The next tanned skins public sales in London will commence on the 27th inst. and 100.000 goatskins and 100.000 sheepskins have been catalogued for sale. The following were the ruling prices (in rupees) in the local market for all-round lots, per lb :—tanned cow hides 8/8½ lbs. average 2 to 2/06, tanned cow calf 1½/2 lbs. average 3/70 to 3/80, tanned buff hides 12/14 lbs. average 1/70 to 1/75, tanned buff calf 1½/2 lbs. average 3/20 to 3/25.

COTTON FUTURES QUIET

(From Our Own Correspondent)

BOMBAY, 22*nd August*

Cotton futures were quiet this week. Sentiment continued to be influenced by reports of good rains recently in Khandesh, Berar and other cotton growing tracts. Bulges, therefore, met with further realising, which, however, was mild, because of bear covering induced by the strong statistical position of the market. Support was generally lacking, but sellers, too, were restrained. Turnover, therefore, was poor and trading unexciting. Owing to alternate spells of realising and bear covering, fluctuations were very irregular and confined to a narrow range. The Jarilla March 1963 contract, which stood at Rs. 736.25 last week-end, opened this week slightly higher at Rs. 738.50 and rallied to Rs. 740.25, but reacted the next day (18th August) to Rs. 735.25. After recovering to Rs. 741.25 on the 20th inst., the contract slipped back again to Rs. 735.75 today before finding at Rs. 737. Although the closing price indicated a small gain over the week, the trading pattern throughout suggested the continuation of the current reactionary trend in the market. However, as it is still too early to talk about the size of the new season's crop, there is no positive factor that can induce the prominent bull operators to revise their ideas of at least the near-term outlook for the market.

On representations made by the industry and in view of the delay in the next season's crop, the Textile Commissioner has decided that purchases by mills against the indigenous cotton quotas issued to them prior to 1st August 1962 might be made by them up to 30th September 1962, while those against the quotas issued from 1st August could be made up to 31st October next. Since the quotas relate to the cotton year 1961-62, it is stated, the purchases have to be confined to that year's and earlier seasons' crops and should not be in the new season's crop. As from 1st September 1962, deliveries of Indian cotton by mills against the quotas for 1961-62 are required to be taken only with the permission of the Textile Commissioner.

The extension of the validity of quotas kent the Sewri spot market active. Mills were reported to be keen buyers of ready lots of Co2, Laxmi, Surti, L-147, Kalyan, 197/3 and Wagad. Prices were unchanged. In the import section, spinner interest continued in Egyptian-Giza and Karnak for January shipment. Stray interest was also discernible in Sudan, African and Pakistan cottons.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.:

Ganganagar 690, Gidharbha 685, Mansha 591 to 567, Barnala 551, Jagadia Yellow 751, Gadag Laxmi 1,290, Hubli-Laxmi 1,340 f.o.r. Ahmedabad, B.P. 52 1.260 c.i.f. February/March, Pakistan AC/137 1.150 c.i.f. October and Sudan G2L 1,371 to 1,375 c.i.f. January.

The Karachi cotton market was dull during the week. The futures contracts moved narrowly and closed with minor changes over the week. Thus, the January contract finished at Rs. 75.30, as against Rs. 75.25 a week ago, and the March contract was unaltered at Rs. 74.90. Spot prices were steady, with Sind *Deshi* done at Rs. 73.50. Punjab *Deshi* at Rs. 67.50, 4F Punjab R.G. at Rs. 80.50 and SG at Rs. 85.

In view of a largely bearish news background of expanding harvesting in the main belt, slow spot and export activity, and very slow textile business, the cotton market in New York was dull and quiet. Futures contracts showed further small losses over the week, with October closing at 33.70/33.72 cents per lb., as against 33.91 cents a week ago, December at 33.84 cents, as against 34.03 cents, and March at 34.22 cents as against 34 30/34.35 cents. The New York spot price moved down from 35.65 cents to 36.45 cents.

The Liverpool market was a shade steady. The October delivery closed slightly higher at 23.65 pence per lb., as against 23.45 pence a week ago.

OILSEEDS RECEDE

(From Our Own Correspondent)

BOMBAY, 22*nd August*

There was a marked setback in the values of oils and oilseeds during the week under review, thanks to bull liquidation induced by bearish crop reports. Groundnuts, in particular, were subjected to heavy selling pressure, following satisfactory rains in Gujarat and Andhra Pradesh which removed the earlier fears of sowing being adversely affected. In the absence of any encouraging export news, castorseeds gave way. Linseed ruled easy due to weakness of mustardseeds in North Indian markets. Cottonseeds moved down in sympathy.

The representatives of oilseeds trade (led by Mr. Ramdas Kilachand), had talks this week with a British delegation representing the Karmahom Conference Lines (led by Mr. L.G. Hudson) on the recent decision of the shipping lines to raise the freight on oilcakes by 12s. per 100 kg. from October next. The trade pleaded for a reduction of 5s., while the shipping lines were not prepared to grant a cut of more than two shillings, though they agreed to postpone the proposed increase by a month to November and to give better service by making available more steamers as well as by accepting cargoes even at minor ports.

Groundnut January 1963 contract fell by Re. 1.87 to Rs. 226.50. September 1962 contract, however, which had been pushed up earlier in the week from Rs. 240 to Rs. 244, closed easy at Rs. 240.75. Nizam bold declined by 25 nP to Rs. 48.75. Oil January 1962 contract eased by 27 nP to Rs. 31.15. Railway receipts shed 20 nP to Rs. 19.45 and ex-mill 10 nP to Rs. 19.90.

Castorseed September 1962 contract suffered a loss of Rs. 3.50, today's closing rate being Rs. 166.25. March 1963 contract fell by Re. 1.25 to Rs. 167. Madras small was lower by 87 nP at Rs. 33.25. Oil B.S.S, shed 45 nP to Rs. 13.50 and Commercial 30 nP to Rs. 12.60.

Linseed September 1962 contract fell by 44 nP to Rs. 40.50. Bold ready dropped 62 nP to Rs. 40. Linseed oil closed lower at Rs. 16.75, as against Rs. 16.80.

Cottonseed September 1962 contract receded by a rupee to Rs. 103.50. Berar shed 50 nP to Rs. 22.25. White was dull at Rs. 21.25 and non-white at Rs. 22.25.

The following table shows the closing prices of oilseeds and oils on Wednesday, 22nd August, as compared with those of the two previous weeks:

	22-8-1962	15-8-1962	8-8-1962
Groundnut	Rs.	Rs.	Rs.
September 1962	240 75	240.00	239.37
Groundnut January 1963 ..	226 50	228.37	234 00
Nizam bold	48 75	49.00	49 50
Khandesh quality ..	50.00	49.75	50 25
Oil ex-mill ready* ..	19 90	20.00	20.20
Railway receipts*	19.45	19.80	19.80
Castorseed			
September 1962	166 25	169 75	172 25
Castorseed March 1963 ..	167 00	168 25	171 25
Ready Madras	33 25	34.12	34.25
Ready Kanpur	32 25	32 75	33.00
Oil B.S.S.†	12 50	13.05	14.00
Oil commercial†	12.60	12.90	13.00
Linseed			
September 1962	40.50	40 94	42.56
Bold ready	40.00	40 62	41.50
Oil ready†	16.75	16.80	17.20
Cottonseed September 1962	103 50	104.50	107.00
Cottonseed January 1963	103 00	103.00	—
Niger seed	37.75	38.00	38.00
Kardi seed	28.00	29.00	29.00

* Rates include excise duty but exclude sales tax

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 22*nd August*

Art silk yarns ruled distinctly easy during the week under review. The easiness was due to the marked drop to about 275 per cent in the premium commanded by import licences, as against as much as 350-360 per cent prevailing a few days ago. The drop in premium would appear to have been the result of reports suggesting (*a*) the early commencement of the pool scheme distribution of art silk yarn and (*b*) the possibility of Japan also joining the scheme. Amilon yarn (20 x 1) August contract encountered selling and fell by Rs. 100 to Rs. 4.700. Among indigenous art silk yarns, Centurys 100 deniers Bt. cones A grade receded by 36 nP to Rs. 18.57, S.I. Viscose 120 deniers by 20 nP to Rs. 16.50 and National Rayons 120 Bt. cones 1st grade by 13 nP to Rs. 16.37.

Staple fibre yarns also came in for selling and suffered losses. 40 x 1 August delivery declined by Rs. 14 to Rs. 812 and October contract by Rs. 16 to Rs. 837. Spot Kohinoors eased by 7 nP to Rs. 9.64. Centurys shed 4 nP to Rs. 9.02.

Cotton yarns were dull. The currently ruling prices were said to be much higher than the ceiling ex-mill prices (fixed by the Indian Cotton Mills Federation). This phenomenon is attributed to the high premium demanded by some mills. It is stated that the powerloom interests have drawn the attraction of the authorities to this and urged the supply of yarn at reasonable prices.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	21-8-1962	16-8-1962
Art silk yarn—	Rs.	Rs.
20/1 *Amilon* (100 kg.)—		
August	4,700.00	4,800.00
Nat. Ray. 150 Bt. 1 (per kg.)	13.75	13.77
Nat. Ray. 120 Bt. 1 (per kg.)	16.37	16.50
Staple fibre yarn (40 x 2)—		
August	812.00	826.00
October	837.00	853.00
Kohinoor (per kg.)	9.64	9.77
Century	9.02	9.06
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.25	18.00
32s Madura	30.00	30.00
40s Gokak	36.50	36.50
60s Finlay	73 50	73 50
80s Madura	81.00	81.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

LEGG-CUT TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 16*th August*

A total of 720,000 kgs. was on offer in sale No. 32 held on Tuesday, 14th inst. Quality from the Nilgiris showed a slight decline, but from other districts it was about maintained. There was good general demand which strengthened towards the close. The best highgrown brokens and fannings were very strong with occasional invoices appreciating considerably in price. Other descriptions under this category came to an irregular, but generally firm market. Good medium brokens were firm but occasionally easier, while their fannings generally came to a dearer market. Medium brokens were irregular but may be quoted as being fully firm to dearer. Similar fannings followed the upward trend of the market for this grade. Low medium brokens were extremely irregular, some barely steady, others much dearer. Fannings in this category were generally dearer to buy. Plainest brokens were irregular but often lower. Their fannings, however, were strong. Black leaf brokens were about steady, but their fannings met with keen competition. The brighter liquoring whole leaf grades were strong while others were about steady. Legg-cut descriptions were firm to dearer, but C.T.C. types were often lower, particularly their whole leaf grades.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.20-4.20	4.45-4.55
Mediums	4.20-4.50	4.50-4.60
Good mediums	4.60-5.50	4.60-5.20
Nilgiri B.O.P.	4.40-8.40	4.65-6.15

The average price realised in sale No. 32 was Rs. 4.42 per kilo as against Rs. 4.38 a week ago and Rs. 4.75 in the corresponding sale last year.

In dust sale No. 32 held today, 416,000 kgs. were on offer. There was good general demand, but prices were somewhat irregular. Highgrowns though well supported, were often lower on last rates, while good medium descriptions followed a similar trend. Travancores sold readily, but prices were often in buyers' favour. There was more interest shown in Wynaad types and these may be quoted as being about firm. Black, grainy kinds sold readily. Unorthodox dusts were firm but occasional invoices were easier.

The average price realised in dust sale No. 32 was Rs. 3.39 per kilo, as compared with Rs. 3.37 a week ago and Rs. 4.71 in the corresponding sale last year.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 33: 691,000 kgs. offered. Fair demand. Brighter and cleaner mediums fully firm to dearer. Poorer sorts 10 nP to 20 nP easier Good mediums generally barely steady. Highgrowns strong and dearer. Unorthodox easier."

QUALITY TEAS IN DEMAND

(From Our Own Correspondent)

CALCUTTA, 21*st August*

There was good demand for the superior grade teas in the export auctions held here yesterday, but the lower grades were as usual neglected and quiet. A further recession in prices of dusts was seen in the internal sales held here last week. The poor demand for dusts has restricted interest in shares of tea companies on the local Stock Exchange. The lack of adequate demand for common teas and the fall in their prices—the average price realised for dusts in this season's sales so far works out to Rs. 4.69 per kg. as against Rs. 5.18 in the corresponding period of the last season—have increased the anxiety of the trade as well as the gardens in regard to the outlook for the rest of the season.

The North Indian crop up to the end of July totalled 206.35 million lbs. representing a decline of 9.76 million lbs. as compared with the production in the corresponding period of the 1961-62 season. August and September mark the end of the season's best period. It is, therefore, considered that the total production in North India this season would be the same as in the last season. Although the crop has so far been lower than in the previous season, demand has not shown any sign of a significant increase. For exports of North Indian tea so far have totalled 27.30 million lbs., as against 27.11 million lbs. previously.

In recent years, the better grades have been in short supply and therefore in good demand. That explains the small increase in the average price of leaf teas realised in the export auctions so far. The price has been Rs. 6.03 per kg., as against Rs. 5.95 in the corresponding period of the previous year. Taking prices of leaf and common teas together, the average price realised so far has been higher at Rs. 5.99 per kg., as against Rs. 5.91 previously. Up to the end of July, the quantity put through the Calcutta auctions was slightly higher at 11.52 million kg. as against 11.39 million kg. in the corresponding period of the last season.

The trade contends that the weak trend in dusts supports its assumption that demand for such teas has declined. Since supplies of these teas are expected to exceed demand, internal stockists are hesitating to build up their inventories as usual. Due to poor foreign demand, most of such teas have to be sold within India. These factors have depressed common teas. The trade strongly feels that, unless internal demand for dusts is increased, the prospects of India achieving the production target of 900 million lbs. by the end of 1966 look bleak.

World tea crop this year has so far totalled 585.2 million lbs., as against 584.1 million lbs. in the corresponding period for the previous year. East African production has increased by 9 million lbs. and Ceylonese by 4 million lbs. That India's production has not increased proportionately is to be regretted. The sharp increase in both acreage and crop of several producing countries is only too evident from a glance of the International Tea Committee's annual statistical bulletin recently published.

Dusts on offer at internal sales, held here last week, totalled 29,746 packages. Although there was a good demand, prices were lower at the opening. However, a general improvement was in evidence as the sales progressed. A strong feature was the non-wither legg-cut teas, prices of which hardened. The brighter liquoring lots received keen attention from the bidders. On the other hand, plain orthodox dusts eased up to 15 nP, while the brighter liquorings in this category were earnestly sought for at slightly higher prices. C.T.C. dusts eased up to 20 nP, with the good C.T.C. lots receiving good attention. The quotations in rupees per kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 6.80, medium Assam C.T.C. dust 5.50 to 6, medium Assam dusts 4.50 to 4.90, legg-cut dust 3.90 to 4.40 and plain orthodox dust 3.20 to 3.50.

Good demand was in evidence at yesterday's export sales, leaf on offer at which totalled 56.824 packages. The best lots in medium C.T.Cs met with good support and prices rose, but the other lots in this category were just firm. Legg-cut teas were maintained at about last prices. An irregular trend was recorded in orthodox teas, which however, met with useful inquiry. In particular, the bright liquoring teas attracted keen attention. The plainest teas were firm with selected fannings fully steady. Darjeelings eased by 40 nP, leading to a number of withdrawals. Whole leaf grades were about firm, but the more stylish teas eased. The tippiest teas were in good demand, but the lesser grades met with poor demand. The quotations in rupees per kg., inclusive of excise duty, were: Best Assam C.T.C. fannings 7 to 8.20, best Assam C.T.C. B.P. 7 to 8, medium Assam C.T.C. fannings 5.40 to 5.90, clean plain pekoe 4.10 to 4.40, medium Assam C.T.C. B.P. 5.40 to 5.90, plain fannings 3.50 to 4, and plain B.P. 3.40 to 3.70.

JUTES STEADY

(From Our Own Correspondent)

CALCUTTA, 21*st August*

Jute markets, both goods and fibre, were steady during the week under review. Prices of goods were well maintained on good support from overseas buyers, but the tendency to make discounted offers in fibre continued to stay. This aspect of the fibre market trend has naturally caused a certain amount of anxiety to both the Government and the Indian Jute Mills Association. It is suggested that, in the present situation, the minimum prices are a little on the high side and that, if these are brought down by about Rs. 2 or Rs. 3 a maund, economic realism would have dawned on those concerned and, what is more, only the profit margin for the farmer would have been reduced and still his cost of production would be fully covered. However, to accept a suggestion of this type would require boldness at a governmental level, as any step to move the price downwards would be resisted by farmers' organisations and would have concomitant political implications. When the minimum prices were fixed last year, prices of goods were higher than at present. Now that conditions have changed and by growing a higher crop it is natural to infer that the marginal cost of production has been brought down, the time is very propitious for considering a revision of the minimum prices. The increase in the tendency to make offers at discounted rates makes it clear that, even at lower rates, the farmer does not stand to lose. It is believed that the conference between the Union Commerce and Industry Ministry and the I.J.M.A. held at New Delhi early last week discussed all these aspects of the situation, but evidently no firm decisions have yet been taken.

Meanwhile, the I.J.M.A., for its part, is determined to take such action as considered practicable within its orbit to support the market. It has accordingly favoured the reintroduction of the system of the weekly issue of minimum purchase quotas. The weekly quota to commence with will be about 500,000 maunds. The mills are disappointed at the fall in the offerings of good quality fibre which commands a good premium. Although there has been a deterioration in the quality of this year's crop and the proportion of superior fibre to inferior grades would indicate a decline, it is possible that not all the good quality is being released by farmers. For, with the gradual widening of the premium, the farmers anticipate that, as the season progresses and the shortage gets more and more felt, prices are bound to increase. This explains their anxiety to dispose of all the inferior fibre as and when cropped as early as possible, in order that what holding power and storage capacity they have can be exercised on good quality fibre. According to reports from jute districts in West Bengal and Assam, the total crop is expected to be higher than last year's. The monsoon has been very satisfactory, and sufficient water has accumulated for retting and cleaning operations. These reports make it possible to expect that, as the season progresses, quality may as well show an improvement; this would be welcome indeed, as, with the buoyant demand for hessian from overseas buyers, mills in India would require all the better quality fibre that the country can grow. The weak conditions in the fibre market in Pakistan has caused anxiety to the authorities there. Several measures to support the market have been considered, and it is reported that the Pakistan Jute Marketing Corporation has already commenced purchasing fibre from those areas where prices have moved down very markedly. Minimum prices are shortly to be fixed with the stipulation that nobody should purchase fibre from the growers below the minimum prices.

On Tuesday last, ready hessian 40" 10 oz. was steady at Rs. 53.00, as activity in the futures market was keen and August futures opening at Rs. 51.54 rose to Rs. 52.04. However, lack of business forced down ready B. twills from Rs. 122 to Rs. 121.40. The market was closed on Wednesday and the reopening on Thursday evidenced a good number of inquiries from foreign buyers. Covering business was done on a good scale, and that accounted for the rise in ready hessian 40" 10 oz. to Rs. 54 and B. twills to Rs. 121.85. Actual business done, however, was confined to non-standard constructions. Hessian 40" 10 oz. August futures was as high as Rs. 53 and same B. twills hardened from Rs. 120.10 to Rs. 121.10. At this stage, bearishness set in in the futures market, reflecting which August B. twills closed lower at Rs. 119.80 on Friday, as against the opening of Rs. 120.40 on that day, and August hessian 40" 10 oz. at Rs. 52.24, as against Rs. 52.80. This affected the ready mar-

ket, and B, twills eased to Rs. 121 and hessian 40" 10 oz. to Rs. 53. Over the week-end, a small recovery was in evidence and this aided ready hessian 40" 10 oz. to close steadier at Rs. 53.25 and ready B. twills at Rs. 121.25. Jute goods shipped during the week continued to be encouraging in respect of both quantity and destinations, and continued inquiries for all constructions, including specialities showed that there exists good demand. As a result, it is to be expected that mills would continue production at the existing high rate. Keener activity was in evidence in the futures, market yesterday, and speculative manipulations, coupled with the steadier trend in fibre prices following reports of heavy rainfall in some jute districts, lent support. As a result, ready B. twills rose to Rs. 122.25 and ready hessian 40" 10 oz. to Rs. 54.00.

Prices of fibre were maintained as follows: Daisee bottoms Rs. 32 for Sep.-Oct. delivery, northern bottoms Rs. 29.50 for Aug.-Sep. and Assam bottoms Rs. 30 for Aug.-Sep. Sellers were anxious for business, but the reported decision of mills to reintroduce the issue of minimum purchase quota every week restrained sellers from discounting. With the transfer of more sacking looms to the production of hessian, mills were naturally interested in the offerings of superior grades. They displayed only little interest in the low varieties. Trade circles here referred to the E.P.C. registrations in Pakistan for the second half of last month and noted that Poland topped the list of foreign countries with its offtake amounting to as much as 88,459 bales. They, therefore, thought that, if only more efforts were made to secure market for India's lower varieties in Poland and other Communist countries, the problem of a surplus in these varieties could be eased.

QUIET TONE IN METALS

(From Our Own Correspondent)

CALCUTTA, 21*st August*

Quiet conditions were in evidence in the metal market here during the week under review. Although copper scrap supplies were tight, prices declined due to restricted demand. Prices of electrolytic zinc and tin hardened, as it was apprehended that the recent expectations of import liberalisation were unlikely to materialise immediately. Lead, in contrast, receded, as supplies exceeded demand.

The trade fully endorsed the demands made by Mr. P. P. Dey in his presidential address to the annual meeting of the East India Metal Merchants' Association. For he appropriately referred to the acute shortage of non-ferrous metals and urged that, having regard to the increased requirements of non-ferrous metal products and castings for machinery-making, the imports of these essential metals should be increased. He said that at present the manufacturing industry could hardly get adequate raw materials to run even a single shift.

If India is to progress in machinery-making, there is no alternative to increased imports of non-ferrous metals. When manufacturers are not even able to work to full capacity on a single-shift basis, there is evidently no point in setting up more manufacturing units, consuming non-ferrous metals. Owing to inadequate utilisation of the existing capacity the country stands to lose. At the same time, considerable foreign exchange is being spent on importing non-ferrous metal products and castings which can be made within India, if only imports of these strategic metals were increased. Indigenous copper meets only a very small portion of the domestic needs, and imports during recent years have shown a rapid increase in line with the tempo of industrial development. Against this background, Mr. Dey observed that the present restrictions on imports amounted to spoon-feeding the industry.

During the week, spot copper was maintained at £234 a ton on the London Metal Exchange. The three-month delivery opened at £234½ and hardened to £231½. The maintenance of the spot rate at £234 a ton for the past several weeks has been due to the cut-back in production in the United States and Chile. The output by big Chilean mines in July was only 40,517 tons, showing a decline of 4,204 tons over the previous month. In July 1961, production was higher at 43,062 tons. Production of Kennecotts for the six months to June 1962 amounted to 299,000 tons, recording a decline of 2,000 tons has compared to the corresponding figure for 1961. Shipments in the same period totalled 305,000 tons, showing a fall of 12,000 tons. The cut-back in production and the maintenance of the price at a steady level in recent months indicate that a proper balance between demand and supply has been reached. In Calcutta, following a fall in demand, utensil copper scrap declined from Rs. 556.50 per 100 kgs. to Rs. 552. The fractional rise on the New York Commodity Exchange was attributed to the confused political situation in the Congo.

Tin supplies in India being extremely limited, the price rose here during the week from Rs. 2,102.25 per 100 kgs. to Rs. 2,194.75. However, demand was low. Improved advices from Singapore and the prospect of greater support by the buffer stock manager in London hardened the sentiment. The buffer stock manager has funds to the extent of £14 million, and he has been buying at £845 for last two weeks, arresting thereby any further fall in the price. In London, the spot quotation was steady throughout the week at £849½ a ton. The erratic movement in the world price for last one year has been due to the uncertainty arising from the expected U.S. releases.

Electrolytic zinc gained from Rs. 279.50 per 100 kgs. to Rs. 297.25, as it was doubted if at all the Government would be able to raise the import quota. A good portion of the foreign aid represents tied loans. In London, zinc eased from £65¼ a ton to £64¾ and lead from £52 a ton to £51. In Calcutta, lead eased from Rs. 149.75 to Rs. 147.75 due to poor demand.

Notices

THE LAWRENCE JUTE COMPANY LIMITED

DIVIDENDS FOR THE YEAR ENDED 31st MARCH, 1962

AT A MEETING OF THE DIRECTORS HELD on 18th August, 1962, the following Dividends were recommended subject to deduction of Tax.

On Cumulative 'A' Preference Shares @ 9.10 per cent per annum.

On Cumulative 'B' Preference Shares @ 7.15 per cent per annum.

On Ordinary Shares @ Rs. 10 per share.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA-1.
18*th August*, 1962.

THE NORTHBROOK JUTE COMPANY LIMITED

DIVIDENDS FOR THE YEAR ENDED 31st MARCH, 1962

AT A MEETING OF THE DIRECTORS HELD on 18th August, 1962, the following Dividends were recommended subject to deduction of Tax.

On Cumulative Preference Shares @ 7.15 per cent per annum.

On Ordinary Shares @ Rs. 2 per share.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA-1.
18*th August*, 1962.

THE AUCKLAND JUTE COMPANY LIMITED

DIVIDENDS FOR THE YEAR ENDED 31st MARCH, 1962

AT A MEETING OF THE DIRECTORS HELD on 18th August, 1962, the following Dividends were recommended subject to deduction of Tax.

On Cumulative Preference Shares @ 7.15 per cent per annum.

On Redeemable Cumulative Preference Shares @ 5.85 per cent per annum.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA-1.
18*th August*, 1962.

THE KINNISON JUTE MILLS COMPANY LIMITED

DIVIDEND FOR THE YEAR ENDED 31st MARCH, 1962

AT A MEETING OF THE DIRECTORS HELD on 18th August, 1962, Dividend on Cumulative Preference Shares at 9.10 per cent per annum subject to deduction of tax was recommended.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA-1.
18*th August*, 1962.

WEEK'S STOCK EXCHANGE TREND

FURTHER BANKING REFORM

THE two Bills introduced in the Lok Sabha with the object of improving the soundness of banks and their utility to trade and industry belong to the category of desirable and necessary legislation. One of them seeks to amend the Banking Companies Act and the other the Reserve Bank of India Act, though both the Bills are inter-related. Banks may find that some of the provisions of these Bills are irksome, but so are all the disciplinary measures designed to ensure healthy behaviour and to prevent excesses. A feature of the present legislative move is that it has been preceded by considerable discussion over a prolonged period with the interests concerned. Further, the necessity for at least a good part of the legislation on the anvil has been felt by experience in recent years. It is true that, originally, the intention was to get at least two of the purposes served through gentlemen's agreement between banks and the Reserve Bank and that an agreement covering one of them has actually been in force since the beginning of this year. But the authorities seem to have felt the necessity to reinforce this gentlemen's agreement by statutory sanction to the crucial part of it. It is said that one of the big banks did not abide by the gentlemen's agreement while appropriating its profit for 1961. It is further said that the authorities had reasons to believe that not all the foreign banks operating in India would comply with such an agreement and that they had no means of enforcing it without resorting to unpleasant methods if any of them failed to toe the accepted line. Significantly enough, the Indian Banks' Association, which is the party to the gentlemen's agreement with the Reserve Bank on the six per cent ratio of "own funds" to deposits, has not objected—at any rate, not in public—to the Reserve Bank's sudden abandonment of the experiment in the gentlemen's agreement.

The amendments now before Parliament have four principal purposes in view. One, to compel banks to maintain a larger liquidity ratio; two, to compel banks to earmark every year a specific percentage of their published profits to the reserve fund, irrespective of its size in relation to paid-up capital; three, to enable the Reserve Bank to collect more detailed information from banks on the credits provided to its customers and to disseminate such information to other banks; and four, to facilitate the provision of more liberal credit by the Reserve Bank to member-banks against export bills. The first two objectives have been before the public for quite some time more prominently than the other two, having been specifically mooted by the Reserve Bank when Mr. H. V. R. Iengar was its Governor and having received detailed discussion in the Press. The failures of the Palai Central Bank and the Laxmi Bank have been principally responsible for compelling the authorities to pay attention to these aspects of banking and for stimulating the interest of a wide section of the Press.

At present, banks are required to maintain a liquidity ratio of 20 per cent of their total liabilities, the liquid assets being cash on hand, balances with the Reserve Bank, gold (if any) and Government securities. This 20 per cent is inclusive of the statutory cash reserves which banks have to maintain with the Reserve Bank at the rate of 2 per cent of their time liabilities and 5 per cent of their demand liabilities. In addition, the Reserve Bank has powers to enforce a variable reserve ratio up to 15 per cent, that is, to raise the statutory cash reserve up to 15 per cent of total liabilities, in times when there is a tendency among banks to indulge in excessive credit creation. It is now proposed to introduce a uniform cash ratio of 3 per cent of total liabilities, instead of the existing two ratios of 2 per cent and 5 per cent of time and demand liabilities, respectively, leaving the highest level to which it can be raised on exceptional occasions unchanged at 15 per cent. At one time, the Reserve Bank had proposed a minimum reserve of 4 per cent, but it was to be on net deposit liabilities, excluding inter-bank borrowings, and not on total liabilities as is now mentioned in the Bill. If regard be had to this point, no major concession has been given to the banks' plea for a lower figure. Nevertheless, it must be said that the figure of 3 per cent is not very much higher than the average minimum ratio the banks are currently maintaining with the Reserve Bank. On the contrary, it may work out to be lower in the case of some banks. It can, therefore, be safely stated that no attempt has been made to increase the effective minimum cash reserve on which the banks earn no interest. An important advantage of the new system is that it will save the time of both the banks and the Reserve Bank which is now spent in calculating the reserve on the basis of two rates.

It is the proposal to raise the overall liquidity ratio from 20 per cent to 28 per cent, with a specific minimum requirement of 25 per cent in liquid assets exclusive of the statutory cash reserve to be maintained with the Reserve Bank, that will prove to be of some hardship to banks. The maximum liquidity ratio in times of credit inflation could go up to as high as 40 per cent, so that, on such occasions, banks might not try to boost their statutory cash ratio at the expense of other liquid assets, including Government securities. It must be further noted that the percentage of liquid assets to be maintained is related to total liabilities and not net deposits. Accordingly, in reducing the overall ratio for normal conditions from the originally proposed figure of 29 per cent of deposit liabilities to 28 per cent, no significant concession has been made by the authorities to the bankers' contention that the proposed ratio was so high that it would adversely affect their capacity to meet the credit requirements of trade and industry in an expanding economy as well as their profit-margin. An increase of 8 points or 40 per cent in the overall ratio of liquid assets is undoubtedly a big jump. Of late, the majority of big banks have been keeping a cash ratio of 7 to 9 per cent and an investment ratio of 27 to 32 per cent. For the scheduled banks as a whole, the ratios had gone down in the last busy season to as low as 6.45 per cent and 29 per cent, respectively. In other words, to be on the safe side, the banks have to maintain their total liquidity ratio at a level which is 10 to 15 per cent above the statutory minimum requirement. Their capacity to create credit will, therefore, be affected to the extent to which the liquidity ratio is raised. Likewise, their earning capacity, too, will be affected, as the return on investments in Gilt-edged securities is substantially less than that on credit to trade and industry.

There will, however, be some compensating features. 1. Since a higher liquidity ratio will induce confidence among depositors, banks may be able to attract more deposits. 2. During the busy season when the demand for credit is high, banks need not maintain the same level of safety-margin as they have been doing hitherto when the minimum liquidity ratio has been as low as 20 per cent. 3. The yields on Government securities have gone up and so also the rates of interest on bank credit. 4. The rediscounting facilities for banks have been greatly increased as compared with what they used to be until recently. From the point of view of the general public, the proposed increase in the liquidity ratio will mean (*a*) an improvement in the stability of the banking system, (*b*) larger resources from banks to Governments for economic development and other purposes, and (*c*) a more effective weapon for restraining the volume of bank credit than hitherto.

In the absence of the full text of the Bills at the time of writing, it is not clear to what extent the convention on the 6 per cent ratio of "own funds" to deposits has been sought to be given legal effect. The convention is flexible, in that it contains no time limit for reaching the goal of 6 per cent. From the reports published in the daily Press it look as though no specific ratio has been laid down; in any case, it was not there in the draft Bill. All that this part of the Bill seems to lay down is that banks should continue to transfer 20 per cent of their declared profits to reserves even after they reach a level which is equal to the paid-up capital. This is a simpler proposition than the terms of the convention and is in keeping with the suggestion made by us before the Reserve Bank had circulated its proposals last year. But this does not mean that the spirit of the convention need not be followed. Indeed, the banks should continue to have the ratio of 6 per cent of "own funds" to deposits as their goal and raise their paid-up capital from time to time. So far as the foreign banks are concerned, they are required to deposit with the Reserve Bank 20 per cent of the net profit made in India until such time as an exemption, if any, is granted to them. Unlike the unreasonable demand of Pakistan, it will suffice if this deposit is made in rupees. This compulsion on foreign banks is in keeping with the gentlemen's agreement reached by the Reserve Bank with the Exchange banks; the primary object of imposing this condition on them is to see that they do not have an advantage over domestic banks in India. That this is a fair objective cannot be denied. Equally fair is the increase in the minimum paid-up capital which a new bank must have to start with from Rs. 50,000 or Rs. 1 lakh to Rs. 5 lakhs. There is really no point in allowing very small banks to be started, as they cannot be quite equal to the task in a modern economy. It is also necessary to make sure that those who promote a small bank have a sizable stake in it, so that they may behave in a responsible manner.

To come to the third purpose of the amendments to banking legislation, namely, export promotion. As recommended by the Kapur Committee, the Reserve Bank of India Act is to

be amended to enable the Bank to purchase or rediscount, or to lend against export bills with a maturity of up to 180 days and with only one signature, namely, that of the borrowing bank. At present, the Bank can accept export trade bills with a maximum maturity of only 90 days. Further, such bills must have two signatures, that is, those of the customer and the borrowing banker. When the amendment comes into force, all that a bank which wants to rediscount an export bill has to do is to make a declaration to the Reserve Bank in writing "that it holds and will hold, as long as the loan from the Reserve Bank is outstanding, export bills, the value of which will not be less than the amount lent by the Reserve Bank." This is a great improvement over the existing position and should help banks to extend larger credits to exporters. But, as the cost of central bank credit has gone up in the past two years, it will be necessary for the Reserve Bank to charge a lower rate of interest on loans against export bills, if these new facilities are to be fully effective.

The fourth purpose of the legislation now before Parliament is to enable the Reserve Bank to build a credit information bureau in order to prevent overtrading by individual borrowers. It is necessary to provide the banks with legal protection for giving information to the Reserve Bank about the credit limits to their customers and the amounts drawn by them. The Reserve Bank will pass on to member-banks the information about the total indebtedness of each borrower without disclosing the details, so that the banks dealing with him may be cautious. Further, the Reserve Bank itself can direct the bank or banks concerned to curtail the limits, if it finds that a particular borrower has been enjoying unduly large credit facilities. This implies one more onerous responsibility for the Reserve Bank and care must be taken to ensure that it will be in a position to discharge it fairly and competently.

PROGRESS OF THIRD PLAN

"GOD is in His Heaven, and all's well with the world." That has not exactly been the approach of the Planning Commission and the Minister for Planning to the progress of the third Plan, for planners can hardly be expected to throw up their hands and say that everything is in God's hands. There is, all the same, an element of complacency or fatalism in their treatment of the problems of development planning. This is particularly noticeable in the Planning Commission's note on the Plan's progress in 1961-62 and the development aimed at in 1962-63 (*vide* page 365 of this issue of *Commerce*). When the note says that the problems of co-ordination in the related sectors of industry, transport and power are *inevitably* related to past trends and developments and decisions taken in different sectors of the economy in the earlier years and that the *very* process of expansion in an economy creates new pressures on the available facilities, critics are bound to draw some inferences which cannot be wholly flattering to planners.

The accent on *inevitability* in the Commission's diagnosis of some of the serious bottlenecks in the economy almost borders on fatalism. This is as good as admitting defective planning and failure in administering the crucial sectors. What is planning worth, one may ask, if it cannot anticipate all the physical needs of forced or accelerated growth and make advance provision for meeting them? If the present difficulties have flowed from past decisions which were presumably wrong, one may further ask: why has not the Commission frankly listed them and also indicated how the damage caused by those decisions is going to be corrected? To say, as the Commission does in its note, that "under conditions of rapid economic development new stresses may continue to arise and suitable safeguards have to be devised from time to time" is to opt for hurried improvisations or makeshift arrangements in the wake of stresses and strains. Leaving so many imponderables for *ad hoc* treatment as and when they emerge is hardly the way of planning. If the Commission facilely thinks that effective remedial measures can be successfully devised from time to time, it is nothing short of complacency, and there is no certainty that its expectations will be fulfilled.

To take a few recent examples in this context. There is, firstly, the instance of resort to coastal shipping for hauling more coal in the wake of the transport crisis; this has led to the discovery that there is no adequate tonnage for the purpose. Again, a road transport scheme, which was originally not part of the third Plan, has just been approved to meet the coal transport crisis in the West Bengal (Calcutta) area; this postulates the availability of heavy trucks which, however, are not being manufactured in the country. It has also been decided to use the rivers and canals to move coal, but, as the necessary vehicles are not there and the river ports have to be developed, one will have to wait for three to four years for the proposal to fructify. The proposed use of furnace oil as a substitute for coal provides another example of newer difficulties arising from makeshift arrangements. If furnace oil is to be used, it has to be imported in the absence of expansion of refineries, and a simultaneous reconversion of boiler equipment has to take place. All this will involve additional expenditure of foreign exchange and rupee resources. Improvisations to meet the power crisis in different parts of the country are also illustrative of the drawbacks of *ad hoc* remedial measures after the emergence of shortages. One can cite many other examples of such hurried measures to meet crises in the various sections of the economy.

The Planning Minister's disarming candour in his reply to the Lok Sabha debate last week on the serious shortfalls in Plan implementation cannot cover up the Planning Commission's deficiencies in the matter of planning and the Government's mistakes in the execution of schemes and projects. Mr. Nanda's admission that mistakes have been made and there are consequential deficiencies and shortfalls in physical achievements does not amount to much. Such self-criticism made in a general way is at best theatrical and is no guarantee against the repetition of the same mistakes. The streak of bravado, as also of fatalism, in the Planning Minister's remark—"I am not going to be ashamed of coming to the House and saying that we could not rise to your expectations in some cases, because the conditions were beyond our control and things happened which no human agency could prevent"—is no answer to the criticism that many of the mistakes *could* have been avoided by more intelligent anticipation, by more pragmatism in the implementation of policies and programmes, by less rigidity in the interpretation of the Industrial Policy Resolution of 1956, and by heeding the suggestions of well-meaning critics and observers, instead of rejecting them as those of interested parties.

If the same mistakes are not to be repeated and if the growth potential of the economy is to be increased more substantially, certain practical measures would need to be boldly taken even if they represent a negation of some doctrinaire considerations. One of the first steps, in this connection, would be to allot a bigger role to the private sector in industries like coal, iron and steel, fertilisers, oil, petro-chemicals, power generation and mineral development and to permit foreign private capital also to participate liberally in their development. These are industries which are crucial to the growth of industrial and agricultural production. The public sector's performance in some of these industries has by no means been outstanding. The National Coal Development Corporation's unsatisfactory working in 1961-62, for instance, has had the effect of keeping down the level of coal production to 55.2 million tonnes (from both the public and private sectors)—0.3 million tonnes less than in the last year of the second Plan. In the iron and steel industry, the public sector steel plants at Rourkela and Durgapur are yet to reach capacity production, while there is some uncertainty about the launching of the Bokaro steel plant project in the third Plan period. The fertiliser industry, in which the private sector has been permitted, albeit after much avoidable delay, to establish some new units, has not progressed fast enough, because the public sector plant at Sindri has fared badly in recent years and its new units elsewhere are coming up very slowly.

According to present plans, the public sector will have an aggregate petroleum refining capacity of 4.8 million tons by the end of 1965-66 and the private oil refineries, if they are not permitted to expand further, will have the same capacity as they have now, namely, 7.6 million tons. The entire capacity of 12.4 million tons in both the sectors will fall very much short of the Oil Advisory Council's latest estimate of demand at 17 million tons by 1966 for petroleum products. In the field of power development, which is mostly the public sector's responsibility, aggregate installed capacity as at the end of 1961-62 has fallen short of the target for the year by 130,000 kw.; its revised target for the current year is 6.88 million kw., as against the original target of 7.03 million kw. As for mineral development, the public sector is yet to show results by mining and refining non-ferrous metals like copper, lead and zinc. In all these industries, the private sector can show better and quicker results, if it is more liberally permitted to expand existing units and if the more competent among the entrepreneurs are encouraged to come forward. It has been contended that the private sector, too, has been lagging behind in implementing some of the projects allotted to it. That may be so, but the responsibility for this slow performance cannot be laid entirely at its door. The Government, too, has been at fault. It should have exercised greater care in giving licences by enquiring into the capacity of the parties concerned to execute the projects in time. Again, the Government has taken too long a time to approve the terms of arrangements concluded by the entrepreneurs.

Another step would be to expedite the preliminaries connected with the projects for which foreign credits are available and ensure their execution according to schedule. Most of these projects are in the public sector, but they are crucial to the success of industrial programmes as they are related to power, coal, iron and steel, oil, heavy machinery, minerals, and so on. Unless these projects are implemented economically and in time, their costs will go up, and that will add to the Plan's difficulties. The current official effort to effect economies in the construction costs of projects must also be marked by a high degree of earnestness. The private sector projects, too, must be enabled to be implemented with the utmost possible speed and economy. If, thus, the capital costs of projects, whether they be in the public sector or private sector, are kept down, the unit costs of things to be produced by many of these projects will also correspondingly go down. At the same time, the cost reduction studies which, according to the Planning Minister, are under way in six industries (cement, jute, bicycles, electric motors, transformers and rayon) would need to be extended to other export industries and their recommendations implemented in co-operation with the industries concerned. All-round cost reduction is something crucial to the success of export promotion which alone, in the ultimate analysis, will enable the country to service and repay its foreign debts and also finance its maintenance imports without much difficulty.

So far as transport is concerned, it is reassuring to be told that an additional outlay of Rs. 120 crores has been approved to enable the railways to expand facilities mainly for the movement of coal and that wagon building has been stepped up by more than 50 per cent in the first year of the Plan. But there is no indication that any additional impetus to road transport has been given. If anything, recent onerous levies on this mode of transport in States like Maharashtra and Madras seem to suggest a contrary trend of discouragement, and it would have to be reversed forthwith. A higher priority to road transport in terms of a clear long-term policy, a bigger construction programme pertaining to national highways, and rationalisation of the automobile industry for the purpose of producing bigger and cheaper vehicles—all these are called for, if the transport bottleneck is to be removed in the next few years of the third Plan. Much is expected, in this connection, from the recently-appointed high-power committee which is to assess the country's transport requirements and suggest measures for the development of modes of transport other than railways. Only, this committee, unlike the Neogy Committee on Transport Policy and Co-ordination, should finish its labours promptly without time-consuming enquiries.

As the foreign exchange requirements of the Plan are likely to be largely, though not fully, met and the expected internal resources, too, are not beyond the country's capacity, it only remains to readjust and co-ordinate the programmes in both sectors and to implement them more economically and expeditiously. The sooner this rephasing is done, the better, for the momentum of development even in the second year (1962-63) is not quite heartening on present indications.

MARKET GOSSIP

Outlook for T.E.L.Co.

AT their seventeenth annual general meeting, the shareholders of the Tata Engineering and Locomotive Company Ltd. naturally tried to find out from their Chairman as to what the near-term outlook for the Company was like. For some weeks now, there have been persistent rumours in the share market that the Company's production would suffer on account of foreign exchange shortage. This was one of the chief reasons for the sharp fall in the market value of the Company's shares from a high of Rs. 382.50 towards the close of May last to a low of Rs. 313 on 19th July. The other reason was, of course, the absence of any increase in the Company's dividend for 1961-62 which was contrary to the expectations of some speculators. Subsequently, there was a partial recovery on account of short-covering and some replacement buying and the scrip came up to remain steady at a little over Rs. 335. But the enthusiasm for the scrip had definitely disappeared, as there were always nagging doubts in the minds of operators about the growth prospects for the Company.

In his replies to the shareholders' queries, Mr. J. R. D. Tata was quite non-committal. They were characterised by 'ifs' and 'buts.' He, for instance, said that production in 1962-63 (April-March) could be maintained at the rate of 12,000 trucks per annum, provided there was no cut in the foreign exchange allocation for imports of components. At the same time, he seemed to suggest that one could not rule out the possibility of a 10 per cent fall in production. The shareholders, therefore, came out of the meeting in a confused state of mind about the near-term outlook for the Company. Their confusion was worse confounded, because only a few days before the meeting Mr. C. Subramaniam, Minister for Steel and Heavy Industries, had told the Lok Sabha that there would be no decrease in the production of T.E.L.Co. vehicles on the ground of inadequate foreign exchange allotment. He had added that the Government would try and secure, in consultation with the Company, substitutes for imported components from indigenous sources. Apparently Mr. Tata is not so sanguine as the Minister. That apart, such substitution, even if feasible, would add to the cost of vehicles and, if the addition were not offset by an appropriate increase in the selling price of vehicles, there would be a fall in the profit-margin. Be that as it may, the production figures given by Mr. Tata for the first four months of the current year showed that the output in July was a shade lower at 950 vehicles after being maintained at 1,000 per month in the first three months. No wonder then that, after the meeting, T.E.L.Co. shares dropped in value from Rs. 336 to Rs. 330. This shows a sense of disappointment amongst market circles.

The observations of Mr. Tata on the expansion programme, under which production is to be doubled to 24,000 vehicles per annum, are also not wholly encouraging. At any rate, they are not in consonance with earlier optimistic expectations. As readers are already aware, the expansion programme is now to be implemented, as desired by the Government, in two equal stages. The first phase, to be implemented by 1965, is dependent on the negotiations for the D.L.F. loans (*vide* page 254 of *Commerce* dated 11th August) which are yet to be concluded and expected to be finalised by the end of 1962. Mr. Tata observed that orders for plant and machinery could not be placed, unless all the details of the loans were worked out. He, however, believed that the second phase of the programme would be undertaken soon after the first stage was completed and it would not only be quicker but also less expensive, as the foundry and the forge shop would have been equipped for the entire expansion from the initial stage. From all this, it seems that the target of 24,000 vehicles would be hit only in the fourth Plan period, perhaps, some five years from now.

It is because of the possible delay in implementing the expansion programme that the Company might reduce, according to Mr. Tata, the amount of the proposed convertible debenture issue; the figure mentioned earlier was Rs. 5 crores. At the meeting, Mr. Tata disclosed that the rate of interest on the debentures would be 6.5 per cent per annum taxable. He also disclosed that the Company had asked the Government to allow it to convert the debentures at three optional rates, namely, Rs. 400 in 1964, Rs. 450 in 1965 and Rs. 500 in 1966, but that the authorities had expressed that there should be only one option and that the conversion rate should not be fixed in advance. Besides, the Government would not, he said, allow that the conversion rate to be lower than the present market rate for the equity shares. The Company had proposed to make the major part of the debenture issue to the public. But a shareholder suggested that it should be offered first to the equity shareholders and that only the balance left over should be thrown open to the public. Mr. Tata explained that the whole issue of debentures was under discussion with the Government, which, he said, held "strange notions" about convertible debentures. He, however, promised to consider the whole proposition carefully and place the final decision of the Directors before the shareholders by October-November.

Several other interesting points were made by the Chairman at the meeting. To record some of them here. Out of a total turnover of Rs. 41.64 crores in 1961-62, Rs. 38 crores were accounted for by the automobile division alone. While the sales of trucks this year might decline due to a possible cut in production, those of excavators, shunters, etc., would rise to Rs. 2.5 crores. The Company has orders on hand worth Rs. 1.5 crore for the paper and pulp division. Last year, it made a modest beginning in the field of exports and sold trucks worth Rs. 6 lakhs. It intends to export about 10 per cent of its output in the next three years. The export prices are approximately 30 per cent lower than the domestic prices. The indigenous content in the auto division is to be raised from 82 per cent at present to 90 per cent and in the excavators from 60 per cent to about 85 per cent in the next two years. The Company's provision for depreciation exceeds that allowed by the tax authorities by Rs. 39 lakhs last year and Rs. 1.30 crore in all in a total provision of Rs. 13.36 crores so far. The royalty payable to West German collaborators, Messrs. Daimler-Benz, has now come to an end. Henceforth, they will be entitled only to a 7.5 per cent share in the profit of the auto division for the supply of the latest results of their research as also for training Indian technicians. While Mr. Tata conceded a shareholder's argument that the possibility of a higher dividend for the current year might be considered, he stated that the relief under Section 15C, enjoyed by the Company so far, might not be available for the current year.

To sum up, Mr. Tata's observations suggest that, while he is cautious about the near-range outlook for the Company, he is quite optimistic about the long-term outlook. Many an investor shares this view. Hence the absence of any sizable unloading of T.E.L.Co. shares in the market. The vast majority of investors seem to be confident that the present uncertainty is only a passing phase and that, ultimately, the Company's position will greatly improve in their favour.

Sugarcane Farms in Maharashtra

The joint-stock sugar mills in Maharashtra will have no control at all over the bulk of their cane farms aggregating about 95,000 acres after 1st April 1963, if everything goes according to schedule. For it is on this day that the State Government will requisition these cane farms under the Agricultural Lands (Ceiling on Holdings) Act, 1961. Many are the problems that will arise during the process of transfer of farms from the mills to the Government. A delegation of the Deccan Sugar Factories Association waited on the Chief Minister of Maharashtra, Mr. Y. B. Chavan, on Wednesday this week to discuss these problems. The delegation was told by Mr. Chavan that the Government would constitute an advisory committee, consisting of five Government and five sugar industry representatives, with Mr. Vasantarao P. Naik, Minister for Revenue, as Chairman, "to deal with the questions relating to the transfer of land and other assets." The Chief Minister is understood to have assured the sugar millowners that the Government would ensure not only the continuance of the present level of cane output in these farms (the total annual yield from the 95,000 acres is put at 2.2 million tons) but also the uninterrupted supply of cane to the factories concerned.

On the issue of compensation to mills for the farms to be acquired, Mr. Chavan stated that it would be in accordance with the provisions in the Act, namely, 20-year bonds bearing interest at 3 per cent per annum. The sugar millowners' contention is that this method of paying compensation is most unfair. And they are right, for, having fixed the compensation amount itself at a very low rate, the least the Government should do is to pay the sugar companies in cash. If this is not possible, then it should pay in bonds at a rate which is in keeping with the current yields on Gilt-edged securities. When the Maharashtra Government is paying 4½ per cent interest on the 12-year loan issued this week, are not the sugar mills entitled to get at least similar terms for the farms they are forced to give away to the Government? Even the Central Government is paying 4½ per cent when it borrows for a period of 20 years. If the Maharashtra sugar mills are paid in 20-year bonds carrying interest at 3 per cent, it will mean effecting a further cut in the already ridiculously low rate of compensation, for the market value of such loan on today's yield basis will be no more than Rs. 80.35 per cent. What is more, all available indications are that the future trend of interest rates is upward which means that there will be a further fall in the market value of the proposed compensation bonds. It is gratifying to learn that Mr. Chavan appreciates the justice of this point and has assured the sugar millowners that he would sympathetically consider their viewpoints on the subject of compensation.

Now that the Maharashtra Government has firmly decided to apply the ceiling legislation to the sugar mills' cane farms with effect from 1st April 1963, the question arises as to what would happen to the cane crop that will still be remaining unutilised by mills as on that day, as well as the crop which the mills will be sowing in the next two-three months and which will be ready for harvesting only in the ensuing (1963-64) season. If the Government wants to adhere to the deadline for taking over the farms, it must allow the sugar mills to utilise such cane as would still remain unharvested. In other words, this means that the ceiling legislation should be applied in the first instance only to the farms the crop on which will have been harvested by then. By doing so, the Government will avoid a lot of botheration to itself and to the factories concerned such as determination of the size of standing crop, assessment of quality and calculation of yield in terms of value, all of which will vary from factory to factory and from farm to farm. It is to be hoped that the Government will accept this sensible suggestion.

Another important question relates to the various "assets" used for growing and transporting sugarcane such as tractors, agricultural implements, railway track, locomotives, diesel engines and wagons. The ceiling legislation does not vest in the Government powers to take over these assets as well. Along with cane farms, it is just as well that the Government should take over these assets too. After all, these assets will be required for the use of those who will cultivate the lands taken over from the mills. The mills, we are told, will readily transfer them to the Government. How this should be done and what compensation must be paid are matters that will have to be discussed between the Government and the individual mills concerned.

What will the Government do with the cane farms acquired from the joint-stock sugar mills? The Chief Minister of Maharashtra stated at a Press Conference on Wednesday that the Government had ruled out the choice of transferring ownership to the ex-landlords. Instead, the Government would, he said, run the farms as State-managed farms for some years and ultimately convert them into co-operative farms. Whatever be the nature of ownership, it is imperative that the farms will be run as efficiently as has been done by the sugar mills. This, however, will depend on the persons engaged on the farms, especially the number of top experts who have been on the staff of mills for many years now and who have acquired considerable experience in cane cultivation. One cannot say now whether these experts would agree to work as Government servants initially and as employees of co-operative enterprise later. The best among them will naturally wish to work elsewhere where conditions will be more congenial than in a State enterprise. It will be interesting to see how the State Government proposes to tackle this important issue.

W. German Wage Crisis

Both the West German Government and the industrialists alike are perturbed by the insistent and widespread demand from workers for increases in their wages. In the next few days, negotiations are scheduled to take place over the claims of as many as two million industrial workers. Several thousands of workers of railways as well as paper and leather industries are either already on strike or have declared their intention to do so to press their claims for higher wages. The demand for higher wages would not have been a source of concern to German authorities but for the declining rate of growth of industrial production and the narrowing down of the favourable balance of trade. The cost of production of most of the industries has gone up considerably of late, and their products are becoming less and less competitive, in terms of price, in world markets. The increased cost has been accounted for mainly by the larger burden of wages. For the past five years, wages have been rising on an average of 3 to 8 per cent annually. What is more, the increase has been of the order of 8 per cent during the first six months of 1962, which is expected to go up to 12 per cent by the year-end. Thus, for the first time in Germany's post-war recovery, the rise in wages and prices has not been matched by expansion of production. The fear of a wage-push inflation in W. Germany is well-founded.

No wonder then that investors are becoming chary of new ventures and stock markets have turned bearish again. Dr. Hans-Constantin Paulssen, President of the Confederation of German Employers' Associations, is of the view that wage demands have created a real threat to stability, "endangering not only the industry but the West German economy as a whole." Disclosing this in a circular to the member-associations, Dr. Paulssen has called upon the industry to "oppose unjustifiable wage claims made by the trade unions with every means, if necessary." He has drawn particular attention to the fact that new orders received by the industry from foreign countries in June was lower by 9 per cent and domestic orders by 3 per cent, as compared with the position a year before. His stand is that productivity alone should be made the yardstick for determining wage increases. The labour, however, does not seem to be in a mood to relent. Trade unions have already characterised Dr. Paulssen's circular as a "clear declaration of war," thereby refusing to realise the danger ahead.

Dr. Paulssen's statement does not appear to be an exaggeration. For a clear indication of these unsavoury trends in the economy were given a few days ago by the West German Federal Bank itself, in its latest monthly report. The report warns that the rising wage-price spiral is steadily taking the wind out of the economy's sales. The industry, according to it, is already arming itself against the expected lean years in accepting numerous contracts which give no promise of profits, "but offer protection against the anticipated recession and a guarantee against going out of business." The German economy, still climbing rather like a burnt-out rocket, is being propelled by the impetus which it had gained from the boom of 1959-61. It is only a matter of time, says the report, before the economic rocket turns to a slow descent.

The most unhappy person over this plight of W. Germany must be Dr. Erhard, Economics Minister, described as the architect of the spectacular post-war recovery of that country. He must be unhappy, because his belief in the virtues of free market economy (he is the author of the well-known treatise *Prosperity Through Competition*), with the State keeping aloof from it, is on severe trial now. It now looks as though the German Government will have to intervene, in the same way the British Government did in July 1961 under the Chancellorship of Mr. Selwyn Lloyd. Already, the German Government is reported to be planning for a wage-pause, in a bid to prevent a cost-price inflation. The latest quarterly report of the Economics Ministry, published last week, warns that the present rush for wage increases is a short-sighted policy, taking advantage of the acute labour shortage that exists in that country, and that it will ultimately endanger Germany's competitive position in world markets.

TREND OF SHARES

QUIET AT CLOSE

(From Our Own Correspondent)

BOMBAY, *30th August*

NEITHER bulls nor bears had a smooth sailing in the stock markets this week, as the remarkable strength in Steel shares restrained sellers, while there was nothing beyond it to induce buyers to extend commitments in other sections. However, after a fairly steady going during the major part of the week, the market turned quiet near the close, as some of the well-held pivotals gave way on professional selling which was partly in the nature of realising and partly by way of hedge against purchases in other counters. Nonetheless, while the bright spots were only a few, weak spots were not many. The tone at the close can best be described as uncertain, as the bulls still hold the trump card in the form of the steel retention price announcement, the delay in which strangely seems to sustain the bullish activity in the market.

Trading was unexciting and turnover restricted due to several intervening holidays. Activity was selective and confined to the popular speculative counters. Initially, prices improved under the lead of pivotal issues which rose once more to the strongly-resisted high levels near the middle of the week only to react once again at the close. The weak saw the few prominent operators in the rival camps at loggerheads, with either side trying to test the strength of the other. While neither yielded much ground, the small fry suffered, as it bought on the rise in values and sold on the decline. It appears that the announcement of the steel retention prices, due any time now, and the declaration of the T.I.S.Co. dividend would decidedly influence the immediate trend.

* * * *

With Bombay Dyeing maintaining the current year's interim dividend at 4 per cent, Century proposing to pay the same interim of 12 per cent even on the increased capital following the one-for-four bonus issue in October last and Kohinoor Mills stepping up the interim dividend from Rs. 6 to Rs. 7 per share, Dalal Street did not find it difficult to put up a brave show of steadiness early in the week. Subsequently, however, the market turned lower at first becausê of a sudden spell of fresh selling in National Rayon and later because of easiness in T.E.L.Co. following the speech of the Chairman of the Company at the annual general meeting. But, while National Rayon closed with a loss of Rs. 6.50 at Rs. 511.50 and T.E.L.Co. finished four points lower at Rs. 331.50, other counters did not show a big drop and a few of them, in fact, disclosed small gains. Thus, Century were only two points lower at Rs. 635, Standard were down by 10 points at Rs. 912, Bombay Dyeing showed a loss of 40 nP at Rs. 67.50, Kohinoor finished Rs. 2.50 lower at Rs. 3.18 and Indian Dyestuff receded by five points to Rs. 446.25. Among the other popular counters, Bombay Burmah closed with a gain of Rs. 2.50 at Rs. 672, Hindustan Motors of 24 nP at Rs. 20.20 and A.C.C. of Rs. 3.25 at Rs. 163.

Among Steels, Indian Iron were exceptionally firm and closed at the highest level of the week at Rs. 27.35 as against Rs. 26.80 a week ago. The lethargic Tata Ordinary finished only 75 nP higher at Rs. 149. Among others, Shree Niwas were up by six points at Rs. 277 and Morarjee by five points at Rs. 426, but Dawn reacted rather sharply by Rs. 9.50 to Rs. 169 and Phœnix showed a big loss of 11 points at Rs. 252 following the bear maintenance of the dividend at Rs. 15 and Rs. 20 per share, respectively, for the year ended 31st March 1962 despite higher profits. Bradbury, in the Cash List, however, showed a gain of four points at Rs. 195 following the increase in the dividend from Rs. 12.50 to Rs. 15 per share. Electrics and Cements were generally better, but Shippings closed easy. Cash shares showed only minor changes either way.

* * * *

Fresh support for leading speculative counters provided for active trading in Calcutta. Closing prices generally showed plus signs. Thus, in the Forward List, Birla Jute rose sharply from Rs. 33.69 to Rs. 36.56 and Howrah improved in sympathy from Rs. 20.50 to Rs. 21.25. Kesoram rose further from Rs. 28.50 to Rs. 29.31 as did Texmaco from Rs. 23 to Rs. 23.70. Indian Cable staged a smart recovery from Rs. 37.31 to Rs. 38, Burrakur gained as much as 69 nP at Rs. 18.31 and Indian Aluminium recovered from Rs. 36.87 to Rs. 37.25. In the Cash section, Bharat Commerce showed a gain of Re. 1.50 at Rs. 29.50, Jay Shree rose from Rs. 15.37 to Rs. 16.75, Bengal Coal recovered from Rs. 347 to Rs. 353, but Ghusick closed two points lower at Rs. 12. Jutes showed a mixed trend. Anglo-French spurted by 12 points to Rs. 232, Bally gained six points at Rs. 310, Budge Budge were up by seven points at Rs. 164, Champdany improved by Rs. 4 to Rs. 143.50, Nuddea moved up by Rs. 3.50 to Rs. 64.50 and Soorah disclosed a gain of Rs. 2.37 at Rs. 24.87, but Alliance eased by Rs. 4 to Rs. 123, Fort Gloster showed a loss of six points at Rs. 425 and Kelvin reacted sharply by 10 points to Rs. 185.

The spurt from Rs. 681 to Rs. 707 in Burn featured trading in Engineering shares, where otherwise small losses predominated. Calcutta Chemical rose sharply from Rs. 15.25 to Rs. 19.06 and Alkali also showed a gain of Re. 1.62 at Rs. 45.62. Miscellaneous issues showed small changes, but Balmer Lawrie were up Rs. 2 at Rs. 259 and Indian Oxygen improved by Rs. 1.50 to Rs. 48, while Union Carbide showed a loss of Re. 1.12 at Rs. 47. Titaghur Paper reacted sharply from Rs. 38.37 to Rs. 36.44 following the 50 per cent cut in the dividend at 10 per cent per annum for the year ended 31st March 1962. Other Paper shares were steady and Seshasayee gained Re. 1.13 at Rs. 9. Dyer Meakin were fancied among Sugars and rose from Rs. 34 to Rs. 36.25. Tea shares were generally better, with Hantapara improving from Rs. 110 to Rs. 111.50 and Hasimara from Rs. 14.25 to Rs. 15.62. N. Doars rose swiftly from Rs. 251 to Rs. 260.50.

* * * *

Active shares showed fair gains in Madras. Trading was featured by a spurt in Textools from Rs. 152 to Rs. 167. Lakshmi gained one point at Rs. 148, Madura 45 nP at Rs. 35.65 and Travancore Rayon 30 nP at Rs. 37.40. Buckingham improved further from Rs. 272 to Rs. 277. But Coimbatore Spinning reacted from Rs. 76 to Rs. 73. Cleared Miscellaneous shares showed small gains further, with Dalmia Cement rising from Rs. 13.56 to Rs. 13.81. Madras Rubber also showed a gain of 25 nP at Rs. 22.75. Sugars were in demand, with Cauvery gaining five points at Rs 112 and United Breweries Rs. 5.50 at Rs. 98.50. But the Cleared share, Deccan, eased from Rs. 10.57 to Rs. 10.20. Plantings displayed mixed trends. Peermades were up from Rs. 19.15 to Rs. 20 and Cochin Malabar from Rs. 6.55 to Rs. 7, but Consolidated Coffee eased from Rs. 18.58 to Rs. 18.50.

CAPITAL MARKET NEWS

NEW ISSUE

THE Upper Doab Sugar Mills Ltd. of Shamli, U.P., is issuing 25,000 additional equity shares of Rs. 100 each at par, of which 10,000 shares have been reserved for allotment to existing shareholders and the balance of the value of Rs. 15 lakhs have been offered to the public. The entire public issue has been underwritten. The subscription lists will open on the 6th inst. and close on the 13th, or earlier, but not before the 10th. The additional capital will go to meet a part of the capital outlay on the expansion plan, which is estimated at Rs. 75 lakhs. The balance of the outlay will be raised by way of bank borrowings.

The Company has a modern sugar factory at Shamli and two distilleries, one at Shamli and the other at Pilkhani, for the production of power alcohol and spirit from molasses. It has now obtained licences from the Government to raise its cane crushing capacity from 3.000 tons to 3,750 tons per day and to increase the production of power alcohol and spirit at its distillery at Shamli from 800,000 gallons to 1.2 million gallons a year. It has already started the construction of additional factory buildings, godowns, etc. The bulk of the machinery has arrived at the site and is being erected. The additional plant is expected to go into production by the start of the crushing season in November 1963.

Nearing its thirtieth year of working, the Company has a good dividend record. It paid a gross dividend of 15 per cent per annum for both 1958-59 and 1959-60, but was obliged to prune it to 12 per cent for 1960-61, as that was a generally bad year for the sugar industry as a whole in the country. In 1948, it issued bonus shares of the face value of Rs. 5 lakhs by capitalisation of reserves. The subscribed and paid-up capital of the Company, as at 30th September 1961, amounted to Rs. 63.76 lakhs, of which Rs. 50 lakhs were in equity shares and the balance in 6 per cent cumulative redeemable preference shares of Rs. 100 each.

BONUS ISSUE

With a view to bringing its share capital in line with the capital employed in business, having regard particularly to the expansion of its activities in the past few years, the **Indian Oxygen Ltd.** of Calcutta has decided to issue 1,040,000 new ordinary shares of Rs. 10 each as fully paid bonus shares to the existing shareholders in the proportion of two shares for every five shares held by them as on 27th September 1962. The shares are to be issued by capitalising Rs. 48 lakhs from the share premium account and Rs. 56 lakhs from the general reserve. The proposed issue has been sanctioned by the Controller of Capital Issues. The Company also proposes to double its authorised capital from Rs. 4 crores to Rs. 8 crores by creating 40 lakh ordinary shares of Rs. 10 each. It had, as at 30th September 1961, a paid-up capital of Rs. 2.60 crores and fixed assets at a written down value of Rs. 4.75 crores. The proposed bonus issue will raise the paid-up capital to Rs. 3.64 crores.

The proposal to issue bonus shares and that to double the authorised capital will come up for consideration and approval at the general meeting of the Company to be held on 27th September 1962. The meeting will also consider and, if thought fit, approve a special resolution seeking to alter clause 3 of the Memorandum of Association of the Company by adding some new subclauses, one of which is to enable the Company to manufacture and deal in plant and machinery for producing and using gases and for manufacturing electrodes, gas using equipment, welding transformers, etc.

GENERAL TYRES LIMITED

The management of General Tyres Ltd. informs us that the construction of production sheds, stores and other buildings at the factory site at Kankinarah, District 24-Parganas, West Bengal, has been almost completed. Most of the plant and machinery supplied by Messrs. Technoexport Foreign Trade Corporation, Praha, Czechoslovakia, have been received at the factory site. A large number of technical experts deputed by Messrs. Technoexport arrived in Calcutta in June 1962 for erecting the plant and machinery. Good progress has since been achieved in regard to the installation of machinery and equipment. Some of the raw materials required for initial production have been acquired from imported sources.

According to the present plans, the factory is expected to go into trial production during the last quarter of 1962. Meanwhile, the Company has been contemplating substantial expansion of its present licensed capacity of 180,000 each of automobile tyres and tubes per year.

(Concluded from previous page)

This year, West German exports have been going up at a slower pace. In the first six months of 1962, exports aggregated DM 25,844 million, an increase of just DM 784 million, which compares unfavourably with an increase of as much as DM 2,130 million recorded during January-June 1961. Imports have risen sharply, being DM 24,193 million in the first half of 1962, as compared with DM 21,300 million in the corresponding half-year of 1961. There was, therefore, a distinct contraction in the trade surplus, that is, from DM 3,760 million to DM 1,650 million. Portents on the production front are no less disturbing. In May, the latest month for which data are available, industrial output fell—contrary to the seasonal trend—albeit slightly (by 0.4 per cent) from the level of the previous month. Though still 3 per cent higher than in May 1961, it represented a decline, as compared with April, when production had been 4 per cent higher over the same month of 1961. The point to be noted here is that there is only a decline in the growth rate and not a reversal of the upward trend. And yet the German authorities are worried, probably because they feel that it is only a question of time before a definite recession sets in. Apparently, they seem to hold the view that even a highly developed economy with full employment should grow continuously, as, otherwise, its economy will get into the reverse gear. Incidentally, this dilemma of West Germany, more or less akin to the various stresses and strains experienced by other "market" countries, such as Japan, Switzerland and Holland, is expected to give a new edge to the controversy on the relative importance of growth *versus* stability.

Five-year World Coffee Pact

The seven-week deliberations of the United Nations Coffee Conference at New York have not been in vain. The Conference, which began on 9th July and ended on 24th August, did succeed in evolving a new five-year world coffee agreement, though the agreement may not fully satisfy all the coffee importing and exporting countries, including India. The news is heartening indeed. For, until Friday, 24th August, the deadline fixed for reaching an agreement, fears had been expressed that the Conference might be "deadlocked" on the isssue of export quota allocations. If the Conference had failed to reach an agreement on this last day, one would have had to wait till November or December for another meeting.

Four features mark the latest coffee agreement. In the first place, it is a fairly long-term agreement running for five years, as against the present year-to-year agreement. Secondly, it is more comprehensive in coverage, including, as it does for the first time, both producing and consuming nations, whereas the present agreement embraces only the producing countries. Thirdly, the agreement covers coffee in all its forms, a departure from the short-term arrangements which have been confined to green coffee. Finally, the new agreement seeks to prevent producers from shipping instant coffee outside their export quotas, as has been the case in the past.

As is only to be expected, the major provision in the five-year coffee pact pertains to export quotas for producing countries. The total of these quotas is put at 45.6 million bags (45,587.183 bags of 60 kg. each to be precise), which represents more than two-thirds of the aggregate world production of 67.3 million bags and over 87 per cent of the estimated exportable output of 52.2 million bags. Apparently, the aim of the agreement is to bring exports into line with consumption and avoid huge surpluses. It is clearly laid down in the agreement that all coffee exports be accompanied by certificates of origin. And the importers have agreed to prohibit imports from any member-country which are not accompanied by such a certificate. Almost two-fifths of the aggregate world export quota have been allotted to Brazil, its actual quota being 18 million bags. Brazil, as is well known, is the world's largest producer and exporter of coffee. The export quotas of member-countries do not include exports to "new markets" (for example, Japan and Soviet Russia) which are defined as countries where coffee is not a traditional beverage but is considered to have a potential consumption. The agreement, however, provides for a close control on the exports to these "new markets" in order to prevent the possibility of such exports being diverted later to the traditional markets.

The agreement will be administered by an International Coffee Council with headquarters at London. All member-countries will be represented on the Council, with producing and importing countries having an equal number of votes—1,000 to each group. The agreement will come into force only after declarations of intent to ratify are made by at least 20 exporting countries representing 85 per cent of world coffee exports and 10 importing countries representing the same percentage of world imports, the base-year for both being 1961-62.

Should India join the new world coffee agreement? This question requires to be examined very carefully. It would appear that India will have to join the agreement. For, otherwise, the country will not enjoy any advantage of expanding coffee exports, since the importing countries have agreed not to increase their purchases from non-agreement countries. Indeed, India's coffee may be gradually shut out of world markets. There are, however, two vital factors that will have to be borne in mind in taking a final decision. One, India's right to regulate coffee output, which, by world's standards, is small, should not be interfered with. Two, the export quota allotted to India, namely, 360,000 bags or less than 20,000 tons, must be raised in keeping with this country's pressing need to earn foreign exchange to finance economic development. This point needs to be specially stressed, because, under the third Plan, coffee production is to be stepped up to touch 80,000 tons by 1965-66 and the prospects of any sizable exports to the so-called "new markets" are limited.

NEWS IN BRIEF

A JOINT meeting of the Import and the Export Promotion Advisory Councils will be held at New Delhi on the 8th inst.

A team of the Geological Survey of India has been sent to Goa to conduct a survey of mineral resources there. The Indian Bureau of Mines is also contemplating to send a party to Goa.

The total value of prize bonds sold so far amounts to about Rs. 20 crores. A sum of Rs. 86 lakhs has been distributed as prizes, while Rs. 23 lakhs remain unclaimed.

A licence for establishing a cement factory at Rajban in Sirmur district in Himachal Pradesh in the private sector has been approved. The party has still to finalise details of the proposed project.

The coal washery at Bhojudih near Ranchi, put up by the Hindustan Steel Ltd., went into production on Saturday last. The washery has a capacity to produce 75,000 tons of washed coal per month.

The Hindustan Machine Tools Ltd., Bangalore, is currently exploring the possibilities of exporting machines to the U.S. It has already exported 21 milling machines to West Germany. Exports to Switzerland are also being arranged.

The revenue realised from items on which duties are levied and collected by the Central Government in the first three months of the financial year 1962-63 amounted to Rs. 230.19 crores, as compared with Rs. 202.24 crores in the corresponding quarter of 1961-62.

The Garden Reach Workshops Ltd. of Calcutta will undertake the construction of larger merchant ships, if the scheme now being considered by the Union Defence Ministry is finalised. With the existing facilities, the Calcutta Workshops and also the Bombay Mazagon Docks are in a position to construct ships up to 5,000 d.w.t.

The question of setting up a reactor for the manufacture of zirconium in Kerala will be considered when a final decision is taken by the Union Government about the type of atomic reactor to be set up in the country. Zirconium is used as canning and structural material in certain types of reactors like the Canada type.

A well-known Dutch trading firm, Internatio of Rotterdam, proposes to enter into a collaboration agreement with a New Delhi firm, Triven. The New Delhi firm has been doing export business. The Dutch firm is said to be interested in undertaking trade in sugar, cocoa, rubber, wool, oilseeds, coffee, tea, spices and cattlefeeds.

A Rs. 15-lakh company, to be called the Guardian Oil and Refining Corporation of India, is being set up in Madras for refining 360,000 gallons of waste oil and 120,000 tons of waste rubber annually. It has a scheme to commence refining of waste oil and reclaim 70 per cent of it as lubricating oil, besides manufacturing synthetic petrol, diesel and lubricating oil from waste rubber.

A West German firm has been invited by the Government of India for negotiations on possible collaboration in the building up of the second shipyard at Cochin. Offers for collaboration have also been received from two more parties, one from West Germany and the other from Holland. Meanwhile, negotiations are going on with some Japanese firms.

The Government of India has decided to place the merchant-exporters on a par with manufacturer-exporters providing for import entitlements for raw materials, components and machinery, under the export promotion schemes. The articles imported by exporters, however, will have to be sold only to manufacturers of export products covered by the scheme.

A tea delegation led by the Chairman of the Tea Board will be sent to Australia and New Zealand this month to explore the possibilities of market for Indian tea. Three tea centres are being set up in London, Dublin and Edinburgh to propagate Indian tea and promote its export. A proposal to set up seven other centres in European countries is under consideration.

The Government of India proposes to set up five overseas regional export promotion councils, one each in Western Europe, Eastern Europe, America, Africa and South-East Asia, according to Mr. Manubhai Shah, Union Minister for International Trade. Of these, the council for Western Europe is already being formed. In addition, it is proposed to appoint a high official in each continent for directing export trade.

Messrs. Ramakrishna Industrials of Coimbatore and the Japanese firm of O.M. Co. Ltd. of Osaka have entered into an agreement, under which the latter will offer technical collaboration to the Coimbatore firm for the manufacture of ring frames. To begin with, the factory will manufacture 30 ring frames a month. Five Japanese technicians are expected to arrive in Coimbatore shortly for supervising the manufacture of these frames.

The Government of India has under consideration a scheme to introduce a limited competitive examination confined to certain categories of Government servants, with four to five years of service and between 29 and 32 years in age, as a regular feature of recruitment to the Indian Administrative Service. Steps have already been taken to increase the annual intake of direct recruits selected on the results of competitive examinations for All-India Services.

Foreign tourists will now be able to travel in air-conditioned comfort on Indian railways for thirty days for a payment of only Rs. 560. Intended to provide less expensive, but comfortable, journey, "travel as you like" tickets will be available for first class on sections where air-conditioned class is not available. As the facility is open to foreign tourists only, a certificate of eligibility from the Tourist Office will be essential. The concession is being offered for two years.

A Bill for the formation of the National Seed Corporation will be introduced in the next session of Parliament. Among other things, the Corporation will promote production of improved seeds by giving financial aid and technical guidance, establishing a suitable production and marketing organisation and by sponsoring training programmes. To begin with, the Corporation will take up hybrid maize, and later on seeds of all types would be produced.

The wheel and axle plant of Durgapur Steelworks, which went into production early this year, has so far supplied nearly 2,000 broad-gauge axles to the Indian railways. The annual rated capacity of the plant is 45,000 finished wheel sets, of which 38,000 will be for broad gauge and 6,000 for metre gauge. The plant has already put up a creditable performance by producing 160 wheels in a single shift, 10 above the target in the first week of August 1962. The formal commissioning of the plant is likely to take place towards the end of this month.

The Government of India has reconstituted the membership of the Life Insurance Corporation of India with effect from 1st September, 1962. The normal tenure of the membership is two years. The Corporation will now consist of Mr. B. K. Kaul, Chairman and the following 14 members: (1) B. Venkatappiah, (2) Gorakh Nath Sinha, (3) N. R. Mody, (4) B. Venkataratnam, (5) Amolakh Chand, (6) A. Baksi, (7) R. G. Saraiya, (8) N. R. M. Swamy, (9) K. C. Maitra, (10) Mrs. Tara Cherian, (11) Y. A. Fazalbhoy, (12) Bawa Bachittar Singh, (13) C. C. Chokshi, (14) P. D. Chaliha.

A Bill to give effect to the Government's decision on the additional price payable to cane growers for the four seasons from 1958-59 to 1961-62 was introduced in the Lok Sabha on Monday this week by Mr. S. K. Patil. The Bill, called the Sugarcane Control (Additional Powers) Bill, seeks to empower the Government to amend the Sugarcane Control Order of 1955 (which does not enable the Government to pass orders on such matters with retrospective effect) in certain specified respects with retrospective effect from 1st November 1958.

The Central Water and Power Commission has prepared a perspective plan (1966-81) and a draft outline of the fourth Plan. The draft outline envisages the addition of 11.46 million kw. of power. It has been sent to the State Governments for their consideration. A planning group consisting of representatives of the Commission, Planning Commission and the various Ministries concerned, it may be recalled, was set up sometime back with a view to drawing up a long-term power development programme for the period up to 1976 and in particular for the preparation of the fourth Plan.

* * * *

From Abroad

Trans-World Airlines and Pan-American World Airways are planning to merge their interests.

The Japanese mineral industry proposes to send shortly survey missions to Indonesia and Ecuador to study the mineral resources position of these countries.

The monthly net income of a four-person wage or salary earner's household in West Germany was almost DM 722 in the first quarter of this year. This was about DM 64, or nearly 10 per cent, more than in the first quarter of 1961.

Bank account saving in West Germany rose to DM 4,576 million during the first half of 1962, which was DM 952 million more than in the first half of 1961 and DM 289 million more than in the first half of 1960.

Per capita consumption of eggs in West Germany rose to 236 during the year ended July 1962. This was eight eggs more than in the corresponding 1960-61 period, and 103 eggs more than the average pre-war consumption (1935-38).

Production of automobiles in West Germany amounted to 1,316,795 units in the first seven months of this year, which is about 5 per cent more than in the same period in 1961. Exports accounted for 46.1 per cent of the production in the period under review, as compared with 48.6 per cent in the first seven months of 1961.

A Canadian trade delegation, with Mr. Alvin Hamilton, Minister for Agriculture, as leader, is expected to go on a tour of Poland, Yugoslavia and Czechoslovakia shortly to explore possibilities of selling wheat to these countries. Poland has already agreed to buy 300,000 tons of Canadian wheat, which may be followed by another contract for 200,000 tons.

The total number of cars to be sold in the U.S. next year would exceed seven million (including imports of 300,000-400,000), according to Mr. Simon Knudsen, Vice-President of General Motors. This forecast is based on "consumer confidence and expectation of a growing U.S. economy." A Ford spokesman had, however, predicted recently that sales would decline to about 6.2 million, from 6.8 million in 1962.

The Newall Engineering of U.K. has secured a £1.25-million contract from Russia for the supply of machine tools. The contract, claimed to be one of the largest foreign contracts secured by any British machine tool manufacturer, is for automatic crankshaft grinders, multi-wheel grinding machines and cylindrical grinders tooled for large-scale production of components for internal combustion engines. Delivery is to take place over an 18-month period commencing at the end of 1963.

The Australian Government has decided, in principle, to appoint an independent expert body to enquire into the effects of tariff protection and other factors affecting costs in the economy. The decision follows strong criticism by primary producer organisations and chambers of commerce of recent extensions of tariff protection for secondary industries. Primary producers have claimed that tariff protection for manufacturers has added unnecessarily to the costs of primary industries which have to compete in world markets.

The Italian Government has reduced customs duties by 10 per cent, with effect from the 18th inst. The reduction does, not, however, apply to lead, zinc, aluminium, sulphur, silk and certain of their derivatives, agricultural products covered by the Common Market agreement, as well as steel and coal covered by the Coal and Steel Community. It is emphasised that the cut is a temporary measure which will be reabsorbed by the duty reductions provided for by the Treaty of Rome. As regards countries outside the Common Market, the cut will not be carried out in cases in which it would reduce the duties to a level below that of the common external tariff.

The Soviet Union has awarded a contract worth about $100 million to three Japanese companies for the supply of 17 ships, aggregating 480,000 d.w.t. tons, besides six dredgers, 12 tugs and 10 floating cranes. The shipping companies concerned are the Ishikawajima Harima Heavy Industries and Mitsubishi Shipbuilding and Engineering and Hitachis. The contract, awarded to a trade mission which was on a visit to Moscow, is said to be the biggest single contract ever concluded by Japanese shipyards. The Japanese Government, however, does not seem to be quite satisfied with the deal, because, under the trade agreement between the two countries, Japan will have to buy reciprocally Soviet goods equal in value to the contract now awarded.

PERSONAL

MR. M. P. Alexander, Deputy Secretary to the Union Government in the Ministry of Commerce and Industry, has assumed charge as the Chairman of the Coir Board.

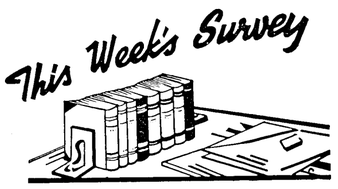
Mr. K. N. R. Ramanujam, Director of Research in the Reserve Bank, Bombay, has been selected by the U. N. to serve as its Economic Adviser in Ghana. Mr. Ramanujam, who is expected to be away for a year initially, will leave for Accra shortly.

Mr. Selwyn Lloyd, who relinquished the post of Britain's Chancellor of the Exchequer in July last, has been appointed a Director of the British Alliance Assurance Company and also of its parent company, the Sun Alliance Insurance. Mr. Lloyd had resigned from the Directorship of the Alliance Assurance in 1951 on joining the Government as a Minister of State.

Mr. Michael Galli has been appointed Deputy Chief of the Agriculture Division of U.S. Agency for International Development Mission to India *vice* Mr. Ralph N. Gleason who has served in India since 1958. Mr. Galli will guide more than 40 American experts presently in India helping in the development of agricultural education and research.

Mr. J. R. D. Tata and Mr. S. S. Khera have been appointed Members of the Atomic Energy Commission for a period of one year, with effect from 27th August 1962. Mr. S. Jagannathan, Member for Finance on the Commission, will be ex-officio Secretary, Atomic Energy Department, for financial matters. Dr. H. J. Bhabha will continue to be Chairman of the Commission.

Mr. D. Das Gupta of the Hindustan General Insurance Society Ltd. has been elected President of the Indian Insurance Companies Association, Calcutta, for the year 1962. The members of the committee are: Mr. P. S. Bhandari (General Assurance Society), Mr. K. P. Chakrabertti (New Great Insurance), Mr. P. K. Ghose (National Insurance), Mr. A. C. Mukherjee (New India Assurance), Mr. K. P. Modi (Ruby General Insurance), and Mr. R. K. Seth (Concord of India Insurance).



ATTITUDE TO AID

THE advanced nations seem to have a stake in world-wide development, notwithstanding the fact that the phenomenal progress registered in recent years in the countries of the European Economic Community has led some politicians and economists in the West to believe that "prosperity is divisible." It is rather difficult to subscribe to the latter view, for it can be shown that prosperity, like peace, continues to be indivisible. But there will always be some critics of foreign aid, both in the West and in the underdeveloped countries, taking their stand either on some sort of economic isolationism or on narrow nationalism. They have something to ponder in the following observations quoted from Mr. Jehangir Ghandy's address at the Calcutta Rotary Club last week:

"Prosperity, like peace, is indivisible. This is not a platitude, it derives substance from the stark reality that productive capacity in the United States cannot be fully utilised, unless surplus goods can be marketed overseas. Two-thirds of the world live today in want and misery, constituting, therefore, a very poor market. If the income of these underdeveloped countries could be raised by 5 per cent a year—the target set for the U.N. Development Decade—then imports would rise by as much every year, if not more. This is what gives affluent nations a stake in world-wide development, and forms the basis on which the expectations of greater international aid are based. . . . The expansion of the world market that will accompany the Decade of Development will not only bring more jobs and more sales to the affluent nations but will also provide a hedge against economic recession. Enlightened self-interest thus reinforces the moral appeal of good-neighbourliness."

There is, of course, a hard core of truth in these observations. But it is something which is better recognised and told by economists and leaders of opinion in the West. Telling the affluent nations that, when they are giving aid, they are doing so in their own interest is illustrative of the kind of psychological difficulties in the way of aid-giving and aid-receiving. What is true of individuals may be true of nations too. If an individual's acute awareness of his continued dependence on others is more likely to breed ingratitude than gratitude towards the latter and lead him to adopt postures involving a sort of mental liberation from all moral obligation, a nation, too, may strike up distorted and unnatural attitudes towards aid-givers who will, as a consequence, be piqued into saying unpleasant things. By far the best course which a developing country in need of aid can usefully adopt is to make out a case for such aid in the light of its needs over a reasonable period of time, say, ten or fifteen years, as well as for expanded trade so as to strengthen its capacity for repayment. This kind of approach, adopted recently by India's Finance Minister, is as sensible as it is commendable.

FINANCE FOR INDUSTRY

One of the important problems that came up for discussion at the quarterly meeting of the All-India Manufacturers' Organisation held at Poona on Sunday last related to the supply of credit for industrial development and export promotion. Mr. Prabhu V. Mehta, Chairman of the A.-I.M.O., in his speech at the meeting, made a particular reference to the difficulties faced by industry and trade in securing adequate credit. He was firmly of the opinion that, although facilities for credit had improved in recent years, there was still room for improvement both in respect of the quantum of assistance available and the speed of disposal of applications for credit. In his inaugural speech, Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India, exhaustively dealt with some of the points raised by Mr. Mehta. While dealing with the question of export finance, he touched upon the facility being offered to exporters by the Export Risk Insurance Corporation to secure credit from banks and under the Bill Market Scheme. The amendment to the Reserve Bank of India Act, now on the anvil would, according to him, facilitate the borrowing further. The proposed amendment, it may be noted, seeks to empower the Reserve Bank to lend against the declaration of the borrowing banks in writing that it will hold, as long as the loan from the Reserve Bank of India is outstanding, export bills, the value of which will not be less than the amount lent by the Reserve Bank. The period of maturity of export bills is also being extended from 90 to 180 days.

Referring to Mr. Mehta's suggestion that scheduled banks should be enabled to provide long-term loans for industrial development, Mr. Bhattacharyya opined that the question was being tackled by specialised financial institutions and that the banks were intended to play only a supplementary role. Giving an account of the difficulties in the way of providing term finance by banks in this country, he observed as follows:

"In examining this point, one has to bear in mind that the loans granted by banks to industry on a short-term basis are not short-term in the real sense. The main difference between a short-term loan and a term loan is that the security available for the former is much more easily realisable. Generally speaking, the banking system of a country, prefers to grant the former type of loans, because, as financial intermediaries in the money market, they obtain command over the resources of the community on a short-term basis. In the case of those countries, where the banking system has been able to meet term requirements of industry for purposes of acquisition of fixed assets on a large scale, they adapted themselves in the context of the institutional structure prevailing there. As far as India is concerned, as a matter of deliberate policy, several special financial institutions have been set up to cater to the requirements of industry for investment and the banking system is intended to play only a supplemental role in catering to the term finance requirements of industries.

"The grant of term-loans is a specialised business. It needs a comprehensive appraisal of a project for which banks are not normally equipped. In spite of this, I hope, you will agree that banks have taken some interest in extending term loans on a formal basis to facilitate purchase of plant and machinery. It was in order to induce banks to take greater interest in this direction that the Reserve Bank of India and the Central Government took the initiative to set up the Refinance Corporation in 1958 with a view to providing re-lending facilities to banks extending term loans. I have every hope that, with the accretion in the deposit resources of banks and with the steps that are being taken by them to gradually equip themselves to undertake appraisals of such term loan proposals, their contribution to the provision of such type of finance to industry would also reach a sizable proportion."

The foregoing observations of Mr. Bhattacharyya clearly explain the present position and the limitations on commercial banks to their going in for term loan business on any significant scale. If still there is a dearth of term loan facilities, it only reflects the inadequate growth of savings in the country and the increasing preference of industrialists to rely more on borrowings than on equity capital. The remedy for this state of affairs lies elsewhere, that is, in the fiscal and interest rates policies.

PLASTICS INDUSTRY

The plastics industry has been able to maintain good progress, despite the shortage of basic raw materials and machinery. The total output of plastics intermediates (such as polyethylene, p.v.c. and polystyrene), which was no more than 7,000 tons in 1955-56, rose to about 10,000 tons by 1960-61. In the third Plan, the output target is fixed at 74,000 tons, with an annual installed capacity of 85,000 tons. This means that production will have to record a sevenfold increase. Mr. J. W. L. Russel, President of the Indian Plastics Federation, has, however, expressed the view (*vide* his speech at a convention held at Calcutta last Sunday) that there is need for stepping up the tempo of development of the industry still further. In his view, a higher capacity target of 133.000 tons, as suggested by the Development Council for Organic Chemical Industries, is not beyond the reach of the industry. But the difficulties in the way are by no means easy of solution, for the attainment of the target will depend, *inter alia*, on whether it is possible to step up investment in the industry by Rs. 60 crores, during the Plan period, from the present level of Rs. 35 crores.

A still more crucial problem is the insufficient progress in the development of basic chemicals for feeding the plastics industry. The growth of plastics industry depends, it may be noted, on the expansion of coal, petroleum and natural gas industries which are the source of basic chemicals (like benzene, menthol and phthalic anhydride) and synthetic organic building blocks (methane, ethylene, propylene, butane, etc.). As is well known, the development of petroleum and petro-chemical industries, in particular, is hampered by the doctrinaire policies of the Government of India. Had the Union Ministry of Mines and Fuel actively promoted the growth of petro-chemicals industry, the plastics industry would have received a good boost. Let us, in this connection, take the case of the polyethylene plant of the Union Carbide at Trombay. Its expansion has been obstructed by the delay in receiving petro-chemicals, as previously envisaged, from the oil refineries at Trombay. The manufacturing process, now based on industrial alcohol, is costlier, as compared with petro-chemicals. Besides, the supply of alcohol itself has not been regular and the demand for it for other uses has greatly increased. It is high time the Government took measures to expand the petro-chemical industry for which the private sector can secure the necessary facilities. In this context, Mr. Russel's plea to plan for the provision of feedstocks and basic chemicals on a long-term basis is quite pertinent and deserves to be given due consideration by the Planning Commission and the Government of India.

There is also a strong case for removing the burden of Government levies on the raw materials of the plastics industry. Mr. Russel himself has urged the Government of India to withdraw excise duty, import duty, taxes or other levies on naphtha and other hydrocarbon feedstocks which are employed in the manufacture of basic plastics, organic chemicals, including petro-chemicals and aromatics. The Development Council, it may be recalled, has already made such a recommendation. It is to be hoped that the Government will give favourable consideration to this legitimate demand of the industry. Removal of Government levies may not reduce the quantum of revenue, for any loss resulting from tax cuts in respect of raw materials will, as pointed out by Mr. Russel, be made good by larger earnings through taxation on profits of the new industries.

The high level of taxes and multiple levies by the Centre, States and Municipalities has pushed up the cost of production considerably, with the result that exports of plastics have become extremely difficult. According to Mr. Russel, export prices of Indian plastics products are much higher than those of other countries. There is, however, scope for expanding exports, provided prices are maintained at competitive levels. But this will be possible only if the industry improves its productivity and the Government provides the encouragement needed on the lines outlined in this note.

LABOUR FORCE PATTERNS

Many and varied are the structural contrasts between the industrialised countries and the under-developed ones. These differences explain why the former are highly advanced and the latter relatively backward. The United Nations Organisation and its affiliated agencies have, by their innumerable studies, added to the world's knowledge of the imbalances and weak spots in the economies of the less-developed countries. One of the latest in the series of U.N. studies pertains to the demographic aspects of manpower. The findings of this study, which is based on an analysis of census data from about 100 countries, show that the advanced countries have some demographic advantages which the underdeveloped countries lack. There is, for instance, the advantage arising from the higher ratio of workers to dependents in the populations of industrialised countries. The unfavourable position of the underdeveloped countries with respect to worker/dependency ratios stems from the age structure of their populations in which there are few adults in relation to the number of children below working age. If the age structures in the underdeveloped countries are heavily weighted with child dependents, it is because of their higher birth rates. It is quite revealing to know, in this connection, that 40-45 per cent of the populations of the less-developed countries are children under 15 years of age, whereas in the industrialised countries this figure is more often in the range of 20-25 per cent.

A related factor which makes for better manpower training in the advanced countries is that only about 4 per cent of boys in the 10-14 age group and 38 per cent of males aged 65 years and over are actually employed. It is an advantage to these countries that these age groups, which cannot be easily trained for work in urban industries or which lack the requisite physical strength for employment therein, are represented in their labour force to a much lesser extent than in that of the underdeveloped countries. As agriculture constitutes the principal means of livelihood in the underdeveloped countries and as the labour of young boys and elderly men can be readily utilised in many agricultural operations, it is no wonder that as much as 25 per cent of boys in the 10-14 age group and 70 per cent of males aged 65 years and over remain in the labour force of these countries. It would also be pertinent to note here that the extensive systems of retirement and social security schemes, which exist in the advanced countries and which enable elderly men to withdraw from the labour force, are not to be found in the poorer countries. Nor do these countries have uniformly extended the years of compulsory schooling which could reduce the proportion of child labour in their economically active populations.

There is another major difference between the advanced and the less-developed countries. This pertains to the higher proportion of working male population in the former. The relevant finding of the U.N. study is that 64 per cent of the male population is in the labour force in European countries, whereas this proportion is only 57 per cent in Africa, Asia and Latin America. Female labour, which is not quite suitable for skilled or hard work in urban industries, is thus represented to a lesser extent in the labour force of advanced countries. If more married women in the age group 35-64 have come into the labour force of industrialised countries in the last 15 years, the proportion of young, single women in their labour force has simultaneously tended to fall. The net result seems to be that the labour force participation rate pertaining to women continues, on the whole, to be substantially less in the advanced countries than in the underdeveloped countries where middle-aged women are very often occupied as family helpers on the farms. The U.N. study, however, admits that the statistics on economically active women are subject to many shortcomings.

WORLD CIVIL AVIATION

The state of world civil aviation in the recent past, at the present time and in the foreseeable future has been pointedly dealt with in the report of the President of the Council of the International Civil Aviation Organisation, an affiliated agency of the United Nations. In the recent past, according to the report which is just being discussed by the I.C.A.O. assembly at Rome, a declining trend in the profit-making capacity of world airlines has been in evidence. The relevant figures show that, in 1960, profits were only $70 million, as compared with $105 million in the previous year, while 1961 ended with a loss of more than $100 million. As far as the current year is concerned, the situation, according to I.C.A.O. sources, seems to have changed for the worse rather than for the better. The outlook for the immediate future, too, may be no less gloomy, unless, of course, a substantial increase in the load factor—this was 51.6 per cent in 1961 for all the world airlines together—comes about.

For the present, the process of readjustment to the large-scale use of jet aircraft—a process which is not yet completed—is bound to keep net revenues down or cause losses. Some figures pertaining to jets would be quite relevant in this connection. There were, for instance, only 12 jet aircraft in operation in scheduled air services at the beginning of 1959; their number rose to 609 by the end of 1961. The increase in seating capacity (international and domestic) offered by the introduction of jets during that period was 46 per cent, but the gain in passenger kilometres performed during the same period was only 38 per cent. At the beginning of the current year, there were still 402 jet aircraft on order. When these, too, are introduced into the air services, the proportion of jets in the estimated aggregate number of aircraft (approximately 4,000) will be about 25 per cent. But, in terms of productive capacity, the fleet of about 1,000 jets will represent nearly 80 per cent of the aggregate capacity of the entire fleet of aircraft. It would appear from these figures that there is bound to be some very substantial unutilised capacity till the process of readjustment to the use of jets is completed. Any such continuance of unutilised capacity is, in turn, bound to eat into the otherwise possible profits.

If a similar situation is not to arise again after seven years with the expected replacement of the present types of jet aircraft by supersonic airliners, the I.C.A.O.'s four-point advice to member-Governments and airlines may have to be given favourable consideration. The four basic points urged by the I.C.A.O. are: (i) the supersonic airliners to be produced should be such that they can be operated economically; (ii) these airliners should be such that they will not cause a revolution in areas near airports, and in inhabited areas to be overflown, with their sonic boom; (iii) the new airliners should not require *completely new* infrastructures by rendering all the existing airports in the world obsolete; and (iv) costs on new infrastructures, if any, must be kept within reason. Unless this sound advice is accepted by the world airlines, they will find themselves in the same predicament as they are in today. The lag between rapid technical and technological advance and slow growth in traffic and profits cannot obviously continue for long without detriment to the economic viability of the world's airlines.

Facilities for the amicable settlement of commercial disputes arising between parties in India and the Hungarian People's Republic are now available as a result of an agreement entered into between the Arbitration Tribunal of the Federation of Indian Chambers of Commerce and Industry, New Delhi, and the Hungarian Chamber of Commerce, Budapest. This is the sixth agreement in the field of international commercial arbitration to be entered into by the Federation with commercial organisations of foreign countries. The other five agreements were signed with the U.S., Japan, the German Democratic Republic, the U.S.S.R. and Poland.

From Cochin to California

PRAWN CANNING is an industry wholly dependent on foreign markets. Prawn exports from the Malabar coast-line to the United States and other parts of the globe are today earning foreign exchange worth several crore rupees. Metal Box has helped the enterprise of India's exporters of prawns—and many other products—by supplying packages made to exacting international standards.

The Canning Advisory Service of Metal Box—the only one in the packaging industry—provides free advice to packers on every aspect of the complex problems of canning technology. As part of this service Metal Box helps develop special containers and closures to suit the requirements of individual products.

In providing all this assistance to packers Metal Box draws on 29 years of experience in the packaging industry and the accumulated technical resources of its overseas associates.

Today precision-made Metal Box packages carry annually to over 50 foreign countries more than Rs 4 crores worth of Indian goods—fish, cashewnuts, vanaspati, vegetable oils, fruit, toiletries, confectionery and biscuits.

But this is not all. Metal Box helps to earn foreign exchange by selling direct to packers abroad. The value of exports of Metal Box packages to foreign customers has increased over 20 times in four years—a truly spectacular record!

IN DEFENCE OF THE ECONOMIST

SOME REMINISCENCES

By Prof. C. N. Vakil

ECONOMIC problems affect everybody; for example, changes in prices are a matter of concern for most people, particularly for the housewife. Most of us are engaged in some activity or other which has economic significance. In consequence, everybody tries to form an economic opinion regarding those economic events which seem to affect him or her directly or indirectly. Some of these opinions based on experience may have some value; others may be guess-work and may take the form of efforts either to convince oneself about a situation or to explain away a particular effect.

The economist does not make economic facts. He observes and analyses facts made by others, and tries to establish economic tendencies based on such observation and analysis. He may use statistics in his effort. Statistical figures have, however, the appearance of mathematical exactness; economic tendencies cannot be mathematically exact, though the economist may have to use statistics for his purpose. This is so because the variety of changes in economic facts with which the economist has to deal are due to actions and decisions of millions of people, with their changing moods and attitudes. The variability of human behaviour in connection with economic affairs results in the vagueness of economic analysis. In other words, such imperfections are inherent in the subject, though the economist is often blamed for the same. It is, therefore, that the economist talks of tendencies and not of conclusions.

Black Market

When Government tries to control the economy, we have a new factor introducing complications in the work of the economist. In a mixed economy like ours, there are continuous conflicts between the operation of Government controls, on the one hand and the operation of economic laws, on the other. For example, when Government controls the price of a commodity, it has an administrative machinery to bring about the controlled price, usually by controlling the supply of the commodity in accordance with some legislation or regulation. In spite of the existence of such machinery, we are aware of the phenomenon of what is called the black market price. Perhaps the black market price is the result of the conflict between the self-interest of people, expressed through the operation of the laws of demand and supply, on the one hand, and the efforts of the administrative machinery to operate the controlled price of the commodity, on the other. If the control machinery were perfect and if there was conscious co-operation of the people in its operation, the black market price could not arise. Such a price arises, because, for one reason or another, it is not possible to make the control machinery perfect, the co-operation of the people in its operation is absent, and the self-interest of some people takes advantage of such imperfection by ignoring the law; the result is the black market price; it is called black because it is not legal. The black market price may be higher than the economic price because it makes allowance for the risk of illegality.

When this simplified operation in a given case is multiplied several times over, with such conflicting forces working simultaneously in many spheres in different degrees in a controlled economy, the task of the economist to disentangle such forces and to arrive at conclusions based on such situations is most unenviable. The vagueness of his conclusions increases in direct proportion to the success of the black market; as such transactions cannot be recorded in official statistics, the known imperfection of official statistics which the economist has to use becomes greater still.

It is obvious why any two economists may legitimately differ in their assessment of a particular economic phenomenon, because of the limitations of their experience or knowledge or data or bias, conscious or unconscious, or a combination of these factors. We all know that doctors differ in their diagnosis and, therefore, in their prescription; lawyers differ in their advice on given legal problems. But, because the layman is not able to act for the doctor or the lawyer, he submits to the uncertain advice of the doctor and the lawyer, sometimes with disastrous consequences. In the case of economic problems, the layman has his own views, which he tries to compare with the opinions of the economist and, if the latter does not suit him, it is easy for him to find fault with the economist. The so-called man of business and affairs is happy if the economist whom he consults agrees with him; he does not mind condemning him if he does not agree with him. Hence the curious statement that, where there are five economists, there are six opinions, suggesting that economists as a body are a divided lot and, therefore, cannot be trusted.

I propose to refer to a few cases in which economists have agreed or disagreed—cases of some significance in the economic affairs of the country. In doing so, I must apologise to all those persons whom I shall refer by name without their permission. I should also apologise for references to myself, as I was involved in the cases referred to. I may add that this is done in good faith in the defence of the economist, because the practical man wants something concrete, before he can be convinced about a situation regarding which he suffers from either prejudice or ignorance.

Some Instances

The Government of India sent a food delegation to the FAO Commission in Washington in the winter of 1946-47, with Dr. Katju as the leader. This delegation by some curious coincidence had three economists on it. During the discussion of the delegation, the economists had naturally an opportunity to take part. Dr. Radhakamal Mukherjee gave a sociological turn to his views and used phrases and words which the delegation could not always follow. At the other end, Dr. V. K. R. V. Rao held strong views and spoke rapidly in technical economic language also with the result that the delegation felt for a time that the economists did not agree and, therefore, they should go their own way on an economic problem. Realising this unfortunate situation after some time, when these two colleagues found themselves frustrated and were in a mood to listen, I succeeded in persuading them to agree to a joint effort. The result was that, in future discussions, only one of us spoke and the others did not contradict. More often we gave an agreed statement in simple language in writing. The delegation was, thereafter, surprised that the economists did not disagree, because, if they did, they could ignore them.

In 1943, when the British Government was carrying on the war with inflationary methods, when additions to the currency were of the order of a crore a day, when inflation was not yet understood in the country, it fell to my lot to explain the phenomenon in simple language in a small pamphlet called *The Falling Rupee*. This did not suit a leading industrialist, who considered it as an effort on my part to starve the people of the country of currency. The British Government was determined to carry on the war at all costs. The war operations resulted in substantial gains to certain businessmen who had Government contracts for war supplies. The greater the inflation the greater the gain to such persons and hence the propaganda of certain leading businessmen against my explanation of inflation. In answer to this, an Economists' Manifesto was issued, signed by leading economists of the country of the time, some of whom were known to have sharply different views on various questions. Among other things, the Economists' Manifesto being unanimous, had some effect and, though inflation was denied by the Finance Member during the Budget discussion in March 1943, anti-inflationary measures were introduced by the Government in May 1943 by Ordinances.

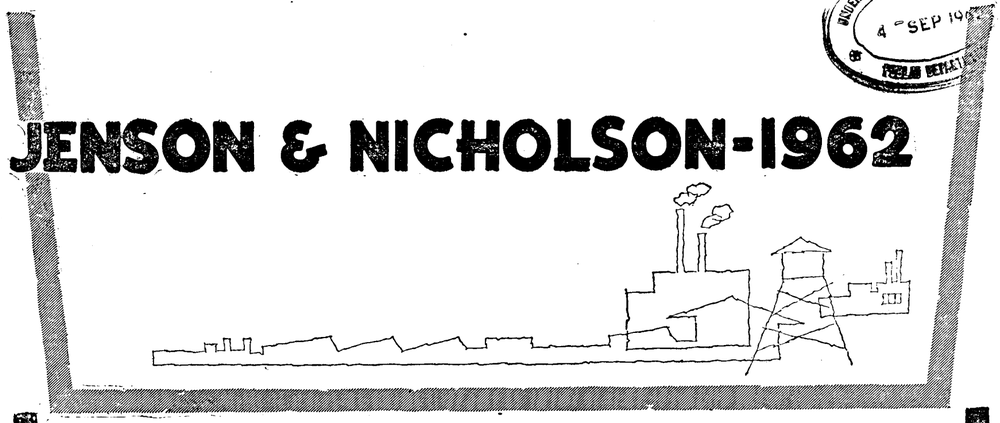
Before the end of the Second World War, during the latter part of 1945, there was a feeling in the then Government of India that the conclusion of hostilities would be followed by a depression as war-time activities would suddenly stop and that the Government should be ready to meet such a depression. The Finance Department issued instructions to Central Departments and the Provincial Governments to keep their plans for expenditure on Public Works ready so that Government activity of this nature could be injected into the economy as an anti-depression measure. Financial provision was also made for all this. The Government of India had created a Department of Planning and Development at that time, with Sir Ardeshir Dalal as the Member-in-charge. I happened to be the Economic Adviser to this Department. I held the contrary view, namely, that there would be a post-war inflation, because of the pent-up demand kept under control by anti-inflationary measures, during a period when the money supply had increased, which could not be matched by supplies of goods. I wrote a brief note in support of my view. This came up for discussion at a meeting of the Consultative Committee of Economists, with Sir Ardeshir Dalal as the Chairman. I found myself in a minority of one in a group consisting of both economists and officials as well as my chief; they all disagreed with me. The *Eastern Economist*, of which Dr. Lokanathan was the Editor at the time, came out with comments on my note ridiculing my attitude, though the note and the proceedings of the Committee were confidential. The war ended soon after. The anti-depression measures of the Government of India added to the post-war inflation and the views of the majority who had advocated the same proved utterly wrong.

It was in such circumstances that the National Government assumed power and found themselves faced with an acute post-war inflation-any crisis in 1948. They thought of calling a group of economists together to suggest remedies. Nine of us were summoned to Delhi at short notice for this purpose and were expected to produce a document giving a prescription for the inflationary disease. Realising that, in the absence of an agreed statement, the effort would be open to ridicule, the group agreed to find a common measure of agreement and to put aside individual differences. After working strenuously for a few days partly overnight, the group produced their report. This was presented in person to the Cabinet by the members of the group, who were called in for a discussion. The seniormost member of the group was Prof. K. T. Shah. Sardar Vallabhbhai Patel knew of the strong views of Prof. K. T. Shah on most questions. He believed that there would be a minute of dissent by Prof. Shah in any case. As the members of the Cabinet sat down, Sardar Patel asked the question whether the group was unanimous. One of us said "yes." Has Shah agreed? came the query, pointing a finger at him. Prof. Shah had somewhat weak eyesight and the glare of the sun coming from the window of the small room in which we met, did not enable him to see the members of the Cabinet properly. As Prof. Shah was not able to follow this rapid exchange of words, I gave the reply that Prof. Shah was signatory number one to this unanimous document.

Even Prosecution was Thought of

Whereas economists can and have agreed on such vital questions as inflation, I may be permitted to point out that Governments are, as a rule, anxious to conceal the fact of inflation, as they do not like to admit that they are the authors of the evil. This may be carried to extremes. For example, there was a move in the Government of India (1943) to prosecute the author of *The Falling Rupee* under the section of the Penal Code which says that anyone who takes away the confidence of the public from the currency is liable to two years' imprisonment. Whereas this did not materialise directly, Dr. Kumarappa, Gandhiji's economist, who wrote articles on the subject in the *Harijan*, in which he profusely quoted from *The Falling Rupee*, was prosecuted. Mr. Vaikunthbhai Mehta, who was collecting material for his defence, enquired of me why Kumarappa should be prosecuted for quoting me and how was it that I escaped. My answer was that the Finance Member was the guilty party, inasmuch as, by inflating the currency and thus reducing the value of the rupee, he was taking away confidence of the people from the currency; I was doing my job as an economist by correctly and scientifically interpreting the action of the Government and, if I was prosecuted, I would call Sir Theodore Gregory, then Economic Adviser, to the witness box and he would have to agree to my interpretation. Gregory and I had one thing in common —namely, the same Economic guru, Dr. Edwin Cannan. But Kumarappa put the case in such manner that the posecution could argue against him and he got two years' imprisonment.

The question is whether politicians and administrators who try to determine the working of a controlled economy are willing to listen to even the unanimous advice of economists or go their own way. I believe that the layman will appreciate that, though the economist can try to explain economic phenomena and may even look into the future, he is not responsible for them; the layman must find out for himself whether the economic expert has the appropriate role in the shaping and in the conduct of the economic affairs of the country, at a time when the State is assuming more and more economic functions and powers.—*Adapted from an address to the Bombay Rotary Club.*



PAINT AT WORK FOR INDUSTRY

J & N's FIRST PAINT WAS AN INDUSTRIAL COATING

—a glossy, lustrous varnish called 'Japan Black' It was used to paint 'society' carriages—the status symbol of 19th century London. Little did John Jenson suspect in 1821 that his Japan Black was destined for fame. It was to become the forerunner of a varied range of J & N coatings. Today, J & N can meet any industrial need.

APPLYING THE THREE 'R's' AT J & N

Range.....Reliability.....Resourcefulness—words which thoroughly sum up J & N's service to industry. The *range* is exhaustive—it extends from finishes for folding chairs to marine paints for ships; from polychromatic enamels for typewriters to non-yellowing whites for fans. *Reliability* is as much part of a J & N coating as the shade of colour—the happy result of J & N's century-old policy: quality first! J & N's *resourcefulness* has led to coatings like the popular rivelling enamel, with its wrinkled finish, so often found on cameras, office equipment etc. Equally ingenious is the polychromatic finish which reflects light in all directions. At J & N, the phrase 'paint is one of the lubricants of industry' finds practical outlet.

RESEARCH PRODUCES RESULTS

The research laboratory at the J & N factory near Calcutta is geared to a fine degree of up-to-the-minute efficiency. When necessary, it draws upon the pooled knowledge of J & N laboratories abroad. Behind such achievements as Solventless Insulating Varnishes for the Electrical Industry and High Temperature Stoving Enamels for the Cycle Industry, lies the tireless, never-ending effort of J & N research.

WHEN MR. A WANTS TO PRODUCE A MORE ATTRACTIVE FAN...

...he approaches the J & N Technical Advisory Service. Mr. A's problem is simply stated: he wants to improve the finish of his product in appearance and durability. One of J & N's Industrial Representatives—an experienced chemist—visits the factory and discusses the entire problem. He may make recommendations on the spot, or return to the laboratory and work out a detailed plan. The scheme accepted, the representative supervises application at Mr. A's factory till he is satisfied that a more attractive fan has been produced. If *you* have a paint problem, call, write or 'phone J & N.

NOT JUST ANYONE'S CUP OF TEA!

A number of conventional treatments were tried and found wanting. Much time was wasted. A lot of money was spent. The Tea Industry had a paint problem and it wasn't just anyone's cup of tea! Then they were introduced to EPILAC...The trade name for a range of outstanding Epoxy based industrial coatings, Epilac is noted for toughness, adhesion, good gloss retention and resistance to staining, heat and chemicals. When the Tea Industry required coatings which could be successfully used for cement floors, machinery etc., J & N recommended Epilac. It suited the industry to a 'T'. Write to Jenson & Nicholson at 2 Fairlie Place, Calcutta 1, for your free copy of the booklet 'Paint For The Tea Industry'.

J & N PAINTS = $...£...¥

Keenly aware of the country's need for foreign exchange, J & N contributes to the national effort by providing specialised coatings to exporting industries. Almost all cycles exported are finished with J & N products. Sewing Machines...Electric Fans...Insulating Cloths...all kinds of manufactured goods carry J & N coatings to foreign markets.

In this challenging period of economic expansion, J & N continues to play an increasing role in providing India's new and growing exporting industries with the indispensable components they must have.

*

Do you often SEE RED ?
In which of J & N's shades ?

*

EPILAC Primers and Finishes are outstanding for their toughness, adhesion, high gloss and resistance to staining, heat and chemicals. Backed by J & N's world-wide experience, EPILAC is one of a number of coatings specially formulated by J & N to meet the needs of Indian Industry.

Specify EPILAC Primers and Finishes for

- Excellent adhesion to the most difficult surfaces
- Toughness comparable to vitreous enamels
- Flexibility and impact resistance not found in other types of industrial coatings
- Exceptional chemical and electrical resistance, particularly in alkaline conditions.

QUALITY SELLS J & N COATINGS

AMERICAN LETTER

LIGHTS AND SHADOWS IN U.S. ECONOMY

ROAD TRANSPORT BOOMING

From Our Special Correspondent

NEW YORK, *24th August*

THE business situation in the United States continues good but spotty. I did a good deal of travelling recently and I was surprised to hear completely different and completely contradictory remarks in various parts of the country, good and bad, and all component parts of the slowly rising overall statistics.

Travelling by automobile, rather than by train or airplane, conveys the truest picture. One has to stop at filling stations, road stands and restaurants. One sees the number of automobiles driven along the highways and their age. One does also get a fair opinion of the type of people who are on the road and for what purpose.

The samplings I did would seem to show that there are more automobiles on the roads than ever. Most of the cars here in the East are new or of recent vintage, although there are also older cars. In fact, I saw a Model A Ford yesterday on a highway in New Jersey which dated back to the early 1930s. Since a good part of the American population is constantly "on the go," business related to such activities is generally good. The filling station operators are doing well, so are roadside stands and restaurants as well as the roadside motels. It seems to me that short-haul and long-range travel is one of the "industries" which does not operate below capacity level. Automotive travel certainly is not in the luxury category. It is now looked upon as an old entrenched necessity. Except on the highways from cities to the suburbs, there are no chauffeur-driven luxury cars on the roads.

Road-rail Competition

On the great inter-State and intra-State throughways, one sees predominantly cars of the "average American," be they salesmen, families of wage or salary earners and an enormous amount of commercial traffic. In fact, most of the road space is taken up by huge trailer trucks which have the capacity of nearly a railroad car. Equally dominant are passenger buses. The latest of these autobuses in service over coast-to-coast routes are air-conditioned, they have a small rest room and a small kitchen like a galley aboard a yacht.

Bus schedules are much more frequent than those of the rails and are about one-half to one-third less expensive than railway fares. It is no wonder the railroad companies are in such straits and, through mergers, are endeavouring to improve their competitive position.

Coming back to the lights and shadows in the U.S. economy, Texas and many parts of the South-west are definitely booming. In the Dallas and Houston areas alone there are at least 200 multi-multi-millionaires who think nothing of building houses costing $2 million. I know, I visited some of them. The only soft spots in the South-west are in the mining and refining areas.

California and other parts of the Far West enjoy a very good economy climate. The vast aircraft plants, working on missiles electronics under Government contracts, provide steady employment. The motion picture industry is muddling through, but in the fastest growing part of the State in the North, unemployment has been a problem—not because there have been many lay-offs but because immigration from other States by people who seek a better climate continues at the rate of about 5,000 persons a day.

Industry and Agriculture

In the middle-Western, Southern and Eastern States conditions are just plain spotty. This means a slight downturn in a few sectors of the economy, or a substantially reduced rate of improvement in many other sectors, but still improvement. The overall figures for industrial production, personal income and the gross national product are still rising.

Federal Reserve economists and those in the U.S. Treasury have become quite cautious in their appraisal of the future. The Federal Reserve points out that "the economy continues to operate well below capacity levels. Moreover, mid-year figures, especially those for new orders for durable goods and the number of housing starts, raise questions about the strength of underlying demand in the months ahead."

The new depreciation rules may give a boost to industry, but a possible tax cut has now been postponed until next year so that rates for the current year will remain as they are at present. Both wholesale and retail prices have shown little change. So far this year, consumer prices have moved up by about 0.8 per cent and have reached a level 1.2 per cent above that of a year ago. In other years, the increase has been much more pronounced.

Farm output in 1962 is expected to be down only slightly from that of last year. At present, it is estimated at only 2 per cent below the record level of 1960. Total production of feed grains will be down from the level of a year ago. If expectations prove correct, 1962 will be the lowest feed grain production year since the 132.7 million tons in 1957. The maize crop will be about 3 per cent lower than last year and 10 per cent below 1960. Wheat output will probably be off 15 per cent from 1961 and 7 per cent from the 1951-60 average.

Balance of Payments

There has been an improvement in the U.S. balance of international payments. One factor in this development seems to be attributable chiefly to repayment of certain obligations and to a further decline in the movement of speculative funds abroad, although a certain amount of pressure remained. Up to a point, the U.S. Treasury carried the brunt of the dollar defence through the Stabilisation Fund.

As mentioned previously, it was decided that the Federal Reserve should share in this endeavour. In due course, the Federal Open Market Committee authorised the Federal Reserve Bank of New York to undertake transactions in foreign currencies for System Open Market Account. Some of the objectives are making the existing system of international payments more efficient and avoiding disorderly conditions in the foreign exchange markets.

There are four specific aims: (1) to offset or compensate the effects on U.S. gold reserves or dollar liabilities of price fluctuations reflecting temporary disequilibrating forces; (2) to temper and smooth out abrupt changes in spot exchange rates and to moderate forward premiums and discounts; (3) to supplement international exchange arrangements such as those made through the International Monetary Fund; and (4) in the long run to provide a means whereby reciprocal holdings of foreign currencies may contribute to meeting needs for international liquidity as required in terms of an expanding world economy. Against this background, the System moved to acquire foreign currency balances. Reciprocal currency agreements are now in force with France, England, Holland, Belgium, Canada, Switzerland, West Germany and the Bank for International Settlements.

LONDON LETTER

DULL SUMMER

SOME INDICATORS EXAMINED

(From Our Own Correspondent)

LONDON, *25th August*

AS the summer progresses further, statistics present themselves as uncertain guides to the predominant question—has the U.K. economy got room for expansion? Unfortunately all the vital statistics do not appear at the same time and thus they seem to be telling contrary stories. The index of industrial production, which is a major indicator of the state of the economy, only just now reveals that, by the end of June—six weeks ago—that month and the whole of the second quarter show an exciting and profitable increase. Whereas, in 1961, the index rose from a January figure of 112 to a June figure of 115, a rise of only 2.7 per cent, this year the index has risen from 111 in January to 117 in June, a rise of 5½ per cent. Between the end of March and the end of June, there has, indeed, been a rise of 2 per cent. For the British economy in recent years these percentage increases are something novel and the second quarter is all the more startling for showing a rise during its course of nearly 3 per cent as compared with no rise whatsoever in the same period last year.

In the manufacturing industries, the increase is even more marked and can be described as a jump; thus, the month of June registered an all-time post-war record in production and, undoubtedly, the export industries have played the major part. June also showed a rise in export orders not only as compared with the previous two months but as compared with June of the previous year.

But, when we turn from this encouraging picture to the up-to-the-minute figures of employment, we find a record figure of unemployed and this August is described as the worst for fourteen years, with 2.1 per cent out of work.

Slump in Bank Advances

Even if one allows for the number of young persons leaving school and looking for jobs at this time of the year, the rise among unemployed adult workers is still just as marked. The grand total is now some 464,000 and is accompanied by a corresponding drop in the number of vacant jobs looking for occupants. These figures are particularly significant, as indicating that there is room for stimulus in the economy and this is borne out by the slump in bank advances. Over the past month, the fall in the total outstanding was £3¾ million, a figure compounded of a substantial rise in the advances to nationalised industries and a fall of no less than £9 million in the advances to private industry. The grand total of advances is very little above the corresponding figure for last year when they were drastically slashed by the special crisis measures. Should the authorities, however, consider that the British economy could do with some stimulus, the drop in bank advances indicates that it will have to be something more than a mere financial prod; for instance, up to now, it has been assumed that, if the Bank of England released the special deposits taken from the clearing banks and gave them a broader credit base, then credit would automatically be more used. But, unfortunately, it is now clear that the existing credit base is not being fully exploited.

The next most likely line of attack and one being constantly pressed in many City quarters is a further reduction of Bank and other money rates. On this issue, most economists are at one with the financiers and foresee a fall in the long-term rate on the gilt-edged to between 4 and 5 per cent. The boost this would give the Gilt-edged market would alone be helpful in stimulating the financial side of the economy.

If one wanders beyond the spheres mentioned, then a great number of budgetary factors could be used in various forms of tax reduction that are possible not only in the form of lower taxes on goods and on incomes, but also by cheapening the cost of industrial investment by making a part of such investment tax-free.

STATE FINANCIAL CORPORATIONS

I.M.C'S SUGGESTIONS FOR IMPROVING EFFICIENCY

BY and large, the views of the Indian Merchants' Chamber on the working of State Financial Corporations are in line with those expressed in this journal from time to time. The Chamber, in the course of its replies to the questionnaire (Part II) issued by the Reserve Bank Working Group on S.F.Cs, has impressively pinpointed some of the factors responsible for the slow progress made by the Corporations and indicated in clear-cut terms the steps that should be taken to improve the usefulness of the corporations and the modifications needed to make them function more efficiently. In particular, the Chamber has drawn attention to the dilatory and costly procedures and practices adopted by the Corporations. But for such procedures and practices, the Corporations would certainly have by now met a considerably larger part of the credit requirements of the medium and small-scale industries than they actually have. Since the vast majority of persons who run such industries are persons with moderate means and many of them do not have a high educational background, it is essential that the procedural formalities prescribed by the Corporations should be simple and easily intelligible.

The Chamber has done well to highlight this need, as also to urge an intensified publicity drive. Its suggestions for opening intelligence wings is, indeed, quite pertinent, their objectives being to publicise the functions and duties of the Corporations, the services offered to industries in the different parts of the State, and to render necessary guidance to small-scale units in regard to the procedural formalities to be gone through by the parties securing loans from the Corporations. Further, the Corporations should, as the Chamber has pointed out, utilise fully the services of chambers of commerce and other commercial organisations, publish literature, and insert display advertisements in the appropriate sections of the Press.

Attention has also been drawn to the legal formalities connected with the obtaining of loans. It has been found that the number of solicitors' firms approved at present by the various Corporations is rather restricted. The lists of such firms should be enlarged and they should also include the solicitors' firms or reputed, experienced advocates in mofussil towns. As for the cost aspect, the Chamber has urged the State Governments concerned to bear fully or partly charges such as stamp duties and registration fees in respect of mortages and other legal documents to be executed by the borrowers of the Corporations. A lead, it is stated, has already been given by the Governments of Assam, Rajasthan and the Punjab, and it will be in the fitness of things if the other State Governments also emulate this example. Only we would like to reiterate here what we said a fortnight ago, namely, "that there is a limit for giving free service to business concerns even on the ground that they are small and that excessive spoon-feeding will not be conducive to the growth of healthy entrepreneurs."

Another factor militating against the grant of adequate and timely loans to industries by the State Financial Corporations to which the Chamber has referred pertains to the rigid, conservative lending criteria. In a number of cases, it is noticed that undue emphasis is placed on security without any regard to the profit-earning capacity of the project in question. Pleading for a more dynamic and liberal attitude, the Chamber has made the following suggestions:

The profit-earning capacity is an important criterion which should be considered in taking decisions on applications for loans and advances by the Corporations and for deciding the extent of the accommodation to be given to the applicants. Further, the technical knowledge of the entrepreneur applicant should be prominently taken into consideration, in addition to the security offered, while deciding the quantum of accommodation. These two criteria should be considered for reducing the margin on security and a larger quantum of advance.

Hypothecation of machinery should also be accepted in cases where the applicant has rented premises. It would be a facility to the industrial units, if equitable mortgage is accepted in place of legal mortgage. The present State Financial Corporations Act, however, does not allow acceptance of equitable mortgage and the Act will, therefore, have to be amended for this purpose.

The basis for arriving at the value of the assets for purposes of security should be the ex-site value of the machinery, etc.

The margin of 50 per cent of the net value of fixed assets for the purpose of advancing loans is rather high and should be suitably reduced.

The limit of loans granted to industrial units run as private limited companies must be stepped up to Rs. 20 lakhs as in the case of public limited companies and industrial co-operatives.

There should be some flexibility in the policy of Corporations in respect of meeting the working capital needs of particular units that are not in a position to secure such accommodation from other alternative sources. The Indian Merchants Chamber has also advocated diversification of the activities of the Corporations. Thus, it favours underwriting of debentures and shares of industrial units on an increasing scale and giving guarantee to deferred payments in respect of purchases of equipments from indigenous sources. The importance of this suggestion lies in the fact that, since the small and medium-scale units are not in a position to raise capital by a public issue successfully, the underwriting by the State Financial Corporations will give them additional credit for attracting such capital and assuring them of their needs.

Besides liberalisation of procedures and practices, a more liberal lending policy and diversification of activities, the I.M.C. wants the Corporations to render better service to industries without raising the cost of credit to any large extent. This, it thinks, would be possible if the Corporations were to establish branch offices at important centres in the respective States. Such a step will, it feels, considerably help the industries situated in the mofussil which are at present unable to take advantage of the services offered by the Corporations. But this may prove to be a very expensive service to the Corporations, especially when turnover in such branches is inadequate. The better thing to do would be for the Corporations to work in collaboration with commercial banks having branches in upcountry centres. Some of them are developing their facilities for term loans. The State Bank of India and its associates also are catering to the credit needs of small and medium-scale industries. It should, therefore, be perfectly feasible for the State Financial Corporation to make use of their services. This arrangement will definitely be cheaper than opening branches. The I.M.C. is of the view that, if its proposal were implemented, the Corporations would be in a better position to know the local conditions. This is, of course, an important point, but that objective could be achieved equally effectively through periodical visits to the important centres by the top officials of the Corporations and establishing personal contacts with the entrepreneurs.

The I.M.C. wants the Corporations generally to resrrict the scope of their activities to extension of loans and advances to medium and small-scale industries. This does not mean that the Chamber is opposed to joint lending along with other credit agencies, such as banks, Industrial Finance Corporation and I.C.I.C.I. Only it emphasises that, where in particular deserving cases it is necessary to participate in joint lending, the statutory limit of accommodation as stipulated in the statute should not be overstepped.

An aspect which, according to the Chamber, deserves the serious consideration of the Working Group pertains to the grant of fiscal incentives to the State Financial Corporations. Reiterating the recommendation made at the conference convened by it in June last, the Chamber observes:

"The State Financial Corporations are, at present, taxed like other corporate sectors . . . The Government should consider the advisability of extending fiscal relief to the State Financial Corporations, with a view to enabling them to augment their resources. It appears that the Government of Pakistan have given some tax concessions to the industrial corporations operating in that country. The development corporations in some of the foreign countries are also granted similar concessions and facilities. The Chamber would suggest the following specific measures in this regard:

1. The State Financial Corporations should be given a tax holiday for a sufficinet period of time as is the case with new industrial units.

2. The Reserve Bank of India and the State Government concerned should forgo the dividends on their respective holidays in the Corporations. This will give the much-needed relief to the Corporations and held them to strengthen their resources."

It is somewhat difficult to agree with these suggestions. The Corporations cannot be considered as new units for purposes of giving a tax holiday, inasmuch as many of them commenced operations eight or nine years ago. We also do not think that either the tax burden or the dividend collected by the Reserve Bank and the State Governments concerned—the rate of dividend is just 3½ per cent except in the case of Mysore and Punjab where the rate is 4 per cent and 3 per cent, respectively—is weighing heavily on the finances of the Corporations. In any case, they are being given subventions by the Government to maintain the guaranteed dividend. They can certainly improve their financial position if only they take vigorous steps to expand their turnover and function on business lines. One may say that they improve their turnover only if they have sufficient funds at their disposal. That the authorities appreciate this point is evident from the fact that they have enabled the Corporations to borrow money from the Refinance Corporation for Industry. The Government has also agreed to lend to the Refinance Corporation the rupee equivalent of $55 million reserved by the U.S. Government under the first P.L. 480 agreement. The State Financial Corporations have also been authorised to act as the agents of the Industrial Credit and Investment Corporation. The important thing to be borne in mind in any discussion about assistance to small businessmen is the availability of credit in adequate sums and not the terms of credit. The terms should, of course, be reasonable and not usurious. But they need not necessarily be so cheap as to make the working of the Financial Corporations uneconomic for ever. Surely, a good business-like enterprise should be able to bear the reasonable cost of the capital employed in it.

LOMBARD SEEKS MINORITY SHARE IN NEW ZEALAND UNIT

A cash offer of 12s. 6d. a share for the minority shareholding in Lombard New Zealand Ltd. has been received from the Parent company, Lombard Banking Ltd., London. The offer, which is subject to Government approval, will be considered at an early meeting of the directors of the New Zealand company.

In 1957, Lombard Banking Ltd. obtained a controlling interest in the New Zealand Guarantee Corporation Ltd., paying 2s. 10½d. for the 2s. shares it acquired. In 1959, the name of the company was changed to Lombard New Zealand Ltd., and the capital was consolidated and divided into 5s. shares.

A delivery contract for 500 bookkeeping machines at an aggregate export value of Kr. 1,500,000 ($300,000) has been signed between Original Odhner, Gothenburg, large makers of office machines, and Australia and New Zealand Bank Ltd. The order is the largest single one ever received by the Swedish company. Delivery will be made successively during the next two years. The Australia and New Zealand Bank is Australia's second largest private bank with 8,000 employees and 600 offices. Since the last three years, the Bank has been using the Swedish company's calculating machines. The new order forms part of a large modernisation scheme. Original Odhner at present covers one fifth of the entire Australian market for office machinery.

The Film Finance Corporation Ltd. has sanctioned two loans, one of Rs. 3.5 lakhs to Nagina Films, Bombay, for the completion of the picture *Punar Milan* in Hindi and the other of Rs. 2.5 lakhs to the Maheshwari Pictures, Bombay, for the production of two films, one in Marathi and the other in Punjabi. The loans will be paid in instalments and bear interest of 9 per cent per annum, subject to a rebate of interest for early repayment as provided in the by-laws and regulations of the Corporation.

An agreement has been signed between the Bank of Foreign Trade of Russia and the Bank of Tokyo (Japan), under which the two banks propose to give reciprocal terms granting short-term loans for exports and imports of goods.

BUY in KILOS

Metric weights are compulsory throughout the country.

To ensure quick service and fair dealing, buy only in round units e.g.

1 KILOGRAM
500 GRAMS
200 GRAMS

1 KILOGRAM = 86 TOLAS

If 1 seer (=80 tolas) was sold at Re. 1, 1 Kilo should sell at Re. 1 nP. 7.

ANNOUNCEMENT REGARDING ISSUE OF FURTHER CAPITAL

THE KALPETTA ESTATES LIMITED

(INCORPORATED IN INDIA)

Registered Office: W-15/9847, BEACH ROAD, ALLEPPEY

EXISTING AND PROPOSED ACTIVITIES AND LOCATION:

The Company carries on Tea, Rubber and Cardamom plantations in its estates, viz., Chulika and Poonoor, situated in Wynaad Planting District in Kerala State.

The present planted acreages are as under :—

Tea	330
Rubber	909
Cardamom	285

It is proposed to expand the planted acreage on Poonoor Estate by 150 Acres of Rubber and on Chulika Estate by 200 Acres of Cardamom, raising the total planted acreage in Rubber and Cardamom to 1,059 and 485 Acres respectively. Including Tea (330 Acres), total planted acreage will be 1,874 Acres.

BOARD OF DIRECTORS:

1. Sri A. V. THOMAS (*Chairman*), Madras.
2. ,, K. VENKATARAGHAVAN, Alleppey.
3. ,, K. V. SURYANARAYANA IYER, Ernakulam.
4. ,, J. R. MOTISHAW, Bombay.
5. ,, P. R. SUBRAMANYAM, Bombay.

MANAGING AGENTS:

Messrs. A. V. THOMAS & CO., LTD., W-15/9847, Beach Road, Alleppey.

Directors of Managing Agents:—

1. Sri A. V. THOMAS, *Managing Director.*
2. ,, J. THOMAS.
3. ,, K. S. KRISHNAMURTHY.
4. ,, K. L. NARASIMHA RAO.

AUTHORISED CAPITAL:

1,50,000 Equity Shares of Rs. 10/- each - - - Rs. 15,00,000/-

SUBSCRIBED AND PAID-UP CAPITAL:

80,000 Equity Shares of Rs. 10/- each - - - Rs. 8,00,000/-

Of this 40,000 Equity Shares were issued as bonus shares by Capitalisation of Share Premium.

PROPOSED ISSUE:

It is proposed to issue 40,000 Equity Shares of Rs. 10 each at par payable in cash Rs. 5 along with application and the balance Rs. 5 within a month of allotment. The Shares are being offered in the first instance to the Shareholders on the Register of the Company as on 30th July 1962 in the proportion of one new Equity Share for every 2 Shares held on that date. Acceptance from shareholders and their renouncees will have to be lodged with the Company on or before 30th August, 1962. Applications from the public will be considered only in respect of shares, if any, remaining unabsorbed by way of right shares and additional shares by the registered shareholders or their renouncees as per letter of offer.

DATES OF OPENING AND CLOSING THE SUBSCRIPTION LIST:

The subscription list will open at commencement of banking hours on the 4th September 1962 and will close at the close of banking hours on the 12th September 1962 or later at the discretion of the Directors.

APPLICATION AND SUBSCRIPTION:

Application forms along with copies of the prospectus can be had from the registered office of the Company at Alleppey or from the underwriters to the issue, Messrs. P. R. Subramanyam, Members, Bombay Stock Exchange, Bombay, at their Office at No. 70-A, Stock Exchange Building, Apollo Street, Fort, Bombay.

WORLD TRENDS IN INDUSTRIAL FIBRES

COMMONWEALTH'S POSITION ANALYSED

[The annual reviews of industrial fibres published by the Commonwealth Economic Committee in London are always looked forward to with much interest. For they contain comprehensive, authentic analyses of world trends, with particular reference to the part played by the Commonwealth countries and to their interest, whether as producers or consumers. The latest review, that pertaining to the year 1960-61 (the twelfth in the post-war series), is no exception. Indeed, it not only contains all the regular features of the earlier editions brought up-to-date but also much new material. The review, which can be had for 10s. net from H.M. Stationery Office, London, presents in a convenient form trends in world production, trade, consumption, stocks, prices and customs duties in respect of industrial fibres. The fibres covered are cotton, wool, rayon and other man-made fibres, mohair and other fine hair, silk, flax, jute and jute manufactures, sisal and other hemps, coir and kapok. The present volume traces in detail developments up to the close of the 1960-61 season, while, at the same time, comparisons are given for the four immediately preceding seasons, as well as the averages of earlier post-war years. A brief summary of the review is given on this page.—Ed.]

WORLD production of the chief industrial fibres in the 1960-61 season is estimated to have risen by about 1½ per cent above the previous season's record to reach a new peak of some 43,200 million lbs. Output of natural fibres was only fractionally higher in aggregate, but production of man-made fibres reached a peak of 7,300 million lbs. in 1960 or 7 per cent up on the previous year. The preliminary information covering the 1961-62 season indicates that, on balance, the total world output of industrial fibres will again be higher than in the previous season. Increases are expected in wool, silk, man-made fibres and hard hemps, while the latest official estimates for jute put the crop at one of the highest on record. For cotton, however, a slight fall is anticipated.

On balance, the Commonwealth's position as a major supplier of industrial fibres remained substantially unchanged in 1960-61 as compared with the previous season, although wool production fell fractionally and there were poor jute harvests in India and Pakistan. On the other hand, cotton production increased by a quarter (due to larger crops in India, Nigeria and Uganda), while the further rise in East African sisal production raised the Commonwealth share of world output of hard hemps to its highest level since 1954. The United Kingdom, Canada and India are the main producers of man-made fibres within the Commonwealth, and their share of world output remained at about 10 per cent in 1960-61.

Consumption

The estimated world consumption of the main apparel fibres rose by a further 4 per cent in 1960, following a 9 per cent rise in 1959. Consumption of cotton and the cellulosic man-made fibres rose in each case by about 3 per cent, while that of wool was up by 4 per cent and the usage of non-cellulosic man-made fibres increased by nearly a quarter. By contrast, silk was in short supply during 1960 and consumption fell 2 per cent below the previous year's post-war peak. Among sacking and cordage fibres, the world usage of jute dropped by 9 per cent in 1960-61, due to acute fibre shortage, while consumption of hard hemp was about 7 per cent lower than in the previous year.

During the seasons ended in 1961, conditions were again reasonably favourable in most of the textile manufacturing industries and the general tendency was for stocks of raw fibres, apart from hard hemps, to fall. The supply stocks of raw wool were low; the poor jute harvests in India and Pakistan reduced the stocks of that fibre to record low levels. Cotton stocks fell further (although in the free world there was a rise of 4 per cent), whereas the Japanese Government's silk stocks were practically all disposed of.

Prices

Prices of natural fibres, apart from wool, were all higher during the 1960-61 season than in the previous season. In most cases, they continued their recovery from the depressed 1957-58 levels; in the case of silk, mohair and jute, demand far outran supply and so their prices rose to record levels. Wool values were very depressed early in the season and, despite a good recovery in the spring of 1961, the seasonal average was about 8 per cent lower than in 1959-60. Following the announcement of changes in the United States Government price policy, medium-staple cotton quotations rose slightly in 1960-61. Prices of flax, sisal and henequen all rose quite sharply in 1960, due to supply shortages, but those of abaca weakened in the second half of the year from the high levels reached in the first half.

At the start of the 1961-62 season, there was a sharp reaction in jute prices under the influence of a bumper crop. Prices of hard hemp (including sisal), flax and silk also declined somewhat in the latter part of 1961 following larger output of these fibres. Cotton remained stable at the enhanced level reached at the end of the previous season, while wool prices were in general slightly above their depressed 1960-61 levels. The United Kingdom price indices for selected industrial fibres (Base: 1947=100 except for flax for which the base was 1952=100) are given below:

	Calendar year				
	1957	1958	1959	1960	1961
Wool	257	185	194	195	195
Cotton (American) ..	124	118	105	106	114
Silk	126	112	112	127	144
Flax	67	55	60	72	70
Sisal	95	96	119	135	124
Jute	119	109	105	147	187

The trends in world production, export and consumption of different industrial fibres over the past decade are indicated in Table A, while Table B pertains to Commonwealth countries alone.

Production

During 1960-61, the overall output of natural fibres was fractionally higher than in 1959-60, a one per cent rise in production of fibres for apparel, household and industrial purposes offsetting a fall in sacking and cordage fibres. Production of man-made fibres made a further marked advance during 1960 and accounted for almost 17 per cent of world fibre output, or slightly above the previous highest percentage reached three years ago. The Commonwealth provided a slightly smaller proportion of world output of wool, while the share of rayon yarn and staple was unchanged. Following the sharp fall in the previous season, Commonwealth production of cotton made a full recovery in 1960-61, its proportion of the world total rising by 3 points to 14 per cent. As a result of the poor 1960-61 crops of jute and allied fibres in India and Pakistan, the percentage supplied by the Commonwealth was reduced further to 76 per cent. On the other hand, the Commonwealth's share of world production of hard hemp rose to nearly 34 per cent, its highest level since 1954.

Among the chief apparel and household fibres, wool production during 1960-61 was practically unaltered as compared with the previous season. Carpet wool production was unchanged between the two seasons, but, among apparel wools, merino qualities fell by 2 per cent (due to a fall in the Australian clip), while crossbreds increased by the same proportion. The 1960-61 world cotton crop was fractionally lower than in the previous season. Output in the United States fell by 2 per cent and the Communist countries produced less, but increases were recorded in India, Mexico, Brazil and Egypt. Silk production fell for the second year running; it is estimated to have been 5 per cent lower than in the previous year, as the result of a fall in Japanese output. Production of man-made fibres reached a new peak in 1960, exceeding the previous year's record by 7 per cent. In the case of rayon and acetate, the increase was rather over 3 per cent, while production of the newer non-cellulosic fibres (nylon, Terylene, Orlon, Acrilan, etc.) showed a sharper rise of 23 per cent and, by the end of 1962, productive capacity is expected to reach nearly 11,000 million lbs., of which over 3,000 million lbs. will consist of non-cellulosics. The production of sacking and cordage fibres was slightly lower than in 1959-60. Output of jute showed little alteration and soft hemp fell, but that of hard hemp was one per cent greater.

Trade in Fibres

The Commonwealth is an important supplier of industrial fibres to the rest of the world. The great bulk of the raw jute entering international trade is of Commonwealth origin, together with just over three-quarters of wool, nearly two-fifths of hemp, and about a tenth of cotton and man-made fibres.

A substantial proportion of the United Kingdom's imports of wool, hemp, jute, coir and kapok are of Commonwealth origin, but a much smaller share of its cotton, mohair and man-made fibres. About 80 per cent of this country's wool and hemp supplies are normally drawn from the Commonwealth and practically all its jute, coir and kapok. In the case of the United States,

COTTON GOODS OUTPUT DECLINES

PROSPECTS CAUTIOUSLY OPTIMISTIC

From Our Special Correspondent

MANCHESTER, 21*st August*

FORECASTING by means of statistics has its dangers, but the level of availability of supplies in the home market has been a reasonably accurate guide to future events within the Lancashire textile industry, particularly since the last war. The fluctuations in activity have so often been preceded by either an apparent surplus or a dwindling of stocks that the trade cycle has taken on a very definite form.

MANCHESTER LETTER

For this reason, even amid the encircling gloom of the trade today, it is permissible to take a cautiously optimistic view of the prospects. Most people involved in the industry are racking their brains to imagine what stimulating influence can arise to start the ball rolling, but, in the table below, the figures for the first half of the current year show that the availability of cotton and rayon cloth is now back to its 1958-59 level, before the phenomenal change which occurred soon after the redundancy scheme was launched:

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1937	4,122	75	4,197	2,001	2,196
1949	2,592	400	2,992	1,078	1,914
1950	2,840	342	3,182	1,017	2,165
1951	2,960	476	3,436	1,105	2,331
1952	2,192	210	2,402	871	1,531
1953	2,632	143	2,775	895	1,880
1954	2,775	335	3,110	812	2,298
1955	2,479	365	2,844	688	2,156
1956	2,314	380	2,694	595	2,099
1957	2,287	490	2,777	567	2,210
1958	2,030	434	2,464	468	1,996
1959	1,927	575	2,502	411	2,091
1960	1,911	786	2,697	383	2,314
1961	1,842	801	2,643	336	2,307
First 6 months					
1955	1,350	200	1,550	351	1,199
1956	1,215	201	1,416	301	1,115
1957	1,212	250	1,462	295	1,167
1958	1,105	229	1,334	257	1,077
1959	977	257	1,234	201	1,033
1960	903	382	1,375	201	1,174
1961	975	455	1,430	180	1,250
1962	868	324	1,192	150	1,042

On the assumption that industrial history repeats itself, the low point in the present phase would appear to have been reached. Whether buying power can be expected to gain momentum depends, as always, greatly on market sentiment, and as yet the mood of customers is overwhelmingly cautious.

The Major Concern

The major concern of producers on this side is to what extent their foreign competitors will benefit from any upsurge in demand which is encountered. With the door wide open for foreign imports, despite all governmental protests to the contrary, the overseas menace cannot be overlooked. Will only the crumbs be the diet for Lancashire spinners and weavers?

It seems a little strange that, just when the negotiations about Britain's entry into the European Common Market have apparently reached a point of stalemate, further documentary evidence about the effects of such an important step should be issued. The latest booklet prepared by the Cotton Board goes into very considerable detail, analyses the trade's prospects in the event of British association with the Six, and is more downright than usual about how individual firms should grasp the opportunities provided.

"More to Gain than to Lose"

There is no sign of a "sitting-on-the-fence" attitude about this report, clearly written by one who believes that Britain has far more to gain than to lose by entry into the Community. The summing-up says bluntly: "The E.E.C. may be the U.K. cotton industry's last chance." Calling for determination by British firms to attack the European markets, the document warns that the Continental cotton industries will certainly move into Britain's home market. "Indeed," it says, "they are already doing so and enjoying certain advantages arising out of the mainly horizontal organisation of the British industry, with its readily available merchanting system. If the U.K. industry is not to lose on balance, it must attack the Continental markets with at least equal vigour."

Touching forcibly on topics where the Cotton Board normally keeps in the background, the report urges not only more verticalisation, but larger groupings within the industry. "There is a trend towards verticalisation in Lancashire," it says, "but it must be carried very much further if the industry is to succeed in the Common Market. More important, verticalisation must be pursued well beyond the more usual spinner-weaver union."

Quoting figures to indicate the degree of concentration in some sections, the document observes that about two-thirds of Lancashire's yarn output comes from only 30 firms and two-thirds of finishing output from 20 firms. Of the 776 firms engaged in spinning, doubling, weaving and finishing in March last year, 36 accounted for half the numbers employed and 26 of these were predominantly vertical. "There is still, however, not only enormous scope, but also a great need for much closer links, both formal and informal, between firms in the industry," the survey adds. "Even if secrecy were justified in earlier years there seems to be little point in it now."

Co-operative Marketing

Another aspect of the trade's structure on which the report has much to say, is the marketing sector. After calling for the creation of mergers, aimed at greater concentration of resources, the document advocates co-operative or combined marketing. British trade within the European Economic Community would be likely at first to consist predominantly of small orders, but many of the disadvantages of the short-run order position could be overcome by co-operative marketing, according to the report.

The report contains numerous facts and figures about the trend of trade on the Continent, with comparative British figures. It contends that current costs in the E.E.C. countries are on average lower than in the U.K. and that the increase in productivity in the European industries over the past 10 years has been much more rapid than in Britain. To be fully competitive Lancashire mills will have to run their machinery for a similar number of hours to those across the Channel, involving an extension of shift working, which will raise a number of social, transport and staffing problems.

Getting down to details, the report provides comfort for some sections. It observes: "There appears to be scope for good trade in combed cotton yarns in the 30's count range, quality shirtings and some coloured wovens. The man-made filament weaving section, with a larger proportion of automatic looms and more extensive shift working than the cotton weaving section, should be competitive. Various finishing processes, especially the resin finishes, should be successful."

A Timely Warning

Oddly enough, the document deals briefly in a single paragraph with what it admits is probably the predominant consideration behind the support which has been forthcoming from most of the industry for British membership of the Community. This is the prospect that the "crippling effect" of Commonwealth low-wage, duty-free competition will be removed by entry into the Common Market.

The Cotton Board warns that too sanguine hopes on this matter may lead later to disappointment. The Government has repeatedly affirmed that Commonwealth interest must be safeguarded and the special position of Hong Kong taken into consideration. It suggests the possibility of a compromise being reached in the negotiations whereby at least part of the 422 million yards of Commonwealth quota cloth might continue to enter British ports on special terms, with re-export to other E.E.C. countries prevented.

Restraint On Output

Production returns issued monthly by the Cotton Board give a regular picture of the situation, occasionally distorted by holiday influences. Over a six-month period, however, it is fair to draw comparisons and the following figures showing the position over the past four years underline the improvement which occurred over the final stages of the redundancy programme, and the unbroken decline which has since followed:

	First Half			
	1962	1961	1960	1959
Cloth (million yards)				
Cotton	566.96	659.53	674.61	680.33
Man-made	262.28	273.35	272.93	253.85
Mixtures	39.05	41.98	45.78	42.35
Total ..	868.29	974.86	993.32	976.53
Yarn (million lbs.)				
Cotton	203.91	241.61	252.32	253.63
Spun rayon ..	43.42	50.25	58.52	51.92
Mixtures	19.16	20.01	16.64	18.32
Waste	51.56	51.52	48.07	53.94
Total ..	318.05	363.39	385.55	377.81

Once again, it is clear that purely cotton goods have borne the brunt of the reduction, as the comparable returns for man-made fibres and mixtures show up by no means unfavourably against 1959. This trend has now been in progress for so long, with the man-made fibres retaining their place and cotton steadily losing ground, that traders find it difficult to imagine when a halt will be called to the erosion of the market.—*All Rights Reserved.*

(Concluded from previous page)

about two-thirds of its imports of wool and the bulk of its raw jute and jute manufactures come from Commonwealth sources, but much smaller proportions of other fibres. There was a falling off, however, in the volume of U.S. imports from the Commonwealth in 1960. The European Common Market countries and the E.F.T.A. group (excluding the U.K.) normally take over 90 per cent of their raw jute, about two-thirds of their wool and one-third of their hemp imports from Commonwealth sources. By contrast, they import only marginal quantities of Commonwealth cotton, and they are themselves important producers of man-made fibres. Imports from the Commonwealth account for nearly nine-tenths of Japan's imports of wool and raw jute, about a third of its hemp imports and from 10-20 per cent of its cotton. Japan imports only very small quantities of man-made fibres and jute manufactures. Until 1959, the Commonwealth supplied only about 10 per cent of wool imported into the Soviet Union, but, in 1960, following the resumption of diplomatic relations with Australia, the proportion rose sharply. Of the relatively small quantities of jute imported, the Commonwealth supplies nine-tenths. The Soviet Union draws most of its foreign supplies of cotton from Egypt and China. Table C shows the percentages supplied by the Commonwealth of total imports of the main raw fibres into the United Kingdom, the United States, the Common Market countries, E.F.T.A., Japan and the Soviet Union in 1957 and 1960.

TEXTILE EXPORT INCENTIVE SCHEME

The decision of the Government of India to introduce from the 1st of this month a simplified procedure for calculating incentives for exports of cotton cloth and yarn marks a significant step towards encouraging the export effort. Under the new procedure, the mills and exporters will receive their entitlements very much quicker than hitherto and the time lag is expected to be cut by at least two to three months. The calculation of incentives, which has now become a joint endeavour of the Textile Commissioner, the Indian Cotton Mills' Federation and the Cotton Textiles Export Promotion Council, it is claimed, will expedite grant of incentives; changes have been made in the following two directions:

1. The actual calculation work has been transferred from the Office of the Textile Commissioner to the Federation. This will make for great elasticity in adjusting the staff to volume of work.

2. Certain basic changes have been introduced in the procedure through the co-operation of Textile Commissioner, mills and exporters.

As regards the second factor, it may be noted, the mills were hitherto entitled to receive 90 per cent of their export incentives immediately on ex-mill delivery of cloth and yarn meant for export. The remaining 10 per cent became available to them only when the proof of actual export of the goods in question became available. This proof was supplied to the Textile Commissioner by different exporters as and when the goods were actually shipped by them, a few weeks or months after the ex-mill delivery. The necessity to establish a link between the ex-mill deliveries from a number of mills and the proof of export received from a number of exporters at different periods, had proved a virtual bottleneck, and the receipt of the remaining 10 per cent of the mills' entitlement was delayed by six months to a year, and even longer in certain cases. Mills have agreed to forgo their claim for receiving 90 per cent of the entitlement on ex-mill delivery, and to postpone receipt of the whole of the entitlement on proof of actual export. On their part, the exporters have agreed to a change in the export contract, under which they will be required to place with mills certain deposits in case the actual export does not take place within three months from ex-mill deliveries. The Textile Commissioner on his part has agreed to transfer the control over the calculation of incentives to a tripartite Committee consisting of representatives of the Textile Commissioner, the Indian Cotton Mills' Federation and the Cotton Textiles Export Promotion Council.

"SUGAR PRICE LINKING FORMULA"

GOVERNMENT'S DECISION ON FINDINGS OF TARIFF COMMISSION

A TYPICAL instance of the lethargic way in which the administrative machinery functions is provided by the decision of the Government of India in regard to the Tariff Commission's report on sugar. Although the report was submitted more than fourteen months ago—on 8th June 1961—it was only last week that the Government released the report together with its resolution thereon. Did the Government really need such a long time to take a decision on the findings especially of a competent and impartial body such as the Tariff Commission? After all, the issue involved was a fairly simple one, pertaining as it did to the revision of the price-linking formula for sharing the price realised on the sale of sugar between factories and cane growers in respect of the past four seasons (1958-59 to 1961-62). The scope of the Commission's investigation was limited to an examination of the pros and cons of the case of the two parties for sharing the extra price realised on sugar sold in accordance with the statutory formula or any other reasonable basis. For the Commission was not required to examine the cost structure of the industry *de novo;* an exhaustive report on this question had been rendered in September 1959. Nor was it called upon to determine a fair price for sugar cane on the basis of actual production cost. And, what is more, even a quick perusal of the Commission's findings will indicate the well-balanced, rational nature of the recommendations made by the Commission, and it could not have been difficult for the Government to "digest" the report and to take a quick decision. The explanation for the delay implied in the Press note issued by the Union Food and Agriculture Ministry is not that convincing. The Press note says :

"After the report of the Commission was received, sugar prices were decontrolled and the incentives offered for increasing the manufacture of sugar were withdrawn. The promotion of export of sugar also assumed increased tempo. The question of linking the price of sugarcane to recovery also assumed importance and urgency on the recommendations of the Commission. The Commission's recommendations had to be examined in the context of these matters."

Scheme Must be Terminated

The major recommendation which the Government of India has done well to accept is that the scheme of linking the price of cane to that of sugar should be terminated with effect from the 1962-63 crushing season. The scheme, as this journal has not felt tired of repeating time and again and which has been reiterated most forcefully by the Commission, was absolutely irrational, in that it did not take into account the quality of cane, completely ignored the interests of sugar consumers, had not promoted good relations between cane growers and sugar millowners—on the contrary, it engendered bickering and agitation—and was not in the larger interests of the country as a whole. Indeed "the scheme," to quote the Commission, "has no parallel either in this country or elsewhere . . . We are apprehensive of the many risks to which the operation of such a scheme must expose our sugar economy and, in our opinion, these risks are likely to be aggravated the longer such a formula is allowed to operate. There is even a danger that the inevitable growth of pockets of vested interests might even imperil the implementation of the permanent solution which is ardently desired by all interests." If, however, the Commission thought it fit to suggest the continuance of the scheme for the seasons 1958-59 to 1961-62—the suggestion has been accepted by the Government—it was solely because of the historical background in which the formula was evolved and of the expectations which the undertaking given by the Government had nursed among cane growers. The Government has conceded, too, the plea of the Commission for applying the scheme of deferred cane price to areas where the price of sugar was under statutory control.

The Government has, however, turned down the Commission's new formula for sharing the "additional sugar price." Under this formula, the share of cane growers was fixed at 45 per cent of the additional sugar price realised by the mills and that of mills at 30 per cent, the balance of 25 per cent being represented by taxes on the share of mills. Rejecting this formula, the Government says :

"The new formula . . . has been examined from all angles and aspects and its implications and effect have been carefully considered. After reviewing the matter, Government consider that it would be more appropriate, equitable and reasonable to apply the existing formula set out in the Sugarcane (Control) Order 1955 after suitable adaptations and amendments in order to incorporate the suggestions of the Commission for the inclusion of allowances for rehabilitation and export losses, for adjustment of costs and for the sharing of incentives, than to accept the new formula for retrospective application. Government have, therefore, decided to retain the existing formula, after making suitable changes, for determining the additional price that might be found due to the growers for the years 1958-59 to 1961-62. The changes would involve the incorporation in the existing formula of a more precise determination of the share of the cultivator in the net price, the inclusion of a suitable rehabilitation allowance and amount of export loss in the deductions from the gross realisation and a modification in the portion of incentives to be included in the realisations to be shared. Steps are being taken to work out suitable legislation to amend the existing formula and to make it applicable retrospectively."

Sharing of Incentives

But the Government is generally in agreement with the Commission's recommendation pertaining to the sharing of incentives for increasing sugar production. The incentives, the Commission had urged, should be shared in the same ratio as that suggested for sharing the additional realisations over and above the fair ex-factory price of sugar, but the amount calculated as growers' share out of the incentives should be treated separately from the amount calculated as growers' share out of additional realisations; that is to say, the deficit under one should not be allowed to be set off against the growers' share under the other. The Government has decided to permit the sugar industry to retain 25 per cent of the realisations from the incentive (given by way of 50 per cent rebate in basic excise duty) allowed in 1959-60 and 1960-61 for taxes and other outgoings. The balance of 75 per cent will be shared between the cane growers and mills in the same proportion as the rest of realisations. It is made clear that rebates of cane cess or cane purchase tax and other rebates must be taken into account in full for the purpose of such determination.

Rehabilitation Allowance

An important recommendation made by the Tariff Commission was that pertaining to rehabilitation allowance. The Commission wanted an *ad hoc* provision of 40 nP per maund of sugar on the basis of 10 per cent recovery and a duration of 150 days as rehabilitation allowance when applying the formula in the Northern Region and 20 nP for Madhya Pradesh and Rajasthan, while, for other regions, no such allowance was considered necessary. The Government, however, feels that this recommendation needs modification. For, in its opinion, the acceptance of the recommendation would lead to discrimination and, further, the allowance for rehabilitation would have no relation to actual allocations made for the purpose. The Government has, therefore, decided that a suitable allowance should be authorised only in the case of those factories which have, in fact, set apart funds or utilised some amount on rehabilitation during the years 1958-59 to 1961-62.

The other findings of the Tariff Commission accepted by the Government are :

"As an interim arrangement, that is, after the termination of the present arrangement and pending introduction of payment by quality, arrangement should be made to offer a collective incentive, as in Maharashtra, to all cane growers attached to a factory in the form of a premium element in the price of cane depending on the extent to which the average recovery of the preceding season is an improvement on the previous average.

"New factories should be exempted from payment of deferred cane price and the share in the incentives for a period of three years from the date of their establishment.

"The price linking formula for sharing of advantage of incentives need not be applied to the States of Maharashtra and Gujarat.

"There is no objection to co-operative factories being exempted from the operation of the formula so far as the member-growers are concerned. The formula should, however, apply to the quantities of cane purchased from non-members.

"If a sugar mill desires that, on grounds of financial stringency, it should be exempted wholly or partially from payment of deferred price, it should apply to Government for such exemption with all relevant documents regarding its production, sales, financial account, etc., of the particular year."

The exclusion of Maharashtra and Gujarat from the application of the price linking formula for sharing of advantages of incentives is only as was expected. For the system of paying for cane in vogue in these States is not in line with that adopted in the rest of India. It is a slab system for payment of a consolidated price for sugarcane. The price is based on the average sugar recovery per cent obtained in the preceding season. There is, as the Government of Maharashtra told the Commission, considerable advantage in adhering to this system of paying a total minimum price for cane once and for all, instead of the statutory minimum price, coupled with the deferred price payable after the close of the season. The Government rightly claimed that the cane growers and the sugar mills alike got the advantage of stability in regard to cost of production and that the cause for disputes was also eliminated.

Cost Schedules

Another important recommendation accepted by the Government relates to cost schedules. The Commission had emphasised that the cost schedules, prepared by it in 1959 for determining the cost structure of sugar and the fair price payable to the industry, should be brought up-to-date by adjusting changes not covered by the allowance for contingencies in the original schedules and that allowance should be made for export loss also.

Long-term Solution

While all this pertains to the payment of cane price in respect of the current (1961-62) season, which is over for all practical purposes, and three preceding seasons, the more important question is about the future. The Commission has given a clear answer to this question, though it has not itself suggested a concrete scheme. The Commission observes :

"We do not support the existing system of payment for cane based as it is on an *ad hoc* minimum price of cane and a future share in the profits of the manufacturer. The recent changes in cane price, which bore no relationship to trends of sugar price, clearly bring out their empirical character. The *ad hoc* price thus tends merely to stimulate expectations and agitations which have no relationship to objective facts. The prospect and computation of the share in sugar price has proved a prolific cause of strained relations between cane-growers and sugar millers. The guarantee of payment by mere weight has blasted all incentives to improvement in the quality of the raw material. We have no doubt that the only way out of this stalemate would be to institute a system of payment which combines a floor price for cane of average or minimum quality with a proportionate or progressive scale for quality differentials. We were pleased to note that all interests in the industry recognise payment on quality as the most rational and appropriate basis for cane-sugar relationship.

"Under a system of payment by quality, the floor price for cane will have to be determined in relation to the costs of cultivation, including profits of cane of average quality and profit from other alternative crops. The costs of cultivation and average quality of cane will no doubt vary from region to region. But we would not support for this reason different floor prices for different regions. If the floor price protects adequately the cultivator of cane under relatively disadvantageous conditions, it will be more than enough to cover cultivators of all other regions with higher average quality of cane and higher yields per acre, since it is contemplated that these cultivators will receive a progressive bonus for their better quality cane so as to compensate them adequately for their higher investment, if any. If more favourable regions as in Maharashtra and the South were allowed to establish higher floor prices which are out of relationship with their costs of cultivation, there is a risk that the growth of sugar factories in these areas will be slower. This is not in the long-term interests of the country. As indicated above, the scale of premiums to be paid for each step in quality improvement will have to be so framed on a proportionate or progressive basis as to cover the higher investment in regions where the sugar content starts on a higher level and attains much higher peaks than elsewhere.

"We understand that the cost of working out a scheme outlined above for each factory would not work out to more than one nP per maund of cane supplied. Considering the fact that the scheme for payment on quality is one which has the most direct bearing and acts as an incentive for production of quality cane, we recommend that steps should be taken by both the Central and State Governments to introduce it on an all-India basis as early as possible. Further, the State Governments which are levying the development cess on sugarcane should consider favourably the question of meeting the expenditure on the establishment of a testing unit for each sugar factory. An independent agency not dependent on the mill will alone ensure confidence of the growers."

On this recommendation, the Union Food and Agriculture Ministry has the following to say :

"After careful consideration of all aspects, the Government of India decided to adopt a system of linking the sugarcane price with the recovery of the preceding season with effect from the sugar year 1962-63. An announcement in this regard has already been made. Experiments are in progress to evolve a suitable system of payment of price on the basis of the quality of sugarcane delivered to the factory by the sugarcane grower. That, however, as stated by the Commission, is a long-term development and will take some years to finalise. Government will not, however, relax efforts to achieve this aim as soon as practicable.

"In coming to their decisions on the Commission's recommendations, Government have had before them the history of the question of prices of sugarcane, the effect of these prices on the economy of sugar industry, the need for maintaining adequate supply of sugarcane for the factories, the requirements of ensuring for the cultivator, in the interests of the industry itself, an adequate fair price, and the long-term needs of development of sugarcane cultivation and manufacture of sugar in the country in the wider national interests. They also took note of the present position whereunder sugar prices are decontrolled, but are being kept within reasonable

(*Continued on next page*)

FIRST YEAR OF THIRD PLAN

GOVERNMENT'S ASSESSMENT OF PROGRESS

[*This note, placed on the table of the Lok Sabha by Mr. Gulzari Lal Nanda, Union Minister for Planning, Labour and Employment, on 22nd August, reviews in short compass the progress achieved in different sectors of the third Plan during* 1961-62 *and the development aimed at during* 1962-63. *The main facts regarding the economic trends in* 1961-62 *have been set out in the* Economic Survey *presented with the Budget. This note limits itself to tracing developments concerning some of the more important programmes of development embodied in the Plan, specially in the sectors of industry, transport, power, agriculture and education.*]

THE outlay on the Plan during 1961-62 amounted to Rs. 1,148 crores, as against Rs. 1,071 crores in 1960-61 and Rs. 1,011 crores in 1959-60. This represented a step-up of Rs. 77 crores as against Rs. 60 crores in the preceding year. It may be noted that, at the end of each Plan, substantial amounts of expenditure on social services, etc., are taken as "committed expenditure" for the next Plan period and are provided for outside the Plan. In this sense, the increase in development outlays in 1961-62 over the preceding year amounted to Rs. 217 crores.

During 1962-63, the Plan outlay is being raised beyond last year's level by about Rs. 300 crores.

The distribution of Plan outlay during 1961-62 and 1962-63 as compared with 1960-61 is as follows :—

(Rs. crores)

	1960-61	1961-62	1962-63
Agriculture, community development and co-operation	140	151	192
Irrigation and flood control	93	98	125
Power	108	131	165
Industry	219	240	333
Transport and communications	278	302	349
Social services	206	203	257
Miscellaneous	27	14	25
Total	1,071	1,148	1,446

Industry, Transport and Power

Problems of co-ordination in the related sectors of industry, transport and power have been a subject of special concern over the past year. Some of these problems are inevitably related to past trends and developments and decisions taken in different sectors of the economy in the earlier years. The very process of expansion in an economy creates new pressures on the available facilities. While improvements in planning and execution and better economic and statistical intelligence are vital, under conditions of rapid economic development, new stresses may continue to arise and suitable safeguards have to be devised from time to time.

Industrial production during 1961-62 rose by about 5 per cent. Apart from cotton textiles, jute and sugar industries, in which special conditions prevailed, the rise in industrial production during 1961-62 is reckoned at about 8 per cent. Progress in certain key industries is shown below. Where new plants are being established and long gestation periods are involved, the rise from year to year is necessarily uneven as between different industries.

	1960-61	1961-62 (estimated)	1962-63 (projected)
Finished steel (million tons)	2.4	2.9	3.9
Aluminium (000 tons)	18.2	19.4	38.0
Nitrogenous fertilisers (000 tons) in terms of nitrogen	97.1	140.0	200.0
Phosphatic fertilisers (000 tons)	53.0	61.9	90.0
Sulphuric acid (000 tons)	353.0*	423.0*	523.0*
Machine tools (value in Rs. crores)	7.24*	8.50*	10.50
Cement (million tons)	7.8	8.2	9.5
Paper and paper board (million tons)	343.0	362.8	400.0
Iron ore (million tons)	10.7	12.1	13.5
Coal (million metric tonnes)	55.5	55.2	62.0

* Calendar year.

During 1961-62, there was a significant increase in installed capacity in several important industries, notably in aluminium, industrial machinery, machine tools, electrical equipment, fertilisers, heavy chemicals and cement. Several new products were manufactured for the first time in the country during the year. Among the more important of these may be mentioned hydraulic presses, gear cutting machines, timepieces, watches, radio valves, compressors (sealed unit), reduction gear units, argon gas, polyvinyl chloride, butyl alcohol, plasticisers and rayon tyre cord.

Construction work on a large number of industrial projects proceeded during the year according to approved schedules. Thus, the construction of the three fertilisers plants in the public sector initiated in the second Plan was virtually completed during the year. Preliminary steps in connection with their expansion were initiated. The implementation of the projects under the Heavy Engineering Corporation progressed satisfactorily. By the end of 1961-62, the Heavy Machine Building Project had progressed to the stage of commencement of construction. Civil construction on the Foundry/Forge Project had commenced and the delivery of the plant equipment for the first stage had begun. The Coal Mining Machinery Projects had also progressed to the stage of civil construction. The project report for the Heavy Machine Tools Plant, Ranchi, was received before the end of the year. The expansion of the Hindustan Machine Tools, Bangalore, was completed during 1961-62. The site for the second Machine Tool Plant at Chandigarh was selected and orders for plant and equipment placed. The Heavy Electricals Project, Bhopal, which went into production in July 1960, took up a number of new items of production and stepped up the volume of its manufacturing capacity. The construction of the Rourkela Fertiliser Plant reached an advanced stage in 1961-62.

The progress of the construction of the Neyveli Fertiliser Plant was also satisfactory. In the case of Trombay Fertilisers, a considerable amount of preliminary work was completed and orders were placed in respect of the major items of plant and equipment. The second stage of expansion of F.A.C.T. was also nearly completed by the end of 1961-62. For Naharkatiya Fertilisers, the site was acquired and contracts for the main plant were given out.

In the private sector, during 1961-62, industrial licences were issued covering the entire targeted capacity of a fair number of industries. The number of applications for licences under the Industries Development and Regulation Act rose from 3,467 in 1960 to 4,012 in 1961. Several industries in which adequate capacity in relation to the third Plan targets had been licensed were placed on the 'banned' list. Projects which would save or earn foreign exchange were given priority in licensing. A large share of the capital goods for which imports were allowed went to paper and pulp, chemicals, textiles other than cotton, automobiles and engineering industries. A notable development in 1961-62 was the expansion of facilities for designing and fabrication.

Coal

The output of coal in 1961-62 was 55.2 million tonnes as compared with 55.5 million tonnes in the preceding year. For a variety of reasons, the output of the National Coal Development Corporation was less than in the previous year. A series of measures have been taken in recent months to expand transport facilities for the movement of coal; the programme of coal washeries is being pushed forward; and, by way of incentive, the price structure for coal has been recently revised. In spite of lower production, actual supply of coal was stepped up by three million tons.

Transport

To enable the railways to expand facilities mainly for the movement of coal, an additional outlay of Rs. 120 crores has been approved. A further provision of Rs. 25 crores has been accepted for line capacity works for general goods traffic and, as an advance measure, related to the movement of coal for the early period of the fourth Plan.

During 1961-62, the production of wagons increased from 11,984 in the preceding year to 19,115. Doublings and conversions were completed on about 422 miles of track. Electrification was completed on 327 route miles.

Roads

Seventy miles of missing links and five major bridges were constructed during 1961-62, under the programme for developing roads. Further 300 miles of existing highways were improved. The plan for 1962-63 provides for the construction of 70 miles of missing links and 10 major bridges and improvement of 400 miles of existing highways. The total addition to road mileage in the country was about 4,000 miles and is expected to be about 4,500 miles during 1962-63.

Power

Estimates of installed generating capacity, generation of power and towns and villages electrified in 1960-61, 1961-62 and 1962-63 are given below :

	1960-61	1961-62	1962-63 (*Target*)
Installed generating capacity (in MW).	5,595	6,174	6,881
Generation of power (million kw hrs.).	20,040	22,900	25,500
Additional towns and villages electrified	1,600	3,100	3,500

The generation of power during 1961-62 increased by about 13 per cent; however, in several areas, the demand for power increased more rapidly, and shortages were experienced. Foreign exchange has now been arranged for a large proportion of the power projects included in the third Plan and the implementation of the power programme is being accelerated as much as possible. To meet shortages in certain regions additions to the programme for power generating capacity amounting to about 500 MW have been agreed to.

Agriculture

While the year 1960-61 enjoyed unusually good weather conditions resulting in a large increase in agricultural production over the previous year, weather conditions were somewhat below normal during 1961-62. The following table gives the figures of production of agricultural crops in 1961-62 for which final estimates are available :

		1960-61	1961-62
Wheat	(million tons)	10.8	11.6
Barley	(")	2.8	3.1
Rice	(")	33.7	33.6
Jowar	(")	9.2	7.7
Bajra	(")	3.2	3.5
Maize	(")	3.9	4.0
Ragi	(")	1.7	1.8
Small millets	(")	1.9	1.9
Oilseeds	(")	6.5	6.8
Sugarcane	(")	10.4	9.7
Cotton	(million bales)	5.4	4.5
Jute	(")	4.0	6.3
Mesta	(")	1.1	1.7

The total potential at outlet created by major and medium irrigation schemes increased from 12.24 million acres in 1960-61 to 13.75 million acres in 1961-62. The target for 1962-63 is about 16 million acres. In minor irrigation, an additional 1.67 million acres were benefited in 1961-62, the target for 1962-63 being over two million acres.

Steps are being taken to intensify the minor irrigation and soil conservation programmes so as to raise the area to be benefited over the plan period by about 20 per cent.

For cotton and oilseeds, where the shortage is particularly marked, areas of intensive development are being specially marked out, and additional agricultural personnel, plant protection facilities and other assistance are being provided.

The consumption of nitrogenous fertilisers increased from about a little over 200,000 tons in terms of nitrogen in 1960-61 to nearly 300,000 tons in 1961-62. During the current year, the consumption will increase to about 400,000 tons (N).

Short and medium-term credit advanced by co-operative societies amounted to Rs. 256 crores in 1961-62, as against Rs. 200 crores in 1960-61 and is expected to go up to Rs. 300 crores in 1962-63.

Education

Progress in the fields of education is shown below :

	1960-61	1961-62	1962-63
Enrolment in primary schools (millions)	34.3	37.8	41.5
Enrolment in middle schools (millions)	6.3	6.9	7.6
Enrolment in secondary schools (millions)	2.8	3.1	3.4

In the third Plan, considerable emphasis is being placed on the provision of scholarships for needy children. Under the scheme of national scholarships for outstanding students for post-matric education, 2,400 awards were made in 1961-62. In addition to these, 61,000 scholarships were awarded in 1961-62 under the programme of assistance to scheduled castes, scheduled tribes and other backward classes.

Considerable progress is being made in technical education, as will be seen from the following figures :

Year	Degree courses		Diploma courses		Craftsmen training	
	No. of institutions	Admission capacity	No. of institutions	Admission capacity	No. of institutions	Admission capacity
1960-61 ..	100	13,860	196	25,570	167	49,830
1961-62 ..	108	15,300	210	26,450	260	84,559
1962-63 (target) ..	112	15,940	220	28,270	323	107,670

The Apprentices Bill 1961 has been passed by Parliament, Action has been taken to set up Central Apprenticeship Councils as laid down in the Act and also for other steps for the implementation of the Act. The four Central Training Institutes for the training of crafts instructors were expanded during 1961-62 for an admission capacity of 820, as against 530 in 1960-61.

Employment

Additional employment opportunities created are estimated at two million in 1961-62 and are expected to be 2.4 million in 1962-63.

Two new programmes of great importance for the expansion of employment opportunities in rural areas have been initiated under the third Plan. The Rural Works Programme, aiming at the fuller utilisation of manpower resources of the rural areas, specially for agricultural development, now extends to more than 200 development blocks. Given adequate organisation at the technical and administrative levels, it is proposed to expand this programme fourfold early next year.

The high-level Rural Industries Planning Committee constituted by the Planning Commission a few months ago has drawn up a scheme for the intensive development of small industries in rural areas. With the object of gaining experience in the intensive development of small industries, 46 areas are being selected, each comprising a population of three to four lakhs and consisting of complete development blocks situated within the same district. The projects will be directed to all kinds of small industries and processing industries which can be developed in rural areas, and will be undertaken as part of a wider and well co-ordinated plan of local development. On the basis of surveys to be shortly undertaken, steps will be taken in the selected areas to prepare area or regional development plans and to co-ordinate effectively the various development programmes under agriculture, irrigation, communications, industries, rural electrification, social services, etc.

SUGAR

(*Concluded from previous page*)

limits, having regard to the scheduled costs of manufacture, through a system of periodic releases. Government are convinced that, in the light of these factors and the considerations stated by the Commission and, in particular, by the linking of sugarcane prices to recovery from 1962-63, the justification for the formula no longer exists and have, therefore, accepted the recommendation of the Commission that the formula should cease to operate from 1962-63. They would, however, like to make it clear that, should prices of sugar show a different trend from the expectation on which this decision is based, they will consider appropriate measures to ensure that any benefit from such rise is passed on equitably to the grower.

"Government are also convinced that the decisions on the recommendations of the Commission and on the linking of sugarcane prices to recovery, on one side, settle an accumulated problem of the growers and the industry and, on the other, constitute a break from the past which would be conducive to the interests of both and would safeguard the national stake in the development of an industry and a line of agricultural production which constitutes the mainstay and economic strength of millions of cultivators. Government are fully determinded to realise this development on a long-term basis and hope that, in the achievement of this objective, it will have the co-operation of the industry and growers alike, whose interests are not mutually exclusive, but are interlinked and at the same time inextricably bound up with national interests."

While the Government's statement that it will not relax its efforts to evolve a suitable system of paying for cane as soon as practicable is reassuring, one wonders whether the Government could not have made a bold beginning right now. The new scheme for linking cane price to both quantity and quality that will be implemented with effect from the ensuing season due to commence on 1st November next—the details of the scheme have been given in our earlier issues (*vide Commerce* dated 30th June and 21st July)—is defective in that the enhanced price of Re. 1.62 per maund is to be paid for cane with a recovery of just 9.8 per cent and not the usual basis of 10 per cent regarded as the norm all these years. In effect, therefore, the minimum price for cane with 10 per cent recovery will be higher still, at Re. $1.64\frac{2}{3}$ per maund, a rise of another 2.4 nP. The need of the hour is to bring down the price of sugarcane in such a way as would cause the transfer of sub-marginal lands to other crops and compel growers to pay attention to the vital question of raising better quality cane. A defective beginning is surely not a good one. If in the beginning itself a liberal minimum price were fixed, how could the Government hope to lower it in subsequent years? That would be politically impossible. Actually, taking advantage of the occasion to switch over to a new system, the Government ought to have fixed the minimum price at a lower level, retaining the present minimum as the maximum to be paid for cane with the highest sucrose-content, say, 11 per cent, if not 12 per cent. Obviously, the powers-that-be lack the political courage.

THE INDIA CEMENTS LIMITED

MR. P. SURYANARAYANA URGES UPWARD REVISION OF CEMENT OUTPUT TARGET

EXPANSION PLANS UNDER WAY

THE view that the third Plan target for the production of cement (15 million tonnes per annum) will require an upward revision in order to meet the growing demand was expressed by Mr. P. Suryanarayana, Chairman of the India Cements Ltd., at the Sixteenth Annual General Meeting of the Company, held at Madras on Saturday, 18th August 1962. He was confident that the industry had a bright future and added that it was in a position to meet the growing demand for cement. Commenting on the expansion programme of the Company, Mr. Suryanarayana observed that the new factory, now under construction at Salem, would be commissioned by the middle of next year. The factory was designed to produce 20,000 tons of cement per year. He disclosed that the scheme for starting another cement factory in Andhra Pradesh was progressing satisfactorily.

The following is the full text of the speech of Mr. Suryanarayana:

"LADIES AND GENTLEMEN,

"On behalf of the management and on my own behalf, I extend to you all a cordial welcome to the sixteenth annual general meeting of your Company and place before you the annual accounts of the Company for the year ended 31st March 1962 and the Board's report and the Auditors' report thereon. Printed copies of these have been circulated to all the members and with your kind permission I will take them as read.

"The year under review marks the completion of the first year of the third Five-year Plan. The third Plan, as I mentioned on the last occasion, was presented to the nation on the 7th July 1961. Economic growth in the first year of the third Plan is satisfactory, though it has not been up to the full expectations of the planners. I feel that the progress in the first year is largely due to the increase in industrial production in the country. An idea of the growth is had, if one looks at the national income data provisionally estimated by the Planning Commission. The estimate for the first year of the third Plan at current prices is Rs. 14,690 crores, as compared with the preliminary estimate of Rs. 14,200 crores for the first year of the second Plan. The percentage increase in the 1961-62 National Income is said to be about 3.5, as compared with the previous year. I need hardly point out that the cement industry has contributed its mite to the increase in the industrial production of the country.

Production

"Your Company was formed in the year 1946 and went into production by September 1949 and got on to full rated capacity production of 100,000 tons per annum in 1950. The plant was doubled after six years in 1956 and the production was again doubled in 1959 and the production today stands at nearly half a million tons.

"The scheme for putting up a cement factory in Sankaridrug (Salem District), with an annual production of 200,000 tons of cement, has just been taken on hand and speedy steps are being taken to bring this unit into production by June-September next year. Necessary lands for the construction of the factory as well as mining have already been purchased and the first sod of earth has been turned yesterday. Deliveries of machinery are also expected to start almost immediately. It is my earnest hope that I will be in the very happy position of announcing to you at the next annual general meeting that Sankari Unit of your Company has gone into production or is about to go into production. Your Directors and the Managing Agents are anxious that this project should go into production at a very early date, so that we can to the extent possible relieve the acute shortage of cement now prevailing in the country.

"The scheme for starting a cement factory in Andhra Pradesh is also progressing, and would be in production in the next two years.

"When these schemes are completed, the total production of your Company, which had an installed capacity of 100,000 tons in 1950, will be more than one million tons of cement, which is an achievement which should be considered creditable judging from any standards. We may, therefore, feel proud of our share of contribution to the rapid industrialisation of the country and the attendant economic progress.

"Your Company has, during the year under review, produced 4,57,116 tonnes of cement, as against 4,64,295 tonnes in the previous year. The slight fall in production is largely due to the shortage of coal supplies and restriction on power consumption.

Installed Capacity

"The present installed capacity of the cement industry in this country is about 9.5 million tonnes, as against which production is in the region of 8.5 to 9 million tonnes. The target for production of cement for the second Five-year Plan was at first fixed at 14 million tons, but, subsequently in 1958, when a review of the Plan was made, the target was reduced to 9 million tons. This target has practically been achieved in the second Plan. The target for the third Plan has been fixed at 15 million tonnes and it would now appear that this would require a revision upwards, if we are to meet the growing demand of this essential commodity, so vital to the development of every phase of our planning. I once again emphasise, as I did on the previous occasion, that the industry has a bright future. I for one see no reason why the industry should not be able to live up to its expectations and at the end of the present Plan, 'deliver the goods,' if I may say so, or even do better by exceeding the estimated target.

Foreign Exchange

"In this connection, I may be permitted to refer to a matter, which of late is seriously engaging the minds of the planners, the Government and the entire business community, namely, the gravity of the position of our balance of foreign payments and the imperative need of not only conserving our present slender foreign exchange resources but also increasing the same by stepping up our exports. I have no doubt that every industrialist and businessman is alive to the situation and there is a growing realisation on the part of everybody that the huge foreign exchange resources required for the import of capital goods for new industries for maintenance equipment and essential raw materials for the existing industries and the fulfilment of our ambitious third Five-year Plan can be achieved only by increasing our exports. Unless there is a marked increase, I should say, almost a doubling or trebling of the present level of exports, one cannot think of any appreciable improvement in the foreign exchange position. The Government's policy of effecting drastic cuts in imports will not solve the problem to any great measure. Perhaps, such a policy, far from solving the problem, will only aggravate the difficulties. The solution to this problem can, therefore, lie only in a greater volume of exports and a highly imaginative export promotion programme. We cannot afford to halt the pace of industrialisation, nor reduce the pace of our exports, if we are to achieve any success in fulfilling the Plan targets. Besides increasing the exports of important traditional items such a cotton and jute products, tea, vegetable oils, etc., we should explore and gain new markets for the products of other industries, such as engineering industry and other miscellaneous industries. The target for exports in the third Plan has been set at Rs. 850 crores and, therefore, calls for a vigorous export drive on the part of the business and industrial communities. No doubt, our path is strewn with difficulties and calls for considerable sacrifices. We have the paradoxical problem of shortages and high prices at home and resistance of increasing competition abroad.

"In this context, it is a matter of gratification that the Government has been very much alive to this problem and in order to encourage exports, are formulating various schemes to make the business of exports advantageous for the industry. I may, in fact, say with some degree of confidence that the Government are doing and will do their utmost towards this end.

"You may perhaps be aware that as a first step in the export promotion campaign, the Government has appointed a Director of Transport and established machinery for quality control with a view to avoiding any bottlenecks in the export trade.

"It is a matter of sacred duty that we in the private sector of industry and trade should stand solidly behind the Government in the matter of export promotion.

Shipment of Cement

"The cement industry has not lagged behind in the export trade. I am happy to say that your Company has exported cement for a total value of Rs. 16 lakhs during the year under review. Most of the Company's exports go to Ceylon, where there is a great demand for Sankar Brand cement. It is hoped that, with our expansion schemes in view, we will not only be able to meet the growing demand in this established market, but also explore markets in other foreign countries and thus contribute to the country's exports in augmenting foreign exchange.

"The statement of accounts has been in your hands for some time now and members may have noted that the gross profit before deducting depreciation and Managing Agents' commission has increased by Rs. 20,18,070, as compared with the previous year. Production of clinker, cement and shales were slightly lower at 4,45,768, 4,57,116 and 4,58,382 metric tonnes, respectively. The fall is due to continued coal shortage and restriction on power supply.

Fair Prices

"I mentioned to you on the last occasion that the Tariff Commission were then considering the revision of cement prices. The Commission submitted its report in August 1961 to the Government recommending ex-works retention price in respect of each cement unit. The Government of India, however, did not approve of differential prices based on individual costs and felt that there should be a uniform price for the industry as a whole, so that the more efficient units will have the benefit of their economies. The Government, therefore, fixed a uniform ex-works price of cement at Rs. 69.50 per tonne, with provision for adjustment in the case of high-cost units subject to adjustments, whenever called for, for variations consequent on Governmental action, including escalation for fuel and power.

"Since the fixation of the price from 1st November 1961, there has already been increase in the cost of pit's-mouth price of coal, railway freight on movement of all goods traffic including coal, surcharge on power levied by the State Government and also increase in the Corporation tax, brought about by Governmental action. Suitable representations have been made by the Cement Manufacturers Association on behalf of the industry for suitable revision in the retention prices consequent on the above increases.

"The Commission recommended to the Government that the revised prices should be made effective from 1st July 1961. The Government, however, has thought fit to make the revised prices effective only from 1st November 1961. Your Company has, therefore, had the benefit of the revised price for a period of five months only during the accounting year.

"I am glad to inform you that the Government has recently sanctioned an increase of Rs. 2.37 per tonne in the retention price of your Company's cement to offset the increase in cost arising out of the use of furnace oil for one of its kilns.

"Members would have noted that we have, along with the statement of accounts, given graphically illustrated charts showing details of distribution of Sankar Brand cement, fixed assets of the Company and sales and dividends. We hope the information furnished therein will be of interest and give a full background to the Company's working.

Increase in Capital

"In order to meet additional capital that will be required for the expansion schemes of your Company, you are aware that a decision was taken by your Board to increase its subscribed capital by Rs. 1,25,55,250. In pursuance thereof, right shares were offered to the members of the Company in February 1962. I am

UNDER SECRETARY 4 PUBLIC LIBRARY

J. K. COTTON SPINNING & WEAVING MILLS CO., LTD.

CHAIRMAN, MR. PADAMPAT SINGHANIA'S SPEECH

RAYON YARN PRICES MUST BE RAISED

THE increase in excise duty on bleached, mercerised and sanforized cotton piecegoods was criticised by Mr. Padampat Singhania, Chairman of the Juggilal Kamlapat Cotton Spinning and Weaving Mills Co., Ltd., in his speech at the Thirty-ninth Annual General Meeting of the Company held at Kanpur on Wednesday, 25th July 1962. The increase, Mr. Singhania declared, was much too high and was bound to retard the trend of expanded production of these sorts. Referring to rayon yarn, he described how the object of imposing control on yarn was frustrated by the activities of the weaving sector. The weavers who get allotment of rayon yarn, according to him, sold their products at fancy prices, since there was no control on the prices of cloth, and earned huge profits and they did not pay any excise duty. Mr. Singhania urged the Government to do away with the stepmotherly treatment being given to yarn producers. He warned that, unless the burden of excise duty on rayon yarn was fully passed on to buyers and prices of yarn were raised to an economic level, it would be difficult for the rayon industry to survive.

The following is the full text of Mr. Padampat Singhania's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all to the thirty-ninth annual general meeting of your Company. The Directors' report and accounts of the Company for the year ended 31st December 1961 having been circulated to you in advance, I propose to take the same as read with your kind permission.

"You will notice from the accounts that, although our sales during the year have increased from Rs. 463.10 lakhs to Rs. 517.05 lakhs as compared with the previous year, the gross profits declined from Rs. 91.90 lakhs to Rs. 73.39 lakhs. This may appear to be surprising to a layman; but, if you will please look into the accounts closely, you will find that the profits have fallen due to increase in the rates of excise duty and cost of raw materials, stores and wages. The excise duty alone accounted for an increase of about Rs. 16 lakhs as compared with the previous year. During the year under review, the Company had to pay a sum of Rs. 63.74 lakhs on account of excise duty, as compared with Rs. 47.80 lakhs in the preceding year. Its impact was much greater in the rayon unit. From April 1961, the Government increased the excise duty on rayon yarn by 66⅔ per cent (from 90 nP. per kg. to 150 nP. per kg.), with a condition that 60 per cent of the increase should be borne by the producers. Normally when excise duty is levied on any article, it is understood that it will be passed on to consumers; but, in the case of rayon industry which is still in its infancy in this country, the Government deviated from this general principle and chose to throw the burden on the industry itself. The duty on rayon yarn has been further increased by 50 nP. per kg. as from April 1962. In the cotton textile industry, too, the Government has recently increased the rates of excise duty on bleached, mercerised and sanforized cloth. This increase is much too high and is bound to retard the trend of increased production of these sorts.

Rayon Yarn Prices

"Another important point to which I would like to draw the attention of the Government is that, while the distribution and prices of rayon yarn are controlled by the Government, there is no control whatsoever on the price of cloth made out of rayon yarn, with the result that the weaving units are able to sell their products at fancy prices and the very object of imposing control on the yarn, that is to say, the cloth woven out of it should be available to the consumers at reasonable prices, is frustrated. If it is desired that the people should get rayon cloth also at fair price, the prices of rayon cloth should also be fixed by the Government. It is common knowledge that the weavers who get allotment of rayon yarn sell their products at fancy prices and earn huge profits and have to pay no excise duty. Thus there is loss to the State Exchequer also. I hope the Government would give this point their due consideration and do away with the stepmotherly treatment being given to the yarn producers. I strongly feel that, unless the burden of excise duty on rayon yarn is fully passed on to the buyers and the prices of rayon yarn are increased to an economic level, it will be difficult for the rayon yarn industry to survive, more particularly the rayon plants of smaller capacity. As you know, ours is a small plant of 5 tons capacity. Its production costs are, therefore, bound to be higher as compared with the larger units. Besides this, as our plant is situated in Uttar Pradesh, the expenses on the transport of raw materials from Port towns to Kanpur further add to our cost. A representation has been made to the Textile Commissioner in this connection urging upon him to increase the selling prices and the Government's decision thereon is anxiously awaited.

"As mentioned in the Directors' report, the working results of the rayon unit were adversely affected by the closure of the factory for about 30 days during the year on account of illegal strikes by workers. The labour disturbances continued during the current year also and the Company has suffered loss of production for about three months due to disturbed working in the unit.

Cotton Textile Unit

"Coming to the cotton textile unit, I am pleased to state that, due to continuous efforts of the management to improve production and to introduce new varieties and better qualities suited to the taste of the consumers, the working results of this unit were better as compared with the previous year. The production costs, however, continued to be high, due to scarcity in the supply of cotton and increased prices of stores, dyes and chemicals and higher wage bill.

"You are fully aware that, in the cotton textile trade, two sections are operating in the country—(i) organised industry, and (ii) handloom industry. The organised industry, as you know, is subjected to heavy excise duty, whereas the handloom industry is free from it. While I fully realise that, from the social point of view, it is necessary to afford some protection to the handloom industry, it must not be done at the cost of the organised industry. The cost of production in the organised industry is already very high due to rising prices of raw materials, stores, dyes, chemicals and labour. It is, therefore, very difficult for the organised industry to stand in competition with the handloom industry.

Notice

THE CHAMPDANY JUTE CO. LTD.

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend of 5 per cent for the year ending 31st March, 1963, has been declared payable on 26th September, 1962; the dividend is subject to deduction of tax under the Income-tax Act, 1961. Dividend Warrants will be issued to the registered shareholders whose names appear in the Register on 26th September 1962 or to their mandatees.

The Share Register of the Company will be closed from 10th to 26th September 1962, both days inclusive.

By Order of the Board,
JAMES FINLAY & COMPANY LIMITED,
Managing Agents.

2, NETAJI SUBHAS ROAD,
CALCUTTA, *24th August*, 1962.

Cotton Supply

"Towards the end of the year, the supply position of cotton deteriorated rapidly on account of adverse climatic conditions and there was a big crisis in the cotton market. Due to low cotton crop of 1961-62 season, the supply of raw cotton became very scarce and the prices soared high. It is most unfortunate that the question of availability of raw cotton at reasonable prices has become a standing problem with the cotton textile industry. Since cotton is the basic raw material of the industry and forms the biggest component of the cost of production, it deserves serious and constant attention of the Government; and unless effective measures are taken by the Government to increase the production of indigenous cotton, the future of the cotton textile industry cannot be bright. Efforts should also be made to increase the cultivation of long-staple cotton in the country in order to save the valuable foreign exchange which is spent at present in the imports of this cotton. Another important step to ease the cotton supply position is to find out a substitute. As suggested in my last year's speech, 'rayon' is a very good substitute for cotton fibre. It is, therefore, essential that Government take effective steps to ensure speedy growth and development of the rayon industry in India.

"A further rise in the wage bill of the cotton textile industry has been brought about by an increase of Rs. 2 per month effected in the wages of workers from 1st January 1962 in terms of the recommendations of the Central Wage Board for Cotton Textile Industry. This is an addition to the increase of Rs. 6 per month which was enforced from 1st January 1960. The cost of living index, with which the dearness allowance is linked, has a continuous upward trend. Recently, the Government has increased the rate of employers' contribution to the Employees' State Insurance Scheme from 1¼ per cent to 2½ per cent with effect from 1st April 1962.

"Keeping in view the adverse trading conditions which prevailed during the year, the working results of both the units of your Company are considered satisfactory and your Directors deserve to be commended for having decided to maintain the same rate of dividend on equity shares as last year, that is, 12½ per cent subject to tax, in spite of adverse results as compared with the preceding year.

Modernisation

"In spite of all these difficulties, the management has continued its programme of modernisation and renovation of the plant and machinery and has incurred a capital expenditure to the tune of Rs. 42.5 lakhs during the year. In the cotton textile unit, a number of modern machines, such as sanforising plant, Barber Colman winding and warping machine and combers were installed during the year. We are sorry that, due to difficulty of getting import licences, it has not been possible to execute our scheme to modernise the finishing department. The need for modernisation of plant cannot be over-emphasised. In every part of the world, modernisation is taking place at a much faster speed. Japan has been able to introduce a cotton mill with continuous process in which you only have to feed cotton in the blow room and you will get yarn at the delivery point. In other words, the entire process from blow room to spinning is continuous and automatic. It is, therefore, imperative for the cotton textile industry in India that it must keep pace with the technological and scientific developments which are taking place in the world.

Doubling Rayon Plant's Capacity

"In the rayon unit also, a sodium sulphate plant has been installed during the year and I hope it will go into production in the near future. The scheme for doubling the capacity of the present rayon plant is also being followed up and we are negotiating with the Government for the clearance of import licence formalities, etc.

"Before I conclude, I wish to thank my colleagues on the Board and express my feeling of appreciation for the valued contribution made by the officers, staff and workers of the Company during the year in showing satisfactory working results.

"With these observations, I propose that the Directors' report and the audited balance-sheet and profit and loss account of the Company for the year ended 31st December 1961 be approved and adopted."

PRICE PERSPECTIVE AND PROSPECTIVE

IMPLICATIONS OF DEVELOPMENT PLANS

By Prof. P. C. Malhotra

Head of the Economics Department, Government Hamidia College, Bhopal

"Abundance and cheapness are not wealth, scarcity and dearness are misery, abundance and dearness are opulence."—QUESNAY.

THE concern over rising prices that is now being voiced all over India is understandable. Prices influence volume and direction of production; consumption through incomes and distribution of national wealth; and the monetary demand and supply. Targets for investments under planning assume a given price level with a more or less certainty about its stability in the given plan period. Revision of financial targets in the upward directions causes ripples in the national economy which, as the Plan gathers momentum, turn into uncontrollable tides, influencing the "affairs of men" and also that of the national economy. Price changes may bring about a silent revolution in a way different from what is desired. It may disturb a given social stratification which may not be desired or is unwanted.

In a Welfare State of an underdeveloped or a developing economy the State itself becomes an instrument and a party to the price rise which it finds helpless to control. A Welfare State under democracy can meet a situation only if the people are properly educated about a policy measure, its working and mechanism, the co-operation and attitude expected of the citizens, the sacrifices, overt or covert, it calls from them and the outspokenness with which they express themselves of the way in which the policy is working. A Welfare State assumes that no vested interests' will be permitted to distort the functioning of agreed economic policies by the people, who are active and not sleeping partners in the State. The citizens in a democratic Welfare State must learn to blame or even curse themselves for situations arising in the society out of their ignorance, apathy, willing or unwilling collusion.

The index numbers of wholesale prices (Revised series—Base 1952-53=100) show the following variations:

Period average of	Food articles	Liquor and tobacco	Fuel, power, light	Industrial raw materials	Manufactures	All commodities
1956 ..	99	82	102	113	105	102.6
1957 ..	107	92	112	118	108	108.7
1958 ..	112	94	115	115	108	110.0
1959 ..	118	101	116	120	110	115.5
1960 ..	120	106	119	139	121	123.0
1961 ..	120	104	122	148	127	125.8
June 1962 ..	126	96	123	127	129	127.5

The above may be compared with the index number of wholesale prices in 1950 which was 108.3 for food articles; 91.6 for liquor and tobacco; 91.1 for fuel, power, light and lubricants; 119.1 for industrial raw materials; 98.3 for manufactures and 106.4 for all commodities. The aggregative variations in prices as indicated by index numbers under main classification of commodities as given above fails to show the sub-sectoral changes in price level, as it is these which directly concern the individuals. But the trends in changes in price levels as revealed by the index number as given above do depict the broad changes in price level unmistakably.

Between 1950 and 1961 the wholesale prices of all commodities rose by 19 per cent (Index number rose from 106.4 in 1950 to 125 in 1961). If we compare the index number of price level in 1951 with the old series of index numbers with base year ending August 1939=100 we have the following figures:

Food articles 409.8, industrial raw materials 608.2, manufactured goods 395.5, all commodities 439.3.

For purposes of studying the deeper and wider consequences of changes in price level, it is more important to examine the price changes between 1939 and 1961 rather than between 1950 and 1961. The generation that lived in 1939, it must be noted, is not run out yet. The earning members belonging to the generation of 'forties of the present century are presumably still battling their way in life and shouldering the responsibility of supporting families. The generation of earning members in society commencing with 1950 does not form the bulk of this class of the generation dating from the 'forties of the twentieth century. The ways of life are dominated by the generation that had seen a rupee commanding much higher value than it is today. The generation of earners commencing with the 'fifties of the twentieth century with purchasing power of the rupee reduced to one-fourth of that of 1939 has to support dependents with more costlier habits without any substantial compensation in the form of increased money incomes.

In examining the price prospective in the third Five-year Plan, the volume of consumption indicated by the growing population of the country, the patterns of consumption and the race for increasing consumption, both quantitatively (due to release of pent-up demand on account of low incomes) and qualitatively due to a desire and the right to have better living, are important matters. Prof. J. K. Galbraith, in one of his lectures delivered in India in 1961 "On the Theory of Development Planning" remarked: "A theory of consumption—a view of what the production is ultimately for—has been surprisingly little discussed and has been too little missed." He added: "The final requirement of modern development planning is that it has to have a theory of consumption." To quote him further: "More important, what kind of consumption should be planned? Should it take consumption of the more highly developed countries as a model? Should it be guided by whatever market demand exists, which in most of the underdeveloped countries will reflect a considerable inequality of incomes with the result that production will be heavily influenced by the wants of the well-to-do minority? Or should production be tailored above all to serving as cheaply as possible the recognisable needs and desires of the average low-income consumer?"

There is a danger of consumption patterns of the more developed countries being followed as a matter of course and assuming a prestige value. But, in low income countries, cheap bicycles are more important than cheap automobiles[2]. An inexpensive electric lighting system for the villages should receive preference over a high capacity system which uses expensive equipment.

At the First Asian Conference of the International Association for Research in Income and Wealth, held at the University of Hongkong in August 1960, Prof. V. K. R. V. Rao observed that it was essential to study the composition of consumption in order to examine the possibility of increasing savings through the reduction of "non-functional," "non-basic," "non-productive consumption."

Consumption not only maintains production but determines the quality of the producer and hence productivity. The justification for a higher standard of living, in the words of Dr. Marshall is: "....a rise in the standard of life implies an increase of intelligence and energy and self-respect, leading to more care, judgment in expenditure and to an avoidance of food and drink that gratify the appetite but afford no strength, and of ways of living that are unwholesome, physically and morally."

In the context of the need for more capital for investment for economic development, in the midst of urgency for saving for capital accumulation, in the face of the policy commitment to reduce inequalities of income and the existence of a very large population of the country living in what is called primary poverty (the situation in which "earnings are insufficient to obtain the minimum necessaries for the maintenance of physical efficiency"), wasteful and conspicuous consumption (having more of show value giving the consumer a feeling of distinction, which has very little relation between the expenditure on it and its utility) is a social sin. While taxation and other regulations may penalise conspicuous consumption in the case of high-income group or the affluent class, public men have to impose self-discipline and deny themselves the luxuries which the official position place in their way. This would check the wanton irritation which conspicuous consumption is apt to cause in the less privileged classes.

According to Prof. Kaldor, if the rate of increase in population is 2 per cent per annum (in India this rate of increase is 2.3 per cent) and the rate of increase in productivity is also 2 per cent and if the capital-output ratio (the ratio of net investment to increases in national income) is 4:1, the proportion of income saved must be 16 per cent, since it is with a saving of 16 per cent that the rate of capital accumulation exactly matches the required rate of increase in output capacity. In the third Plan, capital-output ratio is not likely to be lower than 3 : 1. In fact, experience of advanced countries indicate that the capital-output ratio is likely to rise gradually during the process of development and would tend to fall only after several decades of development. The third Plan points out that, for achieving a cumulative rate of growth of over 5 per cent per annum, it will be necessary to undertake net investment to the extent of more than 14 per cent of the national income as compared with the present level of about 11.5 per cent. This involves raising the rate of domestic savings from 8.5 per cent at present to about 11.5 per cent by the end of the third Plan. Domestic savings can grow only if there are restraints on consumption, enforced and built-in (voluntary).

We have to be realistic about the price situation. Jeremiads over the cheap prices prevailing in the 'forties of the present century are going to be of no help. They can only remind us of days which can never come back. Much water has flowed down the river Ganges since then. In fact, we have now to live with and believe in Quesnay who said: "Abundance and cheapness are not wealth, scarcity and dearness are misery, abundance and dearness are opulence." It would, therefore, appear that the days of low prices are past. General prosperity would be in terms of high prices, higher incomes, higher productivity leading to high production and affluence. But, even under this affluent situation, stable prosperity would demand savings and avoidance of *bonanza* or spending spree.

Prof. T. Balogh, in the course of a lecture delivered at the National Council of Applied Economic Research in New Delhi in 1961, made a remark which emphasised realism in the matter of the price prospective: "To think," he said, "that, in India, you can get by a stable price level over the next ten years, with the type of development programme which must be contemplated, is to me extraordinarily naive. What one ought to do now is to educate people to expect a conscious increase in price, not an unwanted one, and explain to them what the function of those price rises is, that is to say, to help in accumulation through profits in the public or taxes on the private sector." Thus people in India must learn to be taxed more and more smilingly and also accept a price policy in the public sector which enables it to make increasing profits. (To accept rising prices in the public sector is, however, not to countenance waste and inefficiency. Higher prices should cover higher costs of material and labour and be incentive to higher production and higher productivity.) In the third Plan, income from the public sector is expected to be an important source of finance—contribution from railways Rs. 100 crores; surpluses from other public enterprises Rs. 450 crores additional taxation, including measures to increase the surpluses of public enterprises, is expected to contribute Rs. 1,710 crores.

It is common knowledge that price level is linked to the quantity of money supply. It may, however, be noted that, in the case of India, 11 per cent of the transactions in the cities and urban areas and 43 per cent in the rural areas take place without money. This may be called the non-monetised sector of Indian economy. And these sectors are not geographically separate or even separate in terms of commodities and services. But the existence of non-monetised sector enlarges the proportion relatively to the size of the monetised sector (field in which exchange takes place through the use of money) of money supply—currency, demand deposits (current or floating account) of banks and in the wider sense time deposits (fixed deposits for a particular period) also. The percentage of money supply, inclusive of time deposits, to national income is 27 in India, as against 53 in the U.S., 51 in West Germany and 45 in the U.K. In relation to national income in the monetised sector, the proportion in India would be about 40 per cent. This shows the gap between the relation of money supply to national income in India (a developing economy) and that of a developed economy like the U.S., West Germany or U.K. That the money supply in India will increase in years to come is, therefore, anybody's guess. The Working Group of the Reserve Bank of India have estimated that the expansion of money supply in the third Plan period would be little over Rs. 1,000 crores or approximately 35 per cent of the level at the end of the second Plan (Rs. 2,000 crores). The related factors to money supply that will influence price level are agricultural production, mill-made cloth, national income, *per capita* income, population.

To get a clear idea of the increase in total money supply with the public we take over first bench mark 1939 as we have done in the case of price rise. The total volume of notes in circulation in September 1939 was Rs. 196.14 crores which increased to Rs. 1,147.14 crores in September 1945. The same expansion took place in regard to the deposits of the scheduled banks, the total deposits of which increased from Rs. 222.33 crores in September 1939 to Rs. 897.58 crores in September 1945. The total money supply with the public increased from Rs. 341.68 crores in September 1939 to Rs. 1,961.38 crores in September 1945 and to Rs. 1,975.7 crores on 30th March 1951. On 30th March 1961, the money supply with the public (consisting of currency with the public Rs. 2,026.9 crores, other deposits with Reserve Bank Rs. 19 crores, and bank money Rs. 855.8 crores) was Rs. 2,901.7 crores.

The Achilles heel of the Welfare State is that it has a strong tendency to run into inflation as every popular Government, supported by the popularly elected Parliament, has the temptation to please the citizens and, on account of the ideological commitment of the State being run in the interests of the welfare of the people; it is unable to discipline itself to the level of tax burdens it is prepared to impose or the tax burdens people are prepared to accept. This tends to introduce inflationary pressures in the economy. Price inflation leads to income inflation and cost inflation. "In the present phase of the development of the Welfare State," says Prof. Myrdal, "it is a most important fact that the structure of interest organisations, and also the pressures exerted within Parliament and other elected assemblies at the provincial and even municipal level, are strongly biased in favour of the producer's interest in higher incomes and profits. This situation simply means that the institutional setting is such that all people in all walks of life are even more effectively directing their strivings for higher levels of living into attempts to protect and increase their money incomes. They may grumble about rising prices and costs of living—and use such a trend as a motivation when pressing for higher income—but they have usually no effective means to stop, by concerted action, the rising trend of prices."

In a Welfare State based on democracy, a certain balance needs to be evolved between different contending groups organised for defence and also for offence of group of interest. People are mostly organised for bargaining in their capacity as savers of an income or a profit, not as consumers. Out of the bargainings come compromise agreements which may be arrived at the risk of prolonging industrial conflicts by the bargaining parties being a little more generous to each other than current prices can afford. And the very producers who are organised for bargaining are also consumers. But as consumers they are so widely dispersed that there is no effective organisation to give them lower prices, unadulterated quality and restraint on living costs. The only escape from the incidence of rising living costs, therefore, appears in strengthening the bargaining organisations for raising incomes. But adoption of this method leads to a further widening of the gap between prices and incomes, based on the big lag between income rise and increased output of supplies of commodities and services.

A Welfare State is also committed to create an egalitarian society in which irrational disparities in incomes would be reduced, if not eliminated. The following view expressed by Prof. T. Balogh with reference to India has to be reckoned with even by the crusading egalitarian and taken note of by the active and the inert citizen alike, as the egalitarian in authority is acting on behalf of the citizen:

"It should be realised, in this connection, that policies pursued to promote what appears to be equality in this country at this stage but which decrease efficiency, are really inimical to the attainment of equality. You cannot give employment to the whole increment of the rapidly growing population. Unemployment and underemployment are still growing. Therefore any measure which impinges on the rate of increase in income will postpone the day at which India can give employment to all the new entrants in the labour market. Therefore, many of the 'popular' measures of redistributing income by, say, an enforced location of industrial plant and the enforced reduction of the size of the plant against the best and most efficient location of labour, in fact really increase inequality. It will create further little pockets of privileged labour and decrease the possibility of accelerating investment; it will increase the capital-output ratio and thus decrease the possibility of expanding employment. This, in India, *ipso facto* also increases inequality. And it will increase inequality so long as the number of unemployed is continuing to increase. You can begin to think in terms of whether social goals or economic goals are more urgent when unemployment is beginning to diminish. So long as unemployment is increasing any sort of aberration from concentrating on the size and the effectiveness of the planned investment also is anti-social."

The working of price mechanism in industrial nations is different from that in non-industrial societies, the economies of which are not so easily tractable as the optimal conditions like full employment, appropriate distribution of income, free operation of consumer's tastes, competitiveness in the product and factor markets, integration of the capital markets, etc., do not exist. The study of the phenomenon of continuously rising prices unrelated to the corresponding increase in volume of production generating excess monetary demand or inflationary price is different in underdeveloped or developing society from that in developed economic systems. "The importance of the non-monetised sector and the absence of integrated markets in the monetised sector in the underdeveloped economies bring out the material differences in the role of the monetary media, the emergence of prices and the representative character of the price indices in these economies from those in the developed ones."[3] Further, in underdeveloped economies, nearly half or more of the total national product is derived from agriculture. Agricultural production in the short run is very largely governed by natural factors like weather, rainfall, hailstorm, locusts, etc., and total agricultural production does not vary sensitively to changes in prices, as in the developed economies where agriculture is a business and not a way of life. In an undeveloped and predominantly agricultural country, 80 per cent of the people produce food for the entire population and the agriculturists sell on balance only one-fifth of their output.[4] Such a situation permits low level of productivity in agriculture and price lethargy. The role of demand for foodgrains[5] in underdeveloped economies is different from that in the developed economies. The initial rise in incomes in the former gives rise to increase in demand for foodgrains as the consumption of these is at a low level. The production of foodgrains in the short run is conditioned also by weather and rainfall variations. The problem of prices ceases to be importantly a monetary problem as it is in developed economies. It is a problem which is also rooted in the question of raising levels of agricultural productivity on the supply side, a situation under which agriculture comes to be looked upon as a business linked to the currents of price variations. A stagnant agriculture is a stolid anachronism in a planned economic development.

After the Second World War, something around a third of the national income has been passing through Treasury accounts. The proportion of taxation alone to national income in the U.K. is 28 per cent; in the U.S.A. 22 per cent and in Japan 21 per cent. In India, this proportion is as low as 9 per cent. The scope for fiscal measures to influence price movements in the country is, therefore, large, as, in India, planned development is bound to be linked, as it is actually being linked, to rising levels of taxation. Fiscal policy including budgetary policy and taxation measures cause a direct draft on the financial resources and purchasing power of the public as of the individuals which has its impact on prices. The power of taxation to promote, divert or restrict both production and consumption is great.

The problem of price policy in the third and subsequent plans may be summed up in the broad problem of finding adequate finances, without producing serious inflationary whirlpools which draw in their vortex investment and consumption patterns and distort the objectives. Accordingly, the objectives of price policy under our planning should be: (*a*) to ensure that the movements of relative prices accord with the priorities and targets that have been set in the plan; (*b*) to prevent sharp fluctuations and spurts. (The year-to-year fluctuations in prices have been unduly sharp in India. Between 1950 and 1955, the Economic Adviser's Index Number of wholesale prices of "all commodities" declined by 16 per cent, while between 1955 and 1960, it rose by 34 per cent); (*c*) to prevent any considerable rise in prices of essential goods that enter into consumption of low-income groups; (*d*) to goad and permit a constant effort at improving the productivity of enterprises in the private and public sectors, be they large or small.

An attempt has been made in this article at understanding of the price problem in the Welfare State and the factors involved in it, without giving any specific remedy or remedies for the inflationary or near-inflationary situation that exists or may arise in the country that has launched itself on the voyage of economic planning. To know is to forgive. To know is to be prepared. To know is to be responsible. As Prof. Gunnar Myrdal aptly remarks, "In a democracy of the Western type (India is a democracy of this type—Ed.), this problem of securing monetary stability with full employment can only be solved in a fully satisfactory way by raising the general level of education, intensifying still more the active participation of the people in decisions on all levels, strengthening very much the awareness which all should have of the common interest that the price level should not get out of hand...." It is thus clear that more intensive efforts should be made by our leaders to educate and not to mislead the public on the implications of forcing the pace of economic growth to price structure and cost of living.

[1] Professor Gunnar Myrdal, in his book, *Beyond the Welfare State* (page 39), refers to the various categories of vested interests which are a danger for democracy and planning both. He says: "The big and anonymous interests of the corporations exert in various ways an influence which is seldom democratically balanced by the power of the workers and consumers. They are highly skilled at concealment and at accepting public controls which appear to be far-reaching, but which can be evaded. Reforms in the interest of the lower income brackets are often no more than bribes to conceal much bigger advantages given to the higher brackets. The rich are usually left free to 'vote with the dollar' by making financial contributions to political parties that defend their interests. ... They are, indeed often in a position to deduct them from the income for which they are taxable, so that this privately directed buying of influence is actually subsidised to a large extent by the State itself."

[2] "It is absurd obviously artificially to increase the demand for bottleneck sectors, especially because these bottleneck sectors are also exactly those sectors which have the highest capital-output ratio. These are heavily capital-intensive industries, so that, if you encourage them, that means you have to earmark a great deal of new investment."—Dr. Thomas Balogh, "Growth and Price Mechanism" in *Some Aspects of Economic Growth of Underdeveloped Areas* (National Council of Applied Economic Research, New Delhi.)

[5] For India as a whole, between 60 and 70 per cent of the total expenditure of the household is devoted to food items and of this about 60 per cent is on foodgrains. Only one-third of this expenditure was against money and the rest by barter. (*Consumer Expenditure*—National Sample Survey.)

General Manager

LIFE INSURANCE CORPORATION OF INDIA

NEW BUSINESS DONE UP BY MORE THAN RS. 100 CRORES

STATEMENT BY MR. B. K. KAUL, I.C.S., CHAIRMAN

ADDRESSING the Seventy-fifth Meeting of the Life Insurance Corporation of India, held in Bombay on Monday, 27th August 1962, the Chairman, Mr. B. K. Kaul, I.C.S., said that, in the context of the conditions prevailing in our country during 1961, progress of the Corporation in the sphere of new business might be considered satisfactory, inasmuch as the total completed business had shown an increase of 22.4 per cent—the number of policies issued during the year being 1,469,664, as against 1,257,557 issued in the previous year, and the new sums assured being Rs. 608.82 crores, as against Rs. 497.54 crores in 1960. He disclosed that the renewal expense ratio had come down a little from 12.9 per cent in 1960 to 12.4 per cent in the year under review.

The following is the full text of Mr. Kaul's address:

"I have great pleasure in welcoming you to this sixth anniversary meeting of the Corporation. The draft of the annual report and the statement of accounts for the year 1961 have been circulated and are now before us for our consideration.

New Business

"During the year, our new business amounted to Rs. 608.82 crores under 14.70 lakhs policies, as against Rs. 497.54 crores under 12.58 lakhs policies in the previous year, thus showing an increase of 22.4 per cent. In the context of the rise in the price level during the year and of the natural calamities like floods in some parts of the country, the increase of more than Rs. 100 crores in the level of new business may be considered very satisfactory.

"It is also gratifying to note that, as many as 10.24 lakhs policies were taken by persons who were insuring for the first time. Thus, out of every three persons insuring with us, two were seeking life insurance protection for the first time.

Rural Development

"Out of the new business, as many as 5.3 lakhs policies, assuring Rs. 182.59 crores, were issued to people in the rural areas. I may mention that, for the purpose of the definition of rural area, we have now adopted the same criterion as was used in the 1961 census. As the earlier statistics were compiled on a different basis, we do not have the comparative figures for the previous year. There is, however, little doubt that we have made considerable headway in our efforts of systematically expanding the business in the rural areas.

"The main difficulty that constantly crops up in regard to the rural business is the lack of facilities for collection of premiums. We have launched early this year a pilot scheme in Rajasthan for collection of premiums through selected post offices. We are proposing to extend this scheme in due course to other areas, where banking facilities are not available, in consultation with the postal authorities.

Non-medical Business

"Another difficulty in propagating the message of life insurance in rural areas has been the paucity of medical examiners for conducting the medical examination of the lives to be assured. This has, to some extent, been solved by a wider application of non-medical schemes.

"Under the general scheme, which now extends throughout the country, the medical examination is waived in respect of proponents within certain age groups, provided the total insurance on their lives does not exceed Rs. 2,000. Under this scheme, new business of Rs. 38.30 crores under 2.5 lakhs policies was completed during the year.

"Besides this general scheme, we are also insuring, without medical examination, special categories of persons in civil employment upto a total sum assured of Rs. 5,000, which limit was increased, during the course of the year, to Rs. 10,000 in the case of eligible persons, whose ages at entry do not exceed 30 years nearer birthday and also in the case of Category "A-1" of the commissioned officers in the Armed Forces. Under this scheme, new business of Rs. 58.46 crores under 2.4 lakhs policies was completed, bringing the total non-medical business to Rs. 96.76 crores under 4.9 lakhs policies. Thus, one out of every three proposers was insured by the Corporation without medical examination.

"The Corporation has no doubt provided adequate safeguards to ensure that the class of lives coming under the purview of these schemes are of the usual standard who would experience a favourable mortality.

"It is my desire that the scope of the scheme is gradually enlarged as we gain further experience of this class of business.

Foreign Business

"In some of the foreign countries, where we operate, the political and economic conditions were not quite favourable for the development of our business. However, due to sustained efforts of our officers and agents, our total foreign business in 1961 came to Rs. 10.03 crores under 8,056 policies, as against Rs. 9.70 crores under 7,736 policies in the previous year. Special mention must be made here of our London Branch which wrote in 1961 a new business amounting to Rs. 92 lakhs.

Business in Goa

"Since the beginning of this year we have started transacting new business in Goa, Diu and Daman. Details of the scheme for taking over the life insurance business of the former Portuguese companies are being worked out. In the meantime, we have extended to the Indian policyholders of these companies facilities for the collection of premiums.

Business in Force

"The total business in force at the end of 1961 was Rs. 2,737 crores under 86 lakhs policies, as against Rs. 2,285 crores under 77 lakhs policies at the end of 1960, thus showing an increase of 19.8 per cent during the year.

Lapse Ratio

"The ratio of net lapses to the mean business in force was 7.0 per cent in 1961, as compared with 6.6 per cent in 1960. The rise in the net lapse ratio of the Corporation seems to reflect the deleterious effect of the increase in the general price level on the saving capacity of the insured population. Apart from the monetary loss to the policyholders as well as to the Corporation, which the lapses bring in their trail, the termination of life insurance protection for several lakhs of families every year is a matter of vital concern to us. Accordingly, I have been impressing, in the course of my discussions with the Development and other Officers, the imperative necessity to reduce the lapsation of policies to the minimum and to improve the quality of business to the maximum extent. The necessary machinery has been set up to review the lapse position periodically so that any adverse trend may be detected at an early stage and checked by taking suitable remedial action without loss of time.

Premium and Other Income

"For the first time in the history of life insurance in this country, the premium income has crossed the Rs. 100-crore mark, the actual premium in 1961 being Rs. 112.30 crores as against Rs. 96.89 crores in 1960. It may be mentioned that the total premium income in the year preceding nationalisation, that is, in 1955, was Rs. 58.55 crores only.

"The total income for the year 1961 was of the order of Rs. 141 crores, as against Rs. 116 crores in the previous year.

Life Fund, Investments and Total Assets

"The Corporation's life fund as at 31st December 1961 was Rs. 631.59 crores registering a handsome rise of Rs. 72.46 crores after taking into account the adjustments made to the life fund at the beginning of the year.

"Of the total investments in India of Rs. 503.56 crores, the public sector accounted for 77.9 per cent and the private sector 22.1 per cent. During the year, 52 new issues were underwritten to the extent of an aggregate sum of Rs. 759 lakhs.

"The total assets of the Corporation as at the end of 1961 amounted to Rs. 696.31 crores as against Rs. 622.85 crores in 1960. The net increase in the assets of the Corporation, since its inception, amounted to Rs. 281 crores.

Rate of Interest

"The income from interest, dividends and rents before deduction of income-tax rose to Rs. 27.95 crores in 1961 from Rs. 23.97 crores in 1960. The gross rate of interest at 4.80 per cent on the mean life insurance fund (4.58 per cent in 1960) is the highest during the last five years. I expect that the Corporation will be able to maintain this rate in future, if not improve upon it.

"The steep rise in the net yield from 3.55 per cent in 1960 to 4.68 per cent in 1961 is, however, largely due to the fact that the net rate in 1960 was depressed, whereas the net rate in 1961 has been pushed up as tax refunds, accounted for in 1961, comprise refunds in respect of two years.

Expenses of Management

"The overall expense ratio of the Corporation fell from 28.4 per cent in 1960 to 28.0 per cent in 1961, although the full effect of the *ad hoc* increase in dearness allowance sanctioned in 1960 was felt for the first time in 1961. The renewal expense ratio, which provides a better indicator of the economy of management, also fell from 12.9 per cent in 1960 to 12.4 per cent in 1961.

"In the larger interests of the policyholders, the majority of whom consist of middle class people, there is an imperative need to keep a constant vigil on the expenses and to eliminate unproductive expenditure by strict budgetary control.

"Claims for the year amounted to Rs. 25.4 crores under matured policies and Rs. 8.7 crores under policies becoming claims by death. The total claims for the year amounted to Rs. 34.1 crores, as compared with Rs. 30.7 crores in 1960. The total benefits by way of claims during the period, 1st September 1956 to 31st December 1961, amounted to Rs. 147 crores.

Mortality Investigation

"The Actuarial Department at the Central Office set up, during the year, the necessary machinery for the collection of statistics for the purpose of continuous investigations into the mortality of lives assured with the Corporation. The object of this step is to keep the mortality experience under constant review so as to facilitate the construction of up-to-date mortality tables.

Valuations

"In exercise of the powers conferred by Section 49(2)(*k*) of the Life Insurance Corporation Act 1956, the Corporation framed regulations, with the prior approval of the Central Government, for the purpose of classification of policies for declaration of differential bonuses, and published the same during the year. These regulations came into force on 15th October 1961. The bonuses on policies which became claims by death or maturity before this date, were settled on the basis of the provisional classification of policies which was also approved by the Government.

"The second biennial valuation of the Corporation's business as at 31st December 1959 was completed during the year and, as a result thereof, Rs. 24.29 crores were allocated amongst participating policyholders, the rates of reversionary bonus allotted both for policies issued by the Corporation as well as for policies issued by the erstwhile insurers being the same as those declared in respect of the first valuation as at 31st December 1957. The amount allocated to the Central Government was Rs. 1.28 crore.

"The third biennial valuation of the Corporation as at 31st December 1961 is in progress and the results of the same are expected to be available before the end of the year.

Building Activities

"We have on hand construction of a large number of buildings to house our offices and also for investment purposes. Although the shortage of building materials has hindered our building activities to some extent, special efforts are being made to complete the various buildings, at different stages of construction, as early as possible. The housing of our offices in our buildings would relieve the present congestion and would lead to more efficient working. It is my idea that the Corporation should have its own buildings for its offices. Suitable plots of land are, therefore, being purchased for our Divisional and Branch office buildings at various centres.

Mortgages

"The scheme for grant of loans on mortgage of immovable properties has now been extended to 21 cities. It is expected that an increasing number of property owners would avail of this facility. The scheme for grant of loans to policyholders for construction of houses is being revised, with a view to enabling the middle class people to own their homes with the help of loan facilities to be provided by the Corporation. The scheme is to operate in the first instance in 56 cities.

Administrative and Development Training

"I am glad to report that the work of training the administrative staff is progressing satisfactorily, the total number of assistants trained till 31st December 1961 being 5,597. The Officers' Training College at Nagpur is also doing good and systematic work and has by now trained 741 officers. The effect of this training will, in course of time, be reflected in the increased efficiency of our offices. On the development side too, the training centres are doing useful work. So far 6,617 Development Officers and 10,665 agents have been trained.

"I have always received sincere co-operation and valuable advice from my colleagues on the Board and on the Investment Committee. I offer my grateful thanks to them. I take this opportunity to record my appreciation of the services rendered by the officers and staff at all levels. It is their services which have solely contributed to the fine results achieved by the Corporation. Finally, I thank all the agents who have done such excellent work in enabling the Corporation to break its previous records in the matter of our new business."

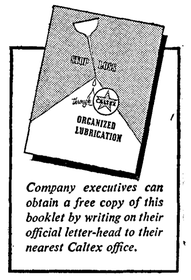
The CALTEX "Stop-loss" Programme helps cut plant-wide maintenance costs as much as 15%



"Stop-loss" organises lubrication throughout the plant—from purchasing on through actual application. By specifying multi-purpose lubricants and by eliminating duplication, a "Stop-loss" Programme can reduce the number of lubricants needed by as much as 50%. By streamlining purchasing procedures the programme can cut the number of purchase orders.

Best of all—by assuring proper lubrication to every piece of equipment in the plant, a "Stop-loss" Programme helps extend equipment life. Result—plant-wide maintenance savings upto 15%. *Ask your Caltex Sales Engineer for information.*

Company executives can obtain a free copy of this booklet by writing on their official letter-head to their nearest Caltex office.

FINANCING PETROLEUM EXPLORATION

U.N. STUDY'S FINDINGS

THE growing importance of petroleum resources to modern economies is brought out by the high proportion of liquid fuels and natural gas in the current pattern of world consumption of energy. This proportion, as of 1960, is as much as 45.7 per cent, as compared with 39.3 per cent in 1952. Whether it be on the side of consumption or on that of production, crude petroleum (liquid fuel) now accounts for about 32 per cent, as compared with 27 per cent in 1952, of the relevant world aggregate. This explains the substantial expansion of exploration and the extension of prospecting to increasingly numerous and less accessible areas in the last decade. In the period 1951-60 alone, for instance, exploration and production of petroleum crude have accounted for 57.4 per cent of the aggregate investment in the petroleum industry, as will be seen from the following table :

Investment in the Petroleum Industry

(1951-60)

(In billions of U.S. dollars)

Branches of the Industry	United States	Other non-Communist countries	Total	
			Investment	Percentage of total
Exploration and production	37.5	14.2	51.7	57.4
Pipelines	2.4	2.1	4.5	5.0
Sea transport	0.7	7.3	8.0	8.9
Refineries	5.8	6.7	12.5	14.0
Petro-chemicals	0.9	0.8	1.7	1.8
Marketing	3.9	5.9	9.8	10.8
Other	1.0	0.9	1.9	2.1
Total ..	52.2	37.9	90.1	100.0

N.B.—Figures include investment in natural gas. But they exclude costs of geological and geophysical surveys and leases—costs which account for $8.9 billion, of which $6.0 billion was incurred in the United States.

The above figures, taken from a U.N. study,* entitled *Petroleum Exploration—Capital Requirements and Methods of Financing*, reflect the world-wide tendency for exploration (including preliminary geological and geophysical surveys) to account for the larger part of investment in the petroleum industry. This is partly due to the fact that exploration is often unsuccessful. The highly speculative nature of petroleum exploration adds, therefore, to its cost. "Exploration," in this context, is the stage of operations during which various techniques are applied with a view to finding out whether there is a commercially exploitable accumulation of hydrocarbons in a given region. It essentially comprises preliminary reconnaissance work and prospecting.

Capital Requirements

Preliminary reconnaissance includes general geological surveys of the whole area or basin, photogeological mapping and, where necessary, gravimetric surveys. *Prospecting* consists of a series of intensive field surveys to determine the possible structures of the area under study, leading, where appropriate, to core-drilling. The next step is test-drilling, the only method of ascertaining that a deposit exists. In many cases, supplementary seismic surveys are necessary. When the results of exploration are favourable, development drilling, which is the only means of determining the extent of the deposit and of estimating its reserves, is taken up. Such *development work* is also included in the "exploration" stage, because a great many uncertainties are still present even after oil has been struck. With so much to be done in the stage of "exploration," it is no wonder that it involves heavy capital investments—far too heavy for the developing countries, most of which are concerned to secure petroleum resources that will free them from reliance on imports by enabling them to cover their domestic needs. The U.N. study, therefore, advises the developing countries to make themselves fully aware of possibilities in this field. In other words, they should know to what extent large-scale exploration may be worthwhile before they decide to go in for it.

They should also have an idea of the capital requirements of petroleum exploration before they venture into this field. The exploration stage, as the U.N. study points out, is marked by a very high degree of uncertainty and requires substantial financial resources, whereas the extraction, transportation and processing of crude petroleum and the distribution of petroleum products involve only a *normal* margin of uncertainty. The latter stages will constitute the relatively stable element on which the more risky venture of exploration can be based, only if the petroleum industry as a whole is characterised by a very high degree of integration. In fact, the leading oil companies of the world have been, and continue to be, highly integrated enterprises. In their case, the distinction between "exploration" and "exploitation" might be regarded as somewhat artificial, for it is impossible to make a complete separation between "exploration" and its objectives—the production and, ultimately, the marketing of petroleum. It is, therefore, difficult, if not impossible, to separate strictly exploration costs from production costs in the industry's accounts. Nevertheless, according to the U.N. study, the special problems of financing in the petroleum industry are principally attributable to the exploration stage and far less to the later stages. The U.N. study has referred, in this connection, to the estimated "exploration" and "development" costs in Canada and the United States. Figures show that, strictly exploration costs aggregating 2,216 million U.S. dollars and development costs aggregating $1,657 million in the period 1947-58 have represented 57 per cent and 43 per cent, respectively, of total expenditure on petroleum exploration in Canada. The proportion of strictly exploration costs in the United States has ranged from 42 per cent to 47 per cent in the period 1948-56, while the proportion of development costs has ranged from 53 per cent to 58 per cent. A hypothetical seven-year exploration programme budget reproduced in the U.N. study indicates a possible total outlay of about $40 million in the area of a potential oilfield where the transport system required is simple and inexpensive.

Methods of Financing

The U.N. study has also dealt with the question of methods of financing petroleum exploration. In one specific instance referred to in the study, 75 per cent of the overall requirements, amounting to over $700 million, were financed by the companies concerned from their own resources, and loan funds were obtained by them to cover only a part of the development costs. It is clearly brought out that it would be contrary to the principles of sound management to finance exploration with funds from outside sources. On the other hand, borrowed money should be used for undertaking whose economic viability is sufficient to ensure the regular payment of interest and repayment of the principal; many examples prove that exploration operations cannot furnish this kind of security. It is, therefore, the practice of international oil companies to rely on their own resources to finance exploration. Although individual exploration programmes inevitably involve an element of risk, the international companies find it possible, on the basis of a series of operations spread over a long period in different areas, to achieve a rate of return that offsets the risks of single operations.

But this method of financing exploration with the exclusive help of international companies is of declining importance so far as the developing countries are concerned. Some of these countries, of course, continue to rely on private, frequently foreign, capital to finance exploration programmes. But some others like Mexico and Brazil work through an exclusive State monopoly. A few other countries like Argentina, Turkey and Bolivia, while retaining their State enterprises, have either deprived them of their monopoly character or sought to enlist the co-operation of private or foreign companies in the search for oil. In many developing countries, however, there appears to be a growing trend towards mixed types of financing in which public capital and private capital are associated. In India such a trend, which started with the Union Government's agreement with the Burmah Oil Company in respect of Oil India Ltd., is yet to work itself out more fully by way of agreements with other foreign oil companies. In 1960, the United Arab Republic invited bids for the exploration of the Western desert on the basis of a 50-50 division of profits in the case of companies which would accept domestic (not necessarily State) participation; but no tender has yet been made under this condition. In Indonesia, where State enterprises are already functioning, negotiations between the three main foreign companies and the Government for a new agreement governing petroleum exploration and development have been suspended. But the State enterprises in Indonesia seem unlikely to obtain the necessary funds for exploration and development due to the increase in the budgetary deficit and the exhaustion of financial aid received from abroad on other industrial projects.

Some Vital Considerations

The U.N. study has done well to emphasise, in the light of difficulties faced by several developing countries which have drawn up ambitious programmes of exploration involving large capital outlay, that no such programme should be launched before there is an assurance that the necessary means of financing it are available. After all, the great bulk of petroleum exploration and production throughout the non-communist world continues to be financed from private sources. These sources alone, accounting as they do for about 94 per cent of all petroleum production, are likely to command ready resources of their own for large-scale investment in oil exploration programmes. Developing countries, with their limited resources which are better used in other sectors, can ill-afford to spurn the services of big international oil companies in this highly risky and expensive field of petroleum exploration by insisting on terms that do not take into account their integrated nature, with world-wide operations. The U.N. study, of course, has not specifically made any such recommendation for obvious reasons.

But it has outlined the considerations that a country should bear in mind before launching on the adventure of petroleum business. They must remember at the very outset that the capital it invests on exploration in its fullest sense, that is, including the highly speculative exploratory phase, may well be lost and the losses may be pretty heavy. After making this preliminary point, the U.N. study ends with the following observations :

"The more that is known about a country's petroleum potential, the easier it will be to obtain the capital needed to finance the development of its petroleum resources. Even if preliminary reconnaissance does not furnish certain evidence, it may provide a guide for subsequent operations and encourage prospectors to undertake them. This phase is relatively inexpensive and has been completed or is on the point of completion in many countries. The surveying of possibilities should undoubtedly be continued or started, where necessary. Subsequent phases of development cannot be undertaken without a detailed economic analysis of the different factors involved. The decision to go ahead is obviously influenced by political or other considerations, but it can only be made in the context of an economic model of which all the elements are known. If the 'petroleum adventure' demands the allocation of a large part of a country's economic potential, the uncertain profitability of this investment will have to be weighed against the safer yield of other investments in different sectors of the national economy. Such an analysis becomes easier, if only by reason of the alternatives which may be available, if it is undertaken in an international context. The problem of exploration, production and supply in a given country can then be studied in broader perspective. *Except in special and essentially temporary conditions, it may be stated that isolationism makes for insecurity and that autarchy is inconsistent with the optimum use of a country's economic potential. This is particularly true of petroleum development. For both technical and economic reasons, petroleum development, in every country, requires to be undertaken in an international framework.* (Italics ours.—ED.)

"Many possibilities exist within this broader framework. The future depends at the international level on increasingly close co-operation between the industrialised and the developing countries. It is only by unwearying efforts in this spirit that it will, perhaps, be possible to solve the continuing problem of maintaining supplies in the context of expanding consumption."

It will be seen from the foregoing extract that petroleum industry is essentially an international business and that it would be folly for a developing country, which wants to make quick progress under the democratic way of life and the foreign trade of which is largely with the non-communist countries, to take upon itself the major part of the risk involved in developing this industry on a national scale. One may, of course, ask: Has not Russia done it? Its production of crude petroleum has shot up from 37.9 million tons in 1950 to 166.0 million tons in 1961, so that it is today the second largest producer of oil in the world. The answer to this question is simply this: Every country in the world is not blessed with the resources which Russia possesses, even if it is prepared to go the Russian way. Russia is the second largest, if not the largest, producer of gold and does not have the problem of either foreign exchange or of heavy population still leaping forward.

* The Study, which is priced at $0.50, consists of three parts : (*a*) the Introduction—pointing out the increasing importance of hydrocarbons among the primary energy resources and noting the peculiar character of the search for petroleum ; (*b*) Part I—investigating capital requirements for exploration of petroleum and attempting to establish the range of unit costs for the various operations entailed—such as aerial photography, geological and geophysical methods of exploration, drilling and so forth and, (*c*) Part II, briefly analysing in a number of typical cases the total volume of capital required and the methods of securing these funds under varying conditions particularly under different economic systems and policies.

Notice

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 p.m. on Thursday, the 27th day of September, 1962, for the following purposes :—

1. To consider and adopt the Profit and Loss Account of the Company for the year ended 31st March, 1962, the Balance Sheet as at that date and the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors.
4. To appoint Auditors and to fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th to 27th September, 1962, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office :
CHARTERED BANK BUILDINGS,
CALCUTTA, 17th *August*, 1962.

Notes :—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after the 26th October, 1962, to those Shareholders so entitled whose names appear in the Company's books on the 27th September, 1962, or to their mandatees. No application for Dividend Warrants will be necessary.

U.N. STATISTICAL YEAR BOOK 1961

Like all the previous issues, the *Statistical Year Book* 1961 has been prepared by the Statistical Office of the United Nations with the co-operation of the national statistical offices. Improved statistical coverage, it is claimed, has enabled the latest *Yearbook* to provide more accurate world aggregates. It is seen from the publication that the world's aggregate population, as of 1960, is just under 3,000 million, having increased at an annual rate of 1.8 per cent during the decade 1950-60. Reference may be made here to some other world aggregates. For instance, world energy production in terms of coal equivalent was 4,311 million metric tons in 1960, as compared with 4,061 million tonnes in 1959 and 3,827 million tonnes in 1958. As much as 60 per cent of the absolute increase of 250 million tonnes (4,311 million tonnes *minus* 4,061 million tonnes) in 1960 was accounted for by crude petroleum and natural gas. World consumption of fertilisers in 1960-61 had also substantially increased, as compared with the previous year. The relevant aggregates are 10 million tonnes in terms of phosphoric acid, 9.9 million tonnes in terms of nitrogen and 8.5 million tonnes of potash fertilisers in terms of K_2O, as against 9.5 million tonnes, 9.2 million tonnes and 8.4 million tonnes, respectively, in 1959-60. World railway freight traffic increased from 3,079 billion net ton-kilometres in 1959 to 3,185 billion net ton-kilometres in 1960. The world aggregates in respect of motor vehicles in use in 1960 are 96.9 million passenger cars and 23.9 million commercial vehicles, as compared with 91.2 million and 23.8 million, respectively, in the previous year. But these figures pertaining to motor vehicles do not include those of the communist countries. In like manner several other world aggregates are not complete for want of data about the communist countries.

An analysis of the industrial undertakings licensed by the Government of India in respect of engineering stores, under the Industries (Development and Regulation) Act 1951, during the period June 1960—December 1961 is contained in a publication recently issued by the Engineering Association of India (India Exchange, Calcutta-1). It may be recalled that the Association brought out a similar publication sometime back, providing the relevant information upto May 1960. The present volume lists, industry-wise, 1,076 licences issued during the period June 1960-December 1961 either to new entrepreneurs or to existing units for substantial expansion in the sphere of engineering industries. It contains summary tables in respect of major engineering industries, showing State-wise additional capacity created. Prospective entrepreneurs can find out the field which has already been covered, while trade can have an idea of the fresh sources of supply. The publication, priced at Rs. 10, has thus good reference value.

NEW PRODUCTS AND PROCESSES

Use of Radioisotopes for Measuring Water Flow

A NEW technique for measuring the rate of flow of water in rivers, using a radioactive isotope, has been successfully employed in the Mutha river at Poona by scientists from the Atomic Energy Establishment, Trombay, and the Central Water Power Research Station, Poona. The method involved injection in the river of the radioisotope Bromine-82. The flow of water was then calculated by measuring the amount of radioactivity in the water about a mile downstream from the injection point. This technique is more efficient and accurate than the conventional method of measuring the water flow by using a current meter. The new method is particularly advantageous during the monsoon, when the water flow in a river is large and difficult to measure by conventional methods. The safety aspects of the Poona experiment were investigated by medical experts and was found that the radioactivity introduced in the river was far below the established tolerance levels for drinking water. The radioisotopes and the electronic instruments used were produced at Trombay.

Rapid Determination of Impurities in Lac

A rapid method for the determination of impurities in lac, developed at the Indian Lac Research Institute, Ranchi, has been reported in the June 1962 issue of the Journal of Scientific and Industrial Research. An estimate of the impurities, representing insoluble matter in hot alcohol, constitutes the most important among the analytical data required by the lac trade. The methods currently available for the purpose are tedious and time-consuming, one determination taking about two days for completion. Compared with this, only four hours are required to complete one determination by the new method. The main steps involved in the new method are the extraction of lac with hot alcohol directly on a fluted filter paper, followed by washing the filter paper and the residue with ether to expedite drying.

Stabilisation of Vitamins in Pharmaceutical Preparations

As part of the series of investigations on the stabilisation of vitamins in pharmaceutical preparations, being pursued at the Central Drug Research Institute, Lucknow, the influence of other B-complex vitamins on the stability of thiamine (vitamin B_1) has been studied. The effect of air space, temperature of storage, nature of vehicle and stabilisers on the stability of vitamin B_1, when present in different combinations, has also been studied. The deterioration of vitamin B_1 in the presence of riboflavin (vitamin B_2) is dependent on the concentration of niacinamide. On the basis of results obtained, a concentration of 1 mg./ml. each of vitamins B_1, B_2 and B_6 and 5 mg./ml. of niacinamide are suggested for a stable B-complex preparation in syrup-glycerol water base. In order to make the formulation stable at 37°C. for a period of one year, the use of thiamine in 70 per cent excess over and above the amount normally used is recommended.

Preservation of Fruit Pickles

A proper balance between salt and organic acids is essential for the preservation of brine pickle. Faulty practices leading to imbalance in these constituents are often the cause of microbial spoilage during storage. An emulsion which can make up the deficiency of salt or acids and prevent microbial spoilage in brine pickle at 10 per cent level, has been developed at the Central Food Technological Research Institute, Mysore. It contains acetic acid and naturally occurring microbe inhibitory factors, like orange peel oil, mustard powder and turmeric powder, as active ingredients. The emulsion can also be used to cure fruits in low strength brine.

A New Tactical Computer

The task of a navigator on board a modern military aircraft is not confined only to helping the pilot fly from one place to another or to pin-pointing the position of the aircraft during flight at any given time. Besides these things, he has to, amongst others, (i) calculate the radius of action of the aircraft, i.e. the farthest distance that the particular type of aircraft can go upto, execute its role and return safely to its base; (ii) calculate and give changes in speed to his pilot which will enable the aircraft to reach its destination at the exact time assigned to it; (iii) calculate the speed, height and course of his own aircraft and that of the intruding one, and help his pilot to intercept the intruder; and (iv) determine the point of no return, that is the point from which, due to weather and fuel considerations, it is safer for the aircraft to fly to its destination rather than to turn back and try to make it for the base. The navigator upto now had to solve all these problems by the graphic method and by going through laborious calculations, consuming minutes that are so precious in present-day high-speed aircraft.

To Sqn. Ldr. Vir Narain, a navigator himself, goes the credit of having invented a computer, which makes the solution of such tactical problems a matter of seconds. For his work on this computer, he has been rewarded by the Council of Scientific and Industrial Research and has received a letter of commendation from the Chief of the Air Staff. The computer has been adopted as standard equipment by the Air Force.

Compositions for Derusting

A new process on compositions for derusting, surface treatment and temporary protection of ferrous surfaces has been developed at the Railway Testing and Research Centre at Chittaranjan, in West Bengal. For derusting and surface treatment, the material is first mechanically derusted to remove the loose rust and degreased. The derusting solution is then applied with a hard brush and worked well. When dry, this is followed by wire brushing to remove the friable black iron tannate. Depending upon the thickness of the rust, the operation is repeated more than once. The composition for temporary protection against weathering is applied to naturally pre-rusted steel after mechanical cleaning to remove loose rust. To obtain satisfactory adhesion of the tannate film, good brushing by a hard brush is necessary. It has been found that a well brushed film coat gives a more durable film than that obtained by dipping or spraying. These films can withstand external weathering conditions for one to three weeks. The manufacture of the compositions has been studied on a pilot plant scale by making 5 to 10-gallon batches for surface trials on coaches and locomotives. Observations of painted complex coaches and panels, treated initially with these compositions, after two years, indicate that the condition of the paint is quite good from the point of adhesion and corrosion prevention. The main raw materials for the process, namely, myrobalan and goran tannins, are available indigenously. Formalin will have to be imported for the time being. These compositions can also be used for the surface preparation, derusting and temporary protection of all types of ferrous surfaces. The process is simple and requires only a mixing kettle. Total capital outlay for a unit producing 100 gallons per day is estimated at about Rs. 42,000. Alternatively, all the ingredients without water can be mixed together and supplied in dry powder when the cost will come down.

Viscosity-control in Oil Blending

An on/off type of viscosity-controller invented by the Industrial Division of S. Smith and Sons, London, is already widely used in oil blending. The controller compares a laboratory sample of the required blend of oil with a 'line' blend. It then corrects for discrepancies in viscosity by despatching impulse signals to motorised valves in the blending equipment. A further development has now been announced that greatly extends the scope of the instrument, by providing a proportional output signal that enables 'on blend' conditions to be established very quickly. The basic mechanism comprises two parallel viscometers each consisting of two co-axial cylinders, the outer cylinder being driven at the same speed in each case. The oil occupies the annular space between the cylinder walls and exerts a viscous drag on the inner cylinder, this drag being transmitted to a torque-comparison mechanism above the viscometers. A laboratory sample of the required blend is fed to the reference viscometer. The differential-torque output between the reference and 'line' viscometers actuates a potentiometer which provides the proportional signal. This information may be used for control purposes, and also to provide visual indication of viscosity deviation from standard. Proportional pneumatic output may also be obtained by means of an electro-pneumatic converter.

Polyester Facing Panels

A company in Breda (Holland), is marketing reinforced polyester facing panels in a wide range of profiles, colours and compositions that meet the architectural and æsthetic demands placed on such panels in the building of flats and office blocks. The standard panels supplied by the company consist of two layers, namely, an outer layer of polyester reinforced with glass fibre and an inner layer of extra hard masonite about 6½ mm. (0.3 in.) thick to reinforce the outside layer. The latter it is claimed, is very strong and light, has excellent weathering properties and can be made in attractive standard colours. The standard panels measure 122 by 244 cm. (47.5 by 95 in.). The company also supplies panels with a third sheet fixed to the second for extra insulation. This extra sheet is of polyurethane foam and is about 10 mm. (0.4 in.) thick. Moreover, a fourth sheet, of any material desired, can be attached to act as a finishing layer and at the same time seal off the inside. Panels can also be supplied with reinforcing sheets of steel, multi-ply, fibreboard, aluminium, etc. For heat-insulating purposes cork, or any other insulating sheet desired, can also be used. The panels can be made to measure and supplied up to maximum dimensions of 400 x 400 cw. (157 in. x 157 in.).

Cold-cathode Tubes

Two new tubes with long-life pure-metal cathodes for an operating voltage of 300 v. such as results from direct rectification of mains current of 220 v. A.C. have been put on the market by the Cerberus A.G., Männedorf, Switzerland. The GR 31 noval tube is particularly suitable for actuating robust relays. The GR 41 sub-miniature, with its extremely compact dimensions and free wire connections, was developed for soldering into printed electronic circuits. A large number of methods of control are made possible by the two starter electrodes. These cold-cathode tubes for operating relays have the characteristics typical of such tubes with pure-metal cathodes: optical indication of whether switched on or off and temperature-independent characteristic stable over long periods of time with little variation.

Recovering Wool from Blended Fabric

British scientists at Leeds University, Yorkshire, have discovered a way of separating wool from man-made fibres in blended fabric so that the reclaimed material can be used again. For several years, large supplies of potentially valuable wool rags containing the newer man-made fabrics have been rendered almost commercially unusalable for re-manufacture because it was impossible to remove the man-made fibre content. Now the problem has been overcome at the laboratory stage and the next step is to adapt the discovery to commercial use. Further tests are being carried out on a pilot plant. If the discovery fulfils its initial promise, it will mark a new era in the woollen rag trade and waste reclamation section of the wool textile industry.

BARRIERS IN THE WAY OF INDIA'S EXPORTS

AN OBJECTIVE STUDY BY G.A.T.T.

THE major findings of the G.A.T.T. Committee III, contained in its report on *Trade of Less-Developed Countries*, were examined in some detail in these columns last week. Incorporated in this report is a special study on India's third Plan, with particular reference to the supply and demand prospects for exports from this country. The Committee recognises India's need for larger foreign exchange resources both for continuing investment and for servicing current loans. This, according to it, was a matter of importance not only for India, but also for other trading countries for, in the absence of larger earnings from exports, "India would have to rely," to quote the G.A.T.T. Report, "increasingly on policies aimed at import substitution rather than on development leading to increased levels of trade and a more rational division of labour." Similar conditions would also apply to the development of other less-developed countries. The Committee has highlighted the fact that "many Indian products continued to be subject to tariff and non-tariff barriers to trade which limited the possibilities open to India for substantially increasing its foreign exchange earnings."

The Committee is on strong grounds when it asks the developed countries to relax (and thereafter quickly remove) restrictions on exports from India. For, by reason of the availability of raw materials, manpower and skills, actual or potential, India will be able to expand several industries if these barriers were removed. Such action, according to the Committee, will lead to channelling of investment into directions of expanding existing industries or developing new industries with a view to securing efficient allocation of resources and the maximum expansion of trade. "This will," says the Committee, "lead to a higher level of international trade which will not only be beneficial to the Indian economy, but will also be of value to other countries having an interest in seeing an expansion in the Indian market."

Slow Growth In Exports

The study on the third Plan is based on a paper prepared by the G.A.T.T. Secretariat, taking into account the official third Plan documents and explanations given by the Government representatives on various aspects of the export problem. No attempt, however, has been made to discuss the political, social or institutional aspects of the third Plan. In its evaluation of the export targets envisaged in the third Plan, the Committee observes that an increase of just about 12 per cent expected in overall exports during the Plan period reflects the "cautious realism" of Indian planners. The table at the bottom of the page shows the anticipated trends in exports of a large number of major commodities during the third Plan periods. As the third Plan does not contain these breakdown figures, the table is adapted from the G.A.T.T. Report to give a clear picture. It may be noted, however, that the G.A.T.T. figures were collected towards the end of last year and some small changes might possibly have been made in these targets since then. It will be seen that the expected increase in exports in the third Plan is only marginal. In some instances, no doubt, this is being influenced by difficulties in developing larger export surpluses. But, as the Committee rightly says, the export forecasts are conditioned to a considerable extent by the various restrictions in force in a number of important markets which had the effect of limiting export possibilities for several major products of interest to India.

Although every effort is being made to diversify production and exports, the country continued to depend for the bulk of its export earnings on a few traditional export commodities, with tea, jute goods and cotton textiles accounting for 50 per cent of the total shipments. The Committee candidly concedes that about two-thirds of India's export trade is faced with obstacles in exporting countries, if account is taken of the restrictions of various kinds facing exports of tea, jute and cotton textiles and other commodities such as leather goods and footwear, coir manufactures, carpets, coffee, vegetable oils, fruits and vegetable products, fish and fish products and tobacco. In regard to some of the newer export items also, such as sewing machines and bicycles, according to the Committee, export opportunities are limited because of the imposition by certain countries of quantitative restrictions and high tariffs.

Commenting on the prospects for exports of tea, the Indian representative informed the Committee about the lack of progress in removing obstacles to expansion of exports of this commodity. As a result of the very high fiscal charges on tea, the retail price is in many countries considerably higher than that for coffee. India being the largest exporter of tea, market limitations on this commodity affect India most. Were it not for measures inhibiting the consumption of tea, particularly in Western Europe, the export of this commodity would have gone up substantially. Alluding to the trends in the development of tea industry in recent years, the Committee expresses the view that even a small increase in investment in the industry for replanting and increased use of fertilisers could lead to a substantial increase in output. But further investment in the industry, says the Committee, is hardly justified, in view of India's scarce capital resources so long as market outlets for this commodity remained unfavourable. It is to be hoped, therefore, that the high tariffs, revenue duties and fiscal charges on tea will be brought down by the industrialised countries.

Jute and Cotton Textiles

The problem is no less acute in the case of jute manufactures. Although world trade in raw jute is expected to expand slightly, export prospects for jute goods are limited "as long as these products continue to be affected by severe quota restrictions in a number of potentially important markets." The scope for exports of cotton textiles is also circumscribed, as in the case of tea and jute, by demand conditions rather than supply. In a number of potentially important markets in Western Europe, Indian textiles continue to be subject to quantitative restrictions. In a number of other countries, high tariffs are an effective brake on imports. In respect of difficulties faced by other traditional goods, the Report gives an account of what the Indian representative had to inform the Committee. The relevant portion of the Report is as follows:

"The representative of India explained to the Committee that exports of such items as gums, resins and lac, raw hides and skins, raw cotton and waste, raw wool and hair, mica, spices, cashew nuts and most metal ores, were on the whole not significantly affected by tariff or non-tariff measures. On the other hand, some of these products, for example, mica, gums, resins and lac, were affected by the use of substitutes which had the effect, at any rate, of limiting the growth of the market. Similarly, export demand for manganese ores was affected by changing industrial requirements as also by procurement through monopolies and bilateral barter arrangements. Other items in the category of goods having relatively unimpeded access to foreign markets were either specialities such as spices and cashew nuts or raw materials such as raw hides and skins, raw cotton, and iron ores, for which there existed a ready market in industrialised countries, particularly for some of the special varieties exported by India. While India was anxious to expand its export earnings by making available for export all types of products for which there existed a ready export market, some of the items for which this was true were in short supply domestically. While provision was made in the Plan for increasing production of products in short supply in order to meet the growing domestic as well as foreign demand, it was obviously desirable, where economically justified, to progress towards more processing of raw materials in order to increase the country's foreign exchange earning capacity.

"In this connection, the representative of India pointed out that it was to be regretted that tariff and licensing policies continued to be in force in many industrialised countries which, by providing more favourable import treatment for raw materials than for processed products, were a factor in retarding the development of processing industries in less-developed countries. Examples of products which suffered from this differentiation in import treatment and of export interest to India were vegetable oils, leather goods and footwear, woollen manufactures and rugs and carpets. It had to be realised that whatever justification might have existed for this differentiation in import treatment when these measures were first introduced, the effect of their continued operation was primarily to discriminate against imports from less-developed countries which were dependent on exports of raw materials and products processed therefrom. He expressed the hope that this matter would find the serious and sympathetic consideration by Governments it deserved in order to find measures which would be of assistance to less-developed countries in developing and expanding processing industries and in increasing their foreign exchange earning capacity. He also pointed out that, with respect to other commodities which less-developed countries like India were in a position to export, such as fruit and vegetable products, tobacco, fish and fish products, many important markets were subject to restrictions imposed in connection with the implementation of the various aims of national agricultural and fishery policies. Moreover, such items as tobacco, for which there existed State trading and monopoly procurement in a number of countries, were handicapped by purchasing policies which often did not take full account of commercial consideration. In these circumstances it was difficult for a country like India to obtain a share in such markets, for example, in some markets in Western Europe."

The G.A.T.T. Committee was also asked to study the scope for expanding exports of non-traditional goods, that is, those of engineering, chemical and pharmaceutical industries. According to the Committee, although exports of such items as agricultural implements, machinery, builders' hardware, electric motors and pumps are not on the whole subject to quantitative restrictions in markets of industrialised countries, there are such restrictions on other items such as sewing machines and bicycles, which are "among the potentially more important exchange earners in this category of exports." Besides, many of these products are subject to customs duties at such a level as to affect trading opportunities.

While the Committee has welcomed the broad programmes of export promotion, it feels that there is scope for further efforts in this direction by both the Government and the business community. It has, however, not given an indication of what exactly are the other measures which it has in mind. It has warned that there is little point in undertaking export promotion in importing countries on those items which are severely restricted. But where markets were open, the Committee stresses, market research and trade promotion should lead to considerable trade gains. The Committee's findings briefly outlined above are objective and it is to be hoped that they will receive due attention at the hands of the Government of industrialised countries.

Anticipated Trends in Exports During Third Plan Period

(Value in rupees crores)

	Annual average Second Plan	Expected annual average Third Plan	Forecast 1965-66	Third Plan total
Major traditional exports				
Tea	130	135	139	675
Jute manufactures	109	110	115	550
Cotton textiles	59	65	67	325
Other traditional exports				
Fish and fish preparations	6	7	8	36
Cashew nuts	15	18	20	91
Other fruits and vegetables	5	6	6	30
Spices	10	11	11	53
Sugar	4	4	6	22
Coffee	7	7	9	37
Tobacco	15	15	15	77
Vegetable oils (including essential oils)	14	21	24	105
Oilcakes	11	20	22	100
Hides and skins	8	6	6	30
Leather and leather manufactures	23	22	21	110
Footwear	3	4	5	20
Raw cotton and waste	18	21	25	104
Raw wool and hair	11	10	10	52
Other textile fibres	4	3	3	15
Woollen manufactures	5	6	7	30
Yarns	11	12	13	61
Art silk fabrics	4	6	7	27
Coir manufactures	3	5	6	25
Gums, resins, lac	6	8	7	39
Mica	9	10	10	50
Manganese ore	17	13	12	65
Other ores and scrap	7	10	11	50
Coal and coke	6	7	8	37
Petroleum products	4	4	5	21
Iron ore and new export commodities				
Iron ore	14	35	45	176
Iron and steel	2	1	..	3
Ferro manganese	2	8	8	38
Metal manufactures	1	5	7	23
Machinery and transport equipment	2	7	6	36

INDUSTRIAL INDIA—ANNUAL 1962.

The annual number of *Industrial India* (Editor: Mr. H. R. Aiyer), the official organ of the All-India Manufacturers Organisation, provides a sumptuous fare of reading material on the various aspects of industrial development in the country. Packed in this 264-page bumper volume are no less than 75 articles, grouped in three main categories, namely, general, technical and miscellaneous, in addition to a supplement on Japan. In the leading article, the editor makes a fervent plea for removing regional disparities in development in the country, against the background of a critical review of the policy being pursued by the Planning Commission. As a corollary, he advocates decentralisation of the powers and functions of the Planning Commission through the constitution of planning commissions in every State. Every State, he emphasises, should have a planning commission responsible not only for the development of the State concerned, but also for co-ordinating development with the neighbouring States under the supervision of the Central Planning Commission.

Some of the notable contributions in this volume are "Industrial growth and the Role of Private Sector *vis-a-vis* the Public Sector" by Dr. V. K. R. V. Rao, "Distribution of National Income" by Mr. Eric da Costa, "Provision for Consumption in the Third Plan" by Dr. K. S. Gill, "Prospects for Cloth Consumption" by Mr. Arvind Narottam, "Indian Economy Meets the Basic Problems of Development" by Prof. J. K. Galbraith and "Outlook for Joint Ventures" by Prof. V. G. R. Aiyer. There are also several technical articles on a wide range of industries, including textiles, food preservation, mineral oil and vegetable oils, glass and ceramics, aluminium, light engineering, dyestuffs, etc, rubber, etc. The annual is priced at Rs. 7.50.

EMPLOYMENT FORECASTING

TECHNIQUES DISCUSSED AT O.E.C.D. SEMINAR

AT an international seminar on employment forecasting techniques recently organised by the Organisation for Economic Co-operation and Development (O.E.C.D.) in Brussels, four reports were presented discussing different aspects of this problem*. Three of these reports referred more especially to employment forecasting methods used in the last few years in three European countries, namely, France (J. Fourastié), the Netherlands (P. de Wolff) and Sweden (Sten-Olof Döös), while Professor J. Tinbergen, the General Rapporteur, was responsible for a comprehensive report on the work. The principal topics treated in these reports and discussed at the Brussels Seminar are outlined in this article.

Employment and Economic Growth

If it is true that "it is not a case of consuming what is produced but of producing what the population wants to consume," production must be adapted to consumer demand; this cannot be accomplished except by switching manpower from one activity or sector to another. Moreover, under the pressure of technical progress, workers released from agriculture or certain industrial branches are moving every day to other sectors in expansion. It would, therefore, be a serious error to neglect employment forecasts in overall economic planning.

According to Professor Fourastié, "the proper distribution of active population over the various sectors of activity needed for the welfare of the total population is the keystone of any long-term economic policy." Professor Fourastié stresses this point, for, in his opinion, "full employment in a period of economic growth is incompatible with stability of employment. Economic growth and equilibrium depend on the shifts in manpower which are required to adjust production to consumption and on the proper orientation of newcomers to the labour force."

Supply of Manpower

Studies of employment forecasting should, therefore, give consideration in the first place to the supply of manpower, that is, the demographical data for its assessment and the sociological factors likely to affect it in the medium or long-term. Factors influencing employment should likewise be analysed; these are of economic origin, and the most decisive are consumption and productivity.

A detailed study of the above leads to employment forecasts which can be global (determination of the total manpower availabilities) or more specific: by activity or by geographical area; or again, which is more difficult, by skill when taking technical progress into account. Forecasts by skill are doubtless the most valuable since they enable education and training to be intelligently planned in relation to future needs. From a strictly demographic point of view, forecasting of the total active population is a relatively simple process, for the people who will be of working age in 15 years' time have already been born. Moreover, the death rate is slow to vary and activity rates between the ages of 25 and 65 are practically constant. The raising of the school-leaving age or the retirement age are the only factors likely to affect it to any extent. The trend in female employment should also be kept in mind; the latter may depend on the tax regulations applying to married women or, because of measures taken in this connection, the number of women in part-time employment may increase. One fact is confirmed almost everywhere, namely the increase in the school attendence rate for girls. In the Netherlands this increase has been roughly estimated as affecting 50 per cent of the active population of a given age group. Finally, allowance must be made for regional or domestic migration which, as in the case of the United States, is sometimes considerable.

The experts meeting at Brussels agreed that the population censuses supplying such data were often taken at too long intervals. To overcome this difficulty, "micro-census" or sample surveys might be made for purposes of employment forecasting.

Demand for Manpower

By studying trends in consumption, production and productivity it is possible to forecast the main trends on the employment market in the coming years. However, some adjustments are unavoidable for it is virtually impossible to predict the effects of new techniques and of new industrial branches and activities.

With regard to the instability of employment, Professor Fourastié's opinion is shared by Professor de Wolff who says that the "relation does not hold for registered unemployment and short-term supply changes.... This proves that the participation ratios (or at least part of them) are subject to short-term fluctuations generated by and parallel to employment fluctuations." It is recalled that provision is made in a Netherlands long-term development plan for action to influence the rate of emigration in order to avoid disparity between supply and demand.

Short-term Policies

However, temporary solutions can always be found for labour shortages in specific sectors by having recourse either to overtime or to international co-operation in the form of temporary migration. This is at present the case in France where Spanish workers are employed for seasonal work and in Germany which has concluded an agreement with Spain for obtaining specialised Spanish workers.

If it is not possible to take emergency measures, the system of accelerated vocational training may be adopted, but this must be readily adjustable to all circumstances and must satisfy actual and immediate requirements. This brings us to the intricate problem of forecasts by skill and the corresponding educational and training policies.

Long-term Policies

While some shortages can be relieved in the short-term by accelerated vocational training, in the long-term it is essential to adopt an educational policy in the light of assumptions based on the trend in occupational structures. Thus, from surveys made by the French Ministry of Labour on industry and transport, Prof. Fourastié predicts that in 1975 the labour force index on the basis 1959=100 will be 171 for technicians and draftsmen, 148 for engineers, 151 for other top executives, foremen and supervisors, 130 for clerical staff and skilled operatives and 108 for unskilled operatives.

While the above data provide valuable information, it is nonetheless true, as pointed out by Prof. Fourastié "that the main cause of error in employment forecasting is the difficulty of accurately predicting technical progress, which has steadily been gaining speed in recent years." However, from a qualitative point of view, the effects of technical progress requiring more highly skilled labour will certainly be further intensified. In this connection the experts at the seminar unanimously recognised the need for an active population with an increasingly high level of general and scientific education.

Action in this direction is already being taken in Germany where specialisation is being increasingly held over to the last stage of vocational training.

Value of Employment Forecasts

It is still too early to give any value judgment on the employment forecasts made in various European countries. France is the only country that can give some information concerning the results of such forecasting for the second Plan (1952-57) and the third Plan (1956-61): generally speaking, the objectives in industrial production seem to have been exceeded, but with a smaller labour force than originally forecast. Growth of productivity has been greater than warranted by employment assumptions. In agriculture, the annual reduction in the labour force seems to have been approximately 100,000 persons in 1961 as against the 85,000 forecast in 1958.

France seems to have obtained from this first experiment useful data for the preparation of the fourth Plan and many European countries are more and more adopting a policy of economic forecasting in general and employment forecasting in particular on which to base a wages and employment reclassification policy in agreement with industry and the trade unions.

Among the recommendations adopted by the participants at the international seminar in Brussels, attention may be drawn to the following:

(1) The request for fuller and more detailed statistical information.

(2) The need for closer international co-operation, particularly in respect of small countries whose economy is largely dependent on exports. The latter (Ireland, Luxembourg, Denmark, the Netherlands) would like to be able to forecast consumer needs of importing countries, for any changes in the demand for goods exported by these countries greatly influence their labour market.

(3) Exchanges of information on educational classification. Such classification varies greatly from one country to another, as pointed out by Mr. Sten-Olof Döös who gives a tentative classification in Appendix 3 to his report.

(4) Greater standardisation and co-ordination of statistical data. The experts laid special emphasis on the need for information compiled at the same date and satisfying the same criteria.

Developing Countries

Finally, Professor Tinbergen discussed the question of developing countries. For them the most important aim is to increase the national product, but as they suffer from widespread unemployment, the number of jobs must likewise be increased. The inconsistency of these two main aims constitutes one of the fundamental difficulties. It is often thought, and to some extent justifiably, that one of the swiftest ways of increasing production is to create industries with a large amount of capital. Such industries do not, however, create many additional jobs owing to their high level of mechanisation. Employment forecasting in these countries is therefore closely related to economic development targets. According to Professor Tinbergen, among available projects "a choice has to be made satisfying as much as possible the conditions that all capital and all labour available be used and that a maximum contribution to national product be made.... The need for education must be then derived from the production structure thus chosen."

Notice

GANNON DUNKERLEY AND COMPANY LIMITED

Registered Office:
CHARTERED BANK BLDG., BOMBAY 1

NOTICE

THE 39TH ANNUAL GENERAL MEETING OF the Company will be held at its Registered Office, Chartered Bank Building, Fort, Bombay, on Friday, the 28th September 1962, at 4-00 p.m. to transact the following business:

1. To receive and adopt the Directors' report for the year ended 31st March 1962 together with the audited statement of accounts for the period.
2. To declare a dividend.
3. To elect a Director in place of Mr. M. R. Morarka who retires by rotation but being eligible offers himself for re-election.
4. To elect a Director in place of Shri Shivnath Kanoria who retires by rotation but being eligible offers himself for re-election.
5. To appoint auditors for the financial year ending 31st March, 1963.

By Order of the Board,

R. MORARKA,
Governing Director.

Dated: 20*th August* 1962.

N.B. (i) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The Transfer Books of the Company will be closed from 21st September 1962 to 5th October 1962, both days inclusive.

ORIENT PAPER SCRAPES THROUGH

PROFIT-MARGIN DECLINES FURTHER

THE uneconomic working of the paper industry as a whole, which called for (and has since been granted) an increase in selling prices, is reflected in the results of the Orient Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers (Private) Ltd., Calcutta) for the year ended 31st March 1962. As the *ad hoc* increase of 6 nP per kg. in the selling prices of paper and board and the discontinuance of the rebate on reels took effect only from 21st June 1962, they had no bearing on the Company's working during the year under review. This turned out to be more uneconomical than in the previous year because of further increases in the costs of raw materials, chemicals, stores and power and fuel. Undeterred by the unencouraging working conditions, the Company expanded its operations and realised gross sale proceeds of Rs. 10.11 crores as against Rs. 8.94 crores in the previous year. But this meant, at the same time, a higher excise burden of Rs. 191.79 lakhs as compared with Rs. 137.07 lakhs a year before. In such circumstances, all that the Company could do and, in fact, did, was to scrape through.

Better Efficiency

A redeeming feature of the year's working is an increase of Rs. 62.98 lakhs, or 8.3 per cent, in net realisations (sales, less discount and excise duty) at Rs. 814.58 lakhs, thanks to higher production and increased efficiency in the working of the factory. It will be recalled that the modernisation programme of the Company was to be practically completed by the end of the year under report and would help it in its efforts to further improve production as also to achieve a still higher level of efficiency. As for the year under report, however, the increase in net sales has meant only a minor improvement in gross profit from Rs. 203.66 lakhs to Rs. 210.22 lakhs and actually a lower profit-margin (ratio of gross profit to net sales) of 25.7 per cent as compared with 27 per cent to which level it had dropped in the previous year from 29 per cent in 1959-60. While the provision for depreciation has been reduced by about Rs. 14 lakhs to Rs. 56.94 lakhs, that for taxation has been raised by as much as Rs. 17 lakhs to Rs. 65 lakhs. Consequently, the net profit has looked up just slightly from Rs. 74.90 lakhs to Rs. 76.20 lakhs. Nonetheless, the Company has not only maintained the taxable dividend at 22.5 per cent per annum *pro rata* on the increased capital following the issue of 440,475 shares of Rs. 10 each at a premium of Rs. 12 per share to the existing shareholders as on 27th May 1961 in the proportion of three new ordinary shares for every ten such shares held by them but also ploughed back Rs. 27.50 lakhs—just Rs. 2.50 lakhs less than that in the previous year—to reserves. The carry forward is Rs. 2.26 lakhs, as against Rs. 1.80 lakh brought in.

A clear idea of the Company's working in the past four years can be had from the comparative table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds (gross)	10,11.29	894.21	785.22	701.22

Low	39.60	39.00	35.10	27.90

* Subject to deduction of tax.
† Includes Rs. 1.56 lakh paid later under Preference Shares (Regulation of Dividends) Act, 1960.

No doubt, the current year's working of the Company would reflect the benefit of the concession granted to the industry by the Government this year. However, it would also reflect the impact of the excise duty on gases, hessian and other goods, levied in the Central budget for 1962-63. Besides, the Orissa Government has imposed a duty on the consumption of electrical energy at the rate of 15 per cent of the rate charged by the suppliers under the provisions of the Orissa Electricity (Duty) Act, 1961, with effect from 16th October last. The same rate of duty is also payable by the Company on the electrical energy which it generates for its own consumption. The writ petition filed in the High Court of Orissa at Cuttack, challenging the validity of the levy under the Orissa Taxation (on goods carried by roads or inland waterways) Act, 1959, is still pending final orders.

Amlai Project

The Government has granted the Company the import licence for its paper mill project at Amlai and approved the credit sanctioned in its favour by the Export-Import Bank of Washington. Orders for plant and machinery have been finalised and the construction work is in progress.

Pursuant to orders dated 2nd January 1962 and 10th March 1962 of the High Court of Orissa and an order dated 20th February 1962 made by the High Court at Calcutta, the Hindusthan Cellulose and Paper Mills Ltd., a wholly-owned subsidiary of the Company, has been amalgamated with the Orient General Industries Ltd., another wholly-owned subsidiary, and dissolved with effect from 2nd April 1962. As a result of the amalgamation, the Company has been allotted one lakh equity shares of Rs. 10 each fully paid-up in the Orient General Industries Ltd. in lieu of an equal number of shares held in the amalgamated unit. During the year, the amalgamated unit earned a higher profit of Rs. 3.33 lakhs as compared with Rs. 1.02 lakh in the previous year. As against a loss of Rs. 6.82 lakhs for the previous year, the Orient General Industries Ltd. showed a surplus of Rs. 3,397 for the year under report, after providing Rs. 9.06 lakhs for depreciation and Rs. 1.39 lakh for taxation. The surplus, together with the credit balance of Rs. 9.78 lakhs brought forward, making a total of Rs. 9.82 lakhs, has been carried forward. The Air Conditioning Corporation Ltd., another subsidiary, earned a profit of Rs. 5.21 lakhs as against Rs. 3.20 lakhs in the previous year, but Motolite Ltd. made a loss of Rs. 879, as against a profit of Rs. 9,043, despite an improvement in sales from Rs. 7.82 lakhs to Rs. 18.25 lakhs.

Capital Increased

The Company has received the entire amount against the call for the balance amount of Rs. 16.50 per share (including the premium of Rs. 9) made payable between 2nd and 12th April 1962 on the 440,475 shares issued last year, which, naturally, is not reflected in the accounts for the year under review, which show Rs. 5.50 per share (including Rs. 3 by way of premium) received on application. The paid-up capital, therefore, has increased from Rs. 326.84 lakhs to Rs. 340.21 lakhs and is made up of Rs. 157.84 lakhs in equity shares and Rs. 180 lakhs in preference shares. As against this, reserves and surplus aggregate Rs. 395.04 lakhs. It will be recalled that, following the addition to the share capital account, the Company redeemed debentures worth Rs. 1 crore on 30th June 1961. The amount paid to the holders of the debentures during the year under report amounted to Rs. 97.80 lakhs and, inclusive of the unclaimed and unpaid interest, there is still an outstanding liability of Rs. 2.62 lakhs. Bank loans were reduced from Rs. 76.52 lakhs to Rs. 20.46 lakhs, but unsecured loans increased from Rs. 13.39 lakhs to Rs. 55.96 lakhs. Then, there are current liabilities and provisions shown at Rs. 181.55 lakhs. Excluding the debenture liability, the total indebtedness of the Company to outsiders works out to Rs. 257.95 lakhs, which, however, is comfortably covered by current assets, loans and advances, aggregating Rs. 314.67 lakhs, and investments of Rs. 31.17 lakhs, of which Rs. 15.20 lakhs are quoted and command a market value of Rs. 19.22 lakhs. The gross block of the Company, which expanded from Rs. 10.31 crores to Rs. 10.81 crores, has been written down to Rs. 6.50 crores.

Taking the net dividend per share at Rs. 1.50, the Rs. 10 fully paid ordinary shares of the Company offer at their current rate of Rs. 42.70 *cum-div.* a net yield of 3.6 per cent per annum.

UNITED NILGIRI TEA

EFFECTS OF LOWER CROP OFFSET BY BETTER SALE PRICE

THANKS to a slightly better average sale price of Rs. 5.14 per kg., the United Nilgiri Tea Estates Company Ltd. (Managing Agents: Messrs. T. Stanes and Company Ltd., Coimbatore) has fared fairly well during the year ended 31st March 1962, despite the fact that its tea crop for the period was lower at 755,000 kgs., as compared with 828,976 kgs. for the previous year. However, the crop was higher than the estimate of 725,000 kgs. Besides, the previous year's crop was the record for the Company and was obtained due to exceptionally favourable weather conditions both early in the season and at its close. The Directors have argued that the 1960-61 crop was obtained, therefore, at the expense of the 1961-62 crop. The short-fall in the crop for the year under report was particularly great at 97,442 kgs. in the first two months, that is, April and May.

The gross profit for the year shows only a small setback at Rs. 15.22 lakhs as compared with Rs. 16.12 lakhs for the preceding year. Therefore, the allocations and appropriations for the year do not show any drastic change from the previous year's levels. Thus, while the provision for taxation has naturally been reduced from Rs. 6.50 lakhs to Rs. 5.78 lakhs, that for depreciation has been put up from Rs. 2.15 lakhs to Rs. 2.22 lakhs. Credit to reserves amounts to Rs. 1.54 lakh, as against Rs. 1.88 lakh a year before. The total dividend has been maintained at 22 per cent per annum, subject to tax, although the interim was pruned from 10 per cent to 7.5 per cent. The amount to be carried forward (Rs. 0.29 lakh) is nearly the same as the sum brought in.

The synopses of the Company's working in the past four years are contained in the comparative table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

Low	20.25	23.00	21.37	16.80

* Excise duty amounted to Rs. 291 in 1962, Rs. 110 in 1961 Rs. 221 in 1960 and Rs. 100,019 in 1959.
† Subject to deduction of tax.

From 1st December 1961, the Company awarded, under the Wage Board recommendations, an increase of 15 nP in the daily wages for male workers, of 11 nP in those for female workers, of 9 nP in those for adolescents and of 8 nP in those for children. Uncovenanted staff in all grades was granted an increase of Rs. 10 in the monthly wages. Gratuities paid for the year amounted to some Rs. 36,000 against an estimated liability of Rs. 40,000. A final settlement was arrived at for bonus to labourers for 1961 on the same basis as for the preceding year and a provision for the same has been made in the accounts. Bonus to staff and assistants at Rs. 35,000, calculated at the agreed rate of a percentage of profits as before, has also been reserved.

The cost on the estates was Rs. 3.21 per kg. of made tea and, including the excise duty, the all-in cost amounted to Rs. 3.98 per kg., as against the gross selling price of Rs. 5.14 per kg. The estimated crop for the current year is 700,000 kgs. The five estates of the Company have a total area of 1,472.07 hectares, made up of 735 hectares mature, one hectare immature, 259.13 hectares under timber fuel and accacia and 476.94 hectares representing reserves, roads, buildings and waste.

During the year, the Company expended Rs. 1.58 lakh on buildings, Rs. 1.71 lakh on machinery, factory and furniture and Rs. 66,200 on vehicles. The capital expenditure for the current year is estimated at Rs. 3.9 lakhs, of which Rs. 1.50 lakh will be on machinery and factory, Rs. 1.69 lakh on buildings and Rs. 70,036 on vehicles. The first of the double set of four banks of withering troughs was installed in March 1962. The results have been most encouraging, although, to obtain maximum efficiency, it would be necessary to have a heater for use in the cold damp weather. The second set of four troughs is being installed now. One of the two rollers on order for more than a year was received and has been installed and the other is expected shortly. To drive this machinery and to put extra pressure on the existing rollers more power became necessary and, accordingly, the Company has installed a second 150 kVA transformer. Meanwhile, shortage of cement, steel and asbestos cement sheets continues to restrict the operations of the Company.

The financial position of the Company is sound. It has a paid-up capital of Rs. 21.93 lakhs, which is supplemented by reserves and surplus aggregating Rs. 18.63 lakhs. Current liabilities and provisions total Rs. 13.56 lakhs and are well exceeded by current assets, loans and advances aggregating Rs. 17.34 lakhs, of which Rs. 10.38 lakhs represent cash and bank balances. Investments have shrunk from Rs. 5.40 lakhs to Rs. 5.03 lakhs. The quoted investments amount to Rs. 4.86 lakhs and command a market value of Rs. 5.28 lakhs. The gross block, which increased from Rs. 49.96 lakhs to Rs. 53.85 lakhs during the year, has been written down to Rs. 31.75 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 20.37 *cum-div.*, final of 14.5 per cent. On the *ex-div.* basis, the net yield on them works out to almost 8 per cent per annum.

BIRLA JUTE'S RESULTS SATISFACTORY

FINANCES SOUND—OUTLOOK STEADY

HOW suddenly the fortunes of jute mill industry can change has been amply demonstrated by the financial results of those jute companies, the latest annual reports of which have been reviewed in *Commerce* so far this year. After passing through a serious crisis in the first half of the preceding year, the tide turned for the better all of a sudden and the second half of the year brought the most favourable trading conditions that the industry had experienced in recent years. On account of drought in the jute growing areas for the second year in succession, there was, it will be recalled, an acute scarcity of crop to meet the full requirements of the jute industry and as a result prices of raw jute soared to abnormally high levels. Production of jute mills had to be curtailed by sealing additional looms, reduction in working hours and block closure of mills for two periods of one week each in June and July 1961. Things continued in this difficult strain till the middle of September 1961. The situation, however, underwent a quick transformation when the 1961-62 jute crop turned out to be a bumper one. With the arrival of the new crop in the market in abundant quantities, trading conditions began to improve and the weekly working hours of jute mills were gradually increased to 45 from 42½ as at the commencement of the year. Moreover, mills were permitted to unseal, against their accumulated loom-hours, the maximum number of looms with a view to increasing the output to the fullest extent possible. At the same time, and this is important, the demand for jute goods was well maintained. Consequently, most of the jute companies were able to end their trading year 1961-62 on a happy note and retrieve at least a part of the lost ground in sales and profits.

The annual report of the Birla Jute Manufacturing Company [Managing Agents: Messrs. Birla Brothers (Private) Ltd., Calcutta] which still has a major interest in jute for the year ended 31st March 1962 provides one more instance of the welcome change in the fortunes of the jute mill industry. It further shows that the working of its other departments such as the cement plant at Sutna, the staple fibre spinning mill and the calcium carbide factory at Calcutta was also satisfactory.

The combined sales turnover of jute goods, cement, staple fibre yarn and calcium carbide during 1961-62 increased by Rs. 119.36 lakhs over and above the rise of Rs. 208.44 lakhs recorded during the previous year, and touched the peak level of Rs. 917.48 lakhs. In keeping with this improvement, the gross profit, too, has risen from Rs. 140.08 lakhs to Rs. 170.64 lakhs. What is interesting about this improvement is that the ratio of gross profit to turnover has actually improved from 17.6 per cent during 1960-61 to 18.6 per cent for 1961-62. If against this growth, the net profit has registered a rise of only Rs. 7.84 lakhs to Rs. 54.65 lakhs, it is because of much large allocations for the prior provisions, particularly the allocation for taxation which has nearly doubled from Rs. 21.30 lakhs to Rs. 42.00 lakhs owing partly to a higher taxable profit and partly to the increase in the rate of corporate taxation. In distributing the net profit, the Directors have followed a conservative policy. Thus, they have transferred Rs. 22.15 lakhs or nearly 45 per cent to the reserves. The equity shareholders get only the same rate of dividend as in the past two years, namely, 15 per cent subject to deduction of tax, but it actually claims a much higher amount of Rs. 23.93 lakhs as against Rs. 13.69 lakhs previously because of the increase in the number of shares consequent upon the right and bonus share issues made during the year. A sum of Rs. 1.08 lakh is being carried forward as against Rs. 1.84 lakh brought in.

The rapid progress made by the Company during the past four years is clearly brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	917.48	798.12	589.68	474.73

High	38.00	36.12	29.56	21.87
Low	28.37	25.50	20.00	14.81

* Subject to deduction of tax.

It will be recalled that, during the year under review, the Company issued 456,300 new equity shares of Rs. 10 each at a premium of Rs. 6 per share besides capitalising a part of the reserves by issuing 228,150 bonus shares in the proportion of one for four existing shares. This has raised the equity share capital from Rs. 91.26 lakhs to Rs. 160.37 lakhs. The Company has also preference shares of two varieties: Rs. one crore in 7.86 per cent redeemable cumulative and Rs. 23.64 lakhs in 11 per cent (original 7½ per cent) non-redeemable cumulative. The paid-up capital is supplemented by as much as Rs. 336.40 lakhs in reserves and surplus, of which Rs. 27.29 lakhs constitute the share premium account. The increase in paid-up capital and reserves has enabled the Company to reduce its borrowings heavily from Rs. 173.01 lakhs to Rs. 104.20 lakhs. Of this total, Rs. 24.24 lakhs represent the loan availed of from the National Industries Development Corporation secured against mortgage of fixed assets of the Company. It is heartening to note from the Directors' report that even this loan has been liquidated since the close of the year under review, though it was repayable in instalments upto July 1974. Besides the secured and unsecured loans just referred to, the Company has current liabilities and provisions aggregating Rs. 178.83 lakhs. These show a sharp rise from Rs. 106.62 lakhs a year before. Additions to fixed assets during the year amounted to Rs. 43.77 lakhs, of which Rs. 10.11 lakhs pertain to jute mills, Rs. 17.49 lakhs to the staple fibre spinning department and Rs. 14.40 lakhs to the cement factory. Consequent on these additions the cost of the gross block has risen to Rs. 856.67 lakhs. On deducting therefrom Rs. 353.44 lakhs as the depreciation provided so far and adding Rs. 20.62 lakhs being the cost of capital work in progress, the net block works out to Rs. 525.85 lakhs. Investments at book value stand at Rs. 79.64 lakhs, of which Rs. 24.24 lakhs only are in fully paid ordinary shares of subsidiary companies. Of the rest all but Rs. 1.66 lakh are in the shares of a variety of joint-stock companies, including three newspaper enterprises. The market value of quoted investments at Rs. 88.38 lakhs is, however, twice as much as their book value at Rs. 44.41 lakhs, though unquoted investments are substantially high at Rs. 35.13 lakhs. As the income from investments in joint-stock companies by way of dividends was Rs. 5.52 lakhs in the year under review, the return works out to a little more than 4 per cent only. Current assets, loans, advances and deposits all together amount to Rs. 298.18 lakhs. The net worth per equity share of Rs. 10 each works out to Rs. 31.15, as compared with Rs. 44.09 a year before and Rs. 34.91 four years before.

On account of the favourable trading conditions now prevailing, prospects for the Company's jute unit for the current year are, in the opinion of the Directors, bright, unless the decline in business activity in the U.S.A., which happens to be the single largest consumer of jute goods from this country, assumes serious proportions. As for the other departments, satisfactory progress was made during the year in the expansion programme under which the capacity of the cement factory at Sutna is to be raised from 750 tons to 1,750 tons per day. Plant and machinery have begun to arrive and it is expected that the new capacity will be put into commission by about the middle of 1963. A licence for a refractory plant has also been obtained, but no decision has as yet been taken regarding the setting up of the plant. The staple fibre spinning mill worked satisfactorily throughout the year. Prices of staple fibre yarn have, however, declined much below the previous year's levels and, consequently, profits for the current year are likely to be adversely affected to some extent. The availability of adequate supplies of electrical power enabled the calcium carbide factory to operate both its furnaces regularly and attain a combined output of 35 tons of carbide per day, as against only 25 tons per day during the preceding year. Unfortunately, the cost of electricity is unusually high and the Company has taken up the matter with the State Electricity Department. The Government chose to disregard the expert opinion of the Tariff Commission as to what should be a fair ex-factory price for calcium carbide and fixed it at a level lower than that recommended by the Commission. Not much progress could be made on the scheme for the production of oxygen and acetylene, a licence for which has already been received. This is due to the delay in getting relevant import licences.

The Rs. 10 fully paid ordinary shares which were elevated to the cleared list on the Calcutta Stock Exchange during the year are currently being quoted around Rs. 33.87 *cum-div.* and fetch a net yield of 3.2 per cent per annum on an *ex-div.* basis. As the Company had issued right shares and bonus shares only last year, an investor who buys this scrip at the current price will have to wait for quite a few years to reap any substantial benefits. Beyond securing two new industrial licences, the Company has made no significant progress in regard to further diversification of its activities.

MANDYA PAPER ATTAINS CAPACITY

In less than a month after President Dr. Radhakrishnan inaugurated it on 2nd August 1962, the Mandya National Paper Mills Ltd. has attained the rated capacity of 35 tons of paper per day. It now looks forward to doubling its capacity which would make it the biggest enterprise of its kind in the country. Incidentally, Mandya Paper is said to be the first unit in Asia to make use of an unconventional raw material like bagasse for the manufacture of paper, which is available in bulk from the Mandya Sugar Factory and from the neighbourhood of Belagula, Mysore State, where the mills are situated. Besides, in the Company's factory is installed the 'Pandia' continuous system which, unlike the conventional digestion system, is capable of utilising a variety of raw materials such as bagasse, straw, bamboo, wood, etc., for pulping with equal facility. The quality of paper now being manufactured by the Company is claimed to be very superior. Mandya Paper, which has paved the way for meeting the third Plan production target of 7 lakh tons for paper, which is double the second Plan target, has been promoted by its Managing Agents, Messrs. Bedi and Company Management (Private) Ltd., well known in the field of civil construction and mining, in collaboration with Messrs. Parsons and Whittemore Lyddon Organisation of the U.S., which has pioneered the use of unconventional raw materials for making paper and has supplied, since its establishment in 1853, pulp and paper machinery to mills in more than 60 countries.

ASSAM SILLIMANITE SHARE ALLOTMENT

The Directors of the Assam Sillimanite Ltd. have finalised, in consultation with the authorities of the Calcutta Stock Exchange, the basis for allotment of shares to the public in regard to the issue of 240,000 equity shares of Rs. 10 each at par made in the third week of June last. The minimum number of shares to be allotted is 150 shares which will go to those who had asked for either 150 shares or 160 to 210 shares. The maximum number of shares to be allotted is 1,260 shares, to be given to the applicants for 20,000 shares. Two hundred shares will be allotted to the applicants for 220 to 300 shares, 250 to those for 310 to 500 shares and 300 to those for 510 to 600 shares. The applicants for 650 shares will be allotted 320 shares. The allotment will be exactly half the applications for 660 shares and will be more than 50 per cent, that is, 410 in the case of applications for 810 shares. Five hundred shares will be allotted to those who had asked for 1,000 to 1,600 shares, 600 shares to those who had applied for 2,000 to 3,000 shares, 700 shares to those having sought 6,000 shares and 800 shares to those who wanted 7,000 shares.

INDIA PAPER PULP'S PROFIT LOWER

DIVIDEND AND ALLOCATIONS REDUCED

FOR the India Paper Pulp Company Ltd. (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) the year ended 31st March 1962 was one of further erosion of profits, notwithstanding a slightly higher turnover. Gross realisation from sales has risen by Rs. 3.81 lakhs to Rs. 233.08 lakhs due probably to a bigger quantity of paper sold—as evidenced by a reduction in the closing stocks of paper and wrapper and a higher charge on account of excise duty. But this small increase has been more than neutralised by a substantial increase in expenses, particularly cost of bamboos, coal and chemicals. There has, therefore, been a shrinkage in profit-margin and the gross profit has, as compared with 1960-61, declined by Rs. 6.28 lakhs to Rs. 38.28 lakhs; the fall is nearly 40 per cent when compared with the high level of Rs. 63.19 lakhs achieved in 1959-60.

The lower profit has naturally necessitated a reduced provision for the Managing Agents' commission, of Rs. 2.25 lakhs as against Rs. 2.84 lakhs, and for taxation, of Rs. 11.55 lakhs as against Rs. 12.10 lakhs previously. It may be noted that the tax provision is lower, despite the increase in the rate of taxation, and had it not been for this increase, the saving would have been bigger still. The transfer to depreciation account has also declined by Rs. 1.20 lakh to Rs. 12.56 lakhs. After these essential provisions, the net profit works out to Rs. 11.92 lakhs, showing a fall of 24.6 per cent as compared with Rs. 15.86 lakhs earned in the previous year. This has necessitated an all-round cut in appropriations. The amount ploughed back has been reduced from Rs. 4.11 lakhs to Rs. 1.52 lakh and the dividend which had been pruned from 15 per cent to 13 per cent last year has been lowered further to 12 per cent per annum.

The vicissitudes in the fortunes of the Company during the past four years are clearly brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales of paper	233.08	229.27	250.58	154.75

Low	16.44	18.69	18.44	18.69

* Subject to deduction of tax.

Consequent upon the foreign exchange difficulties, there were further restrictions on the import by the Company of wood-pulp and the situation was further aggravated by the restricted working for several months of the digester plant on account of major renovations. In consequence, there was a further curtailment of production of finished paper which at 13,181 tonnes, was 1,225 tonnes lower than in the previous year. In order to get over these persistent difficulties regarding the import of wood-pulp, the Company, it will be recalled, had sponsored the formation of the Assam Pulp Mills. Unfortunately, certain difficulties regarding the raising of loan capital for this company could not be resolved and it had to be wound up. The Company's shareholding in the new project worth Rs. 1.12 lakh has, therefore, been written off.

As a further step towards obviating the reliance on imported pulp for making paper or on the use of bamboo as the essential raw material for making good quality pulp, the Company conducted during the previous years experiments at its mill with jute sticks as a substitute for bamboo. These were highly successful and it has now been proved that a good quality of paper can be made by the existing magnesium sulphite process from pulp manufactured from jute sticks. Encouraged by these results, the Company had approached the Government for a licence. The Directors now say that a licence for the expansion of the Company's pulp-making capacity using jute sticks as raw material has been received and that a licence for the import of the additional plant required is awaited.

These are welcome developments which may go a long way towards ensuring a smooth and efficient working of the paper mill, but they are of long-term import. Meanwhile certain developments which have taken place since the close of the previous accounting year have tended to blacken the immediate outlook. Costs have increased still further, owing to additional or increased levies introduced by the Finance Act, 1962 which affect several commodities and chemicals used by the paper industry, the enhancement of coal prices, the very substantial freight increase and the rise in wages. In addition, since May 1962, the severe power shortage in the Calcutta area has been necessitating both load shedding and periodic shut-downs at the hill plant, resulting in loss of production and considerable dislocation of the running of the plant.

The Company's financial position is strong. The issued and subscribed share capital stands unchanged at Rs. 88.20 lakhs, of which only Rs. 3.80 lakhs are in preference shares of Rs. 10 each, the balance being in equities. This is supported by Rs. 85.27 lakhs in reserves and surplus, an amount higher than the paid-up equity capital itself. Loans or borrowings are conspicuous by their absence and current liabilities and provisions aggregating Rs. 39.23 lakhs are very well covered by current assets, loans and advances, and investments amounting to Rs. 93.74 lakhs. A gross block of Rs. 251.05 lakhs has been written down to Rs. 105.96 lakhs or less than half its book value and the net block at Rs. 118.96 lakhs (inclusive of Rs. 13.00 lakhs worth of capital work in progress) forms only 68.6 per cent of the capital funds, thereby ensuring a comfortable working capital position.

Currently, the Rs. 10 paid ordinary shares are quoted at Rs. 20.25 *cum-final div.* On reducing the price to an *ex-div.* basis, the net yield on the full year dividend works out to about 4.3 per cent per annum.

FOUNDATION-STONE OF ORIENTAL POWER CABLES' FACTORY LAID

Mr. Mohanlal Sukhadia, Chief Minister of Rajasthan, laid the foundation-stone of the factory of the Oriental Power Cables Ltd. at Cable Nagar, Ainia, near Kotah, on Thursday, 30th August 1962. The ceremonial function marked the substantial progress made by the Company in regard to its Rs. 250-lakh project for the manufacture of 600 miles of paper-insulated power cables a year within about three months from the day (Thursday, 24th May last) it entered the capital market with a public issue of Rs. 80 lakhs, of which Rs. 53 lakhs were in equity shares of Rs. 100 each and Rs. 27 lakhs were in 9.5 per cent, taxable, preference shares, also of Rs. 100 each.

Arrangements for imports of plant and equipment are said to be well under way. Construction work for the factory and living quarters will be started soon. The plant, to be located on a 400-acre plot allotted by the Government of Rajasthan, is expected to go into production within a year. It will be powered by 2,000 K.V. of electricity at concessional rates. The Company's manufacturing activities will be in collaboration with Messrs. Sumitomo Electric Industries Ltd., a leading member of the Sumitomo Group of industries—the largest in Japan. Plant and equipment are being supplied by that firm under yen credit.

MORARJI INAUGURATES BLUE MOUNTAIN'S SUPERPHOSPHATE FACTORY

Mr. Morarji Desai, Union Finance Minister, inaugurated on Thursday, 23rd August 1962, the Rs. 50-lakh superphosphate factory of the Blue Mountain Estates and Industries Ltd. (Managing Agents: Messrs. Kothari and Sons (Agencies) (Private) Ltd.) at Ennore, ten miles from Madras City. The factory is designed to produce 44,000 tons of superphosphate and 16,500 tons of sulphuric acid per annum. The finance for the project has been arranged by the Company by the additional share capital issue of Rs. 21 lakhs, a sterling loan of £60,000 and bank borrowings of Rs. 13.7 lakhs. The plant and machinery have been supplied by Messrs. Simon-Carves Ltd., International Combustion Export Ltd., and Montecatini of Italy.

(*Concluded from next column*)

for 1959 stood at Rs. 200.71 lakhs, of which the share of National was Rs. 70.82 lakhs and of Asiatic Rs. 21.24 lakhs. The comparable figures for 1958 amounted to Rs. 156.39 lakhs, Rs. 64.29 lakhs and Rs. 17.27 lakhs, respectively. The net premia of the three units put together amounted to Rs. 84.34 lakhs for 1956 and to Rs. 121.24 lakhs for 1957, with the share of Orient rising from Rs. 28.94 lakhs to Rs. 53.05 lakhs, of National from Rs. 43.81 lakhs to Rs. 54.19 lakhs and of Asiatic from Rs. 11.58 lakhs to Rs. 13.99 lakhs.

The total assets of the Company as at 31st December 1962 stood at Rs. 784.18 lakhs, of which those held in India were Rs. 703.22 lakhs, including investments aggregating Rs. 213.79 lakhs and having a market value of Rs. 219.27 lakhs and cash balances of Rs. 219.51 lakhs.

ORIENTAL MAKES FURTHER HEADWAY

NATIONAL AND ASIATIC AMALGAMATED

A SIGNIFICANT development for the Oriental Fire and General Insurance Company Ltd. (Chairman: Mr. B. K. Kaul, Bombay) during the year ended 31st December 1961 was the completion of the amalgamation with it of the National Fire and General Insurance Company Ltd. and the Asiatic Government Security Fire and General Assurance Company Ltd. The merger was sanctioned by the High Court of Judicature at Bombay by an order dated 15th December 1961 effective from 1st January 1961. In pursuance of that order, the Company allotted to each of the members of National 10 'A' equity shares of Rs. 5 each credited as fully paid-up for every one share of National of Rs. 100 and to each of the members of Asiatic one 'A' equity share of Rs. 5 credited as fully paid-up for every one share of Asiatic of a like denomination. Now the paid-up capital of the Company is Rs. 110 lakhs, divided into 15,000 equity shares of Rs. 1,000 each with Rs. 500 paid-up and 700,000 'A' equity shares of Rs. 5 each fully paid-up, as against Rs. 135 lakhs of Oriental, National and Asiatic as at the end of the previous year. The balance of Rs. 25 lakhs has been taken to capital reserve.

The table below, carrying figures for 1960 and 1961 of the three combined units, gives an idea of the Company's department-wise working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Fire:				
Net premium	120.77	93.79	37.02	28.62

Provision for taxation	12.00	1.83	7.25	0.50
Transfer to reserves	1.61	3.49	5.25	3.00
Dividend	6.60	4.50	4.50	..
	(6%)*	(6%)*	(6%)*	
Carry forward	0.29	0.31	0.42	0.09

* Subject to deduction of tax.

Note:—The figures in brackets represent percentage to net premium income.

The combined results for the last calendar year of the three companies, as compared with the grouped results for 1960 indicate commendable progress during the year under report. The net premia rose by 38.80 per cent from Rs. 315.73 lakhs to Rs. 434.30 lakhs. The funds under the three departments, fire, marine and miscellaneous, registered a further accretion of Rs. 77.39 lakhs, or 44.8 per cent, to stand at Rs. 250.07 lakhs. The total of 'own' funds, that is, capital, the three department funds and other reserves and surplus, without providing for the year's dividend, and excluding reserve for bad and doubtful debts of Rs. 3.51 lakhs and staff gratuity account of Rs. 3.56 lakhs, rose by Rs. 79.48 lakhs, or 24.2 per cent, to Rs. 408.1 lakhs. A sum of Rs. 3 lakhs has been provided as an additional reserve over and above the normal reserve required under the Code of Conduct in each of the departments. In spite of the strain caused by the increase in the allocations to departmental reserves, the profit before taxation has staged a sharp improvement of Rs. 10.62 lakhs, or as much as 110.85 per cent, to Rs. 20.20 lakhs. The provision for taxation has been raised sizably from a mere Rs. 1.83 lakh to Rs. 12 lakhs. A sum of Rs. 1.61 lakh (Rs. 3.49 lakhs a year before) has been set apart for reserves. The dividend has been maintained at 6 per cent per annum, subject to tax, but the amount required for this purpose has increased from Rs. 4.50 lakhs to Rs. 6.60 lakhs presumably following the change in the capital structure on the amalgamation of the two units as mentioned at the outset.

Readers would find it interesting to know that the combined net premia of the three units

(*Continued in previous column*)

Notices

GREAVES COTTON AND COMPANY LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Forty-second Annual General Meeting of the Shareholders of GREAVES COTTON & COMPANY LIMITED, will be held on Thursday the 27th September 1962, at 4-30 p.m. (I.S.T.), at Bombay House Auditorium, 24 Bruce Street, Bombay 1, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance-Sheet and Profit and Loss Account for the year ended 31st March 1962.

THE EAST INDIAN COAL COMPANY LIMITED

(*Incorporated in England with Limited Liability*)

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Tenth Annual General Meeting of the Members will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Wednesday, the 3rd October, 1962, at 11.30 a.m., for the following purposes :—

1. To receive and consider the audited Accounts for the year ended 30th April, 1962, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of the one retiring.
4. To fix the Auditors' remuneration.

AS SPECIAL BUSINESS :

5. To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution :—

   "That the authorised capital of the Company be increased from £240,000 to £900,000 by the creation of 660,000 Ordinary Shares of £1 each.
6. To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a Special Resolution :—

   "That the Articles of Association of the Company be altered in the manner following, viz :

   By substituting for Article 4 the following new Article, viz :

   "4. The share capital of the Company is £900,000 divided into 900,000 Ordinary Shares of £1 each."
7. To consider and, if thought fit, to pass with or without modification the following resolutions which will be proposed as Ordinary Resolutions :—

   (*a*) That subject to the consent of the Controller of Capital Issues of the Government of India 144,000 new Ordinary Shares of £1 each in the authorised capital of the Company be issued at a price of £1.13.0 per share including a premium of 13 shillings per share or as the case may be at the Indian rupee equivalent of Rs. 22 per share including a premium of the equivalent of Rs. 8.67 nP. for each new Ordinary Share on the footing that such new Ordinary Shares shall rank in all respects *pari passu* with the existing Ordinary Shares in the Company save and except that they shall not participate in any dividend which may be declared in respect of any period ended on or prior to 30th April, 1962.

   (*b*) That the said new Ordinary Shares so issued be offered subject to the approval of the Reserve Bank of India and/or any other statutory consents that may be required to those members of the Company whose names shall appear on the Company's United Kingdom Share Register on the 3rd day of October, 1962, in the proportion of three new Ordinary Shares of £1 each for every five existing Ordinary Shares then held by such members, at a premium of 13 shillings per share with a right to renounce all or any of the shares so offered to them in favour of any other person or persons whose names shall appear on the Company's United Kingdom Share Register on the date of renunciation or to persons whose names shall appear on the Company's Indian Share Register on the date of renunciation and whose registered address on that date shall be in India.

   Provided that if the offer of the new shares be accepted in full or in part by any members, whose names shall appear on the Company's United Kingdom Share Register as aforesaid, the required payment shall be made by the members concerned to the Company's bankers in London ; provided further that all fractional entitlements resulting from such offer as aforesaid shall be dealt with in the manner provided for in the resolution set out in paragraph (*h*) hereof.

   (*c*) That the said new Ordinary Shares so issued be offered subject to the approval of the Reserve Bank of India and/or any other statutory consents that may be required to those members of the Company whose names shall appear on the Company's Indian Share Register on the 3rd day of October, 1962, but whose registered address shall be outside India on that date, in the proportion of three new Ordinary Shares of £1 each for every five existing Ordinary Shares then held by such members at a premium of Rs. 8.67 nP. for each share with a right to renounce all or any of the shares so offered to them in favour of any other person or persons whose names shall appear on the Company's Indian Share Register on the date of renunciation and whose registered address shall on that date be within India or to other persons resident in India who are not at present shareholders.

   Provided that if the offer of the new shares be accepted in full or in part by such members whose registered address shall be outside India and that permission has been received from the Reserve Bank of India for accepting such offer, payment shall be made by the members concerned in Indian rupees to the Company's bankers in India at the rate of Rs. 22 (including the premium of Rs. 8.67) per share ; provided further that all fractional entitlements resulting from such offer as aforesaid shall be dealt with in the manner provided for in the resolution set out in paragraph (*h*) hereof.

   (*d*) That the said new Ordinary Shares so issued be offered to those members of the Company whose names shall appear on the Company's Indian Share Register on the 3rd day of October, 1962 and whose registered address shall on that date be in India in the proportion of three Ordinary Shares of £1 each for every five existing Ordinary Shares then held by such members at the rate of Rs. 22.00 (including a premium of Rs. 8.67) per share payable to the Company's bankers in India and with a right to renounce all or any of the shares so offered to them in favour of any other person or persons resident in India, provided that all fractional entitlements resulting from such offer as aforesaid shall be dealt with in the manner provided for in the resolution set out in paragraph (*h*) hereof.

   (*e*) That the 144,000 new Ordinary Shares of £1 each so issued be offered on the 25th October, 1962 to the members as aforesaid by a notice specifying the number of shares to which they are entitled provided that the offer, if not accepted on or before the 22nd December, 1962 either by the member to whom the offer has been made or by any other person or persons in whose favour the offer might be renounced as aforesaid, shall be deemed to have been declined and further specifying that the payment for such shares at the rate of £1.13.0 each payable in the United Kingdom or Rs. 22.00 payable in India as the case may be, for each new Ordinary Share so offered shall be payable in full on application, provided that the abovementioned date of offer, viz. 25th October, 1962 and the date of closure of offer, viz. the 22nd December, 1962 can be varied at its discretion by the Committee appointed by the Board in this behalf.

   (*f*) That any new Ordinary Share so issued not taken up by the said members in response to the above offer shall be available for subscription by those members of the Company who take up their rights under the said offer in full and who desire to apply for additional shares but so that the allotment of any such additional shares shall be subject to any condition which may be imposed by the Controller of Capital Issues, Government of India, and, in the case of a member with a registered address outside India, subject further to the approval of the Reserve Bank of India.

   (*g*) That the right to apply for additional shares shall not be renounceable in favour of any other person and in the event of the applications for additional shares exceeding the number of shares available, the allotment shall, subject to any condition that the Controller of Capital Issues, Government of India, may impose, be made in proportion to the respective existing holdings of Ordinary Shares of the applicants for additional shares as on the 3rd day of October, 1962.

   (*h*) That if the offer of the said new Ordinary Shares so issued results in any member becoming entitled to a fraction of a share, any such member who takes up his rights shall be required to pay for such fractional share in cash at the rate of £1.13.0 in the United Kingdom or Rs. 22.00 in India as the case may be, for every new share but the Company shall not issue any certificate in respect of fractional shares ; that the total number of shares representing such fractions shall be allotted by the Company to a person or persons appointed by the Board as nominees of the members entitled to fractional shares and the Company shall issue in favour of such person or persons certificates for the whole shares comprising such fractional shares which shall be sold by such person or persons in the open market as soon as practicable at the best price obtainable and the net proceeds of the sale of such whole shares shall be distributed amongst the members entitled to fractional shares in accordance with their respective entitlements.

Notice is also given that the Share Transfer Books of the Company will be closed from the 19th September to the 3rd October, 1962, both days inclusive.

A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
C. EVANS,
Acting Secretary,
Managing Agents & Secretaries.

SYNOPSES OF COMPANY REPORTS

Saran Engineering Co., Ltd.

(*Secretaries and Treasurers*: The British India Corporation Ltd., Kanpur, U.P.)

Fifty-fifth Annual General Meeting—8th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	36,54	37,42
Closing stock	5,81	4,12
Gross profit	8,63	8,41
Transfer to Managing Agents' remuneration	Nil	21
" " Ex-Managing Agents' remuneration	4	*Nil*
" " Secretaries of Treasurers' remuneration	56	35
" " depreciation	1,21	1,10
" " provision for taxation	3,50	4,00
Net profit	3,37	2,75
Adjustments	79	23
Appropriations :		
Total available balance	4,16	2,98
To expenses relating to previous years	2	2
Transfer to rehabilitation reserve	2,00	2,00
" " general reserve	1,25	20
" " development rebate reserve	2	1
Proposed dividend (taxable) ordinary	75	60
	(12½%)	(10%)
Carry forward	12	15

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items like profit on sale of motor car and excess provisions no longer required.

Extracts from the Directors' report: Trading conditions during the year have not been entirely upto expectations, as sales have gone down slightly; the reasons for the fall being—firstly—a shorter period for overhaul, repairs and replacement of machinery owing to the prolonged crushing season and, secondly—the growing competition from new Engineering firms. Nevertheless, the profits have been somewhat better because of increased realisations from scrap sales, savings in interest on Bank Overdraft and economies effected in other directions.

The recent establishment of engineering firms which also cater for the requirements of the sugar factories, has naturally resulted in splitting up of the Company's monopolistic business. The Directors have, therefore, started diversifying the Company's activities and have succeeded in securing and executing substantial orders from other firms. Besides, a firm of consulting engineers was engaged to advise on the possibility of expanding the Company's activities and utilising the idle capacity of the existing machinery. The report of the firm has been received and is receiving the Directors' attention. In view of the report of the consulting engineers that expansion would be spread over a period of some years and would involve an expenditure of several lakhs of rupees, the Directors have considered it necessary to increase the rehabilitation and general reserves.

Accounts in brief as at 31st March 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	6,00,000	Gross block	31,36,550
Reserves and surplus	18,98,234	—Depreciation	21,35,182
Other liabilities	18,81,508	Net block	10,01,368

* Paid-up capital consists of 1,50,000 ordinary shares of Rs. 4 each fully paid up. Out of this, on 1 lakh Ordinary shares Rs. 2 per share was paid in cash and Rs. 2 per share credited as capital Bonus. 50,000 shares are allotted as fully paid by way of Bonus shares.

ACC-Vickers-Babcock Ltd.

(*Chairman*: Dharamsey M. Khatau, Esq. Managing Director: J. M. Marks, Esq.)

Registered Office: 16, Queen's Road Estate, Bombay 1.

Works: Durgapur, West Bengal.

Third Annual General Meeting—19th September 1962.

Extracts from the Directors' report for the year ended 31st March 1962: The Company has issued 4,00,000 equity shares of Rs. 100 each against which payment has been made in full. During the year, first mortgage debentures of the face value of Rs. 3.3 crores were issued in favour of the State Bank of India as security against cash-credit arrangements of upto Rs. 3.3 crores. 7 per cent third mortgage debentures of a total value of Rs. 2,02,00,000 (on which interest is not payable upto 31st March 1964) were issued in favour of the Associated Cement Companies Ltd., Vickers Ltd., London, and Babcock & Wilcox Ltd., London, in the proportions of 50 per cent, 25 per cent and 25 per cent. Negotiations for the loan of £1 million Sterling from Babcock & Wilcox Ltd., London, or their nominees are progressing and it is expected that this loan against the pledge of second Mortgage debentures will be made available before the end of the current year.

The greater part of the construction work at Durgapur has been completed ahead of schedule. Certain of the heavier machine tools are yet to be received from overseas but it is expected that the initial construction programme will be completed and the Works fully equipped by the end of September of this year.

The formal opening of the Works was performed by the late Dr. B. C. Roy, who was the Chief Minister of West Bengal, on 6th February 1962 at an impressive ceremony which was attended by many distinguished visitors including Sir Paul Gore-Booth, U.K. High Commissioner in India. The visitors were most impressed with the layout of the Works and the quality of the machine tools and equipment and spoke very highly of the Housing Colony which is reputed to be one of the best of its kind in India.

The Company has received firm orders for the manufacture and delivery of boiler plant to the extent of an estimated value of Rs. 8.23 crores. Further projects are in hand and it is estimated that orders will be received for further five boiler units of an estimated value of Rs. 7.5 crores under the Indian Power Projects programme.

Orders for cement-making machinery and ancillary plant thereto have been received to an estimated value of Rs. 68,76,000.

After providing for depreciation of fixed assets amounting to Rs. 22,46,248, the deficit for the year is Rs. 44,31,318. To this has to be added the deficit for the previous years carried forward of Rs. 171,760 making a total to be carried forward as a loss to the balance sheet of Rs. 46,03,078.

It is not immediately possible to take advantage of the development rebate allowed under the Income Tax Act and which is estimated at Rs. 58 lakhs until such time as the Company is able to earn taxable income. Owing to the considerable time-lag between the placing of orders and the final handing over of the Company's type of plant, it has to be appreciated that it is not possible to show the true financial results until some units have been finally handed over.

During the year ending 30th September, 1961 the working of Babcock & Wilcox of India Ltd. was satisfactory. The subsidiary company made a profit of Rs. 69,660.74 nP as against a loss of Rs. 45,574.82 nP during the previous year. The Company has not, however, declared any dividend as the profits made were inadequate for the purpose.

Accounts in brief as at 31st March 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	4,00,00,000	Gross block	5,92,28,508

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes a sum of Rs. 1,20,000 transferred from contingency reserve.

† The preference dividend for 1961 includes Rs. 84,000 being additional preference dividend for the year ended 31st March 1960. Calculated at 2.1 per cent, in accordance with the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: Trading Conditions. The period from April, 1961 to March, 1962 was the most critical of recent years. The position was mitigated after October when quantity arrivals of new crop eased the shortage of raw material experienced prior to that date, and supplies became available at economic prices. During the latter part of the year adequate supplies of raw material and the continued overseas demand for gunnies at reasonable levels were the main features of trading which has been carried on at profitable margins.

The abundance of fibre supply brought in its wake the problem of assuring the cultivators of a fair price for raw jute. In order to achieve this and to ensure the supply of raw material to the industry at reasonable prices, the Jute Buffer Stock Association was formed and commenced trading in April.

Prospects for the current year are satisfactory. It is expected that the new crop, together with the carry over from last season will be sufficient for the industry's requirements, and overseas demand for jute goods would appear to have stabilised at a lower level of prices. The vigorous expansion programme of Pakistan mills however continues to present a growing threat to Indian exports of sacking.

The recent restriction on power supply is a matter of grave concern since its continuation is likely not only to undermine the industry's competitive position in the world markets but also to reduce the country's foreign exchange earnings.

Modernisation: The modernisation of the weaving departments continues to engage the attention of the Directors. The comparative merits of the various types of machinery on offer will be carefully assessed prior to determining the eventual choice of equipment.

Avenues are also being explored to extend this Company's activities to cover the manufacture of other specialised fabrics.

Investments: Although teething troubles in commencing production caused the results of Messrs. Isaac Holdens (India) Ltd., in which this company has a substantial interest, to be disappointing during the year ended 31st December 1961, the current year's working of that company is satisfactory.

The value of this company's investment in Messrs. Landale & Clark Ltd. being considerably below par, a further allocation of Rs. 1½ lakhs is being made to the investment reserve. The value of this company's shares in Landale & Clark (Pakistan) Ltd. has been written down to Re. 1 only and steps are being taken to put this company into voluntary liquidation.

The salvage department of Messrs. Landale & Clark Ltd. continues to work profitably. Settlements have been reached in respect of market differences on jute contracts which the company incurred during 1960 and the earlier part of 1961. The company's results for the year ended 28th February 1962, show a small profit.

Accounts in brief as at 31st March 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	89,20,700	Gross block	2,94,99,598
Reserves and surplus	92,00,227	—Depreciation	1,96,84,535

" " depreciation	18	18
" " provision for taxation	Nil	50
Net profit	5	1,23
Adjustments	43*	25
Appropriations :		
Total available balance	48	1,48
Transfer to general reserve	Nil	50
Proposed dividends (taxable) 7½% preference	11	11
" " " equity	32	64
	(7½%)	(15%)
Carry forward	5	23

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 20,000 transferred from dividend equalisation fund.

Extracts from the Directors' report: Coffee: The crop for the year was 197,803 tonnes from Badra and Gudiathota estate taken over this year as against the previous year's crop of 254,981 tonnes for Badra and 46,529 tonnes for Gudiathota Coffee Estate. The stock of coffee has been valued at Rs. 2 per point, same as previous year.

Estimate for 1962-63: Coffee crop is estimated at 190 tonnes.

Dividend on Equity shares: The profit of the year is lower owing to the lower coffee crop and the Directors consider it advisable to transfer a sum of Rs. 20,000 from the dividend equalisation reserve and recommend a dividend of 7½ per cent subject to tax on equity shares.

Accounts in brief as at 31st May 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	5,75,000	Gross block	11,46,430
Reserves and surplus	4,34,681	—Depreciation	1,25,948

STATE LOANS A SUCCESS

(From Our Own Correspondent)

BOMBAY, 29*th August*

The State loans have been a bigger success this year than in the previous year or in any of the preceding years, even though the amount sought to be raised by them was much larger. This provides a striking commentary on the extent to which the long-term capital market in this country has grown both in depth and width. It is said in Gilt-edged market circles that some of the State loans are already being offered at a discount varying from 75 nP to Re. 1.25 and that offerings are substantial in Andhra Pradesh loan in particular, suggesting thereby that there has been pressure on investors to extend support to these loans. That may be so; canvassing by State Government officials, including Ministers, for the issues of their respective States has become a regular feature since some years now. Nevertheless, it cannot be denied that the market for State loans has greatly broadened. One important reason for the marked success of State loans this year is the availability of large resources with banks, provident funds and the Life Insurance Corporation. Scheduled banks' deposits are at a record high level. It is learned from reliable circles that the support to be extended by the Reserve Bank to these loans was much less than in the previous years in terms of both amount and the number of States.

Although provision had been made in the announcement of State loans to keep the lists open from 27th August to the closing hours of 1st September, the response was so good that the lists for the issues of seven States were closed on the first day itself, the seven States being Maharashtra, Gujarat, Uttar Pradesh, Mysore, West Bengal, Bihar and Orissa. The lists for the issues of four more States—Assam, Andhra, Madras and Rajasthan—were closed on the second day and those for the remaining three—Kerala, Madhya Pradesh and the Punjab—on the third day, that is today. Five State loans were oversubscribed, as per following details:

(In crores of rupees)

State	Amount invited	Amount offered	Percentage of allotment
U.P.	9.00	11.81	81
Mysore	6.00	7.94	83
Maharashtra ..	12.50	15.07	89
Gujarat	6.00	7.11	92
Orissa	7.00	8.15	94
Total ..	40.50	50.08	..

Subscribers who had asked for Rs. 10,000 and below have been given full allotment.

The loans of the remaining nine States were, it is said, "fully subscribed." This means that allotment will be in full to all the subscribers to these loans. Subscriptions to West Bengal and Bihar issues amounted to Rs. 7.03 crores and Rs. 4.36 crores, as against Rs. 7 crores and Rs. 4 crores, respectively, the amount invited.

Full details of the results of conversion of maturing loans into new loans are not available at the time of writing; those available are as follows:

(In crores of rupees)

State	Amount maturing	Amount converted	Balance payable in cash
Maharashtra ..	7.99	2.09	5.90
Uttar Pradesh ..	1.86	0.50	1.36
West Bengal ..	1.75	0.73	1.02

All the applicants for conversion have been given full allotment.

It will be noted that only a small fraction of the maturing loans have been converted, leaving the major portion to be paid in cash. This tendency is not in consonance with the trend of overall response to the new loans.

The conversion results of Madras and Madhya Pradesh, having maturities of the order of Rs. 3.01 crores and Rs. 1.02 crore respectively, are not available at the time of writing. There is, however, no reason to think that they will have fared better than the others.

The preoccupation of the money market with the State loans requiring Rs. 93.50 crores—the total amount offered has been nearly Rs. 105 crores—led to temporary stringency in the call money market, with the inter-bank call rate jumping up from 1½ per cent before the lists opened to 3½ per cent thereafter. Even today, that is, after 12 States had closed their lists, the call rate stayed at 3½ per cent, with lenders scarce. Some banks are actually said to have borrowed from the Reserve Bank in order to ease their position.

The short-term money market was comfortable in all other respects. Trade and industry had no difficulty in getting their needs of bank credit satisfied. Nor was there any change in the rates of interest on short-term deposits, with the ceilings under the inter-bank agreement holding good.

In the Gilt-edged market, there were some offerings. Among the Central loans, 3 per cent 1970-75 lost 15 nP to quote at Rs. 89, 3½ per cent 1967 5 nP at Rs. 93.85, and 3½ per cent 1974 65 nP at Rs. 98.50. Among the State loans, 4½ per cent 1972 issue of U.P., Mysore, Madras, Kerala and Orissa had sellers, all losing 25 nP in their value.

FURTHER RISE IN TIN

(From Our Own Correspondent)

CALCUTTA, 28*th August*

This week's trading in the local metals market was featured by a hardening trend in the price of tin. Lead was unchanged, while copper scrap was quiet. On the London Metal Exchange, tin improved following further purchases by the buffer stock manager. The spot metal opened at £849½ a ton and rose to close firm at £851¼. The same

GOLD: RS. 151.51 PER TOLA

(From Our Own Correspondent)

BOMBAY, 29*th August*

Another new all-time peak was reached by gold in the bullion market this week which had only four working sessions, as it remained closed on Thursday (*Krishna Janmastami*) and Friday (as a mark of respect to the memory of Mr. W. R. Natu, Textile Commissioner, who passed away on Thursday). Today, ready gold was quoted at as high as Rs. 129.90 per 10 grams or Rs. 151.51 per tola, as against Rs. 128.05 on the 22nd inst. Bull support was well sustained, thanks to excellent offtake at upcountry centres and seizure of contraband arrivals in Bombay estimated at 7,000 tolas on Wednesday last week and 700 tolas today. There was also large-scale bear-covering by parties who had sold heavily immediately after the Union Finance Minister's statement that the Government was planning to mobilise gold hoardings. The daily average arrivals and offtake were both the same—4,670 tolas, as against 6,250 tolas last week.

The premium commanded by ready gold over the forward (*Bhadrapad*) increased from 80 nP on Wednesday last week to Re. 1.05 today when the *Bhadrapad* settlement stood at Rs. 128.50, as against Rs. 126.85.

In sympathy with gold and on hopes of better demand, silver registered further gains. Ready silver advanced from Rs. 216.15 to touch a high of Rs. 218.90 today. At this level, it was quoted at a discount of 35 nP under the *Bhadrapad* settlement—the actual discount last week-end was Re. 1.10—which rose in the course of the week from Rs. 217.25 to Rs. 219.25. The average daily offtake of silver was higher at 6 bars, as against 5 bars, while arrivals were unchanged at 21 bars.

Business in the *Margashir* settlement in gold and silver is due to commence on Friday the 31st inst.; the Bombay Bullion Association has already obtained the sanction of the Forward Markets Commission. The conditions governing the new settlement are similar to those applicable to the existing (*Bhadrapad*) settlement.

The dollar price of gold in the London bullion market, which had gone up successively in the past two weeks from $35.11½ to $35.13 per fine ounce, declined this week to $35.11⅞. Ready gold, however, improved further from 250*s.* 7½*d.* to 250*s.* 8½*d.*, owing to the easiness of the pound sterling *vis-a-vis* the dollar. Both ready and forward silver scored handsome gains, the former rising from 92*d.* to 94½*d.* and the latter from 92½*d.* to 95*d.* The gains followed the increase in silver price at New York, from 109.25 cents to 110 cents, due to heavy demand from domestic refiners and the Continental interests.

The following table shows the trend of prices during the week under review:—

	29-8-62 (closing)	High	Low	22-8-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine) ..	129.55	129.90	127.80	127.65
*Bhadrapad** ..	128.50	128.85	126.75	126.85
Sovereign	98.00	98.00	97.50	97.75
SILVER				
Ready (.996 fine)	218.90	218.90	216.85	216.15
Bhadrapad† ..	219.25	219.25	217.40	217.25
London—				
Gold	250*s.*8½*d.*	250*s.*8½*d.*	250*s.*7½*d.*	250*s.*7½*d.*
Silver Ready ..	94½*d.*	94½*d.*	92½*d.*	92*d.*
Silver Forward	95*d.*	95*d.*	92¾*d.*	92¾*d.*
New York—				
Silver	110.00 cents	110.00 cents	109.25 cents	109.25 cents

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

quotation was available for the three-months' delivery. The announcement from Washington that the weekly releases of tin from the national stockpile for disposal in the open market would be only 200 tons as against 300 tons planned earlier also influenced the sentiment in London. The General Services Administration proposes weekly releases for the first six months to commence with. At the end of this period, the situation *vis-a-vis* the world market trends would be reviewed and further releases would be regulated accordingly. Besides, at the end of the six months, the U.S. State Department would consult foreign producers and the International Tin Council on the policy to be followed for further releases. It was announced in Washington that, although the maximum release a week would be 200 tons only, about 160 tons only would be available to the commercial market. At this rate, it is expected that the time required for selling 50,000 tons would be more than five years.

In Calcutta, tin opened at Rs. 2,224.25 per 100 kgs. and, after improving to Rs. 2,273.50, closed firm at Rs. 2,263.75. There was good demand, but supplies were limited. The trade is keenly awaiting the Government of India's import policy statement next month. In his recent address to the Varnasi Brass Merchants' Association, the Union Minister for Industry, Mr. N. Kanungo, stated that by the middle of next month the Government would have reviewed the foreign exchange position and would be ready with measures to ease the acute shortage in non-ferrous metals. He also said that it was expected that imports would be maintained at last year's level.

Spot copper was firm at £234 a ton in London. The trend in Calcutta was easier, and this week's small fall in the price of copper scrap was a step towards equilization of quotations in India with those in the foreign markets. The easiness was also due to the quota allotments to actual users and also to the expectations of relaxation in the import quota now that the foreign exchange crisis has been less acute. According to the figures released by the U.S. Copper Institute, world stocks of copper at the end of July with mines and awaiting disposal amounted to 324,691 tons, showing an increase of 32,561 tons over the previous month. Production of refined copper during the month was higher at 174,675 tons as against 145,341 tons in June 1962. Stocks with the U.S. mines at the end of July were 100,517 tons as against 69,838 tons in June. These figures no doubt indicate that copper production in the world is in excess of consumption.

Electrolytic zinc,in Calcutta closed lower at Rs. 283.50 per 100 kgs., as against the opening level of Rs. 297.25.

COTTON FUTURES RISE FURTHER

(From Our Own Correspondent)

BOMBAY, 29*th August*

Cotton futures looked up again this week on short-covering induced by fears of damage to the crop in Berar and Khandesh, as also due to the general belief that there would be some inevitable delay in the arrivals of new season crop. Firm spot advices continued to act as a bullish factor. Enthusiasm to follow the rise in prices was lacking, as, at higher levels, the erstwhile buyers themselves were sellers. The tone at close, however, was fully firm. As against the previous week's closing level of Rs. 737, Jarilla March opened at Rs. 740.75 on Saturday the 25th inst. and, after declining to Rs. 739.75, rose to Rs. 744.50—the lowest and highest levels of the week, respectively—on that day. Thereafter, it moved narrowly both ways to close six points higher over the week at Rs. 743. Trading was dull and turnover limited, as the market was closed on three days during the week—on Thursday (*Janmashtmi*) Friday (due to the demise of the Textile Commissioner, Mr. W. R. Natu), and Monday (as a mark of respect to the memory of the late Mr. Venilal N. Patwa, a Director of the Association).

Activity in the spot market was limited for want of adequate supplies. The tone was firm. Mills lifted the available choice quality indigenous cotton, but the demand for imported growths was not broad and the import section, therefore, displayed an easy tendency.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.:

Bhagalkot Co2 1,525, Dhulia Co2 1,610, Karmala Co2 1,620, Amravati 1,280 f.o.r. Ahmedabad, Bijpur Laxmi 1,190, Ganganagar 700-k/720-k, Sudan XG3L 1,355 c.i.f. January, Sudan G2L 1,731 c.i.f. January. Pakistan NT new 1,090 c.i.f. September and American ready 1,300.

Mr. Manubhai Shah, Minister of International Trade, told the Lok Sabha on the 27th that the creation of a buffer stock in cotton would be possible only when indigenous production had risen appreciably.

The State Governments have been requested by the Union Ministry of Community Development, Panchayati Raj and Co-operation, to take measures to provide co-operative marketing and processing facilities in the new areas under river valley projects which would become available for cotton cultivation. According to a special Sub-Committee appointed by the Indian Central Cotton Committee for considering proposals for intensification of cotton cultivation, the total new area that is expected to come under cotton cultivation in the river valley projects and rice fallows is estimated at nearly 2.13 million acres. Of these, 730,000 acres are in Punjab, 350,000 acres in the Nagarjuna Sagar area of Andhra Pradesh, the other States being Rasthan, Madhya Pradesh, Orissa and Madras. Many of these areas will be new to cotton cultivation and marketing and processing facilities may have to be provided to enthuse the cultivators to take to cotton in the initial years. It has, therefore, been pointed out to the States that the development of marketing and processing of cotton on a co-operative basis in these areas will offer a significant potential which should be fully utilised.

As the estimated production of cotton during 1961-62 was only 4.63 million bales, as against the third Plan target of 7.0 million bales, the Union Ministry of Food and Agriculture has conveyed to the States a number of suggestions for intensification of the programme of cotton production. It has also been suggested that the State Governments might demarcate the principal cotton growing tracts and take up intensive development in these areas on the lines of the package programme. The Ministry of Community Development and Co-operation has suggested that the State Co-operative Departments should obtain the requisite information from the Agricultural Departments regarding these specific areas and take early steps to strengthen the co-operative marketing institutions there for the marketing and processing of cotton.

The Karachi cotton market was easy this week, with the futures January contract closing at Rs. 73.70, as against Rs. 75.30 a week ago, and the March contract finishing at Rs. 73.60, as against Rs. 74.90. Some of the spot prices in rupees were: Sind *Deshi* 73.50, Punjab *Deshi* 67.50, 4F Punjab RG 77, Sawginned 81.50 and L.S.S. Punjab RG 80.50.

The New York cotton market was quiet in narrow movements. The news background furnished little or no incentive and lack of demand stemmed primarily from a further easing in the average spot price, quiet export trade and slow conditions in the goods market. The futures contracts closed with minor variations over the week. October finished unchanged at 33.68 cents. December closed a shade lower at 33.79/33.80 cents, as against 33.81 cents a week ago, and so did March at 34.15 cents, as against 34.18 cents. The New York spot price moved down during the week from 35.45 cents to 35.20 cents.

In the Liverpool market, the October delivery slipped down from 23.60 pence to 23.45 pence per lb.

YARNS EASY AGAIN

(From Our Own Correspondent)

BOMBAY, 29*th August*

The yarn market continued to rule distinctly easy during the week under review. Art silk yarns encountered persistent selling induced by the reported sizable arrivals of imported yarn and fears of further large arrivals in view of higher exports

of fabrics. Even the statement of Mr. Manubhai Shah in the Rajya Sabha yesterday (28th inst.) that the Government could not afford to spend more foreign exchange on import of art silk yarn failed to have any effect. Replying to a question as to whether restrictions on imports had severely hit weavers in Madras, he said that there was no difficulty so far as weavers working on cotton yarn were concerned. In the current year, imports of art silk yarn amounting to Rs. 12 crores had been permitted. He stated that he had received representations about the paucity of imports, because there was "continuous pressure of rising demand and the supply is not matching the rising demand."

Among spot yarns, National Rayons 150 Bt. cones 1st grade fell by 29 nP to Rs. 13.46 and 120 Bt. cones 1st grade by 16 nP to Rs. 16.21. South Indian Viscose 150 deniers climbed down from Rs. 13.46 to Rs. 13.20. Centurys 100 deniers declined by 49 nP to Rs. 18.08 and 75 deniers by 55 nP to Rs. 23.52. Amilan yarn (20×1) August contract, however, spurted by Rs. 100 to Rs. 4,800, owing to covering by spots.

Staple fibre yarn (40×2) drifted downward on fears of heavy delivery, against the maturing (August) contract. This contract was done today at Rs. 809, as against Rs. 809 last week-end. October delivery shed Rs. 3 to Rs. 834. Spot Centurys receded by 9 nP to Rs. 8.93. Kohinoors lost 3 nP to Rs. 9.61.

There was no change in cotton yarns which were maintained practically at last week's levels. Business put through was limited. The Textile Commissioner is arranging for the supply of grey yarn to hand-knitting wool processing units which have made representations about non-availability of grey yarn to meet their immediate requirements, according to Mr. Manubhai Shah. A scheme for the regular supply of yarn to these units is proposed to be introduced.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	29-8-1962	21-8-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
August	4,800.00	4,700.00
Nat. Ray. 150 Bt. 1 (per kg.) ..	13.46	13.75
Nat. Ray. 120 Bt. 1 (per kg.) ..	16.21	16.37
Staple fibre yarn (40×2)—		
August	809.00	812.00
October..	834.00	837.00
Kohinoor (per kg.)	9.61	9.64
Century	8.93	9.02
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.25	18.25
32s Madura	30.00	30.00
40s Gokak	36.50	36.50
60s Finlay	73.50	73.50
80s Madura	81.00	81.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

GOOD CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, 27*th August*

Arrivals of kips in the local market this week from the tanneries were of fairly good, and the clearance kept pace with the arrivals. Prices were steadier than last week. Shipment business was difficult to conclude because most of the tanners were holding firm to their price ideas and were not inclined to follow importers counterbids. Small business was put through in the heavy weight cowhides for shipment to the East European countries, which lent some strength to the market. The U.K. importers also took some quantities of the inferior fifth cowhides. Inland demand for low grade cowhides continued brisk.

In the tanned goat skins section, tanners were quoting high prices for the top grades in good marks for which demand was good. Lower grades in secondary marks were sold to the Continent in small quantities at good prices. American buyers were not in the market yet. As regards sheep skins, demand for middle class tannages was brisk at firm prices, but for other classes it was restricted. Inquiries for suedes selection from the Continent were in evidence and these are expected to mature into orders within a week or two.

In the German skins auctions, only 40 per cent of the tanned goat skins on offer found buyers and that too at 3*d.* to 6*d.* lower than the current levels, while sheep skins met with little or no response.

GROUNDNUTS STEADY

(From Our Own Correspondent)

BOMBAY, 29*th August*

Oilseeds and oils suffered a setback in values later in the week after staging a smart rally in the earlier sessions. The setback was so sharp as to erase the initial gains completely. Groundnuts, however, proved an exception, in that they continued to receive bull support, induced by firm spot advices. There was persistent squeeze by crushers who feared a shortfall in 1962-63 crop. Note was taken of reports from Saurashtra suggesting pest attack in certain groundnut-growing areas. Hopes of new export quota for groundnut oil, too, imparted strength. Indeed, but for apprehensions regarding official intervention to check an undue rise in prices, as hinted at by Mr. G. L. Nanda, Union Minister for Planning in the Parliament, groundnuts would have gone up still further.

Controls on exports of some oils and oilcakes have been removed, according to an announcement by the Joint Chief Controller of Exports. The measure covers cottonseed oil, kardiseed oil, nigerseed oil, salad oil, sesame oil, and oilcakes (other than groundnut expeller cake, deoiled groundnut meal—solvent extraction variety having less than 1.5 per cent oil content—linseed cake and coconut oilcake).

The Government of India has decided to raise the third Plan production target for oilseeds from the present level of 9.4 million tons. This decision did not, however, have any effect on the market.

Groundnut September 1962 contract spurted from Rs. 240.75 to Rs. 249.50, before declining to Rs. 247.75. The net gain over the week was Rs. 7. January 1963 contract rose from Rs. 226.50 to Rs. 234.50 but today it was lower at Rs. 231.87. Nizam bold improved by 75 nP at Rs. 49.50 and Coromandel by 50 nP at Rs. 50.50. Oil January 1963 contract gained 55 nP to Rs. 31.70. Oil railway receipts gathered 45 nP to Rs. 19.90 and ex-mill 25 nP to Rs. 20.15.

Castorseeds September 1962 contract fell by 50 nP to Rs. 165.75. Ready Madras eased by 25 nP to Rs. 33. Oil B.S.S. shed 10 nP to Rs. 13.40. But oil commercial picked up 5 nP to Rs. 12.65.

Among linseeds, September 1962 contract lost 56 nP to Rs. 39.94. Bold ready finished lower at Rs. 39.75, as against Rs. 40. Linseed oil declined by 5 nP to Rs. 16.70.

Cottonseed September contract fell by Re. 1.50 to Rs. 102. Both non-white and Berar declined by 5 nP each to Rs. 22.20.

The following table shows the closing prices of oilseeds and oils on Wednesday, 29th August, as compared with those of the two previous weeks:

	29-8-1962	22-8-1962	16-8-1962
Groundnut	Rs.	Rs.	Rs.
September 1962	247.75	240.75	240.00
Groundnut January 1963 ..	231.87	226.50	228.37
Nizam bold	49.50	48.75	49.00
Khandesh quality	50.50	50.00	49.75
Oil ex-mill ready*	20.15	19.90	20.00
Railway receipts*	19.90	19.45	19.80
Castorseed			
September 1962	165.75	166.25	169.75
Castorseed March 1963 ..	168.75	167.00	168.25
Ready Madras	33.00	33.25	34.12
Ready Kanpur	31.75	32.25	32.75
Oil B.S.S.†	13.40	13.50	13.95
Oil commercial†	12.65	12.60	12.90
Linseed			
September 1962	39.94	40.50	40 94
Bold ready	39.75	40.00	40.62
Oil ready†	16.70	16.75	16.80
Cottonseed September 1962	102.00	103.50	104.50
Cottonseed January 1963	103.50	103.00	103.00
Niger seed	38.50	37.75	38.00
Kardi seed	28.50	28.00	29.00

* Rates include excise duty but exclude sales tax

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

QUALITY TEAS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 28*th August*

Quality teas were in keen demand during the export sales held here yesterday, and their prices appreciated. Better support was accorded to dust teas on offer at the internal consumption sales held last week. The change in the pattern of demand is attributed to the decline in the North Indian production so far by 10 million lbs. as compared with the figure for the corresponding period last year. Evidently, those who were anticipating a decline in prices based on earlier estimates of a likely increase in production now think that the prices have reached the bottom levels and that the circumstances are propitious for a rapid recovery.

Concern has been rightly expressed over the rapid fall in India's share in the U.S. market for tea. The total imports of tea by the U.S. amounted to 108.9 million lbs. in 1961; of this India's share was only 23.74 million lbs., while Ceylon's was as much as 41.95 million lbs. In 1960, Indian tea exports to the U.S. were only 19 million lbs. due to high prices. Ceylon's exports to the U.S. touched the peak of 45 million lbs. in 1946, while India's maximum exports to that country have been 39 million lbs. In 1959-60, the quantity of the North Indian tea imported into the U.S. amounted to 16.02 million lbs., but in 1960-61 it was only 13.43 million lbs. However, it improved to 16.38 million lbs. in 1961-62.

Both Ceylon and East Africa are offering keen competition to India in overseas markets generally, and in the U.K. and the U.S. in particular, because of our much higher cost of production. The Minister for International Trade, Mr. Manubhai Shah, told the Lok Sabha recently that India's share in the U.S. and Canadian markets fell in the 1953-60 period and while since then the exports to the U.S. had gradually improved, those to Canada had been almost static at around 45 million lbs. a year.

It may be noted that, in 1948-49, India's tea exports to the U.S. totalled 23.32 million lbs. and Ceylon's 26.43 million lbs.; a lead of 3.21 million lbs. for Ceylon over India. But, in 1961, Ceylon exported to the U.S. 41.95 million lbs., taking a lead over India of 18.21 million lbs. In other words, India's exports remained unchanged, while Ceylon made considerable progress and captured a good portion of the increase in the American consumption. The trade and industry strongly feel that this is a point which should catch the immediate attention of the Union Finance Minister. Unless early fiscal reliefs are accorded to the tea industry, its ability to expand its share in overseas markets is almost ruled out. While overseas markets are expanding the Indian industry has to be a silent spectator to the aggressive sales campaigns of other producing countries, the cost of production and the taxation structure in which are decidedly advantageous to the industry. While the recent concessions given to the industry in India have indeed been gratefully acknowledged, it is pointed out that more is required to be done to place the industry on a competitive position with other producing areas.

Exports from North India totalled only 364 million lbs. in 1961-62 (July-June), marking a small gain of 12 million lbs. over the year 1960-61, when exports were generally lower due to high prices and a lower output. In 1959-60, exports were higher at 369 million lbs. The trade has noted cheerfully that exports of tea from India to Germany, France, the Netherlands, Italy and Ireland have gradually increased in recent years. Since with the proposed entry of the U.K. in the Common Market—of course, this subject is now hanging like the sword of Damocles—it has been provisionally agreed by the European nations that the common tariff on tea should be abolished, prospects for a striking increase in the exports to these countries are bright.

Dusts on offer at the internal sale held here last week totalled 29,340 packages. Good demand was in evidence and the non-wither legg-cut dusts were the strongest feature and appreciated in prices. Good support was accorded to C.T.C. dusts, and the bright liquoring and fibrous secondary teas were fully steady. Good C.T.Cs were dearer. Plain orthodox teas eased by 10 nP., while Assam dusts were better. Darjeelings were a poor market. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 6.90, medium Assam C.T.C. dust 5.50 to 6.10, medium Assam dust 4.60 to 5, legg-cut dust 4.20 to 4.60 and plain orthodox dust 3.20 to 3.50.

The keen competition for the best tippy teas evidenced was a feature during yesterday's export sales, when the total quantity on offer amounted to 60,352 packages. Generally, prices followed an irregular pattern, with quality teas rising further and the inferior stuff declining. Other tippy teas had a week market. Plain orthodox teas were fully steady and improved, while the better liquoring grades eased on selective inquiry. This led to some withdrawals. But fannings were fully firm. Selected C.T.Cs met with good support, but others eased. Legg-cut teas were pushed up. There were some withdrawals in whole leaf grades, while the plainer varieties met with a strong demand. The quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings 7 to 8, medium Assam C.T.C. fannings 5.40 to 5.90, best Assam C.T.C. B.P. 7 to 8, medium Assam C.T.C. B.P. 5.40 to 5.90, clean plain pekoe 4.10 to 4.50, plain fannings 3.60 to 4.10 and plain B.P. 3.40 to 3.80.

HIGHGROWN TEAS STRONG

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 23*rd August*

Export sale No. 33 was held on the 21st inst., with offerings amounting to 691,090 kgs. A few Nilgiri invoices showed improvement in quality, while others showed a slight decline. The market met with fair demand. Brighter and cleaner mediums were well supported and these were fully firm to dearer, especially their fannings whereas others and plainer sorts were in less demand and declined by up to 10 to 20 nP. Good mediums brokens received useful support and sold at around last rates. Similar fannings were better supported and in some cases were dearer. There was strong inquiry for highgrowns but the prices realised for these were ir egular. The best invoices realised useful prices, while the lesser kinds were irregular and a few teas where quality showed a decline realised lower prices. Clean black leaf descriptions were steady, with their fannings receiving more support. Unorthodox descriptions met with less demand than of late and were irregularly much easier. Whole leaf grades were in less demand and generally sold at lower rates whilst tippy teas were strong.

The quotations (per kg.) were:

	1962 Rs.	1961 Rs.
Low mediums	3.30-4.20	4.40-4.50
Mediums	4.20-4.45	4.40-4.55
Good mediums	4.55-5.50	4.55-5.10
Nilgiri B.O.P.	4.40-7.70	4.70-6.50

The average price realised in sale No. 33 was Rs. 4.43 per kilo as against Rs. 4.42 a week ago and Rs. 4.75 in the corresponding sale last year.

In dust sale No. 33 held today, 310,000 kgs. were offered. The market met with strong general demand. Low mediums and mediums were well supported and were irregularly fully firm and sometimes dearer. Wynaad descriptions, particularly the colourv ones, were strong and sold at rates above last. Good mediums met with strong demand at firm rates. Milled and residuals shared the upward trend of the market. Highgrowns were well supported and are quoted steady. Clean black grainy descriptions sold readily. True C.T.C. dusts were about steady, while other unorthodox types met with keen competition and were mostly dearer.

The average price realised in sale No. 33 was Rs. 3.41 per kilo as against Rs. 3.39 a week ago and Rs. 4.77 in the corresponding sale last year.

Colombo : There was good general demand. Uvas were irregularly dearer. There was strong competition for Western brokens which were 10 to 15 cents dearer and sometimes more. Mediums were also dearer by 5 to 10 cents. Lowgrowns, however, tended a little easier. Offgrades were generally dearer, while dusts were fully firm.

London : North Indian and other growths : There was a strong market on Monday. New season's Assams, Dooars and bright liquoring Africans were steady. Poor leaf sorts were a little easier.

Ceylon and South Indians : 32,945 packages were offered in Tuesday's sale of which 5,141 packages were from South India. There was limited demand. Ceylons were generally easier by 1*d.* to 3*d.*, excepting the best liquoring kinds. South Indians were irregular with fannings receiving better support.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows :

"*Sale No.* 34 : 755,000 kgs. offered. Fair demand. Low medium and mediums generally 10 to 15 nP easier. Good mediums barely steady. Highgrowns irregular, sometimes dearer with quality. Unorthodox better, demand at lower prices."

JUTE GOODS WELL MAINTAINED

(From Our Own Correspondent)

CALCUTTA, 28*th August*

Reports of flood and consequent apprehensions of widespread damage to the jute crop in Assam and Pakistan districts led to steady conditions in the fibre market during the week under review, though, thanks to the anxiety exhibited by sellers to find buyers attributed to fears of imminent price revision, prices did not improve. The volume of business for export being good, prices of goods were well maintained. Shipments during the week were satisfactory. Reports from the New York burlap market were not quite encouraging, and prices there tended downwards, as purchases were confined to cover the day-to-day requirements of users who hoped

THE INDIA CEMENTS LIMITED

(*Concluded from page 366*)

glad to inform you that the entire issue was oversubscribed. The Directors had reluctantly to refuse full allotment of additional shares applied for by members.

"I am glad to inform you that the Sankar Institute of Polytechnic has recently moved into its own building near your factory at Talaiyuthu. The new building was declared open by Mr. R. Venkataraman, Minister for Industries, on 17th June 1962. The new building has been well planned and designed to meet the growing needs of the Institute.

Technical School

"A Junior Technical School has also been started from this academic year as an adjunct to the Polytechnic. The School is at present housed in temporary quarters, but plans have been approved to construct necessary buildings and workshops for the School in the Company's lands near the Polytechnic.

"Your Directors decided that there should be a *pucca* hospital, with 50 beds, at the factory area in Talaiyuthu to cater to the medical needs of the staff and employees of the Company. The first phase of construction is over and the hospital will be complete in all respects in the next one year's time.

"Government has large programmes under community development schemes. I would only like to mention in this connection that the starting of industries away from urban areas does, in fact, create opportunities for large-scale employment, in the wake of which schools, technical training centre, hospitals, etc., spring up, thereby creating a well-contented community. With each such industry, the community is developed. Your Company has contributed in a large measure towards this achievement of ideal community development.

Labour Relations

"I am indeed happy to report that our relations with the labour at our factory and the staff at the head office continue to be very cordial as usual. I take this opportunity both on your behalf and on my own behalf, to tender our thanks to all the employees of the Company for their unstinted co-operation and hard work during the year. The Company looks forward to their continued loyal and devoted service and co-operation in the years to come.

"I thank you all, ladies and gentlemen, for the indulgence you have shown and the patient hearing you have given. I am afraid, I have taken a little longer time, but I thought it my duty to present to you all these facts."

N.B.—*This does not purport to be a report of the proceedings.*

MARKET REPORTS

(*Concluded from page 385*)

that prices would decline. This caused the duty-paid 10 oz. hessian to ease from 13.65 cents per yard to 13.55 cents and the 7½ oz. hessian from 10.10 cents to 10 cents. The news that U.S. burlap consumption in the month of July increased by 2 million yards to 63 million yards was noted with satisfaction. As compared with July 1961, consumption was higher by 7 million yards. The monthly average so far has been 73 million yards or 10 million yards higher than the corresponding previous period. This comparison should be read against the background that U.S. consumption was abnormally low last year. At 45.8 million yards and 17.6 million yards, last month's bag cut-up and piecegoods deliveries were higher by 7 million yards and 0.4 million yards, respectively. The higher consumption was duly reflected in U.S. stocks falling by 4 million yards to 237 million yards at the end of July.

Note was taken of the threat of strike by jute mill workers in Pakistan. Lower wages and cheaper fibre have made it possible for Pakistan manufacturers to undercquote Indian prices and thus divert business from Calcutta to Dacca. The Pakistan Jute Mills Workers' Federation has submitted a 10-point charter of demands and unless this is met by 3rd September, workers would resort to strike. The Pakistan mills are at present unable to make export offerings, since their order books are completely filled for months to come. As a result, much business that should have normally gone to the Pakistan mills is being attracted to Calcutta. However, it should be noted that Pakistan has launched on a big expansion scheme of production in mills and it is thought that, within two to three years, the mills across the border would have increased production consistent with demand. Against such a background, the prospect of an increase in labour charges should restrict one of the advantages which enable the Pakistan mills to offer unfair competition against Indian mills.

During the week, U.S. buyers were more active than previously, and this indicated that they had commenced buying against replenishment of stocks. About 1,000 bales of hessian were bought on behalf of Argentina against August shipment. It was believed that Argentina has yet to buy about 5,000 bales in order to complete August shipments; but the delay in opening letters of credit consequent on the foreign exchange difficulties which that country is experiencing has caused an initial setback in the purchasing programme. In heavy goods, Australia accorded moderate support, and indications were that that country would lift as much as 9,000 bales before the end of September. This seems likely, as reports have indicated that Australian farm output this year would be substantially higher than last year. Australian purchases of cornsacks were for September shipments and of woolpacks for shipment up to November. Interest on behalf of West Africa pleased the market, as if the expected business materialised heavy goods would before long be a short commodity, and possibly a portion of the hessian looms would have to be switched back for the production of heavy goods. Cuban interest was also lively during the week, and purchases were completed in respect of two steamers expected to sail early in September. Also forward deals were put through. Buyers, too, were active on behalf of South American countries and East Africa for immediate shipment. The Sudan was expected to lift 15,000 bales of grainsacks for October shipment.

On Tuesday last, the feature in the goods section was some short-covering in nine porter hessians; other constructions were also the subject of foreign inquiries. However, since business actually put through was inadequate, ready hessian 40" 10 oz. declined from Rs. 54.00 to Rs. 53.80. Heavy goods were a dull market, and ready B. twills gave way from Rs. 122.25 to Rs. 122.15. The earlier part of Wednesday evidenced listless conditions, but, as prices fell, more interest was accorded and covering business took place on a good scale. Also, activity in the futures market was keener. Thus, ready B. twills at Rs. 121.10 made good a portion of the decline earlier in the day. Ready hessian 40" 10 oz. finished at Rs. 53. The market remained closed on Wednesday on account of *Janmashtami*. On reopening on Friday, there was very little of note excepting some scattered business. Ready B. twills recovered to Rs. 121.25 and hessian 40" 10 oz. was unchanged at Rs. 53. Over the week-end, overseas buyers showed interest in both hessian and heavy goods. The U.S. lifted a fair quantity in hessian and there were indications of greater support from that country in the coming weeks. As a result, ready hessian 40" 10 oz. scored to Rs. 54.25. Overseas inquiries for heavy goods were received from several countries and, over the week as a whole, business done was substantial. This realisation on the part of the market put up B. twills to Rs. 122.75 over the week-end. Conditions were fully firm yesterday, as the market was buoyed to excitement following limited delivery in respect of settlement of August futures contracts. This aided ready B. twills to score to Rs. 125.50 and ready hessian 40" 10 oz. to Rs. 55. In futures trading, November B. twills rose to as high as Rs. 123.20 after opening at Rs. 121.50.

The fibre market was steady. However, mills displayed greater interest in middles than in lower assortments. The latter was freely available at discounted rates. The report that the revision of minimum prices was being considered was circulating, and this restricted actual business. On behalf of the industry, it has been pointed out that, since prices of goods are determined by the extent of demand from foreign markets, a rigid system of prices cannot be applied to fibre. When the ruling minimum prices were fixed last year, prices of goods were far higher than existing levels, and this circumstance alone would justify a downward revision of the minimum prices. Further, it is believed that the cost of production for cultivators is much lower than generally believed and represented. When early last year there was a fibre famine, cultivators reaped a good fortune, and there has been a tendency on the part of cultivators' organisations to compare the existing prices with those of that time. It is believed that the Government of India has not yet been fully convinced of the arguments for a revision of the minimum prices. However, the Government thinks that it is not necessary to resume purchases by the Buffer Stock Agency at present and that the revival of the issue of the weekly purchase quota by the L.J.M.A. would be sufficient to support prices. The L.J.M.A. has already started issuing the weekly purchase quotas to mills.

This week's steadiness in prices should also be attributed to reports of damages to crop as a result of floods in Assam. Heavy rains have also curtailed movement of the new fibre. The quotations for September-October. delivery remained unchanged as follows: Daissee bottoms Rs. 32.00, Assam bottoms Rs. 30.00, and northern bottoms Rs. 29.50. Reports of floods from several jute districts in East Pakistan are of a greatly alarming nature and, if damages to crop have occurred as apprehended, the carry-over to next season would be nil.

BEARISH TREND IN FOODGRAINS

(*From Our Own Correspondent*)

HAPUR, *27th August*

Fairly good rains all over North India after the long dry spell, which have brightened the *kharif* crop prospects, accounted for a bearish trend in the foodgrains market here this week. Stockists were said to have sold liberally, and arrivals of new maize also commenced.

Wheat prices declined during the week by 67 nP. to Rs. 1.34 per quintal according to quality on slack demand in the face heavy stock position. The average quality was quoted at Rs. 40.87 and the farm between Rs. 42.87 to Rs. 44.88. Red wheat stood at Rs. 39.52. Arrivals were at an average of 200 to 300 maunds daily and stocks stood at 66,000 maunds. Rice basmati was quoted higher due to inadequate rains in some of the producing areas and its prices were marked up by Rs. 2.67 to Rs. 5.34 per quintal. Prices of the mainpuri quality also ruled steadier. Arrivals from mainpuri side were small and stocks left were poor. Week-end prices were:—Rice basmati superior Rs. 85.74 to Rs. 101.82, sela basmati Rs. 80.38 to Rs. 88.41, mainpuri Rs. 58.94, inferior Rs. 57.60, ramajwayan Rs. 64.30, raimunia Rs. 66.98 and gadda Rs. 52.92 per quintal.

Gram eased fractionally due to easy advices from Punjab and slack demand. The prices declined by 32 nP. to 67 nP. per quintal. The Punjab quality was quoted at Rs. 43.54 and the local variety at Rs. 42.87 per quintal. Arrivals were poor and the local stock was put around at 17,000 maunds. Arrivals of new maize were small and lifted at Rs. 34.83 by consumers, but old maize prices declined slightly and were quoted at Rs. 28.13 to Rs. 29.47. Barley and bejhar prices were stationary at Rs. 29.47 and Rs. 28.13 to Rs. 29.47, respectively. Stocks were poor at 10,000 and 5,000 maunds, respectively. Juwar ruled quiet and guwar prices declined on slack demand. Methi, however, sought higher levels. Other coarse grains were listless. Week-end prices were:—Juwar Rs. 45.55 to Rs. 50.91, guwar Rs. 38.85, methi Rs. 58.94, bajra Rs. 37.51, maize Rs. 28.13 to Rs. 29.47, new Rs. 34.83, and oats Rs. 29.47 to Rs. 30.81 per quintal.

In pulses, peas declined by 67 nP. to Rs. 1.34 per quintal according to quality. Dara was quoted between Rs. 32.82 to Rs. 33.49 and farm between Rs. 34.83 to Rs. 35.50. Peas dal was quoted at Rs. 37.51. Arrivals were poor and local stocks declined to 65,000 maunds. Arhar prices also eased by Rs. 1.34 and were quoted between at Rs. 52.25 to Rs. 57.60. Stocks were stationary at 7,500 maunds. Urd prices also ruled easy. Masoor prices eased slightly. Moth was listless. Week-end prices were :—Urd Rs. 80.38, urd dal Rs. 91.09, moong Rs. 50.91 to Rs. 53.58, moong dal Rs. 58.94 to Rs. 60.28, masoor Rs. 48.23 to Rs. 53.58, masoor dal Rs. 57.60, moth Rs. 40.19, moth dal Rs. 48.23, gram dal Rs. 49.57 and arhar dal Rs. 66.98 to Rs. 72.34.

INFERIOR SUGAR MARKED UP

(*From Our Own Correspondent*)

HAPUR, *27th August*

Sugar prices continued firm here this week on brisk buying support from Punjab, Delhi, Rajasthan and local centres. Bright export prospects also were a bullish factor. Improvement was more pronounced in the inferior C, D and E qualities. Prices of bold crystal also rose in sympathy. Mill delivery prices improved by about one rupee per maund to touch new peak levels. Week-end prices were :—Spot delivery, wholesale Rs. 112 (per quintal), retail Rs. 1.09 per seer; mill delivery (per maund) (D 29) Amroha Rs. 40.87, Dhampur Rs. 41, Seohara Rs. 40.87, Meerut Rs. 41.44; (E 29) Simbhoali Rs. 41.50, Bijnore Rs. 40.81 and Dhampur Rs. 40.87.

After earlier firmness, sugar prices reacted slightly in the Muzaffarnagar market during the week owing to slack demand from Delhi and consuming centres of the Punjab at the present high levels. Mill delivery prices rose earlier by 12 nP. to 44 nP. a maund on brisk demand from Punjab and Delhi. Later, prices reacted modestly by 6 nP. to 19 nP. a maund, but the tone at the close remained firm. Forward transactions for the September quota were concluded at higher prices. Spot sugar prices recorded gains of one rupee to Rs. 1.25 a quintal on good buying support influenced by the sharp rise in the mill delivery prices, but later eased by 50 nP. per quintal, as demand tapered off. Mansurpur C 29 and D 29 were both quoted at Rs. 112 a quintal. Deoband D 29 was also quoted at Rs. 112. Retail prices improved by 16 nP. to Rs. 1.16 per seer.

Sugar prices also declined in the Kanpur market due to heavy arrivals and poor offtake. Sugar D 29 was quoted lower by a rupee at Rs. 108/109 a quintal in the spot sections, while ex-mill prices ranged from Rs. 106.50 to Rs. 108. Nervous selling by a section of the trade following weaker advices from Saurashtra and Maharashtra also weakened the sentiment.

Khandsari ruled firm in the face of depleting stocks and on good demand from the Punjab and Rajasthan. Noncrystal *khandsari* was quoted from Rs. 37.50 to Rs. 40.50 a maund, while *khandsari* boora fetched Rs. 39 to Rs. 40 a maund. Crystal boora prices declined by 25 nP. to Re. 1 a maund to be quoted at Rs. 40.50 to Rs. 41.62.

Ready *gur* prices touched new high levels, with the stocks being nominal and demand from consuming areas brisk. The week's offtake was two wagon loads to the South. Price at the week-end were :—*Gur* superior Rs. 66.98, dara Rs. 50.91 to Rs. 53.58 and shakker Rs. 72.34. In the Muzaffarnagar market, *gur* chaku prices remained static. *Gur* chaku wet was quoted from Rs. 32 to Rs. 22.25 a maund. Shakker masala and dara were in demand from Punjab and Rajasthan and the prices ranged from Rs. 26.50 to Rs. 27.50 and Rs. 27 to Rs. 28 a maund, respectively.

Gur futures moved both ways during the week on alternate bouts of buying and selling. The *fagun* delivery moved between Rs. 21.68 and Rs. 22.09, before closing the week at Rs. 21.82.

Notice

CALTEX OIL REFINING (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5¼ per cent Debenture Stocks 1966-70 will be closed for transfers from the 17th September 1962 to 30th September 1962, both days inclusive.

R. N. CHETTUR,
Secretary & Treasurer.
State Bank of India,
Agents for Caltex Oil Refining (India) Ltd.,

Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2682 BOMBAY, 8th SEPTEMBER 1962 PRICE Rs. 2

PRIVATE SECTOR AND THE PLAN

THERE was a distinct slow-down in economic growth in the first year of the third Plan. A telling indicator of this slow growth is provided by the currently estimated three per cent increase in national income in 1961-62, as compared with the average annual rate of 5 per cent in the last three years of the second Plan and of 6 per cent envisaged for the third Plan period. How did it happen that the economy failed to maintain the momentum of growth registered in the last few years of the second Plan? There is, of course, one solid explanation. Production of foodgrains in 1961-62 increased only marginally to around 80 million tons from the level of 79.3 million tons in the previous year. Similarly, commercial crops other than jute did not record any very striking increases in output. On the contrary, there was a big fall in the production of raw cotton. But this cannot be the *whole* explanation, for industrial production, too, in the year rose only by about 5 per cent, as compared with about 11 per cent in 1960-61, the last year of the second Plan. It would thus appear that the slow-down in economic growth was due as much to lagging agricultural production as to lagging industrial production.

Which sector was responsible for this failure—public or private? It may be supposed that the failure was that of the private sector covering almost the entire field of agriculture and the larger part of the industrial field. To apportion blame in that manner would be to ignore the crucial dependence of the *private sector* in both agriculture and industry on the *public sector* in irrigation, power generation, industry and transport. The two sectors are now so intertwined that it looks as if both would rise or fall together. To the extent that this was also the state of affairs in the first year of the third Plan, the failure of the public sector to perform as well as it should have done in the crucial or strategic fields spelled simultaneous failure in the private sector too. But let us leave it at that, assuming, for the nonce, that the public sector will set its house in order and see to it that agriculture gets more irrigation facilities, fertilisers, pesticides, etc., and private industry more transport facilities, coal, power, steel, machinery, and so on.

The performance of the private sector in industries does not, of course, depend only on that of the public sector. For the Government's policies and procedures governing the expansion of existing units and the establishment of new units, the allocation of foreign exchange for development and maintenance imports, the arrangements for foreign collaboration, the provision of credit facilities, the retention of some profits for self-financing, and so on, are no less responsible for determining the pace of capital formation and production in the private sector. But this aspect of the matter is one on which all sections of businessmen—big, medium and small—may not have unanimous opinions, because either their respective interests are not wholly identical or they are not affected by the Government's policies in a uniformly identical manner. Still, the approach of the Federation of Indian Chambers of Commerce and Industry, which claims to represent all sections of business opinion, is generally and broadly reasonable whenever there is an official attempt to put the private sector in the dock.

An occasion for defending the private sector seems to have just arisen, judging by the reported vigorous reply of the Federation to the Planning Commission which had stated that the progress in the private sector industries had been uneven and that many essential industries had not come up to expectations. The Federation's reply to the Commission's charge is impressive and cogent. One of the points in this reply is that the delays and uncertainties in the matter of industrial and import licences, which have increased considerably of late, have been responsible for the slow progress in production and actual installation of new capacity in many industries. Some specific instances have been cited in this connection. Firstly, the initial official hostility to proposals from the private sector has been responsible for the lag in fertiliser capacity. A policy decision to sanction capacity in the private sector for nitrogenous fertilisers, it may be recalled here, was taken only late in 1960. Secondly, proposals from private parties for the alloy, tools and special steels industry were kept pending for a long time. It was only in May last year that certain private sector schemes for special steels were cleared by the Licensing Committee, while some more schemes were sanctioned subsequently. Thirdly, the pace of clearance of applications for steel castings capacity has been painfully slow. The capacity so far licensed for this industry is just 200,000 tons, as against the third Plan target of 300,000 tons.

These are probably not the only instances of delay and hesitation in the issue of licences which have set limits to progress in the establishment of new capacity. Available figures show that the process of licensing has slowed down in the last 1½ years, for the new undertakings licensed under the Industries (Development and Regulation) Act were only 682 in the 17-month period October 1960-February 1962, as compared with 536 in the 12-month period October 1959-September 1960. A fuller picture giving up-to-date figures (pertaining to third Plan capacity targets, existing capacity, additional licensed capacity covered by foreign exchange and additional licensed capacity not covered by foreign exchange) for all the 75 organised industries subjected to planned development will probably emerge at the next meeting of the Central Advisory Council of Industries. Pending that meeting, the Federation itself would do well to obtain the relevant data and analyse them for the benefit of the public. Even if it is found from such an analysis that the gap between third Plan target and total capacity licensed has narrowed greatly in all or most industries, that, by itself, may not mean much. For it takes a fairly long time for a project to fructify even in the private sector, because the obstacles to be overcome are many. The more vital factor is foreign exchange, and it is here that the latest position pertaining to additional licensed capacity not yet covered by foreign exchange allocation will show where the private sector stands in its progress towards the third Plan targets.

That the private sector has been in a position in recent years to go ahead with company flotations on a big scale is proved by the figures of aggregate authorised capital of new companies formed. The relevant figures are Rs. 256 crores in 1960-61 and Rs. 202 crores in 1961-62. There has also been a substantial increase in paid-up capital. The relevant figures for public limited companies show an increase of about Rs. 60 crores in each of the two years—1960-61 and 1961-62. Similar up-to-date figures for private limited companies are, however, not readily available. These trends, incidentally, lend substance to the Federation's point that the private sector has demonstrated its ability to raise resources and to implement projects fairly expeditiously.

The Federation has also drawn pointed attention to dilatory procedures in the granting of import licences and to some wrong policy decisions which have flowed from a rigid interpretation of the Industrial Policy Resolution of 1956. As for import licences, applications therefor in the case of licensed wood-pulp projects were kept pending for more than a year. The delay in implementing some other licensed schemes has also been due to uncertainties about the supply of raw materials. As for wrong policy decisions, the reference in the Federation's reply to the decision to produce diesel locomotives in the public sector is noteworthy. Applications for the manufacture of heavy electrical equipment, wool combing plant, petro-chemicals, etc., have been kept pending presumably on the ground that the items concerned are proposed to be manufactured in the public sector. To the delays or hold-ups caused by such rigid policy considerations may be added the long time taken by the Government for approving the terms of collaboration arrangements. No wonder, therefore, that foreign participation in equity capital as well as in overall project financing has been noticeably on the decline this year, having fallen by 50 per cent from last year's level, according to one report. There have been suggestions in the last few days that the Industrial Policy Resolution of 1956 needs to be revised in order to speed up the rate of economic growth. This is a case of misplaced emphasis. What requires to be revised is not the resolution, which is as flexible as india-rubber, but the policy followed in applying it to the various industrial projects. Who will implement a project quickly and cheaply, the private or the public sector? This, indeed, should be the primary consideration in deciding the question as to which sector a project should be allotted. A similar pragmatic attitude is also called for in regard to participation of private capital and import of technical know-how. One has to bear in mind that the galloping population of India, with its aggravating effect on unemployment, underemployment and inflation, will swallow up the powers-that-be if they fail to ensure a high rate of economic growth.

PLANTERS' PROBLEMS

THE speech of Mr. W. C. F. Simmonds, the retiring President of the United Planters' Association of Southern India (U.P.A.S.I.), delivered at the sixty-ninth annual conference of the Association held at Coonoor last week-end, was notable for its brevity and pointedness. Mr. Simmonds did not use any high-sounding words or phrases to highlight the difficulties of planters. Nor did he make a scathing attack against the policies of the Governments, Central and State. Instead, he merely stated the facts about the industry,

with special reference to the tax burden on it. The most important point he made was that there was no conflict in the objectives of the U.P.A.S.I. and those of the Government. Both wanted a plantation industry that was economically sound, so that it could serve well the cause of labour, capital and export promotion. This attitude of Mr. Simmonds evoked a sympathetic response from Mr. Gulzarilal Nanda, Union Minister for Labour, Employment and Planning, who inaugurated the conference. He was quite helpful in his replies. He assured the planters that the Government would provide the industry with the necessary equipment to maintain a high level of quality output at an economic cost, and broadly agreed with Mr. Simmonds' view that there should not be any unnecessary duplication of non-productive work regarding the number of returns required to be submitted to the authorities.

The metaphor used by Mr. Simmonds to describe the economic plight of his industry is very apt. He said: "We have heard a lot about the goose that lays the golden eggs; the poor bird has been overworked." The tax impost in particular is weighing heavily on the industry. The agricultural income-tax alone takes a pretty big slice of the planters' profits—as much as 62 per cent in Kerala, over 50 per cent in Madras and about 45 per cent in Mysore. Besides, the tea industry has to pay the Union income-tax on that portion of the profit which is regarded as industrial. Again, it has to pay a number of indirect taxes. By all means, let the Governments (Central and State) collect their due share of taxes from the plantation industry. But only they must take care to see that the "goose" will not be squeezed so much that either the "egg" laid by it is reduced in size or its quality is poor. In his characteristic way, Mr. Simmonds impressively pleaded for relief in taxation. Here are his words addressed to the authorities:

"Please leave us with enough finance to keep our gardens in good order and enable us to face the future with confidence and stability.

"Please leave us with enough finance to enable us to comply with the onerous requirements of the Plantations Labour Act or lower those requirements.

"Please let us have one tax and one tax collector, instead of the innumerable taxes and tax collectors we have at the moment."

At no time before was the need for tax relief to the plantation industry so pressing as it is today. The industry is required to augment its output (tea, coffee, rubber and spices) considerably in keeping with the continuously expanding domestic demand and to earn for the country as much precious foreign exchange as possible through exports. How can the industry discharge this task when it is finding it exceedingly difficult to keep its production costs within reasonable limits? The difficulty is all the greater because the industry's costs, as Mr. Simmonds said, are governed mainly by inflexible workers' wages, cost of essential supplies and the state of the weather which is unpredictable.

The reduction in tax burden is especially urgent in regard to tea and coffee, the two principal plantation crops that are experiencing stiff competition in world markets. In the case of rubber, the need for tax relief arises from the fact that the commodity is a product of strategic importance and that, to the extent to which its output is raised, there will be considerable saving of foreign exchange that would otherwise be spent on imports. Every 100 metric tons of rubber imported, it may be noted here, involves a foreign exchange expenditure of Rs. 2.76 lakhs. A lot of this exchange can be saved if, as Mr. Simmonds pointed out, sufficient incentive is given to producers to expand and replant. This aspect was recognised by no less a body than the Tariff Commission. This body had recommended that, as rubber tree is a wasting asset, the industry should be allowed a depreciation element at Rs. 9 per 100 lbs. as a charge against taxation. The Central Government accepted the recommendation and asked the State Governments (profits of rubber estates are liable only to agricultural income-tax) to give effect to it. It is creditable that the Madras Government has not only accepted the recommendation but has gone a step further in agreeing to treat expenses on replanting also as a legitimate revenue charge. The Mysore Government also has favourably responded to the Centre's suggestion.

It is, however, deplorable that the Government of Kerala has still not agreed to give the relief, despite repeated appeals by the industry for nearly two years now. It is deplorable not only because the recommendation of an impartial body backed by the consent of the Centre is being flouted but also because Kerala accounts for the bulk of rubber grown in India, having as it does 94 per cent of the total acreage under rubber. Mr. Simmonds was mildly mild when he remarked: "I am sorry that the Government of Kerala is relying on a short-term policy of immediate taxation." Actually, he should have described the Kerala Government's attitude as being extremely short-sighted both Kerala-wise and India-wise. The State Government may initially lose some revenue by recognising the depreciation allowance, but the loss will be more than compensated in due course, for the incentive is designed to encourage the industry to grow and, when it does, the taxable base will get broadened and the State will get more revenue.

It is not the tax burden alone that is weighing heavily on the plantation industry. The incidence of wages is also quite heavy. In respect of tea plantations, for instance, the production cost is expected to go up by six to seven per cent due to payment of enhanced wages as per the interim recommendations of the Wage Board. One does not know to what extent this burden will go up as a result of the final recommendations of the Board which are yet to be framed. The planters do not mind the increase in wages or the grant of maternity and other fringe benefits which together now account for nine per cent of the income of labour, provided they are compensated adequately by higher productivity. But this has not been the case. It is rather disquieting to hear that absenteeism in plantations has increased lately to about 18 to 20 per cent. This is high in all conscience, because, in plantations, there is work to be done all round the year. The industry is certainly entitled to a fair day's work for a fair day's wage. Appropriately enough, Mr. Simmonds observed:

"That is what we ask for and, once the industry obtains this, we shall have a contented and stable labour force. No individual and no country which is developing its resources can exist economically, if five-hours-work-a-day is considered reasonable. ... Surplus labour is a drain on the economy of any industry and affects the earning capacity of our permanent labour force. We do not ask for retrenchment; we are prepared to accept a natural reduction of our labour force. But the days of carrying surplus labour to compensate for absenteeism, seasonal crops and agricultural practices have gone. The industry cannot afford it, neither can our labour."

This is a simple truth which is unfortunately not recognised by labour leaders. Mr. Nanda did well, therefore, to call upon the workers to put in their best and be more efficient and disciplined before they ask for more. Discipline, he rightly declared, was the foundation for efficiency; it came not by shouting but out of certain standard of human relationship, and it could be generated and developed. Elucidating this point further, he said: "That which comes from within is much more enduring and much more valuable." Reassuring is Mr. Nanda's statement that labour legislations affecting plantations would be *very cautiously* introduced and implemented.

LAND ACQUISITION FOR INDUSTRIES

THE validity of acquisition of land for companies wanting to establish industries under the Land Acquisition Act of 1894 had always been taken for granted till it was called in question early this year in the case of *R. L. Aurora* vs. *The State of U.P.* before the Supreme Court. Land acquisitions in the past were made, among others, for the erection of dwelling houses for workmen employed by a company or for the provision of amenities directly connected therewith [Section 40(1)(*a*)], or for the construction of some work likely to prove useful to the public [Section 40(1)(*b*)]. Presumably land required by a company for the construction of factory buildings and works proper was all along being acquired in terms of the procedure prescribed in Sections 6 to 37 of the principal Act, as there was *no prohibition as such* against the Government acquiring lands for a company when there was a public purpose. In retrospect and in the light of the Supreme Court judgment, all this was not quite in order, for the Court held that land could be acquired under Section 40(1)(*b*) only when the work to be constructed would be directly useful to the public and the public would be entitled to use the work as of right for its own benefit in accordance with the terms of the agreement (Section 41) between the company and the appropriate Government. Following the judgment several State Governments represented to the Centre that the Court's findings might have the effect of rendering planned development of industries extremely difficult and that acquisitions of land made for companies in the past might be questioned by previous owners in courts of law. The sequel to this representation was the promulgation of the Land Acquisition (Amendment) Ordinance on 20th July 1962, whereby Sections 40 and 41 of the principal Act were suitably amended and all past acquisitions of land made for companies were also validated.

The central purpose of the amendment was to insert the following as an additional clause in section 40(1) of the principal Act:

"That such acquisition is needed for the construction of some building or work for a company engaged or to be engaged in an industry which is essential to the life of the community or is likely to promote the economic development of the country."

The ordinance was sought to be replaced by an Act of Parliament and an official Bill for the purpose was introduced in the Lok Sabha last month. But, unfortunately, a controversy arose over the aforesaid new clause on the ground that it might be misused in the interests of private parties and that the interests of owners of agricultural land might be jeopardised. What finally emerged from the Lok Sabha on 30th August was a compromise clause replacing the one proposed originally in the amending Bill. This compromise clause, as now passed, is as follows:

"That such acquisition is needed for the construction of some building or work for a company which is engaged or is taking steps for engaging itself in any industry or work which is for a public purpose."

The use of the expression "for a public purpose" in the vital clause pertaining to acquisition of land for companies is, on the whole, a happy one, for it brings the newly inserted clause in tune with the spirit of the principal Act. Although the Act of 1894 has not provided a precise definition of the expression "public purpose," the rules to be framed by the Government under the amending Act may be expected to define it in such a way as to convey that the public purpose or good would be served when land acquisitions for factory buildings or works are made on behalf of companies engaged or to be engaged in industries which are essential to the life of the community or likely to promote the economic development of the country. Industrial development, whether it is in the public sector or in the private sector, serves a public purpose as much as irrigation, roads and railways, for instance, do. It would be most relevant in this context to quote the following from the Legal Reference pertaining to the scope of the Land Acquisition Act of 1894 included in the *Civil Court Manual* (*Central Acts*), published by the Madras Law Journal Office:

"The power of the State to acquire property compulsorily is a power to acquire it only for a public purpose. The expression "public purpose" is not capable of a precise definition and has not a rigid meaning. The State has both the right and is under a duty to regulate the distribution of irrigation water in the interests of the public. The Government has to provide major distribution channels and smaller channels which ultimately lead the water to the several fields. An acquisition for carrying out any part of such irrigation scheme will certainly be acquisition for a public purpose which is also a State purpose. Though, initially, a channel for which land is acquired will serve only one part of land owned by a single individual, as, in course of time, it would also serve other lands as well, it must be held that the acquisition is for a public and State purpose, namely, extension of irrigation. *The fact that, initially, only one individual stands to benefit by the proposed channel would not make the acquisition any the less an acquisition for a public purpose.*" (Italics ours.)

If irrigation (or agricultural) development is a public purpose, industrial development is no less so. No apology, therefore, is needed for acquisition of land for companies, whether they be private limited companies or public limited companies. Although the extent of agricultural lands that have been, and will be, acquired for industrial purposes will be a negligible proportion of the country's cultivated area, still safeguards to owners of land are certainly necessary. Many of these safeguards are already there in the principal Act and some more will form part of the Rules to be framed under the amending Act in terms of the Food and Agriculture Minister's assurance. If a generous premium or solatium well above the market value of land is expected by landowners, there is nothing to prevent a provision therefor being made in the Rules. All other objections to land acquisition on behalf of companies seem to be irrelevant or to ignore the compelling needs of industrialisation which everybody desires.

MARKET GOSSIP

Wild-goose Chase

GOLD is very much in the news again, thanks to the Government of India. In the past fortnight, Mr. Morarji Desai, Union Finance Minister, has stated both in and outside Parliament that the Government of India is actively considering ways and means of mobilising the hoarded gold for the benefit of the country's economic development. He has also conceded the need for taking more effective measures to check smuggling of gold. Naturally, the objectives are such that neither he nor any of his colleagues can disclose in advance the exact steps to be taken by the Government to achieve them. Efforts made by some members of the Lok Sabha on Wednesday this week to fathom the Government's mind proved futile. The opportunity was provided by the discussion on the Bill to amend the Industries (Development and Regulation) Act with a view to enabling the Government to exercise control over the supply, production and distribution of gold and silver as in the case of non-ferrous metals. Mr. K. C. Reddy, who moved the Bill, cleverly left the members to retain their curiosity. All that he could say was that the amendment had an indirect bearing on the Government's desire to bring to the surface hoarded gold and that it was specifically intended to check smuggling, as well as to prevent hoarding of gold. The amendment was also necessary, Mr. Reddy added, to facilitate the Central Government's proposed take-over of the Kolar gold mines from the hands of the Mysore Government. The Bill, incidentally, was adopted by the Lok Sabha on the same day, after a two-hour debate.

Before taking up the subject of mobilising the private gold hoards, one may as well deal with the amending legislation mentioned above. The necessity for this measure is not quite clear. Gold and silver are metals and are, therefore, covered by the term metallurgical industries included in the schedule of industries reserved for the public sector under the Industrial Policy Resolution. Further, gold mining has been in the public sector ever since the Kolar mines were taken over by the Government of Mysore from Messrs. John Taylor and Sons. The entire amount of domestically produced gold, including the small quantity obtained from the Hatti mines, is being taken over by the Centre and put into a special reserve. This policy has been in force since July 1958. Accordingly, the question of distribution of domestically mined gold does not arise. This only leaves the distribution of gold already privately held and that which is smuggled. But no industrial operation is involved here. Perhaps, the Government is having in mind the melting and refining operations. By and large, they are being carried out by individuals with one or two helpers, who are invariably family members. In any case, the enterprises are so small that they are not covered by even the Factories Act.

Some are inclined to feel that the Government may be thinking in terms of licensing all dealers in gold and silver, including goldsmiths and jewellery-makers, and bringing their operations under control. The feasibility of this proposition is doubtful. But how is an amendment to the Industries (Development and Regulation) Act going to be helpful for this purpose?

The bullion dealers in big cities like Bombay and Calcutta are already under the control of the Forward Markets Commission. Much of the smuggled gold is processed in upcountry centres, stealthily of course, and then brought to cities. If the Government thinks that it can catch this gold and thereby strike terror into the hearts of smugglers, it is under an illusion. It will be adding only one more to the controls that are more honoured in the breach than in observance. Some ask: If dealers in foodgrains can be controlled and licensed, why not the dealers in bullion, jewellers and goldsmiths? There should be no difficulty at all in licensing them; in any case, most of them must have been registered for the purposes of sales tax. The real difficulty will arise in tackling their black market operations. It is worth remembering, in this connection, that controls on foodgrains and other articles of food were by no means a great success. The greater the controls, the larger was the black market in food articles. Further, food controls covered only a fraction of India's population, as they were not enforced in rural areas and in small towns.

There is a fundamental difference between food controls and those on bullion, apart from the fact that food is a daily necessity, whereas gold is an article of luxury, except for certain essential social purposes such as marriage. For food articles, the Government fixed a fair price as the ceiling and tried to maintain it by ensuring adequate supplies. Surely, it would sound absurd to suggest that the Government should determine a fair market price for gold and take steps to sustain it.

There is a school of thought which feels that the Government should have before it only the limited objective of restraining sizable purchases of gold (and silver) and not those for small amounts, say, 5 or 10, or even 20 tolas a year. Those who buy 100 tolas and onwards are, it is pointed out, persons who must have made a lot of easy money and paid no taxes on it. Once bullion is subjected to some sort of control, these persons will have to pay, so it is argued, a much higher price for the gold and/or silver than is the case now, for they can do so only without allowing their deals to go on record, whereas those who wish to buy small quantities with taxed savings or white money will be able to get their requirements from the licensed dealers at a price lower than the black market price.

This remedy seems to be worse than the disease. For it will breed a new set of middlemen who will be used for buying gold in small quantities. The gold thus bought will be collected and passed on to persons who wish to store away their ill-gotten wealth in precious metals. After a temporary fall in the wake of shocks given by the Government, prices of bullion will rise again and perhaps to new heights which in turn will attract more smuggling.

Equally difficult will be the task of making people to disgorge gold through civilised methods of law. The entire issue was discussed threadbare four years ago (*vide* pages 211 and 255 of *Commerce* dated 9th and 16th August 1958) and Mr. Morarji Desai himself had come to the conclusion that the problem of mobilising gold hoards with the people was intractable and, as the outcome of any reasonable solution was highly uncertain, the game was not worth the candle. If the idea was not feasible four years ago, it is much less so now. Since August 1958, the price of spot gold has gone up by nearly 50 per cent, from about Rs. 105 to Rs. 151 per tola. Commodity price levels in the country have also gone up by 20 to 30 per cent and the further additions to purchasing power that will follow as a result of monetising the gold hoards will accentuate the inflationary forces, besides encouraging the expenditure on luxuries. It is, therefore, surprising that Mr. Desai should have entertained the idea, again, and given rise to expectations that, sooner or later, the Government would take appropriate action. Mr. Desai himself has clearly gone on record to the effect that any step the Government takes should not lead to harassment of the people and that it should not provide a fresh impetus to smuggling and hoarding or to a further rise in the price of gold. Further, Mr. K. C. Reddy averred in the Lok Sabha on Wednesday that it was mischievous to suggest that the Government intended to take away *all* the jewellery in the country. If regard be had to these assurances and if the hoarded gold is to be mobilised in a manner which will not be expropriatory, without at the same time imposing a heavy burden on the taxpayer, there is precious little the Government can do for getting any sizable quantity of gold from the people.

The difficult foreign exchange situation and the information gathered by the Government from the wealth tax returns may have prompted Mr. Morarji Desai to take the idea out of cold storage. He may have felt that even a few crores worth of gold would be better than nothing. He may also be thinking of directing his attack only against the rich people having gold in considerable quantity. He may also be feeling that, despite all the measures that have already been taken to arrest smuggling, arrivals of contraband gold continue to be sizable, resulting in a heavy invisible drain on India's foreign exchange earnings, and that something more drastic must be done to check the drain. Knowledgeable circles in the bullion market say that, according to estimates published in West Asian countries, gold smuggled into India in 1961-62 was of the order of three million ounces, involving a foreign exchange loss of approximately 200 million U.S. dollars or Rs. 96 crores. In short, the Government must have come to the view that it cannot be a silent and helpless spectator of the gaping, ever-widening hole in its foreign exchange basket. Something must be done to close it. And the only effective way would be to wean away the people from the gold habit, for it is this habit that is encouraging the surreptitious influx of gold into the country. Any measure taken in this direction, the Government must be feeling further, will have the additional advantage of releasing a sizable amount of gold that has already gone into the hoard, whether in the form of jewellery or bullion.

If the gold habit is to be discouraged, no mild solution will be effective. The Government will have to take drastic measures, such as a fiat that no one individual (here an individual should also mean a family) should have gold equivalent to more than five tolas, that all gold in surplus of this quantity should be turned over to the Government and that anyone who contravenes this order would be liable to five years' rigorous imprisonment. But, as no democratic Government can issue such a fiat, one cannot think of solutions of this nature. Alternatively, the Government can pass a law, placing a ceiling on the amount of gold an individual can possess in the form of bullion, jewellery and others, and make it a criminal offence to hold gold in excess of the ceiling. But, as its enforcement will be difficult, the Government should leave the crime to be brought to its notice. Or it can rest content, by allowing it to the conscience of the person to obey the law. There are some in this country who feel that, if this is done, at least the law-abiding persons will not buy gold in excess of the ceiling. This solution, too, is unsatisfactory, for, if conscience were an effective agent for enforcing economic controls, there would not be that much tax evasion, black-marketing and adulteration as there is in India or in any other country subject to similar controls.

The best thing to do, therefore, would be to give up this wild-goose chase, whatever may be the attractions of the game, and concentrate on efficient, clean and honest administration. If taxes are collected properly and if the other economic controls are enforced ruthlessly without fear or favour the scope for black-marketing will diminish and with that the market for gold, too. At the same time, Government should launch a country-wide educational campaign to discourage people from buying gold. Monetary incentives for investing one's savings in Government obligations must be made more attractive than at present. Ministers, officials, politicians, and social workers should give a lead to the people by showing that it is neither fashionable nor patriotic to wear or to possess gold in any form. Some suitable incentives, which do not impose any heavy burden on the taxpayer, may also be offered to encourage voluntary immobilisation of holdings in gold.

Mica Exports

India is the world's largest supplier of good quality mica, which is used largely in the manufacture of electrical instruments and appliances. But it is fast losing its near-monopoly position, particularly in respect of mica blocks, on account of growing competition from other mica producers like Brazil and Madagascar and also from new synthetic substitutes developed in industrially advanced countries. The discontinuance of the U.S. offtake for stockpiles has created fresh difficulties for the mica trade. There is, however, no reason to be pessimistic. For so long as electrical industries continue to expand, as in Western Europe, Japan, Russia and East European countries, the world demand for this commodity is bound to go up. It will be well-nigh impossible to find in the foreseeable future a perfect substitute for natural mica which has a distinctive dielectric strength. With its large deposits of good quality mica, India is, in fact, in a better position to withstand competition from new substitutes than its confreres abroad. Deposits of mica are found mainly in three large belts in the country, one each in Bihar (of 1,500 sq. miles), Rajasthan (1,200 sq. miles) and Andhra Pradesh (600 sq. miles). Most of the mica produced in these tracts now is sold abroad, as the domestic market it still small, though it is bound to expand in coming years.

India's exports of mica have been fluctuating from year to year. From about Rs. 13.2 crores in 1951-52, mica shipments actually fell to Rs. 7 crores by 1954-55, but recovered subsequently to Rs. 10.7 crores by 1961-62. This recovery, though welcome, conceals an important handicap faced by the trade. For the unit values of several types of mica have declined, with the result that larger quantities had to be exported to secure the same or smaller earnings. Another feature of exports has been the decline in U.S. buying. This decline has, however, been neutralised to some extent by the entry of customers from the Communist bloc, particularly Russia.

Because of keen competition in mica trade, some of the exporters have been indulging in under-cutting, which helps nobody but the overseas buyers. The suggestion made at the annual meeting of the Mica Export Promotion Council held at Calcutta last week that domestic exporters should organise themselves on a strong footing and shed their complacency is quite timely and appropriate. It is certainly a reflection of the lack of co-operation among exporters that several of them have not even cared to become members of the Export Promotion Council. Apparently, it is due to the lack of co-operation that the price of mica has come to be controlled by buyers abroad, as disclosed by Mr. S. K. Sen, Chairman of the Council. Mr. Sen felt that it was essential to increase the price of mica by avoiding rate-cutting. Probably, he was thus endorsing the suggestion of the Bihar Chief Minister for fixing floor prices for mica. While price stability is essential, no less important is the need for adhering to strict quality standards. In this context, the pre-shipment inspection scheme introduced by the Council and the various standard specifications brought out by the Indian Standards Institution are steps in the right direction.

These are, no doubt, short-term measures of export promotion. The long-term prospects for mica will depend, as Mr. Sen rightly pointed out, on finding out new uses for mica through scientific research. Besides, his plea for establishing plants for processing of mica is quite sound. At present, almost the whole of the commodity is exported in the raw form as blocks, splittings or wastes. The processed products (exports of which at present amount to less than a crore of rupees annually), will help fetch better prices for this commodity. It may be recalled that the National Council of Applied Economic Research, in its techno-economic survey of Bihar, published a couple of years ago, suggested the possibility of setting up plants for manufacturing mica products in that State. The establishment of a micanite factory some time back in Bihar and another unit in Rajasthan recently to produce fine mesh mica should be considered as a good beginning. It should not be forgotten, however, that these processed products are subject to higher tariff barriers than those on raw mica in some of the importing countries. It is, therefore, necessary to take into account the leanings of importing countries and make sure that, in trying to thrust the processed mica on them, India will not be providing an advantage to its competitors. In other words, the pros and cons must be carefully weighed and the switch-over must be gradual.

The *autobahns*, as the super-motorways in the Federal Republic of Germany are called, will be expanded from the present 2,200 miles to 3,700 miles by 1970 under an expansion programme costing DM 13,000 million. Construction work is to be undertaken in two phases of four years each. Simultaneously with the expansion of the *autobahns*, the network of federal highways, too, will be improved. Altogether some 4,800 new bridges and 2,400 miles of new federal highways are to be constructed under this major plan.

TREND OF SHARES

RENEWED WEAKNESS

(From Our Own Correspondent)

BOMBAY, *6th September*

A SUDDEN and sharp break in steel shares led to renewed weakness in the stock markets this week. Steels fell particularly in the latter half of the week on sizable liquidation by a prominent Calcutta operator which gave credence to reports that the increase in steel retention prices might not come up to market expectations. For quite some time now, strength in steel shares had imparted a steadiness to the markets. Accordingly, once Steels broke, the tendency to sell all-round gained fresh momentum. Prices declined. The setback uncovered weak bull positions in several counters. Bears tended to become aggressive on the decline. Sentiment was depressed and the tone was distinctly quiet. The week closed at about the lowest levels, with a majority of minus signs, although losses on balance were only small, except in Steels where they were quite substantial.

Clipped by holidays, trading continued to be restricted. Turnover was below normal. The week's setback highlighted again the fact that for some time past, the bulk of the interest in the markets has been on account of a handful of big operators, who, being in the rival camps, have resorted more often than not to cut-throat operations, resulting in rather erratic, though not wide, fluctuations. The small fry has naturally been scared away by such a trading pattern.

Besides, the public has been disinclined to take up fresh commitments, in view of the prevailing economic uncertainties. Of primary importance for industries is the financing of maintenance imports, and there is no knowing still how that will be done by the Government. The authorities have drawn up a list of industries to be accorded priority in the foreign exchange allocation, of which not many are in the private sector. What does the Government propose to do for the majority of private sector industries excluded from the list of priority? Are they to be neglected for some time to come? These are pertinent questions, particularly when one hears from Mr. K. C. Reddy, Union Minister for Commerce and Industry, that the private sector was licensed a sizable additional capacity before the commencement of the third Plan. Of course, this was necessary to avoid a hiatus in industrial development in the initial years of the Plan, but today, unfortunately, the shortage of maintenance imports has rendered an increasing proportion of industrial capacity idle.

As for the markets' internal factors, one of them is of immediate importance, namely, the carry forward charges. These charges have been significantly low for the past few settlements. But, with the State loans having mopped up much of the excess liquidity of banks, interest rates have of late hardened again, and the busy season is not too far off.

Although the current levels may not attract any big selling pressure, bullish activity in the markets is definitely an uphill task and needs some big incentive. It is mainly because of the lack of a broadbased sweeping incentive that chemical and dyes shares failed to draw much comfort this week from the ban on import of coal tar dyes.

* * * *

After a fairly long interval, Steels suffered a major setback in Bombay. Tata Steel Ordinary, the barometer of the market, slumped from Rs. 148 to Rs. 144.50 and closed four points lower over the week at Rs. 145. Indian Iron fell from Rs. 26.95 to Rs. 26.15 and closed at Rs. 26.25 as against Rs. 27.35 a week ago. Mukand Iron showed a loss of 44 nP at Rs. 24.76. In other sections, most of the leaders were marked down. Century declined by Rs. 7.50 to Rs. 627.50, Standard by 16 points to Rs. 896, National Rayon by eight points to Rs. 503.50 and Bombay Burmah by Rs. 6.50 to Rs. 665.50. However, Bombay Dyeing closed with a small gain of 20 nP at Rs. 67.70 due to short-covering at lower levels induced by the very low carry forward charges for the past few settlements. Hindustan Motors finished unchanged at Rs. 20.20. Other leading issues were fractionally shaded. Among others, A.C.C. showed a loss of Rs. 4.50 at Rs. 158.50, Khatau of Rs. 11.25 at Rs. 468.75 and Scindia of 24 nP at Rs. 11.84.

Dyes and Chemicals were easy. But Electrics rose further, and Tata Power, in particular, shot up by Rs. 42.50 to Rs. 1,142.50 on revival of investment support. Andhra Valley, too, were conspicuous by a gain of Rs. 12.50 at Rs. 1,032.50. There were some notable gains among the backbenchers. Thus, on expectations of a bonus share issue, Mororjee spurted by Rs. 50 to Rs. 476 and attracted in the process an interim margin of Rs. 27.50 per share against bulls. B.R. Cotton shot up by 17 points to Rs. 85 and attracted for a third time in the current settlement an interim margin which was fixed this week at Rs. 5.50 per share against bulls. At close, these shares reacted to Rs. 80. The remarkable strength in these shares is attributed to reports that the Morarjee Goculdas Mills was negotiating to buy the gross block of the Company and run it as a separate entity.

In the Cash section, changes were minor. But W. H. Brady spurted by Rs. 52.50 to Rs. 450 as compared with the last available quotation of Rs. 397.50 as on 2nd August 1962. T. Maneklal were down by 15 points to Rs. 455, New Standard Engineering by 11 points to Rs. 210 and Star Textiles by nine points to Rs. 123.

* * * *

Values declined in Calcutta over a broad front. Among cleared shares, Dunlop reacted by Re. 1.06 to Rs. 39.50, G.K.W. by 62 nP to Rs. 37.94, Kesoram by 81 nP to Rs. 28.50, Orient by 75 nP to Rs. 43.05, Texmaco by 45 nP to Rs. 23.25, Indian Cable by 50 nP to Rs. 37.50 and Indian Aluminium by 31 nP to Rs. 36.94. In the Cash section, Textiles and Coals displayed mixed trends. While Bharat Commerce were down by Re. 1.06 to Rs. 28.44 and Birla by 50 nP to Rs. 26.69, Elgin moved up by 44 nP to Rs. 19.56 and Jayshree by 62 nP to Rs. 17.37. Similarly, Amalgamated Coal declined by 25 nP to Rs. 21.62 and S. Karanpura by 37 nP to Rs. 8.69, but Raneegunge improved by Re. 1.37 to Rs. 15.62. Selected jute shares were better; Champadany improved by Rs. 7.50 to Rs. 151, Anglo-India by Rs. 7 to Rs. 239, Fort Gloster by Rs. 9 to Rs. 434 and Kelvin by Rs. 7 to Rs. 192.

In the Engineering section, Braithwaite showed a gain of Re. 1.13 at Rs. 35 in contrast with a loss of Re. 1.25 in Escorts at Rs. 18.37 and of three points in Burn at Rs. 704. Alkali Chemical rose further from Rs. 45.62 to Rs. 46.69. Among Miscellaneous issues, Angelo Brothers showed a gain of Re. 1.19 at Rs. 24.69 and Associated Battery of 50 nP at Rs. 30.50 as did H.P. Glass at Rs. 20.56 with Indian Oxygen improving by Re. 1.75 to Rs. 49.75, but East Anglia were down by 75 nP at Rs. 18.25 and Dr. Paul by 63 nP at Rs. 21.37, with other issues showing generally small losses. Titaghur Paper declined further by 69 nP to Rs. 35.75, but Bengal were up by 75 nP at Rs. 33.75. Teas were generally steady, excepting Duffaghur which closed 88 nP lower at Rs. 27.87, Marga-Hope which showed a loss of 63 nP at Rs. 11.62, Hasimara which were 62 nP lower at Rs. 15 and North Dooars which declined by Rs. 2.50 to Rs. 258.

* * * *

The Madras Stock Exchange closed with small changes either way. But Coimbatore Cotton was an exception, in that it advanced by 10 points to Rs. 179. Lakshmi eased by 50 nP to Rs. 147.50 and Travancore Rayon by 80 nP to Rs. 36.60. S.I. Viscose closed fractionally lower at Rs. 165. F.A.C.Ts eased by 30 nP to Rs. 7.50 and Madras Rubber by 25 nP to Rs. 22.50, but Mettur Chemicals showed a gain of 17 nP at Rs. 14.12 and Travancore Chemicals of Rs. 1.25 at Rs. 23.50. Sugars were better, with Deccan closing with a gain of 95 nP at Rs. 11.15, Cauvery of Rs. 4 at Rs. 116 and Travancore of Re. 1.10 at Rs. 8.35. Plantings were listless, excepting Peermades which showed a gain of 50 nP at Rs. 20.50. Consolidated Coffee which closed with a loss of 30 nP at Rs. 18.20 and Cochin Malabar which were 25 nP lower at Rs. 6.75.

CAPITAL MARKET NEWS

NEW ISSUES

CHITALE Sugar Works Ltd. is offering for public subscription 201,919 equity shares of Rs. 10 each and 8,648 (9.28% per cent, taxable) cumulative redeemable preference shares of Rs. 100 each. The lists will remain open for a week from the 12th inst. The Company's factory at Chitalenagar, which is about 90 miles from Poona, has a crushing capacity of 800 tons of sugarcane per day and will produce approximately 138,000 bags of sugar by crushing about 120,000 tons of cane during an average crushing season of 150 days. Construction of the main factory buildings has already been completed and the bulk of the plant and machinery purchased from indigenous sources at rates believed to be comparatively cheap. As the construction of buildings and the erection of machinery have reached an advanced stage, the Company expects to go into production during the manufacturing season of 1962-63.

The capital outlay on the project is estimated at Rs. 89.81 lakhs, of which Rs. 63.90 lakhs have already been expended. The Company's other financial requirements are placed at Rs. 26.43 lakhs. The Industrial Finance Corporation of India has sanctioned the Company a loan of Rs. 32 lakhs, of which Rs. 20 lakhs have already been given. The Company has a strong Board, with Mr. Morarji Vaidya as the Chairman. Mr. S. D. Chitale and Mr. W. D. Chitale are the Directors of Messrs. Chitale and Company (Private) Ltd., the Managing Agents of the Company.

* * * *

Arlabs Ltd. of Bombay, which is increasing its paid-up capital from Rs. 16.69 lakhs to Rs. 36.69 lakhs by the issue of 20,000 equity shares of Rs. 100 each at a premium of Rs. 50 per share, has offered 10,000 of the additional shares for public subscription. The lists will open on the 10th inst. and close either on the 15th inst. or on the 12th inst. The Company claims to be the pioneer in India in the manufacture of solubilised vats and azoic type of textile dyestuffs. It produces at present 1,400 kgs. of vat dyes per month. It now proposes to raise the output to 6,000 kgs. It has also been licensed to manufacture textile printing colours of solubilised vats and azoic type, vat dyes, naphthols, bases, phthalocyanine pigments and derivatives, textile auxiliaries, etc.

RAKA CHEMICALS AND FOOD PRODUCTS LTD.

The Raka Chemicals and Food Products Ltd., a new company incorporated in Madras with an authorised capital of Rs. 25 lakhs, will manufacture basic chemicals and food products from indigenous raw materials. The items to be produced include strontium nitrate, barium nitrate, barium sulphate, barium carbonate, barium sulphide and stearates and malted food products. It will use the raw materials available in Madras and the neighbouring States. Besides, it will employ indigenous plant and equipment. Thus, the project involves no drain on the country's foreign exchange resources. Land for the factory has already been acquired near Guduvancheri railway station, adjoining the Grand Southern Trunk Road and building construction is under way. Production is to start shortly. Messrs. Raka Corporation (Private) Ltd. will be the Managing Agents of the Company.

NEWS IN BRIEF

THE Government of India has requested the World Bank to send a team of experts for studying the coal transport problems in the country.

A factory for the manufacture of fish cans is proposed to be established at Cochin by a Bombay firm in collaboration with a U.S. firm. The Bombay firm has also a plan to establish another can manufacturing factory elsewhere in the country.

An Export Promotion Council for finished leather and leather products is proposed to be set up, with headquarters at Kanpur in U.P. A similar Council dealing only with semi-finished hides and skins is already functioning at Madras.

The Soviet Union has offered to buy from India 1.8 million metres of printed cotton textiles (worth about Rs. 25 lakhs) and 700,000 metres of bleached sheeting (Rs. 10 lakhs). The offer is now being considered by the Central Government.

An official Bill seeking to give independent status to the Central Warehousing Corporation, which is now functioning under the guidance of the National Co-operative Development Board, was introduced in the Lok Sabha last week.

The Union Defence Ministry proposes to put up a plant for the manufacture of power barges at Mokameh in Bihar at a cost of Rs. 50 lakhs. The barges are expected to be used for carrying coal from the Jharia and Raniganj coalfields to U.P. and North Bihar along the Ganges.

The Maharashtra Government proposes to set up a prefabricated housing factory with a view to relieving the acute shortage of housing among low-income groups. Prefabricated houses, it is claimed, can be erected at moderate cost and within a short period of four to six weeks.

Extensive drilling and other experiments have been started at the Mangalore port with the object of developing it as an all-weather port. The experiments are expected to be over in a few months. Technical experts will then be asked to decide the final layout and design of the harbour.

The Governments of Andhra and Orissa have signed an agreement on the use of the Sileru river water. The agreement provides for the construction of a dam at Balimela, a weir at Guntawada, and generation of power jointly by the two States by sharing waters equally and building a reservoir at Balimela. The construction of the dam will be undertaken by a joint control board.

The Government of India has decided to raise the rate of provident fund contributions under the Coal Mines Provident Fund Schemes from 6¼ per cent to 8 per cent of the total emoluments with effect from 1st October 1962. About 408,000 colliery workers in Assam, West Bengal, Bihar, Orissa, Madhya Pradesh, Maharashtra, Andhra Pradesh and Rajasthan subscribe to the Fund. The total accumulations in the Coal Mines Provident Fund amounted to Rs. 28.96 crores at the end of June 1962.

The State Trading Corporation of India handled exports worth Rs. 15.15 crores and imports of Rs. 13.54 crores during the first six months of 1962. The exports consisted mainly of iron ore, cement, manganese ore, shoes and bauxite. Besides, some other commodities like mica, pulses, tobacco, salt, cotton, yarn, lemongrass oil, groundnut oil and oilcakes were also exported. Imports comprised caustic soda, soda ash, ammonium sulphate, newsprint, camphor, polythene, muriate of potash, mercury and urea.

Agreements for two more loans from the British Government to India for financing the third Plan were signed at New Delhi on Tuesday this week. The first loan of £13 million (Rs. 17.3 crores) is to provide finance for a number of important projects, including equipment for the Heavy Electrical Plant at Bhopal, a ropeway system and other equipment for the coal mines and supplies for the river steamer companies operating in eastern India. The second, of £5 million (Rs. 6.7 crores), is available for spending on a wide range of essential imports from the U.K. Both the loans are to be repaid over 25 years, including a grace period of seven years before repayments of principal begin. The rate of interest will be the same as that applied by the British Government at the date of issue to loans for a comparable period from its domestic Consolidated Fund, *plus* an administrative charge of one-quarter per cent.

The Government of India has constituted a high-level expert technical panel on import substitution, with Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation, as Chairman. The members of the panel are S. Mulgaonkar, Dr. M. D. Parekh, S. K. Kirloskar, K. Sreenivasan, Dr. Lal C. Verman, Dr. G. P. Kane, Dr. B. D. Kalelkar, S. T. Thadani and a representative of the Planning Commission. Mr. K. Rajagopalan will be the Secretary of the Panel. The panel will examine technical and other possibilities of replacing maintenance imports, formulating specific programmes and recommending appropriate measures in respect of specified industries. These are: industrial machinery and parts, including boilers, cement machinery, paper-making machinery, dairy machinery and cranes; automobiles and ancillaries, including diesel and petrol engines; construction equipment, including pile driving equipment, earthmoving machinery and agricultural tractors; railway rolling stock, equipment and materials; electrical industries; metal working machines such as rolling mills, foundry equipment, wire drawing machinery, machine tools, etc.; scientific and industrial instruments; substitutes for non-ferrous metals, fibres, rubber, tinplate, etc., and chemicals and dyes. The panel is expected to make recommendations concerning individual industries as and when its studies are completed and might also submit interim reports.

From Abroad

Japan proposes to set up a trade centre at Paris in order to promote trade with France.

Pakistan is reported to be planning to reduce, and perhaps abolish, export duty on raw cotton, in order to increase its exports.

Ethiopia has secured Soviet collaboration in designing and building an oil refinery in Assale. The refinery, which will have an annual capacity of 500,000 tons, will be built under the direction of Soviet specialists, the outlay being met out of a long-term Russian loan.

The first Japanese commercial airliner since the Second World War has been developed by the Japan Aircraft Manufacturing Company. The airliner, which made its inaugural flight last week, has been designated the YS-11 and is expected to replace the DC-3 on domestic routes in Japan and Asia. It has a cruising range of 2,400 kilometres and a capacity to carry 60 persons. It is powered by two Rolls-Royce Dart engines.

Acute labour shortage is becoming an important problem facing industrial expansion in the Common Market, except perhaps in Italy, according to the annual report of the E.E.C. Commission. The development of West Germany, Holland and Luxemburg has been adversely affected by the overall labour shortage, particularly of skilled labour. In France and Belgium, the shortage is confined only to certain areas and industries. As possible solutions, the Council suggests decentralisation of industries and establishment of training centres for unskilled persons.

A proposal for the establishment of a buffer stock for coconut oil and copra among the E.C.A.F.E. countries is being considered by the Governments of countries concerned, including India. There are also some other proposals for stabilising coconut oil prices, including the establishment of an international copra exchange, a coconut advisory board and joint shipping service among E.C.A.F.E. countries, besides an international agreement on fats and oils.

PERSONAL

MR. N. K. Lakshmana Gouda, a prominent coffee planter of Mysore, has been elected President of the United Planters' Association of Southern India for 1962-63.

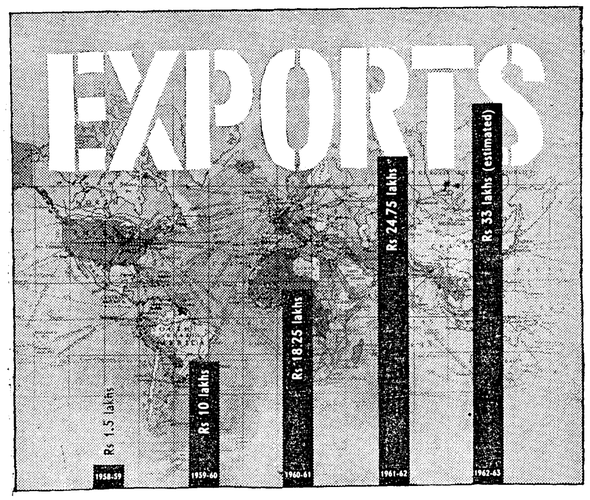
Mr. Bharat Ram, Vice President of the Federation of Indian Chambers of Commerce and Industry, has been re-elected Chairman of the Indian Society of Advertisers for 1962-63.

Mr. R. K. Sirkar of the Dunlop Rubber Company (India) Ltd., has been awarded the annual I.S.A.-Khatau gold medal, sponsored by the Indian Society of Advertisers.

Mr. Tarlok Singh, I.C.S., Additional Secretary, Planning Commission, has been appointed a member of the Commission in charge of administration and transport. He has resigned from the Indian Civil Service.

Dr. Syed Husain Zaheer, Director of the Regional Research Laboratory, Hyderabad, has been appointed officiating Director-General of the Council of Scientific and Industrial Research with effect from the 1st inst., in place of Prof. M. S. Thacker, who has proceeded on leave for three months for reasons of health.

Mr. W. B. Metre, Director and Technical Adviser of Oil India Limited, a joint venture of the Government of India and the Burmah Oil Company, is the leader of the Indian delegation to the Second Symposium on Development of Petroleum Resources of the E.C.A.F.E. region now being held at Teheran. The other members of the delegation are Dr. B. C. Deshpande, Director of Geology in the Oil and Natural Gas Commission, Mr. M. Damodaran, Senior Engineer, Indian Refineries Limited, and Dr. I. B. Gulati, Senior Scientific Officer (Cr.), Indian Institute of Petroleum. The delegation also includes Mr. Y. L. Gladil as a Technical Adviser and Mr. Prough of Esso Eastern as an observer.



The graph Metal Box is proudest of

AN INCREASE OF 20 times in four years! That is the remarkable record of growth in the export value of Metal Box products. Crown corks, decorated tins, Open Top cans, Roll Seal closures, hardware, advertising materials and machinery manufactured by Metal Box go out to twelve countries in West Asia, South Asia, Africa and Europe.

Efficient protective lacquers, high class finish and attractive decoration have helped Metal Box packages sell against fierce competition in these foreign markets. Packers overseas have come to expect not only quality from Metal Box but prompt service and quick delivery at competitive prices. And so today Metal Box closures, containers and other products account for some 3% of the nation's engineering export earnings.

In addition Metal Box quality helped the export last year of *more than Rs 4 crores* worth of Indian goods by providing packages to exacting international standards.

Apart from earning valuable foreign exchange, Metal Box is helping to save it by reducing imports—

- Metal Box manufactures every year nearly Rs 60 lakhs worth of can-closing and bottle-sealing machinery and industrial components—all previously imported.
- Metal Box is constantly striving to conserve imported tinplate by developing alternative packaging materials such as plastics and aluminium.
- Metal Box is developing indigenous sources of supply of previously imported raw materials, putting to maximum use substitute raw materials available locally.

POWER GENERATION BY PRIVATE SECTOR

THE scheme submitted nearly a year ago by a group of industrialists in Madras for the establishment of a big thermal power plant in that city as a private-sector unit is reported to have been rejected by the Planning Commission presumably in terms of the Industrial Policy Resolution of 1956. As power generation has been listed as one of the Schedule-A industries reserved to the public sector for further development in the sense of establishment of new units, the Planning Commission might have taken the line that an entirely new unit like the one envisaged by the Madras proposal could not be permitted to be established in the private sector. If the Commission had thought so, it would not have been in keeping with the spirit of the Resolution which has envisaged "the possibility of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require" and which has further laid down that "whenever co-operation with private enterprise is necessary, the State will ensure, either through majority participation in the capital or *otherwise* (italics ours), that it has the requisite powers to guide the policy and control the operations of the undertaking." In view of the acute power shortage in Madras, as elsewhere in the country, the national interests clearly demanded the Centre's prompt approval of the proposal and permission to the promoters to go ahead with the project. It may be noted here that the proposal had the blessings of the State Government. The public interest in Madras or elsewhere would have been fully safeguarded, for the State has the requisite powers to guide and control electricity undertakings under the Indian Electricity Act and the Electricity (Supply) Act. As readers are aware, electricity generators and distributors in the private sector cannot even raise their little finger without the consent of either Central or State Government, for almost all aspects of their activities are strictly controlled. If, nevertheless, the private sector in that State wanted to establish a power generator, it was because of the inability of the public sector to supply adequate power and the consequent loss of production, as well as of opportunities for creating more employment. Moreover, a favourable decision on the private sector's proposal would have been wholly consistent with the policy of liberalisation initiated last year through the permission to the private sector for establishing medium-size pig-iron plants.

Perhaps, the Planning Commission may yet reconsider the Madras proposal, if the Union Planning Minister's reported reactions at Coimbatore on the 2nd instant mean anything. While reiterating the Government's policy of not allowing new power units in the private sector, Mr. Nanda is said to have added, in the same breath, that the policy was not inflexible, that a change in it might be thought of if a scheme was for the good of the nation and that, if a proposal for power generation came from the private sector, it had to be carefully examined. But the Planning Minister's subsequent remark in the same place was to the effect that, as the private sponsors would have to seek governmental help to obtain foreign assistance and machinery for their power projects, the Government itself could as well undertake them. This remark seemed to contradict his earlier approach to the question which sounded pragmatic. Obviously, Mr. Nanda was not clear in his own mind about the whole thing. Thanks to the all-pervading Government controls in this country, no industry can be started by the private sector without the help of the Government. This is much more so in the case of power generation, for the rate of return on investment in this industry is relatively low and strictly regulated. Consequently, dependence on the Government for securing capital, etc., is no disqualification for the private sector to establish a power generating unit. But, in the case under reference, the Madras industrialists were prepared to find the rupee capital, which itself was a great thing. They were also prepared to find some foreign capital, though the Government might have had to release some foreign exchange out of the foreign aid secured by it. Mr. Nanda has stated on numerous occasions that the Government of India is not pursuing doctrinaire socialism and that it takes policy decisions on practical considerations. If that is true, the Planning Commission and the Government should have jumped at the offer of the private sector in Madras. He has not shown how his consent to this offer will be injurious to public interest. Nor has he denied the fact that the public sector has been unable to meet the growing power needs of industries in the Madras State. The Planning Minister's proclaimed preference for locating big-sized power plants near coalfields would mean that all new thermal power generation would be confined to five States, namely, West Bengal, Bihar, Orissa, Madhya Pradesh and Andhra Pradesh. That surely would not be in the interests of other States like Madras and Maharashtra where the possibilities of further hydro-power generation are limited and where even the existing hydel-power units are at the mercy of monsoons, the vagaries of which have greatly increased in recent years.

AGRICULTURAL PRODUCTION

It is all to the good that Mr. S. K. Patil, Food and Agriculture Minister, has sought to dispel the impression that there are conflicting views within the Cabinet on the feasibility of achieving the third Plan production target of 100 million tons of foodgrains. Mr. Patil is quite confident that the third Plan target is within India's reach, as "the country is sound both from the industrial and the agricultural point of view and the peasant is shrewd and responsive to modern techniques of food production." Not many in this country will, however, so easily share Mr. Patil's optimism, for the none-too-encouraging performance on the agricultural front during the 1961-62 crop year is a grim reminder of the uphill task ahead. In 1961-62, the output of wheat, of course, touched a record of 11.6 million tons, or an increase of 800,000 tons over 1960-61. But India's major crop, rice, suffered a modest setback, having declined by 100,000 tons to 33.6 million tons. The production of *jowar*, too, fell. Besides, there was hardly any perceptible increase in the acre-yields of any of the agricultural commodities. As compared with the net increase of over 20 million tons of foodgrains envisaged in the Plan, or an annual average of 4 million tons, the actual increase in 1961-62, it would appear, was no more than one million tons, bringing the total to about 80 million tons. If the third Plan target is to be fulfilled, output would have to be stepped up by 19 million tons during the next four years, that is, by an annual average of just less than 5 million tons—an unprecedented rate of growth for this country. It is, therefore, gratifying to hear that the State Agricultural Ministers, at a two-day conference at New Delhi last week, gave serious thought to the question of expediting agricultural programmes, particularly those designed to improve unit area yields.

The major issues which were considered by the Agricultural Ministers related to minor irrigation and soil conservation programmes, selection of seeds and measures for better utilisation of available fertilisers. The question of accelerating minor irrigation schemes was uppermost in their minds. And, as suggested by Mr. Shriman Narayan, Member, Planning Commission, the Conference decided to set up a working group to devise methods for better distribution of iron and steel, cement and coal dust for minor irrigation purposes. The working group will consist of representatives of the Central Ministries of Food and Agriculture, Heavy Industries and Steel and Community Development as well as of the State Governments. If it is not just a propaganda stunt but is seriously meant to remove the bottlenecks in the supply of essential construction materials, this step will go some way towards promoting the cause of intensive farming. Mr. Shriman Narayan's plea for unified agencies in all States to handle minor irrigation and ensure proper maintenance of minor irrigation works deserves the urgent attention of State Governments. The latter aspect is of particular importance in the case of minor irrigation works and the State Ministers will do well to heed his advice that legislation should be enacted to empower State Governments to take over the upkeep and repair of small irrigation projects and recover the expenses from *panchayats* and other local bodies, if these institutions failed to do their duties.

In their discussion of problems relating to fertilisers, the Ministers have emphasised the need for removing the "prejudices" of farmers against chemical fertilisers. The harping on "prejudices" is only an excuse, it would appear, for Government's inability to encourage the production of fertilisers within the country in time. It is well known that the supply of fertilisers has fallen far short of demand in the last few years. So the farmers are not to be blamed. It is doubtful, in this context, whether a reduction in the price of fertilisers, as suggested at the conference, would be currently of much value. If anything, any such price reduction might have an adverse impact on the development and expansion of the fertiliser industry. This is not to suggest that there is no need for reducing domestic fertiliser prices, which are said to be the highest in the world but that can be met only through increased production.

ANIMAL HUSBANDRY IN RAJASTHAN

Whatever be the reasons compelling the planners in Rajasthan to cut the State's third Plan outlay (exclusive of the Rajasthan Canal Project) from Rs. 173 crores to Rs. 122 crores, there does not seem to be any justification for the sharp reduction in the provision for animal husbandry from Rs. 4.80 crores to just Rs. 2.11 crores. Animal husbandry occupies a pivotal place in the economy of Rajasthan where more than half the area is arid and livestock raising is an important occupation of the people. Accordingly, there is no better source of income growth for the rural areas of Rajasthan and expenditure incurred in this sector is highly productive. The schemes of animal husbandry development were introduced for the first time only in 1954-55, since when there has been a notable increase in livestock population. In the first two years of the second Plan alone, the animal population rose by 1.46 million to 33.89 million. Concentrated attention was paid during the Plan period to proper breeding, feeding and management of cattle, as well as control of their diseases, improvement of camel breeds, piggery development, poultry development and sheep rearing, and provision of better facilities to consumers for purchase of dairy products. By the end of 1960-61, there were 107 veterinary hospitals and 148 dispensaries, as against 57 hospitals and 138 dispensaries in 1955-56; 16 key village centres benefited nearly 86,000 livestock in 307 villages; two urban A. I centres, three sheep-breeding farms, 12 poultry extension centres and three poultry farms were functioning; 46 sheep shearing sheds had been constructed.

While all this progress is quite notable, much yet remains to be done in the field of animal husbandry. With long distances and poor communication facilities in Rajasthan, a large number of people in many places continue to find it difficult to take advantage of the aforesaid institutions. It is, therefore, necessary to take the veterinary aids closer to the cattle through the establishment of more hospitals, dispensaries and mass immunisation units. The pace of progress made so far in animal husbandry development will slow down considerably as a result of the cut in allotment of funds. The revised third Plan outlay of Rs. 211.00 lakhs is, it may be noted, actually less than the Rs. 211.19 lakhs provided for in the second Plan.

Viewed thus, the cut in Plan outlay on animal husbandry is certainly ill-advised. The Rajasthan Government will, however, do well at least to see that the cut does not affect the all-India sheep and wool research centre proposed to be set up at Malpura in Jaipur division. The U.N. Special Fund has already sanctioned Rs. 75 lakhs in dollars for financing the foreign exchange component of this centre. The Indian Council of Agricultural Research has also offered assistance. Surely, one fails to understand as to why the planners and powers-that-be in Rajasthan have still not come forward with the offer of funds to cover the State's share of expenditure. Since it is Rajasthan which will benefit most from the research centre, the State Government ought to have seized this opportunity by promptly earmarking in its capital budget its share of investment. Rajasthan, as readers are aware, has a large sheep population and vast potentialities for increasing it. It is strange, indeed, that the State Government has to be prodded to come to a prompt decision on this project.

SCREW INDUSTRY

The screw industry continues to make headway. The total production of wood-screws (from 20 units registered with the Development Wing) rose from 7.8 million gross in 1959 to 9.9 million gross in 1960 and still further to 10.6 million gross in 1961. The rate of growth, however, was slower in 1961, the net increase being only 700,000 gross last year, as compared with 2.1 million gross in 1960. But the industry is making some progress in certain other desirable directions. Some of the large units, for instance, have diversified the pattern of production by taking up the manufacture of precision machine screws and fasteners. The industry's installed capacity, on a single-shift basis, was 7.3 million gross per annum as of 1961. A large number of small-scale units is also engaged in the production of screws. According to unofficial estimates, the total output in this sector is about 5 million gross annually, bringing the aggregate production to about 15 million gross. Altogether there are now 51 units, including both big and small. Among the twenty units coming within the purview of the Development Wing, the Punjab State accounts for six, West Bengal four, Maharashtra three, Gujarat, Madras and Delhi two each and U.P. one. Thus the industry is now fairly well decentralised, although it was concentrated in the Punjab alone, when it first developed, that is, during the period of the last war.

The progress of the industry would have been much more marked but for the difficulties in getting the main raw materials, namely, steel wires of requisite quality. The problem of shortage of this raw material has been a constant source of headache to the industry. But it is regrettable that, even after making some progress in iron and steel and other mechanical engineering industries during the last few years, the industry should continue to face this problem. Pointed attention to this problem was drawn by Mr. S. K. Mazumdar, President of the Screw Manufacturers Association, at the annual meeting of the Association held at New Delhi last week-end. As many as ten units have recently been encouraged to take up the manufacture of steel wires in the country, in addition to the Indian Steel and Wire Products Ltd. of Indranagar, which has been the pioneer supplier of this product. These units together have a drawing capacity of 54,500 tons (on a double-shift basis). But, according to Mr. Mazumdar, it is still not possible to obtain the wire of proper specifications, except from the Indian Steel and Wire Products Ltd. of Tatanagar. The reasons for this state of affairs are not clear. The wire manufacturers may, of course, complain of scarcity of billets of the specifications required by them. But is that all? It is to be hoped that the Development Wing will watch the raw material requirements of both wire manufacturers and screw makers and try to remove avoidable difficulties.

The screw manufacturers' claim for export promotion incentives is also justified. It is certainly a reflection of the growing competition in world markets that India's exports of screws have sharply fallen from as much as Rs. 12 lakhs in 1960 to only Rs. 3 lakhs in 1961. This setback is presumably the result of relatively high cost of India-made screws. Mr. Mazumdar, however, has called upon the manufacturers to set apart at least 25 per cent of their respective outputs for exports. In order to achieve this, he has urged the Government to make available to the industry steel at concessional prices and grant some cash subvention to cover the loss suffered in exports. In this context, one does not know why the Association has dropped its earlier scheme to set up an export pool. It would be wise on the part of the Association to revive the scheme which will, incidentally, strengthen its hands while pleading for export reliefs and other help from the Government.

Applicants for the above posts must have three years' experience in a similar capacity.

4. Arts and Commerce Graduates. (Experience is not essential.)

Apply giving details about qualifications, experience, present salary drawn, salary expected, etc.

"Two steps forward and one step back! These red hot steel blooms appear to be doing the Pilgrim's Penitential March!" That's how a visitor described the operational movement of the Pilger Mill at our Works in Jamshedpur.

The completely mechanised Pilger Mill has a total capacity of 30,000 tonnes per annum. Tough seamless tubes are forged from high grade steel blooms for high pressure work, such as for the larger type of boilers and for the oil and chemical industries. In addition our own Poles Plant requires a supply of seamless tubes for the manufacture of transmission poles and lighting columns.

TOUGHER DRUGS REGULATION IN U.S.

NO CURE-ALL FOR SAFETY COMPLICATIONS

WITH the public alarmed over the thalidomide-connected birth deformities, U.S. drug makers are reluctantly ready to accept tougher Federal regulation. But they are far from sure how effective the new regulation can be. The Food and Drug Administration plans to put into effect shortly a series of new rules, the chief result of which will be to bring the agency into testing of new drugs at an earlier stage. The Pharmaceutical Manufacturers Association, according to a spokesman, will agree to the objectives of the new rules, partly because the companies don't think they have any choice. In addition, the Senate last week unanimously approved a Bill to tighten Federal drug laws.

Ruefully, the industry admits it could do little to block new controls, even if it tried. "In the past month or so, our political situation has changed and we can't get anycne's ear in Washington," laments one company official. The reason is thalidomide, the German-developed sleeping tablet suspected of causing thousands of women in Europe and Canada to give birth to deformed infants. The drug was not sold in the U.S., although the licensee here, the Wm. S. Merrell Company, a subsidiary of Richardson-Merrell, Inc., tested the drug on some 16,000 patients. These included about 200 pregnant women, at least three of whom gave birth to deformed babies. The Company vouched for the drug's safety, but an F.D.A. physician, Dr. Frances Kelsey, refused to clear it until further tests were run. The drug application was withdrawn when news arrived of European deformities linked to thalidomide.

New Standards for Tests

Ironically, some of the most important new drug control measures now proposed seem to have nothing to do with the issues of the thalidomide case. Yet the President, the Congress, and the F.D.A. are pointing to thalidomide in justifying requests for stiffer regulations. Drug company scientists note that the F.D.A. had ample power, which it used, to keep thalidomide off the U.S. market. Furthermore, they assert, the F.D.A., without any new grants of legislative or administrative authority, could set new standards for drug tests.

"If the F.D.A. wanted to, it could make us test every new drug on a pregnant camel without any changes in present rules," comments one industry official with slight exaggeration. Thorough testing on pregnant animals has been one frequent suggestion from pharmacologists in the aftermath of thalidomide. Actually, several major drug makers have already begun using such tests.

In Congress last week, the Senate restored to the watered-down Drug Control Bill, a section that would grant significant new authority to the F.D.A. The restored section would give the agency the right to pass on effectiveness or medical "efficacy" of new drugs. The F.D.A. now rules only on safety, on the theory that only practising physicians can determine a drug's usefulness. The thalidomide case, it should be noted, involved only the drug's safety. It was acknowledged to be one of the most effective sedatives of its type ever developed. It is still used in England under carefully controlled hospital conditions.

The Real Problem

Another criticism of new drug proposals, perhaps more serious, is being levelled by some scientists. Their criticisms suggest that the commotion in Washington, while reassuring the public and satisfying election-year pressures, will do little for the real problem. That problem, these scientists argue, stems from the nature of the present drug marketing rather than drug testing. And its solution, they say, is far from being a simple matter of arming the F.D.A. with new regulatory weapons. It will require thoughtful analysis and unusual voluntary co-operation from the industry, the doctors, the Government, and the public.

According to this view, thalidomide was a freak occurrence for which no one is to blame. Its apparent tendency to cause birth defects was totally unexpected by pharmacologists and could not be forecast from tests considered standard by the Government and industry. Thus, in this sense, thalidomide is relatively unimportant in determining any real deficiencies in the U.S. system for new drug introduction.

More important are such drugs as MER-29, another Merrell drug designed to lower cholesterol levels of heart patients, which was withdrawn from the market recently due to suspected side effects; several drugs used to combat mental depression which were removed from the market, because they possibly caused blood diseases; and a host of antibiotics, tranquilisers, and other medicines which show possible dangers, but thus far have remained on sale, either because the evidence of danger is insufficient or because the drugs are very valuable, despite side effects.

All these drugs received the benefit of animal and clinical tests that are probably as thorough as any in the world. The F.D.A. cleared them for sale, thus endorsing their safety. Only after massive marketing campaigns which quickly introduced the drugs to many thousands of patients did side effects begin to appear.

Serious Side Effects

Because of the large numbers of patients exposed concurrently to new drugs, serious side effects that occur are likely to be widespread before doctors suspect something is wrong. This was certainly true of thalidomide in Europe. Yet manufacturers feel they must market new drugs with great speed, according to Dr. Walter Modell, Director of Clinical Pharmacology at Cornell University Medical College and a noted drug authority. He points out that new drug patents give a manufacturer no security in this age of synthetic chemistry. After an important new drug is marketed, chemists in competitors' laboratories, within months or a few years, will synthesise a drug with a slight molecular difference but with similar effects. This second drug can then be patented. The imitator's drug is quickly brought to market, often benefiting from knowledge obtained in tests of the original drug.

In such a situation, the manufacturer of the original drug is compelled to use mass marketing techniques as soon as his drug is cleared. The company blankets the nation with maximum advertising in medical journals, promotion at medical meetings, and an army of "detail men" who sell the doctors personally.

Extensive Clinical Trials

More extensive clinical trials before F.D.A. clearance could diagnose more drug dangers. But this is an expensive, and at some point impractical, approach. Sterling Drug, Inc., for example, estimates that already each new drug that reaches the market costs the Company an average of $5 million in development expense, including costs of drugs that fail to pass the tests. To increase clinical trials fivefold or tenfold would mean a significant increase in the price the public pays for drugs. And it would still not disclose side effects of very rare incidence.

The other solution is for a drug to be marketed more slowly in co-operation with recognised medical authorities in the field in which the drug is used. Then clinical experience would gradually accumulate and side effects would be noted at the earliest possible moment. But this means a drug company would give competitors a better chance to introduce and establish similar drugs.

The drug companies are not solely responsible for this dilemma, says Dr. William Spring, Secretary of the American Medical Association's Council on Drugs. He argues that doctors are often eager to prescribe new drugs liberally. He adds that physicians must learn to use them cautiously until their margins of safety are established by long practice.

The solution to this marketing dilemma will not be an easy one. Certainly it will require restraint on the part of manufacturers eager to capitalise on significant drug discoveries. Doctors may have to restrain a natural temptation to seize upon new drugs that promise the latest medical miracle. And the public may have to learn to accept a certain risk as the price of medical progress.

The question remains whether this attitude of restraint needed from so many people—industry, medicine, and the public—can be legislated. The only certain thing is that the Government, rightly or wrongly, is going to try.—*P. G. Krishnayya's Service.*

DOLLAR AND WORLD IMBALANCE

A TIMELY BACKGROUND SURVEY FOR FUND-BANK MEETINGS

[The present position of the U.S. dollar in the world is critically examined by the Monthly Letter of the First National City Bank in its September issue published in New York this week. After drawing attention to the welcome shrinkage in the balance of payments deficit of the U.S. so far in the current year and the decline in the comparative advantages of the countries in Western Europe, the Monthly Letter comes to the conclusion that this development may prove to be a temporary phase, as there is still considerable scope for European economies to attain the American productivity levels. How will the U.S. face the situation when this happens? The Monthly Letter's answer is: "keep the lid on wage costs" and "change the attitudes, laws and public policies that raise our (the U.S.) costs in general." The increasing preference of European countries to keep the major portion of their external reserves in gold rather than in dollars has been clearly brought out by the Monthly Letter as also the disquieting implications of the arrangements with the Central banks of Western Europe under which the latter agree to hold dollar balances for short periods, with option to renew them on maturity. The authors of the survey are not satisfied even with this arrangement, let alone the suggestion of European commentators that the U.S. should extend a gold guarantee. They feel that such arrangements do not touch the roots of international imbalance and are afraid that they will help shield the deficiencies in the trade and fiscal policies pursued by the U.S. as well as other countries. The only effective solution to the international imbalance lie, according to the Monthly Letter, in a bold rectification of the defects in these policies and in a wider sharing of the defence burdens by Western Europe. The full text of the Monthly Letter's survey is reproduced here, as it provides an appropriate background to this year's annual meetings of the I.M.F. and the World Bank scheduled to begin at Washington on 17th September 1962.—ED.]

THIS month Finance Ministers and Central Bankers will gather in Washington for the 17th annual meetings of the International Monetary Fund (I.M.F.) and the World Bank. As on similar occasions in the past, they will review the state of the world's economic and financial affairs. Nothing spectacular is in the wind. While individual nations have problems, there is no evidence of a general shortage of international liquidity that would hamper the growth of world trade and investment. There is no lack of credit to creditworthy countries. Gold is better distributed than at any time during the past quarter century, and further liquidity is available from the I.M.F. The two key world currencies—the dollar and the pound sterling—are faring better than a year ago.

The U.S. balance of payments, though still in deficit to the tune of $1.5 billion a year, has shown in 1962 a considerable improvement from the $3.4 billion average annual deficit during 1958-61. This better showing reflects a number of special factors, including temporary inflows of funds from Canada, now reversed. Basically, however, it has its main counterpart in smaller balance-of-payments surpluses—or in the emergence of deficits—among Continental European nations. In other words, these countries, with the main exception of France, have stopped accumulating gold and dollars at the rapid rates that had prevailed a year or two ago; some of them have actually registered declines.

The recent changes in balance-of-payments relationships reflect in large part the overstretching of domestic economies throughout much of Continental Europe. In a climate of very high demand and overfull employment, Germany and other countries have lost some of their competitive advantages in world markets; the upvaluation of the German Mark and the Dutch guilder in March 1961 was still another influence. This shows itself in the marked slowdown of export expansion rates and a further rise in imports; Germany's merchandise trade surplus during the first seven months of 1962 was $450 million, as compared with $1,025 million a year ago.

A particularly clear signal of the changing economic environment abroad is the sharp rise in consumer prices and wages; wage increases are out of line with attainable increments in productivity.

Greater inflation among our competitors than in the United States is not the path along which an improvement in international balance should be sought. Current trends in prices and costs abroad tend to help the U.S. competitive position in world trade, but we cannot count on continuing relief. Productivity in U.S. industry, it is true, averages almost twice that of Europe; this explains why U.S. wages can be so much higher. Productivity margins will, however, be narrowing as Europe catches up to American productivity levels and increasingly benefits from economies of scale in its enlarged mass-production markets. The need to keep the lid on our wage costs—and to change the attitudes, laws, and public policies that raise our costs in general—remains imperative.

TABLE 1: *Gold and Foreign Exchange Reserves of Selected Countries*

	Percentage Change in Total Reserves			Amounts Held in July '62 (In millions of dollars)		
	1960	1961	1962*	Gold	Foreign Exchange†	Total

While the change away from large balance-of-payments surpluses in Continental Europe and large deficits here stems from the working of fundamental economic forces, it also reflects special transactions by Governments designed to hold down payments imbalances. The United States has tied a growing portion of its economic aid to purchases here, and has negotiated agreements with Germany and other nations for increased buying of defence goods here and for special debt prepayments. Germany has stepped up its foreign lending. France, which now has the largest balance-of-payments surplus in Europe, will—as the Finance Minister, M. Giscard d'Estaing, stated recently—use future dollar accumulations to pay off debts it owes to the United States; last July, France prepaid $293 million. Enlarged borrowings of non-dollar currencies from, and sizable repayments of dollars to, the I.M.F. have also been helpful in reducing the international imbalance.

Buying Time

Adjustments of the kind needed to redress the U.S. balance of payments necessarily take time. The dollar is not yet like Cæsar's wife—above suspicion. Besides, near-term problems of the business cycle here as well as in Europe, changing constellations of interest rates in the principal money markets, and ups and downs in confidence may all be troublesome.

With the growing freedom of international payments and the new respect gained by European currencies, the market for short-term funds has become increasingly internationalised. Outflows of such funds represent, as it were, short-term loans to countries where investors are assured of an attractive income and the risk of currency depreciation is either absent or can be covered in the forward exchange market. The movement of short-term funds has greatly facilitated the financing of the expansion in international trade. At a time when "hot money" is often blamed for weakening the monetary structure of the Free World, it is refreshing to note the views stated just a few weeks ago by the Board of Directors of the European Monetary Agreement: many of these short-term capital movements are "a sound and indispensable accompaniment to the growing integration of the Western world and are less volatile and irrational than is sometimes assumed."

Many efforts are presently directed at strengthening the monetary defences of the Free World against the threats of instability arising from undesirable movements of short-term capital from one country to another. These efforts are, as a rule, designed to have general applicability. No one can predict which of the world's leading currencies may, a year or two hence, come under pressure. But over the past year or so, the thought has been to prepare for another period of strain on the dollar.

These efforts date back to the flare-up in the London gold market in October 1960, which led to arrangements under which the Bank of England could replenish from the U.S. Treasury gold sold in the market to keep it on an even keel. This "gold bridge" was later supplemented by a wider informal co-operation among central banks to refrain from buying gold in London when the supply is short and to participate with the United States in channeling gold to the market.

Eighteen months ago, the United States began—for the first time in a generation—to intervene in foreign exchange markets, notably in the forward exchange markets. The aim is to smooth and moderate exchange fluctuations, and reduce incentives to shift funds from New York to other international money centres. Initially, such operations were conducted by the New York Federal Reserve Bank for account of the Treasury, which secured the necessary ammunition from German Marks received in the spring of 1961 as part of a debt prepayment, from outright purchases of modest amounts of foreign currencies, and from borrowings in Switzerland and Italy.

This year, the Federal Reserve, in close co-operation with the Treasury, has engaged in foreign exchange operations for its own account. It has acquired the needed foreign currencies mainly through a series of reciprocal credit facilities with foreign central banks. Under these so-called "currency swaps," one participant supplies to the other its own currency up to a stated amount and for 90 days; the swaps are renewable and outstanding balances are protected by forward exchange cover. Federal Reserve borrowing abroad does not come under the legal public debt ceiling, as does the Treasury's.

The circumstances and the purpose of the Canadian swap differ from those with European banks. For one thing, the amount involved was much larger; and for another, it was designed as part of a package of international credit lines to help Canada overcome its exchange crisis last June. The other swaps, made public in a continuing stream of announcements, have been arranged to accommodate—at least in their initial impact—the United States. Taken individually, each of them has been small, but their aggregate, $450 million, is a sum of some consequence.*

Much larger borrowings of international reserves were made by the United Kingdom at times when sterling was under pressure. During the two most recent exchange crises, in 1957 and in 1961, Britain borrowed substantial amounts from the I.M.F. and American as well as European official sources. Subsequently, it made repayments partly because of some improvement in current-account balance but mostly because its reserves were bolstered by inflows of short-term funds attracted on both occasions by 7 per cent Bank rate and restored confidence. One result of borrowing reserves is that it obviates an immediate visible loss of gold. There is a growing feeling that the practice of borrowing reserves makes it more and more difficult to interpret the official figures of gold stocks and foreign exchange holdings. Markets are, of course, aware of this dilution of reserves.

‡ Stand-by arrangement; the Swiss and B.I.S. swaps have reportedly been used in part.
Note: Compiled on the basis of information available as of 27th August.

*Data of actual holdings of foreign currencies by the United States are published with a considerable lag. In June, the Federal Reserve Banks held $439 million; in May, when they reported $134 million, the combined Federal Reserve and Treasury holdings stood at $260 million.

Another thought, put forward a few months ago by Treasury Under Secretary Robert V. Roosa, stems from the fact that, when the U.S. balance of payments is in deficit, gold flows out of New York. But, when some improvement takes place, gold does not return; other countries simply reduce their dollar holdings. If the United States permanently held other currencies as well as gold in its reserves, it would be possible to reduce these holdings when payments deteriorated instead of losing gold. Mr. Roosa felt that this would have the further advantage of avoiding apprehensions about the dollar that now arise when the U.S. gold stock is seen to drop. Briefly:

"It may well turn out that some contribution toward resolving part of our problem may be found in building up—in time of surplus—holdings of other currencies that are not thought of as reserve currencies in the same way that the dollar and the pound sterling are viewed.... We need to provide a means of further economising on gold reserves, while ensuring that the liquidity needs of our expanding world economy will be met in a manner consistent with the sovereignty of individual countries and with heavy reliance on the discipline provided by the balance of payments....

Looking to the Future

Looking to the future, the thought of much larger operations calls for searching examination. It has been suggested that, in certain circumstances, the United States might borrow from the I.M.F.; and to increase availabilities of currencies suitable for lending in an emergency, an agreement is soon expected to enter into force under which the Fund might itself borrow currencies from its leading members. The United States would use foreign currencies obtained from the Fund to buy up dollars offered in the market by private holders and to redeem the dollars acquired by foreign central banks in excess of what they would be willing to hold. This would tend to preclude dollar holdings of foreign central banks from becoming a drain on our monetary gold stock. As in all Fund transactions, these operations would be subject to a "gold clause" guaranteeing reimbursement in terms of the equivalent in gold of the amount lent.

Where there are a number of strong countries—as there are today—a plausible case would seem to exist for some sharing of the burdens placed on the key currency."

The Federal Reserve Open Market Committee, setting down last February the guiding principles for System foreign exchange operations, mentioned not only the specific aims of tempering exchange fluctuations and moderating U.S. gold flows, but noted that, "in the long run," reciprocal holdings of currencies "may contribute to meeting needs for international liquidity as required in terms of an expanding world economy."

How far the United States is prepared to go is not at all clear. Apart from borrowings and outright purchases for gold, the United States can build up stocks of foreign currencies only if it achieves a surplus in its international payments. Are we ready to accumulate foreign currencies when other countries experience difficulties in settling their international accounts? Nor is it clear how far other nations may be ready to move toward holding a smaller proportion of reserves in gold. The Table 1 shows that most of the principal trading nations keep the bulk of their reserves in gold. The large repayment by the United Kingdom to the I.M.F. brought at the end of July a sharp increase in the ratio of gold in Britain's reserves; the ratio had been considerably reduced by last year's borrowing. In the British view, a country which is an international financial centre should hold most of its reserves in gold. For Germany, the proportion is lower than in the neighbouring countries, but, in absolute terms, its gold stock is by far the largest after the United States' (and, presumably, Russia's).

Techniques *vs.* Fundamentals

It is sometimes suggested that the United States extend a gold guarantee to foreign Governments and central banks so that dollars held by them would become as good as gold. The idea is unpalatable to American citizens who must live under the 1933 Congressional Resolution declaring gold clauses contrary to public policy. It is harmful, because, by removing the threat of dollar conversion into gold, it might weaken the determination of the Administration to prevent any inflationary relapse. It is ineffective, because it would do nothing to deal with the hard core of the strains in the international monetary structure.

The dollar is a key currency not by divine right but only so long as it is sought and retained voluntarily. It has achieved its international standing because of the productivity, flexibility, and efficiency of the American economy, capable of producing exportable goods eagerly in demand throughout the world. Europe today also has strong economies and currencies worthy of respect. This has greatly strengthened the world monetary system, which can be only as strong as each of the individual links in the chain.

This calls for policies in the United States that will maintain the dollar as a reliable currency. It also calls for policies on the part of a greatly strengthened Europe designed to achieve a wider sharing of the burdens of defence and economic aid, further liberalisation of trade (including trade in agricultural products), and removal of controls over capital outflows. These are the necessary prerequisites for a smooth and efficient functioning of *any* international monetary system.

Indeed, what has gone wrong in recent years is not a failure of our international institutional arrangements and practices but a deficiency of policies. Ingenious new exchange techniques, including borrowings of international reserves, may be helpful to support each other's currency. They do not, however, touch the roots of international imbalance. They can spare a currency the manifest symptoms of weakness in exchange markets. They will be positively harmful if, through their technical success, they distract attention from fundamentals.

WORLD POPULATION EXCEEDS THREE BILLION

ANNUAL GROWTH RATE 1.8 PER CENT

BY mid-1961, the world population had passed the three-billion mark, representing an increase of almost one-half billion since 1950. An average rate of population growth of 1.8 per cent a year, greater than in any earlier 10-year period, has been shown in the results of population censuses taken during 1960 and 1961 in many countries, stimulated by the U.N. World Population Census Programme. There are now 22 persons for each square kilometre of land, as compared with 18 only 10 years ago. Baby girls in Sweden have the longest expectation of life—slightly over 75 years. Boy babies, with few expectation of life close to 72 years, is also in Sweden. Married persons, the world over, have lower death rates than the single, widowed or divorced. Half, or more, of all the deaths in 1960 in the United Kingdom, Canada, the United States, Australia, New Zealand and Israel were caused by heart disease or cancer.

These facts and figures are given in two U.N. publications issued this week, namely, the quarterly *Population and Vital Statistics Report* (Statistical Papers Series A, Vol. XIV, No. 3), which includes date available as of 1st July 1962 on total population, births and deaths; and the 1961 *Demographic Yearbook*, which deals with international statistics on area, population, birth, death, fetal death, marriage and divorce. For the first time since 1957, the present situation and time trends in mortality are featured in the *Yearbook*.

The rate of growth continued through 1961 and brought the total population to 3.06 billion at the mid-year. One of the facts which recent census results have revealed is that, among 15 countries of Asia, the total population is approximately 35 million persons greater than had been anticipated. But the fastest growing region of the world is Central America, where the average annual rate of growth is 2.7 per cent, though the countries of South-west Asia have grown almost as rapidly, with an average annual increase of 2.6 per cent. The slowest growth is found among the countries of Northern and Western Europe, in which the population increased by an average of only 0.7 per cent a year.

Population Density Increases

The increase in the total population of the world has been accompanied by an increase in the density of the population. The greatest absolute increase has taken place in South Central Asia, where there are now 109 persons for each square kilometre of land. Although this region as a whole is still not as crowded as is Central Europe—the most densely populated region of the world with 137 persons per square kilometre—South Central Asia had added 12 persons for each square kilometre since 1955, while Central Europe has added only five.

The Netherlands has the highest density of any country—342 persons per square kilometre, followed by England and Wales with 303 persons, Belgium with 300 and Japan with 252.

Much greater densities than these occur in certain " city states," such as Ceuta and Melilla (in North Africa), Macau, Gibraltar, Hong Kong, Singapore, Monaco and the Holy See, where densities of between 2,800 and 15,000 are found.

High densities also exist in island areas. Malta and its neighbouring island of Gozo have a density of 1,040 persons per square kilometre, while Bermuda has 805, Barbados 564 and the Channel Islands 561. In Puerto Rico, China (Taiwan), Grenada, the Republic of Korea, the Maldive Islands in the Indian Ocean, and the Ryukyu Islands, densities are 250 or more. At the other extreme are Australia, Bechuanaland, Greenland and South West Africa, with not more than 1 person per square kilometre.

The 1961 *Demographic Yearbook*, in dealing with total, infant or perinatal mortality, presents such characteristics as sex, age, illegitimacy, cause, medical certification, marital status and occupation. Twenty-year series of life-table mortality rates, survivors and expectation of life are also shown.

The estimated world birth rate is now 36 per 1,000 population and the estimated death rate is 18 per 1,000. The highest regional birth rate (48 per 1,000 population) and the highest death rate (27 per 1,000 population) are found in Tropical and Southern Africa. Although the birth rate in South-west Asia is at the same high level, the death rate in that region is somewhat lower (22 per 1,000). The lowest regional birth rate (18 per 1,000) is that of Northern and Western Europe. The lowest regional death rate (8 per 1,000) is that of the U.S.S.R. With the exception of those for the U.S.S.R., regional rates are only estimates and cannot be considered as exact, because birth and death rates for many countries are not known and estimates vary greatly in reliability.

Sweden and Norway Lead in Life Expectancy

Although some of the apparent increase in the population is the result of the fact that methods of counting have become more exact, there is no doubt, according to U.N. statisticians, that the major reason is the decline in mortality. One of the reflections of this decline is the increase in the expectation of life in various countries. The most recent information received at the United Nations shows the longest expectation of life is for baby girls in Sweden, who can now expect to live for slightly over 75 years. Norwegian baby girls have an expectation of almost 75 years, while, in the Netherlands, England and Wales, and France, their expectation is 74 years, and in New Zealand and the United States it is 73 years. In addition, there are 18 other countries, making a total of 25 countries where baby girls can look forward to living for over 70 years.

The longest male expectation of life is close to 72 years, in Sweden, with the Netherlands, Norway, and Israel following closely with 71 years, and Denmark with 70 years. So far, only these five countries have achieved an expectation of life of 70 years or more for boy babies, contrasted with 25 girls live in these ages. It is possible, however, that even longer expectations than these are already, or will shortly, be evident, as more countries revise their life tables on the basis of recent population census results.

World Death Rate Decreases

The *Yearbook* shows that the long-term downward trend in the death rate can be illustrated by a comparison of average death rates for 1945-49 in individual countries with the rates for 1958, 1959 or 1960. Out of 144 series of death rates covering this period, only 10 failed to show a decrease. In 17 cases, the death rate has been cut in half or even more; in 71 cases, the rate decreased by between 20 and 49 per cent; and in 46 cases, the decrease was between 1 and 19 per cent.

The reliability of the figures for over half of the countries of the world for which death rates are available is questionable. In a report prepared for the Population Commission of the United Nations at the end of 1960, it was pointed out that, around 1958, death registration statistics considered to be " complete " (that is, representing at least 90 per cent of the deaths occurring in each year) were available for only 36 per cent of the population of the world. For another 50 per cent of the people, some inadequate data existed, while for 14 per cent there was no indication that any death registration at all existed. That there has been little change in the situation since that time is demonstrated by the fact that the figures for over half of the areas shown in the current *Yearbook* are still considered incomplete.

Even less adequate is the coverage of specific types of statistics relating to deaths. Only 28 per cent of the world's population was included in complete reporting of deaths by age and sex around 1958, and only 25 per cent for deaths by cause. Thirty-five per cent of the population was covered by complete reporting of infant deaths but only 28 per cent for infant deaths by age.

Lower Death Rate Among Women and Girls

Together with their generally greater life expectancy, women and girls usually have a lower death rate than do men and boys. In only seven of the almost 90 countries for which death rates by sex are shown in the *Yearbook* does the crude death rate for women and girls exceed that for men and boys. Of these seven countries, only two are considered to have reliable death statistics.

Among the much larger group of countries where the male death rate is higher than the female, the male excess is 36 per cent in the United States, 38 per cent in Canada, 33 per cent in Argentina and 26 per cent in Australia. These differences are about the same as they were four or five years ago.

The relative weight of environmental factors and of innate biological factors in effecting the differential is not yet known. It might, for example, result from the fact that males are faced with greater stresses of living or, conversely, that females have a greater capacity to withstand physical and emotional stress.

Regardless of the general level of mortality, the age-specific death rates in individual countries usually conform to a standard pattern, starting at a high peak immediately after birth, falling to a minimum in the early teens, and then rising, gradually at first and more and more rapidly as age advances. The decline in mortality in the world during modern times has tended to accentuate, rather than diminish, the differences in the mortality experience at different ages, because death rates in childhood and young adulthood have been cut by proportionally greater amounts than the rates among older persons.

In all parts of the world, married men and women have lower death rates than either the single, the widowed or the divorced population

Ninth Edition of V. S. SUNDARAM'S

LAW OF INCOME-TAX ACT

(Act XLIII of 1961)

This book needs no special introduction being known to all its users over these years. Opportunity has been taken to revise the book not merely by way of re-arrangement as necessitated by the new Act including the new Finance Act XX of 1962, and of bringing all relevant material up-to-date but by re-writing a good part of the book. All obsolete matter has been cut out but in view of the applicability of the old Act to all pending proceedings, all essential and important matters relating to the old law are retained. Several minor changes have also been made in response to the suggestions from the many users of the book. The Publishers are confident that this edition will be distinctly better than its predecessors.

A SLIGHT CHANGE FOR THE BETTER

"BUY LANCASHIRE" DECISION OF TERRY BROTHERS

From Our Special Correspondent

MANCHESTER, *28th August*

MANCHESTER LETTER

TRUE as the old saying, "One swallow doesn't make a summer," may be, just an inkling of good news can have the effect of brightening the horizon—and that is just what Lancashire needs at the moment. Market sentiment is a fickle emotion and can be varied by sudden whims, particularly on the all-important buying side. The turning of the tide, in fact, is often practically imperceptible, although those with "hindsight" claim to have judged the changing mood almost before it happens. To the trader keenly attuned to the atmosphere of the market, however, the intangible feeling that "something is in the wind" can offer a fractional start when business is on the move.

Economic indicators provide a fair guide to the future and the draining away of surplus stocks as evinced in the recent availability returns, must have a bearing on the activities of buyers. Many other considerations are needed to convince the customer that the time to put down more orders has arrived, but basically price and ability to offer quick delivery must be the primary factors.

Orders for Lancashire

Two Directors of a Manchester manufacturing company have returned home from a tour of mills in Hong Kong, Formosa, Japan and India and placed an order for 1,000,000 yards of cotton fabric—stipulating that every yard of it must be made in Lancashire. The order, worth about £150,000, is the biggest ever placed by Mr. Bernard Terry and Mr. Sidney Terry, Directors of Customagic Manufacturing Company, which employs 150 workers at a factory in Hulme, Manchester, producing loose covers for furniture.

The decision to "Buy Lancashire" has come as a tonic to an industry which has known little cheerful news in recent months. The Textile Action Group, which has been waging a campaign against the flood of overseas cotton textiles pouring into Britain, has sent a letter of congratulation to the Terry brothers—and some Lancashire red roses. Mr. Sidney Terry explained:

"We have travelled the world in recent weeks looking at cotton cloth. We've come back home and made a decision—to buy Lancashire. Our own cotton industry has a better standard of merchandise and is becoming competitive, if only customers would realise it. Too many of them are looking overseas instead of on their own doorstep."

The 1,000,000-yard order is for delivery within three months. "We are impressed by the delivery terms Lancashire can now offer," said Mr. Terry. Another board meeting has been called for January to review buying policy and it could mean another substantial order for Lancashire.

New Export Links

Branching out into new direct manufacturing projects in Italy and South Africa is Vantona Ltd., the Manchester-based manufacturers and merchants of drapery, household goods and dresswear. Mr. Stanley Beddow, the group's 70-year-old Chairman, who announced his impending retirement at last week's annual meeting, also told shareholders of fresh links with foreign textile firms in countries where direct exports have become difficult. An agreement is expected within the next few days between the group and a trio of young and dynamic textile enthusiasts in Milan, the brothers Zucchi, makers of household textiles.

Another project is with the Constantia Textile Mills of Cape Town, which will manufacture the group's woven speciality cloth in South Africa. Vantona already has a foreign manufacturing network involving links with firms in France, Holland, Ireland and Jersey.

Uncertainties surrounding industry in North West England, caused particularly by the possibility of Common Market entry and talk of "profitless prosperity," have led to many companies thinking in terms of consolidation rather than expansion, said a report of the Lancashire and Merseyside Industrial Development Association in Manchester. Very few firms are looking for more manufacturing space to expand production, it added. A "regrettable" feature in the past eight months was the number of closures affecting many industries and towns—not all of them concerned with textiles. The textile trade continued to be the worst hit, adds the report, pointing out that 17 mills had closed during the year.

Redundancies had occurred in Burnley, Hindley and Widnes because of closures in industries outside the textile trade and Liverpool was especially affected, although several large developments planned in Liverpool and Widnes were expected to improve the situation. The Association says that the present situation will continue until the economic climate shows visible signs of improvement. But the report adds: "There are signs in the past few weeks of a slight change for the better."

Cotton Supplies Curtailed

Imports of raw cotton are invariably governed by the condition of the spinning and weaving industry, so that it is scarcely surprising to learn that arrivals reaching the United Kingdom during the season just ended were in fact the lowest recorded since 1834. Had it not been for the unloading of cargoes of nearly 20,000 bales in the final week of the season, the total would not have reached the 1,000,000-bale mark. This represents a reduction of about 140,000 bales compared with the previous season, while, in some recent years, the quantity procured for local spinners has been nearer 1,500,000 bales. Some indication of the past glories of the trade can be gained from the records, which show that, 50 years ago, arrivals exceeded five million bales and, in the early part of the century, the mills in Lancashire were regularly consuming an annual average of about 4 million bales.

No explanation is required to give reasons for the current reluctance of shippers to secure supplies or of millowners to take up deliveries. The outlook remains far too uncertain to encourage more than hand-to-mouth buying. The following table shows details of the arrivals of raw cotton by growths during the past three seasons:

(In bales)

	1961-62	1960-61	1959-60
American	294,011	450,551	566,906
Mexican	58,396	43,983	78,997
Nicaraguan	23,084	14,848	18,379
Brazilian	61,141	71,488	47,674
Argentine	23,932	13,132	9,642
Peruvian	56,741	46,617	60,750
Egyptian	22,048	9,320	19,174
Sudan	98,912	127,696	213,509
East African	20,102	30,127	36,268
Nigerian	49,119	86,366	92,071
Congo	22,416	2,821	17,794
Turkish	71,476	35,084	78,890
Syrian	21,634	11,689	16,187
Iranian	69,779	89,382	51,345
Pakistan	12,522	5,597	23,382
Indian	7,515	2,719	2,827
Russian	8,975	36,438	41,796
Others	95,660	76,555	73,516
Total	1,017,463	1,156,413	1,449,107

Perhaps the most interesting feature of the current rate of imports is the evening out of the volume of supplies obtained from the various sources. Although the quantity of cotton shipped from the United States is still far in excess of any other, the gap is narrowing. Purchases from the Sudan have been more than halved during the past two seasons, but the curtailment of the crop in that country has been a major factor. In other directions, notably South and Central America, Egypt, Turkey and Syria, the recent level of imports has shown a marked improvement, although a sharp contraction has occurred in supplies obtained from Russia.

The stock position during the past season has emphasised the low level of supplies available for immediate purchase in this country. Rarely, if ever, has the volume of visible supplies been so low. In November, the position was reached when less than 120,000 bales of cotton were held in Liverpool, Manchester or afloat, and the most favourable moment was in March when nearly 170,000 bales were on hand.

At the end of the season, the quantity of cotton available for disposal was 145,000 bales, comprising 68,000 bales in stock at Liverpool, 18,000 bales in Manchester and 59,000 bales afloat. At least, within this total, the number of growths covered a fair spread, including 29,000 bales American, 21,000 bales Argentinian, 15,000 bales Iranian and 13,000 bales Brazilian.

Forwardings to spinners during the past season at 1,032,998 bales were some 15,000 bales larger than actual arrivals. Spinners took about 10,000 bales more Iranian cotton than was imported, using up supplies carried over from the previous season. Forwardings of American cotton were about 6,000 bales more than arrivals.

INTERNATIONAL SILK SITUATION

PRODUCTION DECLINES—PRICES RISE MARKEDLY

"QUEEN of fibres": This is how silk has all along been described the world over. Although silk has declined in importance as an apparel fibre, it continues to retain its supremacy, especially for textiles of the highest quality, in view of its excellent colour affinity, adaptability to various forms of throwing, and heat preserving property and absorbency. The place occupied by silk on the world textile map was broadly indicated in the latest general review of industrial fibres published by the Commonwealth Economic Committee (London), a summary of which was given in these columns last week. It is proposed to give this week more details of the Committee's review of the recent trends in silk economy. The review will no doubt be found useful, considering that the available literature pertaining to silk is scrappy and that India is one of the world's largest producers and consumers of silk.

Silk is a fine element extruded by the silkworm. There may be anything upto 4,000 yards of filament on one cocoon, but, of this, only about one-fifth can be reeled into continuous filament known as "nett silk"; the tough outer husk and soft inner portions, which are unreelable, can be combed and spun into "spun silk." The Far East and Central and North America are the main silk producing areas, the principal countries being Japan, India, China, Korea and Italy. The so-called "wild silk" (as distinct from raw silk obtained from the mulberry silk cocoon) is also grown in the Far East.

Competition from Man-made Fibres

The extent to which silk has declined in international trade in recent years will be evident from the fact that, over the decade ended 1960, though world production of raw silk increased, world exports of that commodity went down from nearly 33 per cent in 1946-50 to 26 per cent in 1960. Thus, the total world output of silk rose by 80 per cent, from 38.10 million lbs. to 68.20 million lbs., whereas exports (excluding those from Hong Kong) have risen by only 42 per cent, from 12.48 million lbs. to 17.72 million lbs. As for the consumption of silk, however, the past few years have witnessed a distinct improvement. The quantity of silk actually used in the eight biggest consuming countries (Japan, U.S., Italy, India, France, Switzerland, W. Germany and U.K.) in 1960 was 52.7 million lbs. as against 30.1 per cent in 1946-50 (average), representing a rise of 75 per cent. The improvement would have been more marked but for the competition from man-made fibres which has been in evidence for quite sometime now. Here is what the Commonwealth Economic Committee's review says on the demand for silk:

"Silk has been highly valued throughout the centuries for its luxurious qualities and, due mainly to its uses in very expensive apparel and luxury goods, demand has been considerably more elastic than for other fibres. Competition from man-made fibres began to take effect during the middle thirties. Rayon was widely used in apparel fabrics and nylon entered the hosiery market just before the war. During the war, the area under mulberries was drastically curtailed in favour of food crops, so that, by 1946, total silk production was less than a quarter of the 1938 level. In post-war years, the man-made fibres have established themselves in many of silk's former uses; nylon has almost ousted silk from the hosiery markets of the world, due to its durability and uniformity and silk has recently lost ground to the non-cellulosic man-made fibres in tie fabrics."

The trend of world silk production and exports during the years 1959 and 1960 as compared with the annual average for the period 1946-50 is indicated in Table A, while Table B shows the consumption in the main countries. The data bring out clearly the dominant position occupied by Japan in the world sericulture industry. It accounts for as much as seven-eighths of the free world output, almost two-thirds of exports and over three-eighths of consumption.

The world production of raw silk during the year 1960 was 5 per cent lower than in 1959 and 1958, being 68.2 million lbs., as against 71.6 million lbs. and 74.4 million lbs. in the two previous years, respectively. The persistent decline was due largely to the fall in the Japanese production, following the official policy of discouragement and certain weaknesses in the industry itself. Over the next ten years, however, we are told that it is proposed to rehabilitate the Japanese industry by increasing its scale and efficiency, as well as by encouraging collective management of mulberry fields and co-operative silkworm rearing. These plans are expected to augment the production of raw silk from less than 40 million lbs. in 1960 to 65 million lbs. by 1965 and 79 million lbs. five years later.

Silk in India

The only significant producer of silk in the Commonwealth is India. The production of mulberry silk in 1960 was practically unchanged at the previous year's level of 2.5 million lbs., while that of non-mulberry silk actually declined by 8 per cent to 800,000 lbs., so that the total output was only 3.3 million lbs. or 700,000 lbs. below the second Plan target of 4.0 million lbs. The shortfall is attributed to lower productivity in the mulberry industry. In the calendar year 1961, mulberry silk output increased slightly to 2.75 million lbs., while the production of non-mulberry silk declined further to 770,000 lbs. or a total of 3.52 million lbs. The third Five-year Plan has fixed a production target of 5.0 million lbs. to be achieved by 1965-66. The Plan's chief aim is to reduce production cost through programmes for increasing the pre-acre yield of mulberry, to create a sound seed organisation and to replace a large number of traditional *charkhas* by cottage basins. The Government has also extended protection until 1963.

So large a proportion of Japan's silk output is used within the country that only about a quarter of world production enters international trade in the form of raw silk. During the year 1960, world exports fell by 12 per cent from the previous year's comparatively high level to 17.7 million lbs. The fall was due primarily to reduced shipments from China and Russia and, to a lesser extent, Japan, thereby reflecting a shortage of supplies rather than any significant contraction of demand. Exports of Japan during 1960 fell by 2 per cent to 11.7 million lbs., but that country's share of the world silk trade was seven points higher at 66 per cent. Exports from China are estimated to have dropped by 29 per cent to 4.6 million lbs., owing to reduced purchases by Soviet Union and West European markets. India exported in 1960 just 6,000 lbs. of raw silk, as against 3,000 lbs. in 1959.

Silk Waste

After declining between 1957 and 1959, exports of silk waste recovered in the following year to 5.4 million lbs. which was 24 per cent greater than in 1959, although still only half as great as in 1956. Larger shipments from Japan and India were mainly responsible for the higher 1960 total. Exports from Japan rose by 44 per cent to 2.1 million lbs. Shipments from India advanced by 41 per cent to 1.2 million lbs. and were directed mainly to Italy, France, Switzerland and Japan. Exports from China (according to importing countries' returns) dropped by a further 18 per cent to 600,000 lbs., as a result of smaller shipments to Japan and West Germany, but exports from Italy were 19 per cent higher than in 1959.

The U.S. is the world's largest buyer of raw silk, its actual imports in 1960 being more than 6.45 million lbs., representing as much as 36.3 per cent of the aggregate world imports of 17.77 million lbs. Japan alone supplied 5.79 million lbs. of silk to the U.S. The other larger importers of raw silk are Italy, Soviet Union, France and Switzerland. The Commonwealth countries together imported in 1960 over 1.05 million lbs., the main supplying countries being Japan (697,000 lbs.) and China (331,000 lbs.). Of the total imports during 1960, India accounted for 114,000 lbs. The aggregate imports into the Common Market were of the order of 5.88 million lbs. of raw silk and 5.03 million lbs. of cocoons and silk waste, the corresponding figures for 1959 being 4.79 million lbs. and 4.36

WANTED

1. Assistant Secretary—should be a senior Chartered Accountant to look after the Accounts Department at the factory independently, in addition to Secretarial work.

2. Assistant Storekeeper—should be a graduate (preferably B.Sc.) having at least 5 years' experience in a similar capacity in an industrial organisation.

Applicants would be required to serve at the Company's factory at Udhna near Surat. Apply giving details about qualifications, experience, present salary drawn, salary expected, etc., to Baroda Rayons, 130/132, Apollo Street, Bombay-1.

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial resurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

TRAVEL UNDER ONE'S OWN STEAM

WILL THIS BE FEASIBLE IN AIR AS FREELY AS IT IS ON ROAD?

By Our Aviation Correspondent

IT is now almost sixty years since Wilbur and Orville Wright first demonstrated the fulfilment of mankind's long cherished ambition—controllable flight in a heavier-than-air machine. It is a very far cry from the flimsy contraption of wood, fabric, and piano-wire which, on that historic occasion, rose a few feet from the ground. Air travel, from the realms of fantasy, has become a normal feature of everyday life—the world's total air traffic now tops the 200 million passenger mark each year. The modern jetliner, flying at, 40,000 feet, and conveying 150 passengers in considerable comfort over vast distances, transcends, no doubt, the wildest dreams of the early pioneers. And yet, in one important respect, the aeroplane is far from filling the principal role for which, in the popular view, it was originally cast, namely, an individual conveyance for millions of people.

Light Aeroplane

The reasons, of course, are fairly obvious, though cost, which might seem of primary importance, is not, in fact, the most compelling. Had the light aeroplane been built in anything approaching the quantity of the private automobile, it would probably be almost comparable in price. Then there is the question of skill—an important, but by no means all-important factor. The skill required to fly a light aeroplane is not excessive. Most people possess it and, in any event, manufactured in thousands, something pretty foolproof would have been evolved. Few people today will remember the "Flying Flea"—the build-it-yourself aeroplane of the nineteen thirties. It was not all that easy to fly but its French designer certainly had the right idea.

The real, the fundamental reason for the light aeroplane's lack of success is its very limited utility. Whilst it does not need the vast acreage of concrete which the airliner demands, it still requires an aerodrome for its operation. It lacks, in other words, that door-to-door convenience which the private motor car provides. Convenience—that, perhaps, is the keynote of the motor car's universal appeal. Its other qualities—the freedom of movement which it confers, the independence from crowds, queues, and timetables, the almost God-like sense of power—are all more than matched by the aeroplane. But the motor car, unlike the aeroplane, is a genie always at immediate call. One mile, or a thousand miles, so long as there is a road, the motor car will take you, from door to door, with a minimum of fuss or preparation.

Automobiles by Leaps and Bounds

It is hardly surprising, in the circumstances, that the cult of the private motor car is growing by leaps and bounds. So powerful a factor has it become that it is now a serious threat to all forms of public transport—including the queenly airliner. Take the U.S.A., for example—a country of vast distances, with the most comprehensive system of rail, road and air transport in the world. A recent survey—conducted, incidentally, by one of the airlines—shows that, during the last decade, the combined total of passenger-miles operated by all common carriers, road, rail, and air, has declined by 13 per cent. Although, over the same period, the volume of air traffic has steadily increased, the hard fact remains that the air is merely getting a larger share of a diminishing total.

In other words, the air has created no new traffic and, having exhausted—as many now believe—its capacity to attract traffic from the older forms of transport, its future rate of expansion will mainly depend on the growth of individual prosperity in the country. It is in these circumstances that the constantly increasing number of private automobiles is by no means a negligible factor in the airlines situation. It is computed that, over the past seven years, the private automobile increased its share of short-haul, inter-city carriage by more than 140 per cent.

Exactly the same trend is discernible in Western Europe and the United Kingdom. In almost every country, ownership of private motor cars has risen—and is continuing to rise—by an annual 10 per cent. As a result of popular demand, the progressive building of motorways, the elimination of traffic bottlenecks, and the improvement of motoring facilities generally, are matters of high priority. The European Common Market, removing, as it does, many customs and other formalities at national frontiers, is also a powerful factor.

Just as in the U.S.A., so in Europe, the private motor car is affecting—and will continue progressively to affect—all forms of short-haul transport. The fact of the matter is that a great majority of people, whenever and wherever it is possible, prefer to travel "under their own steam." It is, of course, very often much cheaper to do so. For a family party of four or five persons, for example, the private car offers holiday travel at about a quarter of the cost involved in fares by any form of public transport. It is not, however, entirely—or, perhaps, even mainly—a matter of cost. It is the freedom of movement the sense of independence, which counts for a great deal.

Easy-to-fly Version

And, here, perhaps, it is appropriate to return to one's original theme—the private aeroplane. Just as the short-haul air carrier has got to find some answer to the inordinate proportion of "ground time" involved in every short air journey, so, one suggests, may the aircraft industry find a market—and a very extensive market too—for the private aeroplane. In both cases, so far as we can foresee at presence, the obvious answer is the vertical take-off and landing aeroplane. For the airlines, the VTOL is not very far distant. Another three or four years should witness a considerable advance in its development. For the private owner, a comparatively cheap, easy-to-fly version is still a long way off.

One does not suggest, of course, that the small VTOL aeroplane will become as popular as the motor car. One does argue, however, that fully developed for the private owner market, it will have the same kind of appeal—particularly, perhaps, for the commercial firm and the business executive. If, by any stretch of imagination, it were eventually to rival the motor car in popularity, the air traffic problem hardly bears contemplation. The imagination reels at the prospect of a helicopter policeman on point duty directing VTOL traffic during the "rush hour" in any busy city! But, then, who in, say, 1920, foresaw the kind of traffic congestion we now have on the roads? In many countries, new cities are being planned and built with the special problems of the motor car in view. The U.S.A. is currently spending $3,000 million every year on roads. Future generations may have to make similar provision for the private aeroplane!

Indeed, he would be a very bold prophet who would venture to predict the changes which the rising generation are certainly going to see in our present systems of transport. The possibilities are immense. Even today, some of these are foreshadowed by the VTOL, the supersonic airliner, the air cushion or ground effect vehicle and now the GETOL—an aircraft which takes off and lands on its own air cushion and thus, presumably, requires no aerodrome. And this is to say nothing of space exploration, now getting well into its stride. The possibility—even the probability—of large numbers of private aeroplanes in our skies, and landing on our rooftops, pales into insignificance before the scenes which the exercise of a little imagination could conjure up!

FARNBOROUGH AIR SHOW

Equipment which will take the "if" out of the complex requirements of super-high-speed flying, and electronic devices which serve air and ground communications, are among the stand exhibits at Britain's Farnborough Air Show this week. A comprehensive electrical control system for supersonic engines, which can be controlled by a single pilot's lever, is being shown by Ultra Electronics Ltd., of London. It is fully automatic and does not require special action by the pilot when calling-up engine power changes. The control unit of the electric system can be divorced from the engine—an important factor in supersonic aircraft where there are exceptionally high temperatures in the vicinity of the engine. There is automatic control of compressor speed, thrust, acceleration and turbine temperature.

The all-electric throttle control system was designed, developed and manufactured by the firm for the Proteus engine on the Bristol Britannia and it has proved its reliability over some 3,000,000 hours of flying time.

Of interest to air traffic control organisations are two equipments shown for the first time by another British firm. They are Marconi's transistorised plan-position indicator display types 3001 and the transistorised tabular display system types 3101. The plan-position indicator gives on one tube information which previously required four or five units, and the tabular display system provides a complete display of flight data to air controllers.

TRIDENT JET LINER

The third de Havilland Trident jet airliner has successfully completed its maiden flight. It joins the first two Tridents in the test-flying programme for a full Certificate of Airworthiness by the middle of 1963, says an announcement by Hawker Siddeley Aviation, of which de Havilland Aircraft is a member. The Trident is powered by three Rolls-Royce Spey turbo-jet engines. Twenty-four of this airliner have been ordered by British European Airways, with an option on 12 more, and two by Kuwait Airways, with an option on a third. The first Trident flew on 9th January and the second on 20th May this year. They have accumulated 255 hours of flying. The first phase of the tests was mainly concerned with general handling trials, during which the aircraft was flown at speeds close to the speed of sound at heights up to 32,000 ft.

ANNOUNCEMENT

GOVERNMENT SPUN SILK MILLS

CHANNAPATNA (Mysore State)

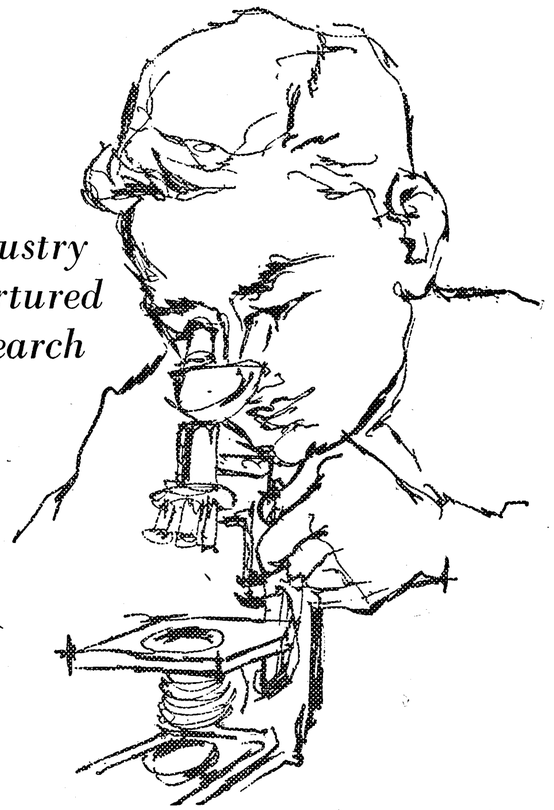
Manufacturers of SPUN SILK YARN in counts 2/210s, 2/140s, 2/100s and 2/60s and NOIL YARN in counts 15s, 10s, 7s, 5s and 2s, can meet the requirements of the consumers from ready stocks.

Our SILK NOIL DRUGGETS in attractive shades and designs are a speciality.

For your requirements and terms of business, please write to

The Director,
GOVERNMENT SPUN SILK MILLS
CHANNAPATNA

An Industry Nurtured by Research



'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

SUGAR INDUSTRY AND THE CONSUMER

PRICES MUST BE REDUCED

A LOOK back at the history of Indian sugar industry in the past two decades will reveal that the fruits of whatever qualitative and quantitative progress that has taken place have been enjoyed by cane growers, sugar mills and workers employed by them, while the interests of consumers have remained neglected. Since it is the consumers who have made a heavy sacrifice to nourish the sugar industry all these years, especially during the long period of tariff protection, they can now legitimately expect to be assured of regular, adequate supplies at a reasonable price. The supplies of sugar are, of course, plentiful at present and they are also easily available in practically every nook and corner of the country. But the prices paid are high in all conscience, thanks to the defective cane price policy of the Government and the heavy tax burden. The Tariff Commission must, indeed, be complemented for having ably championed the cause of consumers in its report on the revision of sugar price linking formula referred to in these columns last week. The scheme of deferred cane price, says the Commission, completely ignores the interests of consumers who have borne patiently the burden of high protection granted to this industry and of periodic shortages. In fact, the Sugarcane (Control) Order, the Commission has taken care to point out, enjoins the Government to bear this point in mind, as price control of sugar is intended mainly in the consumer's interests. It is, however, necessary to mention that this statement was made before the Government decontrolled sugar prices. Concluding its findings, the Commission has the following observations to make:

"It has not been easy for us to arrive at the conclusion we have reached. At each stage of our inquiry, we had an increasing awareness of the emotion and vehemence which permeate the whole controversy. In this situation, it was no pleasure for us to reject any views on either side held with obvious conviction and sincerity. What seems to add to the passions aroused on the issues is the psychological illusion of a struggle between poverty and affluence. The needs of thousands of poor cultivators of factory cane could be visualised. But, it requires a special mental effort to conjure before the mind's eye thousands of other cultivators of cane and other crops, thousands of investors most of whom are not affluent and not organised, and millions of consumers who are on the same economic level as suppliers of factory cane and *who have suffered and are suffering the consequences of high costs and inefficient production* (Italics ours). In our report, as during the inquiry proceedings, we have not aimed at passing any judgment on these issues. Our endeavour has been rather to bring the parties together and to make our final recommendations with due care that expediency does not prevail over permanent interests of the economy and that the interests of the country are placed above sectional pressures. It is in this spirit that we expect our conclusions to be judged."

The Tariff Commission has forcefully pinpointed the fact that, because of the high price of sugar, its consumption in this country has remained low. The high price is attributed to the heavy incidence of the cost of sugarcane and taxation. Sugarcane accounts for as much as 75 per cent of the total cost of sugar in India, while the corresponding ratio in other important sugar producing countries is much less. The incidence of the various levies on sugar is also as high as 35 per cent of the sugar price. The Commission has done well to urge "a proper, progressive, unwavering, well-planned and vigorous policy of cost reduction," but has refrained from offering any comments on the tax policy in regard to the industry. The reason given for not doing so is that, apart from the specific circumstances of the industry from time to time, it also involves the general issues of the fiscal policy of Government. Nevertheless, by implication, the Commission's specific description of the incidence of taxation as heavy and that too in the context of safeguarding the interests of consumers underlines the need for lowering the high level of excise duty on sugar; currently, it is Rs. 10.70 per maund to which level it was raised from Rs. 4.18 in 1957.

At every relevant place in its report, the Commission, it is gratifying to find, has emphasised the importance of reviewing the present minimum price for sugarcane on a strictly economic basis. At the same time, it has sought to drive home the point that a mere economic floor price of cane would be of little avail, unless steps were initiated to raise the quality and per-acre yield of cane. Notwithstanding all the stress on intensive cane development for the past several years, the all-India average yield of sugar per acre is no more than 1.44 ton, which is well below that obtained elsewhere: 8.83 tons in Hawaii, 6.44 tons in Java, 5.08 tons in Peru and 4.06 tons in Australia. The figure for India is much less than even that for Egypt (3.03 tons), South Africa (2.44 tons) and Louisiana (1.80 ton). It is with the object of augmenting the productivity of land devoted to sugarcane in view that the Commission has pressed for the earliest introduction of a system of cane payment by quality.

We do not know what the Commission means when it says that it disapproves "of any scheme of restriction on acreage or output at the expense of improvement in quality or yield of sugarcane." But the Commission is quite explicit when it observes:

"Better return from cane can only accrue from proper crop planning and intensive cultivation of quality cane in suitable areas. In this regeneration of our cane agriculture, the Central and State Governments have also to play a large role which must cover provision of irrigation facilities, construction of feeder roads in cane areas, dissemination of disease-free and improved varieties of seeds, control of pests and diseases, supply of manures and fertilisers at economic prices, etc. The activities of cane co-operatives need to be properly oriented for this purpose. We must record here that, during the course of our inquiry, complaints on these and other grounds like the use of cess funds were *painfully frequent* (italics ours), particularly in Bihar and Uttar Pradesh. The magnitude of the task and national interests at stake are well indicated by the fact that, in 1958-59 and 1959-60, the figures for acreage under cane were 4.8 million and 5.2 million, respectively, and those for outturn were 70.5 million tons and 75 million tons, respectively. The target for the third Plan for cane production is as high as 100 million tons."

Although the aforesaid aspect has been dealt with in this journal on more than one occasion, it requires to be reiterated. For dynamism and energetic action on the part of Agriculture Departments in States in the sphere of cane development are still lacking. Indeed, even in regions where the sugar mills are endeavouring their best to develop cane culture, some State Governments have not only failed to extend full co-operation but have actually placed hurdles. A deplorable instance is provided by the Maharashtra Government's doggedness in taking over the most efficiently run cane farms of joint-stock sugar mills.

Be that as it may, the Tariff Commission has rightly called upon the sugar mills to make their contribution by carrying out modernisation and expansion as rapidly as possible. To quote it: "It is with this purpose in view that we have agreed to an element for rehabilitation and other concessions or exemptions." Evidently, the Commission has been prompted to make this remark by the continuously expanding domestic demand for sugar and the exigency of earning foreign exchange from exports.

In stressing the need for quick modernisation and expansion, the Tariff Commission has been fair enough to draw attention to a possible emergence of an unsatisfactory state of affairs in future consequent upon the establishment of a large number of co-operative sugar factories. Says the Commission:

"In this connection, note has to be taken of the fact that of 53 new factories licensed during the first and second Plans, not less than 38 were co-operatives and that this trend is likely to continue. It is clear that the responsibility for future expansion will, therefore, fall only partly on private enterprise but very largely on social forces which shape co-operatives in which normal economic forces operate but feebly. We ardently desire that the implications of this situation should be properly appreciated in the proper quarters."

The stories that one hears about the working of co-operative sugar factories are by no means complimentary to the movement. The Commission has, therefore, been quite pertinent in sounding a note of caution, which the powers-that-be should heed if they do not wish their reputation to suffer at the hands of prosterity.

The Tariff Commission has made a dispassionate assessment of the problem of heavy sugar surplus. The Commission declares that, unfortunately, the sudden expansion of output (during 1959-60 and 1960-61) is a national embarrassment and not a matter for self-congratulation. For, according to it, the expansion has been achieved not by increased efficiency and falling costs (either of cane cultivation or of sugar manufacture) but by the stimulus of higher cane price and rebate in excise duty. Despite expansion in production, little perceptible fall in costs is, therefore, visible which, in the opinion of the Commission, explains "the peculiar hothouse character of these surpluses." By way of a solution to this problem, it observes:

"With little margin for reduction in manufacturing costs, the heavy accumulating sugar surpluses could be disposed of in either or both of two ways. There is cogent social compulsion for unloading the surpluses on the domestic market with such reduction and adjustment of excise duty, etc., as would involve the exchequer in little or no loss. The surpluses could also be exported but only at a loss in the present conditions of domestic and foreign prices. The export potential of sugar-based industries is also affected by high prices of our sugar. But, rebate in taxation, etc., has its ultimate limit and must, in the end, raise the issue whether the costs are in line with the incomes of consumers. *Ad hoc* exports at a loss offer no long-term solution; rather they only highlight the absence of a policy."

The Commission, it will be noted, has been explicit in its view on this issue, though not categorical in suggesting solutions. Since it has ruled out sugar exports as an economic means to reduce the burdensome surplus, it clearly implies that the price of sugar should be brought to a level that will stimulate domestic consumption. And, since the Commission has broadly recognised that there is little room to reduce the mills' profit-margin, it is obvious that the Government must lower the burden of taxation on sugar consumption or bring down the cost of sugarcane. Now that the Government is prepared to do neither, consumers in India have no choice but to eat less sugar and subsidise exports to other parts of the world having better living standards.

Let not your Tax problems tax you any more

GUIDE TO INCOME TAX ACT

By **A. RAMAIYA**

(Author of Guide to Companies Act)

The object of this book is to make available to the Income-tax Assessees and their Advisers, Chartered Accountants and Lawyers, a reliable Guide to the Income-tax Act and hand-book of easy reference on the Act.

The book contains explanatory notes, which will facilitate easy understanding of the provisions, and comments which will be found to be helpful in solving tax problems.

The provisions of the new Act have to be interpreted in their own language and on the back-ground of the basic material on which they are based. As the Act is a new Act, there is not much scope for citation of judicial decisions as authority for the interpretation of the new Act. Wherever there is room for interpretation the author has expressed his views clearly and these are bound to provoke further thought.

Here is a valuable book for your table which will solve many of your tax problems.

Price **Rs. 15-00** Postage extra.

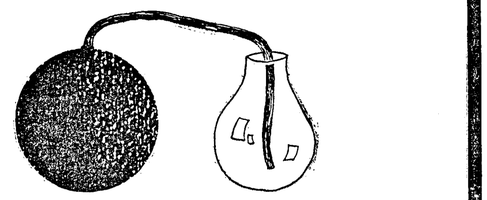
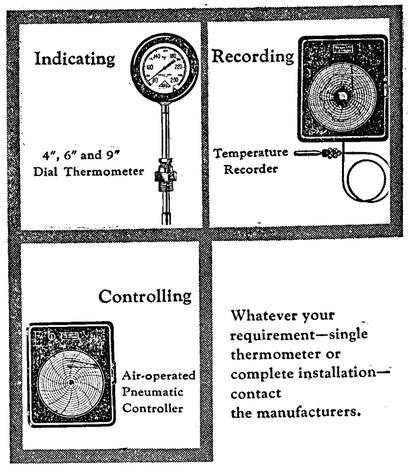
THE THERMOSCOPE CIRCA 200 BC

THE ORIGINAL THINKING OF AN ANCIENT GREEK PAVED THE WAY FOR THE MODERN THERMOMETER



The modern thermometer owes much to the pioneering of an ancient Greek. Physicist and philosopher, Philo of Byzantium invented the thermoscope about 200 B. C. It was a simple apparatus consisting of a lead globe and a flask filled with water. A tube connected the two. When the globe was heated, the air within expanded, flowed through the tube and produced air bubbles in the flask of water. Philo proved that a temperature rise causes air to expand. He did not calibrate his thermoscope and could not therefore measure temperature. But his basic experiment was invaluable: it paved the way for the modern thermometer.

Negretti & Zambra too, have pioneered in the field of temperature. Over a century's experience lies behind their range of mercury-in-steel indicating, recording and controlling instruments. To industry world-wide, the name Negretti & Zambra means instrumentation of faultless workmanship and trusted reliability.



Whatever your requirement—single thermometer or complete installation—contact the manufacturers.

BUS TRANSPORT IN BOMBAY CITY

I.L.O. PRODUCTIVITY MISSION'S RECOMMENDATIONS

THE Bombay Electric Supply and Transport (B.E.S. & T.) Undertaking of the Bombay Municipal Corporation is a big and growing public enterprise. The funds employed in it for general working purposes have increased from Rs. 12 crores in 1947 to Rs. 33 crores by 1962 (as of 31st March). Of the latter amount, Rs. 13 crores has been raised by direct public loan subscription, while the balance, which has come from the retained revenues of the Undertaking, represents the share of the Municipality. The municipal investment represents the real risk capital in the Undertaking. But the return on this capital works out to only 1.6 per cent, as the present statutory annual contribution from the Undertaking to Municipal funds is just Rs. 40 lakhs. This may be compared with the interest of 3¼ to 4¼ per cent paid on public loans raised by the Undertaking and as much as 4½ per cent which the State Governments had to pay when they came to the capital market last week. The Corporation will have to pay at least 4¾ per cent, if not 5 per cent, per annum on its borrowings this year. The I.L.O. Productivity Mission, which recently submitted a comprehensive report on the working of the Undertaking, has referred to some of these facts for the purpose of driving home the point that the Municipality is now getting too small a return on its share of the funds employed. In its view, there is no reason why the Municipality, representing the citizens at large, should not get a return on its investment at least equal to that paid to individual lenders.

But the current health of the Undertaking is such that it is in no position to pay a higher return to its owner, unless, of course, revenues are increased and/or costs are reduced. The Bus Section of the Undertaking, for instance, has been able to yield, in the last three years, a return "very close to zero" on the funds employed in it. The Tramways Section has never made any return on the funds invested in it; on the contrary, there has been a steady loss of capital in this section, increasing year by year to the present rate of between 3 and 4 per cent per annum. In other words, the transport undertaking has been eating into the capital. If it does so for long, it will go bankrupt.

Even the Electric Supply Section, which is regarded as the money-spinner in the Undertaking, is far from being that; the net return in this section has never been much above 6 per cent and, at present, it is less than the cost of borrowing money. For the Undertaking as a whole, the highest return on funds employed was reached in 1949-50 when it was a modest 5 per cent. Since then, there has been a steady trend downwards until now the Undertaking uses public money which it has borrowed at 3¼ to 4¼ per cent and, after all the work of running transport and distributing electricity, manages only to make the equivalent of 1.3 per cent on it, out of which interest on borrowings and the statutory contribution (Rs. 40 lakhs) have to be paid. At this stage of its examination of the Undertaking's finances the I.L.O. Mission has observed as follows:

"The conclusion is inescapable. The economic health of the Undertaking, and the necessity for sound trusteeship of the public funds invested in it, require that the return on funds employed be increased as quickly as possible: by increasing revenue, by reducing costs, or by both together. The present negligible return being achieved is bound to affect the views of investors who may be called upon to subscribe to further Public Loan issues, even though these are backed by the credit of the Municipality, for the persistent downward trend, if allowed to continue unchecked, must eventually jeopardise the Undertaking's ability to continue paying interest and Sinking Fund contributions."

If this state of affairs were to prevail in a private undertaking, no bank would lend money and no investor would buy its shares. Because the Municipality's liabilities are guaranteed by the State Government which, in turn, has the backing of the Centre, the B.E.S. & T. is able to get on without any sense of crisis. But even a nation cannot live beyond its means for all time to come. There is, therefore, no doubt that the B.E.S. & T. must set its house in order.

There is another important aspect of the Undertaking's finances. This pertains to the provisions for the renewal of assets. The Undertaking has no doubt adopted the sound policy of basing revenue retentions for asset renewal on the replacement cost of the assets. But its achievement in this direction has fallen short of intention so far. Although about half the life, on average, of the Electric Supply assets, 80 per cent of the Tramways assets and 44 per cent of the Bus assets, representing a total of Rs. 27.6 crores (*on low estimates*) by way of cost of consumption of assets, have expired as of 31st March 1962, the revenue retentions for asset renewal have amounted to only Rs. 22.9 crores by that date.

These, in brief, are the findings of the I.L.O. Mission which has subjected the finances of the Undertaking to a searching examination. The facts are clear enough and they reveal a very unsatisfactory state of affairs in the premier municipal undertaking in India. The question, therefore, arises whether the Undertaking will be able to grow fast enough to meet the growing power and transport needs of Greater Bombay with its teeming population, which may increase, over the next five or six years, to about 5.0 million from the present level of 4.2 million. According to the I.L.O. Mission, it will be necessary to increase revenue, to raise further public loans, or both, if growth is to continue. As the Undertaking's self-financing over the years has resulted in an excess of assets worth over external liability of Rs. 14.5 crores, it would be a sound proposition to raise fresh loans for financing growth. At the same time, a part of further growth could also be financed internally. It is here that the I.L.O. Mission has made a controversial recommendation—controversial because it will involve increasing revenues through steep increases in bus fares and, presumably, through surcharges on electricity rates, and so on. The Mission has urged that the objective should be to finance *at least half* of future growth from internal sources and that a return of 10 per cent on the investment should be aimed at to make that much self-financing possible.

What will this objective involve in the case of the Bus Section of the Undertaking? It will involve bus revenue increases of 29 per cent in 1962 and 37.5 per cent by 1966-67 after taking into account the possible cost reductions. The Mission has recommended, in this connection, a revision of the fare structure in the following manner:

Fare nP	Distance allowed, kilometres: Present	Proposed
5	—	1.5
7	2.8	—
10	3.6	3.0
15	6.4	4.5
20	9.2	6.0
25	12.0	7.5
30	14.8	9.0
35	17.6	11.0
40	20.4	13.0
45	23.2	15.0
50	26.0	18.0
55	—	21.0
60	—	24.0
65	—	27.0

There is, of course, no doubt that the public of Bombay will not cheerfully accept the proposed steep upward revision of fares above 10-15 nP, particularly when, in spite of the recent railway fare increase, travel by electric trains, especially with season tickets, is relatively much cheaper than bus travel even at the existing level of fares. If the proposed revision in bus fares is brought into force, it may lead to a large-scale diversion of passengers to electric trains which will then be subjected to further overcrowding. To the extent that such diversion takes place to that extent the expected additional revenue from buses may be reduced. The wisdom of steeply increasing bus fares without reference to the prevailing railway fares on the electrified sections catering to the City is, therefore, open to question. This aspect apart, political leaders in Opposition will try to exploit the situation in their favour by organising all forms of mass protest. Actually, the present predicament is the result of past neglect to work the Undertaking on economic lines. If there had been a gradual increase in fares, the position would not have been so bad as it is now.

It must, however, be conceded that the I.L.O. Mission has made out a pretty strong case for revenue increase on the basis of the current and future costs of bus operation. The total operating cost per bus per annum in 1961-62 was Rs. 80,239; it is estimated to be Rs. 81,876 in the current year and expected to rise to Rs. 96,050 by 1966-67 and Rs. 1,10,000 by 1971-72. Possible cost reduction per bus within 10 years is estimated at only Rs. 13,720. But the scope for immediate cost reduction is stated to be negligible. The minimum immediate need for additional revenue is estimated at Rs. 22,000 per bus—partly to cover the increase in cost and partly to provide a bigger margin for depreciation and debt charges and for a higher return on investment. The I.L.O. Mission's estimates have taken into account the likely growth of buses in service from the present level of 1,000 units to 1,250 by 1966-67 and 1,500 by 1971-72. To provide for this growth, it has recommended, as referred to earlier, a 10 per cent return which would make possible self-financing of half of future growth. As public opposition to the proposed fare increases can be foreseen, the following three-point approach may be found useful:

(i) The objective of self-financing of future growth should be sought to be achieved in two stages, the second stage starting five years after the first, so that a sudden steep increase in the existing fares can be avoided.

(ii) The scope for increasing revenue without raising fares to be fully exploited. The I.L.O. Mission itself has given these findings in this connection: (1) Certain improvements which could be made on minor items, such as lost trips and advertising, which together ought to yield a revenue increases of 1-1½ per cent in service within five years; (2) improving the operating ratio from the present 78 per cent to at least 90 per cent, which should be achievable by better maintenance within ten years. This would increase the Undertaking's revenue by Rs. 176 lakhs then (at present fares), and ought to yield a net benefit of Rs. 15 lakhs, within five years, from the extra buses scheduled into operation; (3) increasing the revenue potential of the Schedules. It would be reasonable to assume that careful re-scheduling on technical bases would yield at least a 10 per cent increase, and that the work could be completed so that all of this would be realised well within five years. This would be a substantial benefit, and one which could help the Undertaking to absorb some of the price increases expected in future years without immediate recourse to further fare increases then.

(iii) The immediate revision of the basic fare structure to be such as to involve only marginal increases which will not unduly upset the present balance between electric trains and buses.

Much can be gained through better maintenance, for this will make for increased revenue and cost reduction alike. The 20-point plan, recommended by the I.L.O. Mission, for this purpose would have to be seriously taken up for implementation. The cardinal features of this plan are standardisation of buses and working methods, reduction of the range of types handled, purging the fleet of the over-age vehicles, adoption of the unit-replacement system of maintenance, the setting up of training schools, overhaul and repair shops for bodies, chassis components, engine components and transmisson units, etc. As much of the maintenance work now, according to the I.L.O. Mission, is not done well, the B.E.S. & T. Undertaking's first attention should be given to better maintenance so as to increase the operating ratio from the present 78 per cent, that is, 78 buses in service out of every 100 buses owned. The present ratio is much too low and results in higher costs of operation and reduced revenue. The B.E.S. & T. Undertaking should aim at an operating ratio of 90 per cent, if not the 95 per cent common in European city fleets, instead of thinking in terms of a steep fare increase to finance the cost of its inefficiency.

OIL INDIA PIPELINE

The 720-mile long Oil India Pipeline, which connects the oilfields at Nahorkatiya and Moran with the public sector refineries at Nunmati and Barauni, is the second longest in the East, including the Middle East and, when complete, it will be one of the most modern and automatic of its kind in the world. Complete automatic control of Oil India Pipeline is centralised at Nunmati.

The Burmah Oil Company (Pipelines) Limited, which is the construction authority for Oil India (a joint 50 : 50 venture of the Government of India and Burmah Oil Company), is building this pipeline under its supervision in two stages on a no-profit no-loss basis. Having completed the 250-mile long 16" sector from Nahorkatiya to Nunmati, the B.O.C. (PL) Ltd., has in hand the 14" sector which takes the line further from Nunmati to Barauni (Bihar), covering a distance of 470 miles passing through three States, and a very difficult terrain. The pumping station at Nunmati is a part of the 14" sector.

Work on the 14" sector has progressed satisfactorily. The entire pipelaying operations have been completed. All the 40 rail crossings have been done; of the 66 river crossings, 56 have been completed; and work is progressing in respect of others. Of the five pumping stations on this sector, three are already in operational readiness and the remaining two will also be completed soon. The pipeline is being pressurised for initial testing and, unless leakages take place due to faulty pipe, the entire operation is expected to be completed very soon.

Of the eight pumping stations on the entire 720-mile long pipeline route (including both 16" and 14" sectors), the Nunmati station is the biggest with a capacity to receive 2.75 million tonnes of crude oil and pump two million tonnes to Barauni.

NEW PRODUCTS AND PROCESSES

Ultra-high-purity Hydrogen

A RANGE of four diffusion cells has been introduced in Britain for the production of high purity hydrogen gas from impure hydrogen supplies, cracked ammonia, reformer gas, or other hydrogen-bearing gases, according to the *Financial Times*. The diffusion membrane used is a palladium-silver alloy which was recently developed. This is highly permeable to hydrogen at temperatures above 200° C but offers a practically impermeable barrier to other gases. Moreover, unlike pure palladium, it is completely stable when repeatedly heated and cooled in hydrogen. The cells consist of thin-walled tubes closed at one end and manifolded together at the other, enclosed in a stainless steel shell designed for safe operation at temperatures up to 500° C and pressures up to 34 atmospheres. Impurities in the hydrogen produced by this method are of the order of one part per milllion, which is much lower than can be obtained by any other method. The smallest cell in the range will deliver over 20 cubic feet per hour of pure hydrogen and the largest 350 cubic feet per hour.

Removing Impurities from Molten Iron

When molten iron is being converted into steel it is desirable that silicon, sulphur, phosphorous and other impurities should be removed as quickly as possible. They have to be converted into a slag or scum that floats harmlessly on the surface. A German concern has found an excellent method of removing these impurities. Lime and other chemicals are added to the bath, as usual, but beforehand they are intimately mixed with either coal dust, powdered coke or sawdust. The dust burns as soon as it comes into contact with the molten metal and gives up its heat to the chemicals. They thus become fluid much more quickly than they otherwise would and the impurities are rapidly absorbed. It is claimed that phosphorous can be reduced from over 2 per cent to under 0.1 per cent within six minutes using this technique.

Ointment for Skin Diseases

A Japanese chemist has patented a vegetable-based ointment claimed to be particularly effective in the treatment of eczema, dermatitis and athletes foot. An aqueous mixture of tobacco leaves, flowers and citrus fruit rinds is heated until the residue has been carbonised and all the distillate collected. This is then separated into an oily and an aqueous portion, the oily one being further heated and distilled at 240 degrees Centigrade. The final product is an ointment which is said to have a high sterilisation effect against skin diseases which have not responded to known lotions, as well as being good for the treatment of burns and frostbite.

High Output Batteries

Dry storage batteries that have a high electrical output in proportion to their size and weight have recently been reported from France. The reason for the increased efficiency claimed (as compared with conventional batteries) is that the negative electrode is made from somewhat unusual materials. Metals such as lithium, magnesium and silver are used. The electrolyte or fuel of the battery is dissolved in an organic solvent so that it cannot attack or corrode the electrodes.

Method of Purifying Non-ferrous Metals

The application of a new method of continuous vacuumisation sharply increases the output and purity of refined heavy non-ferrous metals. The method is claimed to have been evolved at the Metallurgy and Ore Dressing Research Institute of the Kazakh Academy of Sciences, in Soviet Russia. The method of removing zinc from rough lead and the removal of admixtures from tin in a vacuum opened up possibilities not only for a sharp increase in the productivity of labour, but also for the automation of these production processes. The facilities for the application of this method have been designed and will be built at two non-ferrous metal enterprises in the Soviet Union this year.

Cavity-resistant Steel

A group of scientists, under the direction of the Urals Professor, Ivan Bogachev, has produced a steel which resists to cavitation, the age-old enemy of metal. (This destructive effect on metal takes place in those components of hydraulic machines which experience pressure by strong currents of water or other liquid.) Prof. Bogachev succeeded in producing a steel which is not destroyed but strengthened by the effect by cavitation. He compelled the air holes bombarding the metal to act as a kind of "drop forge man"; by hitting the metal they thicken it, and its structure is being improved. Tests of hydro-turbine parts, made of new steel, have shown that they have a service life which is six times longer than that of parts from the more expensive stainless steel. Such cavity-resistant pig iron and bronze has been developed in Bogachev's laboratory. The discovery of the Urals scientists is held to be of great importance. The new steel can be used for fusing on parts of hydraulic machines from the cheapest grades of steel, and they will have a service life several times longer than usual.

Passenger Lifts

A new control system for gearless passenger lifts, developed by The Express Lift Company Ltd., England, automatically and precisely matches lift service to demand and provides an instant response to any one of an infinite variety of traffic conditions. The system takes into account the fact that traffic varies, not only with the type of building, but also with the time of day, and that traffic "surges" can be of short or long duration, in either direction or both. It is designed to meet all these peak requirements, as well as the occasional call. The group of lift cars under its control operate only as they are required to match the traffic demand. The "brains" of the system is a computing device, called a differential integrator, which electronically calculates and evaluates the traffic demand, automatically divides the demand, and assigns the cars to handle the traffic in the most efficient way. It continually computes and analyses the passenger waiting time and allocates cars to particular sectors on a time preference basis. On completing their assignments, cars are immediately allocated to the nearest demand sector as computed by the integrator. Each car, when assigned, travels directly to the sector, ignoring any secondary calls. In delivering the passengers to their selected destinations, it again ignores secondary calls, unless they happen to be from floors that the passengers are going to.

Natural *Vs.* Synthetic Rubber

By extending natural rubber with a cheap commercially available rubber processing oil, the price of natural rubber compounds can be made fully competitive with synthetic S.B.R., and considerably less expensive than the various polybutadiene rubbers. This view is expressed in an article in *Rubber Developments*, the quarterly magazine issued by the Natural Rubber Bureau in London. The article says that the use of extenders in rubber compounding is as old as the rubber industry itself. The main object is to lower the cost by adding as much as possible of a cheap material while retaining adequate properties for the particular use to which the rubber is to be put. Low-cost oils, resins, tars and pitches are examples of the usual extenders. It is claimed that, when due regard is made to compounding, the wear resistance of oil-extended natural rubber, particularly in tyres, may equal and even surpass that of non-extended rubber. Natural rubber, which costs 25*d.* a pound, can be made near competitive with oil extended S.B.R. (grade 1710) by replacing 33 parts by weight of the natural rubber by oil selling at 3*d.* a pound. This degree of oil-extension of natural rubber can be carried out on conventional mixing machinery without difficulty and offers many technical possibilities to cheapen products and improve the competitive position of natural rubber.

Multi-bin Feed Units

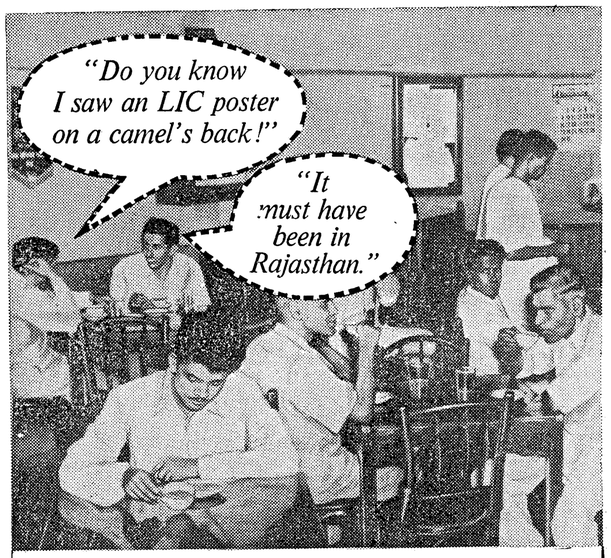
Multi-bin feed units specially designed for releasing and conveying fixed amounts of materials to asphalt and tar-macadam plants are now being produced by Frederick Parker Ltd., England, whose road surfacing machinery is in use in many overseas countries. The required quantities are discharged through the bottom of the hoppers on to a conveyor belt which delivers the materials to the plant's drying section. The multi-bin units, it is claimed, will produce a constantly proportioned flow of all required sizes of material to an asphalt and tarmacadam plant, or any other type of plant requiring a proportioned feed. Immediate change of proportions to meet a new specification is obtainable, and accurate proportioning ensures stable drying performance and prevents starving or overflowing of hot material storage bins.

Spring Platform

A constant level platform designed to speed up work done by man on the shop floor or attendants at a loading bay has been developed by WCB Containers Ltd., England. The platform, which can be fixed or mobile, comprises a false-bottomed unit supported on a stable spring mechanism giving up to 300 lb. (136 kg.) resistance. The springs coil and uncoil during loading and unloading and keep materials at a constant pre-determined level. By this method time, and the strain of stooping to clear the contents from the bottom of a truck or bin, is reduced much.

Hurricane Research

The United States is undertaking an expanded three-year research programme aimed at reducing the fury of hurricanes. It will be carried out by the Weather Bureau and the Navy. Using new devices for making and releasing silver iodide crystals, the specially modified Navy jet aircraft will "seed" hurricanes in an effort to diminish their destructive force. Cloud-seeding of a portion of hurricane Esther last year briefly reduced maximum winds at the hurricane's eye by about ten per cent. Radar readings and analysis indicated that supercooled water in the seeded area turned to ice. There followed an outward movement of energy to the storm's edge, causing a monetary drop in the storm's force. The Weather Bureau says that the new experiments will be conducted to confirm that this change did not occur naturally. According to it, if equivalent results are obtained in additional experiments, little question will remain that this approach (cloud-seeding) can be effective in systematically reducing the destructive fury of hurricanes.



PEOPLE ARE TALKING ABOUT LIC

One of LIC's objectives is to extend the protection of Life Insurance to every insurable person who can afford it. Since most of our people live in villages, LIC have intensified rural publicity. Travelling by jeep and bullock-cart and even by boat and camel, LIC workers spread the message of Life Insurance to every nook and corner. They take films and cine-projectors with them to explain the benefits of Life Insurance more effectiveiy. Such intensive publicity pays handsome dividends; often villagers come forward to take Insurance policies immediately after such a propaganda session.

Life Insurance Corporation of India

ASP/LIC-E-30

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS AND PERSONS INTERESTED IN THE MATTER ARE REQUESTED TO APPLY FOR A COPY OF THE PROSPECTUS FOR FULL DETAILS.

"An Industrial Licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company."

A copy of the Prospectus with the documents required to be attached thereto has been filed with the Registrar of Companies, Maharashtra, Bombay, for registration. Applications are invited only on the basis of the Prospectus, copies whereof may be obtained at the Registered Office of the Company, its Bankers, Underwriters and Brokers mentioned herein.

Applications will be made to the Stock Exchange, Bombay, for admission of the Company's shares to dealings on the exchange and for an official quotation.

OBJECTS OF THE COMPANY

The Company was incorporated for establishing a Sugar Factory at Chitalenagar in District Sholapur (Maharashtra State) at a distance of 90 miles from Poona. The Factory having a crushing capacity of 800 tons of sugarcane per day will produce approximately 1,38,000 bags of sugar by crushing about 1,20,000 tons of sugarcane during an average crushing season of 150 days.

PROGRESS MADE BY THE COMPANY

Construction of the main Factory Buildings has been already completed. After proper investigation the bulk of the plant and machinery has been purchased from indigenous sources at comparatively cheap prices thereby bringing down the capital cost to a considerable extent. The experts have opined that the selection of the machinery has been well planned, and efficiently made with modest capital cost. The Company has already spent Rs. 63,90,000 towards the project.

START OF PRODUCTION

As the construction of the Buildings and the erection of the machinery have reached an advanced stage, the Company expects to go into production during the manufacturing season of 1962-63.

LOCATION AND ITS ADVANTAGES

The Factory is ideally situated at Chitalenagar, in frost-free canal zone. The supply of water is abundant and labour comparatively cheap. The supply of sugarcane in the neighbouring areas is quite adequate with an average yield of about 50 to 60 tons of sugarcane per acre and an average sugar recovery of about 11½ per cent to 12 per cent, the yield and recovery both being reckoned as amongst the highest in India.

There is a ready market for sugar in the area surrounding Chitalenagar which obviates necessity of long-distance transport.

The Holding Company has assured this Company that it will make available to this Company adequate sums towards any unexpected increase in the estimated capital cost of the project, if any, or towards working funds that may be required over and above borrowings from Banks, out of its loan of Rs. 23,78,000 proposed to be repaid by this Company, as shown above.

LOAN FROM THE INDUSTRIAL FINANCE CORPORATION

After a very careful study of the Company's project, the Industrial Finance Corporation of India has sanctioned a loan of Rs. 32 lakhs on the first mortgage of the fixed assets of the Company, and has already paid an interim loan of Rs. 20 lakhs.

MAHARASHTRA AGRICULTURAL LANDS (CEILING ON HOLDINGS) ACT, 1961

The Company is not covered by the provisions of the abovementioned Act as it does not have sugarcane plantations of its own.

SCOPE AND PROSPECTS

The Industrial Licence granted to this Company is so far the last in the private sector in the State of Maharashtra, as further licensing of new units has been suspended.

ESTIMATED CAPITAL OUTLAY, AND FINANCIAL REQUIREMENTS

Particulars. (1)	Expenses Incurred. (2)	Expenses to be incurred. (3)	Total (4)	Other financial requirements. (5)
	Rs.	Rs.	Rs.	Rs.
1. Expenditure on Land and Buildings, Plant and Machinery, etc.	63,90,000	20,91,000	84,81,000	....
2. Margin for working capital	Nil	5,00,000	5,00,000	....
3. Expenses of this issue	....	....	....	1,27,000
4. Repayment of dues to Holding Company	....	....	....	23,78,000
5. Repayment of dues to Sundry Creditors	....	....	....	1,38,000
Total .. Rs.	63,90,000	25,91,000	89,81,000	26,43,000

FINANCIAL RESOURCES

It is proposed to raise the above amount of Rs. 25,91,000 and Rs. 26,43,000 totalling Rs. 52,34,000 from the following resources:—

	Rs.
(1) Proceeds of this issue	28,83,990
(2) Balance amount of the loan from Industrial Finance Corporation of India	12,00,000
(3) Borrowings from Banks and others	11,50,010
Rs.	52,34,000

With growing population of the country, demand for sugar is continuously increasing. The demand for sugar will further increase with exports rising.

During the last year India produced about 27.10 lac tons of sugar against a target of sugar production of 35 lac tons at the end of the third Five-year Plan. There is, thus a wide gap to be filled. With exports growing and internal consumption of sugar increasing, experts believe the present surplus position of the sugar stocks is likely to be a temporary phase.

ESTIMATED PROFITS

On the basis of existing prices and manufacturing cost arrived at after careful investigation, and also after considering the substantial savings effected in capital outlay, it is estimated that in the absence of any unforeseen circumstances, the Company will be in a position to provide an attractive return to the shareholders. As the plant is expected to go into production during the manufacturing season of 1962-63, it is expected that the Company will earn profits earlier than similar new units which usually take about two to three years to start operation.

UNDERWRITING COMMISSION AND BROKERAGE

The Underwriters will be paid an underwriting commission of 2 per cent on the face value of the shares in terms of the underwriting agreement with them.

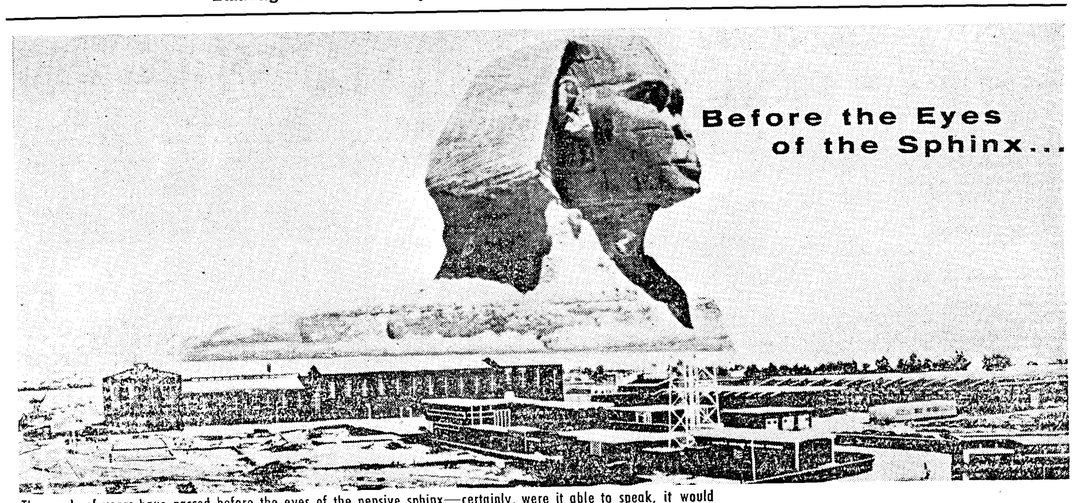
Brokerage at the rate of 1 per cent will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised broker including the Managing Broker. Brokerage on the same basis is payable to the underwriters, in addition to the underwriting commission, on all allotments in respect of applications made or procured by them and bearing their rubber stamp.

No commission and/or Brokerage will be payable to the Underwriter, Managing Broker, Brokers or Bankers to this issue in respect of shares which may be allotted to Chitale Agricultural Products Limited, the Holding Company of this Company.

APPLICATION FOR SHARES

Application for shares should be made on forms accompanying the Prospectus and should be sent before the closing date of the subscription list to the Bankers of the Company at their Head Office or any of their Branches in India or the Managing Broker or Brokers to this issue or to the Registered Office of the Company, duly accompanied by the amount payable on application. Up-country drafts or cheques should not include Bank Charges, as the Collection Charges will be borne by the Company.

The Subscription List will open at the commencement of Banking hours on 12th September 1962 and will close at the close of Banking hours on 19th September 1962 or later at the discretion of the Directors.



Thousands of years have passed before the eyes of the pensive sphinx—certainly, were it able to speak, it would have marvelled at the new sugar refinery at Edfu in the Nile River basin. The advanced technology of this completely up-to-date plant with a capacity of 4,000 tons per day, built by Shin Mitsubishi, has earned the plaudits of the industrial world. Fertilizer, Paper mill, textile, and bottling plants have also been built in Asian and other countries.

The Company's eight departments cover all of man's activities on land, sea, and air, producing ships, prime movers, steel structures, railway rolling stock, motor vehicles, agricultural machinery, aircraft, and numerous other types of industrial equipment.

RUBY GENERAL INSURANCE COMPANY LIMITED

CHAIRMAN, MR. B. M. BIRLA'S SPEECH AT ANNUAL MEETING

REDUCTION IN FIRE PREMIUM RATES CRITICISED

ADDRESSING the shareholders of the Twenty-sixth Annual General Meeting of the Ruby General Insurance Company Ltd., held at Calcutta on Thursday, 30th August 1962, Mr. B. M. Birla, Chairman of the Company, criticised the further reduction in the fire premium rates by the Tariff Committee from July 1962. Pointing out that the last reduction in the rates was made only in January 1960, Mr. Birla observed that the latest cut had hardly any justification. He stressed the need to enable Indian insurers to build up their reserves and thereby emerge as strong units to serve the country in a better way.

The following is the full text of Mr. Birla's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you to the twenty-sixth annual general meeting of the Company. Your Company was established in the later part of the year 1936 and has thus completed 25 years of its working at the close of the year under review. A study of the progress of the Company during these years will reveal that there has been very satisfactory progress in its all-round activities, and the Company occupies today the position of one of the leading insurers in the country.

"The figures given below depict the growth of the Company during the past decade. The net premium has increased from Rs. 74,24,000 in 1951 to Rs. 1,81,80,000 in 1961, which is an increase of 246 per cent.

NET PREMIUMS	1951 Rupees	1961 Rupees
Fire	22,51,756	71,99,127
Miscellaneous Accident	39 07,657	94,02,600
Marine	12,64,536	15,78,516
Total ...	74,23,949	1,81,80,243
CAPITAL and FUNDS ...	79,48,263	1,56,98,056

Fire Department

"The fire premium income for the year amounts to Rs. 71,99,000 as against Rs. 70,50,000 during the year 1960. The working has resulted in a profit of Rs. 16,13,000 as against Rs. 4,99,000 in the previous year. The reserves have increased from Rs. 34,19,000 to Rs. 35,99,000.

"The fire premium rates have again been reduced considerably from July this year by the Tariff Committee. The last rate reduction was from January, 1960, and there seems to be hardly any justification for any further cut so soon. The Indian insurers are passing through a period of transition and they should be allowed to build up their reserves, so that they can serve the country in a better way as strong units. They can meet catastrophic losses, only if they have satisfactory reserves.

Motor and Miscellaneous Department

"The net premium in this department has increased from Rs. 87,38,000 in 1960 to Rs. 94,02,000 in the year under review, with a corresponding increase in the reserves from Rs. 43,69,000 to Rs. 47,01,000. It is a matter of some satisfaction that this department, which has always been showing heavy losses, has this year shown only a small loss of Rs. 39,000. The policy of cautious underwriting being followed by the Company may show better results in future.

"The development of road transport industry in the country has been very rapid in recent years, but the road development has not kept pace with the same, resulting in heavier traffic load on the roads than the normal capacity. The road accidents can, however, be minimised, if the traffic regulations and road rules are strictly followed.

"The Insurance Association should give more encouragement to the careful and accident-free motorists by way of increased 'no claim bonus.'

"There is large scope for development of the miscellaneous accident business other than automobiles, particularly in respect of the engineering insurances and personal accident policies. Your Company has already taken steps in this direction.

Marine Department

"The net premium income is Rs. 15,78,000 this year as against Rs. 14,76,000 during the previous year. The department shows a loss of Rs. 7,41,000, but this has been mainly due to the increase in the reserves which have increased from Rs. 10,33,000 in 1960 to Rs. 15,78,000 in 1961. The reserves on the cargo business has now been increased from 58½ per cent to 100 per cent.

"The marine underwriting is a problem all over the world. The business being non-tariff, there is an unhealthy competition leading to the uneconomical rate-cuts by the insurers. The unsatisfactory conditions prevailing in the ports in many countries are responsible in aggravating the losses. More careful handling of the cargo and stricter measures for watch and ward to avoid pilferage at ports and during the transit can minimise the national loss on this account. I understand, there is a move to have a comprehensive marine tariff. This will help in improving the results in the marine department. The Government should encourage exporters and importers to obtain policies in the country itself as far as possible. This will help in conserving foreign exchange to some extent.

General

"Your Company has further strengthened its financial position during the year under review. The capital and funds stand at Rs. 1,56,98,000 as against Rs. 1,46,74,000 at the end of 1960.

"The increased profit has enabled your Directors to recommend an additional silver jubilee bonus of 25 nP per share, in addition to the dividend of 80 nP per share.

"Your Company has purchased a valuable plot of land in India Exchange Place for its office premises. It is proposed to put up a multi-storeyed building on the site, the plans for which are under preparation.

"The efforts by the Executive Committee of the General Insurance Council to put the insurance industry on sound footing are commendable. The scheme of prepayment of premium introduced several years back has been working successfully and has enabled the companies to strengthen their financial position. The new measures by the Executive Committee, effective from 1st July for further improving the working of the insurance industry, should receive all-round support.

"The total premium income of all insurers in India in 1960 was only Rs. 38 crores. This is too small for a big country like ours. There is much scope for development and all-out efforts should be made by our insurance industry to educate the public of the benefits of general insurance.

"Before concluding, I would like to express my sincerest thanks to the executives, staff, field-workers, agents and other representatives, both in India and abroad, for their close co-operation which has enabled the Company in rendering satisfactory service to the clients and achieving the excellent results.

"I would also like to thank our patrons whose valuable support has been the main factor for the Company's achievements during all these years.

"Thank you gentlemen."

N.B.—*This does not purport to be a record of the proceedings of the above annual general meeting.*

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD.

CHAIRMAN, MR. K. A. P. VISVANATHAM'S ANNUAL SPEECH

INCREASES IN ELECTRICITY TARIFFS IN THE STATE INEVITABLE

THE Madras State might suffer a setback in its longstanding reputation of having the lowest tariffs for electricity in the whole of India, according to Mr. K. A. P. Visvanatham, Chairman of the South Madras Electric Supply Corporation Ltd. Expressing this view at the Twenty-second Annual General Meeting of the Corporation, held at Tiruchirapalli on Thursday, 30th August 1962, Mr. Visvanatham observed: "We should be prepared to accept soon increases in all tariffs (for electricity for industries, agricultural and domestic lighting), and I may say that this is inevitable, if we take into account the enormous increases in cost of construction and management." In this context, he also referred to the decision of the State Government to levy a graded tax on electricity supplies made to different classes of consumers in order to augment the resources of the State mainly to meet the capital requirements for the third Plan.

The following is the full text of Mr. Visvanatham's speech:

"It is my privilege to once again preside over and welcome you to an annual general meeting, being the twenty-second meeting.

"Since we met last year about this time, I am glad to say that we have generally done well as would have been revealed to you by the Directors' report, the auditors' report on the accounts, the balance-sheet and the other statements which have been in your hands for sometime now and which I have no doubt have had your careful scrutiny and attention. I, therefore, will take these documents as read, and will invite your comments on them after the close of this address.

Capital Extensions

"As has been mentioned in the Directors' report, we executed capital extensions to the value of nearly Rs. 20 lakhs, which I consider a fair and satisfactory achievement. At the same time, I hasten to add that the demand for electric power is so great that there is yet a large measure of dissatisfaction from the unsatisfied applicants for agricultural and other categories of power, a state of affairs which, while causing us a lot of mental excercise, is from the national point of view a healthy sign, being an index of the rate of growth of our prosperity.

"The Government of Madras was pleased to give us loans to the extent of Rs. 15,24,634 for executing rural schemes in the year under review. We propose to execute all these schemes in the current year besides urban extensions and system improvements to the extent of Rs. 10 lakhs from our internal finances.

"It is the declared policy of the Madras Government to electrify all the villages in the State in this Plan period and we have agreed to wholeheartedly participate in this venture by accelerating and executing construction programmes on the one hand and also by handing over to the State Electricity Board such parts of the area which are more contiguous to their expansion plans. We have also submitted to the Government of Madras that the loan assistance should be substantially increased to meet the demands of such an enlarged programme of work and we expect that this request will receive the Government's sympathetic consideration.

"The position as regards construction materials like po'es, conductors and cement has not been too good and this contributed in some measure to delays in construction. But our Managing Agents and Chief Engineers have been alert and have risen to the occasion by scouting round and securing substitute materials wherever possible. I have every confidence that, with their ingenuity and enthusiasm, our engineers can fulfil any reasonable programmes we place before them.

Power Shortage

"We had a short spell of grave power shortage towards the end of June 1962. This was on account of the delayed onset of the monsoon. Fortunately the crisis was over in a few days, thanks to rains. It is a matter for gratification that one 50-MW. set of the Neyveli Lignite Corporation has been put into commission recently. We are informed that the storage position in most of the hydro-electric reservoirs is satisfactory and, with the expected commissioning of further power plant at Neyveli in the course of this year, we may not be put to any inconvenience this year. It is, however, pertinent to point out that the demand for power far exceeds the pace of development throughout the country and this critical race between demand and supply is bound to be there, in spite of the vast and ambitious power development programmes envisaged in the Plan. You would have read in the papers of power shortages in Delhi, Bombay as well as Calcutta areas. I think we got out of the trouble much earlier than the others.

"In this context, I would like to pay a special tribute to Mr. V. P. Appadurai who has been the architect of the Madras State Electricity development over the last decade and has been a worthy successor to such stalwarts as Mr. Henry Howard and Mr. G. Sundaram. He is doing a wonderful piece of work and has successfully placed the Madras State in the forefront of all the Indian States (why, all the Asian countries!) in rural electrification and in the planned development of the State's power resources. He has been recently elevated to the position of the Chairman of the Madras State Electricity Board, and I would like to tender to him on your behalf and mine our sincerest good wishes and many years of association with the Madras State Electricity Board as its chief administrator.

Costlier Thermal Power

"Besides leading in rural electrification, this State had also the reputation of having had the lowest tariffs in the Republic for electricity supply to industries, in particular, and comparably advantageous tariffs for agricultural and domestic lighting. This position is likely to suffer a setback now—I mean the enviable status as a producer and seller of cheap power—in view of the costlier thermal power that has to be injected into the power system from Neyveli, Madras and Madurai thermal stations. We should be prepared to accept soon increases in all tariffs, and I may say that this is inevitable, if we take into account the enormous increases in cost of construction and management.

"The Government has also decided to levy a graded tax on the electricity supplies made to different classes of consumers to augment the resources of the State mainly to meet the capital requirements for the current Plan period. This proposed levy has been received by the consumer-public with mixed feelings—the industrial consumers feeling particularly apprehensive, as even with cheap power they have been at a disadvantage when compared to manufacturers of the Bengal area. I sincerely hope the Government will take cognisance of these indications and afford whatever relief is possible in the interests of industrial growth.

"The longstanding disputes with the Income-tax authorities, which related mainly to rates of depreciation on fixed assets, were settled in our favour by the Income-tax Appellate Tribunal; but the Income-tax authorities have appealed against these decisions to the High Court. I should imagine that this will take some further considerable time for a decision to be reached.

Service to Consumers

"Relationship with consumers and power supply applicants has been satisfactory in spite of the inevitable delays in extending supplies to villages. The Directors and the executive of the Company have been constantly exercising their minds as to how best to improve consumer services and accelerate supplies. (If in spite of their efforts there are delays, I appeal to the consumers for patience, with the assurance that every effort will be made by us to serve them better and that these delays are mainly because of the enormous demand which necessarily involves a planned execution of schemes.)

"The Company has made a special appropriation of Rs. 1,21,600 this year also (making up the total of such appropriation to Rs. 2,47,600) for augmenting the Company's capital resources. The appropriation is with reference to the suggestion given by the Federation of Electricity Undertakings of India as a result of their talks with the Government of India and is subject to approval by the Madras Government.

"The Federation of Electricity Undertakings has also been ceaselessly working to get some of the stringent provisions of the Electricity Supply Act relaxed or modified so that profitability in electricity investments is made more attractive to enable private capital to flow in in larger measure. I hope this effort will succeed. The indications are that the Government of India is sympathetic and is appreciative of the need of some such measure, if capital is to be attracted to the supply industry.

"At the level of the Government of Madras, the fact that Mr. R. Venkataraman has been assigned charge of Electricity, besides industry, augurs well for both. He has been an outstanding success as Minister of Industries in placing Madras truly on the industrial field. He is fully aware and conscious of the role played by electricity as a tool to industry, and I have no doubt that as Electricity Minister he will bring to bear his unbounded enthusiasm to increase our power resources and power distribution and have always a soft corner 'for the private sector' which promises to implement his programmes.

Higher Dividend

"Your Directors have recommended to you for consideration a slight increase in dividend, making up 10 per cent for this year as against 9 per cent in the previous years. This has been possible due to slightly increased earnings, and I hope we will be able to keep this up in future years.

"The Company's staff has been, as usual, hardworking and devoted to its duties, and relations with the workers' union have been cordial. I take this opportunity to thank all ranks of the staff for their rewarding work.

"I would also like to record my sincere thanks to the Managing Agents for their continued and efficient services and take this opportunity to congratulate Mr. H. K. Ramaswami, the Director of the Managing Agents in charge of the South Madras Electric Supply Corporation Ltd., on his nomination by the Government to the Electricity Board's Consultative Council to represent electricity supply undertakings. I also thank the Government for having selected the right person for the post.

"I now move that the Directors' report, the auditors' report and the balance-sheet as on 31st March 1962 and the profit and loss account for the year ended 31st March 1962 be approved and adopted."

Note:—*This does not purport to be a record of the proceedings of the annual general meeting.*

FRESH ISSUES SANCTIONED

The following are the details of the fresh capital issues sanctioned by the Controller of Capital Issues recently; the consent of the Controller is valid for 12 months in all cases.

Duncan Brothers and Company Ltd., Calcutta, carrying on the business of non-industrial nature and having a paid-up capital of Rs. 1.35 crore, is to issue further capital of Rs. 18 lakhs divided into 18,000 equity shares of Rs. 100 each to be issued as rights for cash at a premium of Rs. 10 per share.

H. M. Kashiparekh and Company Ltd., Ahmedabad, will issue 81,972 bonus shares of Re. 1 each on capitalisation of the Company's reserves to a like extent.

Indofil Chemicals (Private) Ltd., Maharashtra, is issuing capital of Rs. 40 lakhs in equity shares of Rs. 100 each, for cash at par. Out of this, shares worth Rs. 23 lakhs will be offered to Rohm and Haas Company, Philadelphia, U.S.A. The money will be used for establishing the manufacture of Dithane fungicides, etc.

Bellary Spinning and Weaving Company Ltd., Mysore, is to issue capital of Rs. 25 lakhs in equity shares of Rs. 100 each for cash at par for establishing a spinning mill.

Indore Wire Company Ltd., Bombay, established to undertake the manufacture of high tensile wire, will issue capital of Rs. 20 lakhs divided into 15,000 equity and 5,000 cumulative redeemable preference shares of Rs. 100 each carrying dividend at the rate of 7.5 per cent (gross) per annum for cash at par.

Rajasthan Spinning and Weaving Mills Ltd., Calcutta, is issuing capital of Rs. 10 lakhs divided into Rs. 2 lakhs in 9 per cent cumulative redeemable preference shares and Rs. 8 lakhs in equity shares. The existing subscribed capital of the Company is Rs. 30 lakhs.

SOME THOUGHTS ON VOLUNTARY ASSOCIATIONS IN INDUSTRY

By W. Wilson Mayne

ONE of the most significant features of a free society is the existence of voluntary associations. In fact, it would be true to say that a society without such institutions can hardly be described as, in any real sense, free. The variety and state of health of voluntary groups—social, political or economic—provide a sensitive barometer of the reality of democracy, whatever particular form the actual Government machine may take. A glance at that barometer from time to time is a useful guide to the social and political climate and may provide an early warning of unfavourable winds.

The growing complexity of the modern State and its increasing concern with the totality of human activities, makes it very important that those who value freedom should guard with care those institutions which have grown up over the years to express the views and guard the interests of men and groups engaged in specialised activities within our society. At the same time, these institutions themselves cannot be immune to change and only by a readiness to meet the problems of the mid-twentieth century with imagination and courage can they expect to survive and preserve the values for which they stand.

Rapid Change in India

In India, the past fifteen years have been marked by a rapidity of change which has placed a heavy strain on all the institutions, both State and private, concerned with the country's affairs. In the economic field, the need for a rapid expansion and the prevailing political philosophy has determined a massive intervention of the State into spheres which not so long ago were considered as appropriate to private enterprise. Even where fields have been left to private enterprise, the State has developed organs to supervise, co-ordinate and control its activities to an extent previously unparalleled in economic affairs in a free society. Opinions differ quite naturally, on the extent to which these extensions of State activity are justified and as long as society is free, such differences will persist and be the legitimate issues of political controversy.

It is unfortunate that, in the issue of private *versus* public enterprise, there has been a tendency among prominent leaders of the country to invoke moral judgments which are in appropriate to the problems involved. It is most laudable that India's leaders should call for a united effort to raise the country's wealth and resources and deprecate acrimonious discussion of the relative merits of private or public enterprise to produce the goods and services required. It is not helpful, however, when the same leaders so frequently equate private enterprise with greed and exploitation and promulgate their opinion that there is a special moral purity of State enterprise before which the evils of private capitalism must wither away. They can only expect to continue to receive the embittered criticism of sloth, waste and rigidity to which public enterprises only too frequently succumb.

The result of this conflict has been to throw private enterprise on the defensive and, however regrettable this may be, it does focuss attention on the role of organs developed by private enterprise for consultation and common action. It is highly significant that one can only conceive of a voluntary association of interests engaged in common economic activities in a society where private enterprise has a substantial and honoured place. Once ultimate accountability is to the State, there is no place for any voluntary association of the individuals who together constitute an industry. This fact must be an important item in the balance between the merits of public ownership of the means of production, distribution and exchange and the continuance of private economic activities within the rule of law.

Common Characteristic Features

Voluntary associations in economic affairs are of a bewildering variety, but their common characteristic is the coming together of independent units of production, distribution or exchange for the discussion of common problems, the promotion of common policies and the provision of common services. To the purist, they may seem to sully the clear stream of perfect competition, but this idealised concept of the academic economist is not likely seriously to worry the practical man in the market place. Such associations imply a range of activities in which the members act independently and a range in which they agree to act in concert. If activities in the latter group expand beyond a certain point, the association will tend to become a cartel. A profound belief in the place of voluntary associations in society is not incompatible with a distrust of cartels as potentially dangerous concentrations of irresponsible power.

It need hardly be said that a specific character of a voluntary association is the ability of a member to leave it. This has very important consequences which impose both limitations and advantages on the working of the organisations. While voluntary associations normally have voting procedures for the conduct of their affairs, except for a limited field such as the election of committees, they represent a last resort in the process of reaching decisions. This means that decisions normally depend on discussion and the attainment of a common mind. For the continued health of an association, the decision it makes must be usually unanimous, or at least *nemine contradicente*. Proponents of any policy must, therefore, develop the arts of persuasion and shun the weight of the vote—a procedure which has the disadvantage that decisions take time and often have to be compromises reflecting the reconciliation of differences of opinion. They may not always be the worse for that, and may sometimes be the better, but one cannot normally look to associations for major innovations in spheres where members have agreed to common action.

Freedom to Resign

It is on this account that the ability to resign from an association without too great difficulty is desirable, even though at times it may be awkward for the association. If an association is any good at all, there will be undoubtedly disadvantages from resignation which will give a member reason for very careful consideration before taking such a step. It is reasonable that associations should make resignations contingent on substantial notice, if ony to enable them to adjust their affairs to meet the situation. On the other side, it is quite possible that the future development of the industry may be safeguarded by the resignation of a member with unorthodox ideas and the independence and courage to back his opinion against the weight of his fellows. Such individuals, however, tend to remain independent as a matter of predilection and, it must be admitted, are often a trial to their neighbours. Resignations are in fact more likely to occur among members who are less adaptable to change and their departure need not seriously damage an association as long as the losses are relatively small.

While the freedom to belong to—or to leave—an association is fundamental, it is a negative quality. Obviously, the continued existence of an association depends on a wide measure of general agreement among its members as to programmes and policies and on a group loyalty which will support some sacrifices in the common interest. Both these positive qualities can only result from a gradual process of growth. Nowhere is practice more rewarding than in the development of a common outlook and a common loyalty.

The planting industry of South India offers an illuminating commentary on the growth and purpose of voluntary associations since the local district bodies date back a century and the United Planters' Association of Southern India is approaching its seventieth birthday. An industry which at its inception consisted of small scattered units in undeveloped forest regions of the Western Ghauts found the need for joint action at an early date. At first, the needs were simple—a road, a post office, a police outpost—but it was in the presentation of these needs that the early lessons of reaching an agreement by discussion and compromise were learnt. In the course of time, the range of subjects tackled in the associations widened and a confidence in the usefulness of joint action grew.

These early simple needs generally involved an approach to the State for the extension of services which were universally regarded as falling within the sphere of State action—communication, civil order, public health. A significant step forward—how significant was hardly appreciated at the time and the promoters would have been horrified at the consequences—when the tea industry asked Government to levy a cess for the promotion of tea exports. At the time, the promotion of trade was a novel undertaking for the State and, although the Government of the day was quite ready to accede to the industry's request to collect a levy from its own product, it was equally ready to leave the spending of it very largely in the hands of a committee drawn from the industry's associations, subject to a fatherly eye from the Finance Department.

Weaknesses

This request to Government was a reflection of one of the weaknesses of voluntary associations—the difficulty of ensuring a stability of income for more than a very limited range of services. While the need for a secretariat is obvious and the provision of funds to support it has never proved insuperable, the extension of the voluntary collection of funds for other purposes has rarely been an unqualified success. A voluntary levy has a reasonable chance of success only when there is virtual unanimity about both objects and methods and when any benefits can be largely restricted to the paying members. Situations where these conditions can be met are comparatively few and sometimes a promising beginning lacks staying power with changes of circumstances and personalities. In so far as projects need skilled staff, such uncertainties are a serious handicap to recruitment and this adds a further source of dissatisfaction among subscribing members.

Under pressure of circumstances, a degree of unanimity may sometimes be attained which permits agreement on the desirability of a project and an incentive to ensure its continuance in spite of the possibility of future divergences. The provision of funds by a statutory levy is a means of assuring the continuance of a project if the State can be persuaded to enact the necessary legislation. It is true that legislation can be repealed, but that is a more tedious undertaking than simply ceasing to pay a voluntary subscription and therefore offers a greater likelihood of continuity. More schemes have probably foundered from the growth of indifference than from the development of active opposition. Nevertheless, the association with the machinery of the State involved in accepting a statutory levy gives a hostage to fortune.

Commodity Boards

As long as the State saw its function as that of a passive regulator in economic affairs, the danger of seeking Government help in assuring the finances of projects in the interests of an industry were relatively small. With the tendency to active intervention which has marked recent developments, the situation has changed radically. The existence of committees and boards to regulate the affairs of industries offers ready-made machinery for the more active control and supervision which accords with current Government philosophy. All the present statutory boards concerned with the planting industry had their origin in bodies set up at the request of the industry.

With best compliments from

THE FARM TEA ESTATES SYNDICATE

Makers of

"BOWERLANDS" and "FARM" TEAS

There can be little question that the plantation commodity boards have been increasingly used by Government to impose policies on the industry rather than to formulate policies for the industry. The changes in the structure of the boards in the course of the last fifteen years have consistently reduced the representation of the organised industry. The increasing use of nomination of members and the pointed removal of the representation of the associations in favour of electoral procedures in the case of the Coffee and Rubber Boards have further weakened the ability of the voluntary associations to influence the affairs of the industry. While the resources of these boards continue to be drawn wholly from the industry, the industry's control over their use has been steadily eroded. This illustration of the State's subtle extension of power by the emasculation of the relatively independent bodies should cause concern to all who value free institutions.

A Serious Challenge

The situation presents a serious challenge to the voluntary associations, requiring some reappraisal of their future role. It need hardly be said that their aims remain unaltered, but changed circumstances may well require a change in the methods required to achieve them. It is also evident that the need for vigorous voluntary associations is greater than ever it was, if policies for the industry are not to be made without the benefit of specialist advice which can only come from those directly concerned. It is possible that the advice may not be taken and one must also recognise that there will be times when the rejection of such advice may be in the general public interest; nevertheless, public knowledge that the advice has been given is of fundamental importance so that responsibility for the consequences of any decision can be placed where it belongs.

The disappointments and frustrations associated with the Commodity Boards should not be allowed to discount the importance of continuing to work in them and through them. Any opportunity to move them nearer to organs of real consultation and to effective control of their resources should be eagerly seized. In these days, when the processes of democracy tend to reduce the possibility of industrial and economic leaders being represented in the legislatures, no avenue of access to the centres of power can be ignored by those who are responsible for the organisation of production in private industry.

This problem of power is fundamental to the process of Government and it is the Government which creates the environment in which industry has to operate. The problem for the voluntary associations is the location of the centres of power and the sources which influence them, so that an industry's views and needs can be presented to the best advantage. In earlier, simpler days, this presented no great difficulty but the growth of democracy in the country has brought serious complications. The nature of the problem can be illustrated by a personal experience with a Minister. A case of difficulty in the affairs of the industry was placed before him and his understanding of the situation suggested great hopes of a successful outcome for the representation. However, he was quick to point out that he was a politician as well as a Minister and it was not only he who needed to be persuaded if action was to be taken.

Sources of Influence

The issue becomes one of identifying the sources which influence the action of Ministers in a democracy. In theory, this is, of course, the people—the electorate—and their elected representatives, Parliament. However, in practice, to a considerable extent, opinion is formed by a comparatively small circle of people, not all within the legislatures. It is to this circle that education and persuasion must be directed, so that a body of opinion can be built up which can be expected to bring an informed understanding when the industry's problems become a matter of public debate. It is natural to hope that, with the development of political maturity, the body of informed public opinion will grow and this must be taken into account in devising policies and programmes for voluntary associations concerned with the care of special interests.

Of course, voluntary associations are concerned with other matters than their relationships with the State, though the extent of the State's intervention in economic affairs makes this part of their functions of overwhelming importance. Even in other fields—labour relations, provision for research, for example—the State is increasingly involved and it is difficult to consider them separately. However, perhaps the biggest difficulty that associations have had to face in the past fifteen years has been the growth of the organisation of labour and the problems of negotiation that this development has engendered. The strains have been very great and nowhere has the existence of a group loyalty been of more importance than in the sphere of negotiations on wages and conditions of service. Never have such heavy responsibilities fallen on the officers elected to represent the associations in their negotiation, the outcome of which may well involve large financial commitments on the part of every member. Individual members vary enormously in their estimate of the risks involved in resisting workers' demands and of the equity of demands themselves and it is rare that agreements can be reached without criticism of one sort or another.

Duty of Members

There is no easy answer to this question but any solution required the development of efficient communications within the association to ensure that no member's voice is unheard and that no member is left unaware of the issues involved. While this demands the most careful thought on organisation—and justifies what sometimes appears to be an excessive concern with internal organisational problems—it also requires the active involvement of every member in the association's affairs. If a members' attitude is to leave the work to others, then he has no case if the decisions reached are not to his liking. The health of an association can only be assured by the active participation of all its members in reaching decisions. This takes time when the problems are complex, as they usually are, and requires a readiness to compromise. There has been ample complaint from Unions—and from Governments—on the time taken by employers to reach decisions but little recognition that this is an inevitable consequence of free institutions.

The importance of voluntary associations as a bulwark of free institutions cannot be overestimated. It is usual for such associations concerned with industry or commerce to declare that they are not political and there is a sense in which this is true. They do not attach themselves to any particular party in any formal sense and indeed, so long as the form of Government visualises, the possibility of the peaceful change of the party in power, it would be folly to do so. Nevertheless, if a major cleavage of political principle should develop between those who believe there is a place for private enterprise in the economic order and those who do not, it would be difficult, if not impossible, for voluntary associations to remain impartial. If one is attacked, it may be wicked, but it is certainly natural to defend oneself.

It would be a mistake to underestimate the strength of the trend towards State domination of all economic activities or to deny that some of the suspicion of private enterprise and

TIRUCHIRAPALLI

its associations is not without foundation. One of the problems before voluntary associations is to break down that suspicion and create a public image of useful and efficient activity in the public interest. It must be an honest image and the case must not be overstated—one of the besetting sins of organisations representing special interests. This requires, of course, that the members themselves have high standards of public responsibility, for the whole cannot be better than its parts. It may seem overoptimistic to assume that a time will soon come when the antithesis between capitalism and socialism ceases to be the focal point of political controversy, but it is a worthy end to strive for. There is much evidence from many sources pointing to the tremendous possibilities of a mixed economy but realisation requires the changing of many habits of thought. Without the development of mutual respect for the parts to be played by the State and by private interests, the chances of the peaceful development of a flourishing society will be diminished.

In the last analysis, voluntary associations depend on their members and it is upon the thinking of each individual member on his role in society that their future must rest. They afford a forum in which ideas can be moulded to meet the challenge of these revolutionary times and a platform from which they can be proclaimed. The disappearance of such associations would be an impoverishment of society and a blow to real freedom, which rests on a belief that institutions are made for man, not man for institutions.

PLANTATION HOUSING

A Working Group on Plantation Housing, with Mr. N. N. Chatterjee, Joint Secretary, Union Ministry of Labour and Employment, as the Convenor, has been constituted by the Government of India to suggest measures for accelerating the pace of implementation of the housing programme for plantation workers. The terms of reference of the Group are as follows:

To asess the total cost involved for providing houses to workers and the resources available with the employers for this purpose, including loan facilities under the plantation labour housing scheme and facilities provided by banks;

to suggest how the existing loan facilities may be improved, whether further facilities for loans should be provided and whether loans can be had from the Life Insurance Corporation;

to recommend whether, in addition to loans, assistance by way of subsidies should be provided by the Government; it will decide how and to what extent such assistance should be given;

to consider whether the entire cost of construction could be charged to the revenue account so that 100 per cent development rebate can be allowable to employers for purposes of income-tax without affecting the disbursement of bonus to workers; and

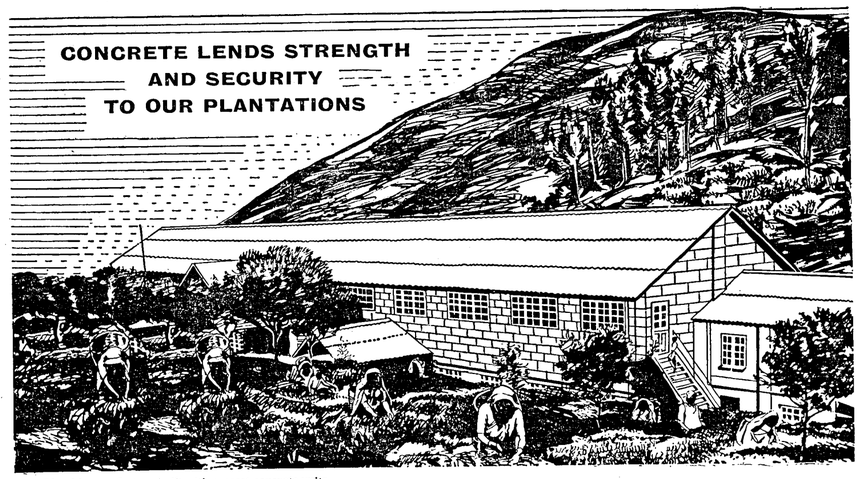
to examine whether the annual rate of construction of houses prescribed in the plantation labour rules should be modified.

The Group has been set up in pursuance of a recommendation made by the tripartite industrial committee on plantations. The other members are: Mr. K. N. Valenkar, Deputy Housing Adviser, Ministry of Works, Housing and Supply, Mr. H. K. Kochar, Deputy Secretary, Ministry of Commerce and Industry, Mr. A. S. Bam, Chairman, Tea Board, or alternatively, Mr. W. Simpson, Director of Tea Development, Tea Board, Mr. Gurdev Saran, Under-Secretary Ministry of Finance, and Mr. S. S. B. Raghavan of the Planning Commission.

RUBBER STUDY TEAM

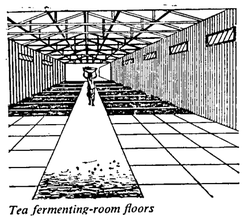
The Indian Rubber Board is sending shortly a six-man delegation, led by its Chairman, Dr. Rama Varma, to Malaya to study the improved methods of cultivation, co-operative movement, possibility of importing rubber on rupee basis and replanting schemes being implemented in that country. The delegation will include two representatives of large growers and one each of small growers, manufacturers and labour. A three-man delegation is also proposed to be sent to Ceylon.

Meanwhile, the Rubber Board has requested the Government of India to conduct a survey of the Andaman and Nicobar group of Islands for the successful implementation of the proposed pilot project on rubber there. The Board wants the Andamans Administration to survey the Islands and it has offered to provide the requisite technical assistance.

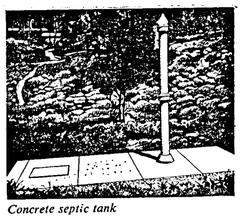


Glen Morgan factory built with precast concrete units

Concrete fence posts and creteways

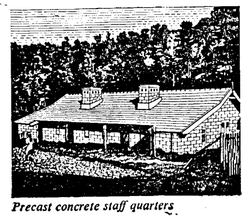


Tea fermenting-room floors



Concrete septic tank

ACC and Sankar Brand Cements



Precast concrete staff quarters

Concrete structures in Plantations, whether they are built with

a) precast units such as concrete hollow blocks, door and window frames, T-joists for roof, lamp standards, fence posts...

OR

b) in-situ constructions such as creteways, tea fermenting-room floors, coffee curing plant floors...

make estate life more healthy and comfortable. Concrete construction is becoming more popular in plantations because it is * maintenance-free * durable * economical * fire and weather proof * immune to attacks by termites

For free technical advice on any concrete construction write to the Concrete Association of India, 175/1 Mount Road, Madras 2.

Pioneers in Plantations

One of the largest groups of planting companies in South India today lies within the Peirce Leslie & Company Limited fold. Resources, experience and skill have combined in PL & Co. to command wide confidence. The diversification of interests from fertilisers to estate stationery has firmly emphasised that PL & Co., are now part of the planter's life. Tea, rubber and coffee interests are blended in the PL & Co. group.

The Rupee companies that Peirce Leslie & Co. Ltd., look after as Managing Agents are:

The Perla Karamalai Tea & Produce Company Limited; The Ouchterlony Valley Estates (1938) Limited; The Kil Kotagiri Tea and Coffee Estates Company Limited; Chembra Peak Estates Limited; The Cochin Malabar Estates Limited; Kumergode Estates Limited; The Kalasa Tea & Produce Company Limited.

Peirce Leslie & Co. Ltd., are also Secretaries and Treasurers of: The Savamalai Estates Limited; The Thirumbadi Rubber Company Limited; Cowcoody Estates Limited and Lingapur Estates Limited.

Peirce Leslie & Company Limited
Incorporated in England with liability of members limited.

Offices at:
COCHIN, CALICUT, COIMBATORE, MANGALORE, TELLICHERRY and ALLEPPEY.

PL-1 II-A

SELF-SUFFICIENCY IN NATURAL RUBBER

By Sat Pal Malhotra

AN idea of production, imports (raw and manufactured) and consumption of rubber in India for the years 1950, 1955 and 1960 are given in Table I on this page. Home production of natural rubber has invariably lagged behind the requirements. It is estimated that the future demand for this raw material will be still higher. This raises an important question of increasing the home production of rubber, which can either be synthetic or natural. We have tried to examine in this paper the technological possibilities of increasing the production of natural rubber and also the economics of natural and synthetic rubber. The production of natural rubber can be increased both by intensive and extensive measures.

TABLE I
(In thousand tons)

	1950	1955	1960
Production of natural rubber ..	15.6	22.4	24.8
Imports of raw rubber	1.1	4.4	34.5
Consumption of			
(a) raw-rubber	17.7	30.6	57.8
(b) imported rubber† manufacture	—1.7	—0.1	+2.3
(c) Total	16.0	30.5	60.1

† In terms of rubber contents.

It is a well-known fact that the average yield of rubber in India, about 336 kgs./hectare, is quite low, as compared with the major rubber producing countries of the world. Way back in 1947, the average yield of rubber in India was about 325 kgs./hectare. Since then, the average has ranged between 283 kgs./hectare and 358 kgs./hectare. As against this, the corresponding figure for Ceylon, for instance, has gone up to nearly 465 kgs./hectare in recent years. Ceylon, it may be noted, is closer to Kerala, the principal rubber State of India, than Malaya or Indonesia, the world's largest producers of natural rubber. It is, therefore, a more relevant country for purposes of comparison with India.

The primary reason for low yields in India is that a major portion of our total rubber area is under ordinary clones. It is estimated that about 80 per cent of the total acreage under natural rubber is planted with old and low yielding seedling trees. Of the total area of the order of 123,000 hectares in India, 83,000 hectares, representing 67 per cent, is under ordinary clones. Besides this, progress in replantation is rather slow. The result is that about 40,000 hectares of our rubber trees, having outlived their economic life, are over 30 years old.

The first step towards intensification of rubber, therefore, is to reorientate our policy towards replanting and new plantings. As for replanting, consideration has to be given to all the factors which have so far stood in our way. We have also to see that practically all the replanted and newly planted area is put under improved varieties. The cultivator has to be compensated for the loss he suffers for uprooting an old plant, which continues to give him some return. He has also to be encouraged for the care he has to bestow on the new plant for a long period of about 7-8 years before it starts yielding latex.

Rehabilitation of Existing Plants

There has been a very slow progress in replanting the aged trees. During the past ten years upto 1959, only 400 to 800 hectares were replanted annually. However, in view of the urgent necessity to accelerate the process of replanting, the Rubber Board launched a Replanting Subsidy Scheme in 1957. It was felt that the slow progress in replanting was due to the reluctance of small growers to uproot the aged plants because of loss of income for some years and the large expenses involved in replanting and maintenance of young plants.

Large estates have the practice of setting aside a rehabilitation fund for which purpose a replanting element has been included in the controlled price of rubber. It was with a view to providing an incentive to planters, especially to small holders, that the Replanting Subsidy Scheme was evolved and put into operation. The scales of subsidy, as shown in the following Table 2, were on a slab basis.

TABLE 2—*Rates of Subsidy Offered to Growers in India, Malaya and Ceylon*
(Rs. per acres)

Category of holders	*India*	*Malaya*	*Ceylon*
Below 10 acres	400	960	1,000
100 acre and below	350	870	900
above 100 acres	275	625	700

As compared with other countries, the rate of subsidy given in India was quite low. Even otherwise, this was rather inadequate as compared with nearly Rs. 2,000 which is the cost involved in planting one acre. The response was naturally not satisfactory. Recently, the rate of the subsidy was raised to Rs. 1,000 per acre on a flat rate. Besides the subsidy in cash, small holders with holdings less than 5 acres in area are supplied manures at half the market price and are also given other concessions. All these measures are bound to command a good response from the cultivators.

Table 3 shows the area replanted from 1957 to 1959 and the targets of replanting proposed for the next five years. There is every reason to believe that the enhanced rate of subsidy and other concessions will give a sufficient incentive and new records will be achieved.

TABLE 3—*Area Replanted, Proposed to be Replanted under Rubber in India,* 1957-65
(In thousand hectares)

Years	*Area*
1957	1.3
1958	1.4
1959	1.5
1960*	3.0
1961*	3.2
1962*	3.4
1963*	3.9
1964*	3.8
1965*	4.0

* Targets.

Table 4 gives the area under different ages of rubber trees in 1959 in the country.

TABLE 4—*Age of Rubber Plants in India*
(In thousand hectares)

	Estates	*Holding*	*Total*
Total area	51	72	123
Area older than 30 years	25	12	37
Area replanted upto 1959	9	29	11
Replanted area under ordinary variety	1	0.4	1.4
Area with trees aged 30 years and less but under low yielding material	8	37	45

Out of 40,000 hectares under rubber plantation which have already crossed the economic age, only 11,000 hectares have been replanted so far. A phased programme in respect of replanting this area in each plan period is given in Table 6.

Both with regard to new plantations and replantations, an effort has to be made that a cent per cent of this area is put under improved varieties. Although total area replanted during the last 25 years is rather small, yet most of it is under improved varieties. Of the total of 11,000 hectares, only a small area of 1,400 hectares have been replanted under ordinary seedlings.

On the other hand, the tendency of putting new area under ordinary material continues unabated. For instance, during the last decade, as much as 29,000 hectares have been put under ordinary material, as against 51,000 hectares brought under new plantation. This tendency has certainly to be checked.

Extension of Areas

Table 5 shows tapped, untapped and total area, total production and yield per hectare from tapped area under rubber during the last 10 years in the country. We have today nearly 123,000 hectares of area under rubber, of which the tapped area is about 71,000 hectares:

TABLE 5—*Area, Production and Yield of Rubber in India,* 1950-59

Years	Total area under rubber (000 hectares)	Tapped area (000 hectares)	Untapped area (000 hectares)	Production of natural rubber (000 tons)	Yield per hectare from tapped area (Kgs.)
1950 ..	58.2	42.3	15.9	15.6	342
1951 ..	59.7	42.3	16.4	17.1	344
1952 ..	68.3	45.0	15.4	19.9	362
1953 ..	68.4	61.5	14.7	21.1	329
1954 ..	69.5	63.9	5.5	21.5	307
1955 ..	70.4	64.5	6.4	22.4	351
1956 ..	77.4	65.0	12.1	23.4	362
1957 ..	88.7	63.6	25.1	23.8	338
1958 ..	115.3	72.7	42.6	24.3	338
1959 ..	122.6	71.4	51.3	23.4	333

The rubber tree is found to grow most satisfactorily in the humid, tropical rain-fed regions with a rainfall of 70 to 120 inches evenly distributed throughout the year and an equable warm temperature of 80° to 90° F on deep, well-drained and fairly fertile soil up to an elevation of 800 feet from sea level.

Scope for Expansion

Kerala, Kanya Kumari District of Madras State and Andaman and Nicobar Islands are the only important areas where most suitable agro-climatic conditions are available for the cultivation of rubber. From the land utilisation pattern for these three areas, it seems that, in Kerala alone, there are more than 162,000 hectares classified as culturable waste and another 81,000 hectares non-reporting area. According to some rough estimates, there are at least 101,000 hectares out of this total area which can immediately be put under rubber plantations.

In Kerala, there are another one million hectares of forests. Rubber cultivation creates forests on scientific line and also prevents soil erosion. The whole forest policy in that State calls for a re-examination. It is quite possible that vast tracts of land may be available for rubber plantations which may serve the dual purpose of conservation of forests and aforestation as well.

Andaman and Nicobar Islands are potential areas for rubber and coconut plantations. There land is extremely suitable for rubber plantations. Rainfall is evenly distributed and generally the climate is more akin to the fertile rubber areas of Malaya. According to tentative estimates, nearly 81,000 hectares are immediately available for rubber plantations. This group of islands is, however, rather underdeveloped and considerable developmental activities will have to be undertaken before plantations on any large scale can be started. It would, perhaps, be necessary to undertake a comprehensive survey of the area, before resorting to any large-scale deforestation. This may have an immediate effect on the natural climate of the area.

It may also be added that a proper plantation scheme for this area will call for huge investment. Labour and heavy capital equipment will have to be imported to the place, quarters built for labour and staff, and roads and buildings constructed. This is a job which can be undertaken either by the Government or big corporations having sufficient resources of their own. These are rather urgent matters which need an immediate decision.

One thing which will have to be kept in mind while allocating the new area is that, as far as possible, the land should be parcelled into big estates rather than small holdings.

Keeping in view the fact that the measures suggested above will be fully implemented, an attempt has been made in the following table to chalk out a 15-year programme for development of natural rubber in the country:

TABLE 6—*Rubber Balance-sheet for the Coming 15 Years*

	Unit	1960	1965	1970	1975
1. Total area	(000 hectares)	130	192	239	255
2. Area tapped	Do.	n.a.	115	154	198
3. Area untapped	Do.	n.a.	77	85	57
4. Area with over 30 years old trees	Do.	40	41	45	60
5. Area replanted/required to be replanted ..	Do.	12*	20 (32)	13 (45)	15 (60)
6. 30 years old area under ordinary material	Do.	38	39	40	46
7. Area with 30 years old trees under ordinary material which will be replanted with improved material	Do.	9	20 (30)	12 (42)	— (42)
8. Total area under ordinary material	Do.	83	53	41	41
9. Yield per hectare of tapped area	(Kgms.)	336	392	426	515
10. Total production ..	(000 tons)	26	45	65	100

Data for the first year in respect of item Nos. 4-8 relate to the year 1959.
N.B.—Figures in brackets are cumulative total.
* Already replanted upto 1959.

In the aforesaid estimates, the average yield per hectare has been placed at 515 kgms., an increase of roughly 50 per cent over the existing level. It has been estimated that the use of manures, proper spraying, chemical regeneration of trees by hormones and proper tapping methods can immediately increase the yield of the existing trees by at least 25 per cent.

New areas in Andaman and Nicobar Islands, recommended for being put under rubber plantations, are ideally suited for the cultivation of high yielding planting material now available. This area has got potentialities of yielding 1,680 to 2.241 kgs. per hectare of rubber.

Of the total area of 130,000 hectares, as much as two-thirds of area is at present under ordinary seedlings. Average yearly yield from ordinary seedlings is estimated at about 224 kgms. per hectare. Corresponding figure for clonal and budded seedlings is 840 kgms. per hectare. According to the balance-sheet as given above, by the end of the coming 15 years, out of the total of 255,000 hectares, hardly 40,000 hectares will be left with ordinary seedlings. This change in itself will help to raise per acre yields appreciably.

If regard is had for all these considerations, it will be appreciated that our estimate of an average yield of 515 kgs. per hectare may prove an underestimate, and it should be quite within the reach of the country to produce about 100,000 tons of natural rubber by 1975-76.

These technological possibilities of raising the production of natural rubber to 100,000 tons or so apart, we have also to examine how far it would be economical for the country to concentrate on the production of natural rubber. This, in other words, means a comparison of the cost of production of natural with synthetic rubber.

Cost of Production

The question regarding the cost of production of natural rubber in India has been thoroughly examined by the Tariff Commission. According to them, the cost of production of latex works out to Rs. 65.86 per 100 lbs., as detailed below:

TABLE 7—*Cultivation, Upkeep and Collection Charges for* 100 *lbs. of Rubber*

	Rs.
A. Cultivation and upkeep	
Wages	
Weeding and pruning	2.84
Forking and manuring	0.14
Spraying, dusting and other pest control measures	1.99
Cover crops, shade tress, etc.	0.12
Fences and boundaries	1.08
Maintenances of tools	0.08
Miscellaneous	1.12
Total wages ..	7.37
Stores	
Manuring	0.77
Spraying, dusting and other pest control measures	3.65
Miscellaneous	0.32
Total stores ..	4.74
General expenses	6.61
Total ..	18.72
B. Collection	
Wages	24.50
Stores	1.07
Transport	0.33
General expenses	21.24
Total ..	47.14
Grand total ..	65.86

Out of this total cost of Rs. 67 for 100 lbs., as much as 80 per cent represents wages and other general expenses. Again, the biggest item in labour costs relates to tapping which may be described as the task of a skilled worker. The task in the industry is limited to about 250 trees per man-day, as compared with 350 to 400 or more in Ceylon and Malaya. With improvement in labour efficiency and higher yields per tree, it can be reasonably assumed that the cost of production of latex may be reduced to some extent. If we reach near about the Ceylonese or the Malayan level, it may come down by, say, about 10 per cent.

But, for determining the future cost, we have also to take into consideration some of the new factors like amenities for labour, provision for gratuity and bonus, depreciation on the cost of existing stand of rubber trees, provision for replanting, new planting and return on capital employed, etc. It is essential to take all these factors into consideration while calculating the price at which rubber may be available to the consumer in future. The table below gives an idea of the present and future estimates of prices of rubber:

TABLE 8—*Price of Raw Rubber of P.M.A.I. Grade*
(Rs. per 100 lbs.)

	As in 1955	*Future estimate*
1. Cost of latex	65.17	60.00
2. Processing charges including packing ..	15.29	15.29
3. Provision for gratuity	..	2.00
4. Provision for contingencies	4.00	5.00
5. Freight and handling f.o.b. Cochin ..	3.45	3.45
	87.91	85.74
6. Depreciation on plantation cost f.o.b. Cochin	6.82	9.00
	94.73	94.74
7. Grade differential to equate cost of production to R.M.A.I. grade	2.30	3.19
8. Cost of R.M.A.I. grade f.o.b. Cochin ..	96.93	97.93
9. Return at 12.5 per cent on employed capital	38.57	40.25
	135.50	N.A.
10. *Ad hoc* increase in 1955	12.00	..
11. Total price for R.M.A.I. grade to be retained by the growers	147.50	138.18
12. Cess existing	6.25	6.25
13. Additional cess recommended	..	7.00
14. Sales tax	2.04	2.04
15. Price f.o.b Cochin for consumers	155.79	153.47

N.B.—For the year 1955, figures for items 1-5 is on the basis of estimates; others are as given by the Tariff Commission, 1960.

Synthetic Rubber

On the basis of this calculation, the price of natural rubber works out to about Rs. 1.6 per lb. to the consumer. Rough calculations for synthetic rubber also indicate that the product from Bareilly may be available at about Rs. 1.5 per lb.

But besides the cost to the consumer, we have also to take into consideration the initial investment. The authorised capital for the Bareilly plant with a target production of 20,000 tons is Rs. 15 crores. Foreign exchange element in this is Rs. 7.5 crores. When the plant is geared to raise its production to about 30,000 tons, total capital investment may be of the order of Rs. 20 crores.

As regards natural rubber, it has been estimated that a new plantation in a most congenial area, like that of Andamans where yields may be of the order of 770 kilogrammes per hectare, would call for an investment of about Rs. 20 crores for a plantation of 100,000 acres. The yield from such a plantation would be roughly 30,000 tons of natural rubber.

Although initial investment in the case of both natural and synthetic rubber is practically the same, returns from synthetic plant are available after about four years. The gestation period for natural rubber, on the other hand, is nearly eight years. This would mean that the price of the final product, being roughly the same, it would be far more easier and cheaper to set up a synthetic plant as compared with that of the natural rubber. All the same, it has to be borne in mind that the major proportion of the investment in the case of natural rubber being on labour, it is a labour-intensive programme. Further, hardly any foreign exchange will be involved in the production of natural rubber.

Given all these factors, the substitutability of synthetic with natural and the possibility of having the necessary raw material for meeting the total demand of raw rubber have also to be examined. The table below would give an idea of the consumption of natural synthetic and reclaimed rubber in different countries:

TABLE 9—*Proportion of Natural Synthetic and Reclaimed Rubber Consumed in Some Industrial Countries*
(Per cent)

Country	*N.R.*	*S.R.*	*R.R.*
U.S.A. (1959)	30	55	15
U.K. (1958)	65	23	11
French (1957)	64	24	12
Germany (1957)	63	22	52
India (1960)	80	11	0

N.R.—Natural rubber. *S.R.*—Synthetic rubber.
R.R.—Reclaimed rubber.

Even a country like the U.S.A. which has to import 100 per cent of its requirements of natural rubber is using this commodity to the extent of 30 per cent. Opinion in our country indicates that, because of the rough nature of our roads and other factors, it may not be possible for India to replace natural rubber by more than 50-60 per cent. This is a point which must be thoroughly gone into. If this is true, all the problems pertaining to economics of production of one or other type will be superfluous. This is because the demand for each of the varieties is independent.

Doubts have also been expressed that the necessary raw material for the manufacture of synthetic rubber is not available in India so as to meet the ever-increasing demand for rubber which is expected to be about 250,000 tons by 1970-71. If so, the programme for natural rubber, as given on the previous pages, will have to be given top priority.

Note:—The views expressed in this article are the personal views of the author.

Notice

MYSORE CHEMICAL MANUFACTURES LIMITED

Registered Office:
CHIKBANAVAR P.O. (Bangalore Dist.)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fourth Annual General Meeting of the shareholders of MYSORE CHEMICAL MANUFACTURES LTD. will be held at the Registered Office of the Company at Chikbanavar P.O., Bangalore District, on Saturday the 29th September 1962, at 11-30 a.m., to transact the following business:—

(1) To receive and adopt the Directors' Report, the audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1962 and the Auditor's report thereon.

(2) To declare Dividends.

(3) To elect Directors.

(4) To appoint Auditors for the year 1962-63.

The Share Transfer Books of the Company will be closed from 15th to 29th September 1962, both days inclusive, for payment of Dividends and also in connection with the issue of new shares.

By Order of the Board,
S. RAMANATHAN,
Managing Director.

BANGALORE,
26th August, 1962.

The Board of Directors have recommended payment of a Dividend of 7.80 per cent on Preference shares and 20 per cent on Ordinary shares for the year, both subject to deduction of tax. The Dividend Warrants will be posted to those shareholders whose names stand on the Register as on 15th September 1962.

Note:—A Member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

PROPRIETORS OF

KUSHALNAGAR WORKS, KUDIGE P.O., COORG

Coffee Curers and "A" Class Agents to the Coffee Board; Dealers and Suppliers of Raw Coffee; Suppliers of Fertilisers and all Estate requisites.

Acreage: The Company owns 7,282 Acres of Coffee and 950 Acres of Minor Produce situated in North and South Coorg.

THE MANAGEMENT OF COFFEE ESTATES IN COORG AND MYSORE IS UNDERTAKEN.

SIXTY-NINTH ANNUAL CONFERENCE OF U.P.A.S.I.

MR. SIMMONDS PINPOINTS INDUSTRY'S PROBLEMS

THE Sixty-ninth Annual Conference of the United Planters' Association of Southern India (U.P.A.S.I.) was held at Coonoor on 1st September 1962. It was inaugurated by Mr. Gulzarilal Nanda, Union Minister for Planning, Labour and Employment. The problems of the industry were succinctly presented by the retiring President of the Association, Mr. W. C. F. Simmonds, in his presidential address. The following is an extract from it:

"We are a non-political organisation whose job in life is to further the interests of the plantation industry to the benefit of our labour, our shareholders and, of course, the largest beneficiaries of all, our Central and State revenues.

"It naturally follows that I should now go into a detailed criticism of the tax burdens the industry has to bear. I will try and make my criticism constructive:

1. We have heard a lot about the goose that lays the golden eggs; the poor bird has been overworked;

2. Please leave us with enough finance to keep our gardens in good order and enable us to face the future with confidence and stability;

3. Please leave us with enough finance to enable us to comply with the onerous requirements of the Plantations Labour Act or lower those requirements; and, finally,

4. Please let us have one tax and one tax collector instead of the innumerable taxes and tax collectors we have at the moment. The number of returns we have to make to the various authorities is fantastic. The number of masters we have to serve is legion. We do not carry dead wood in the industry, let us not carry it in Government service by unnecessary duplication of non-productive work. We are very pleased that this problem is appreciated by the Government of India and a committee is now sitting to examine the possibilities of a reduction in the number of returns we have to make.

"We appreciate that it is essential we earn foreign exchange, but it does not benefit the country if we increase our exports by 30 per cent only to earn the same amount of foreign exchange.

Sheet Anchor

"Let us realise that our internal market with its future potential, is the sheet anchor which could well save the plantation industry from finishing on the rocks.

"We have been given a tremendous target in the third Five-year Plan for all our crops consisting of tea, coffee, rubber and spices. This industry will try its utmost to reach this target, but, and it is a large but, we cannot produce good tea, coffee or rubber unless we have the necessary equipment. I am happy to report a realisation of this fact by those in charge of imports but only when related to exports.

"Whilst on the subject of planning, I would like to say we appreciate and support the necessity for careful planning. It might be advisable for the Government in future to associate bodies like the U.P.A.S.I. in the task of planning for this industry, so that the best experience in practical planting matters is available to the Government.

"Our new Ministry of Export has formed a Board of Trade. This is an excellent step forward and welcomed by the industry. I also see that a Cost Reduction Programme Committee has been formed within the Board of Trade. Our biggest headache is to keep our cost of production within reasonable limits taking into account that this industry's costs are governed mainly by (a) labour wages, (b) cost of essential supplies, and (c) weather which controls our crops.

Tea

"Production is increasing, as we spend more money on agricultural practices. Unfortunately, prices this year have eased and we have to ask ourselves two questions:

1. Have prices eased because increased production means poorer quality? or

2. Does the additional weight of tea in world markets bring down the price?

"If our costs are high, that is the producers' worry not the buyers,' and our costs do not affect the selling price which is controlled by the law of 'supply and demand.'

"Our liaison with the Tea Board has improved considerably and the approach by the Board to sales propaganda is very interesting. We trust the efforts made by the Board will result in increased sales. Our thanks to Mr. Bam for his response to our suggestions and help in our difficulties. This Association will continue to support the efforts of the Tea Board which become more important to the industry year by year.

Coffee

"This unpredictable crop which is entirely dependent on the weather, had a bad cropping year with a shortfall of 22,000 tonnes in comparison with the previous year. Thanks to the efforts of the Coffee Board and sales on the internal market, a slight improvement in price per kilo is envisaged when the total crop is sold, but this will not offset the loss due to the drop in crop. When world prices are well below our cost of production, we must concentrate on quality for our exportable grades.

"Our Association has put many suggestions to the Coffee Board and we hope that they will receive the consideration they deserve, as we restrict our suggestions to those of a practical nature. We look forward to increased co-operation with the Coffee Board under the able leadership of Mr. Sitarama Reddy.

"The International Coffee Agreement is a difficult problem. We cannot agree to limit or restrict exports or production because of (a) our increasing internal market, and (b) our need to export and earn foreign exchange. By keeping out of the International Agreement, we may, however, lose some of our established markets. As a personal opinion only, I think that for exports we must concentrate on quality coffees and ensure that the producers of such coffee receive a satisfactory premium for their crop.

Rubber

"The strategic value of this crop does not seem to have been appreciated by all concerned. Rubber saves crores of foreign exchange and further crores could be saved, if sufficient incentive is given to producers to expand and replant. The Tariff Commission recognised this position, so have the Central Government and the Government of Madras, by allowing the depreciation element as a charge against taxation. The Government of Kerala, in which State most of our rubber is grown, has not so far allowed this very important incentive, and although repeated appeals have been made, they have not yet come to a decision. I am sorry that the Government of Kerala is relying on a short-term policy of immediate taxation, when by agreeing to such a small allowance to be set off against taxation, the future resources of Kerala and the Government of India of this strategic product would be consolidated. Let us realise that major crops in this plantation industry are long-term investments and not investments for immediate gain.

"The Rubber Board, under the chairmanship of Dr. Rama Varma, has given us continued co-operation. Our members know how to grow rubber and know the type of inports it requires for replanting and extending their acreage. On the other hand, there may be difficulties that we, as growers, do not understand. The only way to overcome these difficulties is by close liaison between all sections of the Board. I am sure we can rely on the Chairman to ensure that the industry's requirements are adequately met.

Spices

"As always, spices have had a fluctuating demand, the most noticeable being the fall in the price of cardamoms. This particular product, hard hit by disease, is now an uneconomic crop. India is the largest producer of cardamoms. Why is it that the price received by the grower has fallen so much? One reason is that quality has fallen and to overcome this, exports are examined by the Cardamom Grading and Marking Committee. Another reason is that the majority of cardamoms are grown by small growers as a cash crop to finance expenditure on other crops.

Land Ceilings

"We trust that our State Governments will continue to realise the importance of plantation economy when applying ceilings to land. Some Governments already have appreciated the fact that fragmentation of plantations will be a step backward in the economy of the State and indeed of the country.

Labour Relations

"Apart from a few politically inspired strikes, our relationship with labour has improved. In this connection, we have much to be thankful for a stable Central Government taking a considered view of all aspects of the industry. Most State Governments are taking a realistic and practical approach to our difficulties. Wage Boards are considering the whole aspect of wages and benefits to plantation labour and staff. The Code of Discipline is beginning to work, and, most important of all, an appreciation by our labour leaders that the industry is entitled to a fair day's work for a fair day's wage. That is what we ask for and once the industry obtains this, we shall have a contented and stable labour force.

"No individual and no country which is developing its resources can exist economically if five hours' work a day is considered reasonable. Having made this statement, I would like to say that our female workers are the most industrious and happy people I have met.

"Surplus labour is a drain on the economy of any industry and affects the earning capacity of our permanent labour force. We do not ask for retrenchment, we are prepared to accept a natural reduction of our labour force, but the days of carrying surplus labour to compensate for absenteeism, seasonal crops and agricultural practices have gone. The industry cannot afford it, neither can our labour.

"Replies have been sent to the Bonus Commission and we trust we shall have an opportunity of addressing the Commission as an Association. With our various crops, our large labour force and the peculiarities of plantations, our case cannot be compared with manufacturing industries; we are essentially an agricultural industry.

"We express our appreciation that a Working Group has been formed to enquire into the problems facing the industry on plantation housing. Some manufacturing industries receive assistance from Government by direct financial aid for labour housing; the plantation industry does not enjoy any subsidy for labour housing. However, we have made satisfactory progress with our labour housing. As an industry, we can state without fear of contradiction, we are doing our very best (subject to the limitations imposed by shortage of cement, asbestos cement sheets and other essential materials.

Panchayat Raj

"We agree the Panchayat Raj is sound when considered in the context in which it was planned. That is the improvement of village welfare throughout India. Unfortunately, the peculiar position of the plantation industry does not appear to have been considered. We have been told that Panchayats are correct in levying full taxation on plantations, even though the Panchayat Boards are unable to use such income for the benefit of plantations. The majority of services are a legal liability of plantations under the Plantations Labour Act. We even have extreme cases where there are no villages within miles of plantations, but Panchayat Boards have been formed, with intense rivalry developing between Unions. Management in these cases will have to ask their own Labour for permission to install or move machinery, build houses, etc., etc. We do ask our Governments to consider this position and give the necessary power to responsible authority to grant exemptions and remove the above anomaly where it is found necessary."

INTERNATIONAL COFFEE COUNCIL

An International Coffee Council, with headquarters in London, is to be set up to administer a new international agreement which is expected to come into operation shortly, according to a spokesman of Britain's Ministry of Agriculture. There is to be another meeting on 28th September when the new international agreement will be given final approval. The main aim of the five-year agreement is to fix export quotas for the participating countries, and to prevent the steady decline that overproduction has brought in world coffee prices.

WORLD OILSEEDS OUTPUT HIGHER

EXPORTS, HOWEVER, DECLINE

THE world production of vegetable oils and oilseeds continues to show steady improvement. The total world supply of oils and fats in 1962, according to the latest estimate by Unilever Ltd., will touch a record level of 33.62 million tons, or an increase of 620,000 tons over 1962. These figures relate to the output of edible liquid oils, coconut and palm oils and other industrial oils, as also animal fats and marine oils. As a result of larger output and heavy carry-over from last year, exportable surplus of oils and fats is estimated to have gone up from 8.12 million tons in 1960 to 8.70 million tons in 1961. World consumption, however, has not picked up as fast as production. This is reflected in the trend of exports, which declined from 8.28 million tons to 8.12 million tons in 1961. World stocks, according to Mr. J. C. A. Faure of Unilever, was as high as about a million tons at the close of 1961, as against only a quarter of a million tons at the end of 1960. It is against this background that Unilever sources pinpoint the possibility of supply of fats and oils outstripping consumption by as much as 1.5 million tons by the end of this year.

The following table shows the region-wise estimates of output of fats and oils and their exports, as compared with the previous two years and pre-war period:

Table I

Quantity in thousand metric tons (oil or fat equivalent)

World Production (region-wise)	Pre-war	1960	1961 Preliminary	1962 Forecast
United States*	3,543	7,550	7,660	7,850
Rest of America	1,557	3,100	3,265	3,370

* Based on domestic crushing and oil equivalent of seed exports.
Source: Unilever Ltd.

The Unilever estimates seem to be generally supported by the latest crop estimates of oilseeds for 1961-62 compiled by the Commonwealth Economic Committee, London. The Committee, in its latest *Tropical Products Quarterly*, says that supplies of edible oils and oilseeds, in particular, touched a record in the 1961-62 season. The table at the foot of this page shows the latest estimates of production in 1961-62, as compared with the figures for the previous two years. The production of soyabeans in 1961-62 touched a peak, mainly on account of a spectacular increase in the U.S. output from 14.87 million tons in 1960-61 to 18.56 million tons. The acreage under soyabean has gone up still further, by about 2 per cent, to 28.8 million acres during the 1962-63 season. But the actual production, it would appear, would be small, because the yield per acre is not likely to be as high as in 1961-62. The output of groundnuts (outside China) reached a new record of about 11 million tons (in shell) in 1961-62, thanks to larger crops in India, West Africa, Sudan and Argentina. The sunflowerseed has also fared better. But the output of cottonseed in 1961-62 is said to be lower as a result of smaller crop in East Africa, Mexico, Egypt, and India. The setback in India's production of rapeseed has led to a decline in the world total. Castorseeds output has also been higher, despite the fall in Brazilian production. Linseed supplies, however, are likely to remain tight, in view of sharp reduction in Canadian output. Due to the heavy supplies of copra in 1961, its output in 1962 is placed lower.

In the contrast to the overall trend in production, exports suffered a setback. The total exports of vegetable oils and oilseeds in 1961 was only 5.3 million tons (oil equivalent), which was five per cent below the 1960 level. The main reason for this decline was the drastic reduction in exports of soyabean oil from both the U.S. and China. Exports of oils used predominantly for edible purposes fell by 354,000 tons to 2.48 million tons. Among these, soyabean oil alone fell from 1.3 million tons in 1960 to just 971,000 tons in 1961. Shipments of some of the other oils also fell, for instance, cottonseed oil (from 287,000 to 239,000 tons), rapeseed (from 86,000 to 70,000 tons), sesame oil (from 70,000 tons to 57,000 tons) and olive oil (from 188,000 tons to 180,000 tons). Exports of groundnut oil for edible uses, however, showed improvement (from 742,000 to 824,000 tons); so also of sunflower oil from 105,000 tons to 137,000 tons.

Exports of edible-industrial and industrial oils showed a perceptible improvement. Shipments of edible-industrial oils rose by 34,000 tons to 2.16 million tons in 1961. The increase was accounted for by coconut oil (by 76,000 to 1.23 million tons), despite smaller exports from the Philippines, as other countries had stepped up their share considerably. There was, however, some decline in exports of oil palm products from Nigeria and Congo. Exports of purely industrial oils went up by 46,000 tons to 682,000 tons, particularly, linseed oil (by 40,000 tons to 461,000 tons) and castor oil (by 15,000 tons to 176,000 tons). India's exports of vegetable oils, it may be noted dropped to just 40,000 tons in 1961—the lowest post-war figure—as against 88,000 tons in 1960 and 125,000 tons in 1956.

The Independence Number of the *Southern Economist* (Editor: Mrs. Susheela Subramanya), published from Bangalore, contains a number of articles covering the progress made in the implementation of Plan programmes in the different Southern States. One striking feature highlighted in practically all these articles is the comparative backwardness of the economy of Southern India *vis-a-vis* other regions. Appropriately enough, the Editor, in the course of the editorial, has stressed the need for accentuating the pace of economic development in the Southern region. The Number has reproduced Dr. M. H. Gopal's interesting paper on the concept of regional development read at the seminar on public enterprises recently held at Hyderabad. It also contains articles on mobilisation of bank resources, investment climate and sugar industry problems.

N.B.—(i) In this table, the Southern Hemisphere harvests are, in general, combined with the previous harvests of the Northern Hemisphere. Thus, under 1960-61 are given the Northern harvests, occurring mainly in the latter half of 1960 and the Southern harvests occurring in the first half of 1961. For copra, palm kernels and palm oil, however, production figures are on a calendar year basis, e.g., those in the 1960-61 column refer to 1961.

(ii) The production of China is excluded from this table, except where shown separately beneath the crop totals. There is some production of sunflower seed, linseed and castor seed in China, but no very reliable indications of the size of the crops are available.

(iii) Figures of copra, palm kernel and palm oil output represent commercial production only.

* Unofficial estimates.

NATIONAL INSULATED CABLE

LOWER PROFIT—DIVIDEND SAME

THE smart improvement in turnover and overall profit position achieved by the National Insulated Cable Company of India Ltd. [Managing Agents: Messrs. Associated Industrial Development Company (Private) Ltd., Calcutta] during the year ended 31st March 1961 has most unfortunately proved to be a short-lived affair and both sale proceeds and profits for the year ended 31st March 1962 have slipped down rather badly. Thus, realisation from sale of cables, wires, etc., has declined by Rs. 76.91 lakhs to Rs. 390.61 lakhs to stand midway between the levels recorded during the past two years. The gross profit has, by shedding Rs. 15.67 lakhs, decreased to Rs. 80.74 lakhs or nearly Rs. 2.14 lakhs less than what was earned two years previously, namely, during 1959-60. The factors responsible for this setback are three. First, the Company has had to readjust its manufacturing programme within the limit of copper allocated by the Government and restrict the sale of bare copper conductors, so as to utilise the available metal for the maximum output of cables and winding wires. Second, a cut in electric power was imposed during the year, with the result that many machines could not be engaged on multi-shift working, as in previous periods. Consequently, there was a drop in output of certain types of products and a fall in total sales as compared with those in the previous year. And, finally, owing to increased expenditure under various heads, particularly the wage bill, cost of electric power and selling expenses, there was a further dimunition in the profit-margin.

Although the provision for Managing Agents' commission has been reduced from Rs. 7.05 lakhs to Rs. 5.01 lakhs in conformity with decline in profit, a larger amount, that is, Rs. 7.20 lakhs as against Rs. 6.42 lakhs, has been provided for depreciation because of the increases in fixed assets. Moreover, the stepping up of the rate of corporate taxation by 5 per cent to 50 per cent has also necessitated a comparatively higher provision of Rs. 33.15 lakhs as against Rs. 36.50 lakhs for the tax liability. All these have, therefore, weighed down rather heavily on the net profit which has dwindled to Rs. 35.38 lakhs from Rs. 46.44 lakhs a year ago and Rs. 41.72 lakhs for the year 1959-60. If in spite of this fall in net profit, the dividend has been maintained at Rs. 2.50 per share, subject to deduction of tax, it is entirely at the cost of the reserves which have received Rs. 11.12 lakhs or less than half of what was credited to them a year ago.

The working results of the Company for the year under review are set forth in the following comparative table together with those for the three immediately preceding years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

C.B.—Cum bonus issue at the ratio of one for two.

In order to get an idea as to what is in store for the Company during the current year and may be for the years to come, the following extract from the Directors' report would prove useful:

"The first stage of conversion from copper to aluminium in insulated cables mentioned in last year's report, has been implemented by the Company with effect from 2nd April 1962. Some balancing plant and testing equipment are being obtained in order to maintain the level of production.

"The machine for the manufacture of armoured cables for railway signalling and other purposes has been received and installed. It has been put on successful trial runs. The aluminium wire drawing machine for cable sizes and a modern high speed P.V.C. extrusion line mentioned in the last report have been shipped and are expected to be installed shortly. These machines will contribute substantially to increased output from the latter half of the current financial year onwards.

"As a result of visits of the Company's representatives to the Middle East and to Ceylon, several inquiries were received from those countries for the Company's products, against which competitive quotations were submitted. Shareholders will be glad to know that a few orders for export were received and shipments have been made. Although the foreign markets reveal severe competition and less scope for Indian wires and cables, the Company is keenly pursuing the export drive."

Financially, the Company is in quite a sound state. Out of an authorised share capital of Rs. 175 lakhs—of which Rs. 25 lakhs are in preference shares and the balance in equities —only ordinary shares worth Rs. 90 lakhs had been issued and made fully paid as at 31st March 1962. No preference shares figure in the issued capital. The equity capital is backed by Rs. 170.75 lakhs in reserves, giving a reserve cover of Rs. 18.96 per share of Rs. 10. There has been a further rise during the year in borrowings from Rs. 85.23 lakhs to Rs. 108.14 lakhs and in current liabilities and provisions, too, from Rs. 166.69 lakhs to Rs. 183.40 lakhs, but both of these put together are abundantly covered by current assets, loans and advances and investments aggregating Rs. 474.02 lakhs. The gross block, including the additions of Rs. 3.83 lakhs made thereto during the year, stands at Rs. 142.95 lakhs and has been written down substantially to a net block of Rs. 78.17 lakhs or nearly half its original cost.

Since the closure of its accounting year, the Company has issued bonus equity shares in the ratio of one for two already held. This has raised the number of shares from nine lakhs to 13.5 lakhs. During the past three years, the Company has consistently made a total dividend distribution of Rs. 22.50 lakhs out of an average net profit of Rs. 41.18 lakhs. It will thus be observed that, even if the Company continues to earn at the present rate and proposes to maintain the dividend at Rs. 2.50 per share on the enlarged capital it can very easily do so without drawing upon the reserves. It is perhaps this confidence about the Company's ability to maintain the dividend and even to increase it that has been responsible for sustaining the market price of the Company's shares at the fairly high level of Rs. 31.50 *cum-div.* On an *ex-div.* basis, the net yield works out to 5.9 per cent per annum.

FRESH CAPITAL ISSUES SANCTIONED

The Controller of Capital Issues has authorised the following six companies to make fresh capital issues aggregating Rs. 2.15 crores within a year. Given below are the details of the issues:

Jayanti Shipping Company (Private) Ltd., Delhi, is issuing 200,000 equity shares of Rs. 100 each for cash at par. The proceeds of the issue will be utilised in paying off the balance of amount to the sellers of the oil tanker *Adi Jayanti* and getting it released from mortgage.

The Panipat Woollen and General Mills Company Ltd., Kharar (Punjab), having a paid-up capital of Rs. 10,51,984, will raise further capital of Rs. 3,12,630, divided into 31,263 equity shares of Rs. 10 each to be issued as bonus shares on capitalisation of the Company's general reserve to a like extent.

Sri Mayuram Bank Ltd., Mayuram, is to issue capital of Rs. 2,54,000 in 2,540 'A' class shares of Rs. 100 each, for cash at par. The proposed issue will strengthen its capital base.

Indian Mercantile Insurance Company Ltd., will capitalise Rs. 4,23,060 from its reserves for the purpose of raising the paid-up value of 42,306 shares already issued from Rs. 40 per share to Rs. 50 per share.

The Chettinad Mercantile Bank Ltd., is to issue capital of Rs. 1,800 in 18 shares of Rs. 100 each, for cash at par, Rs. 60 per share paid-up. The proposed issue will strengthen its capital base.

(Concluded from next column)

Rs. 49.06 lakhs and is adequately covered by current assets, loans and advances totalling Rs. 78.65 lakhs. The gross block expanded during the year by Rs. 14.18 lakhs to Rs. 147.21 lakhs and has been written down by nearly 50 per cent to Rs. 70.98 lakhs.

The Rs. 100 fully-paid ordinary shares of the Company are currently quoted at Rs. 128 *cum-div.* On the *ex-div.* basis, they offer a net yield of about 7 per cent per annum. While the yield is quite attractive, the Directors feel that due to the abnormal rise in the prices of cotton, it would be difficult for the Company to maintain the 1961-62 level of profit in the current year.

DAVANGERE COTTON

SMALL DECLINE IN PROFIT

IN contrast to its encouraging performance during the year 1960-61, when it celebrated its silver jubilee, the Davangere Cotton Mills Ltd. (Managing Agents: Messrs. R. Hanumanthappa and Son, Davangere, Mysore) has reported, for the year ended 31st March 1962, a mild setback in its gross profit from Rs. 36.93 lakhs to Rs. 34.85 lakhs. The decline in profit is all the more regrettable, because it has occurred despite an improvement of about Rs. 10 lakhs in sales at Rs. 177.18 lakhs. However, the lower profit, we are told, was the result of circumstances beyond the control of the Company, such as very high prices of cotton following deterioration in supply and the resultant substantial increase in manufacturing expenses, though it was possible to counter this, to some extent, by cost-saving devices. The exact increase in production costs is shown in the accompanying table. The provision for depreciation has been reduced from Rs. 10.78 lakhs to Rs. 7.90 lakhs and that for taxation by Rs. 1 lakh to Rs. 11.50 lakhs. The Managing Agents' remuneration is also slightly lower at Rs. 2.64 lakhs. The net profit is, therefore, higher at Rs. 12.81 lakhs as compared with Rs. 10.74 lakhs a year before. The dividend has been comfortably maintained at 12 per cent per annum. It will be recalled that, in the previous year, the Company had paid an additional 5 per cent silver jubilee bonus. The credit to reserves has been raised by Rs. 3 lakhs to Rs. 8.60 lakhs.

The table below gives a fair idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	177.18	167.85	141.39	135.39

* Subject to deduction of tax. B—Jubilee bonus.

The Government has granted the Company a licence to install 12,000 spindles, 218 plain looms and 82 automatic looms in the Narayandas Chunilal Mills, Gadag, which it purchased in the previous year in court auction. The unit is expected to be commissioned by March next.

During the year, the Company added one single process blowroom machinery, one ring-frame and one cone winding machine. With a view to modernising the preparatory section of the weaving section and as part of the expansion scheme, the Company has placed orders for one unit of Barber-Colman and warping machinery, one set of Whitin combers, 80 spindles of pirn winders, one Hibbert sizing machine, one ring frame and two doubling frames. All these machines will be commissioned to production by March next. Besides, the Company is expected to receive a licence to expand the weaving unit by 500 automatic looms on the condition that 75 per cent of the output from such looms be exported. The looms will be commissioned to production in the next two years. The total cost of the expansion schemes is estimated at Rs. 1.5 crore; the Directors are considering the best and economic way of raising this amount.

The financial position of the Company is sound. Its paid-up capital of Rs. 29.99 lakhs is supplemented by reserves and surplus aggregating Rs. 43.10 lakhs. Secured loans have increased from Rs. 30.50 lakhs to Rs. 32.95 lakhs because of a key loan of Rs. 4.07 lakhs raised from bank as against a small reduction of Rs. 2.50 lakhs in the Industrial Finance Corporation mortgage loan to Rs. 27.50 lakhs. On the other hand, short-term bank borrowings have been brought down by Rs. 27,000 to Rs. 5,000. Current liabilities and provisions making a total of Rs. 43.56 lakhs are some Rs. 7 lakhs higher than a year before. The total short-term indebtedness to outsiders amounts to

(Continued in previous column)

MYSORE PAPER SUFFERS FURTHER SMALL SETBACK

SAME DIVIDEND ON HIGHER CAPITAL

LOWER sales and gross profit have been reported again by the Mysore Paper Mills Ltd. (Chairman and Managing Director: Mr. M. D. Shivananjappa, Bangalore) for the year ended 31st March 1962. But, in comparison with the previous year, the setback is small. Thus, sales realisations at Rs. 119.30 lakhs are lower by only Rs. 3.92 lakhs as against by Rs. 18.09 lakhs at Rs. 123.22 lakhs a year before and the gross profit has dipped by Rs. 1.63 lakhs to Rs. 19.40 lakhs as against by Rs. 2.68 lakhs to Rs. 21.03 lakhs in the previous year. However, the investor has been unaffected by the year's setback and, in fact, the dividend has been maintained at 15 per cent per annum, subject to tax, on the capital increased by the issue of 10 lakh ordinary shares of Rs. 10 each at a premium of Rs. 2 per share, of which Rs. 2.50 per share have been called up on the capital account and 50 nP on the premium account. As at the end of the year, this Rs. 3 per share had been paid on 999,640 shares. The dividend on the additional capital is naturally *pro rata*. Therefore, the amount required for dividend distribution has increased only modestly from Rs. 3.75 lakhs to Rs. 5.47 lakhs. This the Company has been able to provide only by reducing the credit to reserves from Rs. 4.20 lakhs to a mere Rs. 1.38 lakh. It is very likely that, in view of its expansion and modernisation programme, the Company would raise the paid-up value of the new shares by making a further call during the current year. If that were to happen, the amount to be distributed by way of dividend would be much larger. It remains to be seen whether, in that case, the Company would be able to maintain the dividend for the current year. The essential provisions for the year under review have, however, been well maintained, with depreciation claiming nearly the same as last year at Rs. 6.68 lakhs and taxation taking away Rs. 6 lakhs, as against Rs. 6.50 lakhs a year before. The net profit at Rs. 6.72 lakhs shows a setback of Rs. 1.12 lakh as compared with the previous year.

Total expenses during the year amounted to Rs. 102.08 lakhs as against Rs. 106.84 lakhs. Considering the industry's general complaint of rising costs, the lower expenses of the Company suggests a drop in production, an inference further confirmed by the reduction in the inventory by a lakh of rupees. Taking account of the fact that the Company had been licensed in the previous year to raise its output from 8,000 tons to 18,000 tons a year, which it proposes to do soon, the decline in production during the year under review is particularly disappointing.

The drop in the turnover in the year under review is attributed by the Directors to the reduced selling prices fixed by the Government, in accordance with the recommendations of the Tariff Commission, from January 1960. The slight fall in sale proceeds during the year under report was due, we are told, to the manufacture of a larger proportion of lower-priced papers, as the production of higher-priced papers, could not be maintained on account of inadequate supply of wood-pulp due to import restrictions. As the production of lower-priced papers was more, the gross profit should have shown a sizable fall; if it has not, it is because of the higher income from other sources amounting to Rs. 3.78 lakhs as compared with a mere Rs. 1.96 lakh in the previous year.

In the table below are brought together the salient features of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	119.30	123.22	141.31	125.35

† Subject to deduction of tax.

We are told that, with the installation of re-causticising unit, the working of the soda recovery plant has improved considerably, resulting in smooth operations in the bamboo pulp plant and a higher percentage of recovery of caustic soda contributing to an increase in production and a reduction in costs. Negotiations on the terms of loans aggregating Rs. 200 lakhs, of which Rs. 70 lakhs are from the Commonwealth Development Finance Company Ltd., London, Rs. 70 lakhs are from the Industrial Credit and Investment Corporation of India Ltd. and Rs. 60 lakhs from the Industrial Finance Corporation of India, have been concluded and the necessary documents executed and registered. The State Bank of Mysore has been appointed as trustees under the trust deed. Orders for the supply of the bulk of equipments necessary to step up production to 18,000 tons have been placed with suppliers abroad; the first shipment of the boiler (coal-fired) has been received at the site and a part of the soda recovery plant and oil-fired boilers have reached the Madras Port.

In addition to the share capital issue as mentioned earlier, the Company called up Rs. 56 lakhs (£4.20 lakhs) out of a total of Rs. 56 lakhs (£5.25 lakhs) 7.75 per cent 1970-76 debenture-stocks subscribed by the Commonwealth Development Finance Company Ltd. and Rs. 19.34 lakhs (in DM5.17 lakhs and in new French francs of 13.56 lakhs) out of a total of Rs. 70 lakhs (equivalent to U.S. $14.70 lakhs) 7.75 per cent 1965-71 debenture-stocks subscribed in foreign currencies by the I.C.I.C.I. However, the Rs. 60 lakhs 7 per cent 1965-79 debenture-stocks subscribed by the I.F.C. were uncalled up to the end of the year. The aggregate secured loans, including interest and commitment charges accrued thereon, have, therefore, increased from Rs. 13.07 lakhs to Rs. 76.05 lakhs. But, at the same time, the Company has been able to liquidate bank borrowings which had stood at Rs. 13.06 lakhs at the end of March 1961. The paid-up capital, excluding some Rs. 13,000 being the total of application and allotment money received and calls received in advance, has increased from Rs. 25 lakhs to Rs. 49.99 lakhs and is still well supplemented by reserves and surplus aggregating Rs. 43.88 lakhs. Current liabilities and provisions total Rs. 49.23 lakhs, as against which are available current assets of Rs. 92.24 lakhs, including cash and bank balances of Rs. 43.81 lakhs, and loans, advances and deposits aggregating Rs. 15.36 lakhs. Besides, the Company has advanced Rs. 51.21 lakhs for the supply of machinery. The Company has yet to write off development expenditure of the order of Rs. 7.35 lakhs, as also expenses for the issue of additional shares amounting to Rs. 1.75 lakh. The gross block, which increased during the year from Rs. 166.15 lakhs to Rs. 168.58 lakhs, has been written down to Rs. 51.37 lakhs, that is, to less than one-third of the book value.

At their current market value of Rs. 14.37 *cum-div.*, the Rs. 10 fully paid ordinary shares offer on the *ex-div.* basis, a net yield of 7.8 per cent per annum.

CLAIMS AGAINST NEW CITIZEN BANK

Out of a total of 32,325 depositors in the New Citizen Bank of India, 23,541, with claims for amounts not exceeding Rs. 250 each, have been paid in full. Disclosing this to the Lok Sabha on Wednesday, 29th August 1962, the Union Finance Minister, Mr. Morarji Desai, added that the remaining 8,784 had received the initial payment of Rs. 250 *plus* the equivalent of 66 per cent of the balance. It will be recalled that the Central Government issued the order of moratorium in respect of the Bank on an application made by the Reserve Bank under the Banking Companies Act and subsequently sanctioned a scheme for its amalgamation with the Bank of Baroda. The realisation of the value of the assets of the Bank and the other amounts due to it, the Finance Minister said, had not been very easy and was expected to take some more time.

Speaking about payment to depositors in the Indo-Commercial Bank which is now merged with the Punjab National Bank, Mr. Desai said that, besides the initial payment of Rs. 250, or the balance at credit, whichever was less, the depositors had been paid or credited with amounts equal to 37.5 per cent of the balance outstanding and further payments at the rate of 12.5 per cent of the residual deposits had also been made recently. Additional payments, Mr. Desai added, would depend on the extent of the recoveries from the remaining assets of the Bank.

(*Concluded from next column*)

payable to the Bank for borrowings up to Rs. 100 lakhs will be 2 per cent over the Bank rate, with a minimum of 6 per cent per annum, and on the balances over Rs. 100 lakhs at 2.5 per cent over the Bank rate, with a minimum of 6.5 per cent per annum. At the end of the year under report, the Company's borrowings from the bank stood at Rs. 16.04 lakhs as against Rs. 12.97 lakhs a year ago. Besides, it received during the year loans from the Agency for International Development, Washington, which are shown at Rs. 159.08 lakhs. The total indebtedness, excluding debentures and the A.I.D. loans, works out to Rs. 212.72 lakhs, after taking into account current liabilities and provisions aggregating Rs. 196.68 lakhs. As against this, current assets, loans and advances aggregate Rs. 184.24 lakhs and the contingencies reserve investments amount to Rs. 36.30 lakhs. These assets exceed the total short-term indebtedness by Rs. 10.32 lakhs. Unwritten off miscellaneous expenditure amounts to Rs. 13.84 lakhs as against Rs. 14.90 lakhs a year before. The share capital is unchanged at Rs. 874.78 lakhs and is supplemented by reserves and surplus aggregating Rs. 185.13 lakhs. The gross block, which increased during the year from Rs. 16.05 crores to Rs. 18.98 crores, has been written down to Rs. 13.97 crores and, inclusive of capital work-in-progress of Rs. one crore, is shown at Rs. 14.97 crores.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at a discount at Rs. 94.70 *cum-div.*, final of Rs. 5 per share. On the *ex-div.* basis, they offer a net yield of 6.1 per cent per annum.

AHMEDABAD ELECTRICITY

PROFIT AND DIVIDEND BETTER

THE fast increasing need of industries for power in the two-year old Gujarat State due to greater stress placed now on industrial development in that region is clearly mirrored in the further sizable improvement made by the Ahmedabad Electricity Company Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay) in its working during the year ended 31st March 1962. The highlight of the year's working is the further rise of Rs. 57.77 lakhs, or 10.6 per cent, to Rs. 600.32 lakhs in realisations by way of sale of energy. The improvement in the previous year was of Rs. 49.28 lakhs, or a little less than 10 per cent, to Rs. 542.55 lakhs. Generation of power by the Company was higher and the cost of coal and fuel consumed increased from Rs. 288.42 lakhs to Rs. 323.12 lakhs. Other items of expenses have been slightly higher. But, notwithstanding that, the gross profit has jumped up by Rs. 20 lakhs to Rs. 165.76 lakhs, after having improved by only Rs. 5 lakhs to Rs. 145.23 lakhs in the previous year.

The provision for depreciation has been raised again from Rs. 49.68 lakhs to Rs. 51.41 lakhs and a sum of Rs. 5.07 lakhs has been set apart to meet the tax liability, as against nothing in the preceding two years, presumably because the benefit of accelerated depreciation allowances has now ceased. The Managing Agents' remuneration has also increased from Rs. 8.46 lakhs to Rs. 9.29 lakhs. Despite these higher allocations, the net profit has increased by more than Rs. 12 lakhs to Rs. 99.99 lakhs. A part of this increase has been rightly passed on to shareholders who have contented themselves with a rather unattractive return particularly from 1960, since when the dividend became taxable. Inclusive of the final distribution of Rs. 5, as against Rs. 4.50 a year before, the total dividend has been raised by one point to Rs. 8 per share which in recent years has rarely been quoted at or above its paid-up value of Rs. 100. A part of the increase in net profit has been utilised to strengthen the reserves position, too; the credits to reserves have been raised from Rs. 19.73 lakhs to Rs. 26.64 lakhs, a sum equal to 25 per cent of the distributable surplus.

The table below gives a synoptical view of the working of the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale of energy, less discount	600.32	542.55	493.27	455.76

† Subject to deduction of tax.

In terms of kilowatt hours, the sale of energy by way of public and private lighting and fans increased by 4.92 million (6.75 million a year before) to 46.43 million and by way of power by 21.73 million (39.69 million) to 586.48 million. The supply of energy to the North Gujarat Grid was also higher by 7.93 million kw.h. (10.78 million kw.h. in the previous year) at 157.09 kw.h. The total sales went up by 34.59 million kw.h., or 4.58 per cent to 790.01 million kw.h., as against by 57.21 million kw.h., or 8.2 per cent, to 755.42 million kw.h. in 1960-61.

The first 200,000 lbs./hour boiler and the 30 MW turbo-alternator set and associated equipment, signifying 'C-2' extensions, were commissioned in February 1962. The second 200,000 lbs./hour boiler was commissioned the next month. With the commissioning of the turbo-alternator set, power position in Ahmedabad eased slightly, and the State Government lifted, as a temporary measure subject to review later, some of the restrictions imposed in the middle of 1961. The 'C-3' extensions, comprising 1×30 MW turbo-alternator set with the associated boilers, are being erected and the plant is expected to be commissioned by the target date, namely, March next.

To help finance the capital cost of the plant and equipment for meeting the increasing demand for electricity in its area of operations, the Company proposes to issue Rs. 2-crore debentures under the third trust deed and to deposit the same with the Bank of India Ltd. against an increased cash credit facility. The Company has an outstanding liability of Rs. 3 crores by way of 5.24 per cent mortgage debenture loan, redeemable at par on 14th June 1970, or earlier, in a period of four years, from 14th June 1965 onwards. The new debentures will rank *pari passu* with the existing debentures and carry a higher interest rate of 6.5 per cent per annum, subject to tax. They will be originally issued in the name of the Bank, or as it directs, and deposited with it, with the Bank advancing credit up to 90 per cent of the face value or the market value, if and after the debentures are listed on the stock exchange. The actual interest

† Dividend subject to tax.

Extracts from the Directors' report: According to Rule 20 of the Income Tax Rules 1962, the dividend now recommended shall be deemed to have come first out of the profits of the Company exempt under Section 15 (c) of the Income Tax Act, 1922 and/or Section 34 of the Income Tax Act, 1961. Under the said rule, the entire dividend proposed to be declared for this year is out of such exempted profits and hence no tax is deductible out of the said dividend under Section 194 of the Income Tax Act, 1961.

The preference shareholders too have been recommended a dividend at the rate of 7-80 per cent as required under the provisions of Preference Shares (regulation of dividends) Act 1960 as it is not liable for any deduction under Section 194 of the Income Tax Act, 1961.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	39,04,807

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: The competition in the market for *Stoneware Pipes* which started sometime ago, continues unabated. However, a slight reduction of rates which was instituted early during the year, obtained record sales (for the year). The Company also cleared the old stocks of jars and pipes, while there was heavy sale of acid-resisting chemical stoneware, channels, etc.

But for inadequate stock of coal, production of pipes and refractories would have been much better. Anxiety in regard to coal supplies continues. Despite all this, the production of pipes this year has been better than last year and highest so far. As the Company had brisk demand for pipes and as there has not been as good a demand for fire bricks, the *Fire Bricks* department worked only for three months.

The *Kilns* and *Plant* are being replaced and rehabilitated as required. The building constructions, etc., for the expansion contemplated for the output of stoneware pipes is practically complete. These programmes could have been completed earlier if supply of cement and other building materials was timely and adequate.

The Directors wish to bring to the shareholders' notice the experiments being conducted for the production of sanitaryware. The experiments have so far shown encouraging results and have provided a basis to consider the large scale commercial production of white glaze sanitaryware.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,00,000	Gross block	16,44,071
Reserves and surplus .	6,00,283	—Depreciation ..	8,70,796

,, ,, general reserve	Nil	2,00
To payment of dividend (taxable) ordinary..	Nil	1,75
Carry forward	(Nil) 6	(5%) 26

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

Extracts from the Directors' report: The Directors have thought it advisable not to recommend payment of an ordinary dividend for this year as they consider it desirable to conserve the Company's resources in view of the development expenditure which will have to be incurred in the near future in putting up the Cable plant.

As the shareholders are aware, the issued capital of the Company has been increased to Rs. 1,05,00,000 following the issue of 7,00,000 equity shares of Rs. 10 each at par since the last meeting. The Directors expect that the final call of Rs. 5 per share on the new capital will be made before the end of the current year.

The Directors are glad to report that all orders for plant and equipment have been placed and all the necessary import licences have been obtained.

In their last report, the Directors' mentioned that the Company had applied to the Industrial Credit and Investment Corporation of India Limited and to the Commonwealth Development Finance Corporation Limited, London, for foreign exchange loans amounting to Rs. 80 lakhs to meet the cost of imported machinery. These loan agreements have since been satisfactorily concluded.

Good progress has been made on buildings and other construction work at Satna and the Cable plant is expected to go into production in the later half of 1963.

Accounts in brief as at 31st March 1962 are as under:—

THE BRADBURY MILLS, LIMITED

State Bank Building, Bank Street, Fort,
BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Annual General Meeting of the shareholders of the Bradbury Mills, Ltd. will be held on Tuesday the 25th September 1962 at the Ardeshir Namdar Hall, Cama Oriental Institute, 5th Floor, 136, Apollo Street, opp. Lion Gate, Fort, Bombay 1, at 5-00 p.m. or so soon thereafter as the proceedings of the separate meeting of the holders of the Preference Shares of the Company convened at 4-45 p.m. at the same place and on the same day shall conclude, to transact the following business:

1. To consider and, if thought fit, to pass the following Resolution, with or without modifications as a Special Resolution:—

   "RESOLVED that the Memorandum and Articles of Association of the Company be altered in the manner following:

   (*a*) The existing Clause 5 of the Memorandum shall be substituted by the following clause:

   (5) The capital of the Company is Rs. 25,00,000 divided into 30,000 7 per cent income-tax-free Cumulative Preference Shares of Rs. 50 each and 20,000 Equity Shares of Rs. 50 each subject to be increased or decreased or to its shares being sub-divided in accordance with the regulations of the Company and legislative provisions for the time being in force in this behalf:

   "*Explanation*:—In respect of the financial year ended 31st March 1962 and for each subsequent year or other period, the Cumulative Preferential Dividend on Preference Shares shall be payable (or deemed to have been payable) at the rate of 10 per cent without any deduction therefrom on account of income-tax payable by the Company, but subject to such deduction of tax at source in respect of tax payable by the shareholder as is provided by Section 194 of the Income-tax Act, 1961 or any statutory modification, replacement or re-enactment thereof or any Finance Act or any other Act or Rule or Regulation for the time being in force and at such rates as may be prescribed thereby or by any competent authority.

   (*b*) In Article 5(*b*) of the Articles of Association the following explanation shall be added at the end.

   "*Explanation*:—In respect of the financial year ended 31st March 1962 and for each subsequent year or other period the fixed cumulative preferential dividend on Preference Shares shall be payable (or deemed to have been payable) at the rate of 10 per cent without any deduction therefrom on account of income-tax payable by the Company but subject to such deduction of tax at source in respect of tax payable by the shareholder as is provided by Section 194 of the Income-tax Act 1961 or any statutory modification, replacement or re-enactment thereof or any Finance Act or any other Act or Rule or Regulation for the time being in force and at such rates as may be prescribed thereby or by any competent authority."
2. To receive and adopt the Directors' Report and the Audited Balance Sheet as on and Profit and Loss Account for the year ended 31st March 1962.
3. (*a*) To declare a Dividend on Preference Shares for the year ended 31st March 1962.

   (*b*) To declare a Dividend on Ordinary Shares.
4. To elect a Director in place of Mr. Rustomjee Jeejeebhoy who retires by rotation and offers himself for re-election.
5. To elect a Director in place of Mr. Madanmohan Ramnarain Ruia who retires by rotation and who offers himself for re-election, and to consider and, if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Section 261 of the Companies Act 1956 has been received by the Company.

   "Resolved that Mr. Madanmohan Ramnarain Ruia who retires by rotation from his office as Director and who is a Director and member of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of the Company, be and he is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."
6. To appoint Auditors for the current year and to fix their remuneration.

To consider and if thought fit, to pass either with or without modifications, the following Resolutions as Special Resolutions:

7. "Resolved that the contracts respectively entered into between the Company and Messrs. Vinaya Trading Co. Private Ltd., Dawn Mills, Co. Ltd., and Phoenix Mills, Ltd., who are associates of Ramnarain Sons Private Ltd., the Managing Agents of the Company, during the year 1961-62 pursuant to approval of the Company granted by the Special Resolutions passed at the Extra Ordinary General Meeting of the Company held on 5th December 1958 and at the Annual General Meeting of the Company held on 26th September 1961 and particulars whereof are entered in the Register of Contracts maintained under the provisions of Section 360 of the Companies Act 1956 be and they are hereby ratified and confirmed."
8. "Resolved that in supersession of Resolution No. 8 passed at the Annual General Meeting of the Company held on 26th September 1961, the Company hereby approves of contracts being entered into with Phoenix Mills Ltd. an associate of Ramnarain Sons Private Ltd., the Managing Agents of the Company, for the period from the date of this meeting upto the date of the Annual General Meeting of the Company to be held in the year 1966, for the sale, purchase or supply of any goods on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates or for the supply of or rendering of service as dyers, and/or processors, such purchase and supply together with the charges for supply or rendering of services not to exceed in any one financial year of the Company Rs. 30,00,000 and on the terms that in respect of any goods supplied or sold or any service supplied or rendered by the Company to the said associate Company, the associate Company shall make payment to the Company within one month from the date of the supply or sale of the goods or for the supply or rendering of service as the case may be."

The relative explanatory statement concerning the above special business as required by Section 173 of the Companies Act, 1956 is forwarded to the members of the Company.

The Share Transfer Books of the Company will be closed from Thursday the 6th September 1962 to Thursday the 4th October 1962, both days inclusive.

By Order of the Board,
For RAMNARAIN SONS PRIVATE LTD.,
RAMNIWAS RAMNARAIN,
Director,
Agents.

BOMBAY, *Dated 22nd August*, 1962.

Notes: (1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) The Register of Contracts referred to in Special Resolution No. 7 above is open for inspection of the shareholders at the Registered Office of the Company during office hours.

(3) Dividend, if sanctioned, will be payable at the United Commercial Bank Ltd., Bombay, to those shareholders whose names stand on the Register on 6th September 1962, as under:

(*a*) Ordinary Shares from Wednesday the 3rd October 1962.

(*b*) Preference Shares from Tuesday the 30th October 1962.

(4) Shareholders are requested to notify change in address, if any, to the Company.

THE CHAMPDANY JUTE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of Members of The Champdany Jute Company, Limited, will be held at the Registered Office of the Company at No. 2, Netaji Subhas Road, Calcutta, on the 25th day of September, 1962, at 12-30 p.m. for the purpose of considering and, if thought fit, passing with or without modification, the following resolutions as

SPECIAL RESOLUTIONS

(a) That the capital of the Company be reduced from Rs. 60 lakhs divided into 60,000 shares of Rs. 100 each to Rs. 30 lakhs divided into 60,000 shares of Rs. 50 each, and that such reduction be effected by returning to the holders of the said shares paid-up capital to the extent of Rs. 50 per share, and by reducing the nominal amount of the said shares from Rs. 100 to Rs. 50.

(b) That immediately and contingently upon the said reduction of capital taking effect each of the resulting shares of Rs. 50 each in the capital of the Company be sub-divided into 5 shares of Rs. 10 each.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

CALCUTTA, 29*th August*, 1962.

Notes:—(i) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member. The instrument appointing the proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the meeting.

(ii) The Share Transfer Books of the Company will be closed from the 10th day of September 1962 to the 25th day of September 1962 both days inclusive.

Explanatory Statement and Statement of Interest of Directors under Section 173(2) of the Companies Act, 1956.

The position arising from the sale is as follows:—

Champdany Mill fixed assets as per the Books of Account as at 31st March, 1962.

			Rs.
Land			58,394
Buildings			12,96,201
Machinery :—		Rs.	
Mechanical		72,824	
Electrical		2,07,969	
Sprinkler		29,203	
			3,09,996
			16,64,591
PRICE REALISED		48,20,000	
Estimated Cost of Sale		50,000	
			47,70,000
Estimated Realisable Profit			31,05,409

The Directors recommend that of this sum of Rs. 31,05,409, the amount of Rs. 17,04,690 representing the compensation to the redundant workers of Champdany Mill arising out of the sale of the property, and in the debit of the Profit and Loss Account as at 31st March last be written off during the current year. This will leave a balance of profit on the Sale of Champdany Mill estimated at Rs. 14,00,719 to be carried to Capital Reserve.

		Rs.
As regards the disposal of the cash proceeds of the sale of the Champdany Mill property amounting to		48,20,000
the Directors recommend that this be applied towards recouping the cash position of the Company as follows:—		
To meeting the estimated cost of the sale	Rs. 50,000	
To meeting the redundancy payments mentioned above.	17,04,690	
		17,54,690
Leaving an estimated balance of cash of		30,65,310

The Directors consider that this amount of cash is in excess of the wants of the Company and they recommend that as large a portion of this as can be conveniently arranged should be

returned to the Shareholders. The paid-up Capital of the Company is Rs. 59,16,400 in 59,164 Ordinary Shares of Rs. 100 each. The Directors accordingly recommend that Rs. 50 per fully paid-up share of Rs. 100 be repaid. This will absorb Rs. 29,58,200 of the estimated surplus cash, leaving a balance of about Rs. 1,07,110 which after meeting the legal cost of Capital reduction and repayment will comprise a small but useful addition to the Company's liquid resources.

As a result of the foregoing, the shares will then be of Rs. 50 each denomination. This is an awkward denomination and in order to provide a wider market for the shares, the Directors recommend that the shares be divided so as to reduce the nominal value to Rs. 10 each.

The Directors and Managing Agents of the Company are interested to the extent of their shareholdings in the Company as set out below:—

Mr. A. I. Murison	10 shares
„ B. Gill	10 shares
„ R. G. Edwards	10 shares
„ N. S. Coldwell	10 shares
James Finlay & Co., Ltd. ...	27,315 shares

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

CALCUTTA, *29th August*, 1962.

SRI KRISHNARAJENDRA MILLS LIMITED
MYSORE

NOTICE

Secretaries.

CALCUTTA,
24th August, 1962.

Note: A member entitled to attend and vote at the Meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and such proxy need not be a member.

Senegal and Somalia have become members of the International Monetary Fund, the World Bank, the International Finance Corporation and the International Development Association. The initial quota of Senegal in the Fund is $7.5 million, the quota of Somalia is $11.25 million. This raises the total of members' quotas in the Fund to $15,092.45 million and the number of member countries to 79. Senegal and Somalia's subscriptions to the capital stock of the Bank are, respectively, 333 and 150 shares, with total par values of $33.3 million and $15 million. The total subscribed capital to the Bank is now increased to $20,548.1 million and the number of member countries to 78. Senegal's subscription to the I.F.C. is $184,000 and that of Somalia $83,000. The Corporation has now 67 member nations and a total subscribed capital of about $97.26 million. The International Development Association's membership has now been raised to 66 countries and its total subscriptions amounts to $939.19 million. Senegal's subscriptions to I.D.A. is $1.68 million and that of Somalia $760,000.

WORLD POPULATION EXCEEDS THREE BILLION

(*Concluded from page 400*)

in the same sex and age groups. Among the figures on the death rate by age, sex and marital status, appearing in the *Yearbook* for the first time, the countries where an exception to this rule occasionally occurs (usually at ages under 20 and over 65) can be counted almost literally on the fingers of one hand. This relationship holds true regardless of how individual countries classify persons by marital status (whether, for instance, persons not legally married but living in consensual unions are classified as single or as married) and in spite of the fact that the ways in which persons report their marital status at a census and the ways in which it is reported at their death seem to vary.

The relationship among the death rates for persons not married, i.e., single, widowed or divorced, is not nearly so clear, varying from country to country and from age group to age group, with perhaps a slight tendency for divorced persons to have a lower death rate than the widowed. In the view of United Nations' statisticians, no single satisfactory explanation for this phenomenon has yet been found. The higher death rate of the single as compared with the married might be the result of the fact that marriage is a selective process, people with serious physical impairments or chronic diseases being less likely to marry than healthier people. On the other hand, it is, perhaps, true that marriage itself has a salutary effect on health, the family situation giving rise to reciprocal concern about each partner's well-being and a sense of responsibility about preserving one's own health.

The possible effect of divorce or widowhood is open to even more speculation, according to the *Yearbook*. The lives of some divorced persons might be lengthened by contrast with the single or widowed, simply because they have escaped an unsatisfactory marriage. The lives of widowed persons might be shortened by grief or they may have a greater likelihood of having contracted any communicable disease from which their spouses died. There can only be speculation until it is possible to study data on the cause of death for persons in different age and marital status groups, combined with information on the duration of marriage and of no married states.

Infant Mortality Rates Decrease

For each 1,000 babies born alive in Iceland, 13.3 die in the first year of life; in the Netherlands, 15.4; and in Sweden, 15.5. In one West African country, it has been estimated, death claims 250 of each 1,000 live-born babies before they reach one year of age. This contrast in infant mortality rates, according to the *Yearbook*, typifies a situation which has existed for some time. The average rate among a relatively large number of countries decreased from 106 in 1930 to 51 in 1956—a decline of over 50 per cent in 26 years. For the most part, this decrease is continuing. The low rates cited above are substantially below the lowest recorded in 1956. Nevertheless, the spread among the rates throughout the world continues.

An examination of the latest recorded rate in 168 areas shows that about 23 per cent are below 30 per 1,000 live births, 34 per cent are between 30 and 60, 27 per cent are between 60 and 100, and 16 per cent are above 100. Furthermore, some of the lowest rates pertain to very small groups of persons, such as the non-indigenous populations in parts of Africa and Oceania and the small European States such as Liechtenstein and Monaco. In addition to Liechtenstein, Gibraltar, Monaco, Iceland, the Netherlands and Sweden, countries with recorded rates below 20 per 1,000 live births include Norway, Australia, Finland, as well as some non-self-governing territories. Among all of these, the United States, with a rate of 25.2 in 1961, ranks 29th in ascending order.

The infant mortality rate is considered to be a good indicator of the general level of health and welfare among a population, because it can be affected strongly by culture, environment, sanitation and nutrition—or, in other words, by the "level of living." As such, the high rates point clearly to the low level of living which still exists in more than half the countries of the world. As infant mortality rates are reduced, deaths in the first week of life assume an increasingly larger part of the total infant mortality in many countries. Where infant mortality rates are lowest, more infants die in the first week of life than in all the remainder of the first year. In one European country, 7.3 of each 1,000 babies born alive die in the first week of life, while only 6.1 die in the remainder of the first year. By contrast, in one Latin American country, with a total infant mortality rate of 91.9, only 19.9 of each 1,000 live-born infants die at under one week of age, while 72.0 die between the ages of one week and under one year. The large death rate among babies after one week of life in various countries is probably due, in large part, to environmental causes.

Deaths Caused by Heart Disease, Cancer

Half or more of all the deaths during 1960 in Australia, Canada, England and Wales, Iceland, Ireland, New Zealand, Northern Ireland, Scotland, and the United States were caused by heart disease or cancer. These two causes also accounted for almost half the deaths in Austria, the Channel Islands, Finland, Israel and the Netherlands, and for over 35 per cent of the deaths in Bulgaria, France, Hungary, Luxembourg, and Malta and Gozo. In each of these countries, deaths from the infectious and parasitic diseases, pneumonia and bronchitis, gastritis, duodenitis, enteritis and colitis, and from birth injuries and diseases peculiar to early infancy, accounted for fewer than 20 per cent of all deaths.

Almost exactly the reverse situation is found in the Cape Verde Islands, Mauritius, Costa Rica, Gautemala, Panama, Grenada, St. Lucia, Colombia, China (Taiwan), Hong Kong, Jordan, Singapore and North Borneo, where the latter group of causes accounted for from 35 per cent to 65 per cent of all the deaths, while the former group was responsible for less than 20 per cent of the total.

The situation in these two groups of countries, according to U.N. statistics, generally typifies the broad differences in the economically more advanced countries, where heart disease and cancer form an increasingly important part of the causes of death, as contrasted with the less developed countries, both because of the control of infectious diseases and because of differences in age structure of the population where the latter group of causes still does not approach the magnitude of the former.

Deaths Through Accidents

In most countries, particularly those with a higher degree of economic development, accidents take more lives than tuberculosis, and, with very few exceptions, they claim more lives than does childbirth. In 40 out of 47 countries, they are the leading cause of death among young men aged 15 to 24 years and, in 36, they are the leading cause among boys of 5 to 14 years. Girls and young women also lose their lives with notable frequency in accidents, but not to the same extent as the males. In 25 of the 40 countries, accidents are the chief cause of death for females at ages 5 to 14 years, and in 19 countries they are the principal cause among females aged 15-24 years.

Motor vehicle accidents are taking an increasing toll of lives in most countries, while the death rate from other accidents is tending to decrease. The rate from motor vehicle accidents has increased in 37 out of 53 areas, for which rates are shown in the *Yearbook* for more than one year since 1955, while the death rate from other accidents decreased in 35 areas. While deaths from non-motor vehicle accidents are still substantially greater than motor-vehicle-accident deaths in most countries, in Australia and Luxembourg the two causes are almost at the same level.

The highest death rate from motor vehicle accidents is 27.5 per 100,000 population in Austria, followed by 24.8 in the Federal Republic of Germany. Among other motor-vehicle-accident death rates are 23.6 in Luxembourg, 20.8 in Canada, 20.6 in the United States and 20.2 in Switzerland.

The highest death rate from all other types of accidents is 42.6 per 100,000 population in Austria. In France and Mexico, the rate is 41.1, while Peru, Grenada, Finland, Scotland, Panama, Burma, Canada, the United States, New Zealand and Costa Rica have rates between 30 and 37 per 100,000 population.

Europe and Japan Lead in Suicide Rates

The highest suicide rates are found in the European countries and Japan. Hungary suffers the highest rate (24.9 per 100,000 population), exceeded only by West Berlin (34.0). A number of other countries have rates almost as high as in Hungary, namely Austria (23.0), Japan (21.3), Denmark (21.0), Finland (20.4), Switzerland (19.4) and Sweden (18.1).

Rates of below 5 are found in countries throughout the world, including Jordan, North Borneo, Turkey, Greece, Ireland, Malta and Gozo, the Cape Verde Islands, Mauritius, Costa Rica, Guatemala, Nicaragua, Barbados, Grenada, Trinidad and Tobago, Colombia, Peru and Northern Ireland.

The accuracy of statistics on cause of death throughout the world is not really known but must be assumed to be quite poor in many countries, say U.N. statisticians. One of the reasons for this assumption is the large number of deaths for which cause is reported only by lay persons, that is, persons with no medical training at all. In 41 of 84 countries supplying information on this subject, fewer than 90 per cent of all deaths are medically certified. In 15 of the 41, less than half the deaths are so certified. For the remainder of the countries of the world, there is no information on the extent of such certification, but it is not unreasonable to assume that it occurs even less frequently. The reliability of any distribution of deaths by cause will be determined to a great extent by whether the causes of death have been certified by a physician or other medically trained person or reported by a person with no medical training. Although the extent of medical certification has increased somewhat in the past several years, there is still much room for improvement.

TEXTILES

(*Concluded from page 402*)

million lbs., respectively. The most important destination for Chinese raw silk is the Soviet Union which accounted for some 58 per cent of Chinese exports in both 1959 and 1960, the actual quantity being 3.75 million lbs. and 2.65 million lbs., respectively, out of their total exports of 6.45 million lbs. in 1959 and 4.59 million lbs. in 1960.

The total imports of silk waste (including cocoons) into the seven biggest purchasing countries (Italy, Switzerland, W. Germany, France, U.K., U.S. and Hong Kong) were also lower in 1960 than in the previous year; they amounted to 6.6 million lbs. or a fall of 10 per cent. Italy remained the largest single importer, taking 4 million lbs. which was 9 per cent more than in 1959; the chief sources of supply were Turkey, Japan, India, the Soviet Union and Iran. By contrast, United States imports tailed off further to only 400,000 lbs. or less than one-third of the previous year's total; production of spun silk in that country has now practically ceased. West German, United Kingdom and French imports were in each case higher than in 1959, but those into Switzerland dropped by 36 per cent.

Raw Silk Consumption

The aggregate consumption of raw silk in the eight main non-Communist manufacturing countries (India, Japan, U.S., U.K., Italy, France, Switzerland and W. Germany) dropped 3 per cent below the previous year's post-war peak to 53 million lbs. The reduction, which was particularly marked in Japan, stemmed from a shortfall in supplies, rather than from a falling off in demand. In Japan, the world's largest consuming country, usage declined by 7 per cent from its high point of 1959 to 34 million lbs. In the United States, the marked advance in silk prices checked the upward trend in demand for silk fabrics, and usage was 2 per cent lower than in 1959. Indian consumption was 7 per cent lower than in 1959 on account of smaller imports. On the other hand, in Europe, there were noteworthy increases in consumption; Italian usage rose by a further 15 per cent to a new peak of 4.7 million lbs. and in France it advanced by a quarter to 2.5 million lbs.

A striking feature of the world raw silk economy in recent years has been the marked reduction in stocks, from 15.9 million lbs. in 1958 to 3.84 million lbs. in 1960. In Japan alone, the stocks declined from 14.30 million lbs. to 2.26 million lbs. The decline has been due to the marked expansion of world imports (from 13.92 million lbs. in 1958 to 17.77 million lbs. in 1960), whereas the world output has fallen from 74.4 million lbs. to 68.2 million lbs. It is not surprising, therefore, that the world raw silk prices have staged a smart rise. The average price of Japanese silk (20/22 AA) in 1961 was 38.00s. per lb., as against 33.55s. in 1960 and 29.46s. in 1959. Similarly, the average price of Chinese silk (same grade and quality) was 37.41s., as against 32.25s. in 1960 and 28.92s. in 1959. The prices of raw silk in India, it may be noted here, are much higher than the world prices. The latest available average quotation for 20/22 denier filature raw silk from Bangalore is about Rs. 410.41 per lb., as against the f.o.b. price and landed cost of Japanese silk of Rs. 144.43 and Rs. 221.21, respectively (as on 15th July 1962).

FLOATING FUNDS DRY UP

(From Our Own Correspondent)

BOMBAY, *5th September*

With short-term deposit rates subject to ceilings fixed under the inter-bank agreement and with banks' lending rates (that is, the rates of interest on advances, overdrafts, and bills purchased and discounted) rarely altered, the only visible indicator of the state of the short-term money market is the inter-bank call money rate. The dependability of this indicator, however, is limited, because its movements are not quite representative of the volume of transactions. At times, the demand for, or offer of, even a few crores of rupees causes a sharp rise or fall, as the case may be, in the call money rate. There are, of course, the weekly statements of the Reserve Bank, the State Bank of India and the scheduled banks as a whole. But they are published after a time lag of 10 to 14 days. If, therefore, the weekly reviews of money market are dull and sound monotonous, the reviewer is not to be blamed. And in weeks with bank holidays such as the one under review, it is a real problem for him to produce a worthwhile report. It may be noted in passing that Bombay gets 24 to 26 bank holidays in a year.

With 14 new State loans floated last week having drained away a very large part of the floating funds in the market and with some trade demand for funds emerging in the Calcutta side, the banks were keen borrowers this week shortened by two holidays, one on Monday and another today. The inter-bank call money rate, which had spurted from 1½ per cent to 3½ per cent last week, rose further in quick succession to touch 4½ per cent yesterday; in Calcutta, it was as high as 5½ per cent. It is said that some banks even borrowed from the Reserve Bank. This is understandable, because before the States launched their borrowing programme the banks' indebtedness to the lender of last resort was practically *nil* and most of them could get their requirements from that lender at the basic Bank rate of 4 per cent, that is, at ½ per cent below the rate of interest offered by the State Governments.

Some idea of the effects of the States' borrowing programme (put through on 27th, 28th and 29th August) can be had from the Reserve Bank's statement for the week ended 31st August. It shows, as compared with that for the previous week, a contraction of Rs. 26.99 crores in the deposits of scheduled banks with the Reserve Bank and an increase of Rs. 15.18 crores in their borrowings from the Bank. In other words, the scheduled banks had mobilised in that week resources of the order of Rs. 42 crores from the Reserve Bank alone. Besides, one sees an increase of Rs. 7.93 crores in the Bank's loans to State co-operative banks.

So far as the State Governments are concerned, they seem to have used the funds received by them (1) to reduce their borrowings from the Reserve Bank to some extent, (2) to repay some of their debts to the Centre and (3) to replenish their cash balances with the Reserve Bank. Thus, (1) shows a fall of Rs. 8.64 crores (under loans and advances to Governments), (2) a rise of Rs. 33.04 crores and (3) also a rise of Rs. 22.93 crores.

The Treasury Bill results for the week under review reflects the preoccupation of banks with State loans. Even though the weekly tender system was resumed after a break of one week, the response to these 91-day Bills was poor. It looks as though the amount invited was met by the usual "special sources," considering that the total amount offered at Rs. 2 crores was exactly the same as that invited. The average rate of accepted tenders was higher at 2.370 per cent as against 2.350 per cent under the previous tender a fortnight before. There were no sales of 91-day Intermediate Treasury Bills from 27th August to 1st September; they were resumed only on the 5th inst. and would be continued upto the 8th inst.

Details of the results of State loans received after our last week's report went to press are as follows:

State	(In crores of rupees) Amount invited	Amount offered	% of allotment
Andhra	10.00	13.25	82
Assam	3.00	3.02	100
Kerala	4.00	4.15	100
Madhya Pradesh ...	5.00	5.06	100
Madras	12.00	13.38	97
Punjab	3.50	3.65	100
Rajasthan	4.50	5.02	98

So far as conversion of maturing loans are concerned, only Rs. 17 lakhs out of Rs. 102 lakhs of Madhya Pradesh and Rs. 124 lakhs out of Rs. 301 lakhs of Madras were converted and the applicants received full allotment.

The results of the States' borrowing programme for this year are summed up below:

	(In crores of rupees)	
Total amount sought to be raised ...		93.50
Maturing loans		15.60
Subscriptions:		
In cash	104.27	
In conversion	4.73	
Total ...	109.00	
Estimated net borrowings, making allowance for State Governments' option to take up 10 per cent more out of the excess subscriptions		85.37

The total amount offered to all State loans exceeded the amount invited by 16.5 per cent, as compared with 14 per cent last year. The total net borrowings by States in the first two years of the third Plan amount to Rs. 157 crores, leaving a balance of Rs. 168 crores to be raised in the remaining three years to hit the target of Rs. 325 crores.

GOLD MOVES DOWN

(From Our Own Correspondent)

BOMBAY, *5th September*

The firmness of gold noted in the past three weeks abated during the week under review. In fact, the metal ruled distinctly easy. For the bulls who had built up long positions on hopes of a further sharp rise in prices sought to liquidate as much of their holdings as possible on fears of possible official intervention to check the rising trend of prices. There was also large-scale bear pressure induced by weak spot advices. The daily average offtake of gold was markedly lower at 4,000 tolas, as against 6,250 tolas in the previous week, while the average arrivals were higher at 5,500 tolas, as against 4,670 tolas. Over the week, ready gold fell by Rs. 2.05 to Rs. 127.50 and forward (*Bhadrapad* 15th September settlement) by Re. 1.25 to Rs. 127.25. The *Margashir* (December) settlement receded from the starting rate of Rs. 127.00 on Friday, 31st August, to Rs. 126.85 today. Since the rate for transferring commitments from the *Bhadrapad* to *Margashir* settlement was more than 50 nP against bears on the fourth day of the opening of new contract, that is, yesterday, the bulls in the maturing settlement were obliged to pay a margin at Rs. 8 per 10 grams under by-law 33(*d*) of the Bullion Association. The margin, however, was not in force today. The decline in gold would have been steeper but for the seizure of 15,000 tolas of contraband gold in Bombay on Tuesday the 4th inst.

Silver ruled buoyant in the first three sessions of the week, but developed a sagging tendency yesterday, in sympathy with gold, which persisted today too. A large part of the earlier gains was erased. Nevertheless, the closing rates today were well above those prevailing a week ago. The daily average arrivals of silver were lower than in the previous week, being 15 bars, as against 21 bars, whereas offtake was higher at 9 bars per day on an average, as against 6 bars. The floating stocks are estimated at 700 bars. Ready silver moved up from Rs. 218.90 last week-end to Rs. 220.80 on the 1st inst., but receded to Rs. 220 today before finishing at Rs. 220.15. The *Bhadrapad* (17th September) settlement, after rising from Rs. 219.25 to Rs. 221.10 in the first three sessions, moved down later to touch a low of Rs. 220.30 today. The closing was Rs. 220.45. Business in the *Margashir* (December) settlement commenced at Rs. 219.75 on Friday, 31st August. After moving up to Rs. 221.85 on the following day, the settlement declined to Rs. 221.30 today. The distant settlement commanded a premium over the maturing settlement, while the reverse was the case in gold.

The Government of India's declared intention to mobilise a part of private gold hoards for development purposes has not taken any shape yet. This was stated by Mr. B. R. Bhagat, Deputy Minister for Finance, in the Rajya Sabha yesterday (Tuesday the 4th inst.). The Minister said: "Measures to utilise gold hoards for developmental purposes and to discourage people from investing in gold so that there is no continuing strain on the balance of payments through illegal imports are under consideration. Such action as the Government may be considering on the question of this kind cannot, in public interest, be disclosed except at the appropriate time." Answering a supplementary, Mr. Morarji Desai observed that he was not aware of any stored-up gold bullion with the former Princes, but the ornaments and jewellery in their possession had already been declared.

The dollar price of gold in the London bullion market advanced from $35.11⅜ to $35.12½ per fine ounce. The rise followed good demand mainly from Continental buyers, while supplies were restricted. Ready gold, too, improved by ½*d.* to 250s. 8¾*d.* Silver prices jumped up this week to touch an all-time peak: 97½*d.* for spot and 98*d.* for forward. Turnover was quite large, the buyers being both domestic and Continental consumers. A London bullion dealer is reported to have said: "This is a genuine consumer movement. There is not very much silver to be had." Silver at New York spurted further from 110 cents to 113 cents. There was as yet no indication of Mexico entering the market as a seller. A few days ago, there were rumours that Mexico might decide to sell silver if the price were to exceed the 110-cents-per-ounce level. Mexico, it may be noted here, is the world's biggest producer of silver. The actual output in 1961 was 1,254,789 kgs. worth 460.9 million pesos, or 130,139 kgs. more than what was produced in 1960.

The following table shows the trend of prices during the week under review:

	5-9-62 (closing)	High	Low	29-8-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	127.50	129.65	127.40	129.55
*Bhadrapad** ..	127.25	128.45	127.15	128.50

Silver Forward ..	98d.	98d.	95¼d.	95d.
New York—				
Silver	113.00 cents	113.00 cents	110.00 cents	110.00 cents

* 15th September settlement. † 17th September settlement.
§ Starting rate on 31st August.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *5th September*

After some initial easiness, cotton futures emerged firm later in the week. Jarilla March, which began at the last week's closing level of Rs. 743, eased at first to Rs. 739.50 on the 1st inst., due to scattered realising, but shot up to Rs. 747.25 yesterday on anxious short-covering and scarcity of offerings. Extreme gains were, however, pared on realising at higher levels, and the contract drifted lower and finished at Rs. 745.25. The reports regarding absence of repeat rains in the Gujarat region boosted the sentiment which continued to be influenced additionally by very firm spot advices and strong statistical position. However, turnover showed no signs of expansion in the week's three official sessions.

The week saw the announcement of both import and export quotas. But, as the announcement was well anticipated, it was widely discounted. On Wednesday, 29th August, the Government announced an import quota of 175,000 bales of 400 lbs. each of raw cotton stapling 1-1/16" and above from any area, the shipment period being from 1st January to 31st May 1963. Of this quota, 25,000 bales will be allocated to mills against their retention quotas under the export incentive scheme. The balance of 150,000 bales would be allocated as follows:

75,000 bales of cotton stapling 1-1/16" and above but below 1-3/16" to consumers of foreign cotton of the same staple on the basis of their consumption of such cotton during the calendar year 1960; and

75,000 bales to consumers of foreign cotton stapling 1-3/16" and above on a similar basis of their consumption.

On Tuesday, 4th September, the Government decided to release for export 200,000 bales of Bengal *Deshi* cotton during the shipment period commencing from the 11th of this month and ending on 31st August 1963. Excluding 10,000 bales which are earmarked for distribution among co-operative societies in areas growing such cotton, the entire quantity would be licensed according to the terms and conditions laid down by the Joint Chief Controller of Imports and Exports, Bombay.

The Government has also announced (on the 4th inst.) import of 55,000 bales of cotton stapling 1-1/16" and above but below 1-3/16" from the U.S. in pursuance of the Agricultural Trade Agreement between the two countries. This quota would be allocated to mills on the basis of their consumption of cotton of similar staple length during the calendar year 1960.

The import and export quotas have been welcomed by the industry and the trade as having been well-timed and well-conceived.

Stocks with mills at the end of June 1962 aggregated 15.99 lakh bales, made up of 13.71 lakh bales of Indian cotton and 2.28 lakh bales of foreign cotton. These compare with 19.70 lakh bales (15.76 lakh bales of Indian and 3.94 lakh bales of foreign cottons) held by them at the end of June 1961 and 15.90 lakh bales (13.60 lakh bales of Indian and 2.30 lakh bales of foreign cotton) held at the end of May 1962.

In the absence of the new season's cotton policy annoucement, activity was limited in the Sewri spot market. Stray business was reported in popular styles like Surti, Laxmi, 197-3, Kalyan and Wagad. Prices were firm.

The following are some of latest available spot quotations—in rupees per candy of 784 lbs:

Akola 1,020, Bailhongal Co2 1,400, Nagar Co2 1,620, Kadi 1,050, Manavadar 920, Pakistan N.T. new 1,045 c.i.f. September and Sudan G4L 1,335 c.i.f. October.

In the Karachi cotton market, the January futures contract rallied from Rs. 73.75 to Rs. 75.65 and the March futures contract moved up from Rs. 73.65 to Rs. 74.50. Some of the spot prices in rupees were: Sind *Deshi* 73.50, Punjab *Deshi* 76.50, Punjab R.G. 77 and S.G. 82.50.

Cotton futures in New York were quietly steady, with the October contract closing at 33.60 cents, as against 33.66 cents before, December at 33.72 cents, as against 33.79 cents and March at 34.07 cents, as against 34.15 cents.

In Liverpool, a limited spinner inquiry was centred on shipment offers of the South Brazilian styles and to a lesser extent on the American, Colombian and Peruvian growths. Futures contracts were shaded, with October receding from 23.45 pence to 23.30 pence.

STAPLE FIBRE YARN WEAK

(From Our Own Correspondent)

BOMBAY, *5th September*

Staple fibre yarns suffered a setback in value during the week under review, thanks to heavy deliveries against the August contract and pressure of sales by mills. The October settlement (40 x 2) climbed down from Rs. 834 to Rs. 801. December delivery was neglected at Rs. 824.

Turnover in art silk yarns was limited, as fresh large-scale buying support from consuming centres was absent. The supply position in respect of both indigenous and foreign yarns was fairly comfortable. The Amilan (20 x 1) yarn August delivery went off the board at Rs. 4,800, same as last week.

Cotton yarns continued to rule dull. Business put through was restricted, with values moving narrowly.

The decision of the Government of India not to issue import licences for art silk yarn for the current financial year since it is proposed to meet the industry's requirements from imports through the State Trading Corporation has been severely criticised by the Central Development Committee of the Surat Weaving Industry in the course of a memorandum submitted to the Union Finance Minister. The Committee has urged the issue of import licences direct to the industry and not to the S.T.C. as at present. In support of this plea, the Committee makes the following points:

The S.T.C. was issued a licence to import art silk yarn worth Rs. 1.5 crore in the middle of 1961. Against the licence, it has been able to import yarn worth Rs. 67 lakhs only and, as such, the industry has been supplied with hardly 50 per cent of the allotment made against the licensing period October 1961-March 1962. The yarn imported by the S.T.C. does not correspond with the industry for which it has placed indents. The yarn is found to be very costly and the handling expenses are also found to be exorbitantly high. In the circumstances, when the S.T.C. has not been able successfully to import art silk yarn to the extent of import licences issued, even though more than a year has elapsed, it is doubtful whether the S.T.C. would be able to get yarn for the licensing period April 1962-March 1963. The art silk industry has been experiencing an acute shortage of art silk yarn and its prices have shot up considerably. If the S.T.C. is not able to procure and import art silk yarn, the position of the weaving industry will become precarious.

The Committee has also urged that steps should be taken to reduce the time lag between the issue of import licences and the actual imports against them. The time lag results in the locking up of finance and adversely affects exports and it is, therefore, essential that necessary steps must be taken to expedite the issue of incentive certificates and import licences against exports of art silk fabrics. Further, the Committee has pleaded for speedy revision of the rates of drawback of duty against exports of art silk fabrics and exemption of certain processes from excise duty on pressed art silk fabrics.

OILSEEDS RETREAT

(From Our Own Correspondent)

BOMBAY, *5th September*

Distinctly easy conditions prevailed in the oilseeds market during the week under review, thanks to nervous bull liquidation which followed reports of favourable weather in the main oilseeds growing areas. Spot groundnuts were particularly weak, for crop reports from Gujarat were bearish. The crushers and *vanaspati* manufacturers were also reluctant to enter into fresh commitments pending the emergence of a clear picture of price trends. Groundnut futures ruled subdued during the major part of the week, though, later in the week, they met with renewed buying on sporadic reports of pest attacks on groundnuts in Saurashtra. Castorseed and oil continued to seek lower levels as there were hardly any encouraging export enquiries for oil. Linseed was listless as a result of weakness in mustard-seeds in North India. Cottonseeds suffered a setback, despite firmness of raw cotton. The market was closed today on account of *Khordad Sal*.

The Karmahom Conference Lines has announced an increase in freight rates on oilcake by only 10*s.* per 1,000 kgs., instead of by 12*s.* as previously announced. The new rate will be 125/6*s.* per 1,000 kgs. This modification is a sequel to the meeting between representatives of the Conference and oilcake trade interests held at Bombay last month. The trade had protested against the increase and suggested that it should be reduced by 5*s.* The Conference has also decided to reduce the proposed increase in the freight rates for manioc meal and rice bran extraction. The rate for manioc meal will now be 127/6*s.* per 1,000 kgs., and for rice bran extraction, it will be 107/6*s.* per 1,000 kgs. These revised rates will come into force next month.

The Forward Markets Commission has decided to permit regulated hedge trading in groundnut oilcake (expeller variety) at five centres, namely, Bombay, Saurashtra, Adoni, Hyderabad and Madras. The decision was announced today, following discussions with the representatives of the exchanges concerned and other trade interests. A Press note issued by the F.M.C. lays down the basis as 52 per cent O and A, subject to appropriate discounts for tenders of below 52 per cent a minimum tenderable quality of 47 per cent and premia for goods upto 54 per cent O and A. The months of delivery will be January, April, July and September at both Bombay and Saurashtra (five rings). The associations concerned will draft trading bye-laws on this basis. Regulated trading in groundnut expeller is expected to commence in about six weeks' time.

Groundnut Nizam Bold lost 50 nP to Rs. 49. Khandesh quality shed a like amount to Rs. 50. Oil Commercial closed lower at Rs. 20, as against Rs. 20.15 last week-end. Oil railway receipts declined by 25 nP to Rs. 19.65. Groundnut September 1962 contract fell from Rs. 247.75 to Rs. 247, before improving to close at Rs. 248.50. January 1963 contract hardened by 75 nP to Rs. 232.62; it had touched Rs. 230.37 earlier during the week.

Castorseed September 1962 contract was marked down by Rs. 3.75 to Rs. 162. March 1963 contract fell from Rs. 168.75 to Rs. 166.75. Ready *Madras* and Kanpur eased by 63 nP each, the former to Rs. 32.37 and the latter to Rs. 31.12. Oil B.S.S. closed lower by 30 nP at Rs. 13.10. Oil Commercial shed 25 nP to Rs. 12.40.

Among cottonseeds, September 1962 and January 1963 contracts dropped 50 nP each to Rs. 101.50 and Rs. 103, respectively. Both Berar and non-white were quiet at Rs. 22.20.

Linseed bold ready fell from Rs. 39.75 to Rs. 39.62 initially, but improved to Rs. 39.75 towards the close. Linseed oil suffered a setback of 30 nP to Rs. 16.40. March 1963 contract, which had fallen from Rs. 40.19 to Rs. 39.94, recovered to finish at Rs. 40.19. September 1962 contract was higher by 25 nP at Rs. 40.19.

The following table shows the closing prices of oilseeds and oils on Wednesday, 4th September, as compared with those of the two previous weeks:

	5-9-1962	29-8-1962	22-8-1962
Groundnut	Rs.	Rs.	Rs.
September 1962	248.50	247.75	240.75
Groundnut January 1963 ..	232.62	231.87	226.50
Niam bold	49.00	49.50	48.75
Khandesh quality	50.00	50.50	50.00
Oil ex-mill ready*	20.00	20.15	19.90
Railway receipts*	19.65	19.90	19.45
Castorseed			
September 1962	162.10	165.75	166.25
Castorseed March 1963	166.75	168.75	167.00
Ready Madras	32.37	33.00	33.25
Ready Kanpur	31.12	31.75	32.25
Oil B.S.S.†	13.10	13.40	13.50
Oil commercial†	12.40	12.65	12.60
Linseed			
September 1962	40.19	39.94	40.50
Bold ready	39.75	39.75	40.00
Oil ready†	16.40	16.70	16.75
Cottonseed September 1962 ..	101.50	102.00	103.50
Cottonseed January 1963 ..	103.00	103.50	103.00
Niger seed	37.50	38.50	37.75
Kardi seed	28.50	28.50	28.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FOODGRAINS EASE FURTHER

(From Our Own Correspondent)

HAPUR, *3rd September*

Barring gram and rice which ruled steady on higher Punjab advices, foodgrains eased further here this week on reports of beneficial rains over a wide area.

Wheat prices declined by 67 nP per quintal on slack demand and larger arrivals. The average quality was quoted between Rs. 39.52 and Rs. 40.19 and the farm between Rs. 42.87 and Rs. 44.21. The red quality wheat stood at Rs. 39.52 per quintal. Daily arrivals increased to 300 to 400 maunds and stocks stood at 65,000 maunds. Rice was steadier and prices of basmati sela, *mainpuri* and *gadda* quality, in particular, sought higher levels. Arrivals from mainpuri side were very poor and stocks too meagre. Week-end prices were:—*Rice basmati* superior Rs. 91.09 to Rs. 101.81, sela *basmati* Rs. 80.38 to Rs. 88.41, *mainpuri sela* Rs. 58.94, *ramajwayan* Rs. 64.30, *raimunia* Rs. 66.98 and *gadda* Rs. 56.26 a quintal.

Gram prices improved by 32 nP during the week on firm advices from Punjab. The Punjab quality was quoted at the week-end at Rs. 43.86 and the local variety at Rs. 42.87. Arrivals were scanty and the local stock declined to 15,500 maunds. Barley and *bejhar* prices also declined by 67 nP and 32 nP per quintal, respectively, to be quoted between Rs. 28.80 and Rs. 29.47 and between Rs. 28.13 and Rs. 29.15. Maize prices sought lower levels. New crop arrivals were lifted between Rs. 33.49 and Rs. 34.16. *Guwar* prices were stationary, while *juwar* hardened by Rs. 1.34 on brisk demand against poor stocks. Methi and other coarse grains were listless. Week-end prices were:—*Juwar* Rs. 46.89 to Rs. 50.91, *methi* Rs. 58.94, *guwar* Rs. 38.85, *bajra* Rs. 37.51, *maize* Rs. 28.13 to Rs. 29.47 new Rs. 33.49 to Rs. 34.16 and oats Rs. 29.47 to Rs. 30.81 a quintal.

In pulses, peas sought lower levels on slack demand and declined by 32 nP to 67 nP. Peas *dara* was quoted between Rs. 32.82 and Rs. 33.14 and the farm quality between Rs. 34.83 and Rs. 35.50. Peas *dal* was lifted at Rs. 36.84. Arrivals were small and stocks declined to 63,000 maunds. Offtake was two wagons to the south. *Arhar* prices also eased Re. 1.34 in the absence of new urges and *urd* prices too, sought lower levels. Moong was depressed on easy advices from the South. Prices in other sections were unchanged. Week-end prices were: *Arhar* Rs. 50.91 to Rs. 54.22, *dal* Rs. 66.98 to Rs. 72.34, *urd* Rs. 77.70 to Rs. 80.38, *dal* Rs. 88.41, *moong* Rs. 50.91 to Rs. 53.58, *dal* Rs. 58.94, *masoor* Rs. 48.23 to Rs. 53.58, *dal* Rs. 57.60, *moth* Rs. 4.19, *dal* Rs. 48.23 and gram *dal* Rs. 49.57 per quintal.

GOOD MEDIUM TEAS FIRM

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *29th August*

A total of 755,000 kgs. was on offer in export sale No. 34 held on 28th August. Quality showed a general decline. There was fair demand at reduced rates. Highgrowns were irregular with buyers closely following quality, the few brighter invoices realised useful prices but on average rates were lower than last. The brighter good mediums were firm, but others were lower with quality. Medium and low medium brokens faced less inquiry and eased in price. The cleaner medium fannings were about steady, but others declined, whilst low medium fannings met with less competition than in recent weeks and were often much lower. Plainest kinds were generally steady. Black leaf varieties were usually a little lower than last. Whole leaf grades evoked better inquiry at easier rates. Unorthodox teas enjoyed better demand but at lower levels. Tippy teas were strong.

The quotations (per kg.) were:

	1962 Rs.	1961 Rs.
Low mediums	3.20-4.00	4.35-4.45
Mediums	4.10-4.40	4.45-4.55
Good mediums	4.50-5.40	4.50-5.00
Nilgiri B.O.P.	4.40-8.30	5.00-7.00

The average price realised in sale No. 34 was Rs. 4.25 per kilo as against Rs. 4.43 a week ago and Rs. 4.79 in the corresponding sale last year.

In dust sale No. 34 held today, 340,000 kgs. were offered. There was strong general demand. Highgrowns were well supported and may be quoted as fully firm. Good medium descriptions followed a similar trend. Wynaad teas were firm to about 10 nP dearer, whilst those from Travancore often advanced by a little more. Black, grainy types were well supported. Unorthodox descriptions shared in the strong demand, but prices were irregular.

The average price realised in dust sale No. 34 was Rs. 3.46 per kilo as compared with Rs. 3.41 a week ago and Rs. 4.78 in the corresponding sale last year.

Colombo: Approximately 6¼ million lbs. were offered. The market opened to a good demand. Best Uvas were easier, but the lesser sorts were strong and may be quoted as 20-50 cents dearer. The brighter Dimbulas were steady, but others were irregular and often appreciably easier. Best mediums were fully firm, whilst others in the category eased 5-10 cents. Lowgrowns showed a slight decline in price. Highgrown and medium fannings were well supported.

London: North Indian and other growths: In Monday's auction there was a selective demand and prices for new season's Assams were irregular. Dooars and Africans came to a fully firm market but thinnest liquoring types were barely steady.

Ceylon and South Indians: In the sale held on Tuesday, best liquoring South *Indians* were steady, whilst all others were irregular.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. *wire as follows:*

"*Sale No.* 35: 685,000 kgs. offered. *Good* general demand. Better low mediums and mediums *fully firm to dearer, particularly fannings. Others* barely steady. Good mediums steady. Highgrown brokens irregular and sometimes easier. Fannings lower. Unorthodox irregular, generally steady."

SUGAR EASY

(From Our Own Correspondent)

HAPUR, *3rd September*

Absence of demand at higher levels and fears that the Government might take steps to check the rising trend in prices resulted in a slight fall in sugar prices here this week. However, as stocks of *gur* and *khandsari* were very poor and consumer demand was likely to increase in the coming weeks, trade circles ruled out a substantial fall in prices. The small crystal sugar was lifted by Delhi and Punjab, while the bold crystal was in request from Gujarat. But, as demand was not encouraging, prices of the superior quality also drifted lower. Week-end prices were: *Spot* delivery simbhoali Rs. 111.25 and Meerut Rs. 111 (per quintal), retail Rs. 1.09 per seer, mill delivery (per maund) (D-29) Amroha Rs. 40.12, Dhampur Rs. 40, Seohara Rs. 40.12, Meerut Rs. 40.75; (E-29) Simbhoali Rs. 40.75, Bijnore Rs. 40 and Dhampur Rs. 39.87.

Sugar prices also eased during the week in the Muzaffarnagar market following sizable arrivals of the commodity in Punjab, Rajasthan and Delhi against the previous commitments, which, in turn, slackened demand from those consuming areas. Smaller grains eased by 23 nP to 69 nP a maund. The Gujarat and Saurashtra buyers were also restrained from making fresh commitments. On account of the fall in prices, the dealers, who had earlier made bulk purchases, were trying to liquidate outstanding deals at lower rates. Following were the latest mill delivery prices: Daurala AA 29 Rs. 41.99, Mawana A 29 41.80, Rampur B 29 Rs. 41.24, Daurala Rs. 41.62, Mansurpur C 29 Rs. 41.24, Saharanpur Rs. 41.25, Seohara Rs. 40.44, Panipat Rs. 41.25, Amroha D 29 Rs. 40.31, Meerut Rs. 40.75, Simbhoali (E-29) Rs. 40.75, Bijnore Rs. 40 and Dhampur Rs. 39.87.

After ruling steady earlier, *khandsari* also declined in sympathy with sugar. Both crystal and non-crystal were depressed by 50 nP a maund. While the crystal quality was quoted between Rs. 37 and Rs. 40, the non-crystal white quality fetched higher prices between Rs. 37.50 and Rs. 40.50. *Khandsari* boora was quoted between Rs. 39 and Rs. 40 and crystal boora between Rs. 41 and Rs. 41.62.

Ready *gur* prices touched fresh peak levels, as stocks were meagre and demand from the consuming areas was brisk. Shakker continued to attract good buying support and was steadier, as stocks were poor. Week-end prices were: *Gur* superior Rs. 66.98 and shakker Rs. 72.34 to Rs. 75.02.

Lack of buying interest and poor quality of the stocks left in the market accounted for a subdued trend in *gur* prices in Muzaffarnagar market. Chaku received little inquiries from Gujarat and Rajasthan. Wet chaku, too, was out of favour of Delhi, Saurashtra and Rajasthan. Chaku dry was quoted between Rs. 24.50 and Rs. 26.50, that is, 50 nP per maund lower than the previous week's level. Chaku wet was sold between Rs. 22 and Rs. 22.25. Rusket khurpa was quoted between Rs. 10 and Rs. 12 and shakker dara red between Rs. 26.50 and Rs. 27.50. Dana minja was in demand from eastern U.P. between Rs. 23 and Rs. 26. *Gur masala* was transacted at Rs. 32.50. *Khandsari* galawat received good inquiries from Punjab and Rajasthan around Rs. 32 to Rs. 36. Stocks of shakker and masala were small.

Gur futures moved both ways during the week in alternate bouts of selling and buying. Opening

at Rs. 21.82 on last Monday, the *Fagun* contract touched the highest level of the week of Rs. 21.94 the same day, and then eased in successive sessions to Rs. 21.58, but rallied today to Rs. 21.80.

KIPS FIRMER

(From Our Own Correspondent)

MADRAS, *3rd September*

The Madras kips market ruled firmer this week. Both export and internal prices were a shade higher. Importers in the U.K. showed interest in good standards of the light-weight cowhides at improved prices and in mediums at last prices. Local demand from North India for the inferior fifths was brisk. Inquiries for cowcalf was selective. Buffhides and calf ruled unchanged.

Demand for the superior tannage goat skins covered all selections in the light and heavy weights. There were no inquiries from the U.S. or the Continent. Prices of raw goods ruled firm due to steady buying by tanners. As regards sheep skins, there was sustained call for the middle class tannages from the U.K. and the Continent, and prices hardened. Other tannages were unchanged.

In the London tanned skins public sales held last week, fresh parcels of goat skins fetched current sellers' prices in Madras. Other parcels were neglected. As regards sheep skins, most of the lots remained unsold. The following were the ruling prices per lb. for all-round lots in the local market: Tanned cowhides 8/8½ lbs. average Rs. 2.06 to Rs. 2.12, tanned cowcalf 1½/2 lbs. average Rs. 3.65 to Rs. 3.85, tanned buffhides 12/14 lbs. average Rs. 1.65 to Rs. 1.85 and tanned buffcalf 1½/2 lbs. average Rs. 3.25 to Rs. 3.50.

QUALITY TEAS FANCIED

(From Our Own Correspondent)

CALCUTTA, *4th September*

Quality teas continued to meet with increased support at the export sales held here last week. But, at the auctions for internal consumption held last week, demand petered out as the sales progressed, due to which some of the poorer teas weakened towards the close.

Dusts on offer last week totalled 30,487 packages. A particular feature was the strong demand for plain orthodox teas after several weeks of quietness. Prices of these varieties hardened by 20 nP and on occasions more. Good support was also accorded to bright liquoring Assams. Keen competition was in evidence for the few flavoury Darjeelings, with the powdery teas receving special attention. However, the strongest feature was provided by non-wither legg-cut teas. C.T.Cs were a weak market, with medium C.T.Cs and good C.T.Cs declining by 20 nP. The quotations per one kg. (in rupees), inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 6.80, medium Assam C.T.C. dust 5.50 to 5.90, legg-cut dust 4.50 to 5, medium Assam dust 4.70 to 5.10 and plain orthodox dust 3.40 to 3.60.

The keen attention which export offerings have been receiving here as well as in London auctions is an index of the realisation among buyers that, contrary to the earlier expectations, the North Indian crop would show a marginal decline this year. With the best plucking season for North India nearly over, the crop so far has shown a decline of 10 million lbs. as compared with the corresponding previous figure, although it is higher by 10 million lbs. as compared to 1960. The firm tone in London last week received special attention here. Good Dooars were an extremely strong feature in London and good Assams received more attention.

There is no indication that tea would be surplus this year. Current trend all over the world shows that quality teas would be in short supply and buyers would, therefore, be forced to take a good proportion of common teas. That explains the improved tone at the internal sales. Already Pakistan is faced with an acute shortage of tea for internal consumption and to cope with the situation the Government there had to suspend export sales for a few weeks. Export sales for this season have not commenced, and it is doubtful if that country would have any exportable surplus. It is also a fact that just as in North India, production in East Pakistan also is lower. The production in Pakistan up to the end of July was estimated at 17 million lbs., a shortfall of 6 million lbs. over the actual figure for the corresponding period in 1961. When actual figures are available, this estimate may prove to be on the high side.

The production in Pakistan last year totalled 59 million lbs. and this year it should not be more than 52 million lbs. Early in the year, that country had hoped for a striking increase in production and to increase in export. Now that such hopes are difficult of materialisation, both Ceylon and India stand to benefit by diversion of the export demand from Pakistan. Shortage of tea in both wings of Pakistan goes to show that consumption is outstripping production, and it is hardly likely that Pakistan would have any mentionable surplus for export for a few years to come. It may even be necessary for that country to import tea from India.

The Indian tea delegation, which recently visited the United States and other countries to explore possibilities for increasing exports, has recommended that the export duty be further reduced or done away with. The tea industry has time and again urged proper fiscal reliefs so that Indian tea can be made more competitive in foreign markets. In this connection, the President of the United Planters' Association of Southern India, Mr. W. C. F. Simmond's remarks are very appropriate. For, in reply to the question on the advisability of India joining the International Tea Agreement, he said at Coimbatore that the industry would welcome measures for controlling exports but not production. He said that, if India could produce the quality of tea the world wanted and could offer the same at reasonable prices, Indian tea could find its own level.

Mr. Simmonds declared that due to high taxation the plantation industry was finding it difficulty to finance expansion and re-plantation schemes. While addressing the annual meeting of the Association at Coonoor, Mr. Simmonds stressed the need to combine the various taxes into one and thus avoid the large number of returns which the industry is called upon to file. He urged all concerned to realise that the internal market with its future potentiality, was the sheet anchor for the industry. He called on the Government to provide the necessary import licences for equipment in order that the industry could fulfil the production target for the third Plan.

That more propaganda is necessary in both the U.K. and the U.S. has time and again been stressed by spokesmen of the industry. Against this background, it is good news to note that the opening of more tea centres in foreign countries is being actively considered by New Delhi. The trade would suggest that the mere opening of a centre is not sufficient; its proper working must be actively reviewed from time to time and results obtained should be assessed.

JUTE GOODS STEADIER

(From Our Own Correspondent)

CALCUTTA, *4th September*

Following good overseas inquiries and satisfactory volume of business in both hessian and heavy goods constructions, steadier conditions were in evidence in the jute goods market during the week under review, and prices remained fully firm. Fibre prices were also steady at the minimum levels and, due to the widespread belief of heavy damages to crop consequent on floods in Assam and West Bengal, the tendency among sellers to discount quotations was conspicuous by its absence. Prices in the mofussil were rising to parity levels of Calcutta, and cultivators were pronouncedly preferring to hold back their stocks in expectation of higher prices. With the result, despatches to mills' stations declined. A clearer estimate of the crop is not possible until the floods recede and the extent of damages is assessed properly. Floods at this time of the year are a normal feature, but, in view of the severity of the same in Assam and Bihar, it is apprehended both quality and quantity would be affected more noticeably than usual. There is also the apprehension that arrivals in the coming few weeks would be lower than demand. As such fibre prices are expected to steady around the minimum levels even in the mofussil areas also. However, lower arrivals will not cause difficulties to mills, as they have ample stocks of the last year's crop.

Floods have also occurred in East Pakistan on an extensive scale and have affected new crop movements. Reports indicate that quality has been affected and, although overseas buyers have refrained from becoming nervous, the fact that they had been purchasing slowly in recent weeks encouraged by indications of a bumper crop should be noted. If they rush to the market now, prices are bound to rise. Harvesting operations in Pakistan have been slowed down, as farmers are preoccupied with measures to save the paddy crop. Since the jute plants have grown up fairly well, it is expected that quantity may not visibly be affected but that quality due to overgrowth may be subjected to serious deterioration. Due to transportation difficulties, farmers are not able to despatch their produce already cropped. This circumstance is bound to raise prices, although for the present in view of farmers' need for cash, prices have fallen. For instance, in the Narayanganj market, cuttings were thus quoted at Rs. 57, as against Rs. 80 some time ago.

In Calcutta, the delay caused to gunny shipments as a result of the need by the Customs authority to verify shipping documents has now reached serious proportions. In recent weeks, shipments, particularly to the United States, the largest buyer of hessian constructions from this country, have been considerably delayed so as to cause financial losses for importers in the U.S. This has roused the U.S. trade to much understandable anger, and it is feared that, if a regular flow of shipments is not resumed in accordance with the schedule of deliveries in contracts, consumers in the U.S. would be forced to change over to substitutes, even costlier substitutes. However, the U.S. tufted carpet industry is solely dependent on Indian hessian. Information received in Calcutta indicates that stocks of hessian in the U.S. for production of carpets have touched low levels, and in the event early replenishment supplies were not received, production would have to be curtailed in the near future. And this means much foreign exchange loss to India at a time when the Government of India is exhorting all concerned to undertake a vigorous export campaign and thus reduce the country's dependence on foreign aid. The U.S. trade is unable to appreciate the procedure of the Customs authorities in Calcutta which cause considerable delays to shipments. While, it points out, customs authorities should be vigilant and all rules must be enforced, mere suspicion arising from rates in shipping documents being lower than current market rates is unfair to the system of the trade. On behalf of the trade here, it is pointed out that a foreign importer enters into contract with a shipper in India when prices are favourable to the former and the latter considers that the deal is also profitable to him. The consignments cannot be shipped until several days after, and, if by the time the shipments are made prices have risen, it is palpably most unfair to call on the importer in the foreign country to pay the difference between the ruling prices and the contract rates.

Such a criteria has been termed arbitrary at a joint meeting in New York of the Jute Carpet Backing Council, the Burlap and Jute Association, and the Textile Bag Manufacturers Association. The meeting has stated that the action of the Calcutta customs authorities leading to delay to shipments and in certain cases preventing shipments is causing much harm to the Indian export trade in hessian. In a cable addressed to the Indian Jute Mills Association, the Textile Bag Manufacturers Association and the Burlap and Jute Association of the U.S. have expressed concern at the existing state of affairs. This anxiety has already been represented to the Government of India by the Textile Bag Manufacturers' Association, the Burlap and Jute Association and the Jute Carpet Backing Council of the U.S.

During the week under review, fair business was done in heavy goods with overseas countries. Africa bought small quantities and Australia placed orders for a small quantity of woolpacks. Australia also bought cornsacks, but much remains to be bought for completing September shipments. A tender from Khartoum for a good quantity of heavy goods is expected. In hessian, the U.S. accounted for moderate business, while Argentina had to slow down purchases on account of foreign exchange difficulties. On Tuesday last, ready hessian 40" 10 oz. was firm at Rs. 55. There was a good amount of short-covering, following business with overseas countries. Buying interest in the futures market was also keen and November futures rose from Rs. 51.50 to Rs. 52.38 to close firm at Rs. 52.12. Ready B. twills firmed from Rs. 124.50 to Rs. 124.75 in sympathy. Following business in hessian with the United Kingdom and in heavy goods with Australia on Wednesday, ready B. twills advanced to Rs. 125 and ready hessian 40" 10 oz. to Rs. 55.25. At this stage, there was selling pressure in the futures market and, as a result, on Thursday, ready B. twills eased to Rs. 124.10 and hessian 40" 10 oz. to Rs. 54.85. Due-date activities were a feature on Friday, and hessian 40" 10 oz. recovered to Rs. 55. Support for heavy goods being meagre, B. twills eased to Rs. 123.50. Over the week-end, there was some short-covering. However, overseas interests were silent. B. twills were lower at Rs. 122.65 and hessian 40" 10 oz. at Rs. 54.60. The market was closed during yesterday on account of *Sri Ganesh Pooja*.

Fibre prices were firm. Reports of damages to crop in Assam, North Bengal and Bihar were reflected in prices tending to rise to minimum levels in the mofussil markets. Although the volume of arrivals has declined due to transport difficulties consequent on floods and also to the tendency in the mofussil areas to hold on to stocks in expectation of higher prices, the I.J.M.A. is continuing to issue the weekly minimum purchase quotas to mills. With the changed trend, sellers were disinclined to discount prices. Mills accorded support sparingly, and sellers were keen for business for lower assortments. The quotations were: Daissee bottoms Rs. 32.50; Assam bottoms Rs. 30; and northern bottoms Rs. 29.50.

TIN FORGES AHEAD

(From Our Own Correspondent)

CALCUTTA, *4th September*

Tin forged ahead in the local market during the week under review due to the existing shortage of the metal in the country. Lead, on the other hand, displayed an easy tendency, as interest was inadequate. Copper scrap was firm, while zinc was quiet. Utensil scrap was at one time quoted lower at Rs. 543.25 per 100 kgs., as against the opening of Rs. 548.50, but towards the close it recovered to Rs. 549.25. The commencement of issue of import licences for virgin copper arrested the hardening tendency in copper scrap prices. Following a good amount of covering, there was active trading on the London Metal Exchange, but the quotation for the cash metal remained unchanged at £234 a ton.

Tin, in Calcutta, rose to Rs. 2,330.50 per 100 kgs. from Rs. 2,263.75. The metal was in short supply and demand was keen. That explains the rise in the price, despite the fact that on the London Metal Exchange the metal declined from £857½ to £854½ a ton. The fall in London should be attributed to the imminent commencement of releases from U.S. stockpiles. To start with, the weekly release would be only 200 tons, of which 30 tons would be used for the U.S. foreign aid programme and 10 tons for meeting the needs of the U.S. Government agencies. Thus, only 160 tons a week would be available for commercial sale. At present, it is proposed to continue the releases for only fifteen weeks. This means that of the 3,000 tons that would be released during this period, 2,400 tons would be commercially available. As against this, the world's deficit this year has been estimated between 5,000 and 15,000 tons. The U.S. State Department has assured that the selling prices would not affect the world's markets. However, the Department's reluctance to agree to the proposal made by the International Tin Council that the U.S. releases should not be below £910 a ton has caused concern on the London Metal Exchange.

Zinc, in London, opened at £63⅜ a ton and, following the upward movement in lead, closed higher at £64⅜. In Calcutta, it eased from Rs. 281.50 per 100 kgs. to Rs. 273.75, but soon recovered to Rs. 289.25 following the hardening trend in London. Lead here eased from Rs. 145.75 to Rs. 143.75 per 100 kgs.

LINSEED A SHADE LOWER

(Messrs. A. Bradley and Co.)

CALCUTTA, *3rd September*

There had not been much activity in the linseeds market this week. Prices were a little lower, as arrivals improved somewhat. The oil section was fairly steady in sympathy with other edible oils, but business was restricted, as buyers were restrained. The oilcake market ruled steady with a good local demand. Stocks were still small. The latest quotation for the September delivery was Rs. 82 per quintal.

10 AUG 1962

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.

Accounts:—Figures in the 'Accounts Closed' column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

All preference shares are taxable unless otherwise stated.

*** These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent (cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating upto 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares receive 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. UNFAIR TO TARIFF COMMISSION

THE Central Government's decision on "fair ex-works retention prices of steel" recommended by the Tariff Commission is clearly unfair and, what is more, the way in which Mr. C. Subramaniam, Minister for Steel and Heavy Industries, defended it in Bombay during the last week-end is highly deplorable. It is true that the Tariff Commission is only an advisory body and that the Government is not bound to accept its recommendations *in toto*. Indeed, the Government has, in recent years, amended the Commission's proposals in a number of cases involving fixation of fair prices. But it would be a healthy principle, if, as a rule, the Commission's conclusions and suggestions were accepted by the Government, for they represent the result of patient study and detailed examination by a group of competent persons with an impartial attitude. This is not a radical suggestion, especially when it is remembered that the Commission frames its recommendations only within terms of reference outlined by the Government and after taking into account the Government's broad economic policies. Accordingly, the occasions when the Government differs from the Commission should be few and far between. And when it does, the reasons must be weighty enough to carry public opinion with it. Further, these reasons must be spelt out in detail, with facts and figures.

Failure to follow this healthy convention will undermine the confidence of investors and entrepreneurs in the Government's price policy. Still worse will be the outcome when Ministers run down a quasi-judicial body like the Commission by declaring in public that it is an outmoded institution or that it is not progressive in its outlook. It is a common saying that one resorts to abusive language when one has no sound argument to advance. Mr. Subramaniam did nothing else when he declared last week-end that "the Tariff Commission had become completely out of date" and hinted that "other machinery would have to be evolved." If this is the Government's view, it would be better to withdraw the cases that have already been referred to the Commission and to cease making any further references. Currently, the Commission must be busy tackling the issue of fair ex-mill prices for cloth and yarn. It is a sheer waste of public money to continue this price inquiry or any other, if the Government is going to amend the Commission's fundamental recommendations in the same arbitrary manner in which it has dealt with the steel price issue. There is also another reason why the treatment that is being given to the Tariff Commission's work is injurious. And that is the human angle. However stoic the members of the Commission may be, they are, after all, human beings. Would it be conducive to their efficiency and enthusiasm in the onerous tasks assigned to them, if both in action and saying the Ministers went on mutilating and deprecating the major work done by them?

The contention that the Tariff Commission is out of date is baseless. Mr. C. Subramaniam's elucidation of his remark suggests that he is suffering from some confusion. The Tariff Commission in this country has a twofold function, namely, (1) determining the quantum of protection to indigenous industries against foreign competitors, and (2) fixing the fair prices of commodities that are referred to it by the Government. Nowadays, the Commission has very little work under the former in view of the severe import restrictions, but plenty under the latter, as more and more goods are being subjected to price control. In the early 'fifties, the Government deliberately assigned this second function to the Commission, so that it might not be accused of being partial to either any industry or a section of industry. It had also found from experience that *ad hoc* bodies for tackling price fixation were not a satisfactory means. There are already allegations in certain quarters that the Government has meted out harsh treatment to the T.I.S.Co. and I.I.S.Co., because they dared to support the Swatantra Party, dubbed by Congress and Communist leaders alike as a rightist reactionary party.

This allegation apart, one fails to see how the Tariff Commission is an outmoded body for determining fair prices. The fact that the Government finds itself increasingly in conflict with the crucial conclusions and recommendations of the Commission is no justification for holding that view. Anybody who goes through the report of the Commission on paper, cement and steel, to mention only a few instances, will find that the Commission has been adopting stringent norms and policies, that it has by no means been generous to investors and that it has not spared the manufacturers wherever they were found wanting. In its anxiety to hold the price level, the Government may not be able to see eye to eye with the Commission's recommendations, but that is not the fault of the Commission. If anyone is to be blamed for inflation, it is the Government itself, because more often than not inflation is the cumulative result of pursuing a series of defective economic policies. There are several instances where there was no necessity at all to go to the Tariff Commission for price fixation, cotton textiles and sugar being two typical instances. But still the Government invoked the services of the Commission in order to save itself from an embarrassing position or to postpone an unpleasant task as long as possible. Unfortunately for it, the Tariff Commission has not been diplomatic enough to oblige its creator in this respect and has severely left the unrewarding role of King Canute to be played by the respective Ministers concerned.

After a detailed examination of the costs, capital employed, production in relation to capacity created and after taking into account the difficulties experienced by the two private sector steel companies in regard to raw materials and transport, the Tariff Commission came to the conclusion that, for the two years ended March 1962, a uniform average retention price of Rs. 550 per tonne would be fair for both T.I.S.Co. and I.I.S.Co. This meant an increase of Rs. 38 per tonne over the provisional price that had been fixed by the Government, pending the Commission's finding. Of this increase, Rs. 8 represented a special element to enable the companies to repay the special advances they had taken from the Government under agreements, signed in 1953 and 1954. The Commission was of the view that the repayment of this loan together with interest at the rate of 5 per cent per annum from 1st July 1958 should be spread over a period of 20 years. The Government has taken the view that the Commission has been too liberal to the manufacturers. It has, therefore, cut the increase to a mere Rs. 10.50 per tonne and fixed the uniform average price at Rs. 522.50 per tonne. This is too sharp a reduction, unsettling all the premises laboriously worked out and substantiated by the Commission. The reasons given by the Government for doing so are sketchy and unconvincing. In refusing to allow the special element for repaying the loans given by it, the Government has gone back on its own terms of reference to the Commission. These aspects of the Government's decision, as well as the Commission's observations on the state of the steel industry in general, will be examined at some length in our next issue.

WANTED: MORE LAND REVENUE

THE share of agriculture proper in India's national income, at current prices, in 1960-61 (the last year of the second Plan), was about Rs. 5,700 crores, representing as much as 45 per cent of the latter. But the aggregate receipts to the exchequers of the State Governments from land revenue (Rs. 98.0 crores), agricultural income-tax (Rs. 8.5 crores) and irrigation (Rs. 10.3 crores) amounted, in that year, to just Rs. 117 crores in round figure, representing 2.1 per cent of the aggregate agricultural income. This may be compared with the position in 1955-56, the last year of the first Plan. In that year, it may be recalled, the aggregate receipts from land revenue (Rs. 80.3 crores), agricultural income-tax (Rs. 5.7 crores) and irrigation (Rs. 8.5 crores) came to about Rs. 95 crores in round figure, representing 2.7 per cent of the relevant agricultural income (Rs. 3,470 crores). It would thus be seen that, while the aggregate agricultural income had increased by 64 per cent over the second Plan period (from Rs. 3,470 crores in 1955-56 to Rs. 5,700 crores in 1960-61), the incidence of land revenue (including agricultural income-tax and irrigation charges) in relation to that income had perceptibly decreased. If a proportionate increase had taken place in land revenue receipts, the aggregate of such receipts in 1960-61 should have been at least Rs. 156 crores, representing 2.7 per cent of the relevant aggregate agricultural income (Rs. 5,700 crores). The comparison brings out the deplorable fact that the incidence of land revenue, which was far too low in relation to income from land even in 1955-56, was still lower in 1960-61. That means the State Governments did not have—rather, did not attempt to have—a reasonable share for their exchequers in the all-round agricultural prosperity that had come about, thanks to larger production and higher prices for which the increased demand from urban areas for foodgrains and from industries for raw materials was largely responsible.

The third Plan has inherited this legacy of the second Plan's failure to step up land

revenue at least by stages, if not in one sweep. Such increase as there has been in the aggregate revenue from land in the first year (1961-62) is a modest Rs. 8 crores for the country as a whole. Most State Governments have, therefore, proposed in the current year (1962-63) increases in land revenue assessments. Andhra Pradesh, for instance, hopes to get an additional revenue of about Rs. 4 crores per annum from the proposed increase in assessment on land. Assam has proposed to increase the land revenue rate from 25 nP in the rupee to 50 nP in all plains districts. Gujarat's proposal is to have a surcharge on land revenue at 20 nP per rupee. Jammu and Kashmir is to have an agricultural income-tax on incomes over Rs. 3,000 per annum at the same rate as under the Central Income-tax Act. Madhya Pradesh hopes to get an additional revenue of Rs. 1.5 crore through rationalisation of land revenue. Madras has proposed to increase the assessment on wet lands by 40-50 per cent, the water rate on dry lands by 50-100 per cent, and the sugarcane cess from Rs. 2 per ton to Rs. 5. Maharashtra has decided to collect a special education cess in the form of a cash levy per acre principally from irrigated lands growing cash crops. And Uttar Pradesh, with its estimated budget deficit of Rs. 13.3 crores, has brought forward a proposal to levy a fresh tax on landholdings, amounting roughly to 50 per cent of the land revenue now being paid by landholders and estimated to yield an additional Rs. 8.5 crores.

Currently it is the U.P. proposal that has to sail against rough weather, whereas in most other States there has been no such serious agitation against the proposed increases in land revenue assessments and rates. The determined (but short-sighted) opposition of a section of the ruling Congress Party and the Opposition parties to the Land Holdings Tax Bill in Uttar Pradesh has brought things to such a pass that the Central Government has directed the Planning Commission to give its advice to the U.P. Government on the Bill and the State Government itself has just offered to raise the limit of holdings exempt from the tax from one acre, as provided in the Bill, to three acres. The said compromise offer of the State Government is calculated to slash the additional yield from Rs. 8.5 crores to a little over Rs. 4.0 crores. There is no certainty, as of today, that the Government will not compromise further on the issue. Whatever political capital the Opposition parties might try to make out of such land tax proposals, the Congress Party, which is wedded to planned development, would be well advised to close up its ranks and enable the State Governments to raise more resources from the agricultural sector. After all, this sector, while continuing to benefit from planned development, contributes very much less than its due share of resources for such development. The problem of securing a substantially bigger surplus from agriculture for national development will confront any responsible party that may come to power in future—a problem which it will be compelled to solve in some way or other, whatever unrealistic or disruptive stand it may now take as an Opposition party.

PUBLIC-SECTOR UNDERTAKINGS

INDIA'S public sector in industry and commerce has grown to a mammoth size, judged by the magnitude of investment, predominantly by the Central Government, in 42 "autonomous," as distinct from "departmentally-run," undertakings. As at the end of 1960-61, the aggregate investment in these 42 undertakings alone was Rs. 953 crores, of which equity capital accounted for Rs. 556 crores and long-term loans for Rs. 397 crores. Most of this investment—as much as Rs. 872 crores—was made only during the second Plan period. The third Plan is expected to add a further investment of the order of Rs. 1,500 crores in these and other newer undertakings (excluding the departmentally-run units like the Chittaranjan Locomotive Works, Integral Coach Factory, Ordnance Factories, P. & T. Workshops, etc.). When so much public money has been, and continues to be, invested in fields in which the Government has had virtually no experience till recently, the anxious interest displayed by the public, Press, Parliament and businessmen alike in the working of these undertakings is quite legitimate and natural.

Whether the State undertakings are run on prudent, commercial lines and whether they are making reasonable profits are matters of vital interest to the public which, whether or not invited to participate directly in their capital structure by taking up shares, has obviously a big stake in their successful working. The Union Ministry of Finance has, therefore, done well to provide an overall assessment of the performance of at least the "non-departmental" undertakings in its first annual report on them presented to Parliament on the 7th instant. It would not be easy to find fault with the Ministry in its overall financial assessment, for it has taken care to classify the 42 undertakings into four categories, namely, (i) undertakings under construction, like the Nangal and Trombay Fertiliser Units, Heavy Electricals, Heavy Engineering Corporation, Hindustan Organic Chemicals, Hindustan Photo Films Manufacturing Company, Hindustan Teleprinters, Indian Refineries, Neyveli Lignite Corporation and National Mineral Development Corporation, (ii) completed undertakings not fully commissioned, like Hindustan Steel covering the Bhilai, Rourkela and Durgapur steel plants, (iii) running concerns, numbering 26 or 27, the names of which are given in the table on the next page, and (iv) promotional and developmental undertakings like the Central Warehousing Corporation, Export Risks Insurance Corporation, Indian Handicrafts Development Corporation, National Small Industries Corporation, National Industrial Development Corporation and Rehabilitation Industrial Corporation.

From the point of view of an assessment of profit-earning performance, the immediately relevant category is the one pertaining to "running concerns." The accent in this article is on this category, because the relevant undertakings have been working for a number of years now and their financial results lend themselves to a fuller analysis than is possible in the case of either the first category or the second. Still some overall figures and general observations pertaining to all the four categories would need to be highlighted here. First, a break-up of the aggregate investment of Rs. 953 crores shows that the Central Government's share thereof is 97.3 per cent, that of the State Governments 0.7 per cent, that of private Indian parties 0.3 per cent, and that of private foreign parties 1.7 per cent. Secondly, a category-wise break-up of this aggregate investment shows Rs. 109 crores of equity and Rs. 12 crores of loan capital under the first category, Rs. 300 crores of equity and Rs. 306 crores of loan capital under the second (Hindustan Steel alone), Rs. 142 crores of equity and Rs. 70 crores of loan capital under the third and Rs. 4 crores of equity and Rs. 10 crores of loan capital under the fourth. Thirdly, as compared with the total investment of Rs. 953 crores, the total value of fixed assets or gross block, as it is called, stood at Rs. 917 crores, covering land, buildings, plant and machinery and capital works-in-progress. The difference of Rs. 36 crores between the total investment and the gross block represents partly deferred revenue expenditure (Rs. 15 crores) and partly working capital (Rs. 21 crores). Fourthly, the loan capital advanced by the Government has been charged interest at the rate of 5 per cent for 2- to 4-year loans, 5½ per cent for 5- to 9-year loans and 6 per cent for 10- to 15-year loans. These rates of interest, it must be said to the credit of the Government, are higher than what it pays on its borrowings from the capital market and are not unduly low as compared with what first class companies have to pay on the secured loans they raise either from banks or the long-term capital market. It may be presumed that more of loan capital will be provided in future to the undertakings concerned in pursuance of the Government's recent decision to the effect that the ratio of equity investment should, more or less, equal loans for each undertaking, a decision which is in keeping with the criterion favoured by the World Bank for judging the soundness of the approach made by entrepreneurs in the private sector to the capital requirements of their industrial projects. In effect, this would mean that, whether or not an undertaking declares a dividend on equity capital, the Government will at least have a guaranteed return of 5 to 6 per cent on loan capital amounting to nearly half of its total investment, assuming, of course, the interest liability will be regularly met by the units concerned.

Specifically in regard to "running concerns," a broad picture of the capital structure and working results, as of 1960-61, is given in the table on the next page. Although the Finance Ministry's report, in its overall assessment, has lumped together all the 26 or 27 units, we have sub-divided the category into (*a*) industrial and mining units and (*b*) commercial and other units. The Finance Ministry's analysis has led to the conclusion that the 26 or 27 undertakings, taken as a whole, made a net profit representing 5.5 per cent of their aggregate equity capital in 1960-61. Our analysis, however, shows that, during the year under review, the 18 purely industrial and mining units, taken as a whole, made a net profit representing 5.1 per cent of their aggregate equity capital, whereas the 8 or 9 commercial and industrial units together made a net profit representing 6.3 per cent of their aggregate equity capital. Considering that the proportion of equity capital to the total capital investment is considerably higher than in the case of the vast majority of industrial concerns of comparable age in the private sector, this performance is encouraging and belies the earlier pessimistic reports. Although the unit-wise picture is rather uneven, most units, whether industrial or non-industrial, seem to be well set on the road of profit-earning. *Prima facie*, the aggregate provision of about Rs. 55 crores for depreciation, representing 30 per cent of the gross block (Rs. 185 crores as of 1960-61) seems to be fairly adequate, considering that most of the units were less than 10 years old in that year. Likewise, the aggregate amount (Rs. 24 crores) allocated to reserves represented a not insignificant percentage (17) of equity capital.

That internal resources of the order of about Rs. 80 crores (representing depreciation provision, reserves, etc.) have been available for financing development and that such resources will increase further as more projects go into operation are no doubt heartening trends. But allocations to reserves, after providing for depreciation, seem to have been largely responsible for non-declaration of dividends by most concerns. The Finance Ministry's report, however, has sought to explain this position in the following passage:

"In judging the profitability of public-sector undertakings, the sole criterion adopted in some quarters is the dividends declared by them. This basis overlooks the fact that, even though most public-sector units have made profits, not all of them have declared dividends. The total net profit earned by 23 concerns, after taking into account the loss sustained by three, was Rs. 7.7 crores. However, dividends were declared only by 9 units aggregating Rs. 1.4 crore, which works out to an average of 4.2 per cent on the total paid-up capital of these concerns. The amounts representing the difference between the net profit earned and the dividends declared were retained by them for being appropriated as reserves or ploughed back into business. To that extent further investment by Government in these concerns has been avoided."

The above explanation, amounting to a justification, may be valid in the circumstances of State undertakings which do not have to depend on the market for raising capital. But it ignores the vital consideration that the public money represented by the equity capital of these undertakings is entitled to a fair return, inasmuch as the public loans floated by the Government carry interest which is currently ranging between 4 and 4½ per cent. Assuming that all the equity capital provided by the Government has come out of public loans, the public would rightly expect of the State undertakings to declare at least 5 to 6 per cent dividends, besides setting apart a sizable part of their net profits to reserves. Further, as these undertakings are now being worked nearly, though not fully, on the same lines as private-sector enterprises, thanks to public criticism and Parliament's scrutiny, it would not be too much to expect that every State undertaking should also aim at declaring decent dividends at least for psychological reasons. A more important reason why they should do so is, of course, the need for finding resources to finance the other projects in the Plan.

MARKET GOSSIP

The Washington Meet

THE Sheraton Park Hotel at Washington will hum with activity for five days from Monday next week when over 400 leading financial officials (and their advisers) from 79 countries get together in connection with the annual meetings of the Bretton Woods twins (I.M.F. and World Bank) and the two offspring of the latter (International Finance Corporation and International Development Association). The meetings will be held against the background of the continuing imbalance in the overall world payments situation, the symptoms of possible world-wide deflation hinted at by no less a person than Mr. Per Jacobsson, the I.M.F.'s Managing Director, and the pressing claims of a host of underdeveloped nations for more liberal assistance for economic development. Unless these problems are satisfactorily dealt with, the progress that has been achieved so far to strengthen international economic and financial relations cannot be well sustained in the coming years.

On the eve of the aforesaid meetings, it may perhaps be useful to indicate the change in international liquidity that has taken place in recent years. Between the end of December 1952 and March 1962, Continental Europe's aggregate gold and foreign exchange holdings have risen by as much as $15,000 million, whereas those of the U.S. have declined by $6,380 million. The table below shows the actual position in respect of the different regions (free world) at the end of March 1962, as compared with that obtaining at the end of December 1961, 1960 and 1952:

*International Liquidity**

(In million $)

	End of March 1962	End of December		
		1961	1960	1952
U.S.A.	16,873	17,063	17,804	23,252
Europe	23,290	23,680	21,425	8,250
U.K.	3,458	3,324	3,239	1,058
Other sterling areas ..	7,150	7,280	6,755	7,155
Canada	1,716	2,064	1,836	1,864
Latin America ..	2,615	2,840	2,930	3,005
Rest of world ..	5,290	5,160	5,710	4,080
Total ..	60,390	61,415	59,700	49,565

* Represented by official gold and foreign exchange holdings.

As is only to be expected, it is the I.M.F.'s meeting that will be most important. A large African representation, we are told, will lend special emphasis to the financial problems of underdeveloped countries at this year's meeting. There will be representatives of 30 African countries, of which 13 are already members of the Fund and 17 are applicants for membership. Many of the African countries will be represented for the first time. The African delegates, as well as the representatives of many non-industrial, developing Asian, Middle Eastern and Latin American nations, will doubtless express much concern over the price and demand trends in world commodity markets, with a vigorous plea for adequate assistance from the Fund. Gone are the days when the resources of the Fund were intended merely to help its members deal with temporary payments problems. For the Fund is now required to play a more active "financial role" in the adjustment of world payments difficulties. The aggregate drawings on the Fund's resources in 1961 touched a record of $2,500 million, as against $1,000 million in 1957, the previous highest figure. What is more, the various shifts in the world payments situation, as the I.M.F. Press release itself points out, have suggested the possibility of increased calls on the Fund's resources in the future. In particular, the achievement of currency convertibility in many countries has facilitated large-scale movements of funds which are capable of creating considerable strain on the world payments system.

It is true that the lending capacity of the Fund has been considerably augmented in recent years partly through the general increase in members' quota from the equivalent of $9,200 million to over $15,000 million and partly through arrangements by which the Fund has been enabled to borrow additional resources. It is also true that ten of the Fund's industrial members have committed themselves to stand ready to lend up to $6,000 million of their own currencies "to forestall or cope with an impairment of the international monetary system." Even so, some economists and financial experts are doubtful whether the Fund would succeed in meeting the mounting pressure on its resources. A section of opinion believes that the Fund should embark upon a long-term plan for increasing its resources. To this section belongs Mr. Reginald Maudling, Britain's Chancellor of the Exchequer. Mr. Maudling is expected to suggest, in his speech at the meeting, the creation of a pool of currencies which would be much less hedged around by lending restriction than is the $6,000-million fund set up at Vienna last year. Such a pool, it is felt, would improve the world's supply of liquid assets and enhance the Fund's usefulness in the world's payments system.

The above proposal is no doubt quite an interesting one, but there are doubts about its efficacy too. The doubts arise from the current "dangerous obsession" with gold. Such an obsession, according to a section of opinion, can be removed only through extension of a gold guarantee over official holdings of various currencies. Here is what the London *Economist* said recently:

"To remove the current dangerous obsession with gold, which is by no means appeased by all the official efforts to disguise published figures and to economise in gold shipments, it is necessary to extend guarantees over official balances generally. One useful way in which this could be done would be to confine the guarantee to balances that are transferred as deposits with the International Monetary Fund. These deposits, in contrast with the initial subscriptions to I.M.F., would naturally bear interest, in the same way as loans to I.M.F. under the Paris Club facilities. And these deposits would also be available for immediate use, with even less formality than a drawing on the existing 'gold tranche' of the quota now involves. They should certainly be freely transferable, and thereby acquire an independent form. For the holder, they would be as good as existing foreign currency balances, only better by virtue of the guarantee. For the country granting the guarantee on its currency, the advantage would be that the I.M.F. would automatically be a considerate holder of the balances, drawing them down only when the currency was scarce because the country concerned was in basic payments surplus. Such a move could then be a voluntary first step towards the creation of a new international currency, a goal towards which present piecemeal credit arrangements must ultimately lead."

It would appear that the scheme of gold guarantees may be strongly opposed by the U.S. which seems to favour an entirely different scheme. The U.S. Administration, it is stated, may canvas support for its plea that it would be far more satisfactory if all the European countries refrained from asking for conversion of dollar accumulations into gold until the U.S. payments position improved, rather than by formal U.S. borrowings abroad to deal with the backwash (on gold stock) of the functioning of convertibility during this difficult period. The U.S. plea is presumably based on apprehensions of a serious impact on its economy of a continued gold drain. Mr. Per Jacobsson, however, has described the U.S. concern about gold outflow as excessive, in view of the steady improvement in that country's financial position. Addressing the Advertising Club of Washington the other day, Mr. Jacobsson expressed his confidence about an early solution to the gold-dollar problem and said: "It is time to worry less about the outflow of U.S. gold and more about the possible world-wide deflation.... We ought to begin to pay as much attention to a decline in prices as we did in the past to inflation.... There is as much danger of deflation as inflation." He thought that the question of possible deflation would be a major topic at the forthcoming Fund meeting.

The meeting of the World Bank, unlike that of the Fund, will be a routine affair—a review of the Bank's activities and policies. On Tuesday the 18th inst., Mr. Eugene R. Black, President of the Bank, the I.F.C. and the I.D.A., will address the respective Boards of Governors and present the annual reports. Discussion of their activities will follow thereafter. An important item on the agenda pertains to suggestions for enhancing the I.D.A.'s usefulness to member-nations which at present remains restricted, in view of inadequate resources. Since it commenced operations about two years ago, the I.D.A. has practically exhausted the amount effectively available for long-term lending, namely, $800 million, out of the total subscribed capital of $1,000 million. If the I.D.A. is to play a more prominent role in accelerating the tempo of economic development in underdeveloped countries, a substantial rise in its resources is imperative. This is proposed to be done partly by broadening the capital base of the I.D.A. The I.D.A. credits have been of immense value to many countries, including India, inasmuch as they are interest-free (only a surcharge of ¾ per cent per annum is payable on the amount withdrawn and outstanding) and the period for repayment is long enough to suit their needs.

Titaghur Paper in Loss

Reporting a net loss of Rs. 11.38 lakhs for the year ended 31st March 1962, as against a net profit of Rs. 23.92 lakhs in the previous year, the Titaghur Paper Mills Company Ltd. has run into a bad patch for the first time in the past many years. The gross profit for the year at Rs. 23.51 lakhs is miserably poor in comparison with Rs. 106.08 lakhs in the previous year, which again was lower in relation to Rs. 124.59 lakhs earned in 1959-60. That the profit should have fallen so sharply is, indeed, baffling, especially because net sales (that is, excluding excise duty paid) which had declined from Rs. 858.22 lakhs to Rs. 823.53 lakhs in the previous year, have recovered nearly fully to Rs. 857.43 lakhs. The profit-margin (ratio of gross profit to net sales) for the year has slumped to a paltry 2.7 per cent from 12.8 per cent to which level it had slipped back in the previous year from 14.5 per cent in 1959-60. The dividend on ordinary shares has been halved to one rupee per share, subject to tax, after maintaining that on preferred ordinary shares at 13 per cent per annum, taxable, and paying the preference shareholders in full. To provide for the dividends and set off the loss, the Directors have withdrawn Rs. 20.50 lakhs from reserves. The news that this 80-year old Company, enjoying a wide reputation as a leading unit in the field with a first rate efficient management, has suffered so heavily has come as a shock to a large section of investors in this part of India. It would have had a demoralising effect on stock exchanges but for the cushion provided by the management's decision to issue both bonus shares and new shares, the latter at a modest premium.

Sir Walter Michelmore, Chairman of the Company, has explained in detail the circumstances in which the Company had to suffer a setback. This he has done in a statement to the shareholders and published in full elsewhere in this issue. According to Sir Walter, the Company has suffered from seven major drawbacks, namely, (i) uneconomic selling prices even with the latest increase of 6 nP per kilo in relation to rising costs, (ii) insufficient coal supplies and exorbitant cost of transporting at least 50 per cent of them by road, (iii) inadequate wagon supplies for transporting bamboo to the Works, (iv) unremunerative working of the No. 2 mill due to labour troubles and poor management, (v) uneconomic working of the No. 3 mill unit its output reached the level of 18,000 tons per annum as provided by the original industrial licence, (vi) small setback to production owing to the transfer of some machinery from the No. 2 to the No. 3 mill, and (vii) write-off of Rs. 23 lakhs from bamboo stocks due to revaluation. Of these, while the last four are within the control of the Company which has taken steps to overcome them, the first three are beyond the Company's control and, unless urgently remedied, will affect the Company more severely in the current year as well as in the subsequent years. Besides, they affect the industry as a whole. Their detailed examination, as Sir Walter sees them, will prove useful.

According to Sir Walter, when, in 1960, the Tariff Commission gave its award based on 1958 costs, those most closely concerned with the industry predicted a difficult time ahead, and this has certainly proved to be the case. In the first place, the 12 per cent return on capital employed covering as it does taxation, provision for rehabilitation, managing agents' remuneration, bonuses to labour and preference dividends, does not leave a sufficient balance to provide an adequate return by way of ordinary dividends on the

TREND OF SHARES

IN DOLDRUMS AGAIN

(From Our Own Correspondent)

BOMBAY, 13*th September*

A TOTALLY disappointing increase of Rs. 10.50 per tonne in the long delayed steel retention price, as against the Tariff Commission's conservative recommendation of Rs. 38, which was announced on Friday, the 7th, demoralised sentiment completely and touched off a wave of heavy selling in the stock markets this week. Equities were thus left in the doldrums once again, barely two months after they had gradually recovered apart of the ground lost in the last slump. Panicked by a landslide in Steels, particularly in Tata Ordinary, bulls liquidated nervously all round. Bears grasped fully the God-sent opportunity to hammer. Values simply tumbled down, with some leading counters sinking to fresh low levels for the year. However, during the past two days, pressure subsided, and bears covered. But the reports today that the Chinese had made fresh inroads in the N.E.F.A. region produced nervousness again, though the lower levels induced renewed bear covering. Nevertheless, closing prices disclosed widespread losses over the week.

Clearly, bulls have now no wind left in their sails. Oddly enough, while their minimum and reasonable hopes have been shattered, bears have been favoured with an enviable stroke of luck following the emergence of new bearish factors. This week saw a new bearish factor in the statement by Mr. K. C. Reddy, Union Minister of Commerce and Industry, that there would be a further cut in imports in the ensuing licensing period. Economic uncertainties have been growing all the more and political troubles seem to have come to stay. The trend in shares is thus still bearish. But this week's setback has been exceptionally sharp, especially as a couple of bulls were caught napping. The investor, in particular, would be well advised to be restrained and calm at the current low levels in equity values. While bulls have been unloading, bears have been eagerly covering their short sales. A sharp shake-out is always followed by a small or big technical correction. Meanwhile, let not the investor sell and find the next day that the L.I.C. has made fresh purchases at the low levels. As for the steel retention price, certain influential circles are credited with the speculation of a possible reconsideration and revision by the Government. Whether that speculation materialises or not would be known before long. In the meantime, it will be worth waiting for the reactions of the chairmen of the two steel companies.

* * * *

In an orgy of bear raids and panicky bull liquidation, Tata Steel Ordinary, the erstwhile barometer of Dalal Street, slumped from Rs. 144.50 to Rs. 133.50—a level two points lower than the last year's low of Rs. 135.50—to close at Rs. 135.25 as against Rs. 145 a week ago. In the process, a principal Calcutta bull operator was said to have turned a bear and a leading Southern bear operator was said to have gone long in this scrip. The debacle was caused by the paltry increase in the steel retention price and the consequent uncertainty about the dividend. Indian Iron fell from Rs. 26.30 to Rs. 25.25 to close 90 nP lower over the week at Rs. 25.35. Mukand Iron showed a loss of 64 nP at Rs. 24.12.

Among Textiles, the volatile Standard closed 36 points lower at Rs. 860, followed by Khatau which showed a loss of Rs. 15 at Rs. 453.75 and National Rayon which declined by Rs. 8.50 to Rs. 495. Other shares in this section were also lower, Century by Rs. 3.50 at Rs. 624, Kohinoor by Rs. 5.50 at Rs. 310.50, Bombay Dyeing by 80 nP at Rs. 66.90, Swan by Rs. 7 at Rs. 303, Mafatlal by Rs. 32.50 at Rs. 792.50, New City by Rs. 31 at Rs. 150 and Gwalior Rayon by Rs. 3.50 at Rs. 56.50.

In the Miscellaneous section, Telco suffered on bear hammering and closed with a loss of Rs. 17.56 at Rs. 301 *ex-div.* Bombay Burmah also declined sharply from Rs. 665.50 to Rs. 651. The firmly held Hindustan Motors disclosed a loss of 33 nP at the *ex-div.* closing price of Rs. 19. Voltas were down by nine points to Rs. 262. In an otherwise easy dyes and chemicals section, Indian Dyestuff closed with a minor gain of Rs. 2.50 at Rs. 446.25. Cements were quiet, Sugars and Shippings easy and Electrics shed some of their recent gains. In the Cash section, new issues were less affected by the weakness in the Forward List. But T. Maneklal were down by 15 points at Rs. 640, Colour Chem by 10 points at Rs. 420, New Standard by seven points at Rs. 203 and the offside National Electric by 14 points at Rs. 100 and Mackenzie by 12 points at Rs. 140.

* * * *

In Calcutta, among Forward shares, the market leaders closed with further losses. Kesoram and Burrakur were down by 69 nP each at Rs. 27.81 and Rs. 17.25, respectively. Howrah showed a loss of 37 nP at Rs. 20.69, Texmaco of 30 nP at Rs. 22.95 and Indian Aluminium of 25 nP at Rs. 36.69. Both Dunlop and G.K.W. closed 19 nP lower at Rs. 39.31 and Rs. 37.75, respectively. Others showed small losses. In the Cash section, Textiles were generally easy, with Bharat Commerce declining by Re. 1.19 to Rs. 27.25 and Dunbar by 50 nP to Rs. 31.50. Among Coals, Bengal moved down by two points to Rs. 351 and Central India by 94 nP to Rs. 10.25, but Pench Valley disclosed a gain of Re. 1.13 at Rs. 16.50.

Jutes were generally easier. Anglo India were down by five points at Rs. 234 and so were Delta at Rs. 187 with Dalhousie showing a loss of four points at Rs. 126. Engineering issues showed small losses, with Burn declining from Rs. 704 to Rs. 695. While Alkali Chemical reacted by 94 nP to Rs. 45.75, Bengal Chemical rose from Rs. 94.50 to Rs. 101. In the Miscellaneous section, small losses predominated, with Martin Burn showing a loss of 88 nP at Rs. 30.87 as did Philips India at Rs. 29.87. Paper, Sugar and Tea shares were generally lower.

* * * *

The Madras Stock Exchange closed on a subdued note. Textiles bore the brunt of bull liquidation. S.I. Viscose showed a rather big loss of Rs. 4.75 at Rs. 160.25. Travancore Rayon declined from Rs. 36.60 to Rs. 34.80. Both Madura and Cannanore showed a loss of 50 nP at Rs. 35.25 and Rs. 126.50, respectively. In the Miscellaneous section, Ashok Leyland declined from Rs. 8 to Rs. 7.70, Mettur Chemicals from Rs. 14.12 to Rs. 13.75 and India Cements from Rs. 6.35 to Rs. 6.20. But W.I. Products closed with a gain of Rs. 5.80 at Rs. 200. Deccan Sugar showed a loss of 15 nP at Rs. 11 and E.I.D. of 25 nP at Rs. 43.25. Among Plantings, Consolidated Coffee were down by 20 nP to Rs. 18 and Parkside by 12 nP to Rs. 21.75, while Coffee Lands disclosed a gain of 30 nP at Rs. 14.70 and Haileyburia of 23 nP at Rs. 12.10.

CAPITAL MARKET NEWS

NEW ISSUE

ASIAN Refractories Ltd., a new venture promoted by Calcutta's well-known industrial house of Rampurias, is expected to enter the market, possibly on the 27th inst., with a capital issue of Rs. 40 lakhs divided into 7,000 cumulative redeemable preference shares of Rs. 100 each entitled to a dividend of 9.3 per cent taxable and 330,000 equity shares of Rs. 10 each. The entire issue has been underwritten by leading stock-brokers. The Company has been licensed to manufacture 24,000 tons of firebricks and 6,000 tons of silica bricks per year. Initially, it proposes to manufacture high alumina firebricks, shapes and blocks and castable refractories. At a later stage, it will also produce magnesite bricks and chemically bonded bricks. The plant will be put up at Hazaribagh District, Bihar, and the site is said to be enjoying special advantage in respect of the necessary raw materials, power, water and transport by both road and rail. The Company has concluded an agreement with Messrs. Cekop, the Polish State undertaking, for the supply of plant and machinery. The Polish firm will also supply the technical know-how and the technical personnel to erect, assemble and put the plant into operation.

The refractory industry in India has been expanding along with the iron and steel industry which consumes 75 per cent of the indigenous output of refractories and still depends on the import of a substantial quantity to meet its requirements. Asian Refractories has, therefore, a ready and fast growing internal market to exploit. The Company will have in Dr. Subhamay Banerjee, who is highly qualified and has had considerable experience in refractory industry both in India and the U.K., a competent general manager of the factory. Hoare Miller and Company Ltd., which has got an efficient sales organisation, has been appointed the sole selling agents of the Company. The Industrial Finance Corporation of India has sanctioned the Company a long-term loan of Rs. 35 lakhs in addition to agreeing to underwrite the ordinary share issue to the extent of Rs. 5 lakhs. Messrs. R. L. Rampuria, J. L. Rampuria, David Duncan Smith, M. L. Pyne, D. N. Patker and Dr. S. C. Law are on the Board of the Company.

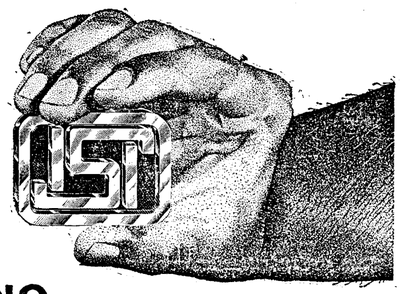
* * * *

BONUS ISSUE

To rectify the imbalance between its paid-up capital and value of assets, the **Titaghur Paper Mills Company Ltd.** has made an application to the Controller of Capital Issues for a bonus and a rights issue. The Company proposes to capitalise Rs. 56 lakhs from the general reserve and issue bonus shares in the proportion of one new "A" equity share for every two ordinary "A" and "B" shares held by the existing shareholders. The rights issue will follow the bonus issue and will be made in the proportion of two new shares for every three old shares at a premium of Rs. 5 per share. The proceeds of rights issue will be utilised to finance the modernisation and expansion programme of the Company. Both the "A" and "B" ordinary shares of the Company are Rs. 10 fully paid.

The Government of India has constituted a study group to consider the problems relating to the organisation and promotion of transport co-operatives in the country and formulate concrete programmes for the third Plan. The terms of reference of the Study Group are to examine the scope for the co-operative form of organisation in the field of transport, to draw up a pattern of organisation for transport co-operatives, to assess the financial requirements of transport co-operatives and suggest ways and means of meeting them and to suggest patterns of financial assistance from the Central and State Governments to transport co-operatives. The Study Group is headed by Mr. S. N. Bilgrami, Chairman, Inter-State Transport Commission. It will submit its report within three months.

Morocco has become a member of the International Finance Corporation. Its subscription to the Corporation is 388 shares, with a total par value of $388,000. In June, the Syrian Arab Republic joined the Corporation with a subscription of $72,000. Tunisia, with a subscription of $133,000, joined I.F.C. in July. The adherence of these three countries raises the total membership of the Corporation to 65 countries. The total subscribed capital of I.F.C. is now $96.99 million.



How ISI Helps the Manufacturer

BY PROVIDING THE SEAL OF INTEGRITY

The ISI Certification Mark may be given to any manufacturer whose products are made to the relevant Indian Standards. It is a recognition of his business integrity and trustworthiness.

Modern methods of quality control, an essential part of any scheme of certification, bring about many economies in production through elimination of defectives, increase in productivity, and securing of uniform quality of output. These benefits far outweigh any additional cost involved in instituting continuous inspection and testing.

Periodical check-up by ISI of manufacturers' own quality control systems constitutes an invaluable service to ensure top management of the high efficiency of production and maintenance of quality.

Consumer satisfaction and competitive marketing position are the obvious advantages enjoyed by all ISI Mark users.

Enquire for details NOW how you too can join the distinguished company of manufacturers who already hold the ISI Certification Mark Licence.

Somersaults in Policy

PARLIAMENT showed unusual vigilance in safeguarding property rights during the last session and the manner in which some members worried Mr. S. K. Patil—who is by no means unfriendly to the property-owner or the agriculturist—showed the real basis of Indian democracy. But while they strained at some gnats to which they were allergic, they could swallow whole camels of doubtful measures which did not specifically prejudice any special interest. The Fourteenth Amendment to the Constitution was one such. Exuberating enthusiasm for introducing democratic institutions everywhere and at any cost enabled the Government to have its way without questions asked about its somersaults in policy. Since Goa and Pondicherry were included in the list of Union Territories for which legislatures and Ministers were to be installed for popular participation, some critics were diverted to the question of the eventual absorption of the areas in adjacent States. The Prime Minister intervened to make it clear that there was no going back on assurances about maintenance of the special character of the former French and Portuguese territories; after this there came the question of a popular set-up on the same model for Delhi for which an agitation had been started by local politicians. In the midst of these controversies, the constitutional changes proposed for Himachal Pradesh, Manipur and Tripura, went almost unnoticed.

And thereby hangs a tale. On 7th December 1961, the Home Minister, Mr. Lal Bahadur Shastri, made a statement in Parliament regarding the demand for a popular set-up in these areas in which he traced the constitutional position under the old Article 240 and the Part C States Act, 1951, which were repealed after the S.R.C. report and Territorial Councils were created for them as Union Territories. He then added: "It would be very awkward that Government should again totally reverse the old decision and consider amending the Constitution. To make such radical changes so frequently will not speak well either of the Government or of Parliament." Yet, such restoration of Article 240 has now been made, without anyone apparently asking why, or the Home Minister offering any explanation in advance. The earlier policy statement was hardly recalled. An official committee appointed soon after that statement under the Union Law Minister had examined the scope for popular participation within that framework, and also submitted a report, which has not been made public, though the Government was purporting to act in accordance with its suggestions. Thus, the very strong reasons given by the S.R.C. for a different kind of administration in these areas, which were accepted by the Government and reiterated only recently, have been overruled without special justification being shown. These three Territories, already dependent on the Centre for the upkeep of their administration which costs thrice their revenue, will now get the full paraphernalia of other States without having to feel the financial pinch. No wonder that Delhi politicians are also getting restive and clamorous since pressure properly exerted pays dividends; the Government will have to find new reasons for accepting the S.R.C's views on the position of the capital city alone while throwing overboard the rest of its arguments.

Rationale for Nationalisation

It is remarkable how quickly the idea that private enterprise in this country is on probation has caught on. Originally, it seemed a happy and forceful way of reminding the private sector of its social obligations which it may tend to forget in the excitement of its pursuit of profit. Now there are many good and well-meaning friends of private enterprise who consider it a kind of *sutra* and try to interpret it literally or discover its deeper implications. In the British economy, it had limited validity so long as the Labour Party was wedded to nationalisation of certain sectors and these latter had to keep on their toes to see that they never gave sufficient provocation to the electorate or the Labour Party. Here the position under our mixed economy, as laid down by the Industrial Policy Resolution, is different; the public sector may, with equal truth, be said to be on probation, considering the numerous proposals for reform of procedures, supervision by Parliament, delegation of powers and earning of surpluses, which have all been widely discussed. In Britain, the existence of a Conservative Party to check and reverse nationalisation gave meaning to the idea of probation; at least until the Swatantra Party shows itself to be capable and willing in this respect, nationalisation will depend on what suits the Congress Party at any time than the actual behaviour of any industry.

Even when the motto is "all hands to the pump"—and the N.C.D.C's hands have not been unflagging—Mr. K. D. Malaviya has lost no opportunity of reminding every one that, one day, the coal industry should be nationalised. Here it is not a case of probation but an indefinitely suspended death sentence. At the same time, this is no reason for the private collieries to feel demoralised in their present operations or their immediate expansion plans; did not the Coalfields Committee, presided over by the leading foreign coal company chairman, recommend the ultimate public ownership of the coal industry? Similar considerations should apply also to the recent moves to have the question of nationalisation of general insurance examined. Some instances of abuse or grounds of public policy can always be discovered to provide pretexts for any step of this kind, but one can see that these fields have always been kept in reserve for those occasions in which the Congress Party finds it necessary to have a shot in its socialist arm to maintain its morale or enthusiasm. Similarly in the States, public ownership of passenger or goods transport on roads depends not on the actual efficiency of the private operator (as it may be supposed) but often on which method offers the maximum scope for a Minister to exercise patronage—licensing of private operators, who, however undesirable, may be politically useful, or setting up a State Transport department with wide scope for awarding contracts and jobs. The real deciding factor is expediency not efficiency; the probation analogy may, therefore, be overworked.

* * * *

T.T.K. on Decentralisation

Two distinct strands of thought on the Indian Constitution have been noticeable in recent years in respect of trends favouring both centralisation and State autonomy. Rarely does it happen that a leader who works long at the Centre will advocate more decentralisation of authority. Mr. T. T. Krishnamachari's Feroze Memorial Lecture last week makes him one of these exceptions; it was clear that he favoured leaving more initiative to the States, though (conscious of his present position as a member of the Union Cabinet) he chose to indicate his ideas in a subtle manner. The logic of the trend towards *Panchayati Raj*, according to him, also compelled a similar delegation of responsibility for economic development from the Centre to the States. Reorganisation of States on a linguistic basis was in itself a move in the direction of greater autonomy, but its effect has been to stress cultural factors which tend to breed an insular outlook and create discord (over issues concerning borders, sharing of waters and co-ordination of transport), instead of a healthy rivalry in development activity. There is much to be said for this view, though it may be difficult at this stage to divert attention from these trivial disputes which local politicians find it convenient to exploit for their own ends.

The pros and cons of greater autonomy can be argued at length. Even now, State Governments prepare their own plans and the Planning Commission may only process them, point out lacunæ and prune them, in order to establish some visible relationship between resources and schemes. Partly because every Five-year Plan provides a good party manifesto for the next General Election, States have not shown that degree of responsibility expected of them and the Planning Commission has been put to the necessity of preparing annual plans, reviewing progress of schemes and linking Central assistance to execution of projects. The Third Finance Commission recommended a radical change in this system by making all revenue grants for Plan schemes unconditional on performance. But there is a natural fear, even in quarters not inclined to support the Centre, that State Governments, being more exposed to political pressures than the Centre, may find it advantageous to fritter away their resources on dubious schemes to placate powerful local groups. On this reasoning, the guidance now offered by the Centre is not to be deprecated, though the Planning Commission can sometimes become too paternalistic, stern and unimaginative in dealing with the States, especially those which have no strong personality at the helm. Those which have can even now snap their fingers at the Planning Commission; at the other extreme, there are some States which are too chaotic to be amenable to the Commission. U.P. has now shattered the Planning Commission's thesis slowly built up over a decade that land tax, irrigation rates and betterment levies offer resources for State Plans.

L.I.C. and Morality

A shocking example of questionable public morality is provided by the recent judgment of the Madras High Court in a case in which the Life Insurance Corporation has deprived a policyholder of his due by entering the plea of limitation as a bar to his claim, though the delay was almost entirely caused by the Corporations own dilatory tactics. In this case (as in many others), justice was helpless before the law and the Judge had to give the benefit of the rule of limitation to the L.I.C. but only after characterising its conduct as regrettable. The particular claim relates to a period immediately following nationalisation and there were, perhaps, some good causes for the delay of three years in informing the beneficiaries under that policy that the insured person had suppressed vital particulars, a charge which the Court found difficult to sustain when the insured had several other policies which have all been honoured. This defence having failed, the honourable course would have been to settle the claim; this should commend itself to the L.I.C. even now, though the Court has dismissed the suit as barred.

It is likely, however, that, audit being what it is, the L.I.C's efforts to pay when there is no legal obligation may be questioned, unless it is regularised by a special sanction. There are, however, strong reasons why such sanction should be made without delay. Public confidence in the L.I.C. is bound to suffer a setback if the matter is allowed to rest here. Its delays in settling claims are common knowledge and the Estimates Committee brought them to light; improvements made since are not known, since there is apparently no statutory or other obligation on the L.I.C. to disclose the number of claims pending for various long periods (though its other exploits are paraded from time to time and *Yogakshema*, its house journal advertises its officials through a meticulous compilation in prose and picture of their observations and other trivialities). Perhaps, an amendment of the law is also necessary, since it is wrong to treat a claim by a beneficiary under a policy as a mere claim for money, attracting the normal rule of limitation. This position is obviously anomalous and particularly so after repeated declarations of the L.I.C's social objectives. A result of leaving the matter in its present state (if no appeal is filed) will be to encourage every claimant under a policy to file a suit for recovery even before getting a reply from the L.I.C. to be on the safe side; liability for costs in such proceedings may more than offset whatever advantage the Corporation can gain by re-agitating concluded contracts for life insurance in this way.

* * * *

Tailpiece: A large firm advertised for a "one-armed" economist. This proved futile and when the managing director was asked by the University Appointments Board why he was particular about a mutilated specimen, he replied, "We must have a one-armed one to advise us. All the others keep saying, 'On the one hand you could do *this*, but on the other hand you could do *that*.'"

ROLE OF ADVERTISING

A LEADING British economist once said that advertising was half business. This statement admirably highlights the importance of advertising, be it in a sellers' market or a buyers' market. The importance is all the greater in India in the context of its expanding economy and the need to earn as much foreign exchange as possible through exports. The vital role that advertising plays in this a context was well brought out by both Mr. Bharat Ram, Chairman of the Indian Society of Advertisers, and Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, in their respective speeches at the tenth anniversary of the Society held at Bombay on Monday this week. Incidentally, it may be noted here that the Society has, during the brief ten-year period of its existence, made a large contribution to the development of healthy and productive advertising. Having as its members nearly a hundred leading manufacturers, including public sector enterprises, the Society accounts for almost 75 per cent of all national advertising in India.

Although the primary objective of advertising is to educate consumers to choose and buy the products best suited to meet their requirements, it is also being increasingly used, as Mr. Subramaniam aptly remarked, in the service of social needs and the growth of social ideas. A typical example of this service is provided by the liberal space donated by advertisers to encourage people to patronise blood bank, to help blind and other handicapped people, to contribute to flood relief funds and Prime Minister's fund, to assist the Red Cross, to invest in National Savings Certificates and so on. Again, the Government is constantly calling for more and more exports. There seems to be no weapon in this job of selling so important and vital to its success as advertising, provided, of course, every care is taken to see that the exportable items compare favourably with those supplied by other countries from the point of view of quality, price and delivery. Mr. Bharat Ram certainly struck a note of realism when he declared that one of the positive steps towards export promotion is to advertise our goods abroad, to undertake intensive and extensive market research and merchandising programmes, to create a good image both for branded goods and for standards of Indian manufacturers—in short, to engage in aggressive salesmanship. Mr. Subramaniam, too, agreed with this view, though he stated with reference to sales for domestic consumption that it was doubtful whether there should be "aggressive salesmanship" particularly in our country where saving is so necessary. He also admitted that there was scope for persuasive advertising, but wondered if competitive advertising between one firm and another served any purpose. Indeed, he went to the extent of saying that such advertising involved much "social waste" which should be avoided.

There is some relevance in these remarks of Mr. Subramaniam, in the context of the closed market that India is today in view of the severe restrictions on imports and of regulated growth of productive capacity necessitated by scarcity of resources. An additional factor is shortage of newsprint. In these circumstances, collective advertising, rather than advertising by individual manufacturers, may be appropriate. But there are also other, perhaps weightier, considerations to be borne in mind. Even if certain products are well known, they have to be advertised in the press, because (*a*) the domestic market is pretty vast (430 million consumers), (*b*) the consumers are widely scattered, and (*c*) every manufacturer has to build an image in the public mind about his product, so that, by the time production expands and competition increases, he may build up sufficient goodwill and market for his goods.

The Indian manufacturer, as Mr. Bharat Ram rightly averred, has a very diffused market, diffused both geographically and linguistically and, therefore, his campaigns have to be widespread; this does not give him the opportunity to concentrate on a limited area or restrict his operations to select languages. Moreover, the Press depends largely for its sustenance on advertisement support from firms manufacturing and distributing well-known products, especially as the financial position of small firms or the firms producing goods not sufficiently known does not permit them to take liberal space in newspapers and journals. It is needless to say that, without adequate advertising revenue, the Press will not be able to reach a wider section of the Society by improving the quality of its contents and lowering the price. Again, if the Press is to be independent and completely free from pressure from advertisers, it is desirable to have as large a number of advertisers as possible and this will be feasible only if each manufacturer advertises his product separately. As a free and fearless Press, an indispensable condition for the survival of democracy, the "social waste" referred to by Mr. Subramaniam is not such a waste at all. It is precisely on this ground rests the plea that the Government should not grudge the Press a liberal quota for import of newsprint.

STEEL AND HEAVY INDUSTRIES

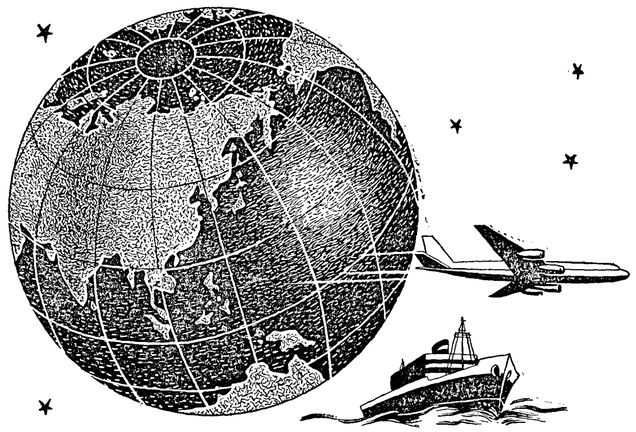
For more than a year now, engineering industries have been afflicted with serious shortages of pig-iron, mild steel, alloy and special steels, steel castings, machine tools, and so on. These shortages, together with inadequate and fitful supplies of coal, coke and power, have doubtless been responsible for the steep fall in utilisation of capacity in the industries concerned. The situation is such that it can be remedied only by greater drive and dynamism on the part of the Government as well as the private sector. As far as the Government is concerned, the need for these qualities is all the greater, because it has assumed the larger responsibility for the development of steel and other heavy industries. Happily the current signs point to some vigorous activity in the Union Ministry of Steel and Heavy Industries, thanks to the initiative taken by Mr. C. Subramaniam who is in charge of it.

Some at least of the Minister's utterances in Bombay on the 8th inst. have encouraged businessmen to believe that his Ministry means business. There is, for instance, the proposal currently under consideration for establishing pig-iron complexes in the public sector. As integrated iron and steel works in either sector are not interested in producing more pig-iron for the market and medium-scale pig-iron plants licensed in the private sector have also not fructified so far, the proposal to establish pig-iron complexes in the public sector deserves to be pursued. Mr. C. Subramaniam has given the assurance, in this connection, that the possibility of establishing a pig-iron plant in Goa would be immediately examined. With its abundant supplies of iron ore and with practically no large-scale industries there, Goa should naturally claim the first attention. But it will take 30 months to put up even a purely pig-iron plant, and so the Ministry should take a prompt decision in the matter.

As for supplies of mild steel, the situation is expected to improve only gradually. Even the Minister has not held out the hope that the full commissioning of the Rourkela plant would be possible before March next. That things are being set right there is the only heartening piece of information given by him. Engineering industries would, therefore, have to await the recommendations of the recently-constituted Iron and Steel Distribution Committee which is expected to report before the end of this year. There is the Minister's assurance, in this connection, that he would take prompt decisions on the Committee's report, and that may be deemed good enough for the present.

The supply situation pertaining to alloy, tool and special steels cannot be expected to improve in the near future. The licences issued to the private sector for establishing their manufacture are not being utilised fully and the public-sector plant at Durgapur, too, has been slow in coming up. The proposal to convert the Bhadravati Iron and Steel Works into an alloy and special steel plant is still hanging fire. Now that the German experts, who examined the possibilities of such conversion, have reported that it would be feasible to produce 40,000 tons of alloy and special steels by the end of 1963, it is high time the Government took early steps to implement the project.

In the case of steel castings and forgings, the failure of the private sector to implement the licensed projects is difficult to understand. The Minister's disclosure that 19 unutilised licences for an aggregate capacity of 64,000 tons of castings and 25 unutilised licences for an aggregate capacity of 65,000 tons of forgings are going to be revoked is rather disquieting. Similarly, his disclosure that as many as 60 unutilised licences for an aggregate capacity of Rs. 21 crores worth of machine tools are also going to be revoked is tantamount to a stricture on the private sector. Why have the parties, who obtained these licences, not cared to take appropriate steps for establishing the manufacture of the products concerned? They might have had real difficulties in the way, and so their lapses might be excusable. The crux of the matter is that there are not enough competent entrepreneurs in the private sector to implement the projects earmarked for it. That apart, the engineering industries cannot entirely blame the public sector for shortages, for their vital raw material requirements have also to be met, albeit to a smaller extent, by the private sector itself.



Exports? Imports? Letters of Credit? Foreign Remittances? Travellers' Cheques?

Foreign Trade is becoming more and more complex every day—Exchange Control Regulations of the various countries need careful attention—details of foreign collaboration of any nature require careful study of the various aspects. Whether it is information that you require or consultation upon any problem, or just efficient service, **THE BANK OF INDIA LTD.,** with its foreign branches and correspondents in almost all parts of the world, can help you expand your overseas business.

THE BANK OF INDIA LTD.

WORLD FOOD BANK

The programme drawn up by the Food and Agriculture Organisation of the United Nations for multilateral food utilisation, has begun to take concrete shape. Pledges, amounting to $86 million, towards the creation of a World Food Bank have just been made by about 30 countries. The aggregate target is $100 million. This target is likely to be fulfilled completely as a few other countries are expected to bring in more contributions. The pledges are made in the form of food, cash and services. Of the total amount now pledged, the U.S. has made the largest contribution, that is, $50 million, mostly in terms of commodities and the rest by way of cash and ocean transport facilities. It may be recalled that the suggestion for the World Food Bank first came from the U.S. at a meeting of the F.A.O. Inter-Governmental Advisory Committee in April 1961. The U.S. delegate then offered to provide $40 million in commodities, with the possibility of a supplementary cash contribution. While making this offer, he made it clear that the U.S. favoured a multilateral approach towards utilisation of food surplus as a supplement to bilateral arrangements, with the widest possible contribution by member-countries.

Several other countries have since followed the lead given by the U.S. West Germany, for instance, has offered $8 million and the U.K. and Canada $5 million each for the project. True to the spirit of world co-operation and give-and-take policies, developing countries, too, have agreed to help the cause according to their mite. India, for instance, has pledged $500,000, of which one-third will be in rupees and the rest in commodities and services. But conspicuous by its absence in these efforts is Russia. Presumably under Russia's inspiration none of the Soviet bloc countries, except Rumania, has participated in this programme. It is, indeed, unfortunate that Russia, the leader of the Communist bloc, has chosen to boycott a movement designed to help meet some of the food needs of underdeveloped countries. The disappointing trends in Soviet agricultural production cannot be the only reason for Russian indifference, for this is not the first time that the Soviet Union has declined to participate in multilateral aid programmes. That country, possibly, is intent on resorting only to bilateral disposal of agricultural commodities and not participate in an international agency in which the free countries are in the majority. It is regrettable that Russia should look at such humanitarian services of the U.N. also from a political angle.

The Food Bank, with resources of only $100 million, is only a modest programme, but it has also only modest objectives. It does not seek to cater to all food needs of less-developed countries during their development stage. It is meant largely for emergency situations, apart from providing food for those working on certain pilot projects for economic development. Consequently, the World Food Bank deserves the ungrudging support of all countries.

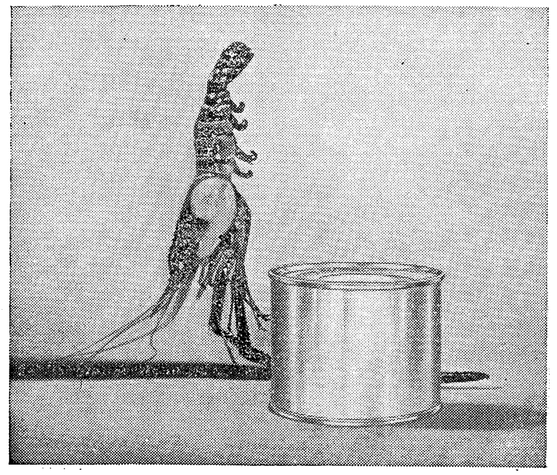
FOREIGN TRADE

The joint meeting of the Export Promotion and Import Advisory Councils at New Delhi last week-end was a drab and dreary affair. Their deliberations treaded the beaten track and appeared almost redundant in the context of the monthly discussions of the Board of Trade. The only element of surprise was sprung by Mr. K. C. Reddy, when he hinted at the possibility of further import curbs during the next half-yearly licensing period beginning October. This must have been unpalatable to business men, particularly to the Vice-President of the Federation of Indian Chambers of Commerce and Industry, Mr. Bharat Ram, who had made a strong plea for the relaxation of import restrictions earlier at the meeting. The Government's anxiety to maintain and extend import cuts is understandable, in view of the persistent foreign exchange scarcity. But, in doing so, it will do well to maintain crucial imports, particularly essential raw materials and components, which have a close bearing on industrial production and exports. It may be recalled here that imports, which had been steadily rising from 1958-59 (Rs. 906 crores) to 1960-61 (Rs. 1,122 crores) had been brought down in 1961-62 (Rs. 1,088 crores). During the seven months ended July 1962, imports were lower at Rs. 575 crores, as compared with Rs. 625 crores during the corresponding period of 1961. There is no doubt that the slower rate of growth of industrial output in 1961-62 (just 5 per cent, as compared with 11 per cent in 1960-61), has been caused, among others, by the curb on imports.

Strict control on imports, all the same, is a necessary evil so long as exports do not pick up. But the prospects for export promotion are by no means encouraging, what with the shortages of coal, power and transport within the country and the continuing decline in world commodity prices. Mr. Reddy was certainly right when he averred that the "export outlook still remains difficult." India's actual performance on the export front during the first seven months of 1962 only confirms Mr. Reddy's assessment of the situation. Exports, no doubt, increased by Rs. 4.14 crores to Rs. 372.17 crores during January-July 1962, as compared with the corresponding period last year. But this rate of growth is virtually insignificant, for the current annual average is less than Rs. 640 crores, as against the target of Rs. 720 crores set for 1962-63. Further, some of our major traditional commodities have suffered setbacks. Although the quantity of tea exported during January-July increased by 6 million kgs. to 87 million kgs., actual earnings at Rs. 49 crores have not registered any increase.

What is still worse, exports of cotton textiles, which had touched the lowest level of the last decade in 1961, continued to face rough weather and, during the first seven months of 1962, went down further to Rs. 25 crores, or a decline of Rs. 7 crores from the corresponding period in 1961. There have been declines in the export of several other important commodities, such as manganese ore, coffee, raw cotton and waste, leather and leather manufactures and fish and fish preparations. Besides, India's exports to the U.K., the major customer, fell by Rs. 6 crores to Rs. 66 crores in the first half of 1962 and those to the Common Market Six by Rs. 7 crores to Rs. 22 crores, as compared with the first half of 1961. It is only natural, in this context, that Mr. Reddy should have expressed his dissatisfaction over the terms which the U.K. has agreed for its entry into the Common Market, particularly those relating to cotton textiles. His plea to advanced countries to desist from protecting and subsidising simpler forms of manufactures in the production of which less-developed countries have a

(*Continued on next page*)



Compatible?

HOW LONG WILL A PRAWN LAST? And how will it taste in hot April or humid August, or in a home in far off California? That depends largely on the container—whether it is strictly compatible with the prawn. Container and product compatibility is a matter of packaging research and engineering development, which is a continuous, ever-changing process. And this is why at the Metal Box Research Division and Technical Development Section highly qualified scientists and technicians work to

—conduct tests on package-product compatibility and keeping qualities
—advise on individual packaging problems
—create new products, develop new processes and modernise established ones
—develop local sources of supply for previously imported raw materials ... help improve the quality of raw materials
—design can-closing and bottle-sealing machinery.

All this and some 30 years' experience of the nation's packaging requirements help Metal Box offer a complete packaging service tailor-made to customer needs, supported by up-to-date technical resources and inspired by a fund of ideas for the future.

CONFLICTING REGIONAL AND NATIONAL OBJECTIVES

IS PRACTICAL RECONCILIATION POSSIBLE?

By Prof. V. G. Ramakrishna Aiyer

SO long as India is a single political unit and movement of goods and personnel is free throughout its territory, the economic development of any part of India in broad terms benefits every other part of the country. A narrow regional view insisting on meticulous proportional development of every State or region is likely to slow down progress. The Indian federation is not built on the States' rights concept (like the American federation) but on the Centre's devolution of power to the States. The States have no rights beyond what is vouchsafed to them by the Centre, and the more or less nominal nature of the federal structure has been reinforced in the last ten years by the machinery of the Congress Party which is also highly centralised. The economic autonomy of the States was even more circumscribed than their political autonomy. It was therefore inevitable that the development of States as individual entities or of two or more of them or of contiguous areas of two or more of them as regions should become in practice a matter to be determined broadly by the Centre.

Regional prosperity in so far as prosperity is divisible depends to a considerable extent on Central decisions. The priorities of planning that we have adopted also work the same way. For instance, Railways, Communications and Ocean Transport are the concern of the Centre, and the Centre determines how much these should be developed mainly in relation to the requirements of its own projects in other sectors of planning, such as industry and trade. In very many cases the answer to the question whether any State has benefited from planning and how much, depends upon what the Centre has done for its own plan in that State. State or regional development has rarely been determined by the priorities of the region or State. It has been the resultant of the priorities of the Centre, and it is well that in the early stages of economic development an overall view is taken of economic development, and the apparently conflicting objectives as between the Centre and the States as well as between the States is lessened.

Inter-State Projects

Though we often hear more of inter-State disputes, there has been more impressive evidence recently of the readiness of the States, particularly in the South, to recognise their common interests in specific projects and co-operate for their success. The frequency of inter-State disputes over the sharing of waters only indicates the extent to which the interests of the people are bound up without regard to political borders which have been often arbitrarily drawn or redrawn in recent times. It is necessary to emphasise that State Governments and State plans must be viewed as an administrative convenience and not as a device with which to guard the real or imaginary rights of any group of people. This is particularly the case where the configuration of the land presents special problems in respect of the irrigation of certain tracts, and it would be detrimental to national integration to insist that the source of water and the irrigated areas should be within the boundaries of the same State. The Mysore Government, for instance, is reported to be opposed to the Madras Government's claim for a share of the Krishna and Godavari waters on the ground that the waters of the river cannot be taken outside the river basin while the new Andhra Pradesh Cabinet of Sanjeeva Reddy is favourable to the settlement of such questions by inter-State agreements in the larger interests of national integration.

Modern engineering technology has made it possible to take river waters to distant points. The deciding criteria have been technical possibility, the cost and the need. Many of the conventions and codes that have been developed to resolve disputes over the sharing of waters of a river flowing through more than one country cannot obviously apply to rivers within a single country, and it is up to the people of the different regions forming part of the same nation to see that the natural resources—manpower, coal, mineral ores, water—are utilised in the best interests of the nation at the minimum cost and the shortest possible time. While recognising the special needs of the different regions as a relevant consideration, it is necessary to stress the priority of national over sectional considerations, and we may expect the Gulhati Commission's findings on these questions will help to iron out the differences and provide a formula for reaching mutual agreement on a none-too-legalistic basis.*

Though there is Central machinery authorised by the Inter-State River Disputes Act to settle problems of inter-State rivers, the better way will surely be to settle them by mutual agreement. Though each State concerned may no doubt exhibit understandable concern for the welfare of its people, the argument cannot be pressed unduly.

Parambikulam-Aliyar Project

The Parambikulam-Aliyar project in the South is a recent noteworthy instance of constructive co-operation between Madras and Kerala, which envisages the prospect of lands in one State benefiting from the irrigation sources in another. It is worthwhile to state the salient details of the agreement that has been reached between the engineers of the two Governments. Broadly it will benefit 63,500 acres of land in the Chittue Puzha valley of Kerala which falls under four categories. Of the 20,000 acres of double crop land which are already under irrigation in the first category, for 5,000 acres the Madras Government will release water from the Aliyar reservoir. Under the second category of 7,500 acres which could be brought under double-crop irrigation, water will be found from the Kerala share of the Parambikulam flows, and the exact quantity available is to be determined by gauging to be done jointly by the Madras and Kerala Governments; it has been agreed that the joint gauging should start from 1st April. In the third category of 23,000 acres that could be irrigated, the two Governments have agreed regarding the manner the waters should be utilised from the Thekkadi Reservoir of Parambikulam-Aliyar project. Regarding the fourth category of land relating to 13,000 acres uncommanded by any of the Kerala schemes but commandable by extending the Madras canals, water could be given from Kerala's share and the proportionate cost could be met from Kerala.

River valley schemes and electricity projects are related mainly to regional requirements. It is true that they are financed mostly from the States' plans but the Centre planned them in close collaboration with the States. There has been an under-utilisation of irrigation waters. For instance, schemes of the first two Plans created an irrigation potential of 13.2 million acres and the utilisation came to nearly 10 million acres, and if we go into the figures State-wise, we can realise the seriousness of the problem. In Gujarat utilisation is said to be one-third of the potential, and in Maharashtra and Mysore, less than half; it is two-thirds in W. Bengal and three-fourths in U.P. and Orissa. It is an encouraging feature of the third Plan that it seeks to reduce substantially the gap between potential and utilisation particularly in those States where it is widest, and Central and inter-State co-operation may help realisation of the targets.

Power Generation

As in the case of utilising irrigation waters, the realisation of benefits from power programmes has been made worse by each State fending for itself in meeting the demands of its energy consumers. Inter-State grids are yet to be organised, and a beginning has been made in the southern States, and it is expected that they will receive some attention in the third Plan. If the electricity loads in the States are pooled, and the energy is generated to the fullest extent of installed capacity, power shortage could be mitigated to some extent. There is no doubt there is great scope for inter-State co-operation in power generation and supply. Though it is true that no State can experience a surplus of power, the differences in the rate of increase in the demand for power, and in the progress of specific schemes in the different States are sure to create scope for give-and-take. The four southern States of Andhra, Kerala, Madras and Mysore have agreed to have a common grid for the region and the southern Regional Council has approved of the proposal in principle, and the Central Water and Power Commission has undertaken studies into its application. Already the construction of a 220-kV inter-State link for interchange of power to a limited extent is being taken up. Recently Mysore made a request to be allowed to tap the Madras State Grid near Hosur to meet the pressing needs of its industrial plants in and around Bangalore. The necessity to share power is inherent in the present set-up in which hydel power is predominant, since such interchange is a matter of vital necessity on account of differences in the time and extent of rainfall of the territories of the States. This is the case with the hydel power schemes of the Western Ghats where power exchange is possible with Kerala State areas, while Madras power that might be in excess could be tapped to meet the needs of South Mysore industries and of Bangalore, in particular. For instance, though the Sharavathi scheme being situated in the northern area of Mysore State has a heavier output, it is likely that power linking with the Koyna system of Bombay would be more economical than taking the power down to Bangalore for which the Madras projects are nearer. The newly conceived Hogenekal scheme in Salem district would also be more convenient for this area when it is implemented. The same holds good for the Balimela-Guntawada project which has to share power and costs between Orissa and Andhra. The integration that is possible in power should lead to its extension in other directions which should help the development of the southern region. In conclusion, the foregoing account of recent developments indicate how conflicting regional and national objectives—State and Central goals, and inter-State rivalries in the matter of river valley development, mineral development, industrial location etc.—can be reconciled in a practical manner in the larger interests of national integration and overall economic development.

*[The Gulhati Commission is already stated to have finalised its report. The development potential of the Krishna and Godavari rivers, as assessed by the Commission, is to be utilised in an agreed and co-ordinated manner for the benefit of each one of the four States concerned, namely, Andhra Pradesh, Maharashtra, Mysore and Orissa. Full details of the report, which is presumably under the consideration of the Union Ministry of Irrigation and Power now, are not yet available.—ED.]

SURVEY

(*Concluded from previous page*)

comparative advantage is no less unexceptionable.

One does not know how far the West will help developing countries like India by offering liberal export opportunities. Self-help, as the old saying goes, is perhaps the best help. Export promotion efforts would, therefore, have to be strengthened and made more effective. In this context, the Government's move to established regional councils for looking after India's trade with the different continents is to be welcomed. Already, a Council has been set up for Europe. But regional councils of the kind will be fruitful, only if they are able to help the business community in undertaking market research and publicity campaigns and to ascertain the consumer preferences characteristic to each region. For this purpose, it is necessary to strengthen the commercial sections of embassies abroad by increasing the number of qualified staff and making arrangements for getting from them market surveys of interest to the Indian business community in a systematic and regular way. In this connection, one does not know what has happened to a scheme of the Export Risk Insurance Corporation, worked out over a year ago, for underwriting the risks involved in market research and other exploratory work. So far as we know, the scheme is yet to be implemented. This is one of the instances which show that, despite big initial talk, concerted and sustained efforts are not made in time to tackle basic issues of export promotion. The Corporation's new scheme for issuing policies to small exporters to cover risk of "non-acceptance" in the case of credit needed by them is also apparently good, but it will serve the purpose of export promotion, only if it is implemented expeditiously.

NEWS IN BRIEF

THE Government of India has sanctioned foreign exchange worth Rs. 3 crores for the installation of 2,100 broad jute looms.

The raw film plant now being set up at Ootacamund (Madras) by the Hindustan Photo Films Manufacturing Company is expected to go into production next year. The total cost of the plant is estimated at Rs. 8.35 crores, including the expenditure on township.

The National Physical Laboratory has invented an instrument, called "metal detector," which is useful in locating metal close to the skin, but not embedded within the body. The laboratory has made a certain number of instruments for the use of Customs authorities.

The total population of India is now 439.235 million, according to the final figures of the latest Census released by the Census Commissioner. This figure includes the population of Dadra, Nagar Haveli, Goa, Daman and Diu, Manipur, North East Frontier Agency, Nagaland, Sikkim and Pondicherry.

The agricultural farm to demonstrate Japanese methods of intensive cultivation to Indian farmers, established by a group of Japanese farmers at Chakuli, about 23 miles from Sambalpur near Bombay-Calcutta National Highway, was inaugurated by the Japanese Ambassador in India, Mr. Kota Matsudaira, on Monday, the 10th inst.

The foundation-stone of the public sector synthetic drugs factory at Hyderabad was laid by Mr. K. C. Reddy, Union Minister for Commerce and Industry, early this week. The factory, estimated to cost Rs. 20 crores is being put up with Soviet collaboration. It will have a capacity to produce 850 tons of modern synthetic sulpha group drugs, anti-T.B. drugs, anti-pyretics, vitamins, etc., and 4,600 tons of intermediates from which these drugs will be manufactured.

An agreement has been signed between the Governments of India and the Soviet Union, under which the latter will collaborate with the National Coal Development Corporation in building up a Central Workshop at Korba in Madhya Pradesh. The workshop will cost Rs. 2 crores, including the cost of supply of Russian equipment worth Rs. 79 lakhs. The finance for the project is covered by earlier 500-million rouble credit granted to India. Besides manufacturing spare parts, the Workshop will carry out overhaul and major repairs to mining machinery and equipment.

An agreement, providing for an additional rebate of 5 per cent in freight on imports on account of Central and State Governments as well as public sector undertakings fully owned or controlled by the Government, has been signed at London between the representatives of the Government of India and the U.K.-Continent-India-Pakistan Conference Lines. So far the Conference Lines have been allowing an immediate rebate of 9½ per cent or a deferred rebate of 10 per cent, except in case of shipments arranged through the India Stores Department, London, for Defence, Railways, Posts and Telegraphs and Ports, where a rebate of 15 per cent was allowed. The new rebate is expected to save foreign exchange to the tune of Rs. 50 lakhs annually.

Five contracts for the supply of plant and equipment by Russia for the 400,000-kw. thermal power station to be set up at Patratu in Hazaribagh district in Bihar have been signed. Under the contracts, the Soviet Union will send specialists to render technical assistance in building the power station and in running the equipment. The contracts also cover the designing work and training of 24 Indian power specialists in the Soviet Union. The Soviet Union will depute 54 Soviet experts to India for rendering technical assistance in construction, adjustment and commissioning of this power station. The total estimated cost of the power station, including the dam, building and road, is Rs. 42 crores. Payments for the equipment for the plant will be made in Indian rupees.

The Export Risk Insurance Corporation (E.R.I.C.) has decided to issue a new insurance cover to help the small exporters who often find difficulty in getting a line of credit from banks. Normally, credit insurers the world over do not cover risks of "non-acceptance" by the overseas buyers. In view of the peculiar difficulties of small exporters in India and the imperative necessity to augment the country's exports, a new insurance policy will be issued by the E.R.I.C. which will take care of their risk, subject to proof of the credit-worthiness of the exporter and the quality of goods. The "non-acceptance" risk policy will serve as an important collateral security for banks and will considerably ease the position in regard to credit availability for small exporters.

From Abroad

In a referendum held recently in Singapore, the majority of voters have favoured the country's merger with the Federation of Malaya for the establishment of Malaysia.

There was an average of one car for every 30 persons in the Common Market countries in 1960, as compared with one for 17 persons in 1958 and 30 persons in 1954.

Foodgrains production in West Germany is expected to go up to 15 million metric tons in the current calendar year, representing an increase of 20 per cent over the previous years and 8.5 per cent over the 1956-61 average.

A Canadian company, Autair Helecopters, has entered into an agreement with the Westland Aircrafts of the U.K. for the joint operational exploitation of the Westland hovercrafts in Canada. Hovercrafts have been developed only recently by the British Company.

The Ceylon Government proposes to set up a plant to manufacture "instant tea," a tea extract powder which dissolves in hot water, in collaboration with a West German firm, Haelssen und Lyon. Instant tea is proposed to be exported in large quantities by Ceylon.

The *per capita* national income in Japan rose by 17.2 per cent to 143,686 yen ($399) in 1961, as compared with the previous year. Japan's gross national product (G.N.P.) in 1961 at about 16.98 million yen was higher by 21.5 per cent nominal and by 15.2 per cent actual over 1960.

The average hourly wage increase in West Germany during the year 1961 was 10 per cent, as compared with 8.9 per cent in 1960 and 5.1 per cent in 1959, according to E.E.C. Commission's latest annual report. Wages in 1961 rose by 8 per cent in France, 5 per cent in the Netherlands and 2 per cent in Italy.

Ten leading Japanese steel mills have decided to effect a further cut in their production of crude steel and ship plates during the last quarter of 1962 from the level of the corresponding quarter of 1961, according to the Japan Iron and Steel Federation. The decision is said to be a sequel to the need for allowing market prices to recover from the current low levels.

World steel output touched 193.06 million tons during the first half of 1962, which was 5.8 per cent higher than that in the first half of 1961 (182.55 million tons) and 2 per cent more than the record output during the corresponding period in 1960. The U.S. output was higher at 54.1 million tons (or 28 per cent of world production), as compared with 44.86 million tons during the first half of 1961 (about 25 per cent of the world output). Steel output in the Soviet Union was also higher, but there were declines in that of the European Coal and Steel Community, the U.K. and Japan.

PERSONAL

MR. Jawaharlal Nehru, Prime Minister of India, left last week-end for London to participate in the Commonwealth Prime Ministers' Conference. He will be back home on 1st October, after paying visits to Paris, Lagos, Accra and Cairo. Mr. Nehru was accompanied by Mr. Morarji Desai, Union Finance Minister. From London Mr. Desai will proceed to Washington to attend the annual meeting of the World Bank and the I.M.F. due to begin there on the 17th inst.

Mr. Sankardas Banerji was sworn in as West Bengal's Minister for Finance and Transport on Sunday this week.

Mr. R. L. N. Vijayanagar, acting Secretary of the Millowners' Association, Bombay, has been confirmed in the post.

Mr. R. Doraiswamy, Chairman of the Forward Markets Commission, has been appointed Textile Commissioner to the Government of India.

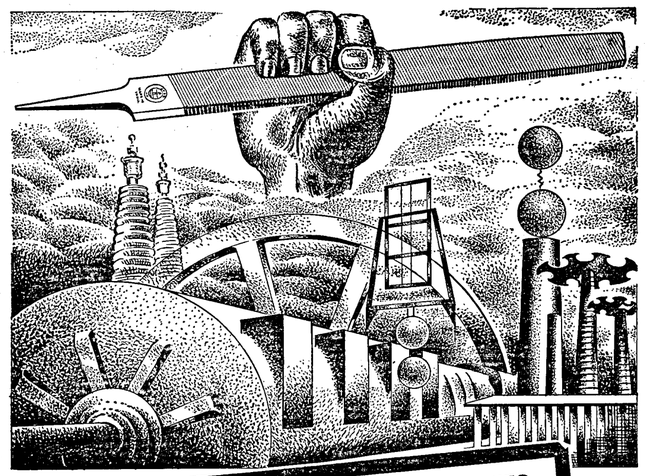
Mr. Bhaskar Ganesh Kakatkar, Honorary Secretary of the Indian Cotton Mills' Federation, has been appointed Secretary-General of the Federation, with effect from the 1st inst.

Mr. Manubhai Shah, Union Minister for International Trade, has left for Kabul to review the existing trade agreement with Afghanistan and finalise matters relating to ceilings for the next year.

Mr. K. M. Bhujpuria has been elected President of the Indian Grain Dealers' Federation, Bombay, for 1962-63. Mr. V. N. Salia and Mr. J. S. Sharma have been elected Senior and Junior Vice-Presidents, respectively.

Mr. Prakash Chandra Sethi, Union Deputy Minister for Steel and Heavy Industries, will visit Czechoslovakia in the third week of this month on an invitation from the Czech Government. Besides attending the industries fair there, Mr. Sethi will visit the steel and heavy engineering works in that country.

Mr. R. D. Char, Chairman of Standard Batteries and Fuel Injections, has left for the U.K., Continent and the U.S. to discuss and finalise collaboration arrangements for the expansion of existing works, particularly for boiler plant, water treatment plant, air filters, etc.



The thumping of giant presses, the whine of the whirling lathe, the beat of the punch press, the rumble of the conveyor... metal and machines rolling smoothly, producing rapidly, satisfying India's industrial needs, fulfilling the nation's dynamic urge for economic progress... and behind it all, the tiny but indispensable tool, an exclusive JOHN BAKER precision product.

LONDON LETTERS

WHITHER SILVER?

DEMAND EXCEEDING SUPPLY

(From Our Own Correspondent)

LONDON, *8th September*

THE principal fact behind the rise in the London price of silver over the past fortnight is that, whereas world production is only around 210 million ounces, world consumption has risen to around 350 ounces per annum. Nor is this consumption substantially reducible, since the major part of it is industrial and over a quarter is used by one principal consumer, the photographic industry. Unless some substitute can be found for silver nitrate, there is little elasticity in demand.

In the light of all this, the rise of just over 6*d.* per ounce over the past fortnight is not inordinate; what has attracted attention is that the metal has now gone to a price of 82*d.* that is, 2*d.* above the historic maximum reached in February 1920, the year in which India switched its currency base from silver to gold.

The gap between supply and demand is no *new thing*, but *it has hitherto* been filled mainly by sales from the vast stocks hoarded by the U.S.A. which has taken so long to reconcile itself to abandoning bimetalism. It is barely a year since the Americans felt that the pressure of demand was sufficiently great for them to unpeg the price of silver and provisionally suspend sales from its so-called "free stock." It is reported that the amount of free stock left at that time was just over thirty million ounces or rather less than 10 per cent of national demand. In short, that free stock is neither here nor there in the long-term and it is dubious whether the stocks bought up by Mexico earlier this year would, if at all released, make an appreciable contribution.

Of course, on top of the industrial demand, there are at the moment substantial speculative possessors, although the latter live in fear that the market might be increasingly flooded by released hoards. In this country, the 1920 debasement of the silver coinage, or rather its replacement by a copper nickel coinage, removed the temptation to melt the currency down for its intrinsic value. A substantial quantity of pre-1920 silver coins still circulate and these will shortly be looking for the melting pot. In America, the price of silver must rise by another 10 per cent before melting points is reached. Then there is a supply of unknown size in silver articles of little worth except their intrinsic metal value and the publicity now being given to the high price of silver may well bring out many "an unwanted cup." This is a poor time for France and Germany to consider the re-introduction of a real silver coinage—a new franc piece and a mark piece—and the present rise in price may make both Presidents consider that, perhaps, their *amour propre* would be satisfied with cupro-nickel. If the future supply of silver is to depend upon a revival of interest in base metal mining, then there is no saying to what level the price might go to make this economic. Any experiment in recreating a silver coinage for sentimental reasons is, therefore, bound to be risky.

In the short run, the large gap between supply and demand can be met by releases from hoards in Mexico, China, India and South America—to say nothing of possible releases by European countries who may decide to abandon the idea of silver coinage and possible releases from the vast monetary stocks held by the U.S.A.; the latter can, of course, be done with impunity, once the silver lobby is satisfied that the market is going to look after their interests without need of recourse to the U.S. Treasury.

In principle, the short-term position is obscure to the extent that we do not know at what rate the big hoarders, official and unofficial, will release their stocks. In practice, each rise and pause in price is likely to bring out some more but fractional increase in supplies. But now that the indispensable industrial role of silver is established, quite apart from its continued desirability in artistic objects, the long-term price trend must surely be upward until a closer equilibrium is established between annual production and demand.

RUNNING A TREASURY

LONDON, *1st September*

Ever since the Rooseveltian era in America and the end of the 'thirties in this country, it has been a growing matter of controversy how one could combine in a Treasury or Finance Ministry the functions of control of the budget and control of the economy. This controversy has raged not least hotly among British economists and British civil servants of war-time vintage. The reason why the war is important is that it involved a vast increase in direct Government activity. Much business was wholely swallowed up by the Government and the problem became acute of keeping production moving at an economic financial cost and keeping overall control of Government spending; under the special conditions of war, the last went by the board—even the Treasury had to bow its head to the overall importance of getting things done.

In those days, the production departments, such, for instance, as those engaged in the production of munitions, became all-important. At first, they were saddled with finance divisions whose function was to supervise all proposed expenditure before it was submitted to the Treasury for approval, but it soon became clear that these departments were merely fifth wheels and the production men quickly got their own direct contacts with the Treasury and there, as noted above, the Treasury had to accept whatever was in the war interest. Nevertheless, its effective standing in the British political and administrative scene has rarely been lower. In the post-war years, it climbed at first slowly and then swiftly back to power. In the new political atmosphere in which the Government was held responsible for the economy, the controversy blossomed anew and caused immense concern. It may be noted, in this connection, that, in the recent political changes in the Government, there have been parallel changes in the Treasury. The two are not, in fact, linked, but the Treasury changes represent a new attempt to resolve the problem of financial control.

In the "good old days," when the Treasury was only responsible for the budget, there were no problems. The Government agreed that so much public money should be spent and the Treasury showed how it was to be obtained and then checked to see that no more than had been agreed was, in fact, spent. No economic considerations intervened. How different is the position nowadays, when the Government is not only expected to balance the Budget but also the balance of payments and to ensure full employment and stable prices. At first, it was urged that the combinations of all these tasks could not be trusted to the Treasury alone—in some countries, indeed, one finds Ministries of Economic Affairs and Ministries of Finance. The former are responsible for matters affecting the well-being of the economy as a whole and the latter for budget matters. But this is not in itself a solution to the problem, since it may often be that the objects aimed at by the two departments are incompatible and then someone else has to resolve them.

Thus, whenever it was argued that the British Treasury was only competent to look after the British budget and that, since the thinking of its civil servants was dominated by this, the control of the economy, the control of the Bank of England, money market policy, balance of payments matters, the gold reserve and so forth: all these must be retained somewhere else. And yet it is obvious that these two aspects cannot be separated: taxation and the vast volume of public spending are in themselves important factors in the national economy.

For this reason, an opposing school considered that the necessary reform to have a proper balance between these various aspects must take place within the Treasury but that the Chancellor of the Exchequer should be responsible for the economy as a whole including in that—and as only *one* of his roles—responsibility for the budget.

The changes recently agreed upon put this thinking into effect. The Treasury becomes, indeed, divided into two parts, with that part concerned with controlling departmental expenditure, taxation and all other budget matters now to be distinct from the part concerned with economic policy and national monetary and financial matters, all of which circled around the balance of payments. The economists are still not fully integrated with what might be termed the "Department of Economic Affairs." They are kept in a special section of their own whence they will hand down advice to the economic department or hand it up directly to the Chancellor. It is never unfortunately very desirable to separate economists from financial executives, since the latter then tend to regard the former as long-haired impractical persons: as far as possible, the economist must be drawn into the department in which he is working, so that he can see, in practice, the results of his economic thinking and draw directly from that his views on policy. But this possible further development is a relatively minor matter; the great thing is that, at last, it has been recognised that the balances of payments and the control of the economy can be even more important than the control of the domestic budget and that, indeed, the latter it itself only a factor in a much larger picture. There is every prospect, therefore, of the Treasury becoming a more effective part of the British economic administrative machine.

JENSON & NICHOLSON

1962

J & N has been producing India's leading paints since 1922. With a pioneering history of forty years, the name Jenson & Nicholson is synonymous with the finest decorative finishes and industrial coatings. The paints featured in this advertisement—leaders in their fields—are only three in a vast range of J & N brands.

ROBBIALAC PLASTIC EMULSION

is excitingly different. It applies easily—brush marks vanish as you paint—and dries in an hour. It leaves a smooth, lustrous, extremely durable finish that will stand repeated washing and scrubbing. Robbialac Plastic Emulsion is especially suitable for decorating walls, ceilings and woodwork.
When planning your new colour scheme, consider Robbialac Plastic Emulsion—choose from 120 delightful shades.

JENSOLAC STOVING ENAMEL

is the perfect coating for metal. It provides a clear, attractive, hard-wearing gloss, and is widely used for refrigerators, typewriters, filing cabinets and other domestic and office equipment.
Industry has clearly demonstrated its confidence in Jensolac Stoving Enamel. As with all J & N's industrial coatings, Jensolac is backed by a Technical Advisory Service second to none! Staffed with qualified chemists, this service offers expert advice and practical assistance to Industry on any problem involving paint.

ROBBIALAC SUPERGLOSS ENAMEL

is the last word in quality finishes. It represents the most advanced thinking in its field. It combines rich, brilliant tones with a superb gloss. The most versatile coating in the J & N range, Robbialac Enamel can be used, with equally superlative results, for interior and exterior painting. Robbialac Enamel comes in a very wide range of colours. It is recommended for use in homes, offices, shops, showrooms, theatres...anywhere, in fact, where only the finest paint is good enough.

FARM LOBBY CARRIES THE DAY

RELUCTANCE TO GO ON WITH RURAL TAX

From Our Special Correspondent

NEW DELHI, 11*th September*

DELHI LETTER

"WHATEVER be the recommendations of the Planning Commission nobody can dare tax the uneconomic holdings; small farmers are the backbone of democracy and they look forward to us with hope to give them succour. Their claims cannot be treated lightly." This statement by Mr. Mahavir Tyagi, a former Central Minister hailing from the State of Uttar Pradesh, whose backward policies are a drag on the national economy, explains the conflict between the politician and the planner which has crystallised in the fields of prices, land tax and sugar. The Planning Commission had to make a sustained effort before it could persuade State Ministers to come round to the idea that the rural sector should start paying at least in part for the benefits from a planned economy being diverted to it. Last year, there was the State leaders' excuse that nothing should be done to offend the powerful farmers' section before the elections.

The Praja Socialists and the Communists had everything to gain from posing themselves as the True champions of the "poor farmers," when, after considerable trepidation, the Uttar Pradesh Government decided to introduce a Land Holdings Tax Bill, which sought to bring the archaic land tax structure of Uttar Pradesh nearer to modern requirements. The threat of two Uttar Pradesh Ministers to quit on the issue and pressure from at least one Central Minister led to Prime Minister Nehru sounding a temporary strategic retreat on the issue.

While many other States in the country have gone ahead with land tax measures, Mr. Gupta does not have much support from his State Cabinet colleagues for the view that every sector of the population must bear the burden of new taxes for development. Mr. Gupta's Minister for Agriculture, Mr. Charan Singh, and Minister for Finance, Mr. Kamalapati Tripathi, are horrified at the prospect of having to tax the rural sector. The Uttar Pradesh third Plan calls for an expenditure of around Rs. 250 crores in the rural sector. Of the total outlay of Rs. 497 crores on the Plan for the State, the Centre is to give Rs. 350 crores. The original estimates were for the State raising Rs. 109 crores through taxation and the balance through savings and loans. Mr. Nehru's reference of the U.P. Bill for further study by the Planning Commission could at best be a delaying action to give time to the politicians to try heal the rift among the Ministers of the State.

In view of its policy directive on the need to tax the rural sector, the Planning Commission could scarcely afford now to advise the U.P. Government to retract. That would also be unfair to the other States which had gone ahead with land taxes. Talks between U.P. leaders and members of the Planning Commission yesterday are led to have resulted in a decision to raise the exemption ceiling from one acre to three and a half acres. This would mean an annual collection of less than Rs. 6 crores against the original Land Tax Bill estimate of Rs. 10 crores. The U.P. lobby has also developed a new theory on continued flow of Central assistance. Its view is that the planners and the Centre should not worry about the extent to which the State can come up with the matching resources. If a State cannot raise its matching resources, it would at least be able to progress to the extent of the Central grants available! The vacillation over the U.P. Land Tax Bill certainly gives more ammunition for the Opposition parties to exploit.

The overriding consideration to dole out more money into the hands of the village voter in Uttar Pradesh or Bihar has all along been obvious from the discussions in the Lok Sabha on sugar prices, and the chorus of the agriculturists' spokesmen that drowned the Land Acquisition Act Amendment Bill.

Price Situation

Less than a fortnight ago, Mr. Gulzarilal Nanda, Planning Minister, gave an assurance in the Lok Sabha that the "Government will take effective measures to check the rising prices and deal sternly with the hoarders." His way out was partly State trading and co-operative marketing as price regulatory measures. The price facts, according to Mr. Nanda, were: in 1961-62 there was a fall of 3.6 per cent in the price index but comparison of August 1962 figures with August 1961 levels show a rise of 3.1 points. Food Minister S. K. Patil has been at pains for some months to paint a picture of the advances on the agricultural front, but the trend of thinking at Yojana Bhavan is to put a major part of the blame for the price troubles on the shortfalls in agricultural production.

The Planning Commission and the Food Ministry are at loggerheads with one another on the interpretation of the price situation. The Food Ministry's thesis comes back to the old political problem: 70 per cent of the population will be hit by any agricultural price reduction. The Food Ministry is in favour of some action on the fringe to curtail the middleman's profit, so that the consumer may have some gain without picking the farmers' pocket.

Atomic Power Plans

Although plans for the first nuclear power station are snarled by international complications, the Government is going ahead with proposals for the second nuclear power plant at Rana Pratap Sagar, in Rajasthan, and is working on the choice of the site for the third plant in the south. The Tarapur project will be built by a foreign contractor on a turnkey basis, but, at Rana Pratap Sagar, the Government hopes to build the plant through a subsidiary organisation of the Atomic Energy Department. This is justifying Dr. Homi Bhabha's confidence that, once the first station is built, there will be Indians capable of building new plants.

Three United States firms, two British firms, a French group and a Canadian organisation comprise the seven who have submitted tenders for the Tarapur project. The Americans have not yet thought out a solution to the atomic dilemma India has placed them in. The American Government is committed to the idea that all nuclear plants sold abroad should be subject to controls and safeguards exercised by the International Atomic Energy Agency. But India will have none of these safeguards.

The French have now come as a close competitor in the bid to build the Tarapur station. They are willing to supply the economic aid to meet the foreign exchange requirements of the Tarapur station. The French have a row with the Americans on exchange of nuclear information and do not subscribe to the American restrictions, especially as they are developing their own nuclear armoury. The French will not ask Delhi to open the doors of the Tarapur station for international inspection.

TEXTILE INDUSTRY IN CHINA

CLOTH AND YARN EXPORTS RISE MARKEDLY

THE past few years have witnessed the emergence of Communist China as one of the formidable competitors to India in world textile markets. The actual exports of Chinese cotton cloth into fifteen main importing countries other than Russia went up from a bare 1,626 metric tons (about 14 million yards) to a record high of 50,344 tons (444 million yards) in 1960, though they declined to 45,000 tons (397 million yards) last year. Among the countries importing larger and larger quantities of cloth from China are those which have been traditional customers for Indian piecegoods, as the accompanying table shows. The countries include Australia, Ceylon, Malaya, Nigeria, Sudan and the U.K. China is today exporting not merely cotton cloth but also sizable quantities of cotton yarn and rayon piecegoods. Since utmost emphasis is now being laid on augmenting exports of Indian textiles in order to earn the badly needed foreign exchange, it will be better for us to know the latest trends in China's textile industry, so that India can take such measures as would enhance the competitive capacity of its textiles *vis-a-vis* those of China. An interesting review of these trends is provided by the International Cotton Advisory Committee (Washington) in the July 1962 issue of its *Monthly Review*.

Expansion of Capacity

If China has been able to offer competition to other countries in the world cotton textile markets, it is due largely to the remarkable expansion in production in recent years. This in turn is attributed to two chief factors, namely, rapid growth in the textile machinery industry and rise in raw cotton production. The textile machinery industry, according to the *Review*, was almost completely responsible for more than doubling the number of spindles (installed) from 5.0 million in 1949 to nearly 10.0 million in 1959. Over the same period, the number of looms installed rose from 75,000 to 300,000. Incidentally, China has also been supplying, since 1954, textile machinery to Mangolia, North Korea, North Viet Nam and some of the East European countries. The production of raw cotton went up from 6.3 million bales (of 478 lbs. each) in 1955-56 to 8.7 million bales in 1958-59, since when there has been a setback, due to "serious natural calamities." The estimate of the 1960-61 crop places the output at no more than 7.0 million bales; even this estimate is considered questionable, for China has not released any data beyond 1959, so that one has had to rely on secondary sources.

Dual Price System

The competitive capacity of Chinese textiles in world markets must also be attributed to the dual price system adopted by that country. Under this system, the domestic price of cotton textiles is maintained at a higher level than the export price. Commenting on this system, the *Review* observes:

"A large gap between the cost of production and the retail price of textiles sold in the domestic market enables the State-owned enterprises to earn large profits. These profits become a major source of new investment funds. It would not, therefore, be surprising in the event that production of raw cotton were increased if an effort were made to relax to some extent present strict cloth rationing. But, 'fulfilling of foreign trade tasks' is not only a major aim but a necessity forced, among other factors, by grain imports. Bearing this in mind, it is considered likely that China will continue to be active in world textile markets. China must have one of the lowest wage structures in the world, as well as considerable experience in the field of manufacturing textiles, and more than one-half of their installed equipment is fairly new. No information is available, however, as to the actual efficiency of operation. The necessity to export textiles, coupled with a desire to maintain export outlets, explains why Chinese exports of textiles did not experience a significant decline in spite of major shortfalls in China's domestic output."

The marked decline in the production of cotton textiles in China in recent years is described as the direct consequence of the dwindling raw cotton supply. The serious failures in the agricultural field were openly admitted by the Chinese Peoples Congress at its three-week secret session on 16th April 1962. The Congress, however, declared that the national economic effort would be focussed on agriculture, top priority being given to cotton along with grains and oil-bearing crops. Alluding to this declaration, the *Review* says:

"At the same time, programmes pertaining to the development of heavy industry are being curtailed in favour of light industries. If the Chinese are able to raise their output of raw cotton and consequently the output of yarn and cloth, it is interesting to speculate whether the additional textile production will be used for export to correct the imbalance in their foreign trade or whether it will be largely used to meet domestic needs."

Yarn Exports

Besides cotton cloth, China exports large quantities of cotton yarn, too. The actual shipments in 1960 aggregated 14,887 metric tons, as against 7,004 tons in 1959, 4,763 tons in 1958, 526 tons in 1957 and 1,143 tons in 1954. The entire shipments (barring 27 tons exported to Hong Kong) in 1960 went to Indonesia, the corresponding figures for the three preceding years as well as for 1954 being 6,768 tons, 3,148 tons, 54 tons and 18 tons, respectively. Such large-scale imports of Chinese cotton yarn by Indonesia are somewhat surprising. For the U.S. embarked in 1959 on a triangular assistance programme under P.L. 480 whereby cotton was processed in third countries, including India, Japan, Hong Kong, Singapore and Yugoslavia, and exported as yarn to Indonesia. Concurrently small mills in Indonesia were reactivated or re-equipped to expand domestic weaving facilities. It is, therefore, conceivable, according to the *Review*, that the Chinese may have stepped up their yarn exports to Indonesia by offering attractive terms so as to retain a share of the Indonesian market.

Cotton Cloth Exports from China

(In metric tons)

Importing country	1961	1960	1959	1954
Hong Kong	16,675*	17,744	14,311	933

‡ Includes imports for process and re-export.
N.A.—Not available.

Rayon Cloth

Exports of rayon cloth from China have also increased in recent years, though there was a setback last year. The exports, which aggregated only 32 tons in 1956, rose to as high as 2,419 tons in 1959 and 4,782 tons in 1960, but declined to 4,000 tons in 1961. The chief buyers of Chinese rayon cloth have been Malaya, Iraq, Hong Kong and Ceylon. Malaya bought about 1,746 tons of cloth in 1960 and 693 tons in the first half of 1961. Iraq's purchases amounted to 1,460 tons in 1960. Hong Kong's offtake in the first nine months of 1961 was 742 tons. The increase in Chinese exports of rayon fabric has followed a notable rise in output. The actual production in 1961 was 6,800 tons of rayon and acetate staple, 5,000 tons of rayon and acetate filament yarn, and 450 tons of synthetic fibres, as against 5,400 tons, 3,200 tons and 400 tons, respectively, in 1960. Production of these man-made fibres began in China only recently, rayon and acetate staple in 1957, rayon and acetate filament yarn in 1958 and synthetic fibres in 1959. Despite the notable rise in output, the supply of man-made fibres in China remains of relatively minor importance. Plans are, however, afoot for setting up new plants, with a view to reducing imports which in 1960 aggregated as much as 11,500 tons of rayon staple, 13,400 tons of rayon yarn and 800 tons of synthetic fibres.

Will China be a major contender for a larger share of world textile markets in the coming years? It is rather difficult to give a categorical reply to this question. For much will depend, as the *Review* points out, on its ability to achieve a breakthrough in agriculture, since the balance of payments difficulty may not permit China to import large quantities of cotton. The foreign exchange squeeze, according to the *Review*, has hit so hard that Chinese imports from West Germany (which usually ran around $200-250 million per annum) and the rest of Continental Western Europe had to be all but abandoned. At the same time, China has been selling silver in the London market in order to compensate for or rectify the balance of payments deficit. Except for possible barter transactions, it is, therefore, unlikely that any significant increase in Chinese imports of raw cotton will occur in the near future and textile industry will have to continue to rely largely on domestic production.

Ninth Edition of V. S. SUNDARAM'S

LAW OF INCOME-TAX ACT

(Act XLIII of 1961)

This book needs no special introduction being known to all its users over these years. Opportunity has been taken to revise the book not merely by way of re-arrangement as necessitated by the new Act including the new Finance Act XX of 1962, and of bringing all relevant material up-to-date but by re-writing a good part of the book. All obsolete matter has been cut out but in view of the applicability of the old Act to all pending proceedings, all essential and important matters relating to the old law are retained. Several minor changes have also been made in response to the suggestions from the many users of the book. The Publishers are confident that this edition will be distinctly better than its predecessors.

TEXTILE INDUSTRY LACKS CONFIDENCE

TALKS ON WAGE RISE FAIL

From Our Special Correspondent

MANCHESTER, *4th September*

ALTHOUGH business in some parts of the Lancashire cotton market has lately shown fresh impetus, the general level of activity remains far below the full-scale revival needed to stimulate any important change in conditions. The hesitancy of buyers persists, encouraged, no doubt, by the fresh series of complications which have arisen over the Common Market talks.

MANCHESTER LETTER

Brief glimpses of the "summer-which-should-have-been" are far too interspersed with gloomy weather to induce retail customers into any thought of a buying spree, and even a belated burst of interest would now be too late to save the day, as the seasonal peak is long past. It is small wonder that traders are discouraged and view the outlook with distinct trepidation.

Their reaction for some months past, as exemplified in the Textile Action Group's agitation, has been to lash out somewhat indiscriminately at their representatives at central or even district level. Hard words have been spoken, some of which were unfair and verging on the slanderous, but at such a crucial stage in the industry's affairs, when livelihoods are at stake, exaggeration and criticism tend to mount.

Conflicting views on the long-term prospects have been expressed, with some commentators even daring to "tip" the purchase of textile shares to be locked away. Such advice, however dubious it seems at the moment, could be justified if greater collaboration between sectional interests is secured in the future.

Closer Relationship

Moves are taking place between individuals and groups having the well-being of the trade at heart to stimulate a better relationship, particularly between the weaving and merchanting communities. More liaison to link output with design and salesmanship is an objective which needs fostering at whatever level a scheme is evolved.

Reports of mill closures almost from week to week are themselves a dismal feature of the current scene. Strangely enough, they do not apparently worry the Government, whose attitude is characterised by a belief that the industry still needs further pruning until some stability is reached whereby local output, plus the intended maximum of imports from Commonwealth countries, covers the anticipated demand for cotton and allied products.

Still on the subject of organisation, to which much obvious thought is being given today throughout the industry, only brief mention can yet be made about the keenly-debated contribution given to the British Association conference by Mr. Allen Ormerod, Managing Director of Ashton Brothers. When the full text of his paper and the relevant statistics have been digested, it will be possible to assess its importance in guiding the trade towards future stability.

In the meantime, it must suffice that Mr. Ormerod was far from complacent about the part played by management in Lancashire, the role of the Government and the measures adopted by the various trade associations. More contraction, he believed, must come—to a point indeed where imports and a home producing industry of fewer than 100,000 looms and little more than 5 million spindles will be enough to cater for our domestic needs.

Pay talks on the year-old application for a 10 per cent increase for 160,000 Lancashire cotton workers have collapsed, it was revealed in Manchester. The claim has been passed to the Industrial Court, which is expected to deal with it within the next few weeks. The Ministry of Labour has been told of the dispute. Union leaders, who had asked for a 2*s*.-in-the-£ increase, swiftly rejected an offer from the employers to step up the basic rates by 5*s*. 8*d*.

The employers' offer was described by Mr. Lewis Wright, General Secretary of the Weavers' Amalgamation, as "ludicrous" when compared with increases received by other industrial workers over the last two and a half years. A spokesman of the United Kingdom Textile Manufacturers' Association confirmed in Manchester that talks had broken down, but said they had no comment to make.

The original claim was made in August last year, and was rejected outright by mill-owners. Informal approaches from unions led to a resumption of talks in February. The last pay increase in the industry was in March 1960 when cotton workers were given an extra 1*s*. 6*d*. in the £.

Shorter Hours

The average number of hours being worked by men in spinning and doubling in April was 45.7, as against 46.2 in the previous October. Women workers in this section were employed for 38.8 hours, as against 39.1 hours six months previously.

In the weaving branch, the latest returns show men operating looms for 43.4 hours as against 43.9 hours in October last. In the case of women, the figure was 39.5 hours, as against 39.9 hours. In the textile finishing trade, average hours worked by men were reduced from 48.8 to 48.5.

Cost of Imports

At the end of seven months of 1962, the pattern of import-export trade in cotton and allied goods has not assumed any different shape from that displayed in the earlier part of the year. Both arrivals to and shipments from this country have declined, although certain important changes have occurred in the balance of purchases from abroad.

Imports of cotton grey cloth in the seven months barely exceeded 250 million yards, as against 381 million yards in the same period last year. Arrivals of finished fabrics, however, amounted to 84,301,000 yards, as against 95,653,000 yards. On this basis, the ratio of processed cloth arrivals to unbleached materials narrowed from about one-fifth of the total to a quarter.

More important yet was the fact that the cost of purchases from overseas of finished goods amounted to £14,543,000, as against the outlay of £15,187,000 on grey cloth. Twelve months ago, the gap between the payments for such goods exceeded £8,000,000.

Less Non-Commonwealth Cloth

The major change in arrivals of unfinished material from abroad was in the purchases from "other foreign countries" outside the Commonwealth, the Irish Republic, France, China and Japan. To the end of July, these amounted to 41,910,000 yards, as against 105,594,000 yards in the same period last year. So far in 1962, Japan has only sent 14,390,000 yards, as against 40,698,000 yards.

A somewhat varying performance has been achieved by Commonwealth suppliers, with India showing the chief reduction. Shipments in the first seven months of the year were cut from 121,772,000 yards to 90,187,000 yards. Smaller quantities arrived from Hong Kong, the figure being 47,588,000 yards, as against 57,040,000 yards, but arrivals from Pakistan have nearly doubled at 23,631,000 yards, as against 12,071,000 yards.

On the export side, average monthly shipments of cotton cloth of around 20 million yards were maintained, bringing the total to the end of July to 144,205,000 yards, a reduction of nearly 34 million yards on last year's level. Earnings from this source were over £5,000,000 down at £20,196,000.

Common Market in Focus

Trade with Europe, whatever any interim decisions may be taken, will provide the focal point of this year's Cotton Board conference, to be held at Harrogate as usual in mid-October. Virtually every session of the gathering will concentrate on this vital factor, whose implications have already been dealt with in considerable detail in the booklet prepared by officials of the Board.

The three main speakers in successive sessions will be Mr. Anthony Barber, Financial Secretary to the Treasury, Mr. A. M. Alfred of Courtaulds, Ltd., and Mr. Michael Grey, Chairman of the Textile Manufacturers' Association. Subsequently, there will be a return to the "questions-and-answers" arrangement wherein a joint panel of representatives of the Export Council for Europe and the Cotton Board will deal with queries related to the Common Market issue. Lord Rochdale's valedictory address will be left until the Sunday morning, when he will presumably be able to report not only on the past year's activities of the Board, but will be able to outline the many important phases of his work as head of the organisation during five momentous years.—*All Rights Reserved.*

SUGARCANE CONTROL ORDER AMENDED

OPPORTUNISM DOMINATES DEBATE IN LOK SABHA

THERE was more heat than light in both Lok Sabha and Rajya Sabha last week when the two Houses debated the Sugarcane Control (Additional Powers) Bill. The heat could have been avoided if only the members who participated in the debate had realised the simple objective of the Bill, instead of allowing their vision to be clouded by an excessive zeal for the welfare of sugarcane growers. The objective was merely to give effect to the Government of India's decision on the additional price payable to cane growers for the four seasons from 1958-59 to 1961-62, as the original Sugarcane Control Order of 1955 did not empower the Government to pass orders on such matters with retrospective effect (from 1st November 1958). Even the decision on the so-called additional price was in accordance with the recommendation of the Tariff Commission, which, everyone will agree, is a competent and impartial body. One had thought that the Bill would provide an opportunity for a constructive discussion on the problems of sugar industry. This, however, was not to be, thanks to the political considerations imported into the discussion by several members, including some Congress members who are supposed to have well-balanced views such as Mr. Ajit Prasad Jain, a former Union Food and Agriculture Minister, Dr. Panjabrao Deshmukh, Minister for Agriculture in the last Cabinet, and Mr. Mahavir Tyagi. The sympathy expressed by the members for cane growers is no doubt understandable, but it should not be extended so far as to overlook completely the interests of the other sections of the community. Incidentally, the Bill was passed by the Lok Sabha on the 4th inst. and the Rajya Sabha on the 6th inst.

Uncharitable Criticisms

That the criticisms made by some of the members were uncharitable and that they were inspired more by a deep-rooted prejudice for the sugar millowners or by a desire to be popular with sugarcane growers, who in U.P. and Bihar in particular are the most inefficient among agriculturists in India, will be evident from the following summaries of their speeches:

Mr. A. P. Jain (Cong.): The Bill is anti-farmer and anti-social. It signifies an attempt to divert to millowners the money due to the growers. Since 1958, the Government has not declared the x price, which is a kind of bonus paid to cane growers as additional price. This is calculated on the profits of mills. If the Bill seeks to give power to declare this x price be paid retrospectively to cane growers, it is well and good. But, if it is meant to reimburse millowners to rehabilitate and modernise their plants, it will be a retrograde step. There is no justification for paying a rehabilitation allowance to millowners.

Dr. P. S. Deshmukh (Cong.): The Government's proposal that rehabilitation allowance should come out of the deferred price is fantastic and unheard of. It will be wrong from every point of view to deny the growers their due in the name of giving money for rehabilitation of mills. I have the strongest possible objection to the Government's acceptance of the Tariff Commission's proposal to give money to millowners for rehabilitation of mills and to meet export losses. It has not been heard of in any other industry that men who supply the raw material should be made to contribute to the rehabilitation of mills.

Mr. Mahavir Tyagi (Cong.): I am alarmed at the recommendation of the Tariff Commission that the scheme for deferred payment of additional price to the growers should be discontinued. I cannot understand how crores of rupees due to the growers can be written off like this. I ask why every time care is taken to see that the margin of profit of the sugar factory is maintained.

Mr. T. K. Chaudhury (P.S.P.): It is not right to deprive the farmer of his dues. The formula of linking the price with recovery will hit production.

Mr. Bhupesh Gupta (Com.): The sugar millowners are making huge profits, while the cane growers continue to suffer. It is regrettable that sugar industrialists manage to flout law with immunity and deprive the cane growers of their due share of profits.

These members of Parliament have thus sung the same old song which has no rhyme or reason. If there was any aspect of the Government's sugar policy that was most irrational, it pertained to the cane growers' share in the profit (not in the loss, be it noted) of sugar mills. One can understand the Communists and Socialists talking as they did. But surely, Mr. A. P. Jain and Dr. Panjabrao Deshmukh know better. The former was the Minister for Food and Agriculture, who failed to solve the problem of sugar shortage and resigned out of despair. He proved to be an unworthy successor to Mr. Rafi Ahmed Kidwai. The latter, too, was a Minister of State for Agriculture. Neither of them was successful in raising Indian agriculture out of the rut, which is essentially the outcome of low productivity. During the regime of Mr. A. P. Jain, drift, drift was the only policy of the Union Food Ministry so far as sugar industry was concerned. During his long tenure of Ministership, he had the opportunity to devise a perfect sugarcane price policy that would have been fair to all the interests. Why did he not do it? Because he lacked the political courage. He knew that he could not produce a rational formula without displeasing the much pampered cane growers and their self-appointed leaders. Mr. Patil at least had the guts to break the ice, though not as perfectly as we would have liked, for he, too, has been pampering cane growers. Nevertheless, Mr. Patil at least saw to it that the country was out of sugar scarcity. And none can deny that, during his regime, cane growers have had more income than during Mr. Jain's Ministership. As for Dr. Deshmukh, it is fantastic that he should have dubbed the Bill as "fantastic, unheard of, anti-farmer and anti-social." May we ask him to cite any industry other than sugar in the profits of which the producers of raw materials have a share? Further, would Dr. Deshmukh pay, as a consumer, the same price for both superior and inferior quality products? Naturally, he would not. And yet when he was a Minister he allowed that to happen. Neither he nor his chief, Mr. A. P. Jain, took pains to see that a farmer growing superior quality cane received a better price than his confrere who raised a poor quality of cane. It is but sheer political opportunism for them to point an accusing finger at those who are now trying to clear the mess created by these two ex-Ministers and introduce some rationale as well as order in sugar policy.

Earning Popularity

As readers are aware, the enhanced minimum price of sugarcane, namely, Re. 1.62 per maund, was itself unduly high, accounting as it did for three-fourths of the cost of making sugar. The price bore no relation whatever either to the sugar contained in the cane (that is, recovery per cent) or to the prices of quite a few other agricultural crops. On top of such a high minimum, the cane growers were entitled to a share in the profit of mills under the scheme of deferred price. The scheme has no parallel either in this country or elsewhere. Commenting on the scheme that was in force hitherto, the Tariff Commission clearly warned that the operation of the scheme would expose the sugar economy to many risks which would be aggravated the longer the scheme was allowed to operate and that there was a danger of the "inevitable growth of pockets of vested interests" imperilling the implementation of the permanent solution so ardently desired by all interests. Nonetheless, the Commission took a generous stand and recommended the continuance of the scheme for the four seasons 1958-59 to 1961-62, in view of the historical background in which the formula was evolved and of the expectations which the Government's undertaking had nursed among cane growers. In urging the discontinuance of the scheme of

talking about banks

There is more in banking with the STATE BANK OF INDIA than the mere possession of a bank account—first class service, security and safety and ability to obtain friendly and helpful advice and information when required.

The wide experience of the State Bank is at the disposal of the customers whether their accounts be large or small. The State Bank can be of assistance to your business and its problems. If the business covers a small-scale industry, you will find special attitudes aimed at earnest desire to help. In the co-operative sector too, the Bank has similar attitudes with schemes offering special facilities. Every kind of foreign exchange business is transacted. Why not contact the nearest office ?

deferred price, the Commission only placed the larger interests of the country above the sectional pressures. Instead of judging its conclusion in this spirit, it is regrettable that members of Parliament who had participated in the debate should have availed themselves of the opportunity to earn some popularity for themselves among sugarcane growers.

It was Mr. D. D. Puri (the erstwhile President of the Indian Sugar Mills' Association) who put the whole issue in its proper perspective in the course of his speech in the Lok Sabha. Here is what he said:

"The price-linking and profit-sharing formula had been conceived of as an alternative to price control on sugar. During the control period, the factories received a statutory price which was based on the cost of production plus 12 per cent gross return on the capital employed. Since there were no excess realisations by factories, there was no question of making any additional payment. It will be unfair to the sugar industry, if it is now asked to bear a burden by way of rehabilitation costs and export losses when these elements had not been taken into account by the Tariff Commission at that time (September 1959) in calculating the cost of production."

In its latest report (June 1961), the Tariff Commission had put forward a new formula for sharing the additional sugar price. This was quite realistic and justified. But the Government has, in its wisdom, rejected the formula and decided to continue (for the four seasons 1958-59 to 1961-62) the same old formula which gives the cane growers much more than what the Commission had considered reasonable. Accordingly, the contention of some members of Parliament that the Government had accepted the Tariff Commission's recommendation is far from the truth. Under the formula that has been in force so far, the growers share with the factory owner the net surplus in the same ratio as the cost of cane bears to the factory's cost of sugar production, excluding taxes. It would be better to quote the Commission's own words to bring the defects in this formula:

"Quite apart from the fact that the formula requires amendment in view of the acceptance by Government of the regional cost schedules suggested in our report of 1959, the main defect of the formula is that, with every rise in the minimum price of cane, the share of the grower rises. Prices of sugarcane may be raised in terms of Article 3(1) of the Sugarcane (Control) Order, 1955, on considerations other than a rise in the cost of production of cane and, therefore, a correlation of the sugar price with the cane price is unsound. It should be remembered that, while the manufacturing cost of sugar is properly regulated in our schedule, there has been no proper determination of cost of cane. Hence the basis of sharing of price on an alleged cost basis under the formula is non-existent and fallacious."

Rehabilitation Allowance

By rejecting the Commission's formula, the Government has sought to serve the interests not of sugar mills but of cane growers. Indeed, Mr. S. K. Patil went so far as to say: "I would try to get as much as possible for the growers. The Tariff Commission had proposed that the share of the cultivator should be 45 per cent of the additional price of sugar. The Government is examining whether the growers' share can be fixed at 65 per cent." Again, while the Commission had recommended rehabilitation allowance at 40 nP per maund of sugar (basis 10 per cent recovery and 150 working days) in Northern region and 20 nP for Madhya Pradesh and Rajasthan, the Government has decided that the allowance is payable only on a limited basis to factories which have rehabilitated their machinery or those which have set apart some funds for rehabilitation. How then can anyone accuse the Government of depriving the farmer of his dues for the sake of rehabilitating the sugar mills? If anything, the Government continues to be over-generous to cane growers in utter disregard of the interests of consumers who are more numerous than sugarcane growers. Proof of this, if any were needed, is provided by its decision to continue for the 1962-63 season the enhanced minimum price of Re. 1.62 per maund of cane with a low recovery of just 9.8 per cent. The only consolation, however, is that this price formula is a temporary arrangement. The Government has stated, in its resolution on the Tariff Commission's report, that it would not relax efforts to finalise a suitable system of payment of cane price on the basis of quality "as soon as practicable." Even this assurance is a qualified one, for the words "as soon as practicable" impart a vagueness to it. God only knows, when the Government will find a solution that will be practicable.

In the course of his replies to the debates in both Houses of Parliament, Mr. Patil held out the assurance that the Government would take into account the interests of the farmers in deciding the exact share of farmers in the additional sugar price realised by the factories in the seasons 1958-59 to 1961-62. Why has the Government still not finalised the farmer's quantum, although the Commission's findings were rendered as far back as in June 1961? The question came up for consideration before the Executive Committee of the Congress Parliamentary Party on Friday last week. Prime Minister Nehru informed the Members that the formula was not ready yet and that it could be taken up for consideration after his return from Europe early next month, the intervening period being availed of for circulating the facts of the sugar situation to members. Incidentally, Mr. K. Hanumanthaiya suggested at this meeting the appointment of a committee of experts to examine the point of view of sugar consumers. The suggestion was no doubt interesting and Mr. Patil agreed to it. But one wonders whether there is any need at all for such a committee. Who does not know the answer to the question as to how the interests of sugar consumers should be safeguarded? Only last week, we reiterated in these columns that the present high prices of sugar could be lowered only if the Government were to reduce the heavy incidence of taxation —taxation accounts for one-third of the sugar price—and follow a realistic cane price policy which would prompt the agriculturist to pay attention to the vital question of raising a larger quantum of cane with richer sucrose-content from a given piece of land.

4¾% MADRAS STATE ELECTRICITY BOARD BONDS 1972

FOR Rs. 300 LAKHS

(PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL, GUARANTEED BY THE GOVERNMENT OF MADRAS)

●

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99.75 PER CENT

REDEEMABLE AT PAR ON THE 24th SEPTEMBER, 1972

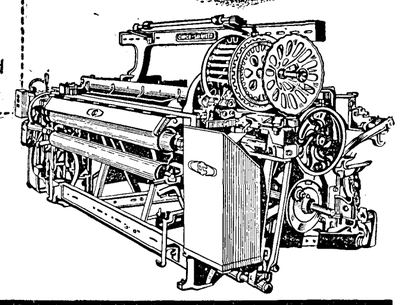
Subscriptions will be received in cash or cheques from the 24th September 1962. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 300 lakhs and in any case not later than the close of business on the 29th September 1962.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Hyderabad, Calcutta, Delhi, Bangalore and Bangalore City.

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all offices of the State Electricity Board.

IN AUTOMATION LIES
the future of India's textile Industry
CIMMCO-SAKAMOTO
AUTOMATIC LOOMS

- Robust Design
- Precision Built
- Easily installed and operated



Made in India by Cimmco in close collaboration with Messrs. Enshu of Japan. Manufacturers of world famous Sakamoto looms - Cimmco - Sakamoto Automatic Looms are a vital necessity, for India's textile mills.

CIMMCO-Sakamoto looms are backed by a powerful loom-building tradition combining Cimmco's 18 years of experience with Enshu's 34 years. Sakamoto type looms are used in more than 40 countries of the world, and over 60% of the automatic looms installed in India are of the Sakamoto type.

With a low initial investment Cimmco Sakamoto automatic looms produce a greater volume and variety of quality textiles at lower running costs than any other looms in the same range.

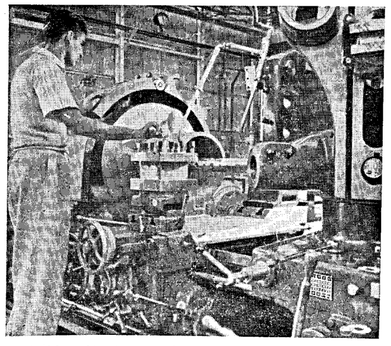
6" spindle ram-type horizontal mill and boring machine

THE REAL POWER OF AVB

Vast Technical Resources... Modern Workshops...



No. 14/36 combination turret lathe installed in the AVB light machine shop

Immensely rich in experience and technical knowledge, with modern workshops equipped with some of the world's most up-to-date machine tools...here is the *real power* of AVB. The essential combination to generate *real industrial power.*

This real power and potential of AVB will give added impetus to the continued and large-scale expansion of industry...by providing the finest facilities for the manufacture of high pressure steam-raising plant and pressure vessels and heavy machinery for the cement-making and mining industries.

Among the modern machine tools in the AVB workshops are

1. **6' ram-type horizontal mill and boring machine.** This machine has a vertical movement of 14' 6" and a horizontal movement of 20' and is the largest of its kind in India.
2. **Numerous capstan and turret lathes** upto 36" diameter swing and central lathes upto 42" diameter.
3. **28/60 vertical model hydrotel milling machine** with 360° profile milling equipment.

AVB ...*a Powerful Partnership for Progress*

ACC-VICKERS-BABCOCK LTD.

TITAGHUR PAPER MILLS COMPANY LIMITED

FURTHER SUBSTANTIAL INCREASE IN PAPER PRICES URGED

CHAIRMAN, SIR WALTER MICHELMORE'S ANNUAL STATEMENT

IN his statement to the shareholders circulated along with the annual report and accounts covering the period ended 31st March 1962, Sir Walter Michelmore, Chairman of the Titaghur Paper Mills Company Ltd., has expressed the hope that the Government would agree to a further price increase of a substantial nature. Citing facts and figures, Sir Walter has pointed out that there has been a further substantial rise in costs which the recent increase in paper prices of 6 nP per kilo, based on the 1958 costs, does not cover. He has, therefore, urged the Government to turn a sympathetic ear to the industry's case before long.

The following is the full text of Sir Walter's statement:

"When, in 1960, the Tariff Commission gave its award on paper prices based on 1958 costs, those most closely concerned with the industry predicted a difficult time ahead, and this has certainly proved to be the case. In the first place the 12 per cent return on capital employed covering as it does taxation, provision for rehabilitation, Managing Agents' remuneration, bonuses to labour and preference dividends, does not leave a sufficient balance to provide an adequate return by way of ordinary dividends on the capital employed. In the second place, the cost of virtually every raw material and service used by the paper industry has increased sharply, often as a result of Governmental action. Coal has increased in price and so has the freight on it—the Calcutta Electric Supply Corporation rates for power have been increased—every single chemical, whether caustic soda, lime or sodium sulphate, to mention only a few, is more expensive than in 1958—and the same applies to the basic raw materials, whether bamboo or waste paper. In March 1962, it was estimated that the total increase in cost since 1958 was Rs. 160 per metric ton or 16 nP per kilo. The 1962-63 budget and the Railway budget added a further Rs. 20 per ton to the industry's costs—or an additional 2 nP per kilo.

"The recent increase in paper prices of 6 nP per kilo was granted with commendable promptitude, and it does not do to look a gift horse in the mouth. The inadequacy of the increase will however be apparent from the figures quoted above, and it is sincerely to be hoped that the Government will, before long, turn a sympathetic ear to the industry's case and agree to a further price increase of a substantial nature. To illustrate the difficulties of, at any rate, certain units in the industry, in the case of your No. 2 Mill the price increase has been virtually entirely absorbed by having to transport 50 per cent of the mill's coal requirements by road—a cost factor that was not even taken into account in determining the recent price increase.

Coal

"This raw material has been a continuous headache throughout the year. In the first place, coal stocks have been down to below one day's consumption on several occasions. Secondly, the mills now receive—and cannot expect anything better—Grade I coal which has to be burnt in boilers, many of which were designed for Selected A rubble. Finally, as mentioned above, 50 per cent of the coal has to be transported by road. In the case of industrial units consuming under 1,000 tons of coal per month, road transport of 50 per cent of consumption is expensive and inconvenient. In the case of your Nos. 1 and 2 Mills, which consume 16,000 tons per month, road transport is ruinous—spelt out in rupees, an additional 18 lakhs is added to the annual coal bill. Having spent considerable sums to strengthen the mill sidings to take full rates of BOX wagons, it would seem only reasonable that concerns such as yours, should be permitted to take their full coal requirements in this manner. This procedure was in force for a limited period and it is believed suited the railways as well as your company—why it should have been terminated is difficult to understand. If, however, the paper industry with its high coal consumption has to take 50 per cent of its requirements by road, it would appear to have just as good a case for a subsidy or an increase in paper prices as industries in the country who are compelled to take their coal by sea.

Bamboo

"Gregarious flowering of bamboos in Assam and Orissa has created difficulties, but by stepping up cutting in the Company's own forest areas to 60,000 tons, adequate supplies have been made available at despatching points. Wagon supplies have, however, been totally inadequate—a situation not peculiar to your Company—with the result that 50,000 tons of bamboo are awaiting despatch at the time of writing, and as with coal, stocks at the mills have on occasion fallen below one day's consumption.

"Longer term, one of the difficulties your Company is faced with is that, with new paper mills going up in the States adjoining West Bengal, they tend to be given preference over your Company in respect of bamboo leases, even in respect of areas from which supplies have been drawn continuously for many years. It is evident that the paper industry as a whole will have to rely to an increasing extent on alternative raw materials, such as, bagasse and jute sticks, and this is receiving careful attention as far as your Company is concerned.

Market

"The market has remained firm throughout the year and it would appear that demand will remain in excess of supply until some time in 1963. With additional mills coming into production, it is quite possible that there may be a surplus of paper in 1964 or 1965, but it is hoped that on a longer term basis, with the increase in literacy, this will be only a temporary feature.

"In the reorganisation of your Company's affairs, to which reference is made later in this statement, particular attention is being paid to the improvement of quality in all the various types of paper produced. Even allowing for the difficulties with which the paper industry as a whole has been faced, shareholders will naturally wish to know why your Company's results compare so unfavourably with those of other units in the industry of comparable size. I will, therefore, deal with this matter in some detail and, at the same time, outline the remedial measures that either have been taken already or are in process of implementation.

Bamboo Forest Areas

"It will be noted that some Rs. 23 lakhs has had to be written off bamboo stocks. Your Company's policy was to value bamboo stocks in the forest areas at a figure well below cost. A few years ago, this method of valuation was objected to and stocks were valued on the basis of average cost irrespective of location. A very poor cutting year resulted in an extremely high cost figure, and it was regrettably not realised, until the current year, that this resulted in an overvaluation of bamboo stocks lying at points distant from the despatching points to the mills. The revaluation in this year's accounts provides for the cost of moving forest stocks to railhead and in addition strict budgetary control has been introduced throughout the bamboo forest areas.

No. 3 Mill

"It was always realised that this mill would not be a fully economic unit, until output reached the level of 18,000 tons per annum as provided by the original industrial licence—12,000 tons per annum plus an expansion licence of 6,000 tons per annum. The mill was, however, planned in 1955 on the basis of bamboo at Rs. 71 per ton delivered, other chemicals at ruling rates, and paper at the prices that prevailed before the reduction imposed by the Tariff Commission. On this basis, it was expected that, as a one-machine mill, it would nearly break square and that on a two-machine or 12,000 tons per annum basis, a small profit would be made. Unfortunately, many factors have combined to make this projection of profit very wide off the mark.

"With the increase in the cost of bamboo, chemicals and all other raw materials, and the reduction in the price of paper, it is now evident that No. 3 Mill will not break square under 30 tons of paper per day.

"For part of the year, only one machine was operating with a rated capacity of 15 tons per day. The second machine was installed in the course of the year, increasing the rated capacity to 35 tons per day. In practice, the average daily output in the year under review did not exceed 23 tons per day. The financial result of this most unsatisfactory state of affairs has been a gross loss of Rs. 39.41 lakhs to which must be added depreciation of Rs. 11.49 lakhs.

"Many factors have been responsible for the low production and the high loss, and, in fact, there is practically no misfortune this mill has not experienced. A go-slow movement in the crusher house and roaster section—wagon shortages leading to chlorine and lime running out so that unbleached paper had to be made on many occasions—power cuts as often as twelve times in a week, some probably due to sabotage. These are only a few of the unexpected problems that have had to be faced up to in the past year.

No. 2 Mill

"This mill has made practically no contribution to the Company's profits during the past year. The two main causes have been labour problems, particularly in the receiving section, and poor management. The former is being dealt with and the latter has been dealt with, as will be explained later.

"The recovery side at this mill has been giving very poor results, and as always this is a most expensive weakness in any paper mill. While improved results are expected, a modern recovery boiler is essential at this mill—partly because the existing obsolete recovery plant will never give a recovery percentage above 55 per cent, however efficiently operated, and partly because it is vital to provide additional steam from this source, thus enabling a reduction in the very high ratio of coal per ton of paper. Mention has been made earlier of the high cost of moving coal by road, and No. 2 Mill suffers badly from the other factors of having to burn low grade coal in boilers designed for the best coal India can produce.

"The No. 1 Mill has worked with reasonable efficiency during the year and has contributed all the Company's profits.

Reorganisation

"The Directors of your Company, and the Managing Agents, have been acutely conscious of the decline in management efficiency in the recent past. This can often occur, and not only in India, after a long period of prosperity when the going has been too easy. A severe shock is often the best cure and this has certainly been administered by the current year's results, assisted by the Tariff Commission. I would, therefore, now like to touch on what remedial action has and is being taken and the results that have been achieved so far.

"As already intimated to you in a previous statement, Messrs. Urwick, Orr and Partners Limited were commissioned to do both a survey of the Company's mills and bamboo forest organisation and to undertake the preliminary implementation of their reports. I should like to take this occasion of congratulating them on the excellent job they have done. It is, therefore, most unfortunate that, when there are not yet available in this country management consultants of this calibre, the Government should have refused sanction to remit them their dues, with the result that the Company has not yet been able to pay them for the greater part of their work—which for this reason had to be brought to a premature end.

"Quite considerable savings, in costs have already been achieved as a result of their reports and there are more to come now that work study engineers have been engaged at all three mills.

"Apart from cost savings, the whole senior management structure has been recast and there are new faces in virtually every senior post. A superintendent of mills has been appointed, there are three new mill managers, a new superintendent of engineering services, and a new cost accountant. In my opinion, the Company now has a most excellent team of senior executives. Almost equally radical changes have been and are being made in the lower staff levels.

"Many other changes are also being made, such as a complete overhaul of the labour relations organisation, the introduction of a modern training scheme, a new cost accounts system—to mention only a few.

"While it will be appreciated that a major reorganisation of this nature cannot achieve a complete cure overnight, shareholders will no doubt be interested to know what results have been achieved so far.

Current Working

"The No. 1 Mill is now earning satisfactory profits. The output in July at 2,330 tons was the highest in its history and in August 98 tons was manufactured in one day which again is the highest figure ever achieved. In my view, even further improvements can be expected in certain directions such as the recovery percentage, quality control—and even output.

"The No. 2 Mill reverted to a profit-making basis—albeit small—in June. A progressive improvement is now expected and it is hoped that by the end of 1962 satisfactory profits will be being earned. A reduction in the percentage of broke and an increase in the recovery percentage are the two main technical problems but getting a full day's work out of a percentage of the labour force is equally important.

"The No. 3 Mill is still making a substantial loss, although on a lower scale than last year. However, in August over 30 tons was reached as daily output on several occasions and given co-operation by the labour—there have been several recent instances of sabotage—it is hoped to get on to a break square or small profit basis towards the end of 1962. As at the other two mills, the new management deserves congratulations at the extremely good job being done, often under difficulties—as recently as July, six wagons of lime were lost on the railways, forcing the mill to make wrappers only for seven days.

"From the above brief survey, it will be seen that substantial progress has been made in recent months. It is, therefore, expected that the 1962-63 results will show a substantial improvement, but it may be 1963-64 before the Company can claim that its results bear favourable comparison with those of other companies of equivalent size.

Capital Reorganisation

"The Company's paid-up capital is unduly small in relation to the scale of its operation and the value of its assets. On the other hand, its borrowings from the I.C.I.C.I. and the bank are on the high side in relation to its paid-up capital. To rectify this situation and to provide funds for the modernisation and expansion programme that is completely essential, application has been made to the Controller of Capital Issues for a bonus and rights issue. It is hoped that sanction will be obtained in the near future, although details of the capital expenditure proposed will still have to be cleared with the Development Wing of the commerce and Industry Ministry.

Modernisation and Expansion

"The Adamson Engineering Corporation were appointed technical consultants to the Company in June 1962. Mr. George Adamson and Mr. Mac Coston have paid two visits to India in the course of their survey of the three mills and their report has been received and is being studied. Mr. Adamson has been responsible for erecting and commissioning the new bamboo pulp and paper mill at Bataan in the Philippines and thus is the rare combination of a technical expert with knowledge of the latest techniques in the world's paper industries plus a special knowledge of the problems involved in bamboo-based paper manufacture.

"Until the consultants' report has been carefully studied, it is impossible to say with exactitude how the funds to be raised by the rights issue will be spent. There are, however, certain general observations that can usefully be made. While it is expected to increase output at No. 1 and 2 Mills by increased efficiency, the expansion licence for 6,000 tons is specifically for No. 3 Mill and the greater part of the capital expenditure will therefore be concentrated on that mill. Apart from this consideration it is quite essential to make No. 3 Mill a contributor to the Company's profits instead of a liability as hitherto, and this postulates increasing the output to 18,000 tons per annum which is today the minimum economic size, bearing in mind the competition to be faced from large and modern mills shortly coming into production.

"In restrospect, it is evident that No. 3 Mill was planned on too small a scale, and with the desire to save foreign exchange and the Company's funds undue reliance was placed on reconditioned plant—undoubtedly a false economy. Both these errors of judgment must be rectified.

"Apart from No. 3 Mill, a modern recovery until at No. 2 Mill is essential—there are, in fact, many other directions in which capital expenditure can improve efficiency and cut costs—one example is installing chippers for bamboo at despatching point to save freight and wagon capacity—but the governing factor will be the availability of funds until the Company resumes making profits on a scale that permits a generous plough back.

Labour

"Since the close of the year, agreement has been reached with the representatives of labour on a long outstanding dispute. An increase in dearness allowance has been granted and an improvement in the clerical grade scales. On the other hand, a retiring age has been accepted coupled with a gratuity scheme. It is also hoped that by the time shareholders read this speech, gate control will have been introduced at Nos. 1 and 2 Mills. Urwick Orr's investigations have shown up what a large surplus of labour exists at all mills, but with give and take on both sides it should be possible over a period to resolve this problem with the minimum of hardship, if any.

"In conclusion, I would say that I well appreciate the concern shareholders will feel at the extremely poor results shown in the accounts now in their hands. Nevertheless, I feel confident that this year is a turning point—that the mistakes of the past are being corrected, and that the increased efficiency now evident at the three mills plus the modernisation programme being planned, and I hope sympathetic treatment by the Government of the problems of increased costs, will restore your Company to the high standing it has so long enjoyed."

Note: *The above statement is not a report of the proceedings of the annual general meeting, which will be held on 27th September* 1962.

A STOCK EXCHANGE QUOTATION—I

IMPLICATIONS TO INVESTORS AND COMPANIES

By D. R. Pendse, M.A. (Cantab.)

IN recent years, Indian company managements have shown a growing appreciation of the importance and utility of a stock exchange quotation for the shares of their companies. Almost all new companies, which are eligible for such a quotation, seem to apply for it. While several old companies, which were averse to applying for such a quotation, are now veering round to the views of their younger colleagues. An attempt will be made in this article to trace briefly the reasons for this welcome change of attitude and to examine the implications of such a quotation to investors and companies. A comparison of the law and practices of the stock exchanges in India with that in the United States is made at appropriate places with a view to assessing as to what extent the Indian practices are geared to meet the demands of the day.

In this article, "stock exchanges" refer only to those seven that are recognised by the Government of India under the Securities Contracts (Regulation) Act (No. 42 of 1956) or S.C.R. Act, to be brief. There are two stages in which shares of a company initially get quoted on a stock exchange. First the exchange agrees to grant a quotation and thereafter permission is given to deal in the said shares. Although there are conditions attached to each of these two stages, the difference between them is, in fact, mainly of time, there being very few cases where the first stage was approved but never the second. In this article, reference to "the grant of a quotation" generally implies the completion of both these stages.

Importance of Quotation

Until a few years ago, company promoters had generally to depend on their friends, associates, and on institutional investors like banks, insurance companies, trusts, etc. to obtain subscription to the capital issues of their companies. It was far from a subject in which the general public as such seemed to show any tangible interest. During the last three or four years, however, the Indian capital market has witnessed a remarkable change and the so-called "small individual investor" has come to be a force to reckon with. Why and how this change came about would undoubtedly be an interesting subject of analysis by itself, but it is entirely beyond the scope of the present article. Much has also been said about this emergence of the new investing class. For the present purpose, it would be sufficient to note the principal characteristics of this "small investor." First, he (and there are many 'shes' too) usually belongs to the middle class is salary earning (or, in a few cases, engaged in small business) and is inflation-conscious. His little savings seem to take him nowhere. Secondly, as he is in active duty, he is not worried about an immediate return from his savings, but wants to see them appreciate in value and to be capable of giving him a decent return after some years, when, perhaps, he will retire. Thirdly, he is enamoured by the conspicuously large premiums commanded by some new issues, would like to try his own luck at the "game," and, therefore, has a strong preference for equity shares. Fourthly, he is not yet initiated in the mechanism of stock exchanges, and is still rather shy of getting "involved" in buying old quoted shares and the manifold procedures attendant thereto. He, therefore, concentrates on applying for new equity issues of his choice, in making which he is as gullible as ever. Last, and the most important for the present purpose, he is not interested in any shares unless he is assured of a stock exchange quotation to them.

New Companies

The attitudes of new and old companies towards the question of applying for a stock exchange quotation are not identical, though there is some inevitable overlapping. To the new companies, a stock exchange quotation is, first of all, a prerequisite for attracting the new investing class to subscribe to the issue capital. Secondly, before the issue of prospectus, the schemes of activities of companies are, in many cases, examined by various Government departments like the Development Wing, the Controller of Capital Issues and these as well as stock exchange authorities informally "recommend" to the promoters that, in the interest of the small investor, they should seek a stock exchange quotation. Lastly, stock exchanges make it a rule not to permit their members to act as brokers, underwriters, etc., to any new issue, unless the company undertakes (*a*) to apply for a quotation on at least one of the seven recognised stock exchanges, and (*b*) to publish this undertaking on the body of the prospectus or advertisements. Companies can ill-afford the non-co-operation of all stockbrokers in the country, and they concede the point by applying, even if, in some exceptional cases, companies would have liked to postpone the application.

Old Companies

In the case of old but unlisted companies, the growing tendency to apply for a quotation is, perhaps, due to three other factors. In the first place, with the popularity and success of several recent new issues, there has been an ever-increasing pressure of the shareholders of such old companies on the managements to seek a quotation on a stock exchange so that they, too, would be able to reap the fruits of their patience. Secondly, in the absence of such a quotation, the marketability of their shares is so restricted that often shareholders of companies with excellent management, dividend record, etc., find it difficult to sell their shares at anything like a reasonable price. Lastly, the income-tax authorities generally give due weight to the stock exchange quotation for the purpose of valuation of assets of an assessee. If shares of any particular company are not listed, they are valued at rates which the shareholders sometimes complain to be arbitrary. The utility and the need for a stock exchange quotation, therefore, seems to be readily accepted by new and old companies alike.

There are, however, still some high-stature large public companies who seem to be hesitant to apply for a quotation. Stock exchanges and the Government naturally insist that a quotation be not granted if the shareholding is unduly concentrated. These companies seem to find it difficult to comply with this condition, presumably because of shortage of sellers. Since it is in public interest that shares of such companies are quoted on stock exchanges so that the investing public could have an opportunity of buying them, the stock exchanges, on the advice of the Government, take a lenient view at present as to the extent of this spread of shareholding and thus encourage such companies to seek a quotation. The fact that under the S.C.R. Act the Government is empowered to force a company to comply with requirements for a quotation, seems to indicate the importance which the Government attaches to this question. But, in view of the healthy trend of the past, there is reason to believe that this section of the Act would continue to remain uninvoked.

Legal Framework

The growing eagerness on the part of companies to seek a stock exchange quotation is, however, not without a curious implication. There is great rush to get past this gateway to marketability, dignity and popularity, and there emerges an urgent need (*a*) to restrict admissions only to those that are really eligible, (*b*) to ensure that those admitted maintain decorum and strictly follow the rules of the game, and (*c*) to remove those who insist on misbehaving despite warnings. As prevention is better than cure, great emphasis is rightly placed on the first, and the Companies Act, the Securities Contracts (Regulation) Act and Rules, and the By-laws and Regulations of Stock Exchanges all contain elaborate provisions for ensuring that only the really eligible companies are permitted. The standardised Listing Agreement, by which every listed company commits itself to a code of conduct after listing, takes care of the second; and the power of stock exchanges to delist a listed company is meant to achieve the third. In the following paragraphs, the framework of laws, rules, and conventions on these three aspects is examined in turn.

A useful starting point for considering the legal framework at a stage prior to the grant of a stock exchange quotation would be Section 73 of the Companies Act. Under this section, once a public company seeking capital from the market makes a statement on its prospectus to the effect that a quotation from a recognised stock exchange would be or is applied for, not only does it have actually to seek such a quotation but it has also to receive the permission of the concerned stock exchange for such quotation. Otherwise, the promoters have to refund forthwith all the application money to the applicants for the issued capital. Wilful negligence to refund the money within eight days of the refund being due, make the Directors of the Company liable to repayment.

The scheme of this section seems to be quite clear. In order to attract the investors, a stock exchange quotation has now become almost a necessity. But the receipt of approval for a quotation is rarely possible before the prospectus is issued and applications for shares are invited. The interests of investors would be seriously prejudiced, if those who had applied for shares in the fond hope of a quotation were later told by the management that the company's application had been rejected, and still had no right even to get back their application money. This section, therefore, throws the onus of responsibility on the promoters, who, as a matter of prudence, should hold informal consultations with the stock exchange authorities before the issue of prospectus to determine if they would be able to comply with all the requirements of the exchange.

By far the most important requirement imposed on the stock exchanges under the Rules framed under the S.C.R. Act is that at least 49 per cent of the capital issued should be offered to the public and whatever is offered should be allotted among applicants fairly and unconditionally. Shares to be held by the Central or State Governments, or by a Government company, etc., and by foreign collaborators, if any, are ignored in calculating this percentage. Presumably, it is intended that 49 per cent is the maximum that promoters can invariably be asked to release for a public offer, consistent with stability of control and management; and it cannot be denied that, despite several controversies, this rule is having a tonic effect on the 'public' ownership of shares.

Scope for Relaxation

Under the Rules, stock exchanges, with the previous approval of the Central Government, have been given power to relax this requirement on "satisfactory evidence being produced by the company concerned that securities sought to be listed are not unduly concentrated in a few hands." In the case of new companies, that is, companies formed after the Rules came into effect in 1957, the Government has generally refused to approve such a proposal. In the case of old companies, the Government has issued certain instructions, whereunder, except for some exceptions, the capital issued and held by the general public has to be about 40 per cent of the issued capital, if the Government has to consider sympathetically the grant of such approval. These instructions also include related matters about further issue of capital, etc. These relaxations tend to help older companies to seek a quotation before they are withdrawn and both old and new companies are placed on par.

There are several other requirements which are laid down in the Rules, by-laws, etc. and they relate to (*a*) provisions that each company should make in its Articles of Association; (*b*) documents and returns to be filed with the exchange; (*c*) matters connected with dividend declaration, closure of transfer books, etc. Rarely is there any controversy over these requirements.

In addition, in the light of experience of the working of the new issue market, stock exchange authorities have evolved some further requirements. Some of these may be briefly stated: (i) In case of oversubscription, allotment of shares should be in consultation with the stock exchanges; (ii) application money should be accepted at par at least at the seven centres at which recognised stock exchanges function; (iii) dividend vouchers should be payable at par at places where company's bankers have branches; (iv) companies should not, as far as possible, charge transfer fees; (v) when right shares are issued, existing shareholders should be allowed to apply for additional shares and these applications should be allotted the surplus shares, if any, in consultation with the stock exchanges, etc. Some of these and similar other requirements are still in the form of conventions. But their force is by no means less, and this fact is correctly appreciated by the applicant companies.

Rejection Very Rare

It would, however, be wrong to conclude that, since a stock exchange quotation presupposes the fulfilment of all these and several other rigorous conditions, there will, perhaps, be quite a number of rejected applications. The rigours of the Companies Act (Section 73) discourage companies from making a formal application, unless they are willing to comply with these conditions and are reasonably confident of the favourable verdict of the stock exchange. In some other cases, the companies themselves prefer to withdraw their applications. In effect, cases of rejection are extremely rare. This is essentially the result of the practice, as mentioned earlier, of having several informal discussions between the representatives of the stock exchange and the company at a very early stage, generally well before the issue of the prospectus. There is a noticeable tendency to have a stock-broker on the Board, which also, plausibly, smoothens the course of the application.

It is, nevertheless, conceivable that, in some stray cases, the decision-making body of any particular stock exchange might be unnecessarily prejudiced against a particular company and might refuse to grant a quotation to it, resulting in hardship to the promoters and the applicants for shares. This possibility is visualised by the law makers; and the S.C.R. Act authorises such a company to file an appeal with the Central Government. If it is upheld, the concerned stock exchange is obliged to accept the company's shares for a quotation. The very presence of such a clause has, perhaps, made stock exchanges conscious of their responsibility; because, during the last five years, the Government did not have to invoke this section even in a single case.

No Guarantee of Soundness

It is useful to state here that, while every application for a quotation is subjected to all the above requirements, the stock exchanges do not accept any responsibility about the profitability or the future prospects of any particular company. On the contrary, they have meticulously avoided expressing any opinions on such issues and it is made clear that permission to grant a quotation is in no way an assurance to the investor that the shares will be quoted at a premium or they will fetch some dividends to him or anything of that sort. Save in cases of known fraud, or proved bad record, they also refuse to give any weight to the quality of management of any particular company in considering its application for a quotation. These questions are left all to the investor for himself to find an answer to. It is the stock-broker who is likely to express his personal opinion to his clients while recommending any particular shares for purchase or sale: the importance of taking the advice of an honest broker thus remains paramount to an investor.

This attitude of the stock exchanges in India is frequently criticised as passive and negative. It is argued that there is too much insistence on, and only on, compliance with technical conditions. Such compliance does not invariably give an assurance that only good companies will be quoted on the stock exchanges. The prescribed form of listing application is itself a very detailed document and the impression gathered is that the stock exchange office-bearers examine the answers to the various questions in the form perhaps on the basis of certain formulæ and then grant quotations to the companies which seem to score a minimum of passing marks. It is appreciated that the stock exchanges would not like to take any responsibility, legal or otherwise, as regards the prospects for any company quoted on the stock exchange; yet, it is felt that the stock exchanges should be a place for transactions in shares of only prosperous and sound companies and should not be either a playground for manipulation or a dumping ground for unsaleable shares. For this purpose, the stock exchange authorities should, so runs the argument, lay down certain criteria as regards (*a*) the minimum size of the company as expressed by its earnings and tangible assets; (*b*) the types of excluded activities; (*c*) the record of management, etc. Above all, the authorities should be ready to make appropriate use of the absolute discretion with which they are armed under their by-lays and regulations on this subject. Fortunately, the members of the Board of Directors of stock exchanges, by virtue of their background, have among them persons of wide experience and knowledge of markets and men. Collectively, they are perhaps the most qualified to take a *bona fide* decision as to whether a stock exchange quotation to be granted to a particular company would be genuinely in the public interest or the interest of the trade. Despite this, the criticism goes, these very Boards of Directors, in their tendency to be meekly satisfied with checking compliance with routine conditions, only count the trees and can miss the wood.

Comparison with New York

A strong contrast is provided by the approach of some of the stock exchanges in the United States towards this question. For example, the New York Stock Exchange (N.Y.S.E.), which is by far the most important one in the United States, refuses to have even any prescribed form for listing applications; the applicant companies have to state various details in the form of a narration. The application is examined on the basis of certain guiding principles. For example first, the company must be a going concern and must have substantial assets or demonstrated earning power, or both. Secondly, the Exchange should be satisfied about the national interest in the shares of the company; the standing of the company in the particular industry; the character of the market for its products; its relative stability and position in the industry; and whether or not it is engaged in an expanding industry with prospects of maintaining its position. Thirdly, shareholding should not be unduly concentrated and an adequate market therein should exist. These abstract principles are translated into figures for the guidance of the applicant companies. Thus, for example, the Exchange expects (*a*) a demonstrated earning power of over 1 million dollars annually; (b) tangible assets of eight million dollars or above; and (*c*) at least 400,000 ordinary shares outstanding (i.e. excluding concentrated or family holdings) among at least 1,500 shareholders (excluding odd-lot holders). The Exchange naturally retains the discretion to add to these or relax one or more of these conditions in suitable cases.

Besides satisfying these conditions, applicant companies to the N.Y.S.E. have to furnish full details on several points such as (*a*) brief history of business; (b) dependence on patents, secret formulæ, etc.; and (*c*) description of property, employer-labour relations, shareholders' relations, litigations, etc. The exchange also requires the company to file an opinion of a lawyer, "of satisfactory standing to the Exchange," on certain matters concerning the legality of the organisation, business activities, etc., of the company. Distribution schedules of shareholdings are required not only on the basis of shares held by each holder, but of shares held by holders in different States of the country. Once a quotation is granted, the Exchange makes it a practice to print (at the company's cost) the listing application in all the details and make copies available on request to any member of the public.

The Securities and Exchange Commission (S.E.C.), the high-power body of the U.S. Government, also has vast powers in this matter. Each approval by a stock exchange of the application of a company for a quotation has to be filed with the S.E.C. and normally becomes effective only thirty days after such filing. The S.E.C. itself has the power, in any particular case, to postpone by a year the listing of shares, to deny listing altogether or even to delist shares, when the interests of investors so demand. The latest reports of the S.E.C. indicate that, when the situations warrant it, the Commission did not hesitate to make use of these powers. In India, as mentioned earlier, the S.C.R. Act empowers the Government to force a company to seek a quotation, but there is no power either to postpone or to refuse the grant of a quotation to any company.

The absence of such a power in the hands of the Government under the present scheme of the Act only enhances the responsibility of stock exchanges in India to take utmost care to protect the interests of the investors while considering the applications of companies for listing. Although the stock exchanges in India have admittedly not adopted as positive an approach as their American counterparts, there are signs of efforts in the right direction which would be welcomed equally by the Government and the investors.

(To be continued)

Note: The author is indebted to Mr. P. S. Nadkarni, Chief of the Government of India's Stock Exchange Division, for the benefit of several discussions. The views expressed in this article are, however, entirely the author's personal views.

Notices

INDIA STEAMSHIP COMPANY LIMITED

NOTICE OF THE ANNUAL GENERAL MEETING TO THE SHAREHOLDERS

NOTICE is hereby given that the Annual General Meeting of the Members of the INDIA STEAMSHIP CO. LTD., will be held at the Registered Office of the Company, "India Steamship House," 21, Old Court House Street, Calcutta, on Tuesday, the 25th September, 1962, at 3-30 p.m. in order to transact the following business:—

1. To receive the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1962.
2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1962.
3. To appoint a Director in place of Dr. S. C. Law, M.A., Ph.D., who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

   RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. S. C. Law, M.A., Ph.D., who has attained the age of 70 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.
4. To elect Maharaja Sir Pratap Chandra Bhanj Deo Bahadur of Mayurbhanj, G.C.I.E., a Director of the Company, who retires by rotation and is eligible for re-election.
5. To appoint Auditors for Head Office and Branch Office, Bombay, and fix their remuneration.

The Share Transfer Register of the Company will be closed from Monday the 10th September, 1962 to Tuesday the 25th September, 1962, both days inclusive.

BY ORDER OF THE BOARD,
A. MUKERJI,
Secretary,
India Steamship Company Ltd.

CALCUTTA,
The 30th July, 1962.

The dividend, if sanctioned, will be payable on and from 1st October, 1962, to those Shareholders whose names stand on the Register of the Company on Monday, the 10th September, 1962.

N.B.—Member entitled to attend and vote is entitled to appoint a Proxy and the Proxy so appointed need not be a member of the Company.

NOTE: The Explanatory Statement as required u/s 173 of the Companies Act, 1956, is annexed to the convening notice issued to the Members of the Company.

THE ELLORE ELECTRIC SUPPLY CORPORATION, LIMITED

Registered Office—MADRAS-1

NOTICE IS HEREBY GIVEN THAT THE 28th Annual General Meeting of the Shareholders of this Company will be held on 29th September, 1962 at 10-45 a.m., at the Registered Office of the Company at No. 20, Second Line Beach, Madras-1, for the adoption of Audited Accounts, Election of Directors in the place of those retiring by rotation, appointment of Auditors for the year 1962-63 and fixing their remuneration as per notice sent to the members individually. The Share Transfer Books will be closed from 22nd September, 1962 to 29th September 1962.

By Order of the Board,
For CHANDRIE & CO., PRIVATE, LIMITED,
S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS-1,
3rd September 1962.

PROBLEMS OF INTERNATIONAL LIQUIDITY

STERLING AND D-MARK EASIER

By W. T. C. King
EDITOR OF *THE BANKER*

LONDON, *5th September*

AN easier tendency in sterling in the international exchange markets has attracted some attention during the past month (August 1962). In terms of the U.S. dollar, the rate has dropped almost to parity—actually to $2.803/16—for the first time since the exchange crisis of 1961. There seems to be no reason to suppose, however, that this movement reflects any fundamental new trend. Traditionally, indeed, this is the time of year when weakness is to be expected, because heavy payments fall to be made for imports of foodgrains and raw materials and for outlays by British tourists overseas at the peak of Britain's holiday season. On these grounds, some depreciation of sterling during August would have aroused little comment had it not been for the fact that, in recent years, these purely seasonal strains have been somewhat less evident than they used to be. They are certainly still present, however, in some degree.

In addition, sterling has been feeling the effects of changes in the weight (and perhaps also the direction) of movements of short-term capital. A few months ago, when there was a huge spate of international suspicions of the dollar, the strength of sterling was almost embarrassing. But, since the blaze of publicity given by the first Telstar relay on television to President Kennedy's denial of any possibility of devaluation of the dollar, these suspicions have notably subsided; and sterling has felt the backwash of this shifting view. In recent months, moreover, changes in the relative levels of short-term interest rates have narrowed down the formerly wide differential which favoured movements of short-term money to London. While some overseas rates have been rising, the trend in London has been downwards. Six months ago, the London Treasury Bill rate was over 5½ per cent; by mid-June, it had dipped below 3¾ per cent, but then hardened to 3-15/16 per cent, when it became clear that no further reduction in Bank Rate was imminent (the last reduction, from 5 to 4½ per cent, took place at end-April). Now the Treasury Bill rate is back to 3¾ per cent.

D-Mark

Another important influence of the pattern of international capital movements recently has been the striking change in attitude towards the Deutschemark. One of the strongest performers in the world's exchange markets for long periods, the D-Mark has lately come under fire—in part in consequence of the new nervousness about East-West relations in Berlin and in part because of the rising pressure, especially from wage-rates, on internal costs in Western Germany. It is certainly a novel experience for the modern exchange markets when ministerial spokesmen in Bonn deem it necessary to give reassurances about the strength of the D-Mark, as happened last month; after all, it is only 18 months since the unilateral upvaluation of West Germany's currency—by a 5 per cent which most international bankers still regard as having been insufficient. Yet, in recent weeks, the D-Mark has actually dipped below its parity with the U.S. dollar. Except to the extent that it springs from the political uncertainties surrounding Berlin, this change of mood probably arises much more from Germany's own deep-rooted fears of inflation (fears aroused anew by the trend of domestic costs) than from any radical re-thinking overseas. International bankers have, however, not yet been shaken out of their conviction that the D-Mark is indeed, as Dr. Erhard claimed, "among the world's hardest currencies."

Since this easing of sterling and of the D-Mark has occurred on the eve of the annual meetings of Governors of the International Monetary Fund and World Bank—to be held this year in Washington—it should perhaps be remarked that there is no sign whatever of any causal connection between these events. All too often in the past the approach of these gatherings of the world's Finance Ministers and Central Bankers has been the sign for the spreading of gravely dislocating rumours through the exchange markets—generally on the hypothesis that some new exchange alignment, possibly affecting the parities of one or more of the leading currencies, might be worked out or receive informal sanction behind the scenes. Perhaps because of the repeated falsification of such rumours, the exchange markets have this year been spared that sort of disturbance. The impending meeting in Washington will certainly be the occasion for further important exchanges of views on the problems of international liquidity, but there has been no expectation of far-reaching decisions of a kind that would impinge upon the exchange markets in the short run.

Shortage of Means of Payment

This does not mean, of course, that the leading Finance Ministers and Central Bankers are content with the international monetary arrangements as they now are, after the improvements made in recent years. The underlying aim is to ensure that the growth of world trade, and of the several national economies, shall not be retarded—now or in the future—by shortage of international means of payment. This is the purpose that is served by the mechanism of the International Monetary Fund, with its central pool and gold and of holdings of national currencies, on which member-countries can draw, under certain conditions, to meet short-term deficiencies in their balances of overseas payments if their own reserves would otherwise be unduly strained. To improve the facilities for this sort of smoothing out of the effects of international fluctuations, the resources available to the I.M.F. have lately been increased in two ways: First, by enlarging its central pool through increases in the quotas directly contributed by the members, and, secondly, by the arranging of credit lines on which the I.M.F. can draw in local currency up to defined amounts in 10 principal countries. This last reinforcement of the Fund, to the extent of the equivalent of $6,000 million, was the outcome of the scheme agreed in principle at the I.M.F. meeting in Vienna 12 months ago. But, welcome though it was, there is widespread agreement that it does not dispose of the problem of international liquidity.

In particular, the total supply of international means of payment still depends to a very large extent upon the available supply in international hands of holdings of the two currencies that are largely held as "reserve" currencies—sterling and the U.S. dollar. So long as these two currencies make up the major part of international reserves and means of payment other than gold itself, it follows that a rising volume of international payments (or, more strictly, of temporary disequilibria arising on national balances of external payments) can be accommodated only if there is a broadly corresponding growth in international holdings of those currencies—apart from whatever growth takes place in the monetary value of available gold reserves. In this system as it operated at present there is an inherent weakness.

British Chancellor's View

Mr. Reginald Maudling, Britain's new Chancellor of the Exchequer, pointed out, in his first major speech as Chancellor, that, if the growth of international holdings of the reserve currencies, in response to the growth in world trade, occurs rapidly "it can create distrust over the future value of the reserve currencies, with difficulties that we can all foresee. We know from experience the constraint that this danger can impose on our domestic policies." In other words, the growth of world trade, which cannot take place without an increase in the supply of sterling and dollars internationally, is liable to put pressure on those currencies in the exchange markets and to threaten the national reserves held against them, and thus to compel the British or American Governments to impose a brake on the rise in domestic activity in the effort to conserve the reserves—restrictions that will not only involve sacrifices within the domestic economies concerned but will also recoil on world trade and tend to retard its growth.

In this sphere, the most immediate need is to find a way of breaking out of the vicious circle thus set up. As Mr. Maudling emphasised last July, if world trade is to expand as we wish, it is necessary to improve the arrangements for international co-operation in support of the key currencies. We must "continue to look for some method of settling international deficits without either promoting world inflation or throwing an undue burden on the reserve currencies." In such an exercise, as the Chancellor immediately acknowledged, there are many difficulties—financial and technical as well as political—to be overcome. This evidently will not daunt him from taking the initiative at the forthcoming meeting, as he hinted he would do last July, in focussing discussion on these problems. It is much to be hoped that some solid progress can be made. But none of the preliminary comments about the meeting has suggested that any grand new plan is in the offing; but there is plenty of scope on the sober, technical plane.

World production of crude oil touched a new peak of 591 million tons during the first six months of 1962, as compared with 551 million tons in the corresponding half of 1961 and 567 tons in the second half of last year, according to the *Petroleum Press Service*. Production in Russia, Eastern Europe and Communist China rose by as much as 11 per cent over the first half of 1961, whereas the total world increase was only 6.6 per cent. Russian output alone was 89.3 million tons. The Middle East continued to be the largest producer of crude oil, its actual output having gone up by 10 million tons to 150 million tons.

GAS COMING UP

When a successful well has been completed the oil that has entered the bottom of the hole has to be brought to the surface. Sometimes the oil will flow to the top of the well of its own accord, rather in the way that a bottle of warm soda-water will empty itself when the cap is taken off—the gas bubbles out strongly and carries the liquid with it.

Sometimes the oil has not enough gas associated with it to flow in this way, but it can be encouraged to do so if extra gas is forced down the well. Sometimes again the oil has so little gas that the easiest way to get it out is by pumping it up with a special type of pump.

In all these methods the oil is brought to the surface through a string of narrow pipe, called tubing, suspended in the well.

TRENDS IN E.E.C.'S STEEL INDUSTRY

EXPANSION PROCEEDING AGAINST BACKGROUND OF TECHNICAL INNOVATION

THE year 1961 was not a particularly good one for the iron and steel industry of the European Economic Community. As a sequel to the weakened market conditions, prices fell and many iron and steel works had to limit their production. Steel ingot production within the Coal and Steel Community (Federal Republic of Germany, Belgium, France, Italy, Luxembourg and the Netherlands) was practically unchanged during the year, in contrast to a rise of over 15 per cent recorded during 1960. In absolute terms, crude steel production aggregated 73.3 million tonnes in 1961, as compared with 72.8 million tonnes in 1960 and 63.2 million tonnes in 1959. In spite of the small increase in production in the year under review, the Community's aggregate steel output accounted for a fifth, 20.1 per cent to be precise, of the aggregate world production of steel (363.6 million tonnes) in the same year. Still the fact that, out of the total increase of 19.9 million tonnes in world output over the 1960 level of 343.5 million tonnes, the Community's share was no more than 0.5 million tonnes is too significant to be ignored. A certain falling-off in the volume of *new orders* from consumers in a number of Community countries and a slight reduction in exports of semi-finished and finished products from 10.8 million tonnes in 1960 to 10.5 million tonnes in 1961 were, together, responsible for the slow-down in crude steel production.

The gradual movement in the direction of a buyers' market from the end of 1960 onwards, according to the recently-published tenth General Report on the Activities of the Community (1st February 1961 to 31st January 1962), caused a general tendency during 1961 to adjust prices downwards and to reduce price disparities as between different products and different markets. Taken overall, the *price spread* for the different rolled products closed up fairly markedly during 1961. The narrowing of the gap between prices of flats and of other products, it is pointed out in the report, reflects the progressive adjustment of these to the modern production techniques which have been coming into use in the course of the last ten years. As for export prices which are the most changeable prices of all, these in general declined, despite temporary upturns, throughout 1961. On 1st January 1962, the Community's export prices were, on an average, 10 per cent lower than on 1st January 1961 and 20 per cent lower than on 1st January 1960. Prices for flats, in particular, were below the lowest point touched during 1958 and early 1959. By way of comparison, it may be noted that the United Kingdom's published export prices remained practically unchanged during the year, while the United States prices were reduced only in respect of sections, heavy plate and hoop and strip. These official British and American prices, along with the Community's export prices, are given in the table below:

($ per metric ton f.o.b. port of shipment)

Steel products	Community (overall)		U.K.		U.S.	
	January		January		January	
	1961	1962	1961	1962	1960	1962
Reinforcing bars ..	92–97	77– 84	110.35	110.35	127	127
Merchant bars ..	99–102	94– 96	109.75–116.65	109.75–116.65	131.85–134.25	126.30–134.25
Joists	94– 96	94– 95	..	..	131.85	126.30
Wire-rod	105–107	88– 90	123.45–124.85	123.45–124.85	146.15	146.15
Hoop and strip ..	109–111	92– 94	114.65	114.65	117.95	114.65
Plate	97–101	89– 92			126.75	118.60
Sheet (hot-rolled) (2.75—<3 mm.)	131–138	106–115	..	..	141.75	141.75
Sheet (cold-rolled) (1 mm.) ..	142–150	116–121	..	..	156.75	156.75

Although official British and American prices are appreciably higher than the Community's, they do not necessarily represent, according to the E.C. & S.C.'s report, the prices actually charged, which may be a good deal lower. However, the American steel industry, whose home prices are high and which is essentially geared to the home market, has generally refrained up till now from differentiating its export prices, which thus lessens its power to compete. As far as the Community's competitive capacity *vis-a-vis* Japan, for instance, is concerned, it is being increasingly challenged, although the general level of exports from the Community was more or less maintained during 1961. The fact that considerable progress has been made by Japan in regard to production techniques and types of products is significant in this connection. The Community's steel industry has, therefore, been urged to work fast on further improvements—technical and other—in order to maintain its competitive capacity in the future.

It is in this context that the Community's General objectives for Steel for the period 1962-65 have to be viewed. If the Community's iron and steel enterprises implement in full their present investment plans, their production potential will be raised to 99 million metric tons of crude steel by 1965. They should then be able to cover the probable requirements of the internal and export markets, which are estimated at 89 million tonnes if 1965 is an average year for business, and at 94 million tonnes if it is a particularly active one. According to the Community's current projections, a quantitative balance is likely to be ensured between production and demand in respect of most steel products, the only exception visualised here being the flat-products sector in which an imbalance may develop inasmuch as estimated capacity is several years ahead of the probable consumption trend.

The problems facing the Community's iron and steel industry are thus of a different nature. Instead of concentrating simply on how to produce the tonnages required and to secure the necessary raw materials, the report points out, the industry will have to devote its attention more specifically to economic aspects. Besides, the European steel industry will also have to consider, first, which production techniques to employ and how quickly to adapt its plant in line with technical progress, and, secondly, which qualities of product will best meet consumers' requirements, due account being taken of the relative prices. Thus, the general background to developments in the iron and steel industry during the next few years may be expected to be one of far-reaching changes both in general economic set-up and in production techniques.

Already in the iron and steel industry the present expansion of production capacity is proceeding against a background of radical technical innovation. Thus, at the blast furnaces, several major improvements, including in particular better burden—preparation methods and the injection of fuel oil, have enabled the coke rate to be very considerably reduced and the capacity of the existing furnaces increased, with a resulting drop in production costs. At the steel works, the most striking development has been the advance of the oxygen steel-making processes, which yield metal of much better quality than the traditional basic Bessemer converter. There have been a number of other improvements, too, as, for instance, the development of oxygen-blowing devices which can be fitted to most types of existing plant. Thanks to these technical changes, a steep rise is already observable in the proportion of high-grade products. This trend will be accelerated in the next few years. It may be noted, in this connection, that the electric-furnace process and the oxygen-blown process will account for 10.4 million tonnes and 26.2 million tonnes, respectively, of the projected production potential of 99 million tonnes in 1965, as against 7.6 million tonnes and 1.8 million tonnes, respectively, of the actual production of 72.8 million tonnes in 1960.

These and other improvements introduced in steel making in recent years have broadened the range of qualities available to the consumer. At the same time, the very rapid development of certain potential competitor products, such as plastics, is obliging the steel industry to devote special attention to problems of quality. The use of the new types of product, reductions in the gauges, and improvements in the intrinsic properties of the metal are likely to cause a change in specific steel consumption in the various manufacturing industries. The end-result need not be a falling-off in steel sales, for the reduction in the cost of steel for any given purpose could enable this metal to maintain, and even expand, its competitive position.

DETONATING FUSE

from YUGOSLAVIA

NOW AVAILABLE IN INDIA

CISSY PRIVATE LIMITED

have pleasure in announcing that supplies of DETONATING FUSE in coils of 250 metres, packed in cases containing 4 coils, tested and approved for use in India by the Chief Inspector of Explosives, are now available in India.

Consumers may write to:

CISSY PRIVATE LIMITED

C-243, DEFENCE COLONY, NEW DELHI-3

for their requirements giving storage licence details.

(These supplies are imported from Messrs. JUGOIMPORT, YUGOSLAVIA)

Under rate contract with D. G. S. & D.

FDS-CC-18

BRITAIN'S ATOMIC POWER STATIONS

Britain's first two commercial atomic power stations at Bradwell (Essex) and Berkeley (Gloucestershire) have each produced electricity sufficient for the annual needs of some 50,000 people since they first went into service a short time ago. An output of more than 60 million units has been achieved by each station during the first stages of its commercial life with equipment being tried out under working conditions for the first time. When fully operational in 1963, the stations at Bradwell and Berkeley are expected to deliver 300,000 and 275,000 kw. respectively to the National Grid.

Britain's atomic power programme, the largest in the world, is designed to produce between five million and six million kilowatts of electric power by 1968. Nine stations which will have a total output of 4.5 million kilowatts are already being built or have been ordered.

The advanced gas cooled reactor built by the Atomic Energy Authority Establishment at Windscale, in north-west England, went into operation recently. Its main objective is to make a significant reduction in the cost of electricity generation by lowering capital costs and increasing thermal efficiency. The advanced gas cooled reactor represents a phase of deveolpment beyond the basic Calder Hall designed adopted as the basis for the early British nuclear power stations like the aforesaid Bradwell and Berkeley stations.

DECISIONS ON SCRAP COMMITTEE'S REPORT

Following the scrap Committee's recommendations, the Government of India recently decided to: (i) ban the export of heavy melting, No. 1 sheet outtings and re-rollable scrap, (ii) permit exports of steel turnings and borings at the discretion of the Iron and Steel Controller, (iii) re-examine the railway freight structure pertaining to scrap, (iv) remove price and distribution controls on all categories of scrap other than fresh unused defectives, re-rollable scrap and ingot moulds, and (v) encourage a rapid development of additional scrap melting capacity by indigenous electric furnaces. The Steel Furnaces Association of India (Chairman: Mr. Viren J. Shah) has fully welcomed decisions (i), (iii) and (v). Although the Association's suggestion that exports of steel turnings and borings should be banned completely has not been accepted, Mr. Shah has expressed the hope that the Iron and Steel Controller will exercise his discretion [decision (ii)] without prejudice to the overall interests of the industrial users. As for the removal of price and disribution controls, the Association's view is that it may have the effect of raising the internal prices of scrap. The question of prices, according to the Association, may have to be reviewed in the not distant future.

"MARAGING" NICKEL STEELS

A range of super-strength steels of great interest to the aircraft, missile and general engineering industries has just been developed by International Nickel Company (Mond) Ltd. Known as "Maraging Steels," these new materials offer exceptionally high strength without the brittleness often associated with conventional high-strength steels.

Containing up to 25 per cent nickel, the "Maraging Steels" gain their unique combination of properties from structural changes which take place in the metal during a simple heat treatment at low temperature. "Maraging Steels" combine high-tensile strength (95-140 tons per square inch) and high proof stress (90-135 tons per square inch) with a toughness and ductility unobtainable from other steels of comparable strength. The development of these important alloys will enable designers to produce stronger and lighter structures and will encourage a much wider use of ultra-high-strength steels in many branches of engineering.

NEW PRODUCTS AND PROCESSES

Telescopic Camera Mast

A NEW technique for obtaining bird's-eye view shots with a still or film camera has been developed by Simon Engineering Dudley Ltd., England. They have produced a mobile telescopic mast that will lift a remote-controlled camera weighing up to 10-lb. to heights of 100 ft. The mast consists of six light alloy tubes, five of them telescoping into the sixth which has a pivoting attachment to the frame of a carrying vehicle. When not in use the mast is stowed horizontally across the top of the vehicle. For filming, manually operated outrigger jacks are extended at the rear to provide a stable base. The mast is raised to a near vertical position by means of an hydraulic ram and is then extended by a system of cables and pulleys operated by a hydraulic winch. The camera is operated from a panel at the foot of the mast with the aid of a small electric motor which controls the camera shutter release, rotation and elevation.

Elimination of Pitch in Baby Car

A rubber-and-fluid system of suspension, called Hydrolast.c, which gives a smoother ride and better cornering is a main feature of the new Morris 1100 announced recently by the British Motor Corporation. A family saloon with a top speed of nearly 80 m.p.h., it has rubber cone springs which are connected longitudinally front to rear by narrow-bore pipes running beneath the car. In the cones are traps containing an anti-freeze, water-based fluid. When the front wheel encounters a bump, a tapered piston rises in the front cone, forcing water out of a trap in the cone, and along the pipe to the rear suspension unit which reacts by causing the rear of the car to rise to the level attained by the front. On rebound, the reverse procedure occurs. Pitch is consequently eliminated.

Automatic Drain Valve

A new automatic drain valve which can deal with a large volume of water condensate in an air line without any appreciable pressure drop has been invented by Nuquip Ltd., England. Compressed air enters an inlet port and passes through a filter which collects large particles of pipe scale and other solids. Drops of moisture then fall into a main reservoir which is sealed by a plastic float resting on an escape nozzle. When the water level in the reservoir rises sufficiently to give buoyancy to the float, water is ejected through the escape nozzle until the reservoir is empty; the float then immediately re-seals the nozzle.

Variable Energy Cyclotron

A new variable energy cyclotron to be used chiefly for studies in the field of radiation chemistry, radiation damage, radio-chemistry and solid state physics is to be built for Britain's Atomic Energy Authority at their Harwell establishment. The machine will be the most versatile of its kind in Western Europe, and the building in which it will be housed, will cost £1,600,000. The Atomic Energy Authority says that it is believed that the experiments in which the cyclotron will be used will provide a more fundamental insight into the chemical and metallurgical effects of intense nuclear radiation more simply and more quickly than experiments using nuclear reactors.

Foolproof Cooker

A Swedish firm, Husqvarna Vapenfabrik, has manufactured an electric "Regina" cooker with two ovens. Described as a "self-cooking robot," the cooker has an automatic time clock which starts the oven or the hot-plates at a pre-set hour. The cooking is governed by a thermostatic button. By the turn of the finger, the housewife can switch the regulator from position I for melting butter to position II for frying eggs and bacon. Naturally, the "robot" stove never allows the food to boil over or to get burnt at the bottom of a saucepan.

Portable Television Set

One of the major new products at the National Radio Show held in London recently was a portable television set with an 8½-inch screen, weighing only 20 lbs. It can be run off its own battery, a 12-volt car system or off the mains. It measures 13 ins. long and 10½ ins. square. Exhibitors also showed such devices as a TV baby alarm—an adapter which gives parents a warning through the sound system of child's cries—super-fine tuning controls and TV screens that do not attract dust. The British General Post Office had a stand on which 500 people at a time were taken on a movable circular table past scenes depicting 60 years of radio history. The climax of this show was a model of the Telstar tracking station in Southwest England.

Gas Forging Machine

Some signal advances in high energy rate technique have been made with a gas forging machine manufactured by U.S. Industries Inc. For the conventional hammer and anvil principle it substitutes two reciprocating 2½-ton chrome molybdenum steel platens which are driven at each other at equal velocities of nearly 60 m.p.h. The energy source is dry nitrogen compressed hydraulically to 1,500 lb./sq. in., giving a maximum rated energy of 145,000 ft.lb. on the medium capacity machine. This very high pressure and velocity stroke forces material to flow plastically into the shape of the dies: at a recent demonstration steel plates 6 in. square and ½ in. thick were hot forged into discs of 9 in. diameter and 0.33 in. width without excess material. The forming takes place in 1/1,000 sec., so problems like die heating, shrinkage and scale are minimized. The circuitry permits a 10-sec. cycle; operation is assisted by inching on both platens to facilitate die setting, and the provision of three methods of ejection. The range comprises five machines, the largest of which has a maximum low energy of 600,000 ft. lb. Lower production costs (reduced by up to 50 per cent) are claimed. Floor space would certainly be saved: the 32,000-lb. machine (ex-works American price about £25,000) is 12 ft. by 6 ft. 6 in. by 3 ft. A final advantage is that the reciprocating action of the platens absorbs most of the impact, so that no special pit or cast iron foundation is required. A 12-in. reinforced concrete bed sufficed for the medium machine.

Fixing Buttons Without Needle and Thread

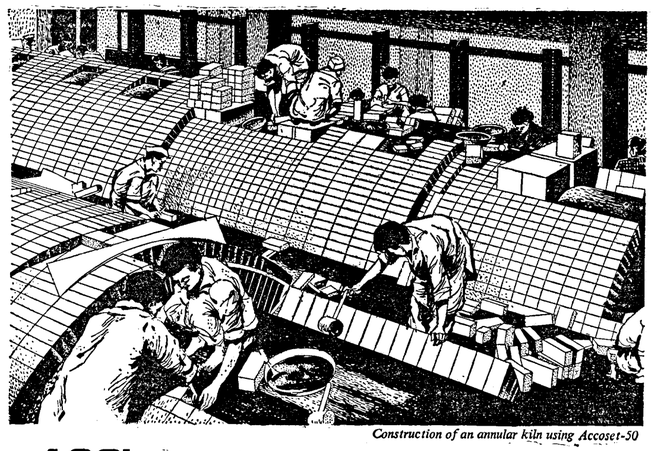
The BOVI Industrie en Handelsonderneming N.V., at Diemen in Holland, has invented a method for securing all kinds of buttons without using needle and thread. Only three small aids are required, namely, a U-shaped, stainless steel pin or staple, a small rubber ring and a counterbutton. The procedure for fixing a button is as follows: the two points of the U-pin are pushed through two opposite holes in the button. Next, the rubber ring is slipped over the two arms of the pin and pushed up against the back of the button. Since the rubber ring can be cut in several different widths, it is possible to vary the distance between button and cloth. After the arms of the pin have been pushed through the material at the point where the button is to be fixed on, the counterbutton is slid over the arms of the pin against the inside of the cloth. At the top of the counterbutton is a small slot that must remain visible. The two arms of the pin are then bent outwards as far as they will go in such a way that the unbent ends fit exactly into the straight slot. By working the projecting ends of the pin arms to and fro in a groove round the side edge of the counterbutton, they can be broken off.

Machine for Cleaning Industrial Equipment

A company at Vlaardingen in Holland (the Metalas) has produced a machine which can clean and degrease in a single operation all industrial equipment and other objects (engine cases, radiators, typewriters, air filters, gearboxes, metal goods, sumps, ball bearings, etc.). The machine consists of a tank with a lid and a grating. The grating is connected to a piston moving up and down in a cylinder and therefore also described a similar motion in the tank. The tank is completely or partly filled with a cleaning fluid such as paraffin, trichloroethylene, perchloroethylene, water, caustic solutions, acids, turpentine and the like. The object to be cleaned is placed on the grating. The capacity of the machine is dependent on the pneumatic servo cylinder. Grating load capacities suppliable range from 60 to 600 kg. Objects can be immersed in the fluid at speeds of up to 60 strokes a minute. The number of strokes per minute can be continuously controlled, as can the length of the cylinder stroke. During dipping and rinsing, the fluid level is constantly passed and, as a result, all blind holes and hidden corners in the objects being cleaned are well flushed out. Grating and load can be lifted out of the fluid so slowly that no liquid is lost and the objects leave the machine clean, degreased, free from shavings, chips and powdery scale. The machine is pneumatically operated and can be connected direct to a compressed air system. A built-in air filter and a spray greaser see to the cleaning of the air and the lubrication of the pneumatic equipment, respectively. If desirable, in view of the cleaning agent employed, the fluid can be heated or the vapours condensed by a cooling coil, so that the lid need not be closed. In addition, where necessary, automatic time switches or filters can be incorporated. When serially or mass-produced articles are cleaned, the moving grating can be replaced by a roller conveyor which, in its highest position, can be connected up to a conveyor belt on which the objects can be brought to the machine. By lining up several machines filled with different cleaning fluids, mass-produced articles can undergo several successive cleansing treatments.

Soundproof Hangar

At a cost of $2,400,000, Hamburg's City Council has built a soundproof hangar for LUFTHANSA at the city's world-famous airport. The ceiling and the walls of the new hangar, a steel and concrete construction, have been padded with material which absorbs sound. The sound is also prevented from penetrating outside the walls by a segmented arrangement of the angular sidewalls, a special design which ensures that the sound waves are reflected back into the interior of the hall and absorbed by the ceiling.



Construction of an annular kiln using Accoset-50

ACC's REFRACTORY CEMENT

ACCOSET-50

makes linings and joints as strong as the firebricks themselves

Composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals, **ACCOSET-50** gives good bonding strength and high heat resistance. Once it is dried and burnt **ACCOSET-50** becomes *one with the bricks.*

YOU CAN USE ACCOSET-50

for jointing, repairing and patching
for bonding and laying firebricks of any shape
for protective wash for furnace walls and floors
for monolithic and rammed linings

ACCOSET-50 — your refractory monolithic cement that makes strong joints to improve furnace thermal efficiency.

ACCOSET-50 — saves your time, saves your money.

Technical literature sent free on request.

For your requirements of **ACCOSET-50** *contact*

WORLD AGRICULTURAL OUTPUT IN 1961-62

GROWING IMBALANCE BETWEEN DEMAND AND SUPPLY

WORLD agriculture during the crop year 1961-62 was characterised by a high level of output of most important commodities. The production of jute, coffee, tea and cocoa, for instance, rose above that in the previous year and, in a few instances (meat, rubber, wool), even new records were established. The major exception to this general trend was wheat, the output of which was substantially smaller than the record crop witnessed in 1960-61. Most of the decline in wheat output was accounted for by North American exporting countries, where drought affected the growing crops in Canada and the spring wheat areas of the United States. The production of coarse grains was also lower, as a result of marked reductions in acreage sown to maize and sorghum in the U.S., following official restrictions. Sugar output also failed to reach the record level of the previous year, due mainly to lower beet harvests in Western Europe. The rice position remained practically unchanged from the previous year's level.

These are some of the important conclusions reached by the *F.A.O. Commodity Review*—1962. This publication, it may be noted, is the second in a series of annual commodity reviews prepared by the Commodities' Division of the F.A.O.'s Economics Department. The volume, priced at Rs. 5, is available from Orient Longman's Ltd., Bombay, and other authorised sales agents elsewhere. According to it, the salient features of the world agricultural commodity situation continued to be: (1) a continuing upward trend in output of most commodities due mainly to technological progress and national agricultural policies, (2) persistent disequilibria of supply and demand for certain commodities, despite the continuance of inadequate nutritional levels in large areas, (3) further deterioration in the terms of trade of agricultural exporting countries and (4) the trend towards regional integration. Some of the salient points arising from this commodity review are proposed to be examined in this article.

Trend of Production

The following table shows the production of major agricultural commodities in 1961-62, as compared with that of 1960-61 and the average of the quinquennium, 1953-54—1957-58:

(In million metric tons)

	†1953-54—1957-58 average	1960-61	1961-62*
Grains and rice:			
Wheat	211.00	249.00	241.00
Coarse grains‡	263.00	297.00	285.00
Rice (paddy)	203.00	239.00	..
Live stock products and oils:			
Butter§	2.85	3.12	3.25
Cheese§	2.33	2.82	2.95
Meat‖	50.10	57.81	59.76
Fats and oils	20.80	23.70	24.50
Eggs	10.62	12.30	12.58
Tropical export crops:			
Sugar	40.80	56.50	53.10
Coffee	2.70	3.92	4.67
Cocoa	0.82	1.17	1.18
Tea	0.79	1.00	1.04
Other tree and field crops:			
Citrus	17.76	20.09	..
Apples and pears	13.78	18.96	..
Dried fruits	2.03	2.00	2.12
Agricultural raw materials:			
Cotton	9.11	10.36	10.48
Wool	1.25	1.46	1.47
Jute	1.71	1.92	2.44
Hard fibres	0.74	0.89	0.89
Rubber	1.88	2.03	2.12

† Season or calendar year of the first year shown. Figures include those of Communist countries, unless otherwise mentioned.
* Estimated.
‡ Excluding Sino-Soviet area (Russia, China, Eastern Europe, North Vietnam, North Korea and Outer Mongolia).
§ Major countries.
‖ Carcass weight, excluding edible offals, and slaughter fats, and Mainland China production.

It will be seen from the table that production of all the main tropical export crops was higher than in the previous year. It is estimated by the F.A.O. that the output of cocoa exceeded the record level of 1960-61. Coffee production was influenced by the upswing in the two-year cycle characteristic of this crop, particularly in Brazil, and fell below the peak of 1960-61. The output of jute increased sharply, with record harvests in India and Pakistan.

It may be noted that the *F.A.O. Review* has not given the estimate of rice output for 1961-62. An idea of rice production, however, can be had from the latest estimates of the Commonwealth Economic Committee. According to the Committee, world production of rice (including that of China) fell from the record level of 151 million tons in terms of paddy in 1960-61 to 150 million tons in 1961-62.

Among the commodities produced predominantly in temperate zones, animal products registered the most consistent advances. The world wool clip of 1.5 million tons (on clean basis) set a new record, following larger production in Australia and, to a lesser extent, in New Zealand, South Africa and Uruguay. There were notable increases in the production of meat and dairy products. Among other commodities, fish catches rose in 1961 to over 40 million tons, with substantial gains being registered by all the leading producers. In Europe, Soviet Russia and North America, the recent trends of raising industrial wood and felling fuelwood were maintained in 1961.

Production in Communist Countries

The *F.A.O. Review* says that the agricultural output tended to go up in Communist countries, except perhaps in China. The position is summed up by the *Review* in these words:

"The Soviet Union reported increased areas and production of grains, sunflower and cotton, with the harvest of the latter particularly favourable. Regional differences were, however, larger; thus, while the grain crops of Kazakstan and the other virgin land areas were heavily down, those of the Ukraine are reported to have been at a record level. In total, Soviet grain production in 1961 reached 137 million tons, including 65.5 million tons of wheat, as compared with the record 141 million tons three years before. Livestock production increased slightly after the setback of the previous year, and animal numbers continued to grow rapidly.

"Poland experienced a record grain harvest of about 16 million tons and agricultural output rose to a new peak, over 8 per cent above the previous year. In Rumania, the main grain-producing country of south-eastern Europe, both acreages and yields were above the level of 1960, and in Hungary, a record wheat yield was recorded. Hungarian maize production was, however, considerably down on the previous year's and in Bulgaria grain production was also lower. Production of most of the south-eastern region's other export crops, including grapes and tomatoes, was favourable. Increases in livestock numbers and production were reported from most eastern European countries.

"Only fragmentary information is available concerning agricultural production in China, where the situation has been dominated by the series of natural disasters in 1959-61. However, it appears that the summer brought little substantial improvement in the Chinese food situation. The wheat and cotton crops in North China suffered badly from drought, but the rice harvest in the southern provinces seems to have been reasonably favourable."

World stocks of a number of commodities carried into the current season remained excessive and continued to over-shadow markets. Opening stocks of wheat, coarse grains, coffee, sugar, butter and soyabean oil, in particular, were higher, though those of rice, soyabeans, cotton, wool and jute were either lower or unchanged. Generally speaking, total supplies of all major commodities were more than adequate to meet the demand and the only important stock reductions anticipated at the end of the current season are in grains. Stocks of rubber, cocoa, coffee, butter and soyabeans, according to the *Review*, are likely to increase.

Decline in Prices

The increase in agricultural output was accompanied by decline in their prices. Only, the pace of fall was slower than in 1960. Food prices, which had fallen less rapidly than other items in 1960, showed the largest declines last year. Prices of the non-food group tended to strengthen in the middle of the year, but there was a sharp relapse in the final quarter, when prices for both groups combined were about 5 per cent lower than in the final quarter of 1960. Some of the most notable price movements, according to the *Review*, occurred in the agricultural raw material group. Under the influence of the abnormally low 1960 harvests, jute prices continued to climb steeply until February-March 1961, when they attained the highest levels since the Korean War. Following the imposition of price controls in India, and later reports of larger current harvests in both India and Pakistan, there was a sharp decline throughout most of the remainder of the year. This levelled out in the later stages, following the establishment of minimum export prices for Pakistani jute, together with a noticeable response in the demand for jute products. Rubber prices also firmed up moderately until April, but a downward movement then set in which was accelerated in October by revisions to United States and United Kingdom stockpile release policies. Sisal and abaca prices have been steadily declining from the relatively high levels reached in 1960, and failed to show any improvement during the summer when demand usually increases. Among the apparel fibres, Egyptian cotton prices also weakened consistently, but American cotton and wool prices have tended to be firm. In the case of wool, there was a setback soon after the opening of the new season's auctions, caused partly by the imposition of credit restrictions in Japan, but this proved to be short-lived and the year ended on a more buoyant note.

As a result of these diverse movements, the prices of some commodities, including sugar and fats and oils generally, at the year's end were at the lowest level since the war. Sugar prices were the lowest in twenty-five years and cocoa and coffee prices had been cut to about one-third and one-half, respectively, of their 1954 peaks. Many other prices, including those of rubber, cotton and wool, while not at their lowest ebb, were nevertheless below those of most other recent years. Prices of only a few commodities such as grains, jute and sisal, compared favourably with recent averages, and the market for some of these has recently been tending downwards.

The following table shows at a glance the decline in price indices of agricultural commodities entering into world-wide trade during the last five years:

(Base: 1957=100)

	1958	1959	1960	1961
All agricultural commodities:				
U.N. index	93	92	92	..
N.I.E.S.R. index	90	91	91	84
Food group:				
U.N.	96	91	90	..
N.I.E.S.R.	95	91	88	82
Non-food group:				
U.N.	89	93	95	..
N.I.E.S.R.	83	91	95	88

N.B.—(1) U.N. index refers to the United Nations price index of primary commodities in international trade. Original index base: 1953=100.

(2) The N.I.E.S.R. index refers to the price index of agricultural exports, from the primary producing countries, worked out by the National Institute of Economic and Social Research of the U.K. *vide* the Institute's *Economic Review*.

Stimulated by the low prices, a high level of economic activity in the main industrial countries and continued surplus disposal, world trade in most commodities increased. World wheat exports in 1961-62 are expected to have exceeded the record established in 1960-61. The trade in sugar is also said to have risen, thanks to larger purchases by the Sino-Soviet area. Most other commodities recorded gains, the only important exceptions being cotton and some classes of meat, the first of which felt the influence of running down of stocks in consuming countries and the second, the competition from increased domestic supplies.

Outlook for 1962-63

On the question of outlook for commodities in 1962-63, the *Review* points out that, under favourable seasonal conditions, production of most agricultural commodities will expand further this year. Tropical tree crops, such as rubber, coffee and cocoa, will continue to show the influence of replanting schemes, the coming into bearing of extensive new areas planted during the fifties, and improved cultural practices. Cane sugar production will also be stimulated in a number of countries by the larger outlets available to them in the United States, following the exclusion of Cuban sugar and by the cessation of export controls under the International Sugar Agreement. In the majority of temperate countries, animal numbers are at record or near-record levels, and this is expected to be reflected in higher production of meat, dairy products and wool. However, further reductions in United States grain production now appear certain, and world production of vegetable fibres (cotton, jute, and hard fibres) may show little change.

According to the *Review*, most agricultural commodities are likely to experience a continuing strong demand in the immediate future, but the supply position and competition from synthetics seem to rule out any significant general advance in prices. The trade in wheat in 1962-63 may decline slightly from the record level of the current season, and supplies of rice for export in 1962 are much the same as in 1961. Exporters of meat and dairy products are likely to encounter the greatest marketing difficulties. In both cases, world trade will continue to be restrained, says the *Review* by the high level of domestic production in the main consuming areas and the failure to develop any important new outlets.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

CHAIRMAN, DR. P. S. LOKANATHAN'S STATEMENT

ADDRESSING the shareholders at the Twenty-fifth Annual General Meeting of the Mettur Chemical and Industrial Corporation Ltd., which was held at Mettur Dam, R.S., Salem District, Madras, Dr. P. S. Lokanathan, Chairman of the Company, disclosed that the Company proposes to make a further capital issue of 600,000 ordinary shares and 300,000 preference shares early in 1963. Recently, the Company had issued 600,000 ordinary shares of Rs. 10 each at a premium of 50 nP per share. The proposed additional issue would go to finance the further expansion in the caustic soda capacity from 40 tons to 100 tons per day. The Chairman said that progress in the matter of this further expansion had been satisfactory.

The following is the full text of Dr. Lokanathan's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the twenty-fifth annual general meeting of your Company.

"The Directors' report, audited balance-sheet and profit and loss account for the period from 1st April 1961 to 31st March 1962 have been in your hands for some time now and, with your permission, I shall take them as read.

Caustic Soda Capacity

"The Company celebrated its silver jubilee in the last week of December 1961, and it is a matter for gratification to us that production capacity for caustic soda has increased from the original 5 tons per day to 40 tons per day—eight times the original installed capacity. Considering the vicissitudes through which the Company has had to pass, particularly during the initial years when it was no easy task to find the comparatively smaller capital involved and in the early 1950s when an unfavourable import policy and pegging of prices at uneconomic levels rendered our operations extremely difficult, I believe we may look back on our past achievements with pardonable pride.

"Sales at just over Rs. 1.5 crores were the highest recorded so far, in spite of the fact that in March 1962 only a part of the expansion plant units was commissioned. Divisible profit would have been slightly better but for the increase in the Corporation tax from 45 per cent to 50 per cent. Shareholders will recall that we had stated in the Directors' report that the Company had approached the Income-tax Officer for a certificate in respect of the balance of relief under Section 15C of the Income-tax Act so that they may pass on the same to the shareholders. The Income-tax Officer, Salem, has since determined the appropriate proportion of the dividend at about 45.95 per cent on which tax is not payable by the recipients.

Production Trend

"I am very glad to be able to report that we have already reached production of our full installed capacity of 40 tons caustic soda per day, thus marking the completion of a significant stage in our expansion programme.

"Production was, however, again adversely affected during June-July this year on account of electricity cuts following the low water conditions in the hydro-electric reservoirs. Fortunately, however, the cuts did not last long, as the hydro-electric reservoirs were again full. Also the first 50 MW. Neyveli thermal unit, based on lignite, was commissioned early in August. The second unit is likely to be commissioned by November next and the other three units later at intervals of five to six months. There have also been proposals to expand the capacity of the plant to 400 MW. against the present 250 MW. during the third Plan period, with further Soviet technical and financial aid. I earnestly hope that these and other hydro-electric schemes in Madras State will materialise as programmed and that power shortages will be a matter of the past.

Further Expansion

"Progress in the matter of the further expansion from 40 to 100 tons caustic soda per day has been satisfactory. The entire additional 60 tons caustic soda will be of the rayon grade quality. The recent initial issue of 6 lakh equity shares of Rs. 10 each at a premium of 50 nP per share was oversubscribed by the existing shareholders. In view of our 40-ton expansion having gone into commission, we expect to be able to maintain the usual dividend level for the current year also, despite the increased capital. We expect to make the further issue of 6 lakh equity shares and 3 lakh preference shares early in 1963. I am also glad to state that the Industrial Finance Corporation of India has advised us that the loan of Rs. 140 lakhs for financing the further expansion scheme including the foreign exchange part of it has been sanctioned by them subject to certain conditions. We have received the fullest co-operation and assistance from the Industrial Finance Corporation of India in all our expansion schemes, and I take this opportunity of expressing our gratefulness to it for the assistance it has agreed to extend to us for the further expansion scheme.

"With the foreign exchange allotment already made to us by the Government, we have placed orders for part of the plant and machinery from Switzerland. The balance of the equipment for the expansion scheme will be ordered from the United States of America under D.L.F. loan allotments.

"The chlorine from the further expansion plant will be fully utilised, partly by converting into organic chlorine chemicals, for which there is a good demand in the country and partly by sale to a neighbouring factory for the production of polyvinyl chloride plastics. Such diversification of production, I am confident, will lead to better operating results and more satisfactory return to our shareholders in the years to come.

Excise Burden

"During the year, fresh excise duties were imposed on liquid chlorine and hydrochloric acid at 10 per cent of the tariff value of Rs. 425 per metric ton and Rs. 180 per metric ton, respectively. These Central excise duties are charged not only in respect of sales of these products but also on internal consumption, thus adding to our cost of production. An electricity surcharge, which, in the case of energy-intensive industries like ours, has been fixed at 5 per cent of the cost of power, was also imposed by the State Government. A duty was also imposed on steel packing sheets used for packing of our products. A higher rate of depreciation has to be provided in respect of plant and machinery coming in contact with corrosive chemicals in chemical works like ours. These and other factors have served to considerably increase our production cost. As, however, ex-works ceiling prices have been fixed by the Government in respect of caustic soda, liquid chlorine, hydrochloric acid and bleaching powder, we have had to seek Government's permission for increased selling prices.

Case for Price Increase

"We do hope that the Government will see the reasonableness of the industry's request and grant the increase in selling prices without delay. Incidentally, I wish to suggest that the Government must establish a body which can promptly consider and decide on manufacturers' representations in regard to increased selling prices, wherever the Government has already fixed ceiling prices. The capacity of the industry to absorb increased costs is very limited, having regard to the factors which the Tariff Commission takes into consideration in recommendng the fixation of ceiling prices to the Government, and it will cause avoidable hardship to industry, if reasonable requests for price increases are not promptly met.

"We have derived some benefit from the decision of the railways to charge only half the freight on consignments of furnace oil booked in wagon-loads, which is leviable in accordance with the normal tariff rates in force at the time of booking with effect from 1st July 1962. This reduction has been proposed in order to facilitate the use of furnace oil by industries located at some distance from the ports, having regard to the unsatisfactory coal supply position.

Maintenance Imports

"I understand that, having regard to the deteriorating foreign exchange situation, the Government of India, which have already cut down established importers' quotas, has under consideration a proposal to cut down the maintenance import quotas as well. Maintenance import quotas have already been fixed at a bare minimum and any reduction in maintenance import quotas will directly result in reduced production in industries like ours. The supply position in regard to chemicals like caustic soda and bleaching powder is already not very satisfactory and the need to maintain indigenous production at the maximum possible level is therefore paramount. I, therefore, hope that nothing will be done by the Government which would cause loss of industrial production for lack of maintenance imports.

"In closing, I wish to convey my cordial appreciation of the valuable services rendered by the Managing Agents, the general superintendent and all ranks of staff and workers."

Note:—*This does not purport to be a report of the proceedings of the annual general meeting.*

U.S. TEXTILE IMPORTS

President Kennedy has accepted the decision of the Tariff Commission rejecting the Department of Agriculture's recommendation for an import fee of 8½ cents per lb. on the cotton content of textile imports to offset the difference between the cost of raw cotton to foreign mills and that which our mills are required by law to pay. He is, however, requesting the Agriculture Department to give immediate attention to the formulation of a domestic programme that would eliminate the two-price cotton system.

Let not your Tax problems tax you any more

GUIDE TO INCOME TAX ACT

By **A. RAMAIYA**

(Author of Guide to Companies Act)

The object of this book is to make available to the Income-tax Assessees and their Advisers, Chartered Accountants and Lawyers, a reliable Guide to the Income-tax Act and hand-book of easy reference on the Act.

The book contains explanatory notes, which will facilitate easy understanding of the provisions, and comments which will be found to be helpful in solving tax problems.

The provisions of the new Act have to be interpreted in their own language and on the back-ground of the basic material on which they are based. As the Act is a new Act, there is not much scope for citation of judicial decisions as authority for the interpretation of the new Act. Wherever there is room for interpretation the author has expressed his views clearly and these are bound to provoke further thought. It contains all important Rules, Forms, Schedules under the Act.

Here is a valuable book for your table which will solve many of your tax problems.

Price Rs. 15-00 Postage extra.

ALIND PAYS ONLY SAME DIVIDEND

EMPLOYEES CHIEF BENEFICIARY OF HIGHER TURNOVER

THE working results of the Aluminium Industries Ltd. [Managing Agents: Messrs. Seshasayee Brothers (Travancore) (Private) Ltd., Alwaye], the only concern at present to be engaged in the manufacture of aluminium cables, wires and accessories in a wide range of varieties, for the year ended 31st March 1962, are far more encouraging than those for the previous year for a good many reasons. As the demand for aluminium conductors and accessories continued to be brisk, there was a sharp upsurge in turnover. The gross realisation from sale of products has, therefore, increased by as much as Rs. 181.84 lakhs to Rs. 617.57 lakhs. The Company was able not only to sell a large portion of the year's production but also to dispose of substantially the accumulated stocks of the previous year, thus bringing down the value of closing stock from Rs. 145.38 lakhs to a more manageable level of Rs. 86.52 lakhs. Due to the inclusion of the previous year's stocks in the sales made during the year under review, the cost of raw materials and stores consumed actually debited to the year's account has risen only moderately in comparison with sales, the exact increase being Rs. 22.52 lakhs bringing the total to Rs. 408.43 lakhs. Nevertheless, the gross profit has expanded by only 17.4 per cent, that is from Rs. 48.64 lakhs to Rs. 57.11 lakhs, as against the rise of 41.7 per cent in sale proceeds. One explanation for this phenomenon is the sharp rise in salaries, wages, employee benefits and other expenses. So far as the wage bill is concerned, it is interesting to note that, since 1958-59, the average annual earnings per employee has materially advanced from Rs. 2,757 to Rs. 3,327, to say nothing of the welfare and other expenses incurred by the Company on employees' account.

With the commissioning of the wire drawing unit of the factory, the Company became liable for providing depreciation on the plant so employed and this has raised the provision for depreciation by Rs. 1.98 lakh to Rs. 12.96 lakhs. For the same reason, however, the Company could also avail of the benefit of development rebate mainly on the plant and machinery in the steel wire unit and some other equipment commissioned during the year. Because of this, the provision for taxation has risen by a mere Rs. 1.79 lakh to Rs. 18.20 lakhs despite the large improvement in the taxable profit and the rise in the rate of corporate taxation. Managing Agents' commission has actually gone down, in contrast to the other two provisions, by Rs. 0.18 lakh to Rs. 2.78 lakhs. The net profit works out to Rs. 23.17 lakhs or Rs. 4.88 lakhs more than what was earned a year ago. Of this, Rs. 4.91 lakhs, as against *nil*, has been transferred to the statutory development rebate reserve. The dividend has been kept unchanged at 18 per cent per annum subject to deduction of tax. This has claimed Rs. 18 lakhs, leaving Rs. 3.27 lakhs as carry forward as against Rs. 3.02 lakhs brought in.

The working results of the Company for the past four years are summarised in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	617.57	435.73	340.72	335.89

Low	23.30	21.87	21.70	17.60

* Subject to deduction of tax.

On the production side, the performance of the Company was encouraging. Production of covered aluminium conductors touched a peak of 9.86 million core metres. Aluminium rods and accessories manufactured were also higher than during the preceding year. The output of bare conductor was, on the other hand, a little lower at 62,000 kilometres, as against 66,300 kilometres produced during 1960-61. The restricted availability of aluminium metal, however, did not permit the full utilisation of the Company's rod milling capacity. The highlight of operation during the year under review was the commissioning of the high tensile galvanised steel wire plant at Kundara, in spite of some difficulties in the timely and adequate provisioning of raw materials.

The history of the Company over the past ten years has been one of continuous progress barring minor and temporary declines in production, sales and profits. This besides, the Company has a number of 'firsts' to its credit; in fact, its brief history of manufacturing activity is literally studded with such 'firsts.' Alind has not only been the first to undertake the large-scale manufacture of aluminium conductors steel reinforced (ACSR) and all aluminium conductors (AAC) and the necessary conductor accessories and tools, but it has also been the first to manufacture covered aluminium conductors (CAC) for outdoor weatherproof and indoor wiring applications. Particularly in the context of the contemplated switchover to aluminium from copper for electrical purposes, Alind's adoption of aluminium as far back as 1957 seems an act of remarkable prescience. And now the Company is to be the first to manufacture a special type of low voltage solid aluminium underground cable, necessary licence for the production of which has already been procured. The plant will be located at Kundara and is expected to go into production towards the end of 1963. Prospects for the future are therefore distinctly encouraging.

The Company's capital structure is simple in that it has only an equity capital which, as at 31st March, is of Rs. 100 lakhs in shares of Rs. 10 each. It is backed by Rs. 55.06 lakhs in reserves and surplus. There is a debenture loan of Rs. 45 lakhs supplemented by other loans aggregating Rs. 152.58 lakhs. Then there are current liabilities and provisions amounting to Rs. 137.58 lakhs. On the assets side, the gross block is worth Rs. 200.54 lakhs; this has been written down to Rs. 121.04 lakhs. Capital work in progress and other expenses yet to be capitalised are put around Rs. 8.32 lakhs, so as to give a total net block of Rs. 129.37 lakhs. Investments are carried in the books at Rs. 0.91 lakh and current assets, loans and advances at Rs. 359.94 lakhs.

The present market quotation for the Rs. 10 fully paid ordinary shares of the Company is Rs. 25 *cum-div.* Reducing it to an *ex-div.* basis, the net yield works out to about 5.3 per cent per annum.

INDIA STEAMSHIP CONTINUES IN RED

Disappointing again! We use these words with an exclamation mark to describe the results of the India Steamship Company Ltd. (Managing Agents: Messrs. Lionel Edwards (Private) Ltd., Calcutta) for the year ended 31st March 1962. For, despite the 10-year money pool arrangement reached by all the Conference Lines operating on the India-U.K.-Continent route from January 1961, which was expected to improve the Company's trading results during the year under review, the Company has continued to be in the red and closed the year with a net loss of Rs. 41.42 lakhs, which again is not less than Rs. 41.05 lakhs incurred in the previous year. We are told that the total benefit of the pool arrangement, which was introduced with a view to eliminating undesirable competition and partly rationalising the service, has not been reflected in the year's accounts due primarily to the lack of experience in operation under the new conditions and various other incidental difficulties. On the other hand, the depression in the world freight market both in volume and in rates of freight continued and the continuous increase in the operational cost rendered rates of freight uneconomic. Although there was a rise in the number of voyages from 49 to 54 liner and from seven to eight coastal, the total freight earned went up less than proportionately, from Rs. 863.01 lakhs to Rs. 897.27 lakhs. Further, though port expenses came down from Rs. 337.27 lakhs to Rs. 331.48 lakhs, staff expenses rose from Rs. 95.21 lakhs to Rs. 100.94 lakhs and so did other expenses from Rs. 393.49 lakhs to Rs. 397.74 lakhs. Accordingly, the gross profit turned out to be only Rs. 72.63 lakhs and lower than the Rs. 77.65 lakhs earned in the previous year. After providing Rs. 127.55 lakhs (Rs. 118.20 lakhs in the previous year) for depreciation and maintaining the Managing Agents' remuneration at the nominal sum of Rs. 50,000, the net result is a loss of Rs. 55.42 lakhs. Following a transfer of Rs. 14 lakhs from the development rebate reserve due to excess provision in 1958-59, the loss is reduced to Rs. 41.42 lakhs and adjusted against the general reserve account which now stands at no more than Rs. 16.77 lakhs. The ordinary dividend has been passed over again. The last dividend paid was for 1959-60 at the modest rate of 10 per cent per annum, taxable. The preference dividend absorbing Rs. 1.63 lakh is paid again from the dividend equalisation reserve. Past tax liability amounting to Rs. 52.816 has been adjusted against the reserve for taxation account.

Lest somebody should get away with the belief that the pool arrangement did not benefit the Company at all, it is necessary to add that the Company drew some advantage from it. Actually, if the insurance claim surplus of Rs. 25.91 lakhs obtained by the Company in the previous year on the total loss of the s.s. *Indian Navigator* were to be ignored, the trading profit for the year shows considerable improvement over that for the preceding year. The Directors are confident that the Company has passed through many of the difficulties which restricted the benefit of the pool arrangement and that the current year's results would fully reflect the advantage from it. If the Company turns the corner this year, the Directors will surely look first to the interests of the shareholders. And, in that case, the ordinary shares (of Rs. 10 each), currently quoted at a discount of nearly 30 per cent, that is at Rs. 6.93, seem to be attractive.

(*Concluded from next column*)

lakhs and investments amount to Rs. 21.32 lakhs, of which Rs. 20.37 lakhs are quoted and command a market value of Rs. 32.93 lakhs. The gross block, which expanded from Rs. 129.63 lakhs to Rs. 159.20 lakhs, has been written down adequately to Rs. 78.31 lakhs.

At their current quotation of Rs. 61 *cum-div.*, the Rs. 50 fully paid ordinary shares of the Company offer a net yield of 7.4 per cent per annum on the *ex-div.* basis.

MYSORE SPG.'S RESULTS ENCOURAGING

PRODUCTIVITY BEING RAISED

SEVERAL significant and encouraging features highlight the improved results of the Mysore Spinning and Manufacturing Company Ltd. [Managing Agents: Messrs. N. Sirur and Company (Private) Ltd., Bombay] for the year ended 28th February 1962. The foremost among them is the substantial rise in sales from Rs. 168.12 lakhs to Rs. 195.81 lakhs after a downward trend in the preceding two years. At the improved level, the turnover is just a shade lower than the recent best of Rs. 197.64 lakhs recorded in 1958-59. With the inventory well maintained at Rs. 44 lakhs, the improvement in sales has been the result of higher production. Costs have, therefore, been higher, though partly also due to inflationary pressures. Nonetheless, the gross profit has continued its upward trend and risen rather more promisingly by about Rs. 4 lakhs to Rs. 13.63 lakhs and the profit-margin has, therefore, gone up by almost one point to 7 per cent. The provision for depreciation is a shade higher at Rs. 6.40 lakhs and that for taxation is Rs. 0.83 lakh as against nothing in the previous year. The Managing Agents' remuneration has also gone up from Rs. 0.45 lakh to Rs. 0.67 lakh. The net profit at Rs. 5.73 lakhs shows an improvement of more than Rs. 2 lakhs. But the dividend has been reduced from 14 per cent to 12 per cent per annum, taxable, on the Rs. 50 fully paid shares, as the surplus available after allowing for past expenses and making other provisions is insufficient to maintain it on the increased capital following the issue of rights shares in the proportion of one for two. Even to pay the reduced dividend, the Directors have had to withdraw Rs. 2.50 lakhs from reserves, though they have transferred Rs. 1.12 lakh (Rs. 0.81 lakh a year before) to development rebate reserve. But, then, the previous year's dividend was paid entirely out of reserves.

The following comparative table gives a clear idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 28th/29th February			
	1962	1961	1960	1959
Sales	195.81	168.12	171.17	197.64

Low	57.50	59.00	62.50	68.00

* Subject to deduction of tax.

From the year under review, the Company has embarked on a three-year programme of rebuilding and renovating the existing plain looms. Last year, 130 looms were rebuilt at a cost of some Rs. 85,000 which have been capitalised. During the latter part of the year, one set of Whitin's high speed combing equipment, comprising one drawing frame, one super lap machine and five combers, was commissioned. The effect of the renovation is being gradually felt in the working of the weaving and spinning sections. The Company has ordered its first Barber Colman warper and spooler which may be commissioned this year. The bleach and dye house, acquired from the sister company, the Minerva Mills Ltd., commenced operations on 1st March 1962. The entire processing factory, with its latest equipment, will work to full capacity by the close of 1962-63.

Since the close of the year under report, the Company has ordered pneumatic broken end collectors for 12 ring frames at a cost of Rs. 34,959 and 20 cylinder drying ranges with padding mangle at a cost of Rs. 68,523.

As for the expansion programme for which purpose the additional capital was raised during the year, the foreign manufacturers of the waste spinning plant have started shipping it in part consignments. The whole plant will be delivered by the end of this year and commissioned early next year. The 144 automatic looms to be installed under the Export Promotion Scheme, which were not ordered because of the power shortage in Bangalore, are now proposed to be imported early next year, now that a thermal station is to be built at Bangalore by the State Electricity Board. The Company has received Rs. 9.48 lakhs against the first and final call of Rs. 25 per share on the 39,585 shares issued during the year.

The paid-up capital, which has increased from Rs. 47.15 lakhs to Rs. 56.73 lakhs, includes Rs. 7.45 lakhs in preference shares, and is backed by reserves and surplus aggregating Rs. 38.29 lakhs. Borrowings have increased from Rs. 66.59 lakhs to Rs. 104.28 lakhs, of which Rs. 87.71 lakhs (Rs. 51.29 lakhs a year before) represent secured loans. Current liabilities and provisions together amount to Rs. 34.42 lakhs. As against the total indebtedness to outsiders of Rs. 138.70 lakhs, current assets, loans and advances aggregate Rs. 133.15

(*Continued in previous column*)

COST INFLATION HITS INDIAN CABLE

FIRST SETBACK TO PROFIT IN PAST FOUR YEARS

AN all-round increase in costs, resulting from a combination of factors, including higher manufacturing expenses mainly under the head of staff expenses and a substantial increase in distribution charges, especially freight costs necessitated by the large-scale use of road transport, has hit the Indian Cable Company Ltd., (Chairman, Sir John Brown, Calcutta) during the year ended 31st March 1962. While the turnover has expanded further by Rs. 56.22 lakhs to Rs. 10.04 crores, rising for the first time in the Company's history to the ten-crore mark, the gross profit has suffered a setback, for the first time in the past four years, of Rs. 12 lakhs to Rs. 157.84 lakhs. The profit-margin (ratio of gross profit to sales), which had already declined in the previous year from 21.2 per cent to 17.9 per cent, has slipped back further to 15.7 per cent. In spite of increasing competition from several new units, the turnover in all the departments increased, except in the rod and wire mills, the working of which was greatly handicapped by shortage of copper due to restrictions on imports. In addition, a considerable amount of business in rod rolling was lost, for a leading cable manufacturer, who was getting all his requirements of copper rods rolled by the Company, had established his own non-ferrous rod rolling mill.

The increases in costs, which could not be set off by raising the selling prices, are indicated in the accompanying comparative table. In spite of the lower profit, the provision for taxation has been raised by Rs. 2.50 lakhs to Rs. 69.50 lakhs, obviously because of the higher rate of corporate taxation, while that for depreciation has been reduced slightly from Rs. 17.37 lakhs to Rs. 16.86 lakhs. The net profit at Rs. 71.48 lakhs is down by about Rs. 14 lakhs, though the effect of the setback has been cushioned by a transfer of Rs. 9.09 lakhs, as against Rs. 2.03 lakhs a year before, from the unwanted past provisions. The dividend has been maintained at 22.5 per cent per annum, taxable, on the Rs. 10 fully paid shares. But this has meant a reduction in the amount of profit retained in business by Rs. 7.51 lakhs to Rs. 18.68 lakhs. The carry forward is again substantial at Rs. 50.15 lakhs as against Rs. 48.73 lakhs brought in.

A synopsis of the Company's working in the past four years is given in the table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	1,004.42	948.20	791.36	720.36

Low	35.19	31.25	29.12	28.80 cr

* Subject to deduction of tax.

The Company's claims for tax reliefs under Section 15C with regard to the profits of the rod rolling mill for the years ended 31st March 1954 and 31st March 1955 have now been upheld. No decision has yet been taken by the authorities with regard to a similar claim in respect of the profits of the paper insulated power cables factory. References are now pending for the years 1959-60 and 1960-61.

Capital expenditure during the year amounted to Rs. 15.37 lakhs, of which Rs. 13 lakhs were on modifications and renewals and Rs. 2.37 lakhs on modernisation and expansion plans which were proposed in the previous year and envisage substantial expansion of the production of paper insulated power cables, thermoplastic insulated cables and flexibles, enamelled copper wires and cotton and paper covered wires and strips. The plans have been delayed due to the unduly late receipt of import licences. The projects will be completed and be in full production in the next two years. An agreement with the Industrial Credit and Investment Corporation of India on the terms of a foreign exchange loan of Rs. 35 lakhs was reached in the previous year and negotiations with the Commonwealth Development Finance Company for a sterling loan of £262,500 were successfully concluded last year. Construction work has been moving apace and orders for imported plant and machinery have been placed.

Chairman Sir John Brown has observed, in his statement to the shareholders, that, on account of the raw material and electric power supply difficulties, which might persist for some time yet, the ultimate net effect of the licensing delays might not prove to be so great as it might otherwise have been. He believes that competition is bound to increase over the next year or two; but so also demand. Nevertheless, he has cautioned the shareholders that, until adequate supplies of aluminium electrical conductor grade from indigenous sources are forthcoming, the pegging of the level of imports of electrolytic copper and aluminium at the present level or any reduction in it, especially when surplus will have to be spread over a greater number of cable makers, will adversely affect the Company's production and raise its costs further. The short-term outlook is, therefore, clouded by the uncertainty about raw material and power supplies. The long-term prospects can, however, be viewed with sober confidence, if not with a degree of optimism. As for the immediate outlook, Sir John hopes that the Company would be able to regain the 1960-61 profit level.

A meeting of the preference shareholders on the 26th inst. will consider a special resolution proposing to modify the rights of the preference shares by the removal of the preferential rights to dividend and in a winding-up. The practical effect of the resolution, subject to the shareholders' approval, will be that the ordinary and preference classes of the share capital will be consolidated. the present paid-up capital of Rs. 248.66 lakhs is made up of Rs. 235.78 lakhs in equity shares of Rs. 10 each and Rs. 12.88 lakhs in preference shares of Rs. 10 each. Reserves and surplus, aggregating Rs. 298.02 lakhs, provide full cover to the entire capital. Secured loans in the form of 1964-69 debentures are unchanged at Rs. 97.80 lakhs. Current liabilities and provisions make a total of Rs. 292.48 lakhs, as against Rs. 310.79 lakhs a year before. Current assets, loans and advances aggregate Rs. 867.13 lakhs and exceed more than twice the short-term indebtedness. Investments are unchanged at Rs. 7.92 lakhs, of which Rs. 7.83 lakhs are quoted and command a market value of Rs. 7.72 lakhs. The gross block, which increased from Rs. 317.94 lakhs to Rs. 330.04 lakhs, has been written down by nearly 50 per cent to Rs. 159.54 lakhs and, inclusive of capital work in progress (of Rs. 2.36 lakhs) is shown at Rs. 161.91 lakhs.

Currently quoted at Rs. 37.62 *cum-div.*, the Rs. 10 fully paid ordinary shares offer, on the *ex-div.* basis, a net yield of 4.2 per cent per annum.

RUBY GENERAL INSURANCE COMPANY LTD.

Substantial progress has been made by the Ruby General Insurance Company Ltd. (Chairman: Mr. B. M. Birla, Calcutta) during its silver jubilee year which ended on 31st December 1961. The total net premium income from the three departments, fire, marine and miscellaneous, improved from Rs. 172.65 lakhs to Rs. 181.81 lakhs. The aggregate amount of claims paid and outstanding stood at Rs. 103.66 lakhs as against Rs. 88.32 lakhs in the previous year. Thanks to a decline in the total commission and expenses from Rs. 63.78 lakhs to Rs. 57.11 lakhs, the profit for the year, after taking into account the taxes paid, has increased threefold from Rs. 4.17 lakhs to Rs. 12.75 lakhs. Besides maintaining the dividend at 10 per cent per annum, taxable, on the Rs. 8 paid-up shares which have the face value of Rs. 25 each, the Directors have proposed a cash bonus of 25 nP per share, which works out to about 3.1 per cent, subject to tax. The total distribution to shareholders takes up Rs. 1 lakh more at Rs. 4.20 lakhs. A sum of Rs. 4.60 lakhs has been set apart for the taxation reserve. This is in addition to Rs. 2.96 lakhs (as against Rs. 2.69 lakhs in 1960-61) debited to the profit and loss account on account of Indian Union and foreign taxes paid. In the previous year, the only credit to reserves was Rs. 5,000 which went to the doubtful debts reserve. The carry forward is large at Rs. 4.95 lakhs, as against Rs. 1 lakh brought in.

The share capital is unchanged at Rs. 32 lakhs. Reserves and surplus aggregate Rs. 26.19 lakhs. The special reserves under the three departments make a total of Rs. 98.79 lakhs. The fire insurance reserve, including additional reserve, now stands at Rs. 35.99 lakhs and is 50 per cent of the premium income of the year, as against Rs. 34.20 lakhs being 48.5 per cent of the premium income of the previous year. The marine insurance reserve, including additional reserve, now stands at Rs. 15.79 lakhs and is 100 per cent of the cargo and hull premium income. The miscellaneous insurance reserve, including additional reserve, now stands at Rs. 47.01 lakhs, equal to 50 per cent of the premium income.

The table below gives an idea of the Company's working in the past three years:

(In lakhs of rupees)

	For the year ended 31st December		
	1961	1960	1959
Fire:			
Net premium	71.99	70.51	57.01
Claims paid and outstanding	31.46	29.15	20.76
	(43.0)	(41.3)	(36.4)
Commission, expenses, etc.	21.24	28.19	22.12
	(29.5)	(39.9)	(38.8)
Underwriting profit	16.13	4.99	11.51
Increase in underwriting reserve	1.80	7.69	1.41
Marine:			
Net premium	15.79	14.76	20.04
Claims paid and outstanding	13.98	12.99	19.12
	(88.5)	(88.0)	(95.4)
Commission, expenses, etc.	3.33	3.55	3.55
	(21.0)	(24.0)	(17.7)
Underwriting profit (+) or loss (—)	—7.41	+3.91	—8.06
Increase or decrease in underwriting reserve	5.46	—5.71	+5.04
Miscellaneous:			
Net premium	94.03	87.38	57.13
Claims paid and outstanding	58.22	46.18	33.65
	(61.9)	(52.8)	(58.5)
Commission, expenses, etc.	32.54	32.04	23.56
	(34.6)	(36.6)	(41.2)
Underwriting profit (+) or loss (—)	—0.39	—7.25	—0.08
Increase in underwriting reserve	3.32	15.98	0.23
Profit	12.75	4.17	4.52
Transfer from reserves, adjustments, etc.			
Provision for taxation	2.96	2.69	0.95
Transfer to reserves	4.60	0.05	1.32
Dividend	4.20	3.20	3.20
	(D. 10% + B. 3.1%)†	(10%)†	(10%)
Carry forward	4.95	1.00	0.08
Market value of equity shares (In rupees):	1962	1961	1960	1959
High	10.62	10.00	11.06	7.87
Low	8.12	7.62	6.50	6.12

† Subject to deduction of tax.

Note.—The figures in brackets represent percentage to net premium account.

It will be evident from the above table that bulk of the improvement in the premium income (Rs. 6.65 lakhs to be precise in a total of Rs. 9.16 lakhs) came from the miscellaneous department, the loss in which also came down from Rs. 7.25 lakhs to Rs. 38,945. Although the fire department did not repeat the sharp rise in the net premium income of Rs. 13.50 lakhs seen in the previous year (the improvement during the year turned out to be only minor from Rs. 70.51 lakhs to Rs. 71.99 lakhs), it contributed to most of the increase in the total profit with its underwriting profit having jumped up from Rs. 4.99 lakhs to Rs. 16.13 lakhs. The marine department fared badly and reported a loss of Rs. 7.41 lakhs, as against a profit of Rs. 3.91 lakhs in the previous year.

West German private investment abroad increased by 40 per cent to DM4,100 million in 1961, as compared with the previous year. Investments in other European countries rose by 69 per cent to DM 1,750 million. Thus they accounted for 42.6 per cent of the total private investment abroad. Investment in developing countries increased only by 29 per cent to DM1,500 million, which corresponds to a share of 36.5 per cent in the total overseas private investment. As regards the developing countries, West German investors have concentrated so far only on a few countries, mainly in South America.

The International Development Association has extended a development credit of $3 million to Nicaragua for financing the expansion and improvement of the water-supply system in the capital city of Managua. This is the first I.D.A. credit to Nicaragua and is for a term of 50 years. Repayment of the principal will begin on 1st February 1973. Thereafter, 1 per cent of the principal will be repayable annually for ten years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ¾ of 1 per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A's administrative costs.

OUTLOOK FOR GREAVES COTTON PROMISING

CONSERVATION OF PROFIT GETS PRIORITY

EVEN a superficial scrutiny of the annual report of Greaves Cotton and Co., Ltd. (Managing Director: Mr. N. M. Wagle, Bombay) for the year ended 31st March 1962 is enough to reveal that, *prima facie*, there is little justification for the decision of the Directors to prune the ordinary dividend in respect of the year by one per cent point to 12 per cent, subject to deduction of tax, after having raised it successively from 7½ per cent to 13 per cent during the past two years. Proceeds from sale of agency and manufactured products have expanded further by Rs. 91.23 lakhs to Rs. 752.34 lakhs. The gross profit, despite heavier cost incidence, is a shade better at Rs. 55.14 lakhs as against Rs. 52.25 lakhs for 1960-61. Similarly, the net profit has gained Rs. 0.23 lakh to Rs. 30.61 lakhs, notwithstanding higher provisions for depreciation (Rs. 2.28 lakhs as against Rs. 1.62 lakh) and taxation (Rs. 22.25 lakhs as compared with Rs. 20.25 lakhs). The only reason advanced by the Directors in support of their decision is that, whereas during the preceding year no provision on account of staff retiring gratuity and doubtful debts was deemed necessary—on the contrary, a sum of Rs. 0.82 lakh could be withdrawn from the provision made during earlier years—this year sizable amounts had to be set aside for these contingencies. Besides, a sum of Rs. 10.10 lakhs has had to be credited to reserves "in keeping with the policy of ploughing back as large a proportion of profits as possible." Since the balance of profit available was hardly large enough to maintain the dividend at the previous year's level, a cut was inevitable. This argument would lose much of its force, if one were to bear in mind that a dividend at the previous rate of 13 per cent would have claimed but a small extra amount of Rs. 1.35 lakh. If, despite this cut in dividend, the market price of the share still maintains itself well above the preceding year's highest level, it is solely because of the Company's growth potential. The following comparative table shows the Company's growth in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	752.34	661.11	495.13	450.98
Other income	35.11	34.03	31.49	24.37
Closing stocks of finished goods and in-process	211.12	148.15	131.19	89.43
Materials and stores consumed	691.54	576.67	447.97	366.68
Salaries, wages and bonus	47.95	42.62	39.98	34.44
Other expenses	55.79	40.66	32.87	25.25
Gross profit	55.14	52.25	47.66	39.72
Provision for—				
Depreciation	2.28	1.62	1.24	0.99
Taxation	22.25	20.25	18.50	18.25
Net profit	30.61	30.38	27.82	20.48
Withdrawals from reserves	..	0.82	1.28	..
To reserves and provisions	10.87	10.35	10.13	7.58
Dividends—				
Preference	3.57	3.57	3.02	2.75
Ordinary	16.20 (12%)*	17.55 (13%)*	14.85 (11%)*	10.12 (7½%)
Carry forward	0.13	0.17	0.44	0.25
Market price of ordinary shares (In rupees):	1962	1961	1960	1959
High	219.00	180.00	135.00	118.50
Low	181.00	132.00	96.00	94.50

* Subject to deduction of tax.

The first thing to note is that the turnover has expanded—from Rs. 450.98 lakhs to Rs. 752.34 lakhs or by 66.8 per cent. Closing stocks of finished goods and work-in-progress have more than doubled, thus underlining a growing trading activity. There has been a marked rise in expenses and consequently gross profit could improve only at a much lower rate than the sales from Rs. 39.72 lakhs to Rs. 55.14 lakhs.

With the emphasis now in favour of indigenous manufacture through a chain of subsidiaries and associated companies, it is but natural to expect the Company to entertain a large interest in the share capital of such companies. During the year under report, the Company's investment in the shares of subsidiary and associated companies increased by Rs. 24.09 lakhs to Rs. 182.80 lakhs and is likely to grow further during the current year. Unfortunately, a substantial portion of this interest has been acquired through bank and other borrowings which, as on the date of the balance-sheet, namely, 31st March 1962, aggregated Rs. 211.22 lakhs. Besides, there are outstanding current liabilities worth Rs. 197.97 lakhs but both are very adequately covered by current assets, loans and advances amounting to Rs. 461.89 lakhs. The gross block is carried in the books at a cost of Rs. 32.22 lakhs and has so far been written down to Rs. 21.86 lakhs. There has been no change in the Company's issued and paid-up share capital which currently stands at Rs. 185 lakhs of which Rs. 50 lakhs are in preference shares of Rs. 100 each. The share capital is supported by Rs. 72.68 lakhs standing to the credit of various reserves and the surplus account.

A none too insignificant portion of the progress made by the Company during 1961-62 was due to the satisfactory working of the subsidiary and associated companies. Crompton Parkinson (Works) Ltd., for example, maintained the progress achieved during the preceding year and this resulted in the Company receiving a higher net dividend of Rs. 3.76 lakhs, as against Rs. 3.01 lakhs a year ago. It is heartening to learn from the Directors that "this associated company continues to expand the range and volume of its products, despite rising costs and severe competition.

Increasing competition, combined with a steady rise in the level of costs, resulted in a reduced profit-margin for Greaves Cotton and Crompton Parkinson Ltd., in spite of an appreciable improvement in turnover. In the result, the Company could receive only an amount of Rs. 3.20 lakhs as net dividend as against Rs. 4.11 lakhs previously.

The expansion in the production of Ruston and Hornsby (India) Ltd. was maintained and this brought about a material improvement in its dividend contribution to the Company. The net dividend for the year ended 31st December 1960 was Rs. 2.59 lakhs as against Rs. 2.07 lakhs for 1959. This increase was achieved in face of dislocation in production due to the initiation of the programme for the manufacture of vertical oil engines, increasing competition in the industry and the fall in demand consequent on a fall in the price of cash crops during the 1961-62 season. Production of vertical air-cooled engines which was frustrated so long by delays in supplies of cement, essential raw materials and electrical power, has at last commenced and output is expected to reach the installed capacity by the end of the year. As there are indications that the demand for the new range of engines is much in excess of installed capacity, necessary expansion of capacity is under consideration.

Mather Greaves commenced production of calender bowls in March 1961, initial teething troubles having been overcome. From November last year, the installed capacity is being fully utilised and, in view of the excellent demand for these products, steps are being taken to increase the capacity.

The implementation of the production programme of David Brown Greaves was hampered by shortage of cement. Some production was achieved by utilising the Company's productive facilities in Bombay which has resulted in a modest profit. The subsidiary's working during the current year is expected to show appreciable improvement both in production and profits.

Of the Company's own manufacturing division, the cone and tube plant made further progress during the year. Additional plant has been imported and installed and this is expected to widen the range and value of production during the current year. Actual production of diamond drilling bits, however, could not commence during the year for want of power and the receipt of import licences for industrial diamonds. Pending receipt of the promised power supply, the Directors authorised the installation of a generating set which made possible commencement of production in April this year. Trial deliveries to customers have served to establish the quality of this unit's production. With the demand for this unit's products rising, the Directors expect a worthwhile contribution by this unit to the current year's trading and profits.

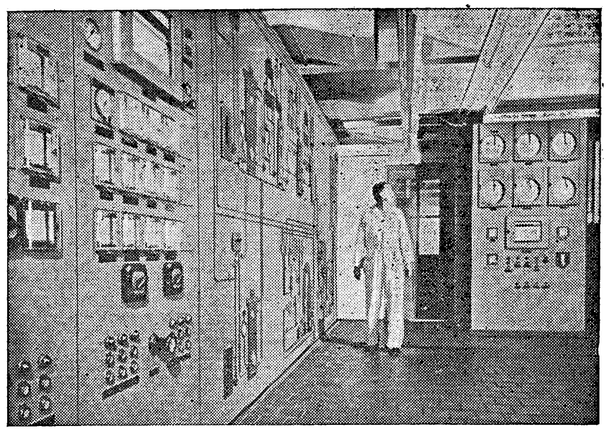
The Rs. 100 fully paid shares of the Company, which have been continuously rising in price over the past four years, are currently quoted at Rs. 207 *cum-div.* to fetch, on an *ex-div.* basis, a net return of 4.3 per cent.

EAST INDIAN COAL COMPANY LTD.

The East Indian Coal Company Ltd., which has increased its dividend from Rs. 2 to Rs. 2.75 per share, subject to tax, for the year ended 30th April 1962, has shown substantial improvement in its results for the year. The gross profit has increased from £178,571 to £347,298. The provision for depreciation has been more than doubled from £27,219 to £58,836 and that for taxation raised sharply from £39,000 to £116,250. A sum of £30,823 (£61,763 in the previous year) has been transferred to the development rebate reserve. Allocation to the sand stowing and development reserve which claimed £20,000 in 1960-61 has been skipped. General reserve has been credited with £125,000 as against *nil* in the previous year. The dividend absorbs £49,500 as against £36,000 a year before. The carry forward is £6,234 as against £16,220 brought in.

DENA BANK'S ISSUE OVERSUBSCRIBED

The further share capital issue by the Devkaran Nanjee Banking Company Ltd. of Rs. 50 lakhs in ordinary shares of Rs. 50 each at a premium of Rs. 2 per share, the lists for which were closed on Tuesday, 11th September 1962, has been oversubscribed. This issue has raised the Bank's paid-up capital to Rs. 100 lakhs, which is supplemented by reserve funds aggregating Rs. 77 lakhs, including the transfer of Rs. 2 lakhs to the share premium account, being the amount collected from the new issue.



Look what you get with

HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most-up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise Instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

BAJAJ ELECTRICALS LIMITED

CHAIRMAN WELCOMES PROPOSAL TO RAISE PLAN TARGET FOR LAMPS

THE recommendation of the Development Council for Light Electrical Industries suggesting an increase in the production target of electric lamps has been welcomed by Mr. Kamalnayan Bajaj, Chairman of Messrs. Bajaj Electricals Ltd., in the course of a statement circulated to the shareholders of the Company along with the Directors' report and statement of accounts for the year ended 31st March 1962. Mr. Bajaj has also given an account of the Company's plans for expansion and diversification. The most important among these is the scheme for the establishment of a unit at Poona for the production of precision instruments—both industrial and scientific.

The following is the full text of the Chairman's statement:

"Instead of addressing the shareholders at the General Meeting, I am incorporating what I would have normally said in this statement.

"Last year, I had mentioned that the targets fixed by the Planning Commission for electric lamps were too low and the annual demand for lamps would not be less than 90 million by 1965-66. I took up the matter with the Planning Commission. I am glad to say that the Development Council for Light Electrical Industries has recommended revision of the production targets for G.L.S. and similar lamps as well as for fluorescent tubes from 75 million and 6 million per annum to 90 million and 8 million, respectively.

Expansion of Hind Lamps

"Hind Lamps Limited, half of whose production of general lighting service and miniature lamps and fluorescent tubes is supplied to this Company, have submitted applications to the Government of India for expansion of production in lamps, fluorescent tubes and components during the third Plan. This will involve an increase in the capital of Hind and, consequently, of our Company.

"To celebrate the completion of ten years of working, Hind held a function at Shikohabad on the 26th of November 1961, at which I had the honour to preside. Amongst our distinguished guests were the Union Finance Minister, Mr. Morarji Desai who inaugurated the Fluorescent Tube Plant and the Automatic Bulb Blowing Plant, completing Hind's second Plan expansion programme; the Chief Minister of U.P., Mr. C. B. Gupta who laid the foundation-stone of the new factory building; and Mr. Manubhai Shah, the then Minister for Industry in the Government of India, who laid the foundation-stone of the new Community Centre. Our Partners were represented by Mr. A. J. Deenen, member of the Board of Management of N. V. Philips of Holland, who presented Hind Lamps with a large bell as a symbol of goodwill and friendship, and Mr. A. E. Page, Managing Director of the Osram Group of the General Electric Company Ltd. of U.K. All the distinguished visitors planted saplings to commemorate the event.

Instrument Factory

"With the growth of industrialisation, there will be a tremendous increase in demand for precision instruments—both industrial and scientific. The Company is busy on a comprehensive scheme to expand the production of instruments and to undertake the manufacture of various types of industrial control equipment. The new instrument factory and a development centre in the field of instrumentation and industrial controls are proposed to be located at Poona.

"Last month, the Union Finance Minister, Mr. Morarji Desai, and the Chief Minister of Maharashtra, Mr. Yeshwantrao Chavan, paid a visit to our Poona factory.

New Lines of Activities

"Besides electric lamps, instruments, transformers and fittings, the Company has for the last few years been taking interest in developing and marketing other products like fans, accessories, heating appliances, Rotaflex shades, and hardware fittings. Efforts are continued to obtain new products for sale by the Company.

"While initially there were several difficulties, the progress made in the last year in developing the sale of other products is encouraging. The Company proposes to provide technical, and, where necessary, financial assistance to some of the manufacturers who supply goods to the Company to enable them to improve the quality and quantity of their production. I think that, in due course, substantial business could be developed in these products.

Productivity

"The Directors and Managing Agents are making efforts to reduce the unit cost of sales and thus improve the productivity and profit ratio, both in relation to sales and capital employed.

"I thank the management, staff and workers for their willing co-operation."

Notices

THE NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

NEPANAGAR

NOTICE

THE FIFTEENTH ANNUAL GENERAL Meeting of the Shareholders of the National Newsprint and Paper Mills Limited will be held at Nepanagar on Monday the 15th October 1962 at 3.30 p.m. to transact the following business:

(1) To receive and adopt the Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1962 and the Reports of the Directors and Auditors thereon and also the comments of the Comptroller and Auditor General of India.

(2) To elect a Director in place of Shri S. N. Mehta who retires under Article 140 of the Articles of Association and is eligible for re-election.

(3) To elect a Director in place of Major Raja Bahadur Birendra Bahadur Singh, M.P., who retires under Article 132 of the Articles of Association and is eligible for re-election.

(4) To elect a Director in place of Shri K. N. Mishra who retires under Article 132 of the Articles of Association and is eligible for re-election.

(5) To elect a Director in place of Shri R. Prasad who retires under Article 132 of the Articles of Association and is eligible for re-election.

(6) To transact any other business with the permission of the Chair.

By Order of the Board of Directors,
S. L. VISVANADHAN,
Managing Director.

NEPANAGAR,
Dated 10th September, 1962.

The Share Transfer Books of the Company will remain closed from 1st October 1962 to 15th October 1962 (both days inclusive).

Shareholders desirous of having at the Annual General Meeting any information concerning the Accounts of the Company are requested to send a written requisition to the Managing Director so as to reach him seven (7) days before the meeting.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE BRITISH INDIA CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Share Transfer Books of the Corporation will remain closed from 27th September to 10th October, 1962, both days inclusive.

By Order of the Board,
R. P. MATHUR,
Deputy Secretary.

KANPUR,
1st September 1962.

Mitsubishi's New 'Electronic Banker' Ends A Thousand-Year Tradition

For over ten centuries Japanese have used personal seals to sign documents and establish identity. With Mitsubishi's Autho-Visor, the depositor is completely protected against loss or fraud, without the use of his traditional seal.

Innovations like these reflect Mitsubishi's tradition of service. Experienced, internationally-minded Mitsubishi Bank is well qualified to aid foreign business in all fiscal matters. Contact Mitsubishi for profitable, efficient dealings in Japan.

Carry forward	Nil	Nil

Extracts from the Directors' report: Trade conditions: The Company's old unit worked 2 shifts for 306½ days and the new unit worked 2 shifts for 296½ days. There was 50 per cent power cut during May, 1961 and 30 per cent power cut during the last week of March, 1962 and the consequent shortage of electric energy was compensated to a certain extent by working our generators. Purchase of both indigenous and imported cotton were, as during last year, subject to allotment of quota by the Textile Commissioner. Besides quantity restrictions, variety-war restrictions also were in force during the year. With a view to standardising the quality of our yarns, the Company had to build up our cotton stocks on a seasonal basis. Due to general short-fall in the cotton crop during the year, it could not spread-over its purchases, but had to cover its requirements in full during the respective peak arrivals with the result that the cotton stock during the major part of the year was substantial and this has contributed to increased interest charges.

The workers were paid bonus for the year 1960-61 at the rate of 6 months basic wages. As per wage board recommendations, the dearness allowance was increased by 2 nP. per point from June, 1961 and the basic wages were raised by Rs. 2 per head from January, 1962.

Additions and Replacements: A new blowroom with auto-mixer and four new ring frames were erected and commissioned during the year replacing the respective old ones. Besides, one imported doubler winder and one indigenous doubling machine were erected and commissioned. A new bailing press was also erected replacing an old one. Another imported doubling machine is under order.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	16,14,300	Gross block	75,47,569
Reserves and surplus	25,61,000	—Depreciation	36,74,752
Other liabilities	49,92,805		
		Net block	38,72,817
		Current assets	48,22,154
		Investments	20,587
		Cash	4,52,547
	Rs. 91,68,105		Rs. 91,68,105

* Paid-up capital consists of 16,143 equity shares of Rs. 100 each fully called up. Of the above 10,762 shares are allotted as fully paid up by way of bonus shares issued by capitalisation of reserves.

Pench Valley Coal Co., Ltd.

(Managing Agents: Messrs. Shaw Wallace and Co. Ltd., Calcutta.)

Annual General Meeting: 25th September, 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	1,24,12	1,12,13
Closing stock	1,32	1,59
Gross profit	9,86	8,23

,, ,, general reserve	69	Nil
,, ,, development rebate reserve	54	1,11
,, ,, capital reserve fund	1	Nil
Proposed dividend (taxable) ordinary	1,57	1,57
	(10%)	(10%)
Carry forward	54	52

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: Output and despatches of steam and other grades of coal for the last three years are as follows:

Year ended	Raisings Tonnes	Despatches Tonnes
31st March, 1962	573,599	575,000
31st March, 1961	529,153	523,464
31st March, 1960	504,046	505,886

Raisings and despatches show considerable improvement over the last year. Wagon supply, though inadequate in the beginning of the year, improved considerably at a later stage and the position was maintained throughout the year.

The Company, even though producing only lower grade coals, was fortunate enough to participate in the World Bank Loan Scheme for importation of capital equipment for carrying out expansion plans.

To meet the upward trend in the raising cost, the Government, since the close of the year, allowed an increase in the selling price but this Company producing Grade III only, is able to derive no benefit at all.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,75,000	Gross block	87,88,044
Reserves and surplus	25,13,378	—Depreciation	54,94,852

,, ,, donation	Nil	Nil
,, ,, development rebate reserve	2,57	8,24
Proposed dividends	4,04	4,04
	(11%)	(11%)
Carry forward	23	14

N.B.—Adjustments include the balance brought forward from the previous year, sundry credits written back, premium received on surrender of cotton import quota, amount withdrawn from dividend equalisation reserve, etc.

Extracts from the Directors' report: During the year under review, the prices of cotton ruled fairly high. Added to this, the costs of labour, stores, spare parts and chemicals have also been continuously on the increase while the prices of the finished products have been fixed at particular levels under a system of voluntary price control. Considering these aspects, the working of the Company can be taken as satisfactory. At the Company's Mysore mills, a printing plant has been installed and the working has commenced since March, 1962. Three units of humidification plants are being installed in the Company's old weaving shed at a cost of Rs. 1,25,000. By this installation, the humidification of the entire mill will be complete.

The replacement scheme of John Hetherington plant installed in the year 1924 will be commenced from the month of August 1962. This could not be taken up earlier as originally proposed, owing to the delayed delivery periods stipulated by the manufacturers of machinery. However, the three old doubling frames have been replaced during the year by the installation of three new frames.

In the Chitradurga Mills, it has been compelled to run from the beginning only one shift during night time owing to non-supply of day power. A part power supply has been sanctioned during the day time since April 1962 and the working has been steadily improving. It will be possible to run two shifts continuously only when power supply is given in full both during day and night.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	36,69,700	Gross block	1,62,32,508
Reserves and surplus	27,03,882	—Depreciation	84,91,089
Other liabilities	99,57,189		
		Net block	77,41,419
		Current assets	77,42,839
		Investments	7,46,775
		Cash	99,738
	Rs. 1,63,30,771		Rs. 1,63,30,771

* Paid-up capital consists of 73,394 equity shares of Rs. 25 each and 73,394 bonus shares of Rs. 25 each consolidated into 73,394 shares of Rs. 50 each.

Amalgamated Coalfields Ltd.

(Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta.)

Annual General Meeting—25th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	2,24,32	2,18,94
Closing stock	1,73	1,62
Gross profit	23,71	[20,80 illegible]
Transfer to Managing Agents' remuneration	1,72	1,58
,, depreciation	5,59	5,35
Net profit	16,40	13,87
Adjustments	28	12
Appropriations:		
Total available balance	16,68	13,99

,, ,, development rebate reserve	92	1,26
,, ,, general reserve	3,65	3,75
Proposed dividends (taxable) ordinary	3,82	3,19
	(15%)	(12.50%)
Carry forward	39	28

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: Output and despatches of steam and other grades of coal for the last three years are as follows:—

Year ended	Raisings Tonnes	Despatches Tonnes
31st March, 1962	10,16,253	10,15,616
31st March, 1961	10,04,283	10,02,147
31st March, 1960	9,14,754	9,20,244

Capital expenditure during the year was Rs. 10,40,732, the corresponding figure for the previous year being Rs. 16,48,585.

Heavy Capital expenditure has been planned for the third Five-year Plan and the necessary foreign exchange for the first two years will be provided for by the World Bank Loan.

To meet the above contingencies, the Company has transferred Rs. 3,65,000 to general reserve in addition to the development rebate reserve of Rs. 92,100.

To meet the raising costs, the Government of India, since the close of the year, has allowed some increase in the selling price, the quantum being higher for higher grades of coal and this company, therefore, has benefited only partially.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	25,50,000	Gross block	1,49,30,452
Reserves and surplus	69,66,806	—Depreciation	90,79,765

Carry forward	11	18

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' Report:—The year would have ended with better results had there been no strike of the daily-rated employees lasting for 45 days during the year under review. In spite of this setback, the sales of the Company during the year have increased by Rs. 7.25 lakhs. The production of dry cells was, however, restricted in spite of heavy demands due to the restrictions on imported Raw Materials. The directors are further glad to inform that the technical collaboration agreement has been concluded with Messrs. Societe Des Accumulateurs Fixes Et De Traction of France, the well-known Manufacturers of dry batteries in Europe. The Government of India has also principally accepted the basic terms and conditions of the agreement. Under one of the terms of the agreement the collaborators have to be given equity shares of the Company to the equivalent value of New Francs 2.50 lakhs, without payment being received in cash, in consideration of technical know-how which they will be imparting. The Government of India, while sanctioning this agreement, has made a condition to bring the equity Capital of the Company on such a level so that the foreign participation is 10 per cent of it. Hence, the directors have thought it desirable to issue new equity capital of Rs. 7.50 lakhs to the existing shareholders in the ratio of one share to the two shares held, out of the authorised capital of Rs. 50 lakhs, consisting of 100,000 unclassified shares. The production capacity of the factory was fully utilised and an application was, therefore, made to the ministry of commerce and industry, Government of India, to allow substantial expansion, and the Government has, accordingly sanctioned to increase the production capacity of the factory from 40 million cells to 65 million cells. Application for the import of necessary capital equipments has already been made to the Government of India and it is hoped that the import licence will be received in the near future.

The expansion of the ball mill section of the factory is progressing satisfactorily and the ball mill received during the year will be commissioned very shortly. Hence the amount for the purchase of the ball mill and the building to house it, which is under construction, has been shown as contingent liability in the balance sheet. The contingent liability shown in the balance sheet also includes the expected liability for the godown under construction, which is now completed.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	24,97,680	Gross block	38,61,373
Reserves and surplus	8,67,106	—Depreciation	24,86,340
Other liabilities	28,54,958		
		Net block	13,75,024
		Current assets	46,72,907
		Investments	5,059
		Cash	1,66,754
	Rs. 62,19,744		R. 62,19,744

* Paid-up capital consists of 19,947—7.14 per cent. cumulative redeemable first preference shares of Rs. 50 fully paid and 29,947 equity shares of Rs. 50 fully paid. Of the equity shares, 1,200 shares are allotted as fully paid up pursuant to a contract with the vendor for sale without payment being received in cash.

MONEY SCARCE

(From Our Own Correspondent)

BOMBAY, 12*th September*

The short-term money market continues to be characterised by a perceptible scarcity of floating funds. The inter-bank call money rate, which had gone up to 4½ per cent last week, has moved up further to stand at 5 per cent. In Calcutta, the rate is as high as 5½-5¾ per cent. There has, however, been no change in short-term deposit rates.

It was pointed out in this column last week that the Scheduled banks' borrowings from the Reserve Bank during the week ended 31st August 1962 had recorded an increase of Rs. 15.18 crores. They have gone up further by as much as Rs. 26.71 crores, taking the total to Rs. 42.65 crores, according to the Reserve Bank's statement for the week ended 7th September 1962. Of the increase of Rs. 26.71 crores, as much as Rs. 12.94 crores has been against usance bills. The present level of Scheduled banks' borrowings is a record for the slack season.

The Treasury Bill results for the week under review show that for the Bills under the tender system the special source is the only supporter. This is evident from the fact that the total amount offered at Rs. 2 crores was the same as that invited and that the average rate of accepted tenders remained unchanged at Rs. 2.370 per cent per annum.

91 days' Intermediate Treasury Bills, however, fared a little better, in that they fetched Rs. 129.75 lakhs during 5th September to 8th September, both days inclusive.

The Gilt-edged market is dull with hardly any turnover. The trend is a shade quiet. 3¾ per cent 1968 has come down by 15 nP, and so also 3½ per cent 1967 albeit by 5 nP. The short-dated 3 per cent 1963-65, however, has gone up by 5 nP. Among State loans, a loss of 25 nP is noted in the recently floated 4½ per cent 1974 loans of Andhra Pradesh, Orissa and of 10 nP in that of the U.P.

In the foreign exchange market, the rupee-dollar rate has been ruling quite steady. The Banks' selling rate at Rs. 477.75 and their buying rate at Rs. 474.50 per 100 dollars are unchanged over the week. This is in consonance with the steadiness of the £ sterling in the New York market where spot is quoted at 280.120-280.150 cents and three months' forward at 279.710-279.740 cents per £.

GOOD CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, 10*th September*

In the Madras hides and skins market, arrivals of stocks from the tanneries were restricted and clearance kept pace with the output this week. Prices ruled steady. Export trading with the U.K. was good and important quantities in the light weight and medium kips of good marks were freely sold. Local demand for the inferior grade kips slackened, but the prices were still out of U.K. buyers' reach. There were fair inquiries for cowcalf run selection, but sellers were few, as stocks were small. Importers in the U.S. did not evince interest in buffcalf and hides.

There was good call for the superior tannage goat skins 8/9 lbs. run and 11/12 lbs. all grades as also for the middle class sheep skins. Other lines ruled quiet. Inquiries for sueda selections were in evidence and tanners hope to get regular orders for them after the Paris Leather Fair.

Shipments (in bales) during August were 1945 of cowhides, 193 of cowcalf, 20 of buff hides, 146 of buffcalf, 207 of goatskins and 231 of sheepskins to the U.K. ports; 7 of cowhides, 10 of cowcalf, 9 of buffcalf, 653 of goatskins and 310 of sheep skins to the Continental ports; 10 of buffs, 72 of buffcalf, 317 goat and 17 of sheepskins to the U.S. and 176 of sheepskins to Japan.

FOODGRAINS EASE FURTHER

(From Our Own Correspondent)

HAPUR, 10*th September*

Easy conditions prevailed in foodgrains here this week. Wheat, rice, maize and other coarser grains drifted lower owing to liquidation by stockists. Fairly heavy rains received during the week would prove beneficial to the standing *kharif* crops including paddy, and also enable timely preparation of the land for *rabi* sowings.

Wheat prices declined, by 67 nP to Rs. 2.01 per quintal on selling pressure from stockists to be quoted between Rs. 39.52 and Rs. 40.19 for the average quality and between Rs. 40.87 and Rs. 42.87 for the farm produce. The prices of the red quality also sought lower levels at Rs. 38.18. Daily arrivals increased to 400 to 500 maunds, while demand was slack. Local stocks at the week-end were stationary around 64,000 maunds. Offtake was two wagonload to the South. Rice was quiet, with the mainpuri quality declining by Re. 1.34 on better arrivals. Demand was not brisk, but stocks left were also poor. Week-end prices were:—Rice *basmati* superior Rs. 91.09 to Rs. 101.80, *sela basmati* Rs. 80.38 to Rs. 88.41, *mainpuri* Rs. 56.26 to Rs. 57.60, *ramajwayan* Rs. 64.30, *raimunia* Rs. 66.98 and *gadda* Rs. 54.92 a quintal.

Gram was, however, unchanged. The Punjab quality was quoted at Rs. 43.54 and the local variety at Rs. 42.87. Arrivals were negligible, and the stocks declined to 14,000 maunds. New maize the stocks declined to 14,000 maunds. New maize arrivals were still poor, but prices declined by 67 nP to Re. 1.34 per quintal. Barley and *bejhar* prices also sought lower levels on poor demand to be quoted at Rs. 28.13 and between Rs. 26.79 and Rs. 28.13, respectively. While *guwar* was stationary, *jowar* prices improved by Re. 1.34 on better demand against poor stocks. Other coarse grains were listless. Week-end prices were:—*Jowar* Rs. 46.89 to Rs. 50.91, *guwar* Rs. 38.85, maize Rs. 28.13 to Rs. 29.47, new Rs. 30.81 to Rs. 34.83, *bajra* Rs. 37.51, *methi* Rs. 58.94 and oats Rs. 29.47 to Rs. 30.81.

Prices of pulses also receded. Peas declined by Re. 1.34 to Rs. 2.01 according to quality due to slack demand in the face of heavy stocks and selling pressure by stockists. The *dara* quality was quoted between Rs. 31.48 and Rs. 31.82 and farm between Rs. 32.82 and Rs. 34.16. Peas *dal* was also lower at Rs. 36.17. Five wagons of peas and peas *dal* were despatched to the South. Arrivals were poor, and stocks declined to 60,000 maunds. *Arhar* and *arhar dal* eased by Rs. 2.67 in restricted poor trading. *Arhar* was quoted between Rs. 50.24 and Rs. 54.22. Stocks left were poor, around 7,000 maunds. During the week, one wagon of *dal* was sent to the Salem market. *Urd* and *moong* prices also declined by Re. 1.34 and Rs. 2.67 per quintal, respectively. *Massoor* and *moth* ruled steady. Week-end prices were:—*Urd* Rs. 76.36 to Rs. 80.38, *urd dal* Rs. 88.41, *moong* Rs. 48.23 to Rs. 50.91, *moong dal* Rs. 58.94, *masoor* Rs. 45.55 to Rs. 53.58, *masoor dal* Rs. 56.26, *moth* Rs. 40.19, *moth dal* Rs. 48.23 and *gram dal* Rs. 48.23 per quintal.

RECOVERY IN BULLION

(From Our Own Correspondent)

BOMBAY, 12*th September*

The bullion market exhibited a distinctly easy trend in the first three sessions of the week under review, but staged a recovery on Monday the 10th inst. The recovery gathered further momentum in the subsequent two sessions. The initial easiness was due to nervous liquidation by bulls who feared that the Union Government might soon clamp down controls on transactions in bullion. Rumours to the effect that the Government was contemplating to freeze gold lying in the safe deposit vaults of banks, together with the reports that about 80.000 tolas of gold had been withdrawn from lockers in Delhi on Friday the 7th inst., also imparted weakness. It was reported that one businessman sold hundreds of tolas of gold at several centres. Consequently, gold suffered a sharp setback in value. In sympathy, silver drifted downward. On Monday, however, both the metals tended to move up following brisk short-covering. The upward trend persisted yesterday and today, too, thanks to good buying support from upcountry centres and seizure of 185 bars of contraband gold worth Rs. 22 lakhs from a tourist motor car at Bangaon on West Bengal-East Pakistan border on the 10th inst. But the recovery was not marked enough to make good the earlier losses, so that today's closing quotations for both gold and silver were below those prevailing on Wednesday last week.

The daily average arrivals of gold during the week were higher by 3.750 tolas at 9.250 tolas as compared with last week; offtake, too, was higher albeit by just 1.500 tolas at 5,500 tolas. In the case of silver, arrivals were at an average of 22 bars, as against 15 bars, and offtake was of the order of 6 bars per day, as against 9 bars.

Over the week, the *Bhadrapad* (15th September) settlement in gold fell by Re. 1.50 to Rs. 125.75 and *Margashir* (December) settlement by Rs. 2.20 to Rs. 124.65. The rate for transferring commitments from the *Bhadrapad* to *Margashir* settlement continued to be against bears throughout the week, the actual rate increasing from 40 nP to Re. 1.10.

The premium commanded by ready gold over the forward (*Bhadrapad* settlement) rose from 25 nP last week-end to 50 nP today when the ready rate stood at Rs. 126.25, as against Rs. 127.50 a week ago, a drop of Re. 1.25.

In silver, the *Bhadrapad* settlement receded from Rs. 220.45 to Rs. 216.70 on Saturday the 8th inst., but recovered thereafter and touched Rs. 220.10 today before finishing at Rs. 219.20. The net loss over the week was Re. 1.25. The *Margashir* settlement fluctuated between Rs. 220.70 and Rs. 217.50 and finished at Rs. 220.35, a fall of 95 nP over the week. The carryforward rate was against bulls throughout the week, the actual rate today being Re. 1.15, as against 85 nP on Wednesday last week.

Ready silver began the week at Rs. 219.40, as against the previous close of Rs. 220.15, and, after declining to Rs. 216.50 on Saturday, spurted subsequently to touch a high of Rs. 219.90 today. The closing was lower at Rs. 219.10. At this rate, ready silver was quoted at a discount of 10 nP under the maturing (*Bhadrapad*) settlement.

The dollar price of gold in the London bullion market rose further from $35.12½ to $35.13 per fine ounce. Ready gold also advanced from 250s. 8¾d. to 250s. 9¾d. Ready and forward silver moved up again, the former by ¼d. and the latter by ⅜d. Silver in New York was unaltered at 113 cents.

The following table shows the trend of prices during the week under review:

	12-9-62 (closing)	High	Low	5-9-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	126.25	127.00	122.50	127.50
*Bhadrapad**	125.75	126.75	122.30	127.25

Silver	113.00 cents	—	—	113.00 cents

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

EASY TENDENCY IN COTTON

(From Our Own Correspondent)

BOMBAY, 12*th September*

Cotton futures which had ruled firm last week developed a reactionary trend during the week under review. The tendency at close was easy, with sentiment influenced by reports of satisfactory progress of the current season's crop in almost all the producing areas. Initial strength petered out, as, at higher levels, bulls themselves turned sellers and support was generally lacking. The setback in values induced bear covering, leading to intermittent rallies which, however, proved short-lived, due to renewed offerings. Fluctuations were, therefore, irregular and trading was active, though turnover was still below normal. Jarilla March, which closed last week at Rs. 745.25, was done at Rs. 745.75 on the 6th inst. The contract hovered between that level and Rs. 740 in the next two sessions and reacted to Rs. 737.25 on the 10th. After recovering to Rs. 741.50 on the next day, it declined again to Rs. 736 today. Over the week, it showed a loss of Rs. 9.25.

The Sewri spot market was dull. Stray business was reported in L147, Co2, Laxmi, Surti and 197/3. The following are some of the latest available spot quotations—in rupees per candy of 784 lbs.:

Manavadar 930-K, Nagar Co2 1.635, Sanand Kalyan 1,039 spot, Surendranagar Kalyan 1,005, Bombay Press 950, Malegaon Co2 uncertified 1,050, Guiza 45 on sample 1.830 c.i.f. January-February, California 1-5/32″ 1,225 c.i.f. October-November and Sudan GL 1,473 c.i.f. January.

The Government of India's cotton policy for the 1962-63 season was announced on the 7th. It was welcomed by the trade here. Although the policy makes no important departure from that followed in the past, it has three interesting features. First, the number of zonal committees has been made compact at six. Second, the compulsory surveys will be made at the last stage, that is, at the time of delivery of cotton to mills. Third, Bengal *Deshi* has been exempted from compulsory survey, if it is intended for export. The new policy also makes a reference to random requisitioning which the Government may resort to in case prices tend to rise above ceiling levels. Such a possibility may not, however, arise, if the crop turns out to be satisfactory.

According to the new price schedule published, an increase of more than Rs. 35 has been awarded to Khandesh Virnar 197/3, Digvijay 'A' and 'B' and Surti, Buri American has been awarded a rise of only Rs. 27. L 147 cotton is no longer grouped with Buri American and granted a separate price which is higher than that of Cambodia C. The change has been effected perhaps in response to the demands of the Berar cotton cultivators. The basic staple has been raised by 1/32″ in respect of Vidarbha M.P. 197/3, Khandesh Virnar 197/3, Digvijay 'A', Surti, Karunganni, Buri American and Laxmi.

The Committee of the Indian Cotton Mills Federation, at its meeting held at Bombay on the 11th inst., considered the very difficult cotton supply position and expressed the hope that the Government would find it possible to arrange for necessary imports with a view to ensuring adequate supplies of cloth and yarn. It urged the adoption of strict measures right from the beginning of the current season to maintain prices within the new ceilings which have been fixed Rs. 125 higher than in the last season.

The Karachi cotton market was distinctly easy this week, with the January futures contract declining from Rs. 71.85 to Rs. 69.65 and the March contract from Rs. 71.75 to Rs. 69.45. Some of the spot prices in rupees were: 289F Punjab R.G. 83.50, S.G. 91.50, A.C. 134, R.G. 87, S.G. 93, L.S.S. Punjab R.G. 74 and Punjab Deshi 76.50.

Cotton futures in New York were steady. October closed at 33.71/33.75 cents, as against 33.62 cents before, December at 33.87 cents, as against 33.76/33.77 cents, and March at 34.27/34.30 cents, as against 34.09/34.11 cents. The second official production estimate of the season placed the crop at 14,687,000 bales or 415,000 bales below the August forecast and this imparted some steadiness to the market.

In Liverpool, too, the tendency was steady, after the previous week's slight easiness. Futures contracts closed slightly higher, with October edging forward from 23.30 pence to 23.35 pence.

BLACK PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, 11*th September*

Malabar black garbled pepper, after touching the lowest at Rs. 300, improved to Rs. 310, as New York was reported to have bought several parcels at rates ranging from $34 to $36. Ungarbled rallied from Rs. 287 to Rs. 300. October delivery at Cochin moved between Rs. 303 and Rs. 317. Improvement in inland demand, together with a boarding of inquiries from New York, proved to be a supporting factor.

Black pepper in Singapore ruled comparatively firmer, as New York remained continuous buyers. Anxiety on the part of short-sellers to cover proved a timely support. White pepper showed sympathetic rise, but was neglected at a higher level. Black pepper improved to $115 to come down to $112½.

Spot in New York, after climbing up to $0.38, came down to $0.36, as the dealers there covered their immediate requirements. Thereafter, they

were quoting to buy according to the tendency at the origins.

Future depends upon the buying policy of New York, as all supplying centres like Singapore, Indonesia and India are willing sellers at every rise.

Ready pepper in Bombay is nominally quoted at Rs. 158 per 50 kilos.

ART SILK YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 12*th September*

The Government of India has revised the rates of drawback of duty on exports of staple fibre yarn, staple fibre fabrics and mixed fabrics made from staple fibre yarn and art silk yarn. The drawback of duty against exports of staple fibre yarn and staple fibre fabrics will be allowed at the rate of Re. 1.14 per kg. of staple fibre yarn content. The drawback against exports of mixed fabrics containing staple fibre yarn and art silk yarn will be allowed at the rate as specified in Serial No. 1 of Schedule 1 on the art silk yarn content. The Government proposes to revise the rates of drawback of duty on exports of fabrics, hosiery and fishnet twine or cord manufactured wholly or in admixture with other yarn, from artificial silk yarn of all varieties other than staple fibre yarn and readymade garments made from such fabrics. The proposals in this regard will be finalised on or after 2nd October after taking into consideration suggestions from the parties concerned. It is proposed that, in the case of such fabrics, hosiery, fishnet twine or cord and readymade garments containing art silk yarn consisting entirely of cellulose derivates or generated cellulose or of both, the rates of drawback are to be as follows (rates per kg. of yarn content of deniers concerned):

Crimped and stretched yarn—below 23D Rs. 19; 24D to 28D Rs. 15.57; 49D and more Rs. 17.38.

Terylene yarn: 50D Rs. 16.90; 75D Rs. 15.82; 100D Rs. 14.8; over 100D Rs. 12.60.

Yarns other than crimped, stretched and terylene: Below 18D Rs. 18.13; 18D to 23D Rs. 14.18; 24D Rs. 11.

In the case of fabrics containing art silk yarn consisting entirely of cellulose or both, the revised rates proposed by the Government are as follows:

Below 75D Rs. 8.85; 75D to 105D Rs. 5.24; above 105D to 175D Rs. 2.54 and above 176D Rs. 4.31.

The above announcement did not have any effect on the market. Art silk yarns drifted downward. Spot National Rayons 150 Bt. cones 1st grade fell by 25 nP to Rs. 13.20 per kg. and 150 Bt. cones 1st grade by 7 nP to Rs. 16.50. Centurys 100 deniers Bt. cones were marked down from Rs. 18.28 to Rs. 17.73. South Indian Viscose 150D was quoted at Rs. 13.33 and 120D at Rs. 17.18.

Staple fibre yarn encountered selling induced by renewed offerings by mills and suffered a setback in values. 40 x 2 October delivery slumped by Rs. 29 to Rs. 772 per case of 100 kg. December settlement receded by Rs. 32 to Rs. 792. Spot Centurys were done at Rs. 8.45 per kg., Kohinoors at Rs. 9.42 and Citys at Rs. 11.42.

Activity in the cotton yarn section continued, with values moving narrowly. The latest available quotations—in rupees per bundle of 10 lbs.—are: 10s Podar 18.50 and Prahlad 18; 30s Madura 29; 32s Madura 29.75; 40s Gokak 36.50 and Meenakshi 37; 60s Finlay 60 and Gokak 59.50; 80s Madura 81.

OILSEEDS EASY AGAIN

(From Our Own Correspondent)

BOMBAY, 12*th September*

For the second week in succession, oilseeds ruled easy. There was persistent bull liquidation in groundnuts, following reports of favourable rains in producing areas, particularly in Saurashtra. Further offtake by crushers and *vanaspati* manufacturers was poor. In sympathy with groundnuts, other seeds and oils also tended to move down. The weakness in the stock markets, too, adversely affected the market sentiment.

The decision of the Government of India to grant exporters of *vanaspati* import entitlements for copra did not have any perceptible effect on the market. According to a trade control notice released last week-end, import licences for copra will be issued to manufacturers-*cum*-exporters of *vanaspati* and hydrogenated oil up to 75 per cent of the f.o.b. value realised from exports of *vanaspati* and hydrogenated oil. Manufacturers-*cum*-exporters will have the option to utilise 10 per cent of this entitlement for such items as chemicals, spares and machinery as approved by the Directorate of Sugar and *Vanaspati* and the Development Wing in the Ministry of Commerce and Industry. The import entitlement for chemicals, spares and machinery as well as copra should be within the maximum limit of 75 per cent of the f.o.b. value realised.

A development of interest to the oilseeds trade was the commencement this week of trading in groundnuts at Latur by the Shri Grain Seeds and Oil Merchants Chamber Ltd. with effect from the 9th inst. The hedge contract traded by this Exchange has as its basis Nizam Bold variety of groundnut. In addition to the basic variety, Madras Bold is also tenderable against the hedge contract, subject to the payment of appropriate tendering difference to be prescribed by the Board of Directors of the Chamber from time to time. The months of delivery are February, April, June and August. The unit of trading is fixed at 100 quintals. Latur is the fourth forward market in groundnut set up under the Forward Contracts (Regulation) Act, 1952, the other three being at Bombay, Saurashtra and Sangli.

Groundnut January 1963 contract was marked down by Rs. 8.50 to Rs. 224.12. September 1962 contract fell by Rs. 3.50 to Rs. 245. Nizam bold dropped Re. 1.25 to Rs. 47.75. Oil ex-mill eased by 60 nP to Rs. 19.40 and railway receipts by 55 nP to Rs. 19.10.

Castorseed March 1963 contract suffered a setback of Rs. 3 to Rs. 163.75. September 1962 contract fell by Rs. 2 to Rs. 160. Madras small was lower by 87 nP at Rs. 31.50. Oil Commercial declined by 15 nP to Rs. 12.25.

Linseed March 1963 gave way from Rs. 40.19 to Rs. 39.44. September 1962 contract lost 19 nP to Rs. 40. Bold ready fell initially from Rs. 39.75 to Rs. 39.25, but improved towards the close to Rs. 39.75. Linseed oil hardened by 10 nP to Rs. 16.50.

Cottonseed January 1963 contract closed lower today at Rs. 101.75, as against Rs. 103. Both Berar and white declined by 45 nP to Rs. 21.75.

The following table shows the closing prices of oilseeds and oils on Wednesday, 12th September, as compared with those of the two previous weeks:

	12-9-1962	5-9-1962	29-8-1962
Groundnut	Rs.	Rs.	Rs.
September 1962	245.00	248.50	247.75
Groundnut January 1963 ..	224.12	232.62	231.87
Nizam bold	47.75	49.00	49.50
Khandesh quality	48.00	50.00	50.50
Oil ex-mill ready*	19.40	20.00	20.15
Railway receipts*	19.10	19.65	19.90
Castorseed			
September 1962	160.00	162.10	165.75
Castorseed March 1963	163.75	166.75	168.75
Ready Madras	31.50	32.37	33.00
Ready Kanpur	30.25	31.12	31.75
Oil B.S.S.†	12.90	13.10	13.40
Oil commercial†	12.25	12.40	12.65
Linseed			
September 1962	40.00	40.19	39.94
Bold ready	39.75	39.75	39.75
Oil ready†	16.50	16.40	16.70
Cottonseed September 1962 ..	102.00	101.50	102.00
Cottonseed January 1963 ..	101.75	103.00	103.40
Niger seed	37.00	37.50	38.50
Kardi seed	27.50	28.50	28.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

ORANGE PEKOE TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 6*th September*

In sale No. 35 held on the 4th inst., 685,000 kgs. were offered. Quality from the Nilgiris was slightly irregular, while that from other districts was about maintained. The market met with good general demand, but prices were irregular for all descriptions. The better liquoring low medium and mediums met with useful support and these were fully firm and in some cases dearer, buyers emphasising more on fannings grades. The plainer kinds under this category did not receive the same support and inclined easier, particularly towards the close. There was good inquiry for good mediums which sold at around last rates. Highgrowns met with irregular support. A few improved invoices realised prices above last, whilst others, particularly fannings, were generally lower. Clean black leaf brokens were steady. Similar fannings elicited better support and were often dearer. There was useful demand for unorthodox descriptions which were irregular but generally steady. Leaf grades under this category, however, sold at rates below last. Flowery pekoes were a little easier, while orange pekoes were sometimes dearer. A small selection of tippy teas were strong.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	3.20-4.00	4.20-4.40
Mediums	4.10-4.40	4.25-4.45
Good mediums	4.50-5.50	...
Nilgiri B.O.P.	4.75-8.50	5.00-7.70

The average price realised in sale No. 34 was Rs. 4.00 per kilo as against Rs. 4.25 a week ago and Rs. 4.66 in the corresponding sale last year.

In dust sale No. 35 held today, 266,000 kgs. were offered. The market met with strong general demand. There was good competition for good mediums, mediums and low mediums which were dearer by 10 to 20 nP. The cleaner types under this category sometimes registered further advances. There was useful support for highgrowns which sold at around last rates. Unorthodox descriptions also received good support and these are quoted firm. Clean black grainy descriptions continued in demand and sold at rates above last.

The average price realised in dust sale No. 35 was Rs. 3.70 per kilo as compared with Rs. 3.46 a week ago and Rs. 4.69 in the corresponding sale last year.

Colombo: There was good demand. Uvas were strong and generally dearer, but Dimbula brokens were irregular and slightly easier. Mediums were firm to dearer whilst lowgrown Middle East types were weak and easier. Liquoring offgrades met with strong demand at dearer rates.

London: North Indian and other growths: In Monday's sale, there was good demand, particularly for good Assams which were appreciably dearer. Other descriptions also were well supported and tended dearer.

Ceylon and South Indians: In Tuesday's sale, there was strong support for improved quality Ceylons. Best liquoring South Indians were well supported whilst the plainer kinds were easier and often neglected.

The sale held on Wednesday followed the pattern of Tuesday.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 36. 630,000 kgs. offered. Strong demand. Low mediums and mediums much dearer, particularly fannings. Good mediums fully firm to dearer. Highgrowns irregularly dearer. Unorthodox stronger."

DUST TEA WEAK

(From Our Own Correspondent)

CALCUTTA, 11*th September*

Good demand was in evidence at the tea export sales held here yesterday, but the internal sales last week, displayed a weak tendency. This week's shipments to the U.K. were satisfactory, though those to Canada, the U.S., West Asia and the Continent were lower. Demand at the U.K. auctions was strong, presumably due to the low level of stocks there, which, in the week ended 31st August, declined to 114.68 million lbs. from 121.54 million lbs. in the previous week. The average price realised in London was 52.57*d.* per lb., as against 52.50*d.* in the corresponding period of last year and 54.15*d.* in the previous week. The lower level has been due to the weaker trend in the prices of plain and medium teas; though, good Assams and Dooars teas have been taken in London bids at higher rates.

Dusts on offer at last week's sales for internal consumption totalled 29,523 packages. As the sales opened, there was a strong general demand, but gradually a weak tendency set in. Legg-cut teas provided the strongest feature of the sales and prices of the favoured varieties rose by 50 nP. C.T.C. teas opened on a firm tone, but soon demand receded and led to some withdrawals of the better varieties. Good demand was seen for the bright liquoring Assams and the plain orthodox teas. The quotations per one kg., inclusive of excise duty (in rupees) were: Good Assam C.T.C. dust 6.40 to 6.70, medium Assam C.T.C. dust 5.50 to 5.90, legg-cut dust 4.80 to 5.20, plain orthodox dust 4.00 to 4.40 and medium Assam dust 4.80 to 5.20.

Speaking at the annual meeting of the United Planters' Association of Southern India, held at Coonoor on last inst., Mr. W. C. F. Simmonds, President of the Association, declared that entry of the U.K. into the E.C.M. would be a challenge to the trade to open new markets. He said that this aim could be achieved by a dynamic propaganda and effective sales efforts to increase consumption not only in the European nations but in other countries also. The trade here would call upon the Tea Board to draw up a comprehensive programme of propaganda in consultation with it.

The E.C.M. countries have already agreed at the recent Brussels negotiations that the common tariff for tea from India, Ceylon and Pakistan should be abolished. This means that India cannot only maintain its exports of tea to the U.K. but gain a strong foothold in the existing E.C.M. countries, where tea is now subjected to heavy duty varying from one country to another. However, it has now been reported that the U.S. is insisting that other Asian producers of tea, viz. Formosa and Indonesia should also be permitted to send tea duty-free to the U.K. The proposal from the U.S. is stated to be in its capacity as a member of the G.A.T.T. If the E.C.M. accepts the American view, it would mean increasing the area of competition for Commonwealth tea. Besides, although India and Ceylon are the major producers, other producing countries in Asia would expand acreage.

This development focusses attention on the recent view of the F.A.O. that tea is very likely to show an unmanageable surplus by 1966. The U.S.S.R. is believed to be aiming at a phenomenal increase in output with the aid of modern scientific methods. However, the fact that the U.S.S.R. has been increasing purchases of tea from India in the past few years shows that consumption in that country is increasing and that production there is yet insufficient to meet fully internal demand. Considering the trend in world production and the F.A.O.'s view, is thought that there is some substance in the suggestion of the South Indian plantation industry that India should enter into an international tea agreement with other producing countries in order to avoid the impending glut in production.

Rejecting this plea, Mr. Manubhai Shah, Minister for International Trade, stated in the Lok Sabha last week that the emphasis for larger exports should be on higher production. Apparently, the Government of India does not share the F.A.O.'s apprehension of a world surplus within the next few years. The Minister stated on another occasion that the Government was considering a scheme for granting financial assistance to tea gardens to make arrangements for artificial irrigation. The cost of the scheme was estimated between Rs. 4 and 5 crores.

A strong feature of the export sale held here yesterday, when leaf on offer totalled 70,026 packages, was plain brokens which met with useful competition with a price rise of 20 nP. Generally, there was a strong demand, and fannings in the above category were fully firm to realise dearer prices. However, medium B.O.Ps. eased, with the more useful liquoring teas being firm. Although Darjeelings were in good demand, prices were irregular. Prices for C.T.Cs. were also irregular, although demand was good. Legg-cut teas met with buyers at hardening rates. In whole leaf grades, the plainer teas met with better support at dearer rates, but Assams were neglected. Tippy teas were fully steady, but the prices were unchanged. The quotations per one kg., inclusive of excise duty, (in rupees) were: Best Assam C.T.C. fannings 7 to 8, medium Assam C.T.C. fannings 5.40 to 6, clean plain pekoe 4.30 to 4.70, best Assam C.T.C. B.P. 7 to 8, medium Assam C.T.C. fannings 5.40 to 6, plain fannings 3.75 to 4.25 and plain B.P. 3.60 to 4.

JUTE GOODS MAINTAINED

(From Our Own Correspondent)

CALCUTTA, 11*th September*

With good support, jute goods were maintained steady during the week under review. Raw jute was unchanged. The announcement that goods in stock with mills as at the end of last month increased by 5,600 tons imparted subsequent weakness to heavy goods, but, when it was realised that several overseas inquiries were pending, steadiness set in. Heavy goods in stock increased by 6,600 tons, but hessian declined by 1,000 tons. Another news noted in the market was that the threatened strike by workers in Pakistan mills was called off following a settlement between the workers' representatives and the Pakistan Jute Mills Association. This means that there would be no diversion of business from Dacca in goods on this score. On the other hand, encouraging note was taken of the Government of India's eagerness to help the jute industry to enable it to increase exports of jute backing cloth to the U.S. Exports of these to that country in 1961-62 aggregated about 41,000 tons, realising foreign exchange to the tune of Rs. 11.65 crores. Stating this in Parliament, Mr. Manubhai Shah, Union Minister for International Trade, disclosed that adequate foreign exchange had been placed at the disposal of the industry to enable it to install broad jute looms.

In the hessian market during the week, U.S. buyers accorded meagre support, as they were reluctant to lift on the rise. Since a decline in the price of hessian is hardly likely, U.S. buyers should begin to be more active now, according to the trade. Argentina has not yet started to buy against September shipments. The U.K. continued to buy small quantities, and orders from the Continent continued to be received. Considering the overall demand for hessian, it is clear that production is insufficient. Mills' difficulties in this regard have only increased as a result of the fall in the quality of the crop. Regarding sacking goods, although stocks at the end of last month increased, undue importance to the same was not attached in the market, as, with several overseas inquiries now being received, it is expected that there would be no excess production. In the week, there was an inquiry for sacking from the Dominican Republic. The expected tender from the Sudan in respect of 20,000 bales of cotton packs and grainsacks has been received. The Government of India was also an active buyer.

Referring to the encouraging view contained in the *Jute Bulletin* of the Central Jute Committee that foreign demand for Indian jute goods should hold strong for the remainder of the year, trade circles say that this would be dependent on the maintenance of competitive prices. In this connection, the hesitant tendency among U.S. buyers to place orders on the plea that prices are high should be emphasised. The U.S. has not yet begun to operate in a big way. The *Bulletin's* assessment is based on the encouraging crop reports in the main sacking goods consuming countries and the return of price stability in prices here. Indeed, orders for heavy goods from West Africa, Cuba and Australia are satisfactory, and indications are that this tendency would continue. Further, Pakistan mills are fully booked up to November. Internal offtake is also satisfactory. Against this background, the *Bulletin* rightly welcomes the mills' decision to maintain the higher rate of production. At the same time, note should be taken of the significant rise in the stock of heavy goods with mills, and this focusses attention on the need to balance production between the two main constructions which is dependent on the availability of adequate quantity of the superior fibre fit for hessian manufacture at present in short supply. In other words, if output of sacking increased at the cost of hessian, the sacking market would be inviting only depression.

Recent delays to shipment of jute goods as a result of the need of the customs authorities in Calcutta to verify prices on shipping documents have rightly received attention in New Delhi, and the Government of India has now set up machinery to scrutinise the contract rates. A three-man committee has accordingly been announced (Chairman: Mr. Bam, the Tea Board Chairman, and members: Mr. Cirvante of the Reserve Bank of India, Calcutta, and Mr. Srivastava, Additional Collector, Customs, Calcutta). The committee will scrutinise the contracts as and when placed by foreign importers on the trade in Calcutta. Export contracts are accordingly required to be registered with the Committee as and when finalised. Such a system would be welcome to all concerned and has been designed to ensure that no inconvenience is caused either to shippers or to overseas importers at the time of actual shipments.

The steady trend in fibre prices was attributed to reports coming from New Delhi relating to the decision by the Government of India to fix a minimum prices of Rs. 30 a maund for new raw jute crop, basis Assam bottoms for delivery in Calcutta. Further, it was stated that a decision to inaugurate a price support scheme had been taken. Accordingly, the Department of International Trade, the Jute Buffer Stock Agency and the State Trading Corporation would participate in the scheme. The trade here points out that the system of minimum prices based on Assam bottoms at Rs. 30 a maund is already in existence since the past year and that as such there is nothing new in regard to Government's decision in this regard. When this report was received here, there was some misunderstanding, since it was not clear if the price was in respect of all varieties of the crop. However, it soon became evident that the price of Rs. 30 a maund is based on Assam bottoms quality and for delivery in Calcutta. It follows, therefore, that lower varieties such as northern bottoms, jungli bottoms, and white *deshi* bottoms of the West Bengal fibre and good, medium and lower quality bottoms of the Bihar crop would be subjected to discounts as hitherto, and that the higher varieties such as Daisee bottoms and middles would command a premium. Also, because the minimum price is in respect of fibre delivered in Calcutta, the price includes transportation cost from mofussil to Calcutta, insurance, handling charges, etc. These factors explain why prices in the interior are lower than Calcutta's parity.

The trade would welcome a price support scheme and also fixation of an export quota for this year. In the last season, the export quota was fixed almost at the end of the season, and naturally overseas buyers were not very enthusiastic to buy fibre from India, in view of the availability of the new crop within a very short time then. Now that it is apparent that India would have a large surplus of the inferior fibre, export inquiries should be initiated from now on, the trade strongly feels. The Jute Buffer Stock Association has announced its decision to purchase a further quantity of 2¼ lakh maunds. Buffer stocks already total 11¾ lakh maunds which were purchased up to June last when the Association discontinued its activiy due to the steady trend in prices. In view of the proposed purchases by the B.S.A., the I.J.M.A. would not issue any purchase quota to mills. Adding the proposed purchases, stocks with the B.S.A. will total 13¾ lakh maunds valued at Rs. 3 crores. This announcement made fibre prices steadier, and, with Assam bottoms quoting at Rs. 30.50, Daissee bottoms Rs. 33 and northern bottoms at Rs. 30 fibre, prices recorded a rise by 50 nP.

On Tuesday last, ready B. twills were better at Rs. 124.15 on prospects of a good order from the Sudan. Encouraging note was also made of the Government of India's tender for 15,000 bales of B. twills for Oct-Nov. shipment. Ready hessian 40″ 10 oz. was also steady at Rs. 55.25, although excepting for some covering business in the 11 porter goods, there was nothing of note otherwise. On Wednesday, conditions were dull as overseas inquiries were few and far between. As a result, B. twills eased to Rs. 123.50 and hessian 40″ 10 oz. to Rs. 54.75. These lower levels generated covering demand, and hessian 40″ 10 oz. recovered to Rs. 55.25 and B. twills to Rs. 123.80 on Thursday. The announcement of a decrease in the stock of hessian at the end of the last month resulted in pushing up hessian 40″ 10 oz. to Rs. 55.75 on Friday. Although the stock of heavy goods rose the price was steady at Rs. 124 in view of the belief that there would not be ultimately any shortfall in demand compared to production. Over the week-end, overseas inquiries were very satisfactory and, although business taking place was not much, expectations led to B. twills rising to Rs. 125. Hessian 40″ 10 oz. improved to Rs. 56.50, as ready goods were keenly sought after. Although officially closed yesterday, the market was fully firm. Overseas buyers displayed interest in ready hessian, and speculation was rife in the futures market. As a result ready hessian 40″ 10 oz. gained to Rs. 56.75 and B. twills to Rs. 125.75. The I.J.M.A., after a Committee meeting yesterday, announced the decision of mills to continue the present maximum level of production up to the end of November. It stated that, despite the increase in stocks of sacking, demand for hessian was being continued at a high rate.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 11*th September*

The statement this week by Mr. K. C. Reddy, Union Minister of Commerce and Industry, that the October-March import policy would see more restrictions, has caused great concern to the metal trade here. Meanwhile, prices in the local market during the week turned steady, as the Minister, who was addressing the joint meeting of the Import and Export Advisory Councils at New Delhi, said that the foreign exchange available for imports in the next licensing period would be appreciably less than what was allocated for the current licensing period.

It would be most unfortunate, if the axe falls on non-ferrous metals imports, the trade feels. Already in the current licensing period imports of the three principal metals, viz. copper, zinc and tin have declined following the blanket cut of 50 per cent imposed by the Government on all import licences as a result of the deepening crisis in the foreign exchange resources of the country. For the six months ended June last, copper imports totalled 28,500 tonnes, showing a fall of 4,600 tonnes as compared from the level in the corresponding previous period. Zinc imports at 35,600 tonnes declined by 2,600 tonnes. Tin imports at 2,600 tonnes were almost the same as before, while, in the case of lead, imports increased impressively by 2,400 tonnes to 17,500 tonnes. It will be seen that the annual copper imports average 57,000 tonnes as against the estimated requirement for this year of 85,000 tonnes. This year's estimated imports would decline fur-

Firestone

Here's another reason why motorists who know always choose

New DeLuxe Champion Tyres

GIVES MORE KILOMETRES PER RUPEE INVESTED

As an end product of over 20 years experience in the manufacture of tyres in India for Indian road conditions, and backed by Firestone world-wide technical research, the Firestone New DeLuxe Champion is a tyre exclusive in quality and construction. The specially compounded wear-resistant tread and strongly reinforced cord body ensure more trouble-free mileage—means more kilometres per rupee invested.

MARKET GOSSIP

(*Concluded from page 447*)

capital employed. Secondly, the cost of virtually every raw material and service used by the industry has gone up further, often as a result of Government action. In March 1962, Sir Walter says, it was estimated that the total increase in cost since 1958 was Rs. 160 per tonne, or 16 nP per kilo. The 1962-63 Central budget and the Railway budget added a further Rs. 20 per ton to the industry's costs—or an additional 2 nP per kilo.

Coal was a continuous headache with the Company throughout last year and often stocks fell below one day's consumption. The Company now receives—and cannot expect anything better—Grade 1 coal which has to be burnt in boilers, many of which were designed for Selected A rubble. Transporting 50 per cent of coal by road is expensive and inconvenient for industrial units consuming under 1,000 tons per month; but it is ruinous in the case of the No. 1 and No. 2 mills of the Company, which consume 16,000 tons per month, spelt out in rupees, it means an additional 18 lakhs to the coal bill.

As a result of inadequate wagon supplies, 50,000 tons of bamboo awaited despatch only recently, and, as with coal, so also stocks of bamboo at the mills had, on occasion, fallen below one day's consumption. Further, the new paper mills coming up in the States adjoining West Bengal tend to be given preference over the Company in respect of bamboo leases, even in respect of areas from which supplies have been taken by it continuously for many years.

Sir Walter has stressed the need for the industry to rely increasingly on alternative raw materials, such as, bagasse and jute sticks. So far as the Titaghur is concerned, it is carefully considering the alternative sources. The Company's Chairman has expressed the hope that the Government will, before long, lend a sympathetic ear to the industry's case and agree to a further substantial increase in its selling prices. As for transport of coal by road, he has observed that units such as the Company which have spent considerable sums to strengthen the mill sidings to take full rakes of BOX wagons be permitted to take all their requirements of coal in this manner, an arrangement which was in force for a limited period and suited both the Railways and the Company. If, however, the paper industry, with its high coal consumption, has to take 50 per cent of its requirements by road, it would appear to have just as good a case for a subsidy or an increase in paper prices as industries which are compelled to take coal by sea have.

As for the factors within the control of the Company, Sir Walter has explained the remedial measures already taken. The most important among them is the restoration of management efficiency which is said to have declined in the recent past. According to the Chairman, the whole senior management structure has been recast and there are new faces virtually in every senior post. Many other changes are also being made, such as, a complete overhaul of the labour relations organisation, the introduction of a modern training scheme and a new cost accounts system. Quite considerable savings in costs have already been achieved, we are told, following a report from a specially appointed management consultant. With all this and the big expansion programme on hand, the going should be good again for the Company before long, provided the transport bottleneck and coal scarcity are successfully solved without any prolonged delay.

Britain's Dilemma

The ten-day Commonwealth Prime Ministers' Conference, which commenced on Monday this week at Marlborough House, London, has already embarrassed the British Government to a greater extent than it might have been prepared for. For almost all the participants in the conference have chosen to throw cold water on the British Government's enthusiasm to join the European Common Market. Some of them, particularly the Canadian Prime Minister, have not concealed their hostility to the very idea of Britain's move, while some others have been content with expressing their dissatisfaction over the specific terms which the U.K. has already agreed to abide by in the event of its joining the Six. The point-by-point reply given by Mr. John Diefenbaker to Mr. Macmillan's studied case is a master-piece. Every one, however, is fully aware that the meeting has no right of veto over any of the U.K.'s decision. It was, therefore, unnecessary for the British Prime Minister to have reiterated this point in his welcome speech. The Conference will not decide whether Britain should or should not join the Common Market; it will only "consider Britain's entry in a consultative capacity." Nevertheless, this is no ground to imagine that the almost unanimous voice of the Commonwealth leaders will be lost on the British Government. The growing tide of domestic public opinion against Britain's entry and the gradually toughening attitude of the Labour Party are two other factors which cannot be brushed aside by Mr. Macmillan in one sweep. While there is little likelihood of Britain retracing the steps already taken to befriend the Six, the opposition from the Commonwealth and the domestic front is likely to influence materially the British position, when the U.K.-Six negotiations are resumed, as scheduled, at the end of this month at Brussels.

Although the British case for entering the Common Market and be one of the founder-members of the European political union was ably put forward by Mr. Macmillan, it has not cut much ice with the vast majority of Commonwealth Prime Ministers. Mr. Macmillan declared his conviction that "the tide of diplomacy and economics demanded Britain's membership in the Common Market." His point was that only a unified Western Europe would be able to compete with the two super-powers which had emerged from the last World War, namely, the U.S. and the Soviet Union. Britain, which is only 20 miles away from the Continent, Mr. Macmillan said, could not afford to stand aloof from the new Europe which was emerging. He had no intention, however, to weaken the Commonwealth bonds. On the contrary, he felt that Britain's entry into the Common Market would be beneficial to the Commonwealth, as continued economic growth of the U.K. was in the interest of the Commonwealth itself. For, if Britain did not join the Six, its ability to import goods from other Commonwealth countries and export capital to them would be severely affected. Mr. Macmillan believed that Britain's entry would strengthen what he called the "outward looking" and liberalising forces at work in Europe, besides increasing its influence with the Six for granting better terms to Commonwealth trade. He also reminded his guests that, since the time of the Ottawa trade agreements, which established the Imperial preference system, great changes had taken place in the Commonwealth trading relations. He, however, rejected the thesis that Britain had to choose between the Continent and the Commonwealth.

Mr. Macmillan's laborious arguments came in for critical examination at the hands of Canadian Prime Minister, Mr. John Diefenbaker. The Canadian Prime Minister did not believe that geographic proximity was a compelling reason for the U.K. to join the Six. He recalled, in this connection, that Canada itself had resisted several times in the last century and the present century moves to align it with its immediate neighbour, the U.S., and leave the Commonwealth. It was equally difficult for him to understand how Britain's merger into the Six would increase its influence on the policies of the Six. He asked: "Can this not equally give Europe a greater influence over Britain?" He also posed the question whether it was not possible for the U.K. to retain its influence on the world, if it remained outside the Six. He held the view that, by joining the Six, the U.K. would only impair its freedom of action in international affairs.

India's position was explained by Prime Minister Nehru, whose thinking on these matters provided new dimensions to the conference's deliberations. Unlike Mr. Macmillan, Mr. Nehru felt that British entry into the Common Market would weaken the Commonwealth. While he preferred not to sit in judgment whether this move was good or bad for the U.K., he failed to understand "how any good can come to the United Kingdom, if it causes harm to the Commonwealth." So far as India was concerned, Mr. Nehru was of the view that the U.K.'s move would adversely affect India in the short-term, particularly if exports of textiles and other goods were not safeguarded. He added that it would upset the third Plan and change the pattern of trade completely. He made an important point when he said that Britain's desire to end the Ottawa Pact just when it was proving useful to the developing members of the Commonwealth was contrary to the assurances given in the earlier years of the Pact. He recalled, in this connection, that the supporters of the Pact used to defend it by saying that the Pact would greatly benefit India and other underdeveloped countries when they established more and more industries.

On the question of changes needed in the Commonwealth, Mr. Nehru apparently agreed with Mr. Macmillan. But, according to Mr. Nehru, such changes should be in the direction leading to wider associations rather than to "newer forms of colonialism in which the developing countries would be compelled to be suppliers of raw materials, and those industrialising would be shut out of world markets and discriminated against." He was of the view that Britain's closer association with the Six both politically and economically would only increase tensions between the East and the West. The speeches of other Prime Ministers and Presidents followed more or less a similar pattern. The Nigerian Prime Minister's rejection of the offer of associated status in an expanded Common Market must have been unsavoury to the British Government, for, while Ghana's opposition to this inferior status was known, Whitehall was hopeful that the bait would work with Nigeria.

COMMERCE AND INDUSTRY

(*Concluded from page 472*)

An indication of the long-term outlook of the various agricultural commodities is also given in the *Review*. This section is based on a detailed study, entitled *Agricultural Commodities—Projections for* 1970, brought out by the F.A.O. as a special supplement. A somewhat disquieting but not surprising, conclusion of this study is that, over the next decade, "the market situation for most agricultural commodities appears likely to be characterised by a *general tendency towards surpluses, unless measures are taken either on the demand or the supply side to alter current trends.*" In brief, the important points made by the *F.A.O. Review* regarding the long-term outlook are as follows:

"Consumption of most staple foodstuffs is unlikely to grow as rapidly as production in high-income countries, while, on the other hand, food production in most low-income countries may not grow sufficiently fast to meet domestic needs. There will be scope for food-aid programmes, particularly for some of the temperate-zone commodities, notably grains, of which export availabilities from high-income areas are likely to continue to exceed commercial requirements.

"For tropical export commodities, the chief problem will be that of maintaining or raising export exchange earnings, particularly for those developing countries whose economies are largely dependent on such exports, and especially as prospects for the rate of increase in consumption of these products in the high-income countries are rather conjectural. For agricultural raw materials, the existence and further development of synthetic substitutes, as well as other technical factors, imply that strong competition will be met with in most areas of utilisation.

"In general, on optimistic assumptions about the rates of growth of national income in the economically developed countries, which constitute the principal markets for agricultural exports, demand may expand sufficiently to absorb the likely supply (with the exception of those commodities such as grains, milk and coffee already in surplus). At the same time, the absorption of larger quantities by the world market will not necessarily imply a commensurate increase in export earnings in real terms, because of the possible adverse movements of relative prices. On less favourable assumptions about income growth, considerable additional surplus problems could arise, while, in the low-income countries, food supplies would continue to lag seriously behind requirements."

The aforesaid projections by the F.A.O. for the next decade are based on the assumption that the present trends in production, income growth, demand and national policies continue approximately as they have done in the recent past. Nevertheless, for agricultural countries like India these projections are of considerable importance and deserve to be carefully examined before they frame their policies for the future.

PLANTATION HOUSING

A Working Group on Plantation Housing, with Mr. N. N. Chatterjee, Joint Secretary, Union Ministry of Labour and Employment, as the Convenor, has been constituted by the Government of India to suggest measures for accelerating the pace of implementation of the housing programme for plantation workers. The terms of reference of the Group are as follows:

To assess the total cost involved for providing houses to workers and the resources available with the employers for this purpose, including loan facilities under the plantation labour housing scheme and facilities provided by banks;

to suggest how the existing loan facilities may be improved, whether further facilities for loans should be provided and whether loans can be had from the Life Insurance Corporation;

to recommend whether, in addition to loans, assistance by way of subsidies should be provided by the Government; it will decide how and to what extent such assistance should be given;

to consider whether the entire cost of construction could be charged to the revenue account so that 100 per cent development rebate can be allowable to employers for purposes of income-tax without affecting the disbursement of bonus to workers; and

to examine whether the annual rate of construction of houses prescribed in the plantation labour rules should be modified.

MARKET REPORTS

(*Concluded from page 481*)

ther in view of the strong possibility of a further cut. Although the Government's policy of getting cable manufacturers switch over to aluminium is progressing satisfactorily, it is apprehended that, if copper imports do not come within the neighbourhood of 85,000 tonnes this year, industrial progress would suffer.

The Federation of Indian Chambers of Commerce and Industry has called upon the Government not to enforce any cuts on imports of non-ferrous metals. This is an important feeder industry, which mirrors the nation's development as a whole. Requirements of electrolytic zinc this year has been estimated at 85,000 tonnes, but the annual imports average 71,200 tonnes only. Tin requirements are estimated at 7,000 tonnes, but the imports fall short. Since the U.S. prices for zinc and copper are higher in relation to those in other producing countries, the trade has urged the Government that import licences should be valid also for import from other countries. However, in view of the foreign exchange shortage, it is difficult for the Government to accept this suggestion. At present, copper and zinc are imported only from the U.S. These imports are against the D.L.F. licences.

In Calcutta, tin was marked up at one time during the week to Rs. 2,448 per 100 kgs., after it opened at Rs. 2,381.75. The shortage of the metal was acutely felt, and that explained the hardening tendency in the price trend. On the London Metal Exchange, tin dropped from £855 to £850 a ton. Due to this the Calcutta price reacted later to Rs. 2,391.50. Singapore was satisfied over the General Services Administration in the U.S. having now reduced the proposed releases to 200 tons a week. If the releases were to affect the international price trend, Malaya would insist on the U.S. to curtail the quantity further. The U.S. releases are expected to commence from tomorrow. Following more releases of the virgin metal against permits, copper scrap here received less attention. Utensil scrap declined from Rs. 548.50 per 100 kgs. to Rs. 546, but soon firmed up to Rs. 549.25. Electrolytic zinc declined from Rs. 289.50 to Rs. 285.50 per 100 kgs. Lead remained unchanged at Rs. 143.75 per 100 kgs.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2684 BOMBAY, 22nd SEPTEMBER 1962 PRICE Rs. 2

COMMONWEALTH AND COMMON MARKET

IT almost looks as if it would be easier for a camel to pass through the eye of a needle than for Britain to enter the European Common Market. Of course, things may not be exactly that difficult, for public opinion on the Continent, especially in the Federal Republic of Germany, seems to be overwhelmingly in favour of British entry. But he would be a bold prophet who could say that the road to Brussels will be easily or quickly cleared of all its other obstructions, now that the roadblock represented by the Commonwealth is as good as removed. There is still a long way to go, for the vital final negotiations between Britain and the Six are yet to take place and British public opinion is yet to assert itself fully and unequivocally in support of entry into the Common Market. Anything like a national decision on a matter involving Britain's sovereignty to some extent and its economic future to an equal extent is not likely to be reached except through a General Election, if current indications are any guide. If, thus, it is supposed that the British electorate will have its final say in the matter, the final *communique* issued by the Commonwealth Prime Ministers at the conclusion of their conference in London this week may be expected to provide some ammunition as much to pro-marketeers as to anti-marketeers.

Pro-marketeers in Britain will draw comfort from the fact that the Commonwealth Prime Ministers have not imposed a mandate, so to say, on the British Government to get better terms in its final negotiations, scheduled to begin next month, with the Six—better than the ones provisionally agreed upon at Brussels at the last Ministerial meeting which ended on 5th August 1962. In the absence of any such "mandate" and in the light of the Prime Ministers' recognition that "the responsibility for the final decision would rest with the British Government," the pro-marketeers would be free to interpret that the Commonwealth has virtually shown the "green light" to Britain for going into the Common Market. Since, however, the fears and expectations of Commonwealth countries have been written into the final *communique* and several African members of the Commonwealth have declined to accept the associate status in the Common Market, anti-marketeers would be equally free to interpret that Britain will be taking with it, if at all, only a reluctant and divided Commonwealth. This possible stand of anti-marketeers will, however, be effectively neutralised by the more plausible stand of pro-marketeers. The net effect on British public opinion will be next to nothing, and so the guess hazarded in our leading article of 11th August last can now be reiterated more safely and confidently. The guess is that the Commonwealth question is least likely to prejudice the chances of British entry into the Common Market.

Let us assume, for the present, that no other prejudicial factor will come into play and that Britain's entry into the Common Market will be a reality sometime next year. The crucial final negotiations at the next Ministerial meeting in October will be of great significance in the light of that supposition. They can still be of some significance or benefit to the different Commonwealth countries, for the British Government has agreed to continue its efforts to safeguard essential Commonwealth interests and also undertaken to arrange for the closest consultation with the other Commonwealth Governments during the remainder of its negotiations with the Common Market. It may be thought that this assurance by the British Government is rather vague and general and that it may not be able to wring out more concessions than those contained in the provisional arrangements already worked out. Any such interpretation would be rather premature, for several details have still to be worked out. It is here that Australia, New Zealand and Canada—the three Commonwealth countries which now export to the British market large quantities of temperate agricultural products like beef and veal, mutton and lamb, butter and cheese, wheat and sugar—may well look forward to more concrete and specific concessions in terms of the following principles governing two declarations to be made by the enlarged Community at the time of British accession:

(i) The first declaration would express its intention to initiate discussions on international commodity agreements for temperate foodstuffs on a world-wide basis.

(ii) The second declaration would relate to the agricultural price policy of the Community.

The Six have already agreed to offer reasonable opportunities in the markets of the enlarged Community for temperate foodstuffs and have also confirmed that the Community's agricultural regulations would require the abolition of quantitative restrictions both between member-States and on imports from third countries. All these, including the proposed declarations, relate to the longer term. The arrangements for the transitional period in respect of a number of major commodities remain to be worked out, but the Six have already offered safeguards for all products where there would be an intra-community preference. With such safeguards assured for temperate foodstuffs and with special provisions promised in the case of New Zealand in view of its high degree of dependence on the U.K. market, the chances are that the three leading exporters of temperate agricultural products will derive concrete benefits when the precise commodity-wise application of these safeguards is discussed and settled in the course of the final negotiations.

Can the three older Commonwealth countries in Asia—India, Pakistan and Ceylon—also hope to get some more concrete concessions? The Commonwealth Prime Ministers' final *communique* has recorded that "the representatives of these countries urged (at the conference), that, if Britain entered the Community, the trade agreements which the enlarged Community had offered to negotiate with their Governments should be concluded as soon as possible and that, meanwhile, no change should be made in their existing trade arrangements with Britain." This is a very reasonable demand, quite consistent with the spirit of G.A.T.T. provisions. There is not the slightest exaggeration in their apprehension that, if the treatment of their products in the U.K. is altered before wider trading arrangements have been worked out with the enlarged Community, their foreign exchange earnings and investment in export industries would be adversely affected at a critical stage in the implementation of their development plans. Between 1963, when Britain's entry into the Common Market may take place, and 1966, when comprehensive trade agreements are to be negotiated by the enlarged Community with India, Pakistan and Ceylon, there will be only three years during which the heavens are not going to fall, if the existing trade of these countries with at least Britain is left undisturbed. The affluent countries of the European Economic Community can certainly afford to agree to this condition, and the risks (if any) involved are by no means beyond their capacity to bear.

STEEL RETENTION PRICES

IT was contended in our last issue that the Central Government's decision on the Tariff Commission's recommendations on fair ex-works retention prices of pig iron and steel payable to I.I.S.Co. and T.I.S.Co. were unfair to the companies. Owing to considerations of space, the grounds on which this conclusion was arrived at could not be covered. It is proposed to address ourselves to this task now and, in doing so, we shall be confining ourselves only to steel, as the pig iron and steel ingots are only subsidiary, constituting only a small proportion of the products sold by the producers. In any case, the main issues involved in both these cases are the same as those concerning steel.

The Tariff Commission was asked by the Government on 13th March 1961 to determine (*a*) the fair ex-works prices payable to the two companies for the years 1960-61 and 1961-62, having regard to the various agreements which they have with the Government, and (*b*) the special element that should be allowed in the price for payment by the companies of interest on and repayment of the special advances given to them by the Government under the agreement signed in the years 1953 and 1954. By the time the Commission started its work on this subject, more than three-fourths of the period to be covered by it had been over, so that much of its inquiry was a sort of post-mortem with very little projections to be done. This was in contrast to the Commission's inquiry in 1955 which covered a period of five years, that is, up to 31st March 1960. Since a post-mortem is a relatively easier job than making estimates about the future, the Commission's task this time was simpler than in 1955 and its conclusions, based mostly on actual performance, must *ipso facto* be less controversial. It is all the more surprising, therefore, that the Government should have found itself in great disagreement with the Tariff Commission this time, whereas it had quietly accepted the Commission's price recommendation in 1955. The Commission has not made many fundamental departures from the approach it took in 1955 and, where it has, as in the case of allowance for depreciation and determination of standard block, it has been less generous to the companies than on the previous

occasion. Further, the Government itself had laid down that the main producers of steel should be paid uniform retention prices for common varieties and that, for varieties which are not common to the main producers, prices should be fixed in relation to common categories, taking into account the known or standard differentials. These qualifications to the terms of reference to the Commission are important, for, if the Government subsequently found that the Commission's recommendations meant a larger margin of profit to one producer than to the other, the fault, if it were really a fault, was not of the Commission but its own.

It was plain as a pikestaff to all competent persons when the terms of reference were drawn up in March 1961 that T.I.S.Co. and I.I.S.Co. were not units of identical sizes, that the former was twice as big as that of the latter and that a uniform retention price based on capital employed would surely mean a bigger margin of profit to that unit which used less capital per ton of steel produced. So what is the point in one complaining now, as Mr. C. Subramaniam does, that I.I.S.Co. would have got away with a bigger profit-margin than T.I.S.Co., if the Commission's recommendations had been accepted as they were? In 1955, it may be recalled, the Government itself had asked the Commission to take I.I.S.Co.'s costs as the basis, as they were higher than those of T.I.S.Co. This time, the Government did not say that the Commission should follow the same principle, namely, the high cost producer to be taken as the basis. If it had, the costs of T.I.S.Co. would have formed the basis, for they have turned out to be higher than those of I.I.S.Co., the fact that the former is a bigger producer than the latter notwithstanding. Instead, it wanted the Commission to consider the adoption of standard costs as a basis for determining depreciation and profits.

If in spite of adopting a new basis, I.I.S.Co. looked like earning a little more than T.I.S.Co. per tonne of steel, it was due to its better efficiency. In trying to trim that profit-margin, the Government has committed a twofold mistake: it has cut the legitimate profit-margin of T.I.S.Co. and penalised I.I.S.Co. for having improved its efficiency in the past seven years despite heavy odds. Having decided in favour of uniform retention prices earlier and given an undertaking to both the producers that they would be continued till the end of March 1962, the Government had no choice in this matter. Apart from everything else, to modify the Commission's recommendations just because they meant a bigger margin of profit to one producer than the Government thought was reasonable is to run counter to the spirit of the Government's earlier undertaking to the companies.

In its enquiry, the Tariff Commission left out no aspect of the cost of producing steel. Although it was asked to confine its recommendations only to T.I.S.Co. and I.I.S.Co., as the public sector units had not attained a representative capacity production, it made a study of the working of all these three units as well, in order to get a broad comparative idea. The Commission's findings about the position of raw materials and transport generally confirm the complaints of producers. Coal supply has not only been short but also irregular, with a progressive deterioration in the quality of coal. The average ash content in coal used by I.I.S.Co. has risen from 15.86 per cent in 1955-56 to 18.06 per cent in 1961-62 and from 16.73 per cent to 18.04 per cent in the case of T.I.S.Co. Higher ash content means lower production of coke, larger intake of coke and limestone, increase in the volume of slag (a waste product), decreased yield of carbon in coke, lower yield of tar and gas, and higher content of sulphur and phosphorus in pig iron. The removal of these impurities in pig iron will require longer-heating during steel melting, increased limestone and fuel requirements for steel making and large incidence of off-heats in steel produced. Most of these losses could have been avoided, if it were possible to ensure full supply of washed coal. But the programme for increasing the output of washed coal has been lagging behind mainly due to the defects in the Government's policy. Following mechanisation of iron ore mines, the quality of iron ores, too, has deteriorated, necessitating installation of beneficiating plants. But till this method of rectification is carried out in full, the deterioration in the quality of iron ore means an increase in the cost of production. Shortage of limestone of requisite quality is also increasing and can be relieved only by developing new mines which, however, are some 300 miles away from the steel plants, as compared with the close proximity of the existing sources.

In view of the difficulties involved in getting adequate and regular supply of the right types of coal, the Government itself has directed the steel companies to attain self-sufficiency in coal as far as possible by developing their captive mines, having their own washeries, ropeways, etc. But this means additional capital expenditure for the companies, some Rs. 42 crores for Tata Steel and Rs. 18 crores for Indian Iron. Further, this self-sufficiency does not mean that the cost of raw materials will be cheaper than buying them from outside producers. On the contrary, experience to-date is that the cost of own coal is Rs. 6 to Rs. 12 per ton higher than market coal in the case of both the companies. Similarly, the cost of own iron ore is higher than that of bought ore. The Commission has, of course, criticised the companies for not trying to keep down the cost of operating their mines, but the blinking fact is that, currently, the policy of self-sufficiency in raw materials is a disadvantage to the companies. They have not only to find more capital for developing and operating their own mines but also to incur a higher cost per tonne of ore.

No concession has been shown to the companies by the Tariff Commission in recognition of (*a*) the adverse conditions faced by them in regard to quality of raw materials, and (*b*) of the dislocations in smooth working of the plants caused by the erratic and inadequate railway transport both for bringing raw materials and for taking out finished products. The producers had suggested that, in view of these difficulties, the Commission should adopt 80 per cent of designed capacity as production potential for purposes of calculating the fair ex-works price. But the Commission turned down this suggestion and assumed 90 per cent of rated capacity as a fair norm. As against this, the actual production performance by T.I.S.Co. was 80 per cent of ingot capacity in 1960-61 and 81 per cent in 1961-62, the corresponding figures for finished steel being 83 per cent and 87 per cent, respectively. I.I.S.Co.'s performance was a little better: 90 and 91 per cent in respect of ingots and 89 and 91 per cent in respect of saleable steel. The performance of Bhilai steel plant, the best of the three public sector plants, was well below that of both the companies, though, occasionally, its monthly production of ingots was over 100 per cent. Bhilai's output of pig iron at 91 per cent of capacity in 1961-62 was, however, much higher than T.I.S.Co.'s 86 per cent, though lower than Indian Iron's 93 per cent. It will thus be seen that the norm adopted by the Commission is higher than T.I.S.Co.'s performance and just about the same as I.I.S.Co.'s. It must be remembered, in this connection, that, in the previous five-year price fixation period (1955-56 to 1959-60), too, T.I.S.Co.'s production fell very much below the levels that had been assumed by the Commission, resulting in lower realisations for development reserve and lower margin of profit. This was due to the effective capacity being very much lower than the planned capacity. In the case of I.I.S.Co., however, the Commission's estimates were considerably exceeded by actual production, with the result that, financially, it was better off than its confrere in Bombay.

The Commission did not also concede many other demands made by producers. These include the demand for including annual bonus to workers and managing agency commission as part of production costs, an increase in the contingency allowances of Rs. 5 per ton fixed as far back as 1949, T.I.S.Co.'s demand for some allowance to cover the shortfall in its revenue during the period 1955-60 as a result of actual production falling far short of estimates of production assumed by the Commission, and the plea of both the producers for including an element, similar to the development element now discontinued, in the retention price to cover the amortisation of World Bank loans. Again, whereas both the producers had suggested that depreciation should be allowed at 6¼ per cent on the additions to gross block since March 1952 and a consolidated amount of depreciation on the old block—in other words, continuation of the system in force upto the end of March 1960—the Tariff Commission allowed an overall rate of only 5 per cent, describing it as "more than adequate."

On the concept of a standard block also, the Commission adopted a more stringent basis than the one proposed by T.I.S.Co. The standard block has been arrived at by assessing the capital block per tonne of saleable steel of T.I.S.Co. and by making certain adjustments to it, in order to make it a reasonable standard. The figure arrived at by the Commission is Rs. 1,300 per tonne of saleable steel. This compares with Rs. 1,450 per tonne on the basis suggested by T.I.S.Co., namely, actual production performance. The comparable figure for I.I.S.Co. is Rs. 1,000 per tonne and for Hindustan Steel Ltd. (the public sector undertaking) Rs. 1,900 per tonne. Requirements of working capital assessed by the Commission for determining the cost of such capital were also conservative estimates. Although the companies had pleaded that the working capital needs had increased not only because of higher costs of materials but also because of accumulation of stocks of finished goods due to delays in their movement for want of transport, the Commission decided to continue the same old basis, namely, six months' works costs, with interest to be calculated at no more than 5 per cent. It may be noted here that I.I.S.Co. had suggested that working capital should be computed at eight months' cost of production and that the rate of interest on such capital should be higher than 5 per cent. So far as the rate of return on capital employed is concerned—the most important issue of all—T.I.S.Co. wanted a minimum of 12 per cent per annum on employed capital, so that there may be a net return of 6 per cent after taxes. I.I.S.Co. did not suggest any specific figure, but stressed the need for a higher rate than the 8 per cent on the gross block allowed under the previous enquiry. The Commission remained unmoved by all these pleas and recommended a rate of return of 8 per cent (gross) on the standard or representative block of Rs. 1,300 per tonne of saleable steel. After payment of taxes, the net return to producers would only be 4 per cent, out of which they will have to meet the bonus to workers and managing 'agents' commission (which Tatas have been forgoing for several years now but cannot do so for ever), set apart sufficient sums to reserves to enable repayment of the loans and modernisation of the works and, finally, pay a reasonable rate of dividend. Even a financial wizard cannot manage all these needs out of a meagre 4 per cent net return.

It will be seen from what has been stated so far that the Tariff Commission has by no means been liberal to steel producers in determining the factors to be taken into account for fixing the fair retention prices. The Government's contention that the Commission has been generous to the companies is, therefore, not convincing. The most important point to be borne in mind is that the Commission itself had penalised T.I.S.Co. by taking 90 per cent of its capacity as production potential which is some 6 to 7 points higher than the actual production achieved by the Company. By whittling down the Commission's recommendations, the Government has hit the Company further and subjected I.I.S.Co. to a more stringent norm than that intended by the Commission.

Three grounds have been mentioned by Mr. C. Subramaniam, Minister for Steel and Heavy Industries, for differing from the Tariff Commission and sharply reducing the retention price recommended by it from Rs. 550 to Rs. 522.50 per tonne. One of them pertains to the element of Rs. 8 per tonne included by the Commission for financing the repayment of the special advances given by the Government out of the Steel Price Equalisation Fund. This is an issue by itself and may, therefore, be dealt with separately. Suffice it to mention here that, on 13th March 1961, it was the Government which wanted the Commission to consider this issue and recommend the special element and, if it has changed its mind now on this specific point, it is not the fault of the Commission. The Government's somersault here is a striking commentary on its fickle-mindedness. As for the other two grounds. One is that the Commission's basis of a standard block of Rs. 1,300 per tonne is unjustifiably high. The Government's contention is that the Commission should have taken 100 per cent of capacity as the optimum, instead of 90 per cent. Accordingly, the Government has reduced the Commission's assumption of standard block to Rs. 1,176 per tonne. This reduction has accounted for Rs. 16.50 of the Rs. 27.50 slashed out of the Rs. 38 increase recommended by the Commission. This argument of the Government totally ignores the difficulties experienced by the companies in achieving full rated capacity production. The Commission itself has testified to the existence of these difficulties. It may suit an all-powerful political body like the Government to brush aside this consideration, but not a semi-judicial body like the Tariff Commission which has to respect the facts of the situation. Further, not all the difficulties were companies' own making; on the contrary, for most of them, the Government itself has been responsible directly or indirectly. In fact, most industries in this country are not able to work to full capacity, though the demand for their products is high enough to enable them to do so. In asserting that 100 per cent capacity should have been taken as the basis for calculating the cost of production, the Government has also conveniently ignored the performance of its own factories not only in the field of steel but also in others. One does not wish to be misunderstood here. It is not suggested that two wrongs make a right. Nor is it suggested that inefficiency should be rewarded. That T.I.S.Co.'s expansion programme has not been free from flaws must be apparent to anyone who has read the Tariff Commission's report. Equally apparent is the fact that I.I.S.Co. has been able to work more efficiently than T.I.S.Co., thereby belying the general belief based on the benefits of large-scale mass production. But the Commission itself has given exemplary punishment to T.I.S.Co. for its failings, as has already been shown. Why punish it again? And, in doing so, why penalise the other company also which did not deserve it at all?

The third reason given by the Government is that the Commission's allowance for working capital is too high and that the equivalent of four months' works cost (as opposed to the Commission's basis of six months') should be adequate. By cutting the estimate of working capital requirement thus, the Government has saved another Rs. 3 per tonne of the increase suggested by the Commission. Mr. Subramaniam has sought to strengthen this point by adding that, as every buyer of steel has to deposit earnest money representing 25 per cent of the price at the time of indenting and as the time lag between the placing of order and the delivery of goods is as much as six months in most cases, the companies enjoy the benefit of interest-free deposits of considerable size. This is a relatively minor point, though there is some force in it. But the companies may as well contend that, whereas the costs have gone up all round and larger inventories have to be maintained on account of various bottlenecks, the Tariff Commission had only maintained the allowance that was fixed as early as 1955. They may also add with some justifiable indignation that they have had to wait for 2½ years to know and receive in full the fair retention prices due to them.

What next? The Government has solved a problem by issuing its order, but it is still faced with two more. The prices payable to the steel companies for the years beginning from 1st April this year have yet to be decided. And so also the issues pertaining to the repayment of the special advances together with interest. So far as the companies are concerned, the Government's harsh decision on retention prices for the past two years has made the task of raising additional capital extremely difficult. As it is, the companies are not able to pay a rate of dividend that will enable them to compete in the equity market with other industrial concerns enjoying a better margin of profit. With the unfavourable price policy now pursued by the Government and the confidence of investors severely shaken, the task has been rendered well-nigh impossible.

STEEL MINISTER ERRS

In a talk with Pressmen at New Delhi, Mr. C. Subramaniam is reported to have stated that T.I.S.Co. and I.I.S.Co. had not paid the Government the interest due on the special advances given to them, although they carried interest at 5 per cent per annum from 1st July 1958. If this is true, the Steel Minister has erred badly. Payment of interest by companies has not fallen due and, by turning down the Tariff Commission's recommendations on this subject, the Minister has unwittingly left the issue still open. It may be recalled that, in 1959, the Government had accepted the Tariff Commission's recommendation of 1959 that the recovery of interest should be postponed until a decision was taken regarding the common retention price payable to producers after 31st March 1960. As regards raising fresh equity capital to repay the special advances, the companies are not liable to follow this alternative before 1st April 1963.—This date is specifically mentioned in the T.I.S.Co. agreement with the Government.

MARKET GOSSIP

Scare Among General Insurers

MR. Nehru's statement on nationalisation of general insurance, at the recent meeting of the Congress Parliamentary Party's Executive, has caused apprehension in the minds of general insurers about their future. Speaking on the resolution moved by Mr. Mahavir Tyagi, calling for nationalisation of general insurance, Mr. Nehru said that the question as to what extent nationalisation of general insurance was feasible should be examined by the Finance Ministry. He emphasised that nationalisation should be considered on its merits.

This statement, on the face of it, looks innocuous. But it knocks off the confidence inspired by the earlier assurances of the Finance Minister, Mr. Morarji Desai, that general insurance would not be nationalised, at any rate, not in the near future. Mr. Nehru's remarks, on the other hand, takes the issue back to where it was and leaves nationalisation of general insurance an open question.

One fails to understand what useful purpose is sought to be served by raising the bogy of nationalisation off and on. Mr. Tyagi is a respected and responsible member of Parliament, who has also held the high office of a Minister in the Government of India. He should know better the psychological damage frequent threats of nationalisation can do to the industry's morale and to investors in general. And what is more surprising is the strange argument advanced by him in support of nationalisation. He is satisfied at the "significant progress" made by life insurance and believes, apparently, that the same success story would be repeated in general insurance also if it were nationalised. Apart from the question whether new business or premium figures could be taken, without regard to the qualitative aspect, as an index of the progress of life insurance, there is an important distinction between general and life insurance.

The latter can be taken as an essential service, by virtue of the fact that, in a country, where there is no national scheme of social insurance, it insures millions of people against indigence and poverty. But general insurance, by no stretch of imagination, can be regarded in that light and no ground of grave national interest can be advanced to justify its takeover by the Government. It cannot even be contended that nationalisation of general insurance will help finance the Plan. That there is little money in general insurance, to finance the Plan has been conceded by no less a person than Mr. Morarji Desai, the Finance Minister, who has gone on record that the risks attendant on nationalisation are grave and great. It is true that there are malpractices in general insurance, but malpractices there are in every branch of industry and trade, not to speak of the Government departments themselves. It cannot, therefore, be given as a convincing argument for nationalisation. Moreover, the Government has been empowered by the Insurance Act, with sufficient means to regulate and control general insurance. And general insurance is full of official controls. So, if malpractices prevail despite these controls, it only shows that controls only breed malpractices. It is only clean, healthy competition and respect for the law of survival of the fittest that will rid general insurance of malpractices.

The Government already owns a sizable share of general insurance business. The public sector in general insurance is sufficiently big and is still growing. 75 per cent of the pool business at present goes to the Government-controlled companies which also account for a sizable portion of the fire, marine and miscellaneous business. In addition, a substantial part of the reinsurance business is controlled by the Indian Guarantee, a public sector reinsurance company. Not content with all these, the Government has been consistently trying by various methods to build up the public sector companies. In these circumstances, one fails to understand the urgency for swallowing up that section of the insurance trade which is in private hands. The advocates of nationalisation do not seem to realise the damage such an unwise step will do to the confidence of foreign investors in India and the financial implications of having to pay compensation to foreign insurance companies operating in the country in the event of nationalisation. Further, general insurance, unlike life insurance, is international in character and is a two-way traffic. Already it has established itself as an important source of invisible export. Once it is nationalised, India may lose the opportunity of operation in a number of foreign markets. So there will be a double loss of foreign exchange at a time when the country can ill afford it. Did Mr. Tyagi consider all these aspects before raising the subject at his party meeting?

Fund-Bank Meetings

India and other developing countries have reason to feel gratified over the deliberations of this year's annual meetings of the I.M.F. and World Bank held at Washington. For they engender the hope that a fresh, more dynamic action will be launched to set right the persistent widening trade gap between the developed and developing nations. That the need for such action is urgent in all conscience was most forcefully brought out by both Mr. Per Jacobsson, Managing Director of the Fund, and Mr. Eugene R. Black, President of the World Bank, in their respective speeches. Mr. Jacobsson declared that, while it was the responsibility of developing countries to pursue policies which facilitated exports, it was, at the same time, the responsibility of the industrial countries to pursue liberal trade policies, opening their markets to imports from the less developed areas. And he added: "Certainly, these (developing) countries would all be greatly helped by a reduction of artificial barriers impeding the free flow of trade and payments with other countries and by mutual arrangements designed to make the best possible use of the scarce resources at their disposal." Echoing more or less this statement, Mr. Black observed:

"While tariffs or quotas do not at present unduly restrict the exports of primary products from the developing countries, there are manufactured goods—notably cotton textiles—where discrimination is an important factor. I feel considerably more anxious about the effects of trade restrictions in the future when we ought to be able to hope for rising exports from the developing countries and especially of the products of their growing manufacturing industries. . . . A serious situation is facing the developing countries, because they are having to pay more for their purchases from the developed countries, while their own sales are bringing lower prices."

This brief extract from Mr. Black's speech not merely pinpoints one of the basic causes for the growing imbalance in world trade and payments but also provides the solution for the same. Which of the industrialised countries can dispute the remark of Mr. Black that their own balances of payments have benefited from the swing of the terms of trade in their favour? Nor can anyone deny that "the developing countries in many cases have mortgaged a dangerously high proportion of their future export earnings to the task of paying off their aid debts." How can the countries which have received large loans from friendly countries for economic development expect to repay them, as Mr. Morarji Desai, India's Finance Minister, very aptly asked in his speech at the Fund-Bank meetings, except through larger exports of things produced in their new factories? Characterising the reluctance of the industrialised countries to facilitate imports of manufactured goods from developing countries as "the most disheartening feature of the present situation," Mr. Desai made it clear that the developing countries could become viable in the long run *only* through larger exports of manufactures; higher exports of primary products alone would not help.

Between 1958 and 1961, it may be noted here, the combined share of the developing (primary producing) countries in the aggregate world exports has come down from 38.7 per cent to 35.6 per cent. The declining trend is bound to be more pronounced in the coming years, unless the impediments to exports from these countries that remain in many industrial countries are removed, if not immediately, over a reasonable period of time. It was Mr. Ahmed Zaaki Saad of Saudi Arabia, who presided over the meeting, that put the whole issue in its proper perspective when he averred: "It is futile to encourage development and growth without making provision for expanding international markets for the products of this development and growth." He even went to the extent of warning that increased export capacity (in developing countries) without access to foreign markets could only lead to frustration and bitterness. The warning is, indeed, most timely and pertinent.

Against the aforesaid background, it may be said that the success of the I.M.F. meeting will depend on the extent to which its deliberations will pave the way for the introduction of more flexibility into world trade and payments. It is somewhat reassuring to be told by Mr. Per Jacobsson that the present monetary structure of the world can be effectively maintained on a foundation of stable exchange rates, thus providing a reliable basis for further economic development and for the shaping of official policies. There is reason to believe, according to him, that further corrective policies (for maladjustments in cost and price relations, as is reflected in capital movements between individual countries) will not have to be so extensive that their effects should prove too disturbing, nationally or internationally. Again, the efforts already made and those which may still be required will prove successful in assuring a stable exchange rate structure without any alteration in the present price of gold. It is equally reassuring to hear from Mr. Jacobsson that the fears of possible competitive efforts on the part of many countries to increase their reserves, which would give rise to what has been called "a scramble for reserves" or "a scramble for international liquidity," are exaggerated out of all proportion to reality. To quote him:

"It seems to me that, after the redistribution of reserves which has occurred in the last few years, very much as a result of the deficit in the U.S. balance of payments, one industrial country after the other is beginning to think that its monetary reserves are sufficient from its balance of payments' point of view. This change in attitude may prove to be very important, for it gives an increasing number of these countries the opportunity to shape their fiscal and credit policies without feeling a need to strengthen their reserve positions. It is true that many developing countries have very low reserves, but what these countries need most is long-term capital to finance their development programmes. Although many of them would no doubt be wise to pay some attention to building up their reserves to a safer level, whatever efforts may be made by them to do so will presumably not cause any appreciable difficulties from a general liquidity point of view."

In his speech, the U.K.'s Chancellor of the Exchequer, Mr. Reginald Maudling, no doubt admitted that the immediate outlook for the world monetary system was more encouraging than

TREND OF SHARES

BEAR GRIP EXTENDED

(From Our Own Correspondent)

BOMBAY, 20*th September*

BEARS extended their grip on the stock markets from Steels to other sections this week. And, virtually devoid of any support, the markets moved the way bears manoeuvred. Closing prices, therefore, disclosed widespread sizable losses. Steels were, however, only fractionally lower over the week. Turnover was small, and activity tended to be increasingly on account of big operators. The small fry was mostly bewildered by the seemingly non-stop fall in values.

Selling in steel shares subsided at lower levels, as bears preferred to book profits, because they did not want to miss the opportunity. But, in the absence of any positive indication about the T.I.S.Co. dividend and the final distribution by the I.I.S.Co., bulls were in no mood to make fresh commitments. There was a strong feeling in the markets that the two steel companies would at least maintain the dividends at the last year's levels. The feeling was all the more pronounced following the news on Monday that the T.I.S.Co. had decided to pay for the year ended March 1962 a higher amount of Rs. 135 lakhs by way of bonus to the workers as compared with Rs. 125 lakhs paid in the previous year. As the bonus is linked to profit and is for 55 days for 1961-62, as against 51.6 days in the previous year, marketmen presumed that the profit must be higher and that the Directors might not find it difficult to maintain at least the dividend at Rs. 6.80 net per share, if not the bonus of 45 nP (net) also. The dividend results are expected to be announced next Thursday.

In view of the above surmise, bears turned their attention from their popular target, namely, steel shares, to other sections, wherein they resorted to relentless and indiscriminate selling. Bulls were forced to sell on the decline in order to cut their losses. Even around the lowest levels of the week, buyers were few and far between. The smooth passage of the payment against the last settlement and the news on Wednesday that the rayon yarn weavers and spinners had reached an agreement on an increase in the prices of certain deniers of the yarn induced some bear covering yesterday and today. But the closing prices were only a shade above the lowest levels of the week. The prospect of strike in Bombay cotton mills acted as a restraining factor.

* * * *

Considerable weakness in automobile shares was the talk of the day and the week in Dalal Street. These shares broke sharply on heavy selling prompted by indications that the current foreign exchange crisis would hit the automobile and spares industry the most. Premier Auto, which had closed the previous week four points lower on balance at Rs. 117, tumbled down from Rs. 115.50 to Rs. 104—a new low level for the past several years—on Monday this week. Later, the shares rallied to close at Rs. 109.50. The volatile Hindustan Motors, which at the previous week's closing level of Rs. 19 *ex-div.* were 33 nP lower on balance, slumped this week from Rs. 19.16 to Rs. 17.92 to rally at close to Rs. 18.40. Bajaj Auto were weak at Rs. 74, as against Rs. 75 in the previous week.

Leading Textiles were marked down on selling pressure. Century were sold down from Rs. 627.50 to Rs. 603, before closing at Rs. 612.50, as against Rs. 624 a week ago. National Rayon fell from Rs. 496.50 to Rs. 474 and closed Rs. 16.50 lower over the week at Rs. 478.50. Standard were 20 points lower at Rs. 840, after having been down earlier from Rs. 862 to Rs. 821. Other shares showed small losses. But Indian Manufacturing and Western closed with a gain of Rs. 15 and Rs. 40 at Rs. 882.50 and Rs. 1,020, respectively.

Bombay Burmah, in the Miscellaneous section, were 12 points lower at Rs. 639. Amar Dye-Chem closed 10 points lower at Rs. 257.50 and Polychem showed a loss of Rs. 7.50 at Rs. 170 Telco were down by Rs. 3.50 at Rs. 297.50, Voltas by Rs. 4.50 at Rs. 257.50 and Alcock by six points at Rs. 320. In Steels, Tata Ordinary finished 25 nP lower at Rs. 135. Indian Iron were 10 nP lower at Rs. 25.25, but Mukand showed a big loss of 72 nP at Rs. 23.40. Other sections were weak. Cash shares were generally lower, with Hindustan Electric showing a big fall of 27 points at Rs. 190, Colour Chem of 25 points at Rs. 395, Permanent Magnets of 15 points at Rs. 215 and Hindustan Wired Glass of 13 points at Rs. 143, as against which T. Maneklal jumped up by Rs. 90 to Rs. 730, Bharat Bijlee spurted by Rs. 21.25 to Rs. 220.

* * * *

The cleared securities developed further weakness in Calcutta. Birla Jute, showing a loss of Rs. 2.25 at Rs. 34.31, and Kesoram closing Re. 1.81 lower at Rs. 26, were the worst affected counters. Among others, Dunlop were 81 nP lower at Rs. 38.50, Texmaco 70 nP lower at Rs. 22.25, J.K. Cotton 75 nP lower at Rs. 16.12 and G.K.W. 50 nP lower at Rs. 37.25. Cash jute shares were also generally lower. Bally declined from Rs. 310 to Rs. 293, Delta from Rs. 187 to Rs. 181 and New Central from Rs. 14.78 to Rs. 14.12. But, as an exception, Alliance looked up from Rs. 119 to Rs. 123 and so did Union from Rs. 160 to Rs. 165.

Textiles and Coals showed small losses, but K. Jherriah, among the latter, closed with a gain of Rs. 2.75 at Rs. 46. Among engineering issues, Escorts showed a gain of Re. 1.25 at Rs. 19.62 and Braithwaite closed 50 nP higher at Rs. 36, but others finished with losses on balance. Chemical shares moved down: Alkali from Rs. 45.75 to Rs. 42.75 and Bengal from Rs. 101 to Rs. 94.50. Losses predominated in the Miscellaneous section, where East Anglia Plastics moved down from Rs. 18.25 to Rs. 16.75, Indian Oxygen from Rs. 50 to Rs. 48 and Union Carbide from Rs. 48.25 to Rs. 44.50. Sugar, Paper and Tea shares disclosed small losses.

* * * *

The trend was downward in Madras. Textiles continued to be particularly weak, with S.I. Viscose declining from Rs. 160.25 to Rs. 156, Coimbatore Pioneer from Rs. 276 to Rs. 273, Travancore Rayon from Rs. 34.80 to Rs. 32.85 and Lakshmi from Rs. 147.50 to Rs. 146. Coimbatore Cotton showed, however, a gain of Rs. 2.50 at Rs. 112.50. In the Miscellaneous section, Mettur Chemicals were down by 38 nP at Rs. 13.37, Indian Steel Rolling by 70 nP at Rs. 11.80 and Textools and Tube Investments by Rs. 2 each at Rs. 165 and Rs. 269, respectively. But Aluminium Industries showed a gain of 15 nP at Rs. 25.10 and Travancore Chemicals recovered 13 nP at Rs. 23.50. E.I.D., among Sugars, were down by Re. 1.42 at Rs. 41.83 and Cauvery by 50 nP at Rs. 115.50. Haileyburia Tea rose smartly from Rs. 12.10 to Rs. 12.62. Consolidated Coffee disclosed a loss of 25 nP at Rs. 17.75 as did Cochin Malabar at Rs. 6.50, with Travancore Rubber declining from Rs. 11.41 to Rs. 11.

CAPITAL MARKET NEWS

NEW ISSUES

ASIAN Refractories Ltd., which will be in the market from the 27th inst. to 4th October next with a capital issue of Rs. 40 lakhs divided into 9.3 per cent. taxable, 7,000 cumulative redeemable preference shares of Rs. 100 each and 330,000 equity shares of Rs. 10 each, has a sound project on hand. The Company has been licensed to manufacture 24,000 tons of firebricks and 6,000 tons of silica bricks per year. Refractory products are utilised in several industries, particularly pig iron and steel, chemicals, glass, cement and power generation. Demand for the products has of late risen steeply, following the large expansion of steel and other industries. It is but natural, therefore, that the third Plan envisages a very substantial increase in production of refractory products. As against the present annual output of 500,000 tons and the installed capacity of 800,000 tons, the Plan target for 1965-66 is 1.6 million tons. On account of the wide gap between domestic production and demand, imports have been quite large; they aggregated approximately Rs. 2.25 crores in 1961.

Considering that the iron and steel industry alone consumes 75 per cent of the indigenous production of refractory products and that it continues to depend on imports to meet a sizable part of its requirements, the location of the Company's plant in the district of Hazaribagh in Bihar is ideal, as the site is near the proposed Bokaro steel plant. Application for acquiring 100 acres of land at the site has already been made to the State Government. The region is served by both railway and road transport. Adequate supply of electric power has been assured by the Bihar State Electricity Board and sufficient water will be available from the nearby Damodar Valley. The Bokaro coalfields are situated within about five miles of the site. Fireclay, the principal raw material, is available in close proximity. For its project, the Company has entered into a technical collaboration agreement with Messrs. Cekop, the Polish State undertaking, which will also supply the plant and machinery, as well as the technical personnel to erect, assemble and put them into operation.

* * * *

The increasing pace of demand for industrial credit in the country has given rise to pressing claims, particularly on the limited resources of development banks. It is with a view to meeting such claims that the **Industrial Finance Corporation of India** has decided, with the approval of the Central Government and the Reserve Bank of India, to augment its resources by the issue of bonds for Rs. 6 crores. The bonds will be Rs. 100 each and issued at Rs. 99.50. They will have a maturity of 12 years and will carry interest at the rate of 4.5 per cent per annum. They will be fully guaranteed by the Central Government in regard to repayment of principal and payment of interest and will be treated as approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act. Subscription lists will open at the offices of the Reserve Bank at Bombay, Calcutta, Madras, New Delhi, Bangalore and Nagpur on 28th September 1962 and close on 5th October 1962, or earlier as soon as the issue is fully subscribed.

Being eligible securities for the purposes of advances to scheduled banks by the Reserve Bank under Section 17(4)(*a*) of the R.B.I. Act and being also included in the list of approved securities of the State Bank of India, the bonds should prove to be an attractive investment to institutional investors, as also to the general public. Arrangements will be made for listing the bonds on the Bombay, Calcutta and Madras Stock Exchanges.

STAINLESS STEEL SHEETS PROJECT

A project for the manufacture of stainless steel sheets according to international standard specifications for industrial and commercial uses—claimed to be the first of its kind in India—has been sponsored by Mr. Vithaldas H. Shah, Managing Director of Messrs. Lallubhai Amichand (Private) Ltd. Mr. Shah has received an industrial licence with a capacity of 10,000 tons a year. It is proposed to raise the capacity to 20,000 tons per annum in two equal stages and save thereby for the country annually Rs. 12 crores in foreign exchange. The plant is to be located at Vatva, near Ahmedabad. A new public limited company, with an authorised capital of Rs. 5 crores, will be formed to implement the project.

The project, to be undertaken in collaboration with a foreign manufacturer in the field, envisages the manufacture of stainless steel and its rolling into sheets and strips. Except for nickel, all the raw materials, namely, steel ingots, low carbon steel ingots, process rejects and ferro-chrome, are available indigenously. The price of the stainless steel manufactured is, therefore, expected to be slightly lower than the prevailing international rates. Stainless steel sheets are used in the manufacture of a number of finished products and are in short supply in the country.

Messrs. Lallubhai Amichand (Private) Ltd., it may be noted here, has been manufacturing aluminium and stainless steel utensils. This firm exports about 22 per cent of its annual production. In value, the exports of aluminium utensils (at prices 33 per cent lower than the internal rates) amount to Rs. 16 lakhs and those of stainless steel utensils (at half the domestic prices) aggregate Rs. 2 lakhs a year.

ASIAN CABLES CORPORATION LTD.

The Asian Cables Corporation Ltd., which has already reached normal production of rubber insulated cables of both standard and special types, such as arc welding cables and mining cables, is now concentrating on its project No. II for the manufacture of paper insulated and P.V.C. insulated mains cables and winding wires. The land is being developed and the foundation-stone of the factory buildings will be laid after the monsoon. Construction work is expected to be completed before the end of 1963, when the plant and machinery will also have arrived. A senior technical executive of the Company is to visit Britain shortly to finalise the relevant details, including purchase of plant and machinery, with the collaborators. He will also acquaint himself with the latest techniques in the manufacture of high tension power cables of voltages up to 33 kV as also magnet wires.

Meanwhile, with its proposal to expand its capacity from 360 tons to 1,200 tons a year having been approved by the Government, the Company proposes to switch on soon to double-shift working. The Company has also been licensed recently for plant with a capacity of 1,000 tons per annum of paper and cotton covered wires and strips, which it proposes to install in the near future. The project for the manufacture of P.V.C. insulated low tension cables and wires is said to be progressing satisfactorily. Building construction is over. Part of the P.V.C. machinery and raw materials have been shipped and the balance will be delivered before the end of this year. Production is expected to start early next year.

The General Tyres Ltd. has been assured by the Government of the necessary licence for expanding its capacity substantially to 120,000 units each of tyres and tubes and 600 tonnes of tyre repair materials per annum on the basis of three-shift working. Construction of production sheds, stores and other buildings at the factory site has been almost completed. The estimated cost for the completion of the construction work including land is Rs. 20 lakhs. More than 90 per cent of the plant and machinery to be obtained from Czechoslovakia have been received at the factory site. A team of technical experts deputed by Messrs. Techno-export, the collaborators of the Company, is said to be supervising erection of the plant and machinery. Major portion of the important machinery has been installed. The outlay on plant and machinery is estimated at Rs. 1.15 crore.

OFFICE OF THE INDUSTRIAL OFFICER
DANDAKARANYA PROJECT

SALE OF NIGER OIL AND NIGER CAKE

An Oil Extraction Scheme for edible oils of Dandakaranya has gone into production at Ambaguda (near Jeypore) District Koraput, Orissa, on the National Highway 43.

This centre will produce niger and mustard oil at the present one shift capacity of 700 maunds of oil and 1,400 maunds of oil cake per month.

Parties interested in either their purchase or sale on commission basis may send in their terms in sealed cover by October 3, 1962, to:—

Suraj S. J. Bahadur, Industrial Officer, Head of Industrial Organisation, Dandakaranya Project, Koraput (Orissa).

DA—1000 (20)/62.

PERSPECTIVES & PROJECTIONS

By "Mercator"

Party Politics and Corruption

ONE of the embarrassing tasks of the Santhanam Committee on prevention of corruption will be the suggestion of measures "calculated to produce a social climate both amongst public servants and in the general public in which bribery and corruption may not flourish." If the Committee's terms of reference had not restricted its scope to the Central Services, it may be in a position to say, for example, that Congress Party members should avoid interference with the work of officials, that a Minister should not act on the advice of party members against the considered views of departments without strong and convincing reasons. Party politics is, in the opinion of most dispassionate observers, the largest single factor hindering enforcement of higher standards of administrative morality. One instance is the grant of industrial licences in one State to party politicians or their friends who had neither the means nor the knowledge required for making proper use of them; little wonder, then, that they have not been utilised till now. Such infructuous licensing makes nonsense of planning targets, gets a bad name for the private sector as a whole and leads to a profitable trade in licences without the sellers having earned the right to the profit by any enterprise except that of acquiring sufficient local influence helpful at election time. Worse still is the demoralising effect on members of the services who are encouraged to indulge in other equally reprehensible activities on their own while the honest few who disapprove of both types of corruption are driven to despair and adopt a can't-care-less attitude.

All this the Committee will not be able to say. Nor can it recommend further changes in the law relating to corruption and disciplinary action against Government servants, without restricting their minimum personal liberties or their right to get a fair trial even in respect of a charge of corruption. Corruption, said Gibbon, was "the most infallible symptom of constitutional liberty," and this is true in more than one sense. A parliamentary party depending on the democratic processes of periodical elections on a large scale, requiring the support of men and money, may be no more able to avoid the temptations of patronage and distribution of spoils than a bureaucracy which has considerable discretionary powers under a system of controls, licences and high taxation. The latter may well invoke the saying of the New Testament, "Physician, heal thyself." But the point to be noted is that, besides setting a bad example of public morality, party politics is also responsible for making the climate in the services worse for preserving integrity by creating pressures for more and more regulatory measures. Whenever the question of integrity of the administration as a whole is mooted, Congress leaders readily assume that it has reference only to the services, not to themselves though the public will no longer be deceived or diverted by such devices.

Corruption in the Railways was the subject of a recent inquiry and it does not appear that the results have been far-reaching. I have heard it said that even catering contracts which were formerly within the powers of zonal officials to award are now centralised in Delhi and applicants have to satisfy in more than one way several persons in a hierarchy of authority before some such small favours could be secured. At the State level, licensing of road transport is, it appears, such a rewarding occupation that defeated candidates consider it sufficient consolation if they can get on to one of the Boards.

The law is already strict enough. The onus of proof in regard to sudden substantial acquisitions of wealth is already on the Government servant concerned; the giver of a bribe is as much liable for punishment as the taker, though the need for prosecution witnesses often turns the givers into respectable men helping the State. Only a general atmosphere of cleanliness can reduce the wide range of tacit understandings in granting favours and jobs which the S.P.E. cannot detect or bring before a Court; for that the prospects are not indeed bright.

* * * *

The D.M.K. Challenge

That Congress leadership is genuinely worried by the separatist demand of the D.M.K. is seen in the recent spate of condemnatory speeches by senior South Indian leaders like Mr. T. T. Krishnamachari, who have generally refrained from direct attacks on the party which may be given a communal complexion besides dubbing the Congress as intolerant of all opposition (considering that the attack on the Swatantra Party has been no less severe). At the same time, there are others crying for a ban on the D.M.K. on the technical ground that, since it advocates secession (though it has not actually used that word) which is not permitted in the Constitution, it is guilty of treason. Such an attitude ignores all the lessons of history and psychology which the Congress had learnt first-hand during its long period of opposition to British rule. On the main issue of the separate constitution of the four Southern States—Kerala, Madras, Mysore and Andhra Pradesh—"into a Co-operative Socialist Republic," the D.M.K. is already very vulnerable because, except in Madras, it has not gained any foothold and is unlikely ever to make headway as its leadership and following have no roots or interest in the other States. The D.M.K. has never pleaded for the separation of Tamil Nad alone from the Indian Union and the danger may, therefore, be greatly exaggerated by those who do not know the fact that there is little risk of the separatist cry spreading to adjacent States. There is, however, a real danger of the D.M.K. acquiring more strength on Madras in course of time to challenge the Congress Government in the State but this cannot be prevented by stifling a constitutional opposition which the D.M.K. proclaims itself to be in its Election Manifesto.

The recent disturbances which resulted in violence and disorder amounted to a deviation from the path of rectitude and democratic agitation which the party professed to follow. If it is able to avoid a repetition of such mistakes in political strategy, the D.M.K. cannot be convicted for its objectives however misguided they may appear to be. So long as there is a fanaticism in the North about hastening the introduction of Hindi as the national language, there will be sufficient public sympathy in the South for the D.M.K. Also by profession and practice it is showing itself as a party of the under-privileged and there are many in Madras State who are socially and economically so backward that they have nothing to lose but their inferiority. It is not surprising that Rajaji who knows the local terrain very well should brush aside remonstrances from his Bombay Swatantra colleagues about the company the Party keeps in Madras State through electoral understandings with the D.M.K. Any long-term alliance between the two may be ruled out because the D.M.K. is as socialist as, if not more than, the Congress; its manifesto calls for "real" socialism, nationalisation of banks, road transport and the expansion of the public sector. It also calls for Rs. 1,000-crore Plan for Madras. All these must seem anathema to the Swatantra Party. It is shrewd political sense, however, to avoid triangular or quadrangular contests as the only way of defeating the Congress, at least to keep the latter on its best behaviour in between elections.

A far more important consideration in the eyes of many is that the D.M.K. cannot be considered more disloyal (to deserve being banned) than those which have openly shown extra-national loyalties but are still regarded as democratic national parties.

Plan Pruning in Rajasthan

Rajasthan, one of the States to begin the Third Plan most hopefully, has already encountered serious difficulties and is now thinking of the "core" which means a reduction of the State Government's outlay from Rs. 235 crores to Rs. 208 crores. As one of the States with large overdrafts from the Reserve Bank, which it has been warned to avoid in future, Rajasthan might have found it prudent to take this cautious step. Many others will have to follow, as the same problem of inability to find local resources through taxation will face them when the precedent set up in U.P. is invoked widely by the opposition in other States to all tax measures. Perhaps this pruning is not entirely regrettable since only some of the frills may be cut; the Rajasthan Government has tried to effect some administrative economies resulting in an annual saving of about Rs. 2 crores in non-Plan expenditure, which (according to the Planning Commission) has increased in all the States. This inevitable go-slow in States in which the Congress faces tough opposition since the last elections (besides much internecine strife) must prove that a large plan which Congressmen wanted before the elections is not necessarily a good advertisement before the electorate.

Instead of Rs. 32 crores, the Rajasthan Government will be able to raise only Rs. 24 crores through fresh taxation, but it may be still less if the current political uncertainties are not soon cleared up. Major projects like the Rajasthan Canal and the Pong Dam will go on in any case. It is the Planning Commission which now stands exposed for its failure to check the exuberance of ambitious project-makers and for accepting unrealistic estimates of additional taxation seriously as the basis of planning. But these, I suppose, are still insignificant compared with the larger miscalculations on foreign aid and on the country's capacity in the public sector to execute projects.

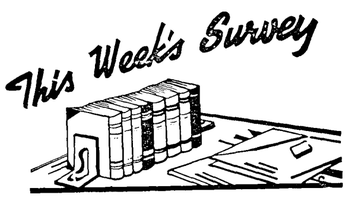
Parkinson's Third Law

Northcote Parkinson, who has now established his right to fame by propounding 'laws' which have aptly caricatured public services and business managements, has come forward with a third law, which is much less interesting and amusing than his first two. Expansion means complexity, he says in his latest book, *In-laws and Outlaws*, and complexity, decay. Apart from the fact that in an age of expansion in which limits to that process are far from evident, such a conclusion does not follow from the earlier Parkinson laws, that work expands to fill the time available and expenditure rises to meet the income. In other words, the new law seems to overlook the infinite capacity for self-perpetuation which the earlier propositions comprehended with extraordinary insight into the workings of public organisations and the minds of those controlling and guiding them. Complexity increases the indispensability of those who create it; with electronic computers now at hand to ease the work of the human brain nothing, it seems, is too much for those who are in a position to hire them.

This third law promises to be the last of the Parkinson laws. His classification of the gender of corporations according to the qualities they display on occasions is even less amusing but Parkinson's name will always evoke memories of those sparkling passages in his earlier books. The formula for forcing retirement on the unwilling top executive—by making him combine the maximum of air travel and filling in of forms—is unforgettable. So is Injelititis, the malady affecting organisations in which the higher officials are plodding and dull, those less senior are active only in intrigue against each other and the junior men are frustrated or frivolous. The most brilliant and imaginative of them all was the clue to the enigma of Chinese tax evasion which ran thus:

"According to this supposition the Chinese millionaire does not wait for his assessment but prefers to send the tax collector a cheque in advance for, say $329.83. A covering note refers briefly to earlier correspondence and a previous sum paid in cash. The effect of this manœuvre is to throw the whole tax collecting machine out of gear.... Officials are so perturbed and mystified that they produce no response of any kind for about eighteen months—and another cheque reaches them before that period has elapsed...."

The All-India Handloom Board decided, at its eighteenth meeting held at Bombay on Saturday last week, to set up an export promotion committee for launching a concerted drive to boost exports of handloom goods of all varieties. The meeting stressed the need to reorient the handloom development programme in the direction of technological and organisational improvements designed to increase production and improve quality. Mr. Manubhai Shah, Union Minister for International Trade, who inaugurated the meeting, urged the State Governments to make fuller use of the credit facilities now being made available by the Reserve Bank of India in order to facilitate increased production. He also called upon them to take more active steps to implement the scheme of pilot centres set up for intensive development of the handloom industry. The Board was informed that the procedure for sanction of handloom development schemes had been further simplified, so that the annual programmes could be implemented by the State Governments more expeditiously. The Union Minister announced the enhancement of the cash incentive in respect of handloom exports from 5 per cent to 8.4 per cent.



MORE POWER FROM KOYNA

THE second of the four 60,000-kilowatt units of the Koyna Hydro-electric Project in Maharashtra was commissioned on the 16th inst., exactly after four months from the date of inauguration of the first unit. If the other two units are also commissioned, according to present schedule, within the next 12 months, stage I of the project will have been successfully completed. That will be no mean achievement, considering that the planning and execution of this great project had posed many difficult problems which taxed the ingenuity of Indian engineers and foreign consultants. Such delay as there has been in its execution may also be condoned, if not entirely forgotten, by the public, now that the power supply position in the Bombay-Poona region has improved with the commissioning of the second Koyna unit.

The Maharashtra Government's decision to lift, with effect from the 17th inst., the peak-hour restrictions imposed on consumption of power in this highly industrialised region (which accounts for about 18 per cent of India's total use of electricity) should be most heartening to industrial consumers. Even non-industrial consumption of power in Bombay City will not be unduly restricted, for the State Government has also simultaneously decided to restore to the licensees the power to connect loads for temporary illuminations for marriages, carnivals, exhibitions, etc., in view of the improvement resulting not only from the commissioning of the second Koyna unit but also from the overhaul, just completed, of the third set of the Tata power companies at Trombay. The power supply position in the Bombay-Poona region has thus taken a turn for the better, whereas the situation in that other highly industrialised region in and around Calcutta seems to be continuously deteriorating.

The consuming public, especially the expanding industries, in the Bombay-Poona region should not, however, imagine that from now onwards everything will be all right on the power supply front. Even if the Tata power companies are enabled to complete their expansion project (involving the installation of a fourth thermal unit of 125,000-kilowatt capacity) at Trombay in time and the other two units (with an aggregate generating capacity of 120,000-kilowatts) of the Koyna project are commissioned according to schedule, a crisis may develop again in the near future. The demand for electricity in the Bombay-Poona-Koyna region is most likely, according to some recent forecasts, to reach the level of one million kilowatts in 1966, as compared with about half a million kilowatts in 1961. But stage II of the Koyna project, envisaging the installation of four 75,000-kilowatt units and one 40,000-kilowatt station, will not be completed before the end of 1967. Nor will any power be available before then from the proposed atomic power station at Tarapore. The possibility of demand again outstripping supply in the next few years cannot, therefore, be ruled out. Neither the authorities nor the industries can afford to be lulled into quiescence by the present improvement in power supply.

OILSEEDS PRODUCTION

One of the disappointing features of agricultural production in recent years has been the deplorably low rate of growth of output of oilseeds. According to official estimates, the production of five major oilseeds rose by about a million tons during the second Plan period to about 6.5 million tons by 1960-61. This compared unfavourably with the second Plan target of 7.6 million tons. During the crop year 1961-62, the aggregate output seems to have been still smaller than in 1960-61. In view of this unsatisfactory performance, it might look as if the third Plan production target of 9.8 million tons itself errs on the side of excessive optimism. The planners, however, seem to be in no mood to learn from experience, for they are now making a bid to raise the third Plan target to 10 million tons or so. The targets, at any rate, are only of academic significance when viewed against the background of persistently slow growth of production of oilseeds in recent years. There is no doubt that demand for oilseeds for edible purposes and for industries within the country, as also for exports, is increasing fast. But mere rehashing of targets on paper is certainly not the way out.

The responsibility for the slack in the growth of oilseeds production should be laid at the door of State Governments. Barring a few States, which have shown some enthusiasm, albeit belatedly, there is a lack of appreciation of the urgency of this matter on the part of several State Agriculture Ministers. It is only appropriate, therefore, that Mr. A. D. Pandit, President of the Central Oilseeds Committee, at a meeting of the Committee held at Madras last week-end, should have hinted at the insufficient response of State Governments. A "package programme" for promoting intensive cultivation of groundnuts was sanctioned by the Committee last year. Although the programme costing Rs. 15.19 lakhs was meant to be introduced in seven States, only three of them, namely Madras, Maharashtra and Gujarat, implemented the scheme during the current *kharif* season. It is a pity that the other major oilseeds-producing States, such as Andhra Pradesh and U.P., should have failed to avail themselves of the programme. In fact, the package programme for groundnuts is of added significance to this country in that it seeks to increase oilseeds output by improving productive techniques rather than by extension of area under the cultivation of the crop. As Mr. S. K. Patil, Union Minister for Food and Agriculture, pointed out in his inaugural speech at the meeting, the country cannot afford to increase the acreage under commercial crops at the expense of that under food crops.

The following table shows the changes in acreage and output of oilseeds recorded since 1950-51.

	1961-62	1960-61	1955-56	1950-51
Production ('000 tons)				
Groundnut	4,757	4,462	3,862	3,481
Castorseed	103	90	125	103
Sesamum	372	321	467	445
Rape and mustard	1,000*	1,402	860	762
Linseed	418*	417	421	367
Total ..	6,650*	6,692	5,735	5,158
Acreage ('000 hectares)				
Groundnut	6,413	6,257	5,134	4,494
Castorseed	448	420	574	555
Sesamum	2,250	2,160	2,293	2,204
Rape and mustard	2,960*	2,940	2,556	2,071
Linseed	1,700*	1,713	1,529	1,403
Total ..	13,771*	13,499	12,086	10,727

* Private estimates.

The slow growth in output (despite the increase in acreage) has led to a sharp decline in exports of vegetable oils and oilseeds. It may be recalled that it was planned originally to export about 214,000 tons of vegetable oils annually during the second Plan period. As against this, the actual shipments were only 61,000 tons in 1960-61. There has been a further decline in exports in 1961-62 and thereafter. Mr. Patil has stressed the need for regaining lost markets. This is certainly not beyond India's reach, provided the State Governments shake off their indifference and extend the necessary help to farmers for increasing production. That there is large scope in India for increasing the unit-area yield of oilseeds can hardly be denied. The per-acre yield of groundnuts, for instance, is only about 700 lbs. in India, which compares unfavourably with that in some of India's major competitors in world markets, being 1,137 lbs. in Brazil, about 1,000 lbs. each in Nigeria and the U.S. The provision of adequate irrigation facilities, better seeds and more fertilisers is bound to step up production substantially.

PHARMACEUTICAL INDUSTRY

The pharmaceutical industry has, of late, attracted nation-wide attention, following the discovery of certain spurious drug rackets in Calcutta. That the anti-social activities of those who produce or distribute spurious drugs should be curbed in the interests of public health is self-evident. But equally important will it be to ensure fair prices for essential genuine drugs. It may be true that the prices of drugs in India, as pointed out by Dr. Sushila Nayar, the other day in Bombay, are exorbitant. Dr. Nayar, while speaking at a meeting of the All-India Manufacturers Organisation last week, stressed the need for evolving a machinery to examine the cost structure of the drug industry. It may be that she has in mind some sort of cost investigation as is done by the Tariff Commission. Here one fails to understand how cost studies alone will solve the problem of high prices. The basic reason for high prices is the inadequate supply of essential drugs in the face of growing demand which, incidentally, seems to have sustained the rackets in "cheaper" but spurious drugs. It is only by increasing production at a much faster rate, both in the public and private sectors, that a solution can be found. Cost studies, though apparently good, may only result in tighter control on efficient units, which are anyhow run on satisfactory lines now, both in respect of price and quality. At the same time, small units, which are not always run on efficient lines, will remain outside the purview of controls; this will only render the field fertile for the manufacture of spurious drugs.

How inadvisable it is to resort to price controls in respect of drugs has been clearly explained by Mr. Prabhu V. Mehta, Chairman of the A.-I.M.O. He has observed:

"Of late, there has been a certain amount of loose talk about price control of pharmaceutical products. There is a section which seems to think that control is the solution for all evils. Our experience has taught us otherwise. Control has been the root cause of many evils which we are fighting to eradicate now. Therefore, a solution to the problem of scarcity is neither price control, nor distribution control. The solution is more production, enlightening public and strict enforcement of the rules under the Drugs Act. Pharmaceutical is a research-borne industry. In these days, when very rapid advances are being made by the pharmaceutical industry abroad, if our industry is not allowed to make adequate profit, which it can reinvest in research and development of new products, give the consumer more benefit by way of prevention of disease and maintenance of health, then the Indian pharmaceutical industry will not be able to serve the nation's need. It will be inadvisable to consider the pharmaceutical industry as just any other industry, as pointed out already, and we do believe, therefore, that Government will take very sound counsel and avoid coming to any decision hastily in regard to price control or distribution control."

What is necessary at this juncture is to encourage the flow of capital into this industry, not to discourage it. The industry is also facing several difficulties which demand early solution. According to Mr. Mehta, the major problem facing the industry is the inadequacy of raw materials. Indigenous production of several raw materials, according to him, has lagged behind demand. Imports, too, have been restricted. Mr. Mehta, however, has made a plea to the Government that the industry should be given adequate raw materials, if it is to expand at a faster pace. He has also urged the Government to remove the procedural difficulties involved in the supply of imported raw materials through the State Trading Corporation.

Another important complaint of the industry relates to the definition of patent and proprietory drugs for the purpose of excise. Pointing out that the present definition helps, ironically enough, spurious drug manufacturers, Mr. Mehta has called upon the Government to evolve a workable formula for patent and proprietory drugs which "while serving the purpose of levy of excise, will not detract in any way from consumer protection and the brand name popularity." These and other difficulties of the industry are patently genuine, and their early removal will certainly make for greater production of genuine drugs.

STEEL TECHNICIANS

The Fourth Plan Steering Group for Iron and Steel, which discussed the requirements of technical personnel for steel plants during the fourth Plan period at its meeting held at New Delhi this week, emphasised the need for expansion of training facilities well in advance lest the fulfilment of Plan targets be rendered difficult for want of qualified personnel. The Steering Group suggested that the training facilities available in the country for steel technicians and engineers should be assessed and a blue print for expansion of these facilities be prepared in consultation with the manpower directorates.

The demand for technicians and engineers will depend on the size of the target for iron and steel laid down in the fourth Plan. The Steering Group is yet to decide as to what, in its opinion, should be the fourth Plan target for steel. But the five sub-committees of the Steering Group, which have been asked to examine the different aspects of the steel capacity targets, have been working on the assumption that the fourth Plan target would be 18 million tons of ingot steel.

There is considerable agreement among experts, both official and non-official, that, in the training of technicians and engineers for steel plants, a longer perspective should be adopted. Thus the Planning Commission, in a note submitted for the consideration of the sub-committee on personnel and training of the Steering Group, has suggested a perspective of at least 15 years. According to it, the estimated current requirement of technical personnel for the three public sector steel plants is 350 senior engineers and 1,650 junior engineers for supervisory jobs and 19,000 operators and skilled workers for actual operation and maintenance of the plants. In addition, about 1,300 engineers and 2,000 diploma holders would be required to take care of the additional plants and facilities to be set up as part of the expansion programme for steel during the third Plan.

The inadequacy of training facilities and the need for advance action in regard to training and manpower development have also been stressed by Mr. S. K. Nanavati, General Manager of the Tata Iron and Steel Company, in his note on the subject submitted to the sub-committee. He has urged that the selection of the trainees and the scope of training to be provided must be determined on the basis of a careful study of the requirements over the period of the fourth, fifth and even the sixth Plans. He estimates that each million tons of steel requires 4,500 steel personnel, of which at least 10 per cent will need to be of the supervisory engineer category. The additional requirements of personnel under each successive plan would depend on the additional steel-making capacity envisaged by it. The greatest shortage at present is in respect of technical personnel at the craftsman level. The reorganisation and expansion of existing training institutions and the opening of a large number of new institutions and special facilities for training teachers and instructors are necessary if the requisite number of qualified persons are to be turned out in time to enable the plan targets to be fulfilled.

MAJOR PORTS

The approved second Plan provision for the development of major ports (Calcutta, Bombay, Madras, Cochin, Visakhapatnam and Kandla) was about Rs. 98 crores. But the actual capital expenditure incurred during that Plan period was only Rs. 49.2 crores, of which non-Plan schemes accounted for Rs. 3.7 crores. The schemes which have been carried forward to the third Plan would involve an aggregate expenditure of Rs. 43.8 crores, while new schemes included in this Plan call for a total outlay of Rs. 42.7 crores. The entire physical programme approved for the development of major ports under the third Plan is, however, estimated to cost Rs. 96.5 crores (Rs. 43.8 crores *plus* Rs. 42.7 crores *plus* Rs. 10 crores for the Tuticorin and Mangalore ports which are to be developed as major ports). Since a financial ceiling has been fixed by the Planning Commission at Rs. 75 crores therefor under the third Plan, the actual outlay on major port development over the ten-year period 1956-66 will have come to no more than Rs. 120 crores in all on the assumption that there will be no carry-forward schemes for the fourth Plan. But no such assumption can be made, and so it may be broadly taken that the physical achievements in this field from the beginning of the second Plan to the end of the third will correspond, more or less, to what had been hoped for in the five-year period ended March 1961.

It is against this background of slow performance—past and prospective—that the "assurance" given by the Union Transport Minister at the meeting of the National Harbour Board at Visakhapatnam on the 16th instant would have to be judged. The assurance is to the effect that lack of funds will not be allowed to stand in the way of achieving the physical targets laid down under the third Plan for the development of major ports and that, if it is found that the funds provided in the Plan for achieving the targets are inadequate, money will be found by reallocation or other means. This does not seem to be a meaningful assurance because the Planning Commission has already fixed a financial limit for major ports development at about 75 per cent of the entire cost of the programme designed to achieve certain physical targets. It is difficult to conceive of any reallocation within the financial limit of Rs. 75 crores, for as much as Rs. 44 crores out of that amount would have necessarily to be spent on the carry-forward schemes from the second Plan and the balance of Rs. 31 crores would cover only three-fourths of the aggregate cost of new schemes. After all, the new schemes covering the ports of Bombay (Rs. 8.9 crores), Madras (Rs. 2.6 crores), Visakhapatnam (Rs. 1.3 crore), Cochin (Rs. 0.4 crore) and Kandla (Rs. 3.6 crores) are relatively modest. It is only in the case of Calcutta that the new schemes will be very substantial, costing as much as Rs. 25.9 crores. As Calcutta Port's need is most pressing, no pruning of its schemes can be thought of without detriment to its rapid development. If more funds can be made available through reallocation of schemes in other sectors of development, it is just possible that the physical programme covering major ports may be implemented in full. If, however, no such reallocation is possible, it will be interesting to know what "other means" the Transport Ministry will devise to achieve all the physical targets in the field of major port development.

As the foreign exchange component of Rs. 44.5 crores will be largely covered by foreign credits already sanctioned—Rs. 22 crores by the World Bank for the Calcutta Port, Rs. 5 crores by the World Bank for the Madras Port and Rs. 9 crores by the I.D.A. for the Bombay Port—it should not also be too difficult for the Ministry to press its claim for the balance of Rs. 8.5 crores of foreign exchange required for the development of other major ports.

LOOKING TOWARDS EAST EUROPE

PLANS FOR STEPPING UP TRADE

From Our Special Correspondent

NEW DELHI, 18*th September*

IN a series of reassessments of the trading prospects with countries in Eastern Europe, Indian officials by the end of the year will study measures to promote exports to the communist bloc at a rate higher than hitherto.

DELHI LETTER

The measures will be to consolidate the gains already made in the past seven years and to expand and diversify the exports to a greater range of products While the general export plan still continues to be linked to the ambition of doubling exports in a decade, some officials today talk of raising the trade with the communist bloc four times and even six times. Soviet trading with India was put on an organised basis after the Khruschev decision in 1955 to support the non-aligned countries economically through aid and trade. In the first six months of 1962, Indian exports to the communist bloc countries rose to Rs. 40 crores, an increase of Rs. 13 crores from the exports in the comparable period of 1961. This increase of exports to the Soviet bloc helped offset the decline of Rs. 13 crores in exports to the United Kingdom and the European Common Market countries. As compared with the exports in 1955, the figures for January-July 1962 show a twentyfold spurt.

In the financial year 1955-56, India's exports to the U.S.S.R. aggregated only Rs. 3.2 crores. The exports rose to Rs. 32 crores by 1961-62. From Rs. 4.3 crores in 1955, the exports to all the East European countries together rose to Rs. 64 crores in 1961-62. The imports in this period rose from Rs. 8.3 crores to Rs. 81 crores. In 1961-62, India had an adverse balance of Rs. 17 crores in trading with the Soviet bloc, while, in the three previous financial years, India had a favourable balance of Rs. 3.5 crores in 1958-59, Rs. 13.5 crores in 1959-60 and more than Rs. 5 crores in 1960-61. Export steps have been taken to see that, in the current financial year, there will be a smaller gap in trading with East Europe. Tables I and II give the country-wise breakup of Indian exports to and imports from East European countries.

Indo-Soviet Trade

Indo-Soviet trade in 1960 aggregated Rs. 43 crores and, under the trade agreement with the Soviet Union, the total trade is sought to be doubled by 1963. Under the terms of the rupee payments agreements with the communist countries, the trade is on a balanced bilateral basis, but trading with some East European countries like Czechoslovakia has not been as balanced as Delhi would like it to be. Except in 1959-60, when there was a small favourable balance of Rs. 55 lakhs, the balance of trade with Czechoslovakia has been continuously adverse in the years 1955-56 to 1961-62. The adverse balance was as high as Rs. 6.10 crores in 1961-62, the imports being Rs. 14.2 crores and exports Rs. 8.1 crores. Seven years of trading with Russia gave India a net favourable balance of more than Rs. 20 crores. In trading with Czechoslovakia the unfavourable balance totals nearly Rs. 17 crores in 1955-62.

Russia became India's best customer for wool last year and its imports from India have been in the traditional commodities, including tea, spices, hides and skins, wool, tobacco, shellac, cashewnuts, vegetable and essential oils, jute goods, footwear and handicrafts. Delhi is satisfied with the progress maintained in geographical diversification of exports to the East European countries and now hopes to sell to Russia more manufactures like chemicals, hardware and textiles. There is one school of thought which believes that Russia could be persuaded to become a major purchaser of textile goods.

Between 1958-59 and 1961-62, the imports from Russia increased from about Rs. 17 crores to about Rs. 35 crores, while imports from other communist countries rose from Rs. 14 crores to Rs. 45 crores. Exports to Russia rose from Rs. 26 crores to Rs. 32 crores, while exports to other communist countries increased from Rs. 8 crores to a little less than Rs. 32 crores. The total exports to communist countries rose from Rs. 34 crores to Rs. 64 crores in four years. A 30 per cent annual increase in exports to communist countries is the ambition of some officials in Delhi. There is also a trend of opinion that, as imports from communist countries increase, some provision should be made for the import of maintenance goods from these countries. Today the imports are almost exclusively of capital goods.

Imports

Some of the drawbacks in increasing reliance on imports from the communist countries were emphasised some time ago by the Federation of Indian Chambers of Commerce and Industry which said:

"The experience of importers in purchasing goods from the rupee payment countries has not been of a uniform nature. It has been pointed out that goods of the exact specifications are not offered by the countries willing to accept rupee payment and an impression is prevalent that there is an attempt to supply inferior quality goods on rupee account while the better quality goods are reserved for normal exports. It has also been reported that items like steel of special quality and tested specifications required by engineering industries, stainless steel, and alloy steel, carbon black for rubber industry, bright cold rolled steel strip and wires and a host of other items are not available in these countries or if available are of poor quality. There are also reports that machinery and equipment supplied to India by these countries were imported in some cases from West European countries. It has been stated by some of our constituents that, if imports are made from rupee payment countries, prices are higher by 15 per cent to 30 per cent. The delivery periods are stated to be uncertain and no after-sales service is generally offered by these countries."

There is another allegation that East European countries overbuy in India to unload their rupee surpluses and sell the goods in Western Europe. This has not happened anyway on a large-scale and the Mudaliar Committee, for example, could not find positive evidence of this practice.

Other new problems that may emanate as a result of rapid expansion of trading with the Soviet bloc are illustrated by the issues evolving in Soviet trade with Japan. The Russians are concentrating on increased trade with Japan whose exports to the Soviet Union in 1961 were worth $65.8 million and whose imports from the U.S.S.R. were worth $145 million. These represented an increase of nine per cent in Japanese exports to the U.S.S.R. over the 1960 figures and a 67 per cent increase in imports. A group of seventeen Japanese industrialists went to the Soviet Union in August and it was announced in Tokyo last week that they were able to sign contracts for supplies of goods worth $150 million. These include $96 million contracts for three major Japanese shipyards for five 12,000-dwt. freighters, some 35,000 dwt. tankers and 28 other smaller vessels.

A Japanese Trade Ministry official in Tokyo some time ago explained to this correspondent the dilemma Japan was being placed in as a result of Soviet pressure to increase trade. If Japan unreservedly accepts the policy of increased trading with the communists, Japan will become more dependent on that bloc and less dependent on the West and non-communist countries. The restrictive trade policies in the United States and West Europe are affecting Japanese exports and there will be political unrest if the Japanese Government restricts trading with the Russians. One of the products which Russia wants to sell in increasing quantities to Japan is crude oil.

Oil

The Russians, who at one time offered to supply India with all her oil import needs if it wanted, are seeking to export up to 15 million tons of oil a year to Japan. Another attractive offer coupled with the oil supplies was made by Mr. Anastas Mikoyan when he visited Japan this year. Russia is prepared to buy steel pipes from Japan for a trans-Siberian oil pipeline, if Japan will buy sufficient quantities of Soviet oil to justify the pipeline project. Just as the Indian Government cannot force the Western oil companies operating in India to use Soviet crude the Japanese too will be unable to make the American and Dutch oil firms refining in Japan to use Soviet oil, although it will be far cheaper than the Middle East oil which comprises 80 per cent of Japanese oil imports.

In India, there may not be the same pressure of opinion in favour of "loyalty to the West" as in Japan. But there are other long-range aspects. The underdeveloped countries still have a very small role in Soviet foreign trade. It is estimated to be in the range of five per cent. As long as the proportion of Soviet trade with underdeveloped countries remains at a low level, Russia is not dependent on these commodities. This gives the Soviet Union a greater flexibility in using trade for political purposes. The bilateralism in Soviet trade with underdeveloped countries is at the moment a great help in foreign exchange saving for India. Today Indian exports to the Soviet bloc comprise less than ten per cent of the total exports, on the basis of the 1961-62 figures. This could rise to anywhere between 16 and 20 per cent by the end of the third Plan. Egypt is an example of a country demonstrating the difficulties from a high rate of bilateral trade on a restricted currency account. In 1958, nearly 50 per cent of Egypt's exports went to the Soviet bloc countries which supplied less than 30 per cent of Egypt's imports. Russia's generous gesture of importing Egyptian cotton at premium prices ultimately recoiled on Soviet-Egypt relations, because in the process Egypt lost some of the traditional customers.

AMERICAN LETTER

MORE BUSINESS-GOVERNMENT FEUDS

STOCK EXCHANGE DOES NOT REFLECT SUSTAINED OPTIMISM

From Our Special Correspondent

NEW YORK, *7th September*

LABOUR Day in the United States has come and gone. It always marks the beginning of a new season even though summer lingers on so far as the calendar is concerned. The summer let-down in economic activity was not more pronounced than in other years and most economic indicators have remained at a fairly even level.

A new business-Government feud broke out again—this time between the U.S. Senate and the steel industry. The worst part of it is that it is not a reassuring element so far as public confidence is concerned. The nub of the matter is that top executives of four big steel companies defied subpœnas from the Senate Anti-trust Sub-committee and thus failed to appear and produce data on production costs.

Both the subpœnas and the failure to answer them were ill-advised and very bad public relations. The four companies involved, Bethlehem, Republic, National and Armco, have challenged the Sub-committee's jurisdiction and they suggest that public disclosure of production costs would impair their competitive position here and abroad. Moreover, they insist such information is confidential and not the business of the U.S. Senate. The companies, undoubtedly, have a point there but it could have been presented more diplomatically and Senator Kefauver, Chairman of the Sub-committee, should have anticipated this argument before issuing the subpœnas. He is now talking of "premeditated contempt of Congress" which on the books is punishable by a $1,000 fine or a year imprisonment, or both.

The controversy goes back to the contemplated increase in steel prices and President Kennedy's intervention which led to cancellation of price boosts. Senator Kefauver also has attacked the drug and pharmaceutical industries for alledged overpricing and that feud has been long and bitter. The chances are that there will be no contempt proceedings against the four steel companies, but Senator Kefauver may have scored with some of his constituents.

Investment Trust Industry

Another business-Government feud was precipitated by the Securities and Exchange Commission's publication of an independent study of the $20,000-million investment trust industry. The study was made at a cost of $95,700 by four professors of the University of Pennsylvania's Wharton School. The findings were not particularly profound. They merely indicated that anybody with as much investment diversification as that used by investment companies would achieve the same result. The implication by the Government agency was that "the load" charged to buyers of between 6 and 8 per cent for investment management was too high and that more and stiffer Government regulations were in order. The fact of the matter is that commissions on the purchase and sale of both listed and unlisted securities on small volume on occasions are almost equal, but hidden in the price rather than stated as an extra charge.

All such things are disturbing psychologically. They undermine confidence. These are some of the underlying reasons for the caution displayed by the New York Stock Market. The traditional summer rally, such as it was, recouped much of the losses sustained in the "Blue Monday" crash of 28th May but there has been no sustained upward push reflecting optimism. In addition to the business-Government feuds, perhaps the main point of worry among analysts has been that many U.S. industries are operating well below capacity.

There is less talk of a forthcoming business recession than there was a month or two ago. The question of possible tax revision is kept alive by occasional announcements that studies are being made by the Administration what could and should be done if the need arises in the opinion of the experts. There are also official promises of restraint in Federal spending in the financial programmes to be submitted to the next Congress in January.

Recovery in steel production is progressing. In fact, it was better than seasonal. The model change-over in the automobile industry has been completed and there is considerable optimism for that particular field which is being fortified, of course, by Government defence orders of all descriptions. But the rate of unemployment in relation to the labour force remains stubbornly at previous levels.

The extraordinary West European boom has been running out of steam, it is pointed out. Expansion rates have been falling, but are still satisfactory, but Governments are becoming aware of the dangers of inflation brought about by wage increases over and above productivity boosts which has been accompanied by an upswing in consumer prices.

The co-operation of Western fiscal and central bank authorities has been excellent and a further strengthening of that is expected to come out of the forthcoming meetings. The easing in the U.S. payments position has been strengthened particularly by repayment of debts owned to the U.S. by such countries as West Germany and France. Buying of defence goods here has also been a factor. Since revaluation of the French currency, France has now the largest balance of payments surplus in Europe and will use future dollar accumulations to pay off more of its debts. These are some of the topics of discussion expected to be in the news.—*All Rights Reserved.*

4¾% MADRAS STATE ELECTRICITY BOARD BONDS 1972

FOR Rs. 300 LAKHS

(PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL, GUARANTEED BY THE GOVERNMENT OF MADRAS)

●

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99.75 PER CENT

REDEEMABLE AT PAR ON THE 24th SEPTEMBER, 1972

Subscriptions will be received in cash or cheques from the 24th September 1962. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 300 lakhs and in any case not later than the close of business on the 29th September 1962.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Hyderabad, Calcutta, Delhi, Bangalore and Bangalore City.

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all offices of the State Electricity Board.

LONDON LETTER

THE NEW REFORMATION

ANTI-COMMON MARKET FORCES GROWING?

(*From Our Own Correspondent*)

LONDON, *14th September*

IT is not much more than four hundred years since the European Community of States, loosely united under the spiritual power of the Pope, broke up into a group of national communities, themselves divided into those who still, although in spiritual matters only, look to the Pope and those, the Protestant faction, who do not look to him at all.

It is no coincidence that the Christian Churches of the West have in recent years been considering the possibility of a re-uniting of all their factions with the See of Rome. This is all part of the new Reformation: the thinking that against the heathen menace (this time in the shape of Eastern European Communism) the cultures of the West must get together again. Nor is it, therefore, a coincidence that the Tory Party in the United Kingdom, itself traditionally Catholic-leaning (once the ancient families had made sure they would not have to disgorge their loot of the rape of the monasteries) should be in the forefront of this movement. And for exactly the same reason the leftward, more traditionally Protestant, feeling in this country should be uneasily dubious of a re-entry into a Catholic Europe.

The long strings of history are tenuous but they are there. It is very much a question of sympathy: the traditionalists of Europe embodied in Dr. Adenauer and in President de Gaulle find their counterparts in this country. On top of this sympathy and more brashly evident are the industrial economic advantages. Thus is the old Reformation position reversed, for then it was the rising mercantile class and the Protestants who wanted to break away from Europe and now it is the mercantile class which is allied with the Catholics and the traditionalists to bring Europe together again.

Labour Opinion Divided

Not surprisingly the Labour Party has found itself very divided on this issue. This has been well brought out at the Annual Conference of the Trade Unions at Blackpool this year. There has been an uneasy feeling that, if the Government wants it, it must be wrong for Labour to want it too and, on the other hand, an uneasy feeling that economically it seems to make sense. The bogey of free entry of labour into this country has not had much success. The Trade Unions for the most part have accepted the argument that industry here has got to be competitive with industry on the Continent and that a bigger market for all the nations concerned does not mean reduced opportunities for those of the United Kingdom.

But Labour's economists have been less sure of all this. They see that food prices here will be higher; that Commonwealth links are liable to be disrupted and, above all, they fear a shackling of the British economy to European Continental interests. At the Trade Unions Council Conference an anti-Common Market vote was taken which was roundly defeated but this does not mean that the Trade Unions accept the idea of entry—it only means that they refuse to take a decision at this time and that they are prepared to wait and see what definite proposals emerge from Brussels and what it is that they and the Commonwealth are likely to have to sacrifice and to receive before committing themselves.

Indeed, the anti-Common Market forces dominated by this reasonable outlook of "waiting to see" can be said to be growing. Time is running against the Government. They lost the attempt to obtain a decision before the summer recess and now they have a Commonwealth Conference on their hands and after that will come an Annual Conference of the political parties in which opinion against entry is likely to harden. And it is understood that the leaders of France and Germany will, if anything, become more intransigent, making Britain's choice between Common Market and Commonwealth more difficult.

What the present still lacks is substantial alternative proposals by the Commonwealth countries to offer good cause why the Commonwealth should turn itself into a Common Market rather than being sacrificed to the Continental alliance.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

A SIMPLE PHRASE...
...VITALLY IMPORTANT!

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

Chartered Bank Buildings, Calcutta-1

BHD/3

WORLD BANK LOANS AT RECORD LEVEL

LAST YEAR'S HIGH RATE OF LENDING CANNOT CONTINUE, SAYS MR. BLACK

PEAK level of financing operations, a notable increase in technical assistance and training programmes, and continued broadening of resources base: These were the outstanding features that marked the activities of the World Bank during the year July 1961-June 1962. The total amount actually lent by the Bank in this year was much greater than in any previous year, amounting to $882.3 million, the number of countries receiving loans being 19 (29 new loans). The previous highest figure was $711 million in 1957-58. As compared with the new loans granted in 1960-61, the aggregate for 1961-62 represents a rise of as much as $272 million. The rise is especially significant considering that the new loans sanctioned by the Bank had continuously declined in the three previous years, from a total of $711 million in 1957-58 to $703 million in 1958-59, $659 million in 1959-60 and $610 million in 1960-61. But the World Bank President, Mr. Eugene R. Black, made it clear, in his speech at the Bank's annual meeting on Tuesday this week, that the rate of lending noted in 1961-62 could not continue in the coming years and that more liberal aid on easy terms of payments should be made available through the International Development Association (I.D.A.). For Mr. Black said:

"Many of the Bank's present member-countries cannot prudently assume further hard debts without jeopardising their future and, of about 20 new members expected to join the Bank within the next year or two, few will be in a position to service loans from the Bank. It is to the I.D.A., not to the Bank, that most of them will have to look for help. The future of I.D.A. is, therefore, the most important issue that I commend to your sympathetic consideration during this week's meetings."

Financial Highlights

The financial highlights of the World Bank in respect of 1961-62 as compared with the previous year are indicated below:

(In million $)

	Year ended June	
	1962	1961
New loans	882	610
Sales of parts of Bank loans	319	202
Repayments of loans to Bank	104	101
Gross income	188	167
Net income	70	63
Total reserves	699	602
Of which : Supplemental	476	408
Special	223	194
Borrowings (gross)	270	787
Net increase in funded debt	292	155
Subscribed capital	20,485	20,093

Almost 47 per cent of the new loans made by the World Bank in 1961-62 is accounted for by the Latin American countries, their combined actual share being $412 million, according to the sixteenth annual report of the Bank. Loans in Asia and the Middle East aggregated $253 million, in Africa $85 million, and in Australia and Europe $132 million. The largest beneficiary of the World Bank loans in 1961-62 was Mexico with two loans aggregating $160.5 million, of which power development accounted for $130 million and roads for $30.5 million. India was the second largest recipient receiving as it did a total of $145.5 million ($54.5 million for coal industry, $50 million for railways, $21 million for port development and $20 million for I.C.I.C.I.). The shares of other countries—in million dollars—are: Australia 100; Argentina 95; Colombia 69.5; Ghana 47; Venezuela 45; Philippines 42.5; Japan 40; Finland 25; Israel 25; South Africa 25; Trinidad and Tobago 23.5; Peru 10; Costa Rica 8.5; Kenya 8.4; Austria 5; Ethiopia 4.9; Iceland 2.

Electric power was the largest single purpose of Bank lending, at $493 million, which included three of the largest loans yet made by the Bank—$95 million for power in Buenos Aires, $100 million for the Snowy Mountains project in Australia, and $130 million for additional power in Mexico. Loans for transport facilities came second at $241 million. Of this, lending for highway programmes was the largest element, with loans to Colombia, Costa Rica, Japan, Mexico, Peru and Venezuela aggregating $150 million. Industrial lending was $134 million, including two important loans for coal supply in India, and a loan to Israel to develop the potash deposits of the Dead Sea. An unusual loan of the year was of $2 million to Iceland to expand the system which supplies hot water from natural springs for heating and domestic use in the capital city of Reykjavik.

The Bank also made important extensions of its technical assistance services during the year. A new Development Services Department was set up to administer all the technical assistance services of the Bank and a new Development Advisory Service was established. This Service is intended to provide a corps of experts to advise Governments on economic and financial questions, particularly in connection with development programming. The Service has now recruited a number of highly qualified experts, several of whom are already in posts in member-countries. During the year, the Bank also increased its expenditure in the less developed countries on studies, both of specific projects and of sectors of the economy. The studies included general transportation study in Colombia, a new bridge over the Hooghly River in Calcutta, and feeder roads in north-east Nigeria. The estimated cost (to the Bank) of these studies is approximately $1.7 million, of which more than $1 million will be spent in the coming year.

The Bank continued to act during the year as executing agency for projects receiving financial assistance from the U.N. Special Fund. In all cases, this work is carried out under Bank supervision by outside consultants chosen jointly by the Bank and the country concerned. By the end of the fiscal year, a number of Bank advisers were in posts overseas.

The seventh course of the Economic Development Institute, the Bank's staff college on economic development, took place from October 1961 until March 1962. A total of 143 officials from member-countries and five from the Bank have attended the regular courses of the Institute since it opened in January 1956.

Membership

The membership of the Bank rose from 68 to 75 countries during the year. Two countries, the Dominician Republic and the Syrian Arab Republic, resumed earlier membership, and the new members were Cyprus, Laos, Liberia, Nepal and New Zealand. The subscriptions of these new members and other changes raised the subscribed capital of the Bank to $20,485 million. In addition, applications for membership were received from 15 other countries, mostly the newly independent countries of Africa.

The net earnings of the Bank (exclusive of receipts from the 1 per cent annual commission payable on all Bank loans) were $70 million, an increase of $7 million over the previous year and the highest earnings figure yet reached. Sales of Bank loans, (all made without the Bank's guarantee) reached $319 million, also the highest figure yet reached. The total was made up of $32 million of participations, where other investors assumed parts of Bank loans at the time the loans were signed, as well as of $287 million of sales from the Bank's loan portfolio. Disbursements on loans were $485 million. Net borrowing was $292 million, bringing the total outstanding funded debt to $2,521 million.

The Bank's total reserves, comprising the supplemental reserve and the special reserve, stood at $699 million, an increase of $97 million during the year. The supplemental reserve, accumulated from net earnings, stood at $476 million at the end of the fiscal year, as compared with $408 million a year earlier. The increase of $68 million consists of the $70 million of net earnings, less $2 million representing losses resulting from revaluation of the Bank's holdings of the currencies of various member-countries, debited directly to the supplemental reserve. The special reserve, which is held in liquid form to meet liabilities of the Bank in case of defaults and to which are credited receipts from the 1 per cent annual loan commission, increased by $30 million to $223 million.

Repayments to the Bank amounted to $104 million and repayments to other investors holding maturities of Bank loans were $122 million; the total of $226 million compared with $191 million a year before. The rate of interest on new Bank loans, including the 1 per cent annual commission, remained at 5¾ per cent throughout the year. The year's disbursements were $485 million, as compared with $398 million the year before.

There were five new borrowing transactions during the year, all but one of them outside the United States. The amount borrowed was $270.5 million. In addition, the Bank received $130 million in dollars and the equivalent of $62.5 million in Deutschemarks as a result of borrowing transactions arranged in previous years. The gross increase in debt was, therefore, $463 million. The year 1961-62 witnessed not only the seventeenth issue of Bank bonds on the U.S. market but also the first sale of Bank lire bonds in Italy, the eleventh public issue of Swiss franc bonds and the fourth public issue in Netherlands guilders.

The Bank's annual report shows how widespread are the sources from which it now draws funds for its lending operations. It observes:

"The situation today is very different from what it was in the early days of the Bank. During the immediate post-war period, for well-known reasons, the Bank was obliged to depend on the United States for virtually all its funds. The United States paid-in capital subscription of $635 million was the first to be made freely available to the Bank for lending, and the Bank's first borrowing operation was the sale in 1947 of $250 million of Bank bonds in the United States. The economic recovery of other countries has since been reflected in a sustained broadening of international support for the Bank's finances. These countries have increasingly made their paid-in capital subscriptions available for lending, mostly on a convertible basis; by 1962, the capital contributions made available by members other than the United States had risen to $1,021 million. Other countries have also opened their capital markets to Bank bond and note issues; at the end of June 1962, about 56 per cent of the Bank's outstanding funded debt of $2,521 million was held by non-U.S. investors."

Loans to India

Including the $882.3 million of new loans announced by the World Bank in 1961-62, the total amount of loan commitments since its inception comes to $6,672.83 million (as on 30th June 1962) in 60 member-countries and territories, the number of loans being 321. Of the total, the share of India alone is $846.11 million. The bulk of this, amounting to $536.61 million, is accounted for by the public sector projects, the share of the private sector being $299.50. The breakdown figures are given in the following table:

World Bank Loans to India

As on 30th June 1962

(In million $)

Projects for which loans are given	Original principal amount	Amount actually disbursed	Cancellations, terminations and refundings	Principal repayment to Bank
Public sector :				
Railways	379.01	336.97	1.20	14.92
Power	68.50	48.19	11.08	2.03
Multi-purpose projects	19.50	10.50	9.00	1.43
Ports	64.00	20.66	..	..
Airlines	5.60	5.60	..	..
Total public sector	536.61	421.92	21.28	18.38
Private sector :				
Coal mining	54.50*	..	..	..
Power (Tata group)	26.00	22.61	2.30	2.34
I. C. I. C. I.†	60.00	17.92	..	1.46
Tata Iron & Steel	107.50	107.50	..	12.64
Indian Iron & Steel	51.50	48.81	2.30	13.11
Total private sector	299.50	196.84	4.60	29.55
Repaid—one loan	10.00	7.20	2.79	2.26
Grand Total	846.11	625.96	28.67	50.19

* Includes $19.5 million given to the Indian Iron and Steel Company for coal mining.
† Industrial Credit and Investment Corporation of India; loans given to this Corporation are for industrial purposes.

In recent years, the number of countries in a position to offer substantial amounts of development aid, according to the Bank's annual report, has markedly increased. At the same time, more of the less developed countries have succeeded in formulating national development plans or large-scale priority development projects which cannot be carried out with their own resources. The situation, it is urged, calls for international efforts to mobilise the potentially available assistance and to direct it where it is most needed and where it can be put to most productive use, in support of well conceived investment programmes and projects. There is a number of possible techniques to this end, whose appropriateness and effectiveness vary, depending upon circumstances. At the moment, international efforts are in an experimental stage, and there is a range of devices in operation. There is the informal exchange of information on the part of assisting countries and institutions; another stage is the co-ordination of external assistance by means of so-called "consultative groups"; and there are the international financial Consortia. The Bank's work in the field of development programming has led to its active participation in these efforts to mobilise and co-ordinate development finance.

I.D.A.'S OPERATIONS EXPAND MARKEDLY

NEED TO REPLENISH RESOURCES

"THE new lending agency (International Development Association) is soft and alluring; but will she cook?" This query of the *Fortune* Magazine of the U.S. reflected the scepticism entertained in some quarters about the new affiliate of the World Bank when it came into being on 26th September 1960. The I.D.A. is now hardly two years old; and two years is too short a period to prove that it can "cook." Moreover, it should be borne in mind that the primary purpose underlying the establishment of the I.D.A. was the creation of a supplementary source of capital for those developing countries whose balance of payments prospects would not justify their incurring, or continuing to incur, external debt entirely on conventional terms. The financial terms of I.D.A. credits have, therefore, been designed with due regard to this purpose which, admittedly, will take a long time to fructify. The terms, in broad outline, are as follows:

I.D.A. credits are repayable in foreign exchange, but on very lenient terms. In each of the credits so far made, a Government has been the borrower; the credits are repayable over a period of 50 years, free of interest; there is a 10-year period of grace, following which 1 per cent per annum is repayable over the next 10 years, and 3 per cent per annum over the final 30 years; to help to meet I.D.A.'s administrative costs, a service charge of ¾ per cent per annum is payable on amounts withdrawn and outstanding. Compared with conventional loans, these terms bring substantial alleviation to the repayment obligations of borrowing countries and bear much less heavily on their balance of payments.

Terms of Financing

It was not intended that these concessionary terms of I.D.A. financing should result in the extension of financial subsidies to the actual projects on which I.D.A. funds are employed, or that I.D.A. funds should be used to finance a project which could not satisfy normal criteria of economic and financial viability. Hence, a project submitted for I.D.A. financing is expected to meet the same technical, economic, financial and administrative standards as the World Bank itself would look for if the Bank were making a loan for that project on conventional terms. Furthermore, in the case of revenue-producing projects, I.D.A. requires that the proceeds of the I.D.A. credit be invested in the project on a normal business-like basis and that the price of the goods or services produced by the project be fixed at levels which will make the investment remunerative.

The activities of the I.D.A. during the brief period of its existence have produced enough evidence to confound the sceptics who doubted its soundness and questioned its effectiveness in providing the much-needed development capital to underdeveloped countries.

The latest annual report of the I.D.A. for the year ended 30th June 1962, the first full year of operations, gives a comprehensive review of the activities of the I.D.A. during the year. Eighteen new credits for a total of $134 million were granted during the year, bringing the total commitment till the end of June 1962 to $235 million. Of this, credits amounting to $174.0 million have become effective, while credits aggregating $60.5 million are not yet effective. Of the effective credits of $174 million, only $12.17 million have been disbursed.

The year's credits were given to finance development projects in eight countries. Of these, six credits were given to India, four to Taiwan (China), three to Pakistan and one each to Colombia, Jordan, Costa Rica, Paraguay and Swaziland. The accompanying table indicates the credits granted to India by the I.D.A. since its inception till the end of June 1962.

Agricultural improvement received the largest amount of I.D.A. credit during the year; a total of $66.2 million was lent principally for irrigation and drainage in farming areas in India and Pakistan where greater agricultural output is vitally needed to keep pace with the food needs of the growing populations. Credits for the transport sector ranked second, aggregating $38 million. The major part of this, as much as $31 million, was for projects in Latin America. In most cases, these credits will also be of direct benefit to agriculture because transport development will open up new areas for farming and provide farm-to-market road systems.

Of the remaining credits, one of $18.5 million was made for electric power to assist development in the Damodar Valley in India. Credits of $2 million and $4.4 million, respectively, were extended to finance municipal water-supply system in Jordan and Taiwan. The only I.D.A. credit for industry was of $5 million to assist the China Development Corporation in the promotion of private industrial ventures in Taiwan (China).

Commenting on last year's operations, the report observes:

"The experience of the past year has amply confirmed the need for more development capital on terms imposing a minimum burden on the balance of payments of less developed countries. Many of these countries are now bringing a growing number of sound projects to the point where construction can begin, given the required external capital. At the same time, because of fresh borrowing for development purposes, the external debt of many of these countries continues to grow, much of it on short and medium-term, and weighing more and more heavily on their balance of payments."

These developments, combined with the fact that within the I.D.A. itself the preparatory processing work is now being brought to completion on an increasing number of deserving projects, are causing the commitments of I.D.A. to increase. By 30th June 1962, I.D.A.

I.D.A. Credits to India

(In thousand $)

Projects	Principal amount of credits	Effective credits	Principal amount disbursed*	Undisbursed balance of effective credits*
Highway construction and equipment	60,000	60,000	3,894	56,106
Tubewell irrigation	6,000	6,000	—	6,000
Shetrunji irrigation	4,500	4,500	451	4,049
Salandi irrigation	8,000	8,000	484	7,516
Punjab flood protection and drainage	10,000	10,000	1,839	8,161
Durgapur Power Extension	15,500	—	—	—
Sone Irrigation	15,000	—	—	—
Total	122,000	88,500	6,668	81,832

* Amounts have been rounded off to the nearest digit.

Note : I. D. A. has extended four more credits to India during its current fiscal year : $14.7 million for Bombay Port Development, $13 million for Purna Irrigation Project in Maharashtra, $17.5 million for Koyna Project and $42 million for expansion of telephone and telegraph facilities in the country. This brings the principal amount of credits given to the country to date to $209.2 million.

had signed credit agreements requiring $235 million out of the $575 million of freely convertible resources available from its initial subscription. Considering that about another $250 million would be needed for credits to India and Pakistan alone by June 1963 to fulfil the promises made to these countries at the Consortium meetings, and also, in view of the mounting requirements for granting credits to other member-countries, it is clear that most or all of I.D.A.'s initial resources might well be committed by mid-1963. The question of replenishment of these resources has, therefore, been placed on the agenda of the Fund-Bank Meetings currently taking place at Washington. It is to be hoped that the member-countries would persuade themselves to put more funds at the disposal of the I.D.A. so that it can supplement the World Bank's activities much more effectively than is the case at present. It is noteworthy that Sweden has already given a lead to other countries in this matter by making a supplementary contribution of $5.8 million in May last to I.D.A.'s resources. This is the first supplementary contribution to I.D.A.'s resources from any of its member-countries. The current expectations are that other affluent countries will follow suit, offering substantially bigger supplementary contributions. It may be recalled that the U.N. Secretary-General himself has emphasised that such an increase in the resources of the I.D.A. is one of the primary requirements for the success of the current development decade.

I.D.A. CREDIT FOR BOMBAY PORT

The development credit of $18 million to India for improvements at the Port of Bombay, approved by the International Development Association's Executive Directors on 11th July 1962, has now been signed. Certain documents were executed at Bombay by the Trustees of the Port of Bombay and the credit agreement and related documents were signed at Washington on the 14th inst. by the Ambassador for India, Mr. B. K. Nehru, on behalf of the Government of India, and by Sir William Iliff, Vice-President, on behalf of the World Bank The Government of India is making the proceeds of I.D.A. credit available to the Trustees of the Port of Bombay for a five-year programme to eliminate congestion by expanding capacity of the port, and to improve facilities for the handling of passenger and cargo traffic.

ACTIVITIES OF I.M.F.

1961-62—A RECORD YEAR

THE year ended April 1962 was a record one for the International Monetary Fund in every phase of its operational activity. Not only did the total sales of currency and the amount of stand-by arrangements agreed exceed by far the comparable figures for any year in the Fund's history, but the repurchases by members were also substantially above any previous year's figures. Of the 30 members which received financial assistance from the Fund, either through direct purchase transactions or in the form of stand-by arrangements, 16 were in Latin America, 4 in Europe, 3 in the Middle East, 6 in the Far East (including Australia), and 1 in Africa. Repurchases were made by 24 members. The greatest number of repurchasing members was also in Latin America, namely 9; 4 were in Europe, 3 in the Middle East, 4 in the Far East (including Australia), and 4 in Africa. As in previous years, improvements in the monetary reserve positions of several members enabled them to make large purchases, in accordance with Fund policy, before the expiration of the maximum period (three to five years), thus strengthening their secondary line of reserves as represented by potential recourse to the Fund's resources. New stand-by arrangements or extensions of existing arrangements were agreed with 24 members, for a total amount equivalent to $1,633 million. The total amount available to members under these arrangements at the end of the financial year was $1,942.9 million ($2,012.9 million effective on 1st May 1962).

The use of the Fund's resources during the year required in each case a waiver of the provision of Article V, Section 3, of the Fund Agreement, which limits purchases by a member to amounts based on 25 per cent of quota in any 12-month period. The use of an increasing number of members' currencies in purchases from the Fund continued and, for the first time, there was also a wide use of member currencies in repurchases. In the year under review, the Fund has served much more fully than in any other year of its history as the multilateral revolving fund envisaged at Bretton Woods.

From the beginning of Fund operations until 30th April 1962, exchange transactions were consummated with 44 members, many of which used Fund resources on several occasions. Three members received financial assistance in the form of stand-by arrangements without drawing on them. Of this total of 47 members, 19 are in Latin America, 12 in Europe, 5 in the Middle East, 7 in the Far East, and 4 in Africa. Total Fund sales were equivalent to $6,265.5 million.

Assistance Rendered

A picture of the aggregate financial assistance accorded by the Fund to members is given by combining the amount of new stand-by arrangements granted in each period with the amount of exchange transactions not effected under stand-by arrangements (thus eliminating the duplication which results from listing drawings under stand-by arrangements in both categories). The total assistance given by the Fund, so measured, has amounted to $9.1 billion. To the end of April 1962, repayments to the Fund had been made by 38 members either by repurchases in gold or convertible currencies or by purchases of the drawing members' currencies by other members. As on 30th April 1962, the total amount of purchases still outstanding was equivalent to $2,015.2 million.

Currently, 27 members are paying the charges levied by the Fund on holdings of a member's currency in excess of quota. The amount of such charges incurred during the year under review was $21.4 million, as compared with $11.0 million during the preceding year.

The members of the Fund that maintain exchange restrictions under Article XIV of the Agreement are required to consult with the Fund annually concerning the retention of these restrictions. In accordance with this requirement, consultations were held during the financial year 1961-62 with 36 such member-countries; for all but one of them, Fund missions were sent to the countries concerned. These annual consultations continued to provide opportunities for useful collaboration between the Fund and its members.

At the request of member-countries, the Fund continued to provide technical advice and assistance directed towards specific problems and tasks in the monetary and financial field. Fund staff teams have assisted several member-countries to formulate appropriate monetary, fiscal

PROGRESS OF TEXTILE MACHINERY MANUFACTURE

"INDUSTRY HAS COME OF AGE"

DESPITE its very recent origin, the Indian textile machinery manufacturing industry has made remarkable progress in terms of volume of production as well as the quality of its products. The industry now manufactures a wide range of textile machinery, including many new items such as blow room lines, continuous dyeing ranges, open-width bleaching plants, hot air stenters, chainless mercerisers and different types of padders. Plans are also afoot to produce many more items which have not been manufactured in the country hitherto. Mr. Manubhai Shah, Union Minister for International Trade, in his speech at the third annual general meeting of the Textile Machinery Manufacturers' Association, held at Bombay this week, rightly observed that the industry has come of age. Mr. Shah expressed satisfaction at the progress made by the industry. He noted that the major textile machinery manufacturers produced machinery worth about Rs. 12 crores in 1961. The production during the current year is estimated at an annual rate of Rs. 15 crores. The estimated production of textile spares and accessories, including small-scale production, is Rs. 14 to 15 crores per annum. The Minister described this as a "proud record," as indeed it is, considering the very recent origin of the industry.

The following table gives the production figures pertaining to some of the main items of textile machinery during the four-year period 1958-61:

(In numbers)

	1958	1959	1960	1961
Spinning and weaving machinery :				
Carding engines	1,148	763	1,075	1,308
Ring frames	877	1,077	1,127	1,380
Looms (plain)	3,151	3,870	5,177	7,586
Looms (automatic)	36	356	375	67
Augusta pneumatic sueflon system	52	427	590	626
High draft conversion system	136	210	287	348
Total value (Rs. in crores)	6.56	7.40	9.22	10.45
Processing machinery :				
Kier and beater	23	27	24	28
Washing machines	26	21	28	33
Water mangle	27	31	50	39
Dyeing jiggers	174	157	174	162
Cloth printing machine	11	14	10	6
Stentering machine	3	4	5	18
Drying cylinders	59	78	120	113
Soapers	11	1	9	3
Total value (Rs. in crores).	1.10	1.36	1.86	2.49
Grand Total (value in crores of rupees)	7.66	8.85	11.08	12.94

Imports of main items of textile machinery and parts during 1961 were valued at Rs. 20.37 crores, as against Rs. 16.12 crores in 1960, Rs. 9.37 crores in 1959, Rs. 10.89 crores in 1958 and Rs. 19.08 crores in 1957. In the matter of exports, the indigenous industry has made only a beginning but the trend is encouraging. The main items of textile machinery exported in 1961 were valued at Rs. 19.13 lakhs, as against Rs. 3.47 lakhs in 1960 and Rs. 1.7 lakh in 1957.

Demand Position

The demand for textile machinery during the third Plan period is expected to increase, thanks to the programmes of rehabilitation and modernisation of the industry and the planned expansion of spindleage by 3 to 4 million and the installation of 25,000 automatic looms envisaged in the Plan. The Committee appointed to assess the requirement of capital goods and components for the textile machinery manufacturing industry has estimated the demand for textile machinery (including the requirement of the cotton, art silk, and woollen industry) on account of these expansion programmes at Rs. 309 crores—Rs. 157 crores for replacement and Rs. 152 crores for expansion. As against this, the production programme of the textile machinery manufacturers envisages an output of machinery valued at Rs. 129 crores. Even if the planned production is achieved, indigenous production of textile machinery would cover only about 42 per cent of the demand. In view of this, the Government has granted licences to new manufacturers, especially for the production of specialised items for which the gap between anticipated demand and supply is considerably wide. The present annual licensed capacity of the industry, in terms of value, is about Rs. 33 crores, and Rs. 44 crores, if account is also taken of the additional capacity licensed to newcomers. As against this, the annual average production of textile machinery during the third Plan period is not expected to exceed Rs. 26 crores in terms of value.

The textile machinery manufacturers are well aware of the need for increasing production. The chief obstacles in the way of increasing production and the main problems faced by the industry were pinpointed by Mr. Prabhu V. Mehta, Chairman of the Association, in his speech at the annual meeting. One such handicap is the shortage of building materials like cement, iron and steel and, in certain areas, of electric power. Another is the difficulty of importing essential components and raw materials, thanks to import restrictions. The imported components generally consist of very specialised equipment and parts not normally manufactured by the textile machinery manufacturers anywhere in the world. Mr. Mehta said that the industry appreciated that these restrictions were inevitable as it was due to the difficult foreign exchange situation. It also conceded that the careful scrutiny of all import applications by the Textile Commissioner was in the interest of the industry. But he pleaded that, in respect of items normally not manufactured by the textile machinery manufacturers anywhere in the world, imports should not be cut, even if the object of the cut was to encourage indigenous manufacture of such machinery. For this would result in the production of machinery of sub-standard design and construction.

A third handicap is the delay in granting industrial licences and approving collaboration agreements. In spite of repeated representations, he pointed out, the position has only deteriorated. Citing a specific instance, Mr. Mehta said that if the Government had not delayed the granting of licence and approval of the collaboration agreement submitted by a well-known manufacturer fourteen months ago, the firm would now have been manufacturing high speed draw frames in the country and thus obviated the need for most of the imports of draw frames.

As regards quality standards, the Chairman disagreed with the official view that an inspectorate should be formed under the Cotton Textiles Fund Committee to inspect the quality of textile machinery and that the textile machinery manufacturing industry and the mill industry should jointly bear the cost. According to him, if at all there is need for an inspectorate, it should be created by the millowners and textile machinery manufacturers. In Mr. Mehta's opinion, which is shared by his colleagues in the industry, an inspectorate alone will not serve the purpose of improving the quality of the machines produced. What is required is an inspectorate, staffed by highly qualified people, not only for the limited purpose of inspection but also for suggesting improvements and modifications in the manufacture of machines.

Import Duty

The Chairman of the Association called for a revision of the customs duty on imported components and raw materials and made certain suggestions in this regard. The following are the relevant observations:

"The industry has been allowed reduction of import duty on imported components, and it is our submission that raw materials should also be treated on the same basis. The Government of India has partly accepted the contention that the import duty on components should not be more than that on complete machines. Duty exemption certificates are issued by the Textile Commissioner's Office, and this procedure is working satisfactorily. However, there are instances where the Customs do not accept these certificates and differently classify certain items and collect very heavy import duties. These duties are being collected in spite of the fact that the importers produce duty exemption certificates from the competent authority. We have represented the

Exide Batteries still keep going when the rest have stopped

Everywhere you go motorists agree Silver Exide are the strongest, most reliable batteries under the sun. They are made from the finest materials and are quality tested at every stage of production. .that's why you're sure of a long and trouble free life. Exide Batteries are known and trusted all over the world. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—fit the finest battery money can buy and you'll still keep going when the rest have stopped.

DRIFT TOWARDS EXTINCTION?

MORE MILL CLOSURES INEVITABLE, IF POOR DEMAND PERSISTS

From Our Special Correspondent

MANCHESTER, 11*th September*

MANCHESTER LETTER

A LACK of ability among management was blamed by Mr. Allan Ormerod, Managing Director of Ashton Bros., a big Lancashire cotton group, for the decline in the cotton industry in Britain. Speaking in Manchester at the annual meeting of the British Association for the Advancement of Science before visitors from all over the world, he said: "I consider that inept and ineffective leadership—both Governmental and internal—have played a greater part in the uncontrolled and wasteful contraction of the cotton industry than all the external circumstances considered collectively." But he added that, during his visits to a large number of mills in many parts of the world, his belief that more was known in Britain about the mechanical handling of fibres, yarns and fabrics than anywhere else, had been substantiated. He suggested that future efforts of the industry should be directed to capitalising on this knowledge.

Comparative figures quoted in his paper underline the big technical improvements brought into operation in Western European mills in the post-war period. Between 1950 and 1957, for example, output per head in spinning mills in Western Germany, Belgium and France increased by 56 per cent, 39 per cent and 59 per cent, respectively, as compared with a rise of only 3 per cent in the United Kingdom. Output in weaving sheds in Western Germany and France improved by 30 per cent and 60 per cent, respectively, as against a mere 4 per cent in Britain.

A great deal of this difference rests on the wider use of shift working in Continental mills, no less than in those of Lancashire's rivals in the Far East. A point which emerges from these statistics is that Lancashire firms are now the coarsest spinners in Europe, with the exception of Belgium, on the basis of average counts spun.

Salvage Operation

The complicated structure of the industry in Lancashire is the fundamental problem facing all those who attempt to suggest means of improving or even, at this stage, of salvaging the trade from an apparently permanent drift towards extinction. The basically horizontal set-up which served its purpose well up to the outbreak of the 1914 war has subsequently been disparaged by practically every commentator. The intensification of this structure by the formation of large spinning combines in the 1920's is now equally condemned by the protagonists of verticalisation.

Mr. Ormerod contends that the Cripps scheme, which followed the Working Party report, and the recent reorganisation scheme of three years ago were just as detrimental in upholding an out-of-date system and supporting a policy "the objective of which would appear to have been the protection of the unprotectable and the penalising of the progressive." The Working Party, he says, advocated the production of a wide range of products through a short series of processes. What was, and still is required, in his opinion, is the production of a narrow range of products through a long series of processes. The vertical firms ought to have been supported as the organically sound nucleus on which to build, but no credit was received for weaving or finishing machinery under the earlier scheme and unless they possessed a large number of spindles such firms were excluded from participation.

Weavers Close Weekly

Among the numerous statistics provided from various sources by Mr. Ormerod is an interesting table showing the type of mills which "capitulated to competition" in the four years before the implementation of the 1959 reorganisation scheme. Horizontal weaving concerns were, in fact, going out of business at the rate of more than one per week. The actual figure was 264, of which 249 were solely weaving units. In the same period, 71 firms involved in spinning ceased production, of which 40 confined their activities to spinning. In the doubling branch 63 firms went out, including 38 individual doublers, while 30 finishing firms closed down.

It should be added that, of the 264 weaving units, 109 were also converters and a further 62 formed parts of groups or combines including converting among their activities. When the Working Party made its report in 1946, 22½ per cent of installed looms were owned by "combined operators." When the reorganisation scheme was launched, this figure had increased to 33 per cent and, at the end of last year, the proportion had been raised to 42½ per cent.

Cotton's Fate in Balance

The fate of a large portion of the Lancashire cotton industry and that of thousands of cotton workers is in the balance, according to a Lancashire cotton trade union leader. Mr. James Whitworth, General Secretary of the Operative Cotton Spinners' Amalgamation—one of the big three Lancashire cotton unions—said in his quarterly report that the last rush of modernisation "blue-prints" submitted by millowners to beat the deadline for a Government grant should on the surface put an end to fears of further recession in the industry. But he warned that millowners have only submitted modernisation plans and the extent to which the applications will be actually put into operation depended on cotton's profitability and prospects during the next six to nine months.

If the present lack of demand continued for several months longer, the prospect of additional mill closures was inevitable. The future of the Lancashire cotton industry was precarious, he said. But one of the features of the Lancashire cotton trade over the past generation and more had been the relatively small difference of opinion between employers and unions in the producing sectors over many fundamental aspects of policy.

On the question of imports, for example, the representatives of the operatives have always joined in approaches made to the authorities in London, both on an official and unofficial basis. In his report, Mr. Whitworth said: "We in the trade recognise equally with other people that the underdeveloped nations need assistance and that such help can only be given by countries with higher living standards." At the same time, like everyone else in the trade, he insists that "this commendable principle" is a world problem and that nations other than Britain must help in the assistance, which must not be to the detriment of one industry alone.

Dealing in some detail with the recently published financial results of cotton companies, Mr. Whitworth adds that these unsatisfactory returns have been brought about not only by a considerable fall in machine activity but also by the same sort of price-cutting within the industry experienced before the formation of the Yarn Spinners' Association which was set up to prevent this very thing. "We are wondering what overall additional business has been gained by this insane practice of price-cutting," he asks. "We remember its disastrous effects in former years and the experience in the past few months has again demonstrated the inevitable. In the long-term it can neither be in the interests of the trade as a whole nor of the employees engaged in it."—*All Rights Reserved.*

THE FIRST CHOICE OF BUILDERS

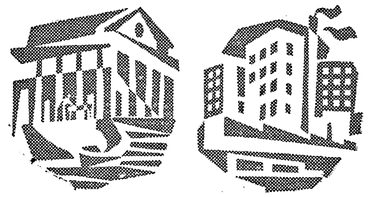
Snowcem

FOR HOSPITALS AND FACTORIES

Snowcem has once again been chosen to redecorate for its attractive colour and waterproofing qualities!

Easy to mix, easy to apply, Snowcem does not rub, flake or peel off...can be cleaned. Provides a hard, durable, waterproof and damp-proof surface. Ideal for both interiors and exteriors.

Snowcem is the *first* choice of builders—for hospitals, offices, factories, housing colonies, hotels and other structures.



For decoration plus protection... Snowcem—the coating that lasts!

Range of 19 Attractive Shades

BN-9.43

THIS ANNOUNCEMENT IS NOT A PROSPECTUS, AND PERSONS INTERESTED IN THE MATTER ARE REQUESTED TO APPLY FOR A COPY OF THE PROSPECTUS FOR FULL DETAILS.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for correctness of any of the statements made or opinions expressed with regard to them.

The Central Government has granted necessary licences and/or approvals, viz., Industrial Licences, Import Licence, etc., for the manufacturing programme of the Company, copies of which are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting these licences and/or approvals, the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of the Prospectus together with the copies of the documents specified therein as required under Section 60 of the Companies Act, 1956, has been duly filed with the Registrar of Companies, West Bengal, for registration.

Application has been made to the Calcutta Stock Exchange for permission to deal in and for official quotation for the shares of the Company.

The Subscription List will open both in respect of Equity and Preference shares at the commencement of banking hours on Thursday the 27th September 1962 and will remain open until the close of banking hours on Thursday the 4th October 1962, unless closed earlier at the discretion of the Directors, but not earlier than the close of banking hours on Wednesday the 3rd October 1962.

ASIAN REFRACTORIES LIMITED

(INCORPORATED AS A PUBLIC COMPANY ON 20TH SEPTEMBER 1960, UNDER THE COMPANIES ACT, 1956.)

Registered Office: **5, Fairlie Place, CALCUTTA**

SHARE CAPITAL

AUTHORIZED CAPITAL .. .. **Rs. 1,00,00,000**

Divided into :

(1)	25,000	9.3 per cent cumulative Redeemable Preference shares of Rs. 100 each (free of Company's tax but subject to deduction of tax at source at the prescribed rates)..	Rs. 25,00,000

PROSPECTS/PROFITABILITY AND TECHNICAL COLLABORATION

The Company propose to manufacture high alumina firebricks shapes and blocks and castable refractories which have got a ready market.

The necessary licences have been granted for production of 24,000 tons firebricks and 6,000 tons silica bricks a year. Its machinery and equipment which will be of the latest type will be imported from Poland and will have a guaranteed capacity of 30,000 tons firebricks and silica bricks a year. The erection and operation of the plant will be carried out under the technical advice and guidance of Polish technicians belonging to Messrs. Cokop, Warsaw.

Dr. S. Banerjee, M.Sc., Cal., Ph.D. (Sheffield), A.M. Inst. F. (London), A.M.I.I. Chem.E. (India) F.I.C. (India), who has had considerable experience in the refractory industry both in India and the United Kingdom, has been appointed General Manager of the Factory.

Messrs. Cokop has also accepted the deferred payment terms under which the prices of machineries supplied by them shall be paid by 8 half-yearly instalments over a period of 4 years and the rate of interest shall not exceed 4½ per cent. The deferred payment terms as mentioned above has received the approval of the Government of India.

On the basis of existing prices the Directors are of the opinion that in the absence of any unforeseen circumstances, the estimated profits after providing for dividends on Preference Shares, payment on instalment to the Industrial Finance Corporation of India and the allocation of reserves, will be such that the Company should be in a position to pay a reasonable dividend on Equity Shares. The commercial production is expected to begin by the end of 1963.

INDUSTRIAL FINANCE CORPORATION

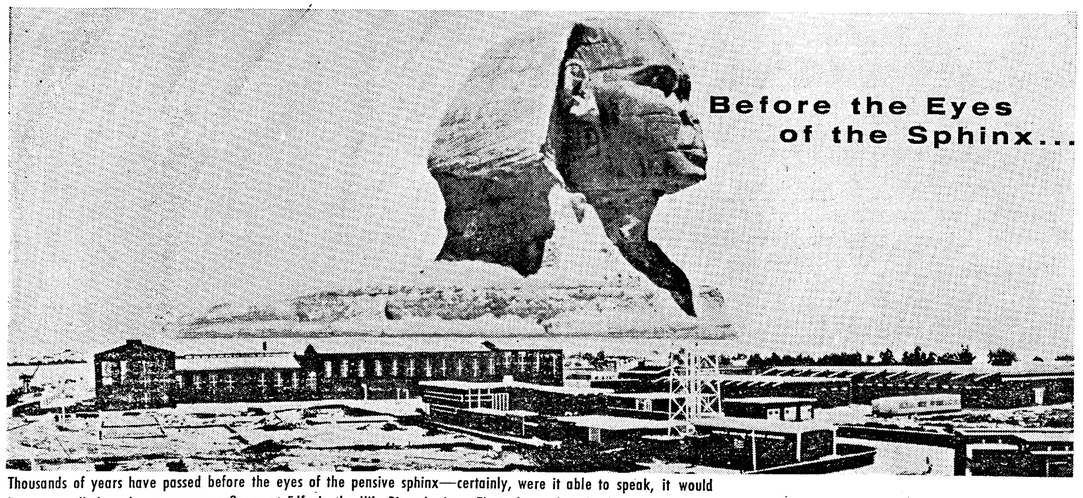
The Industrial Finance Corporation of India has sanctioned a loan of Rs. 35 lacs to the Company against its block assets and has also agreed to underwrite the shares under issue to the extent of Rs. 5 lacs. The interest on the loan granted shall be 7½ per cent and the instalments for repayment of the loan are easy, as usual.

LOCATION

Availability of necessary raw materials and power, advantageous transport and communication facilities, etc., have made the State of Bihar most conducive to the establishment of a Refractory Plant there. Hence, the technical personnel of the Company as well as the collaborating Polish technicians opined that the Plant be situated somewhere in Bihar, Preferably in the District of Hazaribagh. In accordance with that the Company provisionally chose a plot of land and has moved the Department of Land Acquisition, Government of Bihar, for acquiring the said plot. It is expected that the matter shall be finalised very shortly.

Application forms along with copies of the Prospectus on the basis of which alone the shares will be allotted can be had from the Underwriters and Brokers to this issue as mentioned above or from any of such branches of the Bankers to the issue, the names of which appear in the application forms appended to the Prospectus.

Copies of the Prospectus and documents mentioned therein are open for inspection at the Registered Office of the Company on any working day during office hours until the subscription list is closed.



Thousands of years have passed before the eyes of the pensive sphinx—certainly, were it able to speak, it would have marvelled at the new sugar refinery at Edfu in the Nile River basin. The advanced technology of this completely up-to-date plant with a capacity of 4,000 tons per day, built by Shin Mitsubishi, has earned the plaudits of the industrial world. Fertilizer, Paper mill, textile, and bottling plants have also been built in Asian and other countries.

The Company's eight departments cover all of man's activities on land, sea, and air, producing ships, prime movers, steel structures, railway rolling stock, motor vehicles, agricultural machinery, aircraft, and numerous other types of industrial equipment.

INTERNATIONAL FINANCE CORPORATION

COMMITMENTS SO FAR AGGREGATE OVER $62 MILLION

THE International Finance Corporation made nine investment commitments aggregating $18.4 million and one underwriting commitment of $2.9 million during the year ended 30th June 1962 for the financing of productive private enterprises in seven different countries, according to the sixth annual report of the Corporation. The investments were components of larger financing transactions, usually helping to complete projects in which entrepreneurs and other investors, both domestic and international, had provided substantially more than the I.F.C. commitments. Inclusive of these commitments, the total investment commitments made by the Corporation to date amount to over $62.46 million, the number of commitments being 53 in 20 countries. A summary of the commitments is given in the accompanying table.

An important development of the year 1961-62 was the approval by the Board of Governors of an amendment to the Articles of Agreement removing the restriction on equity investment and enabling the Corporation to make its first investments in equity form and to agree to participate for the first time in an underwriting of common shares. A new Development Bank Services Department was organised and other changes were made in staff organisation. The Department is responsible for taking the lead in the consideration of all proposals for financial and technical assistance to industrial development banks by the World Bank and its affiliates, I.F.C., and the International Development Association. An international advisory panel of five distinguished investment bankers was created to serve as advisers to the I.F.C. The five bankers are Dr. Herman J. Abs, Director, Deutsche Bank A.G., Frankfurt; Viscount Harcourt, Managing Director, Morgan Grenfell & Company, London; Mr. Andre Meyer, Senior Partner, Lazard Freres & Company, New York; Baron Guy de Rothschild, a partner in de Rothschild Freres, Paris; and Mr. George D. Woods, Chairman of the First Boston Corporation, New York. From time to time throughout the fiscal year, these bankers provided counsel on investment problems. Their advice enabled the I.F.C., as a development institution, to have the benefit of the private investor's judgment on investments. Mr. Woods, in addition, has given assistance in efforts being made by I.F.C. to advise in the organising of a privately owned development bank in the Philippines.

The I.F.C. completed in two of its member-countries its first studies of the possibilities of developing particular industries. One of these pertained to the survey of the potentialities for private investment in the chemical industry of Iran. In Venezuela, the I.F.C. collaborated with the Corporation de Fomento, a Government agency which supports private industrial development, in making a feasibility study of the potentialities for the development of meat packing and related industries.

The I.F.C. investments of 1961-62 were in various types of productive private enterprises. It made its first investment in Spain, assisting a manufacturer of electrical components for automobiles to expand operations. Its $3-million investment was partly in loan form and partly in equity and was the first in which capital stock was purchased directly as part of the Corporation's original investment commitment. The other investments included $4 million in a new cement plant in Pakistan, $2.4 million in the expansion of a cement plant in Peru, $3,050,000 in a petro-chemical plant in Argentina, $600,000 in a new fertiliser plant in Greece, I.F.C.'s first undertaking in that country, and a small supplemental investment in a fertiliser plant in Peru.

In another phase of equity financing, the I.F.C.'s first underwriting took place in Mexico. In June, it formed a syndicate with Credito Bursatil, S.A., a Mexican investment house, to underwrite an issue of capital shares of the largest private steel company in Mexico. Three private investment banks, two U.S. and one European, joined the Corporation as participants, taking up about one-third of its underwriting commitment. The offering to the shareholders aggregated an equivalent of about $4 million. The commitment of the I.F.C. and its participants in the underwriting syndicate was 75 per cent. Credito Bursatil's commitment was 25 per cent. In addition to the underwriting, the I.F.C. agreed to purchase outright 128,000 shares of Fundidora common stock.

I.F.C.'s Commitments—A Summary
(As on 30th June 1962)

Name of country	No. of commitments	Net commitment in U.S. dollars	Type of business
India ..	2	1,575,000	Refractory bricks; pumps, compressers and valves.
Pakistan ..	3	5,379,705	Steel products; cotton textiles; cement.
Argentina ..	3	8,210,000	Steel; automotive transmissions and gears; petrochemical.
Australia ..	3	975,000	Lumber and mill products; rubber.
Brazil ..	6	10,057,000	Electrical equipment; pulp and paper; automotive parts; motor vehicles; cement; pulp.
Chile ..	4	5,800,000	Copper mining and smelting; food products; cement.
Colombia ..	7	6,893,730	Fibreboard; food products; metal cans; home furniture; electrical equipment; industrial financing.
El Salvador ..	1	140,000	Textiles.
Finland ..	2	2,031,000	Textiles; pulp, lumber, machinery and shipbuilding.
Greece ..	1	600,000	Fertilisers.
Guatemala ..	1	200,000	Flour milling.
Iran ..	2	300,000	Ceramic tiles.
Italy ..	1	960,000	Electrical equipment.
Jamaica ..	1	224,000	Pre-mixed concrete.
Mexico ..	4	2,526,400	Industrial equipment; aircraft engine overhaul; twist drills; steel.
Peru ..	5	7,313,290	Household appliances; limestone and bricks; building material; ammonia and fertilisers; cement.
Spain ..	2	3,000,000	Automotive electrical equipment.
Tanganyika ..	2	2,500,000	Sugar.
Thailand ..	1	300,000	Concrete products.
Venezuela ..	2	3,176,000	Steel; food products.
Total ..	53	62,461,125	—

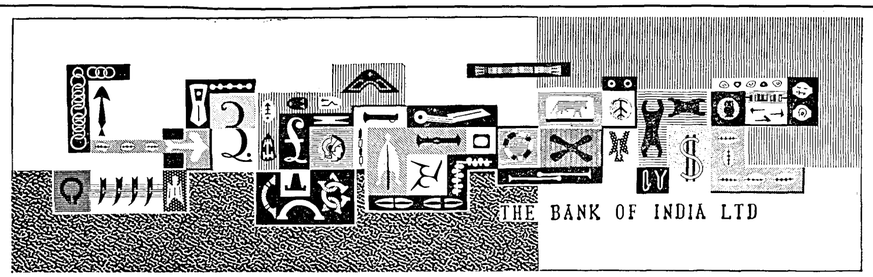
The total funds available with the I.F.C. for operational activities increased during the year under review by $4.5 million to a cumulative total of $120.7 million. The cumulative total of investment commitments (net of cancellations) reached $62.5 million (plus the $2.9 million underwriting commitment), while uncommitted funds available for operational activities as of 30th June 1962 declined to $55.3 million. Net income for the year was $2.6 million.

Disbursements were $11.9 million, bringing the cumulative total of funds disbursed as of 30th June 1962 to approximately $45 million.

Five new countries joined the I.F.C. during the year, including the Dominican Republic which rejoined. The others were Cyprus, Liberia, New Zealand, and the Syrian Arab Republic. Indonesia withdrew in February. The net effect of the changes in membership was a reduction of $107,000 in subscribed capital. At the close of the year (June 1962), 63 countries were members of the I.F.C., their paid-in subscriptions aggregating $96,469,000.

WORLD BANK'S BOND ISSUE

The World Bank has arranged the sale, entirely outside the U.S., of a $100-million issue of U.S. dollar bonds. The sale, at par, was made by private placement with 53 institutional investors in 25 countries. The new bonds will be known as the "Two-Year Bonds of 1962," and will bear interest of 3¾ per cent, payable semi-annually, with the first payment due on 1st April 1963. The issue is dated 1st October 1962 and matures on 1st October 1964. Subscriptions received for the issue were greatly in excess of the principal amount of bonds to be sold, indicating keen investor interests in them. Purchasers included central banks, government special accounts, and privately-owned commercial banks, insurance companies and corporations.



This is the impressive 84 feet x 18 feet mosaic mural on the outside of the Bank's new building in Kampala, East Africa. The mural depicts many of the tokens used as coinage in various parts of the world through the centuries.

THE BANK OF INDIA LTD., at present has Overseas Branches at: LONDON, MANCHESTER, NAIROBI, KAMPALA, MOMBASA, JINJA, DAR-ES-SALAAM, ADEN, KARACHI, SINGAPORE, HONG KONG, TOKYO & OSAKA. With these Overseas Branches and a network of over 500 correspondents in almost all parts of the world, THE BANK OF INDIA LTD., is well equipped to handle Foreign Exchange Business of every description.

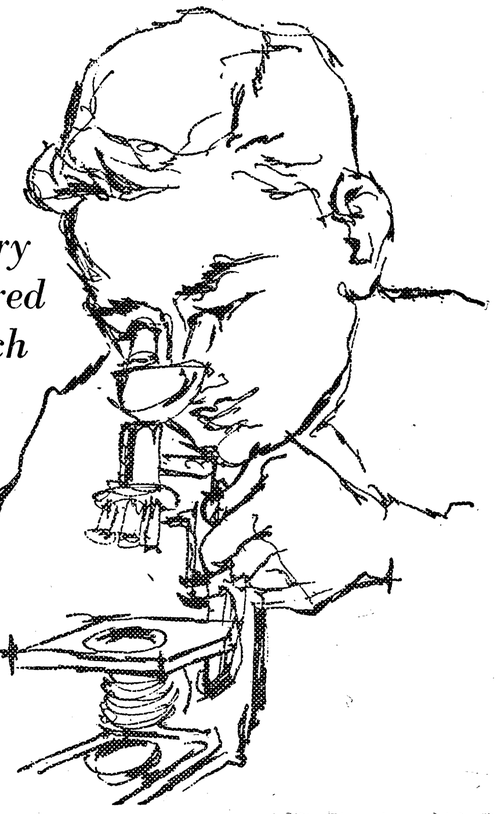
An Industry Nurtured by Research



'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

WORLD GOLD OUTPUT TOUCHES A PEAK

LARGE-SCALE DIVERSION TO PRIVATE HOARDS PERSISTS

WITHIN a fortnight after the Lok Sabha passed the Industries (Development and Regulation) Amendment Bill empowering the Government of India to exercise control over the supply, production and distribution of gold (and silver), the Reserve Bank is understood to have launched the first major step in making a detailed study of the volume and purpose of trading in gold (spot) in the different bullion markets. It is reported that the Bank has sent a circular to all the bullion associations to submit data relating to arrivals, offtake and other details of spot gold transactions in the past ten years. From out of the data collected, the Reserve Bank will estimate (a) the quantity of smuggled gold that has found its way into the open market at different centres of trading at different times in the past ten years, and (b) the volume of additions to private gold hoardings or de-hoarding from time to time at different centres. The findings of the Reserve Bank will presumably form the basis for the Government to finalise the ways and means of mobilising the hoarded gold for the benefit of the country's economic development. Whatever be the merits or demerits of the Government's move to mobilise hoarded gold, the fact remains that the continued diversion of gold to private hoards is causing great concern to the monetary authorities. The Government may, perhaps, justify its move by quoting the International Monetary Fund which, in its latest annual report, observes:

"Even with the improvements that have taken place in the reserve strength of many countries, it is still in the best interest of Fund members that, as far as possible, gold should be channelled into official reserves, rather than into private hoards. Only as gold is held in official reserves can it be used by monetary authorities to maintain stability of exchange rates and to meet balance of payments needs."

The I.M.F. has naturally been prompted to make this remark by the large-scale diversion of gold into private hoards. Its estimate is that as much as $7.3 billion worth of gold was used in the arts and industries or disappeared into private hoards during the twelve years ended December 1961. This is equivalent to well over half the total supply during the same period of gold from new production outside the Soviet area and sales by the U.S.S.R. and countries associated with it.

35 Million Ounces

The aggregate free world production of gold continued to expand during 1961, touching a new post-war peak for the eighth consecutive year. The quantity actually produced was 35.0 million oz., as against 33.7 million oz., representing a rise of nearly 4 per cent. Valued at the internationally fixed price of $35 per fine oz., the free world output amounted to $1.220 million, as compared with $1.175 million in 1960 and $1.125 million in 1959. The value in 1961 was about 66 per cent more than the post-war minimum of $736 million in 1945 and only about 4 per cent less than the all-time peak of $1.264 million attained in 1940.

Almost two-thirds of the world production of gold in 1961 were accounted for by South Africa which produced 22.9 million oz. ($802.9 million), an increase of 1.6 million oz. ($54.5 million) or more than 7 per cent over 1960 and was double the 1951 level. Further increases are considered likely, as the new mines in the Orange Free State and on the Far East Rand develop. The second largest absolute rise in gold production during 1961 was recorded in Japan, where output improved by the equivalent of $1.4 million to about $13.2 million. Gold production also increased in Nicaragua by $1 million to $7.9 million. The output in India, Australia and the Philippines was practically unchanged. There was, however, a fall in gold output in most of the other producing countries, as will be seen in Table A.

The gold mining industry in several countries, we are told, is concerned about rising costs and declining production. Where possible, mines have shifted to the production of higher grade ore, but some mines have been unable to do this and some Governments have found it necessary to render financial assistance to producers by means of tax reductions or direct subsidy schemes.

The aggregate stocks of gold held by the monetary authorities in the free world (including the I.M.F., the Bank for International Settlements and the European Fund) are estimated to have gone up during 1961 by about $605 million to $41,100 million, as against the actual increase of $340 million in 1960 and $230 million in 1951. The rise was more marked in the years 1959, 1958 and 1957, being $695 million, $680 million and $705 million, respectively. The changes in world gold reserves that took place during 1961 are indicated in Table B, while Table C shows the variations in the official holdings of gold in different countries.

Less than half the gold becoming available since 1950 has been added to official stocks. In 1960, the proportion fell to about 25 per cent and in 1961 it was 40 per cent. Since changes in private hoarding are affected chiefly by changes in confidence, there is some relation between additions to official reserves and the world balance of payments. However, this connection, according to the I.M.F. review, is likely to be imperfect, because the state of confidence is not necessarily based on a sound appraisal of current and prospective economic developments.

In the last five years, countries other than the U.S. and the U.K. have increased their gold holdings much more rapidly than their foreign exchange assets. They held 39 per cent of their reserves in gold at the end of 1956, and 48 per cent of a greatly increased total at the end of 1961. This rise reflected in part an increased preference of individual countries for gold; but it was also due to a larger-than-average increase in the reserves of some countries whose established policies called for a high percentage of gold to total reserves.

Between the end of 1958 and the end of 1961, several individual countries altered substantially the proportion of their reserves held in gold. The U.K.'s reserves over the three years increased by $219 million, but its estimated gold holdings fell by $550 million, reducing these holdings from 92 per cent to 69 per cent of its total reserves. West Germany and the Netherlands, on the other hand, added $1,025 million and $531 million respectively, to their holdings of gold, which thus rose from 46 per cent of the total reserves in Germany, and from 71 per cent to 92 per cent in the Netherlands. At the end of 1958, however, the reserves of both countries included large amounts of E.P.U. credit balances which are excluded entirely from the 1961 figures (having been converted after 1958 into bilateral claims, of which about $260 million were still due to Germany and $9 million to the Netherlands at the end of 1961). The German reserves at the end of 1958 also included relatively large amounts of assets having only limited usability. If these and the E.P.U. balances are both excluded from the figures of total reserves, the proportion of gold held by Germany fell from 60 per cent at the end of 1958 to 56 per cent at the end of 1961, and the proportion of gold held by the Netherlands rose only from 82 per cent to 92 per cent. Italy added $1.139 million to its gold holdings and $200 million to its foreign exchange, increasing the proportion of the former from 52 per cent to 65 per cent of total reserves.

Russian Sales

Russian sales of gold in Western Europe during 1961 have been estimated at $275 million. Since the value of gold output outside the U.S.S.R. was $1.220 million, the total increase in the amount of gold available to the rest of the world may be estimated as being of the order of $1,500 million. A comparison of these supplies with the estimated aggregate increase of about $605 million in official gold holdings suggests that, in 1961, the equivalent of about $890 million was absorbed by private holders and the arts and industries, about $150 million less than in 1960.

During and since World War II, New York has been the principal centre of the world for transactions in monetary gold by Governments, central banks, and international financial institutions. It does not provide a gold market like London, Paris, and Zurich, where the price fluctuates from day to day, or where private purchases may be made for various purposes. It is the centre through which the U.S. Treasury is prepared to buy gold for official monetary purposes in unlimited amounts at $34.9125 a fine ounce and to sell it at $35.0875. In this way, the world official price for gold has been kept stable since 1934. Many central banks, governments, and international financial institutions find it to their advantage to have a substantial portion of their gold reserves earmarked at the Federal Reserve Bank of New York, to meet their monetary requirements. Substantial movements in and out of these reserve accounts have been recorded over the years.

Monetary Gold Holdings

Of the total gold holdings of the monetary authorities of the world, excluding those of the U.S.S.R. and associated countries, $28.9 billion (70 per cent) were physically located in the U.S. at the end of 1961. Between the end of 1957 and 1961, the U.S. Treasury's net sales of gold, principally to Western European countries, amounted to $5.9 billion. During the same period, gold held under earmark by the Federal Reserve Bank of New York for the account of foreign central banks and governments and international financial institutions rose by an equivalent amount to a total of $11.9 billion. In addition to substantial purchases from, and sales to, the U.S. by foreign monetary authorities, there were other movements of gold in 1961 between foreign accounts as a result of gold transactions facilitated by the services of the Bank for International Settlements and of the Fund.

While changes in normal market factors of supply and demand were mainly responsible for the lower level of gold prices, the extension of international financial co-operation to the London gold market also added to the stability of gold prices. The understanding between central banks participating in the "Basle arrangements" has been of an informal character, subject to change from time to time as circumstances warrant. Important elements in this co-operative approach included the avoidance of competitive buying, and the supply of gold to the market in certain circumstances.

During 1961, a total of 2,505 bars of gold, weighing 1,010,000 fine ounces, was sold by the South African Reserve Bank to buyers resident outside the sterling area. Early in February 1962, the Republic of South Africa announced a decision, in response to an approach made by "financial circles abroad," to export a "test consignment" of South African two-rand gold pieces. It was said that larger quantities of these coins would be sold later on the foreign market if the experiment were successful.

In other markets where bar gold is traded directly for U.S. dollars, the prices deviated very little from the London dollar price during the period under review. In markets where gold is traded in local currencies, the prices in general tended to move in the same direction as those in the London market, even though in these markets the day-to-day movements of the U.S. dollar equivalent prices may diverge from those of the London prices because of exchange rate fluctuations and the special characteristics of each market.

The price of gold coins in most free markets continued the general upward trend that had begun in mid-1960, reaching in January 1962 the highest premiums over the value of bar gold that have been recorded in recent years.

Gold Transaction Service

The I.M.F. facilitated last year, under the Gold Transactions Service, the completion of five transactions amounting to a total of $27 million. Including these, the aggregate number of transactions since this Service was inaugurated in March 1952 comes to 119 through which 25 member countries and five international organisations have purchased or sold gold equivalent of $1,083 million.

The review of the changes in national policies affecting gold as contained in the I.M.F.'s survey reveals that, pursuant to the Foreign Trade and Payments Law which came into force in West Germany on 1st September 1961, there are now no restrictions in that country on gold transactions between residents and non-residents or on the export and import of gold. The import of gold originating from any one of the countries in the Soviet area, however, requires a special licence. Since December 1961, import of gold into Iran, except by the central bank itself, has been prohibited. The Government of Hungary has minted gold coins in denominations of 500, 100, and 50 forints in commemoration of the 150th anniversary of the birth of Franz Liszt and the 80th anniversary of the birth of Bela Bartok.

Gold Subsidy

The gold subsidy programme of the Governments of Australia, Canada, and Colombia were still in operation during the year. In October 1961, Australia consulted the Fund with regard to a modification of its system of gold subsidies, designed to remove inequities which had arisen because of the previous sharp distinction between "small" and "large" producers. The modification makes it possible for those "large producers" whose annual output is more than 500 but not more than 1,075 ounces to become eligible, if they so elect, for payment of a flat-rate subsidy irrespective of costs and profits. The rate of subsidy that is payable to such producers diminishes from £A2 8s. an ounce at an annual output of 500 ounces to *nil* at an annual output of 1,076 ounces. The amendment involves no change in the basic structure of the subsidy scheme described in the Fund's Annual Reports for 1955, 1958 and 1960, which has been extended to 30th June 1965. In June 1961, the Philippine Republic reintroduced direct subsidies to gold producers. The Fund deemed the modified system of Australia and the new arrangements adopted by the Philippines to be consistent with the objectives of the Fund's statement of 11th December 1947 on gold subsidies. The Fund members considering the introduction of subsidy schemes to prevent the reduction of output of gold, as well as those desiring to amend existing programmes, have an obligation to consult with the Fund on the measures proposed.

Tower Bridge, London one of the 43 cities in Europe served by KLM

What you should know about the remarkable reliability of KLM before your next flight to Rome, Frankfurt, Zurich, Amsterdam, Paris London, or any of 37 other cities in Europe

KLM carries an average of 3830 passengers every day—about twice the capacity of a big ocean liner. More than 30 per cent of KLM's maintenance work is done for other airlines. A remarkable vote of confidence in KLM reliability. Read 20 other facts about KLM.

1. A KLM plane takes off or lands every four minutes somewhere in the world.

2. KLM flies to 43 cities in Europe alone—and to every continent on earth.

3. A KLM DC-8 jet leaves for Europe every Tuesday from Calcutta, every Saturday from Delhi and on Mondays, Wednesdays, Thursdays, Saturdays and Sundays from Karachi.

4. KLM was the first airline to carry freight to the Far East. Today it is one of the leading air-cargo carriers to operate worldwide.

Experienced crew

5. A KLM pilot achieves rank by hard work. After twelve years of flying, he may become a Pilot First Class.

6. Every KLM stewardess takes a special course in baby care during training and loves to look after children during the flight. KLM provides many special services for young travellers.

7. Two senior KLM stewardesses fly KLM's world-wide routes constantly to check that standards of service are being maintained.

DC-8 jet—never out of radio contact

8. KLM's DC-8 jets are never out of direct radio contact with a ground station. When they leave the area of the airport they have just left, they immediately tune into the next airport. The captain himself does most of the talking.

9. A DC-8 jet is an intercontinental jet. It has a hundred subtle refinements. KLM engineers installed what years of experience have taught them are the most reliable, navigational, radar and communications equipment.

10. Every KLM DC-8 jet carries about two hours more fuel than it needs—enough to fly an extra 1,100 miles. An expensive precaution. The extra fuel load is equivalent to 12,000 kgs. (26,460 lbs.) of paying freight.

Service on board

11. KLM chefs cater for special diets. Specify your diet when you book your seat. Meatless meals are usually available on Fridays on European runs and between the US and Amsterdam. Oriental food and vegetarian food are available, too.

12. KLM loves babies. It supplies cots that hook firmly to the racks, leaving mother's lap uncluttered. Your stewardess helps prepare your baby's food.

13. For older children, KLM carries a mysterious bag of tricks filled with toys and games and picture books that keep children quiet for hours on end.

Via attractive Amsterdam

14. KLM's westbound DC-8 jet flights from Calcutta and Delhi depart at a very convenient time (on Tuesdays at 20.20 hours from Calcutta and on Saturdays at 22.00 hours from Delhi.) The arrival times in Rome, Zurich, Frankfurt and Amsterdam are convenient too—next morning.

15. Both these services offer same day connections at Amsterdam to London, Glasgow, Paris, Hamburg, Copenhagen, Stockholm, Oslo, Stuttgart and many other cities in Europe.

16. KLM also offers you a choice of five DC-8 jet flights a week to Europe from Karachi, providing same day connections at Amsterdam to many major cities in Europe. Convenient connecting flights to Karachi available from Bombay and Madras as well as from Calcutta and Delhi.

17. Holland Minitours may be varied to suit individual tourist taste. They usually include a visit to Diamond-cutters' workshops, a flower auction, a museum and a boat tour on Amsterdam canals.

18. Amsterdam's central location makes it the natural hub for your European tour. It offers excellent opportunities for travel by boat, road, rail, or air to all of Europe.

19. Make a point of routing your European trips through Amsterdam for the Tax-Free Shopping bargain.

20. Ask your KLM travel agent about the many stopover opportunities available on the KLM Multi-Stopover Plan. In many cases you may be able to fly to several extra cities, not necessarily on the direct route, at no extra air fare!

CAMPHOR AND ALLIED PRODUCTS LTD.

MR. N. K. PETIGARA EXPLAINS DELAY IN PRODUCTION

MR. N. K. Petigara, Director of the Camphor and Allied Products Ltd., told the shareholders at the First Annual General Meeting of the Company, held at Bombay on Wednesday, 12th September 1962, that the Company's plant would go into production in April or May 1963. The original schedule of putting the plant into operation, by December 1962, he said, had to be modified on account of two factors beyond the control of management, namely delay in the matter of land for the factory site and the unduly late opening of the letter of credit in favour of the Company by the World Bank owing to the technical requirements arising from the agreement between the I.C.I.C.I. and the Bank.

The following are extracts from Mr. Petigara's speech at the annual meeting:

"LADIES AND GENTLEMEN,

"The total land requirement for the project is about 22 acres. Land admeasuring 9.97 acres has been purchased from the Indian Bobbin Company Ltd., Clutterbuckganj, which is four miles from Bareilly. The Company has paid a deposit and already taken possession of the adjoining land admeasuring about 12 acres from the Forest Department of the Government of Uttar Pradesh. The purchase deed is now under finalisation. The total cost of the land is expected to be approximately Rs. 3.05 lakhs.

"The construction of the buildings for the various factory units is proceeding at a satisfactory rate. The power requirement not only for the camphor plant but also for future expansion, rising, in stages, up to 2,000 KVA., has been sanctioned by the authorities and will be drawn from the Harduaganj Extension Hydel Scheme. Two tube-wells are being sunk and pumps and auxiliary equipment are being installed to ensure adequate water-supply for the entire project.

"Arrangements are being made for the construction of suitable sidings between the metre-gauge and broad-gauge railway tracks which are adjoining the plant site to facilitate the receipt of plant equipment, raw materials and the despatch of finished goods.

Supply of Machinery

"As stated in the Directors' report, the superstructure of the plant building is expected to be completed by November 1962. As regards the supply of machinery, I am very happy to state that since the printing of the Directors' report, the first consignment has already been shipped from the U.S.A., and, the first consignment of indigenous machinery has been received at site. Most of the equipment, both foreign and indigenous, is expected to reach the site by the end of the year. The erection work is expected to be completed by March or April 1963, and thereafter, the trials, for which we have obtained performance guarantee jointly from Messrs. American Hydrotherm Overseas Corporation and Messrs. R. L. Dalal and Co., will be undertaken. The plant should go into production, barring accidents and unforeseen delays, by April or May 1963.

"On the above basis, the plant can be in production for only eight months of 1963, and it may be expected to produce about 500 to 600 tons of synthetic camphor. It is believed that the annual demand for camphor in India is about 1,000 tons. Officially, imports through the State Trading Corporation of India Ltd. are to the extent of approximately 300 tons. There are grounds to believe that a major portion of the residual demand is met by illegal imports and/or by spurious products said to contain camphor. The present market price of powder camphor is about Rs. 30 per kilogram, while the wholesale price of the State Trading Corporation for the same powder is about Rs. 11.50 per kg. In view of the demand which should increase, and the prevailing prices, there should not be any particular difficulty in the sale of the Company's production at reasonable profit.

"It was anticipated that the factory would be set up and the production would be commenced by about December 1962. The original schedule for putting the plant into operation has had to be modified due to two factors over which the Company had no control. First, there was delay in the matter of the land for our factory site. Second, although the Industrial Credit and Investment Corporation of India Ltd. had asked the World Bank to open the Letter of Credit in favour of the Company, as early as May 1962, owing to the technical requirements arising out of the agreement between the Industrial Credit and Investment Corporation of India Ltd. and the World Bank, the Letter of Credit could not be confirmed till last month. These delays were unavoidable.

"Your Company will not only be a pioneer in the large-scale manufacture of synthetic camphor in the country but it will also be an organisation well equipped to exploit gainfully various intermediate and by-products. I would like, with your permission, to indicate briefly the potential of your Company.

"The basic raw materials for major organic chemical industries such as synthetic rubber, plastics and resins, synthetic fibres, dyes, drugs and industrial perfumes, are derived from: (i) petroleum and natural gas, (ii) coal and coke, (iii) industrial alcohol, and (iv) gum turpentine.

Turpentine as a Base

"The resources of the first three in the country are certainly not unlimited, and, therefore, your Company's pioneering effort, namely, the utilisation of turpentine as a base not only for the production of camphor but also of a wide range of intermediate chemicals for use in various industries, acquires particular significance.

"The Company has decided to take the initiative and to explore the possibility and profitability of these processes. A short-term project relating to the conversion of residual turpentine into an industrial solvent, for the paint, varnish and insecticides industries, and the manufacture of polyterpene resins from beta pinene has been planned. The long-term project visualised is concerned with the conversion of carenes into various useful and saleable products of high commercial value.

"Another matter which has received the attention of your Directors, is, ensuring the continued availability of formic acid which is one of the major chemicals involved in the camphor process. In order to minimise, and, if possible, to obviate, dependence on imports and other sources, your Directors have applied to the Government for a licence to set up a formic acid plant.

"In order to prepare for all the development plans, to which I have referred above, suitable research and pilot plant facilities are being provided to our personnel. You will be happy to know that our technical personnel are at the plant site and our Technical Director has already commenced acquainting our personnel with the technicalities involved in the various processes.

"To implement the above, the Company has obtained the services of Dr. Gastao Etzel who has specialised knowledge of this field. The Board is satisfied that Dr. Etzel formerly of 'Du Pont' and who is now your Technical Director, will be able to help the Company achieve both its immediate as well as long-term objects. He has come here not only to set up the camphor plant but also to implement other projects for the fullest industrial utilisation of residual turpentine, which I have outlined above. You are aware that Dr. Etzel was one of the senior chemists with Messrs. E. I. Du Pont De Nemours and Company, better known as 'Du Pont,' for several years. Incidentally, it may be added that ours is the only Indian concern so far to obtain technical 'know-how' from this internationally known firm.

"It was decided to shift the site to the State of Uttar Pradesh, where the largest number of tappable *Pinus longifolia* trees grow. The largest turpentine factory in the country is also situated in that State. The advantages of setting up our plant near that factory at Clutterbuckganj in Uttar Pradesh are thus obvious.

"Apart from being assured of the supply of a large quantity of turpentine from the State of Uttar Pradesh, steps have been taken to procure sufficient quantities from other States, and, as such, your Company does not anticipate any raw material problem in the foreseeable future. Indicative of the reasonable adequacy of raw material for your industry is the fact that the Government of India have decided not to permit the import of *Alpha pinene*."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

GROWING DEMAND FOR SPECIAL STEELS

PROSPECTS FOR EARLY MANUFACTURE AT BHADRAVATI

WITH the growth of engineering industries in recent years there has been an acceleration in their demand not only for pig iron and mild steel but also for alloy, tool and special steels which constitute some very essential raw materials. The imports of these alloy and special steels in 1960, for instance, were nearly 50,000 tons, as compared with just 21,000 tons in 1959. In the first eight months of 1961 alone, their imports came to as much as 45,000 tons, valued at nearly Rs. 10 crores. The figures thus show that the demand for special steels has been increasing at a very fast rate in recent years. Since they also happen to be high-priced steels—on an average, they cost more than Rs. 2,000 per ton, as compared with an average of Rs. 850 per ton in the case of ordinary steel products—their increased imports have added to the country's foreign exchange difficulties on maintenance account. Here, as in some other fields, the third Plan has inherited the legacy of the second Plan's failure to establish in the public sector an alloy, tool and special steels plant for which project reports were received from some foreign producers as early as in 1958.

Actually, it was only in November 1960 that the Government took the decision to establish at Durgapur an alloy and tool steels plant with an initial capacity of about 48,000 tons which could be later expanded to about 100,000 tons. Even this project, which now forms part of the third Plan and which will involve an outlay of Rs. 50 crores (with a foreign exchange component of Rs. 20 crores), does not seem to be progressing according to schedule. From what the Union Minister for Steel and Heavy Industries said recently at Bombay, it could be inferred that the Durgapur plant, which would incorporate some of the latest equipment and processes developed recently in advanced countries, might not start production before 1964 or 1965. But it is expected that the ordnance factories of the Ministry of Defence might function as a source of supply of alloy steels in the public sector. What part of their aggregate output, estimated at 50,000 tons per annum, will be available for civilian purposes is, however, not definitely known. As the projected demand for alloy and special steels is 200,000 tons by 1965 and the Durgapur plant and ordnance factories may meet, at best, only a third of this demand, either the private sector, to which a number of licences for establishing an aggregate capacity of about 150,000 tons has been given, should expedite its programmes or some other alternative project would have to be devised. As things stand, several licences issued to the private sector are stated to be dormant, and these run the risk of being revoked. From the point of view of foreign exchange expenditure, it will be a bad thing if the larger part of projected demand (200,000 tons) is not met by indigenous production by 1965.

Conversion Project

It is in this context that the Government's proposal to convert the projected "expansion" part of the Bhadravati Iron and Steel Works in Mysore into an alloy and special steel plant at a very early date seems to be most appropriate. It may be recalled here that the Union Minister for Steel and Heavy Industries, Mr. C. Subramaniam, offered recently to the Mysore Government Central assistance if it agreed to switch over its proposed ordinary steel expansion scheme (for raising steel production from 30,000 tons to 120,000 tons at a capital cost of Rs. 7 crores) to one of special steel manufacture. The Government has just received a project report from the West German firm of Demag whose experts were commissioned to draw up a programme for such conversion. This project report, which has just been brought from West Germany by the Mysore team, considers it possible to start the production of special steels by the end of 1963. It envisages the completion of the special steel manufacturing plant in three phases. In the first phase, 42,000 tons of alloy steel and 38,000 tons of commercial grade steel products could be produced annually. At the end of the second phase, the plant could produce exclusively special and alloy steel products to the tune of 77,000 tons a year. The third phase aims at 100 per cent utilisation of the L.D. steel works, the output of which could be increased from 80,000 tons to 120,000 tons a year provided the hot metal capacity is also correspondingly increased. It is envisaged that the alloy steel plant would have an annual capacity of 145,000 tons of alloy steel products on completion of the third phase.

The Demag report has assigned a number of reasons for the choice of Bhadravati. These are:

(i) Iron and steel have been produced in Bhadravati for a long time, and so experienced personnel and an efficient organisation are available there.

(ii) For many years, a charcoal blast furnace and two electric reduction furnaces have been operated at the Bhadravati Factory and the pig iron it is producing is, therefore, of very good quality, highly suitable for the production of special steels.

(iii) When the Demag plants, at present under construction at Bhadravati, are completed, it would be possible to employ the two existing 25-ton open-hearth furnaces, the two 12-ton converters at present under construction and the 20-ton arc furnace also under construction, with a few minor additions, in the production of alloy and special steels by the end of 1963.

(iv) The existing ferro-alloy furnaces in the Factory could produce different types of ferro-alloys, required in the manufacture of special steels.

(v) The conversion of the ordinary steel plant (expansion project) at Bhadravati into a special steel plant will involve a capital expenditure of only Rs. 15 crores.

Considering that an entirely new 48,000-100,000-ton alloy and special steel plant like the one under construction at Durgapur will cost as much as Rs. 50 crores, the Bhadravati conversion project, with an ultimate annual capacity of 145,000 tons and involving a capital outlay of only Rs. 15 crores, is any day a very attractive proposition. The Government of India should, therefore, lose no time in finalising the Bhadravati project. It will be a great relief to the engineering industries if this project is completed in time to produce those special and alloy steels so very necessary for the manufacture of machines and machine parts.

Complete in a single gesture, the grasp of tiny fingers conveys to a parent the exact meaning of the word... "CONFIDENCE."

Your family has confidence in you that you would provide for their future. You can give meaning to this confidence by setting up a SAVINGS ACCOUNT at CORPORATION BANK. It is the safest way for family security.

You can watch it work for their benefit. So why don't you open a SAVINGS ACCOUNT at any one of our 78 Branches?

EUROPE USING MORE ELECTRICITY

Consumption of electricity in Europe is increasing faster than industrial production. This is one of the main findings of the *Twelfth Report on the Electricity Supply Industry in Europe*, published last week by the Organisation for Economic Co-operation and Development. The difference between the rate of increase in electricity consumption and that for gross national product is attributed not only to the switch-over from other forms of energy but also to the rising standard of living which has led to increased household consumption.

The report, which covers the period 1959-60 and includes forecasts for 1961-66, notes that of the various fuels used in thermal plants coal, despite growing competition from fuel oil and gas, still is responsible for about 73 per cent of total conventional thermal output in a year such as 1959 when hydro conditions were about normal. 1960 was an exceptional year for hydro-electricity with the result that thermal production showed only a relatively small increase.

Production of electricity by nuclear power has already become a factor to be reckoned with in Europe, rising from 0.4 to 0.7 per cent of total thermal production between 1959 and 1960. This new means of producing electricity, the Report adds, is bound to develop considerably in the next 10 or 15 years.

The report draws special attention to the selection of sites for modern thermal power plants. Some 50 years ago thermal power plants were nearly always located inside the boundaries of the town for which it had to cater. Today, as a result of the development of grid systems and their high efficiency, it is often preferable to locate these power stations in industrial areas far away from residential districts. The siting of nuclear power stations also poses problems, due to the need for facilities to dispose of radio-active waste. On the other hand, fuel transport need not be taken into consideration.

Power station capacity in the O.E.C.D. European member-countries rose from 134,566 M.W. in 1959 to 143,714 M.W. in 1960—an increase of 6.8 per cent. In many cases, this increase in generating capacity has been achieved by introducing increasingly powerful generators. 125 M.W. units are now being replaced by 250 or 275 M.W. units and in the near future this will be superseded by 500 or 550 M.W. units.

With regard to the future, the report states that the increase in consumption of electricity is likely to remain fairly steady despite fluctuations in economic activity due to an ever-growing use of electricity. The fact that this trend is continuing in countries where annual consumption is above the European average, for example the United States, suggests that it will persist for some time. In Europe it will therefore be necessary, during the next 10 years, to build a generating capacity equivalent to that in service in 1960. This need, the report states, is now all the more cogent in view of the decision of the Council of O.E.C.D. to increase the aggregate gross national product by 50 per cent between 1960 and 1970.

The unit capacity of the thermal generating units and power stations is growing considerably in step with consumer density and the development of highly concentrated areas of electricity consumption. This means that in the future very high capacity units must be installed to make production rational. This fact and its implications for the siting of stations suggests that the development of transmission in the countries of Western Europe will take the form of power lines which are comparatively short but of very high capacity with the exception, of course, of special cases where long distances have to be covered, such as in Scandinavia.

NEW TYPE OF BRITISH CARGO SHIP

A new cargo ship which introduces an extensive system of remote and automatic controls left Britain on the 17th inst. on her maiden voyage to India and Pakistan. She is the 9,039-ton (gross) *Clan MacGillivray*. The new system of remote and automatic controls has been built in to overcome the problem of a shortage of seagoing engineers and, at the same time, reduce running costs. It has resulted in a total saving in manpower in the engine room of 20 per cent—a figure that is thought likely to improve when operating experience has been gained.

The engineers, it is claimed, will be able to work under more favourable conditions than in other ships. The remote and automatic controls and the main control board are located in an air-conditioned room. The main engine-manœuvring controls in the control room are mechanically connected to the engine. The oil-burning installations for the boiler are fully automatic. There are push-button starting and stopping controls for all the main pumps.

Another new development is the provision of a salt-water main supplied by four centrifugal pumps which, with other modifications, has led to a reduction in the number of salt-water pumps and of some 250 pipes in the engine room. Fitted with 17 derricks for cargo-handling, the ship has one derrick with a lifting capacity of 60 tons. The wheelhouse and chartroom are combined, and a departure from tradition is the provision of an adjustable seat for the helmsman. The *Clan MacGillivray* has a service speed of 16½ knots.

NEW PRODUCTS AND PROCESSES

Lifting Magnet

A STURDY self-contained battery-operated lifting magnet suitable for use with fork lift trucks, mobile and overhead cranes, for the loading and unloading or movement of machine tools, machine parts, has been produced by Rapid Magnetic Ltd., England. This new magnet is available in three types to handle loads of one, two or three tons. Advantages claimed over conventional lifting magnets of similar capacity are: low running costs; independence from external electricity supply; and complete absence of slings and ropes. Normal operation is by a switch contained on the units, marked Lift, Drop and Off, but remote control facilities are also available. An ammeter is fitted to the units to indicate the need for recharging and a plug for a trickle charger.

Wireless Equipment for Light Planes

A new transmitter-receiver, offering economical ground-to-air communications for light planes and gliders, produced by Burndept Ltd., England, has 11 channel selections among the 400 channels available in the 116-136 mc/s VHF at 50 kc/s spacings. Its main economy advantage is lower power drainage resulting from part-transistorisation; and it is also suitable for use with stations still equipped with transmitters employing 100 kc/s-spaced channels. The "transceiver" consists of two units—transmitter-receiver and modulator-power supply. The set is crystal-controlled on both "transmit" and "receive" with the crystals being easily changed. Input voltage is either 12-V or 24-V according to the setting of a subminiature multi-way plug on the power unit.

Control Valve

Many of the problems which occur in the high speed pressure refuelling of modern airliners may be overcome by the use of a new hose and pressure controller produced by Zwicky Ltd., England. Developed in collaboration with a major British petroleum company, the device is about the same size and weight as the standard valves in use, but contains apparatus for sensing and controlling the pressure at which fuel is fed into an aircraft. It is estimated that with the new controller, fuel can be delivered at "full pressure through to the last pint," at the maximum permitted pressure, when the valve will automatically close more quickly than the reaction time of a standard valve. Any change in the surges of pressure coming back from the tank is sensed immediately with an instantaneous valve closure reaction.

Electronic Seam Scanner for Textile Webs

An electronic measuring and control equipment factory, Electrotex, in Enschede, Holland, has designed a seam scanner which scans, fully electronically, all seams present in textile webs. The device can be supplied in two different models. In the simpler of these, the device only produces a signal when detecting various types of seams, such as chainstitch seams, so-called overlock seams, and calender seams, in a continuous web of fabric. Scanning performance cannot be affected by such occurrences as, say, a thick side thread or local thickening of the fabric itself. The more intricate version of the scanner, after signalling the seam, controls: (a) the time which elapses between the passage of the seam through the detector head and the raising of the calender or shearing roller; (b) the roller lifting time. These time intervals, which can be set to suit relevant operating conditions, are regulated by an electronic control mechanism which receives its initial impulse from the detector head as the seam passes through it. The impulse for raising the roller, emitted by the control mechanism, may be passed, for instance, to a magnetic valve incorporated in the calender's pneumatic or hydraulic system. In the case of a shearer, the impulse can be made to actuate the mechanical raising device by means of a lifting magnet. The advantages of the scanner are: labour-saving. The element of human error is thereby removed, and hence, damage to expensive rollers and shearing gear is no longer likely.

Pneumatic Steel-making Process

A pneumatic steel-making process has been invented in Luxemburg, according to the *Financial Times*, London. This method converts iron containing more than 0.3 per cent phosphorus into steel of a quality as high as that produced by the open hearth process. The iron is placed in a converter with slag-forming material and top-blowing carried out in three stages. First, commercially pure oxygen is top-blown into the melt through a lance held at a constant height above it. Then top-blowing using a lime-oxygen suspension is carried out while the top of the lance is gradually lowered. The third stage involves continued top blowing with oxygen containing a finely divided slag-forming compound such as lime. The process is said to have the advantages of being simple and economical and not needing large and expensive installations. Absolute control over the slag-forming operation is achieved, it is claimed.

Gas Compressor

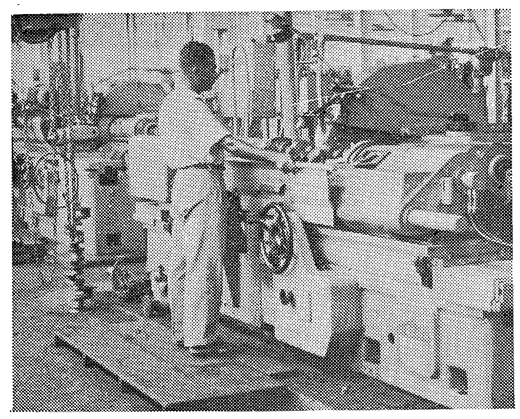
Claimed to have particular applications in the chemical and food industries, the Type 2½ gas compressor is also said to be suitable for research laboratories and for providing pure air in pneumatic control systems. It can be used for pumping or compressing corrosive, poisonous or costly gases because its glandless construction prevent leakage and contamination of the gas. The drive unit is enclosed and its main shaft runs in ball bearings. All reciprocating parts are oil immersed and the diaphragm heads may, if required, be mounted remotely from the operating unit. Full technical details have been published jointly by E.C.D., of Tonbridge, Kent, and Wallace and Tiernan, of Power Road, London.

Compressor Units for Installation in Machines

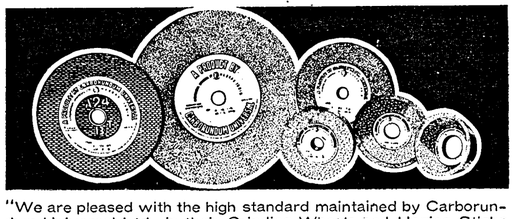
The installation of compressor units in machines requiring air pressure for operation or control manufactured by Electron-Co., Cannstatt, has many advantages. This unit, in which compressor and electric motor are mounted on one shaft for direct drive, requires only the minimum amount of installation space and enables the cheapest form of construction. Apart from better cooling, the extensive use of aluminium means lower weight. The elemination of a belt drive also substantially reduces accident risk. The capacity of these compressors was increased by 28 per cent without any increase in dimensions. Simultaneously, rationalisation in manufacture kept production cost low despite the increased capacity. The compact construction clearly demonstrates the extraordinary space saving which is of particular advantage when the unit is to be installed in the very small space available in machines using compressed air. Despite the increased capacity, the double shell cooling system enabled an improved degree of delivery to be obtained. With this cooling system both motor and compressor are cooled by a single fan fitted at the free end of the motor. Motor cooling is effected by the flow through the inner shell and compressor cooling via the outer shell flow. The increase in capacity means that more compressed air is available than with previous compressors of the same dimensions. This makes it possible, depending on what the compressed air is to be used for, to increase the capacity of the machines without having to worry about providing space for the installation of a larger compressor.

Automatic Pleuger Water Supply Plant

For the economical water supply in agricultural enterprises, country estates, dwelling houses, etc. from deep wells, Pleuger Unterwasserpumpen GmbH., Hamburg, Germany, supply the automatic Pleuger domestic water supply systems. The advantages offered by these plants: always clean and sterile ground water from wells of 4 in. and above at capacities of 80 l/min. (17.6 imp. gall./min.) and heads up to 100 m. (328 ft.); low initial cost of the fully automatic plant; extremely easy installation of the plant; maintenance-free continuous operation of the plant; optimum economy at low power consumption. The automatic Pleuger water supply plant consists of a Pleuger submersible pump with a special cable, a pressure water tank with pressure switch, an additional ventilator, a capacitor for single-phase A.C., a motor protection and a mounting clamp. An ordinary gas pipe of 1¼ in. is used as a riser. The pressure tank normally allows pressures up to 4 atü (57 lb./sq. in.) so that an adequate pressure in the pipe system can always be maintained. The installation of the plant is very simple. The pressure tank can be installed in any convenient position in the house. It is best, however, to install it in the cellar to eliminate the risk of freezing. As the pump operates silently the well may be very close to the house.



SIMPSON AND COMPANY USE
CARBORUNDUM UNIVERSAL ABRASIVES
FOR THEIR GRINDING OPERATIONS



"We are pleased with the high standard maintained by Carborundum Universal Ltd., in their Grinding Wheels and Honing Sticks which we have been employing widely in our Production and Assembly lines with satisfactory results for producing components of the world-famous "P-Series" Perkins Diesel Engines in our Plant 1 at Madras."

SIMPSON & CO. LTD., Madras.

IN ANY INDUSTRY ... FOR ANY GRINDING OPERATION ... YOU CAN RELY ON GRINDING WHEELS BY CARBORUNDUM UNIVERSAL

Besides Grinding Wheels our other items of manufacture include Carboflex Reinforced Depressed Centre Wheels, FERROCARBO Briquettes, Mounted Wheels and Points and Bonded Abrasives Specialties.

CUZ-1484 A

A STOCK EXCHANGE QUOTATION—II

CONDITIONS FOR LISTING AND DELISTING

By D. R. Pendse, M.A. (Cantab.)

ONCE a quotation is granted, further relations between the company and the stock exchange are governed by the clauses of the Listing Agreement, which is mostly derived from the relevant portions of the Rules framed under the S.C.R. Act. Prior to 1957-58, when these Rules came into force, not only was there no uniformity in the matter of the Listing Agreement, but there was no Listing Agreement, at all in some stock exchanges. The grant of a quotation was often a matter informally settled between the members of the stock exchanges and the promoters of the company. With the passing of the Securities Contracts (Regulation) Act, 1956, the need for a uniform listing agreement was felt by all the concerned interests and prolonged consultations were held by the Government with the representatives of stock exchanges, chambers of commerce, etc. The present Listing Agreement, which is standardised in all respects for all the stock exchanges, was adopted as a result of these consultations. By now, almost all listed companies in India have signed this Agreement and have assigned themselves to compliance with its clauses.

With a view to providing the investor with a basis for intelligent judgment of the value of shares of the companies, the Listing Agreement is aimed at the fulfilment of two main objectives, namely, (i) timely and adequate disclosure of all material information, whether good or bad, to the exchange and to the shareholders of the company; and (ii) an obligation not to indulge in practices which would be detrimental to smooth trading in its shares.

Principal Clauses

Apart from some procedural and miscellaneous provisions (e.g. regarding listing fees), the principal clauses of the Agreement can be divided into four broad groups:

First, the Agreement provides for the submission of periodical returns by the company, such as copies of annual audited accounts, dividend announcements, etc. In addition, a "distribution schedule" has to be filed which gives the frequency distribution of shareholdings by numbers of shares held as also the names, addresses and shareholdings of the 10 largest shareholders of the company. This schedule facilitates the periodical review by the stock exchange as regards concentration of shareholdings in the company. It can also enable the investors to study for themselves changes in the structure of the shareholdings and give them a fair idea as to the manner in which the company is controlled.

Secondly, there are certain *ad hoc* returns to be submitted as and when necessary. These include information regarding any change in the nature of business of the company, redemption of any securities, proposals to issue rights or bonus shares, copies of circulars to shareholders, details regarding changes in the Board, amendments to the Articles of Association of the company and some other information which is thought to be likely to have a bearing on the market value of the shares.

Thirdly, the Agreement makes it obligatory for the company to make certain provisions in its Articles of Association; e.g. (i) the company would use a common form of transfer; (ii) fully paid shares of the company would be free from all lien and the lien on partly paid shares would be restricted to the amounts called or payable; (iii) there will be no forfeiture of unclaimed dividends, unless debarred by law; (iv) the company would not refuse to register the transfers in the name of transferee when proper documents have been lodged, unless (in exceptional cases) the company has consulted the President of the concerned stock exchange and apprised him of the position.

Lastly, the Agreement contains several other clauses laying down certain practices that are calculated to protect the interests of the investor, e.g., (i) if required by the stock exchange, the company has to make arrangements for having an office or register etc., in the city in which the stock exchange is located and where transfers of shares can be effected; (ii) letters of allotment, letters of rights, etc., would be issued simultaneously, (iii) the company has to issue free of charge new share certificates in place of those that are old or used up and it cannot charge more than a prescribed amount as fee for registration of transfer, sub-division, consolidation, etc.; (iv) the company would fix the dates for the closure of transfer books after consultations with the stock exchange; (v) the company would inform the stock exchange immediately of any decisions taken by its Board regarding dividends, issue of capital, etc.

Three Omnibus Clauses

There are, of course, three omnibus clauses in the agreement. Under clause 18, the company has to publish, in a form approved by the stock exchange, such periodical/interim statements of its working and earnings as it shall, from time to time, agree upon with the exchange. Under clause 36, the company is bound to furnish to the exchange on request such information concerning the company as may be reasonably required, and, under clause 39, the company agrees to abide by all the rules, by-laws, regulations of the stock exchange in force from time to time and also to comply with such further regulations as may be promulgated by the exchange as a general requirement for new listings.

In the U.S., the Listing Agreement does not seem to have been standardised in respect of all the stock exchanges. But the pattern of the Indian form seems to tally roughly with the one used by the New York Stock Exchange. Some of the interesting provisions in that form which are not contained in our form may be mentioned: (i) If dealings are permitted by the N.Y.S.E. in temporary documents like allotment letters, etc., share certificates have to be made ready by the company within 30 days from the commencement of such dealings; (ii) a listed company has to notify the Exchange if any change in accounting principles is visualised, e.g. a change in respect of provisions for depreciation allowance; (iii) every listed company has to have an office within a certain area of the city of New York where the work of share transfers, etc., would be done by the company. The company has also to make an arrangement to receive and pay cheques at par within that area of the city of New York; (iv) it has to give details of all transactions in the company's shares by its directors and certain office-bearers of the company. These details are published by the Exchange for the general information of investors. As compared to the Indian distribution schedules, these details are likely to give a more correct picture of dealings in the company's shares by interested and knowledgeable parties.

On the whole, however, our listing agreement, as it stands now, seems to cover most of the important points for the protection of the investors. But there is a suspicion that some companies are reluctant to submit these returns or for that matter to give any information about their activities. Pressure is sometimes brought on the stock exchanges that some of the returns filed under the listing requirements should be treated as confidential and the general public should not be allowed to have access thereto. In this connection, it is difficult to improve upon some observations made by a Committee in the U.S., as early as in 1934:

"Just as artificial manipulation tends to upset the true function of an open market, so the hiding and secreting of important information obstructs the operation of the markets as indices of real value. There cannot be honest markets without honest publicity. Manipulations and dishonest practices of the market place thrive upon mystery and secrecy. . . . Delayed, inaccurate and misleading reports are the tools of the unconscionable market operator and the recreant corporate (i.e. company) officials who speculate on inside information.... A business that gathers its capital from the investing public has not the same right to secrecy as a small privately owned and managed business. ..."

The last clause in the uniform Listing Agreement, of course, provides that listing facilities would continue at the entire discretion and pleasure of the stock exchanges who have an unquestionable right to suspend trading in the shares of any particular company or to remove such shares from the official list. Such a removal is known as delisting. In certain contingencies, such delisting becomes an accomplished fact only remaining to be recorded by the stock exchange, e.g. (1) redemption or conversion of particular shares; (2) merger in an unlisted company or liquidation; (3) holding of shares by single parties with no possibility of any sale in the foreseeable future, etc. Such contingencies are ignored in these paragraphs which refer primarily only to those occasions of delisting when continuation of listing is feasible and the company remains eligible for such continued listing. Interpreted in this light, delisting at once emerges as the first (ignoring, of course, such measures as warnings, reminders, etc.) and the last sanction which a stock exchange can invoke against listed companies. The decisions of the stock exchanges in this matter are final. The Government has only an indirect role in the sense that a delisted company can apply for listing again and if that application is rejected, can file an appeal with the Central Government.

Still, the sanction is by no means insignificant. On the one hand, listed companies detest the stamp of being thrown out of the stock exchange. On the other, investors themselves find their interest being seriously injured, if, for no fault of theirs, delisting deprives them of the facilities of marketability to their shares. The stock exchanges, whose Boards of Directors include well-wishers of both these groups, are, therefore, very much disinclined to invoke this power. As a result, cases of delisting by stock exchange in the face of opposition of the company concerned are hard to find.

It is, however, possible to visualise two different sets of circumstances under which stock exchanges might need to invoke this power. First, when there is no public or investor interest at all left in the shares of a particular company. This may be the result of either extraordinary concentration of shareholding over the years or simply the failure of the company's activities to evoke investors' interest. For example, there have been some cases of preference shares (which continue to be listed on stock exchanges year after year) where not a single transaction is reported for several years. The quotations marked in the official list are at best nominal and, since they fail to reflect the real price of the particular share, it is only correct that the official list of quotations should never be burdened by such deadweight. But the stock exchanges, in keeping with their attitude of not expressing any comments on the merits of any shares, loathe doing anything even when the lack of investor interest is complete. They would, perhaps, do well to exhibit a greater readiness and diligence in the matter of pruning their official list from time to time.

Delisting as a Penalty

Delisting might become necessary as a penalty when a listed company fails, even after repeated reminders, to comply with any of the requirements in the listing agreement. This is understandably a more delicate question and the caution practised by the Indian stock exchanges can partly be justified in this case, as innocent shareholders will unnecessarily be denied the facilities of a stock exchange quotation for their shares. In such cases, the method of persuasion could be usefully tried more than once before the extreme penalty of delisting is imposed on a company and, unwittingly, on the shareholders.

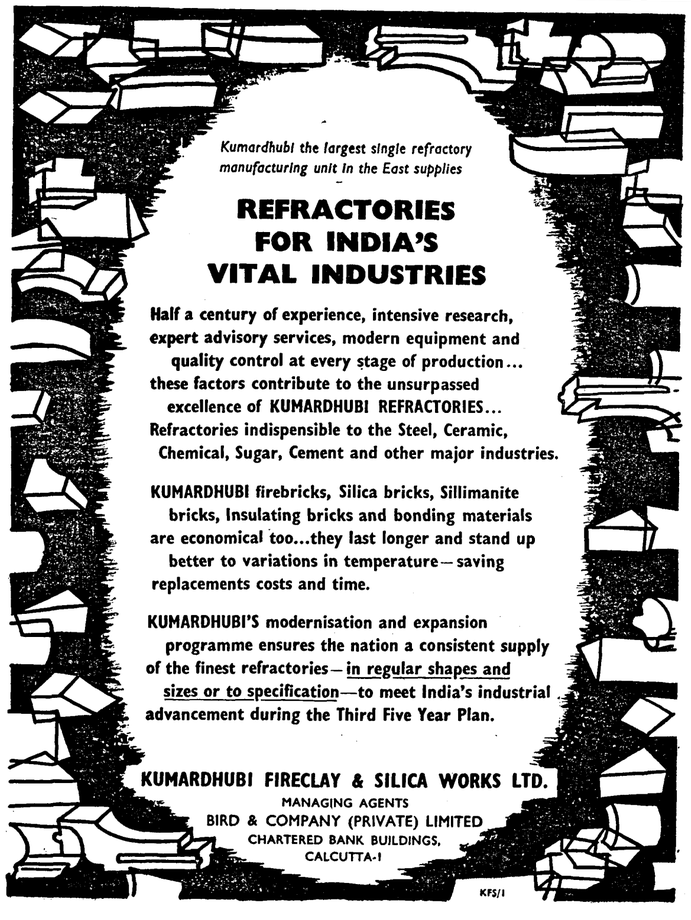
In the United States also, delisting is looked upon as a measure with manifold implications. For example, the N.Y.S.E. includes the following among the criteria for initiating consideration of delisting the equity shares of a company, namely, (i) the market value of outstanding shares in the hands of the public, exclusive of concentrated holdings falls below 500,000 dollars; or (ii) the number of such outstanding shares falls below 30,000; or (iii) the number of shareholders falls below 250 (after substantially disregarding the number of odd-lot holders); or (iv) the net tangible assets of the company fall below 2 million dollars; or (v) the average net earnings (after taxes) for the last three years continue to remain below 200,000 dollars. Similar suitable criteria have also been laid down for preference shares, debentures, etc. When a stock exchange considers that the shares of a company should be delisted, it has to make an application to the Securities Exchange Commission. Delisting becomes effective after the application has been filed with the Commission for a prescribed period, but the Commission has the right (*a*) to postpone the effective date of the application, or (*b*) to initiate delisting proceedings on its own motion.

A situation which has not arisen often presents itself when a company on its own makes an application for delisting of its shares. In many cases, such applications are prompted by genuine causes some of which have been mentioned above. It is possible, however, that, in some stray cases, company managements would not like to comply with some of the conditions of the listing agreement, particularly those relating to the submission of material information to the stock exchange and might, therefore, prefer to see their shares removed from the official list. This is all the more possible, when, originally, a quotation was sought mainly to encourage investors to subscribe to the capital. Similarly, managements might desire to acquire further shares of the Company and with that end might feel that the removal of the shares from the stock exchange list would enable them to purchase them at a lower price than otherwise. To meet such cases, some stock exchanges in the U.S. make it obligatory on listed companies to obtain the approval of at least two-thirds of their shareholders for any move on the part of the company to make an application for delisting of its shares. The S.E.C. also seems to examine the applications made by the companies themselves in the light of these possible motives. In India, happily, in the few cases of companies applying for delisting of their own shares, there is no evidence to trace such intentions behind their applications.

It was observed at the outset that company promoters in search of capital have now accepted the importance of tapping the investments of the new class of individual investors. The growing interest shown by them in the stock exchange quotation was seen to be in no small way related to their desire to attract these investors. Although the law and rules provide a skeleton framework for the protection of the investors, the responsibility to transform the present enthusiasm of the investors into a stable and dependable source of company finance in future continues to rest essentially on the good intentions of the companies and a proper use of discretionary powers by the stock exchanges. A few cases of unscrupulous company promotions and even fewer cases of negligent and careless stock exchange decisions on this matter are enough to make this new source of support to industry to evaporate quickly and it would be a Herculean task to revive the confidence of small investors in stocks and shares.

(Concluded)

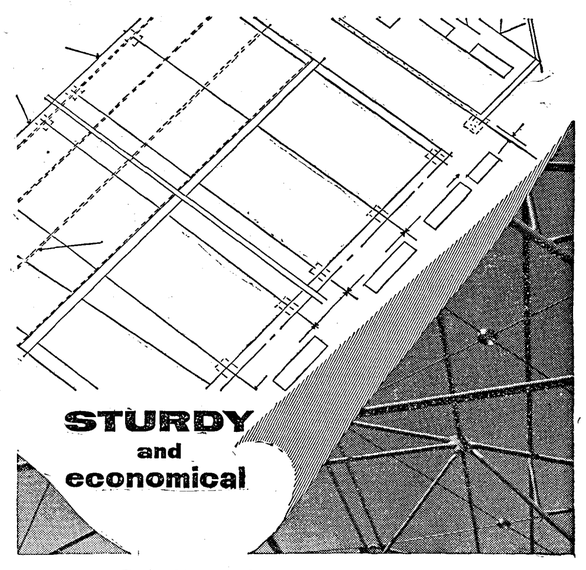
Note: The author is indebted to Mr. P. S. Nadkarni, Chief of the Government of India's Stock Exchange Division, for the benefit of several discussions. The views expressed in this article are, however, entirely the author's personal views.



I.D.A. CREDIT FOR INDIA'S P. & T. DEPT.

The International Development Association (I.D.A.), an affiliate of the World Bank, has just extended a development credit of $42 million to be used by the Posts and Telegraphs Department of the Government of India for the purchase abroad, during the next two years, of equipment to expand and improve telephone and telegraph services. Equipment to be financed by the present I.D.A. credit will be procured on the basis of international competitive bidding. The credit is for a term of 50 years. Repayment of the principal will begin on 1st March 1973. Thereafter, one per cent of the principal will be repayable annually for ten years and three per cent will be repayable annually for the final thirty years. The credit is free of interest, but a service charge of ¾ of one per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs.

The allocation for investment in telecommunications during the third Plan, it may be recalled here, has been set at Rs. 134.5 crores, of which about $100 million will be in foreign exchange. The programme will be carried out by the Telecommunication Branch of the Posts and Telegraphs Department.



prefabricated tubular structures

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 13 ft. 4 in. 10 ft. 1/8 in.
SLS/44	44 ft.	and 13 ft. 4 1/8 in.

WORKS COMMITTEES IN INDIA

WHY THEY HAVE LARGELY FAILED

By Dr. J. L. Rastogi

THE idea of joint consultation between the management and workers at the plant level in India was first introduced by the Industrial Disputes Act, 1947. It authorises the appropriate Governments to require any industrial establishment, employing 100 or more workers on any day in the preceding twelve months, to set up a works committee consisting of employers' and workers' representatives. Employees' representatives are not to be less than those of the employers in any case. The purpose of these committees, according to the same Act, is to promote measures for securing and preserving amity and good relations between the employer and workmen, and to that end to comment upon matters of their common interest or concern and endeavour to compose any material difference of opinion in respect of such matters. Subject to these provisions, each Government is to define the scope, character and functions of works committees to suit its own needs, circumstances, degree of industrial development and growth of trade unions.

Accordingly, orders were issued for the formation of works committees in industrial establishments in the public sector of the Central sphere, in industrial establishments in the mines, in the port trusts of Bombay, Calcutta and Madras, and, also in banking and insurance companies falling under the public sector and having branches in more than one State, provided substantial numbers of workmen apply for the formation of such committees. Similarly, different State Governments passed their own legislations/rules dealing with the formation and working of works committees.

Thus, works committees have been formed in a large number of establishments employing more than the prescribed number of workers in different regions. Out of 2,839 works committees in 1961, 893 were functioning in the Central sphere, 626 in West Bengal, 301 in Madras, 181 in Maharashtra, 141 in Bihar, 125 in Mysore, 117 in Punjab, 106 in Kerala, 73 in Andhra Pradesh, and 65 in Gujarat. In order to promote co-operation and raise productivity these have been granted a very wide jurisdiction and all types of matters have been covered. Besides serving as a regular means of communication between the management and workers and *vice versa*, these have also been made responsible for the enforcement of collective agreements, Government orders and adjudicators' awards.

Scope Redefined

In 1959, a tripartite committee was set up to lay down guiding principles for the composition and functioning of works committees. It suggested certain changes in the composition of these committees and drew up a list of items normally to be dealt with by these. The scope of these committees, according to the sub-committee, should extend to conditions of work such as ventilation, lighting, temperature and sanitation; amenities such as drinking water, canteens, dining rooms, creches, rest rooms, medical and health services; safety and accident prevention, occupational diseases and protective equipment; adjustment of festival and national holidays; administration of welfare and fine funds, educational and recreational activities; promotion of thrifts and savings and implementation and review of decisions arrived at the meetings of works committees. It also laid down that subjects like wages and allowances, bonus and profit-sharing schemes, rationalisation and workload fixation, fixation of standard labour force, programmes of planning and development; retrenchment and lay-off, victimisation for trade union activities, provident fund, gratuity and other retirement benefits, quantum of leave and national and festival holidays, incentive schemes and housing and transport services should not normally be discussed by works committees. However, the recommendations of the sub-committee have not so far been implemented.

Critical Appraisal

The success achieved by works committees in creating mutual trust and goodwill among the management and workers has varied not only from State to State but also from industry to industry and from unit to unit according to the quality of relations between them and their consciousness regarding the need of co-operation. Sometimes, in spite of legislative provisions formation of works committees has been made impossible due to practical difficulties and lack of proper understanding of their true role in promoting mutual understanding and confidence. So far it has not been possible to establish works committees at Bombay and Calcutta ports or in banking and insurance companies. In Uttar Pradesh these had to be dissolved soon after their formation. However, in 1958 fresh orders were issued for the establishment of works councils in all State-owned industrial undertakings employing 100 or more workers and also in U.P. Co-operative Bank, Co-operative Federation and Milk Supply Unions.

Again, while in certain States like Maharashtra, these have fairly succeeded in changing the approach of labour and capital towards each other, elsewhere, they have largely failed to secure adequate support of either the management or workers/unions. These have been reduced to defunct bodies and exist only in name. There are numerous reasons for the failure of these statutory negotiating bodies within the undertaking.

1. As these committees have been formed under legislative compulsion and are not a result of self-realisation, they fail to infuse correct spirit in the parties to come closer and discuss matters of common interest and settle their differences around the table.

2. Industrial Dispute Act, 1947 defines the jurisdiction of these committees in general terms. State Governments tried to extend it as widely as possible. Thus the scope of works committees extends to all types of matters including those which should be sole managerial prerogatives or are more appropriate for collective bargaining.

3. Except in undertakings in the Central sphere where sub-committees have been formed to deal with special subjects, there is, generally, only one works committee in each establishment irrespective of the number of employees. The system has, therefore, failed to establish direct and close contact between the rank and file and the managerial personnel. Again, most of the works committees have been unable to deal with the problems requiring expert opinion and special knowledge.

4. The jurisdiction of most of these committees has been only advisory. Thus they fail to educate workers in administrative difficulties and problems. Cases are not even uncommon where unanimous decisions of works committees remain unheeded.

5. Illiteracy and ignorance of the working masses of the purposes and benefits of works committees and of the general working and problems of the firm have also been responsible for the failure of joint consultation in our country. As employees are provided with very little information regarding the affairs of the concern, their representatives have failed to collaborate effectively in improving techniques, relations and productivity.

6. Absence of representative trade unions or presence of more than one union in an establishment has also made the formation of works committees difficult. While in the former workers' interests are not properly represented, the latter threatens the very existence of such a machinery.

7. Sometimes trade unions themselves have opposed the formation of works committees. The latter are considered as their rivals by the former which might undermine their authority and following.

8. Non-co-operation and unsympathetic attitude of the supervisors and managerial executives also contribute towards failure of works committees. These are regarded as agencies which would take away managerial prerogatives.

9. One of the important reasons for failure of works committees and for apathy of management/workers/unions towards them has been the confusion created due to the introduction of labour participation in management.

Works Committees and Labour Participation

Works committees and labour participation are two different approaches for the promotion of common interests of labour and capital. While the first owe themselves to legislative provisions, the latter depends on voluntary recognition and efforts. But their basic philosophy remains the same. Their object is to raise productivity by promoting direct contacts between the rank and file and management and better understanding of the viewpoints of each other. These, moreover, serve as a regular means of communication and provide facilities to workers and their representatives for self-expression and better education in the needs and problems of the industry/concern and training in their obligations.

However, labour participation offers much larger scope for the purpose. While the Industrial Disputes Act, 1947 provides only for the formation of works committees consisting of workers' and management representatives in concerns employing more than a certain number of persons, the form and degree of participation varies with the quality of industrial relations, extent of co-operation between workers and management and their consciousness of its utility and benefits. Besides formation of joint worker-management councils, the latter may also envisage workers' suggestion schemes or sometimes even appointment of labour representatives on the management board or other managerial bodies.

Again, while works committees have only advisory jurisdiction and take up ordinarily routine matters, under labour participation all those constituting the firm are given wider responsibilities not only in actual performance but also in certain aspects of management. Joint councils under the latter are generally given supervisory and/or executive powers over welfare matters. Every one may be provided with an opportunity to criticise freely the managerial policies and actions and, at the same time, offer suggestions for improvement in working, production, techniques and welfare.

Western Experience

Thus efforts to associate labour with management in India have been made through the establishment of both statutory works committees and voluntary joint councils. Nowhere in the world these are found to exist side by side. While in some countries these joint councils/committees owe themselves to voluntary agreements as in the U.K., Sweden, Switzerland, Norway, Canada, Israel, Japan, etc., in others they have their origin in legislation as in W. Germany, Austria, France, Belgium, Finland and Communist countries like U.S.S.R., Czechoslovakia, Yugoslavia, Poland, etc. Irrespective of the method of formation, these committees/councils seek to promote amity and goodwill among workers and management. These bodies are meant to serve economic and social purposes by promoting co-operation in the undertaking. The economic motive is to ensure increased production and the moral/social motive is to secure full recognition of the importance of the human element and accordingly to give staff a greater interest in the general operation of the undertaking. Their structure and functions, however, vary from country to country according to their political systems, degree of industrialisation, quality of industrial relations, enlightenment of the management and education and consciousness of the workers. In Western countries they are generally joint bodies, while in communist countries these are composed of workers' representatives. Depending on the countries and the regulations in force, the functions of these councils range from social questions (welfare) to technical and economic matters. Frequently, it has been considered best to limit the scope of councils to matters of joint interest not covered by collective agreements and in such cases the councils are advisory bodies pure and simple. But very often supervisory and executive functions in certain aspects of management have also been assigned to make these bodies more responsible and useful.

Measures Suggested

Whatever might have been the reasons for the establishment of statutory works committees and the formation of voluntary joint councils in our country, there is no justification for their existence side by side. In fact, such a duplication of joint machinery is not conducive to better understanding between the management and workers. It creates unnecessary confusion and shakes their confidence in them. In view of illiteracy and ignorance in the working masses, it becomes difficult to find requisite personnel for various committees/councils. Again, a multiplicity of these creates various administrative difficulties like those of relieving the members to take part in committee meetings etc. Thus, in the interest of harmonious industrial relations a multiplicity of committee/councils should be avoided. It would be worthwhile to scrap works committees in favour of voluntary joint councils. However, a large-scale conversion of works committees into joint councils may not be feasible immediately, because the latter themselves are in an experimental stage and could be installed only in a few establishments. Thus, until voluntary joint collaboration is accepted as a basic philosophy of industrial relations works committees should be allowed to function. They will provide basic knowledge and experience for guidance in future.

In order to avoid confusion, the scope of works committees should be clearly defined. Merely limiting the scope of these committees to matters of welfare and safety as suggested by the sub-committee is not enough. It would reduce these to merely welfare and safety committees and leave little incentive to workers to take initiative and active interest in the working of the firm. Jurisdiction of works committees should extend to all matters of common interest. However, subjects which are the sole prerogatives of the management or are more suited to collective bargaining or which are of direct concern to trade unions should be purposely excluded. Again, to generate the confidence of workers in the functioning of works committees, their unanimous decisions should be immediately given effect to and certain supervisory and executive functions should also be assigned to these to make the members more responsible and conscious.

For the success of works committees is needed the correct spirit among the management and workers. These are neither against the interest of the workers/management nor are rivals of trade unions. In fact, works committees are the bodies to promote co-operation and ensure justice and fairplay—and their success largely depends on the willing support of trade unions. Thus, objectives, benefits and utility of works committees should be given wide publicity. Frequent seminars on the functioning of works committees should be organised to ensure uniformity, pool experience and solve difficulties.

Proper Training

What is more important is proper training of particularly those who are to collaborate around the table in the organisation and working of works committees. The rank and file should also be given adequate education in the objectives and working of these committees. It should be an integral part of the induction courses given to workers on their joining and of that of the courses offered by the Central Board for Workers' Education. For this purpose, audio-visual media may be made use of. Again, adequate information should be supplied to workers to enable them to understand their work and managerial decisions and policies better and to collaborate more effectively.

Besides, a healthy and responsible trade union movement is necessary for the success of any such move. In the interest of the workers trade unionism should be above politics and one union in each establishment should be the general rule. However, until a unified unionism obtains in our country, different unions should be encouraged to come to an understanding with regard to the formation of the works committees.

These steps would remove much of the confusion and make the machinery more useful in promoting the common interests of the management and workers.

IMBALANCE IN WORLD PAYMENTS

DEVELOPING COUNTRIES CONTINUE TO FACE DIFFICULTIES

THE overall world payments position continues to have certain important elements of imbalance. This assessment of the current payments situation is contained in the *Annual Report* (1962) of the International Monetary Fund, just released. But the *Report* hastens to add that the imbalances evident at any point of time should not be too readily regarded as "symptoms of an incurable malady of the world's payments structure." The payments situation in 1961 was influenced by important shifts in the foreign trade positions of a number of major countries, leading to the reduction in imbalances. During the year, the payments positions of the U.K. and West Germany moved closer to balance, as the deficit of the former and the surplus of the latter on goods and services were both greatly reduced. But at the same time, the trade surplus of other industrialised countries of Europe showed a sharp increase. The U.S., which had a large surplus in the first half of 1961 owing to increase in exports and decline in imports, had a depletion of the surplus during the latter half, owing to larger imports in response to economic recovery and also larger outflow of capital. In the case of Japan, there was a sharp deterioration in its trade position, although there was an inflow of short-term capital earlier during the year. The position of the primary producing countries, as a group, was marked by "some improvement" in the course of the year under review, but these countries continued to be in deficit on current and long-term capital account throughout the year.

World Industrial Output

The payments situation was influenced by the changing trends in industrial output and foreign trade in the various countries. In the aggregate, world industrial production (excluding the countries in the Soviet area) rose by 3.5 per cent in 1961 over the previous year, but this compares unfavourably with an increase of as much as 7 per cent during the previous year. The year 1961, says the *Report*, was one of general expansion in industrial countries. In the U.S. and Canada, industrial production and real national product resumed their upward course during the spring of 1961, following the mild recession of 1960. The total industrial output in North America during the whole year 1961, however, was higher by only 1 per cent, as compared with 3 per cent in 1960. Besides, expansion continued in Europe and Japan, although at a slower rate than in the previous year (6 per cent, as compared with 11 per cent), as "production approached the available supplies of labour and, in some countries, investment demand became less insistent."

TABLE I—*Value of World Trade*
(Value in billion U.S. dollars)

	1958	1959	1960	1961
World exports (a)	**94.4**	**100.4**	**112.4**	**117.6**
Exports of the U.S. (b)	16.4	16.4	19.6	20.1
Exports of other developed countries:				
Of which:				
E.E.C. countries	22.8	25.2	29.7	32.3
E.F.T.A. countries (c)	15.8	16.8	18.3	19.2
Japan	2.9	3.5	4.1	4.2
Exports of primary producing countries	36.5	38.5	40.7	41.8
Trade among developed countries:				
Exports of U.S. to other developed countries	5.0	5.2	7.4	7.7
Exports of developed countries to the U.S.	3.7	5.1	4.9	4.7
Trade between other developed countries	18.5	20.8	25.0	28.0
Of which:				
Trade between E.E.C.	6.9	8.2	10.3	11.9
Total	27.2	31.1	37.3	40.4
Exports of developed countries to primary producers:				
From the U.S.	11.2	11.2	12.0	12.3
From other developed countries	17.7	17.8	20.1	20.8
Total	28.9	29.0	32.1	33.1
Exports of primary producers to developed countries:				
To the U.S.	9.2	9.8	9.4	9.5
To other developed countries	16.3	17.3	19.5	20.0
Total	25.5	27.1	28.9	29.5
Trade of developed countries with Soviet bloc and China:				
Exports of developed countries	1.8	1.7	2.3	2.3
Exports of Soviet area and China	1.5	1.8	2.0	2.3

(a) Excluding exports of Soviet area and Mainland China, as also U.S. military aid.
(b) Excluding military aid.
(c) Except Portugal.
N.B.—The term "primary producing countries" refers to those countries exporting mainly primary products and semi-manufactures, i.e., that is all countries excluding those classified as "developed countries" and also Soviet bloc.
1961 figures for primary producing countries and for Soviet bloc are partly estimated.

The movement in world trade was more or less similar to that of industrial production. For world trade, which had gone up by 12 per cent in 1960 in terms of value, failed to maintain the tempo and showed an improvement of only 5 per cent during the year under review. The Table I on this page shows the value of world trade by various regions, as also the U.S. and Japan, in 1961, as compared with the previous three years. The increase in trade was largely accounted for by industrialised countries. Since the recession year of 1958, the expansion of world trade has, to a large extent, been in the form of an increase in trade of the industrial countries among themselves. By 1961, this trade was about 50 per cent above that in 1958. But it is significant that their im- 1960. The *Report* pertinently points out, in creased by no more than 15 per cent during the same period. Persistent price weakness of primary commodities in recent years, according to the *Report*, was an important factor in the relatively unsatisfactory development of exports of the primary producing countries.

Incidentally, I.M.F's transactions with the primary producing countries designed to tide over their short-term payment difficulties were larger in 1961 than in the preceding year. Drawings by 21 such countries aggregated an equivalent of $979 million, and undrawn balances under standby arrangements at the end of the year amounted to an equivalent of $495 million, as against $383 million at the end of 1960. The *Report* pertinently points out, in this context, that "the postponement for a relatively short period, by means of credit, of the impact of balance of payments difficulties is of limited value, unless there is a reasonable expectation that exports will recover or import demand will decline." The demand for the products of less-developed countries can be raised, as it rightly says, only if access to their products in developed countries is improved, reinforced by a vigorous and sustained expansion in the developed countries.

Terms of Trade

The world trade situation as it exists today is unfavourable to the growth of less-developed countries, particularly because of the fact that their terms of trade have continued to deteriorate. The *Report* reveals that further deterioration of the terms of trade of primary producing countries took place in 1961. For the year as a whole, the prices of primary products were, on the average, about 4 per cent below the level in 1960, foodstuffs and industrial raw materials being equally affected. Export prices of manufactures, on the contrary, rose by a little over one per cent.

The prices of individual primary products, and of major groups of products, moved diversely in 1961, in contrast to the rather uniform movements in the previous year, according to the *Report*. These changes, in turn, were reflected in the divergent behaviour of exports of countries. Table II shows the trends in exports and imports of primary producing countries in 1960 and 1961. The prices of most tropical foodstuffs were lower in 1961 than in 1960, and some of them, notably cocoa, copra and African robusta coffee, fell by as much as 20 per cent. Consequently, there was a decline in the total receipts of countries exporting mainly tropical foods (other than coffee).

No wonder, in this context, that the primary producing countries continued to be in deficit in their basic balance of payments accounts, despite 1961 being a year of high activity in Europe and of increasing output in the U.S. and Canada. In the primary producing countries, as well as in industrialised countries, changes in the basic balance of payments (those arising out of international transactions on current and long-term capital account excluding certain special transactions) occurred mainly in current account items. Disequilibrating movements of short-term capital between major financial centres, which imposed exceptionally severe pressures in 1960, continued to prevail in the early months of 1961, but were checked in the latter half of the year.

Among the most important changes in the basic accounts of industrialised countries were the reappearance of a large deficit in the U.S. balance of payments in the second half of 1961 and the emergence of a considerable deficit for Japan. The changes were directly related to increased economic activity in these two countries. The striking change in the West German position, to a slight basic deficit in the second half of 1961 after years of substantial surpluses, was associated with a renewed expansion of activity on a seasonally adjusted basis and a very high level of employment, accompanied by strong demand pressures and rising costs. A further factor was the appreciation of the Deutschemark, the effects of which were felt only gradually in the course of the year. A sharp reduction in the basic balance of the Netherlands arose from similar circumstances, but occurred in the first half of the year. A rise in the basic deficit of Switzerland was also associated with the expansion of production at full employment. Conversely, the virtual elimination of the basic deficit of the United Kingdom, following a further increase in the first half of 1961, was brought about largely by a decline in imports as a consequence of the measures to restrain domestic demand. France and Italy—although their output rose more rapidly than that in some of the other industrial countries—continued to be favoured by greater structural possibilities of expanding industrial production and exports than existed in most of the other countries; their basic surpluses increased considerably from 1960 to 1961. An improvement in the payments position of Belgium was in part a reflection of easier conditions in the labour market there than in Germany and the Netherlands, and probably of the advantage gained from the appreciation of the Deutschemark and the guilder.

TABLE II—*Trade of Primary Producing Countries*
(Value in millions of U.S. dollars)

	Exports (f.o.b.)		Imports (c.i.f.)

(d) Grains, livestock products, textile fibres and tobacco.
(e) Burma, Greece, Ireland, Kenya, Sudan, Syrian Arab Republic, Turkey, Uganda and Uruguay.
(f) Bolivia, Congo (Leopoldville) and Viet Nam.
(g) Brunei, Iran, Iraq, Kuwait, Saudi Arabia, Sarawak and Trinidad.

Some progress has been made in dealing with sudden movements of short-term capital, which had been extremely disturbing in 1960 and the early part of 1961. Commenting on the movements of short-term capital in 1961, the *Report* observes as follows:

"In addition to the impact of certain speculative developments, large differentials in short-term interest rates not offset by costs of forward exchange cover had drawn funds away from the United States in 1960 and early 1961. During this period, for example, roughly $500 million flowed out into assets expressed in sterling and Canadian dollars alone. Since the middle of 1961, however, the conditions in the money markets in the main industrial countries have become less divergent, and there has also been a deliberate and increasing tendency in the industrial countries to influence short-term interest rates in such a manner that they would not induce disturbing capital movements. The discount rates in the main centres have moved closer together. While the U.S. discount rate has stayed at 3 per cent since mid-1960, **the rate in Germany** has been brought down from 5 per cent to 3 per cent and the rate in the United Kingdom, which was raised sharply to 7 per cent to deal with the serious situation in July 1961, was lowered by stages to 4½ per cent by the end of April 1962. When account is also taken of the difference between spot

Beginning early October

famous Japan Air Lines service now direct from India

Westward to the Middle East and Europe and, if you wish, on over the Pole to Tokyo! Or eastward to Japan and on across the Pacific to Hawaii and California!

Soon you can reach them all aboard the magnificent Jet Couriers of Japan Air Lines—direct from Calcutta or by connection at Karachi.

No matter how many airlines you have flown before, you discover on JAL a unique difference. Silken jet speed is matched by service more gracious than you ever imagined. Kimono-clad hostesses welcome you to a jet cabin rich in classic Japanese atmosphere... lavish you with truly *personal* attention in the traditional Japanese manner.

On your next trip abroad, don't miss this rewarding experience. Fly Japan Air Lines, and enjoy "the calm beauty of Japan at almost the speed of sound."

JAPAN AIR LINES

For reservations, see your travel agent or JAL at

Taj Mahal Hotel, Apollo Bunder, Bombay
Middleton Street, 41 Chowringhee Road, Calcutta
Ashoka Hotel, Chanakya Puri, New Delhi

JAL's new "Silk Road"

beginning in October links East and West through South Asia like the famous Silk Road of antiquity. From the Orient to London, it is Japan Air Lines' latest expansion—connecting JAL'S Pacific and Far East routes with its European and Polar routes. Now you can enjoy famous JAL service the world around.

RISE IN IMPERIAL TOBACCO'S EARNINGS GOES LARGELY TO THE EXCHEQUER

PROFIT DECLINES, BUT DIVIDEND SAME

THANKS to the increasing burden of excise and other duties on tobacco, the Imperial Tobacco Company of India Ltd. (Chairman: Mr. F. A. Collett, Calcutta) has realised a lower profit of Rs. 382.70 lakhs during the year ended 31st March 1962 as compared with Rs. 411.85 lakhs in the previous year, despite a further handsome improvement of Rs. 3.73 crores in gross sales at Rs. 45.91 crores. For the bulk of the increase of Rs. 3.73 crores in earnings from the business of the Company—more than 61 per cent to be precise—has gone to the Exchequer by way of customs and excise duties, the total of which has soared by Rs. 2.08 crores to Rs. 20.17 crores. Of the total sales realisations, these duties together have claimed about 44 per cent, as against 42.8 per cent in the previous year. Such a large incidence of taxation has itself been sufficient to pull down profit, besides lower income from other sources, Rs. 41.97 lakhs, as against Rs. 62.85 lakhs a year before. Costs, too, have gone up, though presumably largely because of a higher production as reflected in the larger sales and increased inventory of Rs. 275.83 lakhs, as against of Rs. 250.98 lakhs in the preceding year. The cost of raw materials consumed has increased from Rs. 13.03 crores to Rs. 14.38 crores, staff expenses have gone up from Rs. 506.16 lakhs to Rs. 529.96 lakhs and other expenses have been higher by about Rs. 17 lakhs at Rs. 289.87 lakhs.

Following the retroactive increase in company tax in the last budget, provision for taxation has been raised from Rs. 171.19 lakhs to Rs. 177.16 lakhs, at which level it claims about 46 per cent of the gross profit, as against roughly 41 per cent a year before. Provision for depreciation has also been stepped up from Rs. 44.05 lakhs to Rs. 46.76 lakhs. The net profit, therefore, shows a sizable fall of Rs. 37.83 lakhs at Rs. 158.78 lakhs. The last setback in profit was seen in 1958-59, when the gross profit had declined from Rs. 356.79 lakhs to Rs. 333.35 lakhs and the net profit from Rs. 132.12 lakhs to Rs. 114.98 lakhs. Notwithstanding the year's lower profit, the Directors have recommended that the total distribution of the Rs. 10 fully paid ordinary shares be left unchanged at 9 per cent per annum (of this, 4 per cent is final and the balance of 5 per cent was paid in two equal interim dividends), to which level it had been stepped up from 8 per cent paid in 1960-61. The maintenance of dividend has meant a substantial reduction in the profit ploughed back into business from Rs. 48.20 lakhs to Rs. 8.55 lakhs. Provision for staff gratuity has been raised from Rs. 8.62 lakhs to Rs. 12.45 lakhs. The carry-forward is Rs. 24.56 lakhs, as against Rs. 26.96 lakhs brought in.

The table below mirrors the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	4,590.59	4,217.62	3,688.07	3,420.40

* Subject to deduction of tax.

Lest last year's results should unduly disappoint shareholders, the Directors have expressed the confidence that, subject to any unforeseen circumstances, they would be able to maintain a 9 per cent distribution for the current year and appropriate at the same time an adequate sum to reserves. Actually, it was only after taking into account the results of the first four months of the current year and the generally good prospects for the remaining period that the Directors proposed to maintain the dividend for 1961-62.

To protect its interests in paper and board required to wrap its products, the Company had made an initial investment of Rs. 1.13 lakh in the Assam Pulp Mills Ltd. But the project had to be abandoned, since certain difficulties in arranging the required loan capital could not be resolved. The Assam Pulp Mills Ltd. is now in liquidation and the investment made in it has been written off. The Company has no further liability in this regard.

The financial position of the Company is sound. Its paid-up capital of Rs. 15.16 crores is supplemented by reserves and surplus aggregating Rs. 10.12 crores. Current liabilities and provisions total Rs. 318.93 lakhs and are far exceeded by current assets, loans and advances aggregating Rs. 19.57 crores, of which cash and bank balances amount to Rs. 1.67 crore. Investments have declined from Rs. 131.75 lakhs to Rs. 51.14 lakhs, of which those quoted amount to Rs. 42.19 lakhs (Rs. 121.46 lakhs a year before) and command a market value of Rs. 42.62 lakhs. The gross block increased during the year from Rs. 11.57 crores to Rs. 12.05 crores, and this has been written down to Rs. 8.39 crores.

The Delhi and Orient Tobacco Company Ltd., a subsidiary of the Company, earned last year a profit of Rs. 4,313, as against Rs. 4,477 in the previous year, before providing for taxation.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 11.62 *cum-div.* On the *ex-div.* basis, they offer an attractive yield of roughly 8 per cent per annum, free of tax.

EAST ANGLIA PLASTICS (INDIA) LTD.

The Directors of the East Anglia Plastics (India) Ltd. have stated, in their report for the year ended 31st March 1962, that, although the Company's compounding factory at Dum Dum, Calcutta, which was completed in December 1961, is now ready to be worked at its rated capacity, it cannot be run for the time being at its full capacity because of difficulties in importing raw materials due to the acute shortage of foreign exchange. The maximum use of the installed capacity, we are told, will be possible as soon as imported raw materials are obtained or, in the alternative, when the Company's proposed integrated scheme to produce raw materials indigenously is implemented.

The Government of India has allocated 50 per cent in value of the quota of imported cellulose acetate moulding powders for importing raw materials to be processed at the Company's factory. Although the allocation will enable only partial operation of the factory, it will be of some help in respect of the integrated scheme. The compounding unit is capable of producing the entire quantity of cellulose acetate moulding granules now being imported, provided adequate quantities of raw materials are available.

Satisfactory progress has been reported on the implementation of the integrated scheme. Collaboration of an internationally known group of industries for the manufacture of cellulose acetate flakes has been obtained and approved by the Government. In addition to providing the technical know-how, the collaborators will participate in the share capital. Arrangements for the supply of machinery have also been made with them. Their representatives have visited different sites in Andhra Pradesh and recommended a suitable site for the plant. Preliminary work on construction will start soon after the monsoon. The capital outlay on the project is Rs. 5 crores, of which Rs. 3 crores represent the foreign exchange component, to be met through credits on deferred payment basis. Application for imports of plant and machinery under the foreign credit arrangement has been made and will be sanctioned on the availability of the credit.

The Company has also applied for a licence for the manufacture of plasticisers which are also required as raw materials for producing cellulose acetate compounds. It has received several offers for collaboration in this project. It is proposed to produce plasticisers and flakes simultaneously and thereby make the Company self-sufficient in raw materials.

(Concluded from next column)

The balance-sheet of the Company as at 31st March 1962 shows that the share capital in equity shares of Rs. 100 each has remained unchanged at Rs. 36.00 lakhs. This is supplemented by Rs. 17.79 lakhs in reserves. Loans and current liabilities and provisions, too, have remained more or less unchanged at Rs. 20.91 lakhs and Rs. 73.53 lakhs, respectively. The net block is worth Rs. 31.01 lakhs and has been obtained by reducing a gross block of Rs. 46.96 lakhs by the accumulated depreciation of Rs. 15.91 lakhs. Investments, mostly in subsidiaries, are a little higher at Rs. 6.24 lakhs, while current assets, loans and advances aggregate Rs. 110.93 lakhs.

GANNON DUNKERLEY & CO.

EXPANSION OF ACTIVITY

DESPITE the continuously substantial improvement in turnover in the past three years, the gross profit of Gannon Dunkerley and Co. Ltd. (Chairman: Mr. M. R. Morarka, Bombay) has been growing at snail's pace. During the year ended 31st March 1960, for instance, the Company earned from manufactured and trading goods sold and completed contracts invoiced a total realisation of Rs. 186.08 lakhs, against which a gross profit of Rs. 12.23 lakhs was booked. In the following year, that is, 1960-61, it reported a much higher turnover of Rs. 259.26 lakhs, but the rise in gross profit was only of the order of Rs. 1.08 lakh to Rs. 13.31 lakhs. And now, for the year ended 31st March 1962, the Company reports total sale proceeds of Rs. 267.57 lakhs or Rs. 8.31 lakhs more than those for the preceding year, but the accretion to gross profit is only Rs. 0.21 lakh, the actual profit being Rs. 13.52 lakhs. The two chief factors responsible for the slow rate of increase in gross profit during the previous two years were: First, keen competition prevailing in the contracting field in which the Company has a main interest and, second, the need to replace, due to foreign exchange difficulties, imported goods by those of indigenous manufacture which afford a much reduced margin of profit than the imported ones. This situation not only remained basically unchanged during the year under review but actually worsened further due to the closing down of the cylinder manufacturing factory for a few months, owing to non-receipt of licences for imports of raw materials.

After providing out of the aforesaid gross profit of Rs. 13.52 lakhs, a slightly reduced amount of Rs. 2.62 lakhs (as against Rs. 2.88 lakhs) for depreciation and making an enlarged provision of Rs. 4.40 lakhs (as against Rs. 3.60 lakhs) for taxation, the net profit amounts to Rs. 6.50 lakhs which is only fractionally lower than what was earned a year ago. Adding to this Rs. 31,000 as the net withdrawal from reserves and provisions and Rs. 8,499 brought in from the previous year, the amount available for disposal works out to Rs. 6.89 lakhs. From this, Rs. 39,000 (Rs. 87,596) have been transferred to the development rebate reserve, Rs. 1.90 lakh (Rs. 7.25 lakhs) to general reserves and Rs. 1.00 lakh (*nil*) as additional provision for taxation. The balance has been utilised to propose a dividend of 10 per cent subject to deduction of tax, same as that paid in the past two years, absorbing Rs. 3.60 lakhs.

The following comparative table presents the working of the Company during each of the past four years.

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	267.57	259.26	186.08	160.57

* That is after deducting expenses in respect of prior years.
† Subject to deduction of tax.

Notwithstanding the competition that prevails, the Company continues to enjoy comfortable order position. Apart from the contracts already on hand at the commencement of the year, the Company secured, during the year under review, a contract worth Rs. 1.90 crore from the Bombay Port Trust for dredging the harbour channel for its principals in Holland. Work on the same commenced from the middle of December 1961 and good progress in excution was maintained.

Urged by import restrictions and prevailing keen competition, the Company has constantly been seeking new avenues of diversifying the manufacturing side of its activity. During the year under review, an agreement was entered into with Indian Casablancas High Draft Company, Private, Ltd. for the manufacture of machinery for their high-draft spinning system and parts thereof, and a new company, to be named as Casablancas Gannon Engineering Private, Ltd., is under formation in which the Company will be an equal partner. Similarly, negotiations with foreign firms are currently afoot for technical collaboration for the manufacture of valves and small tools.

(Continued in previous column)

RUIA GROUP MILLS FARE QUITE WELL

LARGER TURNOVER—HIGHER PROFIT

IF the details revealed by their respective annual accounts are any indication—the Directors' reports have unfortunately continued to be as uncommunicative on this point as ever—the three mills belonging to the Ruia Group, namely, the Bradbury Mills Ltd., the Dawn Mills Ltd., and the Phœnix Mills Ltd. (Agents: Messrs. Ramnarain Sons Private Ltd., Bombay) appear to have encountered favourable trading conditions during the year ended 31st March 1962 in common with most of the cotton textile companies in the country. In all three cases, the gross turnover has recorded a fair amount of improvement and, despite the all-round increase in practically every item of expenditure, the gross profit in each case is higher than that in the preceding year, whereas the net profit has touched a new high level, notwithstanding the increase in essential provisions. With the exception of Bradbury, which has raised the dividend for the second year in succession, the other two have maintained the dividend at the previous year's level. A feature common to all the three, however, is that each one of them has ploughed back a fairly large portion of available profits into business without in any way affecting the interest of shareholders.

Although the sales proceeds of the Bradbury Mills have risen during the year under review from Rs. 196.15 lakhs to Rs. 212.57 lakhs or barely 8.4 per cent, thanks to enlarged closing stocks of finished goods and some betterment in other income, the gross profit has expanded by 19.6 per cent from Rs. 17.31 lakhs to Rs. 20.71 lakhs, despite the disproportionate increase in the cost of cotton consumed. Provision for Agents' remuneration has quite naturally been raised by Rs. 0.27 lakh to Rs. 1.48 lakh and that for depreciation from Rs. 4.51 lakhs to Rs. 4.72 lakhs. There has, on the other hand, been some saving in the provision for taxation which has declined by Rs. 0.50 lakh to Rs. 4.50 lakhs. As a result, the net profit fully reflects the gains in the gross profit and stands improved by Rs. 3.42 lakhs to Rs. 10.01 lakhs. From this, a sum of Rs. 4.96 lakhs, as against Rs. 1.70 lakh, has been credited to reserve and, after setting aside Rs. 1.47 lakh for payment of preferred dividend in respect of the year, the Directors have proposed a higher ordinary dividend of 30 per cent, subject to deduction of tax, as compared with 25 per cent, subject to deduction of tax, for the previous year. This has claimed Rs. 3.00 lakhs, leaving Rs. 1.96 lakh to be carried forward, as against the Rs. 1.38 lakh brought in.

During 1960-61, the turnover of the Dawn Mills Ltd. had increased by approximately 5.7 per cent. The same rate of progress was maintained during the year under review, and the gross realisation from sale of yarn, waste and hosiery products has gone by Rs. 10.71 lakhs to Rs. 201.19 lakhs. As a result of this but due more to savings in expenses partly through, perhaps, operational efficiencies and partly because of a heavier carry-forward of stocks, the gross profit has staged a smart improvement of Rs. 9.03 lakhs to stand at the impressive figure of Rs. 40.32 lakhs. Unluckily, the major portion of this rise has been annulled by the increase in the provision for Agents' commission from Rs. 2.57 lakhs to Rs. 3.09 lakhs, and for taxation by as much as Rs. 5.50 lakhs to Rs. 17.00 lakhs, even though the depreciation allocation has been a shade lower at Rs. 4.39 lakhs, as against Rs. 4.74 lakhs previously.

There has been an all-round improvement in the working of the Phœnix Mills Ltd. during the year under review. Thanks to higher output of cloth, yarn, surgical dressing and waste, improved sales of Rs. 349.62 lakhs, as against Rs. 314.90 lakhs previously, and increased income of Rs. 27.13 lakhs, as compared with Rs. 18.33 lakhs, from other sources, the gross profit has advanced by Rs. 7.88 lakhs to Rs. 44.50 lakhs. Since, however, there has been a corresponding rise in all essential provisions—that for Agents' commission having gone up to Rs. 3.10 lakhs (Rs. 2.75 lakhs), for depreciation to Rs. 8.06 lakhs (Rs. 6.78 lakhs) and for taxation to Rs. 16.00 lakhs (Rs. 12.00 lakhs)—the increase in net profit has been only nominal, being Rs. 2.25 lakhs to Rs. 17.34 lakhs. Of this, Rs. 7.90 lakhs go to replenish the reserves, while the ordinary dividend, which has been maintained at 20 per cent subject to deduction of tax, absorbs Rs. 9.60 lakhs. The sum carried forward is Rs. 3.85 lakhs, as against Rs. 4.01 lakhs brought in.

The current market prices for the ordinary shares of these three companies and the yield thereon worked out on an *ex-div.* basis are given below:

	Price (Rs.)	Yield (%)
Bradbury	192.00	5.8
Dawn	162.00	6.9
Phœnix	241.00	6.2

A synopsis of the balance-sheets of the three companies as at 31st March 1962 is given below:

(In lakhs of rupees)

	Bradbury	Dawn	Phœnix
LIABILITIES			
Paid-up share capital	24.85	23.00	48.00
Reserves and surplus	40.60	38.54	76.29
Borrowings	53.39	22.10	117.41
Current liabilities and provisions	38.34	90.78	115.75
Total	157.18	179.42	357.45
ASSETS			
Gross block	96.39	111.94	224.30
Less—Depreciation	62.17	72.82	137.42
Net block	34.22	39.12	86.88
Investments	4.81	4.39	5.46
Current assets, loans and advances	118.15	135.91	265.11
Total	157.18	179.42	357.45

It will be seen from the above table that the financial position of all the three mills is quite satisfactory. Accumulated reserves in each case far exceed the paid-up share capital, which, with the exception of Bradbury, is exclusively in equity shares. In the case of Bradbury, the share capital consists of Rs. 14.85 lakhs in preference shares of Rs. 100 each and the balance in equities. The total of borrowings and current liabilities and provisions in all the cases is fully covered by current assets, while the gross block of each mill has been well written down to nearly one-third of its book value.

Efforts towards renovation and rehabilitation of plant and machinery progressed well during the year under review. The Bradbury Mills acquired new machine worth Rs. 6.95 lakhs and has placed orders for warp tying equipments and conversion material for ring frames. Additions to plant and equipments during the year cost the Dawn Mills an aggregate amount of Rs. 8.13 lakhs. Extension of the bleach house undertaken earlier is in progress and is expected to be completed during the current year. Large-scale additions to productive facilities were made by the Phœnix Mills during the year at a total cost of Rs. 34.04 lakhs. These included one winding and warping machine, two steam boilers, 145 looms and other equipment. Additional machinery is expected to be installed during the current year.

ASHOKA CEMENT LTD.

DIVIDEND MAINTAINED

LOSS of about a month's production due to stoppage of the kiln for the installation of an electro-static precipitator for the elimination of dust and the inadequate and interrupted supply of electric power are reported to have been mainly responsible for the somewhat sharp setback in the turnover of Ashoka Cement Ltd. (Chairman: Mr. S. P. Jain, Calcutta) during the year ended 31st March 1962. Production of clinker declined from 166,512 metric tonnes to 133,695 tonnes, while that of cement was as low as 138,597 tonnes during the year under review, as compared with 173,733 tonnes in 1960-61 and 164,206 tonnes in 1959-60. The effect of this decline in output would really have been serious had it not been for the rise in the retention price of cement made effective from 1st November 1961. Even though, as against an average increase of Rs. 10 per tonne for the industry as a whole, the increase in respect of the Company worked out to Rs. 2 per tonne only which again accrued for a period of five months during the year, its impact on the sale proceeds has been fairly encouraging. Gross realisation from sales has amounted to Rs. 161.80 lakhs, as against Rs. 200.02 lakhs a year ago, or nearly equal to what was earned during 1959-60, notwithstanding the sharp drop in despatches of cement as compared with that year. The lower output has naturally had its effect on the cost of consumption of raw materials, stores, etc., as well as other expenses, but the decline in these has been more than proportionate to that in the turnover, with the consequence that the gross profit has actually staged a rise, though quite a nominal one, from Rs. 16.68 lakhs to Rs. 17.22 lakhs. Unluckily this modest increase has been fully absorbed by the enhanced provision for depreciation, amounting to Rs. 10.05 lakhs, as against Rs. 8.97 lakhs, and the net profit has, therefore, decreased to Rs. 7.17 lakhs or about Rs. 0.54 lakh below the previous year's level. Of this, Rs. 0.40 lakh has been utilised towards writing off the debenture issue expenses, while Rs. 2.64 lakhs have been credited to reserves. From the balance that remains, including the amount brought in from the preceding year, a dividend of 7 per cent subject to deduction of tax has been proposed which claims, as during the past two years, a sum of Rs. 4.20 lakhs.

The performance of the Company during the past four years is presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

* Subject to deduction of tax.

The capital structure of the Company appears highly geared or leveraged in that the combined total of the share capital and reserves is far below the outstanding amount of loans, including the debenture-stock. As at 21st March 1962, the issued share capital, all in equity shares of Rs. 10 each fully paid, has stood unchanged at Rs. 59.91 lakhs, backed by Rs. 12.17 lakhs standing to the credit of several reserves and the surplus account. Against these owned funds of Rs. 72.08 lakhs, secured and unsecured loans aggregate Rs. 127.94 lakhs, in addition to current liabilities of Rs. 27.76 lakhs. On the assets side, the gross block at cost is worth Rs. 197.26 lakhs and has so far been written down to Rs. 164.85 lakhs.

Although the Company has consistently paid a dividend for the past four years out of the eight during which it has been in production, the rate of dividend has been too low to merit a serious attention from investors, despite fairly attractive growth prospects. The price has, therefore, continually been depressed; in the current year, it has been confined to a level well below the par value. At present, it stands at Rs. 8 *cum-div.* which is the lowest level so far achieved. A purchase at this price would entitle the holder to a net return of over 6.5 per cent per annum (worked on an *ex-div.* price).

JAY ENGINEERING'S SALES RISE AGAIN

WELL SET TO ACHIEVE HIGHER PROFITS

NEITHER the moderate improvement in gross profit for the year ended 31st March 1962 despite a large increase in turnover nor the reduction in ordinary dividend from 17.15 per cent to 15 per cent (both subject to deduction of tax) should cause the shareholders of the Jay Engineering Works Ltd. (Managing Agents: Messrs. Madan Mohan Lall Shri Ram Ltd., Delhi) any serious concern. For the Company appears well set to achieve higher profits not only during the current year but on a steadily rising basis in the years to come, inasmuch as a bold policy of expanding both internal and export markets is now receiving careful and continued attention. Moreover, the factors which brought about the decline in net profits, namely, power shortage in the Calcutta region and higher incidence of excise and import duty on various raw materials, may themselves either prove short-lived or be annulled through a continually rising production, thereby leading to the widening of profit margin. As for the dividend, the shareholders should note that, though the rate has been cut down, the total distribution as such has actually increased, consequent on the rise in the number of shares following the equity issue made during the previous year.

Notwithstanding the drop of Rs. 22.00 lakhs in the value of exports, earnings by way of sales, on both cash term and hire-purchase accounts, have once again registered handsome gains, the former going up by Rs. 41.08 lakhs to Rs. 916.21 lakhs and the latter nearly doubling from Rs. 14.21 lakhs to Rs. 27.02 lakhs. The total realisation has thus been of the order of Rs. 943.23 lakhs, as against Rs. 889.34 lakhs a year ago. This achievement has been possible because of higher output during the year under review and even more so because of the sales keeping pace with rising production. A notable feature of operation during the year has been the fact that, in spite of the spurt in production, the cost of raw materials, stores and spare parts consumed has increased only marginally from Rs. 411.13 lakhs to Rs. 411.47 lakhs. This state of affairs has, however, not unfortunately prevailed in the case of other expenses which have continued to grow. Indeed, such an increase has been principally responsible for restricting the growth in gross profit of a bare Rs. 2.97 lakhs to Rs. 94.82 lakhs. Despite this betterment in gross profit, the net profit has fallen by Rs. 1.91 lakh to Rs. 32.79 lakhs which was the level registered during 1959-60, because of increased total essential provisions. Provision for Managing Agents' commission has been a shade lower at Rs. 4.56 lakhs, as against Rs. 4.94 lakhs earlier, but increased provisions have become necessary for depreciation and taxation, the former getting Rs. 31.47 lakhs, as against Rs. 29.36 lakhs, and the latter Rs. 26.00 lakhs, as against Rs. 22.85 lakhs. A sum of Rs. 5.00 lakhs has been transferred to reserve and an identical amount has been set aside to meet the liability on account of preferred dividend in respect of the year. The balance falling short of the requirement to maintain the dividend on the enlarged capital, the Directors have proposed a lower dividend of 15 per cent or Re. 1.5 per share subject to deduction of tax.

The following comparative table clearly brings out the progress achieved by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	916.21	875.13	715.71	529.28

* Subject to deduction of tax.

The year under review witnessed a further improvement in the output of sewing machines from 256,000 to 273,000, but the number of fans produced declined by 10,000 to 513,000. On the sales side, however the story was different: Sewing machines fetched Rs. 386.38 lakhs, as against Rs. 384.03 lakhs previously, whereas fans fetched substantially more, Rs. 552.25 lakhs, as against Rs. 501.71 lakhs. The relatively small increase in the sales of sewing machines was, perhaps, due to the import restrictions imposed by the Governments of Yugoslavia, Burma, Ceylon and Egypt which are some of the principal export markets for these machines. The aggregate value of exports to these four countries alone declined from Rs. 52.00 lakhs to Rs. 19.00 lakhs, the overall drop in export earning being of the order of Rs. 22.00 lakhs to Rs. 91.00 lakhs.

In a bid to restore its export earnings to a respectable level and also to develop export markets, the Company has decided to take two steps. First, it has made arrangements to produce new designs in the 16" and 12" table fans range suitable for the export market, the production of which will commence in the current year. Second, it has formed a new company under the name of Usha Industries Ltd. in Ceylon in which the Company will hold 51 per cent interest. This company will undertake the assembly of sewing machines and fans from components and parts, sent from the Company's main factory at Calcutta. Assembly operations have already started and these are expected to add to the export earnings and profits of the Company.

It will be recalled that, in the preceding year, the Company had received the Government's approval for putting up a factory at Hyderabad to manufacture sewing machines with a capacity of 100,000 machines per annum. The construction work of this factory was started during the year under review and installation of machinery and equipment is reported to be in progress. The production of parts for the Zig-Zag machines has already commenced and is gradually being built up.

With the receipts during the year of the call amount remaining unpaid in the preceding year, as also of the balance amount on the 607,500 new equity shares, the share capital of the Company has increased to Rs. 201.86 lakhs, of which Rs. 50.00 lakhs only are in preference shares of Rs. 100 each. This is supported by reserves and surplus amounting to Rs. 130.88 lakhs, including Rs. 45.54 lakhs standing to the credit of the share premium account. Since the expansion is financed chiefly out of loans there has been a further recourse to borrowings during the year and secured and unsecured loans on that account have increased further to Rs. 514.58 lakhs. Besides these, current liabilities and provisions aggregate Rs. 274.94 lakhs. With the inclusion of new assets worth Rs. 18.93 lakhs acquired during the year, the gross block has inflated to Rs. 445.06 lakhs, but this has been fairly well written down to Rs. 275.25 lakhs, with Rs. 28.15 lakhs standing to the debit of the Hyderabad Project yet to be properly allocated to the various classes of fixed assets. Current assets, loans and advances and investments altogether amount to Rs. 847.01 lakhs.

The present market quotation for the Company's Rs. 10 fully paid ordinary share is Rs. 27.62 *cum-div.* Reducing this to an *ex-div.* figure, the net yield works out to nearly 4 per cent per annum.

FORT GLOSTER INDUSTRIES LTD.

The working results of the Fort Gloster Industries Ltd. (Managing Agents: Messrs. Kettlewell Bullen and Company Ltd., Calcutta) for the year ended 31st March 1962 show a distinct improvement over those for the previous year, when the Company had to slash the dividend by 15 points to 10 per cent per annum, subject to tax. Sales realisations have improved further from Rs. 616.60 lakhs to Rs. 695.80 lakhs and the gross profit has risen substantially from Rs. 36.09 lakhs to Rs. 59.59 lakhs. The profit-margin (ratio of gross profit to sales), which had dipped by four points to 5.8 per cent in the previous year, has looked up reassuringly to 7.2 per cent. The improved results have naturally drawn the Directors' attention to the interests of shareholders, and the return to them has been stepped up to 12.5 per cent per annum, subject to tax.

During the year, raw materials cost the Company Rs. 459.18 lakhs, as against Rs. 431.63 lakhs in the previous year. Staff expenses increased from Rs. 107.58 lakhs to Rs. 109.71 lakhs. Other expenses, too, went up from Rs. 74.26 lakhs to Rs. 87.92 lakhs. After providing Rs. 22.01 lakhs (Rs. 21.79 lakhs a year before) for depreciation and Rs. 12.30 lakhs (Rs. 7.10 lakhs) for taxation and allowing Rs. 2.43 lakhs (Rs. 1.32 lakh) for Managing Agents' remuneration, the net profit amounts to Rs. 13.85 lakhs, as against Rs. 5.88 lakhs. Unlike in the previous year, when Rs. 4.50 lakhs were drawn from general reserve, no amount has been transferred from reserves this year, but the past surplus tax provision of Rs. 50,000 has been written back. Credit to reserves is higher at Rs. 5.32 lakhs, as compared with Rs. 2.52 lakhs a year before. The amount carried forward is Rs. 14,938, as against Rs. 72,385 brought in.

The mills of the Company have been modernised to the extent of about 62 per cent up to the spinning stage and application for the import of further machinery has been submitted. Production in the cable division increased substantially last year and so also sales. The Company's products are well received in the market. The proposed rights issue of 50,000 equity shares of Rs. 100 each at a premium of Rs. 90 per share in the proportion of one share for every three shares held, which has been sanctioned by the authorities, will be made after the import licence for plant and machinery to manufacture large sections of V.I.R. cables, mining cables and railway signalling cables is received.

Financially, the Company is in a sound position. Its paid-up capital of Rs. 84 lakhs, Rs. 63 lakhs of which are in equity shares and the rest in two types of preference shares, is backed by reserves and surplus to the extent of Rs. 87.21 lakhs. Secured loans increased during the year from Rs. 176.80 lakhs to Rs. 230.20 lakhs. Of this amount, Rs. 201.70 lakhs were borrowed from banks, the balance of Rs. 28.50 lakhs being made up of debentures of Rs. 10.55 lakhs and the outstanding National Industrial Development Corporation loan of Rs. 17.95 lakhs. Unsecured loans are shown at Rs. 25.25 lakhs—Rs. 5 lakhs more than in the previous year. Current liabilities and provisions aggregate Rs. 79.86 lakhs, as against Rs. 67.65 lakhs a year before. The total short-term indebtedness to outsiders amounts to Rs. 306.81 lakhs and is comfortably covered by current assets, loans and advances aggregating Rs. 335.19 lakhs. Investments are unchanged at Rs. 2.36 lakhs. All of them are quoted and command a market value of Rs. 2.27 lakhs. The gross block under the jute division, which expanded from Rs. 269.67 lakhs to Rs. 291.90 lakhs last year, has been written down to Rs. 101.02 lakhs and that under the cable division, which increased from Rs. 83.15 lakhs to Rs. 88.86 lakhs, has been written down to Rs. 66.95 lakhs. The total net block amounts to Rs. 167.97 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 412 *cum-div.* On the *ex-div.* basis, they offer a net yield of 2.1 per cent per annum.

ALUMINIUM CORPORATION SUFFERS SMALL SETBACK

Following lower despatches in the face of a slightly higher production, the Aluminium Corporation of India Ltd. [Managing Agents: Messrs. J.K. Industries (Private) Ltd., Calcutta] suffered a small setback in its financial results for the year ended 31st March 1962. Net sales (that is, excluding excise duty paid and returns allowed) receded from Rs. 116.04 lakhs to Rs. 114.63 lakhs and the gross profit moved down from Rs. 33.89 lakhs to Rs. 30.45 lakhs. The cost of raw materials, stores and spares consumed increased from Rs. 31.89 lakhs to Rs. 35.14 lakhs. Staff expenses at Rs. 42.20 lakhs were nearly the same as in the previous year, but other expenses rose from Rs. 19.90 lakhs to Rs. 22.34 lakhs. The excise duty (not included in other expenses) amounted to Rs. 11.10 lakhs, as against Rs. 12.08 lakhs in the previous year.

Out of the year's profit, a sum of Rs. 7.35 lakhs has been provided for depreciation, as against Rs. 4.76 lakhs in the previous year. Taxation absorbs Rs. 11.50 lakhs as against Rs. 13 lakhs and Managing Agents' commission Rs. 1.70 lakh, as against Rs. 2.06 lakhs. After making these allocations, the net profit works out to Rs. 9.90 lakhs, that for the year 1960-61 being Rs. 14.07 lakhs. Notwithstanding this rather sharp drop in net profit, the Directors have maintained the dividend on the Rs. 10 fully paid ordinary shares at 12 per cent per annum, subject to tax. But this has meant a substantial reduction in the credit to reserves from Rs. 14.07 lakhs to a mere Rs. 1.86 lakh. The carry forward is Rs. 1.20 lakh, as against Rs. 1.33 lakh brought in.

The first phase of the expansion programme, which is designed to treble metal production capacity of the Company, commenced from the middle of June 1962. This phase of the expansion programme has been completed according to schedule and most economically. Work on second phase relating to fabrication and third phase concerning the alumina section is proceeding well. The necessary machinery and plant will arrive shortly and the expansion will be completed as scheduled.

Against the Company's paid-up capital of Rs. 133.75 lakhs, Rs. 93.75 lakhs of which are in equity shares and the rest divided equally in two types of preference shares, reserves, and surplus aggregate only Rs. 46.83 lakhs. Secured loans have doubled during the year from Rs. 30 lakhs to Rs. 61.22 lakhs and, excepting State Government loan of Rs. 1.26 lakh, the loans represent debenture liability. Current liabilities and provisions amount to Rs. 183.37 lakhs and are not fully covered by current assets, loans and advances aggregating Rs. 130.97 lakhs. Investments of Rs. 1.74 lakh have nearly the same market value. The gross block, which expanded during the year from Rs. 423.35 lakhs to Rs. 587.71 lakhs, has been written down to Rs. 466.18 lakhs.

At their current market value of Rs. 17 *cum-div.*, the Rs. 10 fully paid ordinary shares offer, on the *ex-div.* basis, a net yield of roughly 5.2 per cent per annum.

SYNOPSES OF COMPANY REPORTS

Ganges Manufacturing Co., Ltd.

(*Managing Agents*: Messrs. J. K. Industries Private Ltd., Calcutta.)

Annual General Meeting—25th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	6,66,61	5,19,28
Closing stocks (finished goods)	25,37	23,85
Gross profit	48,94	36,57
Transfer to Managing Agents' commission ..	1,94	Nil
,, ,, depreciation	5,52	3,54
Net profit	41,38	33,03
Adjustments	1,70	61
Appropriations:		
Total available balance	43,08	33,64
Transfer to development rebate reserve ..	2,91	5,85
,, ,, provision for taxation	15,00	Nil
,, ,, general reserve	10,00	17,00
,, ,, extra dividend on preference shares for 1960	Nil	14
Proposed dividend on 8% cumulative preference shares ..	62	62
,, ,, on ordinary shares (taxable).	12,65 (15%)	8,43 (10%)
Carry forward	1,90	1,60

N.B.—Adjustments include the balance brought forward from last year, profit on sale of fixed assets, provision for doubtful debts no longer required and liabilities no longer required.

Extracts from the Directors' report: The modernisation of the company's mills up to spinning was completed and the mill was completely reorganised for double shift working which it is doing now. This has made it more economical than hitherto before. In addition to modernisation the company has already installed 20 wide looms for manufacture of carpet backing cloth which are working satisfactorily. The product of these looms has been well received by the foreign buyers. The company has further received a licence for installation of 10 more wide looms, the machinery for which has already been ordered and it is hoped that they will be installed in the very near future. The company is further making attempts to obtain the permission of the Government of India for installation of further wide looms and it is hoped that licence for sufficient number of looms will be available in the near future.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	90,32,100	Gross block	2,77,93,250
Reserves and surplus..	42,83,046	—Depreciation ..	1,57,04,703

,, ,, on ordinary shares (taxable)	Nil	36
Carry forward	18	(Nil) 9

N.B.—Adjustments include the balance brought down from the previous year's account, refund of tax, adjustment in respect of previous years and transfer from general reserve.

Extracts from the Directors' report: Power cuts, which from the month of February 1961, had become an upsetting factor in the working arrangements of the mill, continued until 28th May 1961, after which date a revised working schedule was introduced making power available for six days per week and in the case of the mill, Monday was declared as the weekly non-working day. This system of working is still in force at the time of writing.

Even after two block closures of one week each in June and July on account of the acute shortage of raw jute it was still found necessary to close one day weekly during the period 6th August to 16th September 1961. All workers affected by these measures were paid lay-off compensation as provided under the Industrial Disputes Act.

The labour situation was quiet throughout the period under review and the mill worked with a full labour force.

The Wage Board has not yet completed its investigations into the wage structure for Jute Mill workers at the time of this report but interim relief amounting to Rs. 3.42 monthly continues to be paid to all workers.

The year ended March, 1962 will long be remembered as one of the most difficult in the long history of the Indian jute mill industry. The reason for this has been the inadequate supply of fibre consequent on two successive short crops which in turn resulted in a period of heavy financial losses due to the disparity in prices between raw jute and manufactured goods. The short crop of 1959-60 due to inadequate sowing was followed by a poor harvest in 1960-61 caused by drought and mills found themselves with insufficient fibre to carry them through the season until the new crop arrived in August-September. Prices for fibre advanced rapidly and with overseas markets resisting the rise in prices for manufactured goods, the disparity widened to such an extent that at one period for every ton of goods produced the mills suffered a loss of Rs. 300 on simultaneous business.

Turning to the current year, the prospects can be regarded as favourable. The growing crop although subject to flooding in certain areas is on the whole satisfactory and although the acreage under cultivation is somewhat less than that of last year it is estimated this will yield 70 lakhs bales and with a carryover of 25 lakhs bales from the previous season there will be ample fibre for the Industry's needs.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	41,98,000	Gross block	96,49,730
Reserves and surplus..	58,06,875	—Depreciation ..	59,81,764

	Rs. 72,21,714		Rs. 72,21,714

* Paid-up capital consists of 5,000 7% cumulative 'A' preference shares of Rs. 100 each, 10,000 5½% cumulative 'B' preference shares of Rs. 100 each and 28,000 ordinary shares of Rs. 100 each fully paid up. Of the ordinary shares 18,000 have been allotted as fully paid by way of bonus shares by way of capitalisation of reserve.

Parrys Confectionery Ltd.

(*Managing Agents*: Parry and Co., Ltd., Madras.)

Annual General Meeting—29th September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	1,33,77	1,16,65
Closing stocks	25,19	24,60
Gross profit	14,98	12,23
Transfer to Managing Agents' commission ..	1,03	38
,, ,, depreciation	1,48	1,34
,, ,, provision for taxation	7,13	4,36
,, ,, provision made in previous years no longer required	9	35
Net profit	5,25	5,80
Adjustments	1,81	1,52
Appropriations:		
Total available balance	7,06	7,32
Transfer to development rebate reserve ..	30	50
,, ,, general reserve	50	1,00
Proposed dividends (taxable) ordinary shares.	4,70 (25%)†	4,00 (30%)†
Carry forward	1,56	1,31

N.B.—Adjustments include only the balance brought forward from the previous year.

† Dividend on the increased capital.

Extracts from the Directors' report: *Review of operations*: Sales during the year touched a new record of Rs. 1.34 crores—an increase of 14 per cent over the preceding year. This increase was achieved mainly from sales of wrapped varieties. As a result of import restrictions and the increase in customs duty on wrapping paper the cost of production continued to rise and some price increases had to be made to absorb part of these rising costs.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,00,000	Gross block	17,20,669
Reserves and surplus..	14,38,302	—Depreciation ..	8,37,458
Other liabilities ..	45,33,245	Net block	8,83,211
		Block in progress ..	47,755
		Current assets ..	64,90,029
		Investments	10,000
		Cash	40,552
	Rs. 74,71,547		Rs. 74,71,547

* Paid-up capital consists of 15,00,000 ordinary shares of Re. 1 each. Of the above, 200,000 shares have been allotted as fully paid up pursuant to a contract without payment being received in cash and 250,000 shares have been allotted as bonus shares by capitalisation of share premium account.

Wartyhully Estates Ltd.

(*Secretaries and Treasurers*: Messrs. Peirce Leslie and Co., Ltd., Mangalore.)

Annual General Meeting: 22nd September 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
By coffee crop	6,76	9,07
Gross profit	2,36	3,89
Transfer to Secretaries' remuneration	10	10
,, ,, depreciation	35	33
,, ,, provision for taxation	60	1,20
Net profit	1,31	2,26
Adjustments	1,12	1,15
Appropriation:		
Total available balance	2,43	3,41
Transfer to general reserve	Nil	50
Proposed dividend (taxable)	1,80 (15%)	1,80 (15%)
Carry forward	64	1,12

N.B.—Adjustments include only the balance brought forward from the previous year.

Crop and Costs.—A total crop of 195.261 metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Rs. 2.30 per point or Rs. 3,463 per metric tonne. A comparative statement of production and costs for the previous 2 years is given below:

Year	Crop (metric tonnes)	Estate expenditure per metric tonne	All-in-cost per metric tonne
1959-60	171.045	Rs. 2,914	Rs. 3,260
1960-61	321.525	Rs. 1,825	Rs. 1,977
1961-62	195.261	Rs. 2,742	Rs. 3,044

A further payment of 2 nP per point has been received on 1959-60 crop making the total for the year Rs. 2.24 per point and this is equivalent to Rs. 3,396 per metric tonne.

The 1960-61 season's crop has been revalued at Re. 1.95 per point which has so far been paid. This is the equivalent of Rs. 2,957 per metric tonne when compared to the valuation of Re. 1.90 per point or Rs. 2,821 per metric tonne adopted last year.

The 1962-63 crop has been estimated at 200 metric tonnes and the all-in-cost of production at Rs. 3,044 per metric tonne.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,00,000	Gross block	16,42,976
Reserves and surplus..	13,04,503	—Depreciation ..	1,87,592
Other liabilities ..	6,37,892	Net block	14,55,384
		Current assets ..	5,40,650
		Investments	6,54,313
		Cash	4,92,048
	Rs. 31,42,395		Rs. 31,42,395

* Paid-up capital consists of 6,00,000 ordinary shares of Rs. 2 each fully paid up.

KINNISON JUTE MILLS COMPANY LIMITED

CHAIRMAN, MR. D. C. B. PILKINGTON'S ANNUAL STATEMENT

ACTION TO AVERT LIKELY THREAT TO SACKING EXPORTS CALLED FOR

SWIFT action to avert a likely threat to India's exports of sackings has been urged by Mr. D. C. B. Pilkington, Chairman of the Kinnison Jute Mills Company Ltd., in his annual statement to the shareholders circulated along with the annual report and accounts of the Company for the year ended 31st March 1962. Mr. Pilkington has recalled that, for some time past, India has succeeded only in obtaining such overseas sacking business, as is available after Pakistan has sold its full production. He admits that during the first half of 1962, both India and Pakistan disposed of their full sacking production due to the rebuilding of stocks overseas, but points out that indications today are somewhat ominous, inasmuch as India's sacking stocks are already rising, while Pakistan's production of sacking is increasing. India's monthly exports of sacking, according to him, amount to between 30,000 and 32,000 tons per month, and this is approximately the extra monthly production of sacking that will come off the additional looms that will be installed in Pakistan by the end of 1964. Mr. Pilkington has, therefore, cautioned that India would stand to lose the Rs. 55 crores earned annually from sacking exports, unless some effective action is taken. For he believes that the world demand is unlikely to rise rapidly due to the installation of a number of sacking mills in other countries.

The following is the full text of Mr. Pilkington's statement:

"Dear Sir/Madam,

"The year 1961-62 will long be remembered as one of the most uncomfortable years the jute mill industry has experienced, redeemed in the latter half of the year by a favourable swing in market conditions that was certainly not foreseeable in the dark days of April/June 1961. Enough has already been spoken and written about the chaotic situation created by the physical shortage of raw jute to make repetition in this statement a waste of time and space and most of my remarks will be devoted to the present and future of your Company and the industry as a whole. It is well known that, in the April/September 1961 period, the Indian jute mill industry as a whole lost some 6 crores of rupees, but shareholders will require some explanation as to why your Company—even allowing for the fact that at the height of the crisis the bigger the mill the more money lost—has made an even poorer showing than most units in the industry.

Unfavourable Results Explained

"Leaving aside the current year, which is exceptional, there have only been two periods in the past five years when it has been possible to purchase raw jute, and sell jute goods simultaneously at a profit. This has left those responsible for managing the various groups in the industry no option but to take views on the future prices of both the raw material and the finished product. Taking a view of the market thus becomes the only alternative to booking a certain loss and, as with all types of speculation, it is impossible to win all the time. Over the five years as a whole the record of the management of your Company in taking a correct view of the market has been extremely good, but this cannot be claimed for 1961. As so often occurs in this industry, the determining factor was unforeseeable—in this instance, what is known as the Bharat Commercial case—a legal action by the Customs on the issue of under-invoicing which was largely responsible for breaking the high level of prices then ruling in the jute goods market. At that juncture, your Company was just about to square a long position in raw jute which would have resulted in a relatively small loss—the break in the goods market and the mistaken impression that the market would recover turned this into a very substantial loss. This is one reason why your Company's results, and indeed those of most companies in the Birds/Heilgers Group, compare unfavourably with those of some other units in the industry.

"The second reason is that labour relations in your mill were far from happy during the major portion of the year. Disciplinary action against certain malpractices led to several cases of 'go slow' with the result that the factory was starved of yarn and production was much lower than should have been the case. It is, therefore, satisfactory to report that there has been a major change for the better in the current year and that, as from June 1962, your Company is once again in its rightful position of making the highest monthly profit in the Birds/Heilgers Group.

"With the transfer of Lawrence machinery and loom-hours from Lansdowne Jute Mill and the subsequent gradual closure of Lansdowne Jute Mill itself from the 25th August, your Company will receive additional machinery on hire and matching loom hours that will increase the loom complement to 2,180. In the difficult times that lie ahead, as well as in the current period of prosperity, your Directors are convinced that the larger the unit, the better its prospects and they are, therefore, gratified at this development which they are confident will be beneficial to all the three companies concerned.

Carpet Backing

"To Jute Industries Ltd., of Dundee, and the Ludlow Jute Company goes the credit for being the first in the field in developing jute backing for the tufted carpet industry. The Birds/Heilgers Group was, however, the first in the Indian Jute Mills Association to install carpet backing looms ordered in 1954 and operating in early 1955—and as far as your Company is concerned 50 looms are now installed with an eventual target of around 60 looms by mid-1963. The tufted carpet industry in America is subject to the same wide fluctuations of fortune as the Indian jute mill industry, and over the last seven years your Company's management has become inured to the alternating periods of surplus and shortage of jute backing cloth—the last period of surplus being in mid-1961 and the latest period of shortage being with us today. There can be no doubt that in America and elsewhere in the world the tufted carpet industry is a growth industry, but it is possible that those with relatively recent experience of the industry may read into the current shortage of backing material that the sky is the limit as regards the installation of additional carpet backing looms. Taking a round figure of 12 rolls per month per loom, it is arguable that any number between 300 and 600 looms will meet the current deficit between supply and demand—a demand based on a period of great activity in the American carpet industry. It is, however, virtually certain that, if the number of additional looms planned for India is installed, plus the sizable number of looms starting to operate in Jamaica as well as those ordered for Pakistan there will, before many months have passed, be a surplus of supply over demand, which may well persist for a considerable period. Cut-throat competition, as was experienced in 1961, will certainly affect India's foreign exchange earnings and may well also hit any newcomers to this somewhat mercurial speciality fabric, who have devoted an undue percentage of their total resources to additional looms and ancillary machinery.

The Standard Jute Company Ltd.

"With a reduced stake in the actual manufacture of jute goods, your subsidiary company has had a relatively satisfactory year. Payment of a dividend would have been possible, but apart from the extra tax liability involved this would not have enabled your Company to pay an ordinary dividend out of current earnings. The Directors of the Standard Jute Company, Ltd., decided, therefore, to conserve that company's cash resources and continue with the policy of diversification which will undoubtedly benefit your Company before long.

"'Standard' now has holdings in:

(a) Coates of India Ltd.—An established company in the printing ink industry with good growth prospects.

(b) McNally-Bird Engineering Co. Ltd.—This company is now in a position to accept contracts on a turnkey basis.

(c) George Salter and Co. (India) Ltd.—This company—despite many delays out with its control—should be in production by early 1963.

"In addition to the above, 'Standard' is constructing a block of 6 flats in the Titaghur area at a cost of around 4 lakhs and has arranged to let these on a rental giving a satisfactory return on the money invested.

Future Prospects

"With the Company's production virtually fully sold up to the end of March 1963 and the great majority of the raw jute required secured, it is satisfactory to report that the current year will be an exceptionally good one barring any unforeseen calamity. This is due to a large jute crop coupled with a strong demand for jute goods arising partly from the present building up of stocks overseas after the famine conditions of 1961 and partly from an increased world consumption of hessian fabrics. The latter, it is hoped, will continue, but the former influence on prices is of a non-recurring nature.

"Prospects for the early part of the 1963-64 year are promising, but the steady increase in sacking stocks is already causing concern and the future outlook for late 1963 and 1964 is obscure and, in fact, many consider gloomy. For some time past, India has only succeeded in obtaining such overseas sacking business as is available after Pakistan has sold her full production. The first half of 1962 has seen both India and Pakistan disposing of their full sacking production due to the rebuilding of stocks overseas mentioned earlier. The indications today are, however, somewhat ominous—India's sacking stocks are already rising, while month by month Pakistan's production of sacking is increasing. India's monthly exports of sacking amount to between 30 and 32 thousand tons per month, and this is approximately the extra monthly production of sacking that will come off the additional looms that will be installed in Pakistan by the end of 1964. Unless, therefore, there is a rapid rise in world demand for sacking—and this is unlikely due to a number of sacking mills being installed in other countries—India stands to lose the 55 crores per annum earned from sacking exports, unless some effective action is taken. A switch to hessian may be a partial solution, but the possibilities in this direction are limited both by demand and by the availability of the quality jute required.

"It is not my intention to propound here a solution to this problem—the Government of India is well aware of the importance of the issue and the Indian industry is confident that it will be dealt with realistically and as soon as the necessity arises. It is, however, desirable to summarise briefly just what the Indian industry is faced with in endeavouring to compete with its counterpart in Pakistan. The export subsidy bonus gives Pakistan a competitive advantage of around Rs. 150 per ton—the lower price of jute in Pakistan gives a further advantage of around Rs. 280 per ton. Factors in India's favour total a net amount of around Rs. 30 per ton. With Rs. 400 per ton to play with—Rs. 40 per 100 'B' Twills—Pakistan has only to decide by how much to underquote Calcutta prices to obtain all the world's sacking business as soon as her production permits.

"The Indian jute mill industry, while having no feeling of hostility towards its Pakistan counterpart, is quite prepared to compete for its share of world sacking markets given the opportunity to do so—and has considerable confidence in its technical ability and dynamism. At the moment, however, it is in the position of a boxer with not one but both hands tied behind his back.

Raw Jute

"With the vital importance in today's conditions of foreign exchange earnings, the jute industry has received more attention from the Government of India than was normal in the past. In talks with the Government on the problems of raw jute, it has been encouraging to note the very wide field over which there is unanimity of opinion, that India must be fully self-sufficient in jute even to cuttings, when raw jute exports are re-established in volume; that yields must be increased and that prices must not fall to levels where the cultivation of jute is uneconomic to the ryot. Unfortunately but not surprisingly, in view of the number of interests involved, unanimity on what is the minimum economic price for raw jute, is much less easy to achieve.

"In the somewhat abnormal, because of non-competitive conditions of 1961 to mid-1962, Rs. 30 for Assam bottoms could be regarded as a suitable minimum price and the I.J.M.A.'s success in basically maintaining this minimum is a matter for congratulation. If the jute industry was an internal industry instead of an export industry, again Rs. 30 might be justified as a reasonable minimum price—or if the price of raw jute in Pakistan was Rs. 30 or even Rs. 28. Unfortunately, these conditions do not prevail—the Indian jute mill industry has to export 85 per cent. of its production and the price of equivalent jute in Pakistan ranges between Rs. 20 and Rs. 24 per maund. If, therefore, jute prices are for other very worthy reasons to be maintained at between Rs. 6 to Rs. 10 above world parity, then the alternatives are losing all overseas sacking markets to Pakistan or a massive subsidy to the Indian jute mill industry. Other overseas jute mill industries which draw their raw material supplies from Pakistan will also be restored to a competitive position in the market for hessian. The moral is that to draw long-term conclusions on the right price for raw jute from the most exceptional 1961-62 year, could have very serious consequences.

"Viewed from the internal angle, there are two points to be made. The first is that the yield per acre must be increased. At 3.7 bales per acre, a price can be remunerative to the Pakistan cultivator that is certainly not so to the Indian cultivator, with a yield of 2.8 bales per acre. The multiplication of improved seeds, more fertilisers and more sowing, must be treated as a matter of real top priority—it has certainly never yet been regarded as of this degree of importance.

"The second is the wide disparity of prosperity between the jute-growing States of India. With top quality jute at Rs. 45 to Rs. 50 per maund and Calcutta not very far away, cultivators in West Bengal and even Assam can make very reasonable profits with prices for bottom and X bottom jute ruling well below Rs. 30 per maund. Bihar is, however, a very different proposition—the lowest yields, the lowest quality and the highest railway freight, result in the cultivator getting less than a reasonable return as soon as prices fall to levels that are even approximately competitive with Pakistan. The long-term answer is higher yields in Bihar and lower railway rates, but much marginal land in Bihar is hardly suitable for jute cultivation. The discontent that results from such low prices to the cultivator leads to demands for totally unrealistic prices for raw jute in India as a whole, hampers the imports of cuttings from Pakistan which are another essential for competitive sacking production, and encourages the impression that the Indian jute mill industry is grinding the face of the Bihar ryot. It is difficult to see how the problem of Bihar jute can be resolved on a short-term basis, but it is essential that the question of the correct price for India as a whole should not be unduly influenced by the special disadvantages of one section of the growers—anything that can be done, however, to assist these growers within a reasonable price structure should be welcomed and supported.

Jute Buffer Stock Association

"This Association which arose out of the I.J.M.A.'s determination that another jute famine should not recur due to human failings, started operation in April 1962. The original intention was that operations should start as soon as a physical surplus of jute occurred; that is, with the second successive good jute crop and at a price level slightly above the minimum economic price to the cultivator. It was, however, found necessary to utilise this weapon in the course of implementing the I.J.M.A.'s undertaking to maintain jute prices at Rs. 30 per maund during the 1961-62 jute season. A delay in setting up the Association occurred due to the original contention of the West Bengal Government that an association with such objectives could not be registered under the Trades Union Act. As a result, the Association was called upon to start purchases very soon after registration, with no financial arrangements finalised, no staff recruited and none of the documentation organised. In the circumstances, great credit is due to all concerned in the successful initial operation covering nearly 2½ lakh bales. While there was some controversy as to the correct moment for the Association to begin active life, the tremendous number of points of detail, thrown up in the limited 1962 purchases, indicate in retrospect how fortunate it was that the Association had the opportunity of this pilot run before dealing with the volume of purchases that will be necessary with a real surplus of jute—possibly in the 1962-63 season. The key to the success of the Association's operations is the fact that individual mills purchase, stock and insure the jute that they will eventually take over from the Buffer Stock Association and consume. Any other method of operating the buffer stock would lead to innumerable complications and almost certain failure.

Labour

"In conclusion, a word of praise is due to the labour force in the industry as a whole for the way they adapted themselves to the unavoidable but nevertheless disagreeable cuts in working hours, including block closures, in 1961. Today, for the first time for many years, there is an acute shortage of labour in many categories and one can but hope—mingled with some apprehension—that the industry will be able to continue to provide employment on something approaching the current level, despite the paramount need for further modernisation and rationalisation."

COMMERCE AND INDUSTRY

(Concluded from page 514).

and forward exchange quotations, the profitability of moving funds from one centre to another on a covered basis has, on the whole, been greatly reduced in the last two years."

The aggregate basic deficit in the balance of payments of the primary producing countries, according to the *Report*, showed only small changes during the year under review. But changes in individual countries showed divergent trends. The industrial group of countries (among the primary producing countries) considerably reduced their basic deficit in 1961, whereas that of developing countries increased slightly. This is explained by the fact that, while exports of the industrial group were considerably higher and imports lower, as compared with the previous year, shipments of developing countries rose only by a minor amount which was insufficient to sustain the increase in imports by about 3 per cent. This difference between the two groups of countries appears to have been accentuated by movements of short-term capital, which supported the improvement in the position of the more industrialised countries and brought about a major deterioration in that of the developing countries. As a result, the industrial group showed a striking improvement in its overall balance of payments; an increase of about $700 million in official reserves and net positions with the Fund, contrasted with a decline of $640 million in 1960. The overall position of developing countries, which had shown a surplus of about $500 million in 1960, showed a deficit of about $700 million in 1961. A large part of this deficit was financed by the Fund's resources; the net drawings on the Fund by the developing countries amounted to about $450 million.

The following table shows the trends in the basic balance of payments in 1960 and 1961:

(In billions of U.S. dollars)

	1960		1961	
	First half	Second half	First half	Second half
United States	—1.1	—0.7	0.2	—1.3
United Kingdom	—0.5	—0.5	—0.8	—0.1
France (a)	0.5	0.3	0.7	0.5
Italy (b)	—0.1	0.4	..	0.6
West Germany	0.3	0.7	0.8	—0.1
Other industrial countries :				
In Europe	0.1	..	—0.5	0.4
Japan	—0.1	0.2	—0.6	—0.5
Primary producing countries :				
Australia, New Zealand, Canada and South Africa	—0.2	—0.6	—0.3	—0.1
Others	0.3	—0.5	—0.1	—0.2
Balancing entry	0.8	0.7	0.6	0.6

The basic balance of payments covers goods, services, transfer payments, and long-term capital transactions *less* certain transactions that are considered to be of an extraordinary character. The main part of these extraordinary transaction consists of repayments on post-E.P.U. debts and advance debt repayments. No sign indicates credit; minus sign indicates debt.

(a) Covering transactions with the non-franc area only.

(b) Including inflows of Italian bank notes; accordingly, the entries for Italy should be regarded as quite tentative.

Note.—If it were not for statistical errors, the sum of basic balances for all countries could be expected to show a small excess of surpluses over deficits in 1960 and 1961. Conceptually, the sum covers (1) non-monetary gold transactions of the countries included in the table, the counterparts of which—changes in world official gold holdings—is not part of the basic balance, and (2) the balance of these countries' current and long-term capital transactions with (*a*) international organisations, and (*b*) other countries, mainly those in the Soviet area. In 1960 and 1961, the balance with international organisations was negative, but slightly smaller than the positive entry for non-monetary gold. The fact that the table records an excess of deficits thus implies that the country figures tend to err more frequently in the direction of overstating deficits or understating surpluses than in the opposite direction.

TEXTILES

(Concluded from page 498)

matter to the authorities concerned and it is being examined by the Customs. We hope that a decision will be taken soon, enabling the Customs to accept the duty exemption certificates issued by the Textile Commissioner in every case.

"Another interesting question has now been raised by the Customs in regard to the clearance of components for ring frames. According to the Notification No. OSR 322 of March 1961, the components for the cotton spinning and weaving machinery are permitted to be imported at a rate of 10 per cent duty. However, the Customs demand a higher rate of duty on inserts, jockery pulleys and high drafting material. Their contention is that these components can also be used in doubling frames. Another important issue raised by the Customs in this regard is that the ring frames manufactured out of these components can also be used for spinning staple fibre. It is contended by the Customs that ring frames used to spin cotton yarn only can be allowed at 10 per cent import duty and therefore only the components for such ring frames can be allowed at 10 per cent. The argument, on the face of it, seems to be reasonable. But...no manufacturer in the world can prove to the Customs that particular ring frame can only spin cotton yarn and not staple fibre yarn. No manufacturer with responsibility is willing to make such an incorrect affidavit.

"In regard to higher import duty on components for ring frames, we understand that, by dint of our representations in the past, the Textile Commissioner has taken up this matter with the Central Board of Revenue through the Ministry. However, we still find, on investigation with the Finance Ministry, that the matter has been referred back to the Ministry of Commerce and Industry for their opinion. An early action in this regard will greatly assist our industry.

"The Customs also demand 50 per cent import duty on setting gauges and tools, classifying the setting tools for drafting system as any other tools. This matter also requires to be looked into.

"There are some items—required for special drafting systems and certain other highly specialised equipments such as bolts, washers, nuts and rivets of special sizes and types which are required to be imported. The quantity required is so small that it does not justify its economic production in India. These items are imported as components. The Customs classify these items as ordinary nuts, bolts, washers, etc. and assess duty at 55 per cent. In this connection, I have a suggestion to make, that a meeting of the officers of Customs and the Textile Commissioner's Office and representatives of machinery manufacturers may be called to clarify various issues and to arrive at some decisions. This will enable the machinery manufacturers to clear their consignments at the earliest without any trouble."

Answering some of the points raised by the Chairman, Mr. Manubhai Shah said that, as far as the delay in granting licences was concerned, it was due, in most cases, to the fact that applications were submitted without proper data. For instance, where foreign collaboration was involved, applications were sometimes submitted without a draft copy of the agreement. Submission of unrealistic manufacturing programmes with high percentages of import content, also resulted in delays.

As regards reliefs in customs duty on imported components, the Minister disclosed that the matter was being looked into and efforts were being made to provide adequate relief.

Notice

ROHTAS INDUSTRIES LIMITED

Registered Office:
DALMIANAGAR (BIHAR)

THE DIRECTORS OF ROHTAS INDUSTRIES Ltd., have decided to recommend the following dividends subject to deduction of tax to the forthcoming Annual General Meeting of the Company in respect of the financial year ended 31st March, 1962:—

'A' Preference Shares 10.1%
'B' Preference Shares 5.525%
Ordinary Shares 8%

The Share Transfer Books and Register of Members of the Company shall remain closed from 29th September, 1962 to 12th October, 1962, both days inclusive.

By Order of the Board,
A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA,
8th September, 1962.

KERALA STATE INDUSTRIAL DEVELOPMENT CORPN., LTD.

CHAIRMAN, MR. K. R. K. MENON'S ANNUAL STATEMENT

MORE LARGE-SCALE INDUSTRIES MUST BE SET UP IN THE STATE

IN his speech at the First Annual General Meeting of the Kerala State Industrial Development Corporation Ltd, held at Trivandrum on Tuesday, 18th September 1962, Mr. K. R. K. Menon, Chairman of the Corporation, dwelt on the problems of industrialisation in the State. Mr. Menon was critical of the backwardness of Kerala in the field of industrialisation and attributed it to the dearth of risk capital and the lack of adventurist spirit in those who had the resources in the State. He laid particular emphasis on setting up large-scale industries in Kerala.

The following is the full text of Mr. Menon's speech:

"GENTLEMEN,

"I have great pleasure in placing before you the accounts of the Kerala State Industrial Development Corporation Ltd., for the year ending 31st March 1962, and the report of the Board of Directors of the Corporation on the working of the Corporation during that period. With your permission, I shall take the report as read.

"As stated in the report, the Kerala State Government was one of the pioneers in setting up Government-sponsored Industrial Development Corporations for assisting in the promotion and development of large-scale industries in the private sector. Despite whatever differences of opinion may exist on the political front and on many subjects, it is fortunately commonly agreed by all political parties and all schools of economic thought in Kerala that by far the most emergent need of the State at present is industrial expansion at a very rapid pace. The unanimity of opinion on this objective had indeed been an encouraging factor.

Dearth of Risk Capital

"So far as large-scale industries are concerned, the main obstacle in the path of expansion at even a moderate pace has been, and continues to be, the non-availability, within the State, of an adequate amount of risk capital. This is attributable, in my opinion, partly to a deficiency in total savings and largely to lack of a spirit of venturesomeness among those who have capital. Entrepreneurs of the right type, who are prepared to risk their capital in putting up large-scale industrial units and to shoulder the responsibility of running them efficiently, are unfortunately very few in Kerala. That this should be so in spite of the undoubted advantages that our State has in the matter of raw material, power, transport facilities and above all, labour supply, is certainly most deplorable, and perhaps even ununderstandable. Whatever be the reason for this, the result is that Kerala is obliged to turn to parties outside the State for bringing in risk capital and managerial skill on the requisite scale in order that large-scale industrial units could be set up within the State in sufficiently large numbers. It is indeed encouraging to find that parties outside our State are beginning to realise that the State is in a position to offer them special attractions, such as plenty of raw material, cheap electric power, and excellent rail, road and sea transport facilities, all relatively superior to those obtaining in many other States, combined with the inestimable advantage of an almost inexhaustible supply of intelligent and skilled labour. Even so, the task of attracting outside risk capital in sufficient volume to the State has been found to be an extremely difficult one, largely because of what I surmise is essentially a psychological factor, namely, the doubts and uncertainties that assail the minds of outside businessmen on account of the distance that separates their place of business from our State. Distance is a factor which definitely does not lend very much enchantment to the view of the prospective investor in Kerala.

"I trust it is not necessary that I should dilate on this occasion on the importance of establishing *large-scale* industrial units in Kerala, as distinct from small-scale and cottage industries. Kerala's case in this regard is not exceptional at all, and the pattern of industrialisation in our State need be no different from the one adopted for India as a whole, namely, the one based on a rational and equitable distribution of industrial units among all these three categories, viz., cottage, small-scale and large-scale industries. Each category has its own place in our economy and, however tempting the thought is, we must not succumb to the facile but defeatist assumption that the salvation of Kerala alone lies in concentrating on small-scale and cottage industries, to the exclusion of large-scale ones. On the contrary, I believe it will be more correct to assume that once a sufficiently large number of large-scale industrial units are set up in Kerala, small-scale and cottage industrial units will follow almost automatically in the role of feeders and subsidiaries. If, therefore, more emphasis is laid in the present initial stages, as I feel it must be, on large-scale industrial units, it will only be in accordance with the well-known maxim that first things must come first.

The Solution

"What then is the solution to this large-scale industries problem faced by a backward State like Kerala which labours under the double disadvantage of lack of indigenous risk capital on the one hand and long distance from the larger capital markets of the country on the other? I do not think I can offer a simple solution to this problem today, but before I even attempt it, I feel I must point out that this is a problem which obviously cannot be left to be solved by the normal operation of economic forces. To do so, particularly in this socialistic patterned welfare State of India, would be as illogical as it would be unfair, and, may I add in all humility, it would also be suicidal to the body politic of the country as a whole. It is not only that ours is a welfare State, but we also function under a highly controlled economy; and to let the principle of the survival of the fittest guide the economic destiny of even the smallest State in India would do grave violence to our socialistic objective. A solution to Kerala's large-scale industrial development problem must, therefore, necessarily be looked for in the direction of positive intervention by the one all-powerful authority in our controlled economy of today, namely, the Central Government. The Central Government's duty in this regard is, to my mind, as clear as my layman's understanding of the manner in which the human body marshalls all its fighting strength to despatch its forces to even the most distant diseased organ, be it ever so small, in order to save it from the onset of gangrene. As in the human body, so in the body politic, the safety and well-being of the smallest and the most distant entity must be the subject of the most anxious concern and solicitude to the seat of power at the Centre. This duty may be ignored only at the peril of fatal consequences to the entire body politic.

"Effective assistance from the Central Government in the matter of industrial expansion in Kerala must in the very nature of things relate closely to the pattern of the grant by the Centre of industrial and import licences. But in the matter of industrial licences and import permits, it will *not* suffice, if the special assistance that will be rendered by the Central Government is confined to those applicants who themselves voluntarily apply for locating their industrial units in Kerala. As I have already said, the crux of the Kerala problem is that, for various reasons, an adequate number of applications from the right parties for locating industries in Kerala has not been coming forward, and there seems no prospect of any appreciable improvement in the position in the near future. Therefore, the urgent need today is to ensure that out of the large number of licences granted throughout the country an adequate number is diverted to Kerala till such time as this backward State attains a minimum level of industrialisation, suited to the requirements of its large population. This is by no means a revolutionary proposition, being quite consistent with the well-known principle of co-operative endeavour, namely, one for all and all for one, and needs no special pleading on my part for its justification. In fact, the Central Government has made a start already in implementing this principle by the allocation it made recently to Kerala of one lakh spindles out of the total spindleage sanctioned by them for the country as a whole. Kerala, which cannot claim to be a cotton-growing area, and has therefore had very few spinning mills till now, has reason to be grateful to the Centre for the gesture, and we may well hope that this will soon be followed by many more examples of this kind in other industries besides textiles.

"Any preferential treatment of this kind must of course be treated as an altogether special one and must obviously be of limited duration only. It will be for the entrepreneurs who set up industrial units in Kerala to ensure that the maximum production targets are achieved as speedily as possible; the State Government has also an important role to play in assisting the industrial units to achieve this. For example, it could help considerably by speeding up land acquisition proceedings, supply of electric power, and the institution of civic amenities in industrial areas. The State Government must also take steps to provide technical training institutes for ensuring a regular supply of trained personnel to fill supervisory posts in the factories, particularly in the lower and middle grades. Kerala has no doubt the highest percentage of literacy, but literacy alone, as is well known, will not suffice to produce the necessary number of trained supervisory staff to man the posts in the factories once we get going briskly with our industrialisation programme.

"An economic survey of the State, with special reference to the availability of raw material of various kinds, is another matter of great importance and urgency which must claim the attention of the Kerala State Government. The K.I.D.C. has had on many occasions during the last few months to cut a sorry figure in their conversations with outside businessmen due to the lack of adequate and reliable data relating to our industrial raw material. This is, therefore, a matter which I would commend for immediate attention of the State Government.

"Another important suggestion, which I have already made to the State Government and which I take the liberty of repeating again, in order to enable more industrial licences being procured for the setting up of industries in Kerala, is the appointment of a suitable liaison officer in New Delhi who will among other things, function as a close and effective link between the Government of Kerala and the Central Government. I understand that this suggestion is currently under consideration of Government; I hope that a decision will be taken without further delay.

Role of K.I.D.C.

"As and when the pace at which industrial licences and import permits are issued for the setting up of industrial units in Kerala is accelerated, institutions like the K.I.D.C. would be called upon to take adequate steps to ensure that the necessary finances are forthcoming for the use of these units, in the shape of share capital, long-term loans and working capital. The financial resources of the K.I.D.C. will then have to be considerably augmented in order to enable it to cope with the demand, and it is my hope that, when the time comes for raising additional funds for the K.I.D.C., we shall be able to tap the general money market also, besides relying on Governmental finances. The success of our direct approach to the money market for augmenting our funds will naturally depend on the reputation that we shall have built up as a dynamic and virile institution. I should like to assure the Government of Kerala that we shall dedicate ourselves to this task with all the earnestness and enthusiasm at our command.

"In closing, I take this opportunity to express my grateful thanks to all my colleagues on the Board of Directors, and particularly to the Managing Director, Mr. Abdussalam, for their very cordial and enthusiastic co-operation, and to our honorary public relations officers and to all the members of the staff for their loyal and devoted application to their work during the period under report."

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*

NEWS IN BRIEF

THE next monthly meeting of the Board of Trade will be held at Bombay on the 28th inst.

A panel of top economists of the country is proposed to be set up by the Planning Commission to advise it on measures to control prices on a long-term basis.

An agreement has been signed between the Governments of India and the Soviet Union, under which the latter will supply larger quantities of oil products to India.

The Government of India has decided to drop the idea of entrusting the State Trading Corporation with certain supervisory functions in regard to exports of dried fish to Ceylon.

An International Trade and Industries Fair is proposed to be organised by the All-India Manufacturers' Organisation at Bangalore from 15th December 1962 to 15th January 1964. About 33 countries are expected to participate in the fair.

The State Trading Corporation has finalised a barter agreement with a British firm which provides for the import of textile machinery worth Rs. 3.5 crores in exchange for manganese ore and ferro-manganese.

The revenue realised from items on which duties are levied and collected by the Central Government during the first four months of the financial year 1962-63 amounted to Rs. 305.63 crores, as against only Rs. 269.48 crores in the corresponding period of the previous year.

The Government of India has decided to purchase the Alnavar-Dandeli railway line in Mysore with effect from 1st October 1962. This is a metre-gauge line, 19.12 miles long, owned by the Government of Mysore. This line is already being run by the Southern Railway.

The Bombay Stamp (Increase of Duties and Amendment) Act, 1962, has come into force in the Maharashtra State with effect from the 15th inst., under the Act, stamp duties on certain instruments have been specifically increased, while those on others are subjected to a flat surcharge of 10 per cent of the duty.

Under a new trade agreement signed between India and Afghanistan, India will export some manufactured goods in addition to traditional items like tea. The new agreement, which will come into force from next month, will be valid upto the end of November 1963. The value of Indo-Afghan trade at present is about Rs. 5 crores each way.

A new series of Rs. 100-denomination notes will be issued shortly by the Reserve Bank of India. While the design will remain unchanged, the new notes will bear the signature of the present Governor, Mr. P. C. Bhattacharyya. Notes with the emblem of Ashoka Pillar and bearing the signature of Mr. H. V. R. Iengar or Mr. B. Rama Rau will continue to be legal tender.

A $1.2 million zinc smelter and refinery is proposed to be put up at Alwaye in Kerala by the Comilco Binani Inc., Ltd., in which the Consolidated Mining and Smelting Company of Canada Ltd. of Montreal will have 40 per cent interest. The plant is expected to be completed by 1965. It will have an annual capacity of 22,000 tons of zinc. Attached to the plant will be a unit for the manufacture of sulphuric acid, with a capacity of 53,000 tons per year.

Applications for import licences under the export promotion scheme will be entertained even during the month in which the exports are effected and payments received, provided the necessary documents regarding the export of the goods and earning of foreign exchange are produced by the applicants, according to an Import Trade Control Public Notice just issued. Applications for import licences under the scheme are being entertained on quarterly or monthly basis.

A seminar on foreign trade will be organised at Calcutta by the World Trade Department of the Indian Chamber of Commerce on 20th and 21st October 1962. The seminar, which will be inaugurated by Mr. Manubhai Shah, Union Minister for International Trade, will focus attention on the urgency of export promotion, consider ways and means of stepping up the exports of traditional and non-traditional items as well as to explore new markets, and suggest measures for saving foreign exchange.

It has been decided that permanent and quasi-permanent employees will not be registered with the Employment Exchanges unless they produce a "No Objection" certificate from their employers. Temporary employees will, however, be allowed to register themselves under two conditions. One, the Employment Exchange and the employee will inform the head of office of the fact of registration. Two, if the head of office has any objection, he will communicate it to the employee and the Employment Exchange concerned.

Production of pig iron at the Durgapur steel plant touched the highest level so far in August 1962 when the three blast furnaces together produced 90,136 tonnes of iron, of which 43,942 tonnes were sent to the pig casting machines. During the same month, three batteries of coke ovens produced 121,614 tonnes of coke, a quantity which is more than their rated capacity. Correspondingly, there was a rise in the coke ovens by-products also. About 4,700 tonnes of crude tar and 1,300 tonnes of ammonium sulphate were produced.

The Government of Maharashtra has guaranteed the repayment of principal and payment of interest at 4½ per cent per annum, subject to reduction of income-tax, in respect of the Maharashtra State Financial Corporation Bonds, 1971. Consequent upon the formation of the Maharashtra State Financial Corporation on 16th August 1962, with a share capital of Rs. 1 crore, from the erstwhile Bombay State Financial Corporation, the Government of India has allowed the Maharashtra State Financial Corporation to convert the share capital into bonds of equivalent value repayable at par at the end of a period of 10 years from the date of issue.

The Research Department of the Indian Co-operative Union, New Delhi, has undertaken a survey of retail trade in the urban areas of the Union Territory of Delhi, with a view to studying the pattern of retail trade, its nature and composition, the range and volume of consumer goods sold in different markets, factors affecting different prices and practices, composition of the consumers served, the problems and difficulties confronting wholesalers, retailers and consumers, and their suggestions to improve such conditions. The survey will cover four wholesale markets dealing in grain, cloth, spices and toilet goods, including hosiery, about 750 retail shops trading in consumer goods and about 1,500 consumers.

In view of the adequate supply of nitrophosphate fertiliser, the Government of Maharashtra has decided to supply it on indent to any individual, firm, institution or co-operative society for purposes of resale to cultivators. The rate of supply will be Rs. 595 per metric ton to co-operative societies and Rs. 605 per metric ton to traders at any destination railway station or railway out-agency open for goods booking. The freight will have to be paid separately. Indents for the supply of the fertiliser have to be placed with the Accounts Officer, Agriculture and Forest Department, in terms of wagon-loads of 24 metric tons, in the prescribed form, accompanied by a treasury chalan for advance payment of Rs. 50 per metric ton, the balance being payable on presentation of the railway receipts.

* * * *

From Abroad

The Government of Ceylon has sanctioned the establishment of thirteen industrial enterprises involving foreign capital investment of Rs. 9.4 million in partnership with indigenous capital. It also proposes to sign with the U.S. Government an Investment Guarantee Agreement.

The U.S. has granted a credit of $31.3 million to Turkey for the expansion of power resources and addition of two 40-million watt hydro-generators to the Sariyar power station, which is the largest of its kind in that country. The credit will be for 40 years and will carry interest of 0.75 per cent. Repayments will start after a period of ten years. The loan is granted on the condition that all equipment and services should be purchased from the U.S.

The Imperial Chemical Industries (U.K.) and Fisons of Britain have reached a long-term agreement, under which the former will manufacture in the U.K. additional ammonia to meet the foreseeable requirements of both the companies. I.C.I. has undertaken to spend between £5-6 million on a new low-cost ammonium producing plant at Immingham (Lancashire), which will supply ammonia for a £9-million plant for the manufacture of nitrogenous fertilisers to be put up there by Fisons.

West Germany's share in world exports rose from 3.6 per cent in 1950 to 10.7 per cent in 1961. The share of the U.S., the world's largest trading nation, fell from 18.3 per cent to 17.4 per cent in the same period. The U.K.'s share declined from 11 per cent to 8.7 per cent. West German imports accounted for 8.9 per cent of the world imports in 1961, as against 4.6 per cent in 1950. The U.S. share was 12.7 per cent and the British share 9.6 per cent last year. West Germany was thus the world's second largest exporter and the third largest importer in 1961.

A loan equivalent to $4 million has been granted by the World Bank to Panama for the expansion of electric power facilities in its Central Provinces. The loan is for a term of 25 years and bears interest at 5¼ per cent per annum, including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin on 1st July 1967. The loan is guaranteed by the Republic of Panama. Including the present loan, the Bank has now lent $18.59 million to Panama.

Tanganyika and Sierra Leone have become members of both the International Monetary Fund and the World Bank. The initial quota of Tanganyika in the Fund is $25 million; the quota of Sierra Leone is $11.25 million. This raises the total of members' quotas in the Fund to $15.128.7 million and the number of member-countries to 91. The subscriptions of Tanganyika and Sierra Leone to the capital stock of the Bank are 333 shares and 150 shares, respectively, with total par values of $33.3 million and $15 million.

The International Rice Commission, at its meeting in Kuala Lumpur last week, adopted a long-term programme seeking to remove the bottlenecks in the way of increasing productivity. It constituted three working parties to pursue the objective. One of the working parties will undertake a co-operative programme on blast research, besides a review on nitrogen and nutrient uptake. The party on rice soils and fertiliser practices will deal with problems concerning field response of crops to plant nutrients. The third party will devote its attention to engineering aspects of rice cultivation, including the question of mechanisation upto the harvesting stage.

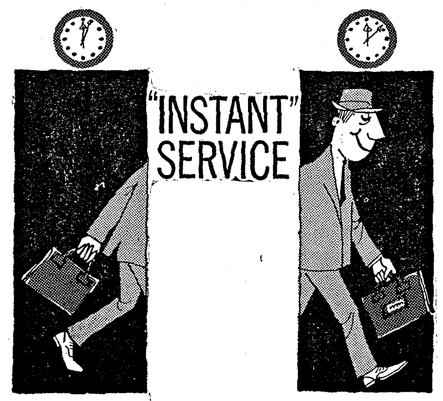
PERSONAL

MR. P. Brahmayya and Dr. Rustom C. Cooper have been elected President and Vice-President, respectively, of the Institute of Chartered Accountants of India for the year 1962-63.

Mr. N. D. J. Rao, who was till recently Deputy Secretary in charge of the social welfare division of the Union Ministry of Education, has been appointed Managing Director of the Hindustan Photo Films Manufacturing Company Ltd., Ootacamund, Madras.

Mr. A. N. Jha, Director of the National Academy of Administration, has been appointed Additional Secretary in the Planning Commission, *vice* Mr. Tarlok Singh, who has now become a Member of the Commission.

Mr. Tarlok Singh, Member of the Planning Commission, has been appointed convener of the two study groups set up by the Commission to work out proposals for bringing down prices of agricultural commodities as well as industrial goods of common consumption.



American Express Banking Service is prompt and trouble-free. No tedious waiting...no irritating delays—everything's done for you with the utmost despatch and courtesy. THAT'S AMERICAN EXPRESS "INSTANT" SERVICE backed by decades of experience in international banking. ■ A COMPLETE WORLDWIDE BANKING SERVICE available in 379 offices in 33 countries.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 19*th September*

The short-term money market was comfortable during the week under review. The volume of floating funds was quite large, in contrast to the perceptible scarcity noted in the past two weeks, while the demand for funds was relatively small. Interest rates, as a consequence, drifted downward. The inter-bank call money rate stood at 4 per cent, as against 5 per cent a week ago and 4½ per cent two weeks ago. Fresh money was done at the same rate. In Calcutta, the rate for renewals was 4½-4¾ per cent, as against 5¼-5¾ per cent. The short-term deposit rates continued unchanged.

The results of the 91-day Treasury Bills of the Government of India for the week under review reveal that the total amount offered at Rs. 2 crores was the same as that invited and the average rate of accepted tenders was slightly lower at Rs. 2.365 per cent per annum, as against Rs. 2.370 per cent last week. Tenders for Rs. 2 crores of Bills have been invited for the coming week.

The demand for the 91-days' intermediate Treasury Bills has waned. Sales of these Bills from 15th to 18th September fetched no more than Rs. 75 lakhs, as against Rs. 129.75 lakhs from 5th to 8th September.

Notes in circulation have declined by Rs. 2.36 crores to Rs. 2,041.70 crores, according to the Reserve Bank's statement for the week ended 14th September. Since, however, the notes held in the Banking Department have risen by Rs. 3.07 crores, the total notes issued are higher by Rs. 71.08 lakhs. There has been a slight accretion of Rs. 32 lakhs to foreign assets which stand at Rs. 94.10 crores. The accretion is entirely accounted for by balances held abroad, while foreign securities are unchanged at Rs. 88.34 crores. The deposits of Central Government with the Reserve Bank have dropped by Rs. 3.03 crores and of scheduled banks by Rs. 5.26 crores, whereas those of State Governments have risen by Rs. 7.77 crores. Bills payable are higher by Rs. 2.49 crores, but other liabilities show a fall of Rs. 2.34 crores. Advances to scheduled banks have gone up further by Rs. 23.96 crores, taking the total for the three weeks to Rs. 66.61 crores.

There has been a further rise of Rs. 15.75 crores in credit made available by the scheduled banks in the week ended 7th September, bringing the total for two weeks to Rs. 36.39 crores. As against the continued rise in bank credit, the deposits of scheduled banks have declined again by Rs. 20.78 crores. Consequently, the banks have had to borrow heavily from the Reserve Bank. The actual borrowings in the aforesaid week aggregated Rs. 39.54 crores, of which borrowings against usance bills accounted for Rs. 13.31 crores. Investments have also declined by Rs. 20.72 crores, in contrast to the improvement of Rs. 18.51 crores noted in the previous week.

The Gilt-edged market ruled easy. 3 per cent 1986 Conversion fell by 25 nP to Rs. 68.60, 3 per cent 1970-75 and 3½ per cent 1974 dropped 10 nP each to Rs. 88.90 and Rs. 98.40, respectively. Among State loans, 4½ per cent 1974 West Bengal and Madras both climbed down by 75 nP to Rs. 99. 4½ per cent 1970 Bihar declined by 55 nP to Rs. 98 and 4½ per cent 1974 Gujarat by 10 nP to Rs. 99.90.

The rupee-dollar rate in the foreign exchange market has been ruling slightly easy. The banks' selling rate is Rs. 478 per 100 dollars, as against Rs. 477.75 on Wednesday last week, and their buying rate was Rs. 474.75, as against Rs. 474.50. The easiness is in sympathy with the weakness of the £ sterling in the New York market where spot is quoted at 279.970-280.020 cents per £ and three months forward at 279.340-279.720 cents. The corresponding rates a week ago were 280.120-280.150 cents and 279.710-279.740 cents, respectively.

SUGAR PRICES FALL

(From Our Own Correspondent)

HAPUR, 17*th September*

Sugar prices here fell this week, reflecting a comfortable supply position following the release of a larger quota of 110,000 tonnes in addition to the monthly quota of 225,000 tons. Mills were anxious sellers and the prices fell by Rs. 4 per quintal. The future quotas were also quoted lower. Demand was slack, as the prices were likely to fall further. Week-end prices were: Spot delivery (per quintal) Rs. 108.75, mill delivery Amroha Rs. 103.15, Dhampur Rs. 103.15, Seohara Rs. 103.15, Meerut Rs. 104.49, Simbhoali (E-29) Rs. 104.80, Bijnore Rs. 102.80 and Dhampur Rs. 102.95.

Following the release of more than 350,000 tonnes of sugar within eight days and the Government's determination to bring down the prices of the commodity to the pre-decontrol level, sugar prices declined heavily in the Muzaffarnagar market. Almost panicky conditions prevailed in the market. Mills were anxious sellers, but there was virtually no demand. Mill delivery prices declined by Rs. 2.26 to Rs. 3.87 per quintal. A few hundred bags were reported to have been sold at lower levels. Against a daily average of 30,000 to 40,000 bags, business during the last fortnight was confined to a few hundred bags a day. Latest quotations (in rupees per quintal) were: Sharanpur (D-29) 106.50; Lakhsar (A29) 108.50; (B29) 107.75; (C29) 106.75; Mansurpur (A29) 109; Deoband (B29) 108.50; (C29) 107; Meerut (D29) 104.49; Bijnore (E29) 102.80; Amroha (D29) 103.15 and Seohara (D29) 103.15.

Khandsari prices drifted lower mainly in sympathy with the trend in sugar prices. Besides, demand from Punjab and Rajasthan was poor. Stocks left with the trade were small. Week-end prices were: *Khandsari* inferior Rs. 85.74 to Rs. 93.77, superior Rs. 96.45 to Rs. 104.49 crystal Rs. 96.45 to Rs. 103.15 and boora Rs. 99.13 to Rs. 107.17. In Muzaffarnagar the commodity lost Rs. 1.34 to Rs. 2.68. *Khandsari* crystal was quoted at the week-end between Rs. 96.45 and Rs. 103.49 and the non-crystal quality between Rs. 96.45 and Rs. 104.49. *Khandsari* galawat declined steeply by Rs. 2.68 to Rs. 5.36 to be quoted between Rs. 80.38 and Rs. 91.08, as between Rs. 66.98 and Rs. 77.70 around this time last year.

Trading in *gur* was almost at a standstill partly due to the rains and partly due to paucity of stocks. Shakker prices were depressed, as the stocks left here were of poor quality. Cane crop prospects have brightened following fairly heavy rains during the week. Week-end prices were: *Gur* superior Rs. 65.64, dara Rs. 64.30 and shakker Rs. 66.98 to Rs. 72.34, a quintal.

Lack of buying interest from Gujarat and Rajasthan and the poor quality stocks left with the trade accounted for a decline of Rs. 1.34 in the *gur* chaku prices. Chaku dry was quoted between Rs. 63.30 and Rs. 69.66 and chaku wet between Rs. 58.94 and Rs. 59.61. Rusket khurpa was done between Rs 26.79 and Rs. 32.15. Shakker dara and masala prices also fell by Rs. 2.68 to Rs. 5.36 in the absence of inquiries from Punjab and Rajasthan. Slackness in demand from Maharashtra and eastern U.P. resulted in a fall of Re. 1.34 in the dana minia prices. Gur masala was unchanged at Rs. 87.08.

Gur futures moved both ways during the week. *Gur Fagun* having opened at Rs. 21.23 last Monday, touched the highest and the lowest at Rs. 21.60 and Rs. 21.16, respectively, mid-week and was quoted today at Rs. 21.52.

DIVERGENT TRENDS IN BULLION

(From Our Own Correspondent)

BOMBAY, 19*th September*
