowns which were dearer with quality. Black grainy descriptions continued in demand and sold at prices above last. Unorthodox descriptions were keenly contested for and these also registered advances.

The average price realised in dust sale No. 31 was Rs. 3.37 per kilo, as compared with Rs. 3.42 a week ago and Rs. 4.63 in the corresponding sale last year.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No. 32*: 722,000 kgs. offered. Good demand. Low medium and medium brokens dearer, except plainest and stalky descriptions. Good mediums fully firm. Highgrowns dearer where quality improved. All fannings strong."

KIPS STEADY

(*From Our Own Correspondent*)

MADRAS, *13th August*

In the local hides and skins market this week, arrivals from tanneries were moderate and offtake was small. There was good demand for the low grade kips from the inland trade at prices which importers were disinclined to follow. However, inquiries from the U.K. dressers were good. Prices were, therefore, well maintained.

In the tanned skins section, demand was patchy and selective, with the emphasis on the better selections in 5½/6 lbs. and 11/12 lbs goat skins and 22/24 lbs.

Expecting rise in prices in the near future, sellers were restrained. Shipment business was, therefore, negligible. Demand for the prime and semi-prime sheepskins was lacking, but there was the usual volume of business in the middle class types. E. I. tanners expect a better demand from abroad after the August holidays. Inquiries from the U.S. were slack due to lower prices there.

The next series of German tanned skins public sales commences on the 20th instant, when about 70,000 goat-skins and 41,000 sheepskins will be offered for sale. Consigners here are not particularly optimistic about the sales in view of the current trend in the local market.

JUTE GOODS STOCKS HIGHER

(*From Our Own Correspondent*)

CALCUTTA, *14th August*

Although there was fair demand from overseas countries for jute goods and the outlook for the coming months was considered encouraging, prices recorded a decline, which was occasioned for no reason other than the very satisfactory arrivals of new crop for this time of the season. The announcement of details in respect of jute goods in stock with mills as at the end of July pleased the market. For, the stock no doubt showed an increase, but the increase in respect of hessian was below earlier expectations. Despite the increase in stock, the decision of the Indian Jute Mills Association to continue the present maximum level of production up to the end of September 1962, though in the fitness of things, affected sentiment. The I.J.M.A., at the same time, noted with concern that July was the third consecutive month registering an increase in sacking stocks. If the mills were to decide on restriction of output having regard to this factor, such a decision could not have been stated as being contrary to the interests of the industry; but the fact that mills are keeping the interests of the country above their own speaks volumes for their anxiety for not doing anything in a hurry that would depress an already depressed fibre market. Even at this time of the new season, arrivals of old crop have not stopped, and the new fibre is arriving in large quantities. Owing to a deterioration in quality, the fibre fit for production of heavy goods would show an unmanageable surplus. In such a context, if the mills were to restrict production, the harm inflicted on the fibre market could easily be imagined.

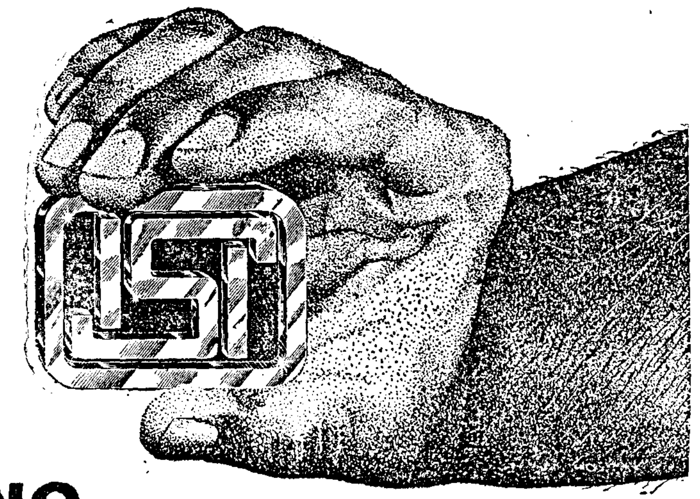
Last month, production in mills exceeded 100,000 tons, which was the highest production in any month since July 1946. It may be recalled that, in order to satisfy the growing demand for goods and also with a view to consuming as much fibre as possible, mills have been increasing production since the beginning of this year. The increased support which mills accorded to fibre, coupled with the stocks of fibre which mills built up despite financial implications, has been one of the causes for raising fibre prices to the minimum level. There was a time early this year when fibre prices had declined well below the Rs. 30 mark. This naturally caused anxiety to all concerned, and buffer stock purchases, together with increased offtake by mills, steadied the price trend in such a satisfactory manner that the Government of India abandoned all proposals for direct intervention. For months now, the prices have been maintained at or above the minimum levels. However, with increased arrivals of new crop, there has been a tendency for prices to fall, and the proposal to revive purchases by the Buffer Stock Agency is now being considered by the Union Commerce and Industry Ministry and the I.J.M.A. Recently, there had been a ministerial suggestion that the Government of India should take over the Buffer Stock Agency. However, in view of the close co-operation which the industry has given to Government with a view to ensuring fair prices to farmers and the good results that have followed, trade circles feel that the Government should not act in any hasty manner. For it is suggested that the Government's taking over buffer stock purchases and consequent distribution would only complicate the situation and bring in its trial numerous problems. Evidently, the conference now being convened at New Delhi between the representatives of the Government and the industry would survey the position *de novo*.

Possibly, purchases by the Buffer Stock Agency can be revived now. Also, now that it is certain that the inferior grades of fibre would be surplus, perhaps by an unmanageable proportion, an export quota can be fixed even now and exporters urged to find markets abroad early. With these two suggested measures, any tendency for fibre prices to fall below the minimum levels should be arrested. In this connection, it is interesting to note that, according to an overseas estimate, the output of fibre in India was expected to reach a new high of 1,119,000 tons or more than double the crop in 1960-61. The Pakistan output was estimated at 1,244,000 tons, representing an increase of 25 per cent as compared with 1961-62.

Stocks of heavy goods at the end of July increased by 6,600 tons to 45,000 tons, while those of other goods declined by 2,300 tons to 13,900 tons. As a result, total stocks increased by 5,600 tons at 85,900 tons. It is possible to expect that, in view of increase in the stocks of heavy goods and better demand for hessian, the mills may increase the production of hessian at the cost of sacking. However, the shortage of fibre fit for hessian production would weigh against any such possibility. The increase in stock followed by the decision of mills to maintain the existing level of production and also by the increased arrivals of fibre affected prices of heavy goods in particular during the week.

The details of stocks were released on Tuesday last and, as an immediate reaction, ready B. twills eased from Rs. 123.40 to Rs. 122.75. On the other hand, the satisfactory outlook for hessian raised ready hessian 40″ 10 oz. from Rs. 54.85 to Rs. 55. Overseas buyers became cautious and activity in the futures market was bearish. This led ready B. twills to fall to Rs. 122.25 and ready hessian 40″ 10 oz. to Rs. 54.80 on Wednesday. At this stage, there was the happy news of a Government tender for B. twills and, on Thursday, ready B. twills hardened to Rs. 123, while hessian 40″ 10 oz. eased to Rs. 54.40. Lack of buying interest pulled down the quotations further to Rs. 121.90 and Rs. 53, respectively, on Friday. During the week-end, quiet conditions prevailed. B. twills sagged to Rs. 121.25 and hessian 40″ 10 oz. to Rs. 52.75. There was a certain amount of buying interest in evidence yesterday and, as a result, ready B. twills rose to Rs. 122 and hessian 40″ 10 oz. to Rs. 53.00.

Fibre prices were maintained at the minimum levels. Buyers were reserved, as the very large arrivals of the new crop were threatening to cause storage difficulties. The quality of arrivals has been disappointing so far, and naturally good quality fibre continued to command a premium. The quotations per maund are: Daissee bottoms Rs. 32.00, Assam bottoms Rs. 30, northern bottoms Rs. 29.50.



How
ISI Helps
the
Manufacturer

BY PROVIDING THE SEAL OF INTEGRITY

The ISI Certification Mark may be given to any manufacturer whose products are made to the relevant Indian Standards. It is a recognition of his business integrity and trustworthiness.

Modern methods of quality control, an essential part of any scheme of certification, bring about many economies in production through elimination of defectives, increase in productivity, and securing of uniform quality of output. These benefits far outweigh any additional cost involved in instituting continuous inspection and testing.

Periodical check-up by ISI of manufacturers' own quality control systems constitutes an invaluable service to ensure top management of the high efficiency of production and maintenance of quality.

Consumer satisfaction and competitive marketing position are the obvious advantages enjoyed by all ISI Mark users.

Enquire for details NOW how you too can join the distinguished company of manufacturers who already hold the ISI Certification Mark Licence.

METALS QUIET

(*From Our Own Correspondent*)

CALCUTTA, *14th August*

Conditions in the local metals market were comparatively quiet during the week under review. Although demand was good, prices eased following expectations of higher imports, due to the notable improvement in foreign aid prospects. This week's decline in prices has gone a small way to bring prices in India in relation to foreign quotations. The acute scarcity in non-ferrous metals coupled with uncertainty in regard to imports had led prices here to rise to very high levels during the past few weeks, much in contrast with an easy trend in foreign markets. Against the background of the acute shortage for copper, it is refreshing to note that the project of the Indian Copper Corporation Ltd. for setting up an electrolytic copper refinery with an annual capacity of about 9,000 tons has made satisfactory progress, despite the delay in securing the import licences for equipment and shortage of cement.

On the London Metal Exchange, cash copper was unchanged at £234 a ton. Consequent on good support for the forward metal, the three-months' position improved from £229¼ to £229¾. Producer demand in London was encouraging. A hardening tendency was also in evidence in the New York Commodity Exchange. It was reported that, despite the cutback in production in Chile, this year's output there would be higher than last year. Chile would welcome sales to the U.S.S.R., provided payment is in dollars. Recently there had been a proposal for the U.S.S.R. to buy about 300,000 tons, spread over a period of three years. In Calcutta, there was good demand for copper scrap; but, while utensil scrap eased from Rs. 562 a quintal to Rs. 554.50, clean wire scrap rose from Rs. 615.50 to Rs. 616.25.

The feature of trading in tin was a tender for 107 tons on Government account, which was covered. Although the stock position is far from comfortable, the quotation eased from Rs. 2,117.00 per 100 kgs. to Rs. 2,106.25. This was in accordance with the weaker advices from the London Metal Exchange as well as the Far Eastern markets. Spot tin, in London, opened at £850½ a ton and, after improving to £852 on Buffer Stock Agency support, closed at £850½. More interest was shown in the three-months' position on behalf of the Buffer Stock Agency, but quotations were more or less the same as those for the cash metal. The fact that, despite the expected releases from the strategic stockpiles, the U.S. purchases of tin from Malaya continue to be on the same level as previously, should go a long way in reassuring Malaya and other producing countries that demand would be maintained on an even keel. Quiet conditions were in evidence in lead in the context of poor demand. Stocks were good. The quotation here opened at Rs. 158.50 per 100 kgs. and eased to Rs. 153.50. In London, the quotation was maintained at £51¾. Zinc was also unchanged at £65¼ a ton. In Calcutta, the price declined from Rs. 297.25 per 100 kgs. to Rs. 269.75 and closed at Rs. 279.50.

FOODGRAINS STEADIER

(*From Our Own Correspondent*)

HAPUR, *13th August*

A steadier trend continued in foodgrains here this week due to insufficient rains and uncertain prospects of *kharif* crop. Damage to the standing crops in west U.P., Punjab and Rajasthan by locust was also an influencing factor.

Good consumer and outside demand and poor arrivals accounted for a hardening trend in wheat prices during the week. The average quality advanced by 32 nP and the farm quality by 67 nP a quintal to be quoted at Rs. 40.87 to Rs. 41.53 and Rs. 44.21 to Rs. 46.89, respectively. Red wheat stood at Rs. 39.52. Arrivals during the week were poor, averaging 200 maunds daily. Stocks were almost stationary at 66,000 maunds. Rice ruled quiet, with *mainpuri* and *gadda* drifting lower on slack demand. Week-end prices were:—Rice *basmati* superior Rs. 85.74 to Rs. 96.45, *sela basmati* Rs. 75.02 to Rs. 80.38, *mainpuri* Rs. 56.26 to Rs. 57.60, *ramajwayan* Rs. 64.30, *raimunia* Rs. 66.98 and *gadda* Rs. 54.22 a quintal.

Gram prices sought higher levels on Madras buying. Arrivals were negligible and stocks were placed around 17,500 maunds. Week-end prices were:—Punjab variety Rs. 44.21 and local Rs. 43.54. Barley and *bejhar*, however, were depressed at Rs. 29.47 and Rs. 30.14, respectively, due to slack buying inquiry. *Jowar* was quoted higher at Rs. 46.89 to Rs. 52.25, as stocks with the trade were meagre. *Guwar* eased fractionally to Rs. 38.85. Other coarse grains were listless. Week-end prices were:—*Maize* Rs. 29.47 *bajra* Rs. 37.51, *methi* Rs. 58.94 and oats Rs. 29.47 to Rs. 30.81.

Among pulses, peas tended to rise due to better buying support. The week's offtake in peas *dal* was one wagon, which went to Howrah. Arrivals were small. Local stocks were around 67,500 maunds. After early steadiness, *arhar* prices sought lower levels towards the close of the week, as demand slackened. Stocks at the week-end were meagre at 8,000 maunds. *Urd* also eased by Rs. 1.34. *Moong* and *arhar* were almost stationary. Moth was firm on better demand in the face of poor stocks. Week-end prices were:—*Peas dara* Rs. 34.48 to Rs. 34.83, *farm* Rs. 36.17 to Rs. 37.51, *dal* Rs. 38.50, *arhar* Rs. 56.26 to Rs. 58.94, *dal* Rs. 69.66 to Rs. 75.02, *urd* Rs. 83.06, *dal* Rs. 93.77, *moong* Rs. 52.25 to Rs. 53.58, *dal* Rs. 60.28, *masoor* Rs. 45.55 to Rs. 50.91, superior Rs. 64.30, *dal* Rs. 58.94, moth Rs. 40.19, *dal* Rs. 48.23 and gram *dal* Rs. 49.57 a quintal.

SUGAR FIRM

(*From Our Own Correspondent*)

HAPUR, *13th August*

Continued buying support from Rajasthan, Delhi, Punjab and some parts of U.P. accounted for a firm trend in the sugar market here this week. Demand for the inferior small crystal was more brisk and the mill delivery prices rose by 37 to 70 nP a maund and the spot delivery prices by a rupee per quintal. Nominal stocks of *gur* and *khandsari* at the producing centres, bright prospects of sugar exports and good demand for festivals were the main factors to influence the sentiment. The last sugar quota has been nearly sold out and trading in the next two releases was being done at still higher levels. The Government is being urged to release one more lakh tons to arrest the bullish fervour in the market.

Sales against the September release continued to be done at premia over the ruling prices, as it was expected by the trade that prices would rise further during the approaching festive season. Week-end ex-factory prices per maund were:—AA29 Iqbalpur Rs. 41.97, Daurala Rs. 41.99, Lhaksar Rs. 41.60, A29 Mawana Rs. 41.80, Rohana Rs. 41.85, Mansurpur Rs. 41.85, Iqbalpur Rs. 41.47, B29 Mansurpur Rs. 41.16, Lhaksar Rs. 40.19, Rampur Rs. 40.68, Panipat Rs. 41.12, C29 Deoband Rs. 40.50, Sharenpur Rs. 40.34, Rohana Rs. 40.34, Seohara Rs. 40.06, D29 Amroha Rs. 39.94 and Dhampur Rs. 39.81.

Khandsari also ruled firm due to the fast depleting stocks with producers and active demand from Rajasthan and Punjab. Prices improved by 32 to 67 nP per quintal. The inferior quality was quoted at Rs. 85.74 to Rs. 91.09, superior at Rs. 95.11 to Rs. 105.16, crystal at Rs. 95.11 to Rs. 103.25 and boora Rs. 99.17 to Rs. 107.17.

Trading in ready *gur* here was nominal, as stocks with traders as well as producers in rural areas were very small. Shakker continued to attract good demand against poor stocks, and hence prices rose to new heights. Week-end prices were:—*Gur* superior Rs. 66.98, *dara* Rs. 50.91 to Rs. 52.25, *kotha* selected Rs. 66.98, *kotha* dry wet Rs. 50.91 and *shakker* Rs. 72.34 a quintal.

After early gains on continued bull support, *gur* Fagun eased in the week-end following the imposition of the highest limit by the F.M.C. The Fagun contract opened at Rs. 22.09 on last Monday, touched the highest level of Rs. 22.16 on Thursday and the lowest of Rs. 21.65 on Wednesday and opened today at Rs. 21.90.

The following is the Press note issued by the Forward Markets Commission on Friday, 10th August 1962, in regard to the maximum price-limit for *gur* futures.

"The recognised associations at Delhi, Amritsar, Meerut, Hapur and Muzaffarnagar were permitted to commence forward trading in the Phagun 2019 (February-March, 1963) deliveries in *gur* in the month of May 1962, subject to restrictions on the 'open position' held by members and a limit of 60 nP per 50 kg. on the weekly price-rise. The recognised associations at Ludhiana and Agra commenced forward trading in the same deliveries in the month of June 1962.

"The Forward Markets Commision has been keeping a careful watch over the trend of prices in the aforesaid hedge contracts in *gur*. The Commission has received complaints about the rising trend of prices. Representatives of the recognised associations at Delhi, Agra, Meerut, Hapur, Muzaffarnagar and Ludhiana met the Commission in Bombay on 10th August 1962 to consider the situation. They felt that there was a fair amount of bull pressure in respect of the running contracts, and urged that a maximum price should be fixed in the interest of the trade, though there was no agreement amongst them on the level of the maximum price. In the light of the discussions and taking into account other relevant factors, the Commission has decided to impose the following maximum prices in respect of the Phagun 2019 *gur* deliveries:—

"Delhi Rs. 25.75 per 50 kg., Hapur Rs. 24.40 per 50 kg., Meerut Rs. 24.40 per 50 kg., Agra Rs. 23.90 per 50 kg., Muzaffarnagar Rs. 24.00 per 50 kg., Amritsar Rs. 26.00 per 50 kg., Ludhiana Rs. 26.00 per 50 kg.

"The restrictions imposed earlier on the weekly limit on price fluctuations and on the 'open position' held by members will continue to be in force."

LABOUR

(*Concluded from page 292*)

unrecognised unions, the representatives of the I.N.T.U.C. found themselves in agreement with the representatives of the Employers' Federation that unrecognised unions should have no right whatsoever beyond the right to exist and educate the workers until they gained recognition according to the procedures laid down by the Code. But the representatives of the *Hind Mazdoor Sabha* and A.I.T.U.C. agreed that unrecognised unions should have the right to represent the case of industrial workers belonging to the minority unions who might have grievances against the management. Disputing this argument, Mr. G. Ramanujam, Vice-President of I.N.T.U.C., contended that the majority union, after its recognition by the management, represented all the workers in the establishment concerned and to speak of the right of the minority union to represent any section of the workers was a contradiction in terms.

The Conference, however, broadly agreed with the rights of recognised and unrecognised unions as laid down in the working paper. Under this, as noted above, only recognised unions could raise issues and enter into collective agreements with employers on general questions concerning the terms of employment and conditions of service of workers in an establishment or industry. The recognised unions would have the right to collect subscription and put up notices on boards within the premises of the undertaking. It was agreed that besides notices about meetings and statement of accounts, only such matters could be put up on notice boards as were not of an abusive, indecent or inflammatory nature. These stipulations, if properly observed, should go some way in curbing the tendency towards multiplicity of unions and encourage the growth of responsible unionism. It may be noted here that this is the first time that the rights of recognised unions have been clearly laid down under the Code of Discipline.

Hunger Strike

Another major recommendation of the Conference was that hunger strike should not be recognised as a legitimate weapon to secure redressal of grievances. The Conference clearly expressed its disapproval of hunger strike. It, however, felt that it was not practicable to impose a ban on hunger strike by bringing it within purview of the Code. Both the Central and State Governments, Mr. Nanda disclosed, have decided not to take notice of hunger strikes. It was, however, emphasised that it was the duty of the Government, as well as employers, to ensure that conditions did not deteriorate to such an extent as to compel workers and their leaders to resort to hunger strikes out of desperation. This stipulation means that workers' grievances must be promptly looked into and, where they cannot be redressed through mutual discussion and understanding, the usual outside machinery for dealing with them should be set in motion without any undue delay.

A unique feature of this year's conference was that the public sector undertakings were separately represented on the Conference, thereby making them bound by the conclusions and recommendations of the tripartite body. This is in keeping with the Labour Ministry's avowed policy of non-discrimination between private and public sectors in regard to the applicability of labour laws and practices.

COMMERCE AND INDUSTRY

(*Concluded from page 298*)

for the purpose. But it would appear that nothing has been done so far in this connection. At best, "the matter is still in an exploratory stage," we are told.

On the question of quality of indigenous p.f. moulding powder, Mr. Dutta revealed that though consumers were generally satisfied, there were complaints from some consumers about the lack of good finish. The Indian Standards Institution, it may be noted here, has published three standards covering the p.f. moulding powder. But, only two units have joined the I.S.I. certification marks scheme. The application of two others are said to be kept pending, as they are not equipped with adequate testing equipments.

There has been no export of p.f. moulding powder so far. But articles made of p.f. moulding powder, particularly electrical accessories, have made some progress in securing markets abroad. Their exports aggregated Rs. 7.8 lakhs in 1961, as compared with Rs. 8.4 lakhs in 1960 and only Rs. 2.8 lakhs in 1959. There have been some imports of p.f. moulding powder, such being 385 tonnes, valued at Rs. 7.87 lakhs, in 1961, as against 428 tonnes (Rs. 10 lakhs) in 1960 and 331 tonnes (Rs. 7.96 lakhs) in 1959. West Germany has been the largest supplier, followed by the Netherlands and the U.K. Imports, which consist largely of G.X. grade p.f. moulding powder, are allowed to be made only by actual users, and not by established trade.

LEIPZIG TRADE FAIR

The autumn Trade Fair at Leipzig, a popular annual event in East Germany, will be held this year for a week from 2nd September. In keeping with its tradition of providing an international market for consumer goods and consumer durables, the Fair is expected to present this autumn over 870,000 exhibits, which will be contributed by over 6,500 firms from about 45 countries. The Fair grounds will occupy an area of 110,000 sq. metres. Exhibits will be grouped in 30 branches, accommodated in 16 buildings and a number of fair halls. The important exhibits include textiles, foodstuffs and processed foods, furniture and veneers, household appliances and books. There will also be a large number of technical consumer goods such as photographic, cinematographic and optical equipments, office machines and motor vehicles. The pride of place in the exhibits goes to East German products. Taking part in the exhibition are also over 1,000 firms from West European countries, besides those from other Communist countries, as also from America, Asia and Africa.

India will have a collective pavilion, bringing together 30 prominent exhibitors, displaying a wide range of traditional and non-traditional export products. Besides the collective pavilion, some of the Indian firms will participate in special commodities pavilions for textiles, foodstuffs and handicrafts. Mr. B. L. Anand of the India Linoleums Ltd., Calcutta, will be the Director of India's collective pavilion, which has been organised by Mr. M. B. Rao, under the directions of the Directorate of Exhibitions, Union Ministry of Commerce and Industry.

NEWS IN BRIEF

(*Concluded from page 269*)

The International Monetary Fund has entered into a stand-by arrangement with the Government of Bolivia which authorises drawings upto the equivalent of $10 million over the next twelve months in currencies held by the Fund. The present arrangement replaces an earlier one-year arrangement for $7.5 million which expired on 26th July 1962. A total of $2 million was drawn under that arrangement. Bolivia's outstanding drawings from the Fund amount to the equivalent of $6,041,666.

Sweden and West Germany have the shortest industrial work week in Europe, according to a survey by the United Nations' Economic Commission for Europe. Time actually worked amounted to an annual average of 40.6 hours a week in W. Germany in 1961 (lower by 3.3 per cent, as against 1960) and to 38.7 hours (down by 2 per cent) in Sweden. Comparable figures for other countries were: U.S. 44.7 hours, Britain 45 hours, France 45.6 hours, Switzerland 45.8 hours and the Netherlands 46.5 hours.

The U.K. firm, the British Insulated Callender's Cables Ltd., has been awarded a contract valued at over £250,000 by the Indian Railway Board for the supply and installation of overhead equipment for railway electrification in the Calcutta area. The contract is an extension of the £1,000,000-contract which was given by the Board for the Calcutta electrification scheme about 14 months ago. British Insulated Callender's Cables, one of the world's largest manufacturers of electrical cables and equipment, will be supplying materials direct from its factories in Britain and also through the Indian Cable Company, in which it has a financial interest.

The International Finance Corporation, in participation with six private banks in the U.S., Switzerland and West Germany, has made a commitment to invest $2 million in Compania Colombiana de Tejidos, S.A. (Coltejer), the largest cotton textile manufacturer in Latin America. The transaction provides assistance to a project of value to the Colombian economy, links leading banking houses on two continents with one of Colombia's pioneer industrial companies, and channels both U.S. and European capital into Latin American development at a time when broadening financial support is one of the objectives of the Western hemisphere nations co-operating in the Alliance for Progress. The six participants are taking up by far the greatest part of I.F.C's commitment, their participations amounting to $1,725,000, or about seven-eighths of the total. The investment is represented by two series of unsecured notes, each bearing interest of 7 per cent and each in the amount of $1 million. One series is repayable in seven semi-annual instalments due 1963-66. The other is repayable in seven semi-annual instalments due 1966-69, and may be tendered for payment of capital shares of the Company according to the stock option agreement.

TREND OF SHARES

SLIGHTLY REACTIONARY

(From Our Own Correspondent)

BOMBAY, 16*th August*

ABSENCE of fresh incentives, unexpected delay in the announcement of steel retention prices and the inability of leading speculative counters to break through the 3rd August high levels, all put together, contributed to a slightly reactionary trend on the stock exchanges this week. At higher levels, the tendency to book profits was felt greater this week than in the previous week and support was generally lacking. The intervening holidays and end-account considerations also induced mild realising. Movements continued to be narrow and irregular, underlining thereby a trading area between the 3rd August high levels and last week's low levels. But, finally, prices drifted lower and closed today around the lowest levels of the week, showing widespread moderate losses on balance. However, with both bulls and bears disinclined to be aggressive, the trading area was held intact and the tone was quiet but steady.

As nothing spectacular emerged from this week's Lok Sabha debate on the border issue, it had no perceptible effect on the share market. But the delay in the announcement of steel retention prices, which in turn delayed the T.I.S.Co's dividend, dampened the sentiment in Steel shares and induced persistent, though mild, realising in other sections too. Moreover, operators continued to be cautious in following the rise in values, especially after the swift recovery of some 50 per cent in the leading counters from the recent slump. In fact, as the popular shares repeatedly failed to break through the high levels during the week, this factor weighed heavily on the minds of marketmen near the close of the week, when it seemed that the resistance level might be broken, resulting in an extension of the reaction a little further in the coming week.

* * * *

Tata Steel Ordinary made a discouraging show. After having been done up to Rs. 148.75, the shares sagged to close one point lower over the week at Rs. 146.50 on bear pressure and selling against huge option deals on conflicting expectations about the dividend, the announcement of which was expected today, but did not materialise. Indian Iron, however, were comparatively steady on Calcutta support and closed with a minor loss of 5 nP at Rs. 26.50. Bull operators in the leading speculative counters like National Rayon, Century, Standard, Telco, Bombay Burmah and Hindustan Motors tried hard to lift values but failed to succeed, in view of the depressed sentiment in Steels. Thus, National Rayon found it hard to hold steady around Rs. 521.50 and slipped back to Rs. 514.50 to close a shade higher at Rs. 515. After being quoted thrice around Rs. 632 during the week, Century reacted to finish 50 nP lower on balance at Rs. 627.50. Telco were vainly bid up to Rs. 337, for they eased to Rs. 332.75 subsequently and closed with a net gain of Re. 1.50 at Rs. 333. Bombay Burmah receded from Rs. 669 to Rs. 663 and closed at Rs. 663.50 as against Rs. 664 a week ago. Although well held throughout the week, Hindustan Motors could not make much headway beyond Rs. 20.32 and closed only 8 nP lower over the week at Rs. 20. Standard Mills were also easy at close and disclosed a loss of three points at Rs. 912. Among others, Svadeshi were conspicuously easy and showed a loss of Rs. 4.50 at Rs. 266.50, but Kohinoor were in good demand and finished four points higher at Rs. 323. Cash scrips showed small changes either way, excepting Star Textile which reacted by Rs. 11 to Rs. 126 and Camphor which closed with a loss of Rs. 6.50 at Rs. 94.50.

* * * *

In Calcutta, Dunlop Rubber eased by 38 nP to Rs. 39.56, Rohtas by 32 nP to Rs. 14.12, Howrah by 25 nP to Rs. 20.12, Shree Gopal by 19 nP to Rs. 25 and Kesoram by 25 nP to Rs. 28.19, but GKW gained 69 nP at Rs. 38.75 and Indian Cable by 81 nP at Rs. 36.75. In the Cash section, Jute shares were distinctly weak. Fort Gloster declined sharply from Rs. 449 to Rs. 429 and Anglo-India were seven points lower at Rs. 218. Among Textiles, Bowreah reacted from Rs. 26.94 to Rs. 26.12. Reacting from Rs. 358 to Rs. 351.50, Bengal Coal lost half the gains of the previous week. Braithwaite moved down from Rs. 35.50 to Rs. 34.62 and Alkali, among Chemicals, slipped back from Rs. 45.62 to Rs. 44.75. Miscellaneous section showed a mixed price pattern. Britannia Biscuit showed a gain of Re. 1.75 at Rs. 45, but Goodyear closed Re. 1.06 lower at Rs. 45 as did Hindustan Twyford at Rs. 15. Indian Oxygen declined from Rs. 48.50 to Rs. 47. Sugars were steady, with Carew improving from Rs. 12.31 to Rs. 13. But Tea shares were easy, with Brooke Bond moving down from Rs. 14.62 to Rs. 13.70 and Dhelakhat from Rs. 20 to Rs. 19.62.

* * * *

Values closed with a mixed price pattern in Madras. Thus, among Textiles, Lakshmi declined from Rs. 157 to Rs. 147.25. South India Viscose lost two points at Rs. 165.50 and Travancore Rayon were easy by 75 nP at Rs. 37, but Cannanors gained five points at Rs. 132, Buckingham four points at Rs. 272 and Bangalore Woollen three points at Rs. 248. In the Miscellaneous section, Aluminium Industries disclosed a gain of 7 nP at Rs. 24.69, while Ashok Leyland were 5 nP lower at Rs. 8.10. Textools were up by two points at Rs. 152 and Indian Steel Rolling appreciated from Rs. 11.75 to Rs. 12.60, though Tube Investments moved down from Rs. 272 to Rs. 269. Among Plantings, Haileyburia disclosed a loss of 25 nP at Rs. 11.75, but Highland gained 37 nP at Rs. 12.87, Consolidated Coffee 50 nP at Rs. 18.70 and Midland 65 nP at Rs. 11.05. Among Cements, Andhra closed 17 nP higher, but Dalmia Cement showed a loss of 20 nP at Rs. 13.50.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2680 BOMBAY, 25th AUGUST 1962 PRICE Rs. 2

THE DRUGS RACKET

THE debates in the Lok Sabha on matters falling under the purview of the Health Ministry have never been as stormy as this week's discussion on spurious and adulterated drugs. The members' indictment of the Government for its incapacity to check the widespread distribution of harmful drugs was certainly justifiable, though it might have come as an unpalatable surprise to the new Minister for Health, Dr. Sushila Nayar. Dr. Nayar, of course, faced the issues squarely and promised to take some steps to check the evil, but, realising the magnitude of the problem and the apparent failure of Administration and judiciary in the past, she took care to add that she was not promising much. Among the measures contemplated by her, three stand out prominently. In the first place, it is proposed to conduct an immediate inspection of 2,700 small units engaged in the manufacture of drugs to verify the quality of their products. Suitable action, according to the Minister, will be taken against offenders. Secondly, the Central Government proposes to appoint drug inspectors who will work in collaboration with the State Governments in checking production and distribution of sub-standard drugs. And, thirdly, it will amend the Central Drug Adulteration Act further to provide for heavy punishment to those convicted of offences under the Act.

It is admittedly essential to prescribe deterrent punishments and enforce them firmly in order to curb the manufacture of spurious drugs. In this respect, what has been done so far is negligible. True, the amendment of the Drugs Act in 1960 provides for a *minimum* punishment of one year's compulsory imprisonment to offenders in this respect. But, unfortunately, the Courts in this country have been unduly lenient and the Government, too, has failed to rectify this state of affairs promptly. It is really distressing to find that the judiciary has been showing much misplaced mercy to those whom Mr. H. V. Kamath aptly described as "merchants of death," with the result that the majority of convicted parties gets away without imprisonment. In 1959-60, for instance, out of 179 convictions, only 17 cases resulted in imprisonment. In 1960-61, the experience was still worse. Out of 207 convictions, only ten cases were covered by imprisonment. The pertinent point here is this: Why was the Government sleeping when it found that the intention of the 1960 amendment was not being fulfilled? Why did it not come out with an immediate amendment to the Act, even through an Ordinance if need be? The sluggishness of the Government in this sphere is in contrast to the speed with which it has been acting to restore any revenue measure which the courts have held *ultra vires* the Constitution. Anyway, it is some consolation to hear from Dr. Nayar that the Act would be so amended as to make it obligatory on the part of magistrates to award the maximum punishment of imprisonment to those found guilty. The amendment should also provide for the publication of the names of manufacturers, whose drugs are found spurious or sub-standard, as soon as their stocks are seized, so that the public may safeguard itself against further injury. At present, such disclosure is withheld on the ground that it is *sub judice* and would constitute contempt of court. This contention does not stand to reason considering the magnitude of damage done to public health. If the publication of names of persons who are accused of murders, assaults and robbery before they are actually convicted by the court is permissible and does not evoke the displeasure of courts, one does not see why an exception should be made in the case of those who are accused of adulteration and manufacture of spurious drugs.

The question of punishment can be satisfactorily tackled only when an effective machinery is created to detect malpractices. In this respect, the Central Government is certainly to be blamed for neglecting the duty entrusted to it under the 1960 amendment, namely, to make available the necessary inspection staff to every State. It is to be hoped that at least now Dr. Nayar's promise that drug inspectors will be appointed will be followed by prompt and adequate action. The work of the inspection staff will, however, be largely ineffective, if sufficient laboratory facilities are not provided for in every State to check the quality of products. There is at present only one such laboratory (at Calcutta) in the whole of the country. It is strange that the Minister had nothing tangible to say on this issue, even though some members did stress this point. The apparent indifference of some of the State Governments has also contributed to the widespread growth of adulteration and other like evils. Adulterators do not exclude even poison from their activities. The U.P. Chief Minister is happy that one man who took poison never died! The Andhra Chief Minister candidly admitted that 50 per cent of foodstuffs and drugs sold in his State was either adulterated or spurious. But did his Government ever press the Centre for more inspection staff or for checking laboratories for the State?

Prevention is better than cure, so goes the saying. And it is a wise one, indeed. It is, therefore, necessary to exercise vigilance even while granting licences for setting up a factory. All possible care must be taken to see that only deserving entrepreneurs get licences for manufacturing and distributing drugs and that the applicants have the necessary men and money. From what Dr. Nayar said in the House it is clear that politicians themselves have been using their position and power to secure manufacturing licences for all and sundry. This is a deplorable tendency, for which the party in power is more to blame than anyone else. The Health Minister deserves to be complimented for her courage to speak the truth. Her sincere appeal to every Member of Parliament to take "a solemn pledge here and now" to desist from using their influence to get licences for their friends and supporters merits absolute compliance. In any case, her revelation and appeal should serve to encourage civil servants to resist political pressures and decide the application for licences purely on their merits.

The suggestions made by some of the Members of Parliament who spoke on the occasion reflected a desire to make political capital out of an unfortunate situation. They, therefore, lacked sense of realism. A Communist member suggested nationalisation of the drug industry as the right solution. This remedy, however, is worse than the disease. It should not be forgotten that the offenders are invariably small manufacturers, whereas the big units of the pharmaceutical industry have on the whole been operating on a scientific basis, taking all possible care to maintain high quality. They have taken pains to secure the collaboration and assistance of some of the world's foremost manufacturers, whose contribution in terms of technical know-how, in particular, has been a great asset to the industry. The quality of their products is not inferior to those produced in the West, although, by and large, the industry is of only recent origin in this country. Further, the drug industry here is by no means the preserve of the private sector. The State has already taken up the major sector of basic drugs. Indeed, the trouble is that the State has not been able to fulfil in time the projects which it has reserved for itself. Further, if the State cannot even control the large number of units spread all over the country, how can it successfully run them? What is needed is not putting an end to the private sector in this industry, but weeding out that section of industry and trade which is indulging in anti-social activities.

Unfortunately, corruption is widespread and the Government machinery has become a serious victim of it. An idea of the extent to which this evil has penetrated the system can be had from some data given by Mr. Lal Bahadur Shastri at a meeting of the Informal Consultative Committee of Parliament for Home Affairs a few days ago. Between 1957 and June 1962, as many as 3,903 Central Government servants, including 128 gazetted officers, were subjected to "major penalties" such as dismissal, removal from service, compulsory retirement and reduction in rank. Their offence was corruption. For the same reason, other actions were taken against 25,566 Central Government servants, of whom 1,055 were gazetted officers. These figures, it must be noted, pertain only to the cases detected in Central services. The undetected cases of corruption must be legion. And then there are the services in States. In referring to these cases, it is not our intention to run down the Government. Corruption is not confined to the public sector alone; it is rampant in the private sector too in various ways. It has become a national evil and is traceable to inflation, controls and shortages. Our object in referring to corruption here is only to show that nationalisation by itself will not mean a panacea to drug racketeering.

Mr. Frank Anthony's suggestion for the creation of a strong public opinion against adulteration and sale of spurious goods is good as far as it goes. But, essentially, it is a case of begging the question, for the country is lacking in effective organisations of consumers, unlike in the U.K. and the U.S., to channel and represent

public opinion and supplement official measures for controlling malpractices. A beginning has recently been made in this direction with the assistance of Indian Standards Institution, but it is a feeble one. Nevertheless, it needs to be encouraged, and persons like Mr. Frank Anthony must take active part in this movement, in addition to championing the consumers' cause in Parliament. Finance is as important a prerequisite for the success of this movement as leadership is. It would be a good thing if some charitable trusts could set aside a part of their funds for this purpose. Even the big industrial units would be well advised to contribute funds without strings to this deserving cause, as the success of consumer organisations in minimising the evil of spurious products will mean a bigger market for their quality goods.

In discussing the drugs racket, the Members of Parliament seem to have overlooked an important issue, namely, the scarcity of several drugs and the resultant high prices, a state of affairs quite congenial to blackmarketing, adulteration, etc. Statistics can always be quoted to prove that production has gone up substantially. But the basic question is whether it has gone up to the extent necessary. The population of India has been leaping forward. The incidence of disease is heavy and varied. Imports have been cut to save foreign exchange and to give protection to domestic producers. The rapid increase in urbanisation has aggravated the demand for modern drugs and the resort to the traditional home-made remedies even for tackling simple ailments is fast diminishing. Having regard to all these factors, the growth in production of drugs has been inadequate. The evil of adulteration and spurious, as well as sub-standard, drugs which thrives because of the scope for making easy money in a sellers' market, cannot be eliminated, unless the supply of quality drugs in pilfer-proof packing is stepped up substantially and the prices of drugs brought down. The Government has thus no reason to be complacent on the production front. It is only through this front that a positive and lasting solution can be found to this problem.

SOVIET AID TO DEVELOPING COUNTRIES

THE process of de-Stalinisation initiated by Mr. N. S. Khrushchev in the Soviet Union and the theory of "competitive co-existence between capitalism and communism" propounded by him have had varied effects in the last six years. One of these is that the U.S.S.R. has found itself engaged in a "race" with the advanced countries of the West, more especially the United States, for rendering economic assistance to the developing countries of Asia, Africa and Latin America. A lot of publicity and propaganda has accompanied Soviet aid to a few selected countries, among which the most important are India, Indonesia, Iraq, United Arab Republic, Ethiopia, Argentina and Cuba. The aggregate aid given or promised during the period 1956-61—the two years prior to the year of de-Stalinisation accounted for just $141 million, of which India alone claimed $138 million—has been of the order of $2,645 million, representing 50 per cent of the amount received by the European communist countries from the Soviet Union in 14-15 years and 100 per cent of the sums promised to Asian Communist countries. This is no doubt a big amount, but its impact even on the selected underdeveloped economies does not seem to stand comparison with that of U.S. aid to a whole range of developing countries. It will be seen from the table in this article that American economic aid to these countries (excluding Japan) has aggregated $25,427 million in the period 1946-61—roughly ten times the comparable Soviet aid in the period 1956-61. This comparison, which has been made possible by two authoritative foreign reports,* is in no way vitiated by the difference in the two relevant periods, for practically no economic aid had been given by the Soviets prior to 1956 to non-communist underdeveloped countries.

*(i) *U.S. Foreign Assistance and Assistance from International Organisation.* Issued by the International Co-operation Administration of the U.S. Government.

(ii) *The Soviet Bloc and the Developing Countries.* Published by the Friedrich-Ebert-Foundation, Bonn.

The comparative picture reveals, on closer analysis, several interesting aspects of the two (American and Soviet) patterns of aid. There is, firstly, the point that American aid has been largely in the form of grants aggregating $15,510 million, whereas Soviet aid has been entirely in the form of loans. Secondly, the Soviet Union seems to be engaged in a competition with the United States in the matter of aid-giving in five countries—namely, Burma, India, Indonesia, United Arab Republic and Ethiopia—inasmuch as its aggregate aid to them represents nearly half, 45 per cent to be precise, of the aggregate American aid to the same countries. But so far as individual countries are concerned, the proportion varies. In the case of India, for instance, Soviet aid is only about a quarter of the U.S. aid. Thirdly, relatively more Soviet aid has been given to Iraq, Ghana, Guinea, Mali, Nigeria, Somali Republic and Cuba—countries which have not been favoured by the United States to any substantial extent. Fourthly, countries aligned with the Western countries in regional military pacts have been virtually ignored by the Soviets in the allocation of its aid. These points pertaining to Soviet, as also some others, show that there is some method in the selection of countries for possible favours.

If there is any such strategy behind the Soviet pattern of aid, what is it? The Friedrich-Ebert Foundation's present study has sought to provide an answer. The theoreticians of the

Soviet bloc, according to the Foundation, distinguish the following four groups of developing countries:

1. Countries which have not yet achieved their political independence. In these countries, the Soviet bloc takes up the struggle for independence by means of propaganda, politics and organisation, in order to achieve a more satisfactory basis for operation after they have obtained their independence.

2. Countries "governed by reactionary pact-makers." By this is meant all nations which are linked in any way with the West. The primary activities of the Soviet bloc are engaged against the Governments of these countries and their Western agreements and by these means it strives to bring tactically into the front line all opponents of Western commitments in Asia and Africa.

3. Countries with Governments in which the "nationalist bourgeoisie" lends the tone. India, the U.A.R., Iraq, Burma, Ceylon and others are counted among their number. These are countries which claim to be uncommitted and neutral, but in which the Communist parties scarcely make an appearance. The Soviet bloc considers the Governments of these countries as possible allies, because, as is stated in the new Party Programme, the progressive role of their national leaders is not yet exhausted. So far as credit aid is concerned, these countries, as is shown, are for the U.S.S.R. the most costly.

4. "National democratic States." These are States which are considered to be transitional States towards "a higher phase of development" on the "non-capitalist road of development." Cuba is at present amongst these States. The pre-conditions for such a State are supposed to be maturing in Indonesia, Ghana, Guinea and Mali. Expatiation on Cuba is superfluous, for Fidel Castro has already committed himself to the founding of a single party of the same kind as the S.E.D. in the East zone of Germany and to the building up of a "socialist State" in Cuba.

In the aforesaid four groups of developing countries, the first one is *wholly* ineligible for Soviet aid. The second group, too, is *generally* not eligible for Soviet aid, a striking exception being Pakistan which was offered $30 million last year. The last two groups of developing countries alone have been actively assisted by the Soviets, presumably for the purpose of strengthening their economies "against those developing countries which are linked with the West and against the West in general." But aid in the form of credits and economic assistance, foreign trade, even the construction of industrial works and installations, and the sending of specialists, and the training of engineers and technicians from the Afro-Asian countries, according to the West German study, are *not* the only parts of the Soviet strategy. In its view, there are also such intangibles like activity of an organisational-political and cultural-political nature, as also the political-psychological influence of the Soviet bloc, in the developing countries. Since these cannot be expressed in terms of roubles, the usual comparisons drawn between Soviet and Western economic aid are imperfect to that extent. In other words, the political pull of Soviet economic aid forms a *part* of the total Communist pull exerted in a variety of ways. There is not much that is new in this interpretation with which students of international affairs in the "cold war" era are all too familiar. The most that it proves is that Soviet aid has a political purpose and that it is not quite so altruistic and disinterested as it has been made out to be.

There are some other aspects of the economic relations between the Soviet Union and the developing countries. In the sphere of foreign trade, for instance, the Soviet Union and other countries of the Soviet bloc are known to have expanded it with the countries of Asia, Africa and Latin America—both as regards the volume of exchange and the number of transactions—in the last two or three years, though precise figures are not readily available. Secondly, as many as 7,000 to 8,000 students from the developing countries are at present studying at the Universities and Institutes of the U.S.S.R. in technical and scientific fields. The Soviets have also promised, as revealed by the position at the end of 1960, to build more than 300 fitted-out industrial works in 14 developing countries —works providing for the training of engineers, technicians and skilled workers.

Further, the Soviet Union is estimated to have a reserve force of 30,000 experts on development who can be sent to the developing countries. This estimate, however, cannot be verified. The West German study, on the other hand, has estimated the current number of Soviet experts available for service in the developing countries at 10,000. This stock of experienced specialists in development and the rigid centralisation of economic aid will make for greater Soviet economic activity in the developing countries. Above all, as the Soviet Union has entered the lists against the West in the economic field, albeit in areas which suits its political strategy against the West, it has instituted a strict quality control in respect of equipment and plant sent to the developing countries. Thus the race is on between the U.S.S.R. and the West, particularly the United States, in the field of "competitive co-existence" with its paradoxical undertones. But it is yet to gain momentum, and the current Soviet Seven-year Plan (1959-65) is expected to release more resources for the purpose of aiding the developing countries. That there will be greater "competition" than "co-existence" in the field of economic aid by the Soviet bloc and the West is, therefore, a logical inference, though the fact remains that Russia has not so far agreed to raise its original offer of aid to India for the third Plan.

MARKET GOSSIP

Another Accord Among Banks

THE spirit of co-operation among banks is growing. Conversely, the competitive spirit is distinctly on the wane. The inter bank agreement on deposit rates has been in force for some four years now, having begun in October 1958. Although it was about to collapse at one time in the first half of this year, it was reinforced by a slight modification in favour of medium and small banks. Encouraged by the benefits which it is assumed to have conferred on the banks in the shape of lower cost of deposits and pressed by the ever-increasing operational costs which are gradually eating into their profit margin, the managing committee of the Indian Banks' Association has reached an understanding that member-banks should agree to a minimum lending rate of 6 per cent on all loans, advances and overdrafts, irrespective of the standing of the borrower or the type of the collateral. There is also a strong desire among a large number of banks to reach an understanding on service charges and it may fructify ere long. Further, the idea is gaining ground in some circles that there is too much of competition among banks in branch banking and that it must be regulated by drawing up a plan for opening branches for the remaining years of the third Plan and distributing the centres among the banks on a regional or some agreed basis. The Reserve Bank has already asked the banks to submit their branch expansion programmes for the next three years, so that it can co-ordinate them and permit a planned development. Thus, in every sphere, the scope for competition is being greatly narrowed down, which will ultimately leave little room for the banking clientele to choose between one bank and another.

The understanding among the members of the managing committee of the Indian Banks' Association is in the nature of a recommendation and will form the basis of a formal agreement to be negotiated with all the members of the Association, exchange banks and small banks. Considering the co-operative attitude always displayed by the exchange banks, it is confidently assumed that they will agree to the proposal. The first big question is whether the State Bank of India, which is not a member of the Association, will agree. The second question is whether the Reserve Bank will give its blessings. The third question is whether the Chambers of Commerce and Industry will accept it without demur. And the fourth question is whether all Members of Parliament will ignore it as being not important enough to merit their attention.

The attitude of the State Bank will depend more on that of the Reserve Bank. There is good reason to believe that the latter is not averse to the managing committee's proposal. The Reserve Bank itself has already subscribed, in principle, to the fixation of a minimum lending rate. As early as in October 1960, it directed all scheduled banks to adhere to a minimum lending rate of 5 per cent per annum on all advances existing or new, clean or secured, but excluding advances to other banks (including co-operative banks) and bank employees. In addition, all banks were required to raise their average lending rate by at least ½ per cent, the base period for comparison being the year ended 30th June 1960. The Reserve Bank's reason for taking this action was "to make credit dearer to the ultimate borrower, so as to restrain the growing demand for banks." The banks have no doubt other reasons, too, for wanting to raise the minimum lending rate to 6 per cent, but the reason given by the Reserve Bank for the measures it took in October 1960 has itself become stronger since then. It is common knowledge that, in the week ended 7th July last, the Reserve Bank made it pretty clear, both by action and by implication, that the banks must make their credit costlier than it was before. Indeed, towards the close of last month, some banks had revised their lending rates in an upward direction, the general increase being ½ per cent. With this rise, the consensus lending rate for first class advances must be 6 per cent or thereabout now. For other advances, the rates have been higher, ranging from 6½ to 8 per cent. So, in recommending an absolute minimum rate of 6 per cent, the managing committee of the Association has made no revolutionary proposal, though, in principle, it is adding one more instance of their inclination to resort to restrictive practices, thereby laying themselves open to attacks by politicians.

One may, of course, question the necessity for raising the minimum lending rate by as much as one per cent, if the general rate among them is already six per cent. If, by the forces generated by the Reserve Bank, the lending rates had themselves automatically gone up, why does the Indian Banks' Association want to resort to such a step which is unlikely to yield any tangible gains but very likely to provoke attacks against banks? If they are convinced that the minimum lending rate should be formally raised, why don't they persuade the Reserve Bank to issue a directive to that effect, instead of themselves taking the lead and thereby incurring the odium for it? These are pertinent questions which the managing committee of the Association will do well to answer.

That one of the big banks was strongly opposed to the proposal under discussion is no secret. Its reason must have been deeper than the fear of the State Bank of India under-cutting it and taking away a part of its first class large-scale advances, the cost of servicing which is very much less than that of advances to medium and small businessmen. It might have disclosed that as the reason for its reluctance to subscribe to this understanding. But its undisclosed reason might have been the feeling that, in view of the slow pace of industrial progress since last year on account of crucial shortages, the demand for bank credit, in the coming busy season at least, might not increase at a rate that would keep pace with the growth in deposits and that as such it should have the freedom to quote slightly more favourable rates to borrowers than is the case now or than those that may be quoted by its competitors in the near future. Such a possibility itself might be the real reason behind the managing committee's anxiety to forge a gentleman's agreement on the minimum lending rate. There is no doubt that a good number of bankers are worried over the rising cost of banking operations and that they would not like even slightly excessive competition that would adversely affect their profit-margin.

In addition to the Reserve Bank's rationale for keeping the cost of bank credit high, spokesman of the Indian Banks' Association invariably quote the undermentioned reasons for raising the minimum lending rate:

(*a*) The banks will have a higher capital to be serviced and will also have to provide a larger amount to the reserves; (*b*) they are being pressed to open branches in areas which are not fully developed economically and, in any case, new branches even in developed areas take four to five years to pay; (*c*) the increase in corporate taxation from 45 to 50 per cent has reduced their profit-margin; (*d*) the latest Bank Award has substantially pushed up the expenditure on staff.

The associations representing trade and industry are unlikely to raise any objections to the banks' move, as the bosses are the same for both lenders and borrowers. In any case, with Dena Bank's Managing Director, Mr. Pravinchandra V. Gandhi —one of the leaders of Indian banks—as President of the Indian Merchants' Chamber for this year, with the United Commercial Bank's General Manager, Mr. S. T. Sadasivan, holding the presidentship of the Indian Chamber of Commerce, and with Mr. Shriyans Prasad Jain, who is closely connected with the Punjab National Bank, as the President of the Federation of Indian Chambers of Commerce and Industry, there is little possibility of protests from the trade bodies, the watch-dogs of the private sector. It is a well-known fact that banks in this country are dominated by industrialists and that they have been actually slow in raising the rates of interest on advances.

The proposed inter-bank agreement on lending rate differs from that on deposit rates in some respects. The agreement on lending rate specifies the minimum that a bank should charge on advances, while that on deposits pertains to the maximum beyond which a bank should not pay depositors. Secondly, the maximum rates on deposits vary according to the period of deposits and the size of banks. The proposed minimum rate on advances is applicable to all classes of commercial banks and to all types of advances, whether it is clean or secured, whether the borrower is first class or otherwise, whether it is an overdraft or a term loan, whether the collateral is gilt-edged and gold or house property or equities. Will not the absence of any gradation in the minimum rate taking these finer points into account lead to circumvention of the agreement? The possibility cannot be ruled out. It may well happen, when the demand for funds is slack or grows at a slower pace than deposits. There is, however, a section among banks which feels that an attempt to go into such details and fix varying minimum lending rates, depending upon the quality of advances, their duration and the size of banks, will not prove a success, as it will be extremely difficult to reach an agreement with all the banks on this basis.

Automobile Tyres and Tubes

Two considerations seem to have prompted the Government of India to raise the third Plan target (capacity) of automobile tyres and tubes from 3.70 million to 5.14 million. One, the demand for tyres and tubes is growing at a much faster pace than had been anticipated earlier. And, two, the Government wants the industry to earn some foreign exchange by way of exports. The export target fixed for the calendar year 1963 is equivalent to 10 per cent of actual output; in the current half-year, the industry has been asked to export Rs. 100 lakhs worth of tyres and tubes. The additional capacity amounting to 1.44 million (the difference between the original and revised targets) is sought to be achieved partly through the establishment of seven new units—three of the five units already licensed are expected to commence production in about six months—and partly through the expansion of some of the existing five units.

While the upward revision of the automobile tyres and tubes target is to be welcomed, it is somewhat doubtful whether the revised target will, in fact, be hit. The manufacture of these products depends entirely on the availability of adequate supplies of a number of raw materials such as rubber, carbon black, rayon and nylon tyre cord, sulphur, zinc oxide, beadwire, tube valves, accelerators and antioxidants, plasticisers and tackifiers. The most important of these is rubber in which there is a big deficit and the deficit will be bigger still in the coming years, unless the Government takes energetic steps to increase output. The overall requirements of rubber in 1965 66 are estimated at 140,000 tons, whereas the actual aggregate production on the basis of capacity now licensed is expected to be no more than 90,000 tons comprising 40,000 tons of natural rubber, 30,000 tons of SBR type synthetic rubber (from the Bareilly plant) and 20,000 tons of reclaimed rubber. The gap between supply and demand will thus be 50,000 tons. This gap, it is pointed out, can be filled only by licensing two more units for the manufacture of two different types of stereo-specific synthetic rubbers, that is, CIS: 1.4 Polybutadeine and CIS:1.4 Isoprene. This question, we are told, is now engaging the attention of the Government.

It is, however, not so much the licensing of additional capacity for synthetic rubber manufacture as the ensuring of the requisite supply of raw materials for making such rubber that is very important. In other words, the creation of additional capacity for synthetic rubber will depend on the speed with which steps are taken to establish petro-chemical industry. It is well known that quite a few proposals have already been submitted to the Government, including one for the establishment of a large sized naptha-steam cracking unit by Esso. The petro-chemical industry will provide raw materials like ethylene, polyethylene, propylene, butylene, butadiene and benzene. Unfortunately, the Government's policy continues to be halting, thanks to the dilly-dallying tactics of Mr. Malaviya's Ministry. One is at a loss to know as to why the Government has still not taken a decision on the establishment of such a great import-saving, catalyst industry as petro-chemicals. Many months have elapsed since some of the parties submitted concrete proposals for petro-chemicals. Further, although a long time has passed since the Petrochemicals Committee (appointed in November 1960 with Dr. G. P. Kane as Chairman to prepare a plan for the development of petrochemical industry) rendered its report, the Government has not cared to release the report to the public. How much time does the Government need to study the findings of the Committee and take a decision thereon? When the private sector, especially Esso and Mafatlals, are prepared to put in money and secure technical know-how to establish petro-chemical projects, why should not the Government give them permission, as well as encouragement and assistance, to go ahead? Unnecessary delay will only compel the country to be dependent on imports entailing expenditure of much precious foreign exchange which it can ill-afford. Such delays and adoption of dubious economic policies in the past have been greatly responsible for the present foreign exchange difficulties. The repetition of such mistakes will only make the position worse in this respect in the coming years.

World Coffee Conference

The Friday of this week (24th August) was a crucial one for the United Nations Coffee Conference at New York, inasmuch as that day was the deadline fixed for reaching an agreement on the regulation of the world coffee market. The Conference, which began on 9th July, should have ended on Saturday the 18th inst., but the delegates decided to extend it by an additional six days, subject to one condition, namely, that, if no agreement was reached, the Conference would be reconvened in November or December next. At the time of writing (afternoon of Wednesday the 22nd inst.), no information is available as to whether the Conference did come to a successful conclusion or not.

The New York Conference, it will be recalled, was convened to thrash out the details of a long-term world coffee agreement to replace the present year-to-year agreement due to expire on 30th September 1962. The Conference went on smoothly for several days, but a deadlock arose on the 10th inst. when the delegates from Brazil and other Latin American coffee producing countries "walked out" in protest against the European Common Market's refusal to reconsider reduction of discriminatory tariffs and taxes on Latin American coffee. Brazil, the world's largest producer of coffee with almost half the aggregate output to its credit, made it clear that it would abstain from further participation in the Conference, unless the Latin American coffee producers were allowed access to the Common Market on the same terms as those shown to coffee producers in Africa and the C.M. agreed to remove the existing obstacles in the way of expansion of coffee consumption. The C.M. countries were not agreeable to this demand on the score that a relaxation of restrictions on coffee would encourage demands for similar relaxation in respect of other commodities from the developing countries.

The deadlock was, however, resolved, thanks to the U.S.—it was this country that took the major initiative in promoting the Conference—which worked hard behind the scenes "to save the Conference." The C.M. countries agreed to a compromise formula (suggested by the U.S. delegation) that commits them to come forward within six months of the signing of the long-term agreement with a specific programme for the reduction of discriminatory import tariff against Latin American countries during the five-year period of the agreement. The compromise formula also seeks to eliminate other taxes and restrictions on Latin American coffee, particularly those levied by West Germany, which decided to become a full member of the Conference. And it was agreed that the common external tariff should be lowered from 16 to 12 per cent, with a provision for further reduction in the duty to 9.6 per cent later. Brazil and other Latin American countries were quite satisfied with these assurances and resumed full co-operation in the task of finalising a long-term coffee agreement.

At the Conference, all the coffee producing countries generally agreed on the need to play their part in the new agreement. The major producers will have to retain a part of their exportable output and the smaller producers will have to retain a smaller proportion. But the point at issue pertained to export quotas to be based on a two year period, while the African producers whose latest crop has been smaller than would have been under normal conditions, pressed for a four-year base period. It is not known at the time of writing whether any agreement has been reached on this issue as well on the question whether the quota system should cover only the traditional markets in Western Europe, the U.S. and Latin America or include the new markets also. The implications of the agreement to India, as well as the question whether this country should be a party to it, can be judged only when it takes final shape.

TREND OF SHARES

STEADY TENDENCY

(From Our Own Correspondent)

BOMBAY, 22nd *August*

RENEWED speculation that the much delayed announcement of the steel retention prices might be made this week (Monday to Saturday) provided a steady tendency in the stock markets during the week under review. In fact, the return to steadiness from the previous week's slightly reactionary trend by the markets was due entirely to fresh speculative buying in Steel shares which rose again to strong resistance levels and, despite that, closed around the highest levels of the week and on a firm note. Other sections staged a moderate recovery mainly in sympathy with Steels. Activity was selective and largely professional. Turnover was small.

It is rather difficult to judge the market trend from the two to four days' trading this week in the new account. But, judging from the low carry-over charges for the past two settlements, the technical position of the markets seems to be healthy and indicates scope for further rise in values. Institutional buying apart, there have been talks of some big operators taking sizable deliveries in some pivotal counters against the last settlement. If that were to happen and looking at the comfortable conditions in the money market, the trend of *badla* charges would continue to be normal for sometime to come. Should the news background turn favourable, particularly in regard to the steel retention price announcement and the declaration of the dividend by T.I.S.Co., the prominent bull operators, who have continued to hold their sway on the markets, would easily succeed in turning the technical position to their advantage. The political storm across the border is there, but there are frequent and more reassuring statements from the leaders on the issue. And then, some leading companies are due to announce either their interim or final dividends. Clearly, the steel retention price announcement will have decisive effect on the market trend. Meanwhile, it is interesting to find the chartists attributing great significance to the current steadiness in the markets. In fact, they are contending that, since 3rd August 1962, the markets have been passing through an interesting phase. They believe that the current steadiness, following the past two weeks' mild reaction, should take the markets to new high ground, that is, above the 3rd August high levels, failing which it would mark the resumption of downward trend in view of the 50 per cent recovery between 19th July last and 3rd August from the preceding slump. All this is speculation, of course.

* * * *

Fresh speculative support for Tata Steel Ordinary from a prominent operator is said to have imparted considerable steadiness to the market in Bombay. In active dealings, Tata Ordinary improved from Rs. 146 to Rs. 148.50 to close with a gain of Re. 1.75 over the week at Rs. 148.25. Indian Iron recovered from Rs. 26.35 to Rs. 26.85 to close 30 nP higher on balance at Rs. 26.80. Quoted *ex-div.* Mukand Iron were up by 19 nP at Rs. 25.25. Among Textiles, Standard were up by 10 points at Rs. 922, Century by Rs. 9.50 at Rs. 637, Shree Niwas by five points at Rs. 271 and National Rayon by three points at Rs. 518. But Kohinoor showed a loss of Rs. 2.50 at Rs. 320.50. The shares of Ruia group of mills showed moderate gains on expectations of a better working and higher dividends for the year ended 31st March 1962. The firmly held Indu Mill shares recorded further modest gains. In the Miscellaneous section, Bombay Burmah closed with a gain of six points at Rs. 669.50, Indian Dyestuff of Rs. 5.82 at Rs. 451.25 *ex-div.* and T.E.L.Co. of Rs. 2.50 at Rs. 335.50. Hindustan Motors were a shade easy at Rs. 19.96, but Scindia staged a recovery of 44 nP at Rs. 12.28. Other sections were quiet. Cash scrips were dull, but New India Fisheries were up by four points at Rs. 121 as were Star Textiles at Rs. 130. Globe Auto rose by 10 points to Rs. 100, Jyoti (old) by Rs. 14.50 to Rs. 190 and Anil Hardboards by nine points to Rs. 200, while Kesar Sugar showed a loss of Rs. 12.50 at Rs. 187.50, Selected Satgram of 10 points at Rs. 132.50 and Brady Engineering of Rs. 8.75 at Rs. 101.25.

* * * *

Some fresh speculative support for the popular shares was discernible in Calcutta. Thus, Dunlop and Birla Jute showed a gain of 50 nP each at Rs. 40.06 and Rs. 33.69, respectively, Howrah improved by 38 nP to Rs. 20.50, Kesoram by 31 nP to Rs. 28.50, J.K. Cotton also by 31 nP to Rs. 17.50 and Rohtas by 32 nP to Rs. 14.44. But G.K.W. showed a loss of 50 nP at Rs. 38.25. In the Cash List, among Coals, the loss of Rs. 4.50 in Bengal at Rs. 347 was offset by a gain of Rs. 5.63 in K. Jherriah at Rs. 48.75. Jutes and Textiles were steady. Engineering issues showed minor changes, with the exception of Burn which were four points down at Rs. 681 and Raymond which showed a loss of 98 nP at Rs. 5.37, in contrast with a gain of 75 nP in Hindustan Wire at Rs. 11.50 and of 68 nP in Jessop at Rs. 23.12. The Miscellaneous section disclosed generally small changes either way, excepting Duncan Bros. which looked up from Rs. 154 to Rs. 157.50, B.I.C. which gained 97 nP at Rs. 10.31 and Isaac Holdens which improved from Rs. 16.37 to Rs. 17. Burmah Oil moved down by Re. 1.31 to Rs. 25.50 and Titaghur Paper declined sharply from Rs. 41 to Rs. 38.37. Tea shares had an even distribution of small gains and losses, but Methoni reacted quite sharply from Rs. 21.25 to Rs. 19.69, while N. Dooars rose by three points to Rs. 251.

* * * *

Trading was dull but the tone steady in Madras. Among Textiles, Cannanore rose further from Rs. 132 to Rs. 134.50 and other active shares showed small gains. In the Miscellaneous section, Aluminium Industries showed a gain of 11 nP at Rs. 24.80 and Mettur Chemical of 12 nP at Rs. 13.87, but Tube Investments reacted further from Rs. 269 to Rs. 267 and Madras Rubber declined from Rs. 22.87 to Rs. 22.50. Among Sugars, E.I.D. rose from Rs. 41.50 to Rs. 43 and India from Rs. 9.25 to Rs. 10.10. Plantings were generally weak, with Nonsuch showing a loss of 50 nP at Rs. 21.75, Parkside of 38 nP at Rs. 21.87, Consolidated Coffee of 12 nP at Rs. 18.58 and Midland of 15 nP at Rs. 10.90. Highland, as an exception, moved up from Rs. 12.87 to Rs. 13.

KALPETTA ESTATES TO RAISE CAPITAL

The Kalpetta Estates Ltd. of Alleppey, engaged in the production of rubber, tea and cardamom, proposes to raise its capital by 50 per cent from Rs. 8 lakhs to Rs. 12 lakhs. The new 40,000 equity shares of Rs. 10 each will be offered at par at the first instance to the existing shareholders of the Company in the proportion of one new share for every two shares held by them and the balance, if any, will be offered for public subscription. The lists will remain open for nine days from 4th September 1962. The proceeds of the issue will go to finance the proposed expansion envisaging the planting of 200 acres more in cardamom and 150 acres more in rubber. The expansion will be completed by 1966-67, when the Company will have a total planted acreage of 909 in mature rubber, 150 acres in immature rubber, 485 acres in cardamom (in full bearing) and 330 acres in tea (in full bearing). The Company also proposes to modernise and electrify its tea and rubber factories. On the existing 1,524 planted acres of the Company, the capitalisation per planted acre works out to Rs. 525 and will rise to Rs. 640 on the increased capital of Rs. 12 lakhs. As against this, tea and rubber estates are, it is claimed by the spokesmen for the issue, changing hands at Rs. 2,500 to Rs. 5,000 per acre. The Kalpetta Estates have a proud record of having paid attractive dividends for the past 10 years. The expectations are that, even after the capital is raised, the return to the investors would be maintained at a reasonable level.

At present, the Company's paid-up capital of Rs. 8 lakhs is backed by reserves and surplus aggregating Rs. 8.68 lakhs. The fixed assets of the Company are estimated at Rs. 16.91 lakhs. Mr. A. V. Thomas, the pioneer among South Indian planters, is the Chairman of the Company. The current quotation for the existing shares of the Company is Rs. 11.25 *ex-right*, as against Rs. 11.83 *cum-right* sometime ago.

WANDLESIDE NATIONAL CONDUCTORS LTD.

The management of Wandleside National Conductors Ltd. of Bombay has informed us that the pre-commissioning trials on the Company's plant at its works at Poona have now commenced and are progressing satisfactorily. The first bulk supply of copper ingots from the U.S. has already been shipped and is expected to be received in Bombay by the second week of September. Commercial production is, therefore, scheduled to commence sometime in October 1962.

INDIAN RAYON CORPORATION

The Indian Rayon Corporation Ltd. proposes to issue additional 30,000 ten per cent, taxable redeemable cumulative preference shares of Rs. 100 each and offer them to the existing shareholders in the proportion of six new shares for every 11 shares held by them. If any shares are unsubscribed, they will be placed privately through a leading firm of share and stock brokers. The Company has already issued 250,000 equity shares of Rs. 100 each and 55,000 preference shares of a like denomination.

GOVERNMENT OF UTTAR PRADESH

FINANCE DEPARTMENT

Dated Lucknow, August 7, 1962

PRESS NOTE

4½ per cent Uttar Pradesh State Development Loan, 1974

THE Government of Uttar Pradesh are floating a loan of Rs. 9 crores in order to finance development schemes particularly those relating to electricity, irrigation and industries. The loan will open for subscriptions on 27th August, 1962 and will close on 1st September, 1962 unless closed earlier. The main terms of the loan are that the issue price will be Rs. 99.75 for every Rs. 100 of the loan applied for; the loan will have a currency of 12 years from 27th August, 1962 and will be repaid at par on 27th August, 1974; the loan will carry interest at the rate of 4½ per cent per annum from 27th August, 1962 payable half-yearly on 27th February and 27th August, the payments being subject to tax under the Income Tax Act, 1961. Subscriptions for the loan can be made in the form of cash or cheque or securities of 3½ per cent Uttar Pradesh Loan, 1962 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India, the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore, the branch of the State Bank of India at Patna and the branch of the State Bank of Hyderabad at Hyderabad.

Full details of the terms of the loan are contained in Finance Department Notification No. B—I-3393/X—88-62, dated August 7, 1962, copies of which, along with the application form, are obtainable at the receiving offices mentioned above.

2. *Financial position of the Government of Uttar Pradesh*:

Revenue Position—The revenue receipts and expenditure and the surpluses for the last nine years are as follows:

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus (+)
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,553	8,423	+130
1956-57	8,996	8,984	+12
1957-58	10,493	9,942	+551
1958-59	11,723	11,614	+109
1959-60	12,955	12,816	+139
1960-61	14,835	14,431	+404
1961-62	15,298	14,841	+457

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1961-62 were 523 lakhs in the U.P. Road Fund, 3 lakhs in the Hospital Fund, 46 lakhs in the Famine Relief Fund, 1,231 lakhs in the Revenue Reserve Fund, 2,246 lakhs in Zamindari Abolition Fund, 264 lakhs in the Depreciation Reserve Fund —Irrigation, 495 lakhs in the Depreciation Reserve Fund—Government Bus Services, 432 lakhs in the Depreciation Reserve Fund—Electricity, 21 lakhs in the Contingency Reserve Fund—Electricity and 221 lakhs in the Depreciation Reserve Fund—Cement Factory. Most of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 5,482 lakhs.

Debt Position—On March 31, 1962, the debt of the Uttar Pradesh Government amounted to 31,793 lakhs consisting of 896 lakhs representing the consolidated debt due to the Central Government, 22,495 lakhs taken from that Government for development purposes, 1,071 lakhs for Community Development Projects and 338 lakhs for Relief and Rehabilitation Schemes *plus* 6,337 lakhs representing the amount of public loans floated by this Government from time to time, 134 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 229 lakhs from the Reserve Bank of India, 121 lakhs from the Life Insurance Corporation of India, 105 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies and 67 lakhs from the Khadi and Village Industries Commission. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds and Rehabilitation Grant Bonds, the outstanding balance of which on March 31, 1962 amounted to 8,201 lakhs. Sinking Funds have been constituted for all the public loans and the balance at the credit of these funds which amounted to 2,520 lakhs on March 31, 1962 are mostly invested in Government of India Securities. Besides this a sum of 1,765 lakhs is also available in the Sinking Fund built up for the amortization of loans obtained from Government of India, which are repayable in lump sums.

Assets of the Government—Against the outstanding debt of 31,793 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tube-wells, Cement Factory, Government Bus Services and Electricity Schemes, in which about 24,934 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 15,382 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

Footnote—The accounts for 1961-62 have not yet been closed finally. The figures for 1961-62 mentioned in the Press Note are based on the latest available information and are liable to changes.

NEWS IN BRIEF

THE Government of India proposes to constitute a high-power panel of experts, with Mr. G. L. Mehta as Chairman, to examine the question of import substitution by indigenous manufacture.

The Madras Government has decided to open an industrial estate at Madhavaram specially for leather and leather products at an estimated cost of Rs. 12 lakhs.

The National Productivity Council proposes to set up a National Institute of Industrial Engineering in Bombay, with the assistance of U.N. Special Fund. The Institute will train 250 engineers annually.

The Government of India has approved the terms of collaboration concluded by a private firm with a Japanese company for putting up a plant in Kerala to manufacture transformers and electrical equipment.

A Central Dairy, including a milk processing and bottling plant with a capacity of 500 maunds of milk per day, is being set up at Ernakulam by the Kerala Government. The cost of the plant will be met by the Central Government partly as grant and partly as loans.

Two additional blast furnaces will be set up under the expansion programme of the Bhilai Steel Plant, according to Mr. C. Subramaniam, Minister for Steel and Heavy Industries. These furnaces are expected to be commissioned by December 1963 and December 1964, respectively.

Exports from India during the month of July 1962 amounted to Rs. 56.02 crores, showing an increase of Rs. 5.6 crores over those in July last year. The total exports during the first seven months of this year (January-July) were higher by Rs. 2.12 crores at Rs. 371.05 crores, as compared with the corresponding period in 1961.

The Central Food Technological Research Institute, Mysore, has developed a fumigation process known as the durofume process to ensure protection of stored grains against insects. The process, which makes use of a combination of ethylene dibromide and methyl bromide, is effective in checking reinfestation from neighbouring godowns or from incoming material.

A scheme for improvement of national highways and approach and feeder roads in the Bengal-Bihar coalfield area, it may be recalled, has been prepared in order to facilitate the movement of coal by road. This scheme, which is estimated to cost about Rs. 17.20 crores, has already been approved by the Planning Commission, and action is now being taken to provide the necessary funds.

The cost of producing newsprint at the Nepa Mills has doubled, from the original estimate of Rs. 478.00 per ton (excluding depreciation) to Rs. 870.62 as of 1961-62, according to Mr. N. Kanungo, Union Minister for Industry. The increase is attributed partly to the inclusion of a depreciation charge of Rs. 106 per ton in the price and partly to the rise in the cost of raw materials, power, fuels and labour.

The machine tool factory now being established in the public sector at Pinjore in the Punjab by the Hindustan Machine Tools Limited, Bangalore, is expected to go into production early next year. The total capital cost of the project, including the township, is estimated to be Rs. 7.5 crores. The capacity presently planned is about 1,000 machine tools per annum and the factory is being so designed as to double its capacity after a few years.

The Central Fuel Research Institute at Dhanbad has developed a new fertiliser from coal. The process involves oxidising coal in fluidised bed in air stream of 200 degrees C. and subsequent treatment with ammoniacal liquor and simultaneous oxidation and ammoniation of coal in a fluidisation column at 300 degrees C. in a mixture of air and ammonia. The cost of production has not yet been worked out. Preliminary field trials have been encouraging.

The Westinghouse Electric International Company in the U.S. has agreed to supply a 15,000-kilowatt steam turbine generator unit and associated electric equipments for a new paper mill to be built by Orient Paper Mills Ltd., at Amlai, Madhya Pradesh. The new mill, scheduled to be completed in early 1965, will produce bleached paper from bamboo. The mill, it is said, will be the largest of its kind in Asia. The U.S. Export-Import Bank will finance the export of machinery.

The net collections of small savings in 1961-62 amounted to Rs. 91 crores, as compared with Rs. 105 crores in 1960-61. Disclosing this in the Lok Sabha, the Finance Minister, Mr. Morarji Desai, explained that there was a large increase in 1960-61 due mainly to a diversion of the deposits in the post office savings bank, but this trend had been partly reversed in 1961-62, following the revival of public confidence in the commercial banks. It was not, therefore, correct, he added, to assume that there had been any continuing trend of a decline in these collections.

As a measure of export promotion, Indian exporters of "French coffee" will be allowed to import chicory powder to the extent of 15 per cent of the past exports of "French coffee" direct from any source. In cases where the quantity of chicory powder desired to be imported exceeds 15 per cent of the quantity of "French coffee" exported, the applications for import licences must be supported by a recommendation from the Coffee Board. Hitherto all imports of chicory powder were being canalised through the Coffee Board and the exporters of "French coffee" were required to register their names with the Coffee Board, Bangalore, for their requirements of chicory.

The National Coal Development Corporation has signed an agreement with the Polish firm, Cekop, for setting up a coal washery at Gidi in the Karanpur fields of Bihar. Estimated to cost a little over Rs. 8.31 crores, the washery will have an annual raw coal input capacity of 2.84 million metric tons. This will be the Corporation's second washery in Bihar, the first being at Kargali. Expected to be commissioned by April 1965, the washery will produce 1.1 million metric tons of washed blendable coal, besides 1.1 million metric tons of washed steam-size coal, suitable for the railways. The present agreement is in pursuance of the earlier agreement for economic co-operation concluded between the Governments of India and Poland in May 1960 providing for a credit of Rs. 14.3 crores.

* * * *

From Abroad

The U.S. automobile industry sold 3,446,563 cars in the first six months of this year, second only to the industry's record achieved in 1955.

Portugal has decided to abolish customs duties against imports from Portuguese territories over a transitional period ending 1971, in a bid to create a Portuguese Common Market.

The total exports (including re-exports) of the U.K. were higher at £340.1 million in July, as compared with £330.4 million in the previous month. Imports rose from £369.9 million in June to £388.4 million.

Japan proposes to buy increasing quantities of sugar from Australia, according to a 22-member Japanese sugar mission now visiting Sydney. The mission expects Japanese annual sugar purchase to go up from 1.2 million tons to 2 million tons in about ten years.

The U.S. Government has called for a meeting of the International Wool Study Group at London in November next to consider the problems of trade in wool and wool textiles. The Study Group, which was constituted in 1948, has not met since 1955. India, the U.S., the U.K., Australia and the Common Market countries are among its members.

The B.O.A.C. has decided to terminate its partnership agreement with the Ghana Airways, following the latter's agreement for similar revenue pooling arrangements with Alitalia. The B.O.A.C. has been in partnership with the Ghana Airways on the Accra-Europe-London route since July 1958, when the Ghana Airways was formed.

The current Five-year Plan of Czechoslovakia, which is due to expire in 1965, is expected to be discontinued at the end of this year as a result of shortfalls in key industries which are making Plan targets impossible to reach. Increase in industrial production during the year 1961 and in the first half of 1962 was at the rate of 7 per cent, whereas the planned rate was 8 per cent. The shortfall was particularly marked in two key sectors, namely, metallurgical and heavy engineerings.

An experimental passenger service by Hovercraft has been started in the U.K. between Portsmouth and the Isle of Wight, off southern England. The Hovercraft, Westland Aircraft's SRN-2, is three times as fast as the ferry boat. The service will be run every week-day for the next fortnight. There are also plans for a regular service. The world's first scheduled Hovercraft service began on 20th July between Wallasey and Rhyl across the estuary of the River Dee on the west coast of Britain. Hovercrafts travel on a cushion of air just above the surface of land or water and represent a revolutionary means of transport. The SRN-2 can carry 66 passengers. Much bigger craft accommodating several hundred passengers, will be used for a regular commercial service.

PERSONAL

MR. Ahmed Mohiuddin, Deputy Minister for Civil Aviation, and Mr. R. N. Katju, Director-General of Civil Aviation, left for Rome to attend the conference of International Civil Aviation Organisation.

Dr. S. Bhagavantham, Director of the Indian Institute of Science, Bangalore, has been appointed full-time Scientific Adviser to the Defence Minister and Director-General of Defence Research and Development.

Mr. Geoffrey M. Wilson, Director of Operations for South-East Asia and Middle East, World Bank, has been appointed a Vice-President of the Bank *vice* Mr. William Iliff who is retiring. Mr. Escott Reid will succeed Mr. Wilson as the Director of Operations.

Mr. Vincent Herbert Coelho, Joint Secretary in the Ministry of External Affairs, New Delhi, has been appointed Ambassador of India to Brazil. He is expected to assume charge of his new assignment in October next.

A family album of firsts!

PIONEERS IN PACKAGING, Metal Box introduced almost every new type of metal package to India.

Some notable firsts :

CROWN CORKS : To keep your aerated drink fresh and sparkling, Metal Box introduced decorated crowns. Today these precision-made closures serve bottlers all over India and in many export markets.

ROLL SEAL PILFERPROOF CLOSURES : The finest tamperproof seal for bottled drugs and foods. Metal Box developed the first Indian made Roll Seal closure as well as the first locally made machine to apply it. Today 150 million packages are hygienically sealed with these closures, frustrating the racketeer, protecting your health.

OPEN TOP CANS: A trusted sentinel in the cause of good health, the food can is common in appearance only. A supreme achievement of engineering and research skill, the Open Top can brings you the bounty of the harvest, fresh and uncontaminated, at any time of the year—wherever you are. Metal Box Open Top cans today carry Indian produce to all parts of the world.

COLLAPSIBLE TUBES : The convenient, versatile aluminium pack which brings you such diverse products as toilet articles, pharmaceuticals, adhesives and even food.

MORE ON RAILWAY ACCIDENTS

IN the Lok Sabha debate on the recent railway accidents, the Railway Minister, Sardar Swaran Singh, was in no position to claim that the incidence of accidents as a whole was significantly on the decline. Nor was he in a position to claim that the number of casualties (both killed and injured) had been relatively less in recent accidents than in those of previous years since 1957-58. Statistics were not quite so obliging as to sustain any such claims. The most that he could claim, after conveniently omitting to mention comparative figures of casualties, was that accidents were not *on the increase*. Even this he was able to substantiate only by a selective use of statistics confined to just four categories of accidents, namely, collisions, derailments, trains running into road traffic at level crossings, and fires on trains. The aggregate number of accidents under these selected categories, he said, was just about the same in the last three years—1,997 in 1959-60, 2,131 in 1960-61 and 1,954 in 1961-62. And he also gave the following more up-to-date figures in support of his contention that accidents were not on the increase even in recent months:

	First half of	
	1962 (No.)	1960 (No.)
Collisions	53	52
Derailments	636	646
Trains running into road traffic ..	119	105
Fires on trains	140	207
Total ..	948	1,010

To draw comfort from these figures (which do not include the crucial data pertaining to casualties), as the Minister did, was to slur over the fact of inefficiency, or of human negligence, or of failure of engines and permanent way. If, even after ten years of railway planning, all these factors continue to be in full operation, there must be something radically wrong in the working of the railways. So long as the Railway Ministry is in no position to claim that the incidence of accidents has been on the decline, the need for a searching probe into the working of the railways will remain. If, by any chance, the Kunzru Committee, which is currently inquiring into the question of accidents, takes a narrow view of its assignment, it will not have done full justice to the public. As the public is footing the bill of railway development, it has every right to expect that railway travel will be rendered much safer than it is today. The first step in this direction would necessarily have to be a searching probe which alone can lay bare all the serious defects and shortcomings for remedial treatment. The possible creation of an autonomous corporation for running the railways, as canvassed recently by the All-India Railwaymen's Federation, may not make much difference to the deplorable state of affairs caused, among others, by a continuing backlog of worn-out rails and sleepers and overworked engines.

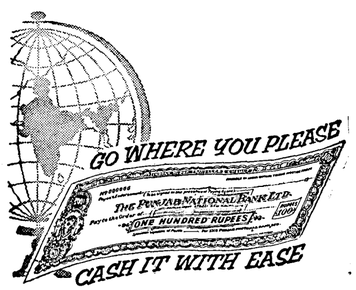
If the proposed increase in the size of the third Plan of the railways does not provide adequately for track and sleeper renewals, replacement of worn-out engines and strengthening of bridges, and assign to them still higher priorities, it will lack justification. It may be noted here that arrears of track renewals, as on 31st March 1961, were 6,291 kilometres of complete track renewals, 2,179 kilometres of through rail renewal and 2,165 kilometres of through sleeper renewals. There are still hundreds of "problem" and "vulnerable" bridges which have to be strengthened or protected. The over-age locomotives in service, as on 31st March 1961, represented 25 per cent of the total stock in service on the broad-gauge and just under 20 per cent on the metre-gauge sections. And, according to information provided by the Railway Minister, there are as many as 1,178 level crossings which would need to be manned, if accidents involving roads and road transport are to be avoided. With such a heavy backlog of worn-out rails, sleepers and engines, and defective bridges, and unmanned level crossings to boot, it is no wonder that railway accidents are proving to be more disastrous than in the past. This is an aspect of the matter which is no less important than the factor of human negligence. That the latter aspect, too, is pretty serious now can be inferred from the Railway Minister's reference to punitive action taken against 1,648 persons found guilty of dereliction or gross neglect of duty in 1961-62, as compared with 1,408 persons in the previous year. If there is growing indiscipline, especially among the lower ranks of the railway staff, as is frequently alleged, the matter calls for serious consideration not only by the authorities but by all railwaymen's organisations. Again, wherever inefficiency has resulted from the reported promotions of inexperienced men belonging to the Scheduled Castes to the ranks of drivers and firemen, there is frankly cause for concern. Such extraneous considerations as caste and war service can have no legitimate place in the field of promotions and appointments to highly responsible and technical posts on the railways. The Kunzru Committee would do well to investigate, without fear or favour, the actual state of affairs, for what is at stake is the morale of the entire railway staff.

OIL AND NATURAL GAS COMMISSION

The functions and powers of the Oil and Natural Gas Commission, which is "a body corporate having perpetual succession," have been defined by an Act of Parliament—Act No. 43 of 1959. The Commission's general functions are "to plan, promote, organise and implement programmes for the development of petroleum resources and the production and sale of petroleum and petroleum products produced by it and to perform such functions as the Central Government may, from time to time, assign to the Commission." Under the Act, the Commission can exercise all such powers as may be necessary or expedient for the purpose of carrying out its functions. But before exercising its powers in respect of three defined matters, it would have to obtain the prior approval of the Central Government. One such matter pertains to the implementation of any scheme or proposal involving a capital expenditure exceeding Rs. 30 lakhs. It is this limit that is now sought to be raised, presumably under an amending Bill, to Rs. 40 lakhs.

The reason given for the proposed amendment is that some schemes of the Commission are delayed because of the low financial limit. A similar move, it may be recalled in this context, has been initiated in the case of the Hindustan Steel Ltd., which can now incur capital expenditure, without prior reference to the Finance Ministry, upto a limit of Rs. 50 lakhs, as against the previous limit of Rs. 40 lakhs. To increase the financial powers of the O.N.G.C. also in like manner seems to be necessary, if exploration schemes are to be expedited and the third Plan target of 3.0 to 3.5 million tons of crude oil output is to be achieved. The Commission's revised third Plan allocation is Rs. 202 crores, as compared with the outlay of Rs. 115 crores envisaged originally in the Plan. An increase to the tune of Rs. 87 crores in the proposed outlay would involve, as a corollary, greater expedition in executing schemes and in incurring expenditure thereon.

In view of the success that has so far attended the Commission's drilling schemes in Cambay (where wells are mostly gas producing), Ankleshwar, Ahmedabad and Rudrasagar (Assam), the pace of its further work deserves to be quickened in other possible ways too. Decentralisation of authority and responsibility, in line with the current trend in several public-sector enterprises like the steel plants and the National Coal Development Corporation's collieries, has been proposed in the case of the O.N.G.C.'s field stations. The proposal to empower the technical members of the Commission to take on-the-spot decisions relating to technical matters without prior reference to the Commission is certainly well conceived, for it will enable them to function more effectively on behalf of the Commission in their various spheres of work. In much the same way, the current proposal to clothe the field officers at the oilfields and drilling site with greater powers may be expected to harness their enthusiasm and initiative in quicker and better execution of schemes. Such decentralisation of authority and responsibility is perhaps needed to a greater extent in the case of the O.N.G.C. with its widely scattered field stations and drilling sites than in that of any public-sector industrial enterprise with its main plant located at one place. But, then, the task of administrative co-ordination will also be rendered that much more difficult. How Mr. P. R. Naik, who has been just appointed as Member for Administrative Co-ordination in the O.N.G.C., will bring about greater decentralisation without prejudice to effective co-ordination would be interesting to watch.



PNB TRAVELLERS CHEQUES

- The safest way of carrying cash during travel
- Exchangeable with cash at any of our over 425 offices and a net-work of agencies all over India
- Can be obtained from all important branches of the Bank
- Available in convenient denominations of Rs. 100/-, Rs. 50/- and Rs. 25/-

PHYTO-CHEMICALS PROJECT

An ambitious scheme to set up four drug projects in the public sector with Soviet collaboration, it may be remembered, was drawn up during the second Plan period. The scheme, estimated to cost Rs. 30 crores in all, envisaged the establishment of an antibiotics plant at Rishikesh in U.P. (to produce Rs. 25.8 crores worth of drugs annually), a synthetics drugs plant at Hyderabad (annual output worth Rs. 6.4 crores), a surgical instruments plant at Guindy in Madras (output worth Rs. 2.8 crores) and a phyto-chemicals plant at Munnar in Kerala (with an annual output worth Rs. 77 lakhs). All these projects, which have been carried over to the third Plan, are running behind schedule. The first three plants, however, are in the initial stages of construction, and according to officials, will be commissioned during the third Plan period. But the Kerala project has met with a surprising reverse. According to one report from Madras, a top official connected with the project has stated that the plant has been shelved for the present. Mr. A. M. Thomas, Union Deputy Minister for Food, however, observed the other day that the project could not be said to have been abandoned. The process now envisaged for production is said to be uneconomical and the Russians are being asked to prepare a revised project report. It is amazing that the Government of India has taken more than two years to find out that the project is uneconomical. Meanwhile, the Government of Kerala and the project authorities have so far spent Rs. 25 lakhs on the project, including the acquisition of land of about 400 acres. It may be noted that the phyto-chemicals plant is the only new industrial project envisaged for the Kerala State during the third Plan period, if we exclude the proposed second shipyard for which the necessary foreign exchange has yet to be found.

The phyto-chemicals plant was expected to produce a wide range of drugs, mainly caffeine (about 50 tons), and also other products like ephedrine, digitalis glycosides, papain and vitamin P. Under the manufacturing process, which was originally suggested by the Russian experts, the caffeine was to be produced from tea prunings and tea wastes in the ratio of 3:1. This process is based on the experience of Russian manufacturers. But it is now found that the adoption of this process will make the cost of production exorbitant, that is, about Rs. 1 lakh per ton of caffeine, which compares most unfavourably with the price of Rs. 18,000 per ton for the imported product. India's total imports of caffeine, it may be noted, amount to no more than Rs. 4 lakhs annually. It is also said that caffeine produced by a Calcutta firm is sold at Rs. 50,000 per ton.

The reason for the prohibitively high cost under the Russian process of manufacture is that the major part of raw materials is tea prunings which are costlier than tea wastes. What the Soviet collaborators are now asked to do is to find out a method to produce caffeine at a lower cost from tea wastes alone. The Russians seem to have agreed to this suggestion, albeit after considerable reluctance. In this context, one is rather puzzled to hear of the high cost of tea prunings in Kerala. In fact, following a meeting between the representatives of the Kerala Government and the Kannan Devan Hills Produce Ltd., a leading local tea producer, in May last, it was stated by the State Government's spokesmen that the Company was in a position to meet the full requirements of tea prunings for the project and that they would be given free of cost. One does not know what has happened to alter the reported agreement within such a short time as about three months. There is here probably something more than meets the eye.

MANAGEMENT CONSULTANTS

Let it be any industry, it owes an important obligation to the community, namely, that of producing goods as cheaply as possible, without detriment to its quality. This statement may appear elementary, but it requires to be specially emphasised in the context of the expanding domestic requirements and the increasingly competitive conditions in world trade. Reductions in costs and improvement in quality both entail a thorough survey of the industry's operations. How much importance is attached to the need for undertaking such surveys in Britain, the U.S. and elsewhere is evident from the growing trend towards employment of specialised consultants in industry. Even the big firms which are universally recognised to be efficient, such as Unilever, Shell and Esso, have made use of the services of consultants who are specialist in their lines. The I.C.I. (Imperial Chemical Industries) of Britain has just engaged the services of the U.S. management consultant firm of McKinsey and Co. to conduct a major survey of its operations. This is said to be the first time that I.C.I. has called in an outside firm of consultants to advise it on such a large scale. Three McKinsey officials have already arrived at I.C.I. headquarters for preliminary work, and the full investigation, we are told, will be a long-term project to which no definite time-limit has been set. Incidentally, McKinsey and Co. is one of the three blue chip management consultant firms in the U.S. and its talents "have been put to work on most of the top 50 of American industries as well as on the Federal Government in Washington." It was this firm that helped to reorganise Chryslers "when it was down in the dumps in 1953."

There is an important lesson that business firms in India can draw from the decision of I.C.I. of Britain and other companies to appoint outside competent firms of management consultants. The outside consultants, as the Industrial Editor of the *Financial Times*, London, states, can look at the structure with fresh eyes and bring to bear the experience acquired from other firms and industries. Moreover, they are not affected by office loyalties and traditions. A leading industrialist of the U.K. is quoted as saying: "Reorganisation usually involves sacking or moving some people in pretty senior posts. Even if we know who those people are and what can best be done with them, it is much easier to take action on the basis of a recommendation from an outsider with no axe to grind, rather than do it off our own bat."

In India, there are no doubt a few well-known firms of management consultants. But their services are being availed of only sparingly and that too by a limited number of business concerns. The one inhibiting factor is, perhaps, the misgiving among these concerns that the consultants may divulge the secrets of their business to competitors either deliberately or inadvertently. If this misgiving is to disappear, it is imperative that the firms of consultants should impose upon themselves a professional status which will ensure certain standards of conduct. Given such standards and provided the approach of these firms is rational, they will doubtless play a vital role in helping the managements of industries to make the maximum use of the factors of production with least wastage, thereby maintaining a high level of quality output at an economic cost.

EXPORTS OF MINERAL ORES

The growth of indigenous iron and steel production and the need for earning foreign exchange through ore exports have alike contributed to the development of mineral ores like those of iron and manganese. Fortunately, India has substantial reserves of iron and manganese ores, the total deposits of the former being estimated at 21,000 million tons (one-fourth of world reserves) and the latter at 180 million tons (or the third largest reserves anywhere in the world). During the last decade of planning, output of these ores has been going up. From only about three million tons in 1950, the production of iron ore has risen to 12.8 million tons by 1961-62, the first year of the third Plan. The development of manganese ore industry, however, has been at a slower pace, the total output being only 1.6 million tons in 1960 (the latest year for which figures are available), as against 880,000 tons in 1950. During the third Plan period, production of iron ore is proposed to be stepped up to 32 million tons per year. The Planning Commission does not seem to have laid down a firm production target for manganese ore, but it estimates the annual requirements, for both domestic purposes and exports, at two million tons. The important role of these two ores in the field of exports can be gauged from the fact that the quantity of manganese ore earmarked for exports is as much as 1.5 million tons (or 75 per cent of output) and that of iron ore 10 million tons (over 30 per cent of output). Incidentally, these figures exclude those relating to Goa.

Export prospects of mineral ores can by no means be taken for granted, as competition in world markets has been becoming more and more intense, particularly so in the case of manganese ore. The situation has become all the more difficult because of the Government's inept policy on mineral ore exports. The export earnings from manganese ore, for instance, amounted to just Rs. 10 crores in 1961-62, which compare unfavourably with Rs. 14 crores in 1960-61 and annual average of about Rs. 17 crores in the second Plan period. The decline has been particularly marked in the offtake by the U.S., as well as by the U.K. and other West European countries. Iron ore has, of course, fared better, its exports being higher at Rs. 17.45 crores in 1961-62, as against Rs. 17.02 crores in the previous year and the second Plan average of Rs. 14 crores. The major buyers of iron ore have been Japan and Czechoslovakia, thanks to long-term agreements entered into with these countries by the State Trading Corporation, which has completely eliminated private trade from the field of exports. But the future is rather uncertain, with the emergence of growing competition from countries like Australia and South Africa.

In these circumstances, one would have expected that the Board of Trade, which discussed the problems facing mineral ores at its meeting at New Delhi last week, would suggest effective measures to remove the obstacles in the way of exports and improve the competitive capacity of Indian ores. Nothing of this sort seems to have happened at the meeting. The Board, according to a Press note, advised that "the long-term planning and development of iron ore should be pursued in an integrated manner and with vigour and that the perspective planning of development of mineral ores, particularly iron ore, should be given the highest priority." In this connection, there was need for encouraging and assisting "modernisation of mines, development of transport arrangements, construction of roads in mine areas and development of railway and port facilities." Besides, the Board suggested that the emphasis should be on exports of semi-processed materials (as, for instance, pig iron, instead of iron ore) as the value of foreign exchange earned would be higher. There is nothing new in these recommendations, as the relevant issues have already been considered by the Government Departments concerned and the Planning Commission. Besides, these are too vague and too general to be of any use in improving the present export situation. The Board has not made any new specific suggestion for promoting exports. It merely discussed the problems and indicated general lines of possible solutions. Its affirmation that exports of iron ore can be raised from the present level of about 10 million tons (including

Around The World It's VANASPATI!

VANASPATI and fats like Vanaspati are used throughout the world; including those countries with the highest living standards. These fats have greater demand than milk fats even in the butter-rich countries of Denmark, Holland and U.S.A.

Before Vanaspati was introduced to the world, the only cooking fats available were animal fats including milk fats and vegetable oils. Animal fats were limited in supply. And oils, besides being liquid fats, contain many impurities on the one hand; and no vitamins on the other. This led to a world-wide search for a low-cost, nutritious, semi-solid cooking fat. The result: VANASPATI!

VANASPATI AND VANASPATI-LIKE FATS ARE USED THROUGHOUT THE WORLD!

Vanaspati is vegetable oil which has been refined, hydrogenated deodorised and vitaminised. Refining removes the objectionable slime, dirt, free fatty acids and colour, which are always present in crude vegetable oils. Hydrogenation changes the liquid oil into a semi-solid fat and, at the same time, it improves the keeping properties of the oil. Deodorisation removes the malodorous and unpalatable constituents. And vitaminisation makes Vanaspati nutritionally superior to vegetable oil; and places it on a par with the purest milk fat obtainable.

Vanaspati is much more than a low-priced, semi-solid cooking fat—it's a valuable food, too! It provides us with 2½ times as much energy as wheat or rice. Then again, it reaches you in exactly the same condition as it leaves the manufacturer—clean, fresh and wholesome. Every gram of Vanaspati contains a generous amount of growth-promoting, skin- and eye-protecting Vitamin A.

THE STATE OF U.K. ECONOMY

IS ADDITIONAL STIMULUS NEEDED?

(From Our Own Correspondent)

LONDON, *17th August*

THE signs multiply that the British economy is in need of additional stimulus. At the same time, there is a danger signal in the air that will give even the optimistic Mr. Maudling, the new Chancellor, pause. The only satisfactory index at the moment is that of share prices: these reached their lowest level for a year at the end of June and it will be recalled that, although they staged a rapid but minor recovery in July, by the latter part of July they were almost back again to the June low. However, the past three weeks have really shown a fantastic improvement varying according to the category of shares from between 8 per cent and 12 per cent. Something like a 10 per cent overall rise in three weeks is vastly encouraging and it only needs this rate of improvement to be carried on for another three weeks to find the general level of prices about as good as they were in the happy Springtime.

LONDON LETTER

But on other fronts the searcher after good augury only meets question marks. On the one hand, there is plenty of money about which accounts for heavy subscriptions to fixed interest loans (gilt-edged have been doing even better than commercials in the recent recovery) and, on the other, interest rates are high, indeed too high, which may account for the reluctance of borrowers to match up to the total amount of money available. The building societies who are great lenders are watching each other cautiously to see who is going to make the first cut but there is nothing very impressive going to come from that direction since it is considered that a forthcoming cut would only be about ¼ per cent. Other money rates are really due to drop by at least ½ per cent and, if the economy is to be stimulated, the drop will have to be even more.

The level of personal savings remains high and this again swells the general body of funds seeking investment. Yet on the commercial front the outlook is not attractive enough for the demand to mop it up.

If we look at the trade figures, there is the same perplexity: the second quarter of the year showed an enormous improvement on the first quarter, particularly in exports which gave rise to optimism and yet the first six months of 1962 can hardly have balanced on the basis of visible trade because imports were so high in the first quarter and exports had shown no rise over the 1961 average. Your correspondent calculates that in the first quarter there must have been a monthly deficit of the order of £10 million which is substantially higher than at any time since the first quarter of 1961 when the monthly deficit was running well in excess of £20 million. The second quarter of 1961 reduced the visible deficit to the order of £5 million and, against that, the second quarter of 1962 indicates a *favourable* balance of visible account of the order of £3 million. The question that everyone is now asking is whether the third quarter is going to repeat the improvement on the second which was witnessed over the comparable period last year or whether we are going to slide back into deficit. The July figures give no encouragement at all: exports, on the one hand, are being maintained but imports have shot up so that the deficit in July is of the same order as the average for the first quarter of this year.

One must repeat the old warning that one month's figures do not constitute a record and, therefore, the July imports are really a basis for speculation more than anything else. Last year the summer quarter showed a drop in imports on the earlier part of the year and that had some connection with the famous crisis measures. It is now widely suspected that the reduced level of imports through much of this year cannot be sustained because of the need to re-stock. And yet, if business recession was being retained, there ought to be no need to re-stock, but that sombody has been re-stocking in July there can be no doubt. The Chancellor of the Exchequer will be watching the August figures because, if the import trend remains up then in spite of his own predilection for a spur to the economy, he will be bound to recognise that he will be applying the spur to an economy which is operating with a deficit on its balances of payments and he is unlikely to want to take that chance.

On the side of industry, the demand for a spur continues with the argument that, if exports are to be expanded further, then the home market has also got to take its share of production. This is the sort of argument which Chancellors of the Exchequer usually regard with extreme suspicion and yet just as often industrialists are right in the event because they are able to say, in effect, that a poor home market has discouraged them from a level of production which would enable them to keep their export costs down to a competitive level.

If one is seeking long-term encouragement it could be found in the fact that for the first seven months of this year compared with the same period of last year, exports have increased by 2½ per cent while imports have only increased by 1½ per cent. Unfortunately, with this as with all the other economic indices what is going to happen in the future is so much more important than what has happened even in the most recent past, and on this issue no one really seems at all sure.

Back on the home front, July showed an increase in retail sales but, while from one point of view, such a rise in home demand is encouraging, from the point of view of the cautious souls who still reign at the Treasury it will be taken as evidence that no internal stimulus is necessary. On yet another hand, the reduction in employment underlines industry's fears that a stimulus is essential. Fortunately, with the holiday season in full swing, Ministers can sun themselves in relative tranquillity and be grateful that no one will expect them to do anything for a few weeks longer by which time the various trends may give a better indication of what they ought to do.

The International Monetary Fund has agreed to a drawing by the Government of Ghana of the equivalent of $14.25 million, to be made half in U.S. dollars and half in pounds sterling. Declining world market prices for cocoa, Ghana's principal export commodity, and rising domestic import demand led to increased balance of payments difficulties in 1960 and 1961. The assistance from the Fund will srengthen Ghana's reserve position and provide time for the corrective measures to take effect.

THE U.N. STATISTICAL COMMISSION

FUNCTIONS—ACHIEVEMENTS—PROGRAMMES FOR THE FUTURE

By Professor M. D. McCarthy (of Ireland)
CHAIRMAN OF THE COMMISSION

THE Statistical Commission, a functional commission of the Economic and Social Council, was established in May 1946, when a small group of the world's leading statisticians met in New York and worked out recommendations for setting up a permanent Statistical Commission. Fifteen years ago, in January 1947, the permanent Commission held its first session. Under its original terms of reference, the Commission was to assist the Council (*a*) in promoting the development of National statistics and the improvement of their comparability; (*b*) in co-ordinating the statistical work of the specialised agencies; (*c*) in developing the central statistical services of the United Nations Secretariat; (*d*) in advising the organs of the United Nations on general questions relating to the collection, interpretation and dissemination of statistical information; and (*e*) in promoting the improvement of statistics and statistical methods generally.

As the membership of the United Nations grew, so the Commission's membership expanded —from 12 to 15 and, at its twelfth session, to 18. The 18 members in 1962 are Australia, Brazil, Canada, China, Cuba, France, India, Ireland, Japan, New Zealand, Norway, Rumania, the Sudan, the Ukrainian S.S.R., the U.S.S.R., the United Kingdom, the United States and Uruguay. Over the years, 30 countries have been members of the Commission. During the early days, when meetings were held annually, the members served three-year terms of office. After the meetings became biennial, the terms were extended to four years.

At the twelfth session which was held in New York from 24th April to 10th May 1962, I had the honour of being re-elected Chairman, having also served at the 1960 session. The other officers were Mr. Valentin Fedorovich Burlin (Ukrainian S.S.R.), Vice-Chairman and Mr. J. V. T. Baker (New Zealand), Rapporteur.

Speedy Dissemination

In most cases, the member-countries of the Commission have been represented on it by the Directors of their national statistical services, who have brought to the meetings both a full knowledge of the techniques and achievements of their own systems and an awareness of the kinds of data which are needed to assist in the solution of current social and economic problems. This situation makes possible the more ready adoption of the Commission's recommendations and ensures that they are such as will command acceptance by national statistical offices generally. Both the official and unofficial interchanges of ideas which take place between the Commission members help toward the speedy dissemination of new techniques and methods.

One of the earliest decisions of the Commission related to the establishment of the Statistical Office of the United Nations as a centre for international statistics. In the past 15 years, this office has amply fulfilled the intentions of the Commission in this regard. Its statistical publications provide the quantitative descriptions of international economic conditions which are required by both national and international institutions concerned with international economic relations. One has only to mention the *Statistical Yearbook*, the *Demographic Yearbook*, the *Yearbook of International Trade Statistics* and the *Yearbook of National Accounts Statistics* —all of which are in current use wherever international economic and social problems are studied—to realise the extent of progress that has been made in meeting the demand for international data. The Statistical Office also constitutes a centre to which national statisticians may refer for information on statistical methods used in different countries to solve particular problems. The existence of such a centre has, in a very concrete fashion, facilitated the work of Government statisticians in many countries.

The Commission keeps under review developments in national statistics. In addition to being a forum for the exchange of experience, it makes recommendations (in the light of the knowledge it acquires) on the best ways to carry out various statistical operations. Over the past 15 years, the Commission has recommended standard terminology and definitions, made suggestions on the choice of base years in compiling index numbers, recommended classifications of international trade and of all economic activities. It has developed international standards in such fields as population census, housing census, vital statistics, international migration statistics, industrial statistics, transport statistics, national accounts and capital formation. In order to facilitate the ready adoption of improved practices by national statisticians, the Commission has encouraged the Statistical Office of the United Nations to organise training centres and seminars in different parts of the world and, on request, to make statistical consultants available to Governments.

Technical Manuals

Perhaps one of the ways in which the Commission proves most useful to the world's statisticians is by bringing to their attention information on the methods used in collecting various kinds of statistics. The Commission has, therefore, recommended the preparation of technical manuals on a variety of subjects. Under the guidance of the Commission, the Statistical Office of the United Nations has issued a series of methodological studies (covering index numbers of industrial production, industrial censuses, population censuses, statistical organisation, vital statistics, national income estimation, sampling), with special emphasis on the application of international standards and recommendations. In order to promote the use of sampling, the Commission established a Sub-commission on Statistical Sampling made up of experts, to advise on the use of sampling methods in various fields.

At birth, the Commission was entrusted with the job of carrying on the various statistical activities of the League of Nations. In 1948, the Commission recommended the use of the *International Standard Industrial Classification of all Economic Activities* (I.S.I.C.) which it had developed as a substitute for and extension of the classification drawn up by the League. Ten years later, it approved a revision of this classification in the light of changes in economic organisation and experience in the interval.

In 1950, the Commission revised the League's *Minimum List of Commodities for International Trade Statistics*. Renamed the *Standard International Trade Classification* (S.I.T.C.), it won wide acceptance, and by 1961 85 countries and territories, accounting for approximately 80 per cent of world trade, were providing data on the basis of this classification. At its 1960 session, the Commission approved a revision of the classification which would make it possible for countries to base both customs nomenclature and statistical classification on a single list of goods.

The Commission realises that there may be good reasons for a country's not being able to use an internationally recommended classification for its own national purposes, but the Commission tries to persuade countries to collect data in enough detail to permit rearrangement for international comparison.

Both the Population Commission and the Statistical Commission have always been deeply interested in population censuses. The various international activities relating to national census-taking during the decade 1955-64 are known collectively as the 1960 World Population Census Programme. As part of the world programme, principles and recommendations for national population censuses were developed by the Statistical Commission, a three-volume methodological handbook was issued, and two regional census training centres were held in 1958—one for Asia and the Far East and one for Latin America. Both centres were sponsored by the United Nations and the Food and Agriculture Organisation; the one for Latin America was also sponsored by the Inter-American Statistical Institute.

A new approach used in this programme was the development of a United Nations/F.A.O. team of regional census (population and agriculture) advisers, which operated in Asia and the Far East between 1958 and 1961, financially supported by the Ford Foundation. Advice on a recurring basis (with respect to census-taking, including sampling and data processing) was given to most of the countries of the region through a series of visits.

At its twelfth session, the Commission was informed that, between 1955 and 1961, 195 censuses had been taken under the world programme and that 35 more were expected to be carried out by the end of 1964. Ever mindful of the need for early planning, the Commission asked that a time-table of international activities proposed for the 1970 round of population and housing censuses be prepared for its 1964 session.

In 1958, the Commission launched its 1963 World Programme of Basic Industrial Statistics, advising Governments on the minimum body of statistics that should be made available for the industrial sector of their economies, on an internationally comparable basis, for 1963 or a year close to 1963. In preparation for this widescale operation, a document was issued setting forth the Commission's detailed recommendations, and a series of regional seminars on industrial statistics was organised; Latin America (1960), Asia and the Far East (1961), Africa (1962). At its 1962 session, the Commission was pleased to learn that, by the end of 1961, more than 90 countries had already indicated their intention of participating in the world programme—about 20 of them planning industrial censuses for the first time.

In 1949, recognising the need for an exchange of experience and discussion of problems peculiar to regions, the Commission recommended the convening of meetings of regional statisticians. Out of these regional meetings there developed the Conference of European Statisticians, at which, annually, under the auspices of the United Nations Economic Commission for Europe, the heads of the national statistical offices of European countries meet to exchange experiences and to plan an annual programme of work. The Conference, through its working groups and expert groups, and with the assistance of the national offices, has sought to advance national statistics in Europe, to improve their comparability and to adapt to European conditions the recommendations of the Statistical Commission. More recently, similar conferences were established for Asian and African statisticians. The Inter-American Statistical Institute co-operates with the United Nations with respect to Latin American activities similar to those carried out by the regional conferences.

Advisory Service

In 1956, the Commission recommended that means be found to meet the need for more adequate and systematic arrangements for providing advisory services to Governments. As a result, regional statisticians were appointed to assist countries in the development and improvement of their statistical services by helping them to formulate requests for expert assistance, giving on-the-spot advice and assisting in the establishment of training activities. The four regional statisticians, stationed at the regional Economic Commissions in Europe, Asia and the Far East, Africa and Latin America, were all present at the twelfth session of the Commission and gave first-hand accounts of the activities and future plans in their regions.

The Commission has long been interested both in the training of statisticians (especially in the newly independent nations where a corps of statisticians does not yet exist) and in encouraging Governments to give proper recognition to the role of statistics and statisticians. At our recent session, the Commission heard a direct report from the regional statistician from Africa about the series of permanent training centres opened in Africa since October 1961—three for training middle-level personnel and one for university level—and about future plans. The Commission attached great importance to strengthening statistical training, in order to make possible the establishment of national statistical organisations adequate for planning economic and social development. It also emphasised the need for training statisticians for planning and advisory services as part of the programmes of training to be carried out in the regional economic development and planning institutes envisaged in General Assembly resolution 1708 (XVI). The Commission called for a special study to be made of statistical requirements for planning economic and social development, including training programmes at different levels.

The Commission has for some time felt a need to rationalise the collection and dissemination of international trade statistics. In view of recent advances in electronic computer techniques, which would not only permit faster and more efficient processing of international data but also give access to the full range of data to a degree not previously possible, the Commission this year recommended the establishment of a centre, attached to the Statistical Office of the United Nations, for the collection and publication of international data on external trade—data processed electronically. The centre is to make available to member-States, specialised agencies and other organisations, at their request, statistical information in the form of publications, tabulations, punched cards or magnetic tapes. This new centre will, it is hoped, eliminate the sending of duplicate requests by the various international and regional agencies to national offices for data on trade statistics and, thus, bring about savings to Governments, both in money and manpower.

At its twelfth session, the Commission approved of the revision, with appropriate expansion, of *Patterns of Industrial Growth* 1938-1958. The original version, issued in 1960, had been very favourably received and used by various governmental and international agencies, academic and other research workers and businesses. It has been called the first comprehensive compilation of comparable data on the dimensions, characteristics and expansion of industrial activity in various countries.

Regional Conferences

A particular concern of the Commission at its recent meeting was the problem of achieving an appropriate balance between the statistical programmes, not only of the United Nations Statistical Office, but also of the regional conferences and of the specialised agencies. It was felt that, with the decentralisation of many of these activities, measures would have to be taken to ensure substantive co-ordination and a realistic appraisal of priorities, so that the scarce technical manpower available might be deployed to the best advantage. The Commission concluded that it would be desirable to ask the specialised agencies and regional organisations concerned to draw up, for consideration at the next session of the Commission, a reasonably detailed programme of their proposed activities over the next five years with, in more general terms, an indication of their intentions for the remainder of the next decade. It was envisaged that such an exercise might bring to light areas of work which are not being adequately considered at the international level at present, and that it would make possible a reasoned assessment of the statistical work requirements associated with the United Nations Development Decade.

The widespread shortage of adequately trained statisticians has in recent years made more difficult the task of the United Nations Statistical Office in carrying out the programme of work laid down for it by the Statistical Commission. The terms of reference of the latter body make it possible for it to advise on the staffing, organisational structure and functions of the Office.

The almost universal shortage of skilled technical personnel and the demands of the national services make the recruitment of specialised staff of the type required to carry out successfully the future programme of work extremely difficult. In such circumstances, the Commission recommended that special measures should be taken to offset staff shortages over the next few years and that, in particular, more recourse might be had to such measures as the recruitment of individual experts in specific subjects, on loan from Governments or academic institutions, and the convening of small expert groups for very short periods to carry out specific tasks.

In addition to the matters already mentioned, the Commission has proposed, for the next two-year period, a substantial volume of work on a wide variety of topics. It has given high priority in the programme to such items as (*a*) a special study of the statistical requirements for the planning of economic and social development in less advanced countries, (*b*) a systematic investigation of the uses to be made of the material collected under the 1963 World Programme of Basic Industrial Statistics and of the various measures which can be derived from these data and used to show relationships between the elements of industrial output and input, (*c*) an examination designed to improve the concepts and techniques employed in deriving statistics of building and construction.

In the field of national accounting and related topics, a methodological supplement to the *Year Book of National Accounts Statistics* is to be completed, and a companion volume to *A System of National Accounts and Supporting Tables* is to be prepared dealing with the problems of principle involved in the system as well as their application in practice. Two outstanding technical problems in this field, that of estimating product and expenditure at constant prices and that of facilitating the comparison of national income, expenditure and product aggregates for different countries by use of a common basis of valuation, are to be tackled. In addition, the question of relating the United Nations system of national accounts and the system used in countries with centrally planned economies is to be pursued in co-operation with the Conference of European Statisticians.

Other tasks are the completion and publication of a *Handbook of Household Surveys* and of the first issue of the *Compendium of Social Statistics* as well as a revised set of recommendations to supersede *The Preparation of Sampling Survey Reports* which was issued in 1950. Among the other topics dealt with at the recent session were also the classification of Government accounts, balance of payments and tourist statistics, the statistics of the financial accounts of enterprises, the integrated accounts of income and financial statistics, and in the demographic field the uses of continuous population registers.

The importance of the national statistical services has been increasing in all countries, particularly over the past decade. This has been true both of the more advanced countries with relatively developed statistical systems, as well as of the less advanced countries where such organisations have to be established and staffed. Where the governmental system involves central planning of the economy, the statistics are required both for the formulation of the plan and for the assessment of its implementation. Where there is less central planning, the need for statistics for the formulation and criticism of Government's social and economic policy is no less. The national statistical offices have not only become the sources of data which are basic to the progress of the economy, but, in many instances, their services are coming to be more and more frequently utilised, not merely as collecting, processing and publication centres, but also in the interpretation and utilisation of the figures they produce. It is my personal belief that, in this latter respect, considerably more use could be made of the statistical services of many international bodies.

The continued preoccupation of the Statistical Commission is not only to aid the improvement of national statistics for national purposes, but also to improve their comparability with those of other countries, so that they may become more useful internationally. It is concerned not only with the technical problems of production of reliable and comparable statistical data but is also becoming more preoccupied with the ways in which they can best serve the community and contribute to economic and social progress. Considerable advances have taken place under the Commission's guidance—but much still remains to be done.

U.S. EXPORT-IMPORT BANK

NEW ACTIVITIES TAKEN UP

By Harold F. Linder

PRESIDENT AND CHAIRMAN, EXPORT-IMPORT BANK OF WASHINGTON

THE Export-Import Bank of Washington is in business to finance and facilitate U.S. overseas trade, and is required by statute to make loans on which there is reasonable promise of repayment in dollars. We are enjoined to supplement and encourage and not compete with private capital interests.

Perhaps to over-simplify our operations: We lend to foreign purchasers of U.S. goods who repay in dollars *plus* interest and on terms appropriate for the types of goods sold in the international markets. We borrow our funds from the Treasury and we pay the Treasury interest on the borrowed money.

As is the case with all lending bankers, the difference between the interest we charge and the interest we pay enables us to pay a dividend to the Treasury and add to our own reserves. We are now paying an annual dividend of $30 million and have added to our reserves of approximately $63 million during the past fiscal year.

During 1961, Eximbank approved 907 loan and guarantee transactions, representing a total of $1,114 million. Of possible interest to the many who finance exports to Latin America is the fact that $490 million of the total authorisations by the Bank were for Latin American countries. In addition, loans and guarantees were authorised for all major geographical areas of the world, with Asia receiving the next largest amount after Latin America.

But aside from the relatively cold dollar totals of Bank business conducted, when we look at the year 1961 in retrospect we must call it a year of adjustment to new patterns in world trade. It has been a period in which we set in motion programmes for greatly enlarged assistance to U.S. manufacturers who wish to export more of their goods; this we have done in the hope of improving the balance of payments position of the United States.

World Market Competitive

The world market is once again a competitive market. Within two years, it will be a fiercely competitive market. To respond correctly and imaginatively to the reality of this new trading world will test the fibre and ingenuity of the American industrial, banking, export, and insurance communities as well as that of the Government. And respond correctly and imaginatively we must, for it is we as Americans who have so long been the world's dedicated proponents of the principles of free competitive trade. Not to accept the challenge now would be inconsistent with our tradition as well as our preaching.

What will win for us in a competitive world market is the heavy application of the initiative, inventiveness, and drive which made our industrialists great in the first place.

No one can doubt that the need to keep the United States competitive in world markets is crucial. With this in mind Eximbank has devised new measures to assist U.S. foreign trade.

One salient point we have kept before us is the desirability of getting small- and medium-sized U.S. firms into the export business. And the converse is true: we are equally interested to sell U.S. equipment to small- and medium-sized firms abroad. To help accomplish this, we are utilising a type of credit known as an "Industrial Bank Loan." To illustrate, last February, we authorised a $25-million credit to the Industrial Bank of Japan.

This Bank in turn made the money available, through Japanese commercial banks, to small- and medium-sized manufacturers for the purchase of U.S. equipment. Within a few months, the credit was completely allocated to a good many small buyers—in fact, applications were more than three times the amount made available. We place a ceiling of a few hundred thousand dollars on the amount of any individual loan and reserve the right to approve allocations above $100,000. Literally, hundreds of U.S. suppliers are receiving orders as the result of this kind of transaction.

A major effort of Eximbank during the past year has been to comply with President Kennedy's directive to assure that our Government provide assistance to American exporters at least equal to any such assistance to be found abroad. Two new programmes have been initiated which we think will be of prime importance to U.S. foreign trade in the competitive years ahead. One is broadening of our guarantee system offered directly to commercial banks. The other is a plan to provide export credit insurance directly to exporters.

Our programme with commercial banks and other financial institutions consists, essentially, of the offer of a combination of Eximbank guarantees on medium-term export transactions. It is designed to encourage non-recourse commercial bank participation in export sales and to facilitate the buying of export paper from commercial banks by other financial institutions should they and the banks so desire. Eximbank will offer a political risk guarantee on that part of each medium-term transaction for which a commercial bank assumes the credit risk, provided an Eximbank guarantee covering both political and credit risks is taken on the balance of the commercial bank's participation.

Comprehensive Guarantee

To put it succinctly, if the commercial bank is prepared to take the credit risk for its own account on the early maturities—and by early I mean the first 18 months of a 3- 4- or 5-year credit or 50 per cent of a 1 or 2-year credit—an Eximbank guarantee of the political risk on those early maturities is offered, provided the commercial bank agrees to carry or resell the later maturities on which the Eximbank will issue a comprehensive guarantee, including both the political and the credit risks.

If, on the other hand, the commercial bank elects to ask us to carry the later maturities, then no political risk guarantee will be offered on the early ones. It is our purpose, through the offering of these guarantees, to make commercial bank participation more attractive. It follows that this will result in both an increase in commercial bank participation and decrease in the volume of direct financial participation on the part of the Export-Import Bank. Moreover, if the commercial bank determines to take all maturities under our guarantees and wishes at any time to sell the paper which it is holding, our guarantees are assignable, the only restriction being that, in respect of the early maturities on which the credit risk is taken by the originating commercial bank, it must offer recourse on one-half of such early maturities.

The amount of cash payments to be made to the exporter by the foreign buyer in connection with medium-term credits also has been under review. This is a point which is basic alike to export credit insurance, non-recourse financing by banks, and exporter credits granted directly by Eximbank. The 20 per cent cash payment formerly required of the foreign buyer has now become more flexible and may be reduced in appropriate cases to as little as 10 per cent. This step was taken to allow American exporters to offer terms which in this respect are as advantageous as those sometimes offered by foreign exporters with the support of their Governments.

The second new major programme of Eximbank, as I mentioned, is in the area of direct export credit insurance to exporters. Since the spring of 1960, Eximbank had provided political risk insurance on short-term export transactions. But U.S. exporters, with varying degrees of heat, had been calling for a comprehensive insurance plan which would cover both political and credit risks, and which would include the medium-term field as well as the short-term. A great deal of our energy has been addressed to meeting this demand during the past year.

We concluded that, if comprehensive political and credit risk insurance was to be offered in this country, then, both in accordance with our mandate from the Congress and our own desire, we should do our utmost to bring in the private insurance companies and certainly to avoid competition with them.

It took us a bit of time to persuade those companies that this is a field into which they should enter, but once we were successful in so doing we have had a very full measure of co-operation. We explored throughout the spring and all last summer, through studies and frequent negotiation, and with the aid of consultants from outside the Bank, the possibility of creating an association of private insurance companies who would be prepared to issue a comprehensive policy to interested exporters. We now have an agreement with a considerable number of the leading insurance companies of this country under the terms of which Eximbank will underwrite 100 per cent of the political risk and the credit or commercial risks will be shared between the insurance association and our Bank. We hope that the time will come in the not too distant future when the private insurance companies will be prepared to take for their own account the whole of the credit risk.

President Kennedy, on 27th October, announced that the Export-Import Bank would soon inaugurate such a programme. Initially, 20 private U.S. insurance companies formed the Foreign Credit Insurance Association. They are engaged in casualty, property, and marine insurance. At the present time 35 additional companies have joined the Association, making a total of 55.

The F.C.I.A. has entered into a partnership with Eximbank for the issuance of comprehensive export insurance policies to U.S. exporters. This plan accomplishes two important things in addition to the issuance of policies. It brings about desirable private participation, and we believe it will solve a mechanical problem of issue. Since insurance agents and brokers throughout the country will be placed in a position to accept applications for insurance policies at or near the exporters' places of business, it will not be necessary for exporters to negotiate the policies with us in Washington. The two new programmes are complementary. Hence, Eximbank obviously will not offer guarantees to commercial banks on transactions for which an exporter has purchased F.C.I.A. insurance; and, conversely, of course, F.C.I.A. insurance will not be wanted or needed for transactions on which Eximbank has given guarantees to commercial banks.

I.M.F.'S BORROWING ARRANGEMENTS

The International Monetary Fund has been advised by the Netherlands Government of its formal adherence to the Fund's general arrangements to borrow. These arrangements will permit the Fund to borrow additional foreign exchange, if this becomes needed to forestall or cope with an impairment of the international monetary system. The maximum commitment of the Netherlands Government is equivalent to $200 million.

The borrowing arrangements become effective when adherences are received from not less than seven participants representing maximum commitments equivalent to $5.5 billion. To date, seven of the ten participants—the Governments of France, Italy, Japan, the Netherlands and the United Kingdom, the Deutsche Bundesbank and the Sveriges Riksbank—have communicated to the Fund their acceptance of maximum commitments aggregating $3,650 million.

The total maximum commitments will be equivalent to $6 billion when formal adherence is communicated by the three other participants—the Governments of Belgium, Canada and the United States—but the adherence of the United States, with a commitment of $2 billion, will be sufficient for the arrangement to become effective. The necessary steps to obtain legislative approval in these three countries are well advanced.

The Directors of National and Grindlays Bank Ltd. have declared an interim dividend of 7 per cent, less English income-tax at 7*s.* 9*d.* in the pound, for the current year. The interim dividend is payable on 5th October 1962.

Complete in a single gesture, the grasp of tiny fingers conveys to a parent the exact meaning of the word ... "CONFIDENCE."

Your family has confidence in you that you would provide for their future. You can give meaning to this confidence by setting up a SAVINGS ACCOUNT at CORPORATION BANK. It is the safest way for family security.

Chemicals help Industry to bring a better future closer

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Antioxidants improve resistance, prevent early cracking, give increased flexibility

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.

PROSPECTS FOR COFFEE INDUSTRY

EXPORT POSSIBILITIES MUST BE FULLY UTILISED

IT is strange indeed that there are some coffee planters in this country who underrate the importance of coffee as a foreign exchange earner. To this section seems to belong Mr. M. A. Dharmaraja Iyer, who was the President of the Wynaad Coffee Growers' Association for 1961-62. Addressing the last annual general meeting of the Association recently held at Kalpetta, Mr. Dharmaraja Iyer declared: "There is no questioning the fact that the welfare of the coffee growing industry in our country lies only in being able to find a market for our entire production in our country and not in depending upon foreign markets." His statement that "there is no questioning the fact . . . " is very questionable. It is no doubt true that the potentialities of domestic market are quite large, that, at present, it absorbs the major portion of the coffee produced in the country, and that Indian coffee is facing keen competition abroad, in view of the continued huge surplus hanging on world markets and the persistently low prices, on the one side, and the high cost of producing coffee here, on the other. But is it rational to argue that the solution to the problem lies in the withdrawal of India from world coffee markets? Certainly not. The solution advocated by Mr. Dharmaraja Iyer is that of a person who wants to run away from his problem and dislikes the economic discipline imposed by keen competition. The right solution would be to make every effort to increase the competitive capacity of Indian coffee abroad by lowering costs and improving quality. The need for such effort at present is pressing to a degree and will continue to be for a long time to come. The country requires foreign exchange on a large scale and the requirements will be higher still in future. And coffee must be made to meet a part of these requirements. India did earn in the last financial year (1961-62) over Rs. 9 crores of foreign exchange by exporting 29,712 metric tons of coffee. The Indian coffee, as Mr. Iyer himself said, has a reputation for its fine cup quality and aroma, an advantage that should be fully exploited. The emphasis on exports does not at all imply that the domestic market should be neglected or receive less importance. On the contrary, the domestic market is pretty important because of the need for developing an export market on a significant scale, for, to the extent to which the domestic market for coffee expands, the loss, if any, suffered in exports can be made good.

Quality Important

This issue whether coffee is sold for domestic consumption or export apart, its quality must be preserved at all costs. Mr. Iyer did well to stress this aspect. He said:

"Of late, there have been complaints that Indian coffee has deteriorated in quality, owing to bad and indifferent processing. It is of the utmost importance that the quality must be preserved and stepped up, if it should have a demand in overseas markets at a competitive economic price. The Coffee Board is doing everything possible to improve the quality of coffee, by giving incentives to planters who prepare really good quality coffee and levying penalties on coffee that is below average quality. The full co-operation of planters must be forthcoming in abundant measure, if the reputation that our coffee has enjoyed before is to be restored and maintained."

The coffee growers are fully aware of the need to grow more and more of quality coffee in a given area of land. In other words, they do recognise the vast potentiality of raising the productivity of coffee lands. This potentiality can, however, be exploited to the maximum only if growers are assured of a reasonable return which should not merely cover the cost of production—the cost as worked out by the Coffee Board's Statistical Department for the 1960-61 season was Rs. 2.24 per point—but also leave a fair margin of profit. This point requires to be specially emphasised, because many coffee growers belong to the lower middle class group with very meagre financial resources of their own. How can the grower be expected to incur heavy additional expenditure in maintaining his estate when he is faced, as Mr. Iyer stated, with a situation of not being able to earn a return sufficient to meet his bare cost of production?

If the coffee growers are to give of their best, three things are essential. In the first place, the system of marketing must be modified on the lines suggested by the United Planters' Association of Southern India. Secondly, the Wage Board for Coffee Industry should fix the wages for estate labour at a level which will be well within the reach of even marginal units, due weightage being given to productivity of workers. Finally, the present heavy burden of taxation must be reduced. As Mr. Dharmaraja Iyer rightly urged, the Central Government and the Governments of the coffee producing States can come to the rescue of the coffee industry, especially the weaker section, by legislative enactments and amendments in the procedure of levying duties and taxes. The replacement of sales tax levies by a surcharge on Central excise duty will go a long way towards helping the trader, producer and consumer by removing the existing anomalies and by leading to an increase in consumption of Robusta coffee which is not in demand abroad. Further, it would be preferable to have the excise duty on an *ad-valorem* basis, instead of at a specific rate as is the case now. A specific rate of duty is disadvantageous to producers in a market of declining prices.

On their part, the coffee growers also must take steps to reduce the production cost. Mr. Dharmaraja Iyer certainly struck a note of realism when he stated that the only hope for the survival of coffee industry, in general, and Robusta, in particular, is to bring down the cost of production to the minimum possible, by bidding good-bye to conservative methods of cultivation and taking earnestly to new scientific methods of cultural practices. The adoption of such methods will, besides lowering costs, augment substantially the average yield of coffee per acre. The average yield, though it has gone up quite significantly in recent years—from 182 lbs. in 1950-51 to 372 lbs. in 1959-60—is still below the averages obtained in the other coffee-producing countries. The average per-acre yield is over 530 lbs. in El Salvador and Kenya, 500 lbs. in Costa Rica and Congo, and 400 lbs. in Colombia, Guatemala, Mexico, Uganda and Tanganyka. In India, too, the per-acre yields of coffee obtained in some of the best managed estates are pretty high, as will be seen from the figures given below:

Name of company	Year	Yield per acre (in lbs.)
Chembra Peak Estates	31st March 1961	1,323
Savamalai Estates	31st December 1960	949
Waterfall Estates	30th June 1961	862
Consolidated Coffee Estates ..	30th June 1960	841
Stanes Amalgamated Estates ..	30th June 1960	780
Puthutotam Estates	31st March 1961	725
Kurchermala Plantations	31st March 1961	702
Kumergode Estates	31st October 1960	697
Kil Kotagiri Tea and Coffee ..	31st October 1960	617
Blue Mountain Estates	30th June 1961	615
Mysore Amalgamated Coffee Estates.	31st March 1961	589
Balmadies Plantations	31st May 1961	585
Coffee Lands and Industries ..	30th June 1960	538

The yields of coffee, of course, depend greatly on climate, altitude, type of soil, and the species and age distribution of the coffee bushes cultivated. But, to an increasing extent, the differences in yield between the better managed farms and the rest are the result of differences in the amount of labour input, use of fertilisers, and adoption of measures to control diseases and pests. The E.C.L.A.-F.A.O. survey in Colombia and El Salvador has shown that a close relationship exists between labour input and yield, though "there is a limit beyond which a more intensive utilisation of labour becomes uneconomic." Moreover, fertiliser application is found to be closely related to yield which rose very steeply with increasing applications. In El Salvador, for example, coffee yields rose from an average of about 120 lbs. per acre with 1.8 lb. of fertilisers and manures to as much as 1,437 lbs. with 2,395 lbs. of fertilisers. In Colombia, it was calculated that higher yields in the range of 288 lbs. to 621 lbs. resulted from the application of fertilisers, whereas the average yield of farms covered by the survey was only 213 lbs.

There is thus little doubt that the average yields of coffee in India could be raised considerably by the more extended application of existing knowledge of good cultivation practices. In addition, research into new and improved varieties provides a promising way to obtain higher yields. The *mundo novo* variety developed in Brazil, for instance, has commonly resulted in yields of 890 to 1,780 lbs. of coffee per acre. The Coffee Board will do well to publish data relating to the trend of yields in the past few years from both existing acreage and the reclaimed abandoned tracts of established coffee, as well as the progress made in the field of new clearings and plantations.

COFFEE SALES

The total receipts of coffee into the 1961-62 pool (August 1961-July 1962) were substantially less than in 1960-61, being just 44,858 tonnes, as against 67,040 tonnes. The decline was shared by all the varieties. The receipts of Plantation coffee were lower at 22,138 tonnes (as against 28,940 tonnes), Arabica Cherry at 16,205 tonnes (28,022 tonnes) and Robusta at 6,515 tonnes (10,078 tonnes).

During the first seven months of 1962, about 19,913 tonnes of coffee were released for internal sale, as compared with 18,774 tonnes in the corresponding period last year. This quantity comprised 7,098 tonnes of Plantation coffee, 2,565 tonnes of Arabica Cherry and 10,250 tonnes of Robusta.

Inclusive of the export sale on the 8th of this month, a total of 9,552 tonnes has so far been sold for export from the 1961-62 crop, consisting of 7,314 tonnes of Plantation, 700 tonnes of Arabica Cherry and 1,438 tonnes of Robusta.

Since the beginning of this year, more than Rs. 33.53 lakhs have been sanctioned as coffee development loans to 534 applicants.

CHANGES IN TEXTILE INDUSTRY

MOVE TO FORM A PRODUCERS' COUNCIL

From Our Special Correspondent

MANCHESTER, 14*th August*

SINCE news of the impending retirement of Lord Rochdale as Chairman of the Cotton Board was announced, Lancashire cotton men are taking the opportunity to call for a change in the structure and leadership of the industry.

MANCHESTER LETTER

There remains widespread frustration, but few if any spearheads of attack on which future action can be usefully carried out. As a result, individual views and comment take precedence over any concerted effort to bring about an improvement in business.

On the one hand, suggestions are being put forward of organised short-time working after the regular holidays end. At the other end of the scale, a proposal for a consortium of merchanting interests is being canvassed, with the possibility of financial support on similar terms to that provided for the spinning section more than 30 years ago.

Whatever its merits, the Establishment always invites criticism and the Cotton Board is no exception. Particularly in the mill towns, whose "rugged individualism" often resents rule from Manchester, there have lately been moves to form a Producrs' Council, consisting of the spinning and weaving sections, which would involve a breakaway from other branches of the trade whose members are represented on the present Board.

Such a campaign, if carried to its logical conclusion, would cut across the long-standing history of collaboration which originally started in the Joint Committee of Cotton Trade Organisations well before the war and later developed into the Cotton Board itself. Internal squabbling among the sections—such as occurred in the early stages of the rise in imports—cannot be avoided, but at least in the last few years the industry has appeared to be pulling one way in its relations with the Government and has generally spoken with one voice.

The public image of Lancashire textiles has suffered in many ways through ill-advised notoriety. Without wishing to camouflage its deficiencies or ignore the occasional intersectional strife, there are many favourable aspects of the trade's activities which have not been sufficiently emphasised, because either the firms or organisations concerned have failed to provide information in the right quarters.

It may well be true that the more irresponsible of our national Press prefers doom and disaster to tales of initiative and enterprise. The fact, however, cannot be denied that Lancashire's case has often been presented in a depressing light when a more healthy public relations attitude could have provided a brighter picture.

Europe—Friend Or Foe

Whatever the outcome of the negotiations aimed at Britain's entry into the European Community, the Common Market itself is a reality which has to be faced, whether as friend or foe, in a competitive world. The District Bank has rendered a service to businessmen by providing a series of articles surveying the economic development of the various Continental countries involved, culminating in a summary by Professor T. E. Chester of Manchester University.

This provides extensive comparative data about populations, industrial trends and the future outlook for the Common Market countries, coupled with the corresponding situation in Britain. Various factors emerge, particularly the genuine industrial revolution which occurred not only in Italy and France but also in the Netherlands in the 1950's. This follows a remarkable decline in the contribution made by agriculture in European countries to the national income.

Considering the publicity which has been given to the negotiations on the agricultural issues concerned with Britain's entry into Euromart, it may be a surprise in some quarters to realise that, whereas a quarter of France's working population in the middle 1950's still found their livelihood on the land, its share in the country's gross national product has fallen from 14.7 per cent in 1950 to less than 10 per cent.

In Western Germany, agriculture contributed more than 10 per cent to the gross national product in 1950 but now provides less than 7 per cent. The numbers employed on the land in the Netherlands have declined by 40 per cent since 1950 and, in Italy, a "flight from the land" is taking place at the rate of some 100,000 people per annum.

"Many British business people sincerely believe that full employment is still an exclusively British phenomenon, to which poor distribution of labour and lagging productivity can be attributed," says Professor Chester. Unemployment in the United Kingdom, currently around 2 per cent of the working population, compares with 0.5 per cent in France, 0.4 per cent in Germany and 0.7 per cent in the Netherlands. Of particular interest to the textile trades is a paragraph which points out that married women are probably now in many countries the only remaining internal source of recruitment.

Summing up, he observes that the economic and social pattern in the Common Market countries is by no means uniform or exclusively favourable. Population structures are undergoing rapid change; increasing industrialisation, coupled with the decline in the relative role of such traditional occupations as agriculture and handicraft provide tensions of varying magnitudes. Prices and costs are by no means held at a constant level, to the disadvantage of British manufacturers. The scope of Government activities is expanding everywhere. No nation has yet succeeded in combining permanently stability of employment, growth and avoidance of inflation.

To those who have misgivings about Britain's adherence to such a project, Professor Chester has this advice: "When in the 1950's the European countries began seriously to consider whether or not to join the Common Market, they were much more aware of the potential risks than certain of the benefits which might accrue. Their apprehension about an unknown future and their consciousness of their shortcomings led to hesitations very similar to those experienced today in Great Britain."

Events since 1957, he continues, have disproved many assumptions as unjustified or, at least, as greatly exaggerated. In fact, all five countries reaped considerable direct benefits, such as an increase in mutual trade.

Top-of-the-table Test

Yet another facility offered to the industry by the Productivity Centre of the Cotton Board has now reached full-scale commercial application. Inter-firm comparison makes its bow after an experimental scheme in which nearly a score of mills took part has proved its worth. The Centre's enterprise in sponsoring various ventures on behalf of the trade is by now well established. The new scheme offered should bring a response from all those firms anxious to find out not only whether they match up in profitability with their neighbours but at which point they lag behind.

By means of close scrutiny of financial accounts, balance-sheets and other confidential data, the investigators can put their fingers on the particular section of any business which does not appear to be pulling its weight. Under a cloak of anonymity, the identity of each firm will be kept secret from the others, but the "league tables" provided by those participating will show where the average lies. The forward-looking firms, however, will not only want to be well above the average but will be anxious to strengthen their weak points to improve their competitiveness. In so diversified an industry, one of the main problems is to ensure strict comparisons, but the organisers of the scheme believe that they have evolved a system which covers every department and can offer considerable benefits to those prepared to put the facts at their disposal.

4½ PER CENT

GUJARAT STATE DEVELOPMENT LOAN, 1974

ISSUE PRICES Rs. 100/- PER CENT

OPENS FOR SUBSCRIPTION ON 27th AUGUST 1962

The loan will be closed as soon as a total of approximately **Rs. six crores** has been subscribed, and in any case not later than the close of business on 1st September, 1962.

THE LOAN WILL BE UTILISED TOWARDS THE DEVELOPMENT PROGRAMME OF THE NEW STATE OF GUJARAT. ALL ARE REQUESTED TO SUBSCRIBE GENEROUSLY TO THE NEW LOAN.

The loan applications will be received at—

(1) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi.

(2) State Bank of India, Patna.

(3) State Bank of Hyderabad, Hyderabad.

(4) Branches of State Bank of India and State Bank of Saurashtra conducting Government work in the State of Gujarat.

(5) Treasuries and Sub-treasuries in Gujarat (at places not covered by (4) above).

APPLICATION FORMS AND FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE ABOVE OFFICES.

PROGRESS OF BALL BEARINGS INDUSTRY

TARIFF COMMISSION'S INQUIRY UNDER WAY

THE manufacture of ball bearings in India is a nascent industry and is still on a relatively small scale. It is also a vital industry, for, without an efficient and viable ball bearings industry, a vast country like India, with immense defence, social and economic responsibilities, cannot attain self-reliance in the economic sphere. Naturally, the industry has to be, and has been, given protection against unlimited imports, until it is able to stand on its own feet and has grown sufficiently big to meet at least the major portion of the country's need for ball bearings.

The first tariff inquiry into the ball bearings industry, it may be recalled, was held in 1952. On the recommendation of the Tariff Commission, the industry was accorded protection for a period of two years upto the end of 1954. The then revenue duty of 94½ per cent *ad valorem* was converted into a protective duty at the same rate on ball bearings not exceeding 2" bore diameter. Simultaneously, the duty on adapter bearings not exceeding 2" bore diameter was raised to 10 per cent *ad valorem*. The period of protection was later extended, in consultation with the Tariff Commission, upto the end of 1956.

The Commission's second inquiry into the industry was held in 1956. It was then recommended that protection be continued for a further period of four years with a duty of 94½ per cent *ad valorem* on ball bearings as well as on adapter bearings not exceeding 2" bore diameter. The Government gave effect to this recommendation and subsequently, in 1957, rounded off the rate of protective duty to 95 per cent *ad valorem*.

The Tariff Commission held its third inquiry into the industry in 1960 when it recommended continuance of protection for a further period of two years upto the end of 1962 at the then existing rate of duty, namely, 95 per cent *ad valorem*. Parts of ball bearings and adapter bearings upto 2" bore diameter, it was further recommended, were also to be protected on the basis of the same rate of duty. Both these recommendations were accepted by the Government.

Industry's Plea

As protection granted to the industry is due to expire on 31st December this year, the Tariff Commission has just undertaken its fourth inquiry, with a view to reporting on whether protection is to be increased, decreased, modified or abolished according to the circumstances of the case. It is seen from the speech of Mr. K. R. P. Aiyangar (Chairman, Tariff Commission) at the public inquiry which opened on the 17th instant, that one of the existing units of the industry has pleaded that import duty on ball bearings above 51 mm. bore diameter and upto 102 mm. should also be increased to 95 per cent. The industry as a whole has again pleaded for continuance of protection and, according to the Chairman of the Tariff Commission, other interests concerned have not demurred to this request.

The industry has been enjoying protection for the last ten years. Under conditions of protection and growing domestic demand, it has been making steady, if not spectacular, progress. In 1960, for instance, the aggregate output of bearings was three million, as compared with 1.4 million in 1957. The 1960 output was accounted for as follows:

National Engineering Industries Ltd. (large-scale)	2,700,000
Dhirajlal and Co. (small-scale) ...	25,000
Small-scale units in the Punjab ...	250,000

Since 1960, no new large-scale unit has gone into production. So the only large-scale producer of ball bearings in the country, as of today, is the National Engineering Industries Ltd., Jaipur, a Birla enterprise, which actually manufactured 3.2 million bearings upto 2" bore diameter in 1961 and 1.9 million in the first half (January-June) of the current year. Another concern, namely, Dhirajlal Company, which had commenced production of ball bearings on a small scale in early 1960, has recently been licensed under a new name, Anti-friction Bearing Corporation Ltd., Bombay. Its present capacity and production, however, continue to be on a small scale. There are, besides, 36 small-scale units now working in the country, of which 34 are in the Punjab. The annual installed capacity of these units is 1.1 million pieces on single shift, and their actual production in 1961 was 0.5 million pieces. Domestic production of ball bearings by these large-scale and small-scale units together has, however, not kept pace with increased domestic demand for this essential component from a wide variety of growing industries like electric fans, electric motors, pumps, machine tools, cotton textile machinery, automobiles, cycle rickshaws, cycles and chaff cutters. This explains why the total import of ball bearings in terms of value increased from Rs. 72 lakhs in 1960 to Rs. 105 lakhs in 1961.

Nine more large-scale units are stated to have been licensed for the manufacture of bearings. Three of these are to be located in Gujarat, two each in Maharashtra and Madras and one each in Bihar and Uttar Pradesh. But, according to the Development Wing of the Union Ministry of Commerce and Industry, only four of these units are likely to commence production within the next two or three years. Although the total licensed capacity of all the eleven units (the existing two units *plus* nine newly-licensed units) on double shift is stated to be 11.2 million bearings per annum, the likely aggregate capacity by 1965-66 would not be more than 7.1 million pieces.

Estimates of Demand

The industry would have to expedite the creation of additional capacity, for domestic demand in 1963 itself, according to the estimate of the Tariff Commission in its 1960 report, is likely to be 8.5 to 9.0 million pieces. How rapidly the demand has been going up in recent years could be seen from the figures of apparent consumption of ball bearings based on sales and imports. Such consumption was 4.6 million pieces in 1960 and 6.3 million in 1961. The latest estimates of demand, based on the requirements of different consuming industries for original equipment as well as for replacement and as submitted to the Tariff Commission, range widely from 7.5 million pieces to 17.8 million pieces for 1965-66, the last year of the third Plan. The Commission's own estimate of demand for 1965-66 will be known only after it completes its enquiries and discussions. That its estimate will be more than 10 million pieces may, however, be safely guessed.

The industry will, therefore, be called upon to expand rapidly to meet the increasing internal demand. At present, the industry is almost entirely dependent on imports for the principal raw materials used in the manufacture of ball bearings—raw materials like H.C.I. steel bars, tubes and wires. This dependence on imported raw materials is expected to continue for some years. The quality of indigenous bearings is stated to be generally satisfactory, though there is still scope for improving it. But their prices, according to some consumers, are relatively high. If protection is to be continued for the purpose of bringing about the required expansion of the industry, it will be equally necessary to take steps to improve the quality of ball bearings and bring down their prices, for the efficient performance and the comparative cheapness of a variety of finished products using indigenous bearings will depend on the quality and prices of the latter.

WORLD'S CRUDE OIL OUTPUT

The world's production of crude oil is now nearly equal, on a calorific basis, to the world production of coal. In January-June this year, crude output was about 591 million tons, being about 40 million tons or seven per cent higher than in January-June 1961 and about 24 million tons or four per cent higher than in July-December 1961. This estimate is contained in the August 1962 issue of the *Petroleum Press Service*. The area-wise figures of output are given below:

(In thousand metric tons)

		July-December 1961	January-June 1962
1.	North America	192,041	195,400
	Of which U.S.A.	176,316	179,200
2.	Caribbean Area	83,482	88,909
	Of which Venezuela	76,412	82,000
3.	Other Latin America	18,726	19,200
4.	Middle East (including Egypt)	143,179	150,043
5.	Africa (excluding Egypt)	10,706	14,430
6.	Western Europe	8,438	8,473
7.	Far East	14,104	14,712
	Of which India	223	458
8.	Eastern Europe and China	96,568	99,840
	Of which U.S.S.R.	86,100	89,300

It will be seen from the above table that output has increased in all the main areas. The number of oil-producing countries, incidentally, has now reached 53, as compared with 43 ten years ago.

With the continually increasing production in all parts of the world, the *Petroleum Press Service* concludes, oil is now rapidly moving towards the position where it will take first place among the world's sources of energy. World production in 1962 as a whole, it is estimated, will be of the order of 1,200 million tons which, on the conventional basis of 1 ton of oil=1.5 ton of coal, will be equivalent in calorific value to about 1,800 million tons of coal. As production of coal in all countries other than Communist China has been more or less static over the past four years at between 1,800 and 1,820 million tons, oil and natural gas, taken together, already cover more than half of the world's energy needs.

ROAD TRAFFIC ACCIDENTS IN EUROPE

The Economic Commission for Europe has just published statistics of road accidents for 1960 in seventeen European countries. The figures show that 51,154 persons were killed in the countries concerned, as compared with 37,302 in 1953. The estimates for the whole of Europe is 65,000 killed in 1960. Almost everywhere, according to the report, it is the pedestrians and, above all, the riders and passengers of bicycles and motor cycles who suffer most. Drivers and passengers of motor vehicles other than two-wheeled vehicles account for less than half the number of casualties.

The published statistics further show that 1.7 million persons were injured in road accidents in the year under review. In this category, the proportion of pedestrians is smaller than in the category of persons killed, but the proportion of riders and passengers of two-wheeled vehicles is generally at least as high.

In fifteen of the countries concerned, about 1.8 million vehicles were involved as causes or victims in some 1.1 million recorded accidents involving physical injuries; they consisted to the extent of 20 per cent of bicycles, or cycles with auxiliary engine and 16 per cent of other motor cycles, 40 per cent of private vehicles and 19 per cent of lorries or delivery vans, the remaining 5 per cent being made up of motor coaches or buses, trams and horse-drawn and other vehicles. These statistics show, *inter alia*, that an average of one private car out of thirty was involved in an accident causing physical injury in 1960.

CAPACITY OF PRIVATE SECTOR OIL REFINERIES

In the Lok Sabha last week the Government's permission to the Burmah-Shell and Esso refineries to operate to their maximum capacity, provisionally for three months from 1st July 1962, was the subject matter of questions. It was asked by some members whether the refineries had expanded their capacity without the knowledge of the Government. Mr. K. D. Malaviya, Minister for Mines and Fuel, replied to the effect that the so-called expansion of capacity was the result of operational efficiency. And he added that, due to such operational efficiency, existing capacity was in a position to undertake more throughput of crude oil, and from time to time, incidental increases in capacity flowing from operational efficiency were taken for granted and sanction was later accorded to them. Reference may be made, in this connection, to an article on page 243 of *Commerce* of 11th August 1962, wherein it has been brought out that maximisation of throughput is different from expansion in the sense of creation of additional distillation unit and other facilities. The Minister's reply, it is worthy of note, is a clear refutation of the allegation that some stealthy expansion by way of material capital additions might have taken place. Presumably his reply is also applicable to the case of the Caltex Refinery which too seems to have increased its throughput beyond its original capacity.

BRITISH RESEARCH ON NUCLEAR REACTORS

Scientists at Britain's Atomic Energy Research Establishment, Harwell, are reported to have succeeded in operating "wireless valve" type devices for converting atomic energy directly into electricity. These devices, which produced larger electric currents than previously announced, are known as "thermionic diodes." They are designed to explore the possibility of increasing the electrical output and efficiency of high-temperature nuclear reactor systems for a very small increase in overall cost. They would be used in place of high-temperature fuel elements in such a way that they would produce low-voltage high-current power without impeding the normal heat production of the reactor. This heat would be used in the normal way to produce steam for generating electricity in conventional machines. The combined effect of the two types of generation together would result in high efficiency, in better utilisation of fuel, and in even cheaper electricity.

The diodes have been designed at Harwell and tested as rig experiments in the high-power test-reactor PLUTO. In the reactor, fissions are caused in the uranium by flying neutrons and sufficient heat is produced to raise the temperature of the cathode to 2,000°C. At this temperature the cathode radiates heat and electrons. The former passes across the vacuum to form the normal heat output of the fuel. The electrons also pass across the vacuum and return to the cathode via the outer sheath. This constitutes the power output which in practice would be led out of the reactor for external use.

WORLD SHIPPING SITUATION

The increasing trend in the movement of world seaborne trade over recent years continued in 1961, although at a lower rate than in 1960 when it rose by 10 per cent. This is one of the conclusions of the latest report of the Maritime Transport Committee of the Organisation for Economic Co-operation and Development. The volume of world grain trade amounted to 61.6 million tons during the trade season July 1960-June 1961. Eighty per cent of this grain was exported by four countries—the Argentine, Australia, Canada and the United States. Seaborne imports of iron ore increased from 101.7 million tons in 1960 to 95.5 million tons, while seaborne coal export rose from 43.4 to 44.5 million tons. Oil represented about 50 per cent of the total tonnage carried by sea in the year under review.

The report also gives a description of the world merchant fleet which was 132.4 million gross registered tons in 1961, as compared with 126.3 million gross tons in the previous year. About 3 million gross tons of tanker tonnage were ordered in 1961, roughly double the previous year's figure. Practically all these new orders were for very large tankers which are economical to run. Increased speeds and modern improvements, the report continues, mean that the increase in the efficiency of the world merchant fleet is greater than would appear from the tonnage figures.

The report has referred to the depression in the freight market—a depression which has now lasted for four years. A rise in world freights is stated to be possible only if deliveries of new tonnage do not exceed the average annual deliveries during 1958-61. While referring to the discriminatory practices which many national Governments continue to apply in order to protect their own shipping, the report emphasises that these are detrimental to the efficient and economic conduct of world trade. The O.E.C.D. continues, therefore, to be guided in its work by the principle of free circulation of shipping in international trade in free and fair competition.

SPACE PROBE LAUNCHES

The first step in the joint Swedish-U.S. exploration of the noctilucent clouds—the faintly luminous, very high and fast-moving clouds whose origin and nature are as yet unknown—was completed recently. The first two of four sounding rockets of the American Nike-Cajun type were then fired from the Vidsel rocket field in Arctic Sweden. The first launch (on the 7th inst.) followed after four interrupted countdowns due to bad weather and is reported to have resulted in a 100 per cent data recovery, as did the second on the 11th inst. The rockets were sent to an altitude of about 68 statute miles (110 kilometres) to make scientific measurements and capture ample cloud particles. The scientists now hope to fire the remaining two rockets before the end of this month. An analysis of the scientific data will then be carried out both in Sweden and in the United States and the results will be published jointly. The project, which is the largest venture to investigate the upper atmosphere so far entered upon in Western Europe, is the outcome of an agreement between the Swedish Committee for Space Research and N.A.S.A., the U.S. National Aeronautics and Space Administration. A staff of 65 Swedish and American scientists are taking part in the project at Vidsel. An Arcas rocket, of the same type as that fired from Vidsel last summer and ten times smaller than the Nike-Cajun, was also launched from the Swedish field recently. The purpose of this test was to study the behaviour of small particles at high altitudes, which was atained by releasing an artificial cloud of magnesium oxide from the rocket.

NEW PRODUCTS AND PROCESSES

Roll-a-Print

AN Australian firm has developed a rubber stamping machine which can print on any surface, rough or smooth, flat or curved, concave or convex, and even round corners. The device, called "Roll-a-Print," consists of a chrome-plated metal frame supporting a felt covered inking roller. The rubber die containing the wording or design to be printed is attached to a second roller which does the printing. Both rollers can be removed and an unlimited number of rollers with different wordings and colours can be used. By using a divided die and and ink roller it is possible to obtain a multi-coloured effect in a single operation.

Instrument for Research and Chemical Analysis

A new instrument for use in research and chemical analysis has been invented by W. G. Pye Ltd., England. It is the result of extensive study of modern chromatographic requirements, and has been designed to accommodate new advances in technology as they occur. Called the Panchromatograph, the instrument separates a mixture of liquids or gases into their component parts and gives a measure of the concentration of each. It has applications in many fields, among them medical research, petroleum refining, drug manufacture and food processing. Specific applications include, for instance, the ability to detect minute traces of pesticide on crops, the study in detail of air pollution and checks on the purity of perfumes and flavours. A "sample" is fed into a column packed with special material and carried through in a stream of inert gas. Separation is achieved so that the component parts of the sample emerge at intervals and are measured by a variety of detecting and recording systems.

Battery-driven Electric Drill

The ¾-inch electric battery drill, development of which was announced by Black and Decker of Middlesex, England, some time ago, has now been generally released. A new departure in the electrical appliances field and the first of its type, the drill represents the outcome of a considerable amount of research and experimentation. The problems were much more difficult to solve than any encountered hitherto because, for instance, electrical consumption of a modern ¼-inch drill is 1,600 times higher than that of a transistor radio. In consequence a high performance demand is put on the drill's four nickel-cadmium cells and the watt-hour output of these has been improved by about 400 per cent in recent months to give satisfactory power to the drill. More than 200 holes of ¼-inch diameter can be drilled in 1-inch thick wood before the battery needs recharging and this operation can be performed 400 times before a replacement battery has to be inserted. Two recharging speeds are available —special charge in 10 hours and normal charge in a minimum of 16 hours. The drill can be left on normal charge indefinitely. Weight is 4 lbs. as against around 3¼ lbs. for conventional drills of the same type.

New Line in Locomotives

Two new locomotives, one driven directly by a gas turbine, the other designed to run on methane gas, have been developed in Britain. The gas turbine locomotive has completed successful trials that covered 11,000 miles on British Railways. Performance is said to compare favourably with some of Britain's latest diesel-electric locomotives, particularly in hauling heavy trains over steep gradients. Potential advantages include: simplicity, compactness, light weight, efficiency, low consumption of lubricating oil, and very low maintenance charges. Believed to be the first of its kind in the world, a new 40-ton shunting locomotive, designed to run on methane gas, has been developed by Rolls-Royce Ltd., Shrewsbury, England. Methane gas—the natural gas found in coal mines—is pumped from the coal face and fed to a compressor which in 15 minutes can refuel the locomotive with enough gas for four hours' work. The 230 h.p. engine which resembles a diesel shunting locomotive and is in the same price range, it is claimed, can haul up to 1,000 tons.

Standard Cargo Vessel Design

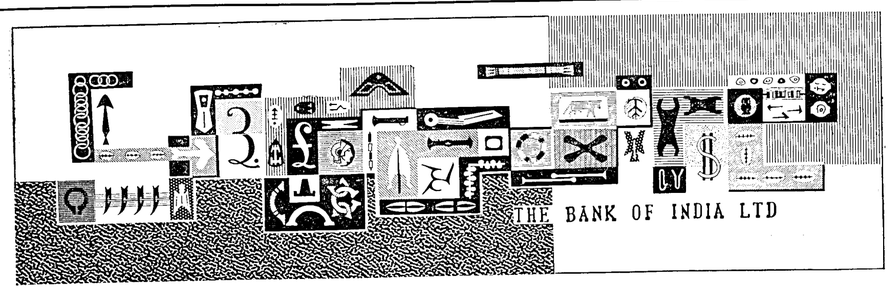
A standard design of dry cargo vessel which can cost up to 15 per cent less than the present comparative vessel, has been announced by one of Britain's leading shipbuilding groups, Swan, Hunter and Wigham Richardson. After detailed market research involving technical requirements of shipowners, speeds, cargo capacity and layout, the firm made an analysis of ports and harbours all over the world and estimate that a dry cargo vessel of 10,000-12,000 tons (d.w.) is the most prevalent type of vessel likely to be wanted for some years to come. The design allows two choices of main machinery—6,600 s.h.p. and 9,600 s.h.p. Whatever the tonnage in the stipulated range, speeds from 14 to 17 knots can be attained. The vessels will have electric deck machinery, derricks (one of 50-tons lift), air conditioning and an air-conditioned control room in the engine department. Modern material and layout for the comfort of crew and officers is standard including private toilets for the officers. An official of the group estimates that after the first vessel is built, construction time will be six months or under. Savings on design and draughting could be as much as £60,000 or more.

Detecting Gases in Steel

A spectrograph for analysing steel and other alloys to detect how much nitrogen, oxygen and hydrogen is present, as well as other elements, is reported by a French organisation, according to the *Financial Times*, London. Correct spark emission—usually the chief stumbling block—is achieved, under vacuum, using two pairs of electrodes. Those of the first pair are kept close together to produce a "pilot spark," while the others are kept far apart to provide a much larger and stronger spark. The large spark is initiated by the smaller one. One of the electrodes of the second pair is a piece of the material being analysed and the wave lengths of the light produced are, as usual, characteristic of the elements present. It is claimed that the system used produces a spark from which oxygen and other gases can be detected yet there is no fear that erroneous results will be produced due to contamination from external sources.

Extracting Excess Water from Paper

Paper made from pulp contains excess water that has to be removed towards the end of the production stage. Wool or cotton felt is normally used as a blotter. A Japanese company now claims to have found a cheap synthetic substitute for the felt which, it says, is much stronger and more able to withstand the strain when the water is subsequently sucked out of it. The substitute is made from polyvinyl alcohol and other chemicals and is prepared in the form of a narrow continuous strip. It is said to be unaffected by the chemicals normally encountered in paper making.



This is the impressive 84 feet x 18 feet mosaic mural on the outside of the Bank's new building in Kampala, East Africa. The mural depicts many of the tokens used as coinage in various parts of the world through the centuries.

THE BANK OF INDIA LTD., at present has Overseas Branches at: LONDON, MANCHESTER, NAIROBI, KAMPALA, MOMBASA, JINJA, DAR-ES-SALAAM, ADEN, KARACHI, SINGAPORE, HONG KONG, TOKYO & OSAKA. With these Overseas Branches and a network of over 500 correspondents in almost all parts of the world, THE BANK OF INDIA LTD., is well equipped to handle Foreign Exchange Business of every description.

INDIAN ECONOMY—A PERSPECTIVE

CONCLUDING our editorial in our last Annual Number, we pointed out that India would have plenty of vexatious economic problems in the year 1962, with the most trying ones stemming from shortages of fuel, power, transport and foreign exchange. That there was no exaggeration whatever in this statement is abundantly borne out by the events of the past few months. Thanks to the most serious shortfalls in respect of fuel, power and transport—the trio of shortages as it has been aptly described—the rate of industrial expansion has slowed down considerably and even the maintenance of production in many industries at existing levels of capacity has turned out to be a pretty difficult job. The demand for the basic services is increasing at such a pace that, unless the Plan projects for these are executed according to schedule, the country is bound to be faced, as the latest *Annual Market Review* (1961) published by Messrs. Premchand Roychand and Sons, Bombay, says, with a spectacle of new factories remaining idle. Rightly has the *Review* urged that all these problems call for quick decisions and vigorous effort. Pinpointing the air of smug satisfaction that prevails in the country with the overall progress made since Independence and with its relatively better performance than all its neighbours on both the political and economic fronts, the *Review* has clearly warned: "Such a psychology is fatal for a developing country." After examining the developments that have rendered the implementation of the third Plan more difficult than was assumed by the planners, the *Review* has assessed the prospects for the private sector and the role it can effectively play thus:

"As a result of the country's present difficulties and the all-round shortage of financial resources, both foreign and domestic, during the third Plan, the private sector projects are likely to suffer to a much greater extent than public sector projects. And yet, there are a number of projects in the private sector which are vitally essential for a balanced growth. Because of shortage of financial resources, particularly foreign exchange, the private sector will have to find its requirements independently of Government resources. This can be done either through foreign private investment or loans and credits from abroad. If private sector projects have to depend upon foreign private investment, their fulfilment is very doubtful, because foreign private investment has so far been small and its future trend will largely depend on the international climate for investment. With the phenomenal growth of the European Common Market, the opening up of African countries and the attractive opportunities for investment in Latin America, much of the available private capital is likely to flow in those countries."

Broadly speaking, this assessment may be correct. Even so, a sizable part of the overseas private capital finding outlets for investment could be made to flow into India, if the powers-that-be in this country were to lift, or at least relax, the restrictions on foreign capital on ideological grounds. Foreign private capital will be more readily available for the development of petroleum and petro-chemicals, fertilisers, shipping services, aluminium, hotels, food processing and cattle feed industries, to name only a few. The amount available for investments in these spheres will be quite considerable, but the opposition to such investments stems not only from the Government but also from a powerful section of the private sector.

Emphasising the need for finding quick solutions to the critical economic issues facing the nation, the *Review* has impressively highlighted the need for keeping inflationary pressures under control. If the spiral of costs and prices rises further, the *Review* warns, the task of achieving the third Plan targets are likely to prove most onerous, especially in the field of exports. Discussing the critical balance of payments position, the *Review* rules out as undesirable either devaluation or reduction of all foreign trade to barters and observes:

"... the authorities have not been able to find a satisfactory answer to the problem of increasing exports. Against fierce competition from countries like Japan and Hong Kong, the products of India's nascent industries can only be sold in very limited quantities in the export markets, while traditional exports of agricultural produce and products of some of the well-established industries like cotton, jute and mining are outpriced because of rising internal costs. The various export promotion schemes have unfortunately proved to be of little assistance in mitigating the high cost and, because of inordinate delays, export incentives, which are in any case circumscribed with numerous conditions, have proved to be of very limited benefit. In fact, over a period of time, the policy of making each industry subsidise its exports by charging higher prices to the domestic consumer is likely to further accentuate the price spiral by increasing the overall cost of production. A flexible and simple method of promoting exports will have to be introduced if results are to be obtained effectively and promptly. The other alternatives would be to devalue the currency and thereafter try to hold the price line at all costs, or to reduce all foreign trade to barters so that exports can be offered at international prices irrespective of costs and imports can be priced up to suit the requirements of the situation. Neither of these alternatives would appear to be desirable. While, at long last, the authorities appear to be seized of the gravity of the balance of payments problem, they appear to be frittering away most of their energy and limited resources in their efforts to tackle minor questions, whereas what the situation demands is a bold approach to the problem on a very broad front."

In the absence of even an outline of this "bold approach," one cannot help remarking that the authors of the *Review* themselves have been content with making broad generalisations. They would have enhanced the value of their *Review* had they described their conception of "bold approach."

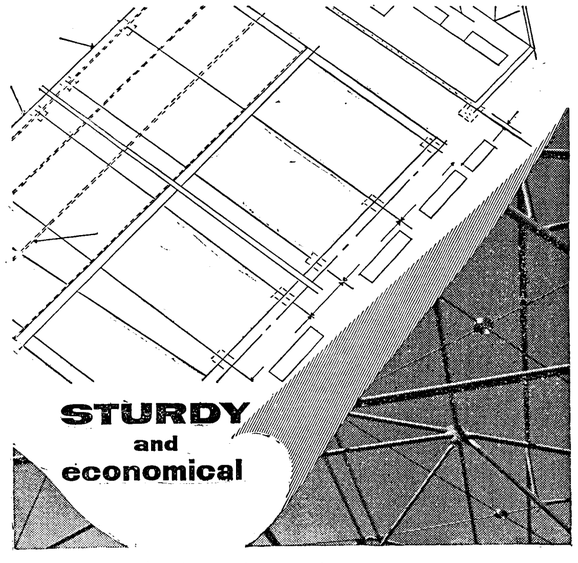
Summing up the outlook for the Indian economy, the *Review* concludes:

"During the coming months, India is likely to face growing shortages first of financial resources and subsequently of goods and services. In a free economy, shortages result in high prices and social injustice; in a controlled economy, they give rise to corruption and nepotism, but, in our mixed economy, shortages can generate both the evils. We sincerely hope that the authorities will find urgent solutions to the critical issues which face the country. We have no doubt that, properly guided, the people of India will give their wholehearted assistance to a truly democratic Government that is prepared to act dynamically to find the resources required for the successful implementation of the Plan. Foreign loans and credits can be utilised only to ease a temporary situation and it is a mistake to depend every year on such assistance to help us out of critical situations."

That Mr. Morarji Desai fully agrees with the last sentence of the above quotation is evident from his observations at a meeting of businessmen in Bombay on Sunday the 19th inst. But will he and his colleagues in the Government also appreciate the need for a reappraisal of their economic policies and programmes which is what is implied in the *Review's* conclusion?

CALCUTTA STOCK EXCHANGE
OFFICIAL YEAR BOOK

The twenty-sixth edition of the *Calcutta Stock Exchange Official Year Book* (compiled and edited by Mr. A. K. Sur and published by Mr. D. Chakravarty, 7, Lyons Range, Calcutta, pp. 586, price Rs. 12.50) is just out. As its name suggests, the *Year Book* is authentic, issued, as it is, annually by the Committee of the Calcutta Stock Exchange Association Ltd. The data collected by the Committee on the vast corporate sector in India, we are told, has been finally verified and endorsed by the managing agents and secretaries of the companies concerned. The *Year Book* is, therefore, quite a dependable guide to investors in shares, stocks, debentures and securities. What is more, besides helping the investor to select the scrips on the basis of past performance, it also explains to him how he can invest on the Calcutta Stock Exchange. This it does by giving an idea of the procedure and practice in that market. Besides, it briefly deals with the Securities Contract (Regulation) Act and the various taxes that investments attract in different circumstances. With a short review of the economic situation in the country in 1961 and vital information on a thousand and one companies, the *Year Book* is a handy publication for all concerned with stock exchanges and the corporate sector. The contents are said to have been thoroughly revised to bring the statistics of old companies up-to-date and to include the particulars relating to new companies, enlisted on the Exchange since the last edition was published. Several new features have also been added to enhance the utility of the *Year Book*.



prefabricated tubular structures

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 13 ft. 4 in. 10 ft. 1/8 in.
SLS/44	44 ft.	and 13 ft. 4 1/8 in.

REACTIONS TO KENNEDY'S BROADCAST
DIVIDED OPINION AMONG BUSINESSMEN ON THE TIMING OF TAX CUT

NEW YORK, *17th August*

MANY leading businessmen in the U.S. endorsed President Kennedy's decision to postpone a tax cut until a comprehensive tax-reform legislation can be presented to Congress next year. But the majority of those contacted in a *Wall Street Journal* survey were sharply critical of the political aspects of the President's radio-TV address, and many expressed the view that a tax cut is not enough to correct deficiencies in the national economy. In Chicago, Mr. Joseph B. Lanterman, President of Amsted Industries, Inc., a capital goods producer, said that he was in favour of the decision to put off a tax cut. "We are going to be better off for the long pull with a sound tax structure than with an arbitrary quickie cut." Similar sentiments were expressed by Robert W. Galvin, President of Motorola, Inc. He, however, added that he was opposed to the President's six-point legislative provision, because it tended "to be inflationary."

In his speech, President Kennedy said that Congress should enact the following measures before it adjourned:

The investment tax credit, designed to stimulate capital spending; the Bill to step up Federal help for public works in areas where unemployment is serious; the Bill for youth employment opportunities, intended to help the million young people out of school and unemployed; legislation to continue the special extension on unemployment compensation; the Trade Expansion Bill, and measures to help finance higher education.

Mr. William Zeckendorf, Chairman of Webb and Knapp, Inc., New York, a real estate development company, termed the Kennedy speech a "very partisan effort." He said he favoured an immediate tax cut, but was not surprised that the President did not recommend such a course, since it would imply the economy had weakened under the Democrats. But he "took some satisfaction that Mr. Kennedy reiterated his plans to urge permanent tax cuts starting from 1st January next."

Optimism Challenged

One group of businessmen challenged the President's optimism about the economic outlook. For example, Mr. Wade Harris, President of Midland-Ross, Inc., Cleveland, declared: "I do not agree that all the indicators are good. It is all right to look at charts, but you should get out where the battle is. I sometimes think his economic advisers live in a glass cage."

There was no immediate official reaction to the speech from the 29-man A.F.L.-C.I.O. Executive Council, meeting in Chicago. But it is almost certain the Council will approve of a resolution repeating its demands for an immediate tax cut which will benefit the lower brackets.

While Mr. Kennedy was delivering his speech, there were critical comments from labour officials huddled around television sets in their Chicago hotel rooms. They noted that all the economy-boosting legislation Mr. Kennedy listed as having been passed by the present Congress was enacted last year, except for the Manpower Retraining Bill and a cut in transportation taxes. However, the labour leaders probably will not attack Mr. Kennedy openly for his failure to seek a tax cut now. In discussing programmes to spur the economy, they have been laying the blame for the lagging growth on Congress rather than on the President. The unions will be telling their members to support Democratic candidates for Congress this fall on the ground that Mr. Kennedy needs their support to get his programme through. Attacking the President now would blunt this drive to elect Democratic law-makers.

In Washington, Democratic Senators and Representatives endorsed the postponement of a tax cut, while a few Republicans argued against it. But many Republicans and at least one key Democrat, Senator Harry Byrd of Virginia, complained that there was too little emphasis on sizable reductions in Federal spending to accompany a tax cut.

Among economists, there was wide, but not unanimous, agreement with the President's decision. Several said that the economy needed stronger medicine than a tax cut. Mr. Clyde Phelps, a Professor of Economics at the University of Southern California, termed the speech "a good generalised statement of good sentiments, but what remains to be seen are the details." Mr. Phelps noted that the President compared the state of the economy today with the depressed levels of 18 months ago and commented: "I would expect, all things being equal, that some progress should have been made in the indices in the past 18 months." He added he does not expect a "sound base for a sustained recovery" to be achieved before the middle of next year. In the next few months, he said, the economy probably will "continue moving sideways." A tax cut is "way past due," according to Mr. Phelps, "but, a cut in Federal expenditures is just as important as a tax cut."

President Supported

In New York, Mr. William F. Butler, Vice-President and Economist of Chase Manhattan Bank, agreed with Mr. Kennedy that no immediate tax cut is needed. "Business news has been looking better and will continue better in the coming months," he asserted. "If Congress this year passes the pending Investment Tax Credit Bill, as the President has again urged, and hopefully follows up with a sound tax reduction measure next session, I believe we will have a very satisfactory arrangement for stimulating business investment and consumer spending." However, Mr. Howard Craven, Vice-President and Chief Economist of the Bank of America, declared in San Francisco: "I think it is necessary that we get an immediate tax cut—the sooner the better. This is not because of any recession, but as part of overall tax reform." In Chicago, Mr. Arnold C. Schumacher, Vice-President and Economist of Chicago Title and Trust Company, said "we need a business tax cut now"; he added: "Basically, the recovery is running out of steam." Mr. Schumacher opposed all of Mr. Kennedy's proposed legislation except the Trade Bill. "It is more important," he said, "to stimulate the private sector of the economy than to provide public works."

Businessmen who criticised the political aspects of Mr. Kennedy's speech included Mr. James J. Ling, Chairman of the Executive Committee of Ling-Temco-Vought, Inc., big Dallas aero-space concern. "To tell the truth, I am a little disillusioned by his approach," said Mr. Ling. "It was very politically oriented. Kennedy seemed to spend most of his speech justifying his programmes seeking the support of the people for them." Concerning the tax cut, Mr. Ling said that it seemed to him that the President was citing vague "economic barometers" indicating no need for a tax cut now, saying there should never be one except in cases of emergency, and then stating there would be one next year. "His excuse for not doing it today and that we should do it in January is incomplete," Mr. Ling declared. And the Senior Vice-President of a large New York City Bank asserted: "If the President really feels a tax cut is needed to help overcome an economic slowdown over the past five years, why does he want to wait until next year to get it through? The truth of the matter is he would really like to ask for a tax cut now but knows he could not get it through Congress this session."

Mr. Kennedy's views on taxes and his legislative recommendations were supported by Mr. Armand Hammer, President of Occidental Petroleum Corporation, Los Angeles, and Mr. Arnold Maremont, President of Maremont Automotive Products, Inc., Chicago. "On the whole, we interpret his message as very encouraging and we are going ahead with our biggest expansion ever with no alteration in plans," said Mr. Hammer. Mr. Maremont asserted that the legislative proposals were good for the economy. He said he saw no reason for the slightest pessimism about economic conditions.

Support for the tax-cut postponement combined with opposition to the legislative programme, was expressed by Mr. Herbert R. Silverman, President and Chairman of James Talcott, Inc., a New York commercial finance concern, as well as by Mr. Judson S. Sayre, Chairman and President of the Norge division of Borg-Warner Corporation, a Chicago appliance maker, Mr. Robert Loomis, President of American Electronics, Inc., Fullerton, California, and Mr. Jerome K. Crossman, Chairman of Ryan Consolidated Petroleum Corporation, Dallas. Mr. Crossman commented: "The cut (as proposed by Mr. Kennedy) will have a salutary effect. I believe it would incline myself and other businessmen toward increased capital spending."

Mr. Carter Kissell, President of National Castings Company, Cleveland, agreed with Mr. Kennedy on the need for a basic tax reform. But he said he did not share the President's optimism about the economy because there seemed to be more doubts now about which way the economy was going than his economists indicate.—*P. G. Krishnayya's Service.*

THE BOMBAY GAS COMPANY LIMITED

CHAIRMAN, MR. N. K. JALAN'S ANNUAL SPEECH

ADEQUATE INCREASE IN SELLING PRICE URGED

MR. N. K. Jalan, Chairman of the Bombay Gas Company Ltd., devoted his speech at the Annual General Meeting of the Company, which was held at Bombay on Friday, 10th August 1962, largely to the unremunerative selling price fixed for the Company by the State Government under the Gas Advisory Committee's report based on the 1956 and 1957 accounts of the Company. Pointing out how the price had become unremunerative for the Company as a result of the various increases granted in the prices of several commodities, including coal from which as much as 80 per cent of the output of gas is raised, Mr. Jalan emphasised that the Company was now faced with such a critical situation that, failing prompt grant of relief by the Government by way of an adequate price increase, the Company would have to consider seriously whether it could continue to carry on its business any longer.

The following is the full text of Mr. Jalan's speech:

"GENTLEMEN,

"It gives me much pleasure to welcome you to the annual general meeting and to present to you the balance-sheet and the annual accounts together with your Directors' report for the year ended the 31st December, 1961. These have been in your hands for sometime now and, with your permission, we may take them as read.

Disappointing Results

"It is unfortunate that the said accounts reveal a very disappointing result of the working of the Company, showing deterioration year after year. I am also sorry to confess that upto now all our efforts to get a reasonable increase in gas price have not borne any fruit. In the past several annual meetings, I had given you a fervent hope of attaining success, but I am sorry, all our efforts so far have turned into failure and the financial position of the Company is worsening year after year.

"The Company's net profit for the year was a meagre sum. It is only by encroaching upon the general reserves to the extent of Rs. 110,000 that it has been possible for your Directors to recommend a dividend to the stockholders at 5 per cent, subject to deduction of income-tax at 30 per cent, i.e., a net dividend of 3.5 per cent which compares so very unfavourably with the current level of dividends paid by companies of similar status in this country.

"The poor profits of the Company in the year under review, as in the preceding three or four years, are due entirely to the fact that, while the costs of production and distribution of gas have been going up substantially year by year, the price of gas remains rigidly fixed at a level which is slightly lower than even what it was in 1926. The present management took over the Company in 1946. Sixteen years have passed by since then. Within this period, all major items of cost have gone up enormously due to the pull of economic expansion and the impact of inflation. Thus, the cost of coal has gone up by 112 per cent, the wage bill by 98 per cent and the cost of amenities for workers by as much as 591 per cent, to take only three major items of cost. All this time, however, the price of gas, as fixed by the Government, continues unchanged. In such a context, it is not at all surprising that the financial results of the operations of the Company continue to deteriorate year by year. The Company is now faced with such a critical situation that, failing prompt grant of relief by the Government by way of an adequate price increase for gas, the Company will have to consider seriously whether it can continue any longer to carry on its business at all.

Coal Price

"The price of coal, which is a basic raw material for the production of gas, had further gone up considerably during 1961 and is mounting up every now and then, as the coal price and the freight on coal are being revised. The full impact of the incidence of the rise in the cost of coal (from Rs. 52.36 to Rs. 57.64) in 1961 would be felt in the current year, i.e., 1962. Besides this rise, railway freight has also been increased from 1st July by Rs. 1.05 per tonne. The Government of India has further notified a rise in the coal price by Rs. 1.56 per tonne, effective from July 1962. This rate of increase, in conjunction with the rise which occurred in 1961, would thus mean that the Company's expenditure on account of the cost of coal alone will increase by Rs. 7.89 lakhs per year. Besides this, increases have occurred in wages, amenities, etc., and the following figures speak for themselves.

Items	1957	1961	*Difference*
Price of coal per tonne	Rs. 48.12 nP.	Rs. 57.64 nP.	Rs. 9.52 nP.
Cost of coal used ..	Rs. 43,14,192	Rs. 54,83,862	Rs. 11,69,730
Wages cost ..	,, 22,26,923	,, 26,51,363	,, 4,24,440
Amenities cost ..	,, 4,03,634	,, 5,41,602	,, 1,37,968

"You are also aware that the coal industry is clamouring for a higher price and, I believe, the Government will have to allow a further increase in its price, which will again mean a big increase in the cost of raw materials to the Company.

"Incidentally, I would like to mention that the Gas Company is the only industry in which the output from coal is as high as 80 per cent.

Supply of Coal

"Coal supplies have been a matter of constant concern during the last few years. The position deteriorated considerably in July last year, and in the months of July, August, September and part of October, coal gas production and consequently gas supply to the city were considerably affected due to erratic and inadequate supplies of coal.

"After strenuous efforts, supplies of coal were offered to the Company, but we were asked to take supplies in box wagons for which the Company has no arrangements. In spite of these difficulties, the Company agreed to accept supplies in box wagons. You are no doubt aware that a box wagon is 2½ times as large as a four-wheeler ordinary wagon. The Company has been hard hit on account of the supply of coal in box wagons in two ways. First, as the collieries are asked to load such huge quantities in prescribed time, they load whatever stock they have, without any regard for the quality. This is instrumental in affecting detrimentally the production to a very great extent, thereby causing abnormal financial loss to the Company. Secondly, on account of under-loading of these wagons, as they are charged on the basis of marking of loading height at 1.7 metres of steam coal, and there being no arrangements for weighment of these wagons anywhere in India, the Company is being charged excessively. In some instances, where the coal was weighed in the presence of the railway authorities, shortage as high as 20 per cent was found. On our representation, revised marking at 1.82 metres has been introduced by the railways, but it is regrettable that still the shortage found is very high. It is imperative that the Railway Ministry looked into it at a very early date. The Company is losing on account of a shorter supply of coal than paid for. It has also to pay additional railway freight, apart from the loss which the Company has to suffer on account of lower production due to the inferior quality of coal supplies.

"In spite of these short supplies of coal, the Company has been able to maintain production, which it would have been possible for the Company to step up further in 1961, if these difficulties of short supplies and poor quality of coal would not have adversely affected the same.

Gas Price

"The price structure was examined by the Gas Advisory Committee, appointed by the Maharashtra Government (then Bombay Government) in 1959, based on the 1956 and 1957 accounts. Over these last five years, the Company has not only been carrying on under a serious threat of financial crisis but has also been labouring all the time under an acute sense of injustice because repeated price increases are being granted by the authorities for several important commodities like iron and steel, cement, coal, paper and heavy chemicals. The rates for public utility services, viz. tram and bus fares, railway fares, airlines fares and telephone charges have also been increased. Even the rates of electricity have been revised, which are governed by the Electricity Act. The anomaly of the situation becomes still more palpable when it is pointed out that in the case of a substitute article, namely, the so-called 'bottled gas,' sold by Burmah-Shell and Stanvac Oil Companies, the Government has given complete freedom to the producers concerned to charge an 'economic price' for this particular commodity. Incidentally, the price charged by the oil companies for 'bottled gas' is three to four times as high as the rate fixed by the Government for 'town gas,' i.e., on a comparable basis. This entails, on the part of some 40,000 consumers of 'bottled gas,' an extra annual expenditure estimated at Rs. 72 lakhs.

"In this connection, I should also like to inform you that the selling price of our 'town gas' at Rs. 3.94 per thousand c.ft. is the lowest in the world, inasmuch as it is (equivalent to rupees) Rs. 7.15 in London, Rs. 7.18 in Cambridge, Rs. 9.69 in Melbourne and Rs. 11.75 in Colombo. Even in Calcutta, where the Gas Company is being managed by the West Bengal Government, the gas rate is Rs. 5.25 per thousand c.ft., while the railway freight for coal from Bengal-Bihar coalfields is only about 50 per cent of what we have to pay here in Bombay.

Saving in Foreign Exchange

"Besides what I have already told you, there will be a significant annual saving in foreign exchange to the extent of about Rs. 44.63 lakhs, if additional 20,000 consumers can get supply of 'town gas,' who are at present using kerosene oil for lighting and heating purposes. We have already given the calculation of this estimated saving in the foreign exchange to the Government. This foreign exchange can be profitably utilised in some other developmental projects in the State. This saving in foreign exchange is quite possible, if your Company gets the gas price adequately increased as also proper facilities and scope for expansion which the Company is quite willing to undertake.

"I have given you only a few out of so many factors which call for an immediate revision of our gas price by the Government. It is incomprehensible why no increase should be allowed in the case of gas while increases in the price of other essential commodities have been granted so often. The gas price today is unfortunately lower than what it was in 1926. The Gas Advisory Committee which examined the gas price structure altogether omitted to take into consideration depreciation, bonus, rehabilitation and other items which are recognised to be basic factors by the Tariff Commission.

"In this connection, I would like to inform you that, even according to the official method of calculation, the Department of the Deputy Director of Commercial Audit has come to the definite finding that the Company had incurred a deficit of 46.68 per cent for 1959 and 54.52 per cent for 1960 on the 'reasonable return on capital employed.' And although the auditing of accounts for 1961 has not yet been undertaken by the Department, it is estimated on the same basis of calculation that the corresponding deficit for 1961 would be as high as 76.89 per cent. It should be noted that, in calculating these deficits no allowance has been made for bonus, for rehabilitation and for contingencies, which are almost invariably provided for as normal items of cost in every modern industrial undertaking and are ordinarily allowed by price-fixing authorities, such as the Tariff Commission. In the case of your Company, it has been estimated that these three items would add up to approximately Rs. 10 lakhs. When this is taken into account, the deficits or shortfalls on the reasonable return would be still larger. You will observe that the recurring annual deficit is substantial and that it is going up appreciably year by year.

New Connections

"Your Company, on its part, has already expressed its willingness to give about 15,000 to 20,000 new gas connections gradually in three or four years, if the gas price is adequately increased to enable the Company to raise the necessary finance from the market for expansion and assure the prospective investors of a reasonable return on their investment in the present money market which has become dearer. You all know, our Union Government and some of the State Governments have issued new loans at an increased interest of 4½ per cent. The Reserve Bank of India has also brought into force a new four-tier scheme of slab rates of lending to scheduled banks, which has made the Reserve Bank credit costlier, being as high as 6½ per cent in some cases as against the Bank rate of 4 per cent. Thus, you can well appreciate the condition of the money market. In this context of things, the return on our capital is practically *nil*.

"In the light of the circumstances stated above, I have recently made a fresh appeal to the Hon'ble Chief Minister and to his Government for an early move to grant an adequate increase in the price of gas, which should cover the enhanced costs of production and distribution and leave a reasonable margin of profit so that the Company may be in a position to carry out the necessary replacement and rehabilitation of the plant and undertake further expansion of production and give a substantial number of new connections within a reasonable period. Your Company hopes very much that the Government will be kind enough to grant this relief to the Company at an early date and enable it to continue to render its good services to the City of Bombay on an extended basis.

Plant and Equipment

"You will be glad to know that gasholder No. 4, which, as I informed you on the last occasion, was under repair by two experts of Messrs. Clayton Son and Company Ltd., has since been repaired at a cost of about Rs. 10 lakhs and recommissioned in the last week of June 1962.

"The Company has also taken up in hand the construction of one overhead purifier box. This will ensure complete gas purity.

"I am glad to inform you that we have introduced a novel welfare scheme from 'lapse and forfeiture account' of the provident fund for the benefit of the members, ex-members and the children and other dependents of the members of the provident fund. The Hon'ble Minister for Labour was kind enough to inaugurate and bless the scheme. Extracts from the speech of the Minister, delivered on the occasion, were broadcast by the A.I.R. in the 'news reel' programme.

"I would like to express my warmest appreciation to the workers and members of the staff and officers for their wholehearted co-operation and specially to Mr. S. Chowdhary, your General Manager and Secretary, and Mr. A. S. Rao, your Deputy General Manager, without whose invaluable services it would not have been possible for your Company to carry on the production and distribution of gas with a wholly uneconomic selling price in the face of continually rising costs.

"Thank you."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

4½ PER CENT

MAHARASHTRA STATE DEVELOPMENT LOAN, 1974

ISSUE PRICE AT PAR

OPEN ON MONDAY, THE 27TH AUGUST 1962

The loan will be closed as soon as the total amount of Rs. 12½ crores has been subscribed and in any case not later than the close of business on the 1st September 1962.

The applications for the loan will be received at—

(a) the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi,

(b) the branch of the State Bank of India at Patna,

(c) the branch of the State Bank of Hyderabad at Hyderabad,

(d) the branches of the State Bank of Hyderabad, conducting Government work within the State of Maharashtra,

(e) the branches of the State Bank of India within the State of Maharashtra except at Bombay and Nagpur and at places covered by item (d),

(f) the Government treasuries and sub-treasuries in the State of Maharashtra at places not covered by items (d) and (e).

PRICES, PRODUCTIVITY AND WAGES

ANOTHER LETTER FROM LABOUR MINISTRY

APROPOS our comments on Dr. Nigam's letter (*vide* page 164 of *Commerce* dated 28th July 1962), Mr. B. N. Datar, Labour and Employment Adviser, Union Ministry of Labour and Employment, writes as follows:

"The issue of *Commerce* dated 28th July 1962 has published a letter from the Union Labour Ministry on 'Prices, Productivity and Wages' together with an editorial comment on it. There are some statements in the editorial comment which do not conform to facts. The following paragraphs attempt to bring out these facts so that the editorial comment could be placed in its proper perspective:

"The Editor wants to know why 1953 has been chosen as the base year for working out indices of real wages of industrial workers and not 1951 or 1947. Public memories are short and require to be brushed up from time to time. At the time of the publication of the Draft Outline of the first Plan, the Development Committee on Industries constituted by the Planning Commission and consisting of leading industrialist in the country and some eminent trade unionists met in New Delhi to discuss the portions in the Draft Plan relating to industrial development and labour. The Committee unanimously accepted the recommendations on labour policy proposed to be set out in the Draft Outline. One of the elements of this policy was that an attempt should be made to restore the loss in the pre-war real wage of industrial workers. In 1947, the year which is recommended for comparison by the Editor, the real wage as compared to 1939 had more or less reached the lowest level. It was about 78, as compared to 100 in 1939. By 1950, there was some recovery, but, even so, the real wage index (1939=100) was 90. It is in the context of these facts that the recommendation in the Draft Outline was accepted by leading industrialists. In 1953, the real wage had nearly reached the pre-war level. The second Plan did not specifically mention a wage increase as an aspect of labour policy, in spite of insistent demands for the same in trade union circles. At the same time, the Wage Board approach for settlement of wages in different industries was adopted and has since been working to the satisfaction of employers and workers. Thus all subsequent comparisons of real wages are made with the position obtaining in the year 1953.

"It is not wholly appropriate to say that the interests of industrial workers have been safeguarded by the escalator clause linking wages to cost of living. The recent wage census has shown that only one-third of industrial workers have the benefit of such escalator clauses and, even here, neutralisation is only to the extent of 60 to 100 per cent of the minimum wage level fixed for the unit or industry. For instance, if Rs. 30 per month is accepted as the minimum wage for an industry in an area, the quantum of dearness allowance, which is the same for all workers in the industry, is worked out in such a manner that it will neutralise the effects of price increases to a varying extent referred to earlier (60 to 100 per cent) in case of persons drawing Rs. 30. But if the average wage in the industry is taken into account, the percentage neutralisation will require to be adjusted downwards.

"The Editor has suggested the policy of 'pay pause' on the basis of British experience to help the export drive. It is presumed that what he means by this 'pay pause' policy is the stopping of wage increases all round; for it cannot be his contention that there should be a pause in jute industry in Bengal unless there is a similar pause in other industries in that area. Also, within the industry, there may be some units which export and others which do not. 'Pay pause' for units which export cannot be operated without similar restrictions on the non-exporting units. Obviously a policy of partial 'pay pause' would not be practicable. A general 'pay pause' will have its own consequences, mainly a pause on the share of non-wage group which incidentally has been going up since 1953. If this implication is not accepted, the 'pay pause' argument becomes completely futile.

"The Editor has complained about some of the qualifying phrases used by Dr. Nigam in his letter in presenting statistics on increases in productivity. He asks: 'Could any firm conclusions be drawn or policy based on such uncertain facts and tentative inferences'? A reference to any publication on national income in this country, or for that matter in many developing countries, will show large gaps in statistics and also limitations in whatever statistics are available, but policies do get framed on the basis of such statistics and do operate with a fair measure of success. This should not be interpreted to mean that reliable statistics are unimportant. At the same time, if a caution is expressed by the user of statistics, it should not be construed in a way the Editor has chosen, namely, for questioning the whole basis of policy.

"The Editor goes on to complain about the obstructive attitude of the trade unions and the Union Labour Ministry in regard to attempts made by employers to increase productivity. He has chosen, however, a wrong instance to substantiate his point: the instance of textile industry. Because of the national objectives mentioned in the Plan of increasing employment, the Indian Labour Conference, in its 15th session, unanimously agreed on a formula for promoting rationalisation. The Working Group for the Cotton Textile Industry appointed by the National Industrial Development Corporation which reported in 1960, that is, three years after the tripartite agreement, has the following observations to make:

> 'We would strongly suggest agreements with labour being entered into so as to facilitate implementation in an atmosphere of mutual understanding and trust. We feel, however, that even the conclusions of the Fifteenth Labour Conference have not perhaps been acted upon in many places. The working arrangement in Ahmedabad has been within the framework of these conclusions and quite substantial results have been achieved.'

"And this is the report of a group consisting mainly of employers and their technicians.

"A recent study by the British Employers' Confederation is quoted to rebut Dr. Nigam's argument about wages in relation to cost of living. We saw a reference to this report in *Commerce* dated 14th April 1962 and, because of the interesting conclusions reached in the study, we wrote to the British Employers' Confederation to send us a copy of the same report. The reply received by us is reproduced below:

> 'I thank you for your letter of 25th April asking for a copy of a study on wages and cost of living. I would explain that we have not published any study on this subject and I think you have been misled by an article in the *Financial Times* which incorrectly reported that we had produced such a study.
>
> 'The question is one, of course, with which we are closely concerned, but I think it unlikely that we will publish anything on the matter, at any rate, in the near future.'

"Comment is superfluous.

"Finally, the Editor quotes from the reported finding of the Mahalanobis Committee. I do not know whether it is appropriate to quote such 'reported findings' of any committee, particularly, when it is the experience that many such findings get amended before they are finally presented to the public."

* * * *

[In his letter, Mr. Datar does not dispute the basic argument of the editorial note under reference. We have no comments to make on his elucidation of the background to and the reasons for adopting 1953 as a base year for the purpose of comparing the trend of real wages. We would, however, like to correct one erroneous impression he seems to have formed from our reference to the 'pay pause' in Britain. We did not say that this country should adopt a 'pay pause' policy. Our purpose in citing the pay pause policy in Britain was to illustrate the influence of wages on industrial costs and to underline the need for giving attention to the cost aspect in the export promotion drive. What we suggested was not pay pause or wage freezing, but wage restraint in the sense that wage rise should be related to increases in productivity. Accordingly, the implications and dangers of partial and total pay pause pointed out by Mr. Datar are irrelevant.

It is a matter of opinion whether the preliminary findings of an important committee like the Mahalanobis Committee could be employed for the purpose we chose to use them. The fact that there is a possibility of the preliminary findings getting amended before publication does make the final findings suspect, assuming that the latter will differ from the former.—ED.]

4½ PER CENT ORISSA GOVERNMENT LOAN, 1974

Issue price Rs. 99.50 per cent

Opens on the 27th August, 1962

The loan will be closed as soon as a total of Rs. 7 crores has been subscribed and in any case not later than the close of the business on the 1st September, 1962.

Applications for the loan will be received at (a) the Offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore, (b) the branch of the State Bank of India at Patna, (c) the branch of the State Bank of Hyderabad at Hyderabad, (d) the branches of the State Bank of India located in the State of Orissa, and (e) the Government Treasuries and Sub-Treasuries.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE OFFICES MENTIONED ABOVE.

EXPORTS OF DEVELOPING COUNTRIES

G.A.T.T. URGES INDUSTRIAL NATIONS TO REMOVE TRADE BARRIERS

THE major obstacles in the way of expanding exports of both traditional and non-traditional goods from developing countries like India have been exhaustively examined by the G.A.T.T. Committee III, as part of the G.A.T.T. programme for expansion of international trade. It may be recalled that, under the programme, which was initiated in November 1958, three committees were formed to tackle the different factors that inhibit the rapid growth of world trade. The first committee was entrusted with the task of reduction of customs duties. Its work led to the world tariff conference which ended in Geneva a month ago. The Committee II examined the problems of trade in agricultural products, with particular reference to the use and effects of non-tariff measures on world trade in agricultural products. The findings of this Committee were reviewed in some detail in these columns sometime back (*vide* page 170, *Commerce* dated 28th July 1962). The function of the Committee III related to the study of factors hindering the trade of less-developed countries. The report of the Committee III formed the basis on which the Contracting Parties of the G.A.T.T. adopted the famous "Declaration on the promotion of the trade of less-developed countries" (urging developed countries to remove tariffs, quota restrictions and other barriers on goods exported from less-developed countries) at a Ministerial meeting in Geneva in November last. The Committee's work, however, was not wound up with the submission of its report. For it is still engaged in following up the actual implementation of the Declaration by the countries concerned. For this purpose, the Committee III met at Geneva twice this year, once in February and again in May.

G.A.T.T. Committee III

The findings and recommendation of the Committee III have now been brought out by the G.A.T.T. in the form of a brochure (*Trade of Less-Developed Countries—Special Report of Committee III*. Price: $1.50) which also incorporates a study on India's third Plan, with particular reference to the programmes for the expansion of exports. It is proposed to deal in this article with some of the findings of the Committee III which are of general importance, leaving its observations on India's Plan to a later article. Slim though it is with no more than 60 pages, the report is a very valuable document on the trade of less-developed countries, being the result of a three-year detailed study by an expert body, involving product-by-product examination of thirty products and detailed discussion with the Contracting Parties of the G.A.T.T.

The Committee has stressed that a rapid increase in the export earnings of less-developed countries is vital both in the short-term and the long-term for meeting import requirements, for servicing and amortising loans, for enabling developing countries to take full advantage of international specialisation and for providing a pattern for sound economic development. In order to attain these objectives, there must be, according to it, sufficient access to international markets, not only for the exports of traditional agricultural products and raw materials but also for the exports of semi-processed products and manufactures. Although these problems have been discussed and suggestions made time and again, only "insufficient progress has been made" by the industrially advanced countries in reducing import restrictions. The Committee has sought to remove the apparent fear of industrialised countries that such concessions to developing countries might harm their interests. It has emphasised the fact that "economic development policies by less-developed countries, which resulted in their fuller integration in the world economy, should promote rather than decrease the trade of industrialised countries by increasing the capacity of less-developed countries to import increasing quantities of the products of the industrialised countries." This conclusion is borne out by India's own experience. Despite heavy restrictions on imports of a wide range of goods, India's total imports today are far higher than they were before its planning era. Actually, its progress in industrialisation has raised its dependence on imports though the character of imports has changed.

The products which have been examined by the Committee with a view to identifying the major obstacles to the expansion of exports by less-developed countries fall under three major groups: (1) foodstuffs and major agricultural products (cocoa, coffee, tea, oilseeds and vegetable oils, cotton, tobacco and canned fish), (2) industrial raw materials and semi-manufactures (iron ore, copper, copper rollings, lead, ferrochrome and ferromanganese, bauxite, alumina and aluminium and timber), and (3) manufactured goods, including (*a*) manufactures of cotton, jute, coir, leather, and sports goods, and (*b*) new items like bicycles, sewing machines, electric fans, electric motors, diesel engines and steel furniture.

Quantitative Restrictions

One of the most serious barriers confronting the exports of less-developed countries, according to the Committee, relates to quantitative import restrictions. Exports of vegetable oils and seeds, coffee, raw cotton, tobacco, tropical timber, sewing machines and manufactures of jute, cotton and coir are often adversely affected by quantitative import restrictions which are sometimes applied in a discriminatory manner. The Committee observes, in this connection, that the less-developed countries as a group have not benefited significantly from the widely observed movement towards trade liberalisation by industrialised countries, following the improvement in their balance of payments difficulties. In certain instances, removal of restrictions, says the Committee, was confined to raw materials, whereas processed products from these materials have continued to be subject to restrictions. Further, certain industrialised countries have liberalised trade on an area basis, while maintaining restrictions against other areas "in which most of the less-developed countries are located." Calling upon the developed countries to remove these restrictions and implement the provisions of the G.A.T.T. conscientiously, the Committee observes as follows:

> "The maintenance of such restrictions by industrialised countries is a serious threat to the balanced expansion of exports of less-developed countries and to sound patterns of growth in the international economy; the maintenance of such restrictions does not only seriously affect export possibilities for less-developed countries, but also has the effect of concentrating imports in markets where goods can enter freely, thus sometimes contributing to strains on the capacity of these markets to absorb imports. Moreover, many of these restrictive measures, particularly discriminatory restrictions, are in clear contradiction with obligations of the importing countries under the General Agreement by all contracting parties will in itself go a long way towards removing many of the barriers at present still confronting exports from less-developed countries."

Tariff Barriers

Equally restrictive are the tariff barriers imposed by industrialised countries. High tariffs and tariffs which differentiate disproportionately in favour of imports of raw materials, as compared with duties on processed or manufactured goods, are also inhibiting the trade of the less-developed countries. The major commodities affected by these obstacles are vegetable oils, coffee, tea, cocoa products, cotton and coir manufactures, sports goods, aluminium, leather products, manufactured consumer goods, etc.

High revenue duties and internal fiscal charges are also considered major impediments to the intake of coffee, tea, cocoa and tobacco and a number of manufactured consumer products by the developed countries. In the case of coffee, tea, and cocoa in particular, these taxes apply, in effect, only to the imports from the less-developed countries, since there is no domestic production in the countries imposing these taxes. The incidence of revenue duties is particularly heavy in various European countries. In regard to tobacco, barring perhaps the U.S., the vast majority of exporters belong to the underdeveloped category.

State Monopolies

The Committee has also found that the activities of restrictive State monopolies, whether in countries with centrally planned or free market economies, are having an adverse impact on trade in such products as coffee, tea, cocoa and tobacco, particularly where retail prices fixed for these products are very high in relation to import costs. The Committee is of the view that if these monopolies and the purchasing agencies in State-trading countries were to import larger amounts of these products and to provide liberal access to imports from less-developed countries by reducing the internal prices, they would help promote a larger offtake of products from less-developed countries than is the case now.

Apart from the four types of obstacles enumerated above, there are also several other obstacles in some countries such as price support, surplus disposal operations and mixing regulations which are detrimental to the export trade of less-developed countries. The question of fluctuations in commodity prices also deserves mention in this context.

Recommendations

In the light of the aforesaid hindrances imposed by the developed countries, the Committee has made ten specific recommendations designed to improve the situation. The recommendations are:

> "(i) contracting parties should give immediate and special attention to the speedy removal of those remaining quantitative import restrictions which affects the export trade of less-developed countries,
>
> "(ii) contracting parties should consider the immediate removal of any element of discrimination in the application of their import restrictions which affects the export trade of less-developed countries,
>
> "(iii) contracting parties, especially industrialised countries, should examine their tariffs with a view to an early expansion of the export earnings of less-developed countries,
>
> "(iv) contracting parties, during tariff negotiations, should keep in mind the needs of less-developed countries, as stipulated in Article XXVIII *bis*:3(b) of the General Agreement, for a more flexible use of tariff protection, particularly to assist their economic development,
>
> "(v) contracting parties should adopt a sympathetic attitude to the question of reciprocity of tariff concessions to meet the special needs of less-developed countries,
>
> "(vi) contracting parties considering methods to bring about a general reduction of tariffs in the future should take account of the needs of less-developed countries,
>
> "(vii) contracting parties, especially those industrialised countries with favourable financial and economic situations, should re-examine the possibility of reducing substantially their internal revenue and fiscal charges on products of interest to less-developed countries,
>
> "(viii) contracting parties, especially industrialised countries, when formulating and implementing their commercial and economic policies, should give increasing emphasis to measures which would enable less-developed countries to enjoy a progressively increasing rate of growth; where their requirements of processed goods, semi-finished and finished components and of the simpler industrial products can be met by imports from less-developed countries, instead of being produced at home, contracting parties should give sympathetic consideration to moderating their tariff and non-tariff measures affecting these products,
>
> "(ix) contracting parties should take account of the long-term development plants of the less-developed countries and recognise that, important as financial assistance is to less-developed countries, an expansion of exports, both of manufactured goods and raw materials, is essential if less-developed countries are to develop on a sound economic basis, and
>
> "(x) contracting parties operating State import monopolies or purchasing agencies, should endeavour to improve access to their markets for products of less-developed countries by decisions to import larger quantities of the products concerned and, if necessary, by reductions in the difference between import and sales prices."

Some of the countries have already taken a few steps in pursuance of these suggestions, but much still remains to be done. As regards reduction of customs tariffs, the G.A.T.T. is expected to commence shortly the elaboration of a new general plan for this specific purpose. The Committee, at its meeting in May last, drew particular attention to the need for incorporating in the general plan the solutions to the special problems faced by less-developed countries. It may be noted, in conclusion, that, while the Commiitte has made a detailed study of the various obstacles, it has not devoted any attention to the impact of the formation of regional blocs on the prospects for exports by the developing countries. It has also not made any detailed study of the consequences of fluctuations in commodity prices.

The U.S. balance of payments deficit in April, May and June of this year was about half what it was in the previous three months—a drop of $250 million from $475 million. If the second half of the year bears out the usual seasonal relationship, the payments deficit for the whole year 1962 would be somewhat less than $1,500 million. In 1961, it was $2,500 million, and from 1958 to 1960 it ran between $3,500 million and $4,000 million a year. In the April-June quarter, the total purchases, investments, loans, and grants of the Government and people of the United States abroad exceeded receipts by $300 million. Adjusted for expected seasonal variations, that would be $250 million. Improvement in the merchandise trade balance accounted for about $160 million of this $225 million improvement over the first quarter. U.S. imports increased by $140 million from the first to second quarter, but exports increased by an even greater amount.

CALICO MILLS DISAPPOINT

SALES RISE, BUT PROFIT AND DIVIDEND LOWER

THE Ahmedabad Manufacturing and Calico Printing Company Ltd., better known as the Calico Mills [Managing Agents: Messrs. Karamchand Premchand (Private) Ltd., Ahmedabad], has disappointed its investors, in particular, and others, in general, with its working results for the year ended 31st March 1962. For, if the past were any guide to the future, its excellent performance in the previous year, extending the all-round progress seen since 1958-59 after the 1957-58 setback, was expected to be surpassed during the year under review. To the contrary, the only welcome feature of the year's results is the further improvement in sale proceeds from Rs. 10.83 crores to Rs. 11.08 crores. As for the other growth factors, gross profit has declined from Rs. 231.35 lakhs to Rs. 208.48 lakhs and profit-margin (ratio of gross profit to sales) has receded from 21.3 per cent to 18.8 per cent. The investor is the casualty of the disappointing results, as the taxable dividend has been pruned to 25.6 per cent per annum from 27.2 per cent, to which level it was raised only in the previous year from 24.8 per cent paid for 1959-60. The amount of profit retained in business is also lower at Rs. 25.28 lakhs as compared with Rs. 51.36 lakhs a year before. The following paragraph reproduced from the Directors' report for the year throws some light on why and how the Company fared rather badly:

"During the year, the cost of production continued to rise. Wages increased in accordance with the recommendations of the Cotton Textile Wage Board and the Technicians' Award. Due to the Government's import policy, prices of stores, chemicals and dyes were higher. The Government of Gujarat imposed a compulsory power cut in May 1961 on account of acute shortage of electric supply in the State. The Indian cotton crop was again badly affected, resulting in substantial price increases. Prices of cloth, on the other hand, were pegged to previous levels in conformity with the recommendations of the Indian Cotton Mills Federation in consultation with the Government of India with regard to price fixation."

It will be seen from the foregoing quotation that the causes for the setback in the financial results were beyond the management's control.

The table below gives a synoptical view of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	11,07.74	10,83.16	999.51	915.65
Other income	15.34	13.12	10.78	5.23
Closing stock of finished goods	117.44	81.54	67.33	82.38
Raw materials and stores consumed	513.48	473.42	435.64	414.96
Salaries, wages and bonus	264.38	251.41	240.94	220.56
Other expenses	198.84	153.81	138.75	137.22

Carry forward	4.26	16.05	21.59	3.14
Market value of equity shares (In rupees):	1962	1961	1960	1959
High	1,146.00	1,199.00	1,105.00	702.00
Low	968.50	872.00	707.00	501.00

* Subject to deduction of tax.

Vigorous efforts to promote cloth exports were continued by the Company during the year, when it was granted a licence to install 25,000 additional spindles under the export promotion scheme. It is, however, stated that the transfer of authority to issue licences for textile exports to Britain from that country to this resulted in a speculative rush for licences to the detriment of the relatively new comers to the field like the Calico Mills, which were making a genuine and determined effort to increase exports.

The Directors state that rapid modernisation, expansion and diversification of the Company's activities continued to be the most notable features of the year. Capital assets of over Rs. 6 crores have been added to the block in the last five years. While the Directors are convinced that this policy of modernisation and expansion is the best in the long-term interests of the Company, they have observed that it has inevitably put considerable strain on both its human and material resources. Sustained efforts have, therefore, been made to increase savings, thereby enhancing the amount of profits available for retention in business. Nevertheless, borrowings against the security of debentures have been heavy, raising the burden of interest charges from Rs. 13.92 lakhs for the previous year to Rs. 26.21 lakhs in 1961-62. In order to provide for the additional short-term finance for its expansion programme, the Company issued during the year under review debentures of the third and fourth series aggregating Rs. 2 crores and placed them as security with banks against borrowings. Since it is the intention of the Directors to repay the debenture liability through retention of profits, since the investment in expansion and modernisation will take quite some time to yield a reasonable rate of return and since the difficulties in the way of cotton textile industry that led to a fall in profit-margin in the past year are still continuing with no sign of abatement in the foreseeable future, there is little or no prospect of the Company being in a position to raise its dividend in the near future.

The polyvinyl chloride plant of the Company was put into commission in July 1961 and the quality of resins and compounds produced proved to be equal to the highest foreign standards. This is the first time that P.V.C. has been made in India entirely from the basic raw materials, such as salt, limestone and coke. In January 1962, the Government announced new prices for calcium carbide, which turned out to be lower than those recommended by the Tariff Commission. As the Company's plant was not yet in operation when the inquiry was conducted, its higher cost structure on account of heavier capital expenditure and raw materials prices was not reflected in the Tariff Commission's recommendations. The caustic soda expansion is said to be progressing satisfactorily and increased production is expected next year.

The financial position of the Company, though sound, underlines its heavy reliance on loan capital and short-term borrowings. It has an issued and paid-up capital of Rs. 235.58 lakhs, of which Rs. 206.25 lakhs are in equity shares and the balance in preference shares. This is supplemented by reserves and surplus aggregating Rs. 300.35 lakhs. But secured loans (part of which are secured against debentures of Rs. 360.75 lakhs) have increased from Rs. 403.81 lakhs to Rs. 559.43 lakhs, including a loan of Rs. 54.02 lakhs from the I.C.I.C.I. Besides, there are current liabilities and provisions aggregating Rs. 255.79 lakhs which are some Rs. 24.35 lakhs less than a year before. Current assets, loans and advances aggregate Rs. 769.83 lakhs and investments amount to Rs. 8.47 lakhs, the bulk of which are unquoted. The gross block, which increased during the year from Rs. 9.87 crores to Rs. 11.24 crores, has been written down to Rs. 5.73 crores.

The disappointing results for the year under review have currently kept the Rs. 125 fully paid ordinary shares a little subdued around Rs. 985 *cum*-final dividend (of Rs. 18 gross), as against Rs. 1,108 *cum*-final dividend (of Rs. 20 gross) roughly around this time last year. However, even the current rate appears to be quite high, reflecting the investor's confidence in the growth prospects of the Company and its sound management. How high the current rate is will be evident from the fact that, at that rate, the net yield on the shares works out to 1.8 per cent per annum.

(*Concluded from next column*)

Besides this, the mills were permitted to unseal, against their accumulated looms hours, the maximum number of looms with the object of increasing the output to the fullest extent possible.

Side by side with this improvement in operating conditions and raw material supply position, demand for jute goods has been extremely good since January 1962. For the first time in several years, the jute industry has thus been able to work to maximum capacity and indications are, as the Directors state in their report, that such conditions should continue for, at least, the next few months. On account of these favourable trading conditions, prospects for the current year are considered to be bright, unless the decline in U.S. business activity assumes serious proportions, since that country is the single largest buyer of Indian jute goods.

At present, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 304.00 *cum-div.* The net yield, on an *ex-div.* basis, works out to 6.1 per cent per annum.

BALLY JUTE REPEATS DIVIDEND

OUTLOOK ENCOURAGING

CONSIDERING the difficult conditions encountered by the jute mill industry particularly during the first half of the preceding year, the slight setback suffered by Bally Jute Company Ltd., another Birla group concern, during the year ended 31st March 1962 ought to appear as nothing of any serious concern. Realisation from sale of finished goods and scrap material declined from Rs. 258.34 lakhs in 1960-61 to Rs. 239.14 lakhs in 1961-62 and a parallel decrease has been witnessed in the gross profit which has gone down from Rs. 23.23 lakhs to Rs. 21.77 lakhs. In line with a lower gross profit, the provision for Managing Agents' commission has also been reduced from Rs. 1.22 lakh to Rs. 1.20 lakh and there has been a cut of Rs. 0.57 lakh to Rs. 6.96 lakhs in the provision for depreciation. These small savings, however, have been nearly absorbed by the increase in the provision for taxation, due to higher rates of corporate taxation, from Rs. 6.50 lakhs to Rs. 6.90 lakhs. The net profit, too, has, therefore, declined, from Rs. 7.98 lakhs to Rs. 6.71 lakhs to be exact. Even then, the Directors have found no reason to reduce the rate of ordinary dividend which has been maintained for the second year in succession at 25 per cent per annum, subject to deduction of tax. This absorbs Rs. 5.00 lakhs, leaving Rs. 60,074 as a carry forward as against Rs. 1,00,757 brought in. The working results of the Company for the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	239.14	258.34	197.72	195.17

The financial position of the Company is strong. The subscribed and paid-up share capital has remained unchanged at Rs. 40.00 lakhs divided equally between 10 per cent cumulative preference shares of Rs. 100 each and ordinary shares also of Rs. 100 each both fully paid. This is backed by reserves totalling Rs. 35.62 lakhs, giving the equity per share as Rs. 278.10. Secured loans aggregate Rs. 70.36 lakhs, of which Rs. 54.39 lakhs represent loan from the State Bank of India secured against all movable assets, while Rs. 15.97 lakhs loan from the National Industrial Development Corporation Ltd. against the security of all fixed assets of the Company. It is interesting to note that, though the latter loan was repayable in instalments by June 1974, it has been fully repaid, since the date of the balance-sheet. Unsecured loans stand at Rs. 0.91 lakh and current liabilities and provisions at Rs. 22.39 lakhs. The net block of the Company is worth Rs. 57.59 lakhs and has been obtained by deducting, from the gross block of Rs. 149.16 lakhs, the accumulated depreciation of Rs. 92.07 lakhs and adding to the balance Rs. 0.50 lakh representing the cost of capital work in progress. Current assets, loans and advances and investments aggregate Rs. 111.70 lakhs.

When the Company commenced its financial year on 1st April 1961, the jute mill industry was passing through a difficult situation. Because of the shortage of raw jute, production had to be curtailed by sealing additional looms, reducing working hours and resorting to block closure of mills for two periods of one week each in June and July 1961. The situation was transformed when the 1961-62 jute crop turned out to be a bumper one. With the arrival of the new crop in the market from September 1961, trading conditions began to improve and working hours were increased by stages to 48 as against 42½ as at the commencement of the year.

(*Continued in previous column*)

KESORAM INDUSTRIES' PROFIT-MARGIN SHRINKS AS COSTS AND EXCISE RISE

DIVIDEND MAINTAINED ON HIGHER CAPITAL

YET another victim of rising production costs and increasing burden of excise duty, which has not only been increased where it already existed but whose net has also been widened year after year to cover the previously uncovered commodities, is the Kesoram Industries and Cotton Mills Ltd., formerly known as only Kesoram Cotton Mills Ltd. (Managing Agents: Messrs. Birla Brothers (Private) Ltd., Calcutta). The Company's excellent sales performance for the year ended 31st March 1962 has unfortunately ended in a lower gross profit. In keeping with the preceding year's remarkable all-round progress, sale proceeds for the year under review have staged a further impressive rise of Rs. 143 lakhs to Rs. 11.61 crores. The enhanced burden of excise duty accounts for Rs. 51.45 lakhs of this increase. Even so, the gross profit has declined by Rs. 3.71 lakhs to Rs. 180.03 lakhs. While the decline in profit is just a little, the profit-margin (ratio of gross profit to sale proceeds exclusive of excise duty but inclusive of closing stocks) has beat a retreat from 18.6 per cent to 16 per cent.

The year under review saw further rise in all sorts of expenses. The cost of raw materials, stores and spares consumed increased sharply from Rs. 451.76 lakhs to Rs. 525.25 lakhs, staff expenses went up from Rs. 204.33 lakhs to Rs. 222.13 lakhs and other expenses rose from Rs. 102.41 lakhs to Rs. 125.89 lakhs. On top of this, the excise duty burden rose from Rs. 114.77 lakhs to Rs. 166.22 lakhs. In these circumstances, one can hardly blame the management for the setback in the profit-margin.

As regards appropriations, while the provision for depreciation is slightly lower at Rs. 69.43 lakhs as compared with Rs. 71.51 lakhs a year before, that for taxation has been raised pretty sharply from Rs. 6.67 lakhs to Rs. 36.16 lakhs and the Managing Agents' commission has absorbed Rs. 9.70 lakhs as against Rs. 8.92 lakhs in 1960-61. Consequently, the net profit at Rs. 64.74 lakhs shows a sizable setback of roughly Rs. 32 lakhs. Nonetheless, the Directors have maintained the dividend at Re. 1.20 per share, subject to tax, on the Rs. 10 fully paid-up shares and that too on the capital increased during the year by the issue of 400,000 shares at par in the form of rights shares in the proportion of one new share for every four old shares held by the shareholders as on 22nd July 1961. However, to maintain the dividend, the Directors have drawn Rs. 11.37 lakhs, as against a mere Rs. 2.03 lakhs a year before, from reserves. While increasing the transfer to development rebate reserve from Rs. 3.47 lakhs to Rs. 13.38 lakhs, they have reduced credit to general reserve from Rs. 62.37 lakhs to Rs. 30.91 lakhs. The net effect of these withdrawals from and additions to reserves is that the amount of profit conserved at Rs. 32.92 lakhs is less than half of that (Rs. 65.84 lakhs) last year.

The table below gives a clear idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	11,60.89	10,17.84	628.18	548.60

* Subject to deduction of tax.

After some initial satisfactory working, the textile section of the Company experienced, in common with the industry as a whole, difficulties arising from slack demand, higher cotton prices, non-availability of and steep increases in the prices of stores, spares and dyes and higher wages from the beginning of 1962, all of which contrasted sharply with the *status quo* in the controlled ex-mill prices of cloth. The Directors regret that, while higher wages have been paid under the Wage Board award, little progress has been made in regard to the Board's recommendation on the introduction of rationalisation of various work-loads, in the absence of which the competitive power of the industry in West Bengal, in particular, will be greatly impaired. The rayon plant reached the target capacity, but did not enjoy satisfactory earning capacity owing to (*a*) the industry having to absorb 60 per cent of the increased excise duty, (*b*) import at higher cost of the export incentive rayon-grade pulp, (*c*) higher prices of raw materials and stores, (*d*) insufficient power supply and (*e*) fall in the prices of certain types of yarn. As regards raw materials, the price of sulphur was higher by 25 per cent and that of caustic soda by 15 per cent. The Directors have estimated the resultant burden of all these factors on the Company at Rs. 44 lakhs on the basis of 48 machines working for a full year. The industry has, therefore, represented to the Textile Commissioner the question of increase in yarn prices.

The transparent paper casting machine started working in June 1961 and production was gradually increased to the designed capacity. Subsequently, however, production was cut due to the slump in offtake. To improve sales, moisture-proofing, printing and bag-making machines have been ordered and are expected to arrive shortly. In addition to these shortcomings, the Company was affected by the shortage of power and coal, which still continues.

Fair progress has been reported by the Directors on modernisation of the textile section, which involved a capital expenditure of Rs. 47 lakhs during the year. In view of the present conditions of the industry, the Directors propose to continue the programme for several years. The second unit of the rayon plant, consisting of 24 spinning machines, went into production in April 1962 and should be working now at full capacity. The import licence for the steel tube project was delayed. But it is expected to be received soon. Meanwhile, land for the project has been purchased near Calcutta and arrangements for temporary supply of power have been finalised with the Calcutta Electric Supply Corporation Ltd. Efforts are being made for securing permanent power supply. The proposed spun pipe project is to be located near the steel tube project. Necessary intimation for the import licence has been received from the Government, subject to the sanction of a loan by the International Bank for Reconstruction and Development. Provisional orders for the plant have already been placed and the technical know-how has been arranged. All these formalities are expected to be finalised by the end of this year. In order to raise additional finance for the various projects, the Directors have approached the authorities with an application to issue debentures and the matter will be considered after the sanction has been obtained.

As for the outlook for the Company, the Directors are optimistic in view of the substantial expansion and diversification in activities, which will find further extension in future. The Directors add that the ultimate future of the Company is quite sound, though periods of unexpected difficulties now and then cannot be ruled out.

The Company's subsidiary, Bharat Kala Bhandar Ltd., reported for the year ended 31st March 1962 a setback in sales from Rs. 455.61 lakhs to Rs. 368.67 lakhs, but a substantial improvement in gross profit from some Rs. 66,000 to Rs. 7.75 lakhs. It has been licensed to install 12,500 additional spindles in its cotton spinning mill at Charduar.

The financial position of the Company is quite impressive. Its paid-up capital of Rs. 319.93 lakhs (of which Rs. 200.09 lakhs are in equity shares and the rest in preference shares) is backed by reserves and surplus aggregating Rs. 333.22 lakhs. Borrowings, the bulk of them from banks, went up during the year; secured loans from Rs. 170.84 lakhs to Rs. 232.73 lakhs and unsecured loans from Rs. 87.67 lakhs to Rs. 96.06 lakhs. Current liabilities and provisions, put together, also increased from Rs. 192.40 lakhs to Rs. 289.53 lakhs. Besides, there are contingent liabilities running into some hundred lakhs, including Rs. 68.75 lakhs by way of guarantees to the State Bank of India against the liabilities of the subsidiary company. As against this, current assets, loans and advances total Rs. 343.90 lakhs and investments amount to Rs. 46.16 lakhs, of which Rs. 27.37 lakhs are quoted and command a market value of Rs. 90.84 lakhs. The gross block expanded sharply during the year from Rs. 8.71 crores to Rs. 11.65 crores, following the erection of the second unit of the rayon plant which is valued at Rs. 240.69 lakhs. The net block is shown at Rs. 881.41 lakhs. The contingency reserve of Rs. 11.37 lakhs created last year in connection with the depreciation on the revalued amount of fixed assets has been transferred to general reserve following the receipt of the approval from the Union Ministry of Commerce and Industry, Department of Company Law Administration. No depreciation has been provided on the revalued amount of fixed assets during the year under review, but the same has been taken into consideration for calculating the Managing Agents' commission. The total depreciation provided so far is yet inadequate. The Company did not provide for any depreciation during the year ended 31st March 1958 and the provision for the years 1959 and 1960 was inadequate. The Directors say that "the arrears of depreciation will be made good gradually in future," as the quantum of depreciation required to be provided for under Section 205 of the Companies Act, 1956, is higher than what is required under the Income-tax Law.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 28.62 *cum-div.* At this rate and on the *ex-div.* basis, they yield a net return of 3 per cent per annum.

CAMPHOR AND ALLIED PRODUCTS LTD.

The Directors of the Camphor and Allied Products Ltd. (Managing Agents: Messrs. Dalal and Jhaveri [Private] Ltd., Bombay) have stated in their first annual report covering the period ended 31st March 1962 that, due to certain formalities beyond its control, the Company cannot go into production by December 1962 as expected at the time of the issue of the prospectus and that production would be delayed further by about three to four months. Meanwhile, the Company has purchased land admeasuring 9.97 acres from the Indian Bobbin Company Ltd., Clutterbuckganj. In addition it has paid deposit and taken possession of land admeasuring about 12 acres from the Forest Department of the U.P. Government, pending finalisation of the documents. Construction work has commenced and will be completed by October next. The superstructure of the plant building will be ready by November this year. According to the terms of the agreement for the purchase of technical documentation and equipment from abroad, the Company has paid $150,000 to its engineering consultant, Messrs. American Hydrotherm Overseas Corporation, which has placed orders for the supply of almost all the machinery required to be imported. The indigenous machinery has been ordered and will start arriving at the site from September next and the imported machinery will be received from November. The erection work, to commence in December next, will be completed by March-April 1963. The Special Director of the Company, Dr. Gastao Etzel, has arrived in India and started imparting training to its technicians in the technique and processes involved in the manufacture of camphor. He has almost finalised the research work for the maximum utilisation of the by-products of camphor.

During the period under review, the Company earned a sum of about Rs. 55,000. It incurred total expenditure of Rs. 3.03 lakhs, out of which Rs. 2.74 lakhs has been transferred to expenditure during construction account and, after providing Rs. 27,500 for taxation, there is a nominal loss of some Rs. 1,000, which is carried forward. The Company issued capital of Rs. 60 lakhs, consisting of 50,000 equity shares of Rs. 100 each and 10,000 9.23 per cent, taxable, cumulative redeemable preference shares, also of Rs. 100 each. The amount called up on both equity and preference shares up to 31st March 1962 was Rs. 75 per share. As against the subscribed capital of Rs. 45 lakhs, the paid-up capital, inclusive of the call arrears received, stood at Rs. 44.79 lakhs at the year-end.

DEVIDAYALS COMMISSION NEW FURNACE

Devidayal Metal Industries (Private) Ltd. of Bombay, which is one of the leading manufacturers of non-ferrous metal products in the country, has recently commissioned a new furnace which is known as controlled atmosphere bright annealing furnace. Supplied by the world-renowned Efco Furnace Ltd., U.K., the furnace is used for heating and cooling a metal or alloy and softening it by increasing its grain size. It is also used for eliminating gas pockets, etc. It is said to be producing the much-needed metal for cold rolling, especially for the manufacture of items undergoing drawing, bending or polishing. Devidayals have been continuously installing new equipment and would add some more this year, which would include also a complete new rolling mill.

SYNOPSES OF COMPANY REPORTS

Birla Cotton Spinning and Weaving Mills Ltd.

(*Managing Agents*: Messrs. Birla Brothers Private Ltd.)

Registered Office: Birla Lines, Delhi-6.

Sixty-sixth Annual General Meeting—3rd September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)

	(20%)	(20%)
Carry forward	1,67	1,34

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: During the year under review, there was a considerable increase in the cost of production in the textile industry by reason of steep rise in the price of cotton and substantial increase in wages, dearness allowance and prices of stores, dyes and spare parts. This adversely affected the working results of the mill. The ginning and pressing factories at Malout and Kesrisingpur and the tent factory worked satisfactorily and have shown good working results. On the whole the working results for the year under review are considered satisfactory.

Some more machines in the processing and finishing departments of the textile mill were added during the year. A few more machines are likely to be added during the current year. In view, however, of the great difficulty in getting requisite import licences, the plan for modernisation of more machines in the textile mill is being delayed. As mentioned in the last report, an application was made to the Government of India for permission to instal additional spindles for balancing the existing ratio of looms to spindles, but unfortunately the application has not been approved.

Since the close of the accounting year the rate of excise duty on cloth and yarn has been increased by the Central Government. Excise and custom duties have also been levied and/or increased on various items which are required by the textile industry. Due to failure of the cotton crop in the last season there is now an acute shortage of cotton leading to further increase in its price. All these factors are likely to affect the working results of the current year adversely.

The Directors are glad to inform that licences have been granted to this company to set up two textile units—one at Kathua in the State of Jammu and Kashmir with a capacity of 12,500 spindles and the other at Khurja in Uttar Pradesh with a capacity of 25,000 spindles. The Directors are taking necessary steps for setting up the units. Orders for plant and machinery for the Kathua Mills have already been placed.

Accounts in brief as at 31st March 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

* This includes Rs. 1,350 being refund of income-tax for the assessment year 1960-61.

Extracts from the Directors' report:

Raisings and Workings:

	1960-61	1961-62
	Tonnes	Tonnes
Raisings	4,38,804	4,41,051
Despatches	4,25,572	4,32,194

As will be seen from the above figures, the Company has maintained satisfactory progress during the year. The Directors in their report last year, had mentioned about the depletion of reserves of coal at the Pure Chirimiri Colliery. It was mentioned that the colliery will be able to work only upto the end of 1961. However, by working out all available sources, the life of the colliery has been prolonged but the reserves will be completely exhausted by August, 1962, when that colliery shall be shut down. The Directors are considering possibilities of augmenting the raisings at the other collieries of the Company. The workings at the Orient Colliery suffered some setbacks but are now returning back to normal. At the Khas Badjna Colliery, the workings of Badjna seam were difficult due to intrusion in the seam and bad roof conditions. The sale of IIIB coal from the Brindabanpur seam at this colliery poses a difficult problem and attempts have been made to convert the coal into soft coke.

A part of the fixed assets worth Rs. 2,16,758 has been written off in the accounts this year. This is due to the closure of 2 out of the 3 inclines at the Pure Chirimiri Colliery. The value of mining rights pertaining to that colliery has also been written off proportionately.

The year under report was a difficult one for the coal industry due to difficult railway transport and accumulation of stock at the pitheads. The cost of coal mining has been increasing over the past few years due to increase in labour cost consequent upon implementation of various awards and also due to increase in prices of stores. The incidence of various increases in labour charges due to operation of labour awards have not been fully neutralised by corresponding adequate increase in prices. The industry had represented to the Government for a satisfactory price increase to compensate for all the losses. The Government has, however, responded by giving very meagre increases in the prices; these in the case of this Company being 75 nP per tonne for *Grade I* coal, 37 nP per tonne for *Grade II* coal. The industry has again taken up this matter with the Government but so far no decision has been taken by them.

The Chairman informed that pursuant to the resolution of the Board of Directors dated 9th April 1962, an Extraordinary meeting of the shareholders of the Company was held on 8th June 1962, to approve the appointment of the Hindusthan Investment Corporation Ltd. as Secretaries and Treasurers of the Company, subject to the approval of the Central Government. The resolution has been duly passed by the shareholders and the application is being made to the Central Government for sanction and approval of the necessary appointment.

Accounts in brief as at 31st March 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital* ..	49,07,750	Gross block ..	84,52,322

N.B.—Adjustments represent only the balance brought forward from the previous year.

* The company has changed the accounting year from December to February. Hence the comparative figures for the previous year are the year ended 31st December 1960.

† This consists of an interim dividend of 10 per cent. and a final dividend of 12½ per cent.

Extracts from the Directors' report: The season started with a welcome rain favourable to growth followed by a severe hailstorm in April resulting in a damage assessed at 63,067.48 kgs. of black tea and a crop of 889.068 (890.959 kgs. for 1960) kgs. of tea (excluding the tea damaged by hail assessed as above) was made against an estimate of 907.185 kgs.

Irrigation carried out in some sections proved beneficial and a scheme enabling further irrigation is under way.

Sale price and cost of working	*Season 1961*	*Season 1960*
	Per kg.	*Per kg.*
Total net average sale price	Rs. 4.02	Rs. 4.52
Working cost per kg. of tea produced ..	Rs. 3.81	Rs. 3.61

It has been found difficult to comply with the provisions of the Companies (Amendment) Act, 1960 which calls for the holding of an annual general meeting within six months of the close of the accounting year as the annual account show the profit or loss on each season's operation and the books cannot be closed until substantially the whole of the crop has been sold. The auction sales of the previous year's crop continue upto May of the following year and, therefore when the accounts are closed in December, very little time is left, for finalisation and completion of audit and convening of the annual general meeting. The Directors have, therefore, considered it advisable to change the accounting year of the Company from December to February and the reduced profit shown may be partly attributed to the provision in the accounts of expenses for fourteen months.

Estimates for 1961 have been based on a crop of 25,000 Mds. of tea at a total cost Rs. 32,25,900.

Katihar Jute Mills.—The Directors are pleased to advise that with a view to diversify the activities of the Company, the lease of Katihar Jute Mills in Katihar having 3,876 spindles and 220 looms has been taken from the 1st April, 1962 for a period of two years and nine months.

Accounts in brief as at 28th February 1962 are as under:—

* Paid-up capital consists of 82,500 shares of Rs. 10 each. Out of this 55,000 shares are allotted as fully paid up by way of bonus shares by capitalisation of general reserve. In an Extraordinary General Meeting held on 15th June 1962 the paid-up capital was increased to Rs. 10,50,000 by capitalising Rs. 8,25,000 from reserves. This bonus issue was in the proportion of one new share for every ordinary share held. These new shares do not participate in the dividend declared for the period ended 28th February 1962.

Chembra Peak Estates Ltd.

(*Managing Agents*: Messrs. Peirce Leslie & Co., Ltd., Calicut, Kerala.)

Thirtieth Annual General Meeting—8th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Income from crops—		
Tea	31,75	36,36
Coffee	4,78	4,60
Pepper	2	2
Gross profit	9,00	13,21
Transfer to Managing Agents' commission ..	58	92
,, ,, depreciation	1,26	1,21
,, ,, provision for taxation	3,58	6,01
Net profit	3,60	5,07
Adjustments	2,78*	1,39
Appropriations:		
Total available balance	6,38	6,46
Transfer to provision for gratuity ..	3,30	Nil
,, ,, development rebate reserve ..	3	6
,, ,, general reserve	Nil	2,17
,, ,, dividend equalisation reserve ..	Nil	1,00
Proposed dividend (taxable) ordinary ..	2,80	2,80
	(20%)	(20%)
Carry forward	25	43

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 34,536 being excess provision for taxation in previous years written back and Rs. 2,00,000 transferred from general reserve.

Extracts from the Directors' report: Now that gratuities to staff and labour have become a legal obligation, it is considered necessary to make suitable provisions in the accounts. To enable the initial provision to be made, Rs. 2,00,000 has been drawn from general reserve and the balance appropriated from the current season's surplus. After making the transfer for gratuity provision the general reserve stands at Rs. 11,00,000. Full provision has been made in the accounts for Income-tax and agricultural income-tax due on the year's profits.

Tea: A crop of 7,58,097 kgs. (1960-61—8,24,496 kgs.) was harvested at a cost of Rs. 3.61 per kg. The average price realised for the year was Rs. 4.19 per kg. as compared with Rs. 4.41 per kg. for 1960-61.

Year	*Tea crop*	*Estate cost of production*	*All-in cost*	*Average price realised*
	Kgs.	Rs.	Rs.	Rs.
1959-60	7,02,575	2.58	3.29	4.16
1960-61	8,24,496	2.47	3.32	4.41
1961-62	7,58,097	2.81	3.61	4.19

Coffee: The crop harvested amounted to 206.843 tonnes (1960-61—228.377 tonnes).

A comparative statement showing details of crop, costs and payments for our coffee for the past three years is given below:—

Year	*Crops*	*Estate cost of production*	*All-in cost*	*Payments received per tonne*
	M. tonnes	Rs.	Rs.	Rs.
1959-60	61.481	3,027	3,390	2,407
1960-61	228.377	1,191	1,341	2,079
1961-62	206.843	1,138	1,204	2,310 (est.)

Estimates for season 1962-63 are as follows:—

Tea .. .. 8,16,466 kgs.

Coffee .. .. 240 metric tonnes

Accounts in brief as at 31st March 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	14,00,100	Gross block	29,31,248
Reserves and surplus..	12,70,857	—Depreciation ..	10,48,175
Other liabilities ..	13,35,073		
		Net block	18,83,073
		Block in progress ..	22,810
		Current assets ..	10,43,564
		Investments	1,000
		Cash	10,55,283
	Rs. 40,06,030		Rs. 40,06,030

* Paid-up capital consists of 7,00,050 ordinary shares of Rs. 2 each fully paid. Of this 1,70,913 shares have been allotted as fully paid up pursuant to a contract without payments being received in cash and 4,66,700 shares have been allotted as fully paid up by way of bonus shares through the capitalisation of reserves.

Notices

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

All preference shares are taxable unless otherwise stated.

*** These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent (cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating upto 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares receive 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of Income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent on 6 months' notice. pp—Partly paid.

SURVEY

(*Concluded from page 315*)

those from Goa) to 25 million tons, "provided all the developmental measures were undertaken" does not mean much. Nor has the Board assessed the extent of damage caused to exports by the S.T.C. The policy of selective buying of high grade ore followed by the S.T.C. has resulted in the wastage of a large part of the ore of other qualities produced in the course of mining. The private exporters, with their close contacts with buyers abroad, were formerly able to persuade the latter to accept some inferior varieties also; this is something which the State enterprise, by its very nature, is unable to do, particularly in its trade with private importers in free countries. Thus, the S.T.C.'s policy unwittingly results in wastage of precious national assets and loss of earnings for mining companies.

The woes of manganese ore trade, in which also the S.T.C. has interfered, albeit partially, are far greater. Particularly disturbing is the drastic reduction of offtake by India's traditional customer in this commodity, the U.S., following the growing competition from Brazil and other countries, stoppage of purchases for U.S. stockpiles and the beginning of an era of surplus disposal and the none-too-encouraging trends in the growth of steel industry in that country. Indian ore is also being priced out of all other markets. In this context, it is little consolation to miners and exporters to be told that they are free to export ore on their own and that they would get all transport facilities. Indian prices are much above world parity prices and, consequently, the mining operations have become uneconomic. The very fact that the largest mining-*cum*-exporting company, the Central Provinces Manganese Ore Company, has ungrudgingly agreed to Mr. K. D. Malaviya's formula for majority participation in the capital of the Company is an eloquent commentary on the outlook for the industry which is quite dismal, indeed. The Board's blessings to barter arrangements by individual parties merely reflect expediency. As is well known by now, in barter deals the bargaining power of domestic exporters is limited and they are usually framed on terms dictated by the foreign buyers. What is required, therefore, is that exporters who can really do the business should be given incentives which will compensate sufficiently for the loss involved in exports. The existing incentive scheme granting import entitlement for capital equipments is availed of neither by exporters nor by mine-owners. For only mine-owners (and not exporters) are at present entitled to essentiality certificates. The fact is that most of the mine-owners, except perhaps one or two large-scale units, are not in a position to undertake direct exports. The scheme is thus a virtual dead letter. Unless exporters are given adequate incentives and the interference of the S.T.C. is minimised, it would not be possible to recapture even partially the markets already lost. It is a pity that the Board of Trade did not care to study the basic problems of the manganese trade and take decisions on several suggestions made time and again by the representatives of trade and industry.

The Board, however, appears to have realised, although belatedly, the importance of exporters in promotional efforts. For it found it advisable to propose the formation of specialised organisations of exporters at the all-India level and at State levels. This, indeed, is a welcome step. Apart from encouraging exporters, such a step would be effective if foreigners themselves, who are conversant with the consumer preferences of their respective countries are encouraged to associate themselves with India's export promotion efforts by way of partners or technical consultants. The other proposals of the Board, including those for the appointment of four regional directors to look after the trade of different regions, for the creation of a non-official body to handle matters relating to trade fairs and for utilising the available facilities in universities and commercial institutions for undertaking surveys of markets and research, all sound quite good. But their value will depend on the speed and diligence with which they are implemented.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 22*nd August*

Comfortable conditions prevail in the short-term money market. The inter-bank call money rate is back again at 1½ per cent per annum, after going up to 2 per cent on the 16th inst. In Calcutta, too, the rate has come down from 3-3½ per cent a week ago to 2 per cent lenders over. The slack season thus continues in full swing. No change has taken place in the rates of interest on term deposits which are still at the ceilings under the inter-bank agreement. With a view to reducing the cost of deposits, the banks are said to be seriously considering the abolition, through concerted action, of the ½ per cent interest that is being allowed on current accounts.

There has been a slight rise of Rs. 10 lakhs to Rs. 2.10 crores in the amount offered against an invitation of tenders for Rs. 2 crores of 91-days' Government of India Treasury Bills. The average rate of accepted tenders, however, was unchanged at 2.350 per cent per annum. There has been a further fall in the response to 91-days' Intermediate Treasury Bills. Sales of these during 14th to 18th August fetched only Rs. 80.50 lakhs, as compared with Rs. 4.40 crores in the past week and Rs. 8.30 crores in the first week of August.

The Gilt-edged market continues to be colourless. The trend is quietly steady, with small turnover confined mainly to short-dateds and short-medium datids. 3½ per cent 1965 has lost 5 nP to Rs. 99.70, 3½ per cent 1966 15 nP to Rs. 99.70, and 3½ per cent 1969 10 nP to Rs. 97.80, thus wiping out almost all the gains made by them last week. A rise of 5 nP has, however, taken place in 3 per cent 1966 68 and 3½ per cent 1967. Among State loans, 4 per cent 1964 issues of West Bengal and Madras are conspicuous by recording a gain of 25 nP, bringing up their value to par.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 20*th August*

Quiet to easy conditions prevailed in the food-grains market here this week, thanks to fairly good rains received all over in Northern India which have brightened the prospects for the *kharif* crops. Consequently, stockists preferred to liquidate on the eve of the new *kharif* crop arrivals. The harvesting of early maize has already begun and the new crop would soon reach the market. Maize crop in this part of the country has been very good. Preparation of land for the *rabi* sowings would commence after rains have been fairly heavy.

Wheat prices declined by 67 nP to Re. 1.34 per quintal. The average quality was quoted between Rs. 40.19 and Rs. 40.87 and the farm between Rs. 44.21 and Rs. 45.55. Red wheat prices stood at Rs. 39.52. Demand was not very brisk. Arrivals increased to 300 to 400 maunds daily, as stockists sold liberally. The local stocks stood at 66.000 maunds at the week-end. Two wagons of the commodity were despatched to the South. Poor demand and better arrivals accounted for an easy trend in rice. Prices of *mainpuri* quality and *gadda* quality declined by 67 nP to Re. 1.34 per quintal. Week-end prices were:—Rice *basmati superior* Rs. 85.74 to Rs. 96.45, *sela basmati* Rs. 75.02 to Rs. 80.38, *mainpuri* Rs. 56.26 to Rs. 57.60, *ramajwayan* Rs. 64.30, *raimunia* Rs. 66.98 and *gadda* Rs. 52.92 a quintal.

Gram also sought lower levels on easy advices from Punjab and slack demand. The prices declined by 32 nP a quintal to be quoted at the week-end at Rs. 44.21 for the Punjab variety and Rs. 43.54 for the local produce. Total arrivals from Punjab were 500 maunds and the stock was stationary at 17.000 maunds. Barley and *bejhar* were quiet at Rs. 29.47 and between Rs. 28.13 to Rs. 29.47, respectively. *Juwar* prices were lower, but *methi* improved modestly on better demand. Other coarse grains were listless. Week-end prices were:—*Juwar* Rs. 45.55 to Rs. 50.91, *guwar* Rs. 40.19, *methi* Rs. 58.94 to Rs. 61.62, *bajra* Rs. 37.51, maize Rs. 29.47 and oats Rs. 29.47 to Rs. 30.81.

PEPPER FINISHES LOWER

(Messrs. Parekh and Co.)

BOMBAY, 22*nd August*

The rise in the price of Malabar black pepper was extended further in the earlier part of the fortnight, as New York came into the market and bought several parcels from both India and Singapore up to the parity of $0.34, the highest for the ungarbled, garbled and August delivery being Rs. 300, Rs. 310 and Rs. 312, respectively. Later in the fortnight, however, the market declined as fast as it improved, in sympathy with Singapore where prices of white and black were down to Str. $110 and Str. $147½, respectively, under pressure of heavy arrivals of Sarawak pepper. Malabar black suffered a setback, as New York withdrew and in sympathy with Singapore.

New York spot, after improving to $0.36, came down to $0.33½ to improve to $0.35.

Malabar ungarbled was quoted at Rs. 291, garbled at Rs. 300 and October delivery at Rs. 302, August delivery having been squared up at Rs. 300.

The improvement in local demand also proved to be a supporting factor. Yet, the *mofussil* traders refused to follow the rise and the demand tappered off. Singapore has started offering September shipment at discount and this had a psychologically bad effect on New York. As such, New York dealers refused to buy anything except early shipment.

Indonesia is reported to be offering cheaper Lampong to New York, as incentives are offered by the Government for export of pepper, coffee, etc.

Ready pepper in Bombay is nominally quoted at Rs. 158 per 50 kilos.

GOLD SCALES A FRESH PEAK

(From Our Own Correspondent)

BOMBAY, 22*nd August*

Gold in the bullion market scaled a fresh peak of Rs. 128.05 per 10 grams or Rs. 150.65 per tola yesterday (Tuesday) and today; the previous peak was Rs. 127.55 touched on 22nd May 1962. The scale-up followed speculative bull buying and nervous short-covering, while fresh offerings were scarce. The floating stocks in the market were said to have depleted considerably of late. One estimate places the total stocks at no more than 22.000 tolas, as against 80.000 to 90.000 tolas a few weeks ago. Operators were inclined to feel that the stocks would dwindle further, in view of the poor contraband arrivals, thanks to stricter customs vigilance, restrictions on overseas travel and rains hampering smuggling through country-crafts. Consequently, ready gold jumped up from Rs. 126.05 on Thursday last week to as high as Rs. 128.05 yesterday, the *Bhadrapad* (15th September) settlement advancing from Rs. 125.80 to Rs. 127.35. The premium commanded by ready gold over the forward increased from 25 nP to 80 nP. Today, however, there was a slight fall in the ready and forward rates, to Rs. 127.65 and Rs. 126.85 respectively, due to scattered selling induced by the Union Finance Minister's statement at New Delhi (yesterday) that the Government hoped to devise measures within a year or so to mobilise gold hoardings estimated at about 110 million ounces valued at Rs. 4.100 crores (at international prices, the hoardings amount to Rs. 1.850 crores).

Certain new gold ore shoots have been discovered recently in the Kolar Gold Mines, but it is too early, without further development in depth, to say whether they would prove to be rich veins, according to Mr. Morarji Desai. Meanwhile, the terms and conditions, as well as other arrangements for the transfer of administrative control of the Gold Fields from Mysore to the Central Government continue to be under negotiation.

The buoyancy of gold, coupled with the declining trend of arrivals and expectations of enlarged demand in view of better crop outlook, imparted strength to silver. Ready silver climbed up from Rs. 214.55 on Thursday last week to touch a high of Rs. 216.35 today before finishing at Rs. 216.15, a net rise of Re. 1.60, bringing the total rise since the beginning of this month to Rs. 4.10. The *Bhadrapad* (17th September) settlement was quoted today at Rs. 217.15—it was higher still at Rs. 217.40 at one time—a net rise of Rs. 2.20 in six days. The discount at which ready silver was quoted under the forward rose in the course of the week from 50 nP to Re. 1.10.

The daily average offtake of gold during the week was higher by 1,850 tolas at 6.250 tolas as compared with last week, while the average arrivals were higher by only 450 tolas at 6.250 tolas. The offtake of silver was 5 bars per day on an average (same as last week) and arrivals averaged 21 bars (as against 24 bars).

The dollar price of gold in the London bullion market improved further from $35.12¾ to $35.13 per fine ounce. Ready gold, too, continued its upward march, rising from 250*s.* 5¾*d.* to 250*s.* 7¼*d.* Ready and forward silver were maintained at the last week's high level of 92*d.* and 92¾*d.*, respectively, as also silver in New York at 109.25 cents. Silver prices might, perhaps, have risen further but for fears that China might consider the present price attractive enough and offer large quantities for export. What was more, there were rumours that Mexico, the world's largest producer of silver, had decided to enter the market as a seller if the price were to exceed the 110-cents-per-ounce level.

The following table shows the trend of prices during the week under review:—

	22-8-62 (closing)	High	Low	16-8-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	127.65	128.05	126.45	126.05

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

KIPS STEADIER

(From Our Own Correspondent)

MADRAS, 20*th August*

Kips in the local market were a shade steadier this week in view of several overseas inquiries. Sellers quoted higher prices which however, importers did not follow. Both export and internal demand for the lower grade cowhides was good. The market for buffhides, buffcalf and cowcalf was quiet. American buying was slack.

Importers of tanned goat skins seemed slightly active and a small volume of business was put through in the light weight goatskins of lower selections at slightly higher prices. Otherwise, the market was unchanged over last week's levels. Sellers of the middle class sheep skins were quoting 3*d.* to 6*d.* higher than the last established prices, which importers were hesitating to pay.
