Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN
(First Part)
In Four Languages: English, Hindi, Gujarati and Marathi
(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.
It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART
A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.
Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES
are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied

RAMTIRTH BRAHMI OIL Special No. 1 Registered
An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.
Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

BULK TRANSPORT BY ROAD

NOT all the stubborn facts of economic life in India at the present time are quite so intractable as they seem to be. Take, for instance, the transport situation which, no doubt, *continues* to be one of anxiety, but which is not too difficult to be remedied in the near future. Merely to declare in general terms, as Dr. K. C. Neogy, Chairman of the Committee on Transport Policy and Co-ordination, did at a press conference in April last, that, "with economic development and progressively growing *demands on transport*, road transport must play an increasingly important part in India" does not mean much. What is required, here and now, is a firm and active policy of encouragement to road transport which alone, among all the modes of transport, has the potentiality to increase its capacity in the shortest possible time with the least amount of investment. Is such a policy, by any chance, already in the making? The answer cannot be wholly in the negative, for there is some evidence that the powers-that-be have lately accorded some additional importance to road development and road transport.

This shift in emphasis is, of course, due to the compulsion of circumstances. One of these circumstances is the crisis in coal transport in the Bihar-Bengal area. Thanks to this crisis, the Planning Commission has recently approved a *scheme to improve some* 700 miles of roads, including 300 miles of national highways, in the Western region and make them fit for coal transport. The scheme, which will cost Rs. 17 crores and have a target of about 6 million tons of coal carried over a distance of 150 miles or so, is something more than an emergency measure. *Its potential implications* for the transport policy in the making have been described by Dr. F. P. Antia, in his presidential address at the thirty-fourth annual meeting of the Indian Roads and Transport Development Association held at Bombay on 29th June, thus:

" . . . its implementation is bound to open up further avenues for employment of road transport. In the first place, the improvement of about 300 miles of national highways to 24-feet wide carriageway will attract to *these roads, in addition to coal*, traffic in other commodities also. Secondly, when deliveries of coal by road to distances of 150 miles become normal, a demand for carriage over still longer distances will develop. In our opinion, it may be prudent to start planning from now for the movement of coal over distances of *about 300 miles, so that a target of about 35* million tons of coal for carriage by road may look feasible by the year 1970-71."

Dr. Antia's enthusiasm for this scheme, like one for the movement of ore from Sukinda Pass to Paradip Port by a special road, may seem to contradict the stand of the I.R.T.D.A., as well as of Mr. K. C. Neogy, that the railways must be prepared in the long run to lose some of their high-rated traffic and that they must rely for their revenues more and more upon bulk goods, minerals, coal, etc., which now earn a lower average rate per ton-mile. But the contradiction is more apparent than real, for Dr. Antia has visualised road transport of coal, ore and other such bulk commodities only over distances of upto 300 miles. Over longer distances, only the railways are expected to handle bulk commodities. There is, however, the question whether the cost of transportation of coal by road would be economic and be comparable with the present concessional rail freight. It is well known that it is not so at *present*, as witness the demand of industries in Calcutta for subsidising road transport of coal even over relatively short distances. But, according to Dr. Antia, the cost of coal haulage by road could be reduced, given indigenous production of large capacity vehicles with trailers—vehicles of the kind which have already been found useful in handling bulk commodities in other countries. Dr. Antia's argument runs on these lines:

"It (coal transport by road) will make it unnecessary for the railways to offer a concessional freight rate on distances on which road transport can operate at comparable rates. They can then avoid the loss which they have been incurring on such freights. Thus the measure which we are suggesting is one involving long-term policy designed to benefit the consumer as well as the railways."

Dr. Antia's optimism is based partly on the assumption that large-capacity trucks with trailers can be manufactured at economic or reasonable prices within the country and partly on the expectation that the railways will be barred from coal haulage over distances of upto 300 miles. Whether the Defence Ministry's unit for the manufacture of trucks can produce large-capacity trucks with trailers fairly cheaply is by no means clear yet. If it cannot do the job, the private-sector automobile manufacturing units might have to be permitted to expand their capacity so that they could produce such trucks with trailers. The crux of the matter is whether the Government would seriously concern itself with the possible manufacture of heavy trucks of the kind in either the public or the private sector and allocate sufficient initial foreign exchange for the purpose. The statement, by Mr. Raj Bahadur, Minister in the Union Ministry of Transport and Communications, at the I.R.T.D.A. meeting, that the upward revision of the targets of automobile production in the country would be considered after the completion of reassessment of the requirements of heavy vehicles *vis-a-vis* the movement of additional traffic of iron ore, steel and coal during the third Plan period is reassuring in this connection. As for the proposal to free the railways from the burden of coal haulage over distances of upto 300 miles, it will be feasible, to begin with, only in the Bihar-Bengal area where the coalfields are largely concentrated. There is no reason why this should not be done, if the necessary fuel can be found and if existing roads are improved and additional roads constructed in the area to suit heavy trucks with trailers. Here again, the clarification by Mr. Raj Bahadur to the effect that the Union Government would grant more funds, if necessary, to the State Governments concerned is reassuring.

Even if all these basic requirements are met, there will still remain the problem of assisting the road transport industry in different ways to do its part of the job. One way would be to encourage the use of truck-trailer and semi-trailer combinations by exempting them from vehicle tax on the trailers for a period of five years. It is noteworthy that the Transport Development Council has already accepted such tax exemption in principle for the country as a whole. Only the question pertaining to the quantum of concession has been left to the discretion of the State Governments. Another way would be to devise arrangements for financing the hire-purchase of trucks with trailers. Here, unfortunately, the Minister has been non-committal in his reaction. If the road transport industry is encouraged and assisted in all these ways for the movement of not only coal but all other bulk commodities over medium distances of upto 300 miles, an effective way will have been found for resolving the transport crisis in several dense industrial areas of the country and for relieving the present excessive pressure on the railways. An important precondition for this development is the building of the missing links on the national highways, besides the strengthening of existing bridges to allow heavy traffic.

COMPULSORY TEXTILE EXPORTS

LEFT to themselves, the millowners might not have accepted the scheme of compulsory exports of cotton textiles, the seriousness of foreign exchange position notwithstanding. They had, it will be recalled, raised their eyebrows when the idea of compulsion in export was first mooted by Mr. Lal Bahadur Shastri when he was the Union Minister for Commerce and Industry. Several of them had made scathing remarks on the idea which was dubbed as a ludicrous one. If, therefore, they have now agreed to compulsory exports on a voluntary basis, they have evidently been prompted by the fear of the Government giving statutory enforcement to the scheme. The Indian Cotton Mills Federation has, of course, stated, in its circular to all the member-mills, that it is the duty of the industry to earn foreign exchange on the stipulated scale, even if it has to make a sacrifice. But the Federation was apparently goaded by the Government to take the steps it has. There was no escape from this obligation. It will be remembered that, in the course of Press note issued on 17th May 1962, the Commissioner had clearly stated that the Government had accepted the recommendation of the Cotton Textiles Consultative Committee to export obligation made at a meeting held two days earlier (16th May). The leaders of textile industry are alive to the old saying that discretion is the better part of valour.

Before examining the Federation's scheme

an idea of the scheme. In essence, the scheme, which has come into effect from the 1st of this month, conforms to the broad pattern suggested by the Textiles Consultative Board. It imposes an obligation on the part of a spinning mill to export annually 12½ per cent of turnover in cotton yarn cloth and 3 per cent of turnover in cotton yarn, with fibre yarn, the turnover being calculated with reference to the balance sheet of any year which ends on a date between 30th June 1961 and 29th June 1962. The obligation is in terms of the f.o.b. value of exports and it can be fulfilled by exporting either cloth or yarn or both in any proportions. This quota is in addition to the previously existing export obligation on account of installation of automatic looms or import of processing machinery. The mills are, of course, given the liberty of not fulfilling the exports themselves, but they have to pay a price for it. And the price is pretty high. The unit which is unable to export, or does not want to, will have to contribute to the Export Promotion Fund of the Federation an amount equal to one-eighth of the value by which the f.o.b. price of export performance falls short of its export obligation, besides forgoing a part of its Indian and foreign cotton quotas.

A saving clause in the scheme is that the obligation can be fulfilled by a mill exporting its own product in full or in part and/or by arranging with other mills to export the balance. This clause is, however, hedged by the condition that the arrangements must be only between a mill and a mill. In other words, this means that, if mills X, Y and Z undertake the obligation on behalf of mill A, the export should take place through the normal channels of mills X, Y and Z only. Apparently, this condition is considered necessary, lest there should be a possibility of the products of X, Y and Z mills reaching the foreign destinations through different channels and being offered there at different rates. At the same time, the assurance is held out that all export incentives due to mills (including cash, cotton quotas, and licences for machinery and dyes) will be given to the mills which actually export regardless of whether the export is on its own behalf or on behalf of some other mill. It is thus obvious that the consideration which such a mill may receive from the non-exporting mill for fulfilling the latter's obligation will be considered as supplementary incentive.

If the export obligation of 12.5 per cent of cloth were fulfilled, India would, we are told by Mr. Bharat Ram, Chairman of the Cotton Mills Federation, achieve the third Plan export target of 800 million yards per year. In terms of foreign exchange, the earnings from cotton textile exports are expected to aggregate Rs. 70 crores, an increase of Rs. 20 crores as compared with the earnings during the calendar year 1961; the estimate for 1962 is put at only Rs. 57 crores, as the scheme will be in operation only for six months.

All this sounds very well on paper. But how far will it succeed? How can it be said that, by merely compelling the mills to sell abroad a definite percentage of their turnover, actual shipments will, in fact, be higher by that quantity? For the export performance of the textile industry during any given period of time, as in the case of any other industry, will be conditioned not merely by the availability of supplies but also by two other important factors, namely, price and quality. It may be that the quality of Indian cloth generally compares favourably with that of cloth produced in other exporting countries and that the Indian mills can maintain satisfactory delivery schedules. The real handicap, however, is the high level of prices. This is so because the unit cost of mill output has gone up quite appreciably of late, thanks to the increases in raw cotton prices, wages, and fuel and electricity charges, on the one hand, and heavy tax burden, on the other, while the productivity per unit of labour continues to be poor, owing to the none-too-encouraging progress in modernisation and rationalisation. Nor is the industry in a position to reduce the unit cost of output by augmenting production, in view of the continued ... of raw cotton, not to speak of the difficulty getting in good time modern, up-to-... and spare parts.

...ted in passing that, of late, ... cotton manufactures have ... In 1959, India was able to ... yards of cloth alone. In ... 695 million yards and still ... million yards in 1961. ... year, the exports have ... yards, as compared with 325 million yards in the corresponding six months of 1961. Surely, all this decline cannot be attributed to a reduction in export surplus brought about by an increase in domestic consumption. Nor can it be said that world exports of cotton goods have been shrinking. It is a patent fact that, while exports of Indian cloth have been declining, those of Japan, Hong Kong and several Continental countries have actually been gaining. The major reason for the downward trend in exports of Indian piecegoods is that the latter are getting priced out in world markets. That basic drawback will not be rectified by compulsion of the type now in force.

In considering the question of compulsory cotton textile exports, one has to bear in mind the differences in cost structure within the industry which shows a very wide variation according to different regions, age and size of units. Mention, for instance, may be made of mills situated at places that are far away from both raw cotton growing tracts and the principal export ports. Mention may be made, too, of certain units which are designed to produce varieties of cloth suited only for local requirements, quite a few of which cannot easily adapt themselves to consumer tastes abroad. These considerations seem to have been ignored completely by the Federation, inasmuch as its scheme of export obligation is based on a uniform principle applicable to the industry as a whole. There is another vital consideration which has also been ignored, namely, the effects of compulsion on the bargaining position of Indian mills *vis-a-vis* the overseas buyers. While price reductions will in any case be needed to become competitive in foreign markets, the fact that manufacturers are under officially backed compulsion to sell for export a specified percentage of their production strengthens the hands of foreign buyers to dictate their terms. Further, it also encourages unhealthy competition among internal manufacturers and traders. The result is that this method of export promotion becomes a very uneconomic way of earning foreign exchange. This is not a mere theoretical assertion. There are actually reports that, already, the overseas demand for Indian textiles has slackened considerably, as foreign buyers are not inclined to extend their commitments in expectation of still lower prices. If the rates quoted by some of the foreign buyers were to be accepted, India would be shipping just cotton and not cotton manufactures. The need for earning more exchange through textile exports is no doubt urgent, but how long can it be met at such a heavy price?

In the ultimate analysis, the cost of this sacrifice is borne by the entire economy. In other words, the scheme will aggravate the malady of high cost structure from which this country, in general, and the cotton mills, in particular, are already suffering. The least the authorities should do is to take away all the restrictions on modernisation of mills and give them all possible positive encouragement to improve their operational efficiency. The time has come for a complete reorientation of the Government's textile policy. Such ideological shibboleths as concentration of economic power and economic anachronisms like Ambar charka, handlooms and penal taxes on cloth made for domestic market in automatic looms must be abandoned without any fuss. The leaders of cotton mill industry themselves must regain their faith in the laws of economics and stand by their conviction that a modern, up-to-date, large-scale cotton mill is the only one that can supply the cloth and yarn needed for both export and domestic markets at the lowest possible price. They have blundered badly by compromising on sound economic principles in their anxiety to make peace with the politicians.

PUBLIC-SECTOR STEEL PLANTS

ONE of the reasons for slow progress towards the attainment of capacity production in the three public-sector steel plants has been the high degree of administrative centralisation. Hindustan Steel Limited, which has been managing the steel plants at Bhilai, Rourkela and Durgapur from its headquarters at Ranchi, has itself not been quite autonomous, controlled as it has been by the Department of Steel at Delhi. The three steel plants, too, have not enjoyed much autonomy under Hindustan Steel. Their general managers, though directors of Hindustan Steel, have not had the status of managing directors. And they have not also been members of Hindustan Steel's Committee of Management which is responsible for the disposal of day-to-day business and consists of the Chairman and five functional directors in charge of finance, production, purchase and sales, personnel and construction, respectively. This set-up of functional directors has meant severe limits to the powers and initiative of the general managers who have been under the additional handicap of having to share financial powers with their financial advisers appointed by the President of India. The general managers have not had the authority to incur any expenditure exceeding Rs. 25 lakhs or make appointments or even promotions in the grade of Rs. 350-850 and above without sanction of the H.S.L. Board which, too, has not been free to sanction outlays of over Rs. 40 lakhs appointments carrying a salary of over Rs. 2,0... And, worse still, all purchases have been routed through the H.S.L.'s Central Purchase Organisation at Calcutta which has not always felt the urgency of the demands made on it by individual steel plants.

That, in short, has been the situation so far pertaining to the administrative structure of the three public-sector steel plants. It is the situation that is now sought to be remedied by the administrative reorganisation scheme which the Union Steel Ministry has brought into effect from the 1st instant. This scheme provides for the delegation of wide powers hitherto wielded by the head office of H.S.L. to the general managers who are being charged with special responsibilities. The general managers, in turn, will have to sub-delegate their powers to appropriate officials in each of the plants and constitute committees to ensure that the powers are exercised in a regular manner. Further, the general managers can now lay down their own rules of business regarding matters on which they may consult the financial advisers. On personnel matters, practically full powers are being given under the scheme to the general managers except that recruitment and promotion to the higher managerial grade will still require a reference to the H.S.L.'s Board of Directors. On the construction side, the general managers will be fully responsible for the expansion programmes. For purchases, it is proposed to have a central wing to deal only with certain raw materials like iron ore, coal, limestone, manganese, dolomite and refractories on which a common purchase policy is necessary. The responsibility will be that of the individual plants in respect of other purchases. The control of the H.S.L.'s Board of Directors over the general managers will be exercised through the budget, periodical reports and statistics of production and cost and by inspections.

For its part, the H.S.L.'s Board, too, is being clothed with wider powers. For instance, where a proposal regarding capital expenditure has already been accepted by the Government in its broad details, it will no longer be necessary for H.S.L. to refer to the Government for approval of any components of the project, even though these may cost over Rs. 40 lakhs each. The only limitation here is that, if the cost of a component exceeds by more than 10 per cent of the original estimate, the revised approval of the Government will be necessary. For other schemes, which have not been approved by the Government, the limit upto which H.S.L. can incur capital expenditure is being raised from Rs. 40 lakhs to Rs. 50 lakhs. The H.S.L. is also being authorised to make appointments on salaries upto Rs. 2,500, instead of Rs. 2,000 which has been the limit so far.

All these measures, forming part of the reorganisation scheme, are expected to ensure an avoidance of delays and enable the general managers to deliver the goods in terms of capacity production and quicker plant expansion and construction. Healthy competition, according to Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, may also set in among the general managers of the three steel plants for putting up a good performance. His expectation may well be fulfilled in due course when the reorganisation scheme is in full operation, for we have it on the authority of no less a person than Mr. Jehangir Ghandy of the Tata Iron and Steel Company Ltd. that adequate devolution of authority and responsibility will alone make for speed and flexibility in decision-making, without which rapid progress will be impossible. As an experienced executive on the spot at Jamshedpur, Mr. Ghandy knows that decentralisation of authority in regard to purchases, personnel and financial matters will make for greater efficiency and better performance in steel plants, whether in the private or the public sector.

MARKET GOSSIP

Dear Money: 4½ Per Cent Era

THERE have been two developments of great importance to the money market this week; one is the announcement of the Government of India's borrowing programme for the fiscal year 1962-63—the second year of the third Plan—and the other a further tightening of the terms under which the Reserve Bank will lend money to member banks. Both of them mean that the Government, as well as the central banking institution, clearly recognises that those who save need a better reward than they have had so far and that the trend of interest rates in this country has to be upward. They also mean at the same time that the Government is still reluctant to abandon its policy of gradualism, that it would rather wait and allow itself to be pushed by the inexorable laws of economics, instead of making a realistic assessment of the expansionary effects of its development plans and evolving a suitable monetary policy in advance. For even now, it has made only a halting concession to the merits of dear, let alone dearer, money policy.

It must, however, be admitted that market circles had not anticipated that the Government would go even so far as it has done now. Not many had believed that the Government would actually quote 4½ per cent per annum for a long-dated loan and thereby openly take the country up from 4 per cent era to 4½ per cent era. The majority was under the belief that, at best, the Government would offer only 4 per cent and reduce the issue price in order to adjust the yield to the current pattern. Indeed, the Gilt-edged market is nursing a grievance that the Reserve Bank has let it down by following a misleading open market policy. By stopping sales of long-dated loans on the eve of the borrowing programme, the Bank had given cause to believe that the terms of the new loans would make no material departure from the existing yield pattern. This action had resulted in some of the long-medium and long-dated loans moving up, with a corresponding fall in their yields. Market circles argue that, if it was the intention of the authorities to offer liberal terms, the Bank should have continued its sales and prevented the yields from falling, so that there might not be a perceptibly wide disparity between the current yields and those available on the new loans.

There is some force in the aforesaid contention, but it is just possible that the Reserve Bank deliberately allowed the Gilt-edged market to move up to some extent in order to heighten the effect of the shift in favour of a higher interest rate policy. After all, the authorities have raised the yield on the new loans only fractionally as compared with the prevailing yields, from 3.78 per cent to 3.90 per cent in the case of six-year loan, from 3.98 per cent to 4.10 per cent in the case of ten-year loan and from 4.10 per cent on a 19-year loan to 4.50 per cent on a 23-year loan. Even the effects of this modest shock treatment on the public would not have been felt, if the Reserve Bank had continued its sales right upto the announcement of the new loans and pushed up the yields on comparable maturities close to those available on the new loans. In any case, not many in the Gilt-edged market seem to have suffered as a result of this action by the Reserve Bank. It is noteworthy that, by delaying the announcement of the new loans till the evening of Monday the 2nd inst. (and not till Tuesday evening, as is inadvertently mentioned on page 40 of this issue), the Reserve Bank had saved the banks of the difficulty of making immediate provision for depreciation in their investment portfolio at the time of half-yearly valuation. It is true that they will have to meet this problem at the end of the year, but, by then, they will also have enjoyed the benefits of dear money policy. In the long run, higher interest rates will, on balance, prove beneficial to banks, provided they are wise enough to toe the line implied by them and charge more on their advances.

Equity values have suffered more perceptibly than Gilt-edgeds, as a result of the changes in monetary policy. But since they were highly inflated out of all proportion to the current yields or even prospective yields, they deserved going down and the authorities, too, must have aimed at such an outcome.

All available indications show that the borrowing programme of the Central Government this year will be a greater success than last year. The banks are flushed with funds and the L.I.C.'s business has expanded. The growth in the deposits of scheduled banks so far this year has been heavier than in the corresponding period of last year. The inter-bank call money is now at the very low level of 1¼ per cent, as compared with 4 to 4½ per cent a year ago.

The amount the Government proposes to borrow from the market covers the entire sum of Rs. 250 crores (excluding Rs. 5 crores budgeted by way of prize bonds) provided for in the 1962-63 budget, as against Rs. 215 crores (excluding Rs. 10 crores of prize bonds) in the 1961-62 budget. There are two maturing loans, 2½ per cent and 3½ per cent, with an outstanding amount of Rs. 75.87 crores and Rs. 107.27 crores, respectively, giving a total of Rs. 183.14 crores. The net borrowing, therefore, works out to Rs. 66.86 crores. Even if only a part of the maturing loans are converted, the balance to be taken up in cash is not beyond the capacity of the market. May be, the Reserve Bank will have to take up, as usual, a sizable part of the loans now offered, but, over the year, it may be in a position to dispose of the major portion of it. Last year, it may be noted, the Centre's borrowing programme was put through in two stages and the total amount raised was Rs. 202.17 crores, of which Rs. 104.9 crores were in cash and Rs. 97.27 crores in conversions out of the total maturing loans of Rs. 139 crores.

Simultaneously with the announcement of the terms of new loans, the Reserve Bank notified all scheduled banks of certain important changes in the system of quotas and penal rates in force since 21st September 1960 governing their borrowings from the Bank. Briefly, the quota at which a bank can borrow at the Bank Rate has been reduced by half; from now on for each quarter, it will be the equivalent of 25 per cent (instead of 50 per cent as hitherto) of their average statutory reserves required to be maintained by them with the Bank in the previous quarter. Thus, on borrowings upto 100 per cent of the new quota, the Bank Rate will be charged. On borrowings over 100 per cent and upto 200 per cent, an additional rate of 1 per cent over Bank Rate will be charged. On borrowings over 200 per cent and upto 400 per cent of the quota, the additional rate will be 2 per cent above the Bank Rate and on borrowings in excess of this it will be 2½ per cent above the Bank Rate. In effect, these changes mean that (1) a four-tier Bank Rate system, in the place of three hitherto, has come into force, (2) the quantum of borrowings that could be had at the Bank Rate has been halved, (3) for each next slab of borrowing the cost will be higher by one per cent and (4) the top slab will attract ½ per cent more. In short, borrowings from the Bank will be costlier than before.

Why has the Reserve Bank taken this step? Here is its answer: "The above modifications are designed to induce banks to achieve a greater measure of self-reliance and reinforce their efforts to meet the growing credit needs of the private and public sectors through more effective mobilisation of financial resources."

The implications are clear. The Reserve Bank wants all member-banks to redouble their efforts at deposit mobilisation, to cut down their advances if they tend to outpace the growth of their deposits, to be prepared to invest a larger proportion of their deposits in Government securities than they have been doing in the last two years, and not to borrow from it in order to support Central or State Government loans. To do the latter is to indulge in created money, which the Reserve Bank itself can do without requiring the services of intermediaries. There are also two more implications, though they may seem to be less apparent than the others. One is that banks should raise the cost of their credit to their clients. The other is that they will have to pay higher interest rates on their deposits and that the inter-bank agreement governing these rates will have to be revised sooner or later. Both these implications will have been quite apparent had the Bank Rate been raised straightaway, instead of in a roundabout fashion. In fact, the honest thing to do would have been to raise the Bank Rate to at least 4½ per cent, if not 5 per cent.

Strange Justice

The price of skelp, a variety of steel from which steel pipes are manufactured, has recently been raised by the Iron and Steel Controller from Rs. 687 to Rs. 804 per tonne. This increase of as much as Rs. 117 per tonne has apparently been made to put consumers of strip, another form of steel used for pipe making produced by the State-owned Hindustan Steel, on par with consumers of skelp produced by the Tata Iron and Steel. On the face of it, this sounds fair, but thereby hangs a tale of a strange kind of justice.

Steel tube manufacturers had represented that the differential of Rs. 117 per tonne between the price of skelp produced by the T.I.S.Co. and strip produced by the Hindustan Steel was unfair to the consumers of strip who, for no fault of theirs, had to pay Rs. 117 per tonne more for their raw material. T.I.S.Co's production of skelp was not sufficient to meet the demand and hence new producers of steel tube had to use strip produced by Hindustan Steel which cost Rs. 117 per tonne more than Tata's skelp. The justification for the higher prices of strip presumably was that it had more width. As strip or skelp of exact size is required for pipe manufacture, the additional width, instead of being an advantage, constitutes a disadvantage in that the strip has to be slitted to the required size. For this purpose, slitting lines have to be installed along with the pipe plants. The higher price fixed for strip, therefore, constituted a further burden on the consumers of strip. Pipe manufacturers had made representation to the Government through the Federation of Indian Chambers of Commerce and Industry against this discrimination. The Government, instead of reducing the price of strip, has raised the price of skelp to parity with that of strip. Hence the strip produced by the Hindustan Steel and the skelp produced by the T.I.S.Co. have now to be quoted at the uniform price of Rs 804 per tonne.

Although the price advantage enjoyed by consumers of T.I.S.Co's skelp has thus been done away with, the relief asked for by the consumers of strip has not been granted. Pipe producers point out that the decision to equalise the price is motivated more by the Government's anxiety to help Hindustan Steel to cover the high cost of production of its strip than by any desire to hold the scales even between the consumers of strip and skelp. By administering this strange form of justice, consumers have been given a raw deal. Pipe manufacturers plead that the prices of skelp and strip must be the same but at the lower level of Rs. 687 per tonne.

DELHI LETTER

WHISPERS ON THE PLAN

(From Our Special Correspondent)

NEW DELHI, 3rd July

DESPITE the brave talk of the Planning Minister, Mr. Nanda, in Parliament, ruling out major changes in the third Plan structure, the whispers about rephasing of the Plan to achieve targets in the essential sectors are becoming deafening in New Delhi. Mr. T. T. Krishnamachari, who is now referred to in Parliamentary lobbies as the "uncommitted Minister," has been at work locating the weak spots which have emerged in the Plan. A brief note by Mr. Krishnamachari on the vicious shortages suffocating development schemes is understood to have been studied by the Union Cabinet. Coal, transport, steel and power are the four sectors which the Minister without portfolio has pinpointed as meriting immediate attention.

Already at Yojana Bhavan, there is talk of the "core" of the third Plan as in the case of the second Plan. The power projects are being delayed by foreign as well as indigenous factors—postponement of machinery deliveries and shortages of construction material like cement and steel. A planned diversion of construction materials may solve some of the difficulties, but, in the case of machinery imports for power plants, the failure of foreign collaborators to deliver the goods in time are a problem which the Indian authorities cannot solve. A search for alternative sources of supply is possible where the credits are not fully tied to specific projects, but this may further delay the projects.

The difficulties in coal are tied up with transport and power, and the Coal Council of India, meeting here last week, asked the Government to take immediate measures to overcome the power shortages which were the "biggest handicap" in achieving the coal targets. The Council's trend of thinking may come into conflict with some State Government concepts, because the Council says that consideration of State requirements of power and coal should not come in the way of the economic location of thermal power stations. According to the Council, thermal power stations should be located at the coalfields from where supplies are to be obtained. A study group of the Irrigation and Power Ministry, which assessed the power requirements of the coal industry, has recommended that the Damodar Valley Corporation should review all present demands for power and reallocate the maximum possible power supply to the coal industry. The group also wants the Uttar Pradesh Government to release a considerable portion of the output from the Rihand power project for the use of the coalfields in Bihar and Bengal. The study group suggests that new capacity coming into operation next year at Hirakud should also be utilised for the coal industry in Bengal.

Fourth Plan

Even as the Heavy Industries and Steel Minister, Mr. C. Subramaniam, announced details of the reorganisation of Hindustan Steel from 1st July, a steering group for iron and steel started work on the steel programme for the fourth Plan period. Similar groups have been formed for coal, power, heavy engineering, basic chemicals, fertilisers, transport and technical education. These groups are under the various Ministries concerned, while the Planning Commission has formed a steering group. Three other Planning Commission groups will study exports, financial resources and manpower.

A meeting of the steel group revealed the continued differences in demand forecasts by the private sector and the public sector. While Government representatives projected a demand of 18 million to 20 million tons by the fourth Plan's end, Mr. Jehangir Ghandy of T.I.S.Co. placed the demand around 14 million tons. Mr. Ghandy thinks that, at the end of the third Plan, the steel output in the country may be around six million tons; on that base he projects the 14 million ton figure for 1970-71.

Nanda on Food

By and large, the general criticism of the Plan and its shortfalls has centred on the muddle in coal, steel, power and transport, and the Food Minister Mr. S. K. Patil has been able to project an image of success on the agricultural front. But this image is being sullied by the Planning Minister who has drawn attention to the fact that the low rate of increase in national income in 1961-62 was due to the low increase in agricultural production.

Mr. Nanda agrees that foodgrains production in 1961-62 is not "very disappointing" but it is scarcely a million tons more than in the last year of the second Plan. The physical programmes undertaken to help agriculture should have led, according to Mr. Nanda, to an increase of three million tons in foodgrains production in the first year of the third Plan. The programmes for the second year of the third Plan are directed at an increase of four to five million tons. And similar increases will be needed in the last three years of the Plan to achieve the 100-million-ton target.

The expansion of minor irrigation facilities crucial to efforts to raise agricultural output is largely in the hands of the State Governments. Another major factor on the farm front is fertilisers. Against the target of one million tons of nitrogen, the capacity of plants licensed is already 1.2 million tons—700,000 tons in the public sector and the balance in the private sector. According to the Union Government, the private firms barring one or two exceptions, who have been given licences have been unable to make sufficient progress with arrangements for foreign collaboration. There is the instance of a party having surrendered the licence given to him for a factory in Madhya Pradesh.

FOCUS ON SOME MAJOR INDUSTRIES

HIGHLIGHTS OF CHAIRMEN'S SPEECHES

RISING production costs, heavier taxes and uneconomic selling prices, where they are statutorily or voluntarily controlled, are among the basic problems which some of India's major industries are confronted with at present, as can be gleaned from the observations made by the chairmen of some of the leading companies in their annual speeches which are published in full elsewhere in this issue. The industries covered range widely from cotton textiles and jute to coal and chemicals and paper, motor cycles and plantations. It goes without saying that the chairmen of the different companies are among the country's leading industrialists. They certainly know best where exactly the shoe pinches. In the paragraphs that follow, a cross-section of their views is presented. But it may be mentioned at the outset that, notwithstanding their current problems, the industries covered by the chairmen's reviews are marching ahead on the road to expansion and modernisation in keeping with the spirit that is so vital to accomplish the task of industrialising the largest democracy on earth.

Cotton Textiles

Although the cotton textile industry in the country has generally made good profits in the past two years, it continues to be faced, as pointed out by **Mr. M. D. Bhat**, Chairman of the **India United Mills Ltd.**, and a former chief of the Tariff Commission, with the problem of cotton supply, which needs ceaseless attention. Mr. Bhat has observed that the recurring imbalance in the supply of and demand for cotton could be reduced only by increasing the yield and growing better varieties by bringing a larger area under irrigation and using fertilisers. According to Mr. Bhat, the present cotton prices are higher by Rs. 150 to Rs. 175 per candy than those a year ago. The dear food allowance and the wage rates have gone up by 6 to 7 per cent. And then, there have been further increases in the excise duty. On the other hand, prices are voluntarily controlled. Mr. Bhat is of the view that mills which have been manufacturing grey piecegoods would have a difficult time ahead. Besides higher costs, low workload and old machinery also result in making the industry's position less competitive in foreign markets. Mr. Bhat is candid when he says: "Increase in wages without increase in productivity, rising costs of raw materials and higher duties and taxes are hardly conducive to creating h-a climate which will enable the industry to produce better cloth at low cost."

Jute Industry

What cotton is to the cotton textile industry jute is to the jute industry. **Mr. P. D. Singhania**, in his speech at the annual general meeting of **Juggilal Kamlapat Jute Mills Company Ltd.**, has explained how both good and bad jute crops affect the fortunes of the industry due to the resultant heavy fluctuations in the price of the raw material. Besides, price fluctuations in India are also influenced by changes in Pakistan. Jute manufactures being a very important foreign exchange earner, Mr. Singhania has rightly stressed that such price risks should be eliminated to provide the impetus to foreign buyers. Appropriately enough, he has welcomed the formation of the Jute Buffer Stock Association, the main object of which is to maintain price stability under the guidance of the Jute Commissioner. Speaking particularly of the jute industry in U.P., Mr. Singhania has said that it is at a disadvantage in Kanpur in relation to Calcutta because of the disinclination of the labour to substitute holidays with Sundays, which means that the working days for the Kanpur mills are about 300 in a year as against 312-313 for the Calcutta mills. Moreover, the adamant attitude of the Kanpur labour to work 22½ *hours per day in three* shifts on modern machines instead of 23¼ hours put in by the labour in Calcutta results in a loss of six hours' production per week as well as extra wages for 1½ hours for the third shift which, in fact, works for 6½ hours.

Coal Industry

Mr. S. D. Shethia, Chairman of the **Satgram Collieries Ltd.**, has referred to the uneconomic coal price which does not allow a unit in the field to declare reasonable dividends and plough back profits to reserve for financing further expansion. Even as it stands revised now following the marginal increase granted recently, *the price does not* fully meet the industry's need and demand. Moreover, the price is raised grade-wise, whereas the cost of production has very little to do with the grade of coal. It remains to be seen how far it will act as an incentive to the industry to reach the third Plan target of 110 million tonnes to which level it has been raised from 97 million tonnes as a sign of the industries' insatiable hunger for coal.

Cement Industry

Unsatisfactory price structure of the country's cement industry has, according to **Mr. G. D. Somani**, inhibited its growth. In his speech at the annual general meeting of **Shree Digvijay Cement Company Ltd.**, he has said that it is really a matter of deep concern for the industry that the Government should have imposed a reduction of Rs. 1.53 in the selling price of Rs. 93.55 *plus* the excise per tonne of naked cement as recommended by such a high-powered, expert body as the Tariff Commission. According to Mr. Somani, the consumers in whose interests the prices are regulated would not benefit from the cut, as the selling price payable by them to the State Trading Corporation has been fixed by the Government at Rs. 94 a tonne *plus* the excise, which means a net increase of Rs. 1.96 per tonne over the price worked out by the Commission. However, the possible implementation of the escalator clause in cement prices, under which the manufacturers would be reimbursed to the extent of increases in costs brought about by various factors after the prices have been regulated, has been welcomed by him, as it is a mitigating factor to some extent. Transport difficulties and coal shortage are two other current problems of the industry that still defy a solution. Because of these problems, Mr. Somani has stated, the industry has not been able to cope with the steadily increasing demand for cement, following the growing tempo of developmental activity in the country. Mr. Somani has recalled the Government's scheme for transporting coal by sea from Bengal and Bihar to the western and southern zones and for compensating the units concerned for the extra transport cost by a subsidy. But even though a year is over since the scheme was introduced, the subsidy still remains unpaid.

Paper Industry

The paper industry, too, is disappointed with the increase permitted recently in the selling prices, because it is granted on the basis of the recommendations of the Tariff Commission inquiry held as far back as in January 1960, since when there have been various increases in costs of which it takes no account. **Mr. N. D. Bangur**, Chairman of the **Bengal Paper Mill Company Ltd.**, has welcomed the increase in prices, but has hoped at the same time that the industry's case for a further rise would be considered more favourably in future. He has emphasised again the need for evolving a formula, so that an increase in the cost of production due to reasons beyond the industry's control may automatically reflect itself in the selling prices. Further, in view of the increase in the corporate tax from 45 per cent to 50 per cent, he has also urged a suitable upward revision of the Tariff Commission's formula of allowing a 12 per cent return on employed capital. Inadequate supply of wagons for the movement of raw materials and finished goods is another acute problem confronting the industry. In addition, there is the difficulty of finding alternative raw materials due to the growing shortage of bamboo and sabai grass. Bagasse and jute sticks are the most important substitutes introduced in the recent past. But sufficient quantity of bagasse would not be available until the sugar industry is provided with other forms of fuel.

Fertilisers Industry

Symbolising the country's fast developing fertilisers industry is the huge expansion programme of the **Fertilisers and Chemicals, Travancore Ltd.**, which the Chairman, **Mr. T. A. Joseph**, has dealt with in detail in his speech at the 18th annual general meeting of the Company. However, it is significant to hear from Mr. Joseph that the latest excise duties, imposed on *almost all the intermediate* products used as raw materials for fertilisers, would lead to increased costs of production. Quite candidly, Mr. Joseph has said that he does hope that it is not the intention of the Government that the cost of fertilisers should increase further. He has pointed out that the prices at which they are available in India today are already higher than in any other country, and urged the authorities to re-examine the question of imposing excise duty on the raw materials that are used in the manufacture of fertilisers.

Automobile Industry

Costs assume a great significance in the case of automobile industry, particularly as it is obliged to keep a large inventory. For example, the **Enfield India Ltd.** keeps, according to its Chairman, **Mr. K. R. Sundaram Iyer**, stocks of *about 6,000* items. As such, in a developing economy, costs rise continuously. But Mr. Iyer has observed that the new and increased excise duties levied in the *latest Central budget cover* such a wide number of items that it would take some time even to assess their full implications. The levies would increase the costs further and, therefore, Mr. Iyer has stated that the benefits of higher productivity to the Company would depend on what portion of the levies it is obliged to absorb. Representations have been made for suitable revisions in the selling prices of the Company, so that increases in *costs beyond* the Company's control could be neutralised.

Metals and Electricals

The 5 per cent increase to 25 per cent in the corporation tax under the Central budget for 1962-63, **Mr. R. H. Kamani**, Chairman of the **Jaipur Metals and Electricals Ltd.**, has pointed out, would reduce the Company's surplus profit which otherwise would have been useful for creating reserve for the development programme of the Company. The Company could not increase production from the metals division last year, because of the shortage of raw materials, especially copper, due to paucity of foreign exchange and drastic cut in the quota of raw materials. But the Company has done well in the field of house meters and proposes to expand its electricals section. The country's total production of single-phase house service meters was 624,113 in 1961. With the additional capacity of 102,000 having been sanctioned, the total licensed capacity has attained the level of 546,000 meters on a single-shift basis. The Government has now decided not to raise the capacity any further for some time to come.

Plantations Industry

Some interesting observations have been made on the country's plantations industry by **Mr. A. V. Thomas**, Chairman of the **Highland Produce Company Ltd.**, and a pioneer among Indian planters. The Company is engaged in producing tea and cardamom. How exactly taxation hampers further expansion of a company in the sense that it takes away the bulk of its profit is best illustrated in the case of Highland Produce, whose income not only attracts Central income-tax and excise but also the State agricultural tax and sales tax besides the new burdens of additional plantation tax and land tax. In 1952, the Company earned a profit of Rs. 2.52 lakhs and provided Rs. 40,000 for taxation. In 1961, taxation claimed Rs. 4 lakhs of the burden out of a profit of Rs. 8.63 lakhs, which means 47 per cent of the income, or a ten-fold increase over the 1952 level. Mr. Thomas does not say that there should have been no increase in taxation. Only, he wants a careful reassessment, taking into account the needs and capacity of the plantations industry. In view of the heavy tax burden attracted by tea, Mr. Thomas says, it is difficult to assess how far the concession in the export duty would help it. Another issue to which Mr. Thomas has referred pertains to the interim increase of 15 nP, recommended by the Central Wage Board, in the daily wages of adult workers, which has been made effective from December 1961. It is interesting to find from his speech that the plantations industry in the South has already been extending some sizable fringe benefits to the workers, which form as much as 14.5 per cent of the total cost of production and no less than 30 per cent of the labour cost. In the case of manufacturing industries, it may be noted, the fringe benefits form only 6 per cent of the wage bill.

Within the last three years, the cardamom crop has more than doubled and the costs have been kept under control. But the industry has failed to realise its market expectations because of lack of holding capacity among most of the producers. For want of such capacity, they sell the produce at the immediately best available prices and lose the full advantage of the demand for Indian cardamom in foreign markets. There is, therefore, an urgent need to set up an effective marketing organisation and the U.P.A.S.I. is collecting the necessary data to draw up a suitable scheme.

TREND OF SHARES

BOLTS FROM THE BLUE

(From Our Own Correspondent)

BOMBAY, 5th July

A CROP of fresh bearish factors, coming like bolts from the blue, produced further weakness in the share markets this week. The factors were (i) the threat of power shortage for industries enveloping almost the whole of the country, including the-so-far-least-affected Maharashtra State, (ii) the further tightening of credit curbs by the Reserve Bank, and (iii) the flotation of new Central loans at a slightly higher rate of interest than in the past, which created fears of a possible flow of investible funds to Government securities from the less attractive shares in terms of yield. Coming almost together, these factors emboldened bears to strike afresh. Values literally tumbled down to yet new low levels on seemingly endless selling pressure and virtual absence of support. In the process, the markets ignored the steady recovery on Wall Street from the recent slump, reports of some improvement in the prospects for foreign aid following talks by Mr. Morarji Desai with some British leaders, possible avoidance of any further deterioration in the foreign exchange situation by getting some of the tied loans converted into untied loans and by obtaining a fresh credit of $100 million from the International Monetary Fund, and, lastly (what concerns the markets directly) slightly lower *budla* charges first in Bombay and later in Calcutta due to both easy money market conditions and the ceaseless selling pressure in the markets for some time past. Scattered bear covering and some buying in the nature of bargain hunting produced a rally near the close, which wiped out substantially the week's losses. But the markets were lacking in strength, as confidence was badly shaken.

* * * *

Losses were widespread on Dalal Street. Tata Steel Ordinary, the barometer of the market, sank from Rs. 148.25 to a new low level of Rs. 144.75 on persistent selling which was partly on account of the option deals. At close, the shares showed a loss of Re. 1.75 at Rs. 146.25. However, Indian Iron were less affected by fresh selling and were quick to rally to Rs. 25.80, after having fallen from Rs. 25.95 to Rs. 25.65. The net loss in these shares, excluding the book closure contango of 25 nP, was 20 nP.

The sellers' recent favourite, National Rayon, in Textiles, broke sharply from Rs. 523 to a new low level of Rs. 498.50, but made up a part of the huge loss and closed only Rs. 11.50 lower at Rs. 509. Century, too, gave way from Rs. 638.50 to Rs. 622.50, but managed to close with a negligible loss of only 50 nP at Rs. 633. But Bombay Dyeing came in handy for bears and slumped from *Rs. 67.90 to Rs. 66.20 to rally at the close* to Rs. 66.90. T.E.L.Co., another prominent bear counter, was the worst to suffer in the Miscellaneous section, as it nose-dived from Rs. 354 to Rs. 342.50, a new low level in the current declining market, before finishing at Rs. 346.50. Most of the Cash scrips were also easy, with the much boosted T. Maneklal sold down from Rs. 675 to Rs. 630 and Link-Chain showing a loss of Rs. 13.50 at Rs. 108.

* * * *

The death of the State Chief Minister, Dr. B. C. Roy, created a feeling of despondency in Calcutta, where reports of the power cut affecting jute industry further unnerved the operators.

Discouraging reports from the principal markets of Bombay and Calcutta and lack of worthwhile support were responsible for small to sizable losses in Madras, where reports that a further cut in power may be averted came too late to cheer up the sentiment. Particularly weak were textiles because of the power cut imposed in the State.

NEWS IN BRIEF

NEW rich veins of gold have been discovered in one or two *shafts* in the Kolar gold fields (Mysore).

The question of setting up free trade zones at Cochin, Goa, Pondicherry, Visakhapatnam and Paradeep, besides Kandla, is being examined by the Government of India.

India has signed an agreement with Australia for buying 100,000 tons of wheat during the next five months.

The World Bank has agreed to give a loan of $720,000 for the construction of a tea warehouse with modern mechanical devices at Calcutta.

A Rs. 5-crore zinc smelting factory is proposed to be set up in Kerala in the private sector in collaboration with a Canadian firm. The factory will have an annual installed capacity of 20,000 tons and will utilise ore imported from Canada.

The International Development Association has extended a credit of $15 million for financing the improvement and extension of the Sone irrigation system in Bihar. The credit is for a term of 50 years and free of interest. Repayment of the principal will begin in 1973. One per cent of the principal will be repayable annually for ten years and 3 per cent annually for the next 30 years. A service charge of ¾ per cent per annum will be made on the amount withdrawn and outstanding to meet the I.D.A's administrative cost.

The existing trade agreement between India and North Korea has been extended upto the end of 1962. In 1961, India imported goods worth Rs. 14.5 lakhs from North Korea and exported goods worth Rs. 17 lakhs. Trade between the two countries being in non-convertible rupees, any difference in any one year is to be made up in the following years. Among the goods exported from India were ferro-manganese, leather goods, cotton textiles, handicrafts, vegetable oils, mica and shellac. Imports consisted of chemicals, fertilisers, electrolytic zinc, high-speed and special steels, anthracite and engineering equipment.

A wool testing laboratory is proposed to be set up at the Regional Sheep Research Station at Jorbeer near Bikaner, Rajasthan. A sum of Rs. 77,940 has been sanctioned for the scheme. The Sheep Research Station was established by the Indian Council of Agricultural Research in 1954 to improve the breed of sheep and the quality of wool. At present the Station maintains a showroom to display the wool produced in the station, a shearing shed, dipping tank, and a veterinary hospital. So far a sum of Rs. 1,93,913 has been spent on this farm.

The Government of India has drawn up a Rs. 230-lakh scheme to ensure adequate and regular supply of quality seeds to farmers as part of the campaign to increase food output during the third Plan. Under the scheme, the production, distribution and marketing of improved seeds will be entrusted to a National Seeds Corporation which will be set up shortly as a company. The corporation, which will have branches operating in different States, will take up work relating to hybrid maize and *jowar* seeds in the first instance, and later extend its activities to cover other foodgrains and edible oilseeds. The U.S. Ageney for International Development Mission and the Rockefeller and Ford Foundations will co-operate with the Government of India in the establishment of the corporation.

An institute of work study, the first of its kind that is being started in this country under the research and development organisation of the Defence Ministry at Londour, Mussoorie, has been inaugurated this week. The institute will train personnel of the defence services and organisations in work study and allied managerial subjects with a view to achieving greater efficiency and economy by devising better methods of utilisation of materials, plant and machinery.

Permission has been granted for the import of dry fruits, asafœtida, cumin seeds and medicinal herbs from Afghanistan by steamers via Iranian ports up to the end of August 1962. The import of these articles will be allowed on c.i.f. basis and will be subject to the condition that the importers will pay for the total c.i.f. value of the imported goods by export of goods to Afghanistan. The facility will be available within a certain ceiling.

The feasibility of preparing copper-chromium alloys by the powder metallurgical technique—compacting mixtures of copper and chromium powders under pressure and sintering the compacts at high temperatures—has been established as a result of recent studies carried out at the Indian Institute of Science, Bangalore. The alloys obtained have been found to possess tensile strength comparable to that of the fully annealed electrolytic tough pitch copper.

The Government of India has decided to increase its contribution to the special bad debt reserves of co-operative banks from 1 per cent to 2 per cent on the additional loans given in the previous year.

A study team has been set up by the Ministry of Community Development, Panchayati Raj and Co-operation, with Mr. R. R. Diwakar as Chairman, for examining the problems connected with the effective functioning of the gram sabha. The team is to submit its report within six months. The team will study the working of the gram sabha, gram panchayat, and the panchayat samiti, with special reference to the extent to which the gram panchayat is influenced in its policies and decisions by the views and mandate of the gram sabha and the extent to which the latter is involved in the implementation of programmes, etc. The team will suggest measures for ensuring that the gram sabha is built up as the base for panchayati raj and sarpanches and pradhans function institutionally.

From Abroad

A new U.S. firm in Jamaica has begun selling abroad high quality jute bagging for rugs and carpets.

Ceylon has undertaken a country-wide agricultural census, in consultation with the F.A.O. The census will cover the extent of land cultivated, nature and techniques of production, use of fertilisers, etc.

Japan has decided to participate in the forthcoming International Coffee Conference due to commence at New York on 9th inst. This country imported last year 250,000 bags of coffee, a quantity that was about 40 per cent more than that what had been imported in the previous year.

The United Arab Republic and Soviet Russia have reached an understanding on a new three-year trade agreement (beginning next January) under which the U.A.R. will export sesame, groundnuts and bananas to Russia and import Soviet machinery equipments and raw materials.

Japan imported 21.21 million tons of iron ore during the year ended March 1962, an increase of 31 per cent over the previous year. Malaya was the leading supplier (6.2 million tons), followed by Chile (2.96 million tons), Goa (2.86 million tons), Peru (2.44 million tons), India (1.69 million tons), the Philippines (1.40 million tons) and Canada (1.11 million tons).

The Soviet Union has ordered an experimental tidal electricity generating set from the French company Neyrpic of Grenoble, for research purposes. It is understood that Soviet research is studying the most favourable domestic sites for tidal power generation and the best types of equipment for installation in tidal stations. Neyrpic has gained experience of this type of plant through its work on designing and building the St. Malo tidal installations and its association with the big tidal station at La Rance.

PERSONAL

MR. R. K. Birla and Mr. G. K. Singhania have been elected Chairman and Vice-Chairman, respectively, of the Federation of Woollen Manufacturers in India for the year 1962-63.

Mr. K. S. Smith has been elected Chairman and Mr. Mohamed Yaqub, Vice-Chairman of the Tanners' Federation of India, Kanpur, for 1962-63.

Mr. V. S. Vaidya has been elected President of the Indian Rubber Industries Association for the current year. Mr. D. Bose and Mr. Jaichand have been elected Vice-Presidents.

Mr. M. R. Dhawan has been re-elected President of the Delhi Stock Exchange Association Ltd. for the current year. Mr. Bharat Bhushan has become the Vice-President.

Dr. W. R. Correa, Product Manager, Consumer Products Division of the Union Carbide India Ltd., Calcutta, has been appointed General Sales Manager of the Division *vice* Mr. James A. Ebersole, who has been transferred to an associate company in Venezuela.

Mr. Alpedo Sedo of Spain has been elected President of the International Federation of Cotton and Allied Textile Industries for a period of two years from 1st November next. Christer Hoglund of Sweden and Charles Uyttenhove of Belgium will be the Senior and Junior Vice-Presidents, respectively.

Mr. Khandubhai K. Desai, Chairman of Oil India Limited, accompanied by Mr. J. C. Finlay, Managing Director, Mr. P. Govindan Nair, Financial Director, and Mr. M. C. Bhatt, Secretary, Oil India, left for London on 29th June on a nine-day visit to the U.K., where he will have talks with the representatives of the Burmah Oil Company Ltd., Oil India's partner, on all aspects of the Company's operations, including the British Company's offer of a sterling loan of Rs. 14 crores to meet the foreign exchange component of the Oil India pipeline.

Mr. Morarji Desai, Union Finance Minister, left on a three-week tour of the U.K. and the Continent last Sunday. He will meet the French President, Charles de Gaulle, West German Economic Minister, Ludwig Erhard, besides the British Prime Minister, and explain to them India's stand in regard to the U.K.'s proposed entry into the Common Market. He will also participate in the U.N. Economic and Social Council meeting to be held at Geneva on the 9th inst.

Why CIMMCO Sakamoto

BECAUSE

★ AUTOMATIC LOOM IS A MUST FOR QUALITY TEXTILES
★ 62% OF COUNTRY'S AUTOLOOMS ARE SAKAMOTO TYPE
★ 25% OF COUNTRY'S AUTOLOOMS ARE OTHER JAP. TYPE

ALSO

★ THESE ARE STURDY IN DESIGN
★ SIMPLE TO SET-UP AND OPERATE
★ TRIED IN COUNTRIES THE WORLD OVER

AND

TECHNICAL COLLABORATION **COMBINES** A **LOOM BUILDING EXPERIENCE** OF **18** YEARS AT CIMMCO WITH OVER **34** YEARS IN JAPAN.

Specially developed technique of boring frames on assembly ensures of perfect allignment. Improved temple cutter, end cutter and latest mechanised warp stop with efficient brake ensure faultless weaving continuously with minimum efforts.

COAL COUNCIL'S SUGGESTIONS

UNLESS the profitability and prosperity of the private sector in coal industry is ensured, the chances of the third Plan's coal production target being achieved in full are rather slender. The Union Minister for Mines and Fuel, Mr. K. D. Malaviya, has no doubt recognised the wisdom of giving all possible encouragement to the private sector. It must be said in fairness to him that he has not taken any rigid stand under the Industrial Policy Resolution of 1956. The expeditious manner in which the Government of India recently granted an increase in coal prices without a time-consuming examination of the cost structure of the industry has also brought him some credit. The Minister's clarification, at the meeting of the Coal Council of India last week, that it was only an *ad hoc* increase must be reassuring to the industry which seems to have welcomed the modest increase in the belief that it represents only the first instalment. As the Government, faced with the continuing coal crisis, is increasingly receptive to suggestions from the side of colliery-owners, it is now up to the latter to seize the opportunity and present an acceptable case for relief and assistance in all its bearings.

How keen the Government is on resolving the coal crisis could be inferred from the proceedings of the latest meeting of the Coal Council of India. By making a departure from its usual practice of merely discussing coal issues and by passing, on Mr. Malaviya's own persuasion, a formal resolution, the Council has enabled the Government to take the necessary action which, now, will not be long delayed. The relevant resolution reads as under:

"Considering that transport of coal is mostly done by railways which are already overstrained in this respect, this Council is of the opinion that, unless unavoidable, no additional transport burden should be placed upon them in respect of coal for short distances. This Council is, therefore, of the view that where thermal power stations or coal washeries are planned for short distances, these must, as a rule, be located at the coal-fields from which the supplies of coal are to be obtained. Consideration of State requirements of power and coal should not come in the way of economic location. This Council is further of the view that, even in respect of thermal power houses and washeries already planned, their exact location may be further reviewed with a view to avoid placing additional burden on the railways."

This approach of the Coal Council to the coal transport problem is realistic in more ways than one. Firstly, location of thermal stations and washeries as far as possible at the coal-fields will release more wagon space for the use of coal-consuming industries. Secondly, it will help relieve the power shortage which at present is afflicting the coal industry itself and standing in the way of expansion in output. By suggesting, in the latter connection, that immediate measures be launched to meet fully the power requirements of the collieries themselves, the Council has brought into focus this biggest single handicap in achieving the coal production target of the third Plan.

EXPORTS OF VEGETABLE OILS

Despite the upward trend in the output of oilseeds during the last two crop years, exports of oils have not registered any perceptible improvement. The total oilseeds production is (non-officially) estimated to have touched the level of 6.7 million tons in 1961-62 crop year, as compared with 6.5 million tons in 1960-61 and 5.9 million tons in 1959-60. Still, the 1961-62 output is lower by 200,000 tons, as compared with 1958-59. The export of castor oil in the 1961-62 fiscal year was no more than Rs. 400 lakhs, which compares unfavourably with Rs. 670 lakhs in the previous year, and that of linseed oil only Rs. 8 lakhs, as against Rs. 88 lakhs. Shipments of groundnut oil continue to be low, although they had staged some recovery in 1961-62 to Rs. 103 lakhs, from the very low level of Rs. 21 lakhs in 1960-61. The major reason for the general stagnation in exports is the fact that domestic prices continue to be out of parity with world prices (though, of late, there has been some fall in domestic prices), on account of steadily increasing trend in the consumption of oils and fats and the failure of production to grow fast enough to take care of both domestic consumption and our need for exports. The price of Indian groundnut oil, for instance, is about 50 per cent more than that of overseas products. But the margin is, of course, not as wide as this in other commodities like linseed oil. It is against this background that Mr. Ratilal M. Gandhi, President of the Central Organisation for Oil Industry and Trade, in his speech at the annual meeting of the Organisation held in Bombay on Monday this week, called upon the Government to grant an incentive scheme for the export of linseed oil.

Mr. Gandhi's belief that linseed oil could be exported with smaller incentives than those needed for groundnuts is a self-evident fact. The plea for incentives for linseed oil is nevertheless timely, as, of late, the pressure of supplies from Argentina, India's major competitor, has been declining. Mr. Gandhi was also optimistic that exports of *niger* and *kardi* oils could be revived with relatively small incentives. The prospects for exports, however, cannot be gauged now, as the trend in prices and exportable surplus in the 1962-63 season will depend upon the nature of the monsoon. The present delay in the arrival of monsoon has already upset the sowing operations in the major oilseeds producing areas in Gujarat, Maharashtra and the South.

Quite apart from the volume of exportable surplus and prices, one of the prerequisites of export promotion of vegetable oils is the assurance of the quality of materials. The Government of India, it may be noted, is considering a scheme of compulsory grading of groundnut oil, linseed oil and oilcakes under *Agmark* for exports. It is not quite clear why Mr. Gandhi should object to compulsory grading, the object of which is to enhance the confidence of overseas buyers in Indian products. Although Mr. Gandhi conceded the need for reducing cost and improving quality, he appeared to apprehend that compulsory grading would only create fresh burdens on trade by way of time-consuming formalities. It is, of course, essential that procedural delays should be eliminated from any new scheme. But fear of procedural delays alone is not a convincing argument against strict enforcement of suitable grading. Another problem highlighted by Mr. Gandhi relates to difficulties in securing adequate and regular shipping space for the export of oilcakes, meal, etc. These difficulties, according to him, were more pronounced in the pool system. Dissatisfaction at the pooling system has been expressed by the other spokesmen of trade as well. Mr. Ramdas Kilachand, President of the Bombay Oilseeds and Oils Exchange, for instance, had something unsavoury to say recently about the working of the pool system. It is time the Government of India investigated into the working of this system and made the modifications necessary to remove the difficulties faced by exporters.

MADRAS BUDGET

A steep increase in taxation to net an additional revenue of as much as Rs. 7.15 crores in a full year and Rs. 6.65 crores in the current year has been proposed by Mr. M. Bhaktavatsalam, the new Finance Minister of Madras, in his budget for 1962-63, presented to the State Assembly on 30th June. This is aimed at covering the major part of an estimated revenue deficit of Rs. 9.51 crores during the year. Revenue receipts during the year are estimated at Rs. 106.5 crores and expenditure at Rs. 116.01 crores. The new proposals are expected to yield an additional revenue of Rs. 6.65 crores, leaving an uncovered deficit of Rs. 2.86 crores. The Finance Minister hopes that the new measures will bring in larger revenues than anticipated and the gap will be automatically closed.

The additional taxation proposals and the revenue expected from them are as follows:

	Rs. lakhs
Increase in the present level of taxation of passenger buses and goods vehicles on a slab rate basis	2.00
Tax on consumption of electricity by high and low tension consumers exclusive of new industry	2.15
50 per cent increase in stamp duties	1.00
Increase in wet land assessment and water rates	1.00
Taxation of urban land	25
Increase in levies on betting ...	24
Increase in cess on sugarcane ...	50
Total	7.14

It will be noted that road transport and electricity, both of which are already heavily taxed, have been made to carry a still heavier load. It is hard to understand as to how these impositions can be reconciled with the country's pressing need for bringing down the cost of production, and for more and cheaper, as well as quicker, transport. The levy on agricultural lands could have been a little more stiff, considering that this branch of our economy has been taxed relatively less as compared with the sharp rise in prices of agricultural commodities.

A comparison of the present budget with the Interim Budget for 1962-63 presented in December last shows the extent of deviation of the former from the latter. The present budget reveals an increase in revenue from Rs. 92.71 crores to Rs. 106.50 crores and expenditure from Rs. 99.67 crores to Rs. 116.01 crores. The revenue gap has thus widened from Rs. 6.96 crores in the Interim Budget to Rs. 9.51 crores in the present budget. The increase in revenue has occurred under such heads as general sales tax, Central sales tax, motor spirits tax and taxes on vehicles and can be taken as an indication, to some extent, of the all-round increase in the tempo of economic activity in the State. The rise in expenditure, which has been mainly under the heads education, medical aid and agriculture, can also be related to the Plan. The budget figures can therefore be properly assessed only against the background of the State's third Plan.

In regard to Plan performance, Madras has a good record. Unlike some other States, where Plan outlays have consistently fallen short of targets, Madras has never had in the past ten years any difficulty in keeping up the Plan schedules in respect of outlays. This position has been continued in the first year of the third Plan, namely, 1961-62 also and the 1962-63 budget bids fair to maintain the tempo of Plan expenditures. The State's third Plan provides for a total outlay of Rs. 291 crores. Of this, Rs. 50.44 crores were spent during 1961-62, the first year of the Plan, and the present budget envisages an outlay of Rs. 57.27 crores for 1962-63, the second year, bringing the total for the two years to Rs. 107.71 crores. Assuming that there will be no shortfall in outlay during the current year, by the end of the second year of the Plan period, the State would have utilised 37 per cent of the total outlay under the third Plan.

OUTLOOK FOR RUBBER

Do you want to swim with the tide or against it? This was the simple but straight question which Dr. Rama Varma, Chairman of the Rubber Board, put to planters when he addressed the forty-second meeting of the Board at Wellington Island, Cochin, last week. Evidently, Dr. Rama Varma must have had at the back of his mind the rapid pace at which demand for natural rubber has expanded in recent years, a phenomenon that is bound to persist for several years to come, notwithstanding the impending manufacture of synthetic rubber at Bareilly by the end of this year. Between now (1962-63) and 1975, the demand for raw rubber is expected to increase from 48,000 tons to 171,000 tons. In the current year alone, the gap to be filled in by natural rubber is estimated at 48,000 tons, even assuming that the Bareilly factory will produce 30,000 tons of synthetic rubber which is very unlikely. The actual output of natural rubber in 1961, it may be noted here, was no more than 27,000 tons and the leeway to be made to achieve the third Plan production target of 45,000 tons is thus pretty wide. All this calls for energetic action on the part of both the Rubber Board and the planters to grow more rubber.

Viewed thus, Dr. Rama Varma certainly struck a note of realism when he urged the need for a new outlook to solve the problems facing the rubber industry. It was here that he examined the likely impact of synthetic rubber on natural rubber production. His assessment is as follows:

"When synthetic rubber is sold in large quantities, the consumers' preference for quality will begin to assert itself. One complaint about natural rubber has long been that the user cannot be sure that he will get just what he wants. There is a lot to be done in its processing, grading and packing. The quality of synthetic is more likely to be consistent and variable to meet the needs of the consumer. Further, its polythene packing will add to its attraction. And added to that, the natural rubber industry will have to find an answer to high power salesmanship backed by first rate technical service for which synthetic rubber industry is reputed. Hereafter, it will be difficult to expect the manufacturer to come and lift anything that is passed on as rubber. The producer will have to cater to the needs of the manufacturer. "Equally important with quality is the price. I have no information about the price policy which Synthetic and Chemicals Ltd. may adopt. I am told that, in the United States, SBR is sold cheaper than natural rubber. There is very little possibility of bringing down the natural rubber prices immediately. It may take time. Even now there are complaints that small growers are not always getting controlled price. When the synthetic rubber comes to the market in larger quantities, the chances for depressing the local prices would be greater than what it is today. The Board should have a policy to meet a situation like that. It cannot shift the responsibility to any other quarter and remain idle."

The statement of Dr. Rama Varma that the Rubber Board would not allow natural rubber prices to be depressed is, indeed, reassuring. It is, however, difficult to agree with his contention that it would be an unwise policy to push up prices. It may be true that the controlled prices of Indian rubber are much higher than the prices of rubber imported from abroad, but that is true of almost all commodities or manufactured goods produced in this country. The planters contend that the ruling prices do not adequately cover the rise in cost of production, heavy incidence of taxation and the interim wage increase awarded by the Wage Board. The right thing for Dr. Varma to do would be to examine whether this contention is true or not and, if true, to what extent. Mere categorical assertions such as the one made by him are of no value. In Kerala, it may be noted, there are at present five taxes on rubber, namely, sales tax, agricultural income-tax, land tax, Kerala additional tax on land, plantation tax and *panchayat* tax. As Dr. Rama Varma himself admitted, unlike other commodities, the price of rubber is controlled and the profit-margin fixed. Unless the rubber industry is assured of a price that will not only compensate for all these increases, but also give a reasonable return on investment, the third Plan production target of 44,000 tons may not be achieved at all.

It is, however, gratifying to learn from the Rubber Board Chairman that the Government has given the highest importance to the replanting programme. Besides a subsidy of Rs. 1,000 per acre, interest-free loan, we are told, is available to existing small holders for extending their areas upto 15 acres in contiguous plots. We are also told that arrangements have been made with the Central Co-operative Bank to advance, through co-operatives, short-term loans of Rs. 150 per acre for manuring, spraying and other plant protection measures.

Apropos the demand for loans from the Board for working capital, maintenance of immature areas and new plantings, Dr. Rama Varma made it clear that finance for new planting was an item of capital expenditure which should be met from out of the savings of the planter himself or through other normal sources of finance. "It is a mistake to think," he said, "that the Board can undertake large-scale financing of new plantings without proper consideration of getting back the loans advanced. It will have to work like any other financial agency." In this connection, he pointed out that certain provisions of the Kerala Agrarian Relations Act might require amendment, if large-scale financing of new plantings was to be undertaken and disclosed that this and the question of medium-term loans for the maintenance of immature areas were under examination. As for working capital, he merely stated that it was for the planters to establish their creditworthiness with the banks. It is not clear how the planters could do this if the prices paid to their crop are unremunerative.

Considering the prolonged delay in the implementation of the replanting programme, the hope expressed by Dr. Rama Varma that, with the enhanced rate of subsidy, the bulk of replanting would be completed by 1970 and that, by 1970, a production of over 100,000 tons from the existing areas alone could be secured is certainly encouraging in so far as it goes. But can one be sure that there is no element of exaggeration in this assessment of the future growth rate? The cost of this expansion plan is placed at Rs. 15 crores. A noteworthy feature of this development programme is that it involves no foreign exchange expenditure.

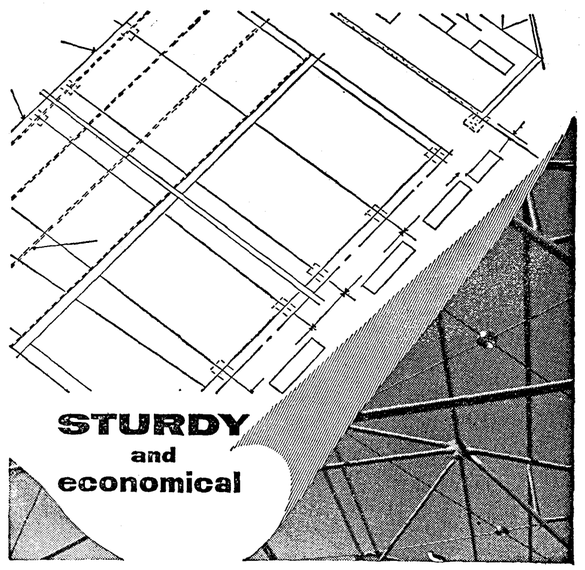
Whether it is new planting or replanting, special care, as was pointed out in this journal on an earlier occasion, will have to be taken to ensure that only high-yielding varieties of seedlings are made available and used. This condition is important, because the per-acre yield of rubber continues to be poor, the all-India average being just 320 lbs. (1960), as against 417 lbs. in Ceylon and Malaya. It is needless to add that, to the extent to which the productivity of rubber-growing tracts are augmented, the cost of production will be reduced, which in turn will enable producers to sell their rubber at lower prices. The whole idea of giving subsidy and protection to rubber industry is to help it achieve economic viability as early as possible. All these efforts will have been in vain, if Indian rubber growers fail to bring down their prices even after the present expansion scheme is completed.

GUJARAT BUDGET

Three striking features mark the Gujarat Government's final budget for the current (1962-63) year, presented to the State Assembly on Monday this week by Dr. Jivraj Mehta, Chief Minister, who also holds the portfolio of Finance. They are renewed buoyancy of revenues, a bold bid to raise more resources through additional taxation, and a firm assurance of all efforts to introduce economy measures. The revenue receipts of the Government, which had gone up from Rs. 52.54 crores in 1960-61 (actuals) to Rs. 60.59 crores in the first year of the third Plan (1961-62 revised), is expected to rise further to Rs. 69.40 crores in the second year of the Plan (1962-63). As, however, the improvement (of Rs. 8.81 crores) has been more than offset by the increase (of Rs. 10.28 crores) in expenditure from Rs. 61.86 crores in 1961-62 to Rs. 72.14 crores in 1962-63, the deficit has widened to Rs. 2.74 crores, from Rs. 1.27 crore in 1961-62; the actual position in 1960-61 was a surplus of Rs. 1.32 crore. The deficit is actually higher at Rs. 2.95 crores, if account is taken of the additional provision made for some of the existing schemes. It is creditable that Dr. Mehta has not hesitated to cover a substantial portion of the deficit—to the tune of Rs. 2.23 crores—by recourse to fresh taxation, in addition to the taxation of Rs. 1.59 crore proposed in the interim budget for the first three months of the year; the balance of Rs. 72 lakhs is left to be covered by economy measures. In doing so, he has done well to cast his net as wide as possible.

Considering the distinct improvement in the earnings of the agricultural sector in recent years following the rise in production and higher prices, it is just as well that this sector should be made to contribute more liberally to the financing of development schemes. Thus, a tax is proposed to be levied on all lands under cash crops, the rate of tax per acre of irrigated land being Rs. 2 for cotton, Rs. 3 for groundnut and other oilseeds, Rs. 4.50 for tobacco, Rs. 9 for sugarcane, Rs. 3 for other agricultural produce except foodgrains, fodder and grass; the rates applicable to unirrigated lands are half these. This levy is expected to yield about Rs. 1.2 crore in a full year and Rs. 70 lakhs in 1962-63. It is in addition to the enhancement of land revenue by Rs. 2 to Rs. 9 per acre of irrigated land and by Re. 1.50 to Rs. 2.50 per acre of non-irrigated land. Simultaneously, it is proposed to withdraw exemption from land revenue in respect of village gaothan sites within the limits of cities and towns with a population exceeding 10,000; this measure is expected to bring in Rs. 10 lakhs in a full year and Rs. 8 lakhs in 1962-63. It is also proposed to impose a surcharge on existing non-agricultural assessment at 75 per cent for lands used for the purpose of trade and commerce, 50 per cent for that of industry and 25 per cent for lands used for residential and other purposes; the additional yield is put at Rs. 8 lakhs in a full year and Rs. 7 lakhs in 1962-63.

Although the rates of sales tax have been stepped up on a wide range of goods, the fresh incidence would appear to be negligible, inasmuch as the total additional yield is put at no more than Rs. 40 lakhs in a full year and Rs. 20 lakhs in 1962-63. The goods covered are farsan (certain edibles), handloom cloth (excluding *khadi* and pillows), glassware, furniture, ærated waters and non-alcoholic drinks, bicycles, hydrogenated vegetable oils (including vanaspati), ice, paints, lacquers, varnishes, component parts of motor vehicles, fireworks, vacuum flasks, aeroplanes, air-conditioning plants and various other items, *ganja*, *bhang*, non-potable liquors, opium, dried fruits, jewellery, *zari* threads, *saris* sold in the price range of Rs. 12



prefabricated tubular structures

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 13 ft. 4 in. 10 ft. 1/8 in.
SLS/44	44 ft.	and 13 ft. 4 1/8 in.

NAS/SL 244

to Rs. 30 and above, biscuits, floor and wall tiles, foodstuffs and food provisions sold in sealed containers, toilet articles, inflammable gas supplied in closed containers, etc.

The enhancement in the rate of stamp duty is expected to bring in an additional revenue of Rs. 9 lakhs in a full year and Rs. 5 lakhs in 1962-63. Electricity duty is proposed to be modified so as to yield Rs. 98 lakhs more in a full year and Rs. 57 lakhs in 1962-63. The increase effected seems to be somewhat steep and it will doubtless raise the cost of production in industries that are run largely on power.

Road transport is another sector which is subjected to a heavier load of taxation. The proposals are (1) a levy on carriage of goods by motor vehicles at the rate of 3 per cent of gross freight charged; (2) increase in sales tax to 11 nP per litre on motor spirit, 5 nP on diesel oil (and aviation spirit), and 3 nP on vaporising oil. The additional yields from these two sets of proposals are Rs. 70 lakhs and Rs. 27 lakhs, respectively, in a full year and Rs. 40 lakhs and Rs. 16 lakhs in 1962-63. One, however, wonders whether Dr. Mehta could not have spared from additional tax motor transport, especially when it is being called upon to supplement the efforts of the railways on a bigger scale. As it is, the tax burden on road transport is pretty heavy and it has now been made heavier still.

To revert to the budget estimates proper. The anticipated improvement of Rs. 8.81 crores in revenue receipts during the current year as compared with 1961-62 is accounted for entirely by non-tax revenue which is estimated higher at Rs. 31.57 crores, as against Rs. 17.04 crores. The rise, thus, of Rs. 14.53 crores has more than made good the fall of Rs. 5.72 crores to Rs. 37.83 crores in tax revenue. On the expenditure side, "development" heads show a rise from Rs. 35.04 crores in 1961-62 to Rs. 38.26 crores in 1962-63 and "non-development" heads from Rs. 26.82 crores to Rs. 33.88 crores. The review of the third Plan working in Gujarat State as made by Dr. Mehta is quite encouraging. The progress made in the different sectors of development in 1961-62 was satisfactory. The expenditure actually incurred was Rs. 37 crores, as against the original Plan allocation of Rs. 33.19 crores. The tempo of the Plan's implementation is being accelerated in the current year, the proposed Plan outlay being Rs. 46.26 crores, a rise of more than Rs. 9 crores over 1961-62. In particular, industrial development will receive a powerful stimulus with the proposed establishment of the Gujarat Industrial Development Corporation. About 131 licences for new industries and 148 licences for substantial expansion of existing industries, we are told, have been granted.

WORLD AGREEMENTS FOR TEMPERATE FOODSTUFFS

With a further cut of 10 per cent in tariffs among the Six, brought into force from the 1st inst., the internal tariffs among the Common Market countries have been reduced to 50 per cent of the 1957 level. The European Free Trade Association has also kept itself in step with the Six, with a reduction of 10 per cent in internal tariffs. Meanwhile, negotiations are still going on in full swing at Brussels between the U.K. and the Six over the various factors that stand in the way of Britain's entry into the Common Market. The important subject that came up for discussion last week at Brussels was the question of Commonwealth temperate foodstuffs, particularly wheat, mutton, butter and cheese—products in which New Zealand, Australia and Canada are vitally interested. The solution being suggested by the Six for the temperate foodstuffs problem falls into two groups; one, transitional arrangements upto 1970 and two, a scheme of world-wide commodity marketing arrangements (for which negotiations are proposed to be started next year) for safeguarding their trade beyond that period.

On the first aspect of the solution, that is, transitional arrangements, the Six have made their intentions clear. For commodities like barley, beef, butter and sugar, for which Commonwealth exporters receive preferential duties in the U.K., the Six have offered to allow Britain at the outset to accord the same preferences to the Commonwealth as they would to themselves. In other words, Britain would be able to give Commonwealth exporters the benefit of the *montant farfaitaire*—"the fixed rebate on import levies which, over the transitional period, the Six accord to each other." The scheme, however, permits diminution of export outlets over the course of the transition period. That this is unacceptable to the U.K. was made clear to the Six by Mr. Edward Heath, the Chief of the British delegation to the Brussels talks.

The U.K. seems to be equally dissatisfied with the cursory nature of the Common Market plan for world commodity agreements (for temperate foodstuffs). The plan for world agreements, designed by France, seeks to ensure higher prices for the relevant commodities and thus raise the revenue of exporters, rather than their quantitative sales through guaranteed quotas and other preferences. The main features of the French plan, usually called Baumgartner plan, according to the *London Economist*, are:

"In essence, the Baumgartner plan aims at lifting world prices to a level compatible with European prices, and then disposing of surpluses through aid programmes. The first element—raising world prices—would be achieved in Europe by ensuring that no wheat, for example, would enter the Common Market below agreed prices. Import levies, as under the existing E.E.C. agricultural policy, would ensure that prices were maintained within the Common Market at the prescribed level. Outside Europe, prices would be sustained by the operation of the aid programme. Any commodities bought on behalf of such a programme within or outside the Common Market would also be purchased at the European price. If the right price is chosen, and sufficient funds for aid are forthcoming, it is assumed that disposals of wheat can comfortably be maintained at a rate which will keep the whole structure in equilibrium. The difference between the European price and the produers' price in other countries can be absorbed by export taxes or import levies in varying proportions.

"Import levies and, perhaps, part of the export taxes would contribute in the aid fund, which might also receive a given small proportion of each participating country's national income. Contributions to this aid fund could be in kind—for example, wheat—as well as cash; and its main purpose would be to distribute to needy countries the amount of these commodities that would otherwise have become surplus and depressed prices. It is imagined, rightly or wrongly, that in no market in the world need prices other than these chosen ones be paid for wheat; for example, there would be no more of those sales of 'cheap' grain to countries like China."

The feasibility of a world-wide commodity arrangement on these lines is open to doubt. Mr. Heath, it would appear, insisted that the Six should give assurances for maintaining Commonwealth trade in temperate foodstuffs, if world agreements were not reached by 1970. He also impressed upon the Six that, in these agreements, they should be prepared to limit production and maintain imports from third countries. He was particularly unhappy to note that the plan gave no indication as to how and on what basis precisely prices were to be fixed. The further developments in this field will be watched with interest. For this will have some impact on the likely arrangements for tropical products like tea, for which the U.K. has asked for *nil* tariffs.

Separate sections have been set up in the office of the Chief Controller of Imports and Exports, New Delhi, at the Regional Import Trade Control Offices at Bombay, Calcutta, Madras, Ernakulam and the Central Licensing Area, New Delhi, for examining the first appeals from traders against the decisions of the licensing authority. Under the procedure, a person not satisfied with the decision of the licensing authority can make an appeal in the first instance to the head of the office or division, in which the application was dealt with originally, within 30 days from the day of the order appealed against. The decision has been taken in pursuance of the recommendation of the Import and Export Policy Committee (Chairman: Dr. A. Ramaswamy Mudaliar).

Valuable Protection

for Valuables

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?

The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.

Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.

By depositing your valuables in the State Bank, you will save yourself the worry about their safety.

Please contact the nearest Branch Agent for further particulars.

SISTA'S-SB-29

The Third Five Year Plan
Bird-Heilgers' part in it...

Rs. 50 CRORES

TO CONFER THE BENEFITS OF SCIENCE ON THE MAN IN THE STREET

Research...to make Indian products compete in world markets, to explore new avenues of creative thinking, to confer the benefits of science on the man in the street. The Third Plan has earmarked Rs. 50 crores for research. An extensive programme will strengthen and expand existing research units, widen their range of activities, train new personnel and provide an adequate number of research scholarships and fellowships. The ultimate aim is best summed up by the Planning Commission—"to carry the application of science into the everyday life of the community".

Research makes good products better

Bird-Heilgers recognises that national research is closely linked to national development. The group's own research and quality control centre is expanding to meet increasing demands. Bird-Heilgers applies the results of research to production techniques. The rich dividend: products of a uniformly high standard, economies in the use of by-products and raw materials, development of new products, quick, easier manufacturing processes...The group translates research into results which benefit India's new and growing industries and, ultimately, the man in the street.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...intensify its use of research...join the national drive to economic independence.

WEAK AND STRONG SPOTS IN ECONOMY

ANOTHER RECESSION NEXT YEAR?

From Our Special Correspondent

NEW YORK, 29*th June*

CONFLICTING news about the economic picture dominate the United States scene. The weak spots are accentuated by fear of the future. The strong spots receive little attention for psychological reasons which are just inherent in human nature and cannot be explained.

On the optimistic side are an increase in the gross national product, a rise in industrial production, a gain in personal income, strong automobile sales and climbing housing starts. Also total payrolls are moving upward. Among the depressing elements are the continued loss of gold and just plain lack of confidence in the future as evidenced by the stock market crash. This state of affairs and state of mind was brought into focus by a major television network programme the other day when three reporters questioned the President of the National Association of Manufacturers, Mr. Donald Hardenbrook.

Mr. Hardenbrook was for many years Financial Vice-President of Union Bag and Paper Company and helped that Company expand and merge. He was considered as one of the candidates for the presidency of the New York Stock Exchange and lost out to an ex-college president, Mr. Keith Funston who holds the job now. I know Mr. Hardenbrook and have been acquainted with him for years. At heart, he is no Tory. He is conservative. He has convictions based on traditions and based on his own background. He is no great television actor, but he was self-composed and his answers were straightforward.

Distrust Deepens

The three TV network reporters who questioned him, unrehearsed, were polite but somewhat hostile, in my opinion. What did he have to say? The N.A.M. representing the vast majority of manufacturers in this country, big and small, distrusts the Kennedy Administration. This distrust, he said, was deepened by Presidential interference in the steel price dispute.

The distrust is enhanced by the announcement that expense accounts of steel executives are being scrutinised by the Treasury Department. The lip service by the White House with statements that business expansion is the only answer to the present situation have a hollow ring in business quarters. Mr. Hardenbrook who may be considered the spokesman for business and finance in the U.S. at this time rather than Mr. Roger Blough, Chairman of U.S. Steel, made a strong plea for across-the-board tax reductions so that business may invest in more productive capacity and consumers have more money to spend.

Unfortunately, the N.A.M. President, as a Government official did before him, suggested the likelihood of another recession next year, perhaps. There are no clear cut reasons for such statements, except that there are always ups and downs and that they occur every once in a while. Mr. Hardenbrook was supporting vigorously a legislative proposal before Congress, named after its two sponsors, the Herlong-Baker Bill. It has been in the legislative hopper for four years. It has been re-introduced and re-introduced but nothing has happened. Anything which has the endorsement of the N.A.M. is naturally viewed with suspicion by the trade unions. It would mean greater profits after taxes but will the labouring man get his share, so goes the reasoning.

Suspicion Understandable

The news has been full of such stories recently and the suspicion is somewhat understandable, even though it may not be too logical. I am citing this Hardenbrook interview at such length because of two primary reasons. A leading TV network recognised the seriousness of the schism between Government and business sufficiently to bring the spokesman of business before the cameras and into the homes of millions of viewers, the same as the President is at every Press conference in Washington which have become full-fledged TV productions.

Secondly, the interview as I hoped I conveyed, protrayed the convictions, uncertainties and, yes, fears. Eventually, of course, all these problems will be resolved one way or another but a crisis psychology is building up. Something will have to be done—something will have to "give." Many people have been wiped out in the stock market crash. They are burned, even though they may have credit, and they are hesitant to invest again until the situation has settled down. At this writing the stock market is recovering and the New York Stock Exchange is making much of his latest survey that 17 million Americans are stock-holders, or about 10 per cent the population, against only 6.5 million people in 1952. There are, of course, many complications, but the figure of 1962 is impressive in the sense that many, many people are involved in the debacle.

However, there are 90 per cent of the people who are not involved. That is an even more impressive figure! These people are not immediately affected by the suspicions of business and labour leaders although in three or four months, if nothing buoyant happens they may be affected.

Spending Goes On

In the meantime, they go on spending their pay check, saving and buying things on credit to enjoy life. With shorter work hours, the "play" industries have made huge strides. The leisure hours are spent in a variety of directions which add up to thousands of million dollars worth of business.

A recent survey showed that it is costing Americans at estimated $43,000 million to play, or 7.8 per cent of the gross national product. There has been no slackening in this area. Outdoors and indoors, in forests and on the beaches, along streams, on mountain slopes, on golf fairways, in backyards and in basements of home hobby shops Americans are hard at play.

Because of the auto congestion on highways, boating has grown by leaps and bounds. Last year, there were 6.1 million motor boats registered and 7.2 million boats in use. Their upkeep costs $2,300 million.

Travelling is one of the biggest play industries. According to the American Automobile Association, about 100 million people take a vacation trip at least once a year and spend about $25,000 million in the process. Twenty-eight States, out of 50, and the district of Columbia where Washington is located, count tourism as one of their top three industries.

This is the other side of the U.S. which is difficult to reconcile with the frustrations of Washington and business and industry.—*All Rights Reserved.*

LONDON LETTER

PRODUCTION GOING UP

ECONOMIC POLICY REITERATED

From Our Own Correspondent

LONDON, 29*th June*

UNEMPLOYMENT figures always fall to a relatively low level during June and July and the current drop from 1.9 to 1.8 per cent is regarded by the Government as considerably less than is usual at this season of the year. But a comparison of figures over the past year show that, in fact, the underlying trend in unemployment has been steadily upward. Production figures have also been rising steadily, but one is left to conclude that the rise in productivity has not been strong enough to warrant increased labour forces.

This bears out the findings of the Federated British Industries survey, which appeared two weeks ago, that while output continues on the up and up, full productive capacity has by no means yet been reached. The Government still remains optimistic that the rise in industrial production will gather momentum, their premise being based on the assumption that such measures as the recent easing of hire-purchase terms will improve consumer expenditure at home and that exports will continue to rise, helped partly by the stimulus of the Common Market proposals which in particular are considered to be responsible for the encouraging rise in car exports.

In the June *Treasury Bulletin for Industry* the Government reiterates its adherence to its declared economic policy despite its obvious unpopularity in the country as shown by recent election polls. The context of the *Bulletin* falls into two parts, one dealing with balance of payment—the recorded current balance for the first quarter of 1962 having shown a surplus for the first time since 1959—and the other dealing with acceleration of economic growth based on increased exports. This, in turn, depends on keeping home demands down to a reasonable level and, to ensure prices remaining competitive, firm control of production costs and a proper relationship of incomes to output. The crux of the matter lies here and implies something more comprehensive and more flexible in the way of an incomes policy than the present 2½ per cent ceiling on wage and salary increases.

However, the pattern emerging from this statement of Government policy is a more reassuring one with the assumption that "an acceleration of our growth rate is not beyond our ability" and can be achieved. It is to be hoped that the work of the National Economic Development Council now being undertaken in examining the implication for the country of a 4 per cent growth rate will produce constructive results.

GOVERNMENT OF INDIA

3¾ PER CENT. NATIONAL PLAN BONDS—FIFTH SERIES (3¾ PER CENT. 1968). ISSUE PRICE Rs. 99.20 PER Rs. 100 (NOMINAL)

REPAYABLE ON 12th MAY 1968

4 PER CENT. LOAN 1972. ISSUE PRICE Rs. 99.20 PER Rs. 100 (NOMINAL)

REPAYABLE ON 1st AUGUST 1972

4½ PER CENT. LOAN 1985. ISSUE PRICE Rs. 100 PER Rs. 100 (NOMINAL)

REPAYABLE ON 12th JULY 1985

Subscriptions to the above bonds and loans will be received simultaneously and will be limited to a total of Rs. 250 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 2¾ per cent. Loan 1962 or 3½ per cent. Bonds 1962 which will be accepted for conversion at Rs. 99.50 and Rs. 100 per Rs. 100 (Nominal) respectively.

Interest on 2¾ per cent. Loan 1962 tendered for conversion will be paid upto 11th July 1962. Interest on 3½ per cent. Bonds 1962 tendered for conversion will be paid for the full half-year ending 15th July 1962.

Interest on the new bonds and loans will accrue from 12th July 1962. Interest on the 3¾ per cent. National Plan Bonds—Fifth Series (3¾ per cent. 1968) will be paid on the 12th November 1962 for the period 12th July to 11th November 1962 and thereafter half-yearly on the 12th May and 12th November. Interest on the 4 per cent. Loan 1972 will be paid on the 1st August 1962 for the period 12th to 31st July 1962 and thereafter half-yearly on the 1st February and 1st August. In the case of 4½ per cent. Loan 1985 interest will be paid half-yearly on 12th January and 12th July.

Subscription lists will open on 12th July 1962 and close on 14th July 1962 or earlier without notice.

Applications for the bonds and loans will be received at:—

(*a*) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
(*b*) Branches of the Subsidiary Banks of the State Bank of India conducting Government business; and
(*c*) Branches of the State Bank of India at other places in India.

For full particulars apply to any of these offices or branches.

Tata-Ebasco

CONSULTING ENGINEERING SERVICES

Tatas have pleasure in announcing the establishment of an Indian consulting engineering firm in partnership with Ebasco Services Incorporated, New York, the internationally renowned consulting engineers.

The firm will direct its efforts towards providing complete engineering services for India's fast growing electric power systems. These will range from making preliminary studies and feasibility reports to preparing complete designs and, where necessary, providing construction supervision of generating plants and other facilities for the production, transmission and distribution of electric power for large inter-connected systems as well as for industrial units. Technology in higher pressure and temperature ranges of the most modern and efficient large-capacity thermal plants will be made available, particularly through the American partner's extensive experience in that field.

This new partnership will help in conserving substantial amounts of foreign exchange normally required for consultant services of this nature.

JWT-TS. 4054 a

U.S. ECONOMY AND THE PRESIDENT

A REPORT ON WHITE HOUSE THINKING

PRESIDENT Kennedy believes that heading off a recession is now the most urgent domestic problem confronting him. And whether he veers more to the Left, as an increasing number of voters apparently expect, will be determined largely by what he deems necessary to meet this problem. Those who have discussed the matter intimately with him have come away with the impression that he will go to great lengths, if necessary, to keep the country from sliding down hill into a recession. The course of moderation, the President says, is still the course he prefers. Nevertheless, he is not at all satisfied that he has found the answer to the problem of economic growth. Already he is committed, on the basis of his own statements, to the principle of deficit spending to spur an economy that is expanding, but not fast enough. But his search for remedies continues. In his quest he has not failed to notice that certain Governments that he regards as conservative, Canada, for example, have in his opinion had the least success with their economies lately.

In White House conversations he alludes to the annual report of the Bank for International Settlements in Basle, Switzerland. The report, issued on 7th June, suggested that the United States should increase its budget deficit, in order to achieve full employment and should raise interest rates to check the flow of funds abroad.

It is true that Mr. Kennedy is deeply interested in the fact that many countries of Western Europe have enjoyed booming economies by following policies less conservative than America's. On the other hand, he realises that the economic situation in Europe is not the same as the situation here. He is not sure, therefore, that policies which have succeeded in post-war Europe would have the same effect, if tried, in the United States. Still, his concern over deficits is distinctly less than his concern over a recession.

President Kennedy had anticipated the nature of the attack which the former President Eisenhower delivered against his economic policies a few days ago. He knows that if he were to move into a field of unorthodox fiscal policy, he will have to face the opposition of influential conservative voices like those of General Eisenhower and Senator Harry F. Byrd, D. Va., Chairman of the Senate Finance Committee, where the House-passed Kennedy tax re-vision Bill is still bottled up. He accepts it as a political fact of life that his critics should blame him for the stock market slump. He has observed wryly to friends that those who are denouncing him for downturn weren't exactly loud in their praises of him when the market was going up during his first year in office.

The President does not for a minute believe that his blow-up with Roger M. Blough, Chairman of the Board of the United States Steel Corporation over the $6-a-ton increase in the price of steel in April, caused the bear market. The market, Mr. Kennedy notes, already had started down under the pressure of economic forces that would have continued to operate whether or not he had had a row with Mr. Blough. The President is, however, known to feel that his violent reaction against Big Steel may well have added to the woes of a market already declining.

The President is well aware that, if business is bad in November, the Democrats may have serious trouble holding their present strength in the House of Representatives. All 437 House seats will be at stake along with a third of the seats in the Senate where it would take a political miracle to put the Republicans in control.

The House of Representatives—the House for short—is a different matter. It is entirely possible that the Republicans could gain control. Although, with several vacancies, there are 258 Democrats to 174 Republicans in the House, a truer measure of the President's strength there was demonstrated last week in the 215-to-205 vote against the farm Bill that he dearly hoped would pass. Thus he feels that a loss of even five Democrat seats in November would be a nasty business.

Persons who have talked to the President have not found him concerned about last week's Gallup poll, indicating that his popularity has declined in the wake of the fight with Mr. Blough and the slump in the stock market. Whereas 77 per cent of the voters in January approved of the way Mr. Kennedy was doing his job, only 71 per cent feel that way now, according to the Gallup sampling. The President regards even the figure of 71 per cent as artificial, however. Furthermore, it does not take anything like that to be elected. In his lopsided victory in 1956 over Adlai E. Stevenson, the former President Eisenhower received but 57 per cent of the popular vote.

Looking forward to 1964, Mr. Kennedy has a sober respect for the potential vote-getting prowesses of Governor Rockefeller and George Romney, and he has not counted Richard M. Nixon out of the picture yet either. Whoever he may be, however, the Republican nominee will be up against a President who intends to fight very hard with the backing of a party whose strength he is building very resourcefully.

Halting Argument with Business

President Kennedy, it can be said with knowledge, is calling off his running argument with business. Call it a "breathing spell" or a "truce" or an adjournment of harsh debate—the President is for it. His contribution is going to be a period of White House calm. He is not altering his conviction that to avert a serious recession deficit spending can be beneficial, but he is altering his tactic. He favours an end to harsh words. He plans to end controversial talk on this matter from the White House for an indefinite period.

There is evidence that some influential and responsible spokesmen of business will welcome the adjournment of the lacerating debate. I cite the following balanced and wise counsel from the President of the General Electric Company, Mr. Gerald L. Phillippe:

"I see no value in the kind of talk that raises still higher barriers of suspicion between Government and business . . . we businessmen have not done much to relieve the confusion, and the times call for greater co-operation, not conflict, between Government and the business community.

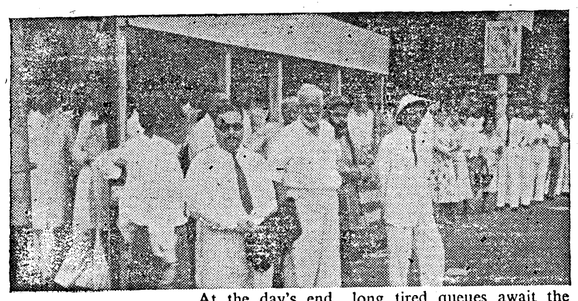
Antagonism between Governments and business does not contribute to economic growth; it creates damaging effects in exactly the opposite direction."

And then this observation, which bespeaks the same kind of truce in hostile criticism of the administration which President Kennedy is himself desirous of achieving:

"We need Government and corporate policies that recognise today's realities, and promote the achievement of cost control, greater productivity and the other requirements that are necessary for business health and economic expansion.

"Business and Government have a common objective in economic growth; it is much more likely to be achieved through a constructive working relationship than through mutual antagonism."

This does not mean that the head of General Electric is embracing Mr. Kennedy's views of what are economic "myths" and what are economic "realities." He is counselling all concerned that the immediate need is for fewer words and better action and, at the very least, debate without animus. For his part, the President is not rescinding his Yale speech which he feels some have purposefully misrepresented. It is not Mr. Kennedy's position that all deficit spending is beneficial, but that, as a deterrent to a developing recession, some deliberate deficit spending may be the best means of avoiding greater budgetary deficits later.—*P. G. Krishnayya's Service.*



At the day's end, long tired queues await the journey home. Among them are *your own employees*, men and women who travel to and from your office in crowded buses, trams and trains. People whose loyalty you value and whose lot you want to make happier.

HOMEWARD EMPLOYEE The Life Insurance Corporation has two Schemes which every employer will do well to know:

GROUP INSURANCE SCHEME offers low-cost Life Insurance protection to your staff under one Master Policy.

SUPERANNUATION SCHEME is the cheapest method of providing retirement pension, with or without life insurance benefit.

MORE ABOUT THESE SCHEMES:

* For tax purposes premiums on both Schemes are treated as normal business expenses
* Under certain Schemes attractive tax-relief is allowed to the employees
* Employees get the benefits of these Schemes at lower cost
* They can often be instituted at no extra cost to the employer
* Administratively, they do not involve your office in anything but minor clerical work
* It is being increasingly realised that these Schemes go a long way to increasing staff productivity and length of service

When next an Insurance man calls on you about these Schemes, give him a few minutes of your time—with no commitments of course.

THE BEST IN THE LONG RUN

BIRKMYRE BROTHERS LIMITED

PROSPECTS FOR TEXTILE INDUSTRIES

INTERNATIONAL FEDERATION URGES GREATER CO-OPERATION

DEAUVILLE in France was the venue of the Congress of the International Federation of Cotton and Allied Textile Industries held from 18th to 22nd June. Although the Congress had as its theme technical progress and textile marketing, its deliberations did serve to focus attention on the more general economic and social problems with which the textile industries are faced at present, particularly the continued structural change in the cotton and allied textile industries of the world. Indeed, the Congress struck a note of warning against the danger that, in development plans and in attempts to promote industralisation, the optimum limit for the size of national textile industries might be overstepped. These industries were, therefore, called upon to reassess their productive capacity from a long-term point of view, bearing in mind (a) that more textile mills will be built in many countries where so far none exists, and (b) that the existing textile industries will continue as an integral and basic part of their national economies. Elucidating the point, the Congress said:

"The possible expansion of international trade in textile is limited, as more and more textile industries will be catering for the needs of their own domestic markets. This structural change has created problems of competition which call for a new approach to international trade policies. It is, therefore, hoped that G.A.T.T. long-term arrangement on international trade in cotton textiles will be ratified by all the Governments concerned, as it should help to avoid market disruption, as well as to promote orderly trade expansion. There is considerable scope for growth in the textile industry, provided that the industry remains within the structural limits which are justifiable in the context of the world economy as a whole and provided that, within those limits, it seeks to attain the highest possible degree of nationalisation. The future of the textile industry lies in the elimination of surplus physical capacity, combined with maximisation of productivity."

Needs of Developing Nations

Few would dispute the logic behind the aforesaid assessment of the prospects for the world's textile industries. There is, however, one fallacy, in that the Federation has equated the textile industries of developing countries with their counterparts in the developed nations. Take any developed country other than, perhaps, the U.S. The cotton textile industry is working very largely on the basis of raw cotton imported from abroad. Would it not be better if these countries were to concentrate more on other industries and provide an outlet for the cotton textiles produced in India and other developing countries? For the latter countries are, as is well known, more advantageously situated in the matter of supply of raw cotton, manpower and other requirements of production. The acceptance of this point is in the interest as much of the developing countries as that of the developed nations themselves, because, to the extent to which the developing countries are enabled to step up their exports of cotton textiles, they will be able to utilise a substantial part of the foreign exchange earned thereby for the import of more machinery and equipment produced in the Western countries. The long-term Geneva agreement on textiles, due to come into operation from 1st October next, clearly recognises the vital importance of ensuring a progressive increase in the offtake of textiles produced in developing countries by the Western countries. And the agreement would, as we have pointed out on more than one occasion, go to the wall, if the developed countries were to seek a reservation exempting them from obligations to admit increased imports.

Be that as it may, the Deauville Congress did well to urge international co-operation in textile research efforts which, it was pointed out, had to be applied in many directions. "More research," to quote the Federation, "should be done into the physical structure of both natural and man-made fibres and into the possibilities of a structural modifications of these fibres through chemical or other processes. There is also a need for further research into new cloth constructions, new end-uses and better making-up techniques." The Congress also stressed that progress in the application of automation to manufacturing processes would alter the look of traditional spinning and weaving mills. It said:

"Large financial investments will be required to build the textile mills of the future and to modernise existing mills. Only countries with relatively low wage levels, that is, mainly the developing countries, may be able to operate textile mills with comparatively low labour productivity, as has been customary in the past. Others will continue the modernisation of their mills so as to be able to run them efficiently and, where necessary, to cope with any shortage of labour. The interdependence of the textile industries of the world from the spinning to the making-up process, irrespective of the fibre used, is becoming more and more pronounced. Improved co-operation and progress in technology and marketing will ensure the future of the textile industry. Our industry will then remain firmly rooted throughout the world, because it caters for a basic need of mankind and is an essential part of our national economies."

It was with a view to facilitating international contacts and improving the administrative services of the Secretariat that the Congress decided to move the headquarters of the Federation from Manchester to Zurich in Switzerland. As a measure of internal organisation, it was decided to set up a new Joint Cotton Committee, consisting of the representatives of raw cotton exchanges and cotton spinners' associations, in order to deal with technical and commercial questions connected with raw cotton marketing. It was also decided to hold the next annual meeting of the Federation at Athens in Greece in the middle of September 1963, at the invitation of the Union of Greek Cotton Textile Manufacturers.

Automisation of Spinning

Several important papers bearing on the latest technical progress made in the field of textile industry were presented at the Congress. One of them related to automisation of spinning processes from raw cotton to yarns, with emphasis on the continuous automated spinning system, the CAS system as it is called. The author of the paper is Mr. Yutaka Tada of Japan. The CAS system was developed jointly by the Tokyo Spinning Company Ltd. and the Howa Industries Ltd.; the first full-scale installation of the CAS system for 30,400 spindles at the Hamamatsu Mill of the Toyo Spinning Company went into commercial production in January 1962 and is currently in full operation with 40s yarns as a major product.

The system consists of a BCD unit and UHD ring spinning frames. A BCD unit is made up of four processes: blowing, carding, break drawing and finish drawing, which are connected in series to make a single production unit. UHD spinning frames have an exceedingly high draft, ranging from 300 to 500. This amounts to a reduction in the number of processing stages from six in the conventional methods to two in the CAS system. In addition, the system claims a high and uniform product quality due to its superior machine performances with a labour productivity more than twice that of a conventional system.

The paper consists of five chapters. Chapter 1 is an introduction describing the history of CAS development; chapter 2 discusses the configuration of the system; chapter 3 covers some of the dynamic characteristics and automatic control of CAS equipment; chapter 4 concerns the performance, labour requirements, and product quality found in actual mill operation of the system; and chapter 5 is the conclusion.

The tremendous efforts made by mill men throughout the world since the beginning of this industry have pushed up the productivity of individual textile machinery to its utmost. In spite of this, much still remains to be desired in the economy of present-day mills. Today, therefore, the importance of the automatisation of spinning equipment cannot be overstressed even to the extent of no-man operation to bring about further progress. Now is the time for drastic modernisation.

Shuttleless Looms

Another important paper read at the Congress was on shuttleless looms and new developments in weft supply to traditional looms. The study is the joint product of Ing. Riccardo Gattermayer and Ing. Emilio Honegger of Italy. After introducing the subject with a short review of the position of the textile industry in various European countries, including statistics of their relative size and character, the paper turns to the basic facts to be taken into consideration in assessing the value of new techniques in the supply of weft to traditional looms and the value of the shuttleless looms. The problems of weft preparation (comparing direct spun and rewound weft) are then discussed with particular reference to the authors' group of mills, and bearing in mind the potentialities of the latest technical developments. The factors to be considered in deciding on the ultimate value of replacing the circular box by either the box loader or the "Unifil" system on modern automatic looms, comparing also the advantages and disadvantages of the two methods, are then examined. The results of tests of relative profitability in two of the speakers' mills have been mentioned.

Next comes a short review of the several available types of shuttleless loom in which it is noted that the Sulzer loom has proved itself the most successful in practical application on an industrial scale. The main part of the paper, therefore, refers only to Sulzer looms. The advantages and disadvantages of Sulzer looms as compared with traditional automatic looms and the preconditions essential to the successful introduction of the new Sulzer looms have also been discussed, followed by a reference to the reasons which control the number of yarn breakages on traditional and on Sulzer looms.

The paper continues with a comparison of production costs on the new Sulzer looms and traditional looms with circular boxes, box loaders or the "Unifil" system on the basis of conditions in existence in the better organised of European weaving mills, but using as labour costs figures now current in Italy and going on to consider possible changes in costs in general over the next 20 years. The authors' conclusion is that, after taking account of the slight differences in cost between the various methods, the real alternatives are not so much of a technical character (traditional automatic looms or shuttleless looms) as of organisation and administration.

Automation in Textile Industry

The place of automation in textile industry formed the subject matter of a special paper read by Prof. Dr. Ing. Emil Honegger of Switzerland. The study attempts to give a short survey of the present position regarding automation in the cotton spinning industry, after reviewing the progress already made in spinning techniques during the first half of the present century. It is emphasised that, automation should, as a first stage, mechanise the more laborious and dirty jobs, as, for example, bale opening, transport, and doffing of ring frames. Control and regulating devices which ensure the correct and exact carrying out of processes are the prerequisites of rational automation, for instance, auto-levellers for card and draw frame slivers. The operations in which automation is already being used successfully to a considerable extent are opening of bales and blending and cleaning of cotton; transport of cotton from the blowing room to the cards; transport of slivers from the cards to the first draw frames; and doffing of ring frames.

Completely automatic spinning mills are now in the realm of technical possibility and some individual cases have already reached the production stage. In most cases, fly frames have been completely abolished and yarn produced on sliver to yarn ring frames from draw sliver, using drafts from 100 to 600. The problem of automation in the winding room has also to a great extent been resolved; automatic winders for cross wound cones and cheeses are already well known in the industry. Automation has three important aims in view, namely, the lightening and reduction of the number of manual jobs, the cheapening of production and the improvement of quality.

Productivity

Aspects relating to productivity and comparison of productivity in cotton spinning and weaving mills were highlighted by Dr. Ing. Wilhelm Bauer of West Germany. The common origin of the words "production" and "productivity" reveals that productivity always refers back in one way or another to production. Productivity in the statistical sense means the results, that is, the output per labour hour, or, put the other way round, the time needed to produce a specific quantity, say, a kg. of yarn. As well as the workers' performance, the production of the machine has to be considered. This is especially the case for cotton spinning mills whose capital costs have always been relatively high. The rapid technical development since 1945, the strained situation on the labour market under condition of full employment leading to a constant rise in wages and, on the other side, strong competitive pressure have led to a reduction of the use of manpower in the field of textile production.

In observing and judging the productivity of a plant under present conditions, the performance of the machines has to be considered more fully than before. Productivity thus means performance of man and machine compared to time. As long ago as 1865, an American economist wrote: "The pillars of economical activity are comparison, recognition, balance, and evaluation. We know comparison not only in economy; our whole life is a constant comparing, balancing and evaluating." Perhaps it was due to the complexity of the textile industry that the thought of interplant-comparison came later than in other industrial fields. However, progressive spinners in Germany had already realised 20 years ago the value of such plant comparison to the management. Mill comparisons have since become an effective instrument of management for all progressive leaders of the industry and, without them, planning and control would sometimes be impossible. Plant economy comparisons need not be confined to output; they may also refer to cost conditions.

As regards comparability, a fictitious pilot mill was planned, based on the latest inventions in machines and spinning technique. On this basis, a standardisation of the two factors of production—man and machine—was calculated expressed in output per spindle hour, labour minutes per kilogram of yarn and the number of hands per thousand spindles. These standard values are now compared with the effective spindle and labour hours worked during a definite period, in Germany, for instance, quarterly. It goes without saying that these standard values are adjusted to accord with technical and technological developments in cotton spinning. For the sake of continuity, such changes must not, however, be made too frequently.

The relation between standard and actual values is expressed in indices. Four indices are considered in the German mill comparison: yarn production, labour efficiency, labour force and mill size. A permanent comparison of productivity was introduced in the German weaving industry at the beginning of 1957. This is a comparison of standard values to actual values, enabling managements to measure mill efficiency through machine output and the labour efficiency of the mill and compare them with those of other mills. All this amounts to a useful tool in the economic and productive development of the mill.

Research and Textile Industry

The vital role played by research in textile industry was highlighted by Mr. Robert Delerive of France. According to him, the leaders of the industry are, speaking generally, convinced of the value of technical research, but they are less than unanimous in converting theory into action. It is essential first to make a definite financial allocation for research expenditure in every firm's budget, secondly to create a favourable atmosphere for research and, thirdly, to make use of the results of theoretical research which, during the transition from laboratory to factory, will require adaptation. Technical research, which is inseparable from fundamental research, can be undertaken by companies which are sufficiently large or by professional research organisations. The latter have up to now often proved to be very effective. In either case, it is also necessary to provide the means, in terms of men and of equipment. All this will be expensive, but will constitute a productive investment. Professional research organisations should give attention to maintaining close contact with the industry, for instance, by drawing up research programmes and by circulating the results. Again, existing international liaison should be developed further and could, indeed, be taken as far as joint work by more than one national organisation on well-defined research projects.

During the discussion which followed Mr. Delerive's paper, two points were particularly mentioned. They were:

1. International co-operation in technical research matters might be directed towards subjects which international technical organisations considered to be of sufficiently wide interest to justify their being studied from several angles, provided that this could be done without wasteful duplication of work.

2. Research concerning textile machinery involves, on the one hand, the machinery makers with their own research departments and enjoying the co-operation of the textile industry (which they have every interest in consulting) and, on the other, the textile industry, with its private or collective research facilities, enjoying the co-operation of the machinery makers.

In the first case, the prime concern is the conception of the machine and in the second case the improvement of the machine by its users.

"Bonded" Fabrics

The study on the manufacture and use of bonded fabrics and foam-backs experience and prospects by Dr. Victor L. Erlich of the U.S. (the paper was presented by Mr. Dean Malcolm E. Campbell) shows that foam laminates in garments are at present almost exclusively combinations of urethane foam firmly bonded to an outer fabric. The outstanding properties of such laminates, especially their insulation value, rich handle, drape, retention of shape, light weight, excellent wear characteristics, have brought foam laminates to a dominating position in outerwear. Sales of foam-backed materials rose in the U.S. within a period of three years from practically nothing to a rate of close to 100 million yards per year. It cannot be expected that this will continue in similar proportions; however, continuous though smaller growth can be taken for granted, particularly also because the market for woven fabric laminates is certainly not yet saturated. These developments have, of course, raised the interest in European markets, especially in the countries where the textile industry is so highly developed as in France and England. New ideas and new styles may come up here and reflect back to the States.

In terms of overall polyurethane production, one pound of foam supplies approximately five yards of laminated garments, which means that about 20 million pounds of foam, or not much more than 10 per cent of the total production of flexible foam in the U.S. is used for the purpose at present. To this a growing volume in foam-backs for industrial end uses has to be added, and this growth may proportionately increase during the next years.

Easy Care Finishes in Textiles

In considering easy care finishing, one should not, according to Mr. J. F. Simpson, O.B.E., of the United Kingdom, forget that previous developments took place before resin finishes were introduced on to the market. Such things as fast dyestuffs and mercerisation are only two of these aspects. The modern conception of easy care finishes was really the brain child of Sir Kenneth Lee of Tootal, Broadhurst Lee, whose objective was to obtain in cotton the same anti-crease qualities that were to be found in wool. Unfortunately resin treatment has a weakening effect on cotton fibre whereas it strengthens viscose, and it was on spun rayon that the process first became of importance on the market.

Since the war, there has been a remarkable development both in the diversity and performance of various finishes, all of which have as their objective a lessening of work for the housewife. While this is doubtless a good thing, it has, at the same time, tended to lead to overstandardisation in such things as men's shirts with a consequent loss of individuality. Furthermore, although time in washing has been saved, the durability of the article has been reduced and its price put up. On the other hand, statistics show that, as a result of these, finished cotton has advanced dramatically in the U.S. in relation to other fibres in such articles as sports shirts, blouses and women's skirts.

Another effect of these finishes has been to improve dramatically the standard of design and coloration of women's dresses. Designs, which were considered suitable only for silk, are now equally suitable for cotton and the cheaper fibres. In men's wear, a whole new outlet has been created for beachwear and casual clothing, which is particularly suitable for the needs of those who travel and amongst these must be included the many millions who now go abroad for their holiday and do not wish to be burdened with heavy luggage. It is most important, however, that close co-operation should exist between the spinner and the weaver, the finisher and the merchant, to ensure that these finishes are not put on to unsuitable clothing. All the ridiculous claims that are made in respect of their carefree nature only irritate the customer because of their exaggerated nature.

Stock Cycles in Textiles

Cyclical changes in textiles noted since 1948 in France, Germany, Italy, Japan, U.K. and the U.S.A. have been presented in the paper read by Mr. A. M. Alfred of the U.K. Each country has had three or four cycles of textile activity since the war. The period of most of these has been about three years, but the range was from two to four years. In most countries, the cycles showed a variation of 6-7 per cent from average to peak or trough (a total variation of around 13 per cent), but, in Germany, the fluctuations were smaller, in Japan greater. These fluctuations are shown to arise mainly from changes in stocks in the hands of producers and distributors of textiles and clothing, and of industrial users. The changes are suggested to arise from faulty anticipation of events, plus a slow reaction to changes in the state of trade at points beyond (nearer the retail level) a firm's immediate customers.

These points could be met by a closer study of the statistics available, including retail sales. For the last six years, in the U.K., the man-made fibre producers have co-operated with the man-made fibre users to produce such a study quarterly; and this could have been a factor causing the stock changes since 1956 to have been relatively small. Further, a quick appreciation of changes in trade is helped by vertical links; and over- and under-ordering are less likely if there is not substantial capacity in excess of likely demand. The conclusions, therefore, are that stock changes could be mitigated by (a) a conscious policy on the part of manufacturers and distributors to minimise fluctuations in the stocks over which they have control; (b) availability of well analysed information on what is happening at retail sales and intermediate levels; (c) growth of vertical links from spinners onwards; and (d) elimination of capacity substantially in excess of likely demand.

Textile Marketing

The several changes that are taking place in the field of textile marketing have been indicated by Prof. Dr. Hein J. Kuhlmeijer of the Netherlands. The most important of them are the following:

1. The growth of textile capacity in developing countries which were former textile export markets for Europe meant that domestic markets, individually or in trade blocks, will have to replace lost export volumes.

2. The greater industrial activity already apparent in the Common Market has raised wages, standards of living, consumer mobility and knowledge, not only creating a new and larger domestic market, but also making the consumer and his preferences a much stronger force in the market.

3. New distribution patterns are developing in which large department stores, chains, mail order houses and supermarkets are rapidly replacing small "family stores" as outlets for textiles.

4. Trends revealed by market research in the U.S., heretofore the only mass consumer market in an economically advanced area, indicate that textile consumption has lagged in industrial uses, risen slightly in household uses and expanded enormously in apparel. This indicates that apparel is likely to be the outstanding growth market for textiles as the Common Market develops.

Fibre consumption in apparel rose by 70 per cent from 1939 to 1960 in the U.S. From 1948 on, it exceeded the growth rate of population and almost matched the rate of growth of consumer spending. At the end of the period, the average American was using four pounds more fibre a year than at the beginning. Despite the entry into the market of new man-made fibres, the traditional major textile fibre, cotton, has done even better than all fibres when compared against the rise in consumer spending. Dr. Kuhlmeijer points out that the U.S. textile consumption increases from 1939 to 1960 were significant for Europe, because European economic levels now are approximately equal to those of the U.S. in 1939. Recent economic studies by the F.A.O., the O.E.C.D. and the I.C.A.C. predict an increase of 25 to 30 per cent over the next decade in the textile market for the E.E.C. countries. This potential 25 per cent increase would barely bring the E.E.C. countries to the level of the U.S. in 1939. There would, therefore, still remain an opportunity, with E.E.C. income and spending rising faster than in the U.S., for textiles to expand even further.

Among the typical end uses where expansion possibilities appear to exist in Europe are such items as man's shirts (where European *per capita* consumption is only 41 per cent of the U.S.), men's underwear (53 per cent), and towels (57 per cent of the U.S.).

WOOLLEN INDUSTRY IN INDIA

RAW MATERIAL PROBLEM MUST BE SOLVED

ALTHOUGH the woollen textile industry is small in size as compared with the cotton mill industry, it does play an important role in meeting a part of the clothing requirements of the country. And this role is bound to be more and more important, what with the persistently rising trend of population and the improvement in the living standards of the masses, both of which will exert a great pressure on the available supplies of cloth. Viewed thus, it is distressing to find that a considerable part of the woollen industry continues to remain unutilised, thanks to shortage of raw material, old and outdated equipment, and defects in official policies. The capacity actually lying idle at present is said to be almost 50 per cent in both the spinning and weaving sectors. The prolonged existence of such vast idle capacity is highly undesirable, as it will needlessly inflate the overheads per unit of production, raise the cost to consumers, reduce the earnings of workers and lower the return to investors. If this highly disquieting situation is to be remedied, energetic action is required to solve the basic problems of the woollen industry. For, otherwise, "confusion will be worse confounded," as was rightly warned by Mr. G. K. Singhania, the retiring Chairman of the Federation of Woollen Manufacturers in India, when he addressed the recent annual meeting of the Federation at Bombay.

The woollen industry depends greatly on imported raw wool and wool tops. The Government has recently announced that only 50 per cent of the licences will be granted. It is creditable that Mr. Singhania did not, unlike the spokesmen of several other industries, raise his voice of protest against the cut in imports, for he said: "We, as a Federation, are a responsible body and shall put our shoulders to the wheel and share the burden of the crisis." He, however, emphasised one point which does merit due consideration. It is that the allocation of imported raw material must not be based on consumption of wool tops alone but it must also take into account the fact that certain units of the industry have built up their present position through the use of larger quantities of imported carding wool. Mr. Singhania would have done well, indeed, if he had given some details regarding the supply position of raw materials and the actual requirements of the industry, so that one would have had a clear idea of the gravity of the problem of raw material shortage.

Wool Top Production

As between raw wool and wool tops, it would appear that foreign exchange can be utilised more gainfully through the import of the former. It is this consideration that invests the need for developing adequate combing capacity within the country with special significance. In order to ensure such a development, a three-pronged measure is necessary. In the first place, experiments for wool top manufacture from indigenous wool and combination with imported wool must be speeded up. Secondly, the production of the requisite quality of wool must be increased through large-scale sheep-farming, sheep-shearing, grading and marketing programme. Finally, adequate quantities of foreign wool should be imported for production of wool tops.

Alongside measures designed to alleviate the problem of raw material shortage, steps will have to be taken to augment the productivity of the woollen industry which is very low, because a sizable part of the equipment is so dilapidated that it requires complete replacement. How else can the industry be expected to reduce costs, improve quality, and, at the same time, give better earnings to workers and better conditions of work? It is a pity that Mr. Singhania did not care to indicate the industry's progress so far in modernisation. All that he said was this: "The delivery periods (of foreign machinery suppliers) are anywhere from three to four years which makes it impossible for the industry in India to accept such offers as a workable proposition." If this is the position, one wonders how Mr. Singhania's plea for linking machinery import to export of specific products will be a practical solution to the present impasse.

On the issue of woollen goods exports, Mr. Singhania was very critical of the scheme of

ACTION GROUP'S PLEA TO TEXTILE INDUSTRY IN E.C.M.

MILL LABOUR ASSAILS GOVERNMENT POLICY

From Our Special Correspondent

MANCHESTER, 26th *June*

MANCHESTER LETTER

LANCASHIRE'S Textile Action Group, which is campaigning for an immediate and drastic reduction in imports of Asiatic cotton goods into the United Kingdom, has taken a new line by urging leaders of textile industries in the Common Market countries to oppose British entry into the European Economic Community without adequate safeguards. Six cotton mill employers led by Mr. John McCann, the founder and Chairman of the group, flew to Brussels last week for talks with European industrialists who, they hope, will be able to exert pressure on the British Government to introduce duties on imports of Asiatic textiles at the full external tariff rate anticipated under any arrangement whereby Britain joins the Common Market. Mr. McCann said:

"We are going to Europe to put the problem squarely before their leaders. In the interests of the industry, the time has come to make representations to those authorities who are in a position to negotiate with authority on equal terms with the British Government."

In a statement aimed at the European cotton trades, the Action Group said:

"We hope we shall be able to impress on those responsible for the coming negotiations in Brussels that the only possible way to maintain any stability at all in the E.E.C. textile industries is to insist that the United Kingdom accept without reservations the common external tariff in full at the time of joining, should she be admitted to membership. There is no other alternative available. Failure to secure agreement on these lines can only lead to the easy access of Asian textiles into the Continental markets with the resultant chaos and eventual breaking-up of the E.E.C. textile industry."

Workers' Meeting

Meanwhile, eight hundred cotton workers, at a meeting in Manchester to discuss the crisis in the industry, passed a resolution accusing the Government of showing "complete disregard" for Lancashire's problems. A three-hour meeting called by the United Textile Factory Workers' Association, which represents 120,000 employees in the industry, ended with unanimous approval for the resolution, which rejected completely the Government's intention to ratify proposals for textile imports from Hong Kong. "We do not accept that our industry should be sacrificed, and those dependent on it for their livelihood, in order to support the underdeveloped countries to the extent they are being called upon to do," it said, and added: "This burden must be shared by other western countries to a much larger extent than they have hitherto been disposed to do."

Rejecting the suggestion that the industry must resolve its own problems, the resolution pointed out that the issue was a political one which only the Government could resolve. It ended: "We pledge ourselves to take all available steps open to us to compel the Government to give us a square deal and we ask for the wholehearted support irrespective of party of all members of the House of Commons in order to bring about a change of policy regarding the cotton textile industry."

The Association's Legislative Council came in for some criticism from the floor for failure to take the initiative before the Textile Action Group, the unofficial ginger organisation. But the Association's President, Alderman H. Chorlton, said: "We were sending deputations to London before T.A.G. was thought of." Mr. Lewis Wright, Secretary of the Weavers' Amalgamation, told delegates: "We wish them well, but we do not want our appointed officials to be answerable to the self-appointed leaders of an unofficial organisation."

In conjunction with its plans for introducing licensing control on imports of cotton yarn and cloth from the beginning of July, the Board of Trade has issued tables which provide an eye-opener after some recent Government statements. The new system of control involves at the moment no quantitative limitation of imports but has been adopted in order to keep a close watch on the pattern and flow of arrivals from foreign sources.

From the time when the President of the Board of Trade first held discussions with trade leaders in Manchester early this year, the Government has consistently pointed to the smaller foreign supplies now reaching British ports compared with the undoubtedly exceptional arrivals in the first quarter of 1961. The figures for the first three months of this year, however, show some variations in the separate categories which cannot be ignored by Lancashire.

In the first place, the rate of arrivals for retention in the home market from Hong Kong, India and Pakistan in the first quarter of this year was lower in piecegoods, but substantially higher in the cloth equivalent of made-up goods than in any of the three previous years. Imports of piecegoods at 60 million yards in the quarter as compared with 259 million yards in the whole of 1961, 320 million yards in 1960 and 305 million yards in 1959.

The cloth equivalent of made-up goods acquired from the three Commonwealth countries this year has been running at an annual level of 92 million yards, as against a total of 73 million yards in 1961, 77 million yards in 1960 and 61 million yards in 1959. After all the fuss about smaller purchases from the Asiatic countries, it should be noted that total imports for retention in the first quarter this year were 83 million yards, a quantity which is at exactly the same annual rate as the 1961 total of 332 million yards.

When arrivals from all sources are taken into account, the situation becomes clearer still. Imports for retention in the home market at 113 million yards in the first quarter this year compared with 101 million yards in the final three months of 1961 and 116 million yards in the third quarter of last year. From this it becomes obvious that the curtailment of imports has, in fact, centred on those scheduled for re-export. In the first quarter this year, these aggregated 30 million yards, as against 37 million yards in the previous quarter, 47 million yards in the third quarter and a quarterly average of 55 million yards in the first half of 1961.

Duty-free Cloth Arrivals

Total arrivals of duty-free cloth in the first quarter amounted to an annual rate of 260 million yards, as against 292 million yards in 1961 and 336 million yards in 1960. Imports of dutiable goods at 48 million yards were equal to those absorbed in both the third and fourth quarters of last year, but, within this category, there was a sharp fall in supplies obtained from countries "now restrained," which presumably means Formosa and Spain.

In contrast, imports from Western Europe and the United States increased in the early months of 1962. It is interesting to note that the first quarter's figures for all dutiable arrivals are running at about the same rate as in 1960, but on an annual basis are three times the size of the 1959 level, twice as much cloth being secured from Western Europe and American sources.—*All Rights Reserved.*

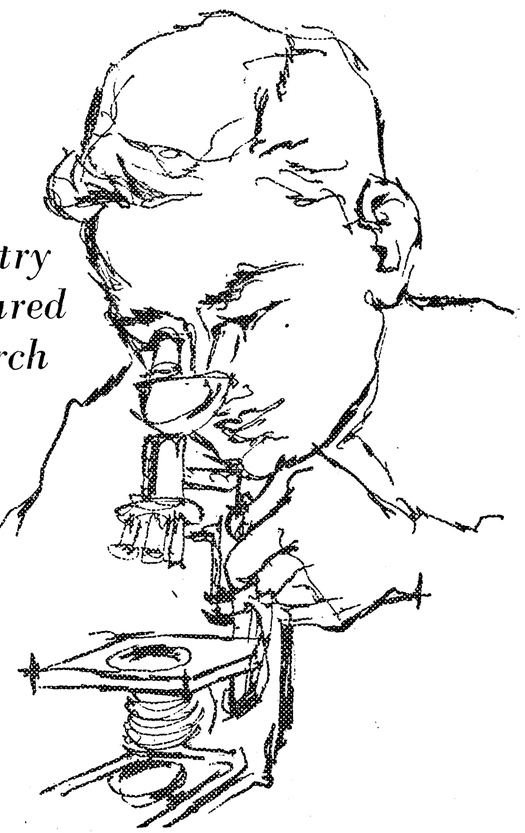
An Industry Nurtured by Research



'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

S. T. SADASIVAN
General Manager

FIRST FIVE YEARS OF COMPANIES ACT, 1956—III

GENERAL ADMINISTRATIVE ARRANGEMENTS

By A Special Correspondent

NOW coming from the general review to the detailed examination of the working of the present Companies Act, one can cover the various aspects of corporate activities and their control by the provisions of the Act under six broad heads, namely, (1) the general administrative arrangements and the overall statistical trends noticeable since the enforcement of the present Act, (2) developments in company management, (3) inter-corporate financial arrangements, (4) protection of minority interests, (5) company investigations and prosecutions, and (6) new company practices.

As regards the administrative arrangements made by the Government for the enforcement of the present Companies Act, even the critics of the present Administration dealing with the Act would concede that the enforcement of the Act has now been entrusted to a strong and properly constituted Government department, whereas, in the past, there was no central administrative agency worth the name for the enforcement of this central law and, at the State or Provincial level, the State Governments paid little heed to this measure, with the result that the Act came to be known as one of the least administered Central laws in the land and the company managements in the country were at best accustomed to receiving only occasional notices from the offices of the Registrars of Companies regarding defaults in the filing of some documents or in carrying out certain formalities under the law. Even these were not earnestly pursued by those offices. The result of all this was that there was neither much respect or care for the law nor any fear for the Administrative authority, which, as stressed by the Bhabha Committee, had no positive conception of the purposes of the law and believed in its routine or negative functions. The laxed handling of the law also led to a complete loss of sense of fiduciary responsibility among the company managements to whom "compliance with even those provisions of the Act which had been on the statute book for decades before the Act of 1956 came into force but had never before been systematically enforced, were sometimes considered needlessly irksome while the enforcement of the relatively new provisions of the law was in some quarters characterised as interference with the freedom of enterprise." In brief, due to a weak and feeble Administration which lacked a proper perception of the basic purposes of law, the companies and their managements found themselves functioning, by and large, in a *laissez faire* atmosphere in which they led the law and Administration and not *vice versa*.

Three-tier Set-up

As a first step towards better administration of the Act, the Government in 1955 devised a three tier set-up, comprising offices of Registrars of Companies in each State, a regional office over a group of States and a Central department each of which was to be manned by permanent expert and administrative staff. While setting up this type of machinery it was realised that

"the provisions of the Act however well-designed they might appear to be to secure the objects which the framers of the new legislation had in view, would not in themselves be adequate either for preventing the existing abuses in the corporate sector or for ensuring its working in the public interest in conformity with the requirements of the economic and social policy accepted by the country. It was felt that it was essential to supplement the law with a strong and competent administrative organisation which should be entrusted with the administration of the Act and all other related measures and instruments connected with the working of the joint-stock companies so that they could be all used as instruments of a coherent and comprehensive policy for the purposive regulation of the organised private sector."

The regional offices constituted a novel and new feature of the present Administration and the main functions of these offices were defined to be

(*a*) to maintain close contact with the offices of the Registrars of Companies in the region and to exercise supervision and control over them on behalf of the Department, and to advise and guide the Registrars in technical and administrative matters,

(b) to report to Government important events and trends in the region in the sphere of trade and industry in general and particularly on the activities and operations of companies and developments in the capital market, and

(*c*) to discharge the functions of public relations offices and attend to complaints or difficulties put forward by joint-stock companies, particularly the smaller ones having meagre resources to obtain expert advice or guidance, and at the Government level to function as a link between the Central Government and the State Governments in the region.

Out of the various functions of the regional offices listed above, that of supervising the work of investigations and prosecutions in the field offices has, it is felt, irked the company management more than the help rendered by these offices in explaining the involved provisions of the Act. However, the real effectiveness and usefulness of the regional offices would very much depend on the latter function and, in this connection, the Government's decision to delegate powers under some sections of the Act is a step in the right direction.

Firmness and Strictness

The trend of administration of the Act during the last five years appears to be one of steady firmness and strictness. The first two Statutory Reports described the two years, 1956-57 and 1957-58, as periods of adjustment from an old to a new order of things and of consolidation both for the joint-stock companies and Administration, respectively. During these two years, the Administration "took on the whole a relatively lenient view of the non-fulfilment of statutory requirements where the default on the part of companies was due to ignorance, oversight or misunderstanding and not to any deliberate intention to contravene the Act." The third year, namely, 1958-59, has been described as a period of assessment and appraisal with which, actually speaking, the liberal era of administration of the Companies Act came to an end and the phase of stricter enforcement of the Act was begun. A clue to the Government's mind is available in the fourth and fifth Statutory Reports in which great stress has been laid on the fiduciary responsibilities of company management and the need for submission of forms and returns, etc., irrespective of the fact that a good use of the information in those sources was made by the Government and interested parties or not. The Administration regards the filing of thsee returns as an essential imperative, in so far as "only through such returns that the disclosures of the essential information about the structure and working of joint-stock enterprise can be made available to the creditors, shareholders, the general public and Government."

As a result of this approach and line of thinking of the Government, the number of prosecutions during the five years shot up from 573 in 1956-57 to 6,272 in 1960-61 and the number of companies involved in these cases increased by nearly eight times, from 165 to 1,220. Taking the five-year period as a whole, one would see that nearly 16,000 prosecutions were launched against about 3,300 companies, that is, about five prosecutions per company. The figures also reveal that, out of the total strength of 26,100 companies at work in the country in 1960-61, one-ninth of them have run into heavy waters and trouble with the Administration.

The tightening of administration is also reflected in the number of companies struck off the live registers of companies, after having been pursued according to law under Section 560 of the Act, for being virtually defunct and inactive. The total number of such struck off cases came around 7,500 companies the continuance of which in many cases would as well have meant the perpetuation of some frauds besides the unnecessary load of work on the Administration. During the same period, the Administration followed up about 400 companies under Section 439 for winding-up, because of their bad state of affairs, and the petitions were presented in the courts by the Registrars of Companies in respect of 75 of them. The Administration is also reported to have pursued the delinquent voluntary liquidators and got some of them removed and replaced by official liquidators through the courts; 200 voluntary liquidators were prosecuted under Section 551 of the Act and more than half of them were actually got convicted by the courts of law. All this speaks of the alertness of the Administration which in course of time is bound to have profound effect on the working of the corporate sector in the country.

Grievances Redressed

Besides prosecutions, there is another aspect of work of the Administration which also needs proper highlighting. Under the present law, the Administration also acts as alternative avenue for help and redress to the regular courts of law in certain matters, such as for redressal of grievances relating to transfer of shares, payment out of company liquidation account, etc. It is reported that, under Section 111 of the Act, as many as 242 parties came to the Central Government to have their grievances redressed about the refusal of managements to register the transfer of over 250,000 shares in their names during the five-year period, 1956-61. These cases were heard and disposed of by the Government in a speedy manner within a period of six months or so. For this purpose, the appellants could as well have gone to the courts, which, as the Statutory Reports point out, was not done, as the appellants thought that the decisions in that case would have taken a much longer time.

Similarly, during the five-year period, no less than about 2,400 applications, involving a sum of about Rs. 4 lakhs, were reported to have been made to the Central Government under Section 555 of the Act for payment of moneys from out of the Companies Liquidation Accounts. In these cases, too, the alernative course open to the parties was to go to the courts to get the necessary orders under the same section. These cases were also disposed of by the Government very expeditiously within a period of 2½ months. These are, indeed, very happy trends and it seems still advisable that speedier methods and procedures should be devised by the Government which would benefit small investors and shareholders.

Size and Growth

Coming to the general and overall trends in company registrations and capital formation, the Statutory Reports present a large mass of factual information for deriving important conclusions. About the new company registrations, an alarming view was expressed for nearly three years or so, 1955-57, that the repercussions of the restrictive nature of the new provisions of the 1956 Act would be very serious inasmuch as these would "retard company formation and hamper private enterprise." Contrary to these fears and apprehensions, the Statutory Reports point out that the new registrations, after receiving a temporary setback in the first year of the working of the Act from 1,448 in 1955-56 to 848 in 1956-57 due to the uncertainty about the attitude of the Government in regard to the administration of the Act and the real implications of the various provisions relating to company promotion, managerial remuneration, etc., increased steadily from year to year to a record level of 1,683 companies in 1960-61 which was exceeded only once during the last ten years and in seven years during the present century. During the five-year period 1956-61, the new registrations totalled 6,039 which worked out as over 23 per cent of the total strength of the corporate sector placed around 26,100 companies in 1960-61. During the five years, 1956-61, the total paid-up capital investment in companies also recorded a sizable increase of the order of about Rs. 700 crores from Rs. 1,024 crores to Rs. 1,724 crores. In this overall increase, Rs. 242 crores were added to the capital base of companies in the private sector whose capital investment increased from Rs. 958 crores to Rs. 1,200 crores and Rs. 458 crores accrued to the Government companies whose paid-up capital increased from Rs. 66 crores to Rs. 524 crores. Taking the paid-up capital of the private sector companies separately, it is seen that it increased almost equally to the increase registered during the earlier quinquennium. A point to be noted here is that, during 1956-61, although the overall size of the corporate sector declined from 29,874 companies to 26,108 companies, in reality, it recorded an expansion if allowance is made for the 7,500 moribund companies which existed at the beginning of the period and were struck off in the following years. If this allowance is made, the size of the active core of the corporate sector recorded an increase of nearly 15 per cent. These statistical facts go to absolve the Companies Act and the Administration of the charge that they would be deterrent to the growth and vitality of the corporate sector.

New Company Formations

Another important trend noticeable in the new company formations is the emergence of larger numbers of companies in the relatively

industrially and commercially backward areas of the country and, consequently, "the relative disparity in the number of companies formed and at work in the four regions, namely, Northern, Eastern, Southern and Western, into which the country has been divided for the administration of the Companies Act appeared to have decreased. As compared with the position in 1956-57, when, in the total company registrations of 848, 334 new companies, that is 40 per cent of the total were formed in the Eastern region and 147 new companies, that is about 17 per cent of the total, in the Southern region, in 1960-61, in the total new flotations of 1,683, 477 companies and 452 companies were formed in the Eastern and Southern regions, respectively, accounting for 28 per cent and 27 per cent of the total new corporate bodies set up in that year. As compared to these, the Western and Northern regions accounted for 25 per cent and 20 per cent of the total new registrations respectively. Thus, the relative position of the Southern region, which for decades stood far behind the other parts of the country from the point of view of corporate activity, has in recent years very much improved.

Further, it is also observed that the formation of new companies is widely spread over various sizes of companies. The numbers of small-sized, medium-sized and big and giant-sized companies totalled 3,608, 2,103 and 328, respectively, during the five-year period, 1956-61. There has been a sharp increase in the number of big and giant-sized companies, having an authorised capital of Rs. 50 lakhs and more each, during the two years, 1959-60 and 1960-61 when 65 and 142 companies respectively were formed. The management pattern of the newly formed companies also bears the imprint of the provisions of the 1956 Act which has placed some very onerous obligations on the managing agencies, with a view to seeing their elimination from the corporate scene in the country. Apart from the reduction of the number of old managing agencies and that of the companies managed by them, the number of new companies which intimated their intention to have managing agents to manage their affairs was very small. During the entire quinquennium 1956-61, only 71 new companies announced their intention to have managing agents, whereas 4,167 companies, that is, 70 per cent of the new companies proposed to have "board-of-directors" type of management and 1,778 new companies, that is 29 per cent of the total, favoured management by managing directors. The two new management institutions, namely, the secretaries and treasurers and the managers created under the 1956 Act to step into the vacuum likely to be created by the disappearance of the managing agencies, however, made a disappointing showing, as it is observed that, out of 6,039 companies formed during the five-year period under review, only 13 companies favoured management by secretaries and treasurers and 10 companies by managers. Thus, on the evidence of available facts, one can conclude that, while the business community and entrepreneurs showed their reluctance to act as managing agents for the new companies, they more or less rejected the two new alternative forms of management created under the 1956 Act to be worthy successors to the managing agency system. The institution of secretaries and treasurers has been adopted by some of the leading managing agencies in the country to get round the provisions of Section 332 of the Act which restrict the number of companies to be managed by a managing agents to ten. Under the combined canopy of "managing agency-cum-secretaries and treasurers" the big managing agencies could easily retain all their old companies with themselves. According to the figures published by the Department of Company Law Administration, twenty-three managing agents functioned in a dual capacity of managing agents-cum-secretaries and treasurers, whereas 22 were genuine secretaries and treasurers in 1960-61. The 45 firms which acted as secretaries and treasurers managed only 181 companies.

Managing Agencies

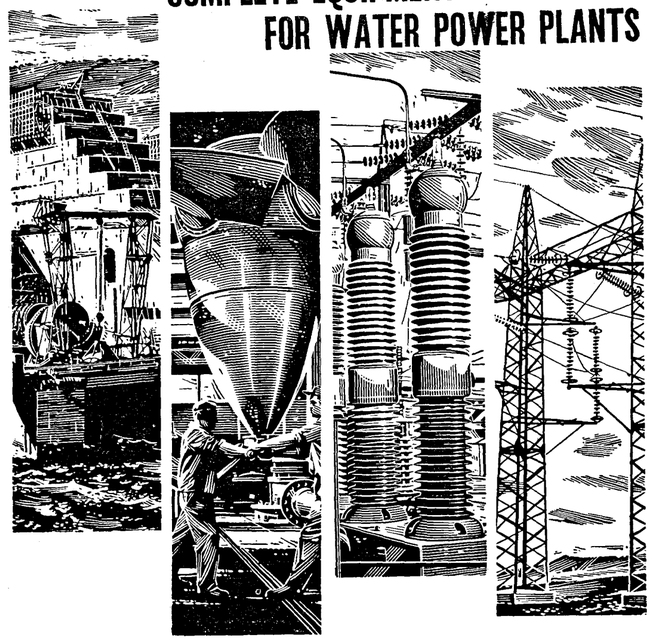
The provisions of the present Act has had a wholesome effect on the managing agencies, as it is revealed by the available reports of the Department of Company Law Administration that, whereas at the beginning of the coming into force of the 1956 Act there were about 4,000 managing agencies which managed about 5,055 companies, the numbers of managing agencies and their managed companies came down to 919 and 1,308 companies as on the 16th August 1960, that is, after the expiry of the deadline set for the renewal of all managing agency agreements by Government under the provisions of Section 330 of the Act. This reduction in the number of managing agencies and their managed companies has been brought about by voluntary surrenders of managing agency, rejection of some cases by Government, natural death of companies brought about by striking off action by Government, etc.

Apart from these, the trend in conversion of public companies into private ones is also somewhat important, as, after the incorporation of certain onerous provisions for the public companies under the Act, it was apprehended in official circles, as disclosed in the Statutory Reports, that many companies might adopt subterfuge methods of converting themselves into private companies and thus escape the rigours of the law. In the first year (1956-57) 227 cases of conversion of public companies into private ones took place but, in the following four years, only 194 of such conversions occurred. This shows that there was no need for further tightening of the law in this regard. Notwithstanding this, Section 43A of the Act, as incorporated in 1960, now requires a private company to be deemed as a public company if one or more corporate bodies subscribed 25 per cent or more of its capital. Along with this, the Amendment Act also extended some of the statutory obligations such as the submission of profit and loss account to the private companies. With these new provisions, which till recently had been confined to public companies, under the substantive provisions of the 1956 Act, the distinction between public and private companies has become very thin and blurred and, in course of time, it is bound to rekindle the controversy about the abolition of distinction between public and private companies in the law. The future development in this regard would be interesting to watch.

The passing of special resolutions and their scrutiny by Government for the appointment of directors of companies and their relations to positions of profit has yielded some beneficial results. During the five-year period, 1956-61 over 7,500 special resolutions passed under Section 314 of the Act to ratify or regularise the appointment of approximately 5,000 company directors and 8,500 persons related to them have been filed with Government. In case of directors, 50 per cent appointments and of relatives 25 per cent appointments carried a salary of over Rs. 500 per month. The amendment of this section in 1960 has given some relaxations in regard to such appointments carrying a salary of Rs. 500 per month for directors and their relatives. Like this, special resolutions passed under Sections 356 to 360 with regard to regularisation of contracts entered into by companies with their managing agents of their associates were also filed with the Government who took them on record only after proper scrutiny.

(To be continued)

COMPLETE EQUIPMENT FOR WATER POWER PLANTS



We supply turbines of the Francis, Kaplan and Pelton type for various heads and outputs.

The world-famous Skoda, CKD and Vitkovice trade-marks guarantee the first class technical design and quality of the equipment we supply.

At present we are constructing Water Power Plants in ten countries.

TECHNOEXPORT

PRAGUE - CZECHOSLOVAKIA

Foreign Trade Corporation for Export of Complete Industrial Plants

Authorised representative and sole importer for India:

SKODA (INDIA) PRIVATE LIMITED

NATIONAL T 13162

ROLE OF INDUSTRIALISATION IN ECONOMIC GROWTH

FINDINGS OF SPECIAL U.N. STUDY

IT is a matter of general observation that the countries with the highest *per capita* incomes are highly industrialised and that the poorest countries have predominantly rural societies. Broadly speaking, there is a certain correlation between levels of *per capita* income and levels of industrialisation and this is statistically demonstrated in the special study entitled "Industrialisation and Economic Development" and forming part of the World Economic Survey 1961, an advance copy of which has just been issued by the United Nations. In the lowest-income countries, according to the study, primary production accounts, on the average, for about 47 per cent of total domestic output, while industry contributes only 19 per cent. By contrast, in the high-income industrial countries, these proportions are quite the reverse: industrial production amounts, on the average, to about 49 per cent of total output, while agriculture and mining together add only 13 per cent. This great disparity between the underdeveloped countries and the industrially advanced countries is due *primarily* to the difference in the role which manufacturing production plays in total economic activity. Another facet of this disparity is that, with the growth of factory production and the related trend towards urbanisation, the industries providing basic facilities, such as transport, power and water, also contribute a rising proportion to total domestic output. In the industrial countries, for instance, the share of basic facilities in total output is about 11 per cent, whereas in the lowest-income underdeveloped countries it is only about 5 per cent. The following table provides a broad picture of the disparity between the two groups of countries, as revealed by national income data for the period 1950-59:

Industrial Distribution of Gross Domestic Product—Averages for Countries Grouped according to Levels of Per Capita Income, 1950-59.

(Percentage)

Per capita income group	INDUSTRY				Primary production (agriculture and mining)	Services
	Manufacturing	Basic facilities (a)	Construction	Total		
Underdeveloped Countries:						
I. Less than $125 (b) ..	11	5	4	19	47	33
II. $125 to $249 (c) ..	14	6	5	25	40	35
III. $250 to $374 (d) ..	16	6	5	26	30	45
IV. $375 and more (e) ..	17	6	5	28	27	46
High-income industrial countries(f) ..	32	11	6	49	13	37

(a) Transportation, storage and communication, electricity, gas and water.

(b) Ceylon, Tanganyika, Indonesia, South Korea, Kenya, U.A.R., Pakistan, Burma, Congo, Thailand, India, Peru, China (Taiwan).

(c) Rhodesia and Nyasaland, Honduras, Tunisia, Algeria, Turkey, El Salvador, Philippines, Ecuador, Morocco, Colombia, Brazil.

(d) Panama, Costa Rica, Jamaica, Cyprus, Lebanon, Greece, Mexico, South Africa.

(e) Venezuela, Trinidad and Tobago, Chile, Puerto Rico, Argentina, Israel, Ireland.

(f) Countries with *per capita* income of more than $800. This group includes Belgium, Canada, Denmark, France, West Germany, the Netherlands, Norway, the U.K. and the U.S.; Sweden is excluded because of lack of data.

The great disparities existing between the industrial and the underdeveloped countries in levels of *per capita* income are thus related to the wide differences in their structures of production. But it is nevertheless true that the relation is a rather loose one, for there are instances of countries which have relatively high *per capita* incomes but relatively low shares of industry in total output. And there are also some countries like Venezuela and Trinidad which have achieved relatively high *per capita* incomes by virtue of their fortunate natural resource endowment. These instances only demonstrate that the level of *per capita* income is not solely determined by the degree of industrialisation. But there is no dispute that industrialisation is the biggest single factor which could improve material welfare in underdeveloped countries. It is only for a small minority of countries that specialisation in primary production, such as production of petroleum, has offered a principal way of improving their material welfare. The primary commodities exported by most underdeveloped countries have been much less favoured by world demand than has petroleum. During the last decade, for instance, the volume of exports from the underdeveloped countries expanded at a rate of 3.6 per cent per annum, which was less than three-fifths of the rate at which exports from the industrial countries increased. Moreover, since the underdeveloped countries also experienced a deterioration in their terms of trade, the purchasing power of their exports advanced between 1950-51 and 1959-60 at only 2.2 per cent per annum.

Even if countries have natural resources in strong world demand, the case for industrialisation is seldom lessened, according to the special U.N. study. In fact, many underdeveloped countries have attached great importance to industrialisation, and manufacturing output, too, has been expanding quite rapidly in most such countries in recent years. According to the relevant finding of the U.N. study, since 1950, the rate of industrial growth in these countries as a group has exceeded the corresponding rate in the industrially advanced countries. Consequently, as will be seen from the following table, the share of the underdeveloped countries in total manufacturing output outside the centrally planned economies increased from 15 per cent in 1950 to 17 per cent in 1960.

Growth and Distribution of Manufacturing Output by Area

Item and area	1950	1960
Index of growth:		
Underdeveloped areas	100	189
Developed areas (a)	100	163
Percentage Distribution:		
Underdeveloped areas	15	17
Developed areas	85	83
Total ..	100	100

(a) Australia, Austria, Belgium, Canada, Denmark, West Germany, Finland, France, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, South Africa, Sweden, Switzerland the U. K. and the U.S.A.

It is indicative of the emphasis that the Governments of underdeveloped countries have generally placed on the acceleration of industrial growth that in more than two-thirds of such countries the annual rate of industrial growth between 1950-51 and 1958-59 has amounted to 5 per cent or more and that in one-fifth of them the rate has equalled or exceeded 10 per cent. The broad finding of the U.N. study here is that, irrespective of whether the rate of industrial growth has been large or small, industrial expansion has been one of the principal factors contributing to the over-all economic growth in most underdeveloped countries in recent years. Despite considerable variations in the relative importance of the manufacturing sector in the individual countries, the inter-country differences in the rate of growth of gross domestic product have broadly tended to reflect those in the expansion of manufacturing output.

While the vigour manifested by these trends is certainly encouraging, it should not be forgotten that in most underdeveloped countries industry still constitutes only a minor segment of the economy. Whereas in the high-income industrial countries of North America and Western Europe industry accounts, on the average, for almost a half of total production, the share which industry claims in most of the underdeveloped countries ranges down from a quarter to a fifth. No wonder, therefore, that more than 80 per cent of the manufacturing output of the non-communist world is accounted for by 16 industrial countries. The relevant countrywise figures are given below:

Share of Industrial Countries in World (a) Manufacturing Output

(Percentage)

Country	1950 (b)	1960 (b)
United States	51.2	43.8
United Kingdom	8.9	7.5
West Germany	5.8	9.1
France	4.3	4.9
Canada	3.4	2.9
Italy	2.0	2.9
Sweden	1.4	1.1
Australia	1.3	1.3
Japan	1.3	4.3
Belgium	1.3	1.1
Australia	1.2	1.2
Netherlands	1.2	1.3
Denmark	0.7	0.8
Austria	0.7	0.8
Norway	0.5	0.5
Finland	0.3	0.3
New Zealand	0.2	0.2
Total ..	84.4	82.5

(a) Excluding the centrally planned economies, that is, communist countries.

(b) Estimates based on value added of manufactured goods in terms of 1953 dollars.

The above figures provide some measure of the industrial transformation yet to be achieved in the underdeveloped countries. Such industrialisation as has taken place in these countries has been partly due to the growth of domestic demand. It has also represented, to a considerable extent, the establishment, behind the protective barriers created by tariffs or import controls, of industries which produce goods in replacement of imported manufactures. But the pattern of industrial development has suffered, and continues to suffer, from some major limitations. The conclusions of the U.N. study, in this connection, are:

"If it is true that the supply of capital equipment has been a major factor limiting the rate of industrialisation, it is also true that the pattern of industrial development has itself been among the determinants of the available supply of capital equipment. For, in part, this supply has depended on the extent to which the pattern of industrialisation has been directed towards the development of domestic capital goods industries or, as alternatives, of import-substituting or export-promoting industries which have increased the capacity to import capital goods. Thus, the current allocation of resources among industries has been a factor influencing the prospective volume of resources for investment.

"Save in some of the industrially more advanced countries, the development of domestic capital goods industries has played a very minor role in the industrial growth of the underdeveloped countries. Numerous countries have certainly established or expanded industries producing building materials, such as cement; but, the engineering industries which produce the machinery and equipment necessary for most industrial investment have assumed significant proportion only in a few countries. In most countries, imported capital equipment has, in fact, accounted for 30 to 40 per cent of total investment expenditure, the remainder consisting of salaries and wages as well as the purchase of local materials.

"Thus, the main contribution of industrial development towards expanding the supply of equipment has been made through its effect on the amount of foreign exchange available for purchases from abroad. And the principal channel through which this has taken place has been import-substitution rather than export-promotion. While exports of manufactures and semi-manufactures from the underdeveloped countries have increased at an annual rate of 4 per cent during the last decade, their absolute value in relation to total export proceeds remains very small. Total merchandise exports have continued to consist predominantly of crude food and raw materials.

"Import-substitution in the field of manufactured consumer goods as well as intermediate producer goods, however, has frequently been of some importance in contributing to the expansion of foreign exchange supplies available for the importation of capital goods. But this process has been more evident during the nineteen-fifties among the industrially less advanced countries than among the more industrialised countries. In the latter group of countries, the role of import-substitution has generally been more moderate, since the scope for the establishment of import-substituting consumer goods or intermediate producer goods industries had already been very largely exploited. It appears, in fact, that the possibility for enhancing supplies of imported capital equipment through the development of these import-substituting industries contract markedly as countries pass beyond the earliest stages of industrialisation."

The major implications of these findings for governmental policy with regard to industrialisation have also been indicated in the U.N. study. Since the desired rate of economic growth implies what future rates of consumption and investment should be, this, according to the authors of the study, suggests the requisite rates of increase in supplies of manufactured capital and consumer goods. It will then become evident how much emphasis should be placed, within this framework, on the development of domestic capital goods industries or, alternatively, on import-substituting or export-promoting industries. If, for instance, the over-riding aim of policy is to raise the level of investment as quickly as possible and hold back, at the same time, the growth in consumption to the lowest feasible rate, then policy should seek to maximise the flow of resources going into the domestic capital goods industries or into other industries which increase the net supply of foreign exchange available for imports of capital goods. This still leaves unanswered the question of the extent to which policy should favour the development of domestic capital goods industries as against import-substituting consumer goods industries or export-promoting industries. A final decision in this matter, in the opinion of the authors of the U.N. study, must obviously rest upon the particular economic circumstances prevailing in each country.

World industrial production slowed down in 1961, the actual rate of growth being 4 per cent, as compared with 7 per cent in 1960 and 11 per cent in 1959. The decline in the place of growth is attributed to stagnating production in North America, which recorded an increase of only 1 per cent, as against 3 per cent and 13 per cent in the previous two years, respectively. The Common Market industrial output rose by 6 per cent, as against 11 per cent and 7 per cent.

The U.S. House of Representatives has approved a Bill giving President Kennedy wide powers to cut tariffs. The Bill will permit him to cut all tariffs up to 50 per cent over a five-year period and to eliminate tariffs on products in which the U.S. and the Common Market together account for 80 per cent of the world market.

NEW PRODUCTS AND PROCESSES

Computer for Labour Costs

A SIMPLE computer which gives a greatly improved progressing system for maintenance and installation workers and an up to the minute cost control, has been built by engineers at Harwell, one of the main centres of Britain's Atomic Energy Authority. The computer is already estimated to have saved its cost and a second is now under construction. A counter for electrical pulses is connected through plugs on the control panel to a pulse generator providing pulses at a repetition rate appropriate to the terms of measurement. One plug is assigned to each worker so that at any time the number of plugs inserted can be adjusted to the number of workers on the job. Time switches are arranged so that the motor runs during the normal working hours but a selector switch allows overtime work to be included. To measure progress in terms of man-hours, the pulse rate is one per hour and to measure in terms of cost, the pulse rate is the rate per man-hour divided by the unit cost, in which case the rate per man-hour may be the total rate, labour and materials. The cost of exceptional items can be added automatically by a separate pulse generator during the lunch hour. By showing the estimated cost on an adjacent display an immediate comparison can be made.

New Device for Solvent Extraction

A solvent extraction device to speed production methods for the preparation of purified uranium for advanced types of nuclear reactors, has been designed by a chemical engineer at the Bradford Institute of Technology, northern England. Dr. Carl Hanson, Senior Lecturer in Chemical Engineering, says that his device, known as a "mixer-settler", could have important applications not only in nuclear power programmes but also in metallurgy and in the field of antibiotics manufacture, where solvent extraction processes are used. The device, like a goldfish tank, accommodates 100 times greater production capacity than conventional types of geometrically-limited uranium purifiers. It circulates the fluids by an arrangement of baffles, pumps, and settling chambers which ensure that the critical depth of about 2 in. is never exceeded during the process. A purity of 99.9 per cent should be possible, and this is comparable to that of existing plant. Dr. Hanson says that one of the practical benefits of the "mixer settler", if introduced, would be to reduce, if only marginally, the cost of generating electricity by nuclear power. In metallurgy it could be used for the separation of thorium and other rare "earth metals", and might well also reduce the cost of manufacturing antibiotics.

Plasters from Gypsum

Specific end uses of plasters from three different varieties of gypsum, namely rock gypsum, marine salt works gypsum and precipitated gypsum have been suggested on the basis of studies on the specific characteristics of the gypsums carried out at the Central Salt and Marine Chemicals Research Institute, Bhavnagar. Plaster from rock gypsum, being quick setting, can be employed for structural purposes; it also meets with the requirements of B.P.C. surgical plaster. Plaster made from marine salt works gypsum, although slightly lighter than that from rock gypsum, is also useful for structural purposes. Plaster prepared from precipitated gypsum, being lighter than others, is suitable only for preparing special moulds and decorative articles.

Metal-cutting Machine

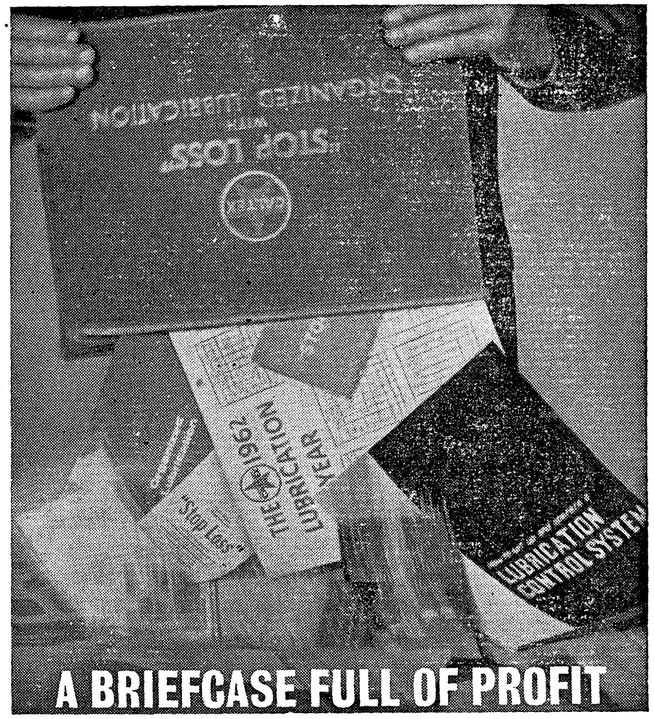
An American flame-cutting machine follows a pen or pencil sketch instead of the templates used on previous profile cutters. A photocell in the control head "reads" dark lines on white paper placed beneath it. Cutting torches follow the movements of the control and cut steel plate on the pattern of the sketch. As many as ten torches can be operated at once in the machine, cutting ten profiles for each scanning of the sketch. The machine can cut circles up to 120 inches in diameter and lengths up to 43 feet. The tracing unit can negotiate 90-degree turns with a radius as small as 1/16-inch at speeds up to 27 inches per minute. By eliminating the template, the machine is said to be cheaper to use than previous profile cutters and is claimed by its manufacturer to be more acurate.

Fire-retardant Paint

A new fire-retardant paint, which can be applied to various surfaces—including timber, fireboard, hardboard and plastic—has been developed by Jenson and Nicholson Ltd., (Industrial Division), Carpenter's Road, Stratford, London. On application of a flame, the paint swells to give a porous mass which does not burn, and also acts as a heat insulator, protecting the base material. It can be applied by brush or, after thinning with thinners, by spray guns. It air-dries to give a smooth, matt surface, which can be washed down. The paint is supplied in off-white as well as in a range of tints.

Special Paper

A paper with a special coated surface which permits typing errors to be quickly and cleanly erased with an ordinary rubber, is now being marketed by Spicers Ltd., 19 New Bridge Street, London, E.C.4. The result of years of research devoted to producing a paper on which correction can be made without disturbing the surface, the built-in erasability of the paper resists the abrasive action which causes holes, tears and wrinkling. It is suitable for all general office work, particularly where evidence of erasure is undesirable—for example, schedules or accounts.



For you...in the CALTEX "STOP-LOSS" Programme

Out of the Caltex Sales Engineer's briefcase comes a sheaf of ideas for cost control through organised lubrication—the Caltex "Stop-loss" Programme.

Start on the programme immediately. You will find that organised lubrication reduces losses in three important directions: production, maintenance and purchasing. The savings will go directly into profits —an average gain of upto 4% safely in the bag.

Ask your Caltex Sales Engineer for information

Company executives can obtain a free copy of this booklet by writing on their official letter-head to their nearest Caltex office.

THE HIGHLAND PRODUCE COMPANY LIMITED

WORKING RESULTS SATISFACTORY

CHAIRMAN, MR. A. V. THOMAS HIGHLIGHTS HEAVY FISCAL BURDEN ON TEA

HOW the heavy fiscal burden under which the tea industry had to operate left little room for its expansion in a useful way was highlighted by Mr. A. V. Thomas, Chairman of the Highland Produce Company Limited, in the course of his speech at the Thirty-sixth Annual General Meeting of the Company held at Alleppey (Kerala) on Friday, 29th June 1962. Taking his own Company as an example, Mr. Thomas indicated that taxation (provision made is Rs. 4 lakhs) took away 47 per cent of the net profit earned during the year 1961 which was ten times the amount required in 1952. He felt that the fiscal burden required a careful reassessment and adjudication. Declaring that the incidence of taxes borne by tea *vis-a-vis* other commodities was very heavy, he warned that, unless the industry was able to maintain itself in a stable form, there would be great repercussion both on the point of foreign exchange earnings and also on the employment possibilities.

The full text of Mr. Thomas' speech is reproduced below:

"GENTLEMEN,

"I have pleasure in welcoming you to the thirty-sixth annual general meeting of the Company.

"The accounts and the Directors' report for the year ended 31st December 1961 have been with you for the prescribed period, and I am sure they would have received your careful attention. You would have noted that the year has, again, been one of progress and the results have been satisfactory, in spite of the various adverse factors which have operated during the year. These may be classified as due to three main causes:

(a) Adverse weather conditions;

(b) the policies and attitude of the Central and State Governments towards this industry, presumably with the intention of helping greater production at cheaper cost; and

(c) adverse trading conditions.

"The estates of South India were subject to an unusually heavy monsoon during 1961, but it is pleasing to note that, in spite of this, the tea crop has not been much affected and has shown some increase over the previous year's production.

Production

"Whilst on this question of production, it is interesting to recall that, between 1952 and the year under report, the actual acreage of tea in bearing on our estates has increased only by about 40 acres, while you would have noted from the statement attached to the balance-sheet that the production has gone up from 737,966 lbs. in 1952 to 1,402,597 lbs. (636,207 kgs.) in 1961, that is, the quantity of tea produced by our estates has been almost doubled and that too in a year when weather conditions could not be said to have been very favourable. The yield per acre has increased from 820 lbs. to nearly 1,514 lbs. per acre. These figures, which are more or less in consonance with the improvement noted in tea production in India as a whole, bear eloquent testimony to the vast technological improvement and better cultivation methods, and manuring, etc., adopted. The industry has almost succeeded in achieving that ideal of making 'two blades of grass grow where one did formerly!' It is noteworthy that, in recent years, the capital required for all these technological and other improvements of this industry has been fouhd almost exclusively by internal financing only. I am not aware of any large new issue of fresh capital for the purpose of plantation industry in the recent past and the industry has been forced to rely upon its own accumulated profits and resources to find the funds for this improvement, besides maintaining its usual and reasonable returns on the capital invested in the face of heavy additional expenses it had had to meet.

"It must be knowledged to you that, out of a total production of about 770 million lbs. per year in the country, about 452 million lbs. per year are being exported wherefore the prices obtained for our teas are conditioned mostly by the markets created in foreign countries. It is here I am anxious to impress upon the Government that our competing capacity with the other countries producing tea must not be depressed, as obviously such a policy would prevent greater export or larger earning of foreign exchange. We have been prevented from getting most from foreign countries, both from our traditional markets and the new markets which have taken to tea drinking, mostly because of our inability to be in a competitive position with Ceylon and Africa. Recently a delegation sponsored by the Tea Board has toured the United States, and I trust that swift action will be taken on the basis of their report to improve and expand our markets in that country as well as in Canada.

Plain Teas

"Whilst on the subject, I would like to mention that the production of plain teas, particularly in South India, has to be sold only within the country itself, as, in many cases, they will not admit of any export at prices advantageous to the industry and, in some cases, not even earning enough to cover the cost of production. Therefore, I feel that our internal market has also got to be developed for our plain teas at least, while our export market is retained for quality teas. It is my belief and experience that, if the proper rounds of plucking are maintained and details of manufacture carefully attended to, we can produce the required quality which will be very much taken up by the foreign countries without serious dent to the quantitative production also.

"It has often been pointed out that the heavy fiscal burden under which the industry has to operate leaves little room for its expansion in a useful way. Apart from the Central income-tax and excise duty, the industry has to bear a heavy charge in respect of agricultural income-tax in the State as well as sales tax. These are besides the new burdens imposed on the industry by way of additional plantation tax and modifications of land tax, sales tax, etc.

Tax Burden

"The increase in the burden of taxation can be judged from the fact that, in 1952 when the Company had a profit of Rs. 2,52,000, the provision necessary for taxation was Rs. 40,000, while in the year under report the profits of the Company have increased to Rs. 8,63,428, but Rs. 4,00,000 had to be provided for as reserve for taxation which in itself takes away 47 per cent of the net profit, that is, ten times the amount required in 1952.

"Though I am not opposed to a reasonable taxation on the profits of the Company, which income is required by the Government to pay for the several Plans which are on the anvil and it is also a desideratum which cannot be minimised in a welfare State, I feel the fiscal burden visited on this industry requires a careful re-assessment and adjudication. Probably most of you are not aware that the incidence of taxes which tea suffers *vis-a-vis* the other commodities is a very heavy one and, unless the industry is able to maintain itself in a stable form, there will be great repercussion both on the point of foreign exchange earning and also on the employment possibilities.

"It is here that I would very much wish that the attitude of the Central and State Governments in the matter of income-tax, agricultural income-tax, sales tax and excise duty can be more helpful to the industry and, therefore, to the earning of the much needed foreign exchange also.

"I am not unaware of the proposals in the recent budget for relief on exports, but how far this will prove actually useful and how far this apparent concession will be negatived by the increase in company taxation, increase in excise duties on chests, aluminium foils and diesel oils, increase in freight rates, etc. is yet to be worked out. In fact, I have been feeling that, in the present set-up of things with a greater enthusiasm to earn more and more foreign exchange, anything that the Government can do to assist the industry to strengthen its competing position must be fully conferred by the Government. I have often felt that, if the whole of the export duty is itself taken away, the industry will be able to sustain its competing capacity well with any other tea producing country and at the same time maintain more or less its profit level on the capital invested. These and others are matters which I would desire very much that the Central and State Governments and particularly their Finance Departments to go into thoroughly.

Labour

"Now I may turn to the other important aspect, namely, labour. Whilst in Kerala there has been comparatively smooth sailing during last year, there was some agitation for increase in wages, even though the question was under the consideration of the Wage Board appointed by the Central Government. In spite of representations made that the industry could not support any further increase in wages, the Central Wage Board has recommended an interim increase of 15 nP in the daily wages to adult workers which has been made effective from 1st December 1961. This is bound to be reflected in an increase in the cost of production. You would have noted from the statement already printed along with the balance-sheet that the ex-estate cost per kilogram of the teas of this Company stands at Rs. 2.91 and the all-in cost is Rs. 3.63 per kg. This is bound to go up with the additional interim wages granted by the Wage Board, while the sale realisations have been going down.

"Whilst this Company has never been averse or opposed to any help or assistance to be rendered to the labour to maintain a higher standard of living, it would be unwise if, in enthusiasm, unlimited increase is recommended without proper relation to the work turned out and, unless and until there is a more precise equation between the quantity and quality of work turned out by labour and its wages, it will be a long time before the industry can stabilise itself on safer anchorage. This is an aspect which I would like very much the Government goes into in detail and that many people similarly placed as ourselves also should think seriously about and make for themselves a scientific costing of the incidence of various expenses that go to make up the cost of production of the teas produced.

Fringe Benefits

"In this connection, it is worthwhile remembering that, in this industry, there is already in existence a number of fringe benefits. It is estimated that, in South Indian plantations, the annual recurring cost of various welfare measures form the highest single item of expenditure next to wages and cost of stores and supplies. It is estimated that the average cost of these fringe benefits works out to about 14½ per cent of the total cost of production in South India without taking into account the capital expenditure involved in providing houses, creches, schools, hospitals, etc. Apart from the cost involved, it is pertinent to remember that standard accommodation and medical aid on much larger scale than is available generally elsewhere in the country is provided to workers in these industries. It is also an interesting fact that fringe benefits form only 6 per cent of the wage bill for manufacturing industries, whereas, in the plantation industry, this forms 14½ per cent of the total cost of production and nearly 30 per cent of the labour cost. I presume that all these important aspects of the problem will be fully considered by the Central Wage Board and the authorities concerned before any additional benefit is sought to be conferred on the labour by way of increase in wages, etc.

"The industry unfortunately has had to bear some buffeting on the other fronts also, namely, in its sales programme. While your Directors have continued a policy of fine plucking and careful manufacture so that the maximum possible prices have been obtained for your teas and the average prices realised by your teas have been more than last year by 11 nP per kg., the general conditions in the market were anything but encouraging. During the last quarter of 1961 when normally tea prices should show an improvement, there was a substantial fall in prices in auctions at Cochin. There was some improvement towards the end of the year, but the prices still continue to be less than those during the corresponding period last year and this may perhaps be reflected in the current year's profits. You will, however, be glad to hear that the average prices

MOVE TO REFORM GENERAL INSURANCE

EXECUTIVE COMMITTEE'S SCHEME OUTLINED

THE most important topic of discussion among insurers and all those who have a more than lay interest in the development of general insurance in the country on healthy lines is the scheme proposed by the Executive Committee of the General Insurance Council in May last. It is an index of the importance insurers attach to the proposal that it has figured prominently in the speeches of many insurance company chairmen. Mr. P. U. Patel, Chairman of the Indian Insurance Companies' Association himself referred to it, in some detail, in his speech at the annual meeting of the Universal Fire and General Insurance Company, of which he is chairman. According to Mr. Patel, it is "a development which is revolutionary in character and is bound to have far-reaching implications in so far as the future of general insurance in the country is concerned." He disclosed that the majority of insurers, being convinced that it was a step in the right direction, had wholeheartedly welcomed the scheme. He appealed to those insurers, who had yet to make up their minds, to do so and support the scheme without any mental reservation.

The scheme was formulated by the Executive Committee of the General Insurance Council, a body representing all insurers carrying on general insurance business in the country, and was circulated to all insurance companies for approval by their respective Boards of Directors. There are three essential elements in the scheme. First, prohibition of deflection of field staff and transfer of business from one company to another by unfair means. Second, establishment of a Mutual Assistance Pool and, third, reorganisation of the Administrative Machinery of the Code of Conduct for insurers to implement the scheme. The suggestion of the Executive Committee was that the first provision of the scheme should be effective from 1st June 1962, while the establishment of the Mutual Assistance Pool and reorganisation of the Administrative Machinery should take effect from 1st September.

Deflection of Staff

The provision concerning the deflection of field staff lays down that no insurer shall deflect or entice away any field worker (including Branch Manager) of another insurer by paying or offering to pay a remuneration higher than his existing remuneration or what is permissible under the Code except with the prior approval of the Administrative Machinery. Moreover, it is also required that every insurer shall file, in addition to the statements required under the Code, certified statements giving particulars concerning all field workers, irrespective of their remuneration, and other employees whose total remuneration exceeds Rs. 5,000. The Administrative Machinery shall arrange to screen every such appointment with the dual object of ensuring that every such appointment is absolutely genuine and also that the remuneration paid is not excessive. In all cases where the Administrative Machinery is satisfied that any appointment is not genuine or the remuneration paid is excessive, it shall, as a first step, discuss the matter with the principal officer of the insurance company concerned and asked him to terminate forthwith any appointment, which is not genuine or to suitably readjust the remuneration, wherever it is found to be excessive. The principal officer will, in turn, either comply with the directions of the Administrative Machinery forthwith or file an appeal with the Chairman of the Executive Committee.

As regards transfer of business, the scheme lays down that it shall be open to every insurer to complain of any loss of business, irrespective of the loss of the premium income, where the insurer feels that the business has been transferred by unfair means. Every such complaint shall be investigated by the Administrative Machinery with the utmost expedition which will, *inter alia*, focus attention on two points: (1) whether the existing field worker, who stands to benefit as a result of such deflection of business, has or had means placed at his disposal by his company to attract business by unfair means; and (2) whether a new field worker was appointed specifically for the purpose of deflecting business. If the Administrative Machinery is satisfied that the transfer has taken place in violation of the letter and spirit of the Code the entire business (less obligatory cessions) shall be non-reciprocally reinsured with the losing company strictly subject to the commission of only 10 per cent in the case of marine business and 15 per cent in other cases through the Mutual Assistance Pool.

Mutual Assistance Pool

The Pool shall be created by all insurers in India contributing a quota share of 3 per cent of their gross direct premium written direct in India during each of the three years the Pool is in existence. Such contributions shall exclude premiums received from the Indian Insurance Companies' Association Pool and aviation, marine, hull, machinery and financial guarantee insurances. Cession to the pool shall be subject to a commission at the rate of 30 per cent, irrespective of the class of business. The distribution of the premiums gathered in the Pool, subject to a deduction of a commission at the rate of 32½ per cent irrespective of the class of business, shall be made department-wise, namely, fire, marine and miscellaneous, as follows:

Insurers who during the preceding year wrote a gross direct premium in all classes in India of	*Shall receive a premium equal to the following percentages of the shortfall of the year's gross direct premium in India as compared with that of the previous years department-wise*		
	1st year	*2nd year*	*3rd year*
Rs. 20 lakhs or less	110	85	55
Between Rs. 20 and Rs. 50 lakhs ..	100	75	50
Over Rs. 50 lakhs	75	50	33⅓

It is also laid down that the effect of the reduction in premium rates in the fire department, which comes into force with effect from 1st July 1962, shall be taken into account for the purpose of judging whether there is a shortfall and the extent thereof. If, after the distribution according to the above formula, there is any surplus premium left in the Pool, it shall be given back to the original contributors in the same proportion as their contributions related to the total contributions collected by the Pool. In case the premium collected by the Pool is not sufficient to meet all demands for assistance upon it, relief shall be scaled down proportionately. Any differences arising out of any matter connected with the affairs of the Pool shall be decided by the Executive Committee.

The object of establishing the Pool is to enable every insurance company to adjust its working to the requirements of the Insurance Act and the Code of Conduct within the shortest possible time and to create a fund of premium with which to assist, for a limited period, those insurers who, in the course of such readjustment, may lose business. The Pool is to be administered by the two reinsurance companies in the country, the India Reinsurance Corporation, which is jointly owned by insurers in the private sector and the Indian Guarantee and General Insurance Company, a Government-owned reinsurance company, and shall be in existence for a period of three years from 1st September 1962. It may be continued for a further period by mutual agreement.

Administrative Machinery

It was agreed that the representative of the Administrative Machinery would, in the first instance, be authorised to check all transactions, whether of receipts or payments, from 1st July 1962 with a view to ensuring that transactions repugnant to the Act and the Code of Conduct, whether direct or indirect, are not taking place. The principal officer of the Company is required to give him the necessary authority in this regard. It was also agreed that, if officers of the companies do not co-operate with the representative in the task assigned to him or if he, in the course of his work, has reason to believe that transactions against the spirit of the Act and the Code, are in fact taking place then the principal officer will agree, if the chairman of the Executive Committee so desires, after consultation with the principal officer, to the Administrative Machinery checking receipts and authorise disbursements of the Company. The Executive Committee also noted that the Tariff Committee had decided to reduce fire tariff rates with effect from 1st July.

It is evident from the foregoing outline that, barring the provision that the Administrative Machinery be authorised to check all transactions with a view to ensuring that they are not in violation of the Act and the Code, the scheme is closely similar to the scheme of Non-diversion and Mutual Assistance evolved and voluntarily adopted by 17 insurers in Bombay last year. This scheme has now been admitted to be a failure presumably because, in spite of the doors being kept open by the sponsors, other insurers were not willing to join it. Since the present scheme bears the stamp of authority in that it has been sponsored by the Executive Committee and has the support of the majority of insurers, it has a better chance of success. The minority of those who are opposed to it may be expected to fall in line as a result of the discussions and negotiations now going on. If the scheme is implemented vigorously and in the spirit of the Code it will go a long way towards eliminating corruption and malpractices. But it cannot be instrumental in the transformation of general insurance into a growing and dynamic industry. For that what is needed is a thorough reorganisation of the industry by merging smaller companies into bigger and economically viable units freely competing with each other in offering better and cheaper services to the insuring public. It is not suggested that the present scheme will serve no useful purpose. It is good as far as it goes, but it does not go far enough. At best, it might reduce to the minimum, if not totally eliminate, the malpractices prevalent in the trade, and the Controller of Insurance will be satisfied as long as there are no violations of the law. But a vigorous and dynamic industry will still be a distant goal, for excessive controls and spoon-feeding can produce only anæmic growth.

HIGHLAND PRODUCE CO., LTD.

(*Concluded from page 22*)

realised by the teas from the estates of the Company were substantially more than the average for the district.

Cardamom

"The Company's other main crop, cardamom, has also had a satisfactory year from the point of view of production. Again, you will note that, within the last three years, the crop has more than doubled, and the cost of production has been kept within control. Unfortunately, here again, the market realisations have been disappointing and as stated in the report, this is a matter which has affected the cardamom planting industry as a whole. Some of the important producers of cardamom met recently to consider ways and means of saving the situation. It would appear that the main difficulty is that producers have no holding capacity and most of them have to sell out at the best prices immediately available so that they are not able to take full advantage of the demand for Indian cardamom in the foreign markets. The need is, therefore, to set up an organisation for marketing the cardamom effectively, while, at the same time, rendering immediate help by making at least partial payments to the growers as and when they deliver the produce. The U.P.A.S.I. is collecting necessary statistics and, when a suitable scheme is formulated and a just and proper price can be secured for this commodity, you will find that this product contributes to a substantial portion of our profits.

"Coming closer home, you would have noticed from the profit and loss appropriation account that after transferring substantially to various reserves, the Board has recommended a dividend of 15 per cent on equity shares, same as in previous years.

"The Company has also established along with the Managing Agents and other companies under the same management, a fund known as the A. V. Thomas Group Companies Employees' Gratuity Fund Trust for the benefit of employees and a contribution has also been made by this Company to this fund during the year.

"I also take the opportunity to extend our thanks to the Visiting Agents, Managing Agents, managers and staff both at the head office and on the estates for the good work they have done during the year."

Note: This does not purport to be the report of the proceedings of the annual general meeting.

SHREE DIGVIJAY CEMENT COMPANY LTD.

MR. G. D. SOMANI CRITICISES OFFICIAL PRICE POLICY

SPEECH AT SEVENTEENTH ANNUAL GENERAL MEETING

CRITICISM of the revised official price policy for the country's cement industry in the light of the recommendations made by the Tariff Commission was voiced by Mr. G. D. Somani at the Seventeenth Annual General Meeting of Shree Digvijay Cement Company Ltd., which was held at Sikka (Saurashtra) on 28th June 1962. Presiding over the meeting in the absence of Mr. G. L. Bangur, Chairman of the Company, Mr. Somani regretted that the Government should have imposed a reduction of Rs. 1.53 in the overall selling price of Rs. 93.55 plus excise per tonne of naked cement as recommended by such a high-powered, expert body as the Tariff Commission. While the Government had shown "undue solicitude" to protect the interest of the consumer by enforcing the cut, he pointed out, the corresponding benefit had not been passed on to the consumer. Recalling how the uneconomic price structure for the industry had depleted the Company's general reserve from Rs. 43 lakhs to Rs. 26.43 lakhs between 1957 and 1961 for paying a fair return to the investors, Mr. Somani observed that the acceptance *in toto* of the Commission's recommendation on the selling price for the industry would have helped it a great deal in accelerating the pace of its progress.

The following is the full text of Mr. Somani's speech:

"GENTLEMEN,

"I have pleasure in welcoming you to the seventeenth annual general meeting of the Company. The audited statement of accounts and the Directors' report have already been in your hands and, with your permission, I will take them as read.

Working Results

"As indicated in the Directors' report, the working results of the Company during the year under review have shown slight improvement over the previous year. This has largely been due to special efforts made to effect savings and economies in certain directions to overcome the incidence of constant increase in the cost of manufacture. In view of the fact that uneconomic prices prevailed for the first ten months and the price increase came in only for the last two months effective from 1st November 1961, the results achieved during the year under review could not have been more satisfactory. It would be recalled that for the last three years we have been continuously drawing upon past reserves to be able to maintain the modest rate of dividend. The general reserve which stood at Rs. 43 lakhs in the year 1957 accordingly tapered down to Rs. 26.43 lakhs in the year 1961. It was a curious phenomenon that against the continuing demand to build up resources to support initiation of scheme for expansion to match the increasing demand, the price policy pursued by the Government in the past years compelled us to drain away the accumulated reserves. The year under review represents the first year in which we have been able once again to declare a dividend without taking recourse to the past reserves, and, I hope, we can now look forward to improved working results for the future.

Official Price Policy

"I am, however, sorry to say that the policy of the Government as to the price structure of controlled industries like cement cannot be considered as quite satisfactory, and it is really a matter of deep concern that the Government should not have seen its way even to accept the modest recommendations of such a high-powered expert body as the Tariff Commission. The cut of Rs. 3.75 nP per tonne was imposed by the Government in the price recommended by the Tariff Commission for your Company with a further stipulation that the provision of Rs. 2 per tonne for rehabilitation had to be made every year. I must acknowledge that the Tariff Commission took a realistic view in estimating output for purposes of cost calculation and made certain recommendations to provide adequate resources for implementing the development programme of the industry. So far as the return on investment is concerned, the basis adopted by the Tariff Commission is still considered inadequate, particularly so because of the change in the grossing up system and increase in the rate of corporate tax. I am firmly of the view that a slightly liberal approach in the matter of fixing prices would provide incentive for the rapid development of the industry and ultimately prove beneficial to the consumers in whose interest the prices are regulated. While the Government has shown undue solicitude to protect the interest of the consumer by making a reduction of Rs. 1.53 per tonne in the overall price payable to the cement industry, the corresponding benefit has not been passed on to the consumer. The Tariff Commission, for instance, worked out, on the basis of prices recommended by it for individual manufacturers, selling price of Rs. 93.55 plus excise per tonne of naked cement, whereas, notwithstanding the said reduction of Rs. 1.53 per tonne in the price payable to the manufacturers, the selling price payable by the consumer to the State Trading Corporation for naked cement has been fixed by the Government at Rs. 94 plus excise, thereby involving a net increase of Rs. 1.98 over the price worked out by the Commission. Thus, whereas the reduction decided by the Government in the price payable to the manufacturers has not ultimately benefited the consumers, the payment of price recommended by the Tariff Commission without reduction would have helped the industry a great deal in accelerating the pace of its progress.

"A delegation on behalf of the Cement Manufacturers Association recently waited on the Honourable Minister for Steel and Heavy Industries, and, while the Minister was not prepared to entertain any claim for an upward revision of price in the near future, he was quite sympathetic to consider favourably the question of compensating the industry for certain increases brought about by the various factors after the Government's decision was announced. I am glad that the Government of India has thus agreed in principle to implement the escalation clause so that any increase brought about by various factors may be suitably adjusted in the price structure.

Coal, Transport Difficulties

"The demand for cement has been steadily increasing with the growing tempo of various programmes of planned development in the country, whereas the imbalance in transport and in the supply of coal continue to adversely affect even the maintenance of the present production. The Government, with a view to cope with the transport difficulties for the movement of coal from Bengal/Bihar coalfields, had announced a scheme for the supply of coal to the Western and Southern Zones by the sea route early last year, and the movement of sea transport actually began in the month of May 1961. Simultaneously, the Government had also announced to compensate the industrial units concerned by subsidising the extra charges involved in this sea transport, but yet it is a matter of deep regret that, although more than a year has passed, the payment of subsidy even for the transport of coal effected in May last year has not yet been forthcoming. At a time when our economy is expanding in a dynamic manner, it is very essential that the administrative machinery must be streamlined to cope with the various problems arising out of this dynamic growth, and it is high time that the Government and the Planning Commission gave proper thought to ensure that the industrial production was not retarded or slowed down due to avoidable administrative delays.

Expansion Programme

"Reference has been made previously to our scheme of expansion by another two lakh tonnes. We had been negotiating to arrange the necessary foreign exchange for the import of requisite plant and machinery for a long period and I am now glad to inform you that we have received the necessary import licence under the D.L.F. for plant and machinery and we have sent our representative abroad to finalise the specifications with the machinery suppliers so that the expansion programme may be carried out as expeditiously as possible. Barring anything unforeseen, it should be possible to complete the expansion programme by about the end of next year, although it is too early to make any definite assessment due to the various uncertain factors that arise from time to time.

"On the question of expansion I would like to say a few words about the need for developing the Port of Sikka. We have on several occasions alluded to the indispensable necessity of placing a permanent fleet of barges at Sikka to cater to the needs of the cement company and to attract other traffic. The Government has, of late, been insisting on maintenance of private-owned crafts in the ports of Saurashtra, strictly in accordance with the requirements of the Mercantile Marine Law. This necessitates stoppage of crafts for prolonged periods to carry out annual survey and necessary repairs. Dependent as we are on the fleet of crafts and barges for moving a large portion of our raw materials like sea sand, receipt of coal and despatch of more than 50 per cent of finished output, the provision of requisite facilities by the State Government has become extremely urgent. We have tried to attract other independent carriers to undertake transport on our behalf and are actively pursuing the matter with the Government to find out a permanent solution of this problem.

Asbestos Cement

"The asbestos cement sheets and pipes project was finally decided to be located at Ahmedabad. I am glad to say that, due to the support and co-operation extended by the State Government of Gujarat, we were able to acquire the necessary land and get the requisite sanction for power. The construction of factory building is nearing completion and the erection of plant and machinery has reached an advanced stage of progress, and, barring anything unforeseen, the factory should be ready for production by the last quarter of this year. The question of suitable fibre for the manufacture of sheets and pipes, however, continues to present a great difficulty. We are exploring the various possibilities and pursuing the matter with the Government of India to secure foreign exchange for importing the requisite quantity of fibre. I would also like to mention that, after protracted negotiations, we have been able to finalise both technical and financial collaboration with Messrs. Johns Manville Corporation of New York, the world-renowned organisation in the asbestos industry.

Subsidiary's Working

"The production at your subsidiary, the West Coast Paper Mills Ltd., for the year ended 30th June 1961, was 25,770 tonnes, which was higher by 3,310 tonnes than in the previous year. It is, however, unfortunate that, in spite of improvement in output, the overall profits did not show improvements owing to the continuous increase in the manufacturing costs and reduction in the selling price of paper enforced by the Government as from January 1960.

"The Government of India has at last revised the selling price for paper from the 21st of this month, with a slight increase of 6 nP per kg. Although the increase is really inadequate compared to the needs of the paper industry, I hope it would afford the much needed relief to some extent to the industry. The West Coast Paper Mills in also contemplating to embark on expansion programme together with a programme for manufacturing of rayon grade pulp and installation of caustic soda/chlorine plant.

"I am glad to report that our relations with labour have continued to be very cordial and satisfactory.

"It gives me great pleasure, on your behalf, to convey to the members of the management and our employees our high appreciation of the valuable contribution rendered by them towards the progress of the Company and to thank them for their sincere effort in maintaining production at this level."

N.B.—*This does not purport to be the report of the proceedings of the general meeting.*

FERTILISERS AND CHEMICALS, TRAVANCORE LIMITED

CHAIRMAN, MR. T. A. JOSEPH CALLS FOR REDUCTION IN EXCISE DUTY

COMPANY BEGINS EXPORT OF FERTILISERS AND KNOW-HOW

A FERVENT plea to reduce the excise duty imposed this year on raw materials of the fertiliser industry was made by Mr. T. A. Joseph, Chairman of the Fertilisers and Chemicals, Travancore Ltd., at the Annual General Meeting of the Company held at Udyogamandal, Alwaye, on 27th June 1962. Drawing particular attention to the fact that prices of fertilisers in India were "already higher than in any other country," Mr. Joseph expressed his concern over the imposition of excise duties "on almost all the intermediate products" utilised in the manufacture of fertilisers. Increases in costs due to excise duty, he observed, were bound to raise the cost of production of fertilisers and thereby adversely affect food production. On the question of the Company's working during last year, Mr. Joseph highlighted two important features: one, the commencement of export of fertilisers by the Company for the first time in its history and two, an agreement with the British firm, Messrs. Power-Gas Company, for the export of technical know-how on a royalty basis.

The following is the full text of Mr. Joseph's speech:

"GENTLEMEN,

"On behalf of the Board of Directors, I welcome you to this, the eighteenth annual general meeting of the Company. Printed copies of the accounts and the report of the Directors are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read.

Increase in Production

"As you would have seen from the statement of accounts, there has been a general increase in production all round consequent on the completion of the first stage of expansion of the factory towards the close of 1960. Ammonia production increased by 51 per cent, ammonium sulphate by 29 per cent and NPK mixtures by 177 per cent. In addition, 12,897 tonnes of ammonium phosphate were produced during the year for the first time. As a result, the sales turnover rose to Rs. 411 lakhs, as compared to Rs. 309 lakhs in 1960. The financial results have therefore been encouraging. After providing Rs. 38.75 lakhs for depreciation, as against Rs. 25 lakhs in 1960, and Rs. 22.75 lakhs for development rebate, as against Rs. 23.55 lakhs in 1960 and making a new provision of Rs. 1.5 lakh for taxation, the Company has a net surplus of Rs. 32.64 lakhs, as compared with Rs. 27 lakhs in the previous year. You will be pleased to note that the reserves at the end of the year will be standing at Rs. 98,93,096, as against Rs. 64,30,156 at the end of the previous year.

"After seeing all these figures, it might be a trifle disappointing to note that your Directors are coming forward with the same old recommendation regarding dividend to be distributed to the shareholders from the profits of the year 1961, viz. 6 per cent, subject to deduction of tax. I would in this connection refer you to my remarks last year on this subject. We are on the threshold of a very large-scale expansion, more than doubling our capital investment. No doubt, finances necessary have been arranged, as explained later. We have to find from our own resources only two out of the ten crores necessary, and this should not be difficult. But we have to keep in mind the fact that half the balance is going to come from the Government of India in the shape of a loan, and there is really something incongruous in large-scale borrowing with one hand and liberal distribution of profits with the other at the same time. However, we try to justify it with facts and figures. We have also to remember that when the share capital is expanded (practically doubled) as agreed to by you at the last extraordinary general body meeting, our liability in respect of dividends would also double. Until we could see our way clear to maintaining, without interruption, the present rate of dividend on the increased equity capital, we did not consider it prudent to increase the rate, and hence we agreed to place before you the same recommendation which we made last year.

"While on this subject, it might be interesting to draw your attention to what the eminent economist, Prof. J. K. Galbraith (now U.S.A. Ambassador to India) had to say on this subject while commenting on Indian planning in 1959:

> "'In both capitalist and communistic countries, investment is in very large measure from the earnings of industrial enterprises. Something must happen in India like this. Industrial plants must take on their full job which is to be efficient producers and to accumulate surpluses which will provide for future expansion.'

"This sound principle has been kept in view by your Directors in recommending this dividend.

Second Stage of Expansion

"The second stage of expansion involving the installation of an oil gasification plant is well under way. The new plant is expected to be commissioned towards the end of August. When the oil gasification process is introduced, the old wood gasification plant will cease to function. The Company will no longer be using firewood as a raw material. The oil gasification plant will be fed by raw naphtha supplied by the refinery at Bombay. To ensure uninterrupted supply of raw material, Messrs. Burmah-Shell, our suppliers, with whom the Company has entered into a fifteen-year contract for the supply of raw naphtha, are laying a pipeline from Ernakulam to the factory.

"As the firewood gasification process is being abandoned, the Company has terminated the contract arrangements for transport of firewood from April this year. These arrangements that were in vogue since the inception of the Company involved over two hundred country craft employing about four hundred workers. The termination of the arrangements was effected on the basis of a negotiated agreement with the Navika Thozhilali Union. I would take this opportunity to record our appreciation of the valuable services rendered to the Company by these workers and of the practical approach shown by their union in negotiating and concluding a satisfactory agreement for the smooth termination of arrangements.

"With the completion of the second stage of expansion, the Company's capacity would have risen to 30,000 tonnes of nitrogen per annum, the end-products being 100,000 tonnes of ammonium sulphate, 33,000 tonnes of ammonium phosphate (16:20 grade), 8,000 tonnes of ammonium chloride and 44,000 tonnes of superphosphate. In addition, the Company will be able to manufacture and supply NPK mixtures on an 'as required' basis for both food crops and cash crops.

Power Cut

"During the first half of this year, the production schedule of the Company was upset due to unusual draught as a result of which salinity in the water of the area increased considerably. For more than two months, the Company was not able to maintain production even at a reasonable level. Added to that, there was also a power cut from 1st March 1962 to 10th May 1962. I gather that the Government of Kerala is taking urgent steps to prevent a recurrence of salinity in the region. I hope the work will be expedited with the urgency it deserves so that there will be no more trouble on this account next year. With the introduction of the oil gasification scheme, it will be necessary for the Company to shut down its wood gasification plant to enable the commissioning of the new plants. This will also affect the total production during the year. But it is expected that with the increased capacity that will be established as a result of the second stage of expansion, production will be picked up during the last quarter of this year.

"In the year under review, the Company entered the export market for the first time in its history. This has opened a new field for further development. With the increase in production of ammonium chloride as a result of the third stage of expansion, it is hoped that in the years to come, the Company will be able to effectively meet the competition in the world markets in ammonium chloride.

Third Stage of Expansion

"I had mentioned to you at the last meeting that the Company was engaged in planning a third stage in its expansion programme. I am glad to say that the programme has now been finalised. Necessary licences for the expansion have been obtained from the Government of India. Most of the contracts for the supply of plant and equipment from both foreign and Indian sources have been concluded. The Government of India has been pleased to sanction the necessary foreign exchange amounting to approximately Rs. 427 lakhs, under the credit facilities available to them from the U.K., U.S.A., West Germany and Switzerland. The capital investment involved in the third stage expansion is approximately Rs. 10 crores. Of this, the Company will be able to find from its own resources about Rs. 2 crores. The Government of India has agreed to contribute the remaining Rs. 8 crores partly as share capital and partly as loan. You would recollect that at an extraordinary general meeting held on 22nd January 1962, the Company had agreed to raise its authorised capital to Rs. 10 crores and to issue shares of the value of Rs. 4,03,84,780 to the Government of India at par. Consent has since been obtained from the Controller of Capital Issues for the issue of 35,00,000 equity shares of Rs. 10 each to the Government of India. When the shares offered to the Government of India become fully subscribed, the Government of India will be acquiring majority control over the shares of this Company. Against the total loan of Rs. 400 lakhs agreed to be made available by the Government of India for this expansion, the Company has already drawn Rs. 170 lakhs to meet the expenses.

"It is expected that the Company will be able to complete its third stage of expansion by the end of 1964. The production capacity that would be achieved as a result of the expansion would be 200,000 tonnes of ammonium sulphate, 135,000 tonnes of ammonium phosphate and 25,000 tonnes of ammonium chloride. There will be no further expansion in the capacity for production of superphosphate. One of the interesting features of this expansion programme is that it is essentially based on the increased production of ammonium phosphate, one of the most popular compound fertilisers in the country today. The by-product gypsum arising out of ammonium phosphate production will be further utilised to enhance the production of ammonium sulphate, thereby achieving the additional quantity of 100,000 tonnes. By adopting this method, F.A.C.T. has shown the way to the rest of the country for the effective utilisation of by-product gypsum, thereby ensuring that the sulphuric acid manufactured out of imported sulphur gets used twice, first in the production of phosphoric acid for making ammonium phosphate and later, in the production of ammonium sulphate, using gypsum obtained from phosphoric acid production. In addition to ensuring maximum utilisation of imported sulphur, this process would also lead to better economics in the cost of production of ammonium phosphate, as the by-product gypsum raised during the process is further utilised for production of ammonium sulphate.

Technical Know-how

"A significant achievement of the Company recently has been the signing of an agreement with Messrs. Power-Gas Corporation Ltd. of the U.K. Under this agreement, F.A.C.T. will be getting a royalty from the U.K. firm on all contracts entered into by the latter for the supply of plant and equipment designed on the basis of the technical know-how provided by F.A.C.T. for the manufacture of ammonium sulphate out of by-product gypsum. There has been a growing recognition in the country and abroad of the technical knowledge and competence acquired by the Company. A few weeks ago, the Company has signed another agreement with Messrs. Project Engineers Private Ltd., an Indian firm of consulting engineers, engaged in the planning and designing of chemical plants. Under this agreement, the Company has agreed to impart techical know-how on payment of a royalty for the designing of plants for the manufacture of ammonium sulphate using the direct neutralisation process of ammonia and sulphuric acid. These achievements have been possible only due to the efforts of the executives, staff and workers of the Company working together with unreserved co-operation and sense of participation. I would like to take this opportunity to congratulate them on these achievements of theirs and record our appreciation of the *esprit de corps* displayed by them.

Industrial Relations

"Industrial relations continued to be quite satisfactory during the year under review. The long-term agreement that was in force expired at the end of the year. A fresh agreement for a further period of three years has since been negotiated and concluded with the F.A.C.T. Employees' Association. A notable feature in the field of industrial relations is the conclusion of an agreement between the management and the F.A.C.T. Employees' Association for the introduction of work study and job evaluation. It has been possible for the Company to negotiate and conclude these agreements because of imagination and cordiality shown by the F.A.C.T. Employees' Association, whose approach has been realistic and influenced by the best interests of the Company. I would like to record our deep appreciation of the manner in which these negotiations were smoothly carried out resulting in the conclusion of agreements that give mutual satisfaction. The average earnings of an employee in the Company stand today at Rs. 2,840 per annum, as against Rs. 1,520 in 1955 and Rs. 2,283 in 1960.

"Last year, I had mentioned about the efforts the Company were making towards increasing fertiliser-consciousness among the farmers of Kerala. The Company has been laying great stress on the use of balanced fertilisers and has been progressively increasing their production of NPK mixtures to meet the demand. You will notice that, during the year under review, the Company has produced over 19,000 tonnes of NPK mixtures, as against 7,000 tonnes in 1960. The Company has plans to expand its mixture production capacity on a large-scale so that it should be possible to meet the requirements of NPK mixtures, if necessary, to the extent of 300,000 tonnes a year. The Company has been maintaining nearly 400 demonstration farms in Kerala State alone. During this year, the Company has extended this work to some of the districts of Madras, Mysore and Andhra Pradesh also.

"The Company has been included in the list of approved mixing firms of the Coffee Board, U.P.A.S.I., and the Government of Madras. The activities in the field of production and marketing of N.P.K. mixtures will, therefore, be enlarged consistent with the demands that will be arising in Madras State as well as in the plantations.

Distribution

"In Kerala State, the Company has at present over 900 distribution points, of which over 60 per cent are held by service co-operatives. The Company has been extending its full measure of co-operation to the Government of Kerala in the implementation of their policy in regard to progressive utilisation of service co-operatives for distribution of fertilisers. Over 40 agronomists of the Company are now working in different parts of Kerala State rendering technical assistance to farmers and service co-operatives and assisting them in obtaining their requirement of fertilisers in time during the season. Soil tests are conducted by the Company's agronomists free of charge and where possible, they also supervise manuring operations. It is gratifying to note from the rising demand for fertilisers in Kerala that fertiliser-consciousness has been on the increase in Kerala State as a result of the measures taken by the Company in this direction.

"In all these activities, the Company has been fortunate to enlist the active assistance and encouragement of the Department of Agriculture of the Kerala State. I would take this opportunity to express our sense of gratitude to the Governments concerned, the Coffee Board and the U.P.A.S.I., and in particular, to the Department of Agriculture of the Kerala State.

Excise Duty

"In the current budget, excise duties have been imposed on almost all our intermediate products utilised for the manufacture of fertilisers. Besides ammonia and sulphuric acid, excise duty will be payable on oxygen and carbondioxide obtained as by-product and utilised in the process. All these form the basic raw materials for the production of fertilisers. Increases in their cost due to the imposition of excise duty are bound to lead to increased cost of production of fertilisers. I hope it is not the intention of the Government of India that the cost of fertilisers should increase any further. The prices at which they are available in India today are already higher than in any other country. In the interests of increased food production which has become a matter of vital necessity to the country, I do hope that the Government of India will re-examine the question of imposition of excise duty on raw materials that go to make fertilisers, so that fertiliser prices are not increased any further.

"I would take this opportunity to express our thanks to the executives and workers of F.A.C.T. for their good work and devotion to duty.

"I now move that the Directors' report and the audited statement of accounts for the year ended 31st December 1961 be adopted."

N.B.—*This does not purport to be a report of the proceedings of the general meeting.*

COTTON YARNS

OF ALL DESCRIPTIONS

NICB-34

THE INDIA UNITED MILLS LIMITED

CHAIRMAN, MR. M. D. BHAT REVIEWS PROGRESS

COMPANY GOING AHEAD WITH RENOVATION AND REHABILITATION

A NOTE of optimism regarding the working of the India United Mills, Limited was struck by Mr. M. D. Bhat, Chairman, when he addressed the shareholders of the Company at the Forty-second Annual General Meeting held at Bombay on Thursday, 28th June 1962. The financial position of the Company, Mr. Bhat said, was progressively increasing and the Company was going ahead with its programme of renovation and rehabilitation of machinery. He revealed that orders for new machinery worth Rs. 1.94 crore had already been placed. He further revealed that the Company had a phased programme of renovation and rehabilitation at an estimated cost of about Rs. 7 crores which would be spread over a period of four to five years. Subject to finances being available, orders, Mr. Bhat added, would be placed gradually, and it might again be necessary to seek financial assistance from the National Industrial Development Corporation and/or from the bank.

The following are extracts from the speech of Mr. Bhat:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the forty-second annual general meeting of the Company.

"The Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December 1961 have been in your hands for some time and, with your permission, I propose to take them as read.

"The working results for the year show a profit of Rs. 181.60 lakhs. This is subject to provisions for depreciation, taxation and bonus. I invite your attention to the appropriations under different heads in the Directors' report. These include Rs. 14.92 lakhs for depreciation, Rs. 4.97 lakhs for development rebate, Rs. 35 lakhs as *ad hoc* provision for bonus, Rs. 70 lakhs for tax liabilities and Rs. 7.11 lakhs for liabilities in respect of miscellaneous expenses of the previous year.

"The question of bonus for the years 1959, 1960 and 1961 is still pending before the Industrial Court and pending final decision in this respect, the Directors have made an *ad hoc* provision of Rs. 35 lakhs.

"I am glad that it has been possible for your Directors to recommend this time dividends at the rate of 140 nP per share subject to deduction of tax on ordinary shares and 37.25 nP per share subject to deduction of tax on deferred shares. The dividends will absorb Rs. 46.62 lakhs. The Directors recognised that, on account of working losses in some of the past years, the Company had to skip over dividends; hence and in view of the good profits for the year 1961, they have recommended dividends at the above rates. I hope the same will be found satisfactory.

Financial Position

"The financial position of the Company is progressively improving and the Company is going ahead with its programme of renovation and rehabilitation of machinery. As stated in the Directors' report, orders for new machinery of the aggregate value of Rs. 1.22 crore have been already placed. Further orders have since been placed for 101 ring frames, one drying range, one six-colour printing machine, one cloth mercerising machine and other equipments. These additional orders are of the aggregate value of Rs. 72 lakhs. You will thus see that orders of the aggregate value of nearly Rs. 1.94 crore have been placed so far. The Company has a phased programme of renovation and rehabilitation the estimated cost of which will be about Rs. 7 crores in all. This will be spread over a period of four to five years and subject to finances being available orders will be placed gradually. It may be necessary to order some machinery on the basis of deferred payment. It may be further necessary to seek financial assistance from the National Industrial Development Corporation and/or from the bank. This matter is receiving your Directors' attention closely.

"The cotton position was easy during the early part of 1961. It, however, became difficult during the latter part of the year. The cotton crop for 1961-62 fell short of expectations, owing to adverse weather conditions in the cotton growing centres. The gap between the crop estimate of about 43 lakh bales and the total requirements of the textile industry of about 57 lakh bales for the cotton season ending on 31st August 1962 will be about 14 lakh bales. The carryover of about 22 lakh bales from the previous year will help to relieve the situation, but the new crop may not be available at the mills till the end of November or early December. Vigorous efforts are being made by the Government of India to import a sufficient quantity of cotton from foreign countries which might enable the textile industry to tide over the difficult period from September to December. The position is, however, likely to be critical if the shipments of foreign cotton do not arrive in good time.

The problem of cotton supply needs ceaseless attention. The consumption of cotton in textile mills has appreciably increased, while the production of cotton has not consistently kept pace with it. The industry needs an annual import of about 6 lakh bales of long-staple cotton, but this import has to be increased if the indigenous production falls short of the annual requirements. All our planning for increasing the production of cloth for internal consumption as well as for exports will be illusory, if cotton supply is not available to the industry in adequate quantities from year to year. Cotton crop is very sensitive and the yield fluctuates from year to year depending almost entirely upon the bounty of nature. This dependence upon weather conditions can be reduced and the imbalance between the cotton supply and the requirements of the textile industry can be corrected, if the cotton area under irrigation is increased, the use of fertilisers is encouraged on an increasing scale and energetic and lasting measures are taken by the State Governments to increase the yield and to grow better varieties of cotton.

Demand for Cloth

"In view of the unsatisfactory position of cotton, it could be expected that the demand for cloth would be brisk. Strangely, however, cloth markets are depressed and there is not much demand from upcountry centres. The present cotton prices are Rs. 150 to Rs. 175 per candy higher than what they were during the last year. The dear food allowance and the wage rates have gone up. The prices of some of the store materials have also risen. All these factors have contributed to increase the manufacturing cost by about 6 to 7 per cent. There is, however, no compensatory rise in the prices of cloth, which, as you are aware, are being calculated according to the formula of the voluntary price fixation scheme. Mills which have been manufacturing and selling grey piecegoods will have a difficult time ahead, but it is hoped that the position will ease with a good monsoon.

"The excise duty on cloth has again been revised. There is some relief in duties on grey piecegoods, but, in respect of processed cloth, the increase was heavy. As a result of the representations made by the textile industry and the powerloom sector, the question was reconsidered and the Finance Minister of the Government of India has recently sanctioned a reduction in the rate of excise for mercerising, waterproofing and other processes. Excise on powerloom factories having fifty or more looms has also been considerably reduced. This gesture is welcomed by the textile industry.

Exports

"The textile industry has been asked to strive hard and to export cotton cloth of the value of 12½ per cent of its total turnover of cloth and thereby to earn increased foreign exchange which is so vitally needed by the nation. The textile industry, I am sure, is as anxious as the Government of India to do all it can to increase its exports, but international markets are very competitive and even though the mills are willing to book orders at prices below cost, they are not able to secure much business. The export incentives are highly encouraging and the textile industry must rise to the occasion and play its part fully.

"It is, however, common experience that other countries are able to quote lower rates and Indian mills are not in a position to make much headway. The mills which exported fairly large quantities during the last three years and whose heavy grey sorts were in fairly good demand are finding that the foreign purchasers consider their prices too high. Obviously, in spite of higher wage levels in other countries, the overall cost of manufacture is lower than that of Indian mills. Two factors are largely responsible for this. Firstly, the workload in Indian mills is low and, secondly, the machinery is old. The working conditions have, therefore, got to be improved. The machinery must be renovated and the workload must be properly analysed and scientifically determined. Intensive efforts will have to be made to create a favourable climate which will enable the industry to produce better cloth at lower cost. Increase in wages without increase in productivity, rising costs of raw materials and higher duties and taxes are, however, hardly conducive to create such a climate.

Progress of the Company

"The textile mills in India have generally made good profits during the last two years. Your mills have been making steady progress as may be seen from the following statement.

	1958	1959	1960	1961
Spindles worked (in lakhs)	1,649.88	1,566.75	1,829.85	2,116.23
Looms worked (in lakhs)	37.67	35.96	36.88	38.27
Average number of workers employed	16,400	15,308	16,315	17,592
Cotton consumed (Kgs.) (in lakhs)	172.54	176.54	175.90	195.55
Total yarn produced (Kgs.) (in lakhs)	152.63	148.21	151.47	170.43
Market yarn (kgs.) (in lakhs)	6.36	8.17	9.74	15.34
Total cloth produced (metres) (in lakhs)	1,303.32	1,222.33	1,315.37	1,380.10
Cloth for export (metres) (in lakhs)	74.67	182.36	178.23	157.27
Excise duty paid (Rs.) (in lakhs)	240.97	198.00	140.67	196.76
Wages, salaries and other incidental charges (Rs.) (in lakhs)	342.44	337.03	385.66	419.30
Profits subject to depreciation, taxes, bonus and other provisions (Rs.) (in lakhs)	L 66.74	P 29.68	P 112.07	P 181.60

"I recognise that many mills have shown better results and that there is good scope for improvement in the working of your mills. I might, however, point out again that the old and obsolete machinery is a serious handicap. The written down value of the plant and machinery including electrical equipment, as on 31st December 1961, was Rs. 58.60 lakhs, which works out to Rs. 933 per loom installed. This is the overall average which includes the written down value of the machinery in spinning, engineering and processing departments. From this, you will get an idea of the extent to which your plant has been worn out. It will also indicate the imperative need for renovation and rehabilitation of the old machinery of your mills.

Utilisation of Machinery

"In spite of the difficulties in obtaining cotton and the rising stocks of materials, stores and chemicals, the Company is going ahead with its plan of maximum utilisation of the machines and production of the maximum quantity of cloth and yarn. To dispose of the huge production of cloth of your mills is an enormous task and, in the present depressed market, the outlook is not quite bright for the near future. The next few months will be difficult for the selling agents who will have to exert very hard to expand the trade, to distribute the products widely and to effect the sales profitably. Of the four selling agents, Messrs. Bhagwandas Lalji & Co. have been working as the Company's selling agents since January 1960 for the processed goods other than *khaki* and Government sorts. They have made good progress in prints and the overall production in their section has considerably increased. They have also discharged their financial obligations satisfactorily. The burden on the process section is, however, going to be further increased. Grey goods are losing their popularity and it will be necessary for your mills to effect an overall change in the pattern of production as early as possible and to manufacture more and more of processed goods. Efforts will also have to be made to develop fully the exports of processed goods. Having regard to what they have achieved during the last two years Messrs. Bhagwandas Lalji & Co. may be expected to carry out their increasing responsibilities satisfactorily. I have every hope that the other three selling agents, namely (1) Messrs. Dinesh Company Private Ltd., (2) Messrs. Hanuman Textiles Agency, and (3) Messrs. Malwa Textiles will also assist the Company in its objective of efficient, sound and progressive working by carrying out their onerous responsibilities successfully.

"Following the direction given by the Central Government, the present Directors, as you are aware, were elected last year on the principle of proportional representation by a system of cumulative voting. As the office of the Directors so elected is for a period of three years, the present Directors will continue for another two years and no Directors would have to retire by rotation this year. The Board of Directors appointed a Committee of Directors in October 1961 for ensuring that the day-to-day work is carried out expeditiously and properly in accordance with the policy laid down by the Board from time to time. This Committee has been functioning since then broadly on the lines of the Committee of Directors which took up the responsibility of management of the Company in July 1958 under the chairmanship of my predecessor, Shri Dharamsey M. Khatau.

Taxation

"May I invite your attention to paragraph 1 in the Directors' report dealing with taxation matters? In my speech last year, I had referred to the assessment for the year 1949-50. The reference application made by the Income-tax Department, to refer the question of law as arising from the order of the Income Tax Tribunal has not yet been finally agreed to. The application was heard by the Tribunal recently and after some discussion was adjourned *sine die*. As the matter is heavy, it is likely to take time for an agreed application for reference to the High Court. The Company's tax appeals for 1950 to 1956 corresponding to the assessment years 1951-52 to 1957-58 are yet to be finally disposed of.

"The Articles of the Company were framed forty-two years ago. A few changes have been made therein since then, but no extensive alterations were effected, although numerous changes were made in the law and procedure relating to companies by the Companies Act 1956. A revision of the Articles was, therefore, undertaken so as to incorporate some of the compulsory provisions of the Companies Act 1956 and to bring them in conformity with the provisions of the Act and the Rules framed thereunder. It was considered advisable by the Directors of the Company to prepare a new set of Articles instead of retaining the old set with numerous alterations. The new set of Articles has been drafted on the lines of the Articles adopted by some of the leading companies in Bombay. I hope that the changes made in the old set of Articles will meet with your approval.

Efficiency Improves

"Shri S. A. Kher has been working as the Chief Executive Authority for the last four years. During this period, the efficiency of working of your mills has increased, the output has been raised and the quality of the products has improved. A programme of renovation and rehabilitation of the plant and machinery has been formulated and the sales organisation has been strengthened. The results of his devoted and energetic efforts are reflected in the steady progress in the working of your mills. I should like to express my warm appreciation of the excellent work that he has been doing for the benefit of the Company.

"The Punjab National Bank has been very helpful to use throughout. In its proposed plan of renovation and rehabilitation, the Company will need financial assistance on a yet larger scale and I feel sure that the Bank will readily extend its full support to the Company.

Labour

"Our relations with the trade union continue to be cordial and I am glad to say that, as in the past, we have been able to settle our differences in a spirit of mutual accommodation and understanding.

"I am sure you will join me and my colleagues in recognising the loyal co-operation that has been extended to the Directors by the officers, staff and workers and the hard work they have put in, and in conveying our thanks to all of them.

"Before I conclude, I wish to thank all my colleagues on the Board for the invaluable support they have always given me."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

INDIAN MERCANTILE INSURANCE COMPANY, LIMITED

PAID-UP CAPITAL TO BE RAISED

CHAIRMAN, MR. K. M. D. THACKERSEY, CONFIDENT OF MAINTAINING DIVIDEND

THE decision of the Directors of the Indian Mercantile Insurance Company Ltd. to reduce the uncalled liability per share of the Company by raising the paid-up value, subject to the consent of the Controller of Capital Issues, was communicated to the shareholders by Mr. K. M. D. Thackersey, the Chairman, in his speech at the Fifty-fourth Annual General Meeting of the Company held at Bombay on Thursday, 28th June 1962. Mr. Thackersey said that this would raise the share capital from Rs. 16.92 lakhs to Rs. 21.15 lakhs. The Directors, he added, were confident of maintaining the dividend on the increased capital. Commenting on the move for eliminating corruption and malpractices from the trade, he welcomed the scheme of the Executive Council and expressed the hope that it would put general insurance on a sound footing.

The following is the text of Mr. Thackersey's speech:

"GENTLEMEN,

"It gives me great pleasure in extending to you all a cordial welcome to the Fifty-fourth Annual General Meeting of your Company.

Better Results

"I am sure, it has been noticed by you that the aggregate results achieved during the year under review are better than in 1960. Further, your Company has been able to maintain the gross dividend of Rs. 6 per share and which works out at 15 per cent of the paid-up capital.

"I am happy to announce that your Directors have carefully examined and considered the question of reducing the uncalled liability per share by raising the paid-up value per share from Rs. 40 to Rs. 50 (subject to the approval and sanction of the Controller of Capital Issues) and with that end in view necessary steps are being taken by your Company shortly. As a result of this, your Company's paid-up capital will go up from Rs. 16,92,240 to Rs. 21,15,300. Other things being equal, your Directors feel confident to maintain the dividend of 15 per cent on the increased capital.

Reform of General Insurance

"In a recent meeting held at Simla, the Executive Committee of the General Insurance Council have devised certain effective measures to place the general insurance business in India on sound footing. Not only the administrative machinery is being reorganised and enlarged with a view to ensure proper compliance with the provisions of the Code of Conduct, but it has been decided that, with effect from 1st June 1962, no insurer shall deflect the field worker of another insurer by offering to pay a remuneration higher than his existing remuneration or higher than what is permissible under the Code of Conduct. Emphasis has also been laid that no insurer shall deflect the business of another insurer by unfair means. To enable every insurer operating in India to readjust his working to the requirements of the Insurance Act and the Code of Conduct, it has been decided to establish a Mutual Assistance Pool which in effect is expected to cushion the impact on companies of sudden loss of business which might result on account of very strict enforcement of the measures of the Code. Insurance industry is suffering from a chronic malady of rebating and calls for introduction of emergency measures. Proposed measures are new innovations intended to curb and control the evil of rebating and, with that end in view, representatives of the Administrative Machinery are being authorised to check all transactions whether of receipts or payments with effect from 1st July 1962 with a view to ensuring that transactions repugnant to the Insurance Act and the Code of Conduct are not taking place. Fire rates will be reduced by approximately 15 per cent with effect from 1st July 1962.

Welcome Move

"In substance you will have observed that, to a large extent, the above measures are an extension of the principle of non-diversion to which your Company have subscribed and you were informed about this last year. Your Company have welcomed the above measure and have decided to support them. You will appreciate that the above move on the part of insurers operating in India readily reflects the desire to clean the *augean stable* in time. I fervently wish and hope that measures as outlined and proposed by the Executive Committee of the General Insurance Council will meet with success so as to put Indian insurance industry on sound footing.

Funds

"The total funds of the Company now stands at Rs. 68,74,462.

"You will have noticed from the Directors' report that the Board has recommended a special allowance subject to the approval of the Central Government, amounting to Rs. 70,000 by way of bonus to the members of the staff at the head office and branches in the usual manner.

"Before I conclude I wish to take this opportunity of thanking our agents, field workers and clients who have continued to extend their patronage to the Company and officers and staff of the Company for the work that they have done during the year under review. I would once again earnestly appeal to them to work still more actively and enthusiastically for the development of the Company's business."

Note: *This does not purport to be a report of the proceedings of the general meeting.*

JUGGILAL KAMLAPAT JUTE MILLS CO., LTD.

PROBLEMS OF JUTE INDUSTRY IN U.P.

SPEECH OF CHAIRMAN, MR. P. D. SINGHANIA

ADDRESSING the Thirty-second Annual General Meeting of the shareholders of Juggilal Kamlapat Jute Mills Company Ltd., Mr. P. D. Singhania, Director, reviewed the problems of the jute industry, in general, and of that in U.P., in particular. He said that the jute industry in U.P., in addition to sharing the common problems of the industry, had also to contend with the special problem arising from the disinclination of labour in Kanpur to substitute holidays with Sundays, with the result that the working days of Kanpur mills were 300 days per year, as compared with twelve to thirteen days more worked by Calcutta mills. Moreover, Kanpur workers were reluctant to work 22½ hours a day in three shifts on modern machinery, whereas their counterpart in Calcutta put in 23½ hours in three shifts. This resulted in loss of production and extra payment to workers for six hours a week.

The following is the full text of Mr. P. D. Singhania's speech:

"LADIES AND GENTLEMEN,

"It gives me great pleasure to welcome you to this thirty-second annual general meeting of the Company. The Directors' report and accounts have been in your hands for some time and I ask your permission to take them as read.

Year of Crisis

"The year 1961 was again a year of crisis for the jute industry as a whole. This crisis could be traced to two consecutive short jute crops in 1959-60 and 1960-61. Efforts were made by the Indian Jute Mills Association to meet this crisis by reducing the working hours from 48 to 45 and by introducing quota system for jute the purchases from October 1960. In January 1961, the working hours were further reduced to 42½ hours a week and from March 1961, maximum prices for jute were fixed. This helped in checking the soaring jute prices but could not solve the problem of jute shortage. The industry had to resort to block closures for one week each in June and July 1961.

"Your company had also to share these common misfortunes. You are aware that, being situated far from the jute-growing centres, we have to purchase and store our annual requirement of jute during the jute season. Apart from the overall shortage of jute during the jute season, and abnormally high prices, the squeeze on credit on jute and jute goods by the Reserve Bank also stood in our way of purchasing the year's requirement and the mills had to be closed for 12½ days in July 1961.

Fresh Problems

"With the advent of the new crop, which was a bumper one, fresh problems arose in the industry. Jute prices started falling rapidly and the Indian Jute Mills Association had to introduce quota system to purchase at least a certain fixed quantity of raw jute per week to maintain prices.

"It is accepted on all hands that it is necessary to provide proper incentive to the cultivator to sow sufficient jute as a long-range solution of the problem of short crops. The prices of jute, however, cannot only be governed by Indian conditions. The prices of jute in Pakistan have also to be kept in view in addition to maintaining reasonable prices to eliminate the risk of impetus to foreign manufacturers which will ultimately affect the exports of jute manufactures from this country. It is equally necessary to have reasonable carry-over to protect the industry against crop failures. To solve these difficulties an association named as Jute Buffer Stock Association has been formed to purchase surplus jute to maintain prices under the guidance of the jute Commissioner.

Labour

"Coming to the subject of labour, it will not be out of place to mention the characteristics of the Kanpur labour which keep the mills in Kanpur at a disadvantage, as compared to Calcutta. In the first place, Kanpur labour has disinclination to substitute holidays with Sundays with the result that, whereas the working days of Kanpur mills are only about 300 days per year, the Calcutta mills work for 312-313 days. In the second place, the adamant attitude of Kanpur labour to work 22½ hours per day in three shifts on modern machinery, instead of the 23½ hours put in by labour of Calcutta, results in the loss of six hours' production per week as well as loss by way of extra wages of 1½ hours' work per day because the third shift has to be paid for 8 hours while it actually works only 6½ hours per day. This has resulted in loss in productivity and an extra payment of six hours per week, as compared to our counterparts in other regions.

Higher Wage Bill

"In the year under review, despite representations, the Central Wage Board for Jute Industry recommended an All-India Interim Relief of Rs. 2.85 per worker per month from 1st October 1960 and Rs. 3.42 per worker per month from 1st January 1961, all payable in 1961. This was done, despite the fact that while the Calcutta workers had been getting a static D.F.A. of Rs. 32.50 per month since 1955, the Kanpur workers had been paid Dearness Allowance varying with the Cost of Living Index and thereby had been earning Rs. 18 per month more than their 1955 wages, thus costing the Company Rs. 7,85,000 per annum more in D.F.A. Now the implementation of this interim relief will further increase our wage bill by more than one lakh of rupees every year. Except for these problems on the labour front, labour has remained peaceful throughout the year.

Modernisation

"Coming to renovation, you will be pleased to know that the modernisation upto the spinning stage has been completed and the quality of yarn has considerably improved resulting in improved conditions of work. To maintain the output, the Company has ordered further new machinery to replace the Spinnbau German plant which was not giving satisfactory service. As a next step, your Directors are planning to replace some of the old machinery of the preparing department for further improvements.

"As you will observe from the annual accounts, Company's sales have improved from Rs. 1.48 crores to Rs. 2.91 crores in the present year and the working results are also encouraging. After meeting the depreciation, the Company has been able to provide Rs. 2,75,000 as development rebate reserve and also pay Rs. 87,750, against arrears of dividend on preference shares upto 1955.

Sales Tax

"Th U.P. sales tax at 4 per cent is still working as a stumbling block to our sales in this State. We have lost completely our market to sugar mills and other consuming clientele. The Central Government has further imposed excise duty on jute goods the burden of which on the U.P. industry alone will be over Rs. 40 lakhs against a total estimated revenue of Rs. 3.1 crores. The U.P. mills have to depend entirely on interior demand and have no export market which is exempted from the excise duty. It is further important to note that, while our manufactures are subject to Central sales tax and excise, the jute manufactures of Nepal are free from these taxes and are, therefore, in a position to freely undersell in our markets. This has indeed created a serious position for the industry in this State which for the last several years had been maintaining employment with successive losses and no return on capital invested.

Chequered History

"To sum up, the career of U.P. jute industry has always been a chequered one and, with the encouraging results of 1961 in hand, let us hope that better crop and better trade conditions in 1962 may enable the industry to sustain against the hurdles and odds that it has to face on account of its geographical situation.

"Before I conclude, I must express my sincere appreciation of the valuable services rendered by the management for their effective efforts in tiding over critical times. The officers and staff and operatives are all to be congratulated for their hard work and co-operation during the year."

Note: *This does not purport to be a record of the proceedings of the annual meeting.*

GERMINABILITY OF JUTE SEED

The immediate setting up of artificial drying units supplemented by moisture testing metres in the jute seed multiplication farms of the States was recommended by the Executive Sub-Committee of the Indian Central Jute Committee at its meeting held at Calcutta on 20th June under the chairmanship of Dr. B. P. Kedia, Vice-President of the Committee. The moisture content in jute seeds has an important bearing on their germination properties. It is generally accepted that the moisture should not exceed 10-12 per ent. Hitherto, it would appear, there has been no organised and systematic check on the moisture content of jute seeds at storage or distribution centres before they are issued to the cultivators. Random tests have often shown the moisture percentage as surprisingly high even in the month of December.

In order to guarantee that the moisture content is at the correct level which will not deteriorate the seed in storage and transport, the sub-committee felt that the present method of sun-drying seeds was not enough in some cases and it would, therefore, be worthwhile to construct at each of the seed collection centres an artificial drying unit, which is easy to design and relatively inexpensive to build. Since even after the drying of seeds large variations in their moisture content are liable to occur during storage with consequent adverse effect on germination, the sub-committee recommended that the jute seed multiplication farms of the States as well as the Central nucleus seed farm of the I.C.J.C. should each be supplied with a moisture testing metre so as to be able to keep periodic checks on stored seeds. The moisture metre in an inexpensive instrument of simple construction, designed by the Indian Jute Mills Association Research Institute.

It is also desirable, according to the sub-committee, that the storage godowns of jute seed dealers be regularly supervised to ensure proper ventilation, stacking etc., and the dried seeds packed and sold to the cultivator in sealed and certified containers of appropriate size. The package should indicate the numerical rating in respect of the germination capacity of the seeds.

Managing Agents: — LIONEL EDWARDS (PRIVATE) LTD.

TRIVENI ENGINEERING WORKS LIMITED

CHAIRMAN'S ANNUAL STATEMENT

ADDRESSING the First Annual General Meeting of the shareholders of the Triveni Engineering Works Ltd. at the registered office of the Company at National Insurance Building, First Floor, 5 Parliament Street, New Delhi, at 10-30 a.m. on 29th June 1962, the Chairman made the following statement:

"It is my pleasant duty to welcome you to this first meeting of the shareholders of the Triveni Engineering Works Ltd. This Company was incorporated on the 7th of January 1961, during an exciting and momentous period in the history of an emergent and fast developing India. The association of Indian and British interests in the promotion of this Company truly reflects the dynamic part played by friendly agencies from abroad in our country's rapid economic progress. The continued technical help and the effective support available at all times and in unstinted measure from our foreign collaborators, to my mind, makes this collaboration of ours outstanding even in the field of such associations. We are looking forward to fruitful labour in continued brotherhood together.

Plan Shortages

"The country has just seen the completion of its third general election and the formation of a new Central Government, and in the States. The second year of the third Five-year Plan has seen critical shortages emerge in basic industrial needs such as coal, transport and power. We trust the problems connected with these will be adequately handled in the near future.

"With production in the steel plants rising, the position of steel is easing. However, for the engineering industry, to our mind, the supply of special steels and steel-castings at this stage presents the foremost problem.

"The sugar industry produced a record of just over 3 million tons of sugar in the year 1960-61, ending it with a surplus of over one million tons. This resulted in the postponement of licensing for expansion of the existing units and erection of new plants in the co-operative sector. This has resulted in the market for sugar machinery becoming very competitive although we hope that there will be a market for quality products for modernisation and rehabilitation of the existing plants. This position has highlighted the necessity for a diversified manufacturing programme which your Company has recognised from the very beginning and has followed up appropriately.

Sugar

"The production of sugar during the current season is estimated to be less than during the last year and if the efforts being made to export sugar during the current year are successful, the surplus at the end of this year may well not exceed the country's requirement for the normal stock-in-trade by a large margin.

"The foreign exchange shortage still continues. Export promotion is being actively pursued in all quarters but it is my duty to point out the necessity for full provision of foreign exchange required to import components according to phased programmes submitted to the Government. Not only is the success of new concerns such as ours connected with this, but also further development necessary to reduce those very imports presently required.

"In this statement, I have briefly dealt with the general economic situation in the country with particular reference to the engineering industry as applied to our concern. Requisite details of the progress of your Company are given in the Directors' report.

"I now declare the meeting open."

Note:—*This does not purport to be a report of the proceedings at the annual general meeting.*

JAIPUR METALS AND ELECTRICALS LIMITED

CHAIRMAN, MR. R. H. KAMANI STRIKES AN OPTIMISTIC NOTE

NEW LINES OF MANUFACTURE UNDERTAKEN

ADDRESSING the shareholders of the Jaipur Metals and Electricals Ltd. at the Eighteenth Annual General Meeting of the Company, held at Jaipur on 29th June 1962, Mr. R. H. Kamani, Chairman, envisaged a bright future for the Company. With the provision for expansion in power generation and extension of rural electrification in the third Five-year Plan, the demand for the products of the Company, according to him, would find an expanding market. The Chairman disclosed that the Company had obtained an industrial licence for the manufacture of all-aluminium conductors, A.C.S.R. conductors, cotton silk and paper-covered wires and strips and enamelled copper wires.

The following is the full text of Mr. Kamani's speech:

"GENTLEMEN,

"It gives me great pleasure in extending to you all a cordial welcome on behalf of my colleagues and myself to this eighteenth annual general meeting of your Company.

"The Directors' report, audited profit and loss account and the balance-sheet for the year ended 31st December, 1961, have been in your hands for some time and, with your permission, I propose to take them as read.

Accounts

"An examination of accounts will show that the year just passed has been a record one for the Company. The profits, before providing for depreciation and Managing Agents' remuneration, have recorded marked increase over the previous year of working. Likewise, turnover has also increased to Rs. 1,60,11,964, as against Rs. 1,46,95,507 in the last year.

"Allocations include Rs. 1,02,919 for the Managing Agents' remuneration, as against last year's remuneration figure of Rs. 71,611 and Rs. 4,33,709 for depreciation, as against Rs. 3,82,092 for the previous year. The provision for taxation has been increased from Rs. 3,58,067 to Rs. 3,90,685 and the development rebate reserve has increased from Rs. 81,433 to Rs. 3,05,000. Provision for gratuity absorbs Rs. 20,000, as against Rs. 10,000 in the previous year.

"The Directors have recommended dividends of 10 per cent on ordinary shares and 40 per cent on deferred shares (subject to deduction of tax at source), as against the previous year's 9 per cent and 25 per cent (subject to deduction of tax at source), respectively. The Board has also recommended a dividend on preference shares. After providing Rs. 3,72,640 for proposed dividends, a sum of Rs. 7,561 has been carried forward against Rs. 5,645 brought in.

"By the new Finance (No. 2) Bill 1962, introduced in the Lok Sabha on 23rd April, 1962, the corporation tax has been increased from 20 per cent to 25 per cent. This step on the part of the Government of India would lead to the reduction of the Company's surplus which would otherwise have been useful for creating reserve for the development programme of the Company.

Record Production of House Meters

"You may recall that, in the year under review, the production of Jaipur house service meters has reached a record figure of 1,76,020, as against the production of 1,34,500 in the previous year. The production of Siemens type of meters in collaboration with Siemens of Germany was taken in hand and the production during the last quarter of the year under review was 6,400 meters. As far as the working of Metals Division is concerned, the Company could not increase the production due to the shortage of raw materials, especially copper owing to paucity of foreign exchange and drastic cut in quota of raw materials.

Expansion and Development

"You will be happy to know that the Company has already planned to undertake manufacture of jewel bearings and important components like cyclometers and magnets so as to cover the entire manufacture of components.

"After the successful completion of the Second Five-year Plan, which has helped to strengthen the foundation and stimulated industrial and economic growth, the country has entered into the Third Five-Year Plan period. In a way, this is the most crucial period in the industrial, economic and therefore social life of the country, as the foreign exchange reserves have been extremely low, and the prospects of getting adequate amount from the Aid-India Club at the moment are not very bright. It will require tremendous efforts on the part of the Government, the industry and the trade to emerge successfully from this crucial period. But I am hopeful that, with greater efforts, we shall pull through it. As, however, your Company has decided to make all the components, I may assure you that our progress will not be affected by this crisis.

Capacity

"During the Third Five-Year Plan, the power supply will play a significant role towards the achievement of industrial development as the addition to the country's power system will be to the tune of 12.69 million kw., representing an increase in installed capacity of 123 per cent. As a part of the development programme, it is proposed to install a net of transmission lines to the extent of 1,50,000 circuit miles and to electrify 43,000 villages and towns in the country. This development of power supply implies that your Company will have still better future. It would not be out of place to mention here that the installed capacity, as registered with the Government, for Single Phase House Service Meters by the end of 1961 was 4,44,000 Nos. on single-shift basis. The total production in the country for 1961 was of the order of 6,24,113 Nos. This year's capacity has been further licensed to the extent of 1,02,000 Nos., bringing the total registered capacity to 5,46,000 Nos. on single-shift basis. When this additional capacity goes into production the total demand of single-phase meters will be adequately met and I may assure you that your Company will remain in the forefront. It is a matter of gratification to note that the Government have recently decided not to increase this capacity any further. With a view to enlarging the field of operations, we have obtained industrial licence for the manufacture of all aluminium conductors and A.C.S.R. conductors, cotton silk and paper-covered wires and strips and enamelled copper wires. With a view to implementing the scheme of diversification, your Company has approached the Industrial Finance Corporation of India for a substantial loan. It has also increased its authorised capital from Rs. 50 lakhs to Rs. 1 crore by creating an additional equity capital of Rs. 50 lakhs. Out of this, 25,000 equity shares have been already issued to the existing shareholders with a premium of 15 per cent by way of right shares. You will be pleased to know that this issue has met with complete success and has already been fully subscribed.

Personnel

"In view of the progress in technology, the Company's technical staff is equipped with necessary training and it will have further personnel fully trained in the factories of the collaborators in the lines of new schemes which your Company propose to undertake.

"I am grateful to you for the encouragement and backing your Company has received from you all from time to time. I am also grateful for the wonderful co-operation of the workers and the members of the staff for the good efforts they have made in the past for the betterment of your Company.

"Thank you."

N.B.—*This does not purport to be a report of the proceedings of the annual general meeting.*

SELECTED SATGRAM COLLIERIES LIMITED

RECENT PRICE INCREASE DISAPPOINTING

CHAIRMAN, MR. S. D. SHETHIA'S SPEECH

THE Government's recent decision to sanction marginal increases in coal prices and fix a ceiling price for certain grades has disappointed the coal industry and the investing public. As the industry's needs for financing its expansion plans are not being fully met, the chances of its third Plan target being realised do not appear to be very bright. This view was forcefully expressed by Mr. S. D. Shethia, Chairman, Selected Satgram Collieries Ltd., in his speech at the Seventeenth Annual General Meeting of the Company held at Calcutta on 29th June, 1962. Mr. Shethia also laid emphasis on the other preconditions for expansion and development of the industry—increase in coal haulage capacity and availability of more power, explosives and essential stores.

The following is the text of Mr. Shethia's speech:

"In welcoming you all to the seventeenth annnual general meeting of the Company I take great pleasure. May I have your permission in taking as read the audited statement of accounts and the Directors' report for the year ended 31st December 1961 which are in your hands for quite some time.

"At the very outset, I am very happy in welcoming to your Board, Sri Mathuradas M. Parekh, Chairman of the Mangaldas Group of Textile Mills and a well-known industrialist of Ahmedabad, and Sri B. N. Banerjee, a reputed industrialist of Calcutta, who is associated with some of the leading West Bengal Government's companies. I am sure, the Board will have the benefit of their wise counsel and mature guidance.

Raisings and Despatches

"Raisings and despatches during the year under review were 3,69,427 tonnes and 3,49,043 tonnes respectively. Thus raisings were up by 85,576 tonnes and despatches by 85,112 tonnes in spite of many difficulties. Paucity of wagons especially owing to remodelling of wagon yard resulted in higher stocks which were 16,105 tonnes as on 31st December 1961.

Profit and Dividend

"The profit before taxation has been Rs. 6,49,524 against Rs. 5,17,915 of last year. After providing Rs. 2,38,000 for taxation and transferring Rs. 1,11,000 to reserves, your Directors recommended a final dividend of Rs. 6 per share on 19,500 equity shares and *pro rata* Rs. 1.16 nP. per share on 20,500 newly issued equity shares. The rate of dividend thus is Rs. 14 per cent gross and Rs. 9.80 per cent nett on doubled capital.

Mining Difficulties

"Owing to sudden detection of gassyness, New Satgram Colliery, the biggest of our units, was compelled to close down the mining operations completely in the Satgram Seam for about 5½ working days, and partially for 25½ working days, by the Department of Mines. This put heavy strain on our resources—of brain, brawn and bullion.

"In South Joyramdanga Colliery, we had water trouble during the monsoon, resulting in imposition of restriction by the Department of Mines. Necessary steps have been taken to remedy this to avoid, if possible, recurrence in future.

"Reconstruction and repair work had to be undertaken at Majri Colliery which has been taken under raising contract from October 1961 until such time as the owners get permission from the Government to transfer the mine to us.

"All our collieries except New Jamuria are raising coal by 'development' where we have been going farther in the mine which requires a continuous dose of additional capital.

Land Acquisition Problem

"The proposal of the company for doing the depillaring work has been thwarted by the recent judgment of the Supreme Court on land acquisition by the State for the purpose of public utility work of an undertaking, simply because it makes profit. This has been pointed out to the Government by all mining associations and even by the Federation of Indian Chamber of Commerce and Industry, who have amply stressed the urgency of removing this obstacle. Let us hope Government pays immediate attention to this problem and solves it for industrial expansion of the country. This problem for the mining industry and particularly the coal industry assumes greatest magnitude for obvious reasons. It would be advisable for the Government to tackle this without slightest delay.

Incentive Scheme

"We have always effectively wished to be up-to-date in our approach to this problem of the staff and the labour. The amenities about which I had mentioned last year, ladies and gentlemen, have all been provided at our New Satgram Colliery. We intend extending them to our other units also.

"Your Company is concentrating upon working an up-to-date production incentive scheme for encouraging better zeal and efficiency amongst workers. Once this method has been introduced scientifically, I have great hopes that it would be better for labour, management and you, the owners of the Company.

Industry's Needs

"Hunger of industrial India for coal could not be easily satiated and hence the revision of the target of production of the third Five-year Plan from 97 million tonnes to 110 million tonnes. The industry has on its part spontaneously responded to the Government's call for increased production. There are, however, a number of difficulties faced by the industry.

"The most important of all the obstacles is the present coal price, which does not allow to plough back adequate reserves from the profits for further expansion. It does not even permit declaration of dividend at a level that would attract the general public to invest in this industry, where demand by far exceeds the supply.

"The industry has of late, however, had a sympathetic hearing from the Hon'ble Shri K. D. Malaviya, the Union Minister for Mines and Fuel, who assured reasonably substantial increase in price against the industry's demand for a flat rise of Rs. 5.43 nP. The reaction of the investing public has been indicated by upward movement of the coal share prices. Let us hope that this rise in price is granted soon irrespective of the quality of coal produced, for the simple reason that the cost of production has very little bearing on the grade of coal.

"The other conditions precedent to fulfilment of our cherised dream of meeting the country's huge demand for coal are stepping up of our present coal haulage capacity and making available increased amount of electricity, explosives, and essential stores. The Government, I understand, has been considering all these points seriously.

Company's Development Plans

"Despite all these heavy odds, in 1961 monthly output of New Satgram was 19,550 tonnes. South Joyramdanga 8,163, New Jamuria 1,908 and Majri 4,658 tonnes. By the end of this year we hope, subject of course to the difficulties which have been repeatedly pointed out by our industry, to do a monthly output of about 50,000 tonnes.

"Development work of Dishergarh Seam requires large capital. With a view to see that development of Dishergarh Seam would give us adequate return on capital, your Directors have decided to give the work of preparing a preliminary project report to Messrs. Cekop—Poland and Messrs. Sofremines—France. Messrs. Cekop have been engaged for deep mining by the N.C.D.C., a Government of India undertaking, and Messrs. Sofremines is a firm of French consultants employed by the World Bank to investigate the working and efficiency of Japanese coal industry. Upon receipt of these preliminary project reports, the Company's experts would then decide which one of the two is better and practicable.

"Regarding transfer of Majri Colliery, I am glad to report that Government of Maharashtra whose attitude has been very realistic to the coal situation, have strongly recommended to the Central Government and requested their approval. Although the coal mined from the present seam is grade III priced at Rs. 22.08 nP. and Rs. 21.09 nP. per tonne for steam and slack coal respectively, seam sample has been found to be of a higher quality and your Company has since applied to the Coal Board for regrading this coal. With upward regradation, we expect this coal to fetch us .59 nP and Rs. 1.32 nP per tonne per one higher grade respectively. The coal reserves of this colliery are approximately 9.3 million tonnes and we can reasonably produce about 15,000 to 25,000 tonnes monthly in about two years' time. The prospect of this colliery appear to be exceptionally bright.

"Your Directors have decided to establish an Engineering Works with a smaller capital outlay in view of certain legal hindrances mentioned by me last year. We are negotiating with quite a few foreign manufacturers of repute. I trust, in years to come, this line will also develop.

Management Aspects

"A substantial increase of capital was made during the year under review. I am happy once again that you have shown your confidence in the management. We hope to express our gratitude by rising up to it.

"A couple of senior, capable and first-class mining managers and mechanical engineers have been added to our technical staff. The zeal and earnestness shown by the staff both at collieries headed by Sri J. Singh, General Manager of the Collieries and at the registered office, to cope with the contingencies was most commendable. I hope you will join me in placing on record our sincere appreciation to them.

"It is my duty to mention the remarkable role played by the Managing Agents of your Company during their heavy strain not only in arranging for higher finances at reasonably lower rate of interest but also in providing from time to time advances from their own resources and forgoing customary brokerage for the year 1961, which we had approved of by special resolution. They have even persuaded their associates to do the same. I am sure you all will join your Board of Directors in recording hearty thanks to them.

"In conclusion, on your behalf and mine, I express my sincere gratitude to members of the of Board of Directors who have always given their very able and mature guidance.

"With your permission, I now propose that the report of the Directors and the audited statement of accounts for the year ended 31st December, 1961 be hereby approved and adopted.

Coal Prices Increase

"While these words were under print, the Government of India have by special notification in the *Extraordinary Gazette* increased the prices of coal ranging from Rs. 1.50 nP on the selected grade to Re. 0.38 nP on grade No. II. The last mentioned price is the recent conversion into ceiling price. This has disappointed the coal industry in its expectation and also the investing public, as reflected in the coal share prices.

"Let us hope, though the chances do not appear to be very bright, that the production targets of the third Five-year Plan will be realised."

Note:—*The aforesaid note does not purport to be a record of the proceedings of the annual general meeting. It is merely an abstract from the Chairman's speech. The detailed speech is available at the Company's registered office.*

ENFIELD INDIA LIMITED

HIGHER OUTPUT OF MOTOR CYCLES—SCOOTER PRODUCTION COMMENCES

CHAIRMAN, MR. K. R. SUNDARAM IYER'S SPEECH AT ANNUAL MEETING

AN encouraging picture of the progress of the Enfield India Ltd. was given by Mr. K. R. Sundaram Iyer, Chairman, in his speech at the Sixth Annual General Meeting of the Company held at Madras on Friday, 29th June 1962. The Chairman told the shareholders that the Company had been wise to have pushed through the phased programme undertaken by it for the substitution of imported motor cycle components by indigenous products because the present foreign exchange situation would have made its completion difficult. The Company, he disclosed, had now reached a stage where production and productivity could be increased without difficulty.

The following is the full text of Mr. Sundaram Iyer's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the sixth annual general meeting of the Company. The Directors' report and the statements of account for the year ended 31st December 1961 have been with you for some time and, with your permission, I shall take them as read.

"During the year under review motor cycle production increased by about 20 per cent. The sales turnover was higher at Rs. 119.68 lakhs. During the previous year, it was Rs. 90.58 lakhs. The profit before depreciation increased from Rs. 8.49 lakhs to Rs. 11.13 lakhs. As mentioned in the Directors' report, the profits would have been still higher if the Company had been in a position to increase its selling prices earlier than September 1961 to make good the continuous increase in the cost of various raw materials since the prices were fixed three years back.

Teething Troubles Over

"At the last annual general meeting, I dealt in some detail on the implications of the phased programme which your Company had undertaken for the substitution of imported motor cycle components by those made in the country. With the virtual completion of this programme in 1961, your Company has reached a stage where production and productivity can be increased without being hampered by the inevitable teething troubles involved when large number of new components are taken up for indigenous manufacture. I am glad to inform you that, during 1962, the output of motor cycles can be expected to register a further increase of 15 per cent, while the sale volume will be aided by the marketing of scooters shortly. The working results for the current year will, therefore, be better than those for 1961.

"In the present context of acute scarcity of foreign exchange, the policy of your Company in having gone through the phased programme at a fast pace has been fully justified. Of course, we still require foreign exchange for some raw materials, gear box and proprietory components not yet available in the country. But, without the completion of the main phased programme, the dependence on foreign exchange would have been considerably more. It is expected that, in due course, these proprietory parts also will be available in the country from ancillary industries. The manufacture of gear box for motor cycles will be taken up in 1963 along with the gear box for the scooter.

Impact of New Taxes

"The automobile industry purchases a large variety and number of materials for its production. For example, your Company keeps in stock about 6,000 items. It would appear that, in a developing economy such as ours, there will be a continuous increase in the cost of various materials. The new and increased excise duties levied in the recent budget have stepped up the cost of various kinds of materials. Because the area and extent of their application is so wide, it will take some time even to assess their full implication. Therefore, what portion of the benefits of higher productivity and, consequently, of higher profitability, expected in the motor cycle production from 1962 onwards, will be available to the Company, is dependent upon how much the Company is obliged to absorb the increases in the cost of materials. Representations have been and are being made to the Government for suitable revisions of selling prices so that increases in costs due to reasons beyond the Company's control can be absorbed. It is hoped that early decisions in this regard will be taken by them.

"In passing, I would like to make a reference to a factor in our country applying to industries such as ours. It is the necessity of having to hold larger inventories in order to ensure uninterrupted availability of raw materials and bought-out components.

Scooter Project

"You have already heard the gratifying information that the production of our scooter, which has been very highly spoken of by all those who had an opportunity to see it, has commenced. They will be in the market in about a month or so. Your Company has been the pioneer in the country in the powered two-wheeler field. The implementation of the scooter scheme will enable your Company to continue to play a leading role in catering to the growing demand in the country for motor cycles and scooters. The Villiers engine is used in our scooter. The Company will, in due course, fit to the lightweight motor cycle also the Villiers engine in place of the present engine. This standardisation, in addition to resulting in economies in the production of engines for both motor cycle and scooter, has also the important advantage that it would enable your Company to alter, at short notice, the ratio of production of lightweight motor cycles and scooters.

New Industrial Estate

"The arrangements for undertaking the manufacture of Villiers engines for industrial and agricultural purposes are going apace. The Company has been licensed for a production of 15,000 engines per annum on a single-shift basis. There is already a large unsatisfied demand in the country for these engines; but the existing demand itself is considered to be only a fraction of what it would be in the coming years. Villiers engine is an international leader in this field. As stated by me at the last annual general meeting, the operations of your Company with regard to this line will be restricted to assembly and testing. The components of these engines will be obtained from the Industrial Estate of ancillary units which your Company has sponsored. This arrangement is mutually beneficial. With the guidance and technical know-how of your Company the ancillary units will be able to establish and stabilise themselves within a short time. The advantage to your Company lies in the fact that it could undertake this important new line without the large increase in capital that would have been otherwise necessary. The fixed assets employed by the ancillary units in the Industrial Estate will be about Rs. 75 lakhs. The Company has to provide only tooling and machines for the maintenance tool room. I should mention here about the considerable guidance and financial assistance which both the Central and State Governments are rendering to facilitate the establishment and healthy growth of these ancillary units. Production and marketing of the engines are scheduled to commence in the first half of 1963.

Labour Relations

"During the year under review industrial relations continued to be cordial.

"I would like to take this opportunity to offer our sincere thanks to the Government of India, the Government of Madras and our U.K. collaborators for their continued guidance and assistance.

"Appreciation is due to the selling agents, dealers, sub-dealers and service points, and the workmen, staff and officers of your Company for having made their contribution to the results of the year under review."

Note: *This does not purport to be a record of the proceedings of the above annual general body meeting.*

UNION CO-OPERATIVE INSURANCE SOCIETY LTD.

GOVERNMENT UNHELPFUL, SAYS CHAIRMAN, MR. J. L. MEHTA

ADDRESSING the Thirteenth Annual General Meeting of the Union Co-operative Insurance Society Ltd., held at Bombay on Thursday, 28th June 1962, Mr. J. L. Mehta, Chairman, said that lack of Government co-operation inhibited the growth of co-operative insurance. He pointed out that, while the Society had to compete with companies in both the private sectors, the Government was taking away all co-operative business as and when the co-operative institutions received financial aid from the L.I.C. or the I.F.C.

Reviewing the progress of the Union Co-operative Insurance Society during the year, the Chairman said that the combined premium income in all the departments increased to Rs. 27,37,672, a considerable rise over that in the previous year. Over and above the usual fire, marine and other insurance business, the Society also undertook such other types of insurance as cattle and crop insurance. The claims ratio in the cattle insurance department was well maintained. The Chairman hoped that the business would increase as the scheme became more popular in other States. Regarding crop insurance, however, he said that, unless the Government extended its support, it was no use expanding this business.

Co-operation Suffers

The Chairman said that it was difficult to say anything definite about the future of general insurance. As far as the Society was concerned, it had to face competition from State Insurance Fund schemes and L.I.C. subsidiaries on the one hand and from the joint-stock companies, with their large financial resources and help from big business houses, on the other. The attitude of the Government was to take away all co-operative business as and when they received financial help from the L.I.C., I.F.C., or Government. Proceeding, the Chairman said that the future growth of business would be affected by the revision of the Code of Conduct which would work to the detriment of smaller companies and co-operative insurance societies. The reduction in fire premium rates might also affect the premium income in the next year. The profit of the Society during the year under review was substantially higher but the dividend was maintained at 6¼ per cent, same as in the previous year. The overall claim experience was satisfactory, the experience of the co-operative sector was not good. One of the reasons for this was the policy of Government of taking away all paying, non-hazardous co-operative business to the Pool or to L.I.C. subsidiaries and leaving the hazardous business to the co-operative insurance society. Sugar factories, housing societies and all other institutions, which were financed by L.I.C. or I.F.C., Central and/or State Governments, had to insure with the Pool 75 per cent of which went to L.I.C. subsidiaries, the balance being divided among all the Indian insurance companies.

Concluding, the Chairman informed the shareholders that the Directors proposed (1) to establish Regional Committees, (2) invest in securities of as many States as possible and (3) to have the Society's own building in the principal towns of the States.

BOMBAY 1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books and Register of Members of the Bank of India Ltd. will be closed from Monday the 23rd July 1962, to Saturday the 11th August, 1962 (both days inclusive).

The Dividend will be payable on and after Monday the 20th August, 1962.

By Order of the Board of Directors,
S. J. RUSTOMJI,
Acting General Manager.

BOMBAY, *2nd July*, 1962.

NON-FERROUS METALS INDUSTRY

SCARCITY OF RAW MATERIALS INHIBITS GROWTH

THE non-ferrous metals industry has been in the protected list for the last fourteen years. The producers, however, have asked for continuance of tariff protection for a further period of three to five years. It is well known that in the absence of sufficient indigenous sources of non-ferrous metals, the domestic industry has been subjected to great hardship in securing basic raw materials. The restrictive import policy has further accentuated the difficulties of the industry. The protected items of semi-manufactures of non-ferrous metals and alloys are lead sheets (other than sheets for tea chests), zinc sheets, zinc strips, copper rods (other than electrolytic copper rods), copper pipes and tubes, brass rods and brass pipes and tubes. But the industry has now asked for enlarging the scope of protection by including three more items, namely, highly polished zinc, highly polished copper sheets used in photo engraving and copper printing rolls for textiles industry. Of these items, the actual manufacture has been commenced only in the case of highly polished zinc. But the production of copper sheets is still being tried out only on an experimental scale and that of the third item is not likely to begin till the end of next year.

It may be recalled here that in 1948, when protection was first granted to the industry, the scheme had covered non-ferrous alloys and manufactures, besides semi-manufactures. Following the tariff inquiry in 1949, however, alloys and manufactures were deprotected, leaving only semi-manufactures in the field. Protection granted to various types of semi-manufactures in 1959 will expire at the end of 1962. The Tariff Commission, therefore, has taken up the customary investigation of the industry's claim for continuance of protection beyond the end of this year. In his opening speech at the public inquiry held in Bombay on 26th June 1962, Mr. K. R. P. Aiyangar, Chairman of the Commission, observed that apart from producers, consumers were also in favour of extending protection for a further period. Consumers, however, complained that "the prices charged by the manufacturers are higher than landed costs at which imports are made or could be contracted."

Virgin Metals

So long as the supply of basic raw materials, namely, non-ferrous metals, does not improve, the cost of production is bound to be high. The raw materials required for the production of the semi-manufactures under consideration are copper, zinc and lead. Barring small indigenous production of copper and lead metals and zinc concentrates, the requirements of the non-ferrous metals industry for these virgin metals are imported. The Geological Survey of India and the Indian Bureau of Mines, however, have been taking steps to locate new deposits for these metals and expedite the exploitation of workable deposits. According to the Chairman, indigenous production of copper was only 7,674 tonnes in 1959, which rose to 8,910 tonnes in 1960, but declined to 8,336 tonnes in 1961. The production of lead was 3,958 tonnes in 1959, 3,745 tonnes in 1960 and 3,664 tonnes in 1961 and zinc concentrates 9,978 tonnes in 1959, 9,787 tonnes in 1960 and 9,253 tonnes in 1961. In this connection, the Chairman observed that the National Mineral Development Corporation was setting up a plant at Khetri (Rajasthan) to produce copper metal with a capacity of 22,000 tonnes per annum, and expected to commission it by 1964. A zinc smelter is also under erection at Udaipur, which is expected to be commissioned in the same year. Indigenous production of the virgin metals is expected to increase in future and reach by 1965-66, 32,000 tonnes of copper, 18,000 tonnes of zinc and 8,000 tonnes of lead. Even then, the indigenous production, Mr. Aiyangar pointed out, would be far short of the domestic demand "which is rising at a faster rate and, consequently, the bulk of the country's requirements will have to be met by imports." The manufacturing industry has strongly represented to the Commission that it has not been able to obtain its requirements of raw materials even to work single-shift capacity.

Despite the shortage of raw materials, the industry has shown signs of fairly steady improvement. Since the last enquiry in 1959, three new units have come into the field, one for copper-brass tubes, another for copper-brass rods and tubes and the third for lead sheets. But one unit, in the meantime, ceased to manufacture the protected items. There are now nine units manufacturing one or more of the protected items. Eight of these are registered with the Development Wing, and the other is a small-scale unit. In 1959, there were only six organised units, besides one small unit. The present aggregate capacity on single shift is 4,156 tonnes for copper/brass rods (three units), 4,121 tonnes for copper/brass pipes and tubes (three units), 3,840 tonnes for lead sheets (three units) and 2,650 tonnes for zinc sheets/strips (two units). These are exclusive of the capacities in ordnance factories, railway workshops and other establishments. Besides, there are twenty-eight small-scale units, twenty-four manufacturing brass rods, one copper rods, two lead sheets and one zinc strips. Thirteen of these units are located in the Punjab, four in Bihar, two in Rajasthan, one in Mysore and eight in West Bengal. It is said that there has been some progress in diversification of the range of production by the organised units as well. Manufacture of highly polished zinc sheets, lead sheets for chemical industries, seamless copper and brass pipes and tubes and tubes of small diameters for refrigeration and internal combustion engines has either already commenced or will commence shortly.

Production

The following table shows the trend in the production of protected items since 1959:

(In tonnes)

	1959	1960	1961	1962 Jan. Apr.
Copper solids (rods and other sections), other than electrolytic	156	158	192	42
Brass solids (rods and other sections)	1,741	1,904	2,174	898
Copper hollows (pipes and tubes)	49	202	326	65
Brass hollows (pipes and tubes)	9	3	105	31
Lead sheets	761	832	1,121	250
Zinc sheets	33	11	2	3
Zinc strips	2,788	3,258	3,830	1,065

The aggregate supply position (including both output and imports) of these semi-manufactures in 1961 was as follows: copper rods 209 tonnes, brass rods 3,648 tonnes, copper pipes and tubes 778 tonnes, brass pipes and tubes 1,403 tonnes, lead sheets 1,464 tonnes and zinc sheets and strips 4,050 tonnes. Domestic demand has been increasing and is expected to expand further in the coming years. In 1959, the Commission estimated the domestic demand for that year at 300 tons for copper rods (other than electrolytic), 800 tons for copper pipes and tubes, 2,000 tons for brass rods, 750 tons of brass pipes and tubes, 700 tons for lead sheets and strips and 3,000 tons for zinc sheets and strips.

The estimates of demand by various parties for the coming years differ. These estimates for 1962 and 1964-65 vary in the following ranges:

(Tonnes)

	1962	1964-65
Copper/brass rods (other than electrolytic)	4,000 to 4,400	6,000 to 10,000
Copper/brass pipes and tubes ..	1,500 to 4,000	3,000 to 7,000
Lead sheets	1,200 to 2,000	2,000 to 5,000
Zinc sheets and strips	4,000 to 5,000	6,000 to 6,100

According to Mr. Aiyangar, there is general satisfaction regarding the quality of indigenous non-ferrous semi-manufactures. There have, however, been certain complaints that materials were not available in the "tolerances" required by consumers and that some of their physical properties are unsatisfactory. The Indian Standards Institution, it may be noted, has published a number of standards covering most of the protected items.

TATA CHEMICALS DROPS MERGER SCHEME

The Tata Chemicals Ltd. has decided not to pursue the scheme of acquisition of and merger with the Bombay Mineral Supply Company (Private) Ltd. It has withdrawn the Letter of Intent issued for that purpose. It will be recalled that, on 4th November 1961, Messrs. Tata Industries (Private) Ltd., Managing Agents of the Company, had announced the conclusion of negotiations with Mr. Prabhulal Shah and the Bombay Mineral Supply Company, resulting in the issue of a Letter of Intent for the acquisition by and merger with Tata Chemicals of the Mineral Company which was stated to own very extensive valuable bauxite deposits under leases from the Government at Bhatia, Saurashtra. It was, however, agreed between the parties that the scheme of acquisition and merger would be concluded only if the bauxite deposits were found to be of the quantity and value contemplated by the parties. We are told that the team of geologists which undertook the survey on behalf of Tata Chemicals has reported that the bauxite deposits are not of the magnitude and value contemplated in the Letter of Intent.

DEVELOPMENT OF SPICES AND CASHEW

TASK BEFORE NEW CENTRAL COMMITTEE

INDIA occupies a pre-eminent position in the world in so far as production and export of spices, such as pepper and cardamom, as well as cashewnuts (raw) and cashew kernels are concerned. Appropriately enough, the development of some of these commodities has received special attention in the third Plan. The output of raw cashewnuts, for instance, is proposed to be raised from 73,000 tons in 1960-61 (according to the Planning Commission's estimates) to as much as 150,000 tons by the end of the third Plan, representing an increase of over 100 per cent in the span of five years. It is expected that the production of pepper would go up from 26,000 tons to 27,000 tons and that of cardamom from 2,260 tons to 2,620 tons. The role of these commodities in India's economy is all the more important because of their export potential. Spices earned a foreign exchange of about Rs. 16 crores as of 1961 (as against Rs. 18 crores in 1960 and Rs. 10 crores in 1959) and cashew kernels about Rs. 19 crores (as compared with Rs. 13 crores and Rs. 15 crores in 1960 and 1959, respectively). In view of the commercial significance of these commodities as well as the development programmes under way in the third Plan, there is admittedly a great need for a central body to plan and co-ordinate production, research and marketing of these commodities as in the case of raw cotton, jute and oilseeds, to mention only a few. From this standpoint, the establishment of a full-fledged central body called the Indian Central Spices and Cashewnuts Committee (President: Mr. A. D. Pandit, Special Secretary in the Union Ministry of Food and Agriculture) is a welcome step.

Inaugurating the first meeting of the Committee at Trivandrum last week, Dr. Ram Subhag Singh, Union Minister for Agriculture, expressed the view that, although India led other countries in the production of cashew and spices, the potentialities for their development had not so far been fully exploited. While this belief is quite sound, one cannot share his apparent confidence that the present development programmes are adequate for the purpose. One of the important aspects of spice development, so far neglected by the Central Government and also the State Governments concerned, is the need for encouraging the cultivation of certain spices, for which India has been dependent on imports so far. It is well known that, in the Southern States, particularly Kerala, conditions are suitable for the development of such spices as cloves, cinnamon, cassia and vanilla, a point conceded by even the Kerala State Food and Agriculture Minister, Mr. E. P. Poulose. Pretty little, however, has been done to encourage the cultivation of these spices in Kerala and elsewhere. Meanwhile, the consumer is paying exorbitant prices for the imported cloves and other spices. It may be noted here that import of spices aggregated about Rs. 170 lakhs in 1961, as compared with Rs. 183 lakhs in 1960 and Rs. 235 lakhs in 1959. The declining trend in imports only reflects the increasing restrictions imposed on imports, and not any fall in demand. Among imports, cloves alone account for over 50 per cent, followed by cassia, nutmag, long pepper, aniseed and vanilla beans. It is to be hoped that the new Committee will examine the prospects of developing the cultivation of imported spices within the country and see that the State Governments concerned take up suitable measures for the purpose.

Need for Buffer Stocks

The development of spices, although urgent, should not be accelerated without taking into account the conditions of overseas demand. In the case of pepper, for instance, consumption in the U.S. and the U.K., the major consumers, seems to have been either stagnant or declining; a reference to this was made in an article on world trade in spices (based on a recent F.A.O. study), which appeared in these columns last week. It would appear that the competition from processed foods and use of refrigeration for preservation purposes is growing, with the result that even export promotion campaigns in the West will be of little avail in popularising spices. With the demand remaining more or less stagnant, any change in supply is likely to lead to wide fluctuations in prices. It is to avoid such fluctuations that the aforesaid F.A.O. study has called upon spice

(*Continued on page 39*)

THE BENGAL PAPER MILL COMPANY, LIMITED

MR. N. D. BANGUR WELCOMES PRICE INCREASE

STATEMENT AT ANNUAL GENERAL MEETING

WHILE delivering his speech at the 138th Annual General Meeting of the Bengal Paper Mill Company Ltd., held at Calcutta on 29th June 1962, the Chairman, Mr. N. D. Bangur, welcomed the recent decision of the Government to grant an increase of 6 nP per kg. in the selling prices for all varieties of paper and board and to abolish the reel rebate of 4 nP per kg. allowed by the industry. However, he referred to the further substantial increases in the production costs of the industry due to fresh excise levies on chemicals, packing materials and miscellaneous items, as well as to the enhancement of railway freight and price for coal and stressed the need for evolving a formula that would take into account such increases as were beyond the control of the industry. He urged that the industry be allowed to add these increases to its selling prices.

The following is the full text of Mr. Bangur's speech:

"GENTLEMEN,

"I have great pleasure to welcome you to this annual general meeting, being the 138th ordinary general meeting of the shareholders of the Bengal Paper Mill Company, Ltd.

"The Directors' report, the balance-sheet and the audited accounts for the year ended 31st December 1961, have been in your hands and, with your permission, I take them as read. During the year, the gross profit of your Company increased to Rs. 55,04,970, as against Rs. 50,83,093 in the previous year. Production of 19,627 metric tons in the year 1961 compares favourably with 18,395 metric tons in 1960. Thus the progress of the working of your mill can be considered satisfactory.

Price Policy and Cost of Production

"The selling prices of the paper and board, which were adopted in January 1960, by the Government of India, on the recommendation of the Tariff Commission were found to be less remunerative over the three years which have passed since the Tariff Commission made its recommendations.

"I am, however, glad to inform you that, after long persuasion and representations, the Government of India has considered the joint memorandum of the Indian Paper Makers' Association and Indian Paper Mills Association and has recently given an *ad hoc* increase of 6 nP per kilogramme for all varieties of paper and board and reel rebate of 4 nP per kilogramme, which was allowed by the industry has been abolished with effect from 21st June 1962. I welcome this move of the Government and hope that the industry's case will be further considered more sympathetically.

"There has been a further substantial increase in the cost of production due to fresh levies of excise on chemicals, packing materials and miscellaneous items, and increase in the railway freight. The recent rise in the price of coal will also adversely affect the industry. I will emphasise again that the Government should evolve a formula so that an increase in the cost of production due to reasons beyond the industry's control is allowed to the industry to be added to its selling prices.

"In my last year's speech, I outlined reasons for considering the Tariff Commission's formula of allowing 12 per cent return on the employed capital, as inadequate. The inadequacy of this formula is more valid today due to increase in corporate tax from 45 per cent to 50 per cent and increase in the rate of interest on borrowings. In view of these changed circumstances, the formula allowing return of 12 per cent needs a suitable upward provision so that the industry could meet all its liabilities and provide for large-scale expansion, modernisation and rehabilitation.

Transport

"The day-to-day running of our mill is affected due to the inadequate supply of wagons for the movement of raw materials and finished goods. The deficiency of railway transport remains the biggest hurdle, in spite of the best effort of the railway authorities, who, with the limited supplies of wagons at their disposal, have done everything possible to help us. Large stocks of raw materials at the upcountry despatching stations cannot be moved to the mill due to inadequacy of wagon supply. You will notice from the accounts presented to you that the stock of finished goods has increased.

Raw Materials

"Due to the shortage of bamboo and sabai grass, the paper industry is exploring the possibility of making use of new raw materials. Bagasse and jute sticks are the most important substitutes introduced during the past few years. However, sufficient quantity of bagasse will not be available until the sugar industry is provided alternative fuel.

"The Tariff Commission, in its report to the Government of India, recommended for granting long-term leases of the forests to paper mills, with a view to foster both plant development and scientific exploitation, but, I regret, no concrete steps in this regard have yet been taken. To ensure adequate supplies of bamboos, paper industry is prepared to play its full part in this development work. Besides this, the establishment of extensive plantations with fast growing species of timber is of particular importance and, unless vigorous steps are taken on these lines, there will, no doubt, be continued shortage of raw materials in the years to come.

"Important chemicals like caustic soda and sodium sulphate are also in short supply and the indigenous production is below the country's requirement. The Government, in wider interests, should help the industry in obtaining long-term leases of the forests and allow import of caustic soda and sodium sulphate to make up for these shortfalls.

Sales

"Your Company is manufacturing special quality paper of different varieties which have been found quite popular with the consumers. The Company is now directing its attention to manufacture industrial 'conversion paper and you will be glad to know that cable insulating paper has been successfully made in your mill.

"In the budget for 1961-62, substantial increase in the excise duty payable on certain qualities of paper and board has been made. The industry is having constant difficulty regarding the identification and classification of paper in accordance with the descriptions contained in the excise tariff. In some instances, the excise authorities are assessing certain types of paper for duty at rates which are higher than those prescribed. The difficulty is all the more greater when payment of additional excise is demanded with retrospective effect, which we are unable to adjust. The Indian Paper Makers' Association has submitted a memorandum to the Central Board of Revenue, pointing out these anomalies and I hope that the Government will clarify the position suitably and in the near future.

"There is another aspect of the problem connected with scale of indigenously produced paper to which I would like to draw your attention. This aspect concerns the import of substantial quantities of offset-printing, manifold and air-mail papers by the State Trading Corporation. The Indian paper industry is making all these varieties which, in view of the imports by the State Trading Corporation, it finds difficult to dispose of. I feel that the Government should ban the import of qualities which are indigenously manufactured, whether on rupee payment or otherwise, and such a step will not only help the industry but also conserve the available limited foreign exchange.

"You will agree that there is a vital need to increase the country's exports, and it becomes the duty of paper industry to play its part. The cost of production of paper in India is much higher than in other established paper exporting countries. I am glad to report that your Company is trying to develop export market for its products, although, as said earlier, the price factor is the major obstacle. The Development Council for Paper and Allied Industry has already appointed a special sub-committee to carefully examine this matter and I hope that its proposals will enable the industry to participate actively in exports.

Expansion

"The expansion and modernisation schemes of your Company are progressing satisfactorily. Shipments of the new paper machine and auxiliary equipments are expected to commence from August 1962.

"Placement of orders for machinery from the United States were delayed due to factors beyond the control of your Company. We have finalised and signed an agreement for a dollar loan with the Industrial Finance Corporation of India and steps have already been taken to open letters of credit in favour of our U.S. suppliers, with whom orders have now been placed.

"The work on the new paper machine house, finishing house and multi-stage bleaching plant building is progressing as per schedule and the expanding scheme is likely to be completed by the second half of 1963.

"As you are aware, the shareholders, at their meeting held on 26th February 1962, accorded approval for the increase in the authorised capital from Rs. 1 crore to Rs. 3 crores and issue of Rs. 30 lakhs convertible loan stock. Subsequently, the equity share of Rs. 25 paid-up of your Company has been sub-divided and consolidated into a share of Rs. 10 paid-up. In pursuance of that resolution, Rs. 69.60 lakhs have been raised by the issue of equity capital and convertible loan stock to finance our expansion scheme.

Prospects

"The present capacity of the paper industry in India is 410,000 tons. Licences have been granted by the Government for an additional capacity of 804,000 tons, bringing the total licensed capacity to 1,214,000 tons. Thus, to ensure fulfilment of the Plan target of 820,000 tons, the Government has given itself a margin of 50 per cent as provision against non-implementation of some of the schemes. Three large and seven small units are likely to come into production during this year. With the rapid industrial development taking place in the country and increase in literacy, we look forward to a better future.

"The programme for training technical personnel both in India and abroad has also been launched.

"The relation with staff and workers continue to be cordial and I would, on your and on my own behalf, like to express our appreciation of the sincere services rendered to the Company by all of them."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

METAL BOX SELLS MORE BUT EARNS LESS

FURTHER DIVERSIFICATION OF ACTIVITIES

ALTHOUGH the sale proceeds of the Metal Box Company of India Ltd. (Chairman: Mr. K. C. Mahindra, Calcutta) for the year ended 31st March 1962 show an impressive rise of Rs. 79.65 lakhs or more than 8 per cent to Rs. 10.50 crores as compared with the previous year, the gross profit has declined from Rs. 149.36 lakhs to Rs. 136.06 lakhs. Consequently, the profit-margin (ratio of gross profit to sales) has dropped from 15.4 per cent to 13 per cent. This setback is to be attributed largely to rising costs. The Company has spent roughly Rs. 60 lakhs more on raw materials and stores, Rs. 11 lakhs more on staff and Rs. 12 lakhs more on other items of expenditure. The growth in the Company's direct exports (over Rs. 25 lakhs in 1961), made possible only by constant touring and by offering very low prices, has also had its effect on profits. Nevertheless, provision for depreciation at Rs. 16.71 lakhs has been well maintained, while that for taxation has naturally been reduced from Rs. 60 lakhs to Rs. 58.10 lakhs, provision for retirement gratuity halved to Rs. 5 lakhs and the profit retained in business reduced by some Rs. 4 lakhs to Rs. 14.20 lakhs. The investor is, of course, unaffected by the decline in profit, as the taxable return on the Rs. 10 fully paid ordinary shares is maintained at 25 per cent per annum.

The table below compares the performance of the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Product sales	10,49.68	970.03	829.52	696.85
Other income	23.73	22.57	16.84	14.50
Closing stock of finished goods	12.91	15.61	7.85	7.95
Raw materials and stores consumed	629.92	569.29	472.91	401.68
Staff expenses	228.68	217.32	183.97	144.08

Low	57.75	40.50	32.12	27.25	23.50

† Subject to deduction of tax.

The 8 per cent increase in sales has turned out to be lower as compared with 11 per cent in 1960, though sales and inventory figures suggest that production was higher during the year. The Chairman of the Company, Mr. K. C. Mahindra, however, sees no reason for discouragement or alarm. In his statement to shareholders he says: "I would rather interpret the relative shortfall as a useful reminder of how closely our fortunes are linked with those of our customers." Explaining his point further, he states the Company's sales are "a remarkably accurate barometer of the affairs of the consumer goods industries." Those industries have reported either lower sales or relatively smaller increase in their turnover during the year either because of consumer resistance to higher prices brought about by increases in costs and excise duties or because of limitations on their output due to shortages of raw materials.

Faced as it is with such exterior problems of the users of its products and its own of rising production costs, Mr. Mahindra has held out the assurance that the Company is determined to find a solution in greater efficiency and increased productivity. And there is every reason to believe that the Company would succeed in this move. For, in the past, it has kept its eyes and ears open and conveniently adjusted its working not only to conform to the changing pattern of demand for its products but also to include production of new substitutes developed in the field. Besides metal containers and closures, the Company has begun to manufacture plastics, hardware and engineering products. A number of new products within the scope of the existing machinery were added during the year under review. The technical development sections have made a further contribution in the design of new packages, industrial components and machinery. The package development work has been primarily directed towards improved pilferproof containers capable of being manufactured and, as far as possible, closed at high speeds. An outstanding development introduced during the year was the aluminium "no-pilfer diaphragm," designed primarily to seal confectionery containers and make them tamperproof. The use of this development is said to eliminate the use of the imported tinplate. The Company has also developed prototype machinery for addition to its range of sealing equipment for customers, redesigned some of its existing plant and designed new machinery to accelerate production speeds. The Company, concentrating its efforts on providing its customers with a complete packaging service, has now received permission from the Government to manufacture treated and laminated papers and boards and containers made therefrom. Its entry into this field will enable it to offer precision-made cartons finished to that high standard of quality which is essential for export markets, as well as to develop packaging systems involving use of tamperproof functional cartons capable of holding semi-solids and possibly liquids and providing an air-tight seal. In this, as in its past endeavours, the Company will be substantially assisted by its associates in the U.K.

The outlook for the current year, however, is clouded by the uncertainty of production at Rourkela, on which the Company has relied for its raw material supplies. During the year under review, the Company had to import from Russia tinplates of non-standard sizes at prices higher than the American. Therefore, Mr. Mahindra has urged that the D.L.F. imports should continue to be made available on the same scale as last year. Deep-drawing mild steel sheet was in satisfactory supply last year. The production of the industrial components is assured for the present orders on hand, but, beyond that, it would depend on the availability of the imported special type of sheet steel. Aluminium sheet and slugs are expected to be had this year at a lower price in the light of the completion of the expansion programme of the Indian Aluminium Company and the commencement of production by Hindustan Aluminium. The increased excise on foil, now Rs. 600 per tonne, will affect the cost of the material used by the Company exclusively for the tamperproof sealing of tinplate containers and for the development of new laminates for heat-sealed consumer-packages intended for the mass markets.

The financial position of the Company is sound. Its paid-up capital of Rs. 191 lakhs, of which equity is Rs. 161 lakhs and preference Rs. 30 lakhs, is supplemented by reserves and surplus aggregating Rs. 226.78 lakhs. The secured loans have increased from Rs. 62.67 lakhs to Rs. 81.13 lakhs and so have unsecured loans from Rs. 39.64 lakhs to Rs. 57.62 lakhs. The other liabilities and provisions amount to Rs. 194.33 lakhs. The total indebtedness to outsiders works out to Rs. 333.08 lakhs, but is well covered by current assets and book debts of Rs. 502.27 lakhs and investments of Rs. 4.05 lakhs, of which Rs. 3.74 lakhs are free and unquoted. The gross block, which increased from Rs. 361.58 lakhs to Rs. 399.57 lakhs during the year, has been written down to Rs. 244.54 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 64.75 *cum-div.* (final of Re. 1.60 a share, taxable). On the *ex-div.* basis, they offer a net annual yield of 2.7 per cent.

SYNTHETICS AND CHEMICALS LTD.

The Synthetics and Chemicals Ltd. (Chairman: Mr. Tulsidas Kilachand, Bombay), has obtained the Government's approval for expanding its annual capacity from 20,000 tons to 30,000 tons of synthetic rubber. Import licence for additional plant and machinery has been received and orders placed for most of the equipment. In order to meet the financial outlay on the expansion programme, the Directors have proposed to increase the issued capital of the Company by issuing 125,000 equity shares of Rs. 100 each at a premium of Rs. 20 per share, to be offered to existing shareholders in the ratio of five new shares for every 18 shares held by them. The proposal has been sanctioned by the Controller of Capital Issues. A part of the rupee requirements for the project will be met by way of bank borrowings. The foreign collaborating firm, Firestone Tire and Rubber Company, Akron, Ohio, U.S., has agreed to advance the Company an additional loan of $2 million to meet the foreign exchange expenditure. Of this loan, a portion will be adjusted towards the share of the foreign firm in the additional equity capital. The Agency for International Development, Washington, has agreed to advance Rs. 1.50 crore from the Cooley funds to finance the rupee expenditure.

According to the Directors of the Company, the engineering and purchasing for the base plant have been completed. The bulk of the plant and machinery has been received at the factory site and its erection is progressing satisfactorily. The construction of warehouses and the first phase of the housing colony have been completed. During its second year's working (ended 31st March 1962), the Company received the licence to import synthetic rubber. The response to the use of synthetic rubber by small and medium-scale manufacturers of rubber goods is said to be encouraging. With a view to facilitating increased use of synthetic rubber, the Company proposes to establish a technical laboratory at Bombay to render technical service and guidance to users. During the year, the Company incurred, after providing Rs. 3.20 lakhs for depreciation and Rs. 1 lakh for taxation, a loss of Rs. 5.04 lakhs, which is adjusted against Rs. 3.87 lakhs brought in, and the debit balance of Rs. 1.17 lakh has been carried forward.

After the close of the year, the Company has borrowed $3.9 million from American banks and Rs. 1.62 crore from the Export-Import Bank of Washington. Its borrowings from foreign financial institutions under dollar and rupee credit agreements till the year-end amounted to Rs. 2.84 crores and these were secured on guarantee of its bankers. In addition, unsecured loans from a company stood at Rs. 1.55 crore. As against the paid-up capital of Rs. 4.50 crores, the Company's fixed assets aggregated Rs. 4.96 crores, comprising net block of Rs. 2.48 crores and works under construction of Rs. 2.48 crores.

KUSUM ENGINEERING COMPANY IS 25 YEARS OLD

Founded on 3rd July 1938, the Kusum Engineering Company Ltd. of Calcutta is now 25 years old. It marks the fulfilment of the dream of two enterprising young brothers, Mr. M. L. Bose and Mr. K. L. Bose, who purchased on hire a small piece of land on the B.T. Road at Baranagore, a northern suburb of Calcutta, and set up a miniature engineering factory with one lathe and a few implements. Increasing its operations from the workshop to the present medium-sized factory at Sukchar, about 12 miles from Calcutta, the Company has emerged as the only organised unit in the country exclusively manufacturing all items of machines, implements, accessories and spares required by the pottery industry.

In 1943, the Company was converted into a public limited company, with its registered office at Calcutta. Three years later, the Company purchased land for the present factory. When it started manufacturing ceramic machines, there were only a few factories in the country. Now their number exceeds 300, and most of them are equipped with 'Kusum' machines. The Company also earns foreign exchange for the country by exporting its products to the neighbouring countries.

At present, the Company has a self-contained production unit, having its design shop, pattern shop, cast iron foundry, steel foundry and machine shop which are all built in the modern style. It employs 500 workers, half of whom are said to be refugees from East Pakistan. So far, the Company has designed and built 80 small and big machines for the pottery industry. Its annual production of machines is about Rs. 20 lakhs.

TATA OIL MILLS COMPANY LTD.

The Tata Oil Mills Company Ltd. has reported a larger turnover of Rs. 11.19 crores for the year ended 31st March 1962, as compared with Rs. 10.27 crores in the previous year, but a slightly lower profit, before making provisions for taxation and development rebate, of Rs. 38.80 lakhs, as compared with Rs. 39.27 lakhs. The equity dividend has, however, been maintained at Rs. 5.75, subject to deduction of tax, per share of Rs. 25 each, and it has absorbed Rs. 16.12 lakhs. The preference dividend has taken away Rs. 1.34 lakh. Taxation has claimed Rs. 15.77 lakhs, as against Rs. 16.10 lakhs a year before. Transfer to development rebate reserve has been raised from Rs. 2.85 lakhs to Rs. 3.50 lakhs, but no appropriation has been made to general reserve, as against Rs. 53,000 set apart in the preceding year. Plant modernisation and development reserve has got Rs. 2.25 lakhs, as against Rs. 2.50 lakhs in the previous year. After making these allocations and providing for the dividends, there is left a surplus of Rs. 10,154 which is proposed to be carried forward, as against Rs. 28,609 brought in.

MADURA MILLS

The Madura Mills Company Limited has obtained official sanction for the issue of debentures of the value of Rs. 125 lakhs for cash at par. The debentures will carry a rate of interest not exceeding 6½ per cent. The proceeds will be utilised on a comprehensive scheme of modernisation and expansion.

SIMPLEX MILLS COMPANY LTD.

Sales of the Simplex Mills Company Ltd. for the year ended 31st March 1962 have declined slightly from Rs. 3.32 crores to Rs. 3.23 crores and not increased from Rs. 3.23 crores to Rs. 3.32 crores, as was inadvertently stated in our write-up on page 1128 of *Commerce* dated 23rd June.

MUKAND IRON'S PROFIT NEARLY SAME DESPITE FALL IN SALES

BILLET SHORTAGE HITS ROLLING MILLS

A SHARP fall from Rs. 637.45 lakhs to Rs. 473.03 lakhs in the sales proceeds of the Mukand Iron and Steel Works Ltd. (Managing Agents: Messrs. Jeewan Ltd., Bombay) during the year to 31st March 1962 has left its gross profit almost unaffected, which is just a shade lower at Rs. 66.99 lakhs, as compared with Rs. 68.64 lakhs in the previous year. The turnover, we are told, has fallen because of a drop in steel billet receipts from 74,366 tonnes to 42,580 tonnes. This shortage of billets hit the working of the rolling mills section, the output from which slumped from 69,552 tonnes to 37,300 tonnes and the sales realisations from products came down with a bang from Rs. 459 lakhs to Rs. 259 lakhs. If, despite all this, the profit has been nearly maintained at the previous year's level, it has been due to the better performance of the steel foundry, the production improving further from 5,624 tonnes to 6,300 tonnes and, correspondingly, the sales of cast products went up from Rs. 178 lakhs to Rs. 214 lakhs. Thanks to limitations on production, the inventory is smaller at Rs. 19.77 lakhs, as against Rs. 30.55 lakhs a year before and the prime costs have come down from Rs. 460.90 lakhs to Rs. 295.59 lakhs.

Notwithstanding the slightly lower profit, the provision for depreciation has been increased from Rs. 9.74 lakhs to Rs. 11.52 lakhs (presumably because of the expansion programme in hand), while that for taxation is unchanged at Rs. 25 lakhs. Again, in view of the expansion programme, development rebate reserve has got Rs. 2.20 lakhs more at Rs. 4 lakhs as compared with the preceding year, but other reserves have received less, Rs. 7.55 lakhs, as against Rs. 10.29 lakhs. The total amount retained in business amounts to Rs. 11.55 lakhs and shows only a minor difference from Rs. 11.99 lakhs in the previous year. The taxable equity dividend has been maintained at 12 per cent per annum; the total amount absorbed is Rs. 9.06 lakhs, as against Rs. 7.22 lakhs a year before, owing to the increase in distribution on new shares from 60 nP to Re. 1.05. The taxable dividend on the Rs. 10 fully paid deferred shares has been raised further from 217.8 per cent to 267.0 per cent per annum.

A synoptical view of the Company's working in the past four years can be had from the table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	473.03	637.45	422.11	356.10

* Subject to deduction of tax.

Note:—Entire issued preference capital of Rs. 10 lakhs was redeemed on 31st March 1961.

Although the Iron and Steel Controller had fixed a certain billet quota as entitlement for each re-roller during the year 1961, the actual supplies from the main producers fell far short of the targets on account of their earlier export commitments, stoppage of mills for overhauling, increased self-consumption by producers, and manufacture of special steel billets for railways and other Government projects with a corresponding reduction in the output of mild steel billets. The prospects of billet supplies in the current year, however, appear to be better, considering that the Company has secured full entitlement supplies in the first two quarters of the year and the position is expected to continue in the third quarter. At the same time, the Company has decided to eliminate the use of the blooming mill and install instead a continuous casting machine for making billets in the factory at Kalwe near Bombay. Moreover, in order to work economically within the limitation of billet availability, the Company has installed from the last quarter of 1961-62 special rolling mill stands, which are said to be better equipped to produce light sections like ¼" and ⅜" rounds which fetch higher prices. However, the latest 5 per cent *ad valorem* excise duty on steel castings weighing one tonne and above will increase the Company's burden by Rs. 50,000 at the projected output for the current year. Electricity expenses will also rise by Rs. 1.50 lakh a year, following the increases in rates proposed by the Tata hydel companies from 1st July 1962. The revision of electricity duty under the Maharashtra State budget, too, will mean an additional burden of Rs. 50,000 a year.

The Company is said to be now very well set for producing intricate castings for the railways and automobile and other industries. The sales of centre buffer couplers, with 100 per cent indigenous components, amounted to Rs. 80 lakhs during the year under report. It is claimed that the order position for steel castings is very satisfactory. Another (third) 4½-tonne electric furnace, with most of the components designed by the Company, was installed during the year, but the furnace could not be operated simultaneously with the other two during the major part of the year, due to power shortage. The legal dispute regarding the acquisition of land at Kalwe was resolved and even the possession of a part of the land obtained. But some inevitable delay has arisen in the matter as a result of the decision of the Supreme Court concerning acquisition of land for companies and filing of writ petitions in the High Court by some landholders at Kalwe, challenging the acquisition of their land. However, according to the Chairman, Mr. Kamalnayan Bajaj, the problem shows signs of being resolved. The project at Kalwe is estimated to cost the Company Rs. 3.70 crores. Of this amount, a sum of Rs. 1.60 crore represents the foreign exchange component for which the Company has approached the Industrial Credit and Investment Corporation of India and the Commonwealth Development Finance Company Ltd., London. The rupee finance for the project is proposed to be raised from the retained earnings and also by issuing additional equity capital. The expansion programme for the steel foundry at Kurla is being implemented and it is expected to be completed as scheduled. It will cost Rs. 1.50 crore. The Company has applied to the Industrial Finance Corporation of India for a loan of Rs. 88 lakhs, including Rs. 20 lakhs under the Development Loan Fund arrangement. The Company has received the licence for expanding its cast iron foundry production to 300 tonnes per month.

The financial position of the Company is satisfactory. With the bulk of the previous year's unpaid calls of Rs. 20.47 lakhs on the 409,450 new equity shares of Rs. 10 each having been received during the year under report, the paid-up equity capital has increased from Rs. 60.17 lakhs to Rs. 80.63 lakhs. Inclusive of the 12,483 deferred shares of Rs. 10 each, the total paid-up capital amounts to Rs. 81.89 lakhs, as against Rs. 61.43 lakhs at the previous year-end. Reserves and surplus make a total of Rs. 68.55 lakhs and provide a fair cover for the equity capital. Secured loans have increased roughly four times from Rs. 15.32 lakhs to Rs. 57.27 lakhs, because of a rise in bank borrowings from Rs. 2.37 lakhs to Rs. 46.07 lakhs which is slightly offset by a drop from Rs. 12.95 lakhs to Rs. 11.20 lakhs in the loan from the Industrial Finance Corporation of India secured against fixed assets. Current liabilities and provisions aggregate Rs. 77.94 lakhs. Excluding the I.F.C. loan, the total indebtedness to outsiders amounts to Rs. 124.01 lakhs. It is, however, well covered by current assets and book debts of Rs. 173.14 lakhs, and investments of Rs. 12.19 lakhs. The gross block expanded from Rs. 138.14 lakhs to Rs. 161.35 lakhs. It is written down to Rs. 100.31 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 26 *cum-div.* On the *ex-div.* basis, they offer a net annual yield of 3.3 per cent.

NATIONAL TOBACCO

PROFIT SHRINKS—DIVIDEND SHARPLY CUT

AFTER rising consistently over a period of ten years, from Rs. 535.38 lakhs in 1951 to Rs. 964.44 lakhs in 1960, the gross sale proceeds of the National Tobacco Company of India Ltd. (Managing Agents: Messrs. B. N. Elias and Co. (Private) Ltd., Calcutta) during the year ended 31st December 1961 have met with a serious reversal and gone down by as much as Rs. 90.12 lakhs to Rs. 874.32 lakhs, notwithstanding an increase in the all-India production of cigarettes during the year under review. Although this decline in turnover has not been attributed by the Directors, in their report to the shareholders, to any specific factors, it is but obvious that the Company must have had to face, as during the preceding year, severe competition from its "major competitor" whose determined efforts to restrict the Company's sales to its major selling grades alone appear to have paid him good dividends. The seriousness of this competition will be apparent from the fact that, besides a contraction in sales, the closing stocks of finished goods have also depleted in value from Rs. 101.16 lakhs to Rs. 73.64 lakhs, underlining a possible drop in production.

In line with the shrinkage in sales, the gross profit has also decreased from Rs. 81.35 lakhs to as low as Rs. 26.79 lakhs. The decline in profit had been more pronounced than in sales because the Company had to toe the line of its major competitor and absorb the increases in excise duty and cost of production by reducing the profit-margin. In the light of the year's depressing results, the Directors have reduced the dividend on ordinary shares from 16 per cent for the previous year to as low as 7 per cent, both subject to deduction of tax.

The performance of the Company during each of the past four years is presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales	874.32	964.44	935.17	835.11
Miscellaneous sales and income	37.02	52.37	36.05	26.55

Low	13.94	14.50	17.50	11.87	8.44

* Subject to deduction of tax.

Although the results of the operation during the year presented a rather dismal picture, there were some bright patches. Sales of Regent, the first filter-tipped cigarette made in India, for example, showed a steady increase and the Company could well withstand the efforts of competitors to dislodge it from its leading position.

Sale of the popular-priced Number 10 cigarettes showed a modest increase and so also that of Cool, the mentholated filter-tipped cigarette. Foreign exchange difficulties, however, curtailed the manufacture of the latter for want of imported filters, and, consequently, the Company was unable to meet the demand for this brand.

There was a small drop in the value of exports of manufactured tobacco. Towards the end of the year, negotiations were commenced with new markets for the sale of some surplus holdings of flue-cured Virginia tobacco and early this year the sale of the 1961 crop was successfully concluded.

The balance-sheet of the Company, as at 31st December, 1961, reveals a healthy financial position. The main feature of attraction, so far as investors are concerned, is that the share capital of Rs. 124.95 lakhs, of which Rs. 44.98 lakhs are in preference shares and Rs. 79.97 lakhs in equities, is backed by Rs. 132.50 lakhs in reserves. This gives a book value of Rs. 26.57 per ordinary share against a market price of Rs. 15.94. There has been a sharp rise in borrowings from Rs. 73.31 lakhs to Rs. 201.23 lakhs due to the need to finance a high carryover of raw material stocks. Now that the Company has been able to dispose of sizable portions of the 1961 tobacco crop, a reduction in bank loans can be anticipated. Current liabilities and provisions amount to Rs. 59.67 lakhs and are covered many times over by current assets, investments and loans and advances aggregating Rs. 436.91 lakhs. Total cost of fixed assets is Rs. 168.52 lakhs, including Rs. 19.43 lakhs worth of new assets acquired during the year, and has been written down to a net block of Rs. 81.44 lakhs.

The Rs. 10.00 fully paid share of the Company is currently quoted at Rs. 13.94 *ex-div.* and fetches a net yield of 3.5 per cent per annum.

SYNOPSES OF COMPANY REPORTS

National Tannery Co., Ltd.

(*Secretary*: Mr. K. D. Ganguli, Calcutta.)

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales	44,04	33,36
Closing stock	11,17	15,62
Gross profit	1,11	1,50
Transfer to depreciation	63	49
,, ,, provision for taxation	29	25
Net profit	29	76
Adjustments	53†	6
Appropriations:		
Total available balance	82	82
Transfer to development rebate reserve	15	20
Proposed dividends (taxable) 5% C. Preference	3	3
Proposed dividends (taxable) Ordinary	29 (3%)	Nil (Nil)
Carry forward	35	59

N.B.—Adjustments represent the balance brought forward from the previous year.

† After providing for additional preference dividend for the years 1952 to 1959 amounting to Rs. 6,000.

Extracts from the Directors' Report: Production.—Although production had to be carried out under a severe strain imposed by the work involved in the construction and reorientation of factory building during the period an upward trend in volume of production was definitely discernible.

Sales.—Sales during the period have increased by 32 per cent approximately over the last year's figure. It may however be pointed out that higher sales were not followed by higher margin of profit because of increased cost of raw materials, rise in labour cost and other indirect expenses.

Plant and Machinery.—Additions of new plant and machinery during the period have been to the extent of Rs. 95,847.63 nP. Machinery worth Rs. 18,983.55 nP although acquired during the year, could not be completely installed on account of their late arrival.

Raw Hides.—Scarcity of raw hides in the country still continue and the directors are glad to report that the import licensing position during the period remained as liberal as before. It would not have been possible to maintain production at the present level except for liberal licensing policy of the Government. The price level for both imported and indigenous hides continued to be high and there is no indication of lowering of prices in the near future. This calls for a stricter control in selection and process to ensure maximum benefit in quality production.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	17,21,304
Reserves and surplus	1,69,148	—Depreciation	7,85,107

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

† This includes Rs. 5,50,000 being excess provision for taxation in previous years written back.

* This includes Rs. 78,750 transferred from contingencies reserve.

§ Preference dividend is calculated at Rs. 5.20 per share, subject to tax.

‡ This includes Rs. 54,000 being additional preference dividend for the year 1959 at Re. 1.20 per share.

Extracts from the Directors' report: Tea (India).—Tea interests have again made a most substantial contribution to the Company's prosperity and efforts continue to be directed towards maintaining the most efficient possible service to gardens in the Agency.

During 1961 climatic conditions were particularly favourable for growth in most of the producing areas of India, and the exceptionally large crop harvested in consequence of this has to some extent offset the effects of a fall in world prices. The total crop harvested by the Agency's estates in India was 22,269 metric tonnes compared with 20,766 tonnes in 1960 and 20,433 tonnes in 1959.

Tea (Pakistan).—After the depressing climatic conditions of 1960 the tea areas in Sylhet shared in the generally favourable weather last year and an excellent crop was harvested. Prices however declined in 1961 so that the quantitative improvement was not fully reflected in the income of the various companies. Moreover there was no break in the impasse regarding profit remittances to India, with the result that profit earnings could not be distributed to shareholders in this country and the Company's dividend income was restricted accordingly.

The total crop harvested by the Agency's estates in Pakistan was 5,937 metric tonnes as compared with 4,018 tonnes in 1960 and 5,170 tonnes in 1959.

Carbon Black.—Work on the construction of Philips Carbon Black Ltd.'s plant has continued steadily throughout the year under review and despite manifold difficulties in the main connected with the acute shortage and long delivery dates of essential equipment and material from indigenous sources, completion schedules have been largely maintained and it is now anticipated that certain of the production units will be commissioned during June 1962, while the entire plant is expected to come into operation soon afterwards. This Company was duly appointed as Secretaries and Treasurers to Philips Carbon Black Ltd. on 5th May 1961.

Valves.—Considerable progress has been made with the establishment of Schrader-Scovill Duncan Ltd.'s plant in Bombay for the manufacture of tyre tube valves for motor vehicles. Since the Supreme Court has recently declared the acquisition of land for industrial purposes to be ultra vires the Constitution, land has been taken on lease for the time being, the necessary import licence for machinery has meantime been received and the complete unit is expected to be ready for production towards the end of this year. This Company has been appointed Secretaries and Treasurers to Schrader-Scovill Duncan Ltd. and in the latter part of 1961 a public issue of equity shares handled on its behalf was oversubscribed more than twenty times.

Bead-wire.—The Company has entered into collaboration with the National Standard Company of Niles, Michigan, U.S.A., one of the leading manufacturers of bead-wire for automobile and cycle tyres, and it is planned to establish a plant in Bombay for the manufacture of that product. The necessary licence has been obtained under the Industries (Development and Regulation) Act, 1951 and it is anticipated that arrangements will shortly be made for the formation of a new company to be known as National Standard Duncan Ltd. The Company will participate in the share capital of this new undertaking and application will also be made for Government's approval to the Company's appointment as Secretaries and Treasurers.

Share Capital.—In last year's report a reference was made to the directors proposal to increase the Company's equity capital by a "Rights" issue of 10,000 shares. In the event, however, when there was a postponement of certain developments then in view and it became apparent at the same time that the profits for the year would fall a little below those of 1960, the decision was made to postpone this fresh issue until the current year. Moreover, the increasing requirements of the Company's expansion into various new fields have shown that a somewhat larger addition to its capital resources would be desirable to ensure a greater degree of adaptability under changing circumstances, and an application is accordingly being submitted to the Controller of Capital Issues for a "Rights" issue of one in five, to be made in the latter part of the current year. Application is also being made for permission to offer Rs. 10 lakhs of 6 per cent redeemable preference shares for subscription and it is for this purpose that a proposed special resolution to alter the authorised capital of the Company has been included in the business for consideration at the annual general meeting; on the assumption that both these proposals will be put into effect at the earliest available opportunity the capital of this Company will be increased by some Rs. 28 lakhs by the end of this year.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,35,00,000	Gross block	36,21,461
Reserves and surplus	1,24,96,877	—Depreciation	13,23,905
Other liabilities	87,95,052		
		Net block	22,97,556
		Current assets	76,74,814
		Investments	2,13,19,988
		Cash	34,99,571
	Rs. 3,47,91,929		Rs. 3,47,91,929

* Paid-up capital consists of 45,000 four per cent. cumulative preference shares of Rs. 100 each fully called up and 90,000 Ordinary shares of Rs. 100 each fully called up.

Isaac Holdens (India) Ltd.

(*Managing Agents*: Messrs. Duncan Brothers & Co., Ltd., Calcutta.)

Second Annual General Meeting—29th June 1962.

Extracts from the Directors' report: The accounts of the Company for the year ended 31st December 1961 which disclose a loss of Rs. 8,28,769 after providing depreciation of Rs. 5,16,215 (Rs. 1,37,693 for 1960). With the carried forward loss from 1959-60 of Rs. 6,39,700 the debit balance on the profit and loss account amounts to Rs. 14,68,469.

Commercial production commenced on 13th January 1961 and was gradually built up as training of labour progressed. The rate of production was, however, seriously affected by several factors. The shortage of electric power in the Calcutta area severely restricted supplies for the Company's use in the first half of the year. Initial difficulties were experienced in obtaining from indigenous sources essential items of equipment such as combing leathers, and delays in shipment led to the late receipt of customers' wool and the disruption of production schedules.

All the difficulties faced in the setting up of the Company's works did not affect the standard of the wool tops and the Company's products have been consistently good and up to standard. Almost all the adverse factors have been overcome and normal working commenced from the beginning of this year. The Company hopes to show more favourable results in next year's account.

Production during the year totalled 1,019,948 kilograms but by the end of the year a satisfactory rate of production on the *Noble combing plant* in excess of 2.3 million kilograms per annum had been achieved.

Future Development. Utilisation of Indian wools was under serious consideration by the Government of India during the year. The Government particularly requested this Company to take up this work and the commission combing of Indian wool on a commercial scale for the first time was, therefore, undertaken by the Company. Valuable assistance was received from the technical consultants who produced tops and garments made from blends of Indian wool which were of great interest to Government and the trade. This development will be of considerable help to the Indian economy and should eventually produce a saving in foreign exchange. It has always been the intention of the Company to undertake the processing of *synthetic* and *cellulosic fibres* for the use of the woollen industry and this development will also be pursued during the coming year. The Board considered that this work would be more effectively carried out by a separate company and therefore Indian Fibres Limited was formed and registered this year as a subsidiary of this Company to promote the sales and production of tops made from *Synthetic Fibres* and Indian wools. The Company is awaiting the issue of import licences to enable it to purchase further machinery to produce the balance 1.6 million kilograms of wool tops. These applications have been kept pending in view of the foreign exchange position but the Company is hopeful of obtaining them under extended credit terms.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	74,89,150	Gross block	78,59,316
Other liabilities	36,13,999	—Depreciation	6,53,908

† This includes Rs. 2,280 being additional dividend for 1959.

Extracts from the Directors' report:

Crop—Tea	Estimate for Crop Secured		
	1961 Kg.	1961 Kg.	1960 Kg.
Pasuparai	2,08,653	2,52,807	2,27,620
Carady Goody	3,26,586	3,83,400	3,76,637
Total	5,35,239	5,36,207	6,04,257

The total crop of 6,36,207 kgs. harvested during the year against an estimate of 5,35,239 kgs. is satisfactory and records an increase of 31,950 kgs. over the previous year's production.

The F.O.B. cost for the year was Rs. 2.91 per kg. as against an estimate of Rs. 2.76 and the all-in-cost was Rs. 3.63 per kg. against last year's figure of Rs. 3.47. The net average sale price realised was Rs. 4.64 per kg. as against Rs. 4.53 during the previous year.

Cardamom: The quantity of Cardamom harvested during the year amounted to 19,126 kgs. as against 13,035 kgs. in the previous year. The cost of production for the year was Rs. 6.02 per kg. as against Rs. 6.40 during last year and the average sale price realised was Rs. 15.76 per kg. as against Rs. 18.02 for 1960.

Crop Estimate for 1962	Tea (Kgs.)	Cardamom (Kgs.)
Pasuparai	2,40,000	17,500
Carady Goody	3,60,000	—
Total	6,00,000	17,500

† This includes Rs. 3,00,000 transferred from general reserve for payment of dividend.

Extracts from the Directors' report: The Directors have decided upon implementation of a scheme of modernisation and rehabilitation of Mills, and, accordingly, have placed orders for the purchase of machineries etc. Such orders as are remaining to be executed on 31st December 1961, are to the extent of about Rs. 39,43,829. Further orders as have been placed during the period from 1st January 1962, till the date of this report, are to the extent of about Rs. 2,50,000. The aforesaid scheme will be financed partly by the Company's own resources and partly by a loan of Rs. 40 lakhs to be obtained by the Company from the National Industrial Development Corporation Ltd., on a mortgage of its fixed assets, an amount so far received being Rs. 18,11,000 only.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	34,00,000	Gross block	1,22,00,010
Reserves and surplus	39,35,967	—Depreciation	71,34,359
Other liabilities	97,78,353

		Current assets	1,06,11,293
		Investments	13,73,969
		Cash	63,507
	Rs. 1,71,14,420		Rs. 1,71,14,420

* Paid-up capital consists of 17,000 Ordinary shares of Rs. 200 each. Out of this 8,500 ordinary shares are issued as fully paid-up Bonus shares by capitalisation of reserves.

RAJKUMAR MILLS LTD.

In the synopsis of the working of the Rajkumar Mills Ltd. appearing in our issue dated 23rd June 1962 (*vide* page 1129), the dividend for the year 1961 was shown as 5½ per cent, while it should be 22 per cent. The error is regretted.

TEXTILES

(*Concluded from page 39*)

export promotion, which, he declared, lacked proper incentives and appreciation of certain basic facts. Evidently, he must have been prompted by the none too encouraging performance on the export front, though the scheme has been in force for the past four years. Exports of woollen goods are currently maintained at an annual rate of no more than 260,000 yards, as against the actual shipment of 345,229 yards in 1960-61 and 567,255 yards in 1959-60. The specific scheme which Mr. Singhania suggested to boost exports is as follows:

"At least 10 per cent of the annual production should be earmarked for export. All manufacturer-exporters who receive actual users' licence for wool tops should deposit a part of the value every year and a pool should be created out of these deposits which should be under the control of the Export Promotion Council for woollen goods. The present export incentive should be raised from 85 per cent to 100 per cent of the exports and additional benefits should be made available to the manufacturer-exporters as a further incentive. This is to be paid from the pool. The manufacturer-exporters will be entitled to raw materials to the full extent of the licences issued to them and the non-exporters will assist member-units which have succeeded in promoting exports."

Considering the present foreign exchange crisis, whatever little that can be earned through any scheme of compulsory export and "full" incentives is, of course, welcome. But even with such a scheme, the actual export performance may not be encouraging, at any rate so long as the woollen industry works on a high cost base and is unable to effect a substantial improvement in the quality of products, in view of worn-out and outdated machinery. The key to export promotion lies in (*a*) requisite supply of raw materials at reasonable prices, (*b*) speedy modernisation of equipment, (*c*) rationalisation of production processes, and (*d*) removal of some of the vexatious controls over manufacture and distribution.

COMMERCE AND INDUSTRY

(*Concluded from page 34*)

producing countries to organise international buffer stocks. On account of the scarcity of capital to finance buffer stocks in primary-producing countries, it has also indicated the need for seeking the co-operation of developed countries. Unless effective measures are taken to eliminate price instability, the producers will not be able to secure fair returns for their products, not to speak of its repercussions on the foreign exchange situation of countries like India.

Cashewnut, though it has been brought within the purview of the new Committee, falls under a separate category. Although India is one of the leading producers of cashewnuts, a large quantity is still being imported for processing into kernels by factories situated mainly in Kerala. Imports of cashewnuts amounted to as much as 90,000 tons in 1961-62 (valued at about Rs. 6 crores), as against 118,000 tons in 1960-61 (about Rs. 10 crores). Thus, cashewnut factories depend more on imports than on domestic sources for raw nuts amounting to about 75,000 tons annually. The need for increasing domestic output is thus self evident. Dr. Singh's fear that expansion of acreage under cultivation of rubber would discourage cashewnuts production seems to be misplaced. Rubber and cashewnuts are not strictly substitutable cash crops. In Kerala, for instance, while rubber cultivation is undertaken generally in high ranges and that too on a plantation scale, cashew plants are grown throughout the length and breadth of the State, particularly in agricultural wastelands. It would, of course, be unwise, in any case, to restrict the cultivation of rubber, the per-tree yield from which is several times higher than that of cashew plants. These patent facts deserve to be stressed, lest Dr. Singh's misleading diagnosis should result in undesirables prescriptions. If sufficient incentives are given by the State by way of long-term loans, distribution of good seeds and suitable fertilisers, the cultivation of cashewnuts can be promoted in places where rubber cannot be grown. It is also necessary to establish some organised fruit canning units to utilise the fleshy cashew fruits that are largely wasted now; the canned fruits themselves may, in turn, fetch foreign exchange, besides securing for the producer a better return from cashew plants.

Notice

DUNCAN BROTHERS AND COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-third Annual General Meeting of the Shareholders of Duncan Brothers & Company Limited will be held at the registered office of the Company, 31, Netaji Subhas Road, Calcutta, on Saturday, the 21st day of July, 1962, at 11-30 a.m., to transact the following business:

(1) To consider and adopt the audited accounts for the year ended 31st December, 1961, and the Reports of the Board of Directors and the Auditors.

(2) To declare dividends on the Preference and Ordinary Shares.

(3) To elect a Director.

(4) To appoint Auditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following resolutions:

(5) *As a Special Resolution*: "That the authorised capital of the Company be increased from Rs. 2,70,00,000 to Rs. 2,80,00,000 by the creation of 10,000 6 per cent Redeemable Preference Shares of Rs. 100 each."

(6) *As a Special Resolution*: That Article 5 of the Articles of Association be deleted and the following Article substituted in place thereof:

"At the date of adoption of this Article, the capital of the Company is Rs. 2,80,00,000 divided into 2,25,000 Ordinary Shares of Rs. 100 each, 45,000 Preference Shares of Rs. 100 each and 10,000 Redeemable Preference Shares of Rs. 100 each. The said Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 4 per cent per annum tax-free on the capital for the time being paid up thereon. The said Redeemable Preference Shares shall confer the right to a fixed—cumulative preferential dividend at the rate of 6 per cent per annum free of income-tax payable by the Company but subject to deduction of tax under Section 194 of the Income Tax Act, 1961 or any statutory modification or enactment thereof prescribed under the Finance Act currently in force. The Preference Shares and the Redeemable Preference Shares shall confer the right in a winding-up to payment off of capital and arrears of dividend, whether declared or not, upto the commencement of the winding up in priority to the Ordinary Shares, but shall not confer any further right to participate in profits or assets, nor confer any voting rights save as provided in Section 87 of the Companies Act, 1956.

"Subject to the provisions of Section 80 of the Companies Act, 1956, the Company shall have the option to redeem the whole or any part of the Redeemable Preference Shares at par at any time or times after the thirtieth day of June, 1969 on giving not less than six months' previous notice in writing specifying the date of redemption and, in the case of partial redemption, the number of shares to be redeemed and the date of drawing hereinafter referred to. The particular Redeemable Preference Shares to be redeemed shall be determined by means of drawing and such drawing shall be conducted by the Board at the office in the presence of a Notary Public and also of such of the holders of the said Redeemable Preference Shares who care to attend."

(7) *As an Ordinary Resolution*: "That subject to the approval of the Central Government being received and with effect from 1st November, 1962 Mr. K. P. Goenka be and is hereby re-appointed a Managing Director of the Company upon the terms and conditions as to remuneration and otherwise to be specified in an agreement to be entered into between the Company and Mr. Goenka, a draft whereof has been submitted to this meeting and for the purpose of identification signed by the Chairman thereof and that, accordingly, the Directors be and are hereby authorised to enter into the agreement with Mr. Goenka in terms of the said draft."

(8) *As an Ordinary Resolution*: "That subject to the approval of the Central Government being received and with effect from 1st April, 1962, Mr. N. C. Lance be and is hereby appointed a Managing Director of the Company upon the terms and conditions as to remuneration and otherwise to be specified in an Agreement to be entered into between the Company and Mr. Lance, a draft whereof has been submitted to this meeting and for the purpose of identification signed by the Chairman thereof and that, accordingly, the Directors be and are hereby authorised to enter into the agreement with Mr. Lance in terms of the said draft."

The Register of Members and Share Transfer Books of the Company will be closed from 12th to 21st July, 1962 both days inclusive.

By Order of the Board,
S. K. MITRA,
Secretary.

CALCUTTA, 12*th June*, 1962.

Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and, on poll, to vote on his behalf. The proxy need not also be a member of the Company.

An Explanatory Statement has been annexed to the Notice sent to the Shareholders.

NEW LOANS ANNOUNCED

(From Our Own Correspondent)

BOMBAY, *4th July*

The eagerly awaited borrowing programme of the Central Government was announced late on Tuesday evening this week. It had a surprise for the money market. While it had generally been anticipated that the Government would pay a little more on its loans this year than it did last year, none had expected that it would offer as much as 4.5 per cent per annum, albeit on the longest-dated loan. Since the terms offered are more liberal than even the expectations of the optimist, values of the existing loans have suffered a substantial setback and a further fall is not ruled out.

Three new loans are being offered by the Government, the lists for which will open on 12th July 1962 and remain open till 14th July 1962, inclusive. They may, however, be closed earlier, if the target, which is Rs. 250 crores, is reached. The Government has reserved the right to retain subscriptions upto 10 per cent in excess of the notified amount, that is, Rs. 250 crores.

The three loans offered consist of a short-medium, a long-medium and a long-term issue, as will be seen from the following particulars:

(i) a further tranche of the existing 3¾ per cent National Plan Bonds—Fifth Series (3¾ per cent 1968) at Rs. 99.20 per Rs. 100 (nominal) repayable at par on 12th May 1968;

(ii) a further tranche of 4 per cent Loan 1972 at Rs. 99.20 per Rs. 100 (nominal) repayable at par on 1st August 1972, and

(iii) 4½ per cent Loan 1985 at Rs. 100 per Rs. 100 (nominal) repayable at par on 12th July 1985.

As the first two loans are being issued at a discount, the redemption yield on them is higher at 3.90 per cent and 4.10 per cent, respectively. As compared with the yields available on the existing loans of corresponding maturities, they are better by 0.12 per cent in both the cases. There is no such long-dated loan as 1985 at present, the existing longest dated loan being 4 per cent 1981. At the time of the loan announcement, the yield on it was 4.08 per cent. While the new long-dated issue is four years longer than the 1981 loan, it carries a yield which is better by 0.42 per cent. A big increase of this nature in the borrowing rate of the Government marks a further significant departure towards higher interest rates.

Subscriptions to the new loans can be both in cash and the two loans maturing this year, namely, 2¾ per cent 1962 and 3¼ per cent 1962. The details of Conversion are as follows:

The securities of 2¾ per cent Loan 1962 and 3¼ per cent Bonds 1962 will be accepted for conversion at Rs. 99.50 and Rs. 100 respectively per Rs. 100 (nominal). Interest on 2¾ per cent Loan 1962 will be paid upto 11th July 1962. Interest on 3¼ per cent Bonds 1962 will be paid for the full half-year ending 15th July 1962.

Interest on the securities to be issued will accrue from 12th of July 1962. Interest on the 3¾ per cent National Plan Bonds—Fifth Series (3¾ per cent 1968) will be paid on the 12th November 1962 for the period 12th July to 11th November 1962 and thereafter half-yearly on the 12th May and 12th November. Interest on the 4 per cent Loan 1972 will be paid on the 1st August 1962 for the period 12th to 31st July 1962 and thereafter half-yearly on the 1st February and 1st August. In the case of 4½ per cent Loan 1985, interest will be paid half-yearly on 12th Jan. and 12th July.

As already stated, the new loan has had a bearish effect on the gilt-edged market. Over the week, the existing 4 per cent 1972 has gone down by 70 nP to Rs. 99.50, 4 per cent 1973 by 55 nP to Rs. 99.50 3¾ per cent 1967 and 1968 by 40 nP and 35 nP, respectively, 3½ per cent 1968 by 30 nP and so on.

The terms of the new loan have had no effect on the short-term money market. The term-deposit rates are unchanged. The inter-bank call rate has been easy throughout the week at the low rate of 1¼ per cent, as all banks are flushed with funds. It is possible that money will be in good demand when the lists for new loans open and the call money rate may then easily jump up to 3.5 per cent.

The 91-days' Treasury Bill rate has gone down further from 2.4 per cent to 2.371 per cent. There has again been competition for them, the offerings aggregating Rs. 4.10 crores, as against Rs. 4.25 crores last week and an invitation for Rs. 2 crores. Sales of Intermediate Treasury Bills, on which the yield was only 2.336 per cent, fetched as much as Rs. 7.10 crores, as compared with Rs. 6.36 crores in the previous week and only Rs. 48 lakhs in the week before that.

There will be no sale of Treasury Bills through the tender system during the coming week, the next date for tenders being 16th July. Apparently the Government has skipped the next week, because of its long-term borrowings referred to at the outset. Sales of intermediate Treasury Bills, however, are being continued from 4th to 14th July, but the rate has been reduced still further to 2.316 per cent.

The foreign assets of the Reserve Bank, during the week ended 29th June 1962, declined by as much as Rs. 5.02 crores, bringing down the total to Rs. 97.32 crores, which is a record low, the previous lowest being Rs. 98.04 crores during the week ended 28th July 1961.

Among foreign exchanges, the pound sterling ruled strong this week, with the rate for ready sterling in New York improving from 280.730-280.760 cents to 280.770-280.800 cents per £. Three months' forward also picked up 0.020 cent to 280.230-280.260 cents per £.

GOLD STEADY, SILVER EASY

(From Our Own Correspondent)

BOMBAY, *4th June*

Gold in the bullion market ruled steady during the week under review, while silver was easy. The steadiness of gold was due to reduced pace of arrivals, the daily average being 5,250 tolas, as against 7,000 tolas last week. Offtake of gold was, of course, lower at 3,750 tolas a day on an average, as against 4,800 tolas, but it was thought that it might improve in the next few weeks. Silver encountered selling induced by bearish advices from upcountry centres. The daily average rate of arrivals was also higher at 53 bars, as compared with 41 bars, whereas offtake was unchanged at 8 bars. The undertone of the silver section at the time of writing was somewhat firm.

In gold, the *Bhadrapad* (15th September) settlement met with good support and advanced in the course of the week from Rs. 123.90 to Rs. 125.30 yesterday, but declined on bull liquidation to Rs. 124.35 today. The ready rate continued to command a premium over the forward, though the actual premium declined from Re. 1.75 on Wednesday last week to Re. 1.30 today, when the closing rate stood at Rs. 125.65 same as last week.

The *Bhadrapad* (17th September) settlement in silver began the week at Rs. 216.40, as against the previous close of Rs. 216.25, and moved down to touch a low of Rs. 214.90 yesterday. At this level, there was some support and the settlement recovered to Rs. 215.40 today before closing at Rs. 215.35, a net drop of 90 nP over the week. Ready silver receded from Rs. 215.25 to Rs. 213.65 yesterday, but hardened to Rs. 214.35 today. At this rate, the discount under the forward was Re. 1, same as last week; the discount was higher at Re. 1.25 yesterday, as well as on Saturday and Friday.

A large part of the gains recorded by silver in the London bullion market in the previous week was erased during the week under review. Ready silver fell from 89*d.* to 86¾*d.* and forward silver from 89½*d.* to 87¼*d.* Silver at New York also suffered a setback, the latest available quotation being 103.25 cents, as against 104.50 cents. Ready gold in London, too, eased from 250*s.* 2*d.* to 250*s.* 0¾*d.* The dollar price, however, strengthened from $35.10½ to $35.11.

The following table shows the trend of prices during the week under review:

	4-7-'62 (closing)	High	Low	27-6-'62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	125.65	125.70	125.00	125.65
Bhadrapad * ..	124.35	125.30	123.65	123.90
Sovereign	97.50	97.75	97.50	97.50
SILVER				
Ready (.996 fine)	214.35	215.40	213.65	215.25
Bhadrapad † ..	215.35	216.40	214.90	216.25
London—				
Gold	250*s.* 0¾*d.*	250*s.* 0¾*d.*	249*s.* 11½*d.*	250*s.* 2*d.*
Silver Ready ..	86¼*d.*	88*d.*	86¼*d.*	89*d.*
Silver Forward ..	87¼*d.*	88¼*d.*	87¼*d.*	89¼*d.*
New York—				
Silver	103.25 cents	104.50 cents	103.25 cents	104.50 cents

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

METALS UNCHANGED

(From Our Own Correspondent)

CALCUTTA, *3rd July*

Conditions in the metal market during the week under review were unchanged and prices were about firm at previous levels. Support was on a modest scale, but the stock position of the principal metals bordered on exhaustion. A hand-to-mouth existence has come to stay as a permanent feature of the metal market, and with the difficult foreign exchange position, the day when India can maintain a good stock position and can import when prices are lower, is far off. That is why prices in India shot up a couple of weeks ago when it was announced that a general cut in imports had been decided. At that time, conditions in world markets were quiet, pending the releases of tin and copper from U.S. strategic stockpiles.

During the week under review, it was announced that the condition, namely, 'that the supplier is not more than 49 per cent owned by stock-holders who are not citizens of the U.S.A." —stipulated in regard to the grant of import licences for non-ferrous metals under the aid granted by the agency for international development of the U.S.A., has been waived by the Government of India.

On the London Metal Exchange, tin opened at £869 a ton and, after hardening to £878, eased to close lower at £864. The improvement in price was due to the pressure now being exerted on the U.S.A. by producing countries to prevent U.S. releases at prices lower than £1 000 a ton. Bolivia has called upon the U.S. to defer the proposed releases until a rational price policy was evolved. Malaya has urged that it is not enough if the U.S. only listens to Malayan representations; that country wants the U.S. to consider actively the different problems that would come to the forefront when once the release commences. In Calcutta, tin was maintained at Rs. 1,840 per 100 kgs.

With more arrivals of the virgin metal from the U.S. copper scrap supplies were under less pressure. In London, the spot quotation remained unchanged at £234 per ton. Zinc in London opened at £66¼ a ton and closed higher at £67½. Lead closed lower at £56¼ a ton, as against opening of £56¾.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, *4th July*

The cotton futures market had a short session of only four trading days during the week. The market was closed on Monday, the 2nd inst., on account of the death of Dr. B. C. Roy, Chief Minister of West Bengal and Mr. Purushotamdas Tandon, a former Congress President and also today, as a mark of respect to the memory of Sir Purushottamdas Thakurdas, who passed away on this day (4th July) last year. During this short period, the market ruled fully steady. The steadiness was influenced by the delay in the monsoon which, it was apprehended, would adversely effect the crop. Speculative support induced by this consideration led to a rally in prices and the Jarilla March 1963 contract rose from Rs. 722.75 last week-end to touch Rs. 731.25 yesterday. This level however could not be maintained as subsequent reports from upcountry centres said that Berar, C.P. and Madhya Bharat tracts had received rains varying from 1" to 1¼" and that there was likely to be further rains and this prompted selling. The Jarilla March contract receded from Rs. 731.50 to Rs. 727.75 at close yesterday. The contract again firmed in private trading today, on fresh support, to Rs. 729. The undertone at the time of writing is fully steady. The range of fluctuation of the contract is indicated below:

	3-7-62	*High*	*Low*	27-6-62
I.C.C. Jarilla				
March 1963 ..	727.25	731.25	720.75	722.75

In the spot market at Sewri, activity was limited. Moderate interest was noted in popular varieties such as Co2, Digvijay, Vijay, Surti, L. 147, Kalyan and 197/3. Prices were well maintained. Export demand for Bengal *Deshi* during the week was slack. Some stray business was, however, put through in fine and superfine varieties. Owing to the Japanese interest noted of late, export sales against the recent quota have been steadily increasing and if the trend persists the ceiling would soon be reached.

In the import section, spinner interest was noted in Pakistan, American and Sudan cottons. The ceiling of 42,000 bales fixed for import of Pakistan cotton has been almost reached. Meanwhile, mill interest in Pakistan cotton has turned to new crop, thanks to the scarcity of choice qualities.

The guaranteed minimum price for Uganda cotton during the 1961-62 season has just been announced. The prices are 55 cents per lb. for S47 and 56 cents per lb. for B.P. 52. These guaranteed minimum prices are higher than is justified by present estimates of what world prices may be when the cotton crop is sold. The Government is reported to have fixed these comparatively high prices in order to maintain growers' incomes, to cushion the effect of possible falls in the sale prices obtained for Uganda cotton and to provide the maximum incentive to growers to increase their acreage of cotton this year as a means to offset their losses on last season's disastrous crop. It has been emphasised that the prices now announced are guaranteed minimum prices; final prices, which will be fixed later in the year, will not be lower and are unlikely to be any higher. In setting the guaranteed minimum prices at this high level, the Government intends to give the grower the closest possible indication of the price he is likely to receive for his crop, and it is hoped thereby to achieve a good response to the call for increased production thus not only restoring the crop to its former level, but possibly bringing about a substantial increase. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from the Spot market at Sewri:

Bengal *Deshi* 685; Gangnagar 640; Wagad 905; Khamgaon 1,150; Pakistan 4F 1,015; B.P. 52 1,340; Elpaso 1,580.

Distinctly firm conditions prevailed in the Karachi cotton futures market during the week under review. The N.T.R.G. July contract attracted fresh support, thanks to the commencement of the delivery period, and rallied from Rs. 72.70 last week-end to Rs. 75.20. The new crop January contract firmed up in sympathy from Rs. 76.15 to Rs. 76.40. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 7.050; Punjab *Deshi* 55; 4F Punjab Roller 83; S.G. 87; L.S.S. Punjab Roller 84; S.G. 88; 289F Punjab Roller 93.50; S.G. 101.

Cotton futures in Liverpool suffered a setback during the week. Both the American and American type contracts declined on pre-tender liquidation in the near positions and hedge selling in the more forward positions. Ready demand by spinners was quiet and centered mainly around South Brazilian, Peruvian, Argentine, and Mexican cotton. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 23.75; October 23.65; December 23.60; March 23.75.

American cotton mixed growth contract: December 23.95.

Sudan: July, September, November 29.50.

Easy conditions prevailed in the New York cotton futures market during the week. Selling in the July position prompted by the issue of a large number of transferable notices led to a decline in values which extended to other positions also. Spot prices, however, ruled steady.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	3-7-62	26-6-62	19-6-62
New York Spot	36.15	36.10	36.10
July	33.71	34.23	34.85
October	34.09	34.43	34.58
December	34.09	34.38	34.40

ART SILK YARN BUOYANT

(From Our Own Correspondent)

BOMBAY, *4th July*

Amilon yarn (20 x 1) futures and spot indigeneous art silk yarn registered a marked rise in values. The rise followed hectic buying by bulls with a view to holding as much stocks as possible before the Government actually gave effect to its proposal to impose a cess of 25 nP per lb. on indigeneous yarn. It was reported that the spinning interests had told the Textile Commissioner that they would accept the proposal, provided they were allowed to raise the prices suitably. The report that Mr. T. T. Krishnamachari had suggested a further drastic cut in import of art silk yarn also gave an impetus to bulls. National Rayons 150 Bt. cones 1st grade advanced from Rs. 13.55 to Rs. 14.78 and 120 Bt. cones 1st grade from Rs. 15.95 to Rs. 17.05. Imported 150 and 120 Japan and Italy yarns were unchanged at last week's levels. Amilon (20 x 1) August contract climbed up from Rs. 4.340 to Rs. 4.460. The Yarn Merchants Association and Exchange has decided not to open the October contract, in view of shortage of goods.

In sympathy with art silk yarns and following good enquiries from consuming centres, staple fibre yarn also recorded handsome gains. 20 x 1 August settlement spurted by Rs. 31 to Rs. 782. Spot Citys rose by 49 nP to Rs. 8.45. Kohinoors hardened by 13 nP to Rs. 8.51. Hinds strengthened by 16 nP to Rs. 8.67.

Cotton yarns were dull. Business put through was restricted with values moving narrowly. Traders felt that the supply of cotton yarn from the Madras side would dwindle due to lower output, following the enhancement of power cut from 50 per cent to 60⅔ per cent. The report, however, did not have much effect.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	4-7-1962	27-6-1962
Art silk yarn—	Rs.	Rs.
120/1 Amilon (100 kg.)—		
August	4,460.00	4,340.00
120 Japan (per 100 kg.)	2,260.00	2,260.00
150 Japan (per 100 kg.)	2,205.00	2,205.00
120 Italy (per 100 kg.)	1,819.00	1,819.00
150 Italy (per 100 kg.)	1,736.00	1,736.00
Nat. Ray. 150 Bt. 1 (per kg.) ..	14.78	13.55
Staple fibre yarn (40 x 2)—		
August	782.00	751.00
Kohinoor (per kg.)	8.51	8.38
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	17.50
30s Podar	21.75	21.75
32s Madura	30.00	29.50
40s Madura	35.50	35.00
60s Punjay	72.50	72.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *4th July*

The upward trend of oilseeds prices noted last week gained considerable momentum during the week under review, with the exception of linseed which ruled subdued mainly on technical considerations. Groundnuts were buoyant, thanks to paucity of rains in the major producing areas. Today, however, there was stale bull liquidation on reports of rains and smooth sowing operations in certain producing areas. Castorseeds staged a smart recovery from the previous week's setback on hopes of better offtake of castor oil by Communist countries. Cottonseeds moved up in sympathy. The June contracts in castorseeds and linseed went off the board this week.

Operators took note of the Gujarat Chief Minister's proposals for additional taxation on oilseeds. In addition to increase in land revenue it is proposed to raise the tax on land under oilseeds from one rupee to Rs. 2.5 per acre in the case of non-irrigated land and from Rs. 2 to as much as Rs. 9 per acre in respect of irrigated land. This measure did not have any perceptible effect on the local market.

Groundnut July 1962 contract firmed up by Rs. 4.75 to Rs. 218.50; at one time it had touched to Rs. 219.75. September 1962 contract advanced from Rs. 215.50 to Rs. 220, before winding up the week at Rs. 218.75. Khandesh quality rose by 75 nP to Rs. 46.25. Nizam bold strengthened by 50 nP to Rs. 45.75. Oil July 1962 contract hardened by 35 nP to Rs. 18.65 and September 1962 contract by 20 nP to Rs. 18.75. Railway receipts put on 35 nP to Rs. 18.85 and oil ex-mill 25 nP to Rs. 19.25.

Castorseed September 1962 contract picked up Rs. 3.50 to Rs. 164.12. Madras small gathered a rupee to Rs. 32. Oil B.S.S. improved by 65 nP to Rs. 13.10 and Commercial by 50 nP to Rs. 12.25.

Cottonseed September 1962 contract scored a gain of Rs. 3 to Rs. 109. July 1962 contract was higher by Rs. 2.25 at Rs. 104.75. White picked up 18 nP to Rs. 20.05. Both Berar and non-white gained 5 nP to Rs. 21.05.

Linseed, however, turned subdued, after ruling distinctly steady in the initial sessions. September 1962 contract declined by 25 nP to Rs. 40.25. Bold ready lost 50 nP to Rs. 39.25. But linseed oil gained 30 nP to Rs. 15.65.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 4th July, as compared with those of the two previous weeks:

	4-7-1962	27-6-1962	20-6-1962
Groundnut	Rs.	Rs.	Rs.
July 1962	218.50	213.75	210.62
September	218.75	215.50	214.50
Nizam bold	45.75	45.25	45.25
Khandesh quality	46.25	45.50	45.75
Oil ex-mill ready*	19.25	19.00	19.10
Railway receipts*	18.85	18.50	18.60
Oil July 1962	18.65	18.30	18.15
Castorseed			
September 1962	164.12	160.62	161.75

NILGIRI TEAS BRIGHTER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *28th June*

A total of 803,000 kgs. was offered in sale No. 26 held on Tuesday, the 26th inst. Quality showed little change, but a few Nilgiris were brighter. There was good general demand. Nilgiris B.O.Ps were about steady on last rates, while a few lines were dearer. Similar fannings were easier except for a selected few of the best sorts, which were firm. The best good medium brokens were firm, whereas others were irregular and generally easier, and their fannings also came to a lower market. The brighter medium and low medium brokens were barely steady on last rates, but others declined, sometimes 10 to 15 nP. Similarly, the brighter fannings shed 10 to 15 nP, but plainer sorts lost ground even further. Plainest brokens came to a firm market, while their fannings were much lower. Black leaf B.O.Ps were fully firm and sometimes dearer, but fannings in this category inclined easier. Whole leaf grades met good inquiry, but rates were irregular. Teas of unorthodox manufacture came to a generally lower market, particularly fannings in this category. Tippy teas were a strong feature.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.10-4.00	4.25-4.40
Mediums	3.80-4.20	4.40-4.50
Good mediums	4.20-5.20	4.50-4.70
Nilgiri B.O.P.	4.00-5.75	4.50-5.50

The average price realised in sale No. 26 was Rs. 3.81 per kg. as against Rs. 3.89 a week ago and Rs. 4.44 in the corresponding sale last year.

Offerings amounted to 387,000 kgs. in dust sale No. 26 held on Thursday, the 28th June. There was good demand but at generally lower rates. The better highgrowns dust and primary unorthodox grades sold at a drop, while good medium descriptions registered declines in prices. Black leaf varieties came to an easier market as did fibrous residual sorts.

The average price realised in dust sale No. 26 was Rs. 3.17 per kg., as compared with Rs. 3.25 a week ago and Rs. 4.28 in the corresponding sale last year.

Colombo: Just over 7¼ million lbs. were offered and the market opened to a good general demand at rates which were firm on last week's closing prices with improved quality Uvas dearer.

London: North Indian and other growths: In Monday's sale demand was less and prices were generally easier. New season's North Indian teas met with fair demand but generally sold at below brokers' valuations.

Ceylon and South Indians: 22,272 packages were offered in Tuesday's sale of which 6,222 packages were from South India. The market met with a good general demand. There was useful inquiry for Ceylons although plain and light liquoring types were easier. Teas from South India met with irregular support. With the exception of best liquoring sorts others sold at generally lower rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 27: 803,000 kgs. offered. Good general demand. Low medium and medium brokens irregular, often dearer. Good mediums fully firm. Highgrown slightly dearer. Fannings, particularly fibrous sorts, weak. Unorthodox irregular."

TEA SUBDUED

(From Our Own Correspondent)

CALCUTTA, *3rd July*

The poor demand for the poor Darjeelings and common teas evident in the auctions of the new season so far has only confirmed earlier apprehensions of the trade. With a higher world production and the consequent possibility of supplies exceeding demand—up to the end of May 1962 this was higher by 14.3 million lbs. at 335.5 million lbs.—consumers all the world over, including India, can afford to be choosey. As such, no difficulty is expected to be experienced in the marketing of quality teas, and, it was encouraging to note that in the last export auctions, more interest was shown by overseas buyers. Several countries participated in biddings and such increased measure of support was in distinct contrast to the weakness in earlier sales. The change indicated that buyers were satisfied that no useful purpose was being served, by waiting. Also in the last auctions, quality showed a visible improvement.

Weather conditions in gardens continue to be exceptionally good and production has so far been higher than last year. This indicates that the output for the year as a whole would be higher by about 20 million lbs. The trade points out that the output of the poor quality teas would be far higher than last year, and there is very little overseas demand for the same in foreign countries. This was only too evident by the large withdrawals of these teas without bid during recent auctions. Competition by other producing countries in common teas in foreign markets is keener than in quality teas. Ceylon's prices are much cheaper than India's and hence Ceylon is able to attract a large overseas market. That explains how, without the cushioning influence of a large home market, Ceylon could sell most of its common production in 1961 in overseas markets.

Owing to the high cost of production, Indian gardens have to depend on the internal market for marketing most of their output of the inferior grades. However, it is a pity that the Government is discouraging internal consumption through fiscal measures, in an attempt to provide more tea for export. Recent trends have indicated that consumers in India are also becoming more and more quality-conscious. There is need for gardens to increase the production of quality teas. If gardens are to be expected to improve their financial position, and to increase the planted area, a glut in supplies must be avoided.

Wages are gradually being pushed up. It was only during this week the unanimous recommendation of the tea industry's Wage Board, for an increase of 8 nP per day for plantation workers in West Bengal and Assam was announced. This would be in addition to the wage increases recommended by the Board in January last. However, at that time, the employer-members of the Board dissented, and there was the apprehension of unrest among workers. At a time when the industry is desiring a reduction in costs of production, further additions to the wage bills would reduce the margin of profits and also weaken the competitive power of the industry in foreign markets. To that extent, the incentive for increased production would be diminished. The industry has been urging the Government for the total abolition of the export duty.

Over the week-end, a reduction in the freight rates on tea was announced by the Calcutta Liners and the Calcutta Continental Conferences.

The total abolition of the export and excise duties was demanded by Mr. N. K. Dutta, in his address at the annual meeting of the Assam Tea Planters' Association. This would put the various measures now being taken by Government to boost exports on a more rational basis. Mr. Dutta expressed his unhappiness at the increase in excise duty of tea meant for internal consumption. For, internal consumption must be encouraged if production were to be stepped up. A glut in world production, he warned, might upset the equilibrium in the internal market leading to a fall in the world price of tea.

Mr. A. S. Bam, Chairman of the Tea Board, who also spoke at the above meeting, referred to his recent foreign visit and said that the climate for export had improved. Realisation of the output target fixed for the third Plan depended on the measure of Government assistance for extension of acreage, and Mr. Bam said that, while the normal programme of replanting was being done by the industry depending on its own resources, a scheme to grant loans, amounting to Rs. 4,500 per acre for hills gardens and Rs. 3,000 per acre for plains gardens had been approved by Government in an attempt to speed up the work.

Mr. Morarji Desai, the Finance Minister, also addressed the Assam planters. He pointed out that concessions to the industry should not go beyond certain limits, as, if they did, there would be unfair competition.

It remains to be seen if the Assam Government is prepared to accept the advice tendered by Mr. Desai as to the unsuitability of Gauhati as an auction centre. Anybody can see that Gauhati offers no facility for such a centre, and still the Assam Government proceeded with the proposal. If it is the intention of the Assam Government that the auction bidders should go to Gauhati for Assam teas, it is easy to see that exports of Assam tea would decline sizably. The gardens can also claim in turn, isolation by demanding auctions of their production in their own premises. Calcutta can go a step further and refuse to consume the oil mined and refined in Assam. If all concerned do not realise that inter-dependence among the States in India is the only way for speedy economic progress, inter-State rivalries would only hamper development.

RAW JUTE SPURTS

(From Our Own Correspondent)

CALCUTTA, *3rd July*

Reports of floods from jute-growing areas in Assam as well as parts of West Bengal made sellers of raw jute reserved and, as a result, prices rose by Re. 1 a maund during the week under review. There were more inquiries for both hessian and sacking goods from overseas market; the substantial business done with West Africa was the solid cause for the sizable rise in the prices of heavy goods. Finding that there was now little

chance for the price to decline, Argentina resumed purchases of hessian, and prices moved up. The improvement in heavy goods was more impressive, and this was a pleasant surprise to the trade, since overseas buyers had been neglecting this section in recent months to lead to widening the margin between heavy goods and hessian. This week's rise, however, went a long way to fill this gap. Since Pakistan mills have sold all production up to the end of this year, overseas buyers have to pay greater attention to the Calcutta market. That explains for this week's abrupt interest by several countries. Several inquiries were received from Cuba and Australia, and the trade believes that substantial business would be done with these two countries in the near future. Several Asian and Middle Eastern countries have sent in feeler inquiries, and it was expected that Burma would follow up the recent purchases. Burma purchased about 2,000 bales for shipment before August, and has started the practice of calling tenders every week. About 2,000 bales were purchased by the Chile Nitrate Corporation for immediate shipment.

The U.S.S.R. was in the market for some quantity of cornsacks. A few months ago, Russia had purchased a token quantity of cornsacks for testing and determining the utility of this construction. That this country has now commenced purchasing cornsacks goes to show that the tests were satisfactory. It is expected that the U.S.S.R. would from now on be a regular buyer of cornsacks. Demand for heavy goods has developed satisfactorily, and so the mills would be called upon to increase the proportion of production of such goods *vis-a-vis* hessian. But, in hessian also, demand is higher. Fair quantities are continuously being lifted by the U.K. and Canada. U.S. buying has been one of the factors for the steady rise in prices in recent weeks and, in addition to this, Argentina has commenced to cover requirements. That the mills are expected to do extremely well in the current accounting period would be evident from the lengthening of transactions of jute mills shares on the stock exchange at hardening rates. It should be said that, in the long-term interests of the industry, the rise in prices should be considered unfortunate. Pakistan quotations are much below Indian, but, since Pakistan mills are unable to meet full requirements, overseas business is taking place at Calcutta in increasing quantities, despite comparatively higher prices. At the same time, it should be said that, in a free market such as the jute goods, even a small increase or decline in interest is immediately reflected in prices, an increase being taken as an indication of the need to adjust supply to demand and a decrease as reflecting demand.

On Tuesday last, there were reports of cornsacks sales to the U.S.S.R. Ready B. twills rose from Rs. 131.50 to Rs. 133.50. Argentina showed interest in hessian and, although enquiries from other quarters was meagre, ready hessian spurted from Rs. 61.75 to Rs. 63.25. Activity in the futures market was keen. Sellers in the local bazar became reserved, following rumours of substantial interest in heavy goods from overseas countries. In fact, there were already several inquiries with shippers. On Wednesday, the market was officially closed, but holders availed themselves of this opportunity to book profits. In the process, ready B. twills eased to Rs. 132.50 and ready hessian 40" 10 oz. to Rs. 63. By Thursday, more overseas inquiries were in the market and, although there was only little actual business taking place, hessian 40" 10 oz. rose to Rs. 64.25 and B. twills to Rs. 132.75 on Thursday. On the following day, B. twills were steady at Rs. 132.75 and hessian 40" 10 oz. scored a fractional gain at Rs. 64.50. Signifying the increased nature of business with overseas countries, booking of space in forward ships on account of hessian and sacking was fairly large. The week-end announcement of a reduction in freight rates of jute goods, tea and certain other commodities by the Calcutta liners and the Calcutta Continental Conferences, it is to be hoped, would result in greater demand. Another good news has been that the U.S.A. has reduced the tariff on jute goods, details in respect of which are still awaited. This reduction, it is felt, would contribute to the increased usage of burlap in the U.S.A. After remaining closed on Saturday, the market re-opened today firm. The market remained closed yesterday as a mark of respect to the memory of the late Dr. B. C. Roy, and the reopening today was against the background of the accumulated demand of the past three days.

With intermittent rains and sunshine, the condition of plants is satisfactory, and the new crop should begin reaching mills this month. Arrivals are expected to total 100,000 bales and would increase to 300,000 bales next month. September and October will see the climax of arrivals. There were reports of flooding from Assam and certain districts of West Bengal, and this helped prices move up. In several jute districts of West Bengal, the monsoon has hitherto been weak, and there is anxiety as to adequate water being available for retting. Another factor which helped prices to move from the minimum levels was the report of the finalisation of export contracts in fibre aggregating about 15,000 bales with Czechoslovakia and Poland. Now that fibre prices have risen, it is apprehended that the export quota of 100,000 may not be completed. Attempts are being made to complete the quota, the unutilised portion of which will lapse at the end of this month. July-Assam bottoms rose from Rs. 30.50 per maund to Rs. 31.50, *daissee* bottoms from Rs. 33.50 to Rs. 34.50, and northern bottoms from Rs. 29.50 to Rs. 30.50. Now that fibre prices have been stabilised, it is felt that the need to export is not as acute as before. Also, with the increased demand for goods, mills would require more fibre.

Speaking at the annual meeting of the East India Jute and Hessian Exchange here the other day, its Chairman, Mr. Gopaldass Toolsidass, declared that the Exchange was of assistance to primary producers, as well as traders and manufacturers. To the former, the function of the Exchange was an indicator of prices and, to the latter group, it offered hedging facilities. He was happy to record that the Exchange had played a very useful role in ensuring stability of prices and fair trading facilities to traders. The two problems towards the solution of which the Exchange contributed were the increase in gunny prices in 1958-59 and 1959-60, in view of inadequate fibre supply and the decline in prices in the last year following the bumper crop.

The fall in fibre prices in Pakistan has been of such a magnitude as to lead to vociferous demands in the East Pakistan legislative Assembly last week for the fixation of minimum prices. However, the official difficulty in acceding to such a request was explained to be that minimum prices would be ineffective when only one-fourth of the crop is consumed within the country. The remainder is exported to about fifty countries. As such, control over prices would be of no avail in the task to ensure a fair return to the grower. As such the only hope for the growers in Pakistan is that, as a result of the lower crop expected in this year, prices would improve. It was reported that, in an attempt to stabilise fibre prices at levels higher than at present, the Pakistan Government had asked mills to increase purchases. Buffer stock purchases were also expected to commence shortly. These purchases would be done by the Government through the Jute Marketing Corporation acting on behalf of the Pakistani Jute Board. As a result of expansion, mills' requirements of fibre in Pakistan are expected to increase. In the Pakistan National Assembly also, anxiety on the present depressed conditions in the fibre market was expressed.

KIPS ARRIVALS MODERATE

(From Our Own Correspondent)

MADRAS, *2nd July*

Arrivals of tanned cow hides, buff hides and buff calf were moderate and of cow calf small in the local market this week. Export trading was patchy. Tanners of good marks were holding firm to their prices. Demand for F.A.Q. marks was poor and their prices were lower. There was moderate call for lower grade kips for inland trade. Importers were keen on cow calf, but sellers were few because of their stock position.

In the tanned skins section, shipment business was selective. There were inquiries for tanned goat in heavier averages all selections and lights inferior fifths. There was sustained demand for middle class sheep skins and prices hardened to some extent. Sheep-primes and semiprimes were difficult to place, despite tanners' willingness to shade their price ideas.

Importers in the U.S. were interested in tanned buff-lights, but sellers were reserved, as stocks available in the local market and in the tanneries were very small. Tanners were greatly perturbed over the power-cut imposed last week, as it would hamper their production seriously.

Notice

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE following posts in the Bank:

(A) **POSTS AND SCALES OF PAY:**

(i) **Probationary Assistants on the General Side:**

Rs. 250-25-450 EB 25-650.

(ii) **Economic Assistants in the Economic Department:**

Rs. 175-12.50-300 EB 20-440.

Note: Candidates for the Probationary Assistants' posts possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) **QUALIFICATIONS:**

(i) **Probationary Assistants:** Applicants should have a good academic record and a first or high second class Master's degree of a recognised Indian or foreign University with Economics, Banking, Commerce or Accountancy as a special subject and should also have some proficiency in drafting. The educational qualifications may be slightly relaxed in the case of candidates who possess a good degree in Law. Preference may be given to those who have passed the Institute of Bankers' Examinations.

(ii) **Economic Assistants:** Applicants should possess a first or high second class M.A. or M.Com. degree in Economics or Commerce of a recognised University, as also a thorough knowledge of economic analysis and have specialised in Economics. Preference will be given to those who have practical experience of research in Economics.

(C) **AGE LIMITS AS ON 1st JULY 1962:**

(i) **Probationary Assistants:** Between 21 and 25 years.

(ii) **Economic Assistants:** Between 18 and 24 years.

The maximum age limit is relaxable but not beyond 30 years in the case of:

(i) candidates possessing special qualifications and experience of value to the Bank;

(ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iii) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit *separate* applications accompanied by separate application fees and *should clearly indicate the post for which they have applied.*

3. Applicants for the posts of Probationary Assistants must remit with their applications a fee of Rs. 7.50 by cheque or Bank Draft on a *Scheduled Bank* or by Postal Order, payable at Bombay. Applicants for the posts of Economic Assistants must remit a fee of Rs. 2.00. *The application fee is in no case refundable.* Bonafide refugee candidates *not in Employment* applying through Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed form obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Hyderabad, Trivandrum and Patna accompanied by copies *(originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post-Graduate degree examinations and copies of at least two testimonials* should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1, so as to reach him on or before the 31st July 1962.

5. Candidates already in service will be required to produce a proper discharge certificate from their employer in the event of their being selected, at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

8. Selected candidates for Probationary Assistants' posts will have to appear for interview/s before the Selection Board at any of the Bank's offices. Selected candidates for the Economic Assistants' posts will be required to appear for a written test which will be held at the abovementioned offices of the Bank. Candidates should clearly state on the top of their applications, the office of the Reserve Bank at which they desire to appear for the test, if called. Those successful in the test will have to appear for an interview at Bombay.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing will be regarded as a disqualification.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

ABBREVIATIONS. N—Nominal. (ƒ) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935.
—Interest free for first 12 years. t—Interest free for first 1? years. Z—Ex nine instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice.
T—Liability taken over by Madhya Pradesh.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

All preference shares are taxable unless otherwise stated.

*** These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent (cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

PROSPECTS FOR FOREIGN AID

THE third Plan will be implemented with or without foreign aid. This assertion was first made by Mr. Gulzarilal Nanda, Union Minister for Planning, and later reiterated by no less a person than the Prime Minister himself. Some of the lesser personalities, too, have been parroting it in their public speeches. This is mere bravado, for the Plan cannot be executed in full and in the stated five-year period without foreign aid. It is true that external assistance for the third Plan forms only about 32 per cent of the total outlay, including refinancing of maturing obligations and the imports of wheat from the U.S. under P.L. 480. But it constitutes a crucial part of the resources pattern of the Plan. With our external resources standing at the nadir, with our exports running well below the target and with our capacity to borrow from the I.M.F. already exhausted, it is ridiculous to say that India can see the Plan through alone, if necessary. Even as a piece of political rhetoric, it is a poor one, as it fails to impress. It is significant that none of India's critics abroad has taken Mr. Nehru's statement seriously and retorted by saying: "Well, if you think that you can go ahead with your third Plan without foreign aid, why not do so?" The fact is that even the worst diehard in the developed countries realises that the underdeveloped nations have to develop and raise their living standards and that, if they are to do so without loss of individual liberty, they need liberal help from the developed countries.

Neither Mr. Nehru nor Mr. Nanda is a simpleton. It is no secret that, currently, Mr. Morarji Desai is trying hard in Western Europe to get, among other things, as much foreign aid as possible and that in a manner to suit India's present predicament on the balance of payments front. He is working behind the scenes for ensuring an early meeting of the members of the Aid-India Club with offers adequate enough to match the quantum of help promised by the U.S. Government. And he is not doing it without the consent of the Prime Minister and the Cabinet as a whole. What Mr. Nanda and Mr. Nehru obviously meant by their statements was that they were determined to pursue their efforts in achieving the third Plan goals, even if the expected and necessary foreign aid failed to materialise. The basic goal of the Plan, as readers are aware, is to raise the national income and living standards of the people. Now this can be achieved in ways other than those preferred in the third Plan. Only, it would mean greater hardship to the people and more delay. There will have to be a lot more tightening of the belt, severe austerity and a considerable amount of regimentation, including conscription of labour and private investments—call it hoards, if you like—in precious metals and jewellery. Some of the projects in the Plan may have to be dropped and others included in it. In other words, the Plan will require rephasing. It would be unfortunate not only for this country but for the whole democratic world—nay, even for the communist world, for the latter too cannot afford the risk of upsetting the balance of power and provoking a world-wide conflict—if circumstances so conspire as to push it into such a position.

While undoubtedly the prospects for the third Plan have been marred by the cold-war politics of the world, the situation is by no means so bad as to warrant the pessimistic thoughts mentioned above. In the first place, out of the external assistance promised by foreign countries for the second Plan and the first year of the third Plan, there is still an unutilised balance of Rs. 880 crores as of 31st March 1962. This will take care of a number of projects which are either in an advanced stage of completion or just half-way through. Of course, these funds will be available only for specific projects negotiated with the foreign Governments. But a vigorous implementation of these projects will help sustain the tempo of economic growth, albeit at a slower pace. In the second place, none of the foreign Governments has so far gone back on its promise to help India, despite the recent political differences with this country. On the contrary, there have been some reassuring indications in the past one week that both the U.S. and Britain will honour their commitments. If reports from the Continent on the impressions created by Mr. Morarji Desai are to be believed, the Governments there also can be expected to be helpful. Emphasising the importance of India's economic progress to Britain and the world, Mr. Duncan Sandys, Britain's Secretary of State for Commonwealth Relations, for instance, told the House of Commons on 5th July that it was not the practice of the British Government to attach political conditions to economic aid and conceded an Opposition point of view that the success of India's five-year Plan was vital to the future of the Commonwealth and the survival of democracy in Asia and possibly in the Far East. Although he turned down the suggestion that Britain's aid to India amounting to £92 million so far was negligible and thought it was not reasonable to compare the British contribution with that of the U.S., he said nothing to warrant the conclusion that his Government was opposed to a reasonable increase in the aid to India. The U.S. Secretary of State, Mr. Dean Rusk, told the American people in a nation-wide television programme on 10th July that "it would be calamitous" if the President's freedom of action for rendering economic aid to India and Yugoslavia were prohibited by law. He said:

"There have been irritations between us and India in the last several months; two great countries in opposite parts of the world with different positions, different problems, are bound to have points in which they are in disagreement and sometimes they disagree very sharply. The basic fact is that there is a country of 450 million people which is the largest constitutional democracy in the world that the world has ever seen, more people going to the polls in free, orderly elections that we have ever seen anywhere, with basic commitments with which we are familiar. . . . They have maintained that democracy in the face of some grave difficulties . . . a dozen or more major languages inside the country, no common language throughout the country, and yet they have made a constitutional system work along democratic lines. . . . Now we will disagree on certain subjects. There is no reason why we should not. India is not a satellite of ours and we are not a satellite of India. We have great and vital interests all over the world. So we will have our differences, but we also have great common commitments that are important. It would be a great mistake, I think, if we did not take an active, even though just a small, part in the Indian development programme."

There is sufficient emphasis in the aforesaid quotation to discredit the scores of alarmingly pessimistic forecasts made in the past few days about the prospects of U.S. assistance for India's third Plan.

It is, however, necessary for our leaders, be they in power or in Opposition, to bear in mind that the Governments of Western countries are answerable to their respective Parliaments and that the Press in those countries is free to say what it likes. Just as we have to safeguard our vital interests, they have theirs. Our leaders, therefore, must be circumspect in what they say and do. It is not suggested that on issues like Kashmir they should be less than frank. But care must be taken to see that our foreign policy is not twisted in such a way as to give rise to the impression that India is leaning more and more to Russia and that our internal economic policies and practices are not inimical to the vigorous and healthy growth of democracy or to securing an optimum rate of development at minimum cost. It is, of course, true that, so far as the foreign policy is concerned, there is an obligation on the part of Western powers to help India to keep out of the cold war. They must refrain from doing things that compel this country to lean on Russia. But, so far as the economic policies are concerned, the powers-that-be, as well as certain sections of the business community, have not been as realistic as they ought to be. There is too much of dog-in-the-manger attitude and preoccupation with paper socialism. The result is that there is more bureaucracy than democracy, more planning and preaching, instead of production and distribution. This state of affairs is certainly not conducive to obtaining foreign aid on a scale the country needs and deserves.

I.M.F. HELPS INDIA AGAIN

THE International Monetary Fund has come to India's assistance once again, by complying with its request for a standby credit of $100 million (Rs. 47.62 crores). The assistance is more timely and useful than that extended by the Fund on three previous occasions—in 1948-49, 1957 and August 1961. India had, of course, been confronted on these occasions also with a balance of payments crisis, but the country had the cushion of a relatively large amount of foreign assets that could be freely utilised. This cushion is no longer there, since the country has successively drawn down the assets which now stand at a very low level, as the table on the next page shows. The total of gold and foreign assets held by the Reserve Bank of India is no more than Rs. 216 crores (Rs. 118 crores in gold coin and bullion and Rs. 98 crores in foreign securities), a level that is just Rs. 16 crores above the statutory currency minimum requirement of Rs. 200 crores. One may ask whether the country could not have taken advantage of the waiver clause under which the Reserve Bank can, by obtaining Government sanction, allow the reserves to fall below the minimum requirement. Such a step, however, would not be desirable, as it would not be conducive to maintaining the confidence of the public, both in India and abroad, in the rupee. The I.M.F. credit has certainly obviated the resort to such a desperate step.

When the Government of India sent in its application to the Fund for a standby credit of $100 million a few days ago, a Washington report appearing in the London *Times* stated that the

chances of the application being favourably considered were bleak. For India, it was averred, was entitled to a total loan of only $227.5 million from the Fund and that it had already overstepped this limit following the withdrawal of $250 million last year. This report was absolutely ill-informed, as India was well within its limits in asking for a standby credit of $100 million. India's quota in the Fund, it may be noted here, amounts to $600 million (Rs. 285.72 crores), of which $77.5 million (Rs. 36.91 crores) have been paid in gold and the rest in Indian currency. Under the Fund's Articles of Agreement, India is entitled to withdraw 25 per cent of its quota, that is, $150 million, as a matter of right in an emergency and another 25 per cent without any questions being asked by the Fund. It is only the drawals in excess of the overall limit of $300 million that entail higher interest charges and possible I.M.F. investigations. The amount of $250 million so far withdrawn by India from the Fund is, thus, less than the overall limit of $300 million, so that the country can still draw another $50 million. Instead of exercising this right, India chose to ask for a standby credit which could be utilised in any currency held by the Fund over a twelve-month period. The standby arrangement is quite different from a straight withdrawal which is restricted to certain currencies only as specified by the Fund.

The need for India seeking assistance from the Fund might not have arisen, if the Aid-India Consortium members had taken a more sympathetic attitude. High hopes had been raised that, at its meeting held at Washington towards the close of May 1962, the Consortium would reach a final decision not only in regard to the aid commitments already made for the first two years of the third Plan but also in respect of the additional assistance required beyond these commitments. The hopes were, however, belied, because the meeting was adjourned, without arriving at a decision, and that indefinitely.

It is gratifying to find that the I.M.F. has fully recognised the urgency of rendering assistance to India to meet its balance of payments difficulties. Signifying this recognition is the statement by the Fund that "the standby arrangement has been made in support of India's reserve position which has been under considerable strain in recent months." Incidentally, the Fund has acknowledged the fact that there has been "continued overall stability in the country's internal economy." It has also a few words of praise for the powers-that-be. "The Indian authorities," to quota the I.M.F. Press release, "have instituted measures designed to achieve an improvement in the foreign payments situaton while continuing to promote economic growth. A broad export promotion programme is in progress and steps have been taken to reduce imports in the months ahead. Additional taxation has been imposed and the Government is tightening its credit policies."

While all this is true and the I.M.F. standby credit will provide a breathing space, the fact remains that work on quite a number of the projects included in the third Plan has already commenced and, unless they are assured of sufficient foreign exchange, the momentum will slow down, leading to higher costs. The impact of delay in granting assistance by friendly countries will be all the severe, because the foreign exchange reserves which India possesses at present are extremely low and the I.M.F. credit of Rs. 47.62 crores is only meant to be a standby arrangement, in that it is to be used only when there is no choice. It is to be hoped that the countries concerned will realise that India is not in a position to draw upon its external reserves any more and that the country urgently requires untied credits to finance imports of raw materials and components to keep its existing industries going.

MORE AID AND MORE TRADE

FROM China to Peru the underdeveloped part of the world, encompassing the Far East and the Near East and the continents of Africa and Latin America, is one vast area of poverty, hunger and disease. It is an area where the continuing build-up of pressures and tensions—social, political and economic—has explosive possibilities and the rising expectations of its teeming millions have revolutionary implications. If such an area is a nightmare to the richer and more advanced countries of the West, it also presents to them an opportunity for service and assistance in the best Christian tradition. How best they can render this assistance has been outlined in a U.N. report devoted to the development problems and tasks of the current decade. The report, which is just being discussed at the meeting of the U.N. Economic and Social Council at Geneva, has given the finding that, if the net flow of capital on suitable terms *could* be raised now to one per cent of the combined national incomes of the wealthier countries in terms of the U.N. General Assembly's resolution at its fifteenth session, it could raise the growth rate of aggregate incomes of developing countries at least half-way from the present 3½ per cent to a minimum of 5 per cent each year in the next few years. Another related finding of the report is that the additional foreign exchange resources required for increasing the growth rate of aggregate incomes of developing countries to a minimum of 6 per cent by 1970 *could* come from an improvement in their trade position. There is the twin assumption here that the terms of trade of these countries could be improved by 10 per cent over the present level and kept at that higher level during the current decade and that, in addition, the countries concerned would be enabled to improve their present share in total world trade from 26 per cent to 28 per cent and maintain this share throughout the decade in a total world trade expanding at recent rates. It is thus visualised that expansion in aid must be accompanied by an expansion in trade as well. If it were possible for the developing countries to expand their export trade to the point of dispensing with aid altogether, that would, any day, be more welcome to them. But there is no likelihood of this happening in the foreseeable future—not, at any rate, in the current decade.

The developing countries, with their acute balance of payments difficulties, continue, therefore, to ask for more aid and more export opportunities. An instance in point is the admirable case put forward by Mr. Morarji Desai, India's Finance Minister, at the meeting of the U.N. Economic and Social Council this week, for both trade and aid as complementary to each other. His is an eloquent plea for ensuring fair terms of trade to developing countries, many of which are heavily dependent on the export of primary products and some of which are also

INDIA'S FOREIGN ASSETS

in a position to export, in addition to primary products, processed goods, semi-manufactures and simple manufactures. Although it is only a reiteration of a familiar plea, it has acquired further significance in the context of what the latest *World Economic Survey 1961* itself has to say. The volume of exports from the primary exporting countries, according to the *Survey*, rose less between 1960 and 1961 than in the preceding interval. The effect of this slackening was enhanced by a further decline in the average price of primary commodities moving in world markets, with the result that the overall terms of trade deteriorated by about 2 per cent and, in the aggregate, export earnings were only 2 per cent above the 1960 level. On the average, in other words, the primary exporting countries had to export 2 per cent more in 1961 than in 1960 in order to acquire the amount of foreign exchange necessary to purchase the same volume of imports. The widening of the combined trade gap and the consequent drawing down of reserves in a number of primary exporting countries occasioned a good deal of borrowing from the I.M.F. Such borrowing was as much as $577 million in 1961, as compared with a mere $15 million in 1959. The World Bank, on the other hand, disbursed less to the primary exporting countries in 1961 than in 1960—about $452 million, as against about $510 million. One of the reasons for the fall in World Bank assistance, as the *World Economic Survey* points out, is the diminishing capacity of many potential borrowers among the primary exporting countries to carry new external debt: as their total foreign indebtedness mounts, the ability of these countries to service additional loans from normal—often slow growing—export earnings tends to shrink.

The aforesaid findings of the *World Economic Survey* provide a telling background to the stand taken by Mr. Desai on the question of aid and trade. His observations, in this connection, are:

"The net flow of long-term funds from the developed countries has fallen short of the target of 1 per cent (of their aggregate national product) envisaged by the U.N. General Assembly.

"The national income of the wealthier countries is now nearly ten times as much as the total income of the developing countries and it is growing roughly at the rate of 5 per cent annually. In absolute terms, the annual increase in national income of advanced industrial countries is about 45 to 50 billion dollars. The additional assistance necessary to reach a level of 1 per cent of national income (of these countries) is hardly one-tenth of the annual increase in their national product....

"Countries in the process of rapid development are likely to be in balance-of-payments difficulties for years to come. Their net capacity to repay will continue to be a negative one, until they have progressed a long way on the road to development and that, too, provided their export opportunities are enlarged rather than restricted.

"Most of the countries which are today making available credits to help developing countries insist, in order to safeguard their own balance of payments, that these credits should be tied to purchases in the lending countries. An extension of the same principle would suggest the conclusion that, when these loans are repaid, the repayments should be tied to purchases from the borrowing countries."

The foregoing observations of Mr. Morarji Desai are substantially the same as those contained in a U.N. special study pertaining to the role of industrialisation in economic growth. The U.N. study, while emphasising the crucial importance of foreign loans and grants, has nevertheless pointed out that foreign aid can never be more than a supplement to the foreign exchange which underdeveloped countries earn from their own exports. The study pertinently adds that, if underdeveloped countries are to be able to increase their foreign exchange earnings through exports of manufactures, there will have to be not only continuing efforts on their own part but also a greater willingness on the part of developed countries to allow access to their domestic markets. In short, the developing countries require more aid and also more export trade.

Unless the U.N.'s target assumptions regarding aid and trade are actually attained and the developing countries themselves succeed in mobilising adequate internal resources, the physical goals of the "U.N. Development Decade" will not be achieved. It may be that the very statement of these goals will spur the advanced countries to do their part in a spirit of enlightened self-interest or, as Mr. Morarji Desai has put it, in a spirit of sacrifice as well as of statesmanship. To lay down these goals would also be to highlight the desperate needs of underdeveloped countries as a whole, so that they can present a united front at the United Nations in spite of their varying degrees of development or underdevelopment. The U.N. report under reference has done a commendable job of it by outlining the goals of sectoral development. Some of these goals are summarised hereunder:

(1) The nutritional levels, in terms of *per capita* calories and animal proteins in grams, to be attained at the end of the present decade in the four major underdeveloped regions are: Far East, 2,300 and 10 gms., Near East 2,470 and 20 gms., Africa, 2,420 and 15 gms., and Latin America 2,400 and 25 gms. To meet even these low nutritional targets, the required overall increase in food supplies for the decade would range from 45 per cent to 52 per cent in the various regions, representing an annual increase of between 3.8 per cent and 4.3 per cent.

(2) Water-supplies would have to be constructed at the rate of about $400 million a year, if the provision of piped water is to catch up, and keep pace, with the growth of urban population in the underdeveloped countries over the decade. Provision of water-supplies to rural communities will require efforts on a comparable scale.

(3) Power development will require an investment of at least $2,000 million a year.

(4) Manufacturing output in the developing countries will have to rise by no less than 130 per cent, while their demand for imports of industrial equipment is expected to rise from $3,000 million to more than $6,000 million during the decade.

(5) As much as 19 to 24 million dwellings should be constructed annually throughout the current decade to eliminate existing shortages in 30 years and to meet current obsolescence.

These physical targets are illustrative and not exhaustive. The targets pertaining to transport, health, education, natural resources development, and so on are also there. They may all look ambitious, but they are necessary to attain a growth rate of at least 5 per cent per year in the aggregate incomes of developing countries in the seventies. The outcome of the current deliberations at the U.N. Economic and Social Council will, therefore, be watched with the greatest interest in every underdeveloped country.

MARKET GOSSIP

Are Indians Anti-American?

HARSH words against India are being uttered in the U.S. Congress which is now debating the Foreign Aid Bill. It is the privilege of Congressmen and Senators to be friendly or hypercritical. It is equally our privilege to say whether they are right or wrong. Congressman Mendel Rivers, a member of the party in power, accused Mr. Nehru of "never having said a good word for the U.S." and opined that "Indians are not neutral, —they are just against America." Mr. Rivers is surely wrong. To give just one instance. If he cares to read the welcome addresses of Mr. Nehru and others to the former President Eisenhower, when he visited India, or to view the picture showing the rousing reception given to him by the Indian public, he might change his opinion. If he does not, then one can legitimately say that his remarks are born of prejudice against Indians rather than of gross ignorance. Indeed, one of the theories for Mr. Khrushchev suddenly picking up a quarrel with Mr. Eisenhower was not the flight of U2 over Russian territory on a spying mission but the jealousy caused by the tremendous reception given by Indians to the former American President and his immense popularity among the Indian masses. Anyway, it will be wrong to pay Mr. Rivers in the same coin by saying that, generally speaking, Americans are against India. Indeed, that will be a stupid thing to say. May be they like Pakistan better than India. But, surely, if they have no love for India, they will not be paying heavy taxes to give this country food, clothing and money on a massive scale.

That the American Administration intends continuing its economic aid to India is abundantly clear from the statement of Mr. Dean Rusk quoted in our first editorial this week. It will be clearer still from the well-reasoned, strong support given by President Kennedy to the Foreign Aid Bill. In his Press conference at Washington on 5th July, the President dealt with this subject at the very outset and observed:

"Our foreign aid programmes have made great demands on our people, and still do, but they are vital to our security and are carefully designed to respond to the national interests of the United States, as well as the maintenance of the peace and security of the free world.

"Three facts should be kept in mind. Almost half of the money authorised in the Foreign Aid Bill is for military assistance, or supporting funds for the defence of countries directly threatened by aggression or subversion.

"More than 80 per cent of the money committed to economic assistance is in the form of loans, not grants, and these loans will have to meet our aid criteria and be repaid in dollars.

"More than 80 per cent of the money appropriated for the foreign aid programme will be spent here in the United States on goods and services supplied by American businesses, and American workers, under new and tighter procedures which have been developed. Most importantly, we simply cannot stand aside in the face of the needs of developing countries...."

We, in this country, should not feel upset by statements of persons like Mr. Rivers, especially when there are amongst us also his counterparts. India has many friends in the U.S. Even our contemporary the *New York Times*, which is by no means a blind supporter of this country, had this to say on President Kennedy's statement on foreign aid: "Foreign aid demands statesmanship.... It calls for understanding and sophistication, so that the value of helping some Communist countries, like Yugoslavia and Poland, can be grasped. It calls for tolerance, so that we can condemn a few of India's policies, without forgetting that she is much the most important democratic nation in Asia and is essentially on our side."

"Telstar": New Frontiers in Communication

With the successful launching into the orbit this week by the U.S. of a new communication satellite called "Telstar," the first step towards what may eventually lead to a regular world-wide television transmission has been taken. Although the picture relayed by Telstar across the Atlantic and caught on millions of television sets on the Continent of Europe was imperfect, it is, indeed, a foretaste of things to come. The day is not far off, if the tempo of current efforts at space communication are maintained, when events taking place in one part of the world could be witnessed from any point of the globe. It is said, for instance, that the success of the programme has paved the way for the relaying of the 1964 Tokyo Olympic Games all over the world.

Telstar is an "active" satellite, that is, one capable of accepting microwave radio transmissions from the ground covering up to 600 telephone and telegraph channels or one TV channel amplifying them many times and relaying them to a receiving station on the ground thousands of miles away. A significant point about the Telstar is that it is the first major satellite programme to be undertaken anywhere in the world by a non-Government agency. It is financed by the American Telephone and Telegraph Company and built by the Bell Telephone Laboratories. The satellite was launched by the National Aeronautics and Space Administration which also provided tracking data for its world-wide chain of stations. But, for rendering this service, it will be fully reimbursed by the American Telephone and Telegraph Company.

As planned at present, there will be two and probably four satellites in the Telstar programme which is meant to develop know-how for a permanent space communication system. The total cost of the programme will amount to several million dollars.

Telstar is not the only international communication satellite planned for the near future. The U.S. National Aeronautics and Space Administration itself has already two programmes, "Project Relay," an active satellite programme, and "Project Rebound," a programme of passive satellites which can only reflect the signals beamed to them. This organisation, it may be noted, is seeking over $85 million for its communications satellite programme to cover its expenditure in the financial year 1962-63.

"Convertible" Life Policy

It is a matter of common knowledge that few persons can afford initially to pay for all the life insurance they really need. By the time one comes to have sufficient income to pay for adequate insurance cover, he will have advanced in age or have deteriorated in health, so that insurance would either be not possible or prohibitively costly. This situation presents a problem to both the insurer and the insured. A British life office has found an answer to this problem. It has introduced a convertible life policy which, so to say, meets halfway the actual need of a client for insurance and his capacity to pay for it.

Convertible policies can be taken by any first-class life, whether male or female, under the age of 50. Once the initial policy has been effected, on the anniversary date, three, six, nine and twelve years later, the insured has the option to take further policies without undergoing medical examination. The initial policy may be either whole life or endowment. But it is stipulated that, if a whole life policy is taken initially, either whole life or endowment policies may be taken subsequently; but, if the first policy is an endowment policy, later policies can only be endowment policies and they must mature not later than the original policy.

Cries for Tax Cut in U.S.

The one offshoot of all the exasperation and worry created by the sharp plunge in stock prices at Wall Street in the U.S. on 28th May ("Blue Monday," as the Americans prefer to call it instead of "Black Monday" by the British) and thereafter has been the chorus of demand for immediate tax-cuts to bolster the economy sung by businessmen, labour, economists and senators. The U.S. Chamber of Commerce, which represents the business community, has urged the Administration to reduce taxes straightaway, the extent of reduction suggested being anywhere between $5.5 billion and $7.5 billion, with emphasis on top personal income-tax brackets. The Chamber wants the top-bracket income-tax rates to be cut from 91 to 65 per cent (with proportionate reductions in respect of other income-brackets) and a 5 per cent cut to 47 per cent in corporate tax rate. Speaking on behalf of labour, the President of the United Automobile Workers of America, Mr. Walter Reuther, has put forward the plea for a $10-billion income-tax cut, effective from 1st August next. He wants this concession to be given primarily to the lower and middle income brackets. Such a slash, he says, would boost the economy by augmenting the buying power to the tune of $25 billion and thereby avoid worsening unemployment. The University economists, too, have warned the Administration that there will be a recurrence of recession in the American economy, unless taxes are cut soon. More than twenty economists are reported to have met privately the Secretary of the Treasury as well as the members of the President's Council of Economic Advisers. Several members of the U.S. Congress have also called for prompt tax relief. To quote Senator George A. Smaters, a Finance Committee member: "If we are going to have a tax reduction, the time to have it is now."

What is the reaction of the U.S. Administration to all these demands for tax cuts? Replying to a question at the latest Press conference on Thursday the 5th inst. as to whether his discussions with Secretary Dillon last week had opened the door for a tax cut in the current fiscal year (July 1962-June 1963), President Kennedy said:

"No. We are continuing to watch the economy. We have, as you know, planned a tax cut and tax reform to come next year. We, of course, would prefer to maintain that schedule. We are continuing, however, to watch the basic indicators of the economy. If we feel that the situation in the economy would warrant a tax cut, then, of course, we would recommend it. At the present time, we are maintaining our previous schedule. But I think the recommendations of the Chamber of Commerce, which is, of course, intimately in touch with the business community, and also the recommendations of the A.F.L.-C.I.O., in regard to the need for tax cuts, should be very seriously considered by the executive, as it is by me, and by the Congress...."

Why is President Kennedy not inclined to accept the need for a tax cut this year instead of next year, although a vast number of competent observers seem to favour this remedy? Apparently he feels that the Tax Reform Bill already before the Congress will provide the necessary stimulus that is now lacking in the American economy. This confidence is, however, not shared by many who point out that it is the limitations of the domestic budget, especially the tax structure, that are inhibiting growth, while several others argue that the deficit in the U.S. international balance of payments limits the extent of programmes aimed at stimulating the domestic economy. It may be noted here that the budget deficit in the fiscal year 1961-62, which ended a fortnight ago, is placed at as high as seven billion dollars. And, for the current year, it is expected to be four billion dollars, if not more, on the basis of existing tax rates. If the Administration were to surrender to the clamour for tax relief, the deficit would be much larger than that for 1961-62. The impact of such a huge deficit on the balance of payments position and the confidence in the dollar can easily be imagined.

In this context, it will be appropriate to give some details about the tax structure in the U.S. Federal personal income-tax rates are 20 per cent of the first $2,000 of taxable income, increasing to 91 per cent on taxable income in excess of $200,000 for all persons other than heads of households, in which case the maximum rate is applied to taxable income in excess of $300,000. Under the split-income division of the joint husband-wife tax return, however, the 91 per cent rate is effective only on taxable income in excess of $400,000 on joint returns. In any case, the maximum income-tax before credits is limited to 87 per cent of the taxable income. The tax rates of 20 to 91 per cent are applied on a carefully calculated percentage basis, the percentage rising rather steeply as taxable income increases. Thus, the Federal personal income-tax system is a progressive tax system based on ability to pay. Unlike the Federal personal income-tax rates which are tailored to many different levels of income, there are only two corporate income-tax rates. One is a flat 30 per cent on the first $25,000 of corporate taxable income and the other is a flat 52 per cent on all income above $25,000. Individual income-taxes account for more than half the total revenue of the U.S. Government. In the 1963 fiscal year, for example, the Government expects to collect $49.3 billion in individual income-taxes, $26.6 billion in corporation income-taxes, $10.0 billion from excise taxes, and $7.1 billion from all other taxes, together amounting to $93.0 billion. The total receipts from individual and corporate income-taxes alone thus come to $75.9 billion.

"Common Market Menace"

Even as Britain's negotiations at Brussels with the Six over its application to join the latter are reaching a decisive phase, the antagonists of the move within the U.K. itself appear to be making a last-minute bid to "keep Britain out." The amorphous opposition against the U.K.'s entry into Common Market, which has been spearheaded so far in London by champions of the Commonwealth, E.F.T.A., and domestic agriculture, now appears to be assuming an organised shape and form, albeit belatedly. This conclusion is borne out by statements made during the last few days by responsible people both in the House of Commons and elsewhere. A surprisingly large number of trade unions have also entered the fray, lending solid support to the anti-Common Market campaign. For instance, the British National Union of Railwaymen, one of the leading labour bodies, decided last week to oppose the Government move to join the Six. A still more significant boost to the anti-Common Market campaign is expected to result from a conference arranged by the Forward Britain Movement from the 16th to 19th inst. in London. The conference, named after Britain-Commonwealth-E.F.T.A., will consider the alternatives to Britain's entry into the Common Market. One of the renowned economists, Sir Roy Harrod, will read the first paper in the conference, which has received the support of other leading intellectuals like Mrs. Joan Robinson, Mr. Michael Barratt-Brown and Mrs. Barbara Castle.

Drawing attention to what it calls "Common Market Menace," the Forward Britain Movement warns that the future of Britain will be jeopardised by the present move "to drag us into the European Common Market." The U.K. Government, according to it, is surrendering to foreign pressure—obviously from the U.S. Its argument runs thus: "It is not very sensible, or good economics, to disrupt our trade with an area (Commonwealth) which takes 46 per cent of our exports to 'get in' to an area (Common Market) which takes only 14 per cent." While the opposition from within the country is hardening against the Government's proposal to "enter the Common Market blind," as Mr. Harold Wilson put it, ill-winds are blowing from the Continent as well. President de Gaulle of France and West German Chancellor Dr. Konrad Adenauer, during their meeting last week, are reported to have decided to cold-shoulder Britain's plans to enter their bloc by the beginning of 1963. It would appear that these two leaders of the Six would prefer the postponement of Britain's entry by one more year, that is, from the provisional date now being suggested (next January) to January 1964. (It may be recalled here that the U.K. has all the while been in favour of arriving at a final decision by the end of this month. This at any rate will not be possible now.) France presumably wants to go ahead with plans for closer political union within the Six, possibly on the lines of a confederation, before the U.K. is admitted. This step will naturally put a fresh spoke in the wheel of plans for Britain's entry.

It is, however, still too early to say whether the majority of British public is actually giving a second thought to the Government's policy on Common Market or whether the Six will unceremoniously part company with its powerful neighbour for good. Since the British Government is keen on joining the Common Market, it is necessary for Commonwealth countries like India to seek necessary safeguards for its trade with Britain and the Six on the assumption that sooner or later Britain will be in it. Mr. Morarji Desai's able presentation of India's case before the U.K. and the Six is, therefore, quite welcome. It, however, remains to be seen whether his talks at Brussels and other European capitals will actually lead to any liberalisation of restrictions on India's exports to the Six. It will take a long time for one to know the outcome, as the actual negotiations will last

TREND OF SHARES

ERRATIC MOVEMENTS

(From Our Own Correspondent)

BOMBAY, 12*th July*

GENERALLY narrow and erratic movements featured this week's trading on the stock exchanges. Generally speaking, during the first half of the week, the markets were steady and recorded small gains on some renewed bull support and short-covering, but turned lower again in the latter part on unloading on a broad front of recent purchases and further selling pressure. Near the close, however, there was a slight rally, as bears covered, with the result that the losses were largely made good. All the same, the tendency was uncertain and the tone weak.

Good rains and the consequent avoidance of the threat of a power-cut in Maharashtra State and some relief in the cut imposed in Madras emboldened bulls to go in for some fresh commitments. Sentiment was also influenced by reports of a change for better in the outlook for foreign aid. But the report on Wednesday that the Chinese had encircled a certain Indian outpost in Ladakh unnerved bulls, who liquidated on fears of the situation taking some adverse turn. Thursday saw considerable bear covering due to which prices rallied from the low levels. But the uneasy calm in Ladakh haunted the minds of the operators, and fresh support was lacking.

The markets' reaction to the fresh Chinese manœuvre across the border was not as sharp as might have been expected, because, no untoward incident was reported to have occurred till today. The markets' reaction was also shaped by considerable covering by the principal bears in the pivotal counters. In fact, throughout the week, these operators sought the opportunity to cover their sales. They seem to be on the defensive due to the steady recovery on Wall Street, improving outlook for foreign aid and the recent decline in *badla* charges, which might be accentuated in the following days by the extremely comfortable conditions in the money market. At close, therefore, if buyers were reserved, sellers were restrained and unwilling to strike. If the situation across the border had not turned adverse, the markets might have looked up this week.

* * * *

Activity on Dalal Street was confined to the pivotal issues, most of which closed with small to moderate losses. Values declined, apart from bull liquidation and bear pressure, also because of selling in some leading counters in the nature of a hedge against purchases in other important market leaders. Therefore, movements in the pivotal issues were quite often exaggerated by manœuvres and manipulations. Turnover was small.

Attention in Steels was concentrated on Indian Iron which moved between Rs. 25.95 and Rs. 25.45 to close unchanged over the week at Rs. 25.80. Mukand came in for trading between Rs. 26 and Rs. 25.25 and were 20 nP lower on balance at Rs. 25.55. Tata Ordinary were quiet and, after moving between Rs. 146.75 and Rs. 145.00, closed 25 nP lower at Rs. 146. In Textiles, Kohinoor showed a loss of 50 nP at Rs. 297.50 and National Rayon of Rs. 2.50 at Rs. 506.50, but Century came down by Rs. 7.50 to Rs. 625.50, Bombay Dyeing by 70 nP to Rs. 66.20 and Standard by Rs. 28 to Rs. 912. Khatau were 10 points lower at Rs. 465. Other issues showed minor losses, but Ambika, in the Cash List, closed with a gain of Rs. 15 at Rs. 240.

Persistent weakness in T.E.L.Co., despite reports discounting rumours of the Company's truck production having suffered due to the cut in imports and the labourers having been retrenched because of that, continued to be a depressing factor not only in the miscellaneous section but also the market as a whole. Intermittent rallies in these shares proved short-lived. The shares finished Rs. 10.50 lower on balance at Rs. 336. Bombay Burmah succumbed to a wave of selling and disclosed a loss of Rs. 10.50 at Rs. 646. Voltas were down by Rs. 3.50 to Rs. 270 and Larsen and Toubro by Rs. 2.10 to Rs. 29. Alcock were six points lower at Rs. 316. All the Chemical shares were weak. Amar Dye-Chem declined by Rs. 5 to Rs. 282.50, Indian Dyestuffs by Rs. 6.25 to Rs. 463.75, Poly Chem by Rs. 5 to Rs. 182.50 and Tata Chemicals by 36 nP to Rs. 15.48. Hindustan Motors came under heavy selling pressure from Calcutta, but rallied modestly to close with a loss of 28 nP at Rs. 19.28. Among other shares, West Coast were Rs. 6.50 lower at Rs. 165.50 and Wimco Rs. 5 lower at Rs. 271. Sugar shares moved idly in a narrow range. Shippings were weak again; Great Eastern disclosed a loss of 32 nP at Rs. 12 and Scindia were 20 nP lower at Rs. 11.72. Cements, too, were lower in sympathy with the general trend. Closing prices in the Cash section provided a mixed pattern. But the active issues were significantly lower; Colour Chem by Rs. 17.50 to Rs. 447.50, Chemicoat by Rs. 10 to Rs. 1.90, Adarsh Chemicals by Rs. 9 to Rs. 84, Standard Battery by Rs. 18.75 to Rs. 203.75, Star Textile Engineering by Rs. 18 to Rs. 99, Tak Machinery by Rs. 12 to Rs. 76, Hindustan Wired by Rs. 11 to Rs. 155, New Standard Engineering by Rs. 9.50 to Rs. 218, Zenith Steel by Re. 1.48 to Rs. 14.52 and Auto Products by Rs. 1.12 to Rs. 8.76. Elsewhere, changes were minor, but T. Maneklal closed 15 points higher at Rs. 645.

* * * *

Overshadowed by the power-cut in Calcutta, Lyons Range ruled weak. Losses were pronounced more in Jutes and Engineering issues, expressing in the latter the market's concern over the raw materials shortages due to the cut in imports. In the Forward List, Birla Jute declined further from Rs. 34 to Rs. 33.25, Dunlop closed with a loss of 81 nP at Rs. 39.44, Texmaco were Re. 1.20 lower at Rs. 23.10, Orient Paper declined from Rs. 42.05 to Rs. 40.90 and Orissa Cement moved down from Rs. 17.44 to Rs. 17.12. Among Cash Jute shares, Gourepore suffered a heavy setback from Rs. 504 to Rs. 464, with Alliance and Barnagore showing a loss of Re. 1.50 each at Rs. 123.50 and Rs. 184.50, respectively, and Nuddea and Union of Rs. 2 each at Rs. 61.50 and Rs. 163, respectively. In the Engineering section, Burn showed a fresh loss of nine points at Rs. 646. Braithwaite declined further from Rs. 35.50 to Rs. 35, Binani from Rs. 11 to Rs. 10.87, Britannia from Rs. 12 to Rs.11.75, Calcutta Steel from Rs. 16.69 to Rs. 16.44, J.K. Steel from Rs. 17.81 to Rs. 15.87, Jessop from Rs. 23.44 to Rs. 22.50 and Kumardhubi from Rs. 7.75 to Rs. 7.31.

Among Textiles, Bowreah receded sharply from Rs. 27.75 to Rs. 25.19. Dunbar showed a loss of 94 nP at Rs. 29.56, Elgin of 75 nP at Rs. 19.44, Cawnpore of 44 nP at Rs. 7.25 and Jayshree of 32 nP at Rs. 14.87. In Coals, Bengal were 10 points lower at Rs. 364, Equitable moved down from Rs. 28.94 to Rs. 27.69 and Pench Valley from Rs. 18.31 to Rs. 16.75. Miscellaneous section showed a fair distribution of gains and losses. Thus, Assam Match were up by Rs. 3.87 to Rs. 28.87, Duncan Brothers moved up from Rs. 158 to Rs. 160 and Calcutta Trams showed a gain of 19 nP at Rs. 11.94. But Dr. Paul declined from Rs. 22.25 to Rs. 20.12, Hindustan Gas turned lower from Rs. 27.12 to Rs. 25. Indian Oxygen showed a loss of Re. 1.25 at Rs. 44.50 and National Rolling slipped down from Rs. 22.12 to Rs. 21. Paper shares were quiet, with Ballarpore showing a loss of 37 nP at Rs. 17.94 and Titaghur of 87 nP at Rs. 40. In Sugars, Belsund moved down from Rs. 10.66 to Rs. 10.06, but Cawnpore looked up from Rs. 12.50 to Rs. 13. Tea shares were steady, but for the setback in Hantapara from Rs. 124 to Rs. 110.50 and in Dhelakhat from Rs. 21.06 to Rs. 20.

* * * *

A small recovery from the previous week's sharp setback in some of the Mill shares following the relief granted in power supply enlivened trading in Madras. Thus, Lakshmi looked up from Rs. 151.50 to Rs. 153 as did Coimbatore Cotton from Rs. 170 to Rs. 171. Recovering from Rs. 164 to Rs. 169, S.I. Viscose turned out to be a feature. Madura, however, declined further from Rs. 35.80 to Rs. 35.25 as did Travancore Rayon from Rs. 38.10 to Rs. 37.40, with Buckingham closing one point lower at Rs. 264. In the Miscellaneous section, Aluminium Industries looked up from Rs. 24 to Rs. 24.10, but Ashok Leyland showed a further loss of 5 nP at Rs. 8.30. Andhra Cement and Madras Rubber showed a gain of 10 nP and 13 nP at Rs. 9.80 and Rs. 21.25, respectively, but Dalmia Cement were 25 nP lower at Rs. 13.15. W. I. Products lost seven points at Rs. 192 and Textools showed a further setback from Rs. 152.66 to Rs. 149. Indian Steel Rolling also were lower by 35 nP at Rs. 11.75. In Sugars, Travancore slipped down from Rs. 7.35 to Rs. 6.93 and United Breweries declined from Rs. 82 to Rs. 80.60. Plantings were dull, but Midland Rubber showed a loss of 45 nP at Rs. 10.45.

CAPITAL MARKET NEWS

NEW ISSUES

SANDVIK Asia Ltd., a subsidiary of Sandvikens Jernverks Aktiebolag, Sandviken, Sweden, manufacturers of the famous 'Sandvik Coromant' tungsten carbide products, is to enter the market shortly with a public issue of 12,000 equity shares of Rs. 100 each. The authorised capital of the Company is Rs. 1 crore, all in ordinary shares. Its issued capital will be Rs. 60 lakhs, of which Rs. 36 lakhs will be held by the parent company, Rs. 12 lakhs by the Directors and their friends and Rs. 12 lakhs will be issued to the public. It has set up its factory in Poona for the manufacture of rock drill steel used in mining, road and dam construction. The plant for this item of production was commissioned in October last. The Company also proposes to manufacture tungsten carbide tips for cutting tools and parts for wire drawing dies, etc., for which it has been granted the necessary licences. Production of tungsten carbide products is expected to commence in the latter half of this year. Initially, tips will be produced from mixed powder imported from Sweden, but, next year they will be made from ore. The Company's production will result in considerable saving in foreign exchange, as tungsten carbide products are being imported in this country at present. The parent company is providing technical collaboration to the Company. The factory will be supervised by Swedish engineers and their counterparts in India, who would be trained in Sweden.

A Rs. 1-crore equity share capital issue will be made soon to the public by **Nanubhai Industries Ltd.**, which is to be converted from a private limited company of the same name and restyled as Nirlon Synthetic Fibre Ltd. The public issue will raise the Company's paid-up equity capital to Rs. 2.60 crores. It is to be made for the purpose of meeting the expenditure on the expansion of the Company's proposed nylon plant as also on setting up a caprolactam plant. Originally licensed to manufacture daily two tons of nylon yarn, the Company has now been authorised to raise the capacity to 5.6 tons a day, which is to include two tons of high tenacity nylon tyre-cord. Construction of the buildings and installation of the plant and machinery have been completed, trial production will start in September next and full production will be reached before the end of the current year. The Company has finalised the agreement for the proposed increase in capacity with its foreign collaborator, Von Kohorn International Corporation, which is also supplying the necessary machinery. The Company has also received an industrial licence to set up a plant for the manufacture of caprolactam monomer, with a capacity of 12 tons per day. It has entered into a tentative collaboration agreement with an American firm. The site for the plant has been selected in the Thana/Belapur area. Ammonium sulphate, a by-product of caprolactam, will be produced at the rate of 60 tons a day. It is considered to be a popular nitrogenous fertiliser and is scarce in the country.

RIGHTS ISSUE

The Allahabad Bank Ltd. has received the consent of the Controller of Capital Issues to issue 22,500 new ordinary shares of Rs. 100 each at a premium of Rs. 50 per share and is to offer them to the existing shareholders as rights shares in the proportion of one share for every two shares held by them. The rights issue will raise the Bank's paid-up capital to Rs. 70 lakhs.

BONUS ISSUE

Having increased the authorised capital from Rs. 50 lakhs to Rs. 1 crore in November last, **Dyer Meakin Breweries Ltd.** has now come out with a proposal to issue one-for-one bonus shares by capitalising Rs. 28 lakhs from its reserves and thus doubling its paid-up capital to Rs. 56 lakhs.

FRESH ISSUES SANCTIONED

The following are a few fresh capital issues, authorised recently by the Controller of Capital Issues:

Braithwaite, Burn and Jessop Construction Company Ltd., Calcutta, engaged in business as engineering contractors, is to issue 35,500 bonus shares of Rs. 100 each on capitalisation of its free reserves. The existing paid-up capital of the Company is Rs. 21.30 lakhs.

Jay Shree Tea and Industries Ltd., Calcutta, is to issue (i) 291,558 equity shares and (ii) 29,156 cumulative redeemable preference shares of Rs. 100 each, carrying dividend at 9.5 per cent per annum. The capital is required for modernisation of the plant and machinery and for working capital. The existing capital of the Company is Rs. 90.92 lakhs.

The Commercial Ahmedabad Mills Ltd., Ahmedabad, is to issue bonus capital of Rs. 5,77,500 (in 2,310 equity shares of Rs. 250 each) in the ratio of one bonus share for every six shares held, on capitalisation of the Company's reserves to a like extent.

Elpro International Ltd., Bombay, a new company, is issuing capital of Rs. 85 lakhs in equity shares of Rs. 100 each for cash at par. This will be subscribed up to Rs. 42,50,000 by Messrs. General Electric Company, U.S.A., up to Rs. 8.5 lakhs by the Indian employees of G.E.C. (India) Ltd., Rs. 12,75,000 by Investment Corporation of India Ltd., its friends and associates and the balance of Rs. 21,25,000 by the Indian public through prospectus. The proceeds of the issue will be utilised for the manufacture of lightning arresters, magnets, heating elements, X-ray equipment, etc.

Prestolite of India Ltd., Delhi, is issuing share capital of Rs. 40 lakhs in equity shares of Rs. 10 each at par. Out of this, shares of the value of Rs. 17.5 lakhs will be offered to Messrs. Electric Autolite Company, U.S.A., against the supply of plant and machinery and the balance to Indian nationals for cash. The proceeds of the issue will be used for manufacture of automobile electric equipment.

Premier Cotton Spinning Mills Ltd., Kerala, is issuing capital of Rs. 25 lakhs in equity shares for cash at par for setting up a cotton spinning mill.

Manganese Ore (India) Ltd., Nagpur, a Government company, proposed to be floated in collaboration with the Central Provinces Manganese Ore Company (a sterling company) for carrying on the business of mining manganese ore, is raising a capital of Rs. 250 lakhs, divided into equity shares of Rs. 180 lakhs and preference shares of Rs. 70 lakhs, carrying dividend at 7½ per cent (gross). Of the capital, equity shares worth Rs. 70 lakhs and preference shares of Rs. 35 lakhs will be issued to C.P.M.O. for consideration other than cash in satisfaction of the purchase price of the assets and stores to be transferred and the balance for cash, at par, equally amongst the Central Government and the State Governments of Maharashtra and Madhya Pradesh.

Coimbatore Pioneer Fertilisers Ltd., Madras, will issue capital of Rs. 50 lakhs, consisting of equity shares worth Rs. 40 lakhs and 9 per cent preference shares of the value of Rs. 10 lakhs. The proceeds of the issue will be utilised for the manufacture of sulphuric acid, superphosphate, etc.

Glass Carboys and Pressedware Ltd., Bombay, a new company, has been authorised to issue capital of Rs. 25 lakhs, divided into Rs. 20 lakhs in equity and Rs. 5 lakhs in preference capital. The issue will go to finance the Company's project for the manufacture of glass carboys and glass pressedwares.

Notice

THE GWALIOR RAYON SILK MANUFACTURING (WVG.) CO. LTD.

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Transfer Books of the Equity Shares of the above Company will remain closed from 20th July 1962 to 11th August 1962, both days inclusive, for the purpose of paying dividend.

The dividend on Equity Shares when sanctioned for the year ended 31st March 1962, will be made payable at the United Commercial Bank Ltd. on or after 11th August 1962 to those shareholders whose names stand on the Register of Members of the Company on 11th August 1962, to whom dividend warrants will be posted.

By Order of the Board,
V. N. BAGRODIA,
Secretary.

Registered Office:
BIRLAGRAM, NAGDA.
7th July, 1962.

NEWS IN BRIEF

AS part of the overall measures to cut down imports, the Government of India is contemplating to reduce the import quota for petroleum products for the current quarter (July-September) from Rs. 7 crores to Rs. 4 crores.

Gorakhpur in eastern U.P. has been selected by the Fertiliser Technical Committee as the site for the proposed fertiliser factory based on naphtha and other by-products from the Barauni refinery in Bihar.

Iron ore deposits estimated at three million tons have been discovered in the Mahendergarh district of the Punjab. A private party has sought official permission for the setting up of a pig iron plant with an annual capacity of 100,000 tons in this place.

The new 51-mile broad-gauge railway line between Vijayawada and Masulipatam in Andhra Pradesh was inaugurated by the Union Railway Minister, Sardar Swaran Singh, last week-end. The new line, converted from metre-gauge, serves the needs of some of the major agricultural and industrial areas in the State extending to the sea coast.

The Federation of Indian Chambers of Commerce and Industry has appointed a sub-committee, with Mr. Shanti Prasad Jain as Chairman, to study the prospects for effecting further saving in foreign exchange through import substitution by framing a well-planned policy of encouraging domestic production. The sub-committee will study the foreign exchange allotment to various projects in both the private and public sectors and suggest suitable remedies.

The Jayanti Shipping Company has finalised a twelve-year time charter with the Esso Oil Company for a tanker of 51,800 d.w.t. The tanker is to be delivered by the end of 1963 and it will be the largest vessel on Indian registry. Meanwhile, it is understood that the Jayanti Shipping Company proposes to place orders for the construction of five dry cargo vessels of 8,000 g.r.t. in European shipyards besides seven Liberty-type coastal dry cargo ships of 7,000 g.r.t. each. These will be in addition to the orders placed by the Company in Japan for eight bulk carriers of 8,000 g.r.t. each. The Company has already a 33,000 g.r.t. Supertanker, *Adi Jayanti*.

The first batch of marine engines from Japan for the mechanisation of fishing craft in India will be delivered next month. India is to receive 2,800 marine engines of various horsepower from Japan and all of them will be delivered by November next. The deal has been effected through the State Trading Corporation which has already placed the necessary indents. Out of the yen credit offered by Japan, Rs. 30 lakhs will be utilised for buying marine engines. It is likely that another sum of Rs. 12 lakhs will be made available by Japan for the purchase of about 1,500 more engines. The Union Government has decided to supply the engines to the State Fisheries Department which, in turn, will supply them to fishermen's co-operatives.

Link deals which will enable exports worth over Rs. 24 crores during the next two or three years have been concluded by the State Trading Corporation with several countries, including Sweden, France, West Germany, Tunisia and Jordan. The State Trading Corporation will also import goods to the same value from these countries during this period. The biggest of these deals is with Tunisia, providing for an import of Rs. 7.5 crores worth of rock phosphate in the next three years and for the same value of exports by India mainly of tea, yarn, jute and jute products. Apart from traditional items, link deals provide for exports of such goods as sugar, ferro-manganese, plastic and engineering goods, power alcohol, *vanaspati* and sports goods.

An agreement for a credit of DM 100 million (Rs. 11.9 crores) has been signed as further assistance from West Germany for the third Plan. The credit will be used for purchase of commodities, industrial machinery and spare parts towards maintenance requirements of projects in India including projects with German collaboration. This amount is a part of the DM 500-million assistance which West Germany has agreed to extend to India for the second year of the third Plan. An agreement for the first portion of DM 85 million for refinancing payments falling due in 1962-63 for the Rourkela Steel Plant was signed in May last. The credit of DM 100 million carries a rate of interest of 3 per cent per annum and is repayable in 20 years, including a period of seven years during which no repayments are required to be made.

The recommendations of the Wage Board for Tea for an interim wage increase to workers in Assam and West Bengal plantations have been accepted by the Government of India. Accordingly, the daily rated labour employed in tea plantations in the two States (except in the Darjeeling Hills and Cachar District) will get an interim increase of 8 nP per head. The increase for women workers is 7 nP and for employable child workers 4 nP. The increase in respect of daily-rated men labour employed in tea plantations in Darjeeling Hills will be 9 nP, and for women workers 7 nP; the increase in respect of employable children is 4 nP. For monthly-rated workers employed in tea plantations of both Assam (including Cachar District) and West Bengal an increase of Rs. 10 per month each in respect of clerical, educational, medical and supervisory staff and artisans and Rs. 6 per month in respect of others, has been recommended.

Oil India Limited has supplied about 215,000 barrels of crude oil equivalent to 34,600 tonnes to the Gauhati Refinery up to the end of June 1962. After the initial supplies of low wax crude, Oil India is now supplying through its 250-mile long pipeline mixtures of high and low wax crudes. Currently it is supplying a mixture consisting of 60 to 70 per cent high wax and 30 to 40 per cent low wax crude. It is expected that, within a week, the refinery will be receiving oil with almost 100 per cent high wax crude. This is besides the 82,500 tonnes of crude oil supplied by Oil India by tank wagons between August 1961 and early April 1962, and the normal supplies to the Digboi Refinery at the rate of about 250,000 tonnes per annum. Oil India has completed drilling of 131 wells, of which 90 wells have been established as commercial producers of oil, 8 are gas wells and 17 are to be tested further before their status could be properly established. Sixteen wells were declared as dry. Two wells are being drilled at the moment.

Of the 40 commercial undertakings run by the Madras Government, 20 incurred losses aggregating Rs. 10.59 lakhs up to the end of 1960-61, after providing for interest charges. The loss works out to 7.9 per cent of the total capital outlay of Rs. 1.34 crore on these units. Of these 20, fifteen were working at a loss amounting to Rs. 6.54 lakhs even without meeting interest charges. The remaining 20 undertakings earned profits aggregating Rs. 40.57 lakhs up to the end of 1960-61 after providing for interest charges. The profit works out to 4.81 per cent of the total capital outlay of Rs. 843.32 lakhs on these undertakings. These figures are given in the State Government audit report on the appropriation accounts, 1960-61. The State had invested Rs. 50.31 crores on irrigation and other works and these yielded a gross revenue of Rs. 1.47 crore during the year. The net revenue after setting off operation expenses, but excluding interest charges, amounted to Rs. 55.28 lakhs which represented a return of 1.1 per cent on the capital outlay. The interest charges of Rs. 2.36 crores, if taken into account, however, would convert this surplus into a loss of Rs. 1.81 crore (3.3 per cent).

The National Co-operative Development and Warehousing Board has suggested to State Governments a number of measures for building up the share capital of co-operative marketing societies. One of the suggestions is that every village society within the area of operation of a marketing society should be enrolled as member and should thus contribute to the share capital of the primary marketing society. This, it is pointed out, will mean that a primary marketing society will ordinarily have about 100 village societies as its members and this should give them a share capital of about Rs. 10,000. The Board feels that there should be a drive for encouraging individual cultivators to become members of the primary marketing society. Another suggestion for building up the share capital is that, as in the case of a co-operative credit institution, the share-holding of a cultivator member in a primary marketing society should bear some proportion to the amount of pledge loan that may be obtained by him from the marketing society. The idea of persuading members to put back the whole or a part of the bonus distributed to them in the marketing society as additional share capital has been commended to the States. In the case of a marketing society, compulsory contribution to share capital from members related as a percentage to the turnover of members' sale has been recommended.

From Abroad

Soviet Russia has ratified the new International Wheat Agreement.

The world output of tea in 1962 will go up by 2.5 per cent to 2,254.7 million lbs., as compared with last year, according to the latest forecast by the U.S. Department of Agriculture.

An agreement for the avoidance of double taxation and prevention of fiscal evasion in respect of income and property has been signed between the Governments of Ceylon and West Germany.

The World Bank has offered a loan of $30 million to Yugoslavia for the construction of hydro-electric power plant and transmission lines. The Bank is considering grant of further loans for the development of Yugoslav communication systems.

Morocco will import from Cuba 150,000 tonnes of sugar, 200 tons of tobacco and 100,000 cigars under a trade agreement signed between the two countries. In exchange, it will export to Cuba fishmeal, cork, canned sardines and foodstuffs valued at $1.76 million, in addition to some quantities of plastic goods, radiators, birdseed, oils, asbestos-cement products, etc.

The Argentine Government has issued a decree requiring all exporters to deposit at the national treasury any surplus they obtain from the sale of their foreign exchange above 110 pesos per dollar or its equivalent. The move is said to be aimed at maintaining peso quotations within levels adequate enough for the volume of Argentine foreign trade. The Government has also asked the exporters to sign sworn declarations regarding their transactions.

West Germany has concluded agreements for the mutual protection of private investments or proper compensation in case of expropriation with Turkey and Cameroun. The agreements ensure guarantee for free transfer of profits and repatriation of money deriving from the sale of assets. West Germany had already entered into such agreements with France, Iran, Liberia, Malaya, Morocco, Pakistan, Thailand and Togo. It has broached the question of such treaty with the Government of India as well.

A new series of polypropylene grades, claimed to have considerable advantages over their predecessors, have been introduced by the Shell Chemical Company in New York. Developed as a result of fundamental polymer studies carried out at Shell research laboratories in Europe and the U.S., the new grades are claimed to have improved flow performance on injection moulding; reduced warping, voiding, and sinkage in finished mouldings; and a greater transparency than previous grades.

West Germany's assistance to the less developed countries amounted to DM 3,200 million last year. This was almost DM 640 million more than in 1960. About DM 2,400 million were contributed by the Government and other public institutions and DM 830 million by private business. The public aid comprised about DM 1,250 million granted under bilateral agreements and DM 1,140 million contributed to multilateral schemes. In the last five years, the total W. German development aid amounted to DM 13,600 million, including nearly DM 9,000 million from public sources.

Italian sources have denied allegations that the State-controlled E.N.I. Oil Corporation has been concealing imports of Soviet oil as Egyptian oil. The allegation has been made in a recent report on Russia's petroleum offensive published by a committee of the U.S. Senate. The report states that Egypt imported 1.3 million tons of Soviet oil in 1961 and exported to Italy 1.5 million tons, part of which is said to be of Soviet origin. According to the Italian company, the Italo-Egyptian company, in which Egypt has 50 per cent interest, alone produced 2.3 million tons of oil from Egyptian wells last year.

World production of man-made fibres set a new record in 1961, with a total of 7,981 million, lbs., or six per cent higher than in 1960, according to the *Textile Organon* of the Textile Economies Bureau, New York. The commodities include textile glass fibre as well as rayon, acetate and synthetic fibres. Rayon output in 1961 was 3 per cent higher, acetate 9 per cent, and the non-cellulosic fibres 17 per cent. New records were set in all these sections. Textile glass fibre production was, however, 11 per cent lower, and high tenacity viscose rayon yarn was 7 per cent below 1960. Total capacity for all types is put at 10,676 million lbs. in 1962, and 11,583 million lbs. in 1963, or nearly 8 per cent higher. For acrylic fibres, an increase of about 29 per cent is forecast for 1963, for nylon an increase of 24 per cent, for polyesters one of over 20 per cent, and for others one of over 36 per cent.

The European Common Market has decided to offer $780 million (about £277.6 million) in aid and loans to the sixteen African overseas territories over the next five years. Of this, $580 million would cover economic and social investments as well as technical assistance, while $200 million would be paid in price subsidies and diversification aids for producers. Price subsidies amounting to $125 million would be paid only to countries in the franc zone, which would receive a further $45 million for diversification. The remaining $30 million of production aids would be made available to facilitate diversification in the Congo and Somalia as well as Ruanda and Burundi. In addition to the overall figure of $780 million in aid, the Six would be ready to pay out $300 million in educational grants. Under the proposed trading regime, the Six would abolish duties on a limited number of products imported from the associated territories and at the same time apply to them their common external tariff towards their countries. The products affected are coffee, cocoa, tea, vanilla, nutmeg, pineapples, coconuts and cloves. The Six also propose to reduce their common tariff on the products in their preferential list. For coffee and cocoa the Six are understood finally to have settled for a cut of a quarter in tariff levels and a further suspension of 15 per cent. An overall reduction of 40 per cent is planned for tea, and cuts of 15 to 25 per cent are envisaged for other products.

PERSONAL

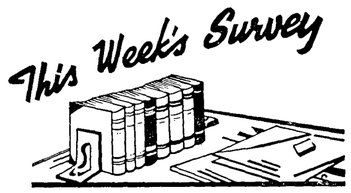
MR. Manubhai Shah, Union Minister for International Trade and leader of the Indian delegation to the Economic Conference which began at Cairo on the 9th inst., left for Cairo early this week.

Mr. Khub Chand, till recently India's High Commissioner to Ghana and concurrently Ambassador to Guinea, Liberia and Mali and High Commissioner to Sierra Leone, has been appointed Ambassador to Sweden and concurrently Ambassador to Finland. He is expected to take up his new assignments next month.

Mr. Mohanlal D. Tolia has been elected President of the Hindustan Chamber of Commerce, Madras, for the year 1962-63. Mr. Jaskaran Bhuwalka and Mr. Chandulal Kamdar have been elected Vice-Presidents.

Mr. K. S. Shenai, Deputy General Manager of the Canara Banking Corporation Ltd., has been appointed General Manager of the Corporation *vice* Mr. V. R. Kamath, who has retired.

Mr. O. S. Murthy, Director of Planning in the Railway Board, has assumed charge as the General Manager of Western Railway, *vice* Mr. S. S. Ramasubban who is retiring. Mr. G. P. Bhalla, Director of Stores in the Railway Board, has been appointed General Manager of the Northern Railway in the place of Mr. P. H. Sarma who is also due to retire.



EXPANSION OF SHIPPING

THE second Plan's tonnage target for the shipping industry was originally laid down as 901,700 G.R.T.—436,200 for the coastal fleet and 465,500 for overseas trade. This target was reached only by the end of 1961, that is, nine months after the third Plan had started. Even here the fulfilment of the target did not strictly conform to plans, for, while the overseas tonnage was 539,300 G.R.T. as on 31st December 1961, that of the coastal fleet was no more than 361,700 G.R.T. Moreover, only about 75 per cent of the overseas and 30 per cent of the coastal tonnage were relatively "young," that is, under ten years of age as at the end of 1961. Very old tonnage of the age of 20 years and over accounted for 50,400 G.R.T. in the coastal trade and 5,900 G.R.T. in the overseas fleet. As much as 103,500 G.R.T. in the coastal fleet and 67,300 G.R.T. in the overseas trade were 15 to 19 years old by the end of 1961. The aggregate tonnage of about 227,100 G.R.T. in both these age groups, it was then stated, would stand in need of replacement during the third Plan period.

With so much obsolescent tonnage due for replacement over a period in which the foreign exchange situation was expected to be tight, it was, perhaps, inevitable that the third Plan target for Indian shipping had to be limited to a comparatively modest aggregate tonnage of 1,085,900 G.R.T. But the break-up of this target into 324,500 G.R.T. for the coastal fleet and 761,400 G.R.T. for overseas trade did not provide any scope for emergency expansion in the former. The need for such expansion was simply not visualised then, for the coastal fleet was not expected to command more bulk cargoes. But the need has now arisen, rather fortuitously, for an additional one million tons of coal are to be moved by sea every year. The National Shipping Board (Chairman: Mr. G. L. Mehta) has, therefore, recommended, at its meeting held last week-end, that the target for coastal tonnage be increased by 45,000 G.R.T. and that an additional provision of Rs. 27 crores be made for this new tonnage as well as for replacement requirements. As the Government's plans for transporting coal by sea to the southern and western parts of the country have already come up against difficulties for lack of adequate tonnage, it should see its way to accepting the Board's recommendation.

If the Government makes provision for an additional Rs. 27 crores for shipping, it would mean that the original provision of Rs. 55 crores gets increased to Rs. 82 crores. Even this amount is well within the sum of Rs. 104 crores which the National Shipping Board had originally suggested so that the industry could have 1.3 million G.R.T. by the end of the third Plan. The same acute problem of coal transport, which has dictated the need for an additional outlay of Rs. 17 crores on roads in the Bihar-Bengal area in the next few years, calls for an increase in outlay on coastal shipping as well. As Mr. G. L. Mehta himself has warned in a recent article, "If foreign exchange is not found for coastal shipping and that, too, very soon, an extremely serious situation would develop on the Indian coast, and the tonnage would get gradually reduced with the result that the capacity of coastal fleet to carry cargo would progressively diminish." That in the matter of providing additional tonnage coastal shipping should be given the highest priority is thus clear.

At the same time, there is need for further attention to overseas tonnage which is short of tramps and tankers. But this, again, would require additional foreign exchange provision—something that cannot be contemplated at the present time. The most sensible way of solving this problem would be to encourage participation of foreign private capital. It will be necessary for this purpose to relax some of the restrictions placed on foreign capital. The first thing to do would be to raise the non-Indian participation in the capital structure of an Indian shipping company from the present limit of 25 per cent to 49 per cent. Such increased non-Indian participation may not only mean further additions to the overseas fleet without subjecting the country's foreign exchange resources to any strain but also enable Indian shipping to secure more foreign cargoes and thus earn more foreign exchange. It is surprising that the National Shipping Board has taken a rigid and narrowly nationalistic stand on this question and rejected the idea of raising the limit of non-Indian participation.

It may be noted here that the Board had before it a specific proposal from an entrepreneur in Poona for promoting a shipping company with 51 per cent Indian capital and 49 per cent foreign capital. This was not the first time that such a proposal had been put forward. And yet every time it came up, the shipping interests in this country had successfully managed to get it scotched by raising the false cry that national shipping was in danger. If other industries, including some strategic ones, in the country can be allowed to secure foreign capital participation of a greater order than even 51 per cent, the shipping industry, which is more heavily dependent on foreign exchange than any other industry, should welcome it all the more. If the country can think of establishing defence industries with the help of even communist countries, one fails to see why private capital from the democratic countries should not be permitted to join hands with Indian capital for expanding its mercantile marine. The National Shipping Board, which is so fortunate in having the enlightened leadership of Mr. G. L. Mehta, should lose no time in modifying its outmoded, nineteenth century stand on foreign participation in the interests of more rapid expansion of Indian shipping which now carries less than 10 per cent of our foreign trade—a pitifully low share, indeed, for a country of India's size and importance in world trade.

COFFEE INDUSTRY

It looks as though India may join the long-term world coffee agreement the draft of which is now being discussed at the United Nations Coffee Conference at New York; the conference began on Monday the 9th inst. and is expected to last for five or six weeks. For the Government of India has sent a delegation, consisting of Mr. H. Sitarama Reddy, Chairman of the Coffee Board, and Government officers, to participate in the conference. The possibility of India becoming a member of the Agreement was also hinted at, albeit indirectly, by Mr. Reddy when he addressed the first meeting of the reconstituted Board held at Bangalore on 29th June 1962. He declared: "An underdeveloped country like India which has to earn foreign exchange to build up her economy needs special consideration in the matter of her coffee exports and area under production." By implication, this statement may be taken to mean that India will join the agreement provided the other coffee-growing and exporting countries are willing to recognise India's needs. India's case for adequate safeguards would have been presented more ably before the World Conference, if the delegation, instead of being a purely official one, had also included the representatives of coffee planters. The non-inclusion of these representatives is rather strange.

Be that as it may, it is gratifying that the conditions in the Indian coffee economy have tended to improve lately. The current (July 1962-June 1963) season's crop is estimated higher at 59,500 tonnes, as against 44,850 tonnes harvested in 1961-62, though it is still well below the record level of 67,794 tonnes produced in 1960-61. Besides the anticipated increase in production, the prices of coffee are also expected to be better, in view of the continuously rising demand for all grades. The domestic consumption of coffee, which had gone down from 30,100 tonnes in 1959 to 30,000 tonnes in 1960, improved to 33,870 tonnes last year. The offtake in the first five months of this year was 13,444 tonnes, as against 13,341 tonnes in the corresponding period of 1961. This modest upward trend in domestic consumption will have to gather further momentum, if the coffee producers are to be enabled to recover a part of the losses incurred on exports. The export prices of coffee, too, have risen, to some extent, the mean average obtained in the export sales during the last five months is Rs. 228.17 per 50 kilos of plantation A coffee, as against Rs. 165 secured a year before.

It may be noted here that the Government wants the allocation for export out of the 1961-62 crop to be raised from the level of 15,000 tonnes recommended by the Marketing Committee of the Coffee Board, in order to earn the much needed foreign exchange. There should be no difficulty in meeting this demand, as there is plenty of coffee in the country. What is important in the present situation is not allocation of quota but actual export of coffee. So far only a part of the allocation already made has been exported. Care must, however, be taken to see that the rising demand from the internal market or the exigency of earning foreign exchange through larger exports does not result in an undue increase in prices. The possibility of such an increase in prices may not, of course, be there, considering the huge undisposed stocks of the 1961-62 season's coffee (the stocks as on 15th May 1962 aggregated 34,715 tonnes) and the rise of 14,500 tonnes to 59,500 tonnes in the estimate of current season's crop.

While an undue rise in coffee prices is not desirable, the need for ensuring a reasonable return to producers is important. Even the currently ruling prices are considered to be uneconomic. Here is what Mr. D. C. Jarvis, the retiring Chairman of the Nilgiri Planters' Association, said when he addressed the seventy-first annual general meeting of the Association at Coonoor last week:

"The ruling price of coffee is such that few estates are able to show a profit. On the top of this, due to the prevailing marketing system, producers have to wait upto 20 months before they receive final payment for a season's crop. Most of our coffee members are small growers and this causes them severe financial hardship even to the extent that they are unable to maintain their asset in a reasonable condition, due to the unavailability of finance to meet such necessities as manure and spraying requisites. The system of coffee marketing now requires an urgent overhaul. In the past, the system was satisfactory, but, with the large crop increases, it is now outdated and unwieldy."

The concern expressed over the financial hardship caused to small growers by the delay in making the final payment is not fully borne out by the statements made by the spokesmen of the Coffee Board. We are told on the authority of no less than the Chairman of the Coffee Board that the growers have already been paid at Rs. 2 per point for the 1961-62 crop, though the large growers have received only Re. 1.19 per point. There is, however, no denying the fact that the growers need further help. The first necessity, as Mr. Jarvis rightly said, is an all-out promotional campaign at home and overseas, accompanied by a scheme under which the total produce is not bought and sold purely by its grade. And there is force in his contention that the advantage which India possesses over its competitors in the quality market should be fully exploited. This point is of special significance in the present context of the buyers' market in coffee created by overproduction in the world.

To revert to the speech of the Coffee Board Chairman. His statement that an early decision would be taken on the question of replacing the States' sales tax by a Central levy is reassuring. The Governments of Madras and Mysore have already stated that they are not opposed to the move in principle. The Kerala Government is also expected to give its views shortly. It is certainly encouraging to learn from Mr. Sitarama Reddy that the Board has taken several propaganda measures designed to boost demand for coffee. The measures include participation in overseas exhibitions, screening of colour films, Press campaign, publication of a booklet in Japanese language, distribution of presentation caddies containing good quality coffee powder to foreigners, arrangements for release of coffee promotional films in important cities in India, house demonstrations, and display of advertisement boards and illuminated signs at important towns and airports. Simultaneously, efforts are being made to intensify research activities.

COTTON PRODUCTION

Fixation of targets and exhortations having failed to achieve the desired result, the Government would appear to be taking a closer look at the reasons behind the failure of cotton production to reach the Plan targets. It is reported to have detected, albeit belatedly, "snags and defects" in the scheme of distribution of improved seeds, fertilisers and pesticides at State level. In order to help the State Governments to remove them, the Centre has made some suggestions and offered additional financial assistance by way of larger subsidies and grants. One of the suggestions is that the arrangements for the distribution of seeds and fertilisers should be improved. Another is that production targets should be revised upwards and that tract-wise target should be fixed, instead of an overall State-wise targets as at present. Some of the other suggestions are: (1) bringing more acreage under cotton by giving inducements to cultivators to divert land under low-yielding sugarcane to cotton in Uttar Pradesh and by utilising irrigation water in Rajasthan, (2) introduction of early maturing variety of American cotton on rice fallows in Andhra, Madras and Orissa by utilising irrigation waters made available from new projects, and (3) adequate plant protection measures which alone, it is estimated, could increase production by about 20 per cent.

The trouble with the plans for cotton production in the past has been that they remained on paper only. Whether it be due to the apathy of the State Government or the inefficiency of the administrative machinery at State level, the fact remains that the programmes have yielded little tangible results. Hence cotton production has consistently fallen short of targets which have had to be revised downwards every year. It is not at the policy-making level that reform is called for but down below at the grass roots—at the implementation level. And, unless efforts are made to implement the Plan programmes vigorously, cotton production problem will continue to be intractable and the building up of a buffer stock for cotton, suggested by the Board of Trade this week at Calcutta, will only remain a pious hope. It is true that stocks can be built up through imports but where is the foreign exchange to pay for it when what little is available is not sufficient to meet even current requirements?

NUCLEAR POWER IN BRITAIN

The first two "commercial" nuclear power stations in Britain—one at Berkeley, Gloucestershire, and the other at Bradwell, Essex—have just begun to supply electricity to the national grid. These stations, using Magnox reactors, have had expensive teething troubles and are stated to be producing power at a cost substantially higher than that of conventional thermal stations. But other bigger stations (six or seven) in the current nuclear power programme, using the same type of Magnox reactor, are likely to produce electricity at a cost only slightly higher than that of thermal stations, for the original assumptions made about the life and loading of Magnox reactors seem to have been unduly conservative. Even if that happens, it will not make much difference to the relatively higher costs, in terms of both capital outlay and unit cost of power, of the present type of nuclear station.

The Atomic Energy Authority, which has enabled Britain to establish a lead in the field of nuclear power generation, can scarcely be expected to reconcile itself to such a situation. Hence its continued research effort to develop a different and better type of reactor known as the "advanced gas-cooled reactor," A.G.R., for short. The Authority's £250-million research and development programme for the next five years, outlined in its annual report laid before the British Parliament on the 5th instant and just approved by the Government, is an impressive confirmation of Britain's determination to maintain its lead in the field of utilisation of atomic energy for peaceful purposes. The sums now being allocated are intended not only to carry through the A.G.R. programme to the stage at which industry can take over the work for large-scale commercial exploitation but also to develop a marine propulsion unit and do research into generation of power from fusion reactions of the kind on which the hydrogen bomb is based.

It is noteworthy that the A.G.R. research programme is already in an advanced stage. The new type of reactor under experimentation is expected to go critical later this summer and to run at power towards the end of the year. The next step is to design and build a prototype to produce substantial amounts of electricity. With further progress in research and development over the next five years, it is just possible that commercial power stations using advanced gas-cooled reactors will be in operation in the 1970s. The U.K. Atomic Energy Authority has great faith in its A.G.R. programme, and its recent estimates, too, point to the possibility of lower costs. Figures show that the capital costs of a twin-reactor, 1000-megawatt power station using A.G.Rs should cost no more than £80 per kilowatt and that the power generated by it would be as low as 0.045d. per unit on the basis of standard assumptions, namely, a life of 20 years for the plant, a 75 per cent load factor and four times more efficient fuel. But the claim pertaining to such cheap power also rests on the assumption that overheads would be spread over a programme of at least 6,000 megawatts of A.G.R. stations which, however, could be built by the Central Electricity Generating Board only over a period of six years. If everything goes well with the A.G.R. research programme, it may be that the next generation of reactors will make nuclear power fully competitive with thermal power in Britain.

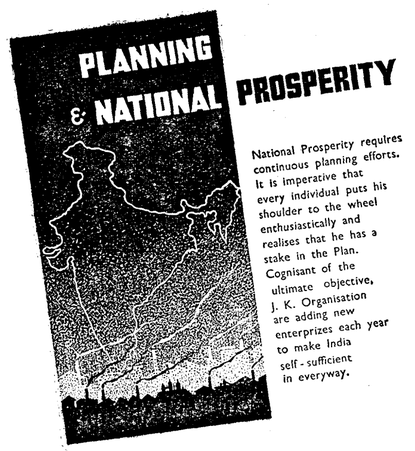
TRADITIONAL EXPORTS

The latest I.M.F. credit of Rs. 47.5 crores, though welcome, provides no more than a temporary relief from the ills afflicting the country on the foreign exchange front. It must be stressed, even at the risk of boresome repetition, that a lasting solution to the foreign exchange problem lies only in expanding exports. The seriousness of the situation is, no doubt, appreciated by the Government, industry and trade alike; and several export promotion measures have been brought into force. Even so, India's export performance still leaves much to be desired. It is disquieting to note that, on the basis of preliminary figures, total exports during the first five months of the current year amounted to no more than Rs. 268 crores, representing a decline of one crore of rupees, as compared with the corresponding period of 1961. In other words, exports are currently running at an annual rate of approximately Rs. 650 crores, which compare unfavourably with the annual target of Rs. 720 crores fixed by the Board of Trade for the fiscal year 1962-63. It is still more distressing that the major traditional exports have, of late, been either stagnant or declining. Despite increase in overseas demand, particularly in the U.K., for tea, export of this item declined from Rs. 124 crores in 1960-61 to Rs. 122 crores in 1961-62; the figure was as high as Rs. 148 crores in 1954-55. Shipment of another leading item, cotton textiles, was also lower in 1961-62 at Rs. 53 crores, as compared with Rs. 62 crores in the previous year. The exports of jute textiles, however, went up in terms of value during the last two years (because of the scarcity-induced boom in jute goods which, however, has now been brought under control), but the actual quantity shipped declined. Jute goods earned a foreign exchange of Rs. 145 crores in 1961-62, as against Rs. 134 crores in the previous year.

The uncertainty over the prospects of any sizable increase in exports of these traditional goods in the coming years still persists. This is all the more discouraging, for, in the short-run, it will be practically impossible to step up aggregate exports without raising the contribution of these items. It is, therefore, only appropriate that the Board of Trade, which held its second meeting at Calcutta last week-end, should have devoted special attention to the problems of tea as well as cotton and jute textiles. In respect of tea, the Board has suggested that all assistance should be given to extend irrigation and increase the supply of fertilisers. Mr. Manubhai Shah, Union Minister for International Trade, who is also the Chairman of the Board, seems to have assured the tea industry that rupee finance and foreign exchange necessary for the purpose would be made available. He, however, did not mention anything about the possibility of reducing the burden of various Government imposts on the tea industry. The decision to send a tea delegation to Australia and the Far East, however, is welcome, in so far as this will open out new markets. In order to expand jute goods exports, the Board was of the view, rightly in our opinion, that the industry should diversify the pattern of production of fabrics. It has also decided to assist the jute industry in establishing an exhibition centre at Calcutta for displaying all the varieties of finished jute goods. The exhibition may encourage the producers to diversify production. But it would have been more worthwhile if the Board had taken a decision in favour of opening exhibited centres abroad for displaying Indian goods to prospective consumers. The jute industry in West Bengal, it may be noted, has derived an immediate benefit from the Board's meeting, as it has been exempted from the power cut introduced in the State in pursuance of a strong plea by the Board.

In respect of the cotton textile industry, the Board considered the question of setting up buffer stocks of raw cotton. This is apparently a sound proposition, as it is designed to ensure regular supply of raw materials to the industry. But the first thing to do is to increase the production of raw cotton in the country. The Board does not appear to have taken a strong stand in respect of modernisation of the industry, which is a *must*, if India has to maintain, if not expand, its piecegoods markets abroad against the growing competition from other highly industrialised countries. The call for expanding exports of dyed, printed and finished cotton textiles, in preference to coarse cloths, however, is quite pertinent and timely.

The major factor inhibiting expansion of India's export trade is the high cost of production. In this connection, the Board approved of a proposal to set up an expert committee to carry out detailed studies. The question of reducing costs, no doubt, is of paramount importance in the context of export promotion efforts. But no tangible and immediate result can be obtained from the proposed study, unless more efficient units are encouraged to expand without any hindrance by way of props to inefficient units, apart from ensuring adequate supply of raw materials, fuels and transport to make possible full utilisation of installed capacity. At any rate, the study is likely to be protracted and will be of use, if any, only in the long run. Another committee was created for the purpose of examining the scope for establishing free trade zones. Besides. Dr. P. S. Lokanathan has been asked to prepare a blue-print for the establishment of an institute of international trade. These measures, however advisable they may be in the present conditions, are not likely to make any significant contribution to export promotion efforts in the next few years. The Board should have earnestly thought over the problem whether the export target of Rs. 720 crores set for the current year is attainable without additional incentives to the industry and trade. Viewed thus, its reluctance to consider the question of income-tax remission as suggested by the Mudaliar Committee on foreign trade, is not quite understandable. It may be that such incentives are only palliatives, but there is at the same time need for avoiding any confusion between short-term and long-term objectives of export promotion.



A MIXED BAG OF FOOD HARVESTS

NEW FOCUS ON RURAL DEVELOPMENT PLANS

From Our Special Correspondent

NEW DELHI, 10*th July*

DELHI LETTER

IT has been a bumper year for wheat, final estimates released here yesterday show. The area under wheat in 1961-62 increased by 3.7 per cent over the previous year's level, from 32.05 million acres to 33.24 million acres, and the crop increased by 7.4 per cent, or by 800,000 tons to 11.62 million tons. There has, however, been a marginal fall in rice production from 33.6 million tons in 1960-61 to 33.55 million tons and in *jowar* there is a fall of 17 per cent or 1.5 million tons. Food production as a whole rose by a million tons from 79.6 million tons in 1960-61. The fall in rice production is attributed to the diversion of around 800,000 acres to jute in Bihar and West Bengal. The diversion to jute, however, led to the raising of a jute crop almost equal to the target to be attained at the end of the third Plan.

Despite the cold spell last winter, the wheat cultivated areas by and large showed a better yield per acre and, in view of the better wheat crop and sufficient quantities of food available in the country, the Food Ministry is already trying to persuade Washington to release Delhi from the commitment of having to import 400,000 tons of wheat on a commercial basis from Canada and Australia. An agreement has already been signed for imports of 100,000 tons of wheat from Australia but Delhi wants to reduce the commercial import commitment by at least 100,000 tons which will mean a saving of a little over Rs. 3 crores. Delhi points out that the wheat production has increased from 7.4 million tons at the end of the first Plan and the P.L. 480 supplies amount to 16 million tons of wheat over four years. Already there is a shortage of storage facilities and a fifth of the P.L. 480 wheat imports, according to one expert, had become unfit for human consumption as a result of being stored in inadequately protected godowns. One independent view is that, in view of the ample supplies, while India should fulfil her commercial commitments, some of the P.L. 480 wheat supplies could be staggered to a later date.

Poor Performance

Addressing the meeting of the Advisory Board of the Indian Council of Agricultural Research in New Delhi yesterday, Mr. A. D. Pandit, Special Secretary in the Agriculture Ministry, did not seek to paint an all-is-well picture as had been done by his Minister, Mr. S. K. Patil, earlier. He pointed out that, against a demand of 5.4 million bales, cotton production was only 4.5 million bales. He admitted that, in many fields, the performance on the agricultural front had fallen below expectations. The low-performance was particularly noticeable in oilseeds, fertilisers, soil conservation and use of irrigation water. The 1961-62 estimate of 6.9 million tons of oilseeds was below the 7.1-million-ton base level presumed for the third Plan. The Agriculture Ministry would try, he said, to intensify oilseeds production.

Of about 200 million acres of land in the country which are in need of protection through soil conservation measures, about 11 *million acres are planned to be covered in the* third Plan. Of this area, only a million acres were tackled during the first year of the third Plan.

New gimmicks are also being considered to find ways to increase, agricultural production. These would include raising paddy and fish in flooded areas, as is done in some South Asian countries. Officials of the Planning Commission and the Food and Agricultural Ministry have had talks on utilising about a million acres of land which are under flood for about four months in the year in Assam, Kerala, Orissa and Andhra Pradesh. A study-team will first visit Orissa to explore ways and means of cultivation of deep water paddy. It is now admitted that fertiliser availability will be between only 60 and 70 per cent of the quantities originally estimated for the various years of the third Plan and there is also said to be resistance on the part of farmer-consumers to the more sophisticated types of fertiliser. In order to meet this resistance, some experts suggest that the price of ammonium nitrate, for example, be reduced and that of ammonium sulphate increased. In short, the increase in agricultural production at a rate of 1.6 per cent against the target of six per cent rise in 1961-62 is leading to a re-assertion of the emphasis on rural development.

Plan for Rural Areas

The Planning Commission has summoned a meeting of Central and State Government officials to be held on 21st and 22nd July to consider the recommendations of the Rural Industrial Planning Committee which had been set up by the Planning Commission. The Committee, in its report, has worked out schemes for intensive development of small industries and selected 40 areas to be tackled immediately. Apart from the funds already allocated by the Central and State Governments and statutory boards for these areas, the Committee recommends that an additional Rs. 2 million should be allotted to each of these areas in the current financial year for the package rural industries programme. Planning Minister Nanda wants a high priority to be given to this scheme because it pursues his favourite desire for the development of a co-operative agro-industrial rural economy. While he wants emphasis on improved agriculture, at the same time Mr. Nanda seeks a diversification of the economy.

The industries will largely have to be based on processing of agricultural products. In a letter to State Chief Ministers, Mr. Nanda has asked them to set up high level advisory committees to plan rural industries in detail. Although the *khadi* and village industries men are to be associated with these committees, experts at Yojana Bhavan tend to give a back seat to the Gandhian concept of small industries and traditional industries. The Planning Commission has appointed a standing committee to 'guide' the States in this field of activity.

Coal Conference

There is to be yet another conference to try bring more sense into the approach towards coal transport. An inter-ministerial conference will seek to evolve ways for providing more coal for industries in the southern and western regions. One section of planners is firm in the belief that the real immediate solution to the coal problem can be brought about only through making the railway system up to the mark. A new proposal with which the autho-

STOCK MARKETS AND BUSINESS CONFIDENCE

IRRESPONSIBLE ALARMISM DIES DOWN

By W. T. C. King
EDITOR, *THE BANKER*

LONDON, *6th July*

THE international business scene has been heavily overshadowed in this past month (June 1962) by the wave of nervousness touched off at end-May by the dramatic crack in stock markets—first on Wall Street and then in London and other important security markets. At the date of my last letter, a large proportion of the violent drop in prices sustained on "black" Monday on Wall Street and on the Tuesday in London had been regained; but the slide began again a few days later and quickly carried Wall Street down to new low levels.

The Dow Jones index of common stocks had closed on "black" Monday—after its 35-point fall—at 577, as compared with its January peak of 726 and its all-time peak (in 1961) of 735; then, after rallying briefly to 613, it slithered away to 595 by 11th June and then plunged in the ensuing fortnight to 535.76 by 26th June. At this new low, the lowest since 1958, the index was thus almost exactly 200 points, or 27 per cent, below the peak. This marked the first real resistance point; and, in the five days before the Independence Day holiday, the market rallied quite vigorously, to 579—partly, no doubt, in response to the closing of bear positions.

In London the pattern of price movements in this second phase has been similar to Wall Street's, but less pronounced. The *Financial Times* Industrial Share index, which had swung from 283 to 261 and back to 277 at end-May, has in this past month dropped back to its lowest since September 1959, falling below 253 on 25th June; but it has since rallied to 266. At this point, however, it is still fully 27 per cent below its all-time peak (reached in May 1961), whereas Wall Street's net fall has now been narrowed to 21 per cent.

Stock market movements as violent as these must inevitably leave their mark on business confidence generally; but, in Britain, at all events, the psychological reactions in the second phase of stock market weakness seem to have been somewhat less than might have been expected in the light of the initial response. In some City comments at end-May and early June, a faint note of hysteria could be detected. Just as some of the more sensationalist commentators on Wall Street were glibly talking of "another 1929," so in Throgmorton Street (and beyond) some observers were claiming that a vicious spiral of deflation and unemployment was now all but inevitable in Britain (as well as in the United States)—unless the Government rushed in with massive reflationary efforts. And, as the mood of pessimism spread, people began to talk as if serious under-employment was clearly visible already—instead of being something to be feared only if demand for goods and services suddenly dropped sharply below expectations. This sort of irresponsible alarmism has fortunately died down in the past few weeks. In spite of the further sharp falls on Wall Street, people have come to appraise the possible business repercussions more calmly and rationally.

Effect on Spending

It is recognised, of course, that the crack in Wall Street must exert both a direct and an indirect effect in curtailing total demand in the U.S. by reducing either the capacity or the willingness (or both) of consumers and businessmen to spend; and it is recognised, too, that, in certain circumstances, these effects could be cumulative. But it is also increasingly recognised that, even at worst, these effects would not be likely to be catastrophic. The note of alarm sounded by early commentators seemed very largely to have been based on the view that the deterioration in the business prospect could in some way be measured by the violence of the stock market fall. But in fact, as I pointed out in my last letter, the fall in stock markets was only a reflection in minor part, of any shift of view about the course of the U.S. economy. Disappointment with the pace of its advance in recent months and doubts whether the advance would continue far into 1963, were certainly prominent among the influences that precipitated the market collapse. But the extent of that movement, when once it started, was chiefly a reflection of the irrational levels to which prices had been pushed—by the blind pursuit of "growth" regardless of prospective (not to mention current) dividends and earnings.

The prospect for business activity is not to be gauged, then, from the extravagant movements involved in the long-overdue readjustment of stock market values. In trying to assess the extent of the threat, it is important to bear in mind that industrial activity in the United States, though rising less rapidly than had been hoped, was running at an all-time peak in the month before the market crack occurred; and, at that stage, all official forecasters were confidently predicting a continuing growth for at least six to nine months ahead. These forecasts have, indeed, been repeated since, although it is too soon for even the first business repercussions of the stock market fall to be visible in economic indices. The July review of the First National City Bank of New York has just observed that such scattered statistics as are yet available suggest that a "levelling" of general activity is under way, but the Bank concludes that it would be a mistake to assume that the stock market break would "promptly spill the economy into a new recession."

Public Misunderstanding

It is even more important to bear in mind that the present administration in Washington is certainly no less determined than any of its predecessors to prevent any such recession. The delay in administering new stimulants to the economy is surely an indication of official confidence that activity will in fact be well sustained, rather than of any excessive preoccupation with the risks (actual or supposed) of reflationary action. It has to be admitted, nonetheless, that, in the United States, some of these risks are intensified by psychological factors stemming from public misunderstanding.

The so-called "sound money" doctrine as traditionally understood on Wall Street is reflected in an inbred horror in many minds of budget deficits, however they may be defined and regardless of economic circumstances. The risks for the dollar on the world's exchange markets, if and when the administration concedes any considerable tax reliefs, will not stem merely from the conservatism of overseas bankers; they will stem also from the contagion of nervousness that is all too likely to spread outwards from New York. These possibilities, it is clear, could impose a considerable handicap on the Kennedy Government; but the President has wisely started already a campaign to promote better understanding of the role of public finance in these days. He is most unlikely to allow his goal of full-capacity working to be subordinated to the prejudices of Wall Street—in spite of the added difficulties that might have to be faced to sustain the dollar.

In Britain, the threat to business activity from Wall Street is mainly a contingent one. There is, no doubt, a certain direct psychological effect on business confidence; but the more rational views about the American scene that have lately gained currency have been calculated to reduce this. Otherwise, the effect on Britain's economy will come only as and when a slackening of American activity exerts a restraining effect on world markets. There is no sign that this possibility—it is no more than a possibility—has yet cast any significant shadow ahead, though the "growth-at-any-price" school in Britain has seized upon it as a new and potent argument for a more expansionist policy. The Government, however, is standing its ground. A relaxation in hire-purchase regulations (reducing the minimum down-payment on consumer durables) unexpectedly announced early in June was not, it is generally understood, in any way related to the expected effects of the Stock Exchange crack a few days previously. A fortnight later, instead of conceding further stimulating measures, the Chancellor was pointedly replying to the expansionist school.

The Chancellor Firm

He "utterly rejected" the "clever, up-to-date, modern doctrine" that spending should be stimulated to keep the economy at the limits of capacity, whilst the pound sterling could be left to take care of itself, and could be devalued if necessary. This sort of talk, Mr. Selwyn Lloyd said, was the most effective and quickest way to stop growth and to reduce living standards. The British economy, if it is still expanding, is doing so only slowly—though hardly any of the latest indices yet reflect the effects of the relaxations conceded since the Budget (the further reduction of Bank Rate, the release of special deposits in order to ease bank liquidity, and then the hire-purchase concession). But there is no sign that the experience in stock markets has induced any change in the basic principle laid down for policy earlier in the year—that the pace of growth of the economy must be governed largely by the pace at which exports grow. They went up again in May, for the fifth successive month, but the rise was small (and in that month was outdistanced by imports).

The trend of the balance of payments as a whole, however, is improving. In the first quarter of this year, there was a surplus on current account for the first time since mid-1959, thanks chiefly to a marked improvement in net "invisible" income. The surplus totalled £21,000,000, and comfortably covered the net outgoings of long-term capital, so that there was an overall surplus of £13,000,000.

General Manager

DELHI LETTER

(*Concluded from page* 60)

rities are toying relates to improving the port facilities at Visakhapatnam which could receive coal by ship from Calcutta. The railways would have to provide at least 100 wagons a day to take the coal inland from Visakhapatnam and this the railways will be unable to supply at the moment. The Government is understood to have decided to concede the industrialists' demands for foreign exchange to convert boilers to use furnace oil instead of coal, but at the same time the cut in the allocation of exchange for the import of oil products in the third quarter of the year may lead to oil shortages by September.

Accumulation of coal stocks at the pitheads is being blamed for the decrease in the coal raisings by the National Coal Development Corporation. The N.C.D.C. output in 1961-62 is said to have been two million tons below the levels of the previous year. The private sector collieries increased their output by about 1.8 million tons, but this too is not considered a fast enough rate to meat the targets set for these collieries in the third Plan.

Meanwhile, Mr. K. D. Malaviya has started blowing hot and cold again. On a tour of the Jharia coal belt, the Minister invited the private sector to co-operate in achieving the third Plan targets and at the same time declared that, eventually, there may have to be nationalisation of the coal industry. He berated the industry for not coming up quickly with applications to utilise the foreign exchange earmarked for expansion of collieries and also hinted that the Government was toying with the idea of a central marketing body for coal. The industry, however, has been blaming the Government for the delay in scrutinising the applications that have already been submitted and in giving its approval.

This is the time to think about Cold Storage

And this is the time to think about Carrier and Voltas

—now, when our need for food is so great nothing should be allowed to perish and go waste. Specially valuable foods like fish, meat, poultry, vegetables, fruit and dairy products which spoil rapidly—particularly in the heat.

Cold storage is a most effective way of reducing waste. It keeps perishables fresh—some for weeks, some for months, others for years! Seasonal fruits and vegetables are thus made available right through the year. Fish and dairy products can be carried and sold far from their sources of supply. A surplus of foods in one area can be transferred to supply the areas where they are needed. All this means more profits!

Why Carrier and Voltas?

Because they bring the maximum engineering experience to every refrigeration project. Carrier in the field of manufacture of equipment. Voltas in the field of engineering, installation and service.

Cold Storage Plants, Deep Freezers, Walk-in-Coolers are meticulously designed to suit a particular project. Work is carried out by skilled engineers and technicians, and serviced with the expert care that guarantees efficient, economical operation.

BANK STAFF GET A BETTER DEAL

DESAI TRIBUNAL'S AWARD DESERVES ACCEPTANCE BY BOTH SIDES

THE Award of the National Industrial Tribunal on Bank Disputes (President: Mr. Justice K. T. Desai), which has been accepted by the Government of India in full, is remarkable essay in compromise. It is an ideal industrial award, in that it seeks to reconcile the conflicting interests of two contending parties against the wider background of national interests. In recommending higher pay and other benefits to bank employees in keeping with the principle of social justice and having regard to the rise in cost of living, the Tribunal has also taken into consideration, as enjoined by the Supreme Court, the capacity of the industry to pay. In a sense, the task of an industrial tribunal is far more difficult than that of an ordinary court of law whose function is not to make new contracts or agreements between parties, but only to interpret existing contracts or agreements. A tribunal, on the other hand, being not fettered in its jurisdiction, may, and often does, create new obligations and rights to maintain industrial peace. In doing so, it has to bear in mind that it does not give a fresh twist to inflationary forces. The task is rendered more difficult when the dispute is between employers and employees of an industry like banking, which, apart from rendering an essential service to the public, has a growing and crucial role to play in national development. And it is a tribute to Justice Desai's sense of fair play and his remarkable understanding of the basic requirements of banking development that he has given an award which is both just and fair to the employees and at the same time conducive to the development of banking on sound and healthy lines. It is no reflection on the merit of the award, if it has fallen short of the aspirations of employees who, obviously, asked for far more than what the industry could afford and the general level of incomes in the country permitted or if it has given rise to misgivings in the minds of bankers about its effect on the industry. For it is impossible, even for a Daniel, to give an award that will fully satisfy both sides.

Main Features

The main recommendations of the Tribunal may be briefly summarised first.

Banks have been classified on the basis of their working funds into three categories, instead of four under the Sastry Award.

Working Funds

A class ... Rs. 25 crores and above (and all exchange banks).

B class ... Rs. 7.5 crores and above.

C class ... Below Rs. 7.5 crores.

Six banks have been placed under a special class, called "excepted list," and separate scales of pay have been recommended for their employees. This has been done on the ground that they cannot pay the scales recommended for C class banks.

Twenty banks, including the State Bank, the Punjab National Bank, the Bank of India, the Bank of Baroda, the United Commercial Bank, the Central Bank of India and the American Express come under class A. Class B consists of 13 banks such as the Andhra Bank, the Bank of Maharashtra and most of the subsidiaries of the State Bank. Class C comprises 26 banks, including the Bank of Rajasthan, Pandyan Bank, the Hindustan Mercantile Bank, etc.

It is noteworthy that classes A and B under the present award are the same as classes A and B under the Sastry Award. Class C under the Desai Award comprise the banks falling within class C and class D under the Sastry Award.

Categorisation

The categorisation of areas has also been modified. Under the Award, the country has been classified into three areas, as against four hitherto. The three areas are: Area I, comprising cities with a population of 1.2 million or above such as Bombay, Calcutta, Delhi, Madras, Ahmedabad, Hyderabad and Bangalore. Area II, comprising all cities other than those included in area I which have a population of one lakh or more. Area III includes all places not included in I and II. The Desai Tribunal has thus abolished the area IV created by the Government. Justifying its action, the Tribunal points out that the inducement offered by the creation of area IV and lower scales of pay fixed for workmen in that area have not constituted sufficient incentives to the commercial banks to attract the appropriate talent necessary for opening branches in that area.

The next important recommendation of the Tribunal pertains to dearness allowance. It has merged the major portion, 80 per cent to be precise, of the existing dearness allowance of bank employees with the basic pay and has provided that there should be a 100 per cent neutralisation of the rise in cost of living in case of subordinate staff and 75 per cent in the case of clerical staff. Following the former recommendation, the Tribunal has put forward a new and higher scale of pay for employees of all classes of banks. Under this revised scale, the minimum salary of a clerk in an A class bank in area I has been raised from Rs. 85 to Rs. 140 and the maximum from Rs. 280 to Rs. 405. Suitable changes have been made in the scales of pay of employees of other classes of banks.

Other benefits recommended are (1) higher house rent allowance, (2) leave fare concession for employees of A class banks once in three years, and (3) more liberal gratuity benefits. The Tribunal has also recommended that the age of retirement should be raised from 55 to 58. The Tribunal has suggested that its major recommendations should take retrospective effect from 1st January 1962.

"Liberal to Employees"

Mr. Justice Desai himself has called his Award as very liberal to employees. In merging dearness allowance with the basic pay, the Tribunal has only followed the Second Pay Commission which did the same thing in the case of Government employees. But it has gone a step further in regard to the classification of cities and, by including Madras, as well as cities of smaller population in area I, it has strengthened the hands of T.T.K. who has been vigorously pleading for rating Madras with the other bigger cities like Bombay and Calcutta, so that Government employees working there may get the same privileges as their counterparts in the bigger cities. Further evidence of liberal treatment given to the employees by the Desai Tribunal is to be found in the provision for full neutralisation of any rise in cost of living in the case of subordinate staff and 75 per cent in the case of the clerical staff. It is noteworthy that the adjustments in cost of living allowance have to be made within a narrower range of fluctuation in the Index than is the case now. Further, the recategorisation of banks into three classes, as against four now obtaining, and the classification of the country into three areas, instead of four as at present, for the purpose of fixing scales of pay, would benefit the employees of the smaller banks and bank employees as a whole in smaller centres. The merger of dearness allowance with basic pay raises the minimum starting salary for a clerk in an A class bank in area I to a more respectable level. As regards dearness allowance, in the case of clerical staff, it is to be calculated and paid at the rate of three per cent of pay (basic pay provided under the Award, plus special allowance and officiating allowance, if any) for every rise of four points above hundred in the quarterly average of all-India average working class consumer price index (general) base 1949=100. In the case of the subordinate staff, the D.A. will be four per cent of the pay for every rise of four points above hundred in the quarterly average working class consumer price index. Justifying the provision for only 75 per cent neutralisation for the clerical staff, Mr. Justice Desai says: "I consider it fair that, as regards members of the subordinate staff, there should be hundred per cent neutralisation linked with the all-India working class consumer price index number base 1949=100. In the case of workmen other than those belonging to the subordinate staff, keeping in view the trend in organised industries, I provide a lesser rate of neutralisation and fix it at 75 per cent."

Immediate Benefit

The immediate rise in emoluments of bank employees resulting from the merger of the major part of D.A. with basic pay and with provision for neutralisation of rise in the cost of living is estimated at under 10 per cent. The long-term benefit, by way of higher provident fund and gratuity, however, is quite substantial. In order to ease the burden on banks arising from this higher liability, the Tribunal has limited the portion of the pay eligible for the calculation of gratuity to 80 per cent of that provided under the award for clerical staff and 75 per cent for subordinate staff.

For provident fund deductions, the Tribunal has recommended that 80 per cent of the basic pay under the award for clerical staff and 75 per cent for subordinate staff and the full amount of special and/or officiating allowances, if any, only should be taken into account. The percentage deductions prescribed are 8⅓ per cent of basic pay in respect of employees of A and B class banks and 6¼ per cent of pay for employees of C class banks and banks in the excepted list. It would have been better and simpler had the Tribunal not made this qualification. The saving for the banks would not be appreciable. Indeed, the gain to banks in terms of goodwill would be greater if the full 100 per cent of the basic pay is taken into account for calculating this retirement benefit.

In recommending the new scales of pay and other benefits, the Tribunal took into consideration the representation made by the various interests concerned, the statements of the Governor of the Reserve Bank and the Chairman of the State Bank, and the trend and progress of banking. It also had in mind the important role banks would be called upon to play in national development, its present position as well as future prospects, the prevailing rates of wages in comparable concerns and the level of national income and its distribution. Having regard to all these factors, and after carefully studying all the materials placed before it, the Tribunal has come to the conclusion that all classes of banks had the capacity to pay the respective scales of pay fixed for them. Where, however, it found that a sudden change in service conditions might lead to a precipitous increase in the burden on some banks, it has provided appropriate relief.

Norms of Wage Fixation

It is now a matter of common knowledge that one of the factors to be taken into account in fixing wage scales is productivity of labour. In fact, it is one of the four principles laid down by the Committee on Fair Wages for wage determination, the other three being the prevailing wage rate in the same or similar occupations, the level of national income and its distribution and the place of the industry in the economy of the country. The Desai Tribunal did not ignore this vital point, but, in view of the fact that there are hardly any standards by which one can measure the productivity of labour in banks in terms of services rendered or profits made, the Tribunal has apparently not made more than a passing reference to productivity. Remarking that, in banking, it is very difficult to fix standards of work by means of time and motion studies, by piece-rate method or by incentive method of wage payment, it draws attention to the observation of the Bank Award Commission to the effect that banking is not a productive business from the ordinary commensense point of view, so that the first out of the four principles laid down by the Committee on Fair Wages, namely, productivity, cannot so much apply to banking as to other industries.

The cost of the Desai Award, in terms of higher emoluments to the staff, has been estimated by bankers at roughly 10 to 12 per cent of the wage bill. Coming as it does on top of the additional burden on banks resulting from the higher corporate taxation, deposit insurance premia and increase in the cost of borrowing from the Reserve Bank, such a burden will, they point out, make further inroads into the profits of banks and make it difficult for them to increase the statutory liquidity ratio as desired by the Reserve Bank and to follow their plans for spreading the area covered by banking.

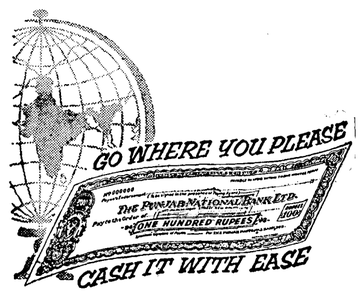
Plight of Employees

There is considerable force in this contention, but bankers must realise that, unless their employees are contented and fully co-operate, it will not be possible either to expand banking service or to improve the quality of service. Bank employees, unlike the blue-collared workers, are an educated and enlightened lot, fully, conscious of their rights and, we hope, of their duties too. It is, therefore, essential for managements of banks to win and retain the goodwill of their employees. This is essential not only in the interest of development of banking in the country but also for maintaining the stability of the country as a democracy. Bank employees form an important section of the middle class which forms the hard core of the social and political fabric of the country. Indeed, when one comes to think of the obligations of this section of the society, the Award cannot be regarded as too generous to employees. One has to bear in mind, in this connection, that they, along with other sections of the middle class having fixed incomes, have to bear the main brunt of the relentlessly rising cost of living in the country. The published index numbers are imperfect, in that they do not fully reflect the cost of such essentials as housing, vegetables and fruits and education. Most of the clerical staff of banks in cities like Bombay, Calcutta and Madras have to pay away a good part of their salary, often amounting to a third to one-half, by way of rent alone. It is the business of bank managements to earn sufficient profit to cover the cost of decent pay scales to their staff.

The Award does not cover the vast majority of junior officers, heads of departments, and other supervisory personnel in the middle range of officers class. Their lot is by no means enviable, for it is they who have often to face the discontentment of the clerical and other subordinate staff and show results to their superiors. These officers constitute a very important section of a bank's work force. They, too, deserve to be kept contented and enthusiastic in their work. Surely, no wise bank management will fail to realise that, unless something more is done to better their lot in the context of the Desai Award, this section of their staff will suffer from a sense of exasperation and disappointment.

Staff's Duty

All bank employees on their part must realise that there is another side to the medal. Just as they are justified in asking for higher emoluments, the management and the public are also equally justified in insisting on efficient, as well as courteous, service. Banking, as Mr. Justice Desai rightly points out, is a public service and the efficiency of workmen in the industry does play a significant part in inspiring and establishing confidence of the public in the banks. At present, there is considerable room for improving the services rendered to the public and it is the bounden duty of bank employees, the more so because of the difficulty in laying down ready-made standards for measuring their efficiency, to serve their institutions and the banking public to the best of their ability.



PNB TRAVELLERS CHEQUES

- The safest way of carrying cash during travel
- Exchangeable with cash at any of our over 425 offices and a net-work of agencies all over India
- Can be obtained from all important branches of the Bank
- Available in convenient denominations of Rs. 100/-, Rs. 50/- and Rs. 25/-

THE "BLUE MONDAY" AND AFTER

WALL STREET'S RECENT BEHAVIOUR ANALYSED

[The recent slump in Wall Street is as baffling as it has been devastating. Since Wall Street is uppermost in the minds of all those who are interested in the behaviour of shares and stocks, we reproduce below a short article on the subject from the July Monthly Letter *of the* First National City Bank, New York. *The authors of the article have briefly dealt with the causes of the setback, preceded in history only by the Great Crash of 1929, explained the main shortcomings in the American economy and examined a solution to the problems arising out of the fall in share values. It is topical and enlightening and makes interesting and informative reading.—*ED.]

STOCK prices, losing ground spasmodically since mid-March, extended their decline in nervous trading during June. Closing at 536 on 26th June, the Dow-Jones industrial stock average was 27 per cent below the high point of 735, touched last 13th December.

While history does not inevitably repeat itself, students of past experience have noted that a decline of this magnitude signifies a break in investor confidence that will not be easily repaired, and may also portend a downturn in general business activity before too many months have passed. It is not surprising that people are wondering what the sequence of events will be this time and evaluating whether the wisdom and power of Washington can be mustered to avert something worse than the mild recessions experienced since World War II.

Minds naturally turn back to the Great Depression that followed the stock market collapse of 1929. But there is little recognisable resemblance in the two situations. We live in a different world. The banks are strong and liquid. People characteristically hold stocks outright, not on borrowed money. We have had no prelude of excessive personal or business spending.

The excesses this time are in government spending—bloated to a point where even war-emergency levels of taxation are incapable of providing a balanced budget—and in wage costs that undermine the ability of private business to create enough jobs and maintain our competitive power in world markets. There is nothing wrong with the U.S. economy that retrenchment of federal spending and taxing, and moderation of wage demands, cannot cure. We need to take to heart the lesson out of last month's developments in Canada: excesses of Government spending and cheap money are more likely to lead to crises of confidence than to full employment.

The Swing of Psychology

At the time of the steel price controversy, with the Dow-Jones index only 6 per cent below the December peak, the predominant view was that the market would break through into still higher ground. Instead, a mood of doubt and hesitation settled upon investors' minds. Many people evidently decided to reduce their holdings. As prices faded, pessimism grew.

Major turning points in the stock market are often triggered by events, such as the steel episode, which outwardly may seem of minor importance. The President, in a press conference on 7th June, said he thought most financial experts had realised for some time that an over-priced market could not hold up once investors recognised that inflation was ending.

The valuation of common stock earning power, at the peak last December, reached a higher extreme than at the top of the market in 1929. The Dow-Jones industrial stock average was 23 times the earning power of the stocks included. This compares with a multiple of 19 times at the peak of the market on 3rd September 1929. Stocks selling at the highest multiples of earnings—the glamour growth stocks—have suffered the most serious readjustments.

Common stocks, well selected and acquired at reasonable prices, most truly represent investments in the growth of private enterprise. Nevertheless, it has been more popular these last years to buy common stocks on the idea that we live in an age of inflation, in which ownership of equities affords the only protection against shrinkage in the value of money. Curiously as the chart suggests, we have had more inflation in the prices of "inflation hedges" than in the goods and services people buy. The inflation we have is in costs of labour and government. This kind of inflation, without recompense in higher commodity prices, has squeezed corporate earnings. Common stocks are not effective hedges against rising costs of labour and government.

As the President stated in his 7th June press conference, "there is no need for this country to stand helplessly by and watch a recovery run out of gas." Nevertheless, there are doubts in the minds of business leaders as to whether the Administration programme—with its accent on increased welfare spending and enactment of the cumbersome and controversial Revenue Bill of 1962—is the right fuel.

A New Approach?

Speaking at the Yale commencement exercises 11th June last, the President implied that he himself had some doubts as to the adequacy of his programme when he invited a "dialogue" on such critical questions as how we can make our free economy work at full capacity, have the budget and tax policies supply adequate revenues, and improve the balance-of-payments position—all without slowing down the economic growth.

Imaginative new lines of thinking can answer these questions. One clue is found in the President's own observation that our present tax structure exerts too heavy a drain on a prospering economy. He has promised to develop a plan for personal and corporate income-tax rate reductions to be offered for action by the next Congress meeting in January. The question is whether we can afford to wait.

Some people want tax reduction simply as a means of getting more money into circulation quickly. This is to misunderstand the situation. What the American economy needs is not more money but stronger incentives to earn money. The experience is that calculated revenue losses from tax reductions never materialise if the reductions are designed to give encouragement to enterprise, production, and employment.

Keen observers, in the U.S. and abroad, are beginning to recognise that inflated government expenditures and cheap money are the

INDIAN COTTON TEXTILES GETTING PRICED OUT ABROAD

DATA FOR 1961 ANALYSED

COMMENTING on the Indian Cotton Mills Federation's scheme of compulsory exports of textiles, we stated in the course of an editorial only last week that the major reason for the downward trend in exports of Indian piecegoods was that the latter were getting priced out in world markets. The force of this contention is fully borne out by the wealth of statistical data furnished by the Textile Export Promotion Council (Bombay) in its customary annual supplement to the *Texprocil Bulletin* published over the week-end which analyses India's export trade in cotton textiles against the background of world trends in recent years. This analysis clearly shows that India's exports of cotton cloth have suffered a distinct setback in the past three years, although the world trade has expanded. There was no doubt a slight setback in world trade in 1961 as compared with 1960, but the volume of trade was still far higher than that for 1959. Thus, between 1959 and 1961, whereas the aggregate shipments from the free world rose from 4,961 million yards to 5,283 million yards—they were higher still at 5,641 million yards in 1960—India's exports (mill, handloom and powerloom cloth) declined from 850 million yards to 603 million yards, bringing down its share in world exports from 17.1 per cent in 1959 to as low as 11.4 per cent in 1961. In contrast, the percentage share of Japan has gone up from 25.5 to over 26.7 and of the European Common Market from 25.4 to 26.8. Even that tiny British Colony, Hong Kong, has gained a larger slice of free world exports, the actual percentage share increasing from 4.7 in 1959 to 6.8 in 1961. The latest entrant into the world textile trade is Pakistan which exported a total of 61 million yards in 1961. Although this quantity is less than the actual shipment of 76 million yards in 1960, it is pretty high. Prior to 1955, not a single yard of cloth was exported from Pakistan and the exports in 1958 were no more than 4.1 million yards. Details of the quantities of cotton piecegoods actually exported from India and other countries in both free world and the Communist bloc during the four years 1958 to 1961 are indicated in Table A.

Disquieting Factors

Last year (1961), India could not sell abroad more than 603 million yards of cotton cloth (including handloom fabrics), as compared with 724 million yards in the previous year (and 850 million yards in 1960). The percentage fall was as much as 20, on top of a drop of 15 per cent suffered in 1960 whereas the decline in free world export was only 6.3 per cent. It was the sharp drop thus of 121 million yards that largely pulled down the aggregate free world exports to 5,283 million yards, from 5,641 million yards in 1960. Such a setback in India's exports is attributed by the Export Promotion Council principally to "uncompetitive prices as a result of the shortage of raw cotton." There were also some other disquieting factors. These are pinpointed below:

1. The U.S. took on the whole significantly less of cotton piecegoods in 1961 than in the previous year.

2. The offtake of Indian textiles by the U.K., the major customer, was lower, in view of their higher prices than those of Spain, Portugal and Formosa.

3. Offtake by Australia was lower, due to a severe credit squeeze in that market.

4. The difficult foreign exchange situation in New Zealand compelled that country to go steady on its textile imports, especially during the latter half of the year.

5. The situation in Angola, Algeria, Mozambique and Tunisia brought about a shrinkage in demand for cotton textiles.

6. Unfavourable weather conditions in several parts of Africa adversely affected cash crops and consequently reduced the purchasing power of people.

7. Tight money conditions were prevailing in some of the Asian markets.

8. Development of local textile industries in most of the Asian markets contributed significantly to a reduced offtake.

9. In certain countries such as Burma, tariffs were increased substantially.

10. In some others like Iraq, imports were almost banned.

11. Bad summer in Europe itself resulted in a marked shrinkage in the demand for cotton textiles.

Although the aforesaid factors were general in character, they affected exports of Indian cotton piecegoods more sharply than others. The decline was least in respect of Japanese piecegoods, it being almost nominal. How India's exports compared with those of Japan and the United Kingdom is illustrated in Table B.

Zone-wise Exports

The decline in the offtake of Indian cotton piecegoods during 1961 was accounted for by all the zones except the African zones. The decline was the steepest in respect of the European zone, to the extent of as much as 58 million yards, due chiefly to the appreciable drop in purchases by the U.K. In fact, if this market is left out, the rest of the European Continent took about seven million yards more of Indian cloth. The sharp fall in the exports of Indian cloth to the Asian zone occurred in only a few of the major markets. The review of the conditions lately obtaining in these markets as contained in the aforesaid publication gives the following particulars:

"Consumer preference in Malaya and Singapore has been steadily shifting towards finished fabrics in which India finds herself priced out by suppliers like Japan. Moreover, this market passed through phases of overstocking and stringent credit conditions during the course of the year which tended to lower her overall offtake of cotton piecegoods during the year. Japan, however, successfully met this situation by offering periodic reductions in the prices of her cotton piecegoods so much so that, by the year-end, prices of Japanese cotton piecegoods were at least 30 per cent less than those quoted earlier in the year. It is understood, that further cuts have been offered in the first quarter of 1962, thus bringing the overall reduction in prices to as much as 40 per cent to 45 per cent. During 1962, however, a new competitor, namely, Hong Kong, is likely to enter this market, in view of the limitations placed on her textiles in U.K. and U.S.A. which were her traditional customers. It is learnt that, during the first quarter of 1962, Hong Kong quotations were well below those of Japan in this market.

"Smaller declines in offtake of Indian cotton piecegoods in this zone were recorded by Aden, Hong Kong, Iran, Iraq, Cambodia and Saudi Arabia. In almost all these markets, local industries have been catering to a large part of their needs of greys, while, in the supply of finished goods, Japan and Eastern Europe have been meeting the bulk of the requirements. Among the Asian markets which took increased quantities of Indian cotton piecegoods during the year as compared with the previous year has been Afghanistan, the offtake of which has been increasing steadily ever since the conclusion of Indo-Afghan Trade Agreement providing for exports of Indian cotton piecegoods against imports of dry fruits from Afghanistan; this market would, in fact, have taken still larger quantities of cotton piecegoods during the year but for the fact that the Pakistan-Afghanistan land border was closed during the latter part of the year due to a political rift between the two countries, necessitating the air-freight of Indian cotton piecegoods which in turn increased the landed cost of Indian textiles in this market. The only Asian market to have significantly improved its offtake of Indian cotton piecegoods during the year was Indonesia, to the extent of nearly 12 million yards. Slight increases in offtake were also recorded by Ceylon, Persian Gulf ports, and Thailand to the extent of one million yards each."

The excessive dependence of Indian cotton piecegoods on a few traditional markets is again highlighted by the fact that the U.K. alone accounted for 23 per cent of the total exports during 1961. The combined share of Sudan and East Africa was over 20 per cent. These three markets thus accounted for 43 per cent of the total. Even as between these, there is a wide gap in the offtake of the first two markets, the actual difference being as large as 74 million yards. There has again been a wide gap of about 22 million yards between the offtake of the third (East Africa) and fourth (Australia) biggest markets. Thereafter, the offtake by the rest of the markets does not show any wide gaps. Exports of Japanese piecegoods do not, however, display tendencies of this nature. Nor does there appear to be any excessive dependence on particular markets.

Greys to Finished Fabrics

A striking feature of India's export trade in cotton piecegoods in recent years has been the slight shift in the direction of finished fabrics, from the traditional greys, as will be evident from the figures below:

(Percentage to total exports)

	1961	1960	1959
Grey	57.2	62.0	61.5
Bleached	19.2	18.2	18.5
Printed	6.2	3.6	3.9
Piece-dyed	13.8	10.6	10.1
Yarn-dyed	3.4	5.2	5.5
Others (including mixed fabrics)	0.2	0.4	0.5

It will be observed that, though exports of printed goods have improved to some extent, their total still constitutes only a small proportion of the total exports of piecegoods and that greys and bleached still form the great bulk of the goods shipped from this country.

The overall sharp decline in the offtake of Indian grey cotton piecegoods from year to year has been in evidence in all the varieties exported, barring domestics and longcloth. Exports of bleached cloth have also declined, though the decline has not been as steep as in the case of grey cloth. Exports of yarn-dyed cloth, too, have suffered a setback. There has, however, been an improvement in shipments of printed goods and piece-dyed cloth. The Table C below indicates the trend of exports of the varieties classified according to processing sorts during 1961 as compared with 1960 and 1959:

COTTON TEXTILES IN PARLIAMENT

IMPORTS RUNNING AT A HIGHER LEVEL

From Our Special Correspondent

MANCHESTER, *3rd July*

MANCHESTER LETTER

FEW traders in Lancashire had anticipated that the Government would be prepared to grant any concessions over the import question, and the debate in the House of Commons did not bring any change in the situation. Speakers on behalf of the Government endeavoured to justify their attitude and, despite the fact that four local members of Parliament voted with the opposition, the official motion supporting the policy of the Government was easily carried.

Outstanding yet again in the latest in a long series of Parliamentary sessions devoted to the trade's affairs was the apparent naivety of several of the speakers, particularly those on the Government front bench. It may be a politician's privilege to gloss over unwelcome facts, but, when dealing with an industry which still interests so many people, the omission of vital aspects of any given situation irritates (to say the least) those whose livelihood is involved. For example, it was stated that, out of a population in the North-West of just over 3 million, only 277,400 or less than 10 per cent were engaged in textile manufacture. That may be strictly accurate, but how many hundreds of thousands more are indirectly concerned with the progress or otherwise of the textile trade? An area which, rightly or wrongly, is still so dependent on the industry, with its many ramifications, cannot afford to stand idly by and watch this staple source of its income dwindle into nothingness.

Imports are *Not* Down

The way in which misconceptions can be bandied about was illustrated by the remark of one Government supporter who said: "Everybody is blaming the Government for the amount of imports when imports are running at a level far below that of 1959." As already outlined from the Board of Trade's own figures, the annual rate of imports, based on the first quarter of 1962, is 572 million yards, as against the 1959 figure of 525 million yards. Of this, supplies arriving for retention in the home market are running at an annual rate of 452 million yards, as compared with the 1959 total of 372 million yards.

The President of the Board of Trade suggested that the lack of confidence "so widely advertised" was perhaps not as deeply ingrained as was imagined, quoting the speed-up in the rate of applications for re-equipment grants in the last few weeks as evidence for his statement. The total, he said, had reached £73 million and he hoped that, by the closing date (at the end of this week), applications would have exceeded the £80 million mark. This means that the Government would be contributing around £20 million towards the modernisation programme.

Still Only Applications

On the face of this statement it would seem that the Minister could justify his remark about confidence within the industry, but gain the omission is the vital factor. The applications made for grants are projects pure and simple; there is no obligation on the firms concerned to implement these plans, even after they are approved.

Many companies, indeed, have had their schemes lying on the table for some time past ready for submission, but have withheld sending them forward until the outlook could be gauged more accurately. There is still another year in which machinery can be ordered and a further 12 months for installation. Only when the final schemes have been completed will it be possible to judge the response to the overall re-equipment programme.

Later in the debate, Sir Keith Joseph, Minister of State, Board of Trade, asserted that a large proportion of the £80 million had "reached the claim stage." A quarter, he said, had already been installed, another quarter was being installed and most of the rest of the applications represented serious schemes often put in by companies which had already "had a first slice."

India, according to Mr. Erroll, has now fallen into line with Hong Kong in accepting current ceilings on cloth and made-up goods for a further three years. Both these countries have also agreed to put a limit on exports of cotton yarn at the actual 1961 level and this system came into force from the beginning of July.

Arrivals from several other sources are already restricted by quota. "There remains only the fear of a sudden rush of imports from a new supplier," said Mr. Erroll. "This is a fear rather than a reality but the Government wanted to dispel it." A much closer watch, he said, would, therefore, be kept on imports and, if there was a sudden upsurge from any source, he would immediately consult the industry, with a view to making a protest to the Government concerned and if necessary invoking the long-term Geneva arrangement.

From Lancashire's viewpoint, this looks uncommonly like another case of "locking the stable door," for, by the time the consultations have taken place and representations have been made to the authorities concerned, the damage will have been done. If precedent is anything to go by, the new supplier will by then have staked its claim to another small portion of the British home market.

Pakistan Sends More

After several months when imports of cotton goods were severely curtailed as compared with the first half of last year, the May returns showed a sharp advance and amounted to 55,194,000 yards, the highest figure since last August. For the first five months of the year, the total of all arrivals at 243,391,000 yards was still over 100,000,000 yards lower than in the same period of 1961 when the total had reached 352,559,000 yards, an exceptional figure, never since approached.

Mainly responsible for the rise in shipments from abroad in May was the big influx of grey cloth from Pakistan, which amounted to 6,249,000 yards, bringing the total from this source during 1962 to 15,098,000 yards, as against 23,061,000 yards in the whole of 1961. Current arrivals from Pakistan are already nearly twice as large as in the same period last year.

In contrast, shipments of grey cloth from India have slipped back from 92,876,000 yards to 69,327,000 yards and from Hong Kong from 37,449,000 yards to 27,113,000 yards. Outside the Commonwealth, Japan has sent only 11,286,000 yards, as against 29,747,000 yards and undesignated foreign countries 33,349,000 yards, as against 80,008,000 yards. Although arrivals of foreign grey cloth have been reduced by nearly 100,000,000 yards at 180,059,000 yards, the cut in purchases of finished goods has been far less noticeable, current imports being 63,332,000 yards, as against 75,153,000 yards.

World Cotton Base Moves

The 17-nation International Cotton Federation is to move its headquarters to Switzerland after 58 years in Lancashire. Since its formation in 1904, the Lancashire cotton industry has always played a key role in shaping policy and finding its leaders. The Federation—world forum of the cotton and allied textile industries—is transferring from Manchester Royal Exchange, hub of the British cotton industry, to Zurich.

In Lancashire, the move was seen in some quarters as a further illustration of the declining influence of the British cotton industry. But the Federation, explaining why the move was being made, said that it was to facilitate international contacts and to improve the administrative services of the Federation's secretariat. Mr. Peter Warburton, Federation Secretary, stated that the situation in the Lancashire industry had not influenced the decision. The move was unlikely before the Spring of next year.

The Federation—full title International Federation of Cotton and Allied Textile Industries—represents owners of nearly two-thirds of the world's cotton spindles and looms as well as cotton exchanges, finishers, merchants and other organisations.—*All Rights Reserved.*

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

SOME THOUGHTS ON CANE PREPARATORY DEVICES IN SUGAR INDUSTRY

VALUE OF SHREDDERS HIGHLIGHTED

By G. Ramchander

SUGAR in our country is manufactured from sugarcane which is related to the bamboo family. Sugarcane may be considered as a hollow cylinder. The walls of this are formed by the rind which contains hard fibres in order to support the plant in an upright position. The interior is filled with a soft cellular structure, the pith. The cylinder has transverse partitions along its length at intervals of 6 to 18 inches. These are called the nodes and have the same composition as the rind tissue.

By far the pith is softer and contains more sugar than the rind. In between the nodes and the internodes—that is, the portion between two nodes—the internodes (rind and pith included) contain more sugar than the hard nodes and less fibre. The nodes contain from 10 to 14 per cent sugar while the internodes contain from 12 to 16 per cent.

This sugar is found dissolved in the cell sap. In order to extract the maximum quantity of sugar, all the cells have to be completely ruptured and, with proper maceration and application of pressure, the sugar must be extracted into the juice. This is the main function of the milling tandem consisting of four to six three-roller mills. In this milling process, it is actually the fibre in the cane that is being subjected to the brute force of the rollers which rupture the cells and remove the last traces of sugar aided by an efficient maceration system.

In this process, the degree of fineness to which the cane fibre has been divided goes a long way in increasing the juice extracted and thereby the sugar recovered. Hence the need for efficient cane preparatory devices. The degree of fineness to which the cane fibre is disintegrated so that its resistance to the roller pressure is reduced helps in the extraction of more sugar. This finely disintegrated cane could be continuously fed as a uniform blanket to the mills; thereby there is an increase in capacity.

Apart from these two advantages, a well-prepared cane reduces the power consumption and wear and tear of the mills.

We might dwell here for a moment on the technological efficiencies, especially of the milling unit of the Indian sugar industry, as compared with that of other countries. This is brought out in the following comparative table:

TABLE I

	India 1958-59	*Queensland* 1958	*Hawaii* 1958	*Jamaica* 1958	*Trinidad* 1958
Sugar % cane	12.33	15.18	11.75	12.15	11.01
Fibre % cane	15.01	13.24	13.10	14.21	13.64
Added water % fibre ..	133.11	185.41	..	127.58	158.53
Sugar % bagasse ..	3.23	3.02	2.36	2.60	2.61
Mill extraction	91.65	94.57	93.80	94.22	93.04
Lost juice % fibre ..	47.28	46.83	..	34.90	44.06
Reduced mill extraction.	93.25	94.90	95.69	95.01	93.71

It will be seen from the above table that the "reduced mill extraction" in India is lower than that in other countries, though the figure of 93.25 is not bad for our country. There is thus definite scope for increasing the extraction. As already said, it is the preparatory device specially that increases extraction and, therefore, one has to examine carefully that aspect, if sugar losses in the bagasse is to be reduced.

Types of Preparatory Equipment

The crusher, either two-roller or three-roller, was considered for a long time as an important cane preparation equipment. The V-grooved two-roller crusher dates back to 1882 when Thompson and Black applied for a patent. The Krajewski crusher was invented by Krajewski in 1886. We have the later three-roller Fulton crusher.

The characteristics of the crusher are that it should possess a specially constructed surface which grips the cane pieces, breaks and tears it, so that, when this material reaches the mills, they can work on this cane immediately. Of course, a certain amount of juice is also extracted by the crusher.

At one time, the crusher was the only cane preparatory equipment. The cane knives though coming before the crusher was later introduced. The knives may be either a single or a double set operating with the crusher. The first set is a leveller and cutter, while the second, when installed, further aids in preparation.

Hawaiian experience has been that the slow-speed crusher was not as efficient a device as the high-speed shredder and knives. This is amply borne out by the figures in the above table concerning Hawaii, where the shredder is now used in almost all factories. Whereas crusher rollers have a speed of 3 to 4 r.p.m., the shredder speeds vary from 1,000 in Louisiana to 1,200 r.p.m. in Hawaii.

The shredder, as the name implies, shreds the cane into fine pieces, so that the succeeding mill tandem can crush and remove the maximum amount of sugar, thereby increasing the extraction. Due to the better preparation of the cane feed to the mills, capacity increases of the value of 15 per cent are reported from Hawaii and Puerto Rico. Louisiana reports 3 to 4 per cent increase in extraction. A shredder was first introduced in 1916 in Hawaii.

A distinction should be made here between the function of the knives and the shredder. The knives chop and break up the cane into small pieces, which hold all the juice contained in the cane.

The shredder, on the other hand, disintegrates the cane pieces delivered by the knives and frays their fibrous layers. This integration of the fibrous layers results in the breaking up of practically all cane cells containing the juice. No knife or crusher can perform this job effectively and herein lies the secret of success of a shredder. This fibrous mass behaves like a sponge holding all its liquid and gives it up when compressed by the mills.

K.C.P. Ltd., Madras, has developed an impact type shredder. The working results of one unit installed during 1961-62 season at the Jeypore Sugar Company Limited, Rayagada, is given in Table II and is self-explanatory. The figures for 1960-61 when there was no shredder are also given for purposes of comparison.

It will be seen that there is an increase of 2.5 to 3 units in "reduced mill extraction." It is erroneous to think that the introduction of a shredder increases power consumption.

The use of the shredder, on the other hand, reduces power consumption. The total power required to run the shredder and mill tandem is less than the power required to operate the tandem without the shredder.

There is also another great advantage. Due to the spongy nature of the prepared cane, maceration water can be more effectively used. This in turn leads to a considerable reduction in the quantity of water used, a lower load on evaporator and, consequently, a saving on steam. One Louisiana factory reports a reduction of maceration water from 14.3 to 6.7 per cent on cane, consequent on the installation of shredder.

There is thus enough evidence to warrant the conclusion that the installation of shredders to increase the efficiency of the Indian sugar industry is a "must."

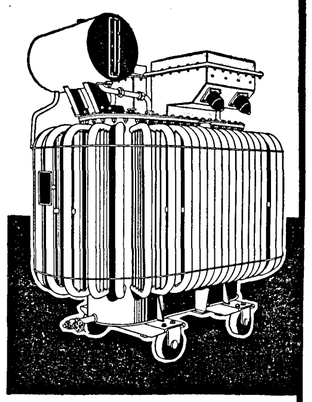
TABLE II

Performance figures of the K.C.P. shredder supplied to the Jeypore Sugar Company Ltd., Rayagada

Particulars	Jan. 1961 without shredder	Jan. 1962 with shredder	Feb. 1961 without shredder	Feb. 1962 with shredder	Mar. 1961 without shredder	Mar. 1962 with shredder
Fibre per cent cane	13.21	14.26	15.15	15.00	16.34	15.75
Maceration per cent cane	14.08	16.16	15.87	16.95	14.52	17.67
Pol per cent bagasse	4.42	3.53	4.59	3.13	4.56	2.29
Mill extraction	89.48	90.87	88.30	91.31	87.36	91.31
Reduced mill extraction	90.13	92.16	90.64	93.52	90.75	93.36

SIEMENS
INDIA

CLOPHEN-FILLED TRANSFORMERS NOW MADE IN INDIA



In technical collaboration with the House of Siemens, Bharat Bijlee are now manufacturing **CLOPHEN**-filled transformers. **CLOPHEN** is a non-inflammable synthetic liquid, having high di-electric strength, which can be used in place of oil as an insulating, impregnating and cooling medium. The non-inflammable characteristics of **CLOPHEN**-filled transformers make them suitable for installation in the vicinity of the load centres in factories, power stations, residential and office buildings.

THE MINERVA MILLS LIMITED

CHAIRMAN, MR. N. D. SIRUR'S STATEMENT

MODERNISATION PROGRAMME MAKES GOOD PROGRESS

A NOTE of optimism that the Minerva Mills Limited would have undergone by the end of this year a transformation from an antiquated and technically inefficient mill into a modern unit in the country was expressed by Mr. N. D. Sirur, Chairman of the Company, in his statement circulated to shareholders at the Forty-second Annual General Meeting held at Bombay on Friday, 29th June 1962. Mr. Sirur gave details of the progress made in the implementation of the renovation and modernisation programme which began in 1960. He referred, in particular, to the complete replacement of about a third of the spindles, modernisation of weaving preparatory department, and installation of automatic looms. He also alluded to the drastic changes in the pattern of production from principally coarse and medium to medium and superfine yarn and cloth.

The following is the full text of Mr. Sirur's statement:

"GENTLEMEN,

"With this meeting, it is proposed to institute the practice of issuing an annual statement with an up-to-date review of the Company's affairs to supplement the Directors' report. A copy of this statement will be mailed to the shareholders along with the dividend warrants which, I hope, will also from now on become an invariable feature.

"The Company has resumed paying dividend with a token distribution of 5 per cent for the year 1961 after five years of stress and strain. To those shareholders who have held on to their shares, I commend you on your patience and am grateful for your confidence. I am particularly encouraged by the foresight of those who have recently become our shareholders in the midst of falling values all round, and welcome them to our fold.

A Transformation

"The year 1961 under review has been the middle year in a period of three years beginning with 1960 and ending with the current year. During this period, your mills will have undergone a transformation from one of the antiquated and technically inefficient mills into one of the more modern mills in the country. Moreover, the pattern of production has been drastically changed from principally coarse and medium to medium and superfine yarn and cloth.

"I daresay that, had we not made these changes, the profits of the Company during this three-year period would have been somewhat higher in line with the general trend of textile profits. However, a continual process of change always involves a certain amount of dislocation, but the fruits of this labour will be felt from the year 1963 onwards, and your mills at Bangalore will, in my opinion, be technically more modern than even its sister mills in Bombay, the Modern Mills Ltd., which is one of the better mills in Western India.

Renovation Programme

"The magnitude of the renovation programme undertaken by the Company can be judged by the fact that, by the end of this year, your mills will have spent on capital expenditure, during the aforesaid three-year period, a sum in excess of Rs. 63 lakhs which is the total of the existing debenture loan of Rs. 18 lakhs and the N.I.D.C. loan of Rs. 45 lakhs shortly to be received. This capital expenditure is only on the spinning and weaving side, since your old dye and bleach house now belongs to your sister mills, the Mysore Spinning and Manufacturing Company Ltd., but is jointly used by both the mills.

"The Mysore Mills has also embarked on a renovation and modernisation programme estimated to cost Rs. 77 lakhs which includes the expenditure already incurred by it in converting your old dye and bleach house into one of the most modern cloth processing plants in the South, containing continuous peroxide bleaching, printing and mercerising. We would like to invite a joint group of shareholders and Directors of the two mills to visit Bangalore later in the year to see for themselves the transformation that is taking place at a total cost of Rs. 1.4 crore between the two mills together. Your Company has reason to be grateful to its sister company, the Mysore Spinning and Manufacturing Company Ltd., for having joined in a common endeavour for mutual benefit.

"Reverting to your own Company's affairs, I would like to enumerate the various changes. Approximately a third of the spinning department will have been completely replaced by the installation of approximately 12,500 new spindles by the end of this year. The rest of the spindles are being renovated and modernised. A new American blow room line will be shortly installed, and considerable short processing is being effected in the preparatory spinning department. The weaving preparatory department has been modernised by the installation of Barber Colman warp winding equipment and high speed weft winding machinery.

"Most of the existing plain looms are being thoroughly renovated and replaced, while 144 new American automatic looms are being installed as a replacement for the unserviceable or superfluous plain looms. The bulk of the imported machinery has now arrived in India, and will be taken delivery of next week when the N.I.D.C. loan documents will be executed and the loan availed of.

Dividend-paying Capacity

"You may be somewhat concerned about the debt-servicing and dividend-paying capacity of the Mills over the next few years as a result of this capital expenditure. I would like to allay your apprehensions by giving a few salient facts. We are spending little more on capital expenditure than would, say, a new mill installing only 12,000 spindles. As against this, on completion of our programme, your mills will be comparable in efficiency, size and pattern of production to some of the better mills in Ahmedabad. Fifty per cent of your spindles are working three shifts on superfine counts which are remunerative. In addition, your mills have the facility of using a first-class process house as well as a printing quota.

"In regard to finances, your Company is starting off with a clean slate. There are no arrears of depreciation or development rebate to be written off. On the other hand, there is the beenfit of past losses, according to income-tax rules, to your Company's credit. This, together with the development rebate and depreciation on the new machinery, will ensure a tax holiday for the next few years similar to that enjoyed by new companies.

Low Capital Base

"Above all, your Company has a low capital base of approximately Rs. 30 lakhs in equity capital which has only been increased to Rs. 40 lakhs by the issue of convertible preference shares to which I hope you will subscribe, now that a definite date for redemption has been stipulated and the fixed dividend rate increased to 9 per cent taxable which is in line with the prevailing rate structure on preference shares.

"A renovated and modernised mill like yours with approximately 40,000 spindles and 704 looms, of which 144 are of the latest automatic type, combines the best of the old and the new both in terms of capital and loan structure, as well as technology. Moreover, the long-term outlook for the textile industry appears reasonably bright.

"I would now like to say a special word of appreciation for the Company's staff and employees, but for whose loyal support and hard work the mills could not have been so early rescued from its difficulties. On behalf of the shareholders, I would like to add that the employees will, indeed, share in the future prosperity that, we hope, is around the corner, barring unforeseen circumstances.

Labour

"We have accepted the principle that bonus is to be related to profits and productivity and should not be a flat percentage on salaries and wage, irrespective of profits or losses, as was the case previously. In early 1960, when we were in financial difficulties, we took courage in both hands and signed an agreement in good faith with the labour union even before the Cotton Textile Wage Board recommendations were published, although both we and the labour union were aware that the Wage Board had already submitted its report to the Government.

"We did so at the urgent request of the union, although we could well have waited for the publication of the Wage Board recommendation. Moreover, this was done on the specific condition incorporated in the agreement itself that the increase given under the agreement would be set off against any increase as a result of the recommendation of the Wage Board. We even agreed that, if the Wage Board increase was lower, as, in fact, it turned out to be, then the increase given under the agreement would stand.

"Both the Government of India and the Government of Mysore, I believe, are satisfied that we were the first mill in India to have more than implemented the Wage Board recommendation in 1960. Since then, we have also given a flat increase of Rs. 2 per worker in January 1962, as per the further recommendation of the Wage Board. However, some outsiders, who are not workers of the mills, have been recently influencing the labour union, perhaps not being aware of the circumstances and spirit in which our agreement with the union was signed in 1960. It is being suggested that we have not implemented the Wage Board recommendations and the management is being asked to more than duplicate what, in fact, the Wage Board has recommended. With all the liberal-minded and just motivation which has characterised the management of the mills, we shall be compelled to contest this spurious claim, if persisted in, up to the highest tribunal in the land. Nevertheless, we are always ready to sit and discuss marginal adjustments with the union and redress any legitimate grievances.

"I shall close now, because I can see that I have almost exhausted your legendary patience."

Note: *The above statement does not purport to be a report of the proceedings of the general meeting.*

Notice

CALCUTTA STEEL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Third Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at 4, Old Court House Street, Calcutta, on Tuesday the 31st July, 1962 at 4 p.m., to transact the following business:

1. To receive, consider and adopt the Directors' Report and the Audited Balance Sheet as on 31st March, 1962 and Profit and Loss Account for the year ended 31st March, 1962.
2. To declare a Dividend.
3. To appoint a Director in place of Shri G. S. Nevatia who retires by rotation but being eligible offers himself for re-appointment.
4. To appoint a Director in place of Shri K. N Tapuriah who retires by rotation but being eligible offers himself for re-appointment.
5. To appoint Auditors and fix their remuneration.
6. To transact any other ordinary business of the Company.

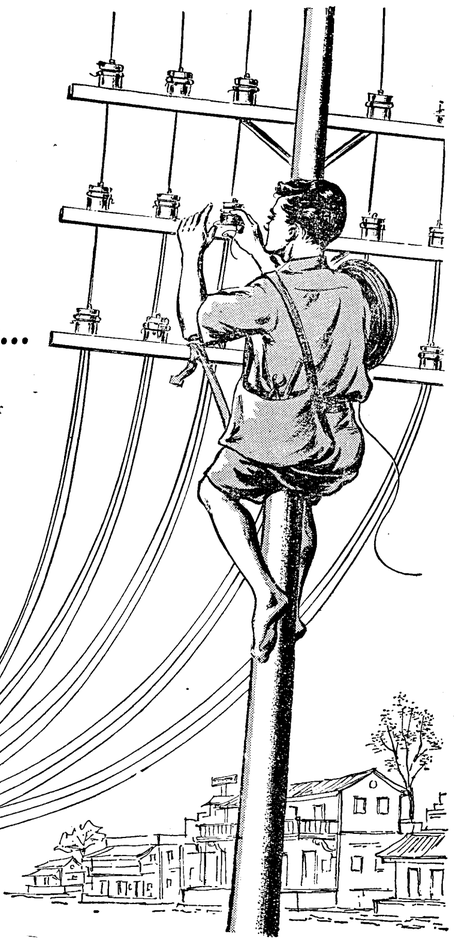
By Order of the Board,
R. N. BHOTIKA.
Secretary.

4, OLD COURT HOUSE STREET,
CALCUTTA, *the 9th day of June*, 1962.

Note: (1) The Register of Members and Share Transfer Books of the Company will remain closed from 23rd July 1962 to 31st July 1962, both days inclusive.

(2) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Right man on the Right lines...



That is the linesman in the public utility serving you. Be it a transient fault or a major line failure, the utility is always on the alert to restore service with least possible delay.

With the unfolding of the National Plans there will be more power but this to be of use must be delivered to Industries and homes. Towards this task, and in augmenting power resources, the Electric Supply Undertakings affiliated to the Federation of Electricity Undertakings in India are dedicated. The successful performance of this task calls for investor confidence which is best fostered by the return being made really reasonable.

With investor confidence comes more finance, which means enlarged power facilities for the Nation.

AIR ACCIDENTS AND COMPENSATION TO PASSENGERS

INTERNATIONAL CONVENTION EXPLAINED

By Our Aviation Correspondent

RECENTLY concluded in the Calcutta High Court, is a case of some interest not only to those concerned with the operation of air transport, but also, perhaps, to the travelling public. The case in question relates to a suit for damages arising from an accident to an aircraft of Indian Airlines. This crashed at Nagpur, when operating the night mail service, in 1953. His Lordship passed a decree in favour of the plaintiffs—relatives of a passenger killed in the crash—for Rs. 1½ lakh, with costs.

Ever a complex subject, the law relating to the liability of air carriers—and, more specifically, the assessment of damages—is certainly no exception. So far as a layman's understanding goes, in the courts of those nations which subscribe to it, such claims are usually subject to the provisions of the Warsaw Convention of 1929. This Convention, incidentally, is still the sole criterion in these matters. In spite of many attempts to draw up fresh conventions, more in keeping with modern conditions, none of these has received the minimum number of ratifications required for recognition. The latest attempt, the Guadaljara Convention of 1961—to which we shall refer presently—seems to hold more promise.

To return to the Warsaw Convention; this is recognised by more than sixty nations—amongst them, incidentally, those of such diverse social systems as the U.S.A. and the U.S.S.R. India, to the best of one's knowledge, is not a signatory. Nevertheless, it has always been understood by air carriers in this country that its provisions would find recognition in the courts. Very briefly, the Convention unifies certain rules relating to the legal liability of air carriers for death or injury to passengers, and for loss or damage to baggage and cargo. It simplifies the task of the plaintiff by deeming the carrier to be liable in all these cases, unless the carrier can use certain specified defences. In return for that concession, the carrier's liability, under any one claim, is limited to a certain specified sum. If memory serves, that sum is the equivalent of Rs. 20,000.

Loopholes

The law, of course, is full of loopholes, and there is one of considerable magnitude in the Convention. If the plaintiff can prove *wilful* negligence or misconduct on the part of the carrier, his servants, or his agents, then damages are not subject to the specified limit. In the particular case to which we earlier referred, the defendant, Indian Airlines, was judged to have been negligent. The pilot of the aircraft, it was held, did not have sufficient training in emergency procedures and, moreover, did not act in accordance with the rules of safety prescribed in the Corporation's Manual. Such failure, it was ruled, amounted to negligence.

If one's recollection is not at fault, the Court of Inquiry, which investigated the accident in question, came to the conclusion that, in the absence of any evidence of failure of the aircraft or its engines, the accident could only be attributed to human failure—or, as it is usually phrased, "an error of judgment on the part of the pilot." The question of negligence, then, seems to be a matter of interpretation of the law. The Warsaw Convention, however, provides for compensation beyond the prescribed limit only when *wilful* negligence is proved. The point at issue—if, indeed, the Convention was taken into consideration by the Calcutta High Court—seems to be not whether the pilot was negligent, but whether he was wilfully so. In this case, one would have thought not.

Fruitful Field for Lawyers

One does not, for a moment, imply that the damages awarded were excessive. Indeed, in the circumstances, they seem to be eminently reasonable. One is curious, however, to know whether the Convention was recognised, because, if pilot error can be construed as wilful negligence, the Warsaw proviso in that regard becomes not a mere loophole but a major breach in the wall itself! In the course of the past eighteen months, there have been in excess of fifty-four fatal accidents to aircraft engaged in public transport. These resulted in the deaths of more than 2,300 persons. Whilst investigation, in all cases, is not complete, it is established that thirty, or more, of these accidents can be attributed to errors of judgment. Here is a fruitful field for plaintiff's lawyers to explore!

But if the airlines have cause for anxiety, the travelling public, one suggests, have cause for perplexity. The Warsaw Convention is not, and was never intended to be, a "one-way street." Whilst, primarily, no doubt, its purpose is to protect the carrier against excessive or unreasonable claims, it does, at the same time, establish—in spite of the wordy and detailed disclaimer of responsibility printed on airline tickets—his legal liability. When the Warsaw Convention was ratified, however, the air transport industry was insignificant in size and scope. Since that time, not only has it grown enormously, but its methods of working have also become far more complex.

So much so, in fact, that, with the interchangeability of airline tickets, pooling agreements, and various chartering practices amongst the airlines themselves, a passenger, who books by airline X, may fly by a service operated by airline Y, in an aircraft chartered—complete with crew—from airline Z! In the event of an accident, to whom does he—or his heirs—look for compensation? Is it the "contracting carrier," the carrier from whom he bought his ticket? Or is it airline Y, which operated the flight? Or is it, perhaps, airline Z, whose aircraft and crew were involved? Which airline does he sue? Or must he, possibly, sue all three? And which carrier, incidentally, is covered by the Warsaw Convention? It is all very reminiscent of that diverting game known as "Spot the lady," or the "Three card trick"!

Hague Protocol

On this and many other aspects of modern airline practice, the Warsaw Convention is silent. Nor is The Hague Protocol of 1955—which was an attempt to bring the Warsaw Convention up to date—any more helpful. Recently, however, the *pundits*, after many years of labour at a place, with the rather difficult name of Guadaljara, have produced something more promising. The Guadaljara Convention certainly seals up many of the loopholes in the older Convention. It answers, for example, the conundrum of airlines X, Y and Z. The passenger may sue any one or, if he so wishes, all three carriers. He will receive, however, only one set of damages and these, too, will normally be subject to the Warsaw Convention limit.

The Guadaljara Convention, which appeared last September, has had a mixed reception. There are those who welcome it—Britain, for example. Indeed, the U.K.—in the interests, it is claimed, of the travelling public—has rushed through legislation to ratify it. The critics, on the other hand, complain that, whilst it does seal up, for the benefit of the airlines, most of the loopholes in the old convention, it does very little for the travelling public. Good, bad, or indifferent, however, it does seem that, this time, a convention is going to receive the required measure of recognition. From almost all points of view—save, perhaps, those of the very litigious—anything which tends to illuminate the dim, dark labyrinths of the law, ought to be welcome.

Pan American World Airways, which inaugurated commercial air service across the Atlantic in 1939, operated its 100,000th transatlantic flight on 2nd July when the Jet Clipper America took off from New York International Airport for London, Frankfurt and, then on, around the world to San Francisco. The departure of the 100,000th flight from Pan Am's glistening umbrella-shaped terminal at Idlewild was vastly different from the take-off of history's first flight of paying passengers across the Atlantic on 23rd June, 1939.

ELECTRONIC COMPUTER CENTRE

WEST BERLIN'S NEWEST ATTRACTION

By Paul Florian

THERE is one large window, a kind of shop window, where at any time during the day one can find many Berliners watching, although nothing can be bought there. During the day, many school children will press their noses flat against the thick glass to see the mysterious grey machines and equipment, to watch girls and operators in white coats walking up and down with long reels of paper tape. But even at night pedestrians will stop when behind the windows the many-coloured lights and dials light up, flash, flicker and go off again. These West Berlin citizens are admiring a new attraction of the city: the electronic computer centre in the ground floor of a tall office building on Ernst-Reuter Square, right in the middle of the city of Berlin.

The Berlin public was informed by the Press what marvellous work this computer robot can render for business and industry. In an inconceivably short time, it will complete the most complicated calculations. It took no more than five minutes, for example, to find out what the net amount is of the wages of the six hundred men employed by a West Berlin firm. As soon as the computer had swallowed the punched cards containing the most important data referring to the workers, it began to produce the finished wage strips to be given as vouchers to the workers. Moreover, for the employer it registered what he had paid in total by way of wages, and how much the Finanzamt, the office of inland revenue, the Krankenkasse, the health insurance, and the Sozialversicherung, the social insurance, had to be paid due to the total of the payroll sum. These are the more exact technical data: the electronic computer type I.B.M. 1401 receives its programmes through punched cards at a maximum speed of 64,000 digits per second, or by magnetic tape at a speed of one million digits per second. One digit is either one number or one letter. The output of the computer comes almost as fast. The cost *per working hour* of the computer is between 400 and 700 Deutsche Marks (or 100 to 175 dollars). The price of this data processing system is approximately DM 1.6 million (or 400,000 dollars). Operation of the computer system in Berlin is by a team of eleven mathematicians; the centre will, naturally, not be used only for the computation and accounting of wages. It is the function of the centre to undertake many different kinds of computing work, which Berlin's business and industry had in the past been able to do only with a great loss of time.

The very fact that, in the city of Berlin, so cruelly divided between East and West by the Wall of Shame, any such system should be installed, is not only a technical phenomenon, but also a political decision. The new electronic computer centre has been established in an administrative building which has just been opened by one of the largest U.S. companies. The American I.B.M. World Trade Corporation has invested more than 1.75 million dollars, and the President of this American corporation was assuring his audience on this occasion that "we have built in Berlin, not because of sentimentality, but for economic considerations—we require this building here, particularly due to the ever-increasing strength of Berlin economy." How genuine the confidence of Americans is in Berlin's bright future can be seen from this symbolic gesture: the construction work for this building to accommodate the Berlin subsidiary of that U.S. company was begun on the day of the first anniversary after the lapse of the first notorious ultimatum on Berlin.

An old, well-established trading Company with strategically situated Show Rooms, Service Stations, and Offices in New Delhi, Calcutta, Madras and Bombay and with Associates in the U.K. and Ceylon is looking for Representations, Sole Selling and Export Agencies from Indigenous Manufacturers of Engineering Products, Scientific and Industrial Instruments, and Consumer Products. Proposals for Sole Selling and Export Agencies and Representations in other lines will also be considered. Excellent Bank references. Write in confidence to Box No. 994, c/o "Commerce," Brady House, 12/14, Veer Nariman Road, Bombay-1.

THE SINGARENI COLLIERIES COMPANY LIMITED

MR. M. P. PAI, CHAIRMAN, URGES NEED FOR BETTER PROFIT-MARGIN

AMONG the several factors essential for attaining the third Plan production target for coal, Mr. M. P. Pai, Chairman of the Singareni Collieries Company Ltd., has mentioned a profit-margin attractive enough to support the development of a wasting asset like coal. Urging such a margin in his speech at the Forty-first Annual General Meeting of the Company held at Hyderabad on 28th June 1962, Mr. Pai observed that any rise in the wage structure of the workers in the industry should be followed by a corresponding increase in the selling price of coal.

The following is the full text of Mr. Pai's speech:

"It gives me great pleasure to extend a cordial welcome to you on the occasion of the forty-first annual general meeting of the Company. We are meeting this year somewhat earlier than in the past as, under the recent amendment to the Companies' Act, 1956, the annual accounts of a company are required to be placed before the shareholders within six months of the close of our financial year, which ended with 31st December 1961.

Results Satisfactory

"The Directors' report and the accounts for the year 1961 have been with you for some time and with your permission, I shall take them as read. The Directors' report on the working of the Company for the year 1961 has been made more exhaustive and explanatory, and, I have no doubt, you will agree with me that the results obtained during the year are satisfactory.

"For the first time, in the annual report that is before you, some charts, graphs and pictures have been included giving useful information about the working of the Company, and also a summarised profit and loss account and balance-sheet to exhibit the working results and the position of the Company at a glance. These are useful additions to the accounts which are required to be placed before you under the Company Law.

"The profit and loss account is made up in three parts, part I giving, as far as possible, the cost of production, part II the trading results and part III the profit for the year and its distribution.

Production and Expansion Schemes

"Production during the year was 27,95,402 tonnes as compared to 24,91,088 tonnes during the year 1960. I am sure, you will be happy to see that we have thereby kept up to our planned target.

"On an average 21,612 workers were totally employed against 20,917 during 1960.

"The most satisfying aspect of your Company's activities during 1961 was the progress made in respect of the development programme of new mines at Kothagudium, Belampalli, Mandamari and Ramagundam divisions. The work of the new railway siding and the screening plant at Ramagundam is in progress. The screening plant at Yellandu collieries has been completed.

Prospecting Department

"The prospecting department of your Company has been doing preparatory work for exploring new coalfields at Nuzvid in the Kistna district in addition to intensive prospecting and development of new areas in some of the districts of the State. Such work is essential even to maintain the existing production due to the peculiarities of coal-bearing strata in this area.

"The Company is committed to increase the production to 5.65 million tons by 1965-66 at an estimated cost of Rs. 20 crores. Recently the target has been raised by a further 0.5 million tons. Of this, a million tons at a capital cost of Rs. 8 crores covers deep shaft mining the economies of which are under study. The costs of production of this coal will be heavier than exploitation through inclines.

"During the latter part of 1961, production started from Ramagundam mines, and the raisings were 15,865 tonnes. The rate of production per month from these mines has been steadily increasing. As soon as these new mines are connected by rail, the raisings will be increased substantially.

"Gentlemen, we have had serious difficulties in securing essential plant and machinery from abroad on account of acute shortage of foreign exchange allotment to the Company. The foreign exchange required in 1961-62 was Rs. 115 lakhs for additions and Rs. 30 lakhs for maintenance and repairs. Sanctions have so far been received only for Rs. 6.13 lakhs and Rs. 8.13 lakhs, respectively. It is, therefore, necessary that foreign exchange should be expeditiously allotted to the Company. The Company has taken up the matter with the concerned Ministry of the Central Government.

Inadequate Power

"Another difficulty the Company has to face for increasing the production is inadequate supply of power at the new developing mines at Ramagundam and Belampalli. Some of the major scheme of the Government of Andhra Pradesh have been held up for unexpected reasons, and, for a couple of years, electricity is likely to be in shortage. At Ramagundam, against an estimated production of 1.21 lakh tons, the actual production was only 32,000 tons and at Belampalli the actual output was 12 lakh tons against 12.5 lakh tons. Thus the total shortfall in production on account of power shortage was 1,39,000 tons at Belampalli and Ramagundam. If the Plan targets of production are to be achieved, it is necessary that adequate power is made available. The Electricity Department of Andhra Pradesh is at present unable to meet the Company's requirements of power. We have, therefore, proposed to make our own arrangements for power through the purchase of package generator sets of a total capacity of 18,000/20,000 kw., since we expect to be short of power to the extent of 17,500 kw. by 1965-66.

"Despite our own difficulties in the matter of power we are making available some power to the two private sector factories being put up for the production of urea and barium chemicals, in the interest of industrial development of this area and the long-term interests of our collieries.

"The present transport position is more or less satisfactory and it is expected that the Central Railway will continue to give the Company the same facilities as hitherto.

Financial Results

"I am happy to report that 1961 was a good year for your Company. The results achieved had enabled the Directors to recommend a dividend of 7½ per cent as against the dividend of 7 per cent last year. The profits, before providing taxation and development rebate reserve, amounted to Rs. 73,90,649 as against Rs. 50,51,305 in the year 1960. You will find that the transfer to development rebate this year has been Rs. 26,25,902 as against Rs. 9,17,572 in 1960. This increase was due to the commissioning of the aerial ropeway for sand stowing and the installation of other plant and machinery in the Company's programme of expansion and mechanisation of the mines with a view to increase the rate of production and to reduce the working costs. Since our accounts were finalised, however, the Central Government has increased the rate of company taxation from 45 per cent to 50 per cent and this is bound to adversely affect distribution of profits next year.

"The raisings during the year under review showed an increase of nearly 12.22 per cent and sales of Rs. 1,03,59,953, i.e., nearly 16.19 per cent above the previous year's sales. The increased sales have resulted in higher profits.

Productivity

"Concerted efforts have been made to raise the productivity per worker through work-study and industrial engineering techniques. The productivity of the workers has progressively increased from 0.24 ton per manshift in 1951 to 0.41 ton per manshift in 1961. The Company continues to utilise the expert services of Messrs. Ibcon Ltd. to help the management in securing higher productivity. A regular division has been formed for this purpose where your engineers work side by side with the Ibcons.

"Your Company also takes pride that not a single worker rendered surplus through new techniques has been retrenched or discharged. As a practical means of finding surplus labour suitable employment, the Company has established a 'labour training pool.' Surplus labour from old mines and departments, when they cannot be transferred at once to where they were needed, were first sent to the training pool. After useful training in this pool, they are sent to the new mines which we are continuously opening.

"One of the ways of increasing efficiency is to educate the labour to give a day's fair work and not to underwork, and to appreciate that this is in their own long-term interests. Incentive schemes have also been introduced for increasing the productivity of the worker. This has yielded concrete results both in the improvement of the workers' earnings as also his performance. Publicity of specific cases is given in our fortnightly magazine *Singareni News*.

"The emoluments of workers, after showing a steep rise due to the implementation of Coal Awards, have continued to show an upward trend due to decrease in absenteeism and increased output per manshift.

Industrial Relations

"The success of enlightened personnel policy has been reflected in the good industrial relations between the management and the workers. There have been no stoppages except a few partial ones. The disputes raised by the unions have mostly been settled at shop level and only isolated cases have been referred to the Industrial Tribunals for adjudication.

General

"To achieve the targets fixed under the Five-year Plans for the Company, a planning and progress division has been created under an agent at Kothagudium. A third post of Deputy General Manager has also been created at Belampalli for effective co-ordination of the work of Belampalli, Mandamari and Ramagundam divisions. To enable the mining engineers to devote their full attention to planning and production and the technical problems arising during the course of implementation of the plans, a fourth post of Deputy General Manager (Administration) has been created at Kothagudium to look after all the administrative matters at the collieries.

"So far as the finances are concerned, the Central Government has agreed to provide funds to reach the target of production. During 1961, we were sanctioned a loan of Rs. 250 lakhs from the Government of India, and, during this year, we have been promised a contribution of Rs. 325 lakhs towards share capital and Rs. 25 lakhs as a loan. If adequate power and transport facilities are made available to the Company, we may confidently expect the Company to show good results in the current year also. We are doing everything possible to secure these.

"Another factor which will help to increase the production of coal to the level aimed at in the Plan is a profit-margin attractive enough to support the development of a wasting asset like coal. Any rise in the wage structure of the workers in the industry should be followed immediately by a corresponding increase in the selling price of coal.

"The success of any industrial undertaking depends upon the loyal and unstinted support of all its employees. I am happy to report that all officers, employees and workers of your Company have contributed towards the achievement of our targets. To them I give our thanks on your behalf and my own, and, I hope, they will continue to give such loyalty and even more effort in the years to come in this national undertaking."

Note.—*This does not purport to be a report of the proceedings at the meeting.*

FIRST FIVE YEARS OF COMPANIES ACT, 1956—IV

DEVELOPMENTS IN COMPANY MANAGEMENT

By A Special Correspondent

A LARGE number of the provisions of the Companies Act directly impinge upon the functioning of company managements. The broad purposes of the various regulatory provisions relating to managerial appointments and remuneration have been stressed at a number of places in the Statutory Reports prepared by the Department of Company Law Administration. These basic purposes are fourfold, namely, (*a*) to ensure the appointment of "fit and proper" persons to the positions of management, (*b*) to bring down the cost of management which would be justified by the resources and profit-making capacity of the company, (*c*) to rid company management, particularly the managing agency system, of many undesirable practices and to make them more efficient and responsible, and (*d*) to raise the standards of company management in the country. All these objectives are interconnected.

The various regulatory provisions of the Act in this regard confer very wide discretionary powers on the Government and to ensure that the exercise of these powers was not done in any brash and brazen manner and did not lead to the harassment of company managements, Parliament provided in the Act itself the creation of an independent body called the Company Law Advisory Commission whose duties it was, *inter alia*, to advise the Government on the following:

> Changes in the management of companies, the appointment and reappointment of directors, managing directors, managers, managing agents and secretaries and treasurers, the changes in the terms and conditions of their appointments, the variations in managing agency agreements, the changes in the constitution of managing agency firms or companies, the increase in the remuneration of directors, managing directors, managers, or managing agents, the appointment by Government of directors under Section 408, and the action which the Government are empowered to take under Section 409 when, in their opinion, it is necessary to prevent any change in the board of directors that is likely to affect the affairs of a company prejudicially.

Besides, the Government is also required to consult this high-powered Commission, under Section 324, before deciding to issue a notification regarding the abolition of managing agency system in any class of industry or business. Apart from these matters, the Government can refer to the Commission any matter they might like. The specific sections dealing with the matters in which Government ought to consult the Commission are enumerated in Section 411 of the Act. As it would appear from the Commission's reports appended to the main Statutory Reports, the Commission has played an important role during all these years and there has been a perfect accord between the Government and the Commission; in fact, there was no case of difference of opinion on any major issue of policy during the five years under review.

During the five-year period ended 1960-61, the Government received about 8,400 applications under various sections dealing with managerial matters which had to be referred to the Commission for advice. The largest number of applications was received for the increase in the remuneration of directors, particularly for the increase in fees for attending the board meetings under Section 310, followed by the applications for the appointment or reappointment of managing agents under Section 326, the number of applications in this case being 1,697. The third and fourth largest numbers of applications received were under Section 346, requiring Government's approval to the changes in the constitution of managing agency companies/firms caused by the transfer of shares, the retirement and appointment of directors, the death of existing partners, etc., and under Section 269 with regard to the appointment of managing or whole-time directors, the actual numbers of applications under the two sections being 1,492 and 1,253, respectively, during the five-year period ended 1960-61. It may be mentioned here that the number of applications under Section 269 must have gone up enormously during the 1961-62 year, as the amended provisions of that section now require that appointments of all managing or whole-time directors of public companies must compulsorily be got approved by Government after the expiry of tenures of all managing directors appointed before 1st April 1956 on the 31st March 1961. As it happened in the case of managing agents whose tenures expired on the 15th August 1960 under Section 330 of the Act unless the approval of the Government had been obtained after the 1st April 1956, the Government would be getting in the case of the managing directors also an "opportunity to assess the past performance of the managing/whole-time directors and to relax, where necessary, their remuneration in accordance with the renewal provisions of the Act, as now amended, and in accordance with the policy adopted by the Department in this regard."

Over the five-year period, of the 1,697 applications made for the appointment and reappointment of managing agents, 1,364 cases were approved and 163 applications were rejected. That is to say, the Advisory Commission and the Government applied the tests of fitness as mentioned in Section 326 of the Act to each and every case and approved of a case only when the prescribed 'norms' were met. Thus, there was no automatic appointment or reappointment of managing agents on the making of an application. Similarly, in the case of secretaries and treasurers, in 181 cases appointments and reappointments were approved and of these 137 cases the appointment of the erstwhile managing agents as secretaries and treasurers was approved. Corresponding figures for the managers appointed under Section 387 are not available, as, before the Amendment of the Act, their appointments were not to be approved of by the Government. However, it would be seen from the above statistical details that undesirable persons have been removed from the management scene as far as it could be possible and the financial burden on the companies resulting from costly management has also been reduced by lowering the limits of managerial remuneration.

Here, it would be useful to recapitulate, in summary form, the various principles and criteria evolved by the Company Law Advisory Commission and the policies followed by the Government for dealing with applications concerning the appointment and fixation of remuneration of the managerial personnel during the last five years. The details given below are scattered over a number of places in the Statutory Reports and on bringing them together at one place one gets a correct and complete picture of the rigours and the sieves of examination the managerial personnel have to pass through before getting the managerial control of a corporate enterprise. It is no wonder that even the best elements of the corporate world have in the past felt the administration of company law as irksome and irritating, but, in the opinion of the Advisory Commission, "there has been appreciable improvement in the standards of company management not only because the objects and purposes underlying the Act have been more fully appreciated by the enlightened company management but also because of the various checks and balances imposed by the Act itself." In the light of this opinion, one can take an optimistic view of the future for corporate enterprise in the country.

The various criteria and policies laid down by the Commission and the Government may be grouped under three main heads, namely, (*a*) general policies, (*b*) policies relating to appointment of managing agents, secretaries and treasurers and managers, and (*c*) policies relating to managerial remuneration.

General Criteria and Policies

1. The number of directors of a company should not be allowed to be out of proportion to the size of the unit and the nature of its business. Where a proposal for increase in the number of directors came up for consideration, it has to be judged in relation to the additional responsibilities and duties cast upon the board and not that it is needed to offer directorship to accommodate financial creditors.

2. Ordinarily, there should not be more than one managing director. Relaxation of this rule can be made where the size of the company or the nature of its activities justify it. To check the violation of the spirit of this policy, the appointment of technical directors has to be scrutinised.

3. A company having a managing agent or secretaries and treasurers should not be allowed to appoint manager, managing director or whole-time director, so long as managing agent or secretaries and treasurers continue in office.

4. Where a company appoints a "committee of directors" to carry on management and not managing director/s or director/s in charge of the management, every member of such committee is to be deemed to be managing director for purposes of appointment under Section 269 of the Act.

5. Director-in-charge should stand in the same position as managing director for purposes of Section 269 or 309. Technical directors, if clothed with powers of management in addition to technical duties, their appointment and remuneration should come within the purview of Sections 269, 309 and 310.

6. Any group of equity holders should not be given the right to nominate directors not liable to retire by rotation, as this has the effect of depriving the other members holding a majority of the shareholdings of their right to elect directors of their choice by exercising the voting rights fully and unreservedly.

7. Managing agents should not be given the right to nominate the chairman of the board of directors; he should be elected by the directors as this would be more conducive to the fairness of the proceedings as also to the objectivity of the person occupying the chair.

8. The practice of an officer of the Government being appointed as chairman and managing director of a company while carrying on at the same time his normal official duties is not a healthy trend and should be discouraged.

9. Sharing of managing agency remuneration with third parties in return for certain services such as the procuring of votes, etc., must be considered as a bad practice and should be discouraged.

10. Having regard to the fact that, in the great majority of cases, the guarantees had never to be invoked and the loans and advances granted by the lending institutions were usually fully secured by pledges or mortgages and since the guaranteeing of loans was generally regarded as part of the comprehensive services to be rendered by the managing agents, it would be desirable to impose restrictions on the payment of guarantee commission. The background to the evolution of this policy is given in the Fourth Statutory Report which at one place mentions that "whatever may have been the historical explanation for this practice in the comparatively undeveloped state of our capital market in an earlier generation, the guarantee commission which still continues to be charged by managing agents in such cases constitutes an additional item of the cost of obtaining loans and advances which managed companies have to bear. This extra burden is hardly commensurate with services rendered in lieu of it." The restrictions proposed by the Commission are:

> (*a*) Any payment made to a managing agent and/or his associates by way of commission or otherwise for guaranteeing or standing as surety for loans obtained by his managed company shall be deemed to be included in the maximum remuneration of 10 per cent of the net profits of the company specified in Section 348 of the Act. (This restriction would be applicable to electricity companies in accordance with the provisions of para XIII of the Sixth Scheduled to the Electricity (Supply) Act, 1948.)
>
> (*b*) The actual amount of guarantee commission payable to a managing agent and/or his associate in any year in relation to his managed company shall not ordinarily exceed one-tenth of the remuneration otherwise payable to him under the terms of the managing agency agreement, provided that the total remuneration payable to him inclusive of guarantee commission shall not in the aggregate exceed 10 per cent of the net profits of the managed company in that year. But where only minimum remuneration is payable in any year because of the absence or inadequacy of profits no payment should be made to them on account of guarantee commission.
>
> (*c*) The guarantee commission should not be allowed to exceed 1 per cent subject to the conditions that such commission shall not in any year exceed one-tenth of the normal remuneration payable to the managing agents by way of commission on net profits for that year and that the total amount of the remuneration of the managing agents, including the guarantee commission, shall not in aggregate exceed 10 per cent of the net profits of the company for that year.
>
> (*d*) The guarantee commission shall not be paid by a company without the previous approval of the Central Government.

11. In regard to principal to principal contracts as between the managing agents and/or their associates, on the one hand, and the managed companies, on the other, under Section 360 of the Act, the approval would be accorded by Government keeping in view that the terms of the contracts are fair and reasonable and that the prices are competitive.

JUDICIAL CONTROL OF LICENSING

By Tehmtan R. Andhyarujina

AN example of the fairly effective control over executive action which the Supreme Court and the High Courts have achieved is in the field of licensing. As a system of regulating businesses and professions, licensing is not peculiar to countries professing any particular brand of economic theory and licensing laws of various degrees of severity are found in most countries. In India, as in the U.S., the Courts have tacitly acknowledged that there are no forms of economic activities that are completely immune from governmental regulation and that some of them may even be prohibited. Barring a couple of early cases in the Supreme Court, in no case before the Supreme Court has it been seriously suggested that licensing as such is an unreasonable restriction on the citizen's fundamental right to carry on a trade or business. The necessity of licensing being conceded, in each case the issue before Courts has been whether a particular set of licensing provisions constitute a deprivation of a citizen's fundamental right to carry on his business or profession or his fundamental right to hold, acquire and dispose of his property.

No theory of social values can be spelt out in the licensing decisions of Courts in India and none has been attempted. Decisions of the Supreme Court on licensing have been devoid of any set formulæ such as that of the welfare State which has frequently been used to justify restrictions on fundamental rights in decisions on labour laws. A strictly pragmatic approach of treating each case of legislative and executive restrictions on its own circumstances and effect has been adopted. But the Supreme Court has not isolated itself in its ivory tower and in its pronouncements on the reasonableness of restrictions on the citizen's fundamental rights it has borne in mind the felt necessities of the times. It has conceded wide limits of discretionary power to the executive and the assumption of *bona fide* administration of those powers; in cases where there have been no materials to decide otherwise, it has assumed that the State in its wisdom must have had valid reasons for enacting those restrictions and has even permitted total prohibition of certain kinds of business and trading activities. Therefore, whilst there have been few successful challenges to licensing laws as such, the Courts have insisted that licensing operations should be scrupulously legal and licensing officials should execute these laws justly and fairly without violating the citizen's fundamental rights.

Fundamental Right

The first thing to be borne in mind in licensing is that a citizen has a fundamental right to carry on a trade, business or profession, subject, however, to reasonable restrictions imposed by the State in the public interest. Secondly, if a citizen fulfils all the requisites which make him eligible for a licence under the relevant law, *prima facie*, the State must grant him the licence.[1] The licensing official cannot claim that, despite the fact that a citizen is otherwise eligible for a licence, he has an absolute discretion to grant or refuse a licence. It is true that, in one of the early cases,[2] which came to our Supreme Court, the Court did state that no one is entitled to a licence as a matter of right, but that decision has been confined to the facts of its own case and has not been cited on this aspect subsequently by the Supreme Court and has been distinguished by some High Courts.[3] Nor can the licensing official claim that a licence is a grant of a special *privilege* to a citizen and, therefore, a citizen cannot complain of a refusal or a revocation as was the decision in a leading Privy Council verdict.[4] Our courts have not recognised the distinction between privileges and rights in licensing, as has been done in the U.S. and by a few decisions on licensing in the U.K. The Constitution now guarantees to every citizen the right to acquire, hold and dispose of property, the right to practise any profession, to carry on any occupation, trade or a business, subject, of course, to reasonable restrictions imposed in public interest. If licensing laws or operations infringe these rights, they can be legally sustained only by proving in each case that they constitute reasonable restrictions on these rights.

Now, the basic problem in licensing is how to ensure that the citizens' rights to hold and dispose of property or to carry on a trade, business or profession will not be violated by the conferment of wide discretionary powers in licensing. It is obvious that the legislature cannot so particularise its laws as to meet every situation which could arise in licensing. Consequently, the executive will have to be entrusted with widely defined powers to act in each situation according to its own lights, but, nevertheless, justly and fairly. Nor would it be proper for the judiciary to sit in judgment over the propriety of executive discretion in each case. Conferment of such wide discretionary powers is not necessarily destructive of a citizen's fundamental rights so long as those powers are not limitless and are exercised within those limits judiciously and not arbitrarily. But, though the courts have recognised the necessity of wide discretionary powers as inevitable in licensing, they have not tolerated naked, unbridled and arbitrary powers legislatively conferred on the executive. There is all the world of a difference between a discretionary power, however widely and largely defined, and an unfettered, undefined or vaguely defined power conferred on the executive. The former is controlled by the object for which it was granted and as such makes the official answerable for his exercise or non-exercise; the latter is untrammelled by any objectives and is, therefore, necessarily arbitrary and discriminatory and is incapable of being tested for its valid or invalid exercise by the subjects of its favour or disfavour.

A Prerequisite

In order to be valid, a licensing law, like any other law, conferring discretionary power on the executive, must, therefore, indicate a sufficiently defined 'policy' or a 'standard' as a guide for the exercise of such discretionary power. The degree of definiteness required depends, to a considerable extent, upon the degree to which a valid 'policy' lends itself to a precise definition and upon the necessity of efficient administration. In the absence of such guidance, discretionary power will be struck down by courts as naked and unfettered power, destructive of the citizen's fundamental rights. The high water mark of the insistence of a 'policy' or a 'standard' in licensing laws to sustain its validity in India is the decision in what is popularly known as the Coal Control Order case.[5] In that case, the Supreme Court invalidated the U.P. Coal Control Order, 1953, which by clause 4(3) provided:

"That a licensing authority may permit, refuse to grant, renew or refuse to renew a licence and may sustain, cancel, revoke or modify any licence or any terms thereof granted by him under the order for reasons to be recorded."

Commenting on this order, the Supreme Court stated:

"The licensing authority has been granted absolute power to grant or refuse to grant, renew or refuse to renew a licence and may sustain, cancel, revoke or modify any licence under this order and the only thing he has to do is to record the reasons for the action he takes. No rules have been framed and no directions given on these matters to regulate or guide the discretion of the licensing official. Practically, the order commits to the unrestrained will of a single individual the power to grant, withhold or cancel licences in any way he chooses and there is nothing in the Order which could ensure an appropriate execution of the power or operate as a check upon injustice that might result from improper execution of the same."

Generally speaking, however, courts have been extremely slow and halting in striking down legislation for lack of a 'policy' or executive guidance. Thus, the validity of the Cotton Textiles (Control of Movement) Order 1948 was upheld by the Supreme Court[6] on the ground that the "policy *underlying* the Order is to regulate the transport of cotton textiles in a manner that will ensure an even distribution of the commodity in the country and make it available at a fair price to all. The grant or refusal of a permit is thus to be governed by this policy and the discretion given to the Textile Commissioner is to be exercised in such a way as to effectuate this policy." Similarly, a policy or a standard has been often derived from such words in the Preamble of the Statute as "the purpose which is to be achieved by the Act" and even from rules made or principles specified under the statute. In a recent licensing case, the Supreme Court[1] found a 'policy' from the *conditions* which a licensing authority was empowered to impose on the grant of a licence which led the dissenting Judge to enter a strong caveat against the tendency of the Court to find a policy "in the crevices of the Statute." In many cases, the status of the repositary of the discretionary power, a high Government official or the State Government itself, has induced courts to lean in favour of the validity of the statute. This by itself is an irrelevant consideration, for, in the absence of any legislative guidance, the highest official is likely to be as much at large in the exercise of his discretion as the meanest of Government officials. The requirement of policy, therefore, has become more a matter of form than substance and, so long as a policy is discernible in the statute, it may be concluded that courts will not strike down the legislation for conferring the widest discretionary power.

Of course, every restriction which the licensing legislation imposes must not only be reasonable but also in the public interest. Further, every restriction must bear a reasonable and rational relation to the object sought to be achieved by the licensing law. These are the requirements for licensing of activities which may not be completely prohibited. But, where the business sought to be regulated by licensing is one which the State may completely prohibit like selling intoxicants or trade in noxious or dangerous goods, sanction or refusal or revocation of a licence may be made to depend solely on the discretion of officials to whom the legislature deems it fit to entrust those powers. Indeed, it has been held that there is no inherent right in the citizen to carry on such trade.[7]

Unreasonable Restriction

Courts have sometimes invalidated a law for procedural unreasonableness. Statutes which give finality to administrative decisions affecting the rights of citizens without provision for hearing the party affected or for the official to state the reasons for the action or for allowing decisions to be tested by another authority, either departmental or judicial, have been held violative of the citizen's fundamental rights. However, even here the Supreme Court[1] has now held that a provision for the grant or refusal to grant a licence for an entertainment house in the Calcutta Police Act 1866 without hearing the party affected by such refusal or stating the reasons for the refusal or allowing that decision to be tested by another authority is not an unreasonable restriction. The licensing authority in that case was not held to be acting in a quasi-judicial capacity in rejecting the application for a licence and was not obliged to afford an opportunity to the applicant to be heard before the licence was refused. Different considerations generally apply when licensing authorities seek to revoke or cancel or amend a licence. Such actions may have calamitous consequences for the licensee and most licensing laws do provide for an opportunity to the licensee to make representations against the action proposed, for example, Clause 10 of the Import Trade Control Order 1955. In other cases, the licensing authority may revoke a licence on stated reasons and provide an appeal against the order, for example, permit provisions in the Motor Vehicles Act, 1939. A licensing legislation which gives power to the licensing authority on his subjective satisfaction to revoke, cancel or amend a licence in normal trading or business activities without providing for the requirement of a reasonable opportunity to the licensee to deal with the contemplated action would certainly be struck down as an unreasonable restriction.

Apart from judicial control over licensing laws, courts have more often controlled the exercise of executive discretion itself, a control achieved not by sitting in judgment over the merits of the issue but by confining the exercise of executive discretion within the limits circumscribed to it by the law. The obvious case of this type of judicial correction is when the licensing official has overlooked some provision of the law or has misinterpreted the law. Again, to refer to another common case, the licensing official may have taken into consideration irrelevant or extraneous considerations. Licensing legislation generally confers on the authority concerned wide powers for imposing conditions in the licence but the licensing authority will not be permitted to impose such conditions in the licence as would be an unreasonable restriction on the business. Thus, a condition imposed on a licence to exhibit films, that the licensee shall exhibit at each performance one or more number of films of such length as the Provincial Government or the Central Government may, by general or special order, direct was struck down by the Supreme Court as neither the length of the film nor the period of time for which the film may be shown was specified in the condition and the Government was vested by the condition with an unregulated discretion to compel a licensee to exhibit a film of any length at its own discretion.[8]

Quasi-judicial Duty

In insisting on the requirements of "natural justice" to the citizen in certain kinds of licensing operations, Courts have ensured, to a limited extent, that the citizen will be associated with the licensing decision arrived at by the official. However adverse the decision of the licensing official may be, the citizen is less likely to smart from it if he has been heard before arriving at it than from a decision taken behind his back or *ex-parte*. Now, whether or not a citizen will be associated with executive decision making will depend on the nature of the duty imposed upon the official by law. In cases where he is imposed with a "quasi-judicial duty," the official must act in accordance with the principles of natural justice, a concept unfortunately most vague and nebulous. In a recent decision, the Supreme Court stated it broadly and without intending to be exhaustive. Thus, it observed that "rules of natural justice require that a party should have an opportunity of adducing all relevant evidence on which he relies, that the evidence of the opponent should be taken in his presence, that he should be given the opportunity of cross-examining the witness examined by that party and that no material should be relied on against him without his being given an opportunity of explaining them." Whether a quasi-judicial duty exists will in turn depend on the legislative provisions conferring powers on the executive. The statute will rarely, if ever, expressly state that the executive must act quasi-judicially and, in almost every case, a quasi-judicial duty will have to be inferred from indications in the statute. Generally speaking, there is no quasi-judicial duty on the official deciding an application for a licence. Consequently, the applicant is not entitled to be heard before the decision is arrived at, but a quasi-judicial duty is imposed in a licensing law when the official has to decide between rival claims for a licence or acts in pursuance of objections being invited and an 'adversary' type of case arises. On the other hand, as we have seen, many licensing laws impose at least a duty to give the citizen a reasonable opportunity before the official cancels, suspends or amends a licence: in any such action, a quasi-judicial duty will be generally inferred and, if the licensing official acts in violation of the principles of natural justice, the Courts will strike down the order. It is difficult to explain why consent or refusal is not a quasi-judicial act whilst revocation, suspension, etc. are quasi-judicial acts. In both types of actions, the citizens' rights are affected. Probably, the distinction lies in the fact that, in granting and refusing the citizen has not a present right to a licence, whilst in revocation, etc., he is actually being deprived of a present right to hold the licence.

Duty of Government

The effectiveness of judicial review of the discretion exercised in licensing, as in other forms of executive action, depends to a large extent on whether there is material on record before the Court to probe into the mind of the deciding official. In cases where reasons have been furnished in support of an order, the Court can scrutinise such reasons for their validity and relevance. Further, if any law is stated therein, the Court will test its correctness. In such cases, the order before the Court is, what has been called a "speaking order" and its advantages are that it enables the Court to review the correctness of the exercise of executive discretion, not in the sense of sitting in appeal over the order but in the sense of confining the exercise of discretion within the limits of the law. If the basis of administrative decision is not articulated, it is most difficult for the Court to test its correctness. It may, therefore, be thought that the administration could disarm the exercise of judicial review by making a "non-speaking order" or to state in celebrated language by making it present "the instructable face of a sphinx." In practice, for a number of reasons, the official will have to make a speaking order. The Supreme Court has held[9] that, when the Government acts as a tribunal, it must make reasoned orders, for only then can the Supreme Court exercise its constitutional powers of appeal from Court and Tribunals in India. Further where an appeal is provided against the decision of an official he must state his reasons in support of his order, for only then can the appellate authority examine the correctness of the order. At least one High Court[10] has ruled that, where a body is required to act judicially, it is its elementary duty to give reasons which would show that it has applied its mind. In England, a person aggrieved by the decision of certain tribunals or a minister making a statutory inquiry may apply for a statement of the reasons for the decision before the decision is arrived at under Section 12 of the Tribunals and Enquiries Act, 1958. In the U.S., the Administrative Procedure Act, 1946 makes it obligatory on every judicial body to include in its decisions a statement of findings and conclusions as well as the reasons or basis therefore, upon all the material issues of fact, law or discretion presented on record. There is no such law in India, but the same protection is available in India by the considerations stated above and by the well settled practice (confirmed by a recent Supreme Court ruling in a licensing case)[11] that the official must state his reasons for his decision before the Court, presumably on an affidavit when that decision is impugned. Thus, though the order may not 'speak' initially, its author is compelled to speak in its justification in a court of law.

Under our Constitution, the judiciary is in a more favourable and fortunate position to control the executive than in the U.K. For one thing, the theory of parliamentary supremacy does not prevail in India, and our Courts are competent to strike down unconstitutional legislation or legislation violative of fundamental right of the citizen. Nor are our Courts bound down by formal requirements and technical boundaries of remedies like *mandamus* and *certiorari* or even restricted to adopt these remedies alone. Yet judicial enterprise in the latter direction has been negligible and judicial control of the administration will achieve its full effectiveness only after the scope of these powers given to the Supreme Court and High Courts by the Constitution are fully and valorously explored.

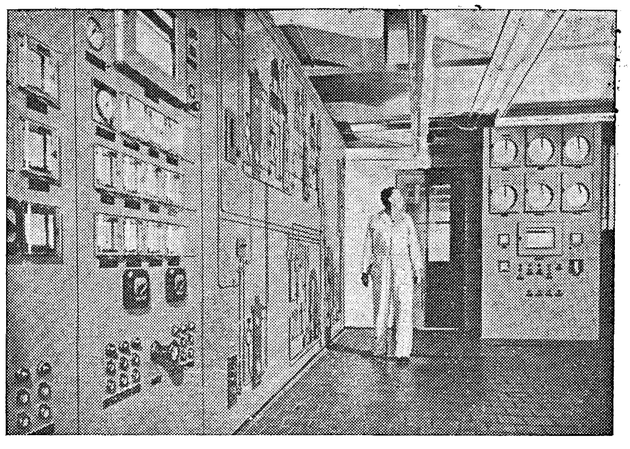
Notes

The U.S. Government has decided in consultation with the International Rubber Study Group, to increase the release of rubber stockpiles from an annual rate of 60,000 tons to 100,000 tons. It plans to offer stockpiled rubber, instead of money, to certain foreign aid recipients. Besides, the Defence Department, will pay in rubber, and not money, to suppliers of tyres and other rubber products. Out of the total of 1.09 million tons of rubber in stockpile, a quantity of 342,000 tons, worth $213.7 million, has been declared surplus.



Look what you get with
HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise Instrumentation by Honeywell... and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

PLAN FOR ROAD TRANSPORT

I.R.T.D.A.'S SUPPLEMENTARY MEMORANDUM

THE issues raised in the preliminary report of the Committee on Transport Policy and Co-ordination (otherwise known as the Neogy Committee), it may be recalled, were dealt with in some detail in a memorandum submitted by the Indian Roads and Transport Development Association in October last year (*vide* page 946 of *Commerce* of 18th November 1961). In the light of the discussions it has since had with Mr. Neogy and in response to his request for a supplementary memorandum, the Association has just forwarded its views on four important aspects of the transport question, namely, the estimated traffic demands of the future, the traffic which should be carried by the roads, the extent to which trailers should be developed, and the relative costs of developing road and rail transport. This supplementary memorandum provides a long-range perspective on transport problems and an estimate of goods traffic by road over the period 1965-66 to 1980-81.

The Association's projection of goods traffic by road upto 1980-81 is of basic importance. The Chief Engineer's Report on the Road Development Plan for India, 1961-81, has provided, it may be recalled here, an estimate of the total goods traffic likely to be generated in the country. According to their estimate, the originating traffic (that is, traffic from centres of production to destinations) that will require haulage over long distances, the feeder traffic operating over short distances to carry from and to terminals the originating traffic handled by the railways and shipping, and the local traffic will be as under:

TABLE 1
(In million tons)

Year	Originating traffic	Feeder traffic	Local traffic	Feeder and local traffic combined
1965-66 ..	300	188	71	259
1970-71 ..	440	240	109	355
1975-76 ..	610	320	148	468
1980-81 ..	800	400	196	596

The break-up of the above figures of originating traffic under the three heads, namely, railways, coastal shipping and road is as follows:

TABLE 2
(In million tons)

Year	Railways	Coastal shipping, etc.	Road	Total
1965-66 ..	228	12	60	300
1970-71 ..	305	17	118	440
1975-76 ..	403	23	184	610
1980-81 ..	523	31	246	800

The I.R.T.D.A. has revised upward the Chief Engineers' estimate pertaining to road transport for three major reasons. Firstly, the recent difficulties over the transportation of coal by the railways have underlined the need for transporting coal by road in the Bihar-Bengal area. The Association's estimates in this connection are:

TABLE 3

Year	Estimated coal production (Million tons)	Suggested percentage for road transport	Quantity of coal to be transported by road (Million tons)
1965-66	115	10.0	11.5
1970-71	200	12.5	25.0
1975-76	300	16.0	48.0
1980-81	400	20.0	80.0

Secondly, the possible development of trailers on a bigger scale than at present will add to the carrying capacities of our main roads without having to provide more funds for road construction, for the same road which carries trucks can carry truck-trailers. This development is considered feasible in the case of national highways having a carriageway of 24 feet which is sufficient to accommodate incoming and outgoing traffic by truck-trailers. The Association has assumed that the production of trailers suitable for goods traffic would be 15 per cent in 1965-66, 20 per cent in 1970-71, 25 per cent in 1975-76 and 30 per cent in 1980-81 of the trucks required to carry originating traffic. At an average carrying capacity per trailer of about 80 per cent of that of a truck, this will mean that the carrying capacity for originating traffic on main roads will be raised by 12 per cent in 1965-66, 16 per cent in 1970-71, 20 per cent in 1975-76 and 24 per cent in 1980-81. If larger capacity vehicles with trailers are produced within the country, the carrying capacity for originating traffic may go up by an additional 10 per cent from 1975-76 onwards.

Thirdly, additional provision would have to be made under local traffic for carrying materials for construction as well as for road work. The Association has made some suitable assumptions here. On the first two counts, the aggregate additional originating traffic estimated by the Association for road transport is 18 million tons in 1965-66, 44 million tons in 1970-71, 109 million tons in 1975-76 and 169 million tons in 1980-81. On the third count, namely, feeder and local traffic, the aggregate additional traffic estimated by the Association is 91 million tons in 1965-66, 160 million tons in 1970-71, 222 million tons in 1975-76 and 310 million tons in 1980-81. Thus, the aggregate road traffic, as now estimated by the Association, will work out as follows:

TABLE 4
(In million tons)

Year	Originating traffic	Feeder and local traffic
1965-66	78	345
1970-71	162	500
1975-76	293	643
1980-81	415	835

Figures of originating traffic by road in the above table may be compared with the corresponding Chief Engineers' estimates given in Table 2. And figures of feeder and local traffic in the above table (No. 4) may be compared with the corresponding Chief Engineers' estimates given in Table 1.

The Association's supplementary memorandum proceeds to point out that the 32,000 miles of national highways envisaged for 1980-81 in the Chief Engineers' Plan would suffice for an originating traffic of 415 million tons in that year. The aggregate cost on their account would be Rs. 1,000 crores (Rs. 980 crores estimated by the Chief Engineers *plus* Rs. 20 crores for roads in coal areas). This investment in roads over a period of 20 years will work out to Rs. 2.4 crores per million tons of goods traffic. This cost may be compared with the investment of Rs. 5 crores in railway tracks per million tons of goods traffic as worked out from the third Plan provision of Rs. 450 crores for new lines, electrification, signalling, line capacity works and bridges on the railways. Thus, the cost of developing national highways per million tons of originating traffic will be appreciably less than that of developing the railways.

There are also other considerations favouring greater investment in national highways. One of these is the revenue to the exchequer from road transport. In 1960-61, for instance, the contribution to the general revenues, after paying interest and other service charges, was Rs. 19 crores by personal and Rs. 42 crores by commercial motor transport, as compared with Rs. 10.5 crores by the railways (after paying dividend which represents the interest on capital-at-charge). Another consideration is that, when the national highway system is increased from the present 15,000 miles to 32,000 miles by 1980-81, nearly half (415 million tons) of the originating traffic of 800 million tons will be able to move about thrice as fast as on the railways, thereby saving to the country a large amount which would otherwise have to be spent in holding stocks and providing storage for them. A third consideration is that the use of truck-trailers, semi-trailers and heavy vehicles in due course will cheapen the cost of transportation. This progressive cheapening of cost, coupled with the speed of road transport, will attract to roads increasingly some of those commodities for which the railways have to offer at present concessional rates involving some financial sacrifice. Above all, with a reduction in the volume of the low-rated commodities handled by the railways, it may be possible for them to reduce the freight rates for their high-rated traffic.

These relevant considerations, according to the I.R.T.D.A., should dictate reorientation of policy in a manner calculated to treat the problem of originating traffic as one problem and get the traffic allocated between roads and railways. The Association has advanced some constructive suggestions for implementing such a policy. The first suggestion is that a Central Road Board should be constituted to take full charge of the national highways and the traffic operating on them on the same lines as the Railway Board. This Road Board and the Railway Board can refer any point of difference between them to a co-ordinating body, the decision of which would be final. The second suggestion is that the licensing of vehicles on the national highways should be entrusted to the Inter-State Transport Commission under the direction of the Road Board. There is no specific suggestion regarding feeder and local traffic, because there is no problem of co-ordination between railways and road transport in this respect. Such feeder and local traffic always goes by road, and the railways do not handle it at any stage. If at all there is a problem of co-ordination between railways and road transport, it is only in respect of originating traffic which has so far been going *practically* exclusively to the railways. In an expanding economy, where the originating traffic will reach the level of 800 million tons by 1980-81, as compared with 90 million tons—all handled by the railways—in 1950-51, road-rail co-ordination will have to take the form of allocation of such traffic between the railways and national highways. Once the allocation of traffic is made on the basis of (*a*) investment, (*b*) return to the State, (*c*) scope for employment, and (*d*) public preference, each service will provide rolling stock/vehicles required for the traffic allotted to it and no more. If cases requiring adjustments within the traffic allotted on particular sections of either the railways or the national highways arise, these can be settled mutually between the Railway Board and the Road Board.

TRANSPORT PLAN FOR ARGENTINA

Argentina in South America is a developing country. Its existing transportation system, however, is not subserving the needs of development. The railways, for instance, are in a state of deterioration and the highways stand in need of massive improvement. This situation can be remedied only by a plan of the kind just recommended by the Transportation Planning Group which was organised by the World Bank early last year on behalf of the U.N. Special Fund and the Argentine Government. It is a ten-year plan designed to achieve the integrated development of Argentina's railways, highways and waterways.

The Group, the report of which has just been published by the World Bank, has emphasised the need for restoring the railway system to efficient operation. As one important step toward rehabilitating the system and making it viable, the Group has proposed that at least 14,000 kilometres of railway line—almost a third of the present system—be abandoned. Freight and passenger schedules should be reorganised, and improvements made in roadways, yards, terminals and maintenance facilities. All existing steam locomotives should be replaced by diesels, and a drastic programme of modernisation is proposed for rolling stock; total purchases would include 831 diesel locomotives, 33,000 freight cars and about 2,500 passenger cars. The Group has also called for changes in the legal status and organisation of the Argentine railways, to permit them to be operated in a manner similar to a business enterprise and to keep them free of political interference. Even if these steps are carried out, the Group believes, viability can be achieved "only if this becomes a matter of national policy and only if certain difficult and unpopular policies are rigidly carried out." These policies, according to the Group, must include, besides the abandonment of uneconomic lines, increases in freight rates and passenger fares, and a variety of measures designed to achieve and maintain an efficient labour force. The total cost of the railway programme for the ten years 1962-71 is estimated, at 1961 values, at the equivalent of about U.S. $1,450 million. Of this amount, about two-thirds would be in foreign exchange, most of which would be needed for the purchase of rolling stock.

As for highways, the Group has estimated that, over the next ten years, passenger traffic on the roads will increase by about 115 per cent, and truck traffic by about 100 per cent. To meet this demand, the Group has called for a ten-year programme of construction, reconstruction and modernisation covering over 40,000 kilometres of highways. These proposals, which continue an already-existing programme, are estimated to cost, at 1961 values, the equivalent of about U.S. $793 million. In addition, the equivalent of U.S. $133 million would be spent on maintenance. If the recommendations of the Group concerning abandonment of uneconomic railway lines were adopted, a further 6,665 kilometres of new highways, estimated to cost the equivalent of U.S. $122 million, would be needed to replace these lines. Although not advocating restriction of motor carriers by any system of licensing, the Group has opined that for-hire carriers should be required to observe published rates.

The Group's report makes recommendations for hydraulic studies and dredging of the waterways system, which is based on the River Plate and its tributaries. It recommends replacement of much of the river fleet, which is largely "far beyond its economic life." Because the two State-owned shipping enterprises are "ill suited to a system which would permit the best adjustments of water transport to trade requirements," the Group has recommended that they should be transformed gradually into a small number of medium-sized private enterprises. The smaller private owners are advised to combine into co-operative groups. The total cost of the waterways programme is estimated, at 1961 values, at the equivalent of about U.S. $169 million.

The Group believes that a Transport Account should be established in the National Budget to provide a focal point for an annual review of financial needs and resources, and to produce greater fiscal co-ordination among the various modes of transport. The report also calls for establishment of a permanent planning group for transport.

NEW PRODUCTS AND PROCESSES

Novel Refuse Truck

A DUTCH firm has produced a new type of refuse truck with a built-in device for compressing domestic garbage and breaking and compressing heavy rubbish. The structure of the truck consists of a large refuse receptacle preceded by an after-loader containing the refuse conveyor and compression system. The refuse receptacle, which like the after-loader is of all-steel construction, has a useful capacity of 494 cu. ft. It is mounted on a structural steel frame secured to the chassis of the truck by tie straps. The after-loader, or loading space into which all the refuse is shot, is articulated at the top where it is joined to the refuse receptacle so that, when the latter is being tipped, the after-loader can be hinged back beyond it. An opening has been provided in the forward wall of the after-loader, through which the refuse is deposited in the receptacle. At the top of the back wall there is a flap hatch for heavy items of rubbish. Beneath it are three openings through which household refuse is emptied from dust-bins following a special system requiring the use of uniform dust-bins.

A refuse conveyor and compression system is installed over the entire width of the after-loader. The conveyor consists of two endless chains passing at the top over two wheels on a common through-axle. The chains are invariably equidistant. At certain intervals between the chains are long metal scoops made of high-grade, wear resistant steel. All the refuse, both heavy rubbish (tins, planks, boxes, etc.) and household garbage, that is shot into the after-loader is broken and crushed at the bottom, of it between a breaking plate and the scoops as they move downwards. As the scoops move upwards, they take with them the compact garbage and feed it to the compression device mounted at the top of the conveyor belt. There the refuse is further compressed by a slow-moving pressing blade and propelled into the receptacle. The degree of compression of the refuse in the receptacle can be checked through a hatch in the right-hand front side. Provision has also been made for a safety device to obviate the risk of the conveyor or compression system being overloaded.

High-speed Tin-lidding

High-speed can or tin lidding calls for accuracy of a high order if waste of time and materials is to be avoided. D.I.C.O. Ltd., of Guildford, is manufacturing a can lidding machine into which has been built an E.M.C. Proximitor for monitoring the operation. The D.I.C.O. Lidder itself consists of an input conveyor which takes the cans or tins to an indexed rotary turret at the lidding station, which, after the lidding operation, rotates to the next station, thus placing a new tin in position and allowing the now lidded tin to be taken by the output conveyor to the next operation. Lids are fed by hand to the vibratory bowl feeder from which they are automatically conveyed to the lidding station and it is not only to guard against the human element but also to ensure that a lid is always in position that this Proximitor method of sensing has been employed. To achieve this, a small platform is built in over the lidding position and carries a specially designed probe which is connected to the Proximitor, thus the Proximitor is able to sense whether a lid is in position or not. Should the lid be missing a relay is operated within the instrument which then stops the lidding machine. The Proximitor, although used in this instance for a lidding operation, is easily adaptable to a wide range of applications where stopping and starting contingent on the presence of an "object."

Metal Plastic Window System

For some time now the building industry has been seeking ways in which the weather-resistant properties of plastics can best be adapted to its particular needs. Plastic piping and guttering have already made their appearance, but lack of strength has limited plastics' wider application. Now a subsidiary of the Castrol Group Tensile Products, London, has introduced Metleplast, a metal/plastics window system, which, besides having an attractive appearance and no maintenance problems, compares favourably in cost with steel and aluminium structures. It has been designed primarily for larger structures where curtain walling is employed. The window frame and sash are constructured from galvanised steel cores to which are applied heavy gauge rigid p.v.c. extruded members incorporating weather seals which, as an assembly, present completely weatherproof units. The system is easy to install since, once the frame core is in position, the plastics components can be simply snapped on and need no other form of fixing device. The glazed window sashes, assembled on site, are then ready for quick installation. All fittings are made of nylon.

High-precision Lathe

A high-precision bench lathe for the precision and instrument industry has been produced by the Kobanya Machine Tool Factory, Budapest. It is claimed to be suitable for the precision turning of drilling of steel, cast steel, cast iron, non-ferrous heavy and light metals, hard-rubbers, and plastics, etc. The precision turning and drilling is carried out with the help of lapped hard-metal-tipped tools, polished diamond tools, or special-ground ceramic tips. Characteristic features of the high-precision lathe is its geometrical accuracy and the excellent surface finish it produces. When turning a proof-specimen according to the Hungarian Standard Specification where the diameter of the proof specimen is equal to one-eighth of the swing diameter, the total of cylindrical error, dimensions scatter and surface roughness cannot exceed 8 microns. Surface roughness must be R_a =1.6 to 0.4 microns or below. With a diamond tip it is possible to obtain—with certain materials—an even mirror surface or the R_a =0.2 to 0.5 roughness range. Quality control of the machine is ensured by the high standard specifications laid down by the Kobanya Machine Tool Factory. A particular advantage of the machine is said to be the fact that while the main carriage is operated in the quick run operation-mode, the feed is automatically switched off; at the end of the quick motion, it is automatically switched on again.

New Aid for Steel Making

Powdered coal will be blown into a blast furnace now under construction for an American steel company. Experience shows, says the company, that the system will result in cheaper iron and increased production. The coal replaces much of the metallurgical coke normally used thus saving money since coal is cheaper than coke. An additional benefit, according to the company, is that coal releases hydrogen in the furnace, giving a reducing atmosphere at no extra cost for the hydrogen. The powder is added to the hot blast on its way to the furnace and carried by the current of air into the furnace proper.

New Soviet Apparatus for X-raying Heart

Soviet doctors and engineers collaborated to design a new "FRK" apparatus for taking X-ray photos of the heart and vascular system at precisely selected moments of the cardiac cycle. "FRK" are the Russian initials for phase X-ray cardiograph. In outward appearance it resembles a television set. The apparatus consists of an amplifier which intensifies the heart's biocurrents 10,000 times, two special devices for precise timing and electronic ray tubes. By means of "FRK" a doctor automatically selects the moments of the heart's activity required for the photo. The new apparatus creates bigger possibilities for cardiological investigations. The "FRK" has been tested in clinical conditions. Two hundred "FRK" apparatuses will be manufactured in the near future.

Automated Coal Digger

A automated coal digger, described as the most revolutionary development in the coal mining field in late years, recently was unveiled at the annual American Mining Congress convention. Operated by five men, the machine can dig more than 1,000 tons of coal in eight hours, equalling the production of 40 men using earlier methods, according to Mr. W. V. Hartman of St. Louis, Vice-President of the Peabody Coal Co. An extremely long mechanical arm attached to a dial-studed control room digs as deep as 800 feet (240 metres) underground. The robot burrows out large chunks of coal and deposits them in conveyor cars. The boring arm is regulated by radar. When it shews into soft material the operator knows the arm has lost the coal vein. The digger was developed by the Union Carbide Company and made operational by the Joy Manufacturing Company.

Strong Carbon Paper

A new form of carbon "paper" is to be marketed by the Peerless Carbon and Ribbon Company, of 1, Dyers Buildings, Holborn, London E.C.1. It consists of a plastic sheet to which an ink has been fused and it is claimed that 200 copies can be obtained from a single sheet. Very strong and almost impossible to tear, the sheet is clean to handle and resistant to creasing.

Electric Car Polisher

An electric tool specially designed for polishing cars has been put on the market by a German firm. It weighs about 1¼ lbs. and polishes by means of a rotating felt disc. The polisher is available in two versions, one can be connected to the domestic power supply and the other to the car's battery.

AUTOMOBILE PRODUCTION

The output of automobiles of different kinds in India in 1961 was not significantly more than in 1960. At least in one important line, namely, commercial vehicles, performance in 1961 was positively disappointing, as there was actually a fall in output. The following figures of production may be found interesting:

Item	1961 (Nos.)	1960 (Nos.)
Cars and Jeeps:		
Cars	21,662	19,066
Jeeps and land rovers	6,051	5,501
Commercial Vehicles:		
Petrol trucks	3,557	3,864
Diesel trucks	15,960	17,097
Diesel buses	6,083	6,105
Miscellaneous:		
Motor cycles	4,682	3,998
Scooters	15,336	13,021
Three-wheelers	1,267	941
Trailers	3,008	2,070

It will be seen from the above figures that the aggregate output of commercial vehicles was only 25,602 in 1961, as compared with 27,066 in the previous year.

Mr. Al Foil wraps tobacco to perfection

Leading cigarette and tobacco manufacturers recognise aluminium foil as the best protective packaging for their products. Experience has proved that foil packaging retards the 'drying out' of tobacco, forms a hygienic wrapper and keeps cigarettes and tobacco fresh and flavourful for a longer time.

Foil in the package implies quality and adds prestige to the product.

BRITISH INSURANCE POISED TO MEET CHALLENGE OF COMMON MARKET

PREMIUM AND ASSETS AT RECORD LEVELS

BRITISH insurance is now better prepared than ever before to face the fresh challenge that is bound to be thrown by the U.K.'s entry into the European Common Market, if and when it materialises. Premium income and invested assets set new records in 1961. Last year, according to the statistics published by the British Insurance Association, premium income and invested assets of the 257 member-companies of the Association increased to £1,772 million and £7,315 million, respectively, as compared with £1,637 million and £6,610 million in the previous year, representing a rise of £135 million in premium and £705 million in invested assets. It is noteworthy that premium income has doubled in the past ten years. With invested assets exceeding £7,000 million, insurance companies constitute Britain's biggest institutional investor. The percentage rise in invested assets of British insurance companies last year, as compared with the previous year, was as much as 10.6. Of the total, investments in equities accounted for 22.2 per cent, which is more than twice the percentage of equity investment in 1947, indicating the popularity of equities as an outlet for insurance funds. The ratio of property investment has also been increasing and is now 10 per cent of the total. Last year, the Chancellor of the Exchequer had asked insurance companies to follow a restrictive policy in regard to property financing and, if the companies were to follow the Chancellor's advice, as they well may, there might be some significant changes investment portfolios in the current year.

Commenting on the underwriting experience of British insurers last year, Mr. R. L. Barnett, Chairman of the British Insurance Association, observed, at the annual meeting of the Association held recently at London, that, though the country's invisible earnings as a whole had declined during the past two years, this had not happened in the case of insurance earnings overseas which were still running at an annual rate of about £40 million a year. About 70 per cent of non-life premiums of British companies, according to Mr. Barnett, were earned abroad and large sums were invested by the companies in territories where the business originated.

Overseas Potential

British insurance thus continues to make substantial contribution to the country's invisible earnings. But will it be able to do so in future? Two developments have a direct bearing on this question; the current trend towards regional economic groupings, typified by the European Common Market, and the development of national insurance in the newly-independent countries. The remarks of Sir Brian Mountain, Chairman of Eagle Star Insurance Company, on this question are significant and of interest to non-British insurers also who have to compete with them in foreign markets:

"It is just as well to recognise that the main current of political and economic change in our time is unlikely to favour of the remarkable international network of service and protection which, for generations, has been provided by the British insurance companies. Insurance is a difficult commodity to sell, as there is nothing tangible to demonstrate what we have to offer and our customers naturally hope they do not have occasion to test the value of our promises. In such circumstances, we should not expect nationals of other countries, within or without the Commonwealth, to prefer us to competitors from their own or other lands simply because we are British. On the contrary, this may impede our business in certain countries, and some of our newly independent friends understandably tend to go elsewhere simply for a change, or to try their own hands at a game, which from the outside, seems easy enough to play.

"From our past record, we are tempted to reflect that there is nothing at all new about the situation and that, so far as we have coped well enough, but there is no worse mistake to make than to suppose that we have only to wait until our virtues gain their just reward for the situation to improve. This dream world has passed away, if it ever existed. But, if we show sympathy for local ideas, if we are on the spot, if we can match our natural aptitude for insurance work with a willingness to approach it from novel points of view, there is still plenty to be done. The upsurge of demand in this expanding world will more than take care of such attrition as political or other changes may bring about....

"These developments are entirely natural, and what we get out of them depends on what we put in by way of understanding and support as new markets find their feet, but the underlying character of our accounts is bound to change and become less predictable in the process. I said that insurance is a difficult commodity to sell. It is also difficult to price, and, for many of the large and unfamiliar risks with which we are confronted nowadays, we have to work without the benefit of past experience or statistics.

"For these reasons, the classical underwriting idea of a stable profit margin year in year out can no longer be pursued as an object of policy. It would, in fact, make more sense, if, as in the Life Department accounts, we could look upon our General Accounts over a three or even five-year cycle of experience. With the insurance outlook being one of a fluctuating nature, the wisdom of using underwriting surpluses to build up reserves rather than to pay dividends, was never more apparent. Indeed, I feel the time is coming when we should seek recognition of this need in the tax laws of this country."

U.S. Market

Although the overseas business on the whole showed favourable results last year, underwriting losses were incurred in the U.S., the largest overseas market for British insurance. Much of the trouble in the U.S. market was, in Mr. Barnett's opinion, due to the exceptional number of windstorms and the increase in fire damage. Nevertheless, investment income from the U.S. had more than out-weighed underwriting losses and earnings on the invested funds increased so as to yield a net surplus on the year's operations.

Motor insurance continues to be a difficult portfolio for British insurers, as it is for their confreres in other parts of the world. Last year, according to Mr. Barnett, world-wide motor premium of the member-companies of the Association increased from £299 million in 1960 to £323 million, but the loss experienced on this account rose from just under £4 million to nearly £5.5 million. Experience in the U.K., on the other hand, was favourable, by comparison, with a profit of under one per cent. While Mr. Barnett admitted that this was not adequate, he did not envisage an immediate increase in motor premium rates. The total number of motor claims in the U.K. last year aggregated as much as 1,558,000 which Mr. Barnett considered to be "a gigantic testimonial to human carelessness, misjudgment and, in many cases, just sheer bad luck."

Mr. Barnett referred to the growing size of both marine and aviation risk and added that, though there had been heavy claims, following accidents to jet airliners, it appeared that the aviation market had turned the corner and that the rates were now realistic.

Dealing with the impact of the Common Market on British insurance, Mr. Barnett said that, whether Britain joined the Common Market or not, the interests of British companies would be affected. If the country did enter, changes in insurance practice would, according to him, affect the business and there might be reshaping of policies to accord with changes in law. He thought, however, that, since insurance had always been primarily international, Britain's entry into the E.C.M. would affect the British insurance less than the other industries.

ADVANCE INSURANCE CO., LTD.

Despite a slight decline in the combined net premium and a sharp drop in the underwriting profit of the fire department, in contrast to the experience of almost all other insurance companies, the Advance Insurance Company Ltd. (Managing Director: Mr. Mangalchand Kedia, Bombay) has been able to report a higher net profit for the year ended 31st December 1961. This has been possible because of higher interest and dividend incomes and a substantial improvement in the working of the other departments, namely, marine, miscellaneous and workmen's compensation insurance all of which yielded profits during the year as against losses in the previous year. Thus the marine department showed an underwriting profit of Rs. 1.27 lakh, as against a loss of Rs. 93,234 in the previous year; similarly, the miscellaneous department wound up the year with a profit of Rs. 43,989, as against a loss of Rs. 17,762 in the previous year; and there was a small surplus of Rs. 5,843 in the workmen's compensation insurance which had suffered a loss of Rs. 9,076 in the previous year. The higher profit has enabled the Company to step up the dividend slightly from 10 per cent in 1960 to 11 per cent during the year under review, both subject to tax, and to treble the transfer to reserves from a mere Rs. 50,000 in the previous year to as much as Rs. 1,50,000.

It is noteworthy that, though the net premium in 1961 was slightly less than in the previous year, it showed an increase of almost 100 per cent over the 1958 figure, the net premium having doubled from Rs. 15.76 lakhs in 1958 to Rs. 30.59 lakhs in 1961.

The following comparative table contains a summary of the working results of the Company for the years 1960 and 1961:

(For the year ended 31st December)

(Rs. in lakhs)

	1961	1960
Fire:		
Net Premium	25.31	25.07
Claims paid and outstanding	15.10	13.31
Commission and expenses	9.85	8.64
Underwriting profit or loss (±)	± 1.33	± 4.13
Fire fund	12.65	12.54
Marine:		
Net Premium	1.77	2.83
Claims paid and outstanding	1.09	1.80
Commission and expenses	0.72	1.11
Underwriting profit or loss (±)	± 1.27	— 0.93
Marine fund	1.77	2.83
Miscellaneous:		
Net Premium	2.69	2.37
Claims paid and outstanding	0.99	1.04
Commission and expenses	1.19	0.95
Underwriting profit or loss (±)	± 0.44	— 0.17
Miscellaneous fund	1.35	1.18
Workmen's Compensation:		
Net Premium	0.82	0.62
Claims paid and outstanding	0.16	0.19
Commission and expenses	0.36	0.27
Underwriting profit or loss (±)	± 0.06	— 0.09
Reserve for unexpired risks	0.41	0.31
Net profit	2.75	1.86
Provision for taxation	1.28	1.05
Dividend	1.41 (11%)	1.28 (10%)
Carry forward	0.13	0.28

The departmental contribution to the profit and loss account amounted to Rs. 3,09,976. Net interest and dividends aggregated Rs. 1.20 lakh. After meeting, out of this, expenses not applicable to any particular fund and the provision for taxation, there remains a net profit of Rs. 2.75 lakhs to which has to be added Rs. 28,574 brought in from the previous year, giving a total of Rs. 3.04 lakhs. Nearly one half of this amount has been transferred to general reserve, as already mentioned. The fractionally enhanced dividend takes up Rs. 1.41 lakh, leaving a sum of Rs. 12,720 to be carried forward.

UNREASONABLE INSISTENCE

The representatives of the Indian Insurance Companies Association, Calcutta, discussed, at a special general meeting held on the 3rd July 1962, under the chairmanship of Mr. K. P. Modi, the circular letter issued to all general insurers by the Administrative Machinery, Insurance Association of India, calling for detailed particulars embracing all field workers irrespective of their remuneration and other employees drawing Rs. 5,000 and/or more annually in prescribed forms along with the photographs. Information is also called for in respect of the names of agents and the names and addresses of all clients who had given premium amounting to more than Rs. 5,000 in 1961.

The general reaction of the insurers in the region is that, while they would be prepared to submit any information that would really tone up the working of the general insurance industry, the information called for was onerous and redundant, particularly the provisions relating to the photographs and inclusion of staff other than the field workers. They are of the opinion that most of the information called for is already available with the Administrative Machinery and it would not be fair to disclose the clients' business which would be contrary to normal good business practice. In any case, submission of such information would require the prior consent of the clients. The members of the Association have, therefore, suggested to the Chairman of the Executive Committee that the circular letter may be reconsidered and, till such time the views of the general insurers' on the subject was heard, compliance with the provisions of the circular should not be insisted upon.

BOEING HULL INSURANCE

The London aviation insurance market is likely to be called upon to pay at least half of the insured value of $5½ million (£2 million) for the hull of the Boeing 707 which crashed at Guadeloupe killing the 111 people on board, according to the Insurance correspondent of the *Financial Times*, London. Coming so soon after the crash at Orley Airport of 3rd June this could appear to be a particularly harsh blow for the market. In fact, however, there are now about 700 jet airliners in commercial service throughout the world. There are, for instance, more than 250 Boeings in use and at any one time about 100 are airborne with passengers. Although this is the fourth Boeing 707 crash within a year, since first coming into service they have flown 613 million miles and carried more than 25½ million passengers.

Disturbing, therefore, as the heavy total loss such as this may appear to be, adds the correspondent, the stage is being reached when it will, almost inevitably, become something of a routine event—an average of a crash a month having been mentioned.

Insurers have prepared themselves for this, and they consider that rates of premium now being charged are on a realistic basis. Furthermore, the rate is not necessarily applied solely to the aircraft, but also very much taken into account is the management of the airline operating the aircraft. Since values of jet airliners are so high, it is considered unlikely that airlines will consider a policy of self-insurance, which means that all the jet airliners will be contributing premiums to the common pool. In spite of these mishaps, aviation insurance results are at present proving to be better than for some years past, and underwriters are quietly hopeful about future prospects.

THE APOLLO MILLS LIMITED

MORE CAPITAL FOR MODERNISATION

CHAIRMAN, MR. C. P. WADIA'S ANNUAL SPEECH

THE Apollo Mills Ltd. is to raise its authorised capital by Rs. 50 lakhs, subject to the consent of the Controller of Capital Issues, to finance its schemes of rehabilitation, modernisation and renovation. Disclosing this to the shareholders at the Forty-second Annual General Meeting of the Company, held at Bombay on 28th June 1962, the Chairman, Mr. C. P. Wadia, stated that the schemes, suggested and considered by the Directors, were to be implemented in planned stages in order to transform the mills into an up-to-date and first-rate unit of the industry.

The following is the full text of Mr. Wadia's speech:

"GENTLEMEN,

"As usual the Directors' report and the audited accounts of the Company for the year ended 31st December 1961 have been duly circulated and must have been perused by you. With your permission, I shall take them as read.

Favourable Results

"Before I go to the details of our working and our programme as to expansion and rehabilitation, I have great pleasure in mentioning to you that, as visualised in my speech last year, the working of the mills has shown favourable results largely due to buoyant trading conditions and prudent management that has enabled us to wipe off the carried forward losses of the preceding years. A small surplus, which has been proposed to be carried forward after, wiping off the past debit balance, has been shown at the close of the year under review.

"From the report you would have noticed that the working of the Company resulted in a satisfactory profit of Rs. 28,88,347 during the year under review. Viewed in the light of difficulties experienced by working old machinery and other incidental disadvantages arising thereof apart from lack of facilities of processing, this could be regarded as highly satisfactory.

Modernisation

"With a view to ensuring economic production and placing the Company on a sound footing from a long-term point of view, your Directors have been from time to time reviewing the state of machinery in the mills. Schemes of rehabilitation, modernisation and renovation have been suggested and considered. Your Directors feel that these steps should be taken in planned stages in order to transform your mills into an up-to-date and first-rate unit of the textile industry. While considering these schemes, the consumers' choice for fine and fancy fabrics has to be kept in view, together with achieving best possible results for the Company in future.

"As you may be aware, export prospects for textiles have been dimmed during the past year by various reasons which I need not enumerate here. Undoubtedly efforts are still being made to see that the products of your Company retain a foothold in the foreign markets which have been developed at great sacrifice. At the same time, taking a realistic view of things, the Company is concentrating on catering to local requirements and for meeting competition in this field with better products at fairer prices to the consumers.

Capital to be Raised

"In order to implement the various schemes for modernisation of the mills by stages, your Directors have been reviewing periodically the financial position of your Company. No doubt you will appreciate that through the successful working of the mills in the past year, a good deal of easing in the resources position of the Company is noticeable. However, for the long-term project of rehabilitation and replacement, it is desirable to strengthen the capital structure. Various methods of financing have been deliberated upon by your Directors and considering the balance of advantage, it has now been proposed to increase the authorised capital of the Company by Rs. 50 lakhs, subject to the consent of the Controller of Capital Issues and subject to your approval, for which an extraordinary general meeting has been convened soon after the termination of this meeting.

"In the report of the Directors, the main points pertaining to the working of the Company have been dealt with at some length. In addition, a matter of some significance about the depreciation provision has been brought to your notice in the report. However, there is one matter of some significance, to which I would like to make a reference here. I can well appreciate the disappointment of many of you at not being able to receive any dividend, despite the profits earned during the past year. While all of us were quite anxious to try and see if any distribution could be made to the shareholders, the necessity to conserve resources has compelled us from not declaring any dividend.

Future Prospects

"You will perhaps expect me to say a few words regarding the future prospects. So far as your Company is concerned, I feel that, without being highly optimistic, there are good prospects for the current year's working being satisfactory, despite recent slackness in the cloth market, high prices of cotton and stores and, last but not least, the additional impost of excise duty placed on this industry. No doubt, trading conditions have not been as favourable during the recent months as in the past. The impact of the excise duties has been felt by us to a pronounced extent. To add to all these adverse factors, wages of workers have been increased as from 1st January 1962 by Rs. 2 per head in terms of the award of the Central Wage Board. Despite all these increases affecting costs, we have had to keep the prices charged for our products on the same level as fixed by the Indian Cotton Mills' Federation on the basis of the prices obtaining in August 1959. Strenuous efforts are being made by the management to see that results for the current year's working do not tend to suffer very severely. In this, our plans and programmes of rehabilitation, modernisation and replacement will play a great part in reducing the cost structure and leaving some margin in our favour for showing satisfactory results.

More Machinery Purchased

"During the past year, we purchased 15 second-hand ring frames of 400 spindles each from Messrs. Madhav Mills Ltd. (in liquidation) to replace 16 ring frames which had become absolutely unworkable. Also two sizing machines have been purchased and put into commission in order to cope with the production of the above frames for turning out market yarn.

"The total number of spindles and looms worked during the year was 4,36,83,369 and 8,15,992, respectively, as against 4,08,20,805 and 8,14,300 worked in the preceding year.

"While concluding, I would like to express my thanks to the technical and administrative personnel as well as to the managing agents and all our workers, who have shown great zeal for ensuring successful results for the institution.

"I now move that the Directors' report and balance-sheet and profit and loss account for the year ended 31st December 1961 be and are hereby adopted. Before I put the resolution to vote, however, I shall be pleased to answer any questions that may be put to by you relating to the accounts under review."

N.B.—This does not purport to be a report of the proceeding of the meeting.

ADVANCE INSURANCE COMPANY LIMITED

CHAIRMAN, MR. BASUDEV SOMANI CALLS FOR HIGHER RESERVES

A SUGGESTION that it should be made compulsory for all insurers to increase the reserves for unexpired liabilities to 100 per cent of net premium income in the fire and miscellaneous departments and 200 per cent in the marine department was put forward by Mr. Basudev Somani, Chairman of the Advance Insurance Company Ltd., in his speech at the Nineteenth Annual Meeting held at Bombay on Thursday, 28th June 1962. Mr. Somani said that this would improve the stability and strength of the companies and put the industry on a sound financial footing.

The following are extracts from Mr. Somani's speech:

"The report of Directors and accounts for the year 1961 are in your hand and, with your permission, I take them as read.

"Before saying anything about the working of the Company during the year and progress made by it, I would like to mention a few things about the current insurance problems.

"We congratulate the Executive Committee of the General Insurance Council of the Insurance Association of India for the efforts they are making towards the progress of the insurance trade and putting the same on a sound basis.

Higher Reserves

"With regard to the Executive Committee's efforts in putting the insurance industry on a sound basis, I would like to suggest that it should be made compulsory for all insurers to increase the reserves for unexpired liabilities to 100 per cent of the net premium income in respect of fire and miscellaneous accident insurance business and to the extent of 200 per cent of the net premium income of the marine cargo and marine hull insurance business. If this percentage is maintained, it would further the stability and strength of the insurance companies. To achieve this end in view, there should be made some provisions preferably by framing rules or by an enactment. It may also be provided in respect of these insurers who have not been able to maintain their reserves for unexpired liabilities as mentioned above that they should not be allowed to declare dividend in excess of 6 per cent of the paid-up capital of the Company.

"I would also like to suggest that it should be provided that this reserve fund of unexpired liabilities be invested only in Government of India securities. If provisions are made to the above effect, the position of companies would become very stable and greater confidence would be created in the minds of the public for the insurance trade.

Expense Limit

"In furtherance of bringing the insurance trade on a healthy and sound footing I would suggest that the overall cost as allowed under Section 40-C, read with Rule 17-E of the Act, be reduced gradually every year for a few years.

"Now coming to the working of the Company during the year 1961, you would be pleased to observe that our Company has maintained encouraging growth and expansion.

"The investments and general reserves of the Company have increased substantially over the last year's. The profits of the Company has also increased during the year and the Company has been able to recommend higher rate of dividend for the year 1961."

FIRE LOSSES IN BRITAIN

An estimated £7,705,000-worth of damage was caused by fires in Britain during May 1962, the biggest peacetime monthly loss ever recorded, the British Insurance Association has announced. It was about £130,000 more than the previous highest monthly estimate in March 1960, which included the Glasgow whisky fire. May losses included eight fires each estimated to have cost £100,000 or more, one of which is likely to be well over £1 million. This would be the first £1 million fire since October 1960. For the first five months of this year losses are estimated at £24,057,000, about £7 million more than the reported figure of £16,957,000 for the same period of 1961. The main reason for the higher total is the larger number of serious industrial fires. The figures represent estimates for material damage only, they do not include the losses resulting from the disruption of business and other activities.

REGIONAL CO-OPERATION IN ASIA–I

AN ANALYSIS OF IMPLICATIONS

AN outstanding feature of the organisation of world trade at the present time is the emergence, and growing importance, of regional arrangements for economic co-operation. It is significant that, though the movement for regionalism was initiated by the industrially developed countries, the less-developed countries in other parts of the world have lost no time in following the trail blazed by the former countries. Some of the Latin American countries, for instance, have gone much ahead with plans for forming a regional market and payments system. The Casablanca group of African countries are also assessing the prospects for establishing a mutually beneficial common market. Nor should it be forgotten that the Eastern European countries, the Soviet Union and mainland China also form a very important regional trading bloc that is geographically contiguous. Can Asian countries alone, in this context, afford to remain silent spectators to the changing pattern of world trading systems? There are some who argue that even the mere existence of other regional trading arrangements constitutes a sufficient reason for closer co-operation in Asia and the Far East, considering the possibility of discrimination likely to be practised by other blocs against the rest of the world. Thus, purely as a measure of self-protection in case of undue discrimination, there is, it is said, an urgent need for joint deliberation and execution of trade policies *vis-a-vis* imports from these countries into the region, even if there is no immediate scope for any sizable degree of co-operation in intra-regional trade itself.

It is, however, superficial to argue that, simply because much of the rest of the world is organising itself into regional blocs, Asian countries must follow suit. Differences in economic structure and stage of development, as well as special historical and political circumstances, make it imperative that any attempt to forge schemes of regional co-operation in Asia be tested by the criterion of maximum advantage to the countries individually as well as collectively. It is, therefore, necessary to examine the economic rationale and need for regional co-operation in Asia against a broad historical and theoretical background. This is precisely what the E.C.A.F.E. Secretariat has done in a comprehensive study on this subject (*vide Economic Bulletin for Asia and the Far East*—Vol. XII, No. 3, December 1961, which has just been made available to us). The study seeks to emphasise that regional co-operation among the Asian and Far Eastern countries is not only necessary, but feasible. This conclusion has been arrived at from a detailed analysis of the regional trade patterns, of the possibilities of agricultural and industrial specialisation and, finally, of the financing of trade and development. Although the E.C.A.F.E. study appears to have minimised the difficulties of a political nature in forming a trade bloc in this region, it has nevertheless built up an excellent case based largely on economic considerations for such a move. In the course of two articles, we propose to bring out the main features of the E.C.A.F.E.'s interesting study.

Special Conditions

There is no gainsaying the fact that both the case for regional co-operation and the nature of the problems to be faced, if the E.C.A.F.E. countries choose to move in that direction, will be quite different from those of the European Common Market or the Free Trade Area. The E.C.A.F.E. Study naturally begins with this aspect. According to it, there are three basic differences between the two regions. These are: (1) the importance of agriculture to the economies of the E.C.A.F.E. countries is much greater, (2) the extent of direct State control over the allocation of resources is generally much wider than in the European countries, where the role of the State is largely limited to monetary and fiscal influence over aggregate demand and supply, and (3) the economies of the E.C.A.F.E. region are not in the stage of "self-sustained" growth, whereas all the European countries have attained this stage. Japan, however, is an exception to these three statements. The Study has accordingly excluded Japan from the rest of the argument.

The nature of problems to be faced by the Asian countries, in general, will be different from those experienced by even the Latin American countries, where "State control over resources allocation is much less, agriculture is usually a smaller proportion of economic activity, and industrialisation is already well on the way." The E.C.A.F.E. Study appears to be optimistic enough to make the point that the aforesaid differences in the nature of the economies do not rule out the possibility of regional co-operation; only, they will lead to important consequences in the formulation of a scheme for regional co-operation. To take the question of agriculture first. If, for example, agriculture were exempted (as in the case of the Rome Treaty) from a projected attempt for regional co-operation in Asia, the benefits to be achieved will be limited, though still not negligible. The prime importance in any scheme of co-operation in this region will, therefore, have to be given, according to the Study, to measures designed to raise agricultural productivity and to reorganise land use on a more efficient basis. Proceeding, the Study observes:

"The greater extent of direct State control over resources allocation in the E.C.A.F.E. countries also means that co-operation, confined to trade, will not have very far-reaching effects, unless backed up by co-ordination of national plans for the overall pattern of investment and resource allocation. In a free-market industrial economy, the relaxation of trade barriers influences the pattern of resource allocation through the price mechanism in the direction of greater international specialisation, and brings about the gains to be expected from this. In the less-developed economies of the E.C.A.F.E. region, however, the effectiveness of the price mechanism is severely limited. Where the allocation of resources is determined substantially by the State, trade liberalisation alone will not be capable of bringing about the desired pattern of international division of labour. To effect such changes as required, great conscious efforts on the part of governments to co-ordinate their national economic plans along lines of mutual advantage would be needed. Thus, a greater degree of co-operation between governments would be necessary than in the European case to achieve the same results, as far as international specialisation is concerned.

"The advantages of international specialisation and the more vigorous competition between entrepreneurs, promoted by widening the market, are the very *raison d'etre* of the European Common Market and Free Trade Area. In the countries forming these unions, economic growth is taken almost as a matter of course, and the function of the union is just to allocate the growing resources more economically over the region as a whole at each point of time. In the E.C.A.F.E. region, however, the achievement of a steadily rising level of *per capita* real income is a goal that the governments of the region are still striving towards, with varying degrees of vigour and success. As a result, any proposals for regional economic co-operation will be tested by these Governments by the extent to which they promote the rate of growth of the national economies. If, for example, they believe that self-sufficiency in foodgrains is a necessary condition for achieving a higher rate of growth, they will be indifferent if not even hostile, to any proposal for freer trade within the region in foodgrains based on the doctrine of comparative advantage. For any proposal for regional economic co-operation to be considered seriously, it will have to be framed with reference to dynamic considerations relevant to to each of the potential participating countries."

Besides, the objective of economic growth pursued by the Asian and Far Eastern countries tends to circumscribe the scope for such policy instruments adopted by Western European countries as the relaxation of quantitative restrictions and the lowering of tariffs on intra-regional trade. In the context of economic underdevelopment, "the liberalisation of trade along the established pattern" is not, says the Study, a likely prospect. For attempts at rapid development inevitably place so much pressure on the balance of payments as to make quantitative restrictions almost a permanently necessary ingredient of economic policy, instead of being an emergency measure as in Western Europe.

Tariff Protection

Another major problem relates to tariff protection. Among the countries of the region, there are, of course, differences in the extent to which such protection is required, according to the stage of development reached by individual countries. The E.C.A.F.E. Study points out that, however difficult it may be to apply this principle in practice, any rational programme of regional co-operation will have to give due attention to this circumstance, and make allowance for the desirable degree of trade liberalisation as among the countries which are at different stages of industrial maturity. It draws attention to the fact that this problem has been recognised even in Europe, where it is taken care of, as a special case, by providing for suitable assistance from the more advanced to the relatively less developed countries, and by granting concessions and privileges.

All these considerations are bound to make a possible Asian pattern of co-operation far different from that of others, but not impracticable, says the E.C.A.F.E. Study. Its arguments run as follows:

"The mere existence of government control does not preclude the possibility of expanding trade co-operation in the interest of accelerated economic growth. The newly intensified attempts of Eastern European countries towards raising the rate of economic growth through trade co-operation under the egis of the Council for Mutual Economic Assistance confirm this view. Applied to this region, the lesson is that a considerable degree of conscious negotiation and mutual consultation will be required to bring such a co-operative scheme to fruition. A mere liberalisation of trade is not enough. But since the scope of government control and planning is generally more extensive in Asia than in Eastern Europe, the possible scope for successful co-operation among the governments, either in designing a new pattern of intra-regional specialisation or in co-ordinating national economic plans through trade, must be also greater. Equally, the need for tariff protection of infant industries should not exclude the possibility of applying the principle of industrial protection on a more rational basis, taking advantage of a certain degree of intra-regional specialisation."

Lack of Complementarity

The lack of economic complementarity in the Asian countries is usually cited as an obstacle in the way of regional co-operation. The E.C.A.F.E. Study observes, in this connection, that what co-operation has to accomplish is to increase the flow of trade between some of the less, rather than the more, complementary economies of the region. For instance, it points out, India and Burma, "which are less complementary are more likely to reap mutual benefits through co-operation, since each one protects lines of production (rice and cotton textiles, for example) in which the other is the more efficient producer."

Emphasising that the lack of complementarity is an argument for regional co-operation, the Study observes as follows:

"The basic reason why the lack of complementarity should not be deterrent to fruitful economic co-operation in the E.C.A.F.E. region is, however, that the problem here is essentially one of co-operation among countries which are at more or less the same or comparable stage of economic development. The nineteenth century pattern of international division of labour, in which the main component was an exchange of manufactured consumer goods, on the one hand, and foodstuffs and raw materials, on the other, now belongs to the past. In contrast, world trade in the twentieth century has been evolving more and more into a new pattern in which emphasis is increasingly on interchange between advanced industrial economies at the expense of commodity flows between industrial and primary producing countries. ... this structural change in world trade provides the appropriate historical setting in which the question of economic co-operation among the less developed countries has to be discussed. It is not difficult to see that countries at similar stages of capital accumulation will not show much differences in cost ratios, so far as the latter depend on differences in factor endowments. How should we, then, explain the tendency for trade among the countries with homogeneous factor

LAKSHMI MILLS' PROFIT LOWER

COSTS GO UP, WHILE SELLING PRICES FALL

A FURTHER cut, since January 1961, in the selling prices for cotton yarn as part of the scheme of voluntary price-control adopted in September 1960 has meant a heavy sacrifice for the South's leading cotton (and now also staple fibre) yarn manufacturing unit, the Lakshmi Mills Company Ltd. (Managing Agents: Messrs. G. Kuppuswamy Naidu and Company, Coimbatore). This can be seen from the fact that the Company's gross profit for the year ended 31st March 1962 has suffered a setback from Rs. 94.12 lakhs to Rs. 83.86 lakhs, despite an improvement in sale proceeds from Rs. 440.03 lakhs to Rs. 469.11 lakhs. The effect of the yarn price cut has been felt seriously largely because of a steady rise in the price of cotton during the year, which has reflected itself in the increase in the cost of raw cotton consumed from Rs. 235.33 lakhs to Rs. 262.76 lakhs. The wage bill, too, has gone up further from Rs. 63.81 lakhs to Rs. 67.24 lakhs due to the increase in the basic wages of the operatives in line with the settlement made on the recommendations of the Wage Board. Besides, the higher cost of living index has meant more dearness allowance. Other expenses, too, were higher at Rs. 38.92 lakhs as compared with Rs. 32.82 lakhs a year before.

In view of commendable efforts at modernisation and development, the provision for depreciation has been raised from Rs. 18.18 lakhs to Rs. 22.52 lakhs. For the same reason the transfer to development rebate reserve has been more than doubled, from Rs. 2.09 lakhs to Rs. 5.18 lakhs. Due to the fall in profit, the provision for taxation has been brought down from Rs. 31 lakhs to Rs. 25 lakhs. In the result the net profit has fallen from Rs. 39.56 lakhs to Rs. 31.83 lakhs. After the transfer to development rebate reserve, the balance left is sufficient just to pay a dividend of 25 per cent per annum, as against 30 per cent for 1960-61. But the latter included a 10 per cent golden jubilee dividend. If this special gift is excluded, it is seen that the net dividend has been progressively on the increase from 12 per cent for 1958-59 to 14 per cent for the following two years and now 17.5 per cent for 1961-62.

In the table below are presented the salient features of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	469.11	440.03	392.13	329.87

Low	151.00	148.00	138.00	93.50

* Includes 10 per cent. golden jubilee dividend.
† Subject to deduction of tax.

It will be noted that the amount retained in business through specific reserves out of the net profit for 1961-62 has shrunk from Rs. 7.59 lakhs to Rs. 5.18 lakhs.

The Company has now a total installed capacity of 132,688 spindles in its three units at Coimbatore, Kovilpatti and Palladam and 300 looms at Coimbatore. The construction of the buildings of the staple fibre spinning unit is nearing completion. Meanwhile, the Company has been working at Palladam 4,928 spindles on staple fibre and making a good profit. Installation of the machinery for the unit is expected to be completed by about the middle of 1963. The import licence for the waste spinning unit is awaited. The installation of the 96 automatic looms is being delayed due to the delivery period being long. The modernisation schemes are making satisfactory progress. In the Coimbatore 'A' Mills, the conversion to GX-2 drafting system is proceeding apace. The preparatory machines, imported for this conversion from America, have been installed, commissioned and are running satisfactorily. The various changes in the cards in the Coimbatore unit, taken up in the previous year, are nearing completion. The humidification of the entire unit will be completed by September next. Modernisation of the Coimbatore 'B' Mills has commenced and supplies of machinery are being expedited.

The Company proposes to take up 15,000 equity shares of Rs. 100 each in the Lakshmi Machine Works Ltd., promoted by the partners of the Company's Managing Agency firm and some prominent industrialists of the South, with an authorised capital of Rs. 5 crores, for the manufacture of textile machinery in collaboration with Rieter Machine Works Ltd., Switzerland. The Company also proposes to invest to the extent of 1,327 shares of Rs. 100 each in the Associated Cotton Traders (Private) Ltd., formed by a few cotton mills in Coimbatore to purchase at competitive rates Indian and foreign cotton from upcountry areas and foreign markets for the benefit of the member-mills. The Company holds 49,000 equity shares of Rs. 100 each, of which 14,000 were new shares taken up at a premium of Rs. 5, in the South India Viscose Ltd. The total cost of the shares is Rs. 49.70 lakhs, as against which the market price is shown at Rs. 88.69 lakhs (as of 31st March 1962).

The financial position of the Company is quite sound. Its paid-up capital is Rs. 106.50 lakhs, all in equity shares of two classes in equal number, that is, 142,000 shares of Rs. 50 each fully paid and 142,000 'A' class equity shares of Rs. 25 each, fully paid. Of this capital, Rs. 41.64 lakhs represent bonus shares. Even after this transfer to capital account, the reserves and surplus are as much as Rs. 90.22 lakhs. Total borrowings by the Company increased during the year from Rs. 72.59 lakhs to Rs. 134.30 lakhs due apparently to the heavy capital expenditure. Current liabilities and provisions amount to Rs. 156.47 lakhs, giving a total indebtedness to outsiders of Rs. 290.77 lakhs as against Rs. 210.80 lakhs a year before. But it is well covered by current assets, loans and advances aggregating Rs. 248.61 lakhs, besides investments shown at Rs. 57.89 lakhs. With a net addition of Rs. 56.22 lakhs, during the year, the gross block stands, as at the year-end, at Rs. 379.25 lakhs. It has been well written down to Rs. 180.99 lakhs.

The Rs. 50 fully paid equity shares of the Company are currently quoted at Rs. 151.50 *cum-div.* On the *ex-div.* basis, the net yield on them works out to 6.1 per cent per annum.

SELECTED SATGRAM COLLIERIES LTD.

In the review of last year's working results of the Selected Satgram Collieries Ltd., published in our issue of 30th June last, it was mentioned that there were still arrears of depreciation to the tune of Rs. 12.69 lakhs. This is not correct. The amount of Rs. 12.69 lakhs represents the accumulated depreciation provided by the Company so far.

(*Concluded from next column*)

indigenous manufacturers, which is not easy. To get over this drawback, the Company proposes to manufacture itself such billets, possibly in collaboration with foreign interests. It is exploring the possibilities in this direction and might submit a scheme to the Government for its approval.

A glance at the Company's balance-sheet reveals that more than half (Rs. 65.45 lakhs) of its paid-up capital of Rs. 100 lakhs is invested in fixed assets. During the year itself, there was an addition of Rs. 15.15 lakhs to the gross block (raising the total to Rs. 70.88 lakhs) which has been written down to Rs. 53.65 lakhs and, inclusive of the plant and machinery under installation, is shown in the balance-sheet at Rs. 59.09 lakhs. The other "own" funds of the Company, namely, reserves and surplus, amount to Rs. 15.98 lakhs as against Rs. 12.99 lakhs a year before. Clearly, the Company's finances are on sound lines, further proof of which is provided in the fact that its total indebtedness to outsiders of Rs. 61.12 lakhs, comprising secured bank borrowings of Rs. 22.61 lakhs and other liabilities of Rs. 38.51 lakhs, is comfortably covered by current assets and book debts aggregating Rs. 117.90 lakhs. Investments of Rs. 11,175, commanding a market value of Rs. 10,650, are deposited with the railways.

The Rs. 10 fully paid equity shares are currently quoted at Rs. 16.44 *cum-div.* On the *ex-div.* basis, they offer a net yield of nearly 7 per cent per annum.

BILLET SHORTAGE AFFECTS CALCUTTA STEEL

DIVIDEND MAINTAINED

THE Calcutta Steel Company Ltd. (Director: Mr. G. S. Nevatia, Calcutta) has suffered in its third year of working, namely, the year ended 31st March 1962, a setback in both sales and gross profit, from Rs. 419.19 lakhs to Rs. 334.90 lakhs in the former and from Rs. 53.43 lakhs to Rs. 40.07 lakhs in the latter. But the Directors have maintained the dividend on the Rs. 10 fully paid equity shares at 15 per cent per annum, subject to tax. Lower sales reflect a decline in the production of bars and rods from 64,738 tonnes to 52,479 tonnes during the year due to shortage of billet, particularly in the early part of the year and insufficient power. Besides, one of the mills of the Company had to be closed down twice; first for the change-over of the reheating furnace from coal to oil firing owing to deterioration in both quality and quantity of coal supplies, and later for replacement of an electric motor in the intermediate mill for the wire rod mill.

As production suffered, the cost of raw materials and stores consumed has come down from Rs. 338.01 lakhs to Rs. 274.12 lakhs and so have other expenses, excluding staff expenses which remained nearly the same, from Rs. 14.31 lakhs to Rs. 9.39 lakhs. The provision for depreciation at Rs. 5.27 lakhs has been well maintained. In view of the lower profit, the tax liability has been estimated and provided for at Rs. 17 lakhs as against Rs. 20.80 lakhs in the previous year. With the net profit at Rs. 17.80 lakhs showing a setback of nearly Rs. 9 lakhs and the dividend absorbing Rs. 15 lakhs, the Directors have not been able to set apart anything for reserves, except Rs. 0.93 lakh for development rebate reserve which had received Rs. 1.35 lakh a year before. In 1960-61, it may be noted, the Company had retained as much as Rs. 11.35 lakhs in business. After making the allocations, the surplus is Rs. 3.68 lakhs which has been carried forward as against Rs. 1.63 lakh brought in.

The table below gives an idea of the working of the Company since its inception:

(In lakhs of rupees)

	For the year ended 31st March		6th August 1959 to 31st March 1960
	1962	1961	
Sale proceeds	334.90	419.19	68.26
Closing stock of finished product..	12.31	10.49	11.47
Other income	0.58	0.20	0.19
Raw materials and stores consumed	274.12	338.01	66.83
Staff expenses	12.54	12.66	2.60
Other expenses	9.39	14.31	2.78
Gross profit	40.07	53.43	7.56
Provision for—			
Depreciation	5.27	5.68	0.96

To development rebate reserve ..	0.93	1.35	..
To reserves	..	10.00	..
Dividend	15.00 (15%)*	15.00 (15%)*	2.50 (5%)*
Carry forward	3.68	1.63	1.03
Market value of equity shares (In rupees) :	1962	1961	1960
High	18.06	26.12	15.75
Low	15.54	14.94	13.00

* Subject to deduction of tax.

The outlook for the current year should be better, considering that billet supplies have improved considerably. But the shortage of power, fuel, transport and imported stores (the last mentioned due to foreign exchange scarcity) is causing some concern. The Directors have candidly said, in their report to the shareholders, that these factors are common to almost all industries in the country at present and that they do not foresee any early solution to these shortcomings.

After some initial difficulties, the production of wire rods was satisfactorily established in the latter part of the year. The quality of the rods, we are told, is up to the mark and so also production, having regard for the type of mill employed. But here, too, shortage of trained staff and operatives has made it obligatory for the Company to work the mill only on one shift. Perhaps, the current year might see a double-shift working, as more men would be trained. It is proposed to engage two foreign technicians to assist the works manager. In future, the Company would concentrate, as far as possible, on the production of wire rods, particularly of the special qualities which are unlikely to be produced by the integrated steel works and as such would be non-competitive in the field. There is, however, a snag here—the availability of special quality billets from the

(*Continued in previous column*)

TATA HYDEL COMPANIES' NET PROFITS LOWER

DEVELOPMENT BASED ON BORROWED CAPITAL

THE results of the Tata group of hydel companies for the year ended 31st March 1962 are encouraging only in part. All the three Companies—Tata Power, Tata Hydro-Electric and Andhra Valley—have earned higher revenues from power supply and better gross profits as compared with the previous year. But their net profits are lower than those for 1960-61. Therefore, their dividends have been kept unchanged and the transfers to reserves reduced sharply.

The revenue realised by the Tata Power Company Ltd. has increased from Rs. 420.12 lakhs to Rs. 477.32 lakhs and the gross profit has gone up from Rs. 153.31 lakhs to Rs. 174.13 lakhs. But the net profit, after providing Rs. 51.23 lakhs for depreciation (Rs. 40.20 lakhs a year before) and Rs. 27.05 lakhs (*nil*) for taxation, has declined from Rs. 113.10 lakhs to Rs. 95.85 lakhs. Inclusive of Rs. 32,801 brought in, the total surplus is Rs. 96.17 lakhs. With the interim dividend of Rs. 30 and bonus of Rs. 5, together with the proposed final dividend of Rs. 45, the taxable dividend on the Rs. 1,000 fully paid equity shares works out to 8 per cent per annum, and absorbs Rs. 41.23 lakhs. The preference dividend has taken away Rs. 6.52 lakhs. The profit retained in business by transfer to the various reserves is less at Rs. 44.38 lakhs as compared with Rs. 61.95 lakhs in the previous year. A significant change in the pattern of appropriations is that, as against Rs. 12 lakhs in the previous year, nothing has been set apart for the reserve for special repairs, whereas, as against *nil* in the previous year, Rs. 9 lakhs have been taken to the debt redemption reserve. The carry forward is Rs. 29,988.

The Tata Hydro-Electric Power Supply Company Ltd. realised Rs. 204.63 lakhs, as against Rs. 176.22 lakhs a year before from sale of power. Its gross profit has improved from Rs. 66.53 lakhs to Rs. 81.18 lakhs. But the net profit, after providing Rs. 20.12 lakhs (Rs. 15.39 lakhs a year before) and Rs. 20.95 lakhs (*nil*) for taxation, has dropped from Rs. 51.14 lakhs to Rs. 40.11 lakhs. The surplus is Rs. 41.68 lakhs, after taking into account Rs. 1.57 lakh brought in. The taxable dividend is Rs. 8 per equity share of Rs. 100, comprising an interim of Rs. 3, a final of Rs. 4.50 and a bonus of 50 nP. It takes up Rs. 19.20 lakhs and the preference dividend Rs. 6.25 lakhs. Transfers to the different reserves aggregate only Rs. 13.79 lakhs, as against Rs. 25.90 lakhs in the previous year. After making other provisions and adjustments, the surplus to be carried forward is Rs. 27,536.

The total revenue of the Andhra Valley Power Supply Company Ltd. from power supply during the year under review amounted to Rs. 268.24 lakhs, as against Rs. 232.51 lakhs in the preceding year. The gross profit has improved from Rs. 70.10 lakhs to Rs. 83.49 lakhs. Depreciation has absorbed Rs. 30.02 lakhs, as against Rs. 22.82 lakhs a year before, and the tax liability has been ignored again. The net profit, therefore, has shown a small improvement from Rs. 47.28 lakhs to Rs. 53.47 lakhs. Inclusive of Rs. 30,342 brought in, the surplus works out to Rs. 53.77 lakhs. A sum of Rs. 2 lakhs, as against nothing in the previous year, has been withdrawn from the general reserve towards payment of the proposed ordinary dividend. The dividend on the Rs. 1,000 fully paid shares amounts to Rs. 80 per share, subject to tax, and comprises interim of Rs. 30, final of Rs. 45 and bonus of Rs. 5. It has absorbed Rs. 24.21 lakhs. The preference dividend requires Rs. 3.45 lakhs. The profit retained in business by transfers to the various reserves is slightly more at Rs. 19.75 lakhs, as compared with Rs. 15.52 lakhs in the previous year. Development rebate reserve alone has got Rs. 12.48 lakhs as against Rs. 4.97 lakhs a year before. After making other adjustments and provisions, there is left a surplus of Rs. 0.36 lakh to be carried forward.

As compared with the previous year, both revenues and expenses of the entire group have been higher during the year, but while the former has increased by Rs. 123 lakhs, the latter, including depreciation and taxes, have increased by Rs. 145 lakhs. The increase in the net profit of Andhra Valley is because of the absence of tax liability, as some of the past depreciation and development rebate allowances due to the Company are yet unabsorbed.

The "clear profit" of the group, though about Rs. 7 lakhs less than in the previous year, has been higher than the reasonable return calculated on the capital base. But, according to Mr. N. H. Tata, Chairman of the Group, the "clear profit" it would earn during 1962-63 at its present tariffs would fall short of the reasonable return to which it is entitled. The Group has, therefore, been obliged to impose a uniform surcharge of 10.5 per cent on its present tariffs with effect from 1st July 1962. The surcharge is not applicable to fuel adjustment rates. This has been due to higher estimates of the costs of producing and purchasing the group's total energy requirements. It has been estimated that the total system's sales during the current year would be 2,700 million units.

The decline in net profits for 1961-62 and the decision of the Group to raise the selling rates from the current month follow from the fact, as pointed out by Mr. Tata in his statement, that the financial return available to electricity undertakings, based on the existing tariff formula, is inadequate. The return needs to be improved by suitable alterations in the Sixth Schedule of the Electricity (Supply) Act. According to Mr. Tata, the Group has continued to exert pressure both directly and through the Federation of Electricity Undertakings on the Central Government to amend the Act. General elections and certain ministerial changes came in the way of any progress in this matter last year. Insufficient profits make it difficult for electric undertakings to pay a fair return to investors and to plough back any sizable amount to reserves to finance development and modernisation. Consequently, electric undertakings are obliged to finance their expansion and modernisation programmes through external resources. Insufficient profits and the resulting inadequate return on investment make it difficult for them to attract sufficient response to additional share capital issues. For example, for the fourth unit project of the group, which is estimated to cost Rs. 12.5 crores, the three Companies have secured a loan of roughly Rs. 8.5 crores from the Agency for International Development, U.S. Further, to finance their modernisation schemes, Tata Hydro and Tata Power are issuing 6.5 per cent debentures of Rs. 100 lakhs and Rs. 85 lakhs, respectively.

The Group has entered into a partnership arrangement with Ebasco India Ltd.—a wholly-owned subsidiary of Ebasco Services Incorporated, U.S., a well-known firm of consulting engineers—for the establishment in India of a consulting engineering firm by the name of Tata-Ebasco Consulting Engineering Services. It is felt that there would be good scope for such an organisation in the country. The firm would provide consulting engineering services in the power engineering field, in which many projects are contemplated in the various States under the third and succeeding Plans. The Group and Ebasco India Ltd. will contribute equally to the working capital of Rs. 25 lakhs of the firm and share profits or losses equally. The interest of the three Group Companies, *inter se*, will be in the ratio of 20 for Tata Hydro, 30 for Andhra Valley and 50 for Tata Power.

(*Concluded from next column*)

the reserves have improved slightly from Rs. 46.72 lakhs to Rs. 48.57 lakhs. Loans, both secured and unsecured, have declined by Rs. 4 lakhs to Rs. 162.04 lakhs, but current liabilities and provisions are substantially higher at Rs. 104.55 lakhs as against Rs. 66.96 lakhs. These are, however, fully covered by investments, current assets and loans and advances aggregating Rs. 271.91 lakhs. With the addition of Rs. 30.07 lakhs during the year, the gross bloc at cost now amounts to Rs. 161.08 lakhs and, on deducting Rs. 64.22 lakhs being the depreciation provided to date, the net block stands at Rs. 96.86 lakhs. Capital work-in-progress at cost is placed at Rs. 1.08 lakhs while miscellaneous expenditure yet to be recouped amounts to Rs. 2.24 lakhs.

After the close of the year under review—on 12th February 1962, to be precise—the Company raised the equity part of its capital by Rs. 50 lakhs by issuing 500,000 ordinary shares of Rs. 10 each. The entire issue was taken up and the funds thus raised will be used to finance the various development projects outlined earlier.

Currently the Rs. 10 fully paid ordinary shares of the Company are quoted at Rs. 11.87 *cum-div.* and fetch, on an *ex-div.* basis, a net yield of nearly 6.3 per cent per annum.

BRITANNIA ENGINEERING'S PROFIT DOWN

OUTLOOK, HOWEVER, PROMISING

AN unfortunate strike, with a consequent lockout, for practically the whole of January last year at its Titaghur Works and a more than proportionate rise in the cost of raw materials and stores consumed have had a deleterious effect on the earnings of the Britannia Engineering Company Ltd. (Managing Agents: Messrs. McLeod and Company Ltd., Calcutta) during the year ended 31st December 1961. Thus, whereas gross realisation on account of sales and work done has increased by Rs. 72.91 lakhs, or nearly 36.7 per cent to Rs. 271.70 lakhs, the gross profit has actually gone down, albeit slightly, from Rs. 22.10 lakhs to Rs. 21.81 lakhs. Likewise the net profit has also declined, and more perceptibly at that, from Rs. 9.19 lakhs to Rs. 7.48 lakhs, because of a higher provision for depreciation (Rs. 9.05 lakhs as against Rs. 7.23 lakhs) even though there has been some reduction in the two other essential provisions, namely, those for managing agents' commission (Rs. 1.28 lakh as against Rs. 1.48 lakh) and taxation (Rs. 4.00 lakhs as against Rs. 4.20 lakhs). The small savings in the transfer to development rebate reserve (Rs. 2.62 lakhs as against Rs. 3.35 lakhs) and preference dividend (Rs. 0.63 lakh as against Rs. 0.78 lakh, subject to deduction of tax) have also proved of no avail in augmenting earnings for the equity and the Directors, accordingly, have been compelled to recommend the maintenance of the ordinary dividend, for the second year in succession, at 10 per cent subject to deduction of tax. This absorbs, as before, Rs. 5.00 lakhs, leaving Rs. 1.11 lakh as a carry forward as against Rs. 1.82 lakh brought in.

The working results of the Company for each of the past four years are presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales and work done	271.70	198.79	185.64	157.94
Closing stocks and work-in-progress	72.11	79.08	78.35	76.02
Raw materials and stores consumed	152.61	100.38	99.17	96.56
Other expenses	91.99	77.42	70.18	49.70
Gross profit	21.81	22.10	18.88	13.23
Managing Agents' commission	1.28	1.48	1.52	1.00
Provisions for—				
Depreciation	9.05	7.23	5.49	5.23
Taxation	4.00	4.20	5.32	4.39
Net profit	7.48	9.19	6.53	2.61

Preference	0.63*	0.78*	0.49	0.36
Ordinary	5.00	5.00	4.00	2.40
	(10%)*	(10%)*	(10%)*	(6%)
Carry forward	1.11	1.88	1.82	0.78
Market price of ordinary share of Rs. 10 each—	1961	1960	1959	1958
	Rs.	Rs.	Rs.	Rs.
High	15.50	15.37	13.71	13.62
Low	12.00	11.87	10.25	10.44

* Subject to deduction of tax.

It will be observed from the above table that, despite the steady increase in the turnover, there has been no corresponding improvement in the profit position, particularly during the past three years. As a result of this, dividends have continued to be relatively low and movements in the market price of the Company's equity shares have been within a narrow range, with poor capital appreciation.

Prospects for the future, however, appear reasonably bright. The Wagon division at Mokameh worked better during the year and with improved availability of matched sizes of steel, a substantial expansion is looked for. Besides, the Company has entered into collaboration agreements with Messrs. Giddings and Lewis-Fraser Ltd., of Arbroath, U.K., for production of cone winders for the jute textile industry, with Messrs. Thomas C. Keay Ltd. of Dundee, U.K., for the manufacture of Ecco cop loaders, with Messrs. Wadkin Ltd. of Leicester, U.K., for the production of wood working machinery and with Paterson Hughes Engineering Company Ltd. of Glasgow, U.K., for the production of electric overhead travelling cranes. Negotiations were also conducted to start the manufacture of single-spindle bar automatics under licence from Messrs. B.S.A. Tools Ltd., Birmingham, U.K. The results of these negotiations, however, have not been disclosed. The Directors have great confidence in the future of the Company and look forward to considerable expansion and improved results in the coming years.

During the year under review, the share capital, comprising Rs. 6.95 lakhs in 7 per cent tax-free preference shares of Rs. 100 each and Rs. 50.00 lakhs in ordinary shares of Rs. 10 each, has remained unaltered at Rs. 56.95 lakhs while

SYNOPSES OF COMPANY REPORTS

Premier Fertilisers Ltd.

(*Managing Agents*: Emcete & Sons Private Ltd., Madras. *Chairman*: Mr. M. Ct. Muthiah, Madras.)

Extracts from the Directors' report for the year ended 31st December 1961: During the period under review, the construction of the factory buildings was started and the erection of machinery was also taken up. The expenditure during construction up to 31st December 1961 amounted to Rs. 1,08,209.73 inclusive of the expenses of Rs. 99,956.72 incurred during the year.

The income earned during this year after making provision for development rebate of Rs. 870 and for taxation of Rs. 55,000 is Rs. 49,735. The Directors recommend that this amount be carried forward.

All the imported as well as indigenous items of plant and machinery have been received, although there was considerable delay in the receipt of indigenous items due to transport bottleneck. However, the Directors expect the factory to go into production in about a couple of months if everything goes according to schedule.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,54,500	Gross block*	20,19,208
Reserves and surplus	50,605	—Depreciation	6,760
Other liabilities	10,77,671	Net block	20,12,448
		Current assets	4,18,553

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: By the end of the year under review, 13,590 bighas of land had been notified and acquired by the Government of India in the Karanpura Coalfield and claims for 10,908 bighas have so far been submitted to the National Coal Development Corporation, Ranchi.

As anticipated, the Company's Saunda claim was referred to the Tribunal set up by the Central Government under Section 16 of the Coal Bearing Areas (Acquisition and Development) Act, 1957, and a decision in this respect is still awaited.

With regard to the Chordhara area, the suit between the National Coal Development Corporation and the Rajendra Collieries Limited was decided against the Company's sub-lessees and despite attempts to arrive at an amicable solution with them, the Company have been constrained to serve a notice on them for recovery of the large amounts outstanding, prior to Court proceedings in the event of their non-compliance therewith.

Royalty: By virtue of a *Gazette* Notification, being No. S.O. 3094 of the 29th December 1961, Section 9(1) of the Mines and Minerals (Regulation and Development) Act, 1957 (67 of 1957) was made to apply with effect from that date to or in relation to mining leases in respect of coal granted before the 25th October 1949, subject to the modification that "the lessee shall pay royalty at the rate specified in any agreement between the lessee and the lesser or at 2½ per cent of F.O.R. prices whichever is higher." The overall effect on the royalty income of the Company unless amendments are made is such as to eliminate without compensation the profit derived in the past from the Company's sub-leased properties.

The Notification has also adversely affected other members of the Coal Industry and it has, therefore, been made the subject matter of a reference to Government as a prelude to a bi-partite conference on the whole Royalty issue.

Raisings and Despatches: During this period 1,603,510 tonnes of coal were raised and 1,558,351 tonnes were despatched.

Taxation: The appeal lodged in Supreme Court against the taxation of *Salami Profits* as business income by Tax authorities has been decided in favour of the Department.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.

	(15%)	(20%)
Carry forward	7	2

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: *Crop and Price*: 1,86,794 (1,82,344 kgs. for 1961) kgs. of tea were produced during the year under report against the estimate of 1,70,100 kgs. The Tea was produced at a cost of 316.34 nP per kg. against 322.58 nP per kg. for the previous year. The net average sale price realised works out to 457 nP per kg. compared to 509.26 nP per kg. during the previous year.

The stock of Tea remaining unsold as at 31st March, 1962 was 38,083 (39,870 for 1961) kgs. the whole of which has been valued at all-in-cost of Rs. 3.62 (Rs. 3.83) per kg.

Coffee: 711—40 Litre Units of Dry Cherry were harvested during the year which gave an outturn of 6.006 (2.010 for 1961) tonnes. The revenue expenditure incurred on Coffee amounted to Rs. 41,770 (Rs. 18,743). The loss on Coffee working for the year was Rs. 29,758 (Rs. 13,718 for 1961).

The estimates for the year ending 31st March, 1963 provide for a crop of 1,70,100 kgms. of made Tea to be produced at a cost of 339.45 nP per kg. and 19 tons Coffee at an estimated cost of Rs. 5,860.39 nP per ton. The estimates also provide for a capital expenditure of Rs. 23,319.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.

† This represents only refund of taxes for previous years amounting to Rs. 35.34 lakhs.

Extracts from the Directors' report: *Cloth Sales*: During the year under report total bales sold and delivered were 129,719. The opening stock comprised of 11,466 bales sold and 9,817 bales unsold and the closing stock 9,691 bales sold and 3,554 bales unsold. Thus the stocks were appreciably reduced.

Machinery: The financial position of the Company is progressively improving and the Company is going ahead with its programme of renovation and rehabilitation of machinery. Orders placed at present for new machineries are of the aggregate value of Rs 1.22 crore. These include (i) 150 Ring frames, (ii) 10-H. S. Draw frames and 10 Inter frames, (iii) one Barber Colman winding and warping equipment, (iv) Four American combers, (v) one stenter, (vi) one yarn mercerising machine, (vii) one cheese dyeing plant, (viii) two cone winding machines, (ix) 48 looms, (x) one 6 colour cloth printing machine, and (xi) three boilers. Lighting and humidity conditions are being further improved.

Accounts in brief as at 31st December 1961 are as under:—

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: *Operations*.—Certain difficulties in arranging for the loan capital required by Assam Pulp Mills Ltd. could not be resolved and it was decided to abandon the project and to take steps to wind up that company. This decision will involve the Company in the loss of its investment in Assam Pulp Mills Ltd. and the major portion of the preliminary expenses incurred in connection with the project. These losses have therefore been written off in the accounts, but due to the improved overall profit in trading and after credit has been taken for the balance of provision for contingencies to the extent it is no longer required the final results for the year are similar to those of 1960.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	80,01,400	Gross block	84,39,789
Reserves and surplus	1,05,94,326	—Depreciation	42,70,006

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

• Only a small sum of Rs. 200.

Extracts from the Directors' report: Raisings for the year were 3,24,426 tonnes compared with 3,50,536 tonnes in the previous year. Despatches, which included purchased coal, amounted to 3,37,480 tonnes as against 3,60,222 tonnes.

Consequent on certain mining difficulties encountered at Laikdih Deep colliery, raisings from this mine showed a decline of over 20,000 tonnes during the year under review. The position has since improved and the colliery continues to pro-

duce a very high grade of coking coal, almost all of which is consumed by the Steel Industry.

At Seebpore colliery raisings have been obtained from the Koithi Seam incline, and quarrying operations have commenced in the area of the outcrop of this seam: this open cast working should help to maintain the raisings at this colliery for some years to come.

Accounts in brief as at 31st January 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ..	14,88,460	Gross block ..	61,62,377

,, ,, ,, ,, ..	1,05 (15%)	1,40 (20%)
Carry forward	4	14

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 2 lakhs transferred from rehabilitation reserve and Rs. 42,552 being unspent liability no longer required—written back.

Extracts from the Directors' report: *Weather and Crop*:—Weather conditions were generally favourable. Hence the crop returns were satisfactory but the average prices during the year declined due to the general weakness of the market and consequently the working results of the gardens were affected.

The following are the comparative crop and sale statistics for the last three years:

	Kgs.	Average sale price per Kg.
Dhunseri Tea Estate		
1959	3,84,545	Rs. 4.96
1960	3,91,409	,, 5.40
1961	3,88,269	,, 4.44
Dhendai Tea Estate		
1959	2,59,786	,, 5.07
1960	2,00,529	,, 5.23
1961	2,44,530	,, 4.72

The estimate for the season 1962 provides for the production of crop at Dhunseri Tea Estate 3,73,000 kgs. at a local cost of production of Rs. 3.45 per kg. and for Dhendai Tea Estate 2,54,000 kgs. at a local cost of production of Rs. 4.28 per kg.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	8,20,000	Gross block ..	28,02,396
Reserves and surplus ..	7,94,308	—Depreciation ..	8,86,220
Other liabilities ..	22,40,911		
		Net block	19,16,176

		Investments	1,02,165
		Cash	31,855
Rs.	38,55,219	Rs.	38,55,219

* Paid-up capital consists of 70,000 ordinary shares of Rs. 10 each and 12,000 ten per cent cumulative preference shares of Rs. 10 each.

COMPANY MEETINGS AND DIVIDENDS

METAL BOX CO. OF INDIA LTD. Twenty-ninth Annual General Meeting, Calcutta, 18th July 1962. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 0.90 per share), subject to deduction of tax. Transfer books remain closed from 2nd to 18th July 1962, both days inclusive.

BRITANNIA ENGINEERING CO., LTD. Forty-sixth Annual General Meeting, Calcutta, 20th July 1962. Dividend: Re. 1.00 per ordinary share, subject to deduction of tax, payable on or after 27th August 1962. Transfer books remain closed from 5th to 20th July 1962, both days inclusive.

BAGALKOT CEMENT CO., LTD. Thirteenth Annual General Meeting, Bombay, 20th July 1962. Dividend: *Nil*. Transfer books remain closed from 6th to 20th July 1962, both days inclusive.

BHARAT LINE LTD. Sixteenth Ordinary General Meeting, Bhavnagar, 20th July 1962. Dividend: *Nil*. Transfer books remained closed from 25th June to 24th July 1962, both days inclusive.

DUNCAN BROTHERS AND CO., LTD. Sixty-third Annual General Meeting, Calcutta, 21st July 1962. Dividend: Rs. 14.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 12th to 21st July 1962, both days inclusive.

COORG TEA CO., LTD. Nineteenth Annual General Meeting, Coimbatore, 21st July 1962. Dividend: 15 per cent or Re. 0.30 per ordinary share, subject to deduction of tax, payable on or after 30th July 1962. Transfer books remain closed from 14th to 21st July 1962, both days inclusive.

SYNTHETICS AND CHEMICALS LTD. Second Annual General Meeting, Bombay, 26th July 1962. Dividend: *Nil*. Transfer books remain closed from 16th to 26th July 1962, both days inclusive.

DHUNSERI TEA CO., LTD. Forty-sixth Annual General Meeting, Calcutta, 26th July 1962. Dividend: 15 per cent or Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 19th to 26th July 1962, both days inclusive.

BURN AND CO., LTD. Annual General Meeting, Calcutta, 30th July 1962. Dividend: 28.5 per cent on ordinary shares, subject to deduction of tax, payable on or after 1st August 1962. Transfer books will remain closed from 21st to 30th July 1962, both days inclusive.

CALCUTTA STEEL CO., LTD. Third Annual General Meeting, Calcutta, 31st July 1962. Dividend: Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 23rd to 31st July 1962, both days inclusive.

LAKSHMI MILLS CO., LTD. Fifty-second Annual General Meeting, Pappanaickenpaiayam, Coimbatore, 1st August 1962. Dividend: 25 per cent on Equity capital, subject to deduction of tax. Transfer books will remain closed from 17th July to 1st August 1962, both days inclusive.

COCHIN MALABAR ESTATES LTD. Thirty-second Annual General Meeting, Calicut, Kerala State, 4th August 1962. Dividend: 20 per cent or Re. 0.60 per ordinary share (includes interim dividend of 9 per cent or Re. 0.27 per share), subject to deduction of tax. The final dividend will be payable on or before 20th August 1962. Transfer books will remain closed from 20th July to 4th August 1962, both days inclusive.

TATA POWER SUPPLY CO., LTD. Forty-third Annual General Meeting, Bombay, 8th August 1962. Dividend: Rs. 80 per ordinary share (includes interim dividend of Rs. 30 per share plus a Bonus of Rs. 5 per share) subject to deduction of tax. Transfer books were closed from 9th to 23rd June 1962, both days inclusive.

ANDHRA VALLEY POWER SUPPLY CO., LTD. Forty-sixth Annual General Meeting, Bombay, 9th August 1962. Dividend: Rs. 80 per ordinary share (includes interim dividend of Rs. 30 per share plus a Bonus of Rs. 5 per share), subject to deduction of tax. Transfer books were closed from 9th to 23rd June 1962, both days inclusive.

TATA HYDRO ELECTRIC POWER SUPPLY CO., LTD. Fifty-third Annual General Meeting, Bombay, 9th August 1962. Dividend: Rs. 8 per ordinary share (includes interim dividend of Rs. 3 per share plus a Bonus of Re. 0.50 per share), subject to deduction of tax. Transfer books were closed from 9th to 23rd June 1962, both days inclusive.

TATA OIL MILLS CO., LTD. Annual General Meeting, Bombay, 16th August 1962. Taxable dividend of Rs. 5.75 per ordinary share, subject to deduction of tax, for the year ended 31st March 1962, payable on 17th August 1962.

WESTERN INDIA PLYWOODS LTD. Annual General Meeting, 31st August 1962. Taxable ordinary, dividend of 14 per cent for the year ended 31st March 1962.

NEW STANDARD ENGINEERING CO., LTD.—BOMBAY. Dividend of 9 per cent (4.5 per cent being payable out Special Reserve—free of tax), for the year ended 31st March 1962.

SRI RAMAKRISHNA MILLS (COIMBATORE) LTD. Taxable dividend of 23 per cent or Rs. 23.00 per share, for the year ended 31st March 1962. Transfer books will remain closed from 17th to 30th July 1962, both days inclusive.

PREMIER MILLS (CBE) LTD. Taxable dividend of 25 per cent or Rs. 25.00 per share, for the year ended 31st March 1962. Transfer books remain closed from 15th to 28th July 1962, both days inclusive.

TIRUPATI COTTON MILLS LTD. Taxable dividend of 12 per cent or Re. 1.20 per ordinary share, for the year ended 31st March 1962, subject to I.F.C. sanction. Transfer books will remain closed from 1st to 10th August 1962, both days inclusive.

MYSORE PAPER MILLS LTD. Taxable dividend of 15 per cent or Re. 1.50 per share, for the year ended 31st March 1962.

BENGAL POTTERIES LIMITED

CHAIRMAN, SIR SHRI RAM DEPRECATES HIGHER EXCISE DUTY

THE extent to which the high rate of excise duty on potteries has adversely affected the growth of the industry was explained by Sir Shri Ram, Chairman of the Bengal Potteries Ltd., in his address at the Fiftieth Annual Meeting of the Company held at Calcutta on 29th June 1962. High rates of duty, he maintained, meant difficulties to the industry in the disposal particularly of the superior quality goods. The industry, therefore, had to produce "to a fair extent" cheaper qualities of goods, and this in turn yielded lower profits. Another major difficulty of the industry, according to him, was the shortage of power, which made it impossible for the industry to run the kilns non-stop.

The following is the text of Sir Shri Ram's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all to this fiftieth annual general meeting of our Company.

"The accounts and Directors' report have been in your hands for some time and, with your permission, I would like to take it as read.

Demise of Mr. Bhagat

"You must have heard of the sad demise of Mr. M. G. Bhagat in January this year after a short illness. Mr. Bhagat was the life and soul of this concern and he was responsible for the great success that this concern has achieved. I hope you will all like to join me in conveying our feelings of sorrow to the family and in sending the resolution of condolence.

"As regards the working of the Company last year, we had a number of difficulties to face. Firstly, the levy of excise duty at rather a high rate which naturally meant difficulties in the disposal, particularly of the better class of goods. It is well known that the percentage of profits normally is lower in the cheaper quality of goods than the better ones, and we had to produce to a fair extent cheaper qualities of goods.

Shortage of Electricity

"In a concern like Bengal Potteries where the kilns have got to run for 24 hours and the goods must be fired in the kilns, the shortage of electricity does a lot of harm, and last year on a large number of occasions the electricity failed without notice. That has also been responsible for not much increase of production and sales of crockery as otherwise would have been possible.

"You will remember that last year we had mentioned that we had entered into an arrangement with Messrs. Rosenthal-Isolatoren-Gmbh for making highly tension insulators. The work in a way started sometime in April, but, as in any new concern, there are a lot of teething troubles and even with all their experience, it was necessary to study the conditions in India with Indian raw materials. Due to these troubles and experiments, I am sorry, that the Factory No. 2 has not been able to show profits, but I am also glad to say that we are now on the right lines and hope to be able to give a better account for the current year.

I.C.I.C.I. Loan

"You will rember that we had decided to take a loan from the I.C.I.C.I. which we have taken and the machinery ordered against the loan has arrived and is being erected.

"Finally, I am glad to say that our employee relations have been satisfactory, which is a great asset."

Note:—*This does not purport to be a record of the proceedings of the annual general meeting.*

CALL MONEY AT 3/4 PER CENT

(*From Our Own Correspondent*)

BOMBAY, 11*th July*

The money market is extremely easy, with banks having plenty of idle funds at their disposal. Since short-term deposit rates are unchanged at the ceilings under the inter-bank agreement, the only evidence of easier conditions is provided by the inter-bank day-to-day call money rate. This rate has been ruling at as low as ¾ per cent since Tuesday, as against 1¼ per cent in the past week and one per cent on Monday this week. Apparently, banks and others have been conserving their liquid resources for investment in the new Central loans, the list for which opens tomorrow.

As briefly reported last week, there were no sales of Treasury Bills under the tender system. Sales of intermediate Treasury Bills from 4th to 7th July fetched just Rs. 57 lakhs as compared with Rs. 710 lakhs between 27th and 29th June 1962.

The Reserve Bank's statement for the week ended 6th July 1962 discloses a slight increase of Rs. 123 lakhs in India's foreign assets bringing the total to Rs. 98.55 crores.

The Gilt-edged market was quiet, with a further fall in the values of medium and long-dated loans of the Central Government. Thus, the 3 per cent 1986 Conversion Loan has gone down by 60 nP, 3 per cent 1970-75 by 30 nP, 3½ per cent 1968 by 20 nP and 4 per cent 1979 by 30 nP. There has been some selling in State loans also. For instance, the 4½ per cent 1972 Uttar Pradesh, Andhra and Madras have gone down by 15 nP, 35 nP and 20 nP, respectively.

After being firm in the last fortnight, the £ sterling has turned quiet. Spot sterling in the New York exchange has come down by 0.280 cent to 280.490-280.520 cents per £. 3 months' forward has declined by 0.320 cent to quote at 279.910-279.940 cents. In keeping with this trend, the rupee has improved to some extent in terms of the U.S. dollar. Bank's selling rate for ready T.T. to New York has gone up by 25 nP to Rs. 477 per 100 dollars. There has been a corresponding rise in their buying rate which, as of today, is Rs. 473.75.

BRIGHTER TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 5*th July*

About 803,000 kgs. were offered in sale No. 27 held on Tuesday the 3rd inst. Quality of high-grown on offer was well maintained and there were a few invoices which were brighter in cup. The market met with good general demand. Low medium and medium brokens were irregular and brighter sorts were often dearer. Fannings under this category, however, did not receive the same support and were generally lower, particularly the fibrous kinds. Good medium brokens were also in good demand at fully firm rates, but fannings were again slightly easier. Highgrowns met with useful support and sold at prices above last. Clean black leaf descriptions were a strong feature of the sale. Unorthodox manufacture, although met with better support, realised irregular prices. Whole leaf grades were strong and dearer.

The quotations per kg. were:

	1962 Rs.	1961 Rs.
Low mediums	3.20-4.00	4.35-4.50
Mediums	3.70-4.20	4.50-4.60
Good mediums	4.00-5.20	4.60-4.80
Nilgiri B.O.P.	4.30-6.30	4.60-5.80

The average price realised in sale No. 27 was Rs. 3.93 per kg. as against Rs. 3.81 a week ago and Rs. 4.55 in the corresponding sale last year.

In dust sale No. 27 held today, 500,000 kgs. were offered. The market met with less general demand at much lower rates, with prices easing further towards the close of the sale. A number of teas were withdrawn. Low mediums and mediums met with fair support, but these were irregularly easier and sometimes declined by upto 50 nP. Good mediums followed a similar tendency. Highgrowns met with good enquiry. The better kinds were steady, while others inclined a little easier. There was better support for unorthodox descriptions, although these generally sold at lower rates than last. Clean black leaf varieties also shared in the downward trend of the market.

The average price realised in dust sale No. 27 was Rs. 3.08 per kg., as compared with Rs. 3.17 a week ago and Rs. 4.50 in the corresponding sale last year.

Colombo: Just over eight million pounds were offered during the week. There was good general demand. Best dimbulas were dearer by 30 to 40 cents while uvas registered advances of 10 to 20 cents. Mediums and lowgrowns were fully firm. Liquoring fannings were again strong and dearer.

London: *North Indian and other growths*: In Monday's sale, there was fair general demand. New season's dooars were firm, while Africans tended easier.

Ceylon and South Indians: There was good general demand for both Ceylons and South Indians offered during this week. With the exception of plain liquoring sorts which were a little easier, others were generally steady.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 28: 822,000 kgs. offered. Good demand. Brighter low medium and medium brokens dearer. Others barely steady. Similar fannings lower. Good mediums firm. Highgrowns fully firm, sometimes dearer. Unorthodox irregularly higher."

BULLION WEAK AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 11*th July*

The bullion market depicted a firm trend during the major part of the week under review, but turned distinctly easy today. Induced by short-covering and scattered fresh buying, both gold and silver moved forward. Calcutta operators were said to be keen buyers especially in silver. The upward trend of values persisted till today when the market experienced nervous bull liquidation in silver which suffered a sharp setback. Not only were the earlier gains completely erased but today's closing rates were well below those prevailing a week ago. In sympathy with silver, gold also tended to recede. But the decline was negligible, so that today's prices were much higher than those a week ago.

The daily average offtake of both the metals was larger than in the previous week: 4,400 tolas of gold and 9 bars of silver, as against 3,750 tolas and 8 bars, respectively. While offtake tended to improve thus, the pace of arrivals slowed down, the daily average being 4,500 tolas of gold, as against 5,250 tolas, and 40 bars of silver, as against 53 bars. The floating stocks in the City are reported to be around 16,000 tolas of gold and 900 bars of silver.

The *Bhadrapad* (15th September) in gold met with speculative support inspired by encouraging spot advices and advanced from Rs. 124.35 on Wednesday last week to Rs. 125.75 today before finishing at Rs. 125.30. The net gain over the week was 95 nP. The ready rate continued to be quoted at a premium over the forward throughout the week. The actual premium improved from Re. 1.30 to Re. 1.55 on Saturday the 7th inst., but declined to 90 nP yesterday. Today, it increased again to 95 nP. Ready gold was quoted today at Rs. 126.25 a rise of 60 nP over the week; the highest level touched was Rs. 127.10 on Saturday the 7th inst.

In silver, the *Bhadrapad* (17th September) settlement was well favoured, the quotation rising from Rs. 215.35 to Rs. 216.80 yesterday. Today, the settlement encountered selling and fell to Rs. 214.95. Ready gold was, as in the previous week, quoted at a discount under the forward, though the actual discount receded from Re. 1 last week-end to 60 nP today when the spot rate stood at Rs. 214.35, same as last week.

The dollar price of gold in the London bullion market improved from $35.11 to $35.11⅜ per fine ounce. Following this rise and owing to the easiness of the pound sterling *vis-a-vis* the dollar, ready gold spurted from 250*s.* 0¾*d.* to 250*s.* 3*d.* Spot and forward silver hardened by ¼*d.* each to 87*d.* and 87¼*d.*, respectively. Silver in New York, however, receded from 103.25 cents to 102.75 cents. With the consumer stocks of silver now replenished, the indications, according to the London *Financial Times*, are that the market should be fairly quiet during the summer. "Very little," to quote this paper, "is known of future Chinese intentions, but several small shipments of Chinese metal are expected in the next few weeks, and these should also help to keep prices steady. But, if more industrial orders come forward in the autumn and there is no increase in the volume of supplies, then this might be only a temporary respite."

The following table shows the trend of prices during the week under review:

	11-7-62 (closing)	High	Low	4-7-62 (closing)
GOLD				
Ready (.99 fine)	Rs. 126.25	Rs. 127.10	Rs. 125.80	Rs. 125.65
*Bhadrapad** ..	125.30	125.80	124.30	124.35
Sovereign	97.75	98.00	97.75	97.50
SILVER				
Ready (.996 fine) ..	214.35	216.10	214.30	214.35
Bhadrapad† ..	214.95	216.85	214.90	215.35
London—				
Gold	250*s.*3*d.*	250*s.*3*d.*	250*s.*1¼*d.*	250*s.*¾*d.*
Silver Ready ..	87*d.*	87*d.*	86¾*d.*	86¾*d.*
Silver Forward ..	87¼*d.*	87¼*d.*	86¾*d.*	87¼*d.*
New York—				
Silver	102.75 cents	103.25 cents	102.75 cents	103.25 cents

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

FIRM TONE IN LINSEED

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 3*rd July*

Owing to continued scarcity of supplies from upcountry due to the heavy rains and floods in the districts, the local linseed market was firm right through the week with their stocks diminishing, they were finding it difficult to fulfil their commitments for forward sales of oil. The oil market was steady due to small stocks and firmness in other vegetable oils. Sellers were hesitant in doing much business at the current prices. The cake market was firm. There was good local inquiry again, but stocks were very limited and prices marked up. The latest quotation for the July delivery was Rs. 80.38 per quintal.

COTTON FUTURES DECLINE AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 11*th July*

Trading in the cotton futures market, which was featureless during the early part of the week, turned hectic towards the close. Reports of irregular rains in Akola and Nagpur areas, coupled with the firm trend of the spot market and the bleak prospects for importing more foreign cotton, prompted heavy short-covering and speculative support which resulted in a rally in prices yesterday. The Jarilla March contract spurted from the closing rate of Rs. 728.25 on Monday to Rs. 734.75 before reacting to Rs. 731.50 today. The range of fluctuations of the contract during the week is indicated below:

	11-7-62 Rs.	*High* Rs.	*Low* Rs.	3-7-62 Rs.
I.C.C. Jarilla March 1963	731.50	734.75	727.50	727.75

The trend of weather will continue to exert a decisive influence on the price trend in the coming weeks. So far, fairly good rains have been reported from most of the cotton-growing regions. Sowings have been completed in Khandesh, Berar, Moglai and Surat and North Gujarat areas. In Saurashtra, while sowing of Kalyan tracts have progressed well, those of Mathia are reported to be lagging behind. In Central India, sowings of 197/3 and Buri cotton are to begin shortly.

In the spot market, there was good mill demand for such popular varieties as L.147, Laxmi, Kalyan, Wagad and Vijay. Prices ruled firm. The Indian Cotton Mills' Federation is reported to have decided to urge, at the forthcoming meeting of the Cotton Advisory Board, the abolition of the variety-wise distribution of cotton. The reason given for this decision is that, under the scheme, many mills had difficulty in getting their requirements for want of adequate quota allocation.

Export demand for Bengal *Deshi* continued to be slack. There has been no marked improvement in the sales registered for export against the current Bengal *Deshi* quota. There is still an unutilised balance of over 4,000 bales. Chances of a fresh export quota for Bengal *Deshi* in the near future are not bright; on the contrary, the latest indications are that Government might issue a much larger quota for the new season early in September instead of issuing a small one immediately. Demand for foreign cotton was good. Spinners bought new crop Pakistan cotton since ready Pakistan cotton, particularly AC 134 and NT varieties, is not available. Stray interest continues in Sudan and Mwanza cottons.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 685; Wagad 910; Gadag Laxmi 1,210; L147 1,170; Pakistan NT 1,060; Pakistan AC 1,160. Sudan G4S 1,450; B.P.52 1,335.

Cotton futures in Karachi depicted a mixed trend during the week. While the maturing July contract attracted support based on settlement consideration and rallied to Rs. 76, as against last week-end close of Rs. 75.20, the new crop contract, namely, N.T.R.G. January 1963, met with selling and receded from Rs. 76.40 to Rs. 74.65. July contract shows a net gain of 80 nP over the week and the January contract a net loss of Rs. 1.75.

Modest gains was recorded by cotton futures on the Liverpool Cotton Exchange. Scattered Commission House support for nearby positions accounted for most of the gains. Spot demand was moderate and centred mostly around South American and Middle East growths.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 23.80; October 23.70; December 23.65.

American cotton mixed growth contract: July 24.20; October 24.05; December 24.00.

Sudan: July, September, November 29.50.

New York cotton futures market ruled quiet during the week. The first official acreage report for the 1962-63 season had little effect on the market as it was in line with the general trade expectation. The U.S. Department of Agriculture estimated the planted acreage under cotton at 16.427 million which is one per cent less than in 1961. The Department, as usual, made no estimate of production but, should yield per acre remain unchanged from the current season (1961-62), production would be 13.79 million bales (of 500 lbs. each), as against 14.32 million in the current season and the ten-year (1950-1960) average of 13.55 million bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	10-7-62	3-7-62	26-6-62
New York Spot	36.15	36.15	36.10
July	33.50	33.71	34.23
October	34.01	34.09	34.43
December	34.13	34.09	34.38

CEILING FOR AMILON YARN

(*From Our Own Correspondent*)

BOMBAY, 11*th July*

This week was quite an exciting one in so far as the yarn market was concerned. Amilon yarn (20×1) futures climbed up to dizzy heights under the impetus of persistent bull support and renewed short-covering both of which stemmed from apprehensions of an acute scarcity of supplies developing in the next few weeks. The rise in prices was so substantial that the Board of the Yarn Merchants' Association and Exchange had to take special

measures to check a further undue increase. One of these measures was the special clearing for the Amilon August contract thrice in the week (Friday, Monday and Tuesday). Yesterday, the Board declared an emergency (the market was closed) and fixed the ceiling price of Rs. 4,800 for the August contract. Fresh transactions in this contract were prohibited; only squaring-up deals were allowed. Members of the Exchange were asked to submit their open position standing at the close of business on Monday the 9th inst. before the reopening of the market today. It will be interesting to note that, over the week, Amilon August contract scored a gain of Rs. 315 to Rs. 4,775.

Indigenous art silk yarns also registered a notable rise during the week. National Rayons 120 Bt. cones 1st grade advanced by 46 nP to Rs. 17.51 and 150 Bt. cones 1st grade by 20 nP to Rs. 14.98. Traders have taken note of the statement of Mr. D. S. Joshi, Special Secretary to the Union Ministry of Commerce and Industry, that the Government has decided to continue, without any change, the existing export promotion scheme for rayon fabrics. Talking to newsmen at New Delhi, Mr. Joshi is reported to have observed:

"The decision has been taken after prolonged consultations with the representatives of the trade and industry and that there is no room for confused thinking on the issue. In an effort to eliminate the delay in the import of yarn, discussions are being held to evolve a pool scheme under which the foreign suppliers will be able to store adequate quantities of yarn in the importing ports to be released as and when import licences are produced."

In sympathy with art silk yarns and on hopes of enlarged demand from consuming centres, staple fibre yarn also staged a smart rally. 40×2 August contract climbed up from Rs. 782 to Rs. 860. Spot Centurys rose by Re. 1.01 to Rs. 9.46. Kohinoors spurted by Re. 1.03 to Rs. 9.54. Citys advanced from Rs. 8.67 to Rs. 9.48.

Cotton yarns also tended to move up on expectations of better demand from handlooms, in view of the intensive scheme for promoting the export of handloom fabrics manufactured from cotton mill yarn. Under the scheme, 12½ per cent of cotton entitlement allowable to exporters will be paid in cash. The cotton entitlement scheme, introduced in July 1961, provided that the manufacturers, exporters as well as co-operatives and other organisations exporting handloom fabrics worth not less than Rs. 2,000 in any quarter of the year would be eligible to receive entitlement for the import of cotton calculated at 40 per cent either of the actual value of the fabric exported or of the value of the consignment calculated at Rs. 2 per sq. metre, whichever is less. No import licence will be granted against this entitlement, but the Textile Commissioner will arrange the payment of cash incentive to exporters and exporting organisations at the rate of 12½ per cent of the cotton entitlement value.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	11-7-1962	4-7-1962
Art silk yarn—	Rs.	Rs.
20/1 Amilon (100 kg.)—		
August	4,775.00	4,460.00
120 Japan (per 100 kg.)	—	2,260.00
150 Japan (per 100 kg.)	—	2,205.00
120 Italy (per 100 kg.)	—	1,819.00
150 Italy (per 100 kg.)	—	1,736.00
Nat. Ray. 150 Bt. 1 (per kg.)	14.98	14.78
Staple fibre yarn (40 x 2)—		
August	860.00	782.00
Kohinoor (per kg.)	9.54	8.51
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	17.50
20s Podar	21.75	21.75
32s Madura	29.50	30.00
40s Madura	36.50	35.50
60s Finlay*	72.50	72.50

Note: Quotations for foreign yarns are not available.

SEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, *11th July*

Barring cottonseeds which lacked support, the oilseeds market ruled firm during the week under review. Groundnuts were particularly strong, thanks mainly to reports of sustained offtake by the State Trading Corporation, steady buying by *vanaspati* manufacturers and absence of large-scale seasonal liquidation. Values would have gone up still further but for reports from the South and Gujarat suggesting smooth sowing operations, despite delayed rains; Khandesh area alone, however, did not seem to have had favourable weather. Steady conditions prevailed in castorseeds as well, though there were reports of Brazilian offers at lower levels. Linseeds too put on a cheerful appearance on encouraging advices from mustard-seed markets in the North. The weakness in cottonseeds was sequel to favourable climatic conditions in cotton-growing areas.

Trading in the 1962-63 season's groundnut and cottonseed crops for January 1963 delivery and castorseed and linseed crops for the March 1963 delivery will commence tomorrow. The Bombay Oilseeds and Oils Exchange has just received the permission from the Forward Markets Commission. Trading in groundnut January 1963 contract will be subject to a limit on the weekly rise in prices of Rs. 5.50 per 250 kgs. and a limit of 5,000 metric tons on the net open position of any individual member. This limit will cover all deliveries traded in the Exchange irrespective of the year of the crop. The long position held by exporters as a hedge against their export sales will, however, be exempted from operation of limits on the trading position. Similar restrictions will also be enforced in respect of groundnut and groundnut oil in other recognised associations, as and when they seek permission for trading. In respect of cottonseed, the trading will be subject to a limit of the weekly price rise of Rs. 3.50 per 250 kgs. There will be no such restrictions on castor and linseed for the time being.

During the first six months of 1962, shipments of castor oil through Bombay port were only 13,600 tons, as against 14,900 tons during January-June 1961. Exports of linseed oil were also lower at 197 tons, as against 580 tons. Exports of groundnut oil, however, rose from 154 tons to 7,000 tons, due mainly to the special efforts made by the S.T.C. Shipments of groundnut meal, too, went up from 58,000 tons to 111,800 tons. linseed oilcake from 5,000 tons to 7,400 tons and cottonseed cake from 14,900 tons to 15,000 tons.

Groundnut September 1962 contract advanced from Rs. 218.75 to Rs. 222.75, before closing today at Rs. 222. July contract rose from Rs. 218.50 to Rs. 222; it had earlier touched Rs. 222.75. Nizam bold improved by 75 nP to Rs. 46.50. Oil July 1962 contract hardened by 20 nP to Rs. 18.85 and September contract by 10 nP to Rs. 18.85. Oil ex-mill closed higher at Rs. 19.35, as against Rs. 19.25.

Castorseed September 1962 contract strengthened by Re. 1.25 to Rs. 165.37. Madras small was higher by 50 nP to Rs. 32.50. Oil B.S.S. put on 25 nP to Rs. 13.35 and Commercial by 20 nP to Rs. 12.45.

Linseed September 1962 contract improved by 31 nP to Rs. 40.56. Bold ready gathered 12 nP to Rs. 39.37. Linseed oil increased by 45 nP to Rs. 16.10.

Among cottonseeds, July 1962 contract fell by Rs. 2 to Rs. 102.75. September 1962 contract declined initially from Rs. 108 to Rs. 106.50, before recovering to Rs. 107.25 towards the close.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 11th July, as compared with those of the two previous weeks:

	11-7-1962	4-7-1962	27-6-1962
Groundnut	Rs.	Rs.	Rs.
July 1962	221.75	218.50	213.75
September	222.00	218.75	215.50
Nizam bold	46.50	45.75	45.25
Khandesh quality	46.75	46.25	45.50
Oil ex-mill ready*	19.35	19.25	19.00
Railway receipts*	19.00	18.85	18.50
Oil July 1962	18.85	18.65	18.30
Castorseed			
September 1962	165.37	164.12	160.62
Ready Madras	32.50	32.00	31.00
Ready Kanpur	31.12	31.00	30.00
Oil B.S.S.†	13.35	13.10	12.45
Oil commercial†	12.45	12.25	11.75
Linseed			
September 1962	40.56	40.25	40.50
Bold ready	39.37	39.25	39.75
Oil ready†	16.10	15.65	15.35
Cottonseed July 1962	102.75	104.75	102.50
Niger seed	35.75	36.00	36.00
Kardi seed	25.75	25.50	25.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

DEMAND FOR TEA IMPROVES

(From Our Own Correspondent)

CALCUTTA, *10th July*

There was visible improvement in demand for tea in the export sales held here this week. The improvement, despite the prospect of heavy offerings this season, encouraged the trade to believe that the current levels of prices for quality teas were competitive. Tea claimed a good portion of the liner space offered in the week. The season has now got off well, and, with the continuance of good weather, it is expected that quality teas on offer would increase. Note was taken of the setback in production in South India as a result of the delay in the arrival of monsoon. It is not yet known whether tea gardens in North East India would be affected by the existing power shortage. The gardens in Madras State were, however, exempted from the recent power cut there.

It has now been indicated that the E.C.M. would impose a duty of 16 per cent *ad valorem* on tea. This would mean that the U.K. consumers would have to pay more for their tea. This would be a heavy burden for them. Although the U.K. is expected to continue its efforts to allow tea duty-free in the E.C.M., the attitude of the E.C.M. countries is reported to be against freeing any imports entirely from duty. As such, prospects of coffee would appear to be better, but the trade would call upon the Government to undertake intensive campaign in West Europe in favour of tea so that any loss which tea might suffer in the U.K. could be made good in other countries of Western Europe.

Recent demands for the abolition of the export duty on tea have been of no avail, and the industry is left to contemplate other measures in order to lower costs of production. In this connection, the suggestion made by Mr. D. C. Jarvis, Chairman of the Nilgiri Planters' Association, is commendable. Speaking recently at the annual meeting of the Association, Mr. Jarvis was reported to have declared that all forms of duty on tea should be collected at one point—the sales point. This would mean amalgamation of the excise as well as export duties with any State levies such as octroi, entry tax, carriage tax, etc. If this were done, the industry could be saved from much clerical work and botheration which would mean lowering cost of production, though marginally. Mr. Jarvis went a step further and said that, if a worthwhile rebate of duty on exports was accorded, overseas buyers would be encouraged and at the same time domestic producers would tend to increase the proportion of exportable teas in production.

Another very useful suggestion offered by Mr. Jarvis related to the task of achieving the Planning Commission's production target of at 900 million lbs. for 1966. He called upon the Government to reduce taxes progressively *pro rata* to the overall increase in crop. By doing so, while the Government's revenues from the industry as a whole would not fall, gardens would be encouraged to produce more, since they would be keenly aware that such increase in production would not be at the cost of marginal increase in cost of production.

Recent expositions of the Government policies on the tea industry by official spokesmen remain a puzzle for the trade and industry. On the one hand, there is the acute need to boost exports in order to minimise the strains which the country is experiencing as a result of the present foreign exchange crisis. At the same time, the Government admits that India's agricultural commodities (which should include tea) as well as industrial products are priced out of international markets. The imperative need to reduce cost of production is evident. And yet, on the industry's strong case for abolition of the export duty, the Government's reply is that tax concessions, if they went beyond a certain limit, would invite unfair competition from other producing countries. The advantages which the tea industry in Ceylon and Africa enjoy by way of cheap labour as well as a realistic level of taxation are already reflected in increased exports by them. Year after year, they are securing a greater share of the expansion in international markets, and the industry in India, which is the world's largest producer, is groaning under the weight of heavy taxation. India's inadequate share in the increase in world consumption is a subject which deserves greater attention.

The trade noted with considerable satisfaction the consensus of opinion in the Board of Trade meeting here last week that another tea delegation be sent to Australia and the Far East. The trade would also like to emphasise the need for greater publicity in the U.S.S.R. and other East European countries. Since cost of production of tea in the U.S.S.R. is prohibitively high, according to the F.A.O., the trade believes that possibilities of increased exports to the Communist bloc countries are bright.

At the Board of Trade meeting, the Minister for International Trade, Mr. Manubhai Shah, rightly emphasised the need to improve production by artificial irrigation and application of fertilisers. The tea industry has time and again complained of inadequate allotment of fertilisers and would gladly receive the increased allotment. Whether the industry should pay the same price for fertilisers as any other agricultural industry should also be considered.

Dusts offered during last week's sales for internal consumption totalled 24,908 chests, of which 1,704 chests were of the old season's tea. Darjeelings were the strongest feature and were absorbed at dearer rates. On the other hand, there was only limited demand for orthodox and legg-cut teas, prices of which declined by 30 nP. There were some withdrawals of the legg-cut teas. The few brighter lines were steady. C.T.C. teas were in good demand. Prices of good C.T.Cs rose. Medium varieties were irregular; the poorer liquorings being quiet and the brighter lines steady. The quotations per one kg. (in rupees), inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 7.00, medium Assam C.T.C. dust 5.60 to 6.10, legg-cut dust 4.10 to 4.50, plain orthodox dust 3.70 to 4.00.

There was good general demand during yesterday's export offerings which totalled 41,556 packages. Among C.T.C. teas, the better liquoring varieties were a very strong feature and advanced on keen competition. Medium C.T.Cs were irregular, but the bright liquoring lines were dearer. The more ordinary types eased. Generally, the plain and medium teas were firm to dearer, and the better orthodox liquoring teas, possessing good leaf appearance, appreciated in prices. Tippy teas received inadequate attention leading to withdrawals, but the low-priced whole leaf grades were in good demand. Legg-cut teas were generally irregular, but the better varieties were supported. Keen competition was offered to the best flavoury Darjeelings which realised good prices. The rest of Darjeelings were easy and liberally withdrawn. The quotations per one kg. (in rupees), inclusive of excise duty, were: Best Assam C.T.C. fannings 7 to 8, best Assam C.T.C. B.P. 7 to 8, medium Assam C.T.C. fannings 5.60 to 6, medium Assam C.T.C. B.P. 5.80 to 6.20, plain fannings 4.10 to 4.40, clean plain pekoe 4.60 to 4.80 and plain B.P. 4 to 4.20.

MODEST GAINS IN METALS

(From Our Own Correspondent)

CALCUTTA, *10th July*

Following good support, metals recorded further modest gains here during the week under review. Consumers were keen to book their requirements before prices rose further. On the London Metal Exchange, conditions were firm. After opening here at Rs. 1,840 per 100 kgs, tin improved to Rs. 1,948.75 on good support against the background of the none-too-satisfactory stock position. In London, it opened at £867 per ton and soon moved up to £872, but closed at £868. The firm trend in London was attributed to the change in the U.S. attitude in regard to the proposed releases from the stockpiles. It is now believed that the releases would be in small quantities, with good intervals, in order that world prices might not be affected.

Meanwhile, producing countries have demanded that the U.S. Government should announce early its programme of releases in categorical terms in order to remove any uncertainty. This is necessary for the producing countries to proceed with their plans to increase production. The recent slump in London and Singapore markets has been a source of great discouragement to small producers. Besides, the cost of production in exploiting abandoned mines would be higher. If world production cannot be increased, the shortage this year would aggregate 22,000 tons. The possibility that the Communist bloc countries would export about 5,000 tons to the Western markets is difficult of realisation, considering the recent purchases by Russia from the London and other world markets. Earlier reports of a shortage of 10,000 tons were based on the belief that the U.S.S.R. would export tin this year and that production in Indonesia would show a visible improvement. However, reports from Indonesia do not support the hope for increased production.

Against the background of inadequate imports of non-ferrous metals and the industry's constant complaints in regard to lack of adequate facilities even to work fully on a single-shift capacity, it is good news that the U.S.S.R. has agreed to supply non-ferrous metals to India against rupee payment. Aluminium ingots, valued Rs. 62 lakhs, lead worth Rs. 25 lakhs, and virgin zinc worth Rs. 80 lakhs would accordingly be imported and distributed in the country by the State Trading Corporation of India. It may be noted that at the recent public inquiry by the Tariff Commission into the claim of the non-ferrous metals industry for continuance of protection for a further period of three to five years, which was held at Bombay, the industry represented that, if it were only supplied with adequate raw materials, it could significantly increase production of non-ferrous semis, such as, brass and copper tubes, sections, rods, sheets, wires and cables, and thus save the country's foreign exchange resources. In view of restricted imports of non-ferrous metals, the indigenous output is very inadequate, and the units producing semis are not able to increase production. At the public inquiry, reference was made to the complaints from consumers that prices of Indian production of semis were 60 per cent above those of the imported items. The industry's contention is that only increased production would result in decreasing cost of marginal output.

At present, the items of semi-manufactures enjoying protection are: Lead sheets (other than sheets for tea-chests), zinc sheets and strips, copper rods (other than electrolytic), copper pipes and tubes and brass rods, pipes and tubes. At the inquiry, it was pointed out on behalf of the Tariff Commission that in 1961 the units producing pipes and tubes could produce only 431 tonnes as against their single-shift installed capacity of 4,131 tonnes. Production of copper and brass rods was only 2,366 tonnes, as against the capacity of 4,156 tonnes. As a result of the shortfall in production, the country had to import 1,750 tonnes of tubes and 1,405 tonnes of rods. In the case of zinc sheets and strips, as against the capacity of 2,650 tonnes, the industry produced 3,832 tonnes and imports therefore, were only 218 tonnes. Lead sheet imports were 343 tonnes; production in 1961 was only 1,121 tonnes, as against the capacity of 3,840 tonnes. During recent months, in view of restricted power supply, production has declined further. Since the supply is cut without prior notice, much inconvenience is being experienced by the industry. It has been distressing news that the power supply to the industry is proposed to be cut further by 15 per cent very shortly.

On the London Metal Exchange, spot copper was unchanged at £234 a ton. Zinc opened at £67 a ton and eased to £66⅝. During the week, there was less demand from the Continent in London. Spot lead, at £55¾ a ton, remained unchanged throughout the week. In Calcutta, electrolytic zinc was two points higher at Rs. 269.75 per 100 kgs. following increased interest shown by the dealers. Copper scrap was in good demand, despite increased arrivals against the D.L.F. import licences.

HESSIANS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, *10th July*

The announcement by the Argentina Government of drastic measures to meet the foreign exchange crisis led to apprehensions here as to whether that country would be able to complete the purchase programme for hessian. Thanks to these apprehensions, prices of hessian gave way during the week under review. U.S. support, though it continued, was only of a hand-to-mouth basis, and the quantities involved were not sufficient to maintain prices. That recent purchases in heavy goods and hessian had been heavy was indicated in that jute goods vied with tea in taking up as much liner space as possible. With the purchases made about a week ago, Argentina completed the quota for June. It was expected that 8,000 bales more would be purchased shortly and, at one time, ready hessian 40" 10 oz. was above Rs. 64 on the news that Argentina had arrangements with a shipping company to lift about 16,000 bales. However, after completing the June quota, Argentina has desisted from buying at higher levels and this, coupled with the foreign exchange crisis, led to fears that the purchasing programme for July and August might not be revised. There was also the realisation in the market that prices had moved so high as to make follow-up demand difficult. The U.K. had already purchased about 1,000 bales for July-September shipment. U.S. buyers preferred to go slowly, but the market was aware that consumers in the U.S. would have to buy substantially before September. Orders for 9-porter hessian are expected from Canada.

Normally, the existing power shortage and the proposal of the Calcutta Electric Supply Corporation to cut power supply to mills by 15 per cent would have led to a rise in prices. But this was not so, since it was hoped that the Government would make earnest attempts not to cut supply of power to jute mills at least, in view of the need to maintain exports of goods at a high level. The proposed cut rightly occupied the serious attention of the Board of Trade when it met here last week under the chairmanship of the Minister for International Trade, Mr. Manubhai Shah. The meeting strongly felt that, in the context of the need to increase export earnings, the cut should not apply to export industries generally and to jute mills, in particular. The Board, therefore, stated that the cut would not be enforced on the jute industry, and accordingly appealed to the Central and West Bengal Governments, the Damodar Valley Corporation and the State Electricity Board. However, the power position being what it is, there is the genuine concern as to how the jute industry can escape the cut. For it is known that the D.V.C. is not able to supply more power to the C.E.S.C. than its contractual obligation. As an alternative to a cut, shedding may have to be resorted to. Latest reports from New Delhi assure that the power cut would not apply to the jute industry.

At a time when foreign demand for goods has revived and mills are called upon to produce as much as possible having regard to the need not only to satisfy overseas demand in full but also to consume increased supplies of fibre, it would, indeed, be unfortunate if the mills were forced to reduce production. A 15 per cent cut in power would mean a production loss of 4,000 tons a month. In the context of present conditions in the market, prices are bound to rise, leading to dissatisfaction among consumers abroad. The Board of Trade's call to the jute industry to leave no stone unturned in boosting exports has been welcomed. It is only with a view to maximising exports that the mills are, it is pointed out here, operating full working hours and had unsealed as many looms as possible commensurate with the spinning capacity. The Board, at its meeting, drew the attention of mills to the need for diversifying its products, as it felt that such a measure would throw open enormous export possibilities. Attention of mills was drawn, for instance, to the large overseas market for tuft carpet, the production of which in India is at present insignificant. In an attempt to bring home the immense possibilities of diversification, the Board's decision to assist the industry in setting up a permanent exhibition at Calcutta where the jute goods varieties produced in different countries would be on display has been timely.

As regards heavy goods, prices were maintained during the week under review. This was so, because, in recent weeks, prices of hessian had moved faster than sacking goods, and as such the decline in hessian prices had already been discounted in sacking. Australia was expected to lift heavy goods in significant quantities, and it was felt that silence on the part of Australian buyers during the week had been due to expectations of a fall in prices. Cuba is also expected to buy, but a fall in agricultural production there is causing anxiety. So far as the gunny market generally is concerned, the diversion of two ships carrying U.S wheat to East Pakistan is interpreted bearishly. For, if the ships were to be received in India, the Government of India would have required bags for storage of wheat and eventual distribution. To this factor is attributed the delay in the expected tender from the Government.

On Tuesday last, ready hessian 40" 10 oz. was steady at Rs. 64.50, though business passing was only small. For the rumours of power cut led to lively activity in the bazar. Ready B. twills opened at Rs. 128.70 and closed with an attractive gain at Rs. 130.50. On the following day, ready B. twills scored to Rs. 134.50, following substantial interest of buyers on behalf of the Dominican Republic. However, hessian was affected by the selling pressure in the futures market. As a result, ready hessian 40" 10 oz. dropped to Rs. 61.25. Profit-taking was a feature of activity on Thursday, leading hessian 40" 10 oz. to ease to Rs. 59.25 and B. twills to Rs. 133. At these levels, overseas inquiries revived and, on Friday, hessian 40" 10 oz. recovered to Rs. 59.75 and B. twills to Rs. 134. Prices during the week-end at Rs. 60 and Rs. 134.50 gained small additions, due to a steady raw jute market. Details relating to goods in stock with mills at the end of last month were available yesterday. The overall stocks fell by 3,800 tonnes. The largest fall of 3,300 tonnes was recorded in miscellaneous constructions. Hessian fell by 2,100 tonnes while sacking recorded a rise of 1,600 tonnes. Yesterday, prices declined, with hessian 40" 10 oz. quoting at Rs. 59.50 and B. twills at Rs. 132.75 due to activities in the local market.

The fibre market was steady. There was an increase in new crop forward dealings. Old crop was quoted at a discount of Re. 1.50 a maund as compared with September-October. New crop quotations were: Assam bottoms Rs. 33; northern bottoms Rs. 32.50; and Daisee bottoms Rs. 36. Reports of further floods in Assam encouraged the bulls, although it had been believed earlier that there had been no great damage to the jute crop. Greater damage was reported to the paddy crop. Flood reports caused anxiety, since the area sown has been lower than last year and, if floods affect standing crop, the produce would be considerably lower than last years. The lack of adequate monsoon showers in some of the West Bengal districts countries to cause anxiety, as, in the absence of adequate water level in canals and tanks, retting would not be satisfactory and quality would be affected. The standing crop also now requires heavy rains.

PEPPER EASY

(Messrs. Parekh and Co.)

BOMBAY, *11th July*

Barring a small revival of short duration, Malabar black pepper ruled easy during the fortnight under pressure of liquidation of July delivery by weak bulls and in sympathy with Singapore where white was down from Str.$157½ to Str.$150 and black from Str.$120 to Str.$115.

New York, after a sizable buying during June, appears to have withdrawn. The dealers there reduced their selling limit for spot from $0.37 to $0.36 as they were able to replace with a margin from Singapore. London is reported quiet on expectations that Brazil will soon be in the market. Lower offers from Sarawak are also responsible for the recent quietness on the Continent.

Some buying by the East European countries for Malabar black was noticed, but it was not sufficient to lift up prices, as the growers remained continuous sellers.

Good rain is reported from all the pepper growing areas. Earlier fear that the crop would be affected is now set at rest, but the drought in June will most likely delay the arrivals of the new crop.

Ungarbled moved between Rs. 299.50 and Rs. 303.50 and garbled between Rs. 310 and Rs. 314. July delivery was traded at the highest at Rs. 318 and the lowest at Rs. 310. Business in August was mostly of the switching nature and a premium of Rs. 5 was demanded for switching from July to August.

The future depends upon the selling policy of Indonesia, as their State Trading Corporations are holding the majority of the stock of Lampong and Muntok.

Ready pepper in Bombay is nominally quoted at Rs. 164 per 50 kilos.

KIPS RULE STEADY

(From Our Own Correspondent)

MADRAS, *9th July*

Kips ruled steady here this week, despite importers' resistance to the levels established earlier. It had been reported that the U.K. importers were pressing sales, anticipating decline in prices later. Export trading was, therefore, very difficult. Arrivals of hides were on the usual scale and clearance was slow. Stockholders were unwilling to reduce prices. Stocks of cow calf skins were small for which there was good demand. Inquiries for buff calf were dormant.

There was not much change in the tanned skins market, except that demand for middle class sheep skins continued brisk as also for light weight and extra heavy goat skins. Other lines ruled quiet.

In the tanned skins auctions held in the U.K. last week, only fresh parcels attracted buyers and fetched current c.i.f. levels. Old lots of goat skins were neglected and a few parcels of sheep skins realised low prices. Shipments (in bales) during June were 2,957 of tanned cow hides, 298 cow calf, 43 buff hides, 467 buff calf, 377 goat skins, and 257 sheep skins to U.K., 311 cow hides, 75 cow calf, one buff hides, 22 buff calf, 767 goat skins and 344 sheep skins to the Continental ports; one cow calf, 5 buff hides, 125 buff calf, 262 goat skins and one sheep skin to the U.S. and 10 goat skins and 218 sheep skins to Japan. It will be noted that the volume of shipments to the Continental ports has been maintained.

The following were the ruling prices (in rupees) per lb. for unassorted lots in the local market: Tanned cow hides 8-8½ lbs. average 2.12 to 2.20, tanned cow calf 1½-2 lbs. average 3.60 to 3.75, tanned buff hides 12-14 lbs. average 1.70 to 1.75, tanned buff-calf 1½-2 lbs. average 3.12 to 3.20.

THE "BLUE MONDAY" AND AFTER

(Concluded from page 65)

fundamental causes of that country's balance-of-payments problem and that suffocating taxes on work and production explain why the U.S. economy has failed to move ahead as rapidly as it could and should.

Testifying before the Senate Banking and Currency Committee, 20th June, Under Secretary of the Treasury, Mr. Robert V. Roosa, was asked what the effect would be on confidence in the dollar, if the debt limit was raised and taxes were reduced, while maintaining spending at present or higher levels. Mr. Roosa reported that foreign opinion was sensitive to "the appearance of careless expenditure policy" and suggested that it would make more sense from the standpoint of the foreign observer if there was an expenditure limit rather than a debt limit. He added:

"I think as far as the foreign observer in general is concerned there has emerged out of the discussion of the last three years of our balance-of-payments problem a recognition that this is going to take time and a very massive effort to restore the position of the American economy to its previous comparative strength and dominance in world trade, and, I think, there would be understanding for a tax reduction, if it were clear that this was related to an incentive programme that gave great promise for future cost reduction as well as for expansion in the producing capacity of the American economy."

The answers to the questions posed by the President at Yale begin to emerge. Confidence in the dollar can be sustained by retreating from loose spending and easy money. Forward momentum—the interest of people in investing and creating jobs in America—can be stimulated by easing up on the tax brakes. Europe has shown how it works.

COMMERCE AND INDUSTRY

(*Concluded from page 82*)

endowments to increase relatively? Apparently, the role of the relative supply of factors of production as a determinant of the direction of trade tends to lose ground, and it must be deduced that there is increased scope for re-arranging factors of production for productive purposes in the process of industrialisation. To the extent to which complementarity express itself in differences in cost ratios, it is something that can be created.

"The fact, therefore, that almost all countries in the E.C.A.F.E. region are at present producers of primary commodities should not be taken to imply absence of scope for regional co-operation. On the contrary, the more the commodities produced under tariff protection in the countries concerned overlap each other, the greater will be the potential gains to be derived from trade co-operation. Actually, the question of the scope for co-operation cannot be decided without reference to the extent of trade barriers that are likely to prevail in the future. It is also true that, even if such a scope is limited at present, it will grow in the future, given an appropriate economic policy, as industrialisation increases, disclosing further complementarities that are unexploited by the present level and pattern of production."

Economic Development

The basic case for regional co-operation among Asian countries rests on its ability to accelerate their economic development. The development of the region at present is inhibited by the insufficient capacity for the import of capital goods as a result of exports from this region, remaining largely stagnant. On the basis of a detailed examination of the supply and demand conditions of the region's exports, the Study concludes that the relatively slow expansion of world demand for the traditional export commodities of the region will make it impossible for the primary producers to rely on the traditional pattern of trade for accelerated growth. Nor are prospects bright for a considerable expansion of exports of non-traditional goods to countries outside the region, so long as industrially developed countries change their trade policies; there is no sign as yet, say the authors of the Study, that such a change will be forthcoming.

The primary producing countries will, therefore, have to aim at diversified output expansion for home markets, substituting domestic production for imports. But if import substitution is organised on a limited national scale, this may not meet the criteria of economic and technological feasibility. It is, in this context, that the E.C.A.F.E. Study advocates the adoption of import substitution on a regional level. Substitution, according to it, can be promoted and further accelerated in respect of imports from other parts of the world, apart from consciously cultivating existing possibilities of specialisation and mutual trade within the region. In short, the objective is ultimate co-ordination of national plans of the various countries in the region on a long-term basis. Regional co-operation provides, to quote the Study again, the only framework in which economic development can be accelerated without detriment to the efficiency and advantages of international specialisation. Its feasibility, however, remains to be studied, with particular reference to the trends in intra-regional trade, resource allocation in agriculture and industry and prospects for mobilising resources for financing trade and development. These aspects of regional co-operation have also been studied by the E.C.A.F.E. Secretariat, and they will form the subject matter of another article.

TEXTILES

(*Concluded from page 66*)

The list of major consumers (arranged in the order of their offtake) of various varieties during the year 1961 is given in Table D below:

TABLE D: *Major Consumers*

(In million yards)

Grey sheeting	U.K. 81.13; Sudan 38.93; Br. E. Africa 22.94; Ethiopia 6.62; Br. W. Africa 5.55; Aden 5.17; Canada 5.05; Switzerland 4.93; Belgium 3.89; Australia 3.62.
Grey drill	U.K. 8.33; Br. E. Africa 8.33; Ethiopia 3.34.
Grey shirting	U.K. 5.75.
Grey domestics	Br. W. Africa 4.21.
Bleached longcloth	Indonesia 11.69; Malaya-Singapore 5.44; Afghanistan 3.30; Aden 4.44.
Bleached voiles and mulls ..	Afghanistan 4.79; Sudan 3.83.
Printed voiles and mulls ..	Arabia 5.48.
Printed *saris* and *dhotis* ..	Ceylon 3.22.
Piece-dyed drill	Afghanistan 3.62.
Piece-dyed voiles and mulls ..	Arabia 5.09.

Foreign Exchange Earnings

Thanks to the appreciable fall of 121 million yards in the quantum of mill cotton piecegoods exported during 1961 as compared with the previous year, the foreign exchange earned from them was substantially lower at Rs. 46.16 crores, as against Rs. 54.70 crores in 1960 and Rs. 54.72 crores in 1959. The decline in earnings would have been more marked but for the persistently rising trend of prices. The average value per yard of cloth exported, which stood at 67 nP in 1959, moved up to 79 nP in 1960 and still further to 80 nP in 1961. Referring to the price aspect, the Export Promotion Council's study observes:

"An outstanding feature of the year has been the fact that, although the trend in the exchange earned per yard was an increasing one in the first three quarters followed by a decline in the last quarter, yet there have not been any violent fluctuations as were witnessed in the preceding two years; in fact, both the rise and subsequent fall in 1961 were steady. The average for the year was slightly above that in 1960 but well above that in 1959. A possible explanation may be the increased exports of printed and piece-dyed fabrics which do earn better exchange than greys, but for exporting which it has been found necessary to cut sharply on prices (with the aid of incentives) in order to be able to meet international competition."

Other Cotton Manufactures

The value of other cotton manufactures exported in 1961 was also lower at Rs. 8.30 crores, as against Rs. 9.90 crores and Rs. 11.16 crores respectively, in the two previous years. Taking both piecegoods and other cotton manufactures, the total foreign exchange earned in 1961 was Rs. 54.46 crores, as against Rs. 64.61 crores in 1960 and Rs. 65.88 crores in 1959.

Handloom (and powerloom) goods are said to account for roughly 10 per cent of the aggregate exports of cotton manufactures other than mill-made piecegoods. Excluding these goods, the total exports of mill-made cotton manufactures other than piecegoods during 1961 amounted to Rs. 7.99 crores. The actual exports of some of these goods in terms of lakhs of rupees during 1961 are (the figures in brackets relate to the previous year) as follows:

Yarn, etc.: Yarn 372.8 (370.4); hard waste 40.7 (51.9); sewing thread 38.1 (36.6); twine thread 6.7 (36.0); rope and twine 3.7 (2.8)—total 462.0 (497.7).

Apparel: Shirts 1.3 (3.0); outer garments for women and girls 0.2 (0.8); uniforms and accoutrements 2.2 (2.0)—total 3.7 (5.8).

Bed pillow, table covers, etc.: Handkerchiefs 2.2 (3.5); laces and lace fabrics 2.2 (1.8); bed covers 17.8 (29.7); bedsheets 17.6 (18.8); bedspreads 22.0 (33.7); counterpanes 24.6 (23.8); pillow cases 3.5 (1.3); pillow slips 2.5 (3.2); table cloth 0.4 (2.2); table covers 0.6 (1.2)—total 89.0 (113.9).

Floor coverings: Blankets 0.1 (0.7); cotton waste blankets 56.5 (62.7); carpets, carpeting and mats 32.7 (76.0); linoleum 17.7 (9.6)—total 50.4 (85.6).

Hosiery: Knitted piecegoods 4.7 (4.0); knitted outerwear 6.5 (12.3); stocking and hose 1.5 (2.1); knitted U and N wears 1.7 (3.2)—total 14.4 (21.6).

Towels and napkins: Mosquito netting 12.7 (15.5); towels in the piece 13.8 (168.5); napkins 0.3 (0.6)—total 131.1 (169.1).

Miscellaneous: Belting 1.2 (1.1); braids and trimmings 1.1 (1.1); duster cloth and glass cloth 0.2 (0.3); imitation leather cloth 0.9 (4.2); lamp wicks 0.4 (0.6); cotton linters 0.6 (0.7); cotton sacks 1.1 (4.5); total 5.5 (12.5)—grand total 829.8 (990.4).

Note: Figures for April to December 1961 relate to mill-made cotton manufactures only.

India also exported by way of post-parcel last year Rs. 12.53 lakhs worth of mixed hosiery goods (Rs. 18.94 lakhs in 1960 and Rs. 31.29 lakhs in 1959). The bulk of these, to the extent of Rs. 7.30 lakhs, was accounted for by cardigans, jerseys and pullovers.

MARKET GOSSIP

(*Concluded from page 55*)

for quite a few months. It is reported that Mr. Desai has clarified India's stand on three points: One, India does not oppose the application of external tariff by the end of the transitional phase, that is, by 1970. Two, it is willing to make voluntary restriction on exports, particularly textiles, if they adversely affect Common Market industries, provided the existing position in regard to exports to Britain is allowed to continue for some years. Three, it agrees that a trade agreement with the expanded Common Market need not be based on duty-free entry. Although *nil* tariffs are sought for tea and jute, low tariffs will be acceptable so far as the other commodities are concerned. India is also reported to have agreed that a "comprehensive agreement" by an enlarged Common Market, including the U.K., is the final solution for the country's long-term problems. The overall impression that one gets from these reports is that, instead of wresting more concessions from the Six, India itself is now climbing down from some of its earlier demands for safeguarding its exports.

Apprehensions about possible setbacks to established patterns of trade in the event of U.K.'s entry into the Common Market are not confined to India alone, but are shared by all the other developing countries as well. The economic conference of twenty-five non-aligned nations, which commenced at Cairo on Monday this week, fully reflects this mood. The conference is devoting particular attention to the repercussions of the formation of trade blocs by developed countries, particularly the Common Market, on the developing economies. The proposal of the non-aligned nations to convene an economic conference under U.N. auspices early next year to consider this problem is quite pertinent. If the U.K. manages to become a full member of the Common Market, as it now proposes to do, the European trade bloc will admittedly disrupt the traditional patterns of trade, besides strengthening their own bargaining power *vis-a-vis* the primary producers. These re-alignments in the world trading systems are obviously not in keeping with the spirit, if not the letter, of the G.A.T.T. The plea for a world conference under U.N. auspices to consider the question is, therefore, quite appropriate. It is to be hoped that the U.S. Government will extend its wholehearted support to this move, as the objective is to make sure that the Common Market will be outward-looking in the real sense of that term.

Notices

BURN AND COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Sixty-eighth Ordinary General Meeting) of the Company will be held on Monday, the 30th July, 1962, at 11 a.m., at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the audited accounts for the year ended 30th April, 1962 and the Directors' and Auditors' Reports thereon.
2. To declare a dividend on the Ordinary Shares. The dividend, if declared, will be paid on or after the 1st August, 1962, to the Shareholders whose names are on the Company's Register of Members for Ordinary Shares on the 30th July, 1962, or to their mandatees.
3. To appoint a Director in place of the retiring Director. In this connection notice is hereby given that Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 261 of that Act to move the following resolution as a Special Resolution:

   "That Mr. K. L. Ganguly, the Director retiring by rotation, who is an associate of the Managing Agents of the Company, be and is hereby appointed a Director of the Company."
4. To appoint Auditors and fix their remuneration.

The Ordinary Share Register and Transfer Books of the Company will be closed from the 21st July, 1962 to the 30th July, 1962, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
ROMEN MOOKERJEE,
Director,
Managing Agents.

Registered Office,
12, MISSION ROW,
CALCUTTA-1,
4th July, 1962.

An Explanatory Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

THE TRAVANCORE OGALE GLASS MANUFACTURING COMPANY LTD.

AN EXTRAORDINARY GENERAL MEETING of the Shareholders of the Company will be held at the Registered Office of the Company, Glass Factory Premises, Manjummel, Alwaye, on 5th September 1962, at 2 p.m. Notices of the meeting setting out the agenda and Explanatory Statement on the special business to be transacted thereat have been posted to the members.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
For OGALE BROTHERS (PRIVATE) LTD.,
Managing Agents.
N. P. OGALE.
Director.

Registered Office:
MANJUMMEL,
June 1, 1962.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2675 BOMBAY, 21st JULY 1962 PRICE Rs. 2

BRITISH CABINET RESHUFFLE

THE reshuffling of the British Cabinet by Prime Minister Harold Macmillan this week, appears to be lacking in convincing reasons. The changes made have affected some of the senior ministers, including the efficient Chancellor of the Exchequer Mr. Selwyn Lloyd. There have been no major political crises, domestic or foreign. Similarly, there have been no economic crises either. It is true that, in some of the recent by-elections, the Conservative Party had fared rather badly; with liberals coming to the fore. But such straws in the wind do not appear to be enough justification for the Prime Minister to make a sacrifice of this nature, though they may suffice to provoke Opposition parties to try to make political capital. It is also true that Britain's application to the Common Market for membership is meeting with heavy weather. Instead of being able to dictate terms to the Common Market countries as Britain had hoped to do by forming the E.F.T.A., it is being dictated by France and Germany as to how and when it could join the Common Market. Undoubtedly, the present British Government had underrated the significance of C.M. to Britain's future. And to make matters worse, it has been in such a great hurry to wind up the E.F.T.A., weaken the Commonwealth and jump into the Franco-German wagon that the whole thing looks to an outside observer as nothing short of a self-inflicted humiliation. This development has made the British Government unpopular with large sections of the public by offending their sense of pride. But, surely, the responsibility for it cannot be laid at the door of any one member, or a section, of the Cabinet. Whether it is the reversal in by-elections or the failure at the negotiating tables in Paris and Brussels, the responsibility for them is that of the Cabinet as a whole. A mere change of ministers is unlikely to undo the harm already done, if such has really been the case.

A poignant feature of the British Cabinet reshuffle is the dismissal of Mr. Selwyn Lloyd. Dismissal is doubtless the right word, for Mr. Macmillan demanded his resignation and Mr. Lloyd readily obliged, in keeping with democratic traditions. Not many friends of Britain will have shed a tear, if Mr. Macmillan had not retained Mr. Lloyd in the Cabinet which he first formed after the Suez episode. At least most people in this country will have regarded it as a fitting punishment to Mr. Lloyd. But as the Chancellor of the Exchequer in the last two years, he has served Britain ably. And it is ironical that he should have been asked to quit the Government at a time when the merits of his economic policies have been amply proved by results. Many are the economic achievements of Britain under Mr. Lloyd's policies. His firm wage-pause policy, though highly unpopular and controversial, has knocked some sense into the head of labour. Wage demands of late have been restrained and the idea that increases in incomes should not be in excess of the rise in productivity has gone home well. Creeping inflation may not have been completely eliminated, but its pace at least has been perceptibly slowed down. Critics there were in plenty of his dearer money policy also. It used to be argued that the high Bank rate was conferring a lot of benefits to those who were keeping balances in London and that it was reducing the benefits of Britain's invisible exports. This was true, of course, but these losses were minor as compared with the large gains on the balance of payments front. The pound sterling has been strong for quite some time. The external reserves of Britain have greatly improved. The massive borrowings from the I.M.F. have been virtually liquidated before time. Confidence of foreign investors in Britain has gone up to such an extent that they are buying even long-dated and irredeemable British Government securities. They would not be doing so, unless they have come to feel that it might not be necessary for the British authorities to employ in the foreseeable future the high Bank rate weapon. Britain's competitive capacity has apparently improved, as is evident from the encouraging increase in its exports. Further, Mr. Lloyd has been largely instrumental for the creation of the National Economic Development Council.

In one of his public speeches a week before his "resignation," Mr. Lloyd claimed that the economic policies with which he was associated had enabled his country to devote a higher proportion of its national income to investment and aid overseas, a higher proportion to investment at home in modernisation of factories, roads and railways and a smaller proportion in personal spending than eleven years ago. "The pay pause has," he averred, "ended as a substantial success. It slowed down the rate of increase in our costs at a time when costs in countries which competed with us were mounting rapidly. As a result, our exports are more competitive." Indeed, in introducing the novel system of pay pause, Mr. Lloyd gave a lead to other countries which were faced with wage-push price inflation. German leaders in power, for instance, used to quote Britain's example as worthy of adoption in their country. It will be no exaggeration to say that even President Kennedy must have felt emboldened to take the firm stand he did against the steel companies by the pay-pause policy of Britain. In sending away Mr. Lloyd, Mr. Macmillan might have indirectly weakened the forces that were restraining the wage-induced inflation in many parts of the free world.

It is not suggested that Mr. Lloyd was not free from faults. He made a mistake in April 1961, when he presented a soft budget, giving tax concessions to the rich. In less than three months, he had to introduce a "little budget", incorporating in it crisis measures. His pay pause was unpopular not only with industrial workers but also with the middle class. His attempts to tackle speculative gains were feeble and unsuccessful, serving to confirm the common man's impression that he was pro-capitalist and anti-working class. When weighed against the large gains to the country as a whole, these faults are tolerable, even if they are politically inconvenient. The significant feature of Mr. Lloyd's policies is that it has not led to any fall in the living standards of British workers or in employment. Britain is still a country of full employment and high living standards. Some say that, in recent months, there have been some signs of a slight recession. But sensing this in good time, Mr. Lloyd had reduced the Bank rate, lifted the restrictions on banks in regard to special deposits and not sought the renewal of pay pause. So even the charge of inflexibility against him does not bear scrutiny.

The main reason why this able Chancellor had to go was, we are told, the unpopularity of the policies with which he had been associated. But this is hardly an explanation, because no Finance Minister can successfully clear an economic mess or overcome an economic crisis without resorting to measures that are painful. It is well known that a chronic malady needs a drastic remedy. Mr. Lloyd's dismissal is akin to a patient taking his doctor seriously to task for having successfully cured him by administering a bitter pill. Strange are the explanations given by some in Britain for the "betrayal" of Mr. Lloyd, to quote the expression aptly used by a British commentator. Mr. Macmillan himself says in his acknowledgment to Mr. Lloyd's letter of resignation that "we intend to continue on the path that you have prepared" and that he is "certain that this is the only way in which we can build growth upon a sound basis." Many in Britain seem to share this view. And yet it is argued that Mr. Lloyd had to give up his job, because he presented his policies "too inflexibly and unimaginatively." It is further argued that he failed to impress the audiences in television and that he was very poor in the public relations job. If this view is accepted, it means that the Finance Minister of a modern democratic government must have, in addition to the economic competence, generally expected of him, not only a pleasing personality but also pleasant manners, that is, he should be able to sell to the public his ideas, policies and remedies in a very agreeable fashion. He should, in short, be an ace public relations manager and an adept at television appearances. This seems to be a new qualification for finance ministership, though those who have read the works of Manu, the great Hindu law giver, may disagree with this view, for they may well exclaim: Has not Manu said that a Finance Minister must collect taxes from the people in the same way as a bee gathers honey from flowers! Be that as it may, it is claimed by some British commentators that Mr. Reginald Maudling, the erstwhile Colonial Secretary who has succeeded Mr. Lloyd, has all these additional qualities and that he would be able to pursue the policies of his predecessor by carrying the public with him. Describing the qualities of the new Chancellor of the Exchequer, the London *Financial Times*, for instance, says: "He is a gregarious man, with experience of economic matters, an acquaintance with businessmen, and a mind of his own. His reluctance to accept official briefs without question may be a useful asset in the present situation; it is to be hoped, from the public relations point of view, that he will also refuse to accept official jargon." It remains to be seen whether a mere change of personality and expert public relationship will make Mr. Lloyd's policies more acceptable.

MINERAL DEVELOPMENT

THANKS largely to the impetus provided by industrialisation over the last decade, India's metalliferous mining industry, covering a wide variety of minerals, has registered some progress. The aggregate number of mines has increased from 1,203 in 1950 to 2,639 (as of 1960). The number of persons employed by the industry has likewise increased from 121,000 to 255,000. And the value of output of minerals—as many as 45 of them, with stone and gravel at one end, and gold and diamond at the other—has increased from Rs. 36.7 crores to Rs. 50.1 crores. Figures given in the table on this page would, however, show that the entire increase in the value of output has been accounted for by just 11 minerals, namely, iron ore, manganese ore, limestone, chromite, ilmenite, bauxite, magnesite, gypsum, copper ore, lead concentrates and zinc concentrates. This progress, though substantial, has, however, not been commensurate with the needs of industrialisation and export possibilities. It would appear that any all-round development of minerals, which are important either as raw materials for industries or as export commodities, is yet to take place on the required scale.

The mineral requirements of the third Plan period are going to be very heavy. The annual output of iron ore, for instance, would have to be trebled to provide 20 million tons for the iron and steel industry and 10 million tons for export by the end of the Plan. The demand for copper by 1965 is estimated at 150,000 tons, but its current production is less than 9,000 tons per annum. Nearly 500,000 tons of bauxite for the aluminium industry, 2.1 million tons of gypsum for fertiliser and cement industries, 30 million tons of limestone for cement, steel and ferro-manganese industries and 2.0 million tons of manganese ore for domestic industries and for export are other targeted annual requirements under the third Plan. But the actual production of some of the important minerals in the first year (1961-62) of the Plan has not been significantly higher than in 1960-61. The output of iron ore, for instance, was 12.8 million tons in 1961-62, as compared with 11.0 million tons in the previous year, and of copper ore 450.000 tons, as against 420,000 tons. In some lines, such as lead concentrates and zinc concentrates, the output has even fallen—from 6.400 tons in 1960-61 to 5,200 tons in 1961-62 in the case of the former and from 10,000 tons to 9,000 tons in the case of the latter. The progress, thus far, under the third Plan does not warrant any optimism on the score of mineral development.

What factors, if any, are impeding or slowing down mineral development? An unduly rigid interpretation of the Industrial Policy Resolution of 1956 is certainly one of the factors responsible for the slow pace of progress. Mining of iron ore, manganese ore, chrome ore, gypsum, sulphur, gold and diamond, mining and processing of copper, lead, zinc, tin, molybdenum and wolfram and atomic energy minerals, it may be recalled, have been listed among industries in Schedule A of the Resolution. All new units in these industries can be set up only by the State; this, however, does not preclude the expansion of the existing privately-owned units or the possibility of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require. The pattern of investment in mineral development under the third Plan suggests that the relevant Schedule A reservations to the public sector have been closely adhered to, without exercising the option contained in it. This surely is not in public interest, as it has placed on the country avoidable strains and stresses. It is revealing, in this connection, to find that the public sector has been allotted Rs. 478 crores (with a foreign exchange component of Rs. 200 crores) for mineral development (covering coal, petroleum and minerals) by way of investment outlay, whereas the private sector's share under the same head is just Rs. 60 crores (with a foreign exchange component of Rs. 28 crores) and, that too, only on account of the coal industry. The third Plan, thus, has provided no scope for new investment by the private sector in non-coal mineral expansion. Logically, therefore, the public sector alone can take the credit for whatever progress is achieved or be held responsible for failure or slow progress in this field.

The reservation of mining areas for exploitation in the public sector, in terms of the Industrial Policy Resolution, has been, and is being, made in a haphazard and indiscriminate manner, and this is impeding mineral development. Many States have notified vast areas as reserved for exploitation in the public sector. But exploitation has not commenced in most of them, with the result that there has come about "economic blocking of otherwise promising areas." Many industries based on mineral raw materials need mines of their own to have a steady supply of such raw materials, but they are not being granted suitable portions of the reserved areas. The Ministry of Mines and Fuel, which has been notorious for following a dog-in-the-manger policy, has not accepted the suggestion of even the Maharashtra Government, namely, that mining leases may be granted to mineral-based private industries in areas reserved for State exploitation.

There are some discouraging factors at work even in the existing privately-operated mines which, of course, are numerous. For instance, the State Trading Corporation's policy governing iron ore purchases for export is having the effect of discouraging further extraction of iron ore in the private sector. The S.T.C. is known to have been insisting on selective mining of high grade ore. This insistence has led to the accumulation of lower grade ores in the mining areas, as ore bodies contain different qualities of ore in the same deposit. And this, in its turn, has discouraged further extraction. If the situation is to be remedied, the S.T.C. might have to establish a foreign market for iron ore of lower grades or of average composition, besides catering to the existing market for higher grade ore.

There is virtually no encouragement to mechanisation of mining operations, and this is responsible for the slow pace of mineral expansion. If the third Plan target for iron ore is to be achieved, mechanised mining may have to be encouraged. Actually the Geological, Mining and Metallurgical Society of India has

Volume and Value of Mineral Production

Mineral	1950		1960	
	Volume in '000 tons	Value in Rs. lakhs	Volume in '000 tons	Value in Rs. lakhs
Iron ore	2,970	154	10,520	770

Total ..	..	3,673	..	5,007

* Figures relate to calendar year 1951. 1 lakh=100,000.

recently put forward this suggestion. In the case of mica mining, mechanisation has been recently advocated by the Mineral Advisory Board. The Board's suggestion to the Government is to the effect that 10 per cent of the foreign exchange earned on mica exports be earmarked for importing machinery required by the mica industry. But no action seems to have been taken on suggestions of this kind, while all the foreign credits, such as those of the U.S. Export-Import Bank, the D.L.F. and the World Bank have been earmarked, almost exclusively, for mineral development in the public sector. Mr. K. D. Malaviya's latest statement, at the second annual review meeting of the officers of the Indian Bureau of Mines and the Geological Survey of India held at Nagpur on the 13th instant, that the Government has been considering a scheme in a "big way" to enter into a long-term arrangement with some foreign countries for the exchange of mineral resources and "know-how" is presumably related to mineral development in the public sector. It may be remembered, in this context, that the public sector alone needs $400 million for its mineral projects under the third Plan.

There is also a lot of uncertainty in the matter of royalty payable to State Governments for different minerals. While the Ministry of Mines and Fuel would prefer to have fixed rates of royalty for different minerals instead of relating it to variable factors like pitmouth value or f.o.r. price, several State Governments have opposed the Union Ministry's suggestion. Of course, fixed rates of royalty would be of advantage both to the public sector companies (mining as well as mineral-based industries) and to the private lessees and mineral-based industries in that they will help proper "forward planning" of mining operations and introduce an element of certainty in the determination of the prices of end-products. But there are also objections to this proposal on two grounds, namely, that it may be difficult for the lessees to pay the fixed rates if market prices fall and that the State Governments will be the losers if market prices go up. Whatever be the merits and demerits of the proposal for fixed rates of royalty, the question of revising the basis of calculating the royalty—a question in which the State Governments are most interested because of revenue considerations—would have to be solved at the earliest on the basis of some compromise formula and in the interests of mineral development.

In the final analysis, rapid mineral development in the country will depend on the performance of the public sector which is responsible for mineral exploration through the Indian Bureau of Mines and the Geological Survey of India and for mining and development through the National Mineral Development Corporation Ltd. and other departmental projects. How well the N.M.D.C., to which have been assigned the Kiriburu Iron Ore Project (Orissa), the Panna. Diamond Mining Project (Madhya Pradesh), the Khetri Copper Project (Rajasthan), the Daribo Copper Project (Rajasthan) and the Bailadila Iron Ore Project (Madhya Pradesh) has performed? The findings of the last Estimates Committee on the activities of the Corporation are by no means flattering. They reveal deplorable delays and waste in the execution of projects under its care. It will be no exaggeration to say that the public sector in the field of mineral development will be judged more by its ability to produce copper, sulphur, rare earths and other such scarce minerals than by its mining of iron ore and coal.

NEW LOANS SUCCESSFUL

THE slump in the share markets has not had any adverse effect on the Central Government's borrowing programme. On the contrary, there has been encouraging response to the new loans. This has, of course, nothing to do with the old and almost forgotten saying that, when equities wilt, Gilt-edgeds shine. For gone are the days, especially in this country, when individual investors had a sizable interest in Government loans. They now prefer to invest their savings in equities even when they offer yields lower than those available on Gilt-edgeds, because the former have on the whole served well as a hedge against inflation, whereas the latter have actually suffered a sizable capital depreciation nowadays. The main backing for Government loans is provided by banks, the Life Insurance Corporation and the provident funds. All these institutional investors had more funds to invest than a year before and the terms offered by the Government were also a little generous this time. There is a widespread impression in market circles that the credit for bringing about this change of heart in the authorities goes to the I.M.F. And it does not seem to be without some foundation, for they had to seek the Fund's assistance to augment the country's foreign exchange resources. They need not feel sorry for what they have done. The loan results have been more impressive than had been expected and the Centre's borrowing programme for the second year of the third Plan has been completed at one stroke, instead of at two as in the past year. The total subscriptions were Rs. 256.87 crores as compared with the invitation for Rs. 250 crores. Cash offerings aggregated Rs. 103.20 crores, while conversions accounted for Rs. 153.67 crores. This means that repayment of the two maturing loans in cash will be no more than Rs. 29.47 crores. In this respect, too, the Government has fared better than last year. It is, of course, not known to what extent the Reserve Bank supported the loan programme both by conversion and cash subscription. But knowledgable circles aver that the amount left over to be taken up by the Bank was smaller than it thought it would have to and definitely much less than last year. It is significant, in this connection, that the lists were open only for two days, instead of the three days provided for in the announcement. The fact that, of the total amount offered, Rs. 92.25 crores were for the short-dated 3½ per cent 1968 loan (with a redemption yield of 3.90 per cent) suggests that commercial banks were the largest supporters. That they were content with a lower rate of interest in preference to the 4½ per cent available on the long-dated (23-year) loan is indicative of their fear, not unjustified in our view, that the upward trend in the rates of interest and the downward trend in the value of Gilt-edged securities have by no means come to an end.

MARKET GOSSIP

Bankers' Seminar

A NEW spirit of co-operation and *camaraderie* is evident among bankers in the country. Although inter-bank competition has acquired a keener edge, thanks to the need to attract more deposits and more advances, bankers would appear to have realised that, since their interests are common and problems identical, closer co-operation can be mutually beneficial. Symbolic of this changed outlook of bankers is the three-day Seminar organised in the city this week by the Indian Banks Association. It was inaugurated by Mr. S. G. Barve, Finance Minister of Maharashtra. The Seminar has brought the bankers in the country together, for the first time, to exchange views on problems of common interest to the banking industry and therefore to the country as a whole. Although the Reserve Bank of India and the State Bank of India, the largest commercial bank in the country, are not directly participating in the Seminar, senior officers from these two institutions have been closely associated with the preparation of the Seminar papers which deal with as many as 23 subjects covering both short-term and long-term issues pertaining to banking and allied subjects. There is no doubt that a free exchange of views and sharing of experience, which the Seminar makes possible, will enable the banking industry and those who are in charge of regulating it to see the problems in the correct perspective and help in finding out solutions to them. It will also serve the purpose of educating public opinion.

We are told that the Indian Banks Association proposes to organise such seminars at suitable intervals in the future. This is a wise decision, for periodical discussions are essential for promoting the development of banking on sound lines. In fact, by the close of this year, three banking seminars would have been held in this country. It may be recalled here that, in March last, a seminar on development banks was held under the auspices of the I.C.I.C.I. In December next, a seminar of Asian Bankers is scheduled to be held. All this is good. Only, care must be taken to ensure that these seminars and symposiums do not degenerate into "an exercise in self advertisement," as Mr. G. L. Mehta put it in another context this week.

Welcoming the participants and guests, Mr. Tulsidas Kilachand, Chairman of the Indian Banks Association, set down in his speech some of the problems confronting banking in the country for the consideration of the Seminar. He did not himself suggest any solutions; nor did he anticipate the conclusions and recommendations of the Seminar. He only posed what he considered to be some of the more important issues which have a vital bearing on the development of banking both from short- and long-range points of view. The foremost challenge facing banks in the country is to raise their deposits to an extent which will enable them to provide the growing demand for bank finance in the third Plan. According to Mr. Kilachand, an investment of the magnitude envisaged in the third Plan is expected to create additional demand for bank finance of the order of Rs. 1,300 crores. Assuming that the ratio of advances to deposits would be maintained at 70 per cent, the additional deposits that would be required to provide Rs. 1,300 crores would be in the neighbourhood of Rs. 1,850 crores. To reach this target, bank deposits will have to grow at the rate of 20 per cent, which is a formidable challenge indeed for banks, considering that the rate of growth of deposits was 3.7 per cent per annum during the first Plan period and 12.6 per cent during the second Plan period. If the higher liquidity ratio proposed by the Reserve Bank of India is put into effect, it is doubtful, according to Mr. Kilachand, whether even a 20 per cent increase in deposits would be adequate to provide advances of the order of Rs. 1,300 crores. (One does not know from where Mr. Kilachand obtained this figure of Rs. 1,300 crores. Some days ago, the present Governor of the Reserve Bank gave the estimate of Rs. 600-700 crores for the last four years of the third Plan. On this basis, the additional deposits required by banks work out to Rs. 1,000 to Rs. 1,100 crores.) Anyway, to collect additional deposits of such a magnitude, concerted measures will be necessary. While Mr. Kilachand left it to the Seminar to consider the most effective way of achieving the target, he felt that extension of banking to unbanked areas, better service to customers, tax concessions to stimulate savings, etc., might help.

A second important problem over which banks and industry are equally exercised is to what extent banks can supply the needs of industry for medium and long-term finance. It has been suggested by the Finance Minister that the banks should give more support to the Government's borrowing programme and that industry should rely more on equity capital than on bank borrowing. Mr. Kilachand suggested that the Seminar might examine the appropriate manner in which the needs of industry and Government could be met. Similarly, he wanted the Seminar to examine the scope for extending further the financing of small-scale industries and commercial agriculture.

The absence of a well-organised credit information agency is a serious lacuna in the banking system in the country, to which Mr. H. V. R. Iengar had drawn pointed attention when he was the Governor of the Reserve Bank. At present, information regarding the business standing of individuals and firms is generally collected by banks on their own and they are reluctant to disclose or share such information with one another. The Reserve Bank of India is setting up a Credit Information Bureau for supplying banks with data relating to credit limits of parties from one or more banks. Mr. Kilachand suggested that the possibilities and implications of setting up a credit information bureau by the commercial banks themselves be examined by the Seminar.

Another subject he wanted the Seminar to examine was the question of an inter-bank agreement on service charges, the possibility of which is being currently explored. Mr. Kilachand did not indicate the possible conditions or provisions of the agreement but stressed that the agreement on deposit rates could form a suitable basis for further experimentation covering the terms of advances and services.

The shortage of trained personnel is already being felt by banks embarking on branch expansion. Accordingly, training of personnel has an intimate bearing on banking development in the country. Mr. Kilachand, therefore, did well to ask the Seminar to consider the question of staff training and to suggest methods for training an adequate number of staff.

The conclusions and recommendations of the Seminar are expected to be announced during the week-end. It is, however, too much to expect a Seminar to arrive at cut and dried solutions to all the aforesaid issues. It took months and months for banks to reach an understanding on one issue, namely, the inter-bank agreement on deposit rates and several months of negotiations with the Reserve Bank on the capital-deposits ratio. The value of seminars like this lies in the opportunities they provide to air different viewpoints on problems of current importance and nothing more.

Corporate Finances

There are quite a few in this country who time and again deride the private sector on the score that it has not given a good account of itself. Some even go to the extent of affixing on it the label of profiteering and exploitation. Such an attitude towards the private sector is, to say the least, uncharitable. Indeed, the sector continues to contribute significantly to the economic development of the country. A clear testimony to this contention is provided by the Reserve Bank of India's periodical studies of the finances of 1,001 large and medium-sized non-Government public limited companies, the latest of which, that pertaining to the calendar year 1960, is published in the June 1962 issue of the Bank's *Bulletin*. Inasmuch as the 1,001 companies covered in the study account for almost four-fifths of the aggregate paid-up capital of the aforesaid type of companies, the review may be taken to represent the position of the entire joint-stock or corporate sector. The latest review throws much interesting light on three important aspects of corporate sector: (*a*) relative performance of companies in different size groups; (*b*) trends in profits and capital formation during the five years from 1956 to 1960 which broadly represent the second Plan period; and (*c*) trends in debt-equity ratio. These aspects are synoptically presented in the table below:

Finances of Companies At a Glance

(In crores of rupees)

	1956	1957	1958	1959	1960
Income	1,899	2,079	2,168	2,339	2,636
Expenditure	1,720	1,917	1,988	2,109	2,364
Profit before tax	179	162	180	230	272
Tax provision	59	52	57	60	72
Depreciation	47	53	57	66	85
Dividends	43	43	47	65	71
Profits retained	30	14	19	39	44
Rates of growth (percentages):					
Paid-up capital *plus* free reserves	9.5	6.2	5.1	7.1	8.3
Net assets	15.9	11.8	6.2	5.0	9.5
Total income	13.7	9.5	4.3	7.9	12.7
Sales	11.8	9.2	5.4	9.5	11.1
Capital formation (as percentage of total assets formation)	86.7	94.3	91.8	77.0	80.4
External sources (as percentage of total sources of funds) ..	63.5	71.6	51.7	37.2	43.5
Increase in bank borrowings as percentage o external sources	40.0	27.0	13.0	—6.6	48.3

Note:—The figures in crores of rupees have been rounded off to the nearer digits.

Anyone who cares to peruse the analysis of the financial results of 1,001 companies will at once be impressed by the all-round improvement in production, sales, profits and capital formation during the five years 1956 to 1960. The value of production has gone up from Rs. 1,673 crores in 1956 to Rs. 2,342 crores in 1960, or at an average annual rate of 12.1 per cent. The rise, though it reflects to some extent the general increase in price levels, is particularly significant in that it has been achieved despite all the bottlenecks of transport, raw material scarcity and power shortage. Over the same period, total sales proceeds have improved from Rs. 1,452 crores to Rs. 2,273 crores. The average annual growth in offtake thus works out to 11.3 per cent which closely matches the expansion in production.

In the context of increased production, sustained aggregate demand in the economy and rise in prices, one would naturally expect an appreciable improvement in the profits of companies. But it has not been so. Thus, between 1956 and 1960, the gross profit as percentage of total sales has risen from 9.8 to just 10.2; actually the ratio had receded to 8.0 in 1957 and 8.5 in 1958. It is not difficult to explain this phenomenon. The improvement in production and sales has been neutralised greatly by the pronounced bulge in the cost of raw materials and other manufacturing expenses. Taxation also has taken its share in profit, the total sum earmarked for 1960 being Rs. 72 crores, as against Rs. 50 crores in 1956. Provision for depreciation has also been larger (Rs. 85 crores, as against Rs. 43 crores), a part of the increase having been necessitated by enhanced fixed assets. It is true that the amount distributed by way of dividends has increased from Rs. 42 crores in 1956 to Rs. 71 crores in 1960, but the increase is on a higher capital: Rs. 615 crores in 1960, as against Rs. 504 crores in 1956. If the average rate of dividend payment has been slightly higher, it has yielded the advantage of enhancing the popularity of equities and thereby enabling the capital market to attract a lot of savings into productive investments. Otherwise, the companies would have been forced to rely more heavily on borrowings than has actually been the case—in 1960, they aggregated as much as Rs. 643 crores—entailing a larger interest burden. In this connection, it is well to mention one welcome feature, namely, that the companies have ploughed back quite a good part of the profits into business, the total profits actually retained in 1960 being over Rs. 44 crores, as against Rs. 30 crores in 1956. It must, however, be conceded that due credit for this development must be given to the introduction of the system of compulsory development rebate reserve under the Income-tax Act.

It is rather disquieting to find that the rate of gross capital formation (comprising gross fixed assets and inventories) of the corporate sector has slowed down from 16.9 per cent in 1956 to 10.6 per cent in 1960, though the latter figure is much higher than 6.1 per cent for 1959. For the five-year period, the gross capital formation for the 1,001 companies aggregated Rs. 962 crores (Rs. 224 crores in 1960 alone), of which fixed assets accounted for Rs. 695 crores (Rs. 123 crores in 1960) and inventories for Rs. 267 crores (Rs. 101 crores in 1960). This works out to an average annual rate of 14.6 per cent.

The conventional debt-equity ratio (defined as the ratio of paid-up capital, reserves other than depreciation and taxation reserves, and unallocated surplus in the profit and loss account) to funded debt has worsened from 1 : 4.22 in 1955 to 1 : 3.36 in 1960. This has been brought about by a more than proportionate increase in debt as compared with that in equity. Thus, whereas the debt rose by about 78 per cent—from Rs. 179 crores to Rs. 318 crores—equity rose by only 41 per cent—from Rs. 754 crores to Rs. 1,068 crores. This is by no means a healthy development and has been deservingly criticised by the World Bank and the International Finance Corporation.

India and World Coffee

The eyes of all coffee producing and consuming interests the world over (including India) are now turned to New York, the venue of the U.N.-sponsored International Coffee Conference, Assembled at the Conference, which began on Monday the 9th inst., are the delegates from fifty-four nations and observers from eleven others who are thrashing out the details of a long-term world coffee agreement to replace the present year-to-year arrangement due to expire on 30th September next. It is premature to assess the final outcome of the Conference: Whether it will succeed in reconciling the divergent viewpoints of producers *inter se* and of producers and consumers. For the past experience of such international attempts to stabilise the world market has not been quite encouraging. Coffee, like crude oil, is one of the products which, as a West German commentator aptly puts it, always pose new problems to world trade. In his characteristic way, this commentator observes:

"For decades, the scene has been characterised by two extreme features: coffee being used to heat locomotives in order to keep the prices stable, on the one side, and coffee consumption restricted by taxes in Europe, on the other. The reason: there exists an abundance of coffee and, at the same time, there are too many finance ministers using coffee as a highly welcome source of revenue. So far, international coffee talks have hardly been more than well-organised shows. However, there could be a change in the seventh decade of our century."

From the brief reports that have trickled from the New York Coffee Conference hall, it would appear that practically all the delegates are agreed on the need for a more comprehensive, effective agreement that will avoid price fluctuations and create a production-consumption balance. India's approach to the issue has been clearly spelt out by its chief official delegate, Mr. H. Sitarama Reddy, Chairman of the Coffee Board. Speaking at the Conference, Mr. Reddy not only warned against the serious impact of any move to restrict coffee production in countries with small output such as India but also urged a realistic basis for fixing production and export quotas, so as to help and not hinder the economies of such producing countries. India, he declared, produced only about 2 per cent of the world's coffee, but it consumed a high percentage of its production, and consumption demands were expected to increase greatly as years went by. Mr. Reddy minced no words in stating the position of this country when he said:

"The expansion of coffee production . . . is a link in the fabric of our third Five-year Plan, and the imposition of any production controls at this stage would not be compatible with the setting up of targets for accomplishment by the end of the Plan period. Any tampering with the Plan at this stage would also retard our development. It is thus that the imposition of production controls in the international agreement for coffee becomes important to us. On the other hand, we would welcome any incentive and encouragement which could be given to us."

This journal is certainly proud of the fact that its views on the question of India's participation in the world coffee agreement represent the stand which Mr. Reddy has taken. We have ere now stressed that India cannot be a party to any move that tends to encroach upon its right to regulate coffee production which, by world standards, is small. For, otherwise, the hardship caused to India will

TREND OF SHARES

HESITANCY ... AND DEMORALISATION

(From Our Own Correspondent)

BOMBAY, *19th July*

HESITANCY till yesterday yielded place to complete demoralisation today on the stock exchanges this week. Today saw yet another severe shake-out in the markets. Perhaps everybody sold, as heavy all-round selling by a certain influential, big industrialist-cum-operator unnerved marketmen. Some of the left-over prominent bulls also unloaded, as several market leaders offered no resistance to the bout of selling and sank to new low levels in the current downward trend. Stop-loss sales and sizable selling against option deals accentuated the setback. Closing prices disclosed further all-round losses which were heavy in some of the leading counters. The tone was distinctly weak, with bulls anxious to know if the worst was over.

There was nothing fresh in the published news to warrant the deterioration in sentiment. On the contrary, the markets heaved a sigh of relief when the news came that the serious tension from which the Indian outpost in Ladakh suffered in the previous week had eased slightly. True, the situation was still tense, as the Chinese had withdrawn not too far from the Indian outpost, and were said to be preparing for a more sinister design. But bears were restrained and sought the opportunity to cover their sales. Values, therefore, generally moved in a narrow range around the previous week's levels. Trading was dull in the absence of any big speculative support. But the heavy selling by the influential operator was followed by rumours that it was based on expectations of some Union Cabinet reshuffle on the return of Mr. Morarji Desai from abroad. A certain bull operator in Bombay, whose positions were uncovered in not one (as was generally believed) but in several counters is presumed to have suffered heavily and it is feared by marketmen that he might default. Hesitancy has thus given way to demoralisation.

* * * *

Textiles were the worst hit on Dalal Street, partly because of reports that mills might have to close down their third shift for want of cotton. Next came Dyes and Chemicals, followed by some leading Miscellaneous and Engineering issues. The worst to suffer among Textiles were the widely popular shares. For example, Century, which dipped to a new low level of Rs. 592, showed a loss of Rs. 28.50 at Rs. 597; National Rayon, sunk to a new low level of Rs. 486 and were 16 points lower on balance at Rs. 490.50; and Standard slumped to a new low level of Rs. 826 and were 74 points down over the week at Rs. 838. Among others, Khatau showed a loss of Rs. 17.50 at Rs. 447.50, Morarjee of Rs. 9 at Rs. 388 and Mafatlal, in the Cash List, of Rs. 18.75 at Rs. 801.25. Swan were five points down at Rs. 285. Kohinoor showed a loss of Rs. 3.50 at Rs. 294. Even neglected counters like Elphinstone and Raja Textiles also declined; the former by Rs. 8.30 to Rs. 101 and the latter by Rs. 10 to Rs. 110.

All the forward-listed Dyes and Chemicals showed big losses; Indian Dyestuff slumped by Rs. 28.75 to Rs. 435, Amar Dye-Chem by 15 points to Rs. 267.50, Poly Chem by Rs. 12.50 to Rs. 170 and Tata Chemicals by 72 nP to Rs. 14.76. Cash shares, in this section, were also weak. Colour Chem showed a big loss of Rs. 32.50 at Rs. 415. Synthetics were 14 points down at Rs. 200 and were closely followed by Alembic which disclosed a loss of Rs. 13.75 at Rs. 200. Camphor were seven points down at Rs. 90 and Pesticides came down by 36 nP at Rs. 5.24.

In the Miscellaneous section, Hindustan Motors were sold down to a new low level of Rs. 18.28 and were 76 nP lower at close at Rs. 18.52. Bombay Burmah, too, came down to a new low level of Rs. 632, but rallied to close seven points higher at Rs. 639, as against Rs. 646 a week ago. Premier Automobiles were Rs. 3.25 lower at Rs. 123.50 and Premier Construction showed a loss of Rs. 3.50 at Rs. 148.50. Wimco showed a further decline of five points at Rs. 266. In an otherwise weak section, B.B. Petrol gained 14 nP at Re. 1.94, after having risen to Rs. 2, at which rate they attracted a margin of 10 nP per share against bulls.

Among Engineering shares, Telco fell to a new low level of Rs. 313 and closed 18 points lower at Rs. 318. Larsen and Toubro were another heavy loser, as they declined from Rs. 29 to Rs. 26 and closed at Rs. 26.75 following the cut in the dividend from Re. 1.80 to Re. 1.40 per share, taxable, for the year ended 31st March 1962. Voltas showed a loss of five points at Rs. 265.

Steel shares made some show of steadiness, but receded at close. Tata Ordinary were one point lower at Rs. 145. The firmly-held Indian Iron broke sharply from Rs. 26 to Rs. 25.30—a new low level—and showed an on-balance loss of 25 nP at Rs. 25.55. Mukand Iron closed 31 nP lower at Rs. 24.24. Sugars, Shippings and Cements were easier. In the Cash List, among others, Permanent Magnets came down by Rs. 20 to Rs. 185, T. Maneklal by Rs. 25 to Rs. 620, Tak Machinery by Rs. 9 to Rs. 67 and Ceat Tyres by Rs. 6.25 to Rs. 173.75.

* * * *

The Calcutta Stock Exchange closed generally with moderate losses. In the Forward List, Birla Jute came down from Rs. 33.25 to Rs. 32.75 as did Howrah from Rs. 21.75 to Rs. 21.31. Indian Aluminium finished 44 nP lower at Rs. 37.75, despite the management's decision to issue right shares to the tune of Rs. 2 crores and debentures of Rs. one crore. J.K. Cotton showed a loss of 37 nP at Rs. 18.75, Texmaco declined from Rs. 23.10 to Rs. 22.85 and Burrakur receded from Rs. 17.81 to Rs. 17.56. However, Indian Cable showed a gain of 32 nP at Rs. 35.94 and Dunlop closed 6 nP higher at Rs. 39.50. Among Coals, Bengal declined from Rs. 364 to Rs. 351, but Equitable edged forward from Rs. 27.69 to Rs. 28.06. In Textiles, Bharat Commerce recorded a gain of Re. 1.69 at Rs. 25.94, but Bowreah declined further from Rs. 25.19 to Rs. 24.87. Jutes were subdued, with Dalhousie receding from Rs. 130 to Rs. 124 and Delta and Champadany showing each a loss of Rs. 2 at Rs. 196 and Rs. 135, respectively. But Bally recovered by nine points to Rs. 308.

Engineering issues made a mixed show, with trading featured by a recovery in Burn from Rs. 646 to Rs. 680 and in Raymon from Rs. 5.25 to Rs. 6.31. Miscellaneous section was devoid of much activity, but closing prices were generally slightly lower, with Balmer Lawrie reacting sharply from Rs. 281 to Rs. 257, Phillips Carbon declining from Rs. 24.75 to Rs. 22.25, Philips India showing a loss of Rs. 3.37 at Rs. 30.25 and Shaw Wallace moving down from Rs. 24.50 to Rs. 20.25. Rallis India, as an exception, showed a gain of five points at Rs. 140.50. In Papers, Titaghur came down from Rs. 40 to Rs. 39.44; in Sugars, Cawnpore showed a loss of 88 nP at Rs. 12.12 and Dyer Meakin of 57 nP at Rs. 54.55; and, in Teas, Grob closed Re. 1.63 lower at Rs. 8.37, Tezpore showed a loss of one rupee at Rs. 15.31 and Hantapara declined from Rs. 110.50 to Rs. 104.

* * * *

Considerable weakness in Plantings and fresh losses in Textiles were the features of trading in Madras. Thus, among Tea shares, Kil Kotagiri declined from Rs. 4.92 to Rs. 4.65 and United Nilgiri from Rs. 20.37 to Rs. 20.25. Blue Mountain showed a loss of 4 nP at Rs. 2.33 and Chembras receded by three points to Rs. 339. Consolidated Coffee came down from Rs. 18.35 to Rs. 18.25 and Coffee Lands from Rs. 15.25 to Rs. 14.75. Cochin Malabar, among Rubbers, fell from Rs. 6.95 to Rs. 6.50, T.R. and T. disclosed a loss of 35 nP at Rs. 9.65 and Midland finished 8 nP lower at Rs. 10.37. In Textiles, Madura showed a loss of one point at Rs. 34.25, Travancore Rayon of Re. 1.60 at Rs. 35.80 and S.I. Viscose of Rs. 4.50 at Rs. 164. 50. Sugars showed minor changes either way, with the exception of E.I.D. which gained 25 nP at Rs. 40. In the Miscellaneous section, Tube Investments came down from Rs. 286 to Rs. 277, Dalmia Cement declined by 95 nP to Rs. 12.20, W.I. Products showed a loss of one rupee at Rs. 191, Aluminium Industries came down from Rs. 24.10 to Rs. 23.90, Ashok Leyland disclosed a further loss of 15 nP at Rs. 8.15 and Mettur Chemicals slipped down from Rs. 13 to Rs. 12.95.

CAPITAL MARKET NEWS

NEW ISSUE

MOHATTA **and Heckel Ltd.**, a new company formed in Maharashtra State, is expected to enter the capital market in October next with a public issue of Rs. 25 lakhs—Rs. 23 lakhs in equity shares of Rs. 10 each and Rs. 2 lakhs in preference shares of Rs. 100 each. The Company is to undertake a Rs. one-crore project for the manufacture of wires and wire ropes. It has been licensed a capacity of 3,600 tons. The plant will be set up at Thana, industrial suburb of Bombay. Messrs. George Heckel Ltd., West Germany, is providing both technical and financial collaboration for the project. Negotiations for acquiring the necessary land between Thana and Kalyan are said to be under way. The Company is understood to have finalised technical details for the plant and machinery. The authorised capital of the Company is of Rs. one crore. The issued capital will be Rs. 55 lakhs and comprise Rs. 45 lakhs in equity shares and Rs. 10 lakhs in preference shares. Out of this, the promoters, Directors and their friends are taking up shares worth Rs. 20 lakhs, the foreign collaborator will be allotted shares of the value of Rs. 10 lakhs and the balance of Rs. 25 lakhs is to be offered to the public.

RIGHTS ISSUE

The Directors of the **Indian Aluminium Company Ltd.** have decided to issue additional equity shares worth Rs. 2 crores and offer debentures of the value of Rs. one crore for public subscription, both subject to the consent of the Controller of Capital Issues. The new shares are to be offered to the existing shareholders in the proportion which would be fixed after the terms on which the issue is sanctioned by the authorities are known.

FRESH ISSUES SANCTIONED

The Controller of Capital Issues has authorised the following five companies to make fresh capital issues. The details of the issues are given below:

Jaswant Sugar Mills Ltd., Meerut, U.P., having a paid-up capital of Rs. 30 lakhs, is to issue bonus shares of the value of Rs. 12 lakhs on capitalisation of its reserves to a like extent.

Swastik Oil Mills Ltd., Bombay, will raise 6.5 per cent debentures of the value of Rs. 20 lakhs for cash at par. The proceeds will be utilised for redeeming the existing debentures and for providing working capital. The present paid-up capital of Rs. 30,37,500 is in equity shares of Rs. 100 each.

Super Spinning Mills Ltd., Andhra Pradesh, is raising capital of Rs. 25 lakhs, in equity shares of Rs. 10 each for cash at par. The proceeds will be utilised for establishing a cotton spinning mill.

Deccan Sales Corporation (Private) Ltd., Bombay, having a subscribed capital of Rs. 30,600, is issuing equity capital of the value of Rs. 19,69,400 in shares of Rs. 100 each for cash at par. The money will be used for the manufacture of granulated compound fertilisers.

Bombay Wire Ropes Ltd., Bombay, has been granted a revised consent to issue capital of Rs. 60 lakhs in equity shares of Rs. 10 each for cash at par. The proceeds of the issue will be utilised for the manufacture of wire ropes. The revised consent is valid up to 31st December 1962.

MARKET GOSSIP

(Concluded from previous page)

be pretty severe both in the matter of export earnings and for meeting the needs of internal consumption. Mr. Reddy did well to drive home this aspect, with a forceful plea for giving special weightage to the consideration that India is exercising "utmost control" to assist the world coffee economy by making allotments for exports only after meeting internal requirements and taking into account the pressing urgency of foreign exchange.

As the International Coffee Conference is in session, a special G.A.T.T. Study Group is discussing at Geneva the possibilities of reduction of tariffs and taxes on coffee (as also tea, cocoa and other tropical products) in industrial nations. The overseas territories associated with the European Common Market and the developing countries of the Commonwealth are taking part in the discussions which are being held on the basis of a Brazilian draft providing for the gradual removal of these burdens within five years. A survey of the G.A.T.T. Secretariat reveals that West German taxes on coffee (and tea), which correspond to 70 per cent of the import value, are the highest. Britain has removed the tariff on coffee imports and Italy has announced a 50 per cent cut in coffee tax.

While on the subject of coffee, it may be interesting to note that the Common Market Commission has promised to study carefully a protest of the Organisation of American States (O.A.S.) dealing with the coffee trade between the Common Market and Latin America. Dr. Walter Sedwitz (U.S.), the head of the Economic Department of the O.A.S., had personally been to Brussels to underline the importance of the O.A.S. demand. The Euro-African Steering Committee of Common Market and the associated African countries has formed a working group with five sub-working groups. The first of the latter has already started to discuss the exchange and sales of coffee, tea and cocoa.

Depreciation Allowance in the U.S.

Amidst the widely entertained expectations of some relief in all income taxes, including that on personal income, the Kennedy Administration has announced, as a fillip for the lagging U.S. economic growth, the biggest federal tax-cut of $1.5 billion since 1954 by liberalising the depreciation allowances for both business and industry. The sweeping overhaul of the system is contained in the new "Depreciation Guidelines and Rules," effective from the 11th of this month. A key feature of the new system is to shorten considerably the lives of assets in relation to those worked out in the last official guide, published in 1942. It is aimed at allowing business houses to use tax savings to increase their investments in the latest machinery and equipment, and also provides for even faster depreciation, if a firm actually replaces its old equipment at a more rapid rate. Briefly, under the new system, assets of farmers and businessmen are divided into only 75 categories, instead of the 5,000 in the old regulations, introduced 20 years back and long recognised to be out of date, and the average life of manufacturing equipment, for depreciable purposes, reduced from 19 to 13 years. Congressional approval is not necessary for this action. Meanwhile, the President and the Secretary of the Treasury, Douglas Dillon, have urged Congress to approve the upward revision from 13 per cent to 16.7 per cent in the tax credit for new investments under the system. According to Mr. Dillon, special tax incentives for new investment granted by America's nine friendly industrial competitor nations have resulted in the average first year's recovery in those countries of 29 per cent. The new revision would be still far short of equality.

The increase in the depreciation allowance as mentioned above has met the complaints of businessmen that the old system was stunting economic progress. Business spokesmen and Congressional leaders have generally welcomed it. Mr. Dillon believes that it should have a quick impact on the economy. For, with many business houses having promised to use tax savings in new equipment, he foresees an upward trend in orders for those items in the next couple of months. President Kennedy's reasons for this reform are: "By encouraging U.S. business to replace its machinery more rapidly, we hope to make U.S. products more cost-competitive, to step up our rate of recovery and growth and to provide expanded job opportunities for all U.S. workers."

The estimated first-year revenue loss of $1.5 billion due to the revision will be the largest since the Congress revised the tax laws in 1954. Mr. Dillon, however, hopes that the Government would quickly recoup it, at least partly, as liberalised depreciation is expected to promote job-creating business investments. The President believes that the result of his reform would be an increase of about $6 billion in the annual capital expenditure by business.

It is interesting to find that the rate at which depreciation on plant and machinery is admissible in India varies from 7 to 40 per cent, depending upon the wear and tear in different industries. For most of the industries it is 10 per cent and, at that rate, quite liberal in relation to even the revised position in the U.S. In addition, industries are permitted an extra allowance up to a maximum of 50 per cent of the normal allowance for double-shift working. Then there is the 25 per cent development rebate, to be set apart under a reserve account to be utilised for the purpose of the business of the undertaking. Lest someone should get away with the belief that the authorities in this country are too liberal, it is, however, necessary to add that the concessions are nothing more than the necessary incentives for entrepreneurs and investors in an underdeveloped economy, and that the basic rate of taxation of companies at 50 per cent is one of the highest in the world, higher than even in some of the highly developed countries.

NEWS IN BRIEF

THE number of foreign experts and technicians employed at present by Hindustan Steel Ltd. is 460, of whom 174 are in Rourkela, 158 in Bhilai and 128 in Durgapur.

The Rs. 1.82-crore coal washery set up by Hindustan Steel Ltd. at Bhojudih, near Dhanbad, was commissioned last week. The washery is expected to reach its full capacity of 4,000 tons per day by September next. Its annual output of washed coal will be 1.2 million tons.

The Planning Commission has decided to locate the second atomic power plant at Pratapgarh in Rajasthan. The proposed plant is likely to come up only during the fourth Plan period. A third nuclear plant is also proposed to be set up somewhere in the Madras region.

A trade delegation, led by Mr. M. M. Vadi, Industrial Adviser (Engineering), Union Ministry of Commerce and Industry, has left for Djakarta to explore the possibilities of exporting engineering goods to Indonesia. On its way back the delegation will visit Singapore, Kuala Lumpur and Bangkok.

The International Development Association has agreed to give a loan of $18 million (Rs. 8.57 crores) for the development of Bombay port during the third Plan. The I.D.A. credit, which is interest-free, barring a service charge of ¾ per cent will be repayable in 50 years, the first instalment starting from January 1973.

The Film Finance Corporation Ltd. has sanctioned a loan of Rs. 3.5 lakhs to Messrs. Umesh Rao and Gian Sachdev, partners of Messrs. Akash Ganga, Bombay, for the production of a Hindi film. The loan will be paid in instalments and bears interest of 9 per cent per annum subject to a rebate of interest for early repayment as provided in the by-laws and regulations of the Corporation.

An agreement has been signed between the Governments of India and Russia, under which Russia will supply jet engines for the HF-24 supersonic jet fighters manufactured at Bangalore. It will also help the Indian Government to manufacture the engines within the country. The question of finding a suitable engine for the HF-24 had been holding up the actual manufacture of the aircraft. Originally the Siddeley Bristol Aviation Company's Orpheus-12 engine was intended for the plant, but the British firm has since discontinued development of the engine.

The Government of India has extended the date of registration of powerloom co-operative societies upto to 31st March 1963. This decision is a sequel to the representations received to the effect that the programme of conversion of handlooms to powerlooms through co-operative societies is still in progress. It may be noted here that cotton fabrics produced on powerlooms owned by a co-operative society or owned by or allotted to the members of such a society are at present exempt from the whole of the Central excise duty leviable on them.

The Government of India is considering a scheme for installing a power plant on the bank of the Jhelum river in Kashmir. The project, which is estimated to cost Rs. 15 crores, is designed to produce 50,000 kw. Under the terms of the Indus Waters Treaty, the Jhelum is one of the three rivers allotted to Pakistan, but the agreement provides for the use of its water for power generation by India provided it does not diminish the river's flow downstream. The proposed power house is described as the "run-of-the-river" unit. Water will be diverted to the Jhelum after power generation. In accordance with the treaty, Pakistan has been informed of India's plans and has even been supplied with details of the design.

The National Co-operative Farming Advisory Board has now been reconstituted for a further period of two years. The term of the Board, which was set up on the recommendation of the working group on co-operative farming, expired at the end of June. The Board has been charged with the task of planning and promoting the programme of co-operative farming on a voluntary basis, reviewing the progress in the field, suggesting measures for enlisting people's, participation in the programme and fostering their initiative and leadership and assessing the requirements and recommending the pattern of financial assistance. The Board will also seek to co-ordinate inter-State developments and experience and help State Governments and State Boards in formulating their schemes and programmes.

The public sector fertiliser plant at Rourkela, the largest unit of the kind in the country, is scheduled to commence production in September next. Initial production will be at the rate of 100 tonnes of calcium ammonium nitrate per day, but, when in full operation, the plant will produce 580,000 tonnes per annum. The plant, which has been constructed jointly by a West German firm and the Fertiliser Corporation of India, is expected to cost Rs. 23 crores, including cost of plant, equipment and the township built for the factory's 1,500 technicians and workers. The important raw materials, which form the base of the fertiliser to be produced, are mixed gases from the coke oven batteries and nitrogen from the oxygen plant of the Rourkela Steel works, now going waste, and small-sized limestone from the steel plant's own quarries that is not required for the production of steel.

An increase in the number of both senior and junior research scholarships in agricultural and animal husbandry subjects was recommended by the Advisory Board for the Indian Council of Agricultural Research at its meeting at New Delhi last week. The Board approved a number of research schemes in the field of agricultural and animal husbandry. Under one of these, hybrids of rice are to be tried on an all-India basis in order to select those varieties which would combine the capacity to respond very well to fertilisers with other useful attributes. Another project relates to trials for testing improved cultural and manurial practices on farmers' holdings in respect of mango, citrus and banana. Other projects cover the establishment of regional research stations for medicinal and aromatic plants, promotion of walnut cultivation in the Punjab and Uttar Pradesh, laying out of Japanese-style gardens at different places in the country and use of antibiotics to control plant diseases and to regulate plant growth.

From Abroad

The United States Chromium Company has undertaken to exploit the rich deposits of manganese ore recently discovered in the Menoikon area in Greece.

Soviet Russia expects to harvest a bumper crop of foodgrains aggregating 146-160 million tons in 1962, as against 136 million tons in 1961 and the previous record of 141.2 million tons produced in 1958.

The European Common Market has offered import tariff concessions to Canadian farm, fishery and forest products, metals and some manufactured goods. The concessions will benefit Canada to the tune of about $250 million annually.

A leading sugar factory in Japan, the Shibaura Sugar Company, proposes to set up a sugar refinery near Bangkok as a joint venture with a Thai firm under the name Thai Nippon Sugar Corporation. The refinery is estimated to cost 150 million yen and will have an annual capacity of 150,000 tons.

France has repaid $293.4 million (of long-term Marshall Aid loans) to the U.S. and $62.5 million (of a 1946 loan) to Canada. The normal maturity dates of these loans are spread out until 1987, but the advance repayment will save France total interest charges amounting to $116 million. The repayment of loans has been rendered possible by the improvement in the French balance of payments position.

Japan is organising a Floating Fair to visit twelve ports in Near Eastern and African countries during the period December 1962-February 1963. The 12,200-ton Fair Ship, specially designed with no funnel, will carry about 10,000 items for display in the three exhibition halls. The major portion of the exhibits will comprise machines, some durable consumer goods, textiles and sundries. This will be Japan's fourth Floating Fair. The first visit was to the South East Asian countries in 1956, the second to Latin America in 1958-59 and the third to Oceania and South East Asia last year.

Two of the biggest electrical concerns in Western Europe, Philips and Siemens, have decided to link up their interest in the production of gramophone records. Under an agreement signed between the two companies, they will take over half shares in each other's record subsidiaries. Philips will become a partner in Deutsche Grammophon GmbH, hitherto a 100 per cent. Siemens affiliate, while Siemens will take over 50 per cent in N. V.

The Government of Ghana has taken over the Ghana Graphic Company, a subsidiary of the Mirror Group (U.K.) which publishes at Accra the morning daily, following an agreement reached with the Company. The Company's share capital will be bought by a five-man board of trustees with Chief Justice, Sir Arku Korsah as Chairman, Mr. Cecil King, who is the Chairman of the Mirror group, has been named one of its members. Newspapers, it is said, will continue to be published without any change in policy. This is the third private business taken over by the Ghana Government. The first two were the British trading firms, Commonwealth Trust, and A. G. Leventis, a chain of commercial and industrial organisations named after its sole owner, the Greek-Cypriot millionaire, Mr. A. G. Leventis.

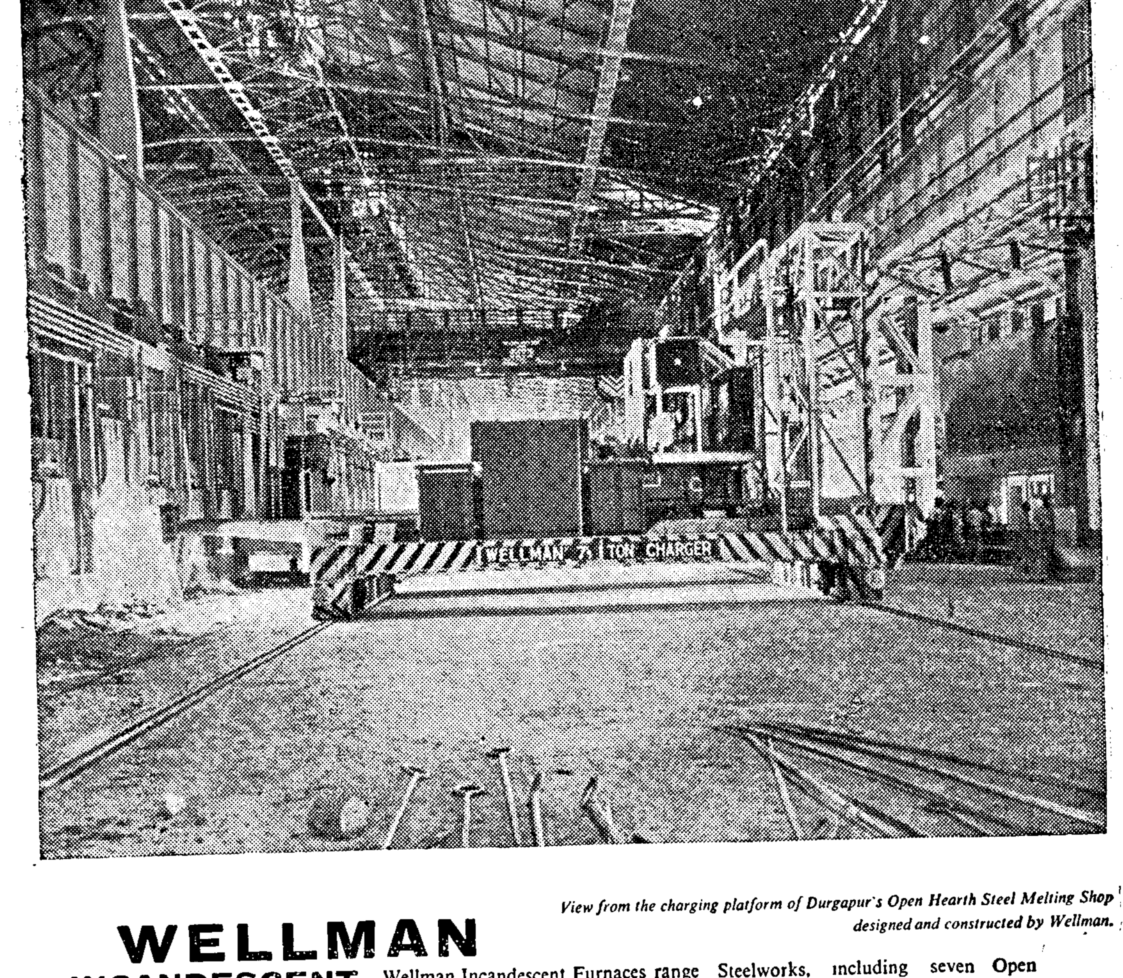
PERSONAL

MR. H. V. R. Iengar, a former Governor of the Reserve Bank of India, assumed office as the Chairman of the Indian Aluminium Company, Ltd., on Wednesday this week. He is also designated the Financial and Economic Adviser of the Company.

Mr. L. Melo Lecaros, Chilean Ambassador-designate to India, has arrived in New Delhi to take over charge of his new assignment.

Mr. R. A. Haryott, who, until his retirement three months ago, was Chairman and Managing Director of Glaxo Laboratories (India) Private Ltd., has been appointed to the main board of Ross Foods Ltd., Grimsby, in an administrative capacity.

Mr. Vasantrao G. Gupte, the first Indian to hold the post of an uncovenanted Assistant in Mackinnon Mackenzie and Co. (Pvt.) Ltd. has retired after serving the Company for 41 years.



View from the charging platform of Durgapur's Open Hearth Steel Melting Shop designed and constructed by Wellman.

WELLMAN

INCANDESCENT OFFER COMPLETE SERVICE IN INDUSTRIAL HEAT ENGINEERING

Wellman Incandescent Furnaces range from the smallest Heat Treatment Ovens to the largest Steel Melting Furnaces and Metal Mixers for modern Steel Plants. The Wellman Incandescent Group have over half a century of experience in this field of engineering during which they have designed and erected industrial furnaces in many parts of the world. Lately, as a member of the ISCON Consortium, Wellman Smith Owen were responsible for designing and erecting the entire Steel Melting Shop at the Durgapur Steelworks, including seven Open Hearth Melting Furnaces, Waste Heat Boilers and two 800-ton Metal Mixers.

Wellman Incandescent are also specialists in Mechanical Handling Equipment. They design and erect a wide range of cranes including Ladle Cranes and Ingot Stripping Cranes for use in the steel industry and are now in a position to manufacture progressively in India many products, which hitherto, have had to be imported.

RURAL HOUSING

THE housing situation in India's 558,000 villages has always been deplorably bad—as bad as in its towns. According to the 1951 Census, 54 million rural dwellings were occupied by a total rural population of 295 million, each house providing shelter, on an average, to 5.5 persons, as compared with an average of 6.0 persons per urban dwelling. There was thus as much crowding (or overcrowding) in rural dwellings as in urban ones. But the more distressing part of the situation was that as many as 50 million out of the then 54 million rural dwellings stood in need of complete rebuilding or substantial improvement. The situation seems to have deteriorated over the last decade, for, while the combined efforts of Central and State Governments, co-operatives and individuals have provided an estimated three million urban houses during the period, no extensive rebuilding or improvement of rural dwellings has since taken place. As the 1961 Census figures pertaining to occupied houses in rural areas are not available, it may be broadly assumed, on the basis of what has been said at the recent all-India seminar on village housing, that the present rural population of 360 million has to live in about the same number of dwellings as in 1951. In other words, quite apart from the further deterioration in the quality of these rural dwellings, there seems to be more crowding (or overcrowding) in them now than in 1951. An average rural dwelling must be having at the present time more than six persons.

The magnitude of the rural housing problem is such that public financial aid can touch only its fringe. In fact, the Centrally-aided village housing projects scheme, which has been in operation since 1957 in about 5,000 selected villages in suitable Community Development blocks, has not scratched even the surface of the problem. Under this scheme which provides financial assistance in the form of loans to the extent of two-thirds of the construction cost or Rs. 2,000, whichever is less, the amount sanctioned so far has come to just Rs. 7.0 crores for the construction of about 45,000 houses. This amount includes Rs. 3.3 crores sanctioned in the first year of the third Plan which has made a provision of Rs. 12.5 crores for the period 1961-66. Even this five-year provision (Rs. 12.5 crores) includes Rs. 5.0 crores for acquisition of house-sites for landless agricultural workers. So much so, the number of houses that can be built with the aid of Rs. 4.2 crores (Rs. 12.5 crores *minus* Rs. 5.0 crores *minus* Rs. 3.3 crores) is not expected to be more than 30,000. In the sum, only 75,000 rural houses will have been built under the scheme over the period 1957-66, as a whole. This will be a pitifully negligible performance, as compared with the enormous need for rural housing. The all-India official seminar on village housing, held at Mysore last week under the chairmanship of Mr. Mehr Chand Khanna, Union Minister for Housing and Supply, has therefore done well to recommend that a further 5,000 villages be brought under the purview of the scheme and an additional Rs. 12.5 crores be allocated for the purpose.

The additional amount asked for is, of course, not much. But it can conceivably be used for building a larger number of houses than is envisaged under the construction standards of the scheme, if more vigorous efforts are made to utilise local materials and adopt some of the traditional construction practices. For instance, the need for cement, which is a scarce commodity, and for bricks can be minimised if brickwork is limited to the foundation and two or three feet above it. Mud walls above this solid foundation raised according to traditional practices can be quite enduring. The need for R.C. construction or for C.I. sheets can also be eliminated by the use of tiled roofs on palmyra, neem, jambul or other suitable wooden beams, rafters and strips. Their durability may be increased by properly seasoning them with the help of modern methods. The other materials that will be available without difficulty in different localities calls for investigation by the rural housing wings of the State Governments. If some of the traditional construction practices can also be usefully adopted, the existing village masons and artisans would be able to do the job without any special training. The employment-potential of such construction methods is bound to be larger, and the use of local materials to the farthest extent possible will also mean some saving of foreign exchange on account of steel and relieve the pressure on manufactured construction materials in short supply. To construct or reconstruct rural houses on a larger scale may also be a good thing in the present context of foreign exchange shortage and resultant cutbacks in other projects.

U. S. FOREIGN AID BILL

The U.S. Foreign Aid Bill (covering the fiscal year commencing from 1st July 1962) as passed by the House of Representatives on Thursday the 12th inst. marks a distinct improvement over the Bill as it emerged from the Senate last month in three important respects. In the first place, the Bill provides for a larger total aid authorisation amounting to $4,668.5 million, as against the sum of $4,662.0 million recommended by the Senate, though it is still considerably less than the $4,878.5 million requested by the Administration. Secondly, India's share in this total is left unchanged at the figure of $815 million proposed by the Administration, whereas the Senate had voted the pegging of this share at the previous year's level of $727 million; earlier, a 25 per cent cut even in this amount had been urged. Finally, the House has turned down the Senate's move to deny the President any authority to give economic aid (except food surpluses) to countries like Yugoslavia and Poland. Indeed, it has left the door open for extending aid to these countries and vests the President with authority to use his discretionary powers in this respect. The House has, however, adopted two amendments which weaken the Administration's authority. One of them bans U.S. purchases of United Nations bonds and the other denies the President discretion to continue aid to nations expropriating American property without paying adequate compensation.

The differences between the two Bills as passed by the two Chambers of the U.S. Congress have now come for adjustment before a Senate-House Conference Committee, and the compromise Bill will then go back to each House for a new note. The final shape of this compromise Bill will depend on the extent to which the Administration will bring to bear its influence on the Joint Committee. The latest reports from Washington aver that the Administration's supporters "are trying to persuade the Committee to confirm the helpful provisions (as provided for in the original Bill) and delete the restrictive amendments."

If the Bill as voted by the House of Representatives is a distinct improvement on the one adopted by the Senate, the credit must go largely to President Kennedy, Secretary of State Dean Rusk and some of the House members. Just before the House assembled on the 12th inst., President Kennedy had personally requested the leaders not to make any drastic changes in the original Bill and it is understood that he had pleaded for the avoidance of any specific reference to India. Two days earlier, in a nation-wide television programme, Mr. Dean Rusk had warned that it would be calamitous if the President were robbed of his authority to give aid to India, Yugoslavia, Poland and other nations. Despite all this, some members of the House made a scathing attack on India, United Arab Republic, Indonesia, Ceylon, and six South American countries. Mr. Halpern, for instance, declared that "American taxpayers are fed up with our granting assistance to nations which use their economic resources to buy arms and military assistance from the Soviet." Mr. Michael Feighan introduced a last-minute amendment seeking to cut all aid to countries which did not share U.S. views on the nature of the world crisis. He referred, in particular, to India's action in Goa, its threat to buy M.I.Gs and the latest Soviet veto on Kashmir has demonstrating a difference with the U.S. approach. Such shortsighted views were effectively countered by several others, both Republicans and Democrats. It was ridiculous, Mr. Judd (Republican) said, to suggest that only those who were the satellites of the U.S. deserved aid; the aim of foreign aid was to help the emergence of strong and independent countries. A leading Democrat from Ohio characterised the move to cut off all aid to neutral countries as unjustified. Humorously but appropriately enough, he said: "I sympathise with the wife of the author of this amendment (Mr. Michael Feighan), because, if she disagrees with her husband, he will cut off her funds too." It was Mr. Cornelius Gallagher (New Jersey Democrat) who ably supported the cause of India. Praising India's achievement in the economic field under an effective democratic structure, he is reported to have said:

"India has poured enormous sums from her own sources into a well-organised and sustained effort, leading toward specific economic goals. We have confidence in what they are trying to do, and it is in our interest that this progress be maintained. The 'Goa incident,' India's posture in the U.N. on Kashmir issue and the matter of the Soviet M.I.Gs are no doubt distasteful to us, but let us not overlook the fundamental factor, namely, that these are situations which, while annoying to us, are not vital to the U.S. national interest. They are, however, essential problems of Indian national interest.

"India is playing a very constructive role in South-East Asia. We and the Indians have a common concern, that is, the threat of communist China.... The Indian development programme is gathering additional momentum under an increasingly effective democratic structure, while the Chinese communists are facing increasing economic difficulties under the most totalitarian Government in the world today. A faltering or collapse in the Indian economic development effort will have such psychological and political repercussions throughout Asia, Africa and the Middle East that the price of picking up the pieces in the aftermath may well become intolerable for the West.

"In brief, there is no doubt in my mind of the necessity to continue to assist India, because it is in our national interest to do so. We must not let ourselves be swayed from the task ahead of us, because of emotionalism more appropriate for a new nation than for the leader of the free world."

The observations of Mr. Gallagher have been quoted *in extenso* only to show that there are in the U.S. persons who continue to evince keen interest in India's development, political differences notwithstanding. It is to be hoped that the Joint House-Senate Committee will ponder these observations and fully endorse the Administration's authorisation of $815 million to India for the fiscal year 1962-63. The people of India are certainly appreciative of the massive American support to this country. It may be noted here that the total aid actually granted by the U.S. since the inception of the Economic Assistance Programme in June 1961 and up to 4th May 1962 is $4,324.30 million, equivalent to Rs. 2,060 crores.

PUBLIC SECTOR COLLIERIES

The public sector in India's coal industry is operated by two Government companies—the National Coal Development Corporation Ltd. and the Singareni Collieries Company Ltd. Both the concerns have on hand expansion programmes under the third Plan. The N.C.D.C. has drawn up a phased programme for achieving a total production of 10.6 million tons in 1962-63, 18.1 million tons in 1963-64, 24.4 million tons in 1964-65 and 33.6 million tons in 1965-66. For its part, the Singareni Collieries Company has programmed to increase its production to 5.7 million tons during the last year of the Plan. These are rather ambitious targets for the two concerns, but they are not unattainable. A major factor that will facilitate their attainment is timely reorganisation of the administrative structure of the two companies.

In the case of the N.C.D.C., which is an unwieldy organisation with its headquarters at Ranchi and its collieries in four States (Bengal, Bihar, Madhya Pradesh and Maharashtra), a reorganisation plan is already under way. Under this plan, the collieries of the Corporation have been grouped into six Areas. The larger Areas, namely, those with a production rate of 5 million tons a year or more, have been put in the charge of Chief Mining Engineers and the smaller ones under Joint Chief Mining Engineers. As a measure of decentralisation of authority, Financial Advisers have also been attached separately to the Chief Mining Engineers/Joint Chief Mining Engineers in charge of the Areas. As a step towards reorganisation of the headquarters, Directorates of Production and Planning have also been established at Ranchi. Apparently these reorganisational measures are not enough, for the new mines which the N.C.D.C., is opening at considerable distances from one another stand in need of a large measure of autonomy which alone would be conducive to local initiative in the varied conditions of such mines. It is, therefore, a promising development that the Union Minister for Mines and Fuel, Mr. K. D. Malaviya, is already considering ways and means of decentralising further the administrative set-up of the N.C.D.C. The Ministry's decentralisation proposals, like those of the Steel Ministry pertaining to the public sector plants, would have to be sufficiently imaginative in the direction of fuller autonomy to individual collieries. It may also be a good thing to bring about a measure of healthy competition among the N.C.D.C. collieries by maintaining and publishing the accounts of each colliery separately on a commercial basis.

As for the Singareni Collieries Company which is owned by the Andhra Pradesh Government, it is heavily dependent on the Centre for financial assistance. In fact, the entire amount (Rs. 20 crores) needed for its expansion programme under the third Plan would have to be provided by the Central Government. It is not surprising, in the circumstance, that the Government of India has expressed a desire to take over the administrative control of the Singareni Collieries. But the State Government is opposed to the Centre's move. How Mr. Malaviya will deal with the Andhra Pradesh Government is the question. There is already an uproar in Andhra Pradesh and, if a bitter controversy is allowed to emerge, there may be serious delays in the implementation of the expansion programme. What is needed here is close co-operation and understanding between the Central and State Governments. Since the Centre's hands are quite full, it can allow the State Government to run the entire show, subject to suitable safeguards for ensuring that this will be done in a businesslike manner. There is no point in the Centre overburdening itself with more and more responsibilities, when it is not able to discharge efficiently those which it has already assumed.

PLANS' BENEFICIARIES

It is about two years now since the Distribution of Income and Levels of Living Committee (Chairman: Prof. P. C. Mahalanobis) was appointed by the Planning Commission to ascertain the extent to which the operation of the (Indian) economic system has resulted in concentration of wealth and means of production, to review the changes in the levels of living during the first and second Plan periods and to study the trends in the distribution of wealth and income. Considering the complexity of the task which involves precise appraisal of the concentration of economic power and the measurement of changes which do not lend themselves easily to statistical computation, it is not surprising that the Committee has taken considerable time even to set down its preliminary findings which it is reported to have done now. From the brief report that has appeared in a section of the Press, it is clear that the Committee's findings, preliminary though they are, point to certain significant conclusions which are bound to cause some flutter among the powers-that-be. The Committee's observation that concentration of wealth is inevitable during the initial stages of industrialisation, particularly in industries being set up in the country for the first time, may disappoint those rich-baiting socialists who cannot bear to see concentration of power and wealth anywhere except in their own hands.

One of the main findings of the Committee is that, during the period 1951-61 covered by the inquiry, real incomes of all sections of the population, except agricultural workers, had increased. Total earnings of the employed population taken as a whole rose by 40 per cent. Since there was an appreciation in the price level by 19 per cent, real earnings went up by only 21 per cent. But this increase in real earnings was unevenly distributed. Coal miners were the biggest beneficiary, their earnings having risen by 76 per cent, while Government employees were the least benefited, their earnings having gone up by a mere one per cent during the entire decade. Of course, they were better off than agricultural workers whose real earnings actually declined by 11.8 per cent. The other categories came within these two extremes. Thus earnings of factory workers increased by 20 per cent, of teachers by 18 per cent, of railway employees by 8 per cent, of skilled rural labour by 15 per cent and mine workers other than those of coal mines by 14 per cent.

That the first two Plans have not reduced the disparity in income between the rural and the urban sector is evident from the respective shares of the two sectors in the national income and its distribution. The Committee noted that the *per capita* income in the rural sector was still less than in the urban sector, although there was a slight improvement during the period. As much as 70 per cent of the national income was contributed by the rural sector. This was, however, shared by 83 per cent of the population. The urban sector accounted for 30 per cent of the national income. But this was shared by 17 per cent of the population.

One of the main task of the Committee, as noted above, was to ascertain the extent of concentration of wealth, if any; it found that, in industries like sugar and *vanaspati*, ownership was more broad-based than in, say, cement or chemicals, where there was excessive concentration of ownership. In its view, however, such concentration is inevitable in the earlier stages of industrialisation, "if we are to obtain fullest benefits of the economies of scale." This is a realistic conclusion, indeed. But whether, in the short-run, faster growth at a minimum cost is preferable to equal distribution of existing wealth and power is a question involving subjective value judgment which is not for the Committee to decide. That, at any rate, may be the view which some politicians may take.

FOOD PRODUCTION

All the three Central Ministers (Mr. S. K. Patil, Mr. G. L. Nanda and Dr. Ramsubhag Singh) who have spoken in recent weeks on the prospects for food production in the third Plan have expressed, albeit with varying degrees of emphasis, the hope that the target (100 million tons) would be achieved. But it is not clear from their statements whether the attainment of the target would spell complete self-sufficiency. Mr. Nanda's warning that, if food self-sufficiency is not reached by the end of the third Plan, it would amount to "total failure of planning itself" is as timely as Dr. Singh's misgiving whether self-sufficiency in the sense of complete elimination of imports would be attained. While the Planning Minister has emphasised the crucial need for self-sufficiency, the Agriculture Minister has referred to the difficulties in the way.

Ministerial statements of the kind have a familiar ring. They do not mean much so long as sufficient efforts to revitalise agriculture are not forthcoming. During the first year of the third Plan, food output is estimated to have touched about 80 million tons, which was only about 700,000 tons above the output in 1960-61 (final estimate). What is worse, there was actually a slight decline in the output of India's major crop, namely, rice from 33.60 million tons to 33.55 million tons. The increase in foodgrains output as a whole was largely accounted for by wheat, the output of which rose by 7.4 per cent to 11.62 million tons. This increase, however, was not the result of any sizable increase in per-acre yield, since the acreage itself rose by 3.7 per cent or by about 1.2 million to 33.24 million. The price situation has also not been quite encouraging, despite large imports. The wholesale price index (base: 1952-53=100) for cereals, for instance, was higher at 105.2 in mid-June 1962, as compared with 102.7 a year before. The corresponding index for pulses, too, rose from about 90 to as much as 102.

Since the increase in aggregate output of foodgrains in 1961-62 was less than one million tons (as against a target of 3 million tons), it is open to question whether during the remaining four years of the Plan, it will go up by 20 million tons, or an annual average of 5 million tons. If the projected increase is not attained, the food situation will turn critical. If there is a shortfall of, say, ten million tons by 1965-66, the prospect will be bleak, indeed, especially as the country cannot find the necessary foreign exchange to import this much quantity of foodgrains. It needs to be stressed that the country's population is steadily increasing at an annual rate of over 2 per cent and will be about 480 million by 1966, or an increase of about 45 million during the third Plan period.

It is, of course, true that the Central Food Ministry alone cannot be blamed for any shortfall. As Dr. Singh has rightly observed, food production is conditioned by two important factors namely, supply of fertilisers and success in the implementation of irrigation projects. This year, for instance, it would not be possible to meet more than 70 per cent of the requirements for fertilisers, on account of the failure of Sindri factory to regain its maximum level of production, delay in the execution of fertiliser projects and import restrictions. The allotment for minor irrigation, according to Dr. Singh, is also less than what is necessary. Climatic conditions also continue to have a decisive influence on output. The absence of a sense of urgency on the part of State Governments is also there. Agriculture being a State subject, its improvement will depend to a great extent on how the State Governments speed up their action programmes. There is certainly a strong case for the establishment of a Central Service for Agriculture, which can keep a close watch on programmes in the States and co-ordinate them, apart from giving suggestions for improvements. Agricultural services admittedly are a neglected section of administration in the country. As early as in 1928, it may be recalled, the Royal Commission on Agriculture had suggested various measures to improve service conditions. The Agricultural Administration Committee (1958) gave the finding that "present-day problems of low morale and inefficiency are attributable to non-implementation of these vital recommendations made thirty years ago." What an irony that the report of this Committee, too, containing several measures to tone up the agricultural administrative machinery, should still lie in cold storage, without anyone caring for it!

INDO-HUNGARIAN CO-OPERATION

Hungary has been making modest but valuable contributions to India's economic development. The latest instance is the donation of a complete textile testing laboratory costing Rs. 2.5 lakhs to the Bombay Textile Research Association. At a function held last week in Bombay, the laboratory was formally handed over to Maharashtra's Minister for Industries, Mr. S. K. Wankhede, by the Hungarian Ambassador in India, Dr. Laszlo Reczei. The laboratory equipments, manufactured by Metripex of Hungary, incorporating the latest techniques, are highly useful in testing the quality of fibres, yarn and cloths. They will thus help improve the process of pre-shipment inspection and other tests for assessing the quality of textiles. In view of the importance of quality control in textiles, particularly those meant for export, Hungary's gift is both timely and welcome.

The gift of the testing laboratory is only one of the few instances of growing Indo-Hungarian co-operation. Hungary has already been helping the country by participating in some industrial ventures. It has already agreed to collaborate with the Government of India in the establishment of a 50,000-ton aluminium plant in Madhya Pradesh. Its contribution to the plant is expected to be about Rs. 4-5 crores, out of a credit of Rs. 8 crores already offered. An agreement for the project is expected to be finalised within two months. Among the other projects in which Hungary is collaborating, mention may be made of two pilot plants being set up, one at Delhi and the other at Kanpur, for the production of cheap bio-gas from cowdung. The Hungarian foreign trade enterprise, Komplex, is currently erecting two hydro-electric plants in Kashmir and is expected to put up some more plants elsewhere. Hungarian collaboration with two Bombay firms, one in the manufacture of travelling crabs and the other in that of acid-resistant chemical machinery, also deserves mention here.

In the field of trade, which is conducted on rupee payment terms, the two countries have made significant headway. India's exports to Hungary, which amounted to no more than Rs. 3 lakhs in 1953, have gone upto Rs. 485 lakhs in 1961-62. Similarly, imports from that country have gone up from Rs. 10 lakhs in 1953 to Rs. 560 lakhs. The major items of exports from this country are iron ore, pig iron, mica, spices, coffee, cotton waste, jute goods, vegetable oils, tea, etc. Imports include machine tools, diesel generating sets, hydro-electric and thermal power stations, steel products and pharmaceutical products.

NEW OUTLET FOR GROUNDNUT SHELLS

A method of manufacturing chip board from groundnut shells has been developed by the Tropical Products Institute of Britain's Department of Scientific and Industrial Research, London. The board has many qualities most desired in tropical countries. The chief use of the board would be as lining material for a wide range of domestic and industrial buildings. Experiments which have led to this discovery could according to the report of the Institute, lead to new industries in India and many other tropical and sub-tropical countries. The shell accounts for about 30 per cent of the total weight of the groundnut. Of the weight of the nut or kernel, about 50 per cent is oil and the remainder solids used widely as a food for both animals and humans. In 1960-61, India produced 4,391,000 tons of groundnuts (in shell) by far the largest production anywhere in the world. The Institute's report says that studies are now being made of the effects of density, quality of resin binder and other variables of the new board. When these are completed, selected boards will be submitted to moisture and termite resistance tests.

A spokesman of the Institute said that, because of the extremely low cost of the raw product—groundnut shells—the chip board could be made at about half the cost of chip board manufactured from wood. There was, however, a much greater supply of groundnut shell than could ever be utilised for chip board. One of the most useful qualities of the chip board, said the spokesman, was its excellent resistance to flame. "It is almost impossible to burn groundnut shells, and even harder when they are compressed into a board." Another good quality was that it effectively deadened sound, which would make it useful in factories.

HAVE THE RICH BECOME RICHER?

DEVELOPMENT OF GOA—PESSIMISM ON COAL

From Our Special Correspondent

DELHI LETTER

NEW DELHI, 17*th July*

HAVE big business men and industrialists cornered the major portion of the additional wealth generated as a result of the economic growth under the Plans? The Mahalanobis Committee's inquiries into the distribution of wealth are reported to provide not much ground for the allegation that the merchant magnates have amassed all the benefits. Of course, it is true that the enterprising investors have reaped good dividends, but the primary producers and the middlemen are also said to have consumed the larger fruits. The worst hit in the community are the salaried class. The Committee's report is expected to contain a recommendation for a tax squeeze on persons earning more than Rs. 15,000 a month.

Goa Development

The Planning Commission is preparing an integrated scheme for the development of Goa during the remaining period of the third Five-year Plan. The scheme will cover Marmagoa port, power supply, road transport and industries. Talk of plans for a steel complex in Goa is being discounted on the basis of the report of experts who have visited Goa. The long distances over which limestone and coal will have to be hauled will make even a pig iron plant uneconomic for the present. At best, and iron ore pelletising plant is regarded as feasible.

The experts have recommended the immediate purchase of a dredger to deepen the Marmagoa port navigation channel. The Union Government has been requested by the experts to investigate the possibility of a hydro-electric project in eastern Goa, but such a project would be possible only in the fourth Plan period. In the interim period, Maharashtra may supply power to Goa from the Koyna project. The iron ore industry is still in a flux, as a result of doubts over the long-term policy over ore exports from Goa. (Incidentally, Indian shipowners are reported to have approached the Government asking for a share in the transport of iron ore from Goa. Under long-term contracts now in operation, Japanese and European buyers are moving the coal in their own vessels. The Government has also agreed to the resumption of coal shipping services from Calcutta to Goa which were suspended eight years ago.)

Under the Portuguese. Goa lacked an administrative structure to promote any industrial development. Indian experts who surveyed Goan development prospects have suggested that an industries department should be established in Goa. They also want a technical training institute there. While any big industries will have to wait for power supply, it is suggested that steps could be taken to initiate such small industries as manufacture of clocks, mechanical toys, machine tools and boat-building. An emporium could be established to propagate Goan handicrafts like metalware, clay modelling, shoe embroidery. With Japanese assistance, the Goan bamboos could be used to make drawing room accessories. Fruit preservation is another industry offering ample scope for development in Goa.

Falling Coal Hopes

There is one common strain in the opinions of Mr. T. T. Krishnamachari, Mr. Morarji Desai and the Federation of Indian Chambers of Commerce and Industry on the coal problem—it is well-nigh impossible to attain the third Plan target of 97 million tons of coal, not to talk of the further proposed increase of four million tons. The Planning Commission's discussions last week on the subject were hamstrung by the absence of Mr. K. D. Malaviya from the capital. (One wonders what Mr. Krishnamachari means by his reported privately circulated complaints of lack of co-operation from the departments whose working he is supposed to co-ordinate.) Mr. Krishnamachari's note, which was the subject under discussion by the planners, emphasised the need for urgent measures to co-ordinate the programmes for steel, coal, power and transport. In his view, the top priority should be for steps to speed transportation. Mr. Krishna Menon suggested that, ultimately, coal transport would need the use of heavy bulk-haul trucks. Some unkind critics of Mr. Menon tie this proposal of the Defence Minister with his Ministry's keenness to expand truck manufacture. Any large-scale coal transport by road will need extensive improvement of roads and bridges, a prospect not accepted by the planners yet. It is also admitted that transport by road or waterways could at the most cover three or four million tons of coal, a quantity which does not provide any substantial relief either to the railways or to consumers of coal.

Although the railways persistently seek to deny any huge gap between demand and supply of wagons for coal haulage non-railway experts estimate it at 800 to 1,000 wagons. While a more exhaustive review of the problems in the four sectors is expected after the Prime Minister returns from his holiday in the South, the Cabinet Sub-committee followed up the discussions of the Planning Commission this week. The recently increased allocation for the railway plan is still considered short to meet the needs of wagons, locomotives and track renewal. Even if the locomotives and wagons are found, the track capacity is not enough to haul the projected third Plan output.

The Finance Minister, Mr. Morarji Desai, has suggested a thorough revision of the coal production policies, if such a revision would act as an incentive to increasing output. According to Mr. Desai, unless there is a major revision of policies, the coal target in the public sector may not materialise even in the early period of the fourth Plan. Mr. Desai doubts whether even the target of 97 million tons is realistic. He is sceptical also of the prospects of the private sector achieving the target set for it, in view of the restrictions which limit the operations of the private sector coal companies to their existing mines and contiguous areas.

Running a race? Running a business? The keynote is CONTROL.

But control is a complicated problem in a business organisation, for it means consultation and assessment of records. It also means arrangement of all kinds of records and information in such a manner that they can be consulted easily and quickly.

We have gone a step further in the Systems Division of Remington Rand.

We have devised Systems which not only arrange all your records for easy consultation, they even provide the *Control*. They convert your piles of files and notes and lists and ledgers into a *Working Force*.

Remington Systems can be arranged to tell you when to act, how to act. They can quickly and easily give you all the data you need to do the one thing they *cannot* do, use your judgement.

You do not have to be a big businessman to use a Remington System. You just have to be a good businessman.

MAKE YOUR RECORDS WORK FOR YOU

Call the man from

Remington Rand of India Limited

RR/G/112

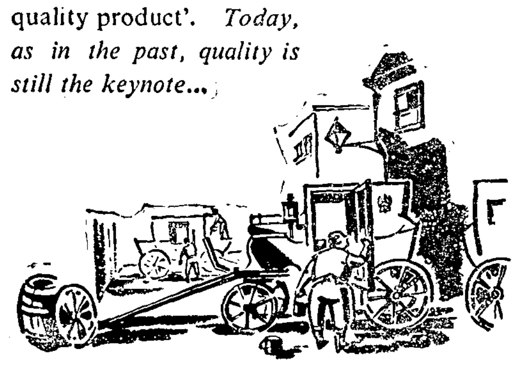
JENSON & NICHOLSON-1962

The Name : **JENSON & NICHOLSON**
The Year : **1922**
The Place : **NAIHATI, NEAR CALCUTTA**

AND THE RESULT : Forty years of dedicated service to India's homes and industries by Jenson & Nicholson—the country's leading manufacturer of decorative finishes and industrial coatings. The J & N factory is now the focal point of a farflung distribution service. J & N paints are used in places as distant as Patiala and Pondicherry and for purposes as widely separate as interior decoration and industrial coating.

'JAPAN BLACK' FOR MILADY'S GIG

The firm now known all over the world as Jenson & Nicholson was founded in London in 1821. Its sole product : a varnish imaginatively called 'Japan Black'. It was used to paint 'society' carriages—the status symbol of the day. Japan Black was a fine varnish—a rich, glossy black—blended with infinite care. It was, as the phrase goes, 'a quality product'. *Today, as in the past, quality is still the keynote...*



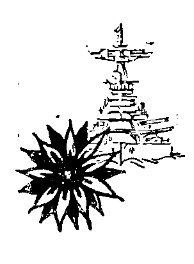
DECORATION OR DONKEY WORK—J & N HAS A PAINT FOR IT

Plastic emulsion for a penthouse flat ; anticorrosive composition for a lockgate ; rivelling enamels for typewriters ; porcelain lacquer for bathroom fittings...orders like these are all in the day's work to J & N. Whether it's a paint to make a place look pretty, or a coating to prevent a termite attack, J & N can supply it. J & N decorative finishes are to be found in such landmarks as the Taj Mahal Hotel, Bombay, and Raj Bhavan, Calcutta, while J & N industrial coatings are used on everything from domestic appliances to railway rolling stock.

'GO OUT AND SELL PAINT !'

A traditional order at J & N, where production is matched in importance by selling. Comprehensive distribution covers the subcontinent. J & N has established paint depots at Calcutta, Delhi, Bombay, Madras, Coimbatore, Gauhati, Kanpur and Siliguri, and from these depots paints are supplied to a network of stockists strategically located so as to cover even the smallest villages. Distribution is backed by a vigorous selling force. *You can always get a J & N paint when you want it, where you want it.*

FROM SUNFLOWER SEEDS TO 'BATTLESHIP GREY'



Sunflower Seeds, Castor and Soya Beans, even fish, are used in the manufacture of paint. The metamorphosis takes place daily in the J & N factory. The most advanced paint factory in India, it is now expanding under a phased programme. In this busy complex of men and machines, raw materials are converted to paints like Robbialac Super Gloss Enamel and Jensolac Stoving— leaders in their fields.

Precision control is the keynote in every department of the factory. From the 'varnish kitchen' where gums are 'cooked' with oils to the dry-distemper department, there is an emphasis on quality and an endless striving for improvement.

CAVE PAINTS AND CHEMISTRY

We've come a long way from the days of our cave forebears, when colouring matter came from natural pigment scooped out of the ground. Today the production of paint is a science and an art.

At the J & N factory, the chemistry of paint is vitally important. A fully-equipped laboratory, staffed with skilled chemists, pursues an unceasing programme of research, development and testing.

J & N PAINTS RUN THE GAUNTLET

Testing is exhaustive. The quality of pigments must meet rigid standards of purity, colour strength and correctness of shade. Raw materials are tested for stability and durability. On the laboratory terrace, surface coatings are exposed to the full force of sun, wind and rain. Each batch of paint is tested to precise standards before leaving the factory. So far is attention to detail carried that the laboratory even contains a miniature production plant—a duplicate of the actual factory machinery. Here new formulations are evolved and existing paints improved. The result of all this care : *you take quality for granted in a J & N paint..*

TEAM WELFARE AT J & N

J & N believes in teamwork and team welfare. Much thought is given to the well-being and happiness of factory employees. Labour quarters, medical facilities and other employee benefits are provided. Team welfare leads to better teamwork. At the J & N factory, where India's leading paints are produced, this policy speaks for itself.

Do you see PINK ELEPHANTS ? ...which of J & N's shades of pink ?

BJN PAINT GROUP

In September 1960 two of the world's largest paint groups, Lewis Berger & Sons Ltd., and Jenson & Nicholson Group Ltd., pooled their resources by amalgamation to form Berger, Jenson & Nicholson Ltd. Paints manufactured by J & N in India are backed by the joint technical knowledge and experience of this international organisation.

QUALITY SELLS J & N COATINGS

AMERICAN LETTER

CONSUMERS TIGHTEN THEIR PURSE-STRINGS

BUSINESS OUTLOOK BECLOUDED

From Our Special Correspondent

NEW YORK, 14*th July*

THE hysteria in the American stock markets has subsided somewhat. The reasons for this changed attitude are both psychological and real. The reduction of margin requirements by the Federal Reserve Board for purchasing or carrying listed securities from 70 to 50 per cent helped; then, there was the psychological boost from the successful launching of the U.S. communications satellite; finally, there has been an absence of anti-business statements from the Administration and renewed promises of tax reductions.

The plea for a cut in taxes is now fairly universal. The trade unions want reductions for the wage earner. They also realise that higher profits for business which might result from lower taxes would be an assurance of continued payrolls, but there are, of course, suspicions that the workers would be the last to benefit. Big business organisations, such as the Chamber of Commerce of the United States and the National Association of Manufacturers, are primarily concerned with lowering the 52 per cent corporate tax reduction and the 90 per cent graduated rate for individuals in the upper brackets.

The business outlook is still good but quite beclouded. Fears of a new recession in the offing have led to a drop in consumer confidence. June retail sales dropped sharply from the record levels of May. This was particularly true in the luxury class goods and in merchandise which is nice to have but life does not depend on it. The decline was most apparent in department stores, appliance and automobile sales.

Employment Position

Employment increased in June, but so did unemployment, because some 2 million out-of-school youngsters entered the labour force seeking jobs. Thus, statistically speaking, the unemployment rate stayed at 5.5 per cent of the labour force.

The steel picture has not been very encouraging either. In the first week of July, steel manufacturing operations fell below 45 per cent capacity. Such a low operating rate was unexpected. It is the result of caution created by the $100,000 million drop in securities' values among 17 million institutional and individual investors.

As indicated at the outset, there has been some change from the original hysteria, but a real break, in my opinion, can come only from extremely good or extremely bad news which would shake out the lethargy and stimulate action.

Some times overall national figures are quite deceiving. For example, spending of the U.S. industry as a whole for plant and equipment have changed little, according to the latest surveys. But the picture differs from industry to industry. Steel, for instance, reduced their expansion and modernisation programmes for this year by 18 per cent, while textile manufacturers, encouraged by the new liberalised depreciation allowances in their field, boosted their investment plans by about 19 per cent.

Gold Stocks

The outflow of U.S. gold stocks has been negligible in recent weeks. But recent London gold quotations above the official equivalent of $35 an ounce have nurtured persistent rumours that an increase in the established Western gold price is contemplated, or inevitable. Total U.S. monetary gold stocks now are around $16,000 million, against $24,400 million in 1949 and $17,600 million in 1959.

The international payments' deficit will be difficult to solve. Commercial U.S. exports have been exceeding imports fairly consistently. But invisible exports such as tourist expenditures, export of private capital, Governmental economic aid and military assistance programmes are producing the dilemma. It cannot be resolved by just raising the gold price. That is why so much emphasis has been placed in recent statements on the necessity for other nations to carry a greater share of economic aid for developing countries.

Expensive proposals for private welfare programmes and an increase in the Federal debt limit have not helped to affirm the soundness of the dollar, even though the price level has remained fairly stable.

Recreation

Defying these somewhat gloomy aspects, people in the U.S. are spending more this year on play than ever before. About 8 per cent of the gross national product goes in that direction. Playing has become a growth industry, involving some $43,000 million a year. In that category fall boating, bowling, fishing, skiing, hunting, golf, camping and eating.

For example, there are some 7 million pleasure boats registered in this country, 10,000 bowling alleys and 6 million golfers. More than one half of the population takes vacations at least once a year and the number is growing as the work week becomes shorter with every new management-labour wage contract.

Construction has been holding up quite well. For the first half of the year, it was about 4 per cent higher than in 1961. Expenditures for repairs and maintenance are also larger. There is a note of caution, though.

Surplus Space

Reports from many parts of the country speak of surplus space. Heretofore, nobody wanted to admit overbuilding and mortgage money was plentiful. Now it is quite evident that there has been overbuilding in office space, apartments and tourist motel rooms. The condition was brought about by a credit ease. Speculators would engage architects on speculation to draw up plans for new structures. Then high pressure sales campaigns started and contracts were solicited for leases on the yet-to-be-built buildings. If the builder-speculator could show tentative long-term leases for more than one-half of his new structure, this was usually sufficient collateral to finance the wrecking of the old building and the construction of the new, —with a minimum of equity on the part of the entrepreneur himself. Thus, a period of decline in this area must be expected, unless the bubble bursts like the stock market did.

The farming picture, however, is quite favourable. Despite drought conditions in some areas, the weather has been quite good. Predictions are for a high level of cash farm income from marketings, larger than in 1961. Government support payments to farmers should also be larger than in 1961.

The House of Representatives of the U.S. has approved a compromise version of President Kennedy's new trade extension Bill. It gives him wide powers to negotiate tariff cuts and compromises. It is supposed to make it easier for the U.S. to realign itself with the Common Market and other trade areas. But it is a novel experiment and nobody knows the outcome. So far, it has been claimed and counter-claim. Moreover, the Senate has not yet passed on the measure. The general feeling, however, is that this time the chances for enactment of a compromise Bill are quite favourable.—*All Rights Reserved.*

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial insurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

FOCUS ON EXPORT FINANCE

NO NEED FOR AN EX-IMP BANK

THE Study Group on Export Finance, appointed by the Ministry of International Trade, is currently examining the adequacy of existing institutional agencies for supply credit facilities for exporters. The Study group, which is headed by Mr. K. P. Mathrani, Chairman of the Industrial Finance Corporation of India, has already concluded discussions with exporters in Delhi and Bombay and is receiving representations and collecting evidence from other prominent trade centres in the country. Doubts have been expressed in some quarters whether a fresh study on these lines was necessary when the Kapur Committee, appointed in April 1960 by the Union Ministry of Commerce and Industry, had covered the same ground and necessary action was being taken to implement its recommendations which had been accepted by the Government. Answering this point, Dr. S. P. Chablani, the present Managing Director of the Export Risks Insurance Corporation and Member-Secretary of the Mathrani Study Group, observed in Bombay last week, that a fresh review of the credit requirements of exporters was necessitated by the "somewhat changed circumstances" and the greater need to step up export. He disclosed that many of the recommendations made by the Kapur Committee had already been implemented by the Government and that the remaining ones were in the process of being implemented, the delay being due to the fact that they required certain amendments to be made to existing legislation. These amendments, he added, were being expedited.

Kapur Committee's Recommendations

The Kapur Committee report, as far as we know, has not been officially published, though a section of the Press had managed to publish long extracts from it some months ago. The latest issue of *Trend and Progress of Banking in India*, covering the year 1961, published by the Reserve Bank of India, contains a summary of the main recommendations of the Committee and the action thereon. These are as follows:

The Group had recommended the amendment of Section 17(3)(b) of the Reserve Bank of India Act so as to permit the discounting or granting of advances against export bills upto 180 days as against 90 days at present. It further recommended that the Bank might examine the desirability of extending loans against usance export bills on the security of only the promissory notes of the scheduled bank instead of against the promissory notes of both the scheduled bank and the exporter. Both these recommendations have been accepted in principle and the question of promoting the necessary enabling legislation is under consideration.

The Group had suggested that the Bank should examine the possibility of relaxing the foreign exchange rules requiring the realisation of export proceeds within six months and extend the period to five years in respect of export of engineering and capital goods. The Exchange Control Department of the Bank have already extended the period of export proceeds in regard to such items upto 12 months. The question whether export credits for longer periods can or should be permitted will be decided on the merits of individual cases.

The Group had also recommended that the Bank might consider the possibilities of exempting or giving concessions in respect of usance export bills and packing credit from the purview of credit control measures bearing on the volume and cost of scheduled bank credit. The Bank accepted in principle that export bills should be exempted from the purview of the slab rate system, but, in order to ensure that the benefit of this concession would be passed on to exporters, formulated certain proposals which are under discussion with foreign exchange banks.

The Study Group had suggested that the State Bank of India Act might be suitably modified so as to permit the grant of export credits for medium-term periods. The necessary amending legislation is under consideration. As regards the subsidiaries of the State Bank of India, term credits for exports would also be granted by these banks but no amendment of the State Bank of India (Subsidiary Banks) Act, 1959 for this purpose is necessary.

The possibility of modifying the agreement governing the working of the Refinance Corporation and amplifying its memorandum so as to enable it to grant export credits for medium-term periods had also been suggested. This, too, has been accepted.

As the Government has accepted in principle the recommendations of the Kapur Committee, some of which, according to Dr. Chablani, have been implemented and others are in the process of implementation, the Mathrani Study Group, it is argued, may be expected to go further than the Committee. It is said that the Kapur Committee had no formal terms of reference. But the Ministry of Commerce and Industry had indicated that it should examine (1) the nature and extent of the facilities required for exports, (2) the commodities or groups of commodities to which these facilities might be extended in the first instance, and (3) the basis for extending such facilities to other commodities or groups of commodities. The Committee interpreted, and that very rightly, these directions very liberally to cover examination of the ways and means of ensuring that the volume of credit available to exporters is increased and that the terms on which the credit is available are based on a recognition of the special position and needs of the export trade.

Why Another Committee?

The decision to set up the Mathrani Study Group might have stemmed from the realisation by the Board of Trade that liberalised and widespread credit and guarantee facilities should be provided to the export trade and suitable institutional arrangements should be made to make both short-term and medium-term credits available at favourable rates of interest to exporters and the existing export industries. This is precisely what the Kapur Committee had done. We wonder whether the members of the Board of Trade had read the report of the Committee at all. If they had and still wanted another committee to go into this problem, then the only inference that one can draw is that the Committee's recommendations do not go far enough to meet the present foreign exchange crisis. In spite of all this explanation, it does not appear to us that there is much scope for improving upon the recommendations of the Kapur Committee or exploring new methods, unless one were to think of unorthodox methods which amount to throwing away good money. We shall, however, wait and see what new things the Mathrani Study Group has to say and to what extent they are an improvement over the proposals made by the Kapur Committee. Meanwhile, the truth of the matter is that the key recommendations of the Kapur Committee have not yet been implemented. This is amply borne out by the extract from the Reserve Bank's report given above. Now there is a risk of the implementation of these suggestions being delayed further on the ground that the Government is awaiting the findings of the Mathrani Study Group.

While this is the position, some buisnessmen have revived the old demand that India, too, should have an Export-Import Bank on lines similar to those in vogue in the U.S. The kudos for this suggestion of questionable merit goes to the All-India Manufacturers Organisation. There is surely no need for multiplying institutional agencies. Nor are the conditions and circumstances in India favourable to copy the American model of Ex-Imp Bank. It must not be forgotten, in this connection, that, whereas the U.S. is a net capital exporting country, India is a net capital importing country. Further, India is urgently in need of exports that will yield foreign exchange immediately. Consequently, there is not much room for exports on the basis of long-term credits.

Role of Refinance Corporation

It is, of course, necessary to make sure that India does not miss whatever opportunity it gets for developing export markets of long-term value. From this point of view, terms of export credit must not be less attractive than those offered by other countries. But, for this purpose, there is already the Refinance Corporation. It can play a significant role in providing export finance on a reasonable basis through commercial banks. Only a few amendments to its constitution will have to be made. This issue, too, was examined at some length by the Kapur Committee. Its observations are worth recalling here:

"Taking into account the institutional framework in our country and the scale on which it will be possible for us to grant credit, there is no need in our view," says the Committee, "for the establishment, at present, of a new institution such as an Indian Exchange Bank or an Export-Import Bank. The Refinance Corporation, which has sizable unutilised long-term funds at its disposal at present and which also may get a large flow of similar funds in future, can, on the other hand, easily function as a refinance institution for medium-term export credit, which may be defined as credit extended for periods over six months and not normally exceeding five years.

"We understand that practically all the authorised dealers in foreign exchange are now entitled to borrow from the Refinance Corporation. The Corporation is a non-statutory body; and its procedure and methods of operation are, therefore, likely to be relatively more flexible than those of other institutions incorporated and governed by special laws.

"The use of P.L. 480 funds for facilitating export credits is also supported by precedent. In West Germany, for example, the Ausfuhrkredit A.G. derives its resources in part from E.R.P. funds, the Plafond B, a special fund for financing rediscounts of export bills originally placed at the disposal of the Kreditanstalt, having been made over to the former organisation. The Kreditanstalt itself, as we have indicated earlier, continues to be eligible for assistance from the E.R.P. special funds. In Japan, the capital of the Export-Import Bank has also been contributed in part from out of the U.S. aid counterpart fund special account. In Austria, the Export Fund was set up to extend short-term credit upto 12 months, the resources of the Fund being the E.R.P. counterpart fund; the present resources of the Fund amount to Sch. 100 million and are shortly to be raised to Sch. 110 million. There is no reason, in our opinion, why the Refinance Corporation should not, in course of time, play, in relation to Indian exports, the same role as is played by the specialised institutions in these two countries. If the Corporation is able to help, over a period of some years, in building up new export possibilities and in diversifying and increasing the country's exports, the use of P.L. 480 funds for this purpose would have been abundantly justified."

The Committee did not stop with these observations and leave to somebody else the task of indicating the lines on which the Corporation's constitution should be amended for this purpose and the terms under which its funds could be utilised for refinancing export credits. What more could a committee do? For the benefit of those who may have forgotten the personnel of the Kapur Committee, we may add here that it consisted of Mr. T. C. Kapur, who, as the first Managing Director of the Export Risks Insurance Corporation, has considerable experience in export finance; Mr. N. M. Chokshi, General Manager, Bank of Baroda; Mr. B. S. Agarwal, a representative of the engineering industry; Mr. K. N. R. Ramanujam, Director of Banking Research, Reserve Bank of India; Mr. R. K. Seshadri, Deputy Secretary, Ministry of Finance, and Mr. R. Venkateswaran, Deputy Secretary, Ministry of Commerce and Industry, who was the Member-Secretary of the Committee.

CENTRAL BANK OF INDIA
LIMITED

Profits for the Half-year ended 30th June 1962

The Net Profit of the Central Bank of India, Limited, for the half-year ended 30th June, 1962, subject to audit, including the sum of Rs. 23,36,733.88 brought forward from the last year's account, amounts to Rs. 1,11,69,551.85 which the Directors have resolved to dispose of as follows:

	Rs. nP
To pay an *ad-interim* dividend at the rate of Rs. 2.40 per share subject to Tax (i.e., Rs. 1.68 net) for the half-year ended 30th June, 1962, which is equal to 19.20 per cent per annum gross ..	30,24,000.00
To carry forward to next half-year's account subject to taxation ..	81,45,551.85
	Rs. 1,11,69,551.85

WORLD BANK LOAN TO YUGOSLAVIA

The World Bank has given Yugoslavia a loan equivalent to $30 million for continuation of a national power expansion programme. The loan will help to finance construction of a 240,000-kilowatt hydro-electric plant in central Yugoslavia, and the extension of the country-wide electric power network by the installation of 362 miles of transmission lines and associated substations. It has been made to the Yugoslav Investment Bank, a Federal Government institution which channels investment funds for development. The Investment Bank will re-lend the proceeds of the Bank loan to the enterprises responsible for constructing and operating the power plant and the transmission system. The loan is for a term of 25 years and bears interest of 5¾ per cent, including the one per cent commission which is allocated to the Bank's special reserve. Amortisation will begin on 1st December 1966.

WIPE YOUR FEET

To most people mud is something to be got rid of, a nuisance. Not so to the oilman. His mud—a specially prepared mixture of clay and chemicals—is an essential aid to drilling. Pumped down the well, inside the drill pipe, it flows through holes in the cutting bit and works its way around the outside of the pipe up to the top of the hole. It flushes out the rock cuttings (which give valuable geological information) and keeps the drilling bit cool. It lines the walls of the hole with a protective coating of mud helping to prevent them from caving in. And by its weight it reduces the risk of blowouts which might wreck the drilling outfit.

The safe and satisfactory completion of an oil well calls for a high degree of skill. Great care is taken to keep the well under control at all times, and a gusher—a well out of control—is a rarity.

RAW SUGAR MANUFACTURE FOR EXPORT

PROPOSAL REQUIRES CAREFUL EXAMINATION

BY the time these lines appear in print, the viewpoints of sugar technologists on the question of manufacturing raw sugar (as distinct from white sugar) for export, expressed at a special conference of these technologists convened by the Government of India at New Delhi on the 18th inst., will probably have been known. And in the light of the recommendations made at the conference, the Committee of the Indian Sugar Mills Association (I.S.M.A.) is expected to consider the matter in greater detail and submit to the Government definite proposals on raw sugar production. Meanwhile, the I.S.M.A. Export Agency Division has received replies from most of the sugar mills to its circular sent recently, inviting offers for the supply of raw sugar from the next crushing season due to begin on 1st November 1962. In its circular, the Export Agency Division conveyed to the mills the Export Sub-committee's decision to plan from now onwards for the manufacture of raw sugar, subject to the necessary permission being obtained from the Government, and called for their opinions and suggestions on the scheme tentatively drawn up. The salient features of the scheme are as follows:

Supply: Raw sugar supplies by mills will be against the export quota released by the Government. This will mean that, as and when delivery is made, an "on account" payment will be made by the Export Agency; the balance being paid after the closing of accounts for the export quota year (May-April) in terms of the provisions of the Sugar Export Promotion Act. The bags for packing sugar will be supplied to the factories by the Agency at its cost.

Quota: The export quota of raw sugar should be in 5,000 tons or near-about per factory or group of factories to be supplied in a maximum of two months. If the anticipated white sugar export quota for the current quota year, that is, 1st May 1962—30th April 1963 (the total quota expected is 500,000 tons, of which 150,000 tons have already been announced), does not fully cover the said quantity, it may be possible to treat the excess as an advance delivery for adjustment against future export quotas. Further, any quota remaining undelivered may also be adjusted towards raw sugar supplies.

Quality: Polarisation of raw sugar at the port of destination should be between 96° and 97.99° but in no case less than 94° or more than 97.99°.

Premiums and discounts: These will be calculated on the destination outturn polarisation and adjusted at the time of final payment. An extra 1.5 per cent of the basis price will be given for every full degree above 96° to and including 97° and an additional 1.25 per cent for every full degree above 97° to and including 98°. Conversely, 1.6 per cent of the basis price will be deducted for every full degree below 96° to and including 95° and an additional 2 per cent for every full degree below 95° to and excluding 94°; fractions of a degree will be calculated in the same proportion.

Penalty: The sugar mills will have to guarantee that, in case of polarisation at destination port falling below 94°, they will reimburse the Export Agency for all losses incurred in this behalf. Failure to deliver the raw sugar as per the contract entered into between the Export Agency and the factories will render the factories liable to such losses as may be incurred by the Agency for their not being able to fulfil their commitments to the foreign buyers.

The circular has suggested that the North Indian sugar mills may undertake raw sugar production for the current quota year in the months of January-February 1963 and others in the months of October-November 1962. It is expected that, as in the case of white sugar, the cane cess-purchase tax will be refunded by the State Governments on the raw sugar despatched for export. For the guidance of factories and with a view to helping them to decide upon the manufacture of raw sugar, a typical analysis of raw sugar (Cuban) accepted in foreign transactions has been given. The analysis reveals 96.50 per cent polarisation, the percentage share of other elements being 0.82 reducing sugar, 0.65 ash, 0.80 moisture and 1.23 undetermined.

No factory in India, it may be noted here, is at present producing raw sugar, but it is raw sugar that is in great demand the world over. Many sugar importing countries such as the U.S., the U.K., Japan and South Korea have their own refineries and they prefer to buy raw sugar instead of refined sugar. Even the white sugar imported from countries is refined again before being sold for consumption. Malaya, a prominent importer of Indian white sugar, is proposing to put up a refinery for handling about 200 000 tons annually. It is such possible disposable outlet for raw sugar abroad that has brought to the fore the issue of raw sugar manufacture in India. The opinions of millowners, however, seem to be sharply divided on this issue; some have welcomed it as being very desirable, while some others have opposed it.

Saving in Cost

The one important argument put forward in support of raw sugar manufacture for export is that the cost of production is considerably lower than in the case of white sugar, thereby rendering the task of exporting surplus sugar less difficult. The actual saving, according to Mr. R. C. Aitken, General Manager of the East India Distilleries and Sugar Factories Ltd. (Nellikuppam), will be Rs. 49 per metric ton for raw sugar 96.0° Pol. and Rs. 39.19 per ton for sugar 97.0° Pol. He has come to this conclusion in an interesting article entitled "A case for Raw Sugar Production for Export" to the latest Annual Number (May 1962) of *Indian Sugar*. The estimate, which has been made with reference to one of the factories in the Parry group that has a daily cane-crushing capacity of 2,200 tons, is equipped with all suitable plant and equipment for raw sugar manufacture and is situated nine miles from a port, is arrived at as follows:

Pol. %	Raw sugar		White sugar
	96.0	97.0	99.7
Cane crushed (tons)	392,151	392,151	392,151
Sugar produced (tons) ..	36,219	35,556	34,117
Recovery per cent	9.236	9.067	8.700
Cost per ton of sugar (Rs.)			
Cane at Rs. 43.40 per ton ..	469.90	478.66	498.85
Cess at Re. 1.9684 per ton ..	21.31	21.71	22.63
Purchase tax at 3 per cent on cane value	14.10	14.36	14.97
Total ..	505.31	514.73	536.45
Steam	3.53	3.59	8.17
Chemicals	5.13	5.23	8.27
Gunnies	14.39	14.39	16.87
Labour and overheads	127.73	130.10	135.76
Loss by difference in molasses ..	0.43	0.29	..
Total cost ..	656.09	668.04	705.52

Note:—The above estimates are based on the assumption that production during the 1960-61 season at the factory which Mr. Aitken has taken had consisted of raw sugar, instead of white sugar.

It is thus seen that savings that can be achieved in raw sugar production fall under five heads: Increased recovery, steam, chemicals, gunnies, and labour and overheads. If cane cess is refunded on raw sugar exported, there would, Mr. Aitken says, be a further saving of about Rs. 21.50 per ton. In addition, he expects that the extra output of sugar (as raw) amounts to 2.102 tons in the case of 96.0° Pol. sugar and 1,439 tons in respect of 97.0° Pol. sugar.

An important question that is raised is whether the raw sugar manufacture will not involve any complications and difficulties for the factories. Mr. Aitken does not think so. On the contrary, he feels that the problem is very easy. Here is what he says:

"Manufacture of raw sugar for subsequent refining is virtually unknown in India, but the methods employed have been more or less standardised throughout the raw sugar producing countries and little difficulty is envisaged in the adoption of the process in many factories in India. The National Sugar Institute convened conferences of sugar technologists in April and August 1961 and the proceedings of these conferences indicated that problems of alterations and additions to equipment, particularly in carbonatation factories, for raw sugar production, storage and handling assumed a high degree of importance. As far as production is concerned, there should be no difficulty in sulphitation factories which are equipped with modern defecation and filtration equipment and high speed centrifugals. Storage and handling problems should present little difficulty in the case of sulphitation factories situated within easy access of the main shipping ports, provided raw sugar is produced against firm orders and shipped in reasonable time. Japan, South Korea, and Malaya have no facilities for bulk handling of raw sugar on receipt, and transactions with these countries require packing in a single new jute bag of uniform weight."

Compulsion not Justified

While raw sugar manufacture may facilitate exports at a smaller loss, any move to bind *all* the mills to the obligation to produce a certain quantity of sugar for export is not, according to a section of millowners, justified. There are, we are told, some factories which simply cannot undertake raw sugar production, in view of several manufacturing difficulties. What is worse, when once the mills effect changes in machinery and equipment to produce raw sugar, it will be a sort of permanent arrangement. Some millowners question the wisdom of forcing such an arrangement on the mills. They ask: How long can India continue to export sugar? Will there be sizable exportable surplus year after year, what with the persistently rising domestic consumption? Should not adequate provision be made to meet any sudden shortage of supplies caused by setback to the cane crop? Attention is also drawn to the inability of many units in the sugar industry to produce raw sugar as cheaply as in other countries where plants have been installed exclusively for making raw sugar. The greatest drawback in raw sugar manufacture in India is said to be that, raw sugar is highly diluent and deteriorates much more quickly than white sugar. It will be worthwhile to quote here the observations of Mr. V. D. Jhunjhunwala. In the course of a special article to the aforesaid *Indian Sugar* Annual Number, he says:

"Once manufactured, it (raw sugar) will have to be exported, as it cannot be sold within the country, there being no refineries. Further, it will have to be exported immediately after manufacture, as it deteriorates very fast during storage, unless temperature and humidity are controlled. In other words, it will be essential to export raw sugar before the monsoons arrive. Further, it would be economical to transport raw sugar in bulk, but neither factories nor railways are equipped to handle bulk transport, especially under controlled conditions. In the absence of facilities for bulk handling, raw sugar will have to be bagged in jute gunnies. It may, however, be possible to use good secondhand gunny bags to reduce cost of packing. If the Government declares its policy and sales are effected in advance, it would be worth manufacturing raw sugar exclusively for export. Manufacture of raw sugar has to be undertaken, keeping the following in view: Uniformity and control of grain size are very important from the refiners' point. The grain size will have to be 'D' and 'E', as it would not be possible to produce raw sugar having 96 per cent Pol. or above with smaller grains. Filterability of raw sugar is very important from the refiners' point. Other countries manufacturing raw sugar adopt simple defecation and liming process. As it would be convenient for Indian factories to follow the single sulphitation and single curing process, it remains to be seen if the product would be acceptable to the refiners. Ordinarily there should be no difficulty. It is high time to carry out practical experiment to serve as a guide before undertaking manufacture of raw sugar on a large scale.

"Further, factories having adequate boiling house capacities and making bold grains may not find it attractive to manufacture raw sugar. The reason is that the premium being paid by the refiners, although 1.4 per cent for each unit rise over 96 Pol. is restricted to 98.8 Pol., is much below what is being realised for bolder grains. The premium for raw sugar having Pol. above 96° based on Rs. 24 per maund for 96° works out as below:

	nP per maund
For sugar having 97 per cent Pol. ...	36.0
For 98 per cent Pol.	66.0
For 98.8 per cent and above Pol. ...	85.2

"In calculating cost of raw sugar, quality of cane from which raw sugar is manufactured will play an important role, inasmuch as the saving towards the cane cost per maund of sugar is reduced with better quality; hence factories having low recovery would be attracted to make only raw sugar."

Practical Experiments Wanted

In view of all these factors and considering that raw sugar manufacture will necessarily involve a suitable revision of the lately announced sugarcane price formula, the whole question will have to be carefully examined. In any case, it looks as though it will be too early to give effect to the proposal from the next season onwards, as it is due to commence in a little over three months from now. Detailed practical experiments must be carried out in some factories and, if these prove successful, then the scheme can be implemented on an all-India basis. Even here, any mill which has special technical difficulties should be exempted from the obligation to undertake raw sugar production. Which mill, after all, will seek such an exemption, if it can conveniently and economically produce raw sugar and make a few rupees more on its sale for export? The best thing to do will be to drop the idea of compulsion; instead, the Government or the I.S.M.A. could negotiate with such mills as are suitably located and willing to manufacture raw sugar for export on mutually agreed terms. The whole industry and the Government can pay these mills appropriate compensation for the loss suffered by them. As it is conceded that the loss on exports will be smaller if they are undertaken in the form of raw sugar instead of white sugar, the cost of export subsidy to be borne by both will be correspondingly less. In other words, the aim should be to achieve the object at a minimum loss to the industry and the country as a whole.

U.S. SUGAR ACT

President Kennedy signed on Friday the 13th inst. the Sugar Bill as it finally emerged from the U.S. Congress after a series of "behind-the-scenes manœuvres." The Bill, described as a compromise legislation, has replaced the Sugar Act of 1934 which actually expired on 30th June 1962. The new Act provides for an increase in the statutory share of the domestic market to the indigenous industry from 55 per cent to 66 per cent and continued payment of subsidies to uneconomical growers; the total subsidies paid hitherto was of the order of $330 million per annum. This provision was in accordance with the recommendation made by the Administration in the original draft Bill. The balance of 34 per cent in the total domestic requirements of sugar is distributed among foreign suppliers as follows:

The Philippines is given a special allocation of about a million tons.

A combined "permanent" quota of 1.205 million tons is to be allocated among 27 countries, the purchases being at the so-called U.S. premium prices which have been cut by 10 per cent, pending a review in 1964. The Administration had proposed the complete abolition of premium and the allocation of the same amount to a special fund for international development programmes.

A quota of 1.635 million tons is reserved for Cuba, should it be free from Communist control. Meanwhile, this Cuban quota will be allocated among the foreign friendly countries on first-come-first-served basis at world prices.

Additional quotas have been given to the Latin American nations, especially to the Dominican Republic, which had expressed deep resentment at the allocations previously announced.

Commenting on the new Sugar Act, the New York correspondent of the London *Financial Times* observes:

"The compromise sugar legislation ... has left most of the inconsistencies of America's sugar policy unchanged.... The basic features of the sugar legislation remains the same, and the extraordinary competition for American sugar quotas, which has given birth to a very active lobbying industry on behalf of sugar producing nations, will presumably continue. The Administration did not apparently regard its Sugar Bill as sufficiently important to merit a real Congressional fight."

India's share in the combined permanent quota of 1.205 million tons is only 20,000 tons, a reduction of 10.000 tons as compared with the figure mentioned earlier. For this quantity, India will get the U.S. premium price. The size of the *ad hoc* quota allotted out of the Cuban reserve is not known. Previously, it was thought that India's quota might be about 100,000 tons out of the total 2.58-million Cuban quota. Since, however, this total quota has now been reduced to 1.635 million tons, the share of India will also correspondingly be less, about 63,000-65,000 tons. Since the supply of sugar by India against this quota is to be at world prices, the loss on exports will be quite huge, in view of the wide gap between the world price of about Rs. 340 per ton and the average Indian export price of Rs. 810 per ton, exclusive of the refund of excise duty and cane cess together amounting to Rs. 343.

LINKING CANE PRICE TO SUGAR RECOVERY

A detailed reference to the issue of linking cane price to sugar recovery was made in these columns three weeks ago (*vide* page 1162 of *Commerce* dated 30th June 1962). The reference was based on Press reports pertaining to the decision of the Central Government. The decision was actually announced in the course of a Press note issued on the 3rd inst. by the Ministry of Food and Agriculture. The salient features of the scheme as contained in this Press note are the same as those indicated in our review, excepting that the discount or premium in respect of every rise or fall of 0.1 per cent in the average certified recovery is fixed at 1.5 nP per maund, as against 1.2 nP mentioned in our review. For purposes of record, we reproduce below the official Press note:

"After careful consideration of all aspects, particularly the demand for sugar, requirements of sugarcane by the sugar factories and the need for improving the quality of sugarcane, the Government of India have decided that, from the commencement of the sugar season 1962-63, the price of sugarcane will be linked with recovery. In coming to this decision, the Government of India had before them the advice of the Tariff Commission.

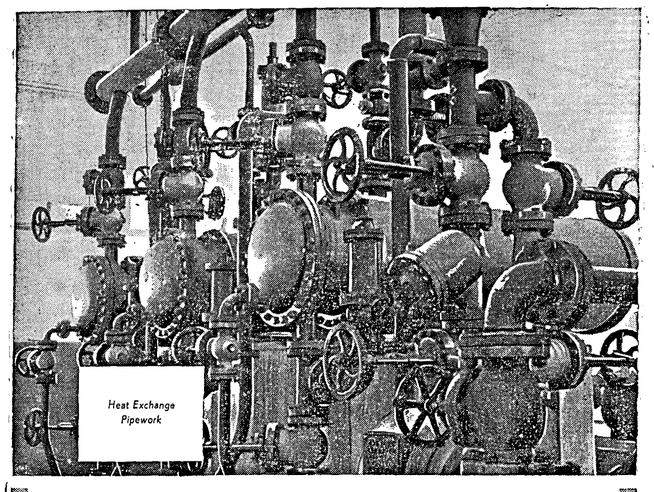
"For the sugar year 1962-63, it has been decided to maintain the price at Re. 1.62 nP per maund of sugarcane for delivery at the gate of the factory, but link it to a recovery of 9.8 per cent. A discount or premium, as the case may be, shall be allowed on this price at the rate of 1.5 nP for every 0.1 per cent fall or rise in the average certified recovery of the factory for a prescribed duration during 1961-62 season, provided that the minimum price payable shall be Re. 1.50 nP per maund for a recovery of 9 per cent or less. The price for delivery at purchasing centres connected by rail shall be Re. 1.50 per maund of cane with corresponding discounts or premia, at the prescribed rate, provided that the minimum price payable at such centres shall be Re. 1.38 per maund of cane for a recovery of 9 per cent or less.

"In order that cultivators and factories have sufficient advance notice of Government's intention about the production of sugar during 1962-63, the Government have decided that the total production in the coming year should not fall below the production in 1961-62."

"INDIAN SUGAR"—ANNUAL NUMBER

The latest Annual Number (May 1962) of *Indian Sugar*, the eleventh in the series (Editor: Mr. J. S. Mehta, Indian Sugar Mills Association, India Exchange, Calcutta 1. Price: Rs. 3), provides, as usual, much useful information pertaining to economic and technical aspects of the sugar industry in India and abroad. It contains a number of special articles contributed by experts. The articles cover problems confronting sugar manufacture, technological developments, sugarcane and its problems, confectionery industry, production of furfural (a chemical intermediate used in the manufacture of nylon and synthetic resin, as well as in the extraction of lubricating oils and butadiene) from bagasse and labour matters. There are two special articles on raw sugar manufacture, a reference to which has been made in this week's feature article on sugar. The statistical section gives comprehensive data relating to the various aspects of the sugar industry, including the primary sector, that is cane cultivation.

The twenty-ninth Annual General Meeting of the Indian Sugar Mills Association will be held at New Delhi on 8th August 1962. Mr. D. D. Puri, President of the Association, will preside over the meeting which will be inaugurated by Mr. S. K. Patil, Union Minister for Food and Agriculture. Besides a review of the various important developments in the sugar industry in the past year, certain important resolutions having a vital bearing on the sugar industry will also be taken up for discussion.



S&L make it

This is an S & L pipework installation—a part and parcel of the rapidly growing Indian Industry.

S & L undertake fabrication and installation of the pipework, as well as the design work entailed in the engineering of the piping systems. Our years of experience gained on projects so far completed in India, plus the extra attention that has made S & L so well-known for quality and dependability, assures you of complete satisfaction.

Whatever your project—a Steel plant, Power Station, Paper Mill, Chemical plant, a single item or a complete installation—call for S & L.

MODERNISING TEXTILE INDUSTRY

RESPONSE TO COTTON BOARD'S SCHEME GOOD

From Our Special Correspondent

MANCHESTER, *10th July*

MANCHESTER LETTER

A SPECTACULAR last-minute rush has sent the modernisation budget of the Lancashire cotton industry soaring to an estimated £115 million. Plans to spend millions of pounds on modernising the mills have poured in to the Cotton Board headquarters at Manchester. Some millowners hurried their applications by car to Manchester with only minutes to spare to submit their re-equipment plans and so qualify for a Government grant of 25 per cent towards the cost.

The last-minute entries into the re-equipment programme surpassed all anticipations. During the debate on cotton industry in the House of Commons, the President of the Board of Trade indicated that schemes involving the expenditure of £72 million had already been submitted to the Cotton Board, and he hoped that the final figure would be more than £80 million. But the final rush has taken the amount which the industry wants to spend on making mills more up-to-date up by nearly £40 million in the 12 days since the debate. The Government's share, if all these plans are completed, will be at least £25 million, so that public funds to the extent of £40 million will have been utilised under the overall reorganisation programme.

It scarcely needs to be repeated that the contemplated re-equipment schemes involve at the moment only applications for the subsidy. The last-minute entries require the approval of the Cotton Board, and the plant must be ordered within a year, and installed within two years to be fully effective. The industry's critics, however—and even the cautious waverers—have been quickly answered when the moment of decision has been reached.

New Light on Merchanting

Marketing remains a key factor in considering what future action is likely to be taken to improve the prospects of the Lancashire textile trade. Many outside observers have constantly criticised this aspect of the industry's affairs, but have rarely been able to put forward constructive alternative proposals. Merchanting in its various guises was an important asset in days gone by, particularly when foreign outlets were involved. Experience gained in supplying cotton goods to the numerous markets of the world was invaluable when it came to disposing of the products of the mills, but, with the diminution of export trade, the wealth of background information gained by shippers became superfluous.

Those who find fault with the existing structure of the industry often point to the predominantly horizontal production and the complicated flow between the different processes. They advance the entirely different way in which competitive industries are established as evidence for their contention that greater integration would be of inestimable value to Lancashire. Many individuals working in the trade at present would contest these views as it is by no means certain that even if they were carried out to their logical conclusion, sudden benefits would accrue.

At the same time, a gradual process of verticalisation is taking place, almost unobserved. Most of the changes which are being adopted in the industry are the result of mergers and absorptions, through which producing units are being linked to the distributive sector. Old-established firms are making contact with one another, so that past rivalries are being forgotten and joint collaboration in disposing of their products can be arranged.

Integrating Output and Distribution

Without any official plan to encourage such a movement, economic forces are undoubtedly working in this direction. It has not escaped attention that the financial results of those firms which combine the activities of spinning and weaving often with supporting merchant facilities have been amongst those companies which have weathered recent storms and are likely to continue in the van of the movement towards a more profitable era.

However much the prospect of joining the Common Market may dismay certain traders, an entry into domestic outlets on the Continent will only be obtained by integrating the output of local mills with an efficient and effective medium of distribution. Not only that, but the whole trend of disposal of manufactured products within the home market is towards the requirements of the big buyers, whether representing chain stores, co-operatives or multiple retail suppliers. In such circumstances, the individual merchant may be able to gain occasional business, but the more highly organised merchanting section of a major producing group should be in a favourable position.

With this background in mind, the next few months may well see substantial changes in the structure of individual companies, many of which have names whose forebears played a big part in building the industrial strength of the Lancashire cotton trade. Output will have to be severely pruned in line with the future level of demand, but, unless production can be effectively transferred through efficient distributive channels, many of the improvements lately introduced into the mills will have been wasted.

Striking A Balance

Arguments have lately arisen among statisticians dealing with cotton trade affairs as to the size of the gap which exists between current production in Lancashire and available domestic demand. On this, of course, hinges the whole question of the volume of imports which should be permitted to make good any shortfall in output from the local mills. Figures have been widely quoted, the most frequently mentioned being 500 million yards, as the absolute limit after which any further arrivals tend to swamp the normal flow of supplies and undermine the whole situation. Many people in Lancashire would contend that even a fraction of this total still has the same undermining effect in destroying confidence.

The annual report of the Cotton and Rayon Merchants' Association had this comment: "It is important that the statistical position should be made clear, bearing in mind that production in Lancashire in 1961 was well below capacity. To the extent that production in the United Kingdom can be increased, maintenance of the existing volume of imports is not necessary."

Another way of putting the same argument was outlined by Mr. W. T. Winterbottom, Chairman of Fine Spinners and Doublers Ltd., in his statement with the accounts. Existing ceilings on imports from Hong Kong, India and Pakistan allow for a total of 422 million yards to enter the United Kingdom each year until the beginning of 1966, which represents 26 per cent of total home market consumption, he pointed out. "If imports from other countries continue at their current level, this means that nearly 40 per cent of the home market will be supplied with imported cloth, compared with 27 per cent in 1959 when the reorganisation schemes were introduced."

Too High A Level

The basic mistake, in the view of Mr. Winterbottom and, no doubt, many others within the industry, was made in 1959 when the original quotas were fixed at too high a level. Little, however, will be gained by recognising such errors at this stage, but much needs to be done to deal with existing conditions. Mr. Winterbottom draws attention to the high level of imports of both yarn and cloth from countries outside those covered by quota limitation. Already these are running at 10 per cent of home market consumption in cloth and 4 per cent in yarn, despite the present slump. As nearly all this trade is subject to import duty and comprises supplies from countries with similar living standards to ours, the problem is one about which Lancashire cannot afford to be complacent, he says, particularly as our own export trade to these markets is negligible.—*All Rights Reserved.*

BUOYANT DEMAND FOR JUTE GOODS

HIGH LEVEL OF OUTPUT TO CONTINUE

JUTE goods production in India will continue to be maintained at the maximum level for a further period of one month, that is, up to the end of August 1962. A decision to this effect was taken by the Committee of the Indian Jute Mills Association at its meeting held at Calcutta on the 10th inst. The actual level of output will, of course, depend on the availability of adequate power supply. It is gratifying that the jute mills in West Bengal have been exempted from the 15 per cent power cut in accordance with the recommendations of the Board of Trade. Meanwhile, the I.J.M.A. has been asked to examine whether there is any scope for augmenting power supply by the installation of small generating sets imported from countries with which India has rupee payment arrangements. The Railway Ministry is also being approached by the Board of Trade for getting larger quantities of coal transported to the jute mill generating stations.

The sustained efforts of jute mills to maintain output at as high a level as possible are to be widely welcomed, considering that the industry is India's ace earner of foreign exchange. Out of the aggregate exports of all goods and commodities amounting to Rs. 657 crores during the financial year 1961-62, the share of jute manufactures alone was of the order of Rs. 145 crores, representing over 22 per cent of the total. The actual production in the first six months of the current calendar year aggregated 581,200 metric tons, as against 482,500 tons in the corresponding period of 1961. The jute mills have felt encouraged to produce more because of the plentiful supplies of raw jute and the buoyancy of demand for both export and domestic consumption. The total quantity of jute goods actually despatched from mills in the first half of 1962 was 552,800 tons, as against 483,900 tons a year before. The month-by-month trend of production and despatches is indicated below:

(In metric tons)

	Production		Despatches	
	1962	1961	1962	1961
January	96,700	87,600	90,800	82,600
February	92,200	78,600	89,200	79,000
March	97,800	88,900	98,200	87,400
April	97,000	80,500	82,300	73,900
May	99,700	79,000	90,000	77,900
June	97,800	67,300	101,600	83,100
Total Jan.-June ..	581,200	482,500	552,800	483,900
Whole of 1961 ..	970,300	..	991,200	..
Whole of 1960 ..	1,088,442	..	1,058,760	..
Whole of 1959 ..	1,022,520	..	1,118,328	..

The improvement in production was particularly marked in the case of hessian, the actual output in the first half of 1962 being 227,000 metric tons, representing a rise of 58,600 metric tons as compared with the corresponding period of 1961. The production of sackings was also higher at 272,800 tons, but the rise was of the order of 24,800 tons only. Other jute manufactures show a rise of 15,300 tons to 81,400 tons. The following table shows the actual trend of output, together with equivalent of raw jute consumption during the first half of 1962 and 1961, as well as in the whole of 1961 and 1960:

(In metric tons)

	January-June		Whole of	
	1962	1961	1961	1960
Hessian	227,000	168,400	355,700	371,000
Sacking	272,800	248,000	483,700	532,700
Others	81,400	66,100	130,900	117,900
Total ..	581,200	482,500	970,300	1,022,500
Equivalent jute consumption (In thousand bales) ..	3,288	2,712	5,458	5,806

Thanks to the appreciable expansion in production, the supply position of jute goods has now been much more comfortable than that in the past two years despite the lower opening stocks, as the following figures show:

(In metric tons)

	January-June		Whole of	
	1962	1961	1961	1960
Opening stocks ..	55,600	81,500	81,500	58,900
Production	581,200	482,500	970,300	1,088,442
Total supply ..	636,800	564,000	1,051,800	1,147,342

The rise in despatches of jute goods is accounted for by both exports and internal consumption. The total despatches for exports during the first half of 1962 were higher by 52,532 metric tons at 387,332 tons and those for internal consumption by 16,368 tons at 165,468 tons. Details are given below:

(In metric tons)

	Despatches for export		Despatches for internal consumption	
	1962	1961	1962	1961
January	63,400	57,300	27,400	25,300
February	62,300	54,500	27,600	24,500
March	66,400	55,800	31,800	31,600
April	54,300	52,700	28,600	21,200
May	66,200	53,700	23,800	24,200
June	74,732*	60,800	25,868*	22,300
Total Jan.-June ..	387,332	334,800	165,468	149,100
Whole of 1961 ..	713,100	..	278,100	..
,, ,, 1960 ..	786,930	..	271,830	..
,, ,, 1959 ..	881,586	..	236,742	..

* Rough estimates only.

In view of the high level of offtake, jute goods, stocks with mills have gone down. The total of these stocks as on 30th June 1962 stood at 80,300 tons, as compared with 84,100 tons at the close of the previous month. The decline would have been more but for the fall of 1,900 tons in production during the month of June. The end-June 1962 stocks are, however, higher than those a year ago when they amounted to 77,600 tons. The latest I.J.M.A. stock figures are given below:

(In metric tons)

	30th June 1962	A month ago	A year ago
Hessian cloth and bag	25,000	27,100	29,300
Sacking cloth and bag	38,900	37,300	36,900
Others	16,400	19,700	11,400
Total ..	80,300	84,100	77,600

Although the demand for jute goods has registered a notable improvement, prices of sackings have staged a decline, while those of hessian do not show any marked change. The latest available quotation for sacking B. twills at Calcutta is Rs. 130.75 per 100 bags, as against Rs. 167.00 prevailing at this time last year. Hessian (40" x 10 oz.) is quoted at Rs. 58.25, as against Rs. 56.80 a year before. The downward trend of sackings prices must be attributed partly to the increase in supplies following higher output and partly to the keen competition from Pakistan. Further, the prices of raw jute, too, have fallen. Assam bottoms are now on sale at Rs. 30 per maund, the floor price, as compared with Rs. 54.50 prevailing in the middle of June 1961. It, however, remains to be seen whether the present level of raw jute prices will continue in the coming months, what with the recent reports suggesting damage to the current season's crop.

WHY ARE THERE SO MANY AIR ACCIDENTS NOWADAYS?

By Our Aviation Correspondent

MORE than fifty years ago, the steamship *Titanic*, then on her maiden voyage, foundered in the Atlantic with great loss of life. It was an event which shocked the world. How, people wondered, could such a thing have happened? How could disaster, so sudden and so complete, have overtaken this great vessel, the last word in steamship construction and, as men then thought, complete with every modern device for the safety of navigation? The subsequent inquiry, of course, revealed just how many and how flagrant were the shortcomings of even the best of ocean-going ships of that time. The shortage of lifeboats and the limited hours of watch then maintained by ship's radio, for example, were two factors largely responsible for the appalling loss of life.

To this day, the *Titanic* disaster is still the subject of film and story. People, born long after the event, have read of it or seen it portrayed. The very magnitude of the disaster preserves it in the public memory. And yet, since the beginning of this year, in the short space of seven months, air disasters have occasioned a loss of life little short of that involved by the foundering of the *Titanic*. Is it not a very curious fact that we all seem, nowadays, to take these air disasters as a matter of course—or, to use a colloquialism, "just one of those things"? There is little or no public outcry. Indeed, a few days after each successive catastrophe, save by those immediately concerned, the whole affair is almost completely forgotten.

Is this because we live in a more swiftly moving age, an age, perhaps, when people have been hardened by the cruelty and devastation of two world wars? Or is it that we have been conditioned to expect these disasters at regular and distressingly frequent intervals? Both these factors probably contribute to our attitude. It is a pity because, as long as the public conscience remains unshocked, as long as the public memory continues to be so short-lived, as long as we accept these fatalities as inevitable, so long, one suggests, will this state of affairs persist.

Let us take a look at the accident statistics for the past six months. There have been twenty-four accidents to aircraft engaged in public transport involving fatalities. These have taken a toll of nearly 900 lives. In addition, there have been thirty-five serious accidents which did not, fortunately, involve fatalities, but which did, in many instances, involve the complete destruction of aircraft. In any consideration of the problem, however, these latter accidents cannot be ignored. The overwhelming majority of all these accidents—fatal as well as non-fatal—were due not to any kind of mechanical failure, but to errors of human judgment.

Such errors are usually attributed to the commander of the aircraft. That, perhaps, is natural; he is the unfortunate individual on whom the final responsibility rests. Nevertheless, it is too often forgotten that, when Captain *X* hits a mountain, or crashes on take-off, killing a hundred or more people, he is very often as much the victim of a chain of circumstances beyond his control, as are the unfortunate passengers who perish with him. Those circumstances, moreover, although sometimes aggravated by weather and terrain, are usually man-created. In other words, responsibility for Captain *X*'s error lies, very often, as much in the Boardroom as on the flight deck.

You cannot pass a law against errors of judgment. From time to time, in all walks of life and, more specifically, in all forms of transport, accidents do happen. The *Titanic* disaster was such an accident. Although warned of the presence of ice at a more southerly latitude than usual, the captain, with speed of passage probably in mind, failed to take every necessary precaution. Such an accident has not been repeated in our time. Man can—and usually does—learn by experience. In the case of air transport, however, we have the same types of accident occurring with monotonous regularity.

The fact is that the task of airline flying is becoming progressively more exacting. So exacting, indeed, that however wise, able, cautious, and experienced, there are occasions when the commander is simply overwhelmed by circumstances. And that, one suggests, is to change the whole aspect of the matter. These accidents are not just occasional human lapses or errors of judgment. They are the logical and foreseeable consequence of definite and recognisable defects in the very machinery of air transport operation.

The air transport industry can be likened to a task force which has overrun its objectives and failed to consolidate its gains. It is in an extremely vulnerable position. It has progressed too fast. By that, one does not seek to imply that speed, *per se*, is dangerous. Apart from the more critical handling characteristics of most jets—a factor, of course, not to be ignored—speed of flight has little to do with it. It is the *tempo* of operation which is straining, beyond reasonable endurance, the patched up fabric of existing ground facilities.

Take airports, for example. Most of these lack the facilities which modern jets ought to have. Not only are available runways too few but they are usually very marginal in length—which accounts, no doubt, for the high incidence of take-off and landing accidents. Radar and other aids are inadequate for the volume of traffic; in many instances, these aids are defective or out of date. Many airports are ill-sited. Whilst, in the days of Constellations and other piston aircraft, they were probably marginal, today they present unacceptable hazards. One could cite many examples. And all this is to say nothing of *en route* facilities which are often sketchy and not seldom non-existent.

Immediately after the last world war, with the incursion of large numbers of war-trained pilots into civil aviation, there was an attitude towards airline flying which can best be described in the war-time phrase of "press-on-regardless." This was undoubtedly the cause of a great many accidents. So far as flying crews are concerned, intensive training, discipline, and experience, have inculcated a high sense of responsibility and an acute awareness of the hazards which negligence or rashness inevitably invite. There is now no trace of the "press-on-regardless" brigade in the ranks of commercial pilots. Can it be, however, that, in a rather different form, it lingers on in management offices and Boardrooms?

Is not the whole air transport industry pressing on regardless? Is it not turning a blind eye to marginal runways, inadequate ground facilities, the more critical characteristics of jet aircraft, the hazards of traffic congestion, and sub-marginal weather? Is it not over-estimating the human skills at its disposal? Is not all this suggestive of a railway system which, whilst it has the last word in engines and rolling stock, persists in operating over a permanent way which is known to be unsound? For how long would the public continue to patronise such a railway?

The industry would, of course, indignantly repudiate such views as these. The accident rate is improving, they constantly declare and quote statistics to prove it. One remains unimpressed. In the first place, statistics seldom present a comprehensive truth; in the second place, to accept the inevitability of death for a proportion, however small, of those who travel by air is a deplorable philosophy. These accidents are, for the most part, avoidable—not inevitable. So long as that position obtains, the airlines have much to answer for.

PLASTIC VENTILATOR FOR CARS

An ingenious car ventilator on sale in West Germany consists of a sheet of plastic material which fits above the driver's window—or any other window that can be wound down—and to the outside of which two cones joined at their apexes are attached. The movement of the vehicle drives air into the first cone in which it is accelerated and compressed. At the apex of this cone there are two holes. One allows a jet of fresh air to blow over the inner side of the car roof while the other directs a second jet down the centre of the second cone. This acts in the same way as a water pump and extracts stale air from the car through a series of holes down the internal side of the second cone.

FIRST FIVE YEARS OF COMPANIES ACT, 1956—V

REFORM OF MANAGEMENTS

By A Special Correspondent

[Towards the close of Part IV of this series on Company Law published in our last issue, the author had made a beginning with the subject of criteria and policies laid down by the Company Law Advisory Commission and the Government in regard to management of companies. He had dealt with general policies, and in this article has outlined the policies relating to appointment of managing agents, secretaries and treasurers and managers and managerial remuneration.—ED.]

TO take up the criteria and policies relating to appointment of managing agents first. The applications for appointment and re-appointment of managing agents are to be scrutinised according to the criteria laid down in Section 326 of the Act. In this connection, the objections received from the shareholders should also be scrutinised to ensure that the proposed 'person' has not been guilty of conduct which would make him undesirable to be placed in a position of trust.

Where a partner or a member of the managing agency firm or company was involved in any case pending in the Sessions courts, such a person should be dropped from the firm or company at the time of appointment.

When a change in the constitution of managing agency firm or company amounts to a change in the controlling interest in the managing agency, the managed company should also approve of such a change by special resolution, so that the shareholders of the latter company may have a chance of recording whether or not they agreed to the new set-up of managing agent. While approving such a change, the Commission can, where it considers fair and reasonable, lay down conditions regarding the transfer of shares and the prices at which transfer should take place. Further, where conversion of a public company into a private company is involved, the Commission would give approval, provided *all* the shareholders of the company give consent to the conversion.

Any change in the constitution of a managing agency company caused by the transfer of more than 50 per cent of its shares to another company so as to make it a subsidiary of the latter should be approved only if the holding company concerned undertook, by means of a resolution in general meeting, to guarantee the observance and performance by its subsidiary of the latter's managing agency obligations under the various managing agency agreements with the companies under its management.

Agreements containing a provision that nominee directors should be appointed chairman of the company should not be approved.

Exemptions

The terms of office for a managing agent should be ten years in the case of a first appointment and five years for reappointment. This rule is to be followed in the case of secretaries and treasurers also. It is also applicable to managing agents and secretaries and treasurers of private companies, not being subsidiaries of any public company. But, while this would be the general rule, the following exemptions could also be made:

(a) Companies engaged in basic or heavy industries or industries of national importance, such as iron and steel, heavy engineering, deep mining, overseas shipping, the planned development or expansion of which is of great importance to the national economy and involves a long period of gestation before yielding full results;

(b) companies undertaking diversification programmes on a large scale spread over a period of years, involving very heavy capital outlay and heavy incidence of depreciation in the initial years, for the speedy and timely implementation of the expansion programme, the managing agents are directly responsible because of their ability to render financial and/or other specialised technical services;

(c) where the managing agents are themselves primarily responsible for the promotion of a new industry in the country, as a pioneering venture (provided it is of importance to the national economy) or where they come forward to set up a new industry on a large scale in an undeveloped and backward region;

(d) where the managing agents have voluntarily forgone their remuneration for a considerable period in the past and have only recently started earning some remuneration.

Now to take up the question of criteria and policies relating to remuneration of managing agents, secretaries and treasurers and managers.

The 10 per cent remuneration mentioned in Section 348 of the Act is the ceiling and is not to be automatically allowed. The commission "will not consider such proposal of voluntary increases in the commissions payable to managing agents merely because such remuneration is permissible in the Act, unless the proposals are supported by compelling constructive evidence."

In sanctioning minimum remuneration to managing agents in case of absence or inadequacy of profits the facts to be considered are such as the nature of the business, the financial resources of the company, the ability of the managing agents as disclosed by their past performances, standards of efficiency of both managements and workers, management-labour relations, handicaps arising out of the disadvantageous location of factories, availability of materials and transport problems. Subject to these general considerations, the Commission has accepted the basic formula of a minimum remuneration ranging from Rs. 7,500 *per annum* for a company with an effective capital (i.e. paid-up capital, debentures, loans and overdrafts, deposits, reserves, subsidies from Government, profits carried forward less investments not being short-term deposits and loans made by company) of Rs. 5 lakhs or less, to Rs. 50,000 *per annum*, the maximum as provided in Section 198(4) of the Act. But, in this connection, a liberal rule made by the Commission is that, where the nature of the industry is such that paid-up capital is low, but sales are considerably in excess of the capital employed, a weightage is to be given to (i) scientific or literary undertakings or those engaged in pioneering works, (ii) number of partners to divide the remuneration in the managing agency firm, (iii) needs of persons living in costly places, and (iv) where the industry is located in places not easily accessible.

Directors or partners of a managing agency company or firm should not be allowed to draw separate remuneration from the managed companies in other capacities over and above the remuneration drawn by the managing agents.

While considering the increase in the percentage commission on net profits to a company, the Commission also bears in mind the past sacrifices made by the managing agents.

In case of private companies, the bulk of whose shares are held by managing agents, directors or their relatives, the Advisory Commission gives a liberal quantum of maximum remuneration allowable to the managing agents of public companies.

On the question of remuneration payable to managing agents of private companies, the Commission is of the opinion that, where the partners of the managing agency or its shareholders, as the case may be, hold not less than 80 per cent of the capital of the managed company, the remuneration should be fixed at a figure which, in whatever way expressed, should not exceed 20 per cent of the net profits of the company calculated in accordance with Sections 349 to 351 of the Act. This remuneration would be without perquisites.

Where the managing agency of a holding company is also acting as managing agent or secretaries and treasurers of the latter's subsidiary, the earnings of the holding company by way of dividends from its subsidiary should be deducted from the net profit of the holding company for purposes of calculating the remuneration payable to its managing agents.

Any payment made by way of remuneration to every partner of a managing agency firm, every director of a managing agency company, if it is a company, or every director and member of a managing agency company if it is a private company, should be deemed to be included in the remuneration of the managing agency concerned as approved by Government.

Any proposal for the increase in the remuneration payable to a managing agency who has so far been entitled to only less than 10 per cent commission on net profit, should not ordinarily be allowed to draw at the maximum rate, unless there are special reasons to justify such an increase.

Amendment of 1959-60

In 1959-60, the Commission reviewed the question of managerial remuneration and decided upon a sliding scale varying between 4 per cent and 10 per cent for the managing agents and between 3 per cent and 7½ per cent for the secretaries and treasurers, subject to the following exceptions:—

(a) Even where the managing agents are allowed to be reappointed for a longer period than five years on the basis of the principles set out regarding the tenure of managing agencies, if the development or expansion of the particular industry entails very heavy capital outlay as also heavy incidence of depreciation calculated at the income-tax rates in the first few years after the completion of the development or expansion programme, and where even after the completion of the development or expansion of the undertaking it is likely to take some time before it begins to yield reasonable returns.

(b) Where a company engaged in a new or comparatively underdeveloped industry has been unable to earn reasonable profits for a number of years on account of factors beyond the control of the management, and is unlikely to be able earn large profits in the near future, but the company is otherwise efficiently managed, provided the Commission, for reasons specifying the special circumstances of the case or the special features involved in it, recommend that such higher remuneration should be allowed to the managing agent for such limited period as the Commission may suggest.

Where a deviation is made from the standard sliding scale, the desirability of imposing a ceiling on the absolute amount of remuneration payable in any one or more years may be considered, so that in years of abnormal profit as, for instance, in the second half of the term of office, the managing agents do not receive unduly excessive remuneration out of proportion to their past earnings, having due regard to the increased responsibilities, if any, to be shouldered by them.

Managing Directors, Whole-time Directors, etc.

In fixing the remuneration of managing directors, whole-time directors, directors, etc., regard is to be had generally to the financial resources of a company, its dividend record, turnover, size of the company, the nature of its business, the extent of the managing director's interest in the company and the responsibilities discharged by the managing directors, etc.

Proposals for increase of sitting fees or fixed conveyance allowance are to be considered on merits.

Proposals involving payment of remuneration to managing directors which may exceed the statutory limits of Section 198 in the case of inadequacy of profits should be considered on merits.

The directors of a company who are also directors or partners of the managing agency company or firm should not ordinarily be permitted to receive any separate remuneration from the managed companies by way of stipulated commission on net profits or otherwise.

Payment of commission on net profits to the non-working directors of a company may be paid, provided such directors were getting a commission before or the Advisory Commission is satisfied that in the circumstances of the company, the payment is fair and reasonable in relation to the responsibilities shouldered. Such commission, however, could be divided among the directors in any proportion agreed among themselves.

Managing directors in receipt of a monthly salary and a commission on profits are not to be allowed to draw any additional guaranteed minimum remuneration, besides their monthly salaries in the event of absence or inadequacy of profits. This rule would also apply to the directors.

In the case of appointment of managing directors consequent to the resignation of managing agents, the Advisory Commission usually lays down a condition that the proposed managing director should not supplement his earnings directly or indirectly by any buying or selling commission through the subsequent appointment by the company of their former managing agents as their sole selling or buying agents. The Advisory Commission has extended these restrictions on managing agents under Sections 356-358 to the managing directors as well.

Payment of bonus to directors and/or managers of the company could be favoured if it was at the same rate as allowed to the other employees of the company; ordinarily, two months' bonus is to be allowed.

Ordinarily, the Advisory Commission would not advise the approval of any proposal for absorption of the element of commission into the basic salary, as the latter represents the minimum that a person should get, having regard to the resources of the company and his official rank and position in the company, whereas the commission element provides an incentive to the individual concerned to make every effort to achieve better working. But, where an increase has to be allowed, it is necessary to see that the element of commission converted into salary does not exceed the average earnings of the individuals concerned by way of commission during the preceding five years. The interest of the company is to be a guiding factor and each proposal has to be judged from the point of view of whether or not its acceptance would leave sufficient incentive with the person concerned to strive for better working of the company.

In this regard, the comments made in the Second Statutory Report are important. The Report says that, "in the interest of the efficient management of companies, commission on net profits should stay as an item of incentive payment and that the protection given by the proviso to Section 198(4) should not ordinarily give any cover to the commission on net profits which the managing directors could expect to earn only in those years when the company made good profits but which could not be guaranteed during lean years when the company either made no profits or its profits were inadequate even to cover basic salaries, allowances and perquisites payable to managing director under the terms of the service agreement."

No special remuneration is to be paid to directors for the signing of share certificates which is a part of their normal duty.

Normally, fixed monthly payments should not be allowed to directors who are neither whole-time directors nor are rendering any specific services to the company. This would be particularly objectionable in the case of a company having a director-manager or managing director for managing its affairs.

The remuneration by way of salary and commission payable to a managing director or whole-time directors should not ordinarily exceed Rs. 1,20,000 *per annum*, even if the total managerial remuneration was well within 11 per cent of the net profits as laid down in Section 198.

Payment of fixed amounts to directors on account of travelling and halting allowance for attending board meetings, etc., should not ordinarily be allowed but reimbursement of expenses can be allowed.

Prior to 1959-60, the Commission was not in favour of a ceiling on the maximum amount of remuneration payable in any year to a managing/whole-time director or a manager of a company by way of salary and commission in the case of reappointment of the same person in the same capacity and under the same terms and conditions, but, later on, it came to the conclusion that even in such cases an overall ceiling on the remuneration payable to the individual managing/whole-time director or manager should be imposed.

A manager's remuneration under Section 387 should be restricted to 5 per cent as is fixed under Section 309(3) for managing or whole-time directors.

Remuneration for foreign nationals appointed as managing or whole-time directors or manager of public companies could be deviated from the pattern of remuneration allowed in respect of the company of comparable size not involving foreign collaboration or foreign participation. The criteria for determining the amount of remuneration such cases should be (a) qualifications and business experience of the foreign national in question, (b) the size of the company, (c) the anticipated profit-earning capacity of the company, (d) the status and position of the person under his previous employer, (e) the net remuneration earned by him in his previous position, and (f) the standard of living and the average level of income in the country of origin.

Finally, cases of remuneration in the "deemed public companies" under Section 43A are to be treated on par with those of other public companies.

Thus, it will be seen from the foregoing details that the various criteria and policies evolved during the last five years for dealing with the management cases are far too comprehensive and many of them are tantamount to placing new constructions on the substantive provisions of law which, though legally could not be objected to, are nevertheless the over-extension of the apparent meanings of law. However, while this is so, it is refreshing to find that the Advisory Commission have not applied their formulæ and criteria with any rigidity and inflexibility and, when hard types of cases came up, they were considered on merits and with a pragmatic realism. This general attitude and approach of the Advisory Commission has exercised a sobering and restraining influence on the Government Department dealing with the Companies Act.

STEPPING UP PRODUCTIVITY

BETTER MANAGEMENT WILL HELP DEVELOPING COUNTRIES A LOT

By Dr. M. P. Kacker

FOR sometime past, specially since the setting up of the National Productivity Council in January 1958, the problem of stepping up productivity has been given serious thought by the Government, businessmen, industrialists and the academicians. All of them have come to realise and appreciate the potentialities of comprehensive productivity campaign in a country like India which is forging ahead to overtake the highly industrialised countries of the West. Productivity, it is claimed, offers no exclusive gain to any single partner of production, namely capitalists, labourers or management nor is it supposed to be an end in itself. It is a scientific technique of employing the available resources of an undertaking in a way which ensures their maximum utilisation, so that the best possible results are attainable with the various "input factors" involved in production. The term "productivity" is thus synonymous with elimination of waste and maximum utilisation of resources in the interest of the community as a whole. The fruits of a well sustained productivity campaign can thus be enjoyed by all, including the consumers who are able to get their requirements at lower prices.

At times, the term is wrongly interpreted and often confused with similar other terms like production, yield, performance and efficiency. The first two terms, production and yield, connote absolute output of a product, without any relation to the factors involved, but productivity implies an improvement in output as a function of changes in the quantum of resources. "Performance" and "efficiency" are in a sense general terms and may or may not lead to higher productivity. The performance of labour or capital at a particular point of production may be to the entire satisfaction of the management, but there might be still some scope of their better utilisation or a more effective use through shifting and inter-departmental substitution. An improvement in the working conditions and amenities provided to the labourers will no doubt contribute to their efficiency but may not necessarily lead to higher productivity, if their placement is not to the best advantage of the enterprise, that is to say, if the management fails to visualise the capacity and skill of the individual workers and locate the points where it can be best utilised. The distinction between "efficiency" and "productivity" of labour was made by Siegal when he observed that "labour productivity indexes do not reveal changes in the intrinsic efficiency of labour but rather the changing effectiveness with which labour is utilised in conjunction with other factors."[1]

It is now widely admitted that, in the highly competitive world markets of today, a country can hold its head high only through a vigorous drive towards increased productivity. The three main steps to this end are incessant production research, increased capital investment and better management. Every country, however, cannot afford to take all these three steps simultaneously or with equal emphasis. A characteristic feature of the economy of many underdeveloped Asian and African countries is that they suffer from shortage of foreign currency but have abundance of manual labour. As a consequence, the problem of these countries is "productivity without pain," that is, stepping up productivity with least additional investment and without involving any retrenchment of labour. No doubt, introduction of modern automatic machinery and improvements in plant and equipment will result in higher labour productivity, that is, increased output per worker, but any unrestricted move in this direction is fraught with the danger of labour unrest in such countries where the labour supply is abundant. Thus, more emphasis will have to be laid on better management rather than better machines. The I.L.O. missions operating in these countries have also served to demonstrate how productivity could be increased, often substantially, with better utilisation of machines and material rather than the labour of workers.[2]

The task of better utilisation of resources rests upon the management. The managerial revolution which appeared in the western countries during the post-war era was mainly instrumental in the productivity campaigns initiated there. "The most significant factor in America leading to high production at low cost is efficient management."[3] In India, new management techniques have come into prominence only recently and a considerable section of the industry is still reluctant to experiment and adopt them.

The primary responsibility for creating a favourable atmosphere for productivity and successfully implementing the various schemes thereof has to be shouldered by the management. The management will have to show more receptiveness to new ideas and a keen willingness to improve upon rather than imitate the techniques in use elsewhere. At the same time, it will have to convince the workers that the various steps being taken for higher productivity are for their own benefit and that the gains resulting therefrom will be shared by all.

The quest for higher productivity through better management has been aptly called "war on waste of all kinds."[4] This war has to be waged on many fronts, especially the following:—

(a) Production planning and control;
(b) Statistical quality control;
(c) Costing and budgetary control;
(d) Sound industrial relations;
(e) Simplification, standardisation and specialisation, and
(f) Efficient marketing management.

These techniques have proved to be indispensable aids to management, where, of course, they were given sincere trials in the midst of favourable conditions. It is, however, unfortunate that, in many manufacturing organisations, they are still unknown because those on the management side are not convinced about their potential values and not prepared to give them a fair trial.

The successful *planning and control of production* enables the manufacturers to adhere to the delivery dates and ensure the availability of men and machines when required. While the planning serves to check irregularities in production and employment, the control does away with imperfections in materials and machines which may hamper productivity. *Statistical Quality Control*, on the other hand, helps the maintenance of quality by bringing to limelight the deviations of manufactured products from given specifications. The application of this technique brings about considerable elimination of waste and safeguards against deterioration in quality.

Scientific and regular cost studies enable the management to estimate the prices at which their products could be offered in the market and the extent to which they would prove competitive. Unreasonably high costs are indicative of wasteful methods of production and forewarn the management to take suitable steps for their reduction. Detailed cost studies of the past serve as the basis of production budgets of individual departments, processes and operations and the workers concerned are apprised of the budgetary cost limits beyond which the production costs should not go. In an organisation where budgetary control is exercised in this fashion, even an ordinary worker feels interested in managing his small affair within the pre-approved cost limits. The cost department locates those points where the money value of the performance exceeds the standard laid down and reports the variations to the departmental heads for necessary action.

Another important duty of the management is to establish *sound industrial relations* with the workers. A climate of co-operation and mutual confidence has to be created so that new techniques and methods are willingly accepted by the workers. The trade unions will come forward to join the management in their productivity campaign only when the wage and employment interests of the workers are adequately protected and the benefits of higher productivity are shared. Only then the management can solicit valuable suggestion from the workers out of their intimate knowledge of production processes and everyday practical experience. The two-way communication between the workers and management through informal and personal meetings, display of charts, posters, etc., publication of house magazines, etc., serves as a vital tool for the management in the latter's bid to bring about harmonious industrial relations. It will not be out of place to recall here the views of I.L.O. experts:

"It is, therefore, of the utmost importance that action to raise productivity should be accompanied by appropriate employment policies, by appropriate policies to ensure that the benefits from higher productivity are fairly distributed through higher wages or lower prices or both and by safeguards to ensure satisfactory working conditions. Such measures ... are to be regarded not so much as measures which should accompany action to raise productivity but rather as integral parts of programmes to raise productivity; for, unless workers are reassured on these points, their indispensable co-operation cannot be expected."[5]

Simplification, standardisation and specialisation constitute another waste elimination weapon for the management. Simplification is achieved in industry through reduction in the number of varieties or types of products, so that production is concentrated on a small range and favourable conditions are created for specialising in the manufacture of few selected varieties. Standardisation implies application of certain predetermined standards of quality, measurements, inner contents, etc., directing the manufacturing process strictly in accordance therewith. While it is true that the nature of industry and size of markets pose serious limitation to any move in this direction, all available opportunities should be fully exploited in order to take the best out of men, material and machines. In a large national market, even consumer goods industries, characteristic of a long chain of varieties, can successfully effect simplification by calling upon the individual units to manufacture a limited range different from each other. This will not be possible where the industry has a small market to cater to, for, in that case, the individual units will find it economical to devote to a complete range of products to offset the diseconomies arising from their small scale of production. The problem of variety is not so acute in industrial goods industry where these techniques can be employed to an appreciable degree. One of the main reasons of high productivity and low costs in the manufacturing industries of the U.K. and the U.S.A. during the last thirties was their sincere adherence to the policy of simplification and standardisation.[6] These two countries have since then continued to be world champions of this movement.

Role of Marketing Management

The techniques of production planning and control, statistical quality control, costing and budgetary control, sound industrial relations and simplifications, etc., thus offer an indispensable aid to management in their mission for increased productivity. The application of these techniques is, however, made at the production or manufacturing stage which might leave an impression that the distribution stage has to do little with the productivity movement of an industrial undertaking. In fact, opportunities of waste elimination and cost reduction can also be exploited by marketing management which is in charge of the administration and promotion of sales.

The marketing management of a concern is entrusted with the formidable task of finding suitable outlets for the distribution of goods, appointment of marketing personnel including selling agents, salesmen, travellers, etc. and making arrangements for transport, insurance, sales promotion, etc. It is their important function to see that the goods for sale do not get accumulated either in the warehouses of mills or at intermediate points within the distribution channel.

It has been observed that, in a majority of Indian mills, while steps have been taken or are being taken to modernise the plant and equipment, the marketing machinery continues to exist on the old outdated pattern. The marketing management has not yet realised the need for modernising the marketing machinery and adopting the modern techniques of sales planning or budgeting, inventory control, marketing research and distribution cost analysis. In order that they may contribute something to productivity, the management will have to examine periodically the suitability of their marketing organisation in accordance with the changes in the production set-up, size of markets, fluctuations in demand and the psychological behaviour of consumers. Further, it will have to ensure that the marketing personnel is fully occupied with productive duties and co-ordination is maintained between different branches of the marketing department. If it is found that the sales force remains idle or underworked during some time of the year, the management can think of improving the situation through an expansion in the size of the undertaking, increase in the number of varieties sold under mills' own trade marks or taking up themselves some more marketing functions such as advertising, export, etc., to the extent possible.

Even when the marketing department is efficiently organised, wastages in marketing effort may occur at some point or other. The management can locate such points through distribution cost analysis—a modern technique of evaluating various marketing operations in relation to turnover, sales staff, sales territories, etc. According to A. E. Taylor:

"Distribution cost analysis is a tool which offers to management perhaps even greater opportunity for reducing costs and increasing efficiency than that resulting from the pioneering work of F. W. Taylor and his associates on time and motion studies and cost accounting in the factory."[7]

An analytical study of turnover and marketing costs may make striking disclosures of misdirected and unproductive marketing efforts. It may, for example, reveal that a large proportion of the number of customers, orders, products, etc. bring in only small proportion of sales involving disproportionately large marketing expenses. As a result, the management may be inclined to "selective selling" by discarding comparatively less productive orders, customers and products. In other words, the marketing departments can step up productivity by securing higher turnover volume with less than proportionate distribution cost. Through analysis and investigations, it can find out which sales territory is overstaffed, in what parts of the country the national advertising campaign would have little potential value, which territories offer more scope for direct distribution of products to the ultimate consumers and similar other facts.

To conclude, the marketing management can substantially contribute to industrial productivity by successfully experimenting upon modern marketing techniques and maintaining a regular flow of goods to the consuming centres. Where the installed capacity of a factory is not fully utilised, the management can devise ways and means of demand creation and market extension, feeding thereby the idle capacity. It can impress upon the dealers and consumers the significance of demanding a restricted range of standardised products to enable the production department to carry out the policy of simplification and standardisation. The customers may be persuaded to abandon irrational preferences of variety and concentrate upon a standard range. In other words, the dovetailing of the work of marketing management with that of production management would go a long way towards bringing about maximum productivity in an industrial undertaking.

WORLD'S FIRST COMMERCIAL SATELLITE

SIGNIFICANCE OF "TELSTAR"

"THIS nation's space programme," said the President of the United States in February last, "has introduced a new dimension to progress. An increasing flow of peaceful benefits, both national and international, is materialising from our efforts to probe this new frontier. One of the most practical examples of our growing space competence is in the field of communications. Our intensive research and development in the field of communications satellites have brought us to the point where we are now certain of the technical feasibility of transmitting messages to any part of the world by directing them to satellites for relay. This will provide an alternative means to existing transoceanic cable and microwave radio systems, and, even more importantly, will permit ready communication among distant corners of the world."

President Kennedy was then looking forward to the development of a communications satellite system. With the successful launching, on the 10th instant, of "Telstar," the world's first commercial satellite, the President's expectation has been fulfilled. This satellite, which can relay voice, wireless and television transmissions across the Atlantic Ocean, has been designed and developed by the American Telephone and Telegraph System which will pay about $3 million to the National Aeronautics and Space Administration for the cost of launching and services. "Telstar" is a working satellite with a miniature communications receiver, an amplifier and a re-transmitting device. It is a hollow aluminium and magnesium sphere, covered with 3,600 solar battery cells which collect energy from the sun and store it in 19 nickel-cadmium cell batteries. The diameter of the satellite is 34.5 inches and its weight is 170 pounds. It is designed to test broad band microwave communications in space, study radiation and micrometeoroid effects and test tracing facilities. It is now orbiting the earth once every 157.8 minutes, extending as far out as 3,502 statute miles and coming as close as 593 miles. And its velocity is 18,380 miles an hour at perigee (the point closest to earth) and 11,220 miles an hour at apogee (the point farthest from earth).

The launching of "Telstar" is part of the experimental communication satellites project —a co-operative programme which has been undertaken by N.A.S.A. and communications organisations in the United States, Europe and South America. Under this programme, the American Telephone and Telegraph Company sends signals to "Telstar," and receiving stations in Britain, France, Germany, Brazil and Italy participate on a voluntary basis. The experiments include television transmission, a live long-distance telephone call, a video tape, a facsimile transmission of a current news picture, sending of high-speed data between two points, and a voice hook-up between 20 American cities and 20 European cities.

Already "Telstar" has proved the feasibility of international voice, photo, television and data processing transmission by bouncing across the Atlantic (from the United States to Britain) the first "live" television picture. It has thus ushered in a new era in long-distance communications and brought mankind a step closer to the goal of worldwide "live" television. Many details still remain to be worked out in this connection, but the possibilities with the existing facilities are stated to be several. For instance, President Kennedy could appear before cameras in the White House and talk directly to television viewers in Europe. Events of general interest, such as the opening of the New York World's Fair, could be viewed almost simultaneously throughout the United States and Europe. The 1964 Olympic Games in Tokyo could, as was mentioned in our last issue, conceivably be heard and seen by millions of persons throughout the world by an extension of the communications satellite system. The European Broadcasting Union, in co-operation with the B.B.C. and other European broadcasting bodies, is already planning a detailed trans-atlantic T.V. transmission through "Telstar."

The "Telstar" programme, the first major satellite programme to be undertaken anywhere in the world by other than a Government organisation, will cover three or four more satellites, aimed at building up know-how for an eventual permanent space communication system. Any transatlantic T.V. transmissions, therefore, will represent only a small part of the work which these satellite experiments will involve. For its part, the National Aeronautics and Space Administration is expected to launch three more satellites of its own a few months hence—"Relay," "Rebound" and "Echo II." These satellites will circle the globe at intermediate heights of between several hundred and several thousand miles. Then will come "Syncom"—N.A.S.A's experiment in placing a communications satellite far out in space—to orbit the earth at a distance of about 22,300 miles. If such a satellite could be placed in a perfectly circular orbit, it would appear to be stationary in the sky, and would relieve the necessity of tracking. The great distance also would provide greater extension of the ground distances which the signals can cover. Microwave transmissions are direct line-of-sight signals—on the surface of earth they can be relayed only short distances, but by using a repeater station in space, greater distances on earth can be reached. For these and other projects in its communications satellite programme alone, N.A.S.A. is seeking an allotment of over $85 million in the 1962-63 budget. Only after the "Telstar" programme and the N.A.S.A. programme are successfully completed will it be known whether international satellite communications will ultimately take the form of privately-owned satellites, Government-sponsored projects or internationally-financed programmes.

It may be of interest to recall here that President Kennedy recently proposed to Congress the establishment of a communications satellite system that would be truly international in scope and service. Ownership and operation of the system, according to his proposal, would be in the hands of a privately-owned U.S. corporation, and would serve both the industrialised and newly developed nations. The policy objectives, in this connection, were laid down as: the assurance of global coverage; co-operation with other countries; expeditious development of an operational system; the provision of service to economically less developed countries as well as industrialised countries; and non-discriminatory access to the system by authorised users.

I.D.A. CREDIT FOR BOMBAY PORT PROJECT

Cargo traffic through the Bombay Port has doubled in the past ten years, reaching a peak of 14.7 million tons in 1960-61. The increased traffic has put a great strain on port facilities, particularly on those for handling the larger deep-draft cargo vessels. A five-year programme to eliminate ship congestion by expanding the capacity of the port and to improve facilities for the handling of cargo and passenger traffic has, therefore, been drawn up by the Port Trust. The principal features of this programme are the construction of four additional deep-water berths at Alexandra Dock, a new ferry wharf adjacent to Prince's Dock, an extension of Ballard Pier to provide an additional berth and a new building equipped to accommodate passenger and cargo traffic; dredging of the main harbour channel to arrest siltation; the acquisition of new floating craft like dredges, tugs and harbour launches; and improved port equipment and services. The dock expansion works are being started this year.

The total cost of the programme is estimated at the equivalent of $57 million, of which $18 million will be in foreign exchange. The International Development Association (I.D.A.) has just extended a credit of $18 million to cover the entire foreign exchange cost of the programme. This credit is for a term of 50 years, free of interest. Repayment of the principal will begin in January 1973. One per cent of the principal will be repayable annually in the period 1973-82 and 3 per cent annually in the final 30-year period. A service charge of ¾ of one per cent per annum on the amount withdrawn and outstanding will be made to meet the I.D.A.'s administrative costs.

RURAL HOUSING IN EUROPE

A majority of rural dwellings in Europe are owned by the occupiers. These dwellings, on an average, contain more persons than urban dwellings. Their quality is also, on average, lower than that of urban dwellings in so far as age, materials of construction, design and sanitary equipment are concerned. These are some of the findings of a report on the rural housing situation in Europe, just published by the Economic Commission for Europe.

In a number of countries, the report continues, an annual rate of new construction and reconstruction in excess of 2 per cent of the early post-war rural dwelling stock has enabled reasonable progress to be made with the replacement or improvement of defective rural dwellings. New rural dwellings have been better located than in the past in relation to communications and social and communal amenities. In many countries much new construction has been in new or existing villages, but, in others, the policy has been to group dwellings, particularly farm dwellings in small clusters in order to reduce isolation and to facilitate the provision of communal services.

All European countries provide public financial aid for rural housing, but, in a number of countries, the amount of such aid is limited below requirements by general economic conditions. The potentialities for self-help building are great in rural areas and self-help building is being regarded as a normal adjunct to schemes of public financial aid, particularly among lower-income rural families. Examples of such self-help building are the "castor" movement in France, the State-organised scheme in Porto Rico (United States) and the provision of prefabricated dwellings in the U.S.S.R.

Schemes of public financial aid for rural areas facilitate home-ownership, particularly in small-holding countries; the provision of long-term credit may not always be as effective, however, as lump-sum grants where there is a reluctance to undertake long-term commitments, because of the uncertainty of agricultural income, where recourse to long-term credit is not traditional or where there may be difficulties in proving title to land for mortgage purposes. The collective farm dwelling construction in the U.S.S.R., new farmsteads erected by State agencies in Italy and Western Germany, State aid for the establishment of new farmsteads in Belgium (Société Nationale de la Petite Propriété Terrienne) and Finland are examples of schemes of public aid for home-ownership.

EUROPE'S LARGEST CRANKSHAFT FORGE

In the Opel automobile works at Ruesselsheim recently the largest and most modern crankshaft forge in Europe was put into operation. A team of only six workers will handle the production of 12,000 crankshafts in an eight-hour shift. So far the output of the old forging plant amounted to 480 crankshafts per shift. The main feature of the new plant is the 6,000-ton forging press, the operation of which is relatively noiseless and can even be entrusted to unskilled workers. This new forging press also makes possible certain improvements in quality. Square steel bars, 4 metres long and 9.3 centimetres thick are the raw material which is being supplied by small trucks and fed into an automatic shearing machine which cuts the square bars into the desired lengths, which are then conveyed on conveyors and by means of hydraulically actuated grip tongs lifted into oil-heated furnaces, where they are stored in two rows at 700 degrees Centigrade. The work pieces remain for 50 minutes in this rotary furnace, which has a diameter of 11 metres, and is subdivided into three zones kept at different temperature levels.

In the last zone the work pieces are heated to a temperature of up to 1,290 degrees Centrigrade. On their way to the forging press the bars are fed through a descaling device where cold water is sprayed on them at a pressure of 2,560 p.s.i. so that the scale is removed in order to reduce the wear on the forging dies. The descaling device requires a special compressor and a tank for storing the pressurised water. Subsequently the bars are fed through a roughing mill. After a turn around their transversal axis they are fed into the first-stage shaping press where the work pieces obtain their preliminary shape; in a second operation involving another stroke of the press they are finally forged into crankshafts proper. The crankshafts are then automatically ejected from the drop-forge die. While the bars weigh originally 29 kilograms, the ready crankshaft has a weight of only 22 kilos after having passed through the trimming machine. The last station for the crankshaft is the straightening press, where slight deformations due to the thermal treatment are eliminated in two successive strokes. The entire forging operation which is carried out in a regular sequence of 20-second intervals takes exactly 54 minutes.

NEW PRODUCTS AND PROCESSES

New Pigment for Colouring Plastics

A NEW line of pigments manufactured by E.I. du Pont de Nemours and Co., Delaware, U.S.A., can bring the sheen of gold or silver to plastics, paints and floor coverings in a way never before possible. Du Pont is marketing them as "Afflair" flake pigments. The family currently has two members, Gold and Pearl. Like the metallic flake so popular in automotive lacquers, these are metameric substances. When they are part of a paint or plastic, the colour shifts and shimmers as the viewing angle changes. "Afflair" pigments are considerably more metameric than metallic flake. Industrial designers and stylists thus can achieve new and outstanding decorative effects in bottles, coated upholstery fabrics, rainwear and shower curtains. The new pigments can be used in any relatively transparent resin system. They blend smoothly with vinyls and other soft materials. Heat does not darken them; they appear to be stable at any temperature normally encountered in pigment usage. Their chemical resistance is excellent. One-year exposures show them to be excellent in light-fastness, too. They are package stable, non-bleeding, non-migrating and non-crocking. They disperse readily by simple mix-in techniques. Particles of "Afflair" are predominantly in the ten to 30 micron range—larger than conventional pigments. Since they are designed to supplement the value of other materials, their colour and strength are quite weak. Plastics with "Afflair" may be formulated at modest cost with excellent performance. Combinations of "Afflair" with other pigments, such as the more transparent organic colours or white or black, make the possibilities almost limitless. Metallic, pearlescent or iridescent effects are obtainable without resorting to lead-based pigments, special dispersions or compromises in performance. The possibilities in paints appear even broader from kitchen cabinets and appliances to automobiles, bicycles, lawn furniture and special decorative effects on walls. In floor coverings, it seems likely that the new pigments can be used both to increase the overall lustre and to achieve silver or gold swirls. More work will be done to explore their possibilities in paper and ink. The pigments are available in commercial quantities. They are not expensive; for some applications, the makers claim, they may actually save money.

Small Welding Transformer

A Dutch firm has brought out a small welding transformer that can be plugged into the (220-Volt) light mains and is specially designed for use in places where small, light welding jobs need doing. It is a useful addition to any *Do-it-yourself* kit. It is made of special-quality tinplate, called aligned tin, and weighs only 10 kg. (22 lbs.). It measures 13½ x 16½ x 20 centimetres. By moving a special plug the welding current can be set at 50, 70 or 90 Amp. Using the highest current intensity, electrodes up to 2½ mm. in diameter can be managed. The maximum ignition or open voltage given by the apparatus is 45 Volts. It is possible to work continuously for about 15 minutes with the transformer, in which time seven or eight 2½-mm. electrodes can be melted. Since the switching duration is about 15 per cent, it should then be left to cool off for a while. When welding with a current intensity of 90 amps, the maximum grid current absorbed is about 15 amps, so that for plugging into the light mains it is sufficient to fit a 10-amp. delayed-melting safety fuse. Underneath the cap where the cables join the transformer there is an earthing screw to accommodate a connection with a three-core cable with a rim-earthing socket.

Aluminium Foil in Steel-making

Aluminium foil waste, ground in a hammer mill to produce irregularly shaped grains, is the basis of a Dutch process for the deoxidation of iron or steel. The grains are compressed by moderate pressure, without the use of a binding agent, into tablets shaped like convex lenses and weighing between 1 and 20 grammes. When strewn over the surface of molten steel the heat causes them to disintegrate into their original powder form. Because of their shape, the tablets readily scatter over the molten metal, rolling over each other if they happen to fall in a mass. Cheap to make, the tablets are said to ensure a very pure and accurate dosage.

Polyester-based Wood Polish

A polyester-based wood polish, suitable for television and radio set cabinets, and all types of wooden furniture, is a recent Australian product. The manufacturer claims that fruit juices, hot water, detergents, fats, greases and alcoholic beverages can be spilt on it without fear of damage. Only two coats are needed to produce a high gloss and depth of finish and no particular skill is required. Stocks of finished furniture can be held without deterioration in film appearance and it is also claimed that the cost of the finish is below that of nitro-cellulose finishes.

Sulphur from Dirty Gas

An economical method of recovering clean and usable sulphur from dirty coke oven effluent, petroleum wastes and other contaminated hydrocarbons has recently been announced by a French company. The process involves a series of reactions in which all contaminated compounds are converted to carbon dioxide and water and free sulphur released. A high yield of sulphur is claimed with a purity as great as 99.95 per cent.

IMPORTANT DEVELOPMENT IN THE UNITED KINGDOM COMPUTER INDUSTRY

I.C.T. AND E.M.I. MERGE DATA PROCESSING INTERESTS

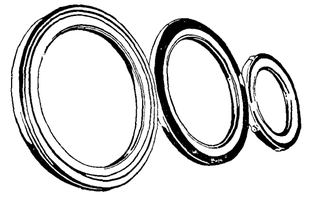
International Computers and Tabulators Limited of London (represented in India by International Computers and Tabulators (India) Private Limited) and E.M.I. Electronics Limited of Hayes, Middlesex (represented in India by the Gramophone Company Limited) announce that agreement has been reached whereby as from 24th July 1962 the Data Processing activities of E.M.I. Electronics Limited will be merged with the I.C.T. organisation. The relevant staff of E.M.I. are being invited to join I.C.T. and the design effort on which they are engaged will continue and will become an integral part of I.C.T.'s research programme concerned with the development of future Computers. These arrangements will not cover Analogue Computers or Computers designed specially for Defence or Process Control purposes. Further E.M.I. is developing and will offer for sale a special range of basic components for Computers. E.M.I. will by this means and by its interest in I.C.T. continue to be directly concerned in all spheres of Data Processing. The Boards of both companies feel that this association is highly desirable since it will bring about a concentration of effort within the British Computer industry and a further expansion of its trading in the United Kingdom and Overseas markets.

I.C.T. have been established in India for more than 40 years and have offices throughout the country.

NON-FERROUS

CASTINGS FOR

STEELWORKS



IISCO makes all types of standard quality non-ferrous castings required by steelworks. Some of the items on regular production schedule are :

MILL ROLL NECK BEARINGS
COPPER BOSH PLATES
COPPER TUYERES
COPPER TUYERES COOLERS
COPPER INTERMEDIATE CINDER NOTCH
HOT BLAST VALVE SEATS

IISCO

THE INDIAN IRON & STEEL CO. LTD.
SALES DEPARTMENT
MARTIN BURN HOUSE, 12 MISSION ROW, CALCUTTA 1
Managing Agents: MARTIN BURN LTD.
Branches: NEW DELHI BOMBAY KANPUR PATNA
Agents in South India : THE SOUTH INDIAN EXPORT CO. LTD., MADRAS 2

MANAGEMENT PROBLEMS OF MODERN BUSINESS AND GOVERNMENT

SOME HOME TRUTHS

By G. L. Mehta

[The importance of competent management to modern business and Government was highlighted by Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India Ltd., in a closely-reasoned address to the participants in the Advanced Management Programme sponsored by the All-India Management Association of New Delhi held at Srinagar on 17th inst. He traced the changes that have taken place in the management, ownership and character of industries in India since independence and pinpointed the decline in the hereditary type of managing agency houses and the rise of professional managers in the top level of management. He also referred to the change in the Government's role and its active entry into industry and trade. He warned the politicians and bureaucrats that "if planning is not to fall into disrepute through economic crisis, miscalculations and inefficiency of administration, much more thought should be given to, and much better organisation set up for, management of industrial enterprises." The text of Mr. Mehta's address is published as a special article on this page, in view of its great value to businessmen, politicians and administrators.—ED.]

THE success of our national planning depends not merely on the availability of resources but also on the execution and administration of schemes and measures. For this, efficient and imaginative management is essential. That is a prerequisite of modern business, as also a fundamental of modern Government, especially in a country like ours where the State is increasingly assuming the role of an entrepreneur and trader. More than ever before, the system of management has to fit in with technological, economic and social needs. In recent years, the pattern of management in our country has been undergoing important changes. It may, therefore, be useful to consider these changes and see what they signify. In industrially developed countries, economic and technical progress has brought about a managerial revolution. Is such a managerial revolution taking place in India? If so, what are its significant features and implications?

British Pioneers

We might begin by reviewing the pattern of management with which we have been familiar in our country. When we speak of management, we have usually in mind the industrial management of joint-stock companies, since State enterprise in industry on a large scale is of recent origin. Private enterprise has been functioning through the joint-stock form of organisation and it is with corporate management that we are mainly concerned. No doubt, small-scale industries have their own problems of management, but, in many respects, they are qualitatively different. So far as medium and large-scale industries are concerned, the traditional form of corporate management has been the managing agency system. This pattern is in some ways peculiar to India and has been the product of the political and economic conditions obtaining in this country during the latter part of the last and the early part of this century. British and Indian entrepreneurs who promoted and established new industries performed the dual function of providing and mobilising capital as well as of carrying out the day-to-day management of an enterprise. British merchant houses were the first to promote modern types of industry in India and were soon followed by Indian merchant houses. In the earlier period of industrialisation, the British were more prominent in Calcutta, Kanpur and Madras, while, in the Bombay area, Indian entrepreneurs were the principal contributors to industrial development. British entrepreneurs promoted jute, coal and tea industries, and Indians pioneered the development of industries such as textiles, steel and power.

The special features of the managing agency system were, however, common to both British and Indian business houses, such as ownership of a part of the capital along with direction and control of management in the hands of the managing agency for which remuneration is given not in terms of salaries but as a fixed percentage of profits. This system contributed to industrialisation in the early stages by providing organising and administrative capacity as well as finance and credit through the managing agency. Entrepreneurial attitudes in our country today resemble, in many respects, those prevalent in England and Europe during the last century. Industry is closely held in many cases, where the managements have a proprietorial approach towards the enterprise, though some industrial firms do have an institutional structure. The working of corporate management disclosed several shortcomings and abuses many of which have been mitigated or removed by reform in company law in 1936, in 1956 and in 1960 as well as by supervision and administration by a separate department. Consequently, the powers of managing agents have been curtailed, the duration of the agency shortened and its sphere of operation regulated. The maximum remuneration for managerial functions has been limited to 11 per cent of profits with a sliding scale as the quantum of commission goes up; there is also a limitation on the number of companies which can be managed by one managing agency. The new institution of secretaries and treasurers provided for in the Companies Act of 1956 is designed to serve the same purposes as the managing agency system shorn of some of its defects. Several companies have adopted this system of management.

New Trends and Forces

In the post-war period, new trends and forces have been modifying the structure and functions of the managing agency system. For one thing, Government themselves have been promoting industrial enterprises which are controlled and managed by corporations and companies run by their officials. Entrepreneurs from abroad who are collaborating with Indian industrialists have in many cases been operating without a managing agency system. Besides, in several existing concerns, the managing agency has been terminated without adverse effect on management. Several new enterprises prefer to have managing directors or managers to organise and operate their concerns.

It is increasingly recognised that, for efficient management, modern industrial enterprise demands the services of technicians and specialists. The role of a mere financier in management is no longer crucial. The managing agency has hitherto been regarded primarily as a hereditary or family concern, but this is not likely to be acceptable in future. Some managing agencies have recognised this trend and a number of managing agency houses have converted their partnership firms into private or public limited companies, so as to broaden the organisational set-up and enlist talent from outside. Most of the managing houses in Calcutta, for example, have been transformed into public limited companies during the last decade. By throwing open their share capital to the public, the managerial remuneration is also shared with the stockholders.

Vertical Mobility Essential

Until recently, most industrial enterprises in India were concerned with production of consumer goods such as textiles or paper or of durable consumer goods like cement where production techniques are simple and well known. But, as the country has increasingly turned towards producing capital goods, machine tools, chemical products and the like, manufacturing techniques have become more complex. In these, new technical processes and scientific methods need to be studied and applied. Establishment and operation of an industrial enterprise require today talents and skills which have to be mobilised and co-ordinated. Industrial organisation requires long-term planning which cannot be achieved without the co-operation of professional men and technicians. With a variety of governmental controls and regulations and the intricacies of finance and taxation, an industrial enterprise today has to depend on the advice and assistance of accountants and lawyers. The growth of trade unionism and increase in the volume of labour legislation requires close attention to problems of industrial relations, supervision and welfare. The top executives in an industrial enterprise have to possess trained intelligence and capacity to work with others—qualities which can enable them to analyse the varied and changing requirements of the industry and co-ordinate the work of the specialist. The work of a manager is primarily concerned with achieving results through the co-operative action of a number of persons to attain common objectives. Moreover, as industrial enterprises grow in size and their activities are diversified, work has to be delegated and procedures decentralised which need a staff with knowledge and experience that cannot be the preserve of a family or a privileged group. Managerial ability, in other words, is not an inherited trait. Vertical mobility is essential in our industries, so that the man at the lowest rung of the ladder can, if he has merits and becomes qualified, rise to the topmost positions. An industrial enterprise has to look at many factors apart from the purely financial ones—economic implications, public image, political repercussions—before arriving at a decision. The difficulty, as Keynes said in another context, "lies not in new ideas but in escaping from old ones." It is apparent that the managing agencies which look after a number of concerns cannot run them effectively, unless they have a staff of specialised and trained persons devoting all their energies to numerous, complex problems which face industries today.

Direction and Policy-making

New changes are also taking place in the field of direction and policy-making of industrial concerns. The board of directors of a company is the ultimate authority which is responsible for managing an enterprise. Following the British pattern, the majority of directors in Indian enterprises comprise of outsiders who are experienced men giving general advice on matters of policy but are not closely associated with detailed management. Such directors with varied background can give valuable guidance, but there is an increasing trend whereby the executives of the company itself have now a place on the board. Many concerns now have full-time paid chairmen and executive directors. Several foreign enterprises prefer to have their own executives on their boards. This trend is bound to grow, because, with the gradual elimination of the managing agency system, management through full-time competent executives will have to take its place.

Two-way Movement

Another interesting line of development in the entrepreneurial and managerial field is the enlisting of new talent from other spheres. Until a few years ago, there was little exchange of higher staff between the business community and the Government. This situation has been changing and many senior Government officials have joined business while the services of business executives have been utilised by Government on boards of directors in State-run corporations. Such two-way movement is common in industrially advanced countries and would be useful here also. Closer understanding between Government and business is essential to promote fruitful co-operation between the public and private sectors.

Government—The Biggest Holding Company

Problems of management have assumed much greater importance, because the Government have, as mentioned earlier, entered the industrial sphere. It is not widely recognised that the Government are, in fact, the holding company for the largest group of industries in India. If planning is not to fall into disrepute through economic crises, miscalculations and inefficiency of administration, much more thought should be given to, and much better organisation set up for, management of industrial enterprises. We cannot afford to let planning be discredited by bureaucratic machinery being regarded, in Bagehot's words, as "a grand and achieved result not a working and changeable instrument." Functioning of the giant Hindustan Steel Corporation serves as a warning rather than an example. It is a matter for satisfaction that the new Minister for Heavy Industry is addressing himself to this task and endeavouring to decentralise the administrative machinery of the steel plants. Indeed, some of our large industrial establishments are prone to be infected by one kind of official virus or another. As Ambassador Galbraith who has made many pertinent observations on this subject has said, the intrusion of civil service procedures and routines which may be admirably designed to ensure equality of treatment of all employees, can have the effect of destroying the easy inter-personal adjustments and the automatic co-ordination on which effective operation depends.

With the growth of industrialisation in India, industrial enterprise has grown in dimension, with the result that its capital requirements have been increasingly provided by a large number of individual and institutional investors and the hold of big financiers and capitalists has correspondingly weakened. Finance and management which have, in the past, been largely provided by the same set of persons have gradually been divorced. The private investor has been content to receive a return on his investment leaving the function of management in the hands of porfessional full-time executives. The company executives, consequently, tend to be on their own and would be concerned with the interests of the company rather than being at the mercy of a group of financiers who happen to control an enterprise. Industrial organisation is no longer a mere matter of finance; its effective functioning demands ability, ingenuity and application. In the sphere of top-management, especially in an industry based on technology, economic and technical questions become merged, and even in preliminary projects of manufacture, research and development are, in a sense, only capital investment one stage further removed. Technical errors involve financial risks just as reduction in costs can be achieved through applied research. This development has hastened the pace of the managerial revolution and is raising the status of the full-time executive. In short, a class of civil servants in the world of business is growing charged with the responsibility of creating national wealth through the private sector working in public interest.

Staff Training

An encouraging sign is the growing awareness of the need for schemes of staff training at various levels. In private, as well as public enterprises, programmes for training in industrial, financial and administrative spheres have been instituted for junior and senior staff. Management associations, productivity councils and other organisations are focussing attention on problems of productivity and industrial efficiency. The Administrative Staff College, the Reserve Bank Staff Training College and other similar institutions are providing training facilities. In several universities and institutes of technology, courses of industrial management have been introduced and are attracting young men and women. Institutes of management are also being organised at important centres. With all these training facilities, the new generation of managers and administrators will, it is hoped, start their career much better equipped than hitherto and the outlook of higher executives will be broadened through refresher courses and well-organised seminars.

A word of caution is, however, necessary. Research can also be bogus and symposiums an exercise in self-advertisement. Besides, most industrial psychologists and sociologists study problems from the management's viewpoint and tend to regard questions of productivity as concerned only with workers rather than with *organisation* as a whole, including management. For there is no mistaking the trend: industry is moving from personal to social ownership. Consequently, the emphasis has to shift from status and wealth to competence and skill.

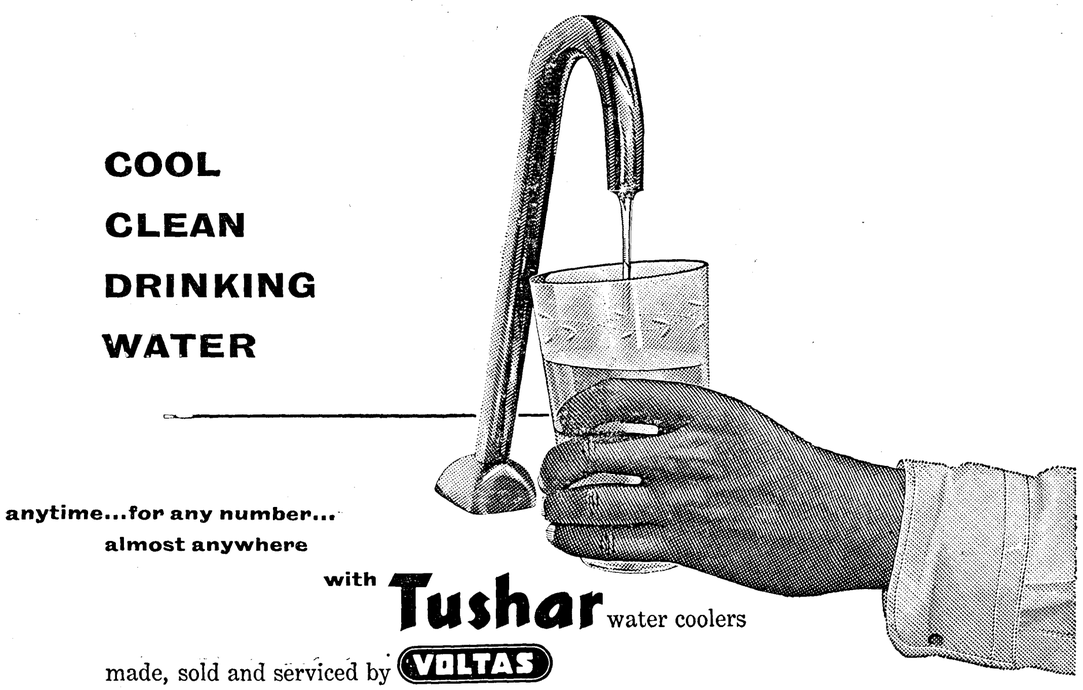
The managerial revolution will increasingly reflect a smaller and, over a period, a declining share in the ownership of a concern of those who merely finance it. Managements all to often deal with other people's money—those of shareholders, banks, credit institutions, even Government's, that is the taxpayer's. The concept of an entrepreneur dealing entirely with his own money is becoming out of date. This does not mean that enterprise and initiative are not needed or that bureaucracy and regimentation can secure industrial progress. But it does mean, in the first place, that qualified and trained men will have to run industry and that the hereditary principle is no more valid in industry than in democratic Government. It also means that profit-motive by itself and ability to speculate on the stock exchange are no substitute for imaginative leadership and organising capacity. "Hit and miss" methods are out of place in an environment of technological development, high costs of production, and economic impact of concepts of social welfare. As Prof. Arnold Toynbee has observed, "in place of the original association with notions of *enterprise* and *profit*, the term *business* is coming to be associated with the very different notions of *administration* and *organisation*." The wholly new study of "organisation and management" has been hitherto decried in many quarters as mere charlatanry and waste of energy. And it is only now coming to be recognised that it has an important place in industrial development, even if not all that is spoken and written on the subject is really worthwhile.

Managerial Ethics

But, with the growing complexity of industrial society and magnitude of business operations affecting individual and collective life, we need not only trained men and women: we shall also have to evolve managerial ethics. As management becomes increasingly professional in character, it will have to adopt norms of competence and standards of responsibility. As Professor Harold J. Laski observed many years ago in a stimulating essay, "Can Business be Civilised?" the great avenue of social change is the need to organise business as a profession. We should seek to subordinate industry and commerce to public interest by insistence on definite standards of performance such as we have established in law, in medicine, in engineering or in architecture. We must learn to demand responsibility for the technical competence of those engaged in it. We have to endeavour to abolish, on the one hand, anti-social monopolies and on the other, competition which is detrimental to the interests of the community. We should do away with speculative profits and secret commissions. Industrialists are entitled to returns for their risks and efforts and may grow rich in pursuit of their vocations, but their wealth should be a by-product of their work and not the "be-all" and "end-all" of their activities. Wealth is a means of welfare, not its substitute.

LONG-TERM POWER PROGRAMME

The Union Ministry of Irrigation and Power has set up, in consultation with the Planning Commission, a Planning Group for drawing up the long-term power development programme for the period up to 1976, and more especially for the preparation of the power development programme for the fourth Plan. The Group will also review from time to time the progress of power development schemes during the remaining period of the third Plan. The Chairman of the Central Water and Power Commission will be the convenor of the group. The Union Ministries of Mines and Fuel, Steel and Heavy Industries, Commerce and Industry, Railways (Railway Board), and the Atomic Energy Department will be represented in the group. The other members of the group are the Joint Secretary, Union Ministry of Irrigation and Power, Member (Hydro-electric), Central Water and Power Commission, Adviser (Irrigation and Power) in the Planning Commission.



PRINCIPLES OF WAGE FIXATION

RECOMMENDATIONS OF LABOUR CONFERENCE NOT BINDING, SAYS BANK TRIBUNAL

THE entire gamut of labour legislation, norms of wage fixation, judgments by courts on industrial disputes and the recommendations of the Indian Labour Conference came in for review at the hands of Mr. Justice K. T. Desai, in his capacity as the President of the National Industrial Tribunal (Bank Disputes), in the course of his award on the bank dispute, published last week. His Lordship observed that the adjudication in respect of matters referred to the Tribunal had to be done against the background of (1) the preamble of the Constitution of India signifying the people's resolve to secure social, economic and political justice, equality of status and of opportunity, (2) the Directive Principles of State Policy which enjoins the State to endeavour to secure, by suitable legislation or economic organisation or other means, a living wage to workers, and (3) the resolution adopted by the Lok Sabha in 1954, by which a socialist pattern of society had been accepted as the objective of State policy. The relationship between employers and employees, his Lordship observed, was no longer left to the free play of economic forces; but the concept of social and economic justice also came into play. In fixing wages and other conditions of work, the needs of the industry, as well as those of the employees, had to be taken into account. To secure a living wage to workers was the objective of State policy, but, before a living wage could be secured to workers, various factors, such as the capacity of the industry to bear the burden of a living wage, had to be taken into account. His Lordship considered, in this connection, the conclusions and recommendations of the Committee on Fair Wages in regard to the concepts of living wage, fair wage and minimum wage and the Supreme Court's ruling regarding their applicability to specific disputes regarding wages, and made the following observation:

"The problem of wage determination cannot be considered in isolation from the larger economic and social background obtaining in the country. A delicate balance has to be struck between fair wages to workers and officers, fair profits to the shareholders and fair service at reasonable rates to the community, after taking into account the share of the Government in profits in the shape of taxes and after considering the amounts of reserves and depreciation necessary for the stability and healthy functioning of the industry. From the purely economic point of view, the wage policy has to take into account the inflationary pressures. It is necessary to provide for wage differentials based on job evaluation as the economic structure in India is not founded on the principle 'to each according to his needs and from each according to his capacity.'"

It was urged before the Tribunal by the representatives of employees that the resolution of the Fifteenth Indian Labour Conference regarding the fixation of a need-based minimum wage was binding on the Tribunal and that it was under an obligation to act in accordance therewith. It was further urged that, if the Tribunal could not award a minimum wage in accordance with the principles laid down in the resolution, it was incumbent on it to justify the circumstances which prevented it from adhering to the norms. Dismissing these arguments as untenable, the Tribunal observed:

"The resolution represents the views of the 15th Indian Labour Conference and is, in the main, recommendatory. A Labour Conference is not entitled to give any directions to a Tribunal like the National Industrial Tribunal or to use the language of dictation or command in connection with such a Tribunal and it could not possibly have been the intention of the Conference to do so. As stated in the summary of the proceedings of the 15th Indian Labour Conference, Shri Shantilal Shah, Minister for Labour and Law of the then State of Bombay, suggested that 'the Committee's report (containing the recommendations in regard to the need-based wage) might be sent only to wage boards set up by an executive authority and not to those set up by the judicial authority.' It is stated in the summary of the proceedings that the Chairman explained 'that Government would have to devise some means to implement the principles on an agreed basis and to ensure their observance as courts could not be forced to follow them.' The 15th Labour Conference is not a statutory body. However eminent may be the persons who attended the Conference, the resolutions passed at the Conference have no binding force."

The Tribunal also did not accept the plea that the resolution should be regarded as binding on the employers, as it constituted a tripartite agreement, on the following grounds: (1) the resolution has not been ratified by any of the Governments concerned or by the employers' federations and organisations; (2) it has not been made applicable to the employees in the public sector, let alone Government employees. (It may be noted here that the Government had made it clear to the Second Pay Commission that the recommendations of the Labour Conference should not be regarded as decisions of the Government but only as recommendations and that the Government had, at no time, committed itself to taking executive action to enforce them.)

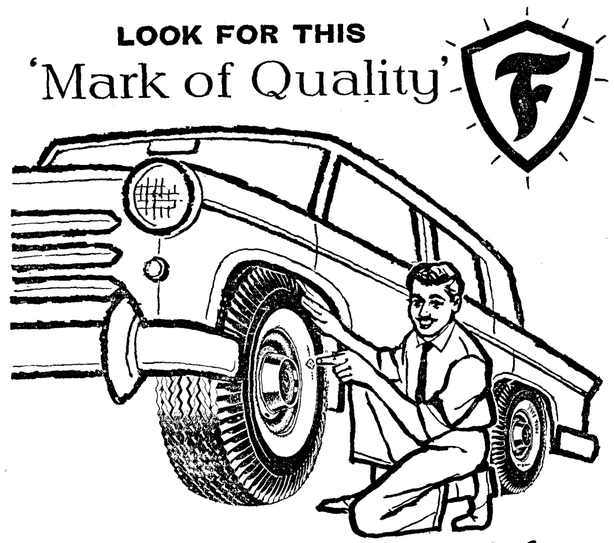
Having regard to these factors, the Tribunal came to the conclusion that, so far as banks (which were one of the parties to the dispute referred to it) were concerned, by no stretch of imagination could it be said that they (banks) had expressly, or by implication, agreed to be bound by the recommendations of the Conference.

The Tribunal, however, recognised the importance of the resolution in the following words:

"Apart from its binding character, this resolution, which has been unanimously passed by men occupying high, responsible positions and status, is entitled to great weight. For the first time in India, norms have been crystallised for the purpose of fixation of a need-based minimum wage in a conference where the participants were drawn from the ranks of Government, industry and labour. These recommendations represent a landmark in the struggle of labour for fixation of a minimum wage in accordance with the needs of the workmen. The resolution lays down what a minimum wage should be. It recognises that the minimum wage was 'need-based.' It is a resolution passed in connection with the needs of an 'industrial worker.' The norms laid down by it are standardised norms applicable to all industrial workers whatever may be their age and whatever may be the number of years of service they may have put in. The standard of a working class family has been laid as comprising three consumption units for one earner, the earnings of women, children and adolescents being disregarded. These three consumption units are intended to provide for one adult male, one adult female and two children. This norm has been laid down for the purpose of fixing a minimum wage at all stages in the life of a workman. The norm would be three consumption units at a time when a workmen may be unmarried and may have no children and dependants. This norm is equally applicable at a time when a workman may have more than two children and other dependants to maintain. This norm is laid down even when a worker may have an earning wife. It is a standardised norm representing the average need of a workman having due regard to various stages in his life. The minimum food requirement on the basis of a net intake of 2,700 calories has been laid down even though human metabolism is such that after middle age lesser calories would be required than during the earlier period."

The Tribunal, however, felt that the clerical staff in banks and members of the supervisory staff who fall under the definition of "workmen," could not be regarded as covered by the recommendations of the Labour Conference, as they were applicable to industrial workers. These norms, in the Tribunal's opinion, might at best be applied to the members of the subordinate staff in banks.

The capacity of the industry to pay is one of the main issues which the Tribunal had to consider in recommending suitable wage scale to employees. The Supreme Court has exhaustively dealt with this question and has also laid down clear principles in this regard but their application to specific instances is not easy. The Supreme Court has ruled that, in a given case, it is permissible to divide the industry into appropriate classes and then deal with the capacity of the industry to pay class-wise. The Desai Tribunal had taken these rulings and directives into consideration in giving the award. In the light of the foregoing considerations, the complaint of certain Union leaders that the Tribunal has not done justice to employees has no solid basis. It is the result of a one-sided view of the question, whereas the Tribunal rightly looked at it from the larger standpoint of equity and economic considerations.



BURN AND COMPANY FORGES AHEAD

NEW UNIT TO OPERATE SWITCHGEAR PROJECT

IN keeping with the growing prosperity of engineering industry in the country in the context of increasing developmental activities, Burn and Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) naturally forged ahead during the year ended 30th April 1962, when its sales realisations rose from Rs. 947.12 lakhs to Rs. 11,23.04 lakhs and its gross profit improved by Rs. 50 lakhs to Rs. 199.68 lakhs. The turnover for 1959-60 was Rs. 11,42.19 lakhs. But, as in the previous year, the figures for the year under review are not strictly comparable with the 1959-60 level. For, in conformity with the requirements of the amended Company Law, they have been regrouped since 1960-61. To have an adequate comparison, one has to take into account work-in-progress which has progressively increased from Rs. 235.77 lakhs to Rs. 307.41 lakhs and to Rs. 387.72 lakhs in the past three years. The turnover for 1961-62, therefore, shows considerable improvement over the level reached two years ago. The profit is likewise higher. As compared with the performance in the previous year, the profit-margin (ratio of gross profit to sales) has expanded by two points to 17.7 per cent.

However, to the investor the prosperity of the Company has not meant much, save, of course, in that the return on his Rs. 100 fully paid shares has only been maintained at 28.5 per cent, subject to tax, for the past four years, which gives a net return of nearly 20 per cent, the same as that paid by the Company consistently for three years preceding the change in the rules governing grossing-up of dividend. At least for the year under review, the return could have been more. But a substantially larger provision of Rs. 92.50 lakhs (Rs. 57.75 lakhs in the previous year) for taxation and of Rs. 24.40 lakhs (Rs. 10.22 lakhs) for retiring gratuity have eaten away the bulk of the improvement in the profit. The tax liability takes into account the impact of the 5 per cent increase to 50 per cent in the rate of income-tax on corporate profits under the 1962 Finance Act not only for the year under review but also for 1960-61, because the Company's financial year ends in April and the profits become taxable at the rate to be determined by the Finance Act of the following year. The higher provision for gratuity is due to a change wanted by the workers from its payment on an ex-gratia basis to its incorporation in the terms of service. Besides, now that an award has been made, gratuity has become a legal liability, instead of a moral obligation for the Company. We are told that the overall liability of the Company is not materially altered, but it has been obliged to make a large provision which until the time of payment is not allowable against profits for determining tax liability. Notwithstanding these two larger provisions, the Company has been able to plough back to reserves Rs. 20.99 lakhs, which sum is only a shade less than the Rs. 22.25 lakhs set apart last year.

A glance at the table below would give an idea of how the Company has fared in the past four years:

(In lakhs of rupees)

	For the year ended 30th April			
	1962	1961	1960	1959
Sale proceeds	11,23.04	947.12	11,42.19	10,16.81
Closing stocks of finished goods and work-in-progress	447.46	364.53	287.45	360.51
Other income	89.20	90.14	78.33	65.64
Raw materials, stores and spares consumed	638.49	543.58	587.53	511.62
Staff expenses	312.00	296.86	317.24	261.74
Other expenses	145.02	124.04	111.64	105.17

Negotiations have been concluded between the Company and A. Reyrolle and Company Ltd., U.K., for the manufacture and sale in India of the latter's well-known switchgear and other electrical products which have so far been imported into the country. A factory will be constructed by the Company for this purpose, with Reyrolle supplying the necessary imported equipment and technical expert assistance. A new company, with an initial issued capital of Rs. 30 lakhs to be held equally by the Company and Reyrolle, will be formed to operate the project. The industrial licence has been issued and collaboration generally approved by the Government.

At the Company's Howrah works, there is shortage of work in the structural and points and grossings shops for quite opposite reasons. Structural orders are plentiful, but long delay by the Government between calling for tenders and placing the contracts has resulted in an idle shop awaiting steel. Points and crossings work is not adequate, though, at the behest of the Government, the Company's capacity was raised in the past few years. The Directors believe that points and crossings work is being carried out in the Government workshops to the detriment of the Company's interests. Current schemes for modernising the Lalkoti works at Raniganj and the Gulfarbari works are expected to be completed by the end of the current year. The labour position at Raniganj is unsettled, but the Directors are not in a position to increase wages owing to the unremunerative nature of work carried out at the Raniganj No. 2 works and at the Durgapur works. Further, the volume of work does not justify reconstruction and modernisation of these two works, and the Directors feel that the capacities of the Lalkoti and Gulfarbari works and other works would be sufficient to meet all anticipated requirements. The Jabalpur works and mines are making a good show and their efficiency is being systematically improved. The development of the Niwar site, delayed last year because of the preoccupation of the refractory staff with other works, should have been completed by now, as production was expected to start by the middle of this year. Production at the Salem mines was well maintained to meet the demand at home and from abroad, though development work was being carried out to ensure that sufficient additional quantities of magnesite would be available for the factory, when manufacture of shapes commences. The factory is nearly completed. Trial production will start in the last quarter of this year and regular programme of manufacture will be taken up in January next. Wagon, cement and steel shortages, however, continue to hamper the work of completing the project.

The financial position of the Company is quite impressive. Its paid-up capital of Rs. 112 lakhs, of which Rs. 92 lakhs are in equity and the rest in preference, is backed by reserves and surplus aggregating Rs. 277.93 lakhs. The latest year-end figures show borrowings as *nil*, which was the position at the previous year-end too. Current liabilities and provisions aggregating Rs. 857.40 lakhs, as against Rs. 739.38 lakhs a year before, are comfortably covered by current assets and book debts of the order of Rs. 906.37 lakhs. Investments at Rs. 8.32 lakhs include Rs. 7.41 lakhs in quoted items which command a market value of Rs. 11.61 lakhs. Out of the quoted investments, those with book value of Rs. 1.98 lakh are deposited as security for tenders and contracts. The gross block increased during the year from Rs. 520.79 lakhs to Rs. 561.70 lakhs and has been written down very conservatively to Rs. 215.09 lakhs and, inclusive of Rs. 117.56 lakhs being the value of incompleted work, is shown in the balance-sheet at Rs. 332.65 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 646 *cum-div.* and offer, on *ex-div.* basis, a net yield of 3.2 per cent per annum.

(Concluded from next column)

cent, tax-free, cumulative preference shares of Rs. 100 each and 90,000 equity shares of Rs. 10 each, the Company has increased its capital but once, that is, way back in 1950, when it offered 625 preference and 3,750 equity shares to the existing shareholders, of which 524 preference and 3,656 equity shares have so far been taken up. One wonders why the Company should not issue additional capital and reduce its dependence on external resources.

The Rs. 10 fully paid equity shares of the Company are currently quoted at Rs. 16.50 *cum-div.* On the *ex-div.* basis, the yield on them works out to 6.3 per cent per annum, free of tax.

CAUVERY SPINNING FARES WELL

MODERNISATION MOVES APACE

NOTWITHSTANDING difficulties in procuring suitable and adequate supplies of indigenous cotton and voluntary control on selling prices for yarn up to 40s counts, the Cauvery Spinning and Weaving Mills Ltd. (Managing Agents: Messrs. United Industries (Pudukkotai, Madras) (Private) Ltd.) have fared well during the year ended 31st March 1962. Sales have improved further from Rs. 110.11 lakhs to Rs. 118.26 lakhs and gross profit has increased by Rs. 1 lakh to Rs. 12.54 lakhs. The clue for the improvement in profit is provided by the decline of more than Rs. 5 lakhs to Rs. 69.46 lakhs in the cost of raw materials and stores consumed. Staff and other expenses, however, have been slightly higher. A provision of Rs. 3.99 lakhs for depreciation seems to be traditional with this Company, as to that level it has been brought down, despite some improvement in profit, after it had been raised to Rs. 4.16 lakhs in the previous year as an exception in the past four years. Taxation has claimed Rs. 2.90 lakhs as against Rs. 2.43 lakhs a year before. Bonus for workers for the previous year has taken away Rs. 1.95 lakh as against Rs. 1.76 lakh in the preceding year. Dividend on the Rs. 10 fully paid equity shares has been maintained at 15 per cent per annum, subject to tax. Reserves have got Rs. 1 lakh—some Rs. 24,000 more than in 1960-61.

The table below gives a fair idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales	118.26	110.11	92.72	82.62

* Subject to deduction of tax.

We are told that the satisfactory progress of the Company during the year was partly due to the modernisation programme which has been moving apace. Three combers and two high-speed drawing frames, ordered in the previous year for the manufacture of combed yarn of superfine counts which is in good demand, were installed and commissioned during the year under review. Fourteen ring frames to replace the old frames have been ordered and are expected to be delivered in September-October next. These would improve further the efficiency of the plant. Complete renovation of the preparatory section at a cost of Rs. 9.5 lakhs has been taken up now and would make the plant fully modern. The balance of the mortgage loan due to the Industrial Finance Corporation of India, amounting to Rs. 5.67 lakhs, was paid in February 1962. Labour-management relations have continued to be cordial and the mills are working three shifts with full complement.

The Company's finances are on sound lines, considering the fact that the Company is still in its teens. Thus, its paid-up capital of Rs. 15.93 lakhs, of which Rs. 9.41 lakhs is equity and the rest preference, is supplemented by reserves and surplus aggregating Rs. 8.47 lakhs. But its liability to outsiders has increased during the year from Rs. 40.22 lakhs to Rs. 42.94 lakhs due largely to an increase in borrowings from Rs. 22.59 lakhs to Rs. 24.47 lakhs. As against this indebtedness, book debts and investments aggregate only Rs. 34.52 lakhs. Clearly, the Company has been increasingly relying on external resources for financing its modernisation programme. The gross block, which increased from Rs. 69.48 lakhs to Rs. 73.47 lakhs during the year, has been well written down to Rs. 32.81 lakhs. Established in 1947 with an issued capital of Rs. 15 lakhs, made up of 6,000 6.25 per

(Continued in previous column)

MILD RECESSION IN INDIAN COPPER'S RESULTS

DISPUTE WITH BIHAR GOVERNMENT SETTLED

AN all-round, though decidedly mild, setback in all the principal spheres of its activities was experienced by the Indian Copper Corporation Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot and Company Ltd., Calcutta) during the year to 31st December 1961. Not only was the development work adversely affected by the shortage of essential stores such as explosives and drill steel but, due to insufficient supplies of coal and power, the quantity of ore milled and the output of refined copper and rolled products were fairly well below the previous year's record figures. The average selling prices for the Company's products, as compared with the previous year, were also low, as will be evident from the following figures:

(Per metric tonne)

	1961 £	1960 £
Copper ingots	242.59	266.60
Rolled brass	272.30	277.56
Yellow metal circles	294.35	304.30
Rolled copper	350.46	356.64

Despatches, save those of kyanite, too, declined as compared with 1960, and occasioning a fall in net sale proceeds from £3,467 thousand to £3,322 thousand. The gross profit has likewise declined in sympathy by £155 thousand to £1,248 thousand but, what is more, its ratio to net sales has fallen more perceptibly from 40.5 per cent for the previous year to 37.6 per cent for the one under review. There has been no doubt some saving in essential provisions which in all amount to £759 thousand against £770 thousand but this has hardly helped matters and the net profit has, therefore, dwindled to £489 thousand from £633 thousand a year ago. With a transfer, however, of £62,929 from provisions in excess of actual requirements and a lower credit of £229 thousand as against £251 thousand to reserves, the Directors have found it possible to maintain, for the third year in succession, the rate of ordinary dividend at 27 per cent, subject to deduction of tax. This claims £370 thousand, leaving £72.310 as a carry forward, as against £118.750 brought in.

The working results of the Company for the past four years are contained in the following comparative table:

(In thousands of £ sterlings)

	For the year ended 31st December			
	1961	1960	1959	1958

* Subject to deduction of tax. † Short tons. ‡ Long tons.

The financial position of the Company as disclosed by its balance-sheet as at 31st December 1961 is formidable. The share capital, all in equity shares of 2s. each, remains unchanged at £1,371 thousand and is far exceeded by reserves amounting to £2,397 thousand. Secured loans and current liabilities and provisions aggregate £3,306 thousand but are very well covered by current assets totalling £5.316 thousand. Gross block, consisting of mining rights, permanent works, buildings, plant, machinery, equipment, etc. is carried in the Company's books at a cost of £4.402 thousand. As against this, the depreciation provided so far is £2,244 thousand, yielding a net block of £1,758 thousand.

As regards the operations of the various sections of the Company and its reserve position, the following extracts from the Directors' report, which is fairly exhaustive, will no doubt be found interesting. The report states:

"The total ore reserves for all mines as at 31st December 1961 show an estimated increase of 110,666 metric tonnes at 4,004,534 metric tonnes as compared with 3,893,868 metric tonnes at the close of the preceding year. It is to be noted that, though the footage developed at all mines was appreciably less than the previous year, the ore reserve position was satisfactorily maintained.

"The ore mill treated 412,986 dry metric tonnes of ore, averaging 2.192 per cent copper, as compared with 435,728 metric tonnes, averaging 2.083 per cent copper in the previous year. The decrease in tonnage milled was due to modifications to the aerial ropeway and smelter, which was undertaken during the earlier part of the year, followed by shortage of essential raw materials, such as coal and explosives, during the latter part of the year under review. During 1961, 8,336 metric tonnes of refined copper were produced, being a decrease of 574 metric tonnes on the previous year's figure of 8,910 metric tonnes. Construction of the electrolitic refinery has commenced and is proceeding according to schedule. The expected date of completion is the end of 1963.

"The output of rolled products, including 1,120 metric tonnes of copper sheets and strips, was 9,966 metric tonnes, as compared with 10,923 metric tonnes in the previous year. This year, again, the output was restricted in accordance with the availability of zinc import licence.

"10,632 metric tonnes, including 1,322 metric tonnes of copper ingots, were despatched for sale during the year, as compared with 11,192 metric tonnes including 1,108 metric tonnes of copper ingots, during the previous year.

"During the year the sale of kyanite amounted to 27,460 metric tonnes or 5,801 tonnes more than during the preceding year. The two civil suits with the Bihar Government which were pending in appeal were finally disposed of during the year on the basis of a compromise settlement between the Company and the State of Bihar. Under the terms of the compromise the State of Bihar has granted the Company a new mining lease for kyanite over the same area as previously leased for a further period of 20 years, as from 1st September 1961."

The ordinary shares of the Company are currently quoted at Rs. 4.88 *cum-div.* Reducing the price to an *ex-div.* basis, the net yield works out to 5.46 per cent per annum.

DYER MEAKIN BREWERIES LTD.

Dyer Meakin Breweries Ltd. proposes to sell its coated abrasive unit at Ghaziadad, known as National Abrasive Works, to John Oakey and Mohan Ltd., a new company floated by Hindustan Abrasives in collaboration with John Oakey and Sons Ltd., London. Dyer Meakin will receive Rs. 1.60 lakh for plant and machinery, furniture and vehicles, Rs. 4.65 lakhs for tools, raw materials and finished and semi-finished products and Rs. 80,000 for a partly constructed building. The sale has been necessitated by the exigency of technical know-how and a modern plant to improve the competitive position of the unit in the field. The Directors are said to be negotiating with John Oakey and Mohan Ltd., which has an authorised capital of Rs. 1 crore, to reserve some of its shares for allotment to the shareholders of Dyer Meakin.

Notice

THE RELIANCE JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Fifth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta-1, on Tuesday, the fourteenth day of August, 1962 at 11-30 a.m., for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1962, the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors thereon.
2. To appoint a Director in place of one retiring.
3. To appoint Auditors and to fix their remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from the 1st August to the 14th August, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
C. EVANS.
Acting Secretary.
Managing Agent.

4, CLIVE ROW,
CALCUTTA-1.
6th July, 1962.

INDIAN DYESTUFF

TURNOVER AND PROFITS BETTER

THE Indian Dyestuff Industries Ltd. (Managing Agents: Messrs. Mafatlal Gagalbhai and Sons, Bombay) has done well, during the year ended 31st March 1962. The upward trend in sales which had been in evidence ever since the Company went into production during 1956 was maintained. Gross sales realisation at Rs. 258.11 lakhs is nearly 36.5 per cent higher than the previous year's total of Rs. 189.71 lakhs and, even though a portion thereof merely reflects the inflation due to the rise in excise duty on dyestuffs, which has claimed Rs. 32.63 lakhs for the year under review as compared with a mere Rs. 0.75 lakh previously, the fact nevertheless remains that the Company did experience a bigger demand for its products and that this has been instrumental in expanding the turnover. An added favourable development during the year was the relative decline in the cost of raw materials and stores consumed as well as in other expenses. As a result, the gross profit has risen smartly by Rs. 17.77 lakhs to Rs. 78.52 lakhs and is the highest on record so far. Provisions for the Managing Agents' remuneration and taxation have also risen in consonance with the gross profit, the former going up by Rs. 1.64 lakh to Rs. 7.35 lakhs and the latter by Rs. 9.70 lakhs to Rs. 33.70 lakhs. A small increase of Rs. 1.70 lakh to Rs. 4.91 lakhs has also geen found necessary in the provision for depreciation in view of the increase in the value of depreciable block at the close of the year under review. Even then, the net profit is up by Rs. 4.73 lakhs to Rs. 32.56 lakhs.

It is heartening to note that, despite the betterment in the net profit position, the management has found no reason to modify its policy of ploughing back a substantial portion of the available profit in the business. It has accordingly allocated nearly 75 per cent of the profit, or Rs. 25.49 lakhs, to reserves. At the same time, it has been able to propose a slightly higher ordinary dividend of 7 per cent, subject to deduction of tax, as against 6 per cent subject to deduction of tax last year. The proposed dividend absorbs Rs. 10.97 lakhs. A sum of Rs. 5.87 lakhs out of this, however, is to be deemed, according to the modified Income-tax Rules, to have been paid out of the amount standing to the credit of the tax-exempt dividend reserve and to that extent, therefore, ordinary dividends will be free from deduction of tax.

The progress achieved by the Company during the past four years is well brought out by the comparative table given below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

Market price of ordinary shares (In rupees) :	1962	1961	1960	1959**
High	578.75	570.00	865.00	930.00
Low	452.50	407.50	400.00	150.50

* Including Rs. 10.64 lakhs for previous years.
† Subject to deduction of tax.
** On 7th August, 1959, the Company issued right shares at par at nine shares for every one. The highest rate is *cum*-right and the lowest *ex*-right.

As revealed by its balance-sheet as at 31st March 1962, the financial position of the Company is satisfactory. The issued share capital, which has now risen to Rs. 185.78 lakhs from Rs. 174.78 lakhs a year ago, comprises Rs. 29.00 lakhs in 8.58 per cent preference shares of Rs. 100.00 each and Rs. 156.78 lakhs in equities of Rs. 100 each. It is supported by reserves and surplus amounting to Rs. 59.36 lakhs. Unsecured loans have remained unchanged at Rs. 1.05 lakh but current liabilities and provisions have increased substantially by Rs. 47.23 lakhs to Rs. 138.81 lakhs. These, however, are adequately covered by current assets, loans and advances and investments all aggregating Rs. 223.00 lakhs. With the acquisition of new assets worth Rs. 20.66 lakhs during the year, the gross block has improved to Rs. 60.07 lakhs but has been written down to Rs. 39.52 lakhs or nearly two-thirds its original cost. Besides this, the capital work-in-progress is valued at Rs. 112.49 lakhs.

The Company's scheme for the manufacture of important intermediates made further progress during the year. Some of the buildings have been completed and the remaining ones are expected to be ready by the end of 1962. Plant and machinery, both imported and local, are being received and installed. It is anticipated that the Company will be able to commence production of a few of the intermediates by the last quarter of this year and the dyestuffs by the beginning of the next year. As regards the plant for the manufacture of sulphuric acid and oleums, orders for the entire project have been finalised and it is expected that manufacture will start by the last quarter of 1963.

The Rs. 100.00 fully paid ordinary shares of the Company are currently quoted at Rs. 457.50 *cum-div.* On an *ex-div.* basis the net yield works out to 1.3 per cent per annum.

FOUR LEADING BANKS DO WELL AGAIN

Four leading banks of the country, namely, the Punjab National Bank Ltd., the Bank of Baroda Ltd., the Bank of India Ltd. and the Devkaran Nanjee Banking Company Ltd., have done well again during the half-year ended 30th June 1962. The results of these banks, which are given below, confirm the belief that banking as a whole would fare at least as well as it did in 1961, a year of record profit, if not a little better.

Punjab National Bank Ltd.: For the half-year, the Bank has earned, subject to audit and after providing for tax and making other necessary provisions, a net profit of Rs. 49.55 lakhs (excluding Rs. 10.38 lakhs brought in), as against Rs. 76.06 lakhs (excluding Rs. 4.23 lakhs brought in), before providing for taxation for the corresponding period of the previous year. The Directors have decided to maintain the interim dividend of one rupee per Rs. 10 fully paid equity share, subject to tax. However, the total amount to be distributed is higher by Rs. 7.50 lakhs at Rs. 20 lakhs, as the dividend is on a larger issued capital of Rs. 2 crores following the issue of 750,000 shares of Rs. 10 each at a premium of one rupee per share in September last. After providing for the dividend, the surplus of Rs. 39.93 lakhs is to be carried forward to the next half-year's accounts. The Bank has 429 offices in India, Burma and Pakistan.

Bank of Baroda Ltd.: The Bank's profit for the period under review has increased from Rs. 25.11 lakhs (excluding Rs. 1.09 lakh brought in) to Rs. 25.41 lakhs (excluding Rs. 3.02 lakhs brought in), subject to audit. The Directors have stepped up the interim dividend on the Rs. 50 fully paid ordinary shares from 14 per cent to 16 per cent per annum, subject to tax. The dividend will absorb Rs. 12 lakhs, as against Rs. 10.50 lakhs in the previous year. The carry forward to the next half-year's accounts is Rs. 16.43 lakhs.

Bank of India Ltd.: The profit of the Bank, before tax, works out to Rs. 47.50 lakhs, which is a shade lower than the Rs. 47.85 lakhs earned in the first half of 1961. The interim dividend has been maintained at 16 per cent per annum, subject to tax, on the Rs. 50 fully paid ordinary shares. It will absorb Rs. 24 lakhs and leave Rs. 23.50 lakhs to be carried forward to the current half-year's accounts. Together with Rs. 29.17 lakhs brought in from the previous year, the total amount to be carried forward works out to Rs. 52.67 lakhs.

Devkaran Nanjee Banking Company Ltd.: For the first-half of the current year, the Bank has earned a higher net profit of Rs. 17.11 lakhs, as compared with Rs. 15.10 lakhs, realised for the corresponding period of the previous year. The figures are exclusive of Rs. 13.51 lakhs brought in from 1961 and Rs. 7.86 lakhs from 1960. The interim dividend is proposed to be maintained at Rs. 2 per share of Rs. 50, subject to tax. It takes away Rs. 2 lakhs, leaving Rs. 28.62 lakhs to be carried forward to the next half-year's accounts.

WYMAN-GORDON STARTS FORGINGS PRODUCTION

The recently established Wyman-Gordon India Ltd. has started production of forgings for the automotive and agricultural industries of the country at its plant at Thana, an industrial suburb of Bombay. The plant-capacity is being gradually increased for the manufacture of meehanite grey iron castings for a variety of other industries. A subsidiary of Wyman-Gordon Company, world's leading producer of forgings for missiles, rockets, space-vehicles, aircraft, automotive and far equipment, the Company has been formed with the co-operation of Almag Forge and Foundry (Private) Ltd. Forging technology and equipment are being provided by the parent company, but the plant is Indian-managed, and the operating force is eventually expected to number 1,000.

TUBE INVESTMENTS' NEW PROJECT

Considerable headway has been made by Tube Investments of India Ltd. in regard to its new project for the manufacture and fabrication of cold roll formed metal sections. The first part of the new factory is complete near Madras and the plant will be installed shortly. The factory will produce mainly cold-formed sections that can be used for building bus bodies, rail cars, roller shutters, insulation systems, furniture and in the motor and textile industries. Within two years from now, the sphere of activity at the factory will be widened to include the fabrication of the cold-formed sections by bending, welding, pressing, rust-proofing and painting for the building industry.

The new project of the Company will be similar to that of the long-established T.I. subsidiary in the U.K., namely, Metal Sections Ltd. of Birmingham, which is providing the Madras factory with the technical know-how. The Company is one of the largest cycle manufacturers in India. It also produces cycle components, cycle saddles and electric-resistance welded steel tubes and roller chains.

23 JUL 1962 Notice PUBLIC DEPARTMENT

DELHI LETTER

(*Concluded from page* 100)

The F.I.C.C.I. is the most pessimistic of the lot. It thinks that, in actual practice, an annual rate of production of around 75 million tons would be the highest that may be reached by the end of the third Plan. The F.I.C.C.I. is convinced that there is no magic which can take the production from 55 million tons to 97 or 101 million tons in a little over three years. In view transport muddle and the shortage of mining equipment and explosives, the F.I.C.C.I. estimates an increase of four million tons a year on an average during the current Plan.

Freight reductions and substitution of furnace oil for coal would only scrape the surface of the problem. The Government's emphasis on promoting the production of quality coal is unrealistic in the opinion of the F.I.C.C.I., which wants increased production of grade II coal. While admitting that the shortages of coal for industries will continue for a long time to come, the F.I.C.C.I. wants the Government to retrieve the position to some extent at least by encouraging production of grade II coal and providing washery facilities.

If there is some rethinking on basic coal policies on the part of some senior Ministers, there is also a pragmatic trend developing in steel. Apart from Mr. C. Subramaniam's declaration of "taking up the challenge" of improving the working and profitability of public sector steel plants to match the private sector performance, in the formulation of plans to increase steel output to 18 million tons by 1971 (that is by the end of the fourth Plan period), the Steering Group on Steel has been tempted to discuss expansion of the private sector plants also. The poser before the group: what is the correct balance to be struck between new public sector plants and the expansion of existing plants in the public and private sectors?

Notice

HOWRAH MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Thirty-seventh Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta-1, on Tuesday, the fourteenth day of August, 1962 at 12 o'clock noon, for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1962, the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors thereon.
2. To appoint a Director in place of one retiring.
3. To appoint Auditors and to fix their remuneration.
4. (*As special business*): To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a Special Resolution, viz.:—

"That approval be and is hereby accorded to the sale of three Roll Formers to Kanknarrah Company, Limited (an associate of the Managing Agent as defined in Section 2 (3) of the Companies Act, 1956) at a price of Rs. 1,500 each."

Notice is also given that the Share Transfer Books of the Company will be closed from the 1st August to the 14th August, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
C. EVANS.
Acting Secretary,
Managing Agent.

4, CLIVE ROW,
CALCUTTA-1.
6th July, 1962.

Note.—Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all Members.

INVESTORS' GUIDE

The 1962 Edition of the **Calcutta Stock Exchange Official Year Book** is now out. It is India's most up-to-date and comprehensive work of reference on investments. Contains detailed information relating to all companies quoted on the Calcutta and Bombay Stock Exchanges. Also contains information on economic matters, tax rules and rates, names and addresses of Liquidators of Companies wound up since 1944, preference dividends in arrears. Special features of this edition: (1) Information relating to all Bombay Companies, and (2) List of Companies which accept vernacular signatures on transfer deed. Also lists of companies which accept and which do not accept signatures in dot pen on transfer deed.

Copies available from the Stock Exchange, 7, Lyons Range, Calcutta, at a price of Rs. 12.50 nP per copy. Postage Rs. 2/- extra.

SYNOPSES OF COMPANY REPORTS

Andhra Cement Co., Ltd.

Chairman : Mr. V. Ramakrishna, Madras.

24th Annual General Meeting—Held on 22nd June 1962.

Working Results :

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Cement sales	1,25,80	1,20,03
Closing stock of cement	16	24
Gross profit	21,07	23,34
Transfer to ex-Managing Agents' remuneration.	Nil	75
,, ,, depreciation	9,85	10,86
,, ,, provision for taxation	3,50	2,30
Net profit	7,72	9,43
Adjustments*	4,98	1,77
Appropriations :		
Total available balance	12,70	11,20
To donations	2	3
,, expenses (for prior years)	2,44	25
Transfer to provision for gratuity	40	50
,, ,, rehabilitation fund	1,02	79
,, ,, development rebate reserve	75	1,20
,, ,, deferred taxation reserve	75	1,00
Proposed dividends (taxable) preference	19	19
,, ,, ,, equity	7,10 (10%)	7,10 (10%)
Carry forward	3	14

* Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report : The production during the year had suffered due to various factors, the main bottleneck being the continuing short supplies of coal. The facility for augumenting the supplies by sea-cum-rail route as in the case of Factories in the South was not extended to the Company's unit and even the consignments which were received during the early part of the year on the advice of the Ministry were not taken into consideration for cost purposes. The Tariff Commission examined the cost structure in the year for fixing the prices. The movement by all rail route which was the arrangement fixed by the Coal Control Authorities for the Company's unit was not forthcoming in full measure and production had therefore suffered.

There was also intransigent attitude on the part of the workmen due to pending disputes relating to implementation of the Wage Board recommendations (the fixation of workmen in different grades as per Wage Board scales were not acceptable to the Union), re-employment of retrenched workmen (retrenchment was upheld by the Tribunal), bonus for the year 1958, 1959 and 1960. After protracted negotiations these disputes were amicably settled in August 1961. The relationship between the Management and the workmen since then has been cordial.

The working results during the year were also affected due to rising cost of raw materials and other items of manufacture. In spite of the recommendations of the Tariff Commission to give the revised price with retrospective effect, they were not accepted by the Government of India and the revised price was made applicable only from 1st November 1961.

Accounts in brief as at 31st December 1961 are as under :—

Liabilities	Rs.	Assets	Rs.
Capital*	73,89,508	Gross block	1,74,60,937
Reserves and surplus.	10,78,650	—Depreciation	80,90,423
Other liabilities	74,68,285		
		Net block	84,70,514
		Current assets	67,99,964
		Investments	6,17,195
		Cash	48,770
	Rs. 1,59,36,443		Rs. 1,59,36,443

* Paid-up capital consists of 7,10,317 equity shares of Rs. 10 each fully called up and 2,488 six per cent. tax-free cumulative first preference shares of Rs. 10 each fully called up. Application money in arrears by others comes to Rs. 72. Amount paid up on shares forfeited—Rs. 37,610.

Hindustan Wires Ltd.

Chairman : Mr. D. N. Mitra, Calcutta.

Third Annual General Meeting—6th August 1962.

Working Results :

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales (gross)	45,83	5,46
Closing stock (finished products and work in progress)	3,92	9,68
Gross profit	3,84	88
Transfer to depreciation	81	22
Net profit	3,03	16
Adjustments*	6	Nil
Appropriations :		
Total available balance	3,09	16
Transfer to development rebate reserve	1,00	10
Proposed dividend (maiden) equity	2,00 (4%)	Nil (Nil)
Carry forward	9	6

* Adjustment represent the credit balance brought forward from the previous year.

Extracts from the Directors' report : The proposed dividend of 40 nP per share is covered under Section 84 of the Indian Income-tax Act according to the calculations made by the Company and no tax will be deducted therefrom. On this dividend no Income-tax and Super-tax will be payable by the Shareholders under Section 85 of the Income-tax Act.

During the period under review, sales of the Company's products amounted to Rs. 44,46,930. The Company had also undertaken processing jobs from the customers for drawing wires out of wire rods imported by them under their own import licences. The processing charges amounted to Rs. 1,36,163 which has been added to the sales figure shown in the Profit & Loss Account. The cost of the raw materials imported under such licences amounted to Rs. 8,50,000 approximately. The Company's production was hampered due to electricity failures and restrictions in Calcutta during the last year.

The Company has now gone into production for some of the high carbon high tensile wires. Sales in the current year are expected to rise considerably. The major part of the plant and machinery on order, is expected to be shipped in July this year. This would increase the production capacity of the Company's plant, particularly of specialised high tensile wires from which there is a very good market and which are mostly being imported at the moment.

The Company has been receiving allocations of mild steel rods from the Iron & Steel Controller on the indigenous producers, but the supplies have not been regular. It is expected that the position of supplies will improve. In addition, the Company has been able to secure import licences for high carbon wire rods, zinc, lead and other raw materials.

The Cost and Accounts Officer, Ministry of Finance, has already examined the cost structure of this Company in regard to the demand made by the Company for increase in the price of its mild steel products and the same is still under consideration of the Government of India.

The Company has been further licensed to manufacture 4,200 tonnes of *Tyre Bead Wires* which are now being entirely imported at a price of approximately Rs. 2,000 per tonne. The capital equipment required for the same is expected to be licensed for import under the Second Yen Credit. With the rapid expansion of rubber tyre manufacture, the demand for these wires has been estimated by the National Council of Applied Economic Research at 10,660 tonnes by 1965-66 against the present targeted capacity of manufacture of rubber tyres in the Third Five Year Plan. These wires are inserted in the rims of tyres, thus giving necessary reinforcement to tyres. The wires are usually bronze or copper coated. This Company expects to be the first to produce these wires in India.

The Company has finalised, subject to the approval of the Government of India and the Government of Japan, Technical Collaboration for manufacture of *Tyre Bead Wires, Prestressed Concrete Wires* and other high tensile wires with the famous steel manufacturing firm of Kobe Steel Works Ltd. and its subsidiary Company, Shinko Wire Co., Ltd., who are one of the biggest manufacturers of these wires in Japan.

The Company's application for further expansion of its present wire manufacturing capacity is still under the consideration of the Government of India.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,54,025	Gross block	29,04,461
Reserves and surplus.	1,19,167	—Depreciation	1,02,927
Other liabilities	6,04,230		
		Net block	28,01,534
		Current assets	21,39,019
		Cash	6,54,306
		Miscellaneous expenditure	1,42,563
	Rs. 57,37,422		Rs. 57,37,422

* Paid-up capital consists of 5,00,000 equity shares of Rs. 10 each fully called up. Calls in arrears amount to Rs. 45,975.

Travancore Cements Ltd.

Managing Agents : Essel Private Ltd., Kottayam, Kerala.

15th Annual General Meeting—Held on 22nd June 1962.

Working Results :

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Cement sales	64,22	71,30
Closing stock of cement and cement in process	9,13	8,15
,, ,, raw materials	93	67
Gross profit	11,76	11,70
Transfer to Managing Agents' remuneration	55	58
,, depreciation	6,22	5,90
Net profit	4,99	5,22
Adjustments	4,26	29
Appropriations :		
Total available balance	9,25*	5,51
Transfer to reserve for rehabilitation	9	Nil
,, ,, provision for taxation	6,00	Nil
,, ,, deferred taxation reserve	Nil	2,00
Proposed dividend (taxable) equity	3,00 (6%)	3,00 (6%)
Carry forward	16	51

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 3,75,000 transferred from deferred taxation reserve.

Extracts from the Directors' report : The Company's turnover and net profit for the year 1961 have been comparatively lower than that of the previous year due to the following reasons : (i) the opening stock of clinker and cement in 1961 was lesser than the opening stock in 1960 and hence there was lesser sales and turnover in 1961, (ii) production of grey clinker was stopped for a period of about two months as the kiln was put to use for the production of white clinker, (iii) the bulk of the white clinker produced in 1961 was in stock on 31st December 1961.

White Cement : Sale of *White Cement* has shown marked improvement over that of 1960 and is about 26 per cent. more than the sales during 1960.

Ex-works selling price of Grey Cement : Since the fixation of cement prices in 1958 the cost of production has increased considerably due to increase in wages, price of coal, stores and spare parts etc. The price fixed in July, 1958 was to be in force for a period of three years, i.e., up to July 1961. The Central Wage Board recommendations came into force from 1st January 1960 and the increase in wages consequent on the implementation of the Wage Board recommendations was allowed to the producers by corresponding increase in the price of cement. The increase allowed to the Company's factory was Rs. 2.10 and the revised price Rs. 82.18 per tonne.

The Government of India at the request of the cement producers directed the Tariff Commission to work out the cost of production at various units and recommend to the Government fair prices payable to them. The Tariff Commission after conducting a thorough investigation into the matter submitted its report to the Government for the revision of cement price from 1-7-1961 and in this Company's case the price recommended was Rs. 103 per tonne for naked cement ex-factory. The Government of India have fixed the price payable to the producers only from 1-11-1961 and have fixed Rs. 95 for this Company's factory including an allowance of Rs. 2 per tonne for rehabilitation, research, etc. The revised price is to be in force till 31-3-1966. By this revision the Company is getting an increase of Rs. 12.82 per tonne from 1-11-1961, out of which Rs. 2 per tonne less tax has to be kept as a separate Fund for rehabilitation, research, etc. This increase has given us some relief in meeting the increased cost of production.

Accounts in brief as at 31st December 1961 are as under :—

Liabilities	Rs.	Assets	Rs.
Capital*	50,00,000	Gross block	1,38,60,929
Reserves and surplus.	10,27,347	—Depreciation	70,05,860

Carry forward	20	23

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: The Company had maintained its progress during the financial year ending with 31st March 1962. The directors inform that in addition to the Waste Spinning Plant for which the Company has already received licence, and of which mention has been made in last year's report, the Company has now secured licences for an expansion by 9,000 spindles and 30 looms for the manufacture of Cotton Blankets. There was some delay in the shipment of Waste Cotton Spinning Plant and therefore it could not be installed before the end of the last financial year as anticipated. As per present programme, the plant is expected to go into production before the end of the current year.

In order to finance partly the expansion programmes on hand, the Company made a Right Issue of 96,985 Equity Shares of Rs. 10 each on 23rd April 1962 which was fully subscribed. Arrangements are being made to meet the balance by loans from Banks and Finance Corporations, internal resources and deferred payments.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,51,862	Gross block	54,71,158
Reserves and surplus	10,06,303	—Depreciation	17,54,054
Other liabilities	29,67,100		
		Net block	37,17,104
		Current assets	20,28,505
		Investments	1,00,975
		Cash	1,78,621
	Rs. 60,25,205		Rs. 60,25,205

* Paid up capital consists of 75,252—8.93 per cent. cumulative preference shares of Rs. 10 each and 1,20,313 Ordinary (Equity) shares of Rs. 10 each. Forfeited shares—amount to Rs. 6,152.

MONEY QUITE EASY

(From Our Own Correspondent)

BOMBAY, 18*th July*

The short-term money market was active and tight for a while early in the week when the lists for the Central loans remained open. Thereafter, conditions became easier again. The banks had a surfeit of funds and borrowers were scarce in the inter-bank section. Demand for bank credit from trade and industry was poor. On Thursday, the 12th inst., when the lists for new loans opened, the inter-bank call rate jumped up to as high as 3½ per cent from ¾ per cent on the previous day and stayed at that level for both fresh money and renewals on the following day also, presumably because the Central loans were on offer on that day too. Thereafter, it came down by quick stages—2½ per cent on Saturady, 2 per cent on Monday, 1½ per cent on Tuesday and one per cent today.

There has been no change in the short-term deposit rates and no bank has yet ventured to lower the rate even for three-day deposits.

The Treasury Bill results, however, are not in conformity with the aforesaid conditions. There was hardly any response to these bills from quarters other than the "special" source. The total amount offered was only Rs. 2 crores, that is, just sufficient to meet the amount invited. The average rate of accepted tenders was actually higher at 2.390 per cent per annum as compared with 2.71 per cent per annum a fortnight ago when the total amount offered was as high as Rs. 4.10 crores for an invitation of Rs. 2 crores. The sales of Intermediate Treasury Bills during the period 9th to 14th July, both days inclusive, amounted to a mere Rs. 10 lakhs as compared with Rs. 57 lakhs in the previous week and Rs. 7.10 crores in the week before that. Obviously, the banks and other institutional investors who were evincing interest in these bills shortly before the new Central loans must not have been free from the aftermath of heavy subscription to these loans.

The response to new loans of the Central Government was quite encouraging. The total subscriptions to all the three loans aggregated Rs. 6.87 crores more than the target of Rs. 250 crores. Of this, conversion of maturing loans accounted for Rs. 153.67 crores, the balance of Rs. 103.20 crores being in cash. All subscribers were given full allotment. The response was the largest for the short-dated loan, as will be seen from the following break-down figures:

3½ per cent 1968 (fifth series) ...	Rs.	92.25 crores
4 per cent loan 1972	Rs.	80.59 crores
4½ per cent loan 1985	Rs.	84.03 crores
Total ...	Rs.	256.87 crores

India's foreign assets, which had registered a slight improvement of Rs. 1.23 crores in the week ended 6th July 1962, were down again by Rs. 2.09 crores in the week ended 13th July 1962, according to the Reserve Bank's statement for that week.

The Gilt-edged market continued to rule weak, with a further fall in the value of the majority of the old Central loans. There has been a decline of Re. 1.40 in 3 per cent 1986 Conversion Loan to Rs. 69.00. A drop of 25 nP is seen in 4 per cent 1980 and of 30 nP in 4 per cent 1972. 3½ per cent 1967 and 3½ per cent 1968 have fallen by 10 nP. The extremely short-dated loans such as 3 per cent 1963-65 and 3 per cent 1964, however, were in good demand and registered an increase of 20 nP. 3 per cent 1966-68, too, went up by 10 nP. The newly floated long-dated 4½ per cent 1985 has been standing at par. There have been no appreciable changes in State loans.

In the foreign exchange markets of the world, £ sterling was firm. In New York, for instance, the rate for spot sterling has gone up during the week by 0.250 cent to stand at 280.740-280.770 cents per £. This improvement has more than wiped out the decline experienced in the previous week. Three months' forward has also looked up by 0.240 cent to 280.150-280.180 cents. In keeping with this change in the value of £ sterling, the rupee has strengthened a little in terms of the U.S. dollar. Thus, the banks' selling rate for ready T.T. on New York has come down by 25 nP to Rs. 476.75 per 100 dollars. There has been a corresponding fall in their buying rate which is currently standing at Rs. 473.50.

TEAS IN GOOD DEMAND

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 12*th July*

A total of 822,000 kgs. was offered in sale No. 28 held on Tuesday the 10th inst. Quality showed a slight improvement in some Nilgiri teas and a few mediums. There was good general demand. Improved highgrown brokens and fannings were well supported, but others were irregular and often lower. Good medium brokens were irregular and sometimes advanced with quality, but fannings in this category were generally easier. The brighter medium and low medium brokens were firm to dearer. Others, however, were irregular and lower. Similar fannings were easier and there were frequent withdrawals amongst low mediums. Plainest brokens were taken up at a slight discount, while their fannings were much lower and virtually neglected. Black leaf descriptions were well supported, particularly brokens. Whole leaf grades were firm and sometimes dearer, particularly where quality showed an improvement. Teas of unorthodox manufacture met with support and although irregular were sometimes dearer. Tippy teas were a strong feature.

The quotations per kg. were:

	1962 Rs.	1961 Rs.
Low mediums	3.10-4.00	4.45-4.60
Mediums	3.60-4.10	4.60-4.70
Good mediums	4.10-5.30	4.70-5.00
Nilgiri B.O.P.	4.20-6.00	4.65-5.90

The average price realised in sale No. 28 was Rs. 3.94 per kg. as against Rs. 3.93 a week ago and Rs. 4.67 in the corresponding sale last year.

Offerings in dust sale No. 28 held today amounted to 462,000 kgs. There was a better demand at irregular rates. The cleaner and brighter medium and low medium kinds were firm, but others were lower. Good mediums sold readily but were also lower. Plain fibrous kinds often sold at rates below last. Highgrowns though well supported, often sold at a discount. Unorthodox descriptions were keenly sought after and the primary grades may be quoted as fully firm to dearer, fibrous kinds were lower. Clean black leaf varieties were generally often easier.

The average price realised in dust sale No. 28 was Rs. 2.91 per kg. as compared with Rs. 3.08 a week ago and Rs. 4.62 in the corresponding sale last year.

Colombo: Just over 6½ million lbs. were offered this week. Tea met with strong general demand with highgrowns advancing by 20 to 30 cents, while mediums were by 10 to 20 cents dearer. Lowgrowns also came to a firm to dearer market.

London: *North Indian and other growths*: In Monday's auction, there was good demand and best liquoring teas were fully firm, but poor stalky types were somewhat easier.

Ceylon and South Indians: In Tuesday's sale, 33,392 packages were offered, of which 6,329 packages came from South India. The market opened with a quieter demand. Only the best varieties from South India sold at valuations, while others were generally lower. There was useful support for Ceylons which were steady with quality.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 29: 840,000 kgs. offered. Good general demand. Cleaner low medium and mediums fully firm to dearer, particularly brokens. Others barely steady. Good mediums firm. Highgrowns strong and dearer. Unorthodox dearer."

SILVER WEAK, GOLD STEADY

(From Our Own Correspondent)

BOMBAY, 18*th July*

Silver in the bullion market ruled distinctly easy during the week under review, while gold was fairly steady. The easiness of silver was due to heavy arrivals—at an average rate of 53 bars daily, as against 40 bars last week—while offtake continued to be low, being eight bars per day, as against nine bars. Some Calcutta interests sought to press sales. One operator was reported to have sold 1,500 to 1,600 bars. Consequently, prices suffered a setback. Gold, however, met with scattered support induced by spot house buying and tended to move up, though today it developed a sagging tendency. The average daily offtake was 4,500 tolas, as against 4,400 tolas. The pace of arrivals, which had slowed down last week (from 5,250 tolas per day on an average to 4,500 tolas), improved again to 5,750 tolas this week. But increased arrivals did not have much effect.

The *Bhadrapad* (15th September) settlement in gold began the week at Rs. 125.20, as against the previous close of Rs. 125.30, and advanced to touch a high of Rs. 125.90 yesterday. At this level, profit-taking set in and the settlement declined to Rs. 125.25 today.

In silver, the *Bhadrapad* (17th September) settlement encountered selling and receded from Rs. 214.95 to Rs. 213.30 yesterday (Tuesday the 17th inst.). The settlement opened at Rs. 213.35 today and, after improving to Rs. 213.80, closed easy at Rs. 213.15.

The feature of trading in the spot silver section was the further marked fall in the discount under the forward, from 60 nP on Wednesday last to 25 nP today, when the ready rate stood at Rs. 212.90, as against Rs. 214.35. The lowest level touched was Rs. 212.70 today.

Ready gold continued to command a premium over the forward throughout the week, though the actual premium declined from 95 nP to 65 nP. The closing spot rate today was Rs. 125.90, a drop of 35 nP over the week; it had been quoted higher at Rs. 126.75 on Saturday and Monday.

The dollar price of gold in the London bullion market moved up further from $35.11⅛ to $35.12⅛ per fine ounce, the highest level since February last. Ready gold, too, improved by 3*d.* to 250*s.* 3¾*d.* Ready and forward silver gathered ½*d.* each to 87½*d.* and 87⅝*d.*, respectively. Silver in New York was firm at 102.75 cents.

The following table shows the trend of prices during the week under review:—

	18-7-62 (closing)	High	Low	11-7-62 (closing)
GOLD				
Ready (.99 fine)	Rs. 125.90	Rs. 126.75	Rs. 125.90	Rs. 126.25
*Bhadrapad** ...	125.25	125.90	125.20	125.30
Sovereign	97.75	97.75	97.50	97.75
SILVER				
Ready (.996 fine) ...	212.90	214.40	212.70	214.35
,, *Bhadrapad*† ...	213.15	214.80	212.95	214.95
London—				
Gold	250*s.* 3¾*d.*	250*s.* 4*d.*	250*s.* 2½*d.*	250*s.* 3*d.*
Silver Ready ...	87½*d.*	87½*d.*	87*d.*	87½*d.*
Silver Forward ...	87⅝*d.*	87½*d.*	87⅛*d.*	87¼*d.*
New York—				
Silver	102.75 cents	—	—	102.75 cents

* 15th September settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, 18*th July*

The declining trend witnessed in the cotton futures market towards the close of last week gathered further momentum during the week under review. Reports of favourable weather indicating the prospects of normal crop development prompted heavy unloading with the result that futures values suffered a sharp setback. Upcountry operators were heavy and persistent sellers. Local operators too followed suit. From a peak of Rs. 736 touched on the 11th inst., the Jarilla March contract declined steadily to touch a low of Rs. 722.50 yesterday. The contract drifted further down to Rs. 715.75 today, thanks to fresh selling and bear hammering, although the finish was a shade higher at Rs. 720, showing a net loss of Rs. 15.50 over the week. The range of fluctuations of the contract is indicated below:

	18-7-62	High	Low	11-7-62
Jarilla March 1963 ...	716	732	715.75	731.50

Progress of new crop sowing has been satisfactory in Maharashtra and Madhya Pradesh while in Broach and North Gujarat more rains are required. In fact, lack of rains has held up sowing operations in Vijay, Kalyan and Wagad tracts. In the South too rainfall has not been adequate and further showers are necessary.

In the spot market, reflecting the tight supply position, demand continued to be well maintained. With choice qualities in short supply, mill interest centred round cotton spinning lower counts. Some of the varieties which attracted attention were Laxmi, L.147, Co2, Kalyan, Wagad and 197/3.

Export demand for Bengal *Deshi* continued to be slack. Japan was interested only in superfine varieties, stock of which were limited. Spinner interest in foreign growths centered round Pakistan and Sudan cotton.

The East India Cotton Association, Bombay, is reported to have urged a reduction in freight rates on Indian cotton shipped to the U.S. It has asked the Freight Investigation Bureau to take up the matter with the Conference lines concerned.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 680; Kalyan 960; Khamgaon 980; Hubli Jaydhar 1,115; Hubli Laxmi 1,220; B.P. 52 1,320; Pakistan NT 1,061.

Cotton futures in Karachi suffered a sharp setback during the week. Pre-tender liquidation in the expiring July contract and speculative selling in the new crop contract prompted by favourable weather news were responsible for the decline in values. The N.T.R.G. July contract was marked down from Rs. 76 last week-end to Rs. 72.75, a net loss of Rs. 3.25. The January contract receded from Rs. 74.65 to Rs. 73.70, a decline of 95 nP over the week. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind Deshi 71; Punjab *Deshi* 65; 4F Punjab Roller 70; S.G. 82; LSS Punjab Roller 84; S.G. 88; NT Roller 87; S.G. 90; S89F Punjab Roller 93.50; S.G. 99.50.

Barring the July delivery of both American and American type contracts, which ruled steady, cotton futures in Liverpool drifted downward during the week. Scarcity of tenders accounted for the steadiness of the July contract while lack of buyers and lower advices from New York prompted selling in the more forward positions. Sudan cotton contracts were quite and nominally unchanged. The following are the latest available quotations—in pence per lb.— from Liverpool:

American cotton one inch staple contract: July 23.80; October 23.55; December 23.50.

American cotton mixed growth contract: July 24.20; October 23.80; December 23.85.

Sudan: July, September, November 29.50.

Easy conditions prevailed in the New York cotton futures market. Bearish crop news and continued slackness of export demand induced selling, which led to a decline in values. Spot prices too tended to look down, thanks to reduced demand from domestic mills.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	17-7-62	10-7-62	3-7-62
New York Spot	36.05	36.15	36.15
July	—	33.50	33.71
October	33.69	34.01	34.09
December	33.83	34.13	34.09

COTTON YARN—CEILINGS FOR OVER 40s

(From Our Own Correspondent)

BOMBAY, 18*th July*

Cotton yarns of over 40 counts will be brought under the purview of the Indian Cotton Mills Federation's Price Regulation Scheme with effect from the 1st of next month. The decision to this effect was taken by the Committee of the Federation at its meeting held in the City on Monday the 16th inst. At present, only yarns up to 40 counts are covered. The following are the ex-mill net prices fixed for hank yarn of counts above 40s:

(In Rs. per bundle of 10 lbs.)

60s: Indian carded 47; Indian combed 52; American carded 50.50; American combed 55.50; African carded 52.50; African combed 57.50.

80s: Egyptian/Sudanese carded 72.85; Egyptian/Sudanese combed 78.85.

100s: Carded 87.75; combed 93.75.

In respect of existing contracts, the price to be charged for deliveries from 1st August will be the contract price or the new price whichever is lower.

Prices for intermediate counts are to be worked out as follows (per count—per bundle):

Counts

41-43: add 60 nP to the price of 40s.
44-59: deduct 50 nP from the price of 60s.
61-69: add 60 nP to the price of 60s.
70-79: deduct 60 nP from the price of 80s.
81-99: add 70 nP to the price of 80s.

The differentials to be added for cone yarn and double yarn are given below:

Counts	*Cone yarn*	*Double yarn*
41-50	3.80	5.10
51-60	4.40	5.70
61-80	5.00	6.90
81-90	5.40	7.50
91-100	5.80	8.20

For mixed yarns, the prices will be calculated as follows:

For 25 per cent to 49 per cent of foreign cotton mixture: Add to price of yarn from Indian cotton 25 per cent of difference in price between yarn from Indian cotton and that from foreign cotton.

For 50 per cent to 74 per cent of foreign cotton mixture: Add to price of yarn from Indian cotton 50 per cent of difference in price between yarn from Indian cotton and that from foreign cotton.

For 75 per cent to 99 per cent of foreign cotton mixture: Add to price of yarn from Indian cotton 75 per cent of difference in price between yarn from Indian cotton and that from foreign cotton.

Where more than one variety of foreign cotton is used, the yarn price of the lower of the varieties will be taken into account to calculate the prices of yarn.

Since the ex-mill ceiling prices for cotton yarns of 40 counts and above are to come into operation only from the 1st of next month, the announcement did not have any significant effect on cotton yarn prices during the week under review. Only the prices of counts below 40s tended to move up.

Art silk yarns registered a sharp rise on speculative demand immediately after the Government of India's announcement that no licences for import of art silk yarn would be issued to actual users during the current (April 1962-March 1963) licensing period and that the actual user requirements would be met from imports made by the State Trading Corporation from rupee sources under link arrangement. Amilon (20×1) August contract, which had earlier receded from Rs. 4,775 to Rs. 4,650, jumped up to Rs. 4,700 yesterday. Today, however, the contract climbed down to Rs. 4,600 on nervous bull liquidation induced by fears that there might be stiff resistance to high prices by consuming interests. Spot yarns also drifted lower. Even the appreciable rise in exports of rayon fabrics from 2.29 million metres (valued at Rs. 29.28 lakhs) in May to 5.71 million metres (valued at Rs. 72.58 lakhs) in June had no effect. National Rayons 150 Bt. cones 1st grade fell by 54 nP to Rs. 14.34. 120 Bt. cones 1st grade dropped 85 nP to Rs. 16.76.

Imports of art silk yarn into Bombay port during the month of June amounted to 694,973 kg., thus making a total of 46,71,108 kg. for the first six months of this year. Synthetic yarn imports aggregated 311.205 kg., making a total of 14.48.835 kg. Cotton yarn imports for the six months were of the order of 39,952 kg. Exports of cotton yarn during June amounted to 269,708 kg. and those of cotton sewing thread 12,700 kg.

Staple fibre yarns also suffered a distinct setback owing to bull liquidation, while demand from consuming centres was at a low ebb. 40×2 August contract moved down from Rs. 860 to Rs. 824. October contract was dull today at Rs. 844. Spot Centurys declined by 35 nP to Rs. 9.11. Kohinoors fell by 26 nP to Rs. 9.22.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	18-7-1962	11-7-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
August	4,600.00	4,775.00
Nat. Ray. 150 Bt. 1 (per kg.)	14.34	14.98
Nat. Ray. 120 Bt. 1 (per kg.)	16.76	17.51
Staple fibre yarn (40×2)—		
August	824.00	860.00
October	844.00	—
Kohinoor (per kg.)	9.28	9.54
Century	9.11	9.46
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.62	17.50
20s Podar	22.00	21.75
32s Madura	30.00	29.50
40s Madura	35.75	36.50
60s Finlay	72.75	72.50

Note: Quotations for 120 and 150 Japan and Italy are not available since there has been no trading in view of paucity of stocks.

SEEDS FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *18th July*

The oilseeds market ruled firm during the major part of the week under review on heavy speculative support, but suffered a sharp setback today, with futures contracts losing considerable ground. Over the week, futures contracts generally closed lower, while spots were well maintained. Groundnuts put on a distinctly cheerful appearance till yesterday, thanks to reports of oil exports by the State Trading Corporation and relatively small offerings. The sentiment was aided further by the news that the S.T.C. had entered into a barter deal with a European firm for exports of groundnut meal. A sharp reaction, however, set in today following heavy liquidation by Kathiawad interests on bearish crop reports. The possibility of grant of an import quota for 100,000 tons of soyabean oil for use by *vanaspati* manufacturers also unnerved the bulls. There was brisk trading in castorseeds, following steady offtake of castor oil by shippers. Linseed ruled distinctly steady. Cottonseeds were featureless.

The Union Government has decided to extend upto the end of next January, the validity period of the quota of 20,000 tons of H.P.S. groundnut kernels released for export on 5th May last. Exports will be allowed to all permissible destinations excluding Tibet, South Africa and South West Africa by all shippers, including established shippers and co-operative societies against registrations for contracts in the form of cable offer and acceptance on first-come-first-served basis.

A plea for reducing stamp duties on oilseeds in the State has been put forward by the trade. A deputation of the Bombay Oilseeds and Oils Exchange Ltd., led by Mr. Ramdas Kilachand, President of the Exchange, met Mr. S. G. Barve, the State Finance Minister, on Saturday the 14th inst. Referring to the Bill which provides for increase in stamp duties, the deputation urged a reduction in stamp duty as far as oilseeds and oil trade was concerned. It was suggested that, in any case, there should not be any increase in the existing stamp duty rates applicable to oilseeds and oils trade. The Government was requested to have stamp duty for groundnut oil also on unit basis, instead of *ad-valorem* basis as at present The case of jobbers was strongly presented by the deputation. It was stated that the taravaniwala's business in the market should be treated sympathetically and those transactions be totally exempted from the levy of stamp duty. The Finance Minister is said to have promised to consider the points raised by the deputation.

Groundnut July 1962 contract advanced from Rs. 221.75 to Rs. 224.87, before closing at Rs. 219.75. September 1962 contract initially rose from Rs. 222 to Rs. 224.87, but moved down towards the close to Rs. 219.75. January 1963 contract fell gradually from Rs. 220.75 on the opening day (Thursday) to Rs. 216.75. Both July and September 1962 oil contracts, which had remained firm earlier during the week, wound up the week on an easy note at Rs. 18.60, with a net loss of 25 nP each. Khandesh quality, however, was higher by 75 nP to Rs. 47.50. Nizam bold hardened by 25 nP to Rs. 46.75.

Linseed bold ready improved by 38 nP to Rs. 39.75. Linseed oil strengthened by 40 nP to Rs. 16.50. September 1962 contract, however, declined by 6 nP to Rs. 40.50.

Cottonseed September 1962 contract eased by Re. 1.75 to Rs. 105.50 and July contract by 75 nP to Rs. 102. But Berar, white and non-white picked up 25 nP to Rs. 22.25.

Castorseed September 1962 contract firmed up from Rs. 165.37 to Rs. 168.87 before finishing at Rs. 167.87. Madras small gathered a rupee to Rs. 33.50. Oil B.S.S. rose by 55 nP to Rs. 13.80.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 18th July, as compared with those of the two previous weeks:

	18-7-1962	11-7-1962	4-7-1962
	Rs.	Rs.	Rs.
Groundnut			
July 1962	219.75	221.75	218.50
September	219.75	222.00	218.75
Nizam bold	46.75	46.50	45.75
Khandesh quality	47.50	46.75	46.25
Oil ex-mill ready*	19.40	19.35	19.25
Railway receipts*	19.00	19.00	18.85
Oil July 1962	18.60	18.85	18.65
Castorseed			
September 1962	167.87	165.37	164.12
Ready Madras	33.50	32.50	32.00
Ready Kanpur	32.00	31.12	31.00
Oil B.S.S.†	13.80	13.35	13.10
Oil commercial†	12.90	12.45	12.25
Linseed			
September 1962	40.50	40.56	40.25
Bold ready	39.75	39.37	39.25
Oil ready†	16.50	16.10	15.65
Cottonseed July 1962	102.00	102.75	104.75
Niger seed	36.50	35.75	36.00
Kardi seed	27.50	25.75	25.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

METALS STEADIER

(From Our Own Correspondent)

CALCUTTA, *17th July*

Under the influence of keen demand against the background of the recent drastic reduction in import quotas, steadier conditions were in evidence in the local metal market during the week under review. Prices improved further. On the London Metal Exchange, copper was firm and tin recorded a modest gain; but lead and zinc eased. Tin opened at £862 a ton and gradually rose to £872. The improvement was attributed to the belief that the U.S. Government would not disturb the international tin market by too abundant releases at a time from the strategic stockpiles. Various assurances in this regard have now been given on behalf of the U.S. Government, but trade circles regret absence of any specific assurance in regard to the price.

It has now been indicated on behalf of the U.S. Government that it would take about 10 years to complete the proposed releases, amounting to 50,000 tons. This would mean that the yearly releases would not be more than 5,000 tons. In this connection, it should be noted that the world's shortage has been variably estimated at between 5,000 and 15,000 tons a year. The U.S. releases would, therefore, relieve this shortage, and there is hardly any need for the producing countries to increase output. The U.S. Government's strategic stockpiles of tin are now stated to aggregate 348,296 tons. Disclosing this recently, Mr. E. A. McDermott, Director of the Office of Emergency Planning in the U.S.A., was reported to have told the American Tin Trade Association that consultations with foreign Governments were being held on a definite selling programme for the proposed releases, which would be announced within the next few days. During the week, tin was fully steady in Calcutta.

At a time when the existing industries consuming non-ferrous metals are not able to work at full capacity even on the basis of one shift, due to inadequate import of raw materials, it is difficult to see reason in the Government's policy in granting fresh licences for setting up new units. However, the industrial licence granted to a Calcutta firm to set up an extrusion plant at Kotah in Rajasthan is justified. For, that plant's output would include print rolls used in the textile industry, the full requirements of which are now being met by imports. The technical collaborators to this unit will be the New York firm of Revere Copper and Brass Incorporated. The Indian sponsors of the proposed Kotah enterprise has also been allowed to set up a 20,000-ton zinc smelting plant at Alwaye in Kerala; in addition to zinc, the plant will produce cadmium and sulphuric acid. It is pointed out that, if only the existing units were supplied with adequate raw materials, they would be able to increase production and meet India's full requirements of several items of semi-manufactures, such as, brass and copper rods and tubes. The industry is said to be prepared even to work on two shifts.

It has been in the fitness of things that the National Productivity Council on Non-ferrous Metal Industry has been told by its seven-member study team that there was considerable scope for the expansion of production of primary non-ferrous metals and also for processing secondary alloys based on optimum utilisation of indigenous resources through the adoption of latest production techniques and introduction of up-to-date research and development themes. It is recognised that, although India can increase the production of zinc and lead, the scope for increasing copper output is limited. There is absolutely no possibility of mining tin in India. If the industry producing non-ferrous semis is to expand, it goes without saying that the country should allot to it sufficient foreign exchange for the import of copper and tin.

In London, copper was firm at £234 a ton. The firmness was attributed to the cut-back in production in Rhodesia and expectations of good demand from Europe. In Calcutta, copper scrap supplies were acute. Virgin lead was a few points higher at Rs. 155.50 per 100 kgs. following keen demand. Zinc also was fully firm. In London, zinc opened at £66¼ a ton and eased to £65⅝. Lead, at one time, was as low as £53⅜ a ton, after opening at £54¼; however, towards the close, it recovered the loss.

TEA BOOKINGS INCREASE

(From Our Own Correspondent)

CALCUTTA, *17th July*

Tea bookings here were heavy during the week under review. Inquiries for space for the U.K. were particularly large, due to the accumulated demand during the period, as no auctions were held recently. Stocks in the U.K. declined by about 3 million lbs. to 117.8 million lbs. during the week ended 6th inst. Shipping agents in Cochin, it was noted, were finding it difficult to provide space for tea to the extent required by shippers. As a result, consignments had accumulated in warehouses. This accumulation is indeed causing problems to traders at the South Indian port, and no tender two auctions scheduled later this month have been postponed.

Current indications are that the conditions in the tea industry this year would not be the same as last year. With the recent increase in wages for workers in Dooars, Darjeeling and Assam gardens, cost of production would show an increase. The Government of India's acceptance of the Wage Board's recommendations for interim wage increases was announced during the week. According to these recommendations, male, female and child workers in tea gardens in West Bengal and Assam, excepting the Cachar District and the Darjeeling Hills, would get an interim increase of 8 nP, 7 nP and 4 nP per day, respectively, as from 27th June 1962; in Darjeeling, the increases are 9 nP, 7 nP and 4 nP, respectively. Monthly-rated workers in the group belonging to clerical, educational, medical and supervisory staff in Assam and West Bengal gardens, inclusive of all areas, would get each Rs. 10 a month and others Rs. 6 per head per month. With these increases in the wage bills of employers, and the recently increased railway freight rates coupled with the levy of excise duty on aluminium foils and plywood, cost of production is bound to increase.

On the other hand, the trade does not anticipate that prices for tea would be higher than last year. This would mean a lowering of the profit-margin even in respect of gardens producing superior grades only. Production in North-east India, up to the end of June, totalled 119.3 million lbs., showing a small rise of 1.2 million lbs. As the weather continues to be good, the slow rate of increase in production is likely to be maintained in the coming months. However, the increase for the year as a whole would not be by sufficiently large as to improve the profit-margin. Prices of common teas realised in auctions so far have been unsatisfactory, and this is reflected in the poor interest being displayed in shares of the gardens producing only inferior varieties. Although the monsoon has started late in South India, and the earlier drought caused some damage to plants, it is likely that production there would be higher than last year.

The need for gardens in India to devote more attention to improving the quality is never greater today than before. The F.A.O. has already put forward its belief that tea would become surplus within a few years. That this warning is based on a realistic analysis of current trends would be evident when it is known that all the producing countries are vying with one another to increase production and expand export markets. Also, several countries have started tea cultivation. The problem of surplus can be got over only with quality production. This need has been brought to the attention of the gardens by the Government on several occasions. The industry has replied that its cost of production has increased, and the frequent increase in taxation and labour charges make the position only even worse. Its earnest plea has been to relate the present plethora of taxes to its ability to pay. Time and again, cancellation of the export duty has been demanded, but the Government has been averse to any such measure.

Producers of common teas, especially the smaller gardens, have renewed their plea for excise duty concession. Despite repeated representations by the industry, the case for amalgamating State and Central taxes has not so far been sympathetically heard. If only this is done, not only cost of collection can be reduced, but the industry can be spared the cumbersome procedures now necessary at the edict of the tax collecting officers of the State as well as the Central Governments. Another complaint of the gardens relate to lack of provision of foreign exchange for importing machinery used in tea factories. The inadequate allotment of fertilisers is yet another grievance. The industry fully agrees with the Government that quality should be improved and, unless this is done, exports from India may not increase commensurate with the rise in world consumption. It is high time the tea industry's grievance that it is not afforded necessary facilities to improve quality received greater attention of New Delhi than hitherto.

Dusts on offer during last week's sales for internal consumption totalled 16,242 packages, demand for which was selective. Keen competition was offered to C.T.Cs, prices of which, particularly of the small powdery types and the bright liquorings, advanced. Legg-cut teas were irregular. Thus, while the poorer kinds belonging to this category eased by 20 nP, clean teas, possessing bright liquors, were fully steady. Plain orthodox teas eased. The quotations per one kg. (in rupees), inclusive of excise duty were: Good Assam C.T.C. dust 6.60 to 7.10, medium Assam C.T.C. dust 5.80 to 6.30, legg-cut dust 4.00 to 4.50 and plain orthodox dust 3.60 to 3.90.

The best flavoury teas among Darjeelings were one of the strongest features during yesterday's export sales, when offerings totalled 28,113 packages. Generally, there was strong demand, and competition for some of the finer varieties was in evidence. Among C.T.Cs, brighter liquoring kinds added attractive gains above invoices, while plainer teas tended to be easy. Tippy teas were firm at valuations, the tippiest sorts realising good prices. The brighter liquoring orthodox teas met with good demand, but plainer varieties eased. Legg-cut teas were well supported. Among whole-leaf grades, there was good demand for cheaper varieties, but the stylish O.Ps met with less demand. The quotations per one kg. (in rupees) inclusive of excise duty were: Best Assam C.T.C. fannings 7 to 8, best Assam C.T.C. B.P. 7 to 8, medium Assam C.T.C. fannings 5.80 to 6.20, medium Assam C.T.C. B.P. 6 to 6.30, plain fannings 4.00 to 4.30, clean plain pekoe 4.60 to 4.80 and plain B.P. 4 to 4.20.

JUTE GOODS EASIER

(From Our Own Correspondent)

CALCUTTA, *17th July*

Following reluctance of overseas buyers to place orders at prices which had risen in the last couple of weeks as a result of renewed interest on their part, easier conditions were in evidence in the jute goods market during the week under review. These affected fibre prices also, but another contributory cause for the fractional recession in fibre prices was the commencement of new crop movements, albeit in small lots, and the anxiety of stockists of old fibre to exhaust their holdings as reflected in the increased number of offerings later in the week. The official indication that every attempt would be made to spare the jute mills from any general reduction in power supply was hailed with enthusiasm which encouraged overseas buyers to go slow with their purchasing programme. At the same time, at its recent meeting, the Electric Supply Control Advisory Committee reviewed the power situation and postponed consideration of the proposal to cut supply by 15 per cent generally. In the meantime, the Committee hoped that all concerned would follow the measures already in force. These measures include the shifting of the weekly off-day on Sunday in several factories to some other day of the week as fixed by the Calcutta Electric Supply Corporation. Note was also taken of the New Delhi report that the question of allowing private consumers to install their own generators, provided they were able to find their own foreign exchange, was under consideration.

That demand for goods in the month of June was running at a high level was evident from the fact that stocks of goods with mills at the end of the month declined by 3,800 tonnes to 80,300 tonnes. Production in the month fell by 1,900 tonnes to 97,800 tonnes and, therefore, the total availability was 181,900 tonnes. Deducting the stock figure at the end of June, the resulting figure of 101,600 should be considered as aggregating demand. This indicates that, despite increased production, demand exceeded supply. As such, it is not surprising that the Indian Jute Mills Association has now decided that the high level of production should be continued in August also. This decision is, of course, subject to the availability of electric power. According to the figures compiled from shipping bills by the customs authorities, actual shipments in June rose to 95,000 tonnes from 77,700 tonnes in May 1962. In April 1962, shipments totalled 60,600 tonnes only. It is estimated that on an average purchases on internal consumption accounts should total 20,000 tonnes a month. The total offtake in June should, therefore, have amounted to 115,000 tonnes whereas according to the stock returns and production figures of mills, this should have been only 101,600 tonnes, i.e. lower by 13,400 tonnes. Since customs figures are prepared from actual shipping bills, more importance should be attached to these figures. As such, the view that returns of mills disclose an exaggerated view of the stock position follows; and this is all the greater reason why mills should continue to produce the maximum amount of goods, and the authorities should assist the mills in all possible ways.

The insistence by the customs authorities to calculate the value of goods to be shipped according to the ruling prices on the day of shipment has come in for severe criticism by the trade. Shipments do not take place on the day on which a contract is made. Several days will elapse between contract and shipment. In the interval, it is natural that prices may either decline or rise; they can also remain static, but dynamism is the general rule. Fluctuations in prices of jute goods are often wide, and it is the freedom of the shipper to offer his wares at a substantial discount if only with a view to getting the order for him. His stocks may have been purchased at a time when prices were lower. Although, according to current market prices, he may be offering the advantage of substantial discount to his foreign client, it is easy to see that the former does not incur any loss. Considering all factors, the trade fails to see why the customs authorities cannot accept the contract rates. It is pointed out that, for clearance by excise authorities, the ruling prices in the market are the basis for calculating excise duties; however, in regard to certain products, they have ruled to accept the contract rates, which, too, can easily be verified. A suggestion that, in order to remove the difficulties felt in this regard, all export contracts should be registered with the customs authorities as and when they are made, has been offered. This is a really a workable method to get out of the difficulty. If, thus, the customs authorities are agreeable to this method, it is not seen why the shipper's declaration of the contract rates cannot be accepted. For this would save much clerical work entailed in the registration of export contracts. In case there is much variation between ruling rates and contract prices, the customs authorities can call for the original copy of the contract and, if necessary, can also enter into correspondence with the foreign buyer after permitting the shipment. This would prevent delays in shipment of goods.

The stupendous task of preventing violent fluctuations in prices is rightly engaging the attention of the Forward Markets Commission. The Commission is understood to be examining a proposal to limit the fluctuations to Rs. 3 in the case of sacking and to Rs. 2 in respect of hessian in any one week. If these limits are exceeded in any week, no more trading would be permitted. If this proposal is accepted, it is easy to see that much harm would be done to the export trade. For, if in a week, as a result of keen demand, prices rise and cross the limits, the sellers would not be able to make any more offers. The experience of recent weeks shows that these limits are too low. As such, it is to be hoped that the F.M.C. would not adopt this proposal, as, otherwise, business would be hampered. At the same time, the trade also strongly feels that violent fluctuations should be avoided in the long-term interests of the industry. Another suggestion pertains to the levy of a tax on August futures and transferable specific delivery contracts. A third suggestion is the fixing of maximum prices for both these contracts. It is seen that implementation of any of these palliatives would bristle with difficulties; but yet it is recognised that some measure is necessary. Possibly, a beginning can be made by fixing maximum prices which can be reviewed as often as necessary.

News of worsening flood situation in Assam has caused anxiety. The anxiety is all the greater, since flooding has occurred in the jute-growing areas where quality fibre is grown. Already, fibre fit for manufacture of hessian and specialities is in short supply. If, as a result of floods, the crop, which is estimated to be lower than last year, is affected, the country would be forced to import the superior fibre from Pakistan. During the week, the new crop started moving in small quantities in Northern Bengal and Assam. This led to an increase in the offers of old fibre. Mills were hesitant to enter into commitments, as they have already in stock enough of the inferior fibre. As a result, new crop Assam bottoms fell from Rs. 33.50 to Rs. 32, daissee bottoms from Rs. 36 to Rs. 35, and northern bottoms from Rs. 33 to Rs. 32. During the week, the Government of India announced extension of the last date for completion of fibre export quota of 200,000 bales up to the end of August. This extension is a recognition of the fact that there is no ready market overseas for such inferior varieties as India can afford to export at ruling prices.

In the goods market, on Tuesday last, there was only little genuine interest. As a result, prices fluctuated narrowly. However, covering business and activity in the futures market was keen. Ready B. twills rose from Rs. 132.75 to Rs. 133. Hessian 40″ 10 oz. was steady at Rs. 59.75. The announcement by mills to continue the maximum level of production in August was hailed by buyers. Argentina continued to keep out of the market during the week on hopes that prices would come down. Small purchases on behalf of the United Kingdom were reported throughout the week. The report that the U.S. Government had placed a large order for sandbags with U.S. bag manufacturers was noted with satisfaction. It was expected that this would stimulate U.S. demand on Calcutta, though one explanation could be found for the comparative low level of U.S. interest in the week, namely, that American buyers were awaiting a decline in prices before entering the market. The disappointment caused by the absence of lively U.S. interest was reflected in hessian 40″ 10 oz. falling to Rs. 58.75 on Wednesday last. There was selling pressure in the futures market, where B. twills fell by Rs. 2. This was reflected in ready B. twills easing to Rs. 131.25. On Thursday, selling pressure in futures trading continued to depress quotations. Ready B. twills were pushed down to Rs. 130.75 and hessian 40″ 10 oz. to Rs. 58.25. At this stage, weak holders became nervous and in the liquidation that followed ready B. twills eased to Rs. 129.50 and hessian 40″ 10 oz. to Rs. 58 on Friday. Over the week-end, there were further losses, the quotations standing at Rs. 129 and Rs. 58, respectively. There was disappointment yesterday when the Government of India's purchases fell considerably less than earlier rumours of a tender. B. twills eased to Rs. 128.50. Ready hessian 40″ 10 oz. gave way in sympathy to Rs. 57.50.

POOR TURNOVER IN KIPS

(From Our Own Correspondent)

MADRAS, *16th July*

Arrivals of E.I. tanned hides and calf were of the usual volume and the clearance by shippers was staggered in the local market this week. Inland demand was poor. Export business was selective, with emphasis on lightweight cowhides, lower grade kips, and cowcalf. Demand for buffhides and calf was negligible. Stocks of buffcalf was small, but that of buffhides was accumulating. Cowcalf was in good request, but high prices quoted by shippers restricted business, although the stock available was meagre.

In the tanned skins section, demand for middle class sheep skins continued steady, while better tannages remained neglected. As regards goat skins, there was a moderately good call probably because the dressers considered current prices economical. Tanners quoted almost the same prices for the regular lines on expectations of a revival of steady business with the Continent.

In the German tanned skins public sales held last week, only 20 per cent of the goat skins and 10 per cent of the sheep offered found buyers. Prices realised were fairly satisfactory. It is likely that the consigners will have to suffer considerable loss by the time their consignments get cleared.

The prices quoted for the market lots were more or less unchanged, but the undertone was weak.

ISSUE OF RIGHT SHARES

SHAREHOLDERS ARE HEREBY INFORMED that in accordance with the resolution passed by the Board of Directors of the Company on 10th July, 1962, 3,12,500 new Equity shares of Rs. 10 each will be issued at a premium of Rs. 3 per share and such shares will be offered to those members of the Company whose names appear on the Company's Share Register on 16th August, 1962 in the proportion of one new Equity share of Rs. 10 for every four existing Equity shares then held by such members.

The Register of members and Share Transfer Books of the Company will be closed from 30th July to 16th August, 1962, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & CO., LD.,
Secretaries and Treasurers.

11*th July*, 1962.

THE AMALGAMATED ELECTRICITY COMPANY, LIMITED

ISSUE OF 2,86,300 ORDINARY (EQUITY) Shares of Rs. 10 each at par. Transfer Books of the company will be closed from 16th to 22nd August, 1962 both days inclusive, in connection with the issue of new shares as mentioned above.

By Order of the Board,
For N. C. JAVERI & Co.,
N. C. JAVERI,
Partner,
Managing Agents.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings at the end of Jan., 1962 amount to 18.41 crores of rupees

ABBREVIATIONS. N—Nominal. (*f*) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport. A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable. ††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935. —Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex nine instalments but inclusive of accrued interest. M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice. T—Liability taken over by Madhya Pradesh.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

COMMERCE

*"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."*
William Blake.

VOL. CV. No. 2676 BOMBAY, 28th JULY 1962 PRICE Rs. 2

WHITHER THIRD PLAN?

NOW that Mr. Morarji Desai has returned from his tour of Western Europe, there is optimistic speculation about the success of his mission. Mr. Desai himself is optimistic, though he is not quite sure of the final result. This is understandable, for one cannot take the courtesies shown to him as clear evidence that India's needs will be fully met. With Aid-India Club due to meet on 30th July, the suspense will soon be over. One must, however, be prepared for an unsatisfactory outcome, what with the Government of India's decision to buy M.I.Gs from Russia, a decision quite unpalatable to Western powers. It is significant that a spokesman of the U.S. Government has assured his Senators that the Administration will respect the Senate's wish that the U.S. aid to India in 1962-63 would not exceed the previous year's limit, even though this condition had been formally removed by both the Houses of American legislature following compromise efforts with the full backing of the Administration. Even assuming that the Aid-India Club agrees to give in full the aid expected from it, will this country be in a position to implement the third Plan as it is according to schedule? There are grave doubts. To say so does not necessarily mean that the planners had done a wrong thing in drawing up a plan of this magnitude and nature. Only, it is suggested that, in the light of experience in the first 15 months of the third Plan period, they should be realistic enough to appreciate that the country is not in a position to carry the third Plan through and that it would be better to rephase the Plan. One of the assumptions about the third Plan is, it may be recalled, that it would be revised suitably, if the conditions necessary for executing it turned out to be unfavourable.

Figures (provisional) pertaining to the first six months of India's foreign trade are not quite encouraging, as compared with those for the corresponding period of 1961. Although there was a sharp fall in imports from Rs. 549 crores to Rs. 499 crores, and the adverse balance of trade contracted from Rs. 231 crores to Rs. 185 crores, the exports were actually smaller at Rs. 309.43 crores, as against Rs. 315.46 crores, instead of being larger. At this rate, it is not clear how the target of Rs. 720 crores recommended by the Board of Trade, albeit for the fiscal year 1962-63, will be reached. The reduction in balance of trade, welcome though it is, has been achieved at the expense of several existing industries which have had to cut their production for want of adequate raw materials. The position in this respect will be worse still in the coming six months, for further cuts have been effected in import quotas. Besides, even a trade gap of Rs. 185 crores in the first half of this year is greater than that in the second half of 1961 by some Rs. 65 crores and disturbingly large for a country with an external reserve of less than Rs. 100 crores—Rs. 93.85 crores to be precise. There is, of course, the I.M.F. standby credit of Rs. 47.62 crores, but even that will not carry the country very far. Since most of the aid that will be forthcoming from the consortium of Western nations and Soviet group will be tied country-wise and projectwise, not much significant relief in the balance of payments pressure can be expected from their help. It is, therefore, necessary to cut the coat according to the cloth available. There is surely no point in creating productive capacity with expensive foreign capital, if it cannot be worked to full capacity for want of raw materials and components. It would mean a colossal waste of resources.

The Government of India has done well in calling back the unutilised industrial licences. In fact, this was long overdue. But this alone is not sufficient. It must also look into the projects on which only the initial steps have been taken. Of these projects, those which entail substantial foreign exchange expenditure for their sustenance could be held over to more auspicious times and those which would result in considerable import saving could be given a high priority. The overriding consideration here should be to ensure full utilisation of capacity already created, especially in all essential industries. Businessmen, in particular, should appreciate this point and refrain from exercising pressure on the Government for receiving favourable treatment in respect of projects which can wait. Some of them have already started the plea that, in view of the bright prospects of getting the hoped-for-aid from the Consortium, the Government should relax its import restrictions. This plea is not only premature but also lacks clear appreciation of the balance of payments prospects. When Mr. T. T. Krishnamachari said the other day that automobile companies should think of using wood instead of steel for the body of cars, he was not exaggerating the difficulty confronting the country a bit. He was only giving an example of the extent of hardship through which the country will have to pass even to implement the core of the third Plan and to remain solvent on the external front.

A revision of the third Plan has also become necessary in view of the terrible "trio of shortages," to use a phrase coined by Mr. Jehangir J. Ghandy, Director-in-charge of the Tata Iron and Steel Company, Ltd., Jamshedpur. The grave shortages of fuel, transport and power are holding up progress in vital industries such as steel, cement and chemicals. Their multiplier effect on industrial and agricultural production is being underestimated, as well as inadequately realised. Lack of power has reversed the growth in coal production, while insufficient transport capacity to move even the attenuated coal production is standing in the way of steel industry's progress. Everyone is now bravely talking of breaking the transport bottleneck by expanding road transport and coastal shipping and by giving new life to inland navigation. But the automobile manufacturers are complaining of a cut in the foreign exchange allocation and its possible adverse effect on the output of their vehicles. Shipping companies, too, have a similar tale to recite. Inland navigation has fallen into disuse so much in recent years that it is a moot point whether its revival on any significant scale will be possible before the end of the third Plan. On top of all this is the possibility of a part of the transport capacity being diverted to the defence of the country. The situation in Ladakh has become pretty serious and China may choose to harass us in the N.E.F.A. area in the winter, when nature keeps the Ladakh front frozen.

The adverse consequences of the "trio of shortages" are being aggravated by the follies of some Ministers at the Centre. Foremost among them is Mr. K. D. Malaviya. The economic loss to the country stemming from his dogmatism is so huge that there is need for appointing a high power independent body to evaluate the gains and losses of his Ministry and determine the net position. If, occasionally, he solves one problem, the country heaves a sigh of relief and everyone praises him for that achievement, but it is conveniently forgotten that the new problems which he creates rise in geometrical proportion to the ones he solves. When he began his work in the new Ministry, by making conciliatory speeches which had a ring of pragmatism in them, he made a good impression on the coal industry. But sweet words alone, unaccompanied by the action implied by them, cut no ice. By giving rise to false hopes, they only lead to a sense of exasperation among the industrialists later on. It will, therefore, be better if they are not said at all.

The things that Mr. Malaviya said at Madras last week about coal and oil refining will only make matters worse. What was the necessity for him to say that, ultimately, the coal industry would have to be nationalised? By reintroducing this sword of Damocles, he is only making it even more difficult for the private sector in the coal industry to raise the capital necessary for expansion. By all means let Mr. Malaviya be firm in dealing with erring mine-owners or those who are trying to take advantage of the country's pressing need for more coal. But it is unnecessary for him to hold out threats of this nature which help nobody and penalise the mine-owners who are conscientious, hardworking and competent. Moreover, the threat of nationalisation is absolutely meaningless, if not mischievous, considering that the private sector in coal had fully achieved the target of 45 million tons set for it in the second Plan, in refreshing contrast to the failure of the public sector to fulfil the job assigned to it. It must also be remembered that the progress made by Mr. Malaviya's Ministry in regard to the development of non-ferrous metals has been so poor and far behind the schedule that the dependence on imports is greater than had been assumed in the Plan. He is committing the same mistake in regard to petrochemicals, with the result that the establishment of a great import-saving, catalyst industry is being unnecessarily delayed. His attitude towards petroleum industry proper is marked by too much brinkmanship. Faced as it is with a mighty Communist enemy on its northern borders and with a rapidly growing demand for petroleum products, it is risky for India to resort to such tactics. There can be some consolation if at least the public sector oil projects have progressed according to plan. But they have not and there is insufficient ground for being optimistic that their performance in the remaining years of the third Plan will be so good as to make up the leeway. This journal is not, therefore, still sure that its earlier forecast of a shortage of petroleum products in the coming years will not materialise.

CAIRO ECONOMIC CONFERENCE

THE international economic scene today reflects the kind of phenomenon which can, and does, occur, in certain circumstances, within an individual nation—the phenomenon of the rich becoming relatively richer and the poor relatively poorer. The industrially rich nations of the world are now relatively much richer than the less-developed countries of the world. In the immediate post-war years, it may be recalled here, *per capita* income in the few advanced countries was only 5—10 times larger than the average *per capita* income ($100 per per annum) of the more numerous under-developed countries of Asia, Africa and Latin America. Over the last 15 years, however, this gulf has become wider still, with the result that *per capita* income in the former countries has now increased to 10—15 times that ($150) of the latter. Quite a few revealing facts, which have not become stale by repetition, throw further light on this contrasting situation. *Per capita* food production, for instance, has fallen by 2 per cent in Africa and increased by just 2 per cent and 12 per cent, respectively, in Latin America and Asia since the war, whereas it has increased by 21 per cent in the developed Western Europe. Secondly, the underdeveloped countries' share in world trade has come down by stages from 38 per cent in the immediate post-war period to 29 per cent in 1961. Thirdly, in the course of the last ten years alone, the prices of industrial goods in international trade have increased by 24 per cent, while those of raw materials have fallen by 5 per cent. In other words, the under-developed countries exporting raw materials are purchasing one-third less industrial goods for the same quantity of raw materials, as compared with ten years earlier. And, fourthly, the less-developed countries are now paying out to foreign investors and creditors, by way of profits, interest and dividends, 11.6 per cent of their export earnings, as against 9.4 per cent at the beginning of the fifties.

The disturbing tendencies revealed by these facts have resulted, to a large extent, from the economic policies of the industrial countries. It is not inconceivable that they can be partly curbed, if not reversed, by the advanced countries themselves. For this, the policy of subsidising agriculture in industrial countries—a policy which has caused the emergence of surpluses in some lines and reduced the dependence on imports of foodstuffs and agricultural raw materials from several under-developed countries—would, in the first instance, have to be drastically modified, if not given up altogether. To say this would not be to overlook the role played by American food and cotton surpluses during the last decade not only in meeting shortages but also in subserving the needs of development in many under-developed countries. But this situation is not expected to continue for long, for the under-developed countries are already developing the potential for greater agricultural growth in a variety of ways. It would be a good thing if the industrial countries, which are now encouraging uneconomic natural (and, to some extent, even synthetic) production through protective tariffs and subsidies, begin to think less and less in terms of agricultural autarky.

Another direction in which the advanced countries can be helpful to the underdeveloped countries pertains to trade in simple manufactures such as cotton textiles and light engineering goods. As the latter countries have increased their proportion of spindles and looms in the world textile industry to more than 20 per cent now, they are in a position to export a part of their production to the advanced countries. But the possibility of increased exports of textile goods from the underdeveloped countries would become an actuality only if the recent five-year agreement reached at the G.A.T.T. International Cotton Textile Conference results in the gradual relaxation and ultimate elimination of restrictions on their imports into the developed countries. There is no certainty, even in terms of this agreement, that restrictions on textile imports would be completely eliminated by any advanced country over the next five years. Exports of manufactured products in the category of "newer" industrial production by underdeveloped, though partly industrialised, countries like India, Pakistan and Yugoslavia, may not also have smooth sailing. It remains to be seen whether the regional economic integration represented by the European Common Market will lead to greater inter-dependence between the advanced countries and the underdeveloped ones by way of reciprocal intake of more agricultural and industrial products by the former broadly in consideration of the large volume of capital goods and industrial raw materials exported to the latter. As of today, the signs unfortunately seem to be that the European Economic Community is developing more inward-looking characteristics than outward-looking ones.

The time has, therefore, verily come for the underdeveloped countries to concert measures for mutual economic co-operation among themselves, on the one hand, and for securing more equitable relations in the matter of trade and aid between them and the industrially advanced countries, on the other. Herein lies the supreme justification for the declaration issued by the "Economic Conference of Developing Countries" which concluded its session at Cairo last week. This declaration (dealing with the internal problems of developing countries, the problems calling for co-operation among the developing countries *inter se*, and the external problems of relations with the developed countries) has been described by a foreign correspondent as "a sensible, straightforward document." The highlights of this declaration, in so far as they relate to the internal and inter-regional problems of the developing countries, are as follows:

(1) Countries that suffer from the pressure of population on resources available should accelerate their rate of economic development and, in the meantime, take appropriate legitimate measures to deal with their population problem.

(2) Developing countries should take appropriate measures of agricultural reforms for raising agricultural productivity and broaden their national economies through diversification and industrialisation.

(3) Developing countries should improve means of transportation and communication among them in order that diversification and industrialisation may bear fruit in internal, inter-regional and international fields.

(4) All developing countries should launch more intensified programmes of technical-scientific training to a much larger proportion of their population.

(5) Financial and monetary stability should be maintained, and public and institutional savings should be developed as major sources of domestic financing and development. Special care should also be given to the mobilisation of savings and formation of capital through proper utilisation of human resources.

(6) Developing countries should promote mutual bilateral and broader relations in the fields of trade, payments, financing, technical and scientific co-operation, industrial co-operation, transport and communications, geological surveying, land reclamation, training centres, and preparation of investment projects.

(7) Close co-operation should be established amongst those developing countries which produce primary commodities, with a view to coping with marketing problems including improvement of quality.

The aforesaid recommendations of the Cairo Conference, though they may look like generalities, represent a golden mean between possible isolation and the creation of a separate economic bloc. As trade among the under-developed countries themselves is only 23 per cent—10 per cent in foodstuffs and 13 per cent in mineral fuels and industrial products—of their total trade turnover, the Conference has done well to emphasise the useful contribution which an expansion of trade between developing countries, particularly on a regional basis, can make to their further development. Here, fortunately, the progress of industrialisation opens up great possibilities for a more intensive and, possibly, extensive exchange of goods. But this switchover would require a number of institutional changes, the development of transport and a payments system—things which cannot be done in a few years. The feasibility of the last one in particular is extremely doubtful. But co-operation among the developing countries in the field of technical training can be developed more easily in the immediate future. It is, in this context, that the offer made by Mr. Manubhai Shah, India's Minister for International Trade, at the Cairo Conference appears as a concrete first step of great significance. This offer of reciprocal technical assistance in training young men from Africa and Asia in Indian Universities and technological and specialised institutes, it is needless to add, should be reciprocated by such other developing countries as may have established specialised technical institutions. That way lies mutual co-operation on the most practical lines, to begin with.

Greater economic co-operation among the developing countries *inter se* can also grow out of the united way in which they possibly face the problems of international trade. The Cairo declaration has issued the call precisely for this unity of approach and action. Exchange of information and views on economic relations with industrial countries, attitudes to be adopted on economic questions examined by international organisations, concerted action in connection with any adverse effects of the economic integration policies of industrial countries, adoption of a programme of measures for the abolition of tariff, non-tariff and other discriminatory barriers affecting the exports of developing countries—all these will call for mutual consultation and understanding of a high order. This is no easy thing, of course. But the challenge posed by the European Common Market cannot be met in any other manner. Given such unity, the hoped-for implementation of the G.A.T.T. programme of action for improving the prospects of exports from developing countries may also be rendered easier.

In much the same way, the establishment of a compensatory financing system by the International Monetary Fund for a more effective balancing of payments of the developing countries, as demanded by the Cairo Conference, may be more easily achieved. That opinion in the advanced countries may well be sympathetic to the idea could be inferred from a related, though not identical, suggestion recently canvassed by *The Economist*, London. The suggestion is to the effect that an increase in world liquidity should somehow be partly channelled in the first place through a certain quantum of new liquid funds put at the disposal of the underdeveloped countries (by special drawing rights on the I.M.F. or on the Organisation for Economic Co-operation and Development through the European Monetary Agreement). Whether the industrial countries will also adopt positive measures, as urged by the Cairo Conference, to ensure a steady expansion, on a non-discriminatory basis, of the developing countries' exports to their markets remains to be seen. Already the way in which the E.E.C. is dealing with the problem of India-Pakistan-Ceylon's trade with Britain, which has applied for membership in the Community, is hardly calculated to set at rest the fears and anxieties of many underdeveloped countries. Perhaps some relief could conceivably result if steps are taken, within the framework of the U.N., to stabilise international primary commodity markets "on a fair and remunerative basis and taking into consideration the trend of prices of manufactured goods," as urged by the Cairo Conference. But will such a solution be possible? The few experiments that have been tried so far have yielded no conclusive evidence. The Coffee Conference now in session at New York may provide a pointer. Generally speaking, however, the fact remains that the problem of stabilising international commodity prices has eluded a satisfactory solution.

On the question of development aid, the Cairo Conference has had nothing much new to say. Its declaration, which has demanded a more even distribution of international aid and urged the need for its continuity as well as its integration with national economic development plans, is emphatic that the economic emancipation of developing countries can best be achieved through aid in the form of low-interest, long-term credits that would not unduly burden their balance of payments. While appealing for immediate implementation of the U.N. recommendation concerning the allocation of one per cent of the combined national incomes of the advanced countries for the development of poorer countries, the Cairo declaration has urged the channelling of such aid, to a greater extent than now, through the U.N. In other words, the declaration expresses a greater preference for multilateral aid than for bilateral aid. The feasibility of this suggestion is in grave doubt, in view of the rift in the world and the cold-war politics. The failure of the Cairo Conference to appeal to the Communist bloc countries, particularly the Soviet Union, to participate in multilateral aid programmes on a far larger scale than at present is conspicuous enough not to escape notice. If an International Economic Conference within the framework of the U.N., as urged by the Cairo declaration, comes to be held next year, it will have to devise ways and means of ensuring the fullest participation of Communist countries in multilateral aid programmes. The resources of the I.D.A. and the U.N. Special Fund, if augmented greatly, may go a long way towards neutralising the prevalent fear or suspicion that bilateral aid involves implicit or explicit strings attached to it. But Communist countries, which now provide mostly bilateral aid, may be less willing to forgo the manifest advantages of aid in that form than the advanced countries of the West.

MARKET GOSSIP

Doubts About Dollar

THE widespread anxiety about the ability of the U.S. dollar to hold its ground is quite understandable. For the U.S. has come to occupy such a pivotal place in the international economic set-up that anything which undermines its currency is bound to have world-wide repercussions. That country accounts for almost one-fifth of the aggregate free world exports and one-seventh of imports, gives colossal amounts by way of economic assistance (nearly five billion dollars a year) to several needy nations, and extends massive military aid to a large number of countries. It is clear, therefore, that the need to ensure the stability of this key currency, the dollar, is in the interest as much of the U.S. as that of all the other countries in the free world. Dr. Keiser, Assistant Secretary-General of the Organisation for European Co-operation and Development (O.E.C.D.), certainly put the whole problem in its proper perspective when he declared the other day: "All responsible people are firmly convinced that the position of the dollar *vis-a-vis* gold should be maintained in the interests of all of us. We are firmly determined to work together to defend the dollar against any sort of attack."

The world-wide concern now being expressed over the U.S. dollar stems from (*a*) the persistent pressure imposed on the U.S. balance of payments by the heavy military expenditure abroad in defence of democracy against communism and the continuing flow of long-term capital into investments abroad, and (*b*) the reports suggesting that the European Central Banks are getting impatient over the "abnormal" accumulation of dollar balances which they have been holding for some time. It is feared that the continuing deterioration in its balance of payments position may compel the U.S either to prune drastically aid to developing countries or to adopt a tough restrictionist policy at home thereby exerting severe downward pressures on world economic activity or to slash imports by tightening quota restrictions or introducing tariff surcharges of the type recently employed by Canada.

Reflecting the pressure on balance of payments, the U.S. gold drain continues unabated, the total loss since the beginning of 1962 amounting to $391 million, on top of a loss of $878 million in 1961 and $1,689 million in 1960; the reserves, which were standing at as high as $22,781 towards the close of 1957, have now fallen to $16,298 million (as on 18th July 1962) and there may be a further big drop in them, if the European Central Banks decide to convert a part of their dollar holdings into gold. Apparently, the "defences for the dollar" erected since the year began by the U.S. Administration have not had the desired effect in a full measure. One of these "defences," it may be recalled, pertains to the creation of a $250-million gold stabilising fund. The object of this fund is to protect the U.S. reserves against the first impact of hoarders' demand for gold; the fund was set up only a few weeks ago under the ægis of the Bank for International Settlements. The size of this fund has now become smaller and it is felt that it will be exhausted in the not too distant future, thanks to Continental, particularly Swiss, buying. The demand for gold on the London market has been so high that the dollar price of gold has moved up (despite large sales by the authorities) to $35.14⅛ per fine ounce from $35.10⅜ a month ago. In other words, it commands a premium of 14¼ cents over the world parity level of $35. Again, as the London *Financial Times* points out, despite the various "swap" arrangements already made between the U.S. and the U.K., France, and Holland (similar arrangements were announced early this week with the Swiss National Bank and the Bank for International Settlements of Switzerland), the dollar is very close to its support point against almost all European currencies. Nevertheless, it is confidently felt in London that, if and when the gold fund or currency swaps need enlargement, this will be arranged.

So far as the U.S. is concerned, President Kennedy has reiterated once again the Administration's determination to defend the dollar at all costs, which means that it will not agree to any upward revision in the price of gold. Replying to a question at a Press Conference in Washington on Monday this week, Mr. Kennedy categorically declared that "we are not going to devalue and we will be able to bring our balance of payments into balance by the end of next year." This confidence seems to be based on the ground that some of the measures lately being taken by the Administration will meet with success. Thus, for the first time in recent financial history, the U.S. Government has sought to raise long-term money outside America, as distinct from short-term credits arranged in connection with foreign exchange operations. The technique adopted is the sale of notes, held by the Export-Import Bank against loans to the Governments of the Continental countries and industrial concerns, to European investors. Two New York investment banking houses have been approached by the Treasury to conduct the experiment. Their representatives are currently visiting banks and individual investors in France, West Germany, Italy, Netherlands and Switzerland and trying to interest them in buying the notes. To start with, notes worth $300 million are expected to be offered and, if the experiment proves a success, the total may be increased later. The response to the issue is likely to be quite good, considering that the notes will pay the European investors a fairly high rate of 5½ per cent, as against the average long-term interest rate of 4 to 4.5 per cent currently prevailing in the U.S., though it is below the average rate of about 6 per cent in most European countries. It may be noted here that, early in June last, the Bank for International Settlements at Basle had mooted the idea of the U.S. Government tackling its balance of payments problem by raising long-term interest rates to the level (6 per cent) prevailing in Europe, in order to check the outflow of capital. The idea has since been actively discussed in the O.E.C.D. But it has not found favour with the U.S. which fears that such an increase would have an adverse effect on the expansion of American economy, especially at a time when it is in need of a boost.

Meanwhile, the U.S. Secretary of Defence has announced his plans to improve the balance of payments by cutting military expenditure abroad. When carried out, they are expected to result in a saving of $1,000 million in 1962-63 and the Defence Secretary wants to double this saving by 1965-66.

With the flat rejection by the U.S. Government of the plea for raising the price of gold which has been kept anchored at the $35-per-ounce level for nearly three decades, the suggestion for resolving international payments problems through a reinforcement of the gold exchange standard, put forward sometime ago by Mr. Xenophon Zolotas, Governor of the Central Bank of Greece, seems to have attracted increasing support of late. The reinforcement operation, according to "Lombard" of the *Financial Times*, would involve the following three main steps:

1. All the major trading countries should introduce differential interest rate and tax treatment for foreign official depositors of short-term balances, in order "to secure independence for their international positions from the requirements of domestic monetary and fiscal policies."

2. The reserve currency countries must build up sufficient balances of other convertible currencies both to give them plenty of room for manœuvre in the foreign currency markets and to serve as a first line of defence for their own units.

3. All convertible currency countries, particularly the reserve currency ones, should provide a gold guarantee in respect of all balances held in their currencies by foreign official bodies.

The first two proposals, "Lombard" seems to feel, can be given effect to at least within certain limits and subject to certain reservations. As for the third proposal, however, the reserve currency countries, it is felt, will hesitate for long before implementing it; the proposal concerns them to a much greater extent than other convertible currency countries, their holdings of foreign official funds being relatively much larger than those of the rest.

Ayub's Fiat Against Foreign Banks

Indian banks having branches in Pakistan are understandably exercised over the recent Ordinance promulgated by President Ayub Khan requiring foreign banks operating in that country to keep a minimum deposit with the State Bank of Pakistan, the central banking authority of that country. It is not the stipulation that a minimum deposit be kept that has perturbed bankers but the insistence that the funds for the purpose should be brought from outside. It is a normal and legitimate practice of a central bank to require foreign commercial banks functioning in areas under its jurisdiction to maintain statutory deposits with it but the condition that fund should be brought from outside is, to say the least, unparalleled and unreasonable. For, if the idea is to protect the interest of local depositors, there is no need to insist that funds should be brought from outside; the purpose could as well be served, if the banks are allowed to draw upon their local resources. The Indian Banks Association, which has rightly termed the stipulation "unusual and extraordinary," considers this as a subtle move on the part of Pakistan to effect capital transfers to that country through bank finance.

According to the Ordinance issued early last month—it is not clear why Indian banks have been so slow in protesting against it—all foreign banks operating in Pakistan, irrespective of the country of incorporation, should deposit with the State Bank of Pakistan a minimum of Rs. 20 lakhs or 5 per cent of their total time and demand liabilities, whichever is higher, by transferring funds from outside Pakistan. This condition applies not only to existing foreign banks but also to branches of foreign banks that are likely to be opened in the country in future.

A period of six months has been allowed for banks to comply with the provision. The State Bank of Pakistan, however, is empowered to grant an extension not exceeding six months if it thinks fit to do so in a particular case.

There are 21 Indian banks operating in Pakistan as on 31st December 1961 with a total of 48 branches. Surely, they account for a good portion of the total foreign deposits of Indian banks. If the condition is to be met, the Reserve Bank of India will have to authorise substantial remittances to Pakistan by Indian banks operating in Pakistan and that at a time when the country is facing a difficult foreign exchange situation. This makes the Pakistan Government's Ordinance a development which directly concerns the Indian banks no less than the Government of India. The latter should, therefore, take up the matter with Pakistan on a Government-to-Government level.

It is difficult to fathom the motive or reasons behind this extraordinary move. It is possible that it is designed to spite India on political grounds, but then why should banks belonging to other countries, some of which are giving huge amounts of aid to Pakistan, be also penalised? It is noteworthy, in this connection, that banking circles in India do not rule out the possibility of banks belonging to countries that give aid to Pakistan being exempt from the stipulation. Significantly enough, the Ordinance has given wide discretionary powers in this regard to the State Bank of Pakistan. Should this happen, Indian banks would find themselves singled out for harsh treatment. The foreign exchange position of Pakistan is not such as to warrant this patently unjust and discriminating measure. Its foreign balances stood at Rs. 138.51 crores on 29th June 1962, as against Rs. 149 crores a year ago. These are plenty for a country of Pakistan's size and foreign trade. In any case, Pakistan is in a far better position than India whose foreign exchange reserves have touched a new low of Rs. 93.85 crores this week.

Although the State Bank of Pakistan has, as noted above, discretionary power to exempt such banks as it may deem fit from the statutory requirement, banks of aid-giving countries are not leaving anything to chance. The British banks in Pakistan, for instance, have protested against the discriminatory character of the provisions of the Ordinance relating to the foreign banks. American banks too are reported to have expressed their "unhappiness" over the relevant provisions. No formal action has, however, been taken by the Exchange Banks' Association of Pakistan. Incidentally, Indian banks are not members of this Association.

World Commodity Prices at All-time Low

World commodity prices have been tumbling down in recent weeks at a rate which must be a source of serious concern to all primary producers. This, of course, does not reflect any new turn, but only the aggravation of a trend, which has been in evidence ever since the end of the Korean boom over a decade ago. The *Financial Times* (London) index of world commodity prices (base: 1952=100) touched an all-time low of 75.94 early this week, as compared with the previous low of 76.35 in the middle of last November, and 79.04 a year ago. The commodity prices had, no doubt, recovered from the setback in November, with the index having gone up to 78.29 by the end of the year. But this modest recovery has also turned out to be a short-lived affair. Dow Jones indices (base: average 1924-26=100) for spot is also lower now at 145.75 (as against 147.15 a year ago and 149.85 early in 1962) and for futures at 143.80 (as against 147.94 and 148.44, respectively).

The only redeeming feature is that the downward trend has not been uniform and some of the commodities such as silver, certain foodgrains coffee, tea and cotton have fared better. But these exceptions pale into insignificance, considering the sizable setback suffered by a wide range of other commodities, particularly metals, vegetable oils and oilseeds, cocoa, rubber and jute.

The renewed weakness of the commodity markets is the result, at least to some extent, of the fear of a possible recession in industrial countries and the general easiness in stock markets, apart from the phenomenon of demand for primary products lagging behind supply. The possibility of the disposal of U.S. stockpiles of certain strategic commodities, has also adversely affected the market sentiment.

The table below shows the current prices of select commodities in the London market (latest available quotations) as compared with those a year ago along with the highest and lowest levels touched so far during the current year:

(Quotations are in £ per ton unless otherwise stated)

	Latest quotations	Year ago	1962 High	1962 Low
Oils				
Castor (Indian)	119.5	134.0	134.0	112.5
Coconut (Straits 5¼%) ..	83.5	85.5	88.5	82.5
Groundnut (B.W.A. 8/5%) ..	103.0	119.0	122.0	100.0
Linseed, crude	107.5	127.0	123.0	107.5
Soyabean	72.5	98.5	93.5	72.5
Oilseeds				
Groundnuts (Nigerian) ..	60.5	70.0	70.0	57.5
Linseed (Canadian) ..	53.8	61.0	59.5	53.3
Metals				
Aluminium	180.0	186.0	186.0	180.0
Copper (3 months) ..	230.5	235.0	237.0	229.0
Lead (cash)	53.0	65.5	62.0	53.0
Tin (cash)	860.3	910.0	973.5	858.0
Zinc (cash)	65.5	78.5	71.5	65.5
Others				
Maize (American)	19.3	21.3	20.5	19.3
Wheat (No. 2 Manitoba) ..	28.0	27.6	29.3	27.5
Jute (L.J.A. Firsts) ..	103.0	146.0	127.0	98.0
Rubber*	22½d.	24¾d.	25½d.	22d.
Tea* (quality)	5s.-5s. 9½d.	4s.9d.-5s.5d	..	..
Cocoa†	158s. 0d.	168s. 6d.	172s. 6d.	155s.
Cotton (Amer. middling)* ..	24.20d	24.10d.	24.60d.	24.20d.
Coffee‡	144s. 6d.	128s.	151s. 6d.	133s.

* Per lb. † Per 50 kilos. ‡ Per cwt.

It will be seen from the table that prices of coconut oil, groundnut oil, tin, rubber and cocoa, which have now declined sharply, were ruling higher early this year. Prices of some of the other commodities like jute, soyabean oil, linseed and linseed oil, zinc, lead, maize, etc., have not shown any pronounced improvement from the last year's level, and have continued to seek lower levels. It may also be noted that, although the current prices of some of the commodities like coffee, cotton and wheat, are higher than those a year ago, they are nevertheless well below the levels witnessed early during the current year.

TREND OF SHARES

STEADY TENDENCY RETURNS

(From Our Own Correspondent)

BOMBAY, 26th July

A STEADY tendency returned to the stock exchanges this week and provided a refreshing contrast to the near paralytic state in which the markets had closed last week. Values improved gradually but steadily, and practically every day more and more counters, including cash scrips, in different sections tacked on gains. Closing prices showed widespread, but modest, gains. Shorts were the principal buyers, but some renewed professional support was also discernible. The fact that, in the recent past, the Life Insurance Corporation had made substantial investments in several scrips emboldened investors to appear on the scene. Higher levels, however, attracted scattered realising near the close, but it was well absorbed. Turnover increased with the improvement in prices and underscored the markets' optimism about the near-term trend.

Few observers would ascribe much significance to the week's rally beyond that it was warranted by and, in fact, overdue from, purely technical considerations, inasmuch as the preceding fall had been too sharp. But, at the same time, one cannot lose sight of the fact that the recovery commenced the very next day after values had broken afresh to new low levels on Thursday last week and extended its course throughout this week, thus clearly demonstrating that last week's extraordinary nervousness in the markets was the result of all sorts of bear manipulations. Besides, good corporate results and reports of further expansion and diversification by some leading companies, which considerably influenced the sentiment during the week, should help the markets to discount their fears.

In the light of all this, this week's recovery is possibly a pointer to the resumption of the upward trend in equities on a modest scale. Summing up the position, in its weekly review, dated the 21st of this month, Messrs. Maconochie and Company, a leading stock brokers firm in Madras, writes: "Considering all factors, we feel that the time has arrived for making investment purchases. Paper, engineering and other industries which do not depend on imported raw materials are especially attractive."

* * * * *

Smooth passage of the payment against the last settlement, fairly satisfactory results of the Tata Engineering and Locomotive Company Ltd. and an encouraging report of Hindustan Motors Ltd. were the three factors that were particularly well received by Dalal Street. T.E.L.Co. has reported, for the year ended 31st March 1962, an increase in turnover from Rs. 37.55 crores to Rs. 41.65 crores and in profit, before taxation and development rebate, from Rs. 312.68 lakhs to Rs. 378.40 lakhs and maintained the gross dividend at 14.5 per cent per annum on the Rs. 100-fully paid shares. But the net dividend will be higher at 11.94 per cent as compared with 11.33 per cent a year before, as the gross dividend is subject to relief under Section 84 of the Indian Income-tax Act and, out of a total distribution of Rs. 116 lakhs, Rs. 47.61 lakhs (Rs. 31.25 lakhs in the previous year) have come out of past and current profits, exempted under Section 15C of the Act. Strike, lock-out and shortage of power have reduced the turnover of the Hindustan Motors Ltd. for the year ended 31st March 1962 from Rs. 50.45 crores to Rs. 24.90 crores, but its gross profit has increased from Rs. 3.49 crores to Rs. 3.86 crores. The Company's production reached an all-time record of 2,365 vehicles in March last and is said to be proceeding since then according to schedule.

T.E.L.Co. recovered smartly from the previous week's new low level of Rs. 313 to Rs. 331.50 and closed the week four points higher at Rs. 322. Hindustan Motors, too, staged an impressive rise from last week's new low level of Rs. 18.28 to Rs. 20.28 and closed with an on-balance gain of Re. 1.44 at Rs. 19.96. All other Miscellaneous issues showed fairly good gains; Bombay Burmah of Rs. 16 at Rs. 655, Amar Dye-Chem of Rs. 11.25 at Rs. 278.75, Indian Dyestuff of Rs. 17.50 at Rs. 452.50, Poly Chem of Rs. 21.25 at Rs. 191.25, Alcock of Rs. 9 at Rs. 324 and B.B. Petrol of 86 nP at Rs. 2.80. In Steels, Tata Ordinary closed two points higher at Rs. 147, Indian Iron 25 nP higher at Rs. 25.80 and Mukand Iron Re. 1.51 higher at Rs. 25.75. Among Textiles, Century rallied by Rs. 13.50 to Rs. 610.50, Standard by Rs. 20 to Rs. 858, Bombay Dyeing by Re. 1.10 to Rs. 67.20, Khatau by Rs. 15 to Rs. 462.50, Kohinoor by Rs. 7 to Rs. 301, National Rayon by Rs. 7.50 to Rs. 498, Elphinstone and Dawn by Rs. 12 each to Rs. 113 and Rs. 165, respectively, as did Morarjee to Rs. 400, closely followed by Phoenix which gained Rs. 11 at Rs. 251, and Tata Mill which were up by two points at Rs. 63.50. Cements were steadier, with Digvijay gaining six points at Rs. 193, Belapur, in Sugars, recovered 13 points to Rs. 238.50. Small gains predominated in the Cash List, but Colour Chem spurted by Rs. 22.50 to Rs. 437.50, Permanent Magnets by Rs. 16.25 to Rs. 201.25, Synthetics by Rs. 15 to Rs. 215, Tak Machinery by Rs. 15 to Rs. 82, T. Maneklal by Rs. 10 to Rs. 630 and New Standard Engineering by Rs. 24.50 to Rs. 230.

* * * *

In Calcutta, among forward shares, Texmaco showed a gain of 15 nP at Rs. 23, Orissa Cement of 25 nP at Rs. 17.25, Jaipur Metals of 75 nP at Rs. 13.69 and Indian Cable of 6 nP at Rs. 36 but G.K.W. showed a loss of Re. 1.25 at Rs. 38 and Indian Aluminium of 31 nP at Rs. 37.44. In the Cash section, Ghusick Coal improved from Rs. 10.25 to Rs. 14, Alliance Jute by Rs. 4 to Rs. 127 and Dalhousie Jute by Rs. 6 to Rs. 130, but Alkali Chemical eased further by 94 nP to Rs. 42. Engineering and Miscellaneous issues generally showed small changes either way, but Martin were up from Rs. 28.56 to Rs. 29.25 and N.I. Cable from Rs. 28.56 to Rs. 29.25, while National Tobacco slipped down from Rs. 13.94 to Rs. 12.37 and Union Carbide from Rs. 47.25 to Rs. 45. A rise of Re. 1.06 to Rs. 14.12 in Sirpur featured the trading in Paper shares. Sugar shares were active, with Dyer Meakin recovering from Rs. 54.55 to Rs. 56 and Cawnpore from Rs. 12.12 to Rs. 12.50. Among Tea shares, Betjan showed a loss of Rs. 2.62 at Rs. 32.75 and C. Cachar of Rs. 4.50 at Rs. 73.

* * * *

Selected shares showed small gains in Madras, but some Plantings declined further. Thus, Periakaramalai improved by 11 nP to Rs. 3.32 and Chembras by 16 nP to Rs. 3.55, Deccan Sugar by 15 nP to Rs. 9.95, S.I. Viscose by Re. 1.75 to Rs. 166.25 and Textools by Re. 1 to Rs. 149. On the other hand, Peermades declined by Re. 1.22 to Rs. 19.15, Consolidated Coffee by 15 nP to Rs. 18.10, Coffee Lands by 15 nP to Rs. 14.60, Balanoor by 84 nP to Rs. 12.91, Ouchterlony Valley by 7 nP to Rs. 3.58, Cochin Malabar by 10 nP to Rs. 16.40, and Cannanore by Rs. 3 to Rs. 127. Mettur Industries slumped by as many as 40 points to Rs. 360.

CAPITAL MARKET NEWS

NEW ISSUE

METAL Distributors Ltd. of Calcutta is to raise soon additional equity capital of Rs. 45.90 lakhs in shares of Rs. 10 each, of which Rs. 6.70 lakhs will go to the Directors of the Company and their friends and the balance of Rs. 39.20 lakhs will be offered to the public at par. The additional capital will go to finance the expansion programme of the Company and will be utilised to enable it to participate in the share capital of two new companies promoted by it in collaboration with foreign firms to operate its two new projects.

Incorporated in 1948, the Company has been the largest supplier of non-ferrous metals to the fabricating industry in the country. It is the exclusive distributor of the entire indigenous production of virgin lead, silver and antimony, besides zinc recovered from domestic concentrates. It is believed that, in view of the rapid industrialisation and the emphasis being laid on indigenous production of galvanised products, engineering components and plant in the country, there is vast scope for expansion of the Company's existing sphere of activities. Moreover, the Company has promoted two new ventures, Multimetals Ltd. and Cominco Binani Zinc Ltd., for the manufacture of non-ferrous metals and their by-products.

Multimetals Ltd. has been formed in co-operation with Messrs. Revere Copper and Brass Inc. of New York for the manufacture of copper alloy rods, tubes, sections, etc. It has obtained a licence to produce annually 1,800 tons of these copper products on a single-shift basis. It has been licensed to manufacture, for the first time in India, also copper printing rolls for the textile industry. The capacity envisaged here is 5,000 units. The plant will be set up at Kotah, Rajasthan, and commissioned during the second-half of the next year. The American firm will provide technical know-how and assistance as also participate in the share capital of the new company to the extent of Rs. 25 lakhs. Arrangements are said to have been made to obtain a loan of Rs. 54.64 lakhs from the International Development Agency of Washington.

Cominco Binani Zinc Ltd. will set up a plant near Cochin with a capacity to produce 20,000 tons per annum of electrolytic zinc and 130 tons per day of its by-product, sulphuric acid. Consolidated Mining and Smelting Company Ltd., Canada, known better as COMINCO and credited to be the pioneer in electrolytic refining of zinc as also one of the largest producers of this metal in the world, will provide the technical know-how for the project and participate in the share capital of the new Company to the extent of Rs. 84 lakhs. The Canadian Export Credit Insurance Corporation is understood to have agreed, in principle, to give credit to cover the balance of foreign exchange requirements of the project.

The present paid-up capital of Metal Distributors Ltd. is of Rs. 34.10 lakhs, to which level it was raised only recently from Rs. 24.36 lakhs as on 5th November 1961 by capitalising Rs. 9.74 lakhs from the reserves. The turnover of the Company has progressively increased from Rs. 4.75 crores in 1958-59 to Rs. 7.81 crores in 1960-61. Last year, it earned a net profit of Rs. 9.57 lakhs and paid a dividend of 27.5 per cent per annum on the Rs. 10 shares.

RIGHTS ISSUE

To finance its ambitious programme of branching out into new lines, the capital expenditure, including working capital, over the next few years on which is estimated at Rs. 3.50 crores, the **Tata Oil Mills Company Ltd.** proposes to issue immediately 140,150 new equity shares of Rs. 25 each at a premium of Rs. 15 per share and offer them to the existing shareholders in the proportion of one share for every two ordinary shares held by them. The issue will bring in Rs. 56.06 lakhs. More funds are proposed to be raised by issuing 6.5 per cent, taxable, debentures of the value of Rs. 50 lakhs.

CENTRAL BANK EARNS MORE

The results of the Central Bank of India Ltd. for the first-half of the current year reveal a small improvement in the net profit, subject to audit, from Rs. 86.68 lakhs to Rs. 88.33 lakhs. The Directors have proposed to maintain the dividend on the Rs. 25 shares at Rs. 2.40 per share, subject to deduction of tax, to which level it was raised in 1961 from Rs. 2.10, taxable, paid in 1960. The dividend absorbs Rs. 30.24 lakhs and leaves, inclusive of the amount brought in, Rs. 81.46 lakhs to be carried forward to the current half-year's accounts as against Rs. 75.05 lakhs in the previous year.

THE INDIAN BANK LTD.,

(Established in 1907)

REGD. OFFICE: INDIAN CHAMBER BUILDINGS, ESPLANADE, MADRAS-1

Offers complete Banking service of every description, backed by more than 54 years of sound experience

	Rs.
Authorised Capital	...1,00,00,000
Subscribed Capital	... 88,60,000
Called & Paid-up Capital	... 82,99,975
Reserve Fund	... 68,44,584
Share Premium	... 14,57,300
Deposits as on 31-12-61	... 40.05 Crores

Has a net work of 145 offices (24 situated in the city of Madras, 5 Overseas and 116 spread over 8 States in the Indian Union) and is fully equipped to advise and help regarding deposits, advances, remittances, collections, foreign exchange business etc.

SISTA'S-IB-2

NEWS IN BRIEF

THE Indo-French trade agreement signed in October 1959 has been extended upto 6th June 1963.

The Andhra Pradesh Government has decided to sell its paper plant at Tirupati to a private firm, according to the Chief Minister, Mr. Sanjiva Reddy.

Production of barley in India touched the record level of 3.07 million tons in the 1961-62 crop year, or an increase of 8.7 per cent or 246,000 tons over the previous year. The increase is attributed, to some extent, to a rise of 3.6 per cent to 8.26 million acres in the area sown to the crop.

India will buy 200,000 tonnes of rice from Burma under an agreement which has just been signed between the two countries. The supply will be made out of the 1962 crop. It may be recalled that India imported two million tons of Burmese rice under a five-year agreement valid from 1955 to 1960.

The Government of Bihar has constituted an Export Promotion Advisory Board, with the Chief Minister as Chairman, to formulate policies for expanding exports, to suggest ways of removing difficulties of exporters and to disseminate information on aids and incentives granted by Central and State Governments.

The first stage of the project for laying coaxial trunk cables connecting all major cities has been completed, with the inauguration of a subscriber trunk dialling service between Delhi and Agra by the Prime Minister last week-end. The service will be extended in course of time to Bombay and Calcutta.

The Government of Kerala is contemplating to set up a rubber development corporation. The proposed corporation is expected to supervise planned cultivation of rubber in the State, improve research facilities and provide better marketing arrangements for small cultivators, besides functioning as a financing agency.

The Textile Commissioner has provisionally placed the cotton textile mills' production in June 1962 at 70 million kgs. of cotton yarn and 383 million metres of cotton cloth. At the end of June 1962, the composite mills of cotton textile industry held an estimated stock of 160,000 metric bales as unsold and 170,000 metric bales as sold but not lifted.

The rate of interest on all post office savings bank accounts will be increased by ½ per cent with effect from 1st August 1962. Thus, interest will be 3 per cent on deposits upto Rs. 10,000 in individual accounts (upto Rs. 20,000 in joint accounts), 2½ per cent on balances in excess thereof as also on public accounts, as against the existing rates of 2½ per cent and 2 per cent, respectively.

The Indian Council of Agricultural Research has decided to establish a regional research station for the fruits preservation industry at Abohar in the Punjab. The functioning of the station will include promotion of suitable varieties of fruits and vegetables and development of new techniques of commercial canning, bottling and processing. There is already a similar research station for citrus, grapes and dates at Abohar.

The State-owned Bharat Electronics, Bangalore, has concluded an agreement with a well-known U.K. firm for the manufacture of a special type of transmitting equipment. Under the agreement, the firm will give all information about the manufacture of the equipment and also train Indian engineers. It will also lend the services of its engineers. The Bharat Electronics, is already manufacturing about 30 different types of electronic equipment like transmitters, receivers and trans-receivers and electronic and components like radio valves, capacitors and crystals.

The Union Government has announced grant of import licences within fixed ceilings for twelve items from Pakistan. The items are dhaincha seeds, *chuna khari* pearls, eggs and poultry, green spices, fish (dry and salted), betelnuts, drugs and medicines (including unani and ayurvedic), black cumin seeds, mother-of-pearl shells, betel leaves, guar seeds and gramophone records. The last date for applying for licences is 31st August 1962. Payment for imports will have to be made in non-convertible Indian rupees as provided for in the existing trade agreement between the two countries.

The Government of India has allocated a sum of Rs. 30 lakhs out of the second Japanese yen credit to the National Small Industries Corporation for import of plant and machinery from Japan for distribution to the small industrialists on hire-purchase terms. The Japan Small Plant Committee, Tokyo, will assist the National Small Industries Corporation in obtaining reasonable quotations for Japanese plant and machinery of standard quality. The small industrialists of India will be able to choose the machines. The Committee will help in consolidation of small contracts by recommending a representative supplier who will obtain the export permits and undertake other formalities required in Japan.

As a measure of export promotion, the Government of India has decided to allow drawback of customs and/or Central excise duty on exports of 22 more items. They are tarbollers, duplicators, detonators, machine tools, pistons, gudgeon pins, cylinder liners, piston rings, centrifugal castings, hydraulic brake fluid not otherwise specified, fountain pen nibs, switch gears and control gears and components, capacitors, cocoa powder, chocolate, cocoa butter, stainless steel, copra cake, deoiled copra cakes, storage batteries and steel barbed wire. Certain changes have also been made in items relating to textile machinery, steel products, glassware, mill machinery, radio receivers, noil yarn, paints, chemicals and pharmaceuticals and plastic goods.

The State Trading Corporation has secured a licence to import caustic soda worth Rs. 25 lakhs from the U.S. It has also secured licences for imports of rock phosphate (valued at Rs. 2.15 lakhs) from Morocco, sulphanilamide, etc. (Rs. 1.04 lakh) from Poland, fine chemicals (Rs. 1.11 lakh) and also some strontium nitrate from Russia. Among the other important items, which will be imported by the Corporation, are one oxygen gas plant (costing Rs. 3 lakhs) and another oxygen producing and decenting plant from East Germany. The Corporation will also import Mogurt dumpers (worth Rs. 17.29 lakhs) from Czechoslovakia, ball, roller and taper roller bearings from Rumania (Rs. 8.5 lakhs) and components for motor cycles (Rs. 3.38 lakhs).

The capital's first, and the country's second, Institute of Catering Technology and Applied Nutrition will open for instructional training on 20th August next. It will be formally inaugurated by Mr. S. K. Patil, Union Minister of Food and Agriculture, at a later date. The Institute, one of the four sponsored by the Union Food Department, is the latest venture in Government's plan for improving nutritional standards in the country. At the same time, it will provide new opportunities for those seeking a career in the hotel and catering industry or in the field of applied nutrition. Two other institutes are to be set up in Calcutta and Madras while the existing College of Catering and Management in Bombay is being reorganised.

For purposes connected with the implementation of the obligatory exports scheme of the Indian Cotton Mills Federation, the Government of India has amended clause 5 of the Cotton Control Order, 1955 which empowers the Textile Commissioner to specify the maximum quantity of Indian and foreign cotton which a mill may be allowed to purchase during a specified period or may have in stock at any time. The amendment now made provides that, in fixing this quantity, the Textile Commissioner shall also consider the need for promoting export of cotton textiles and the manufacturers' contribution towards such export. It will be noted by mills that failure to fulfil their export obligations under the Federation's scheme is liable to attract action by the Textile Commissioner under Section 3 of the Essential Commodities Act.

* * * *

From Abroad

West Germany, which has so far taken part in the World Coffee Conference as an observer only, has joined the conference as a full-fledged member.

Egypt has decided to join the nineteen countries which have accepted the G.A.T.T. long-term international agreement regulating trade in cotton textiles.

A leading Japanese mining concern, the Nittentsu Mining Company, has decided to send a team of geologists to Alaska for surveying copper and iron ore resources there.

Production of wool in Australia during 1962-63 is expected to touch a record of 1.707 million lbs. (greasy basis) representing an increase of 7¼ million lbs., as compared with the previous year.

Industrial production in Britain is continuing to rise. The seasonally adjusted index (base 1958=100) for all industries for the month of May 1962 is provisionally estimated at 117, as compared with 114 for April.

The average cost of crude oil production in West Asia during the last ten years has been only 16 per cent which compares very favourably with $3.10 in Canada, $1.73 in the U.S., 51 cents in Venezuela and 82 cents in the Far East. The low cost in West Asia is attributed to the shallowness of rich oil deposits.

The world's three major exporters of copra, namely, Philippines, Ceylon and Indonesia, have agreed to meet shortly at Manila to work out an agreement on marketing of copra. Understanding in principle is understood to have already been reached among the three countries for collaboration in this connection.

West Germany's favourable balance of trade fell sharply from DM 3,600 million in the first half of 1961 to DM 1,600 million during January-June 1962. This was due to the fact that, while exports during the first half of 1962 rose by just 3.1 per cent to DM 25,900 million, imports were substantially higher by as much as 13.3 per cent at DM 24,300 million.

The U.S. General Services Administration (G.S.A.) has announced a plan to make available about 20,000 short tons of stockpile aluminium for exclusive use in foreign aid programmes. The metal, in primary aluminium form, is being held in the inventory created under the provisions of the Defence Production Act. It will be supplied to foreign aid recipients in semi-finished forms and in ingot form.

A trading firm in Ceylon proposes to put up a new plant to manufacture synthetic textiles in collaboration with a Japanese Company, Tekseku Rayon Company. The plant is likely to go into production by April next. It will have 48 looms and one set of dyeing machines, with a rated capacity to produce five million sq. yards of textiles. The capacity output is expected to be reached by 1967.

The U.S. management consultant firm, Messrs. George Fry and Associates Inc., of Chicago (Illinois), has been awarded a $380,000-two-year extension of a contract for assistance under the programme for technical assistance administered by the U.S. Agency for International Development. Under the contract, the U.S. firm will furnish six technicians to advise and assist the National Productivity Council of India in improving industrial techniques and processes.

Yugoslavia has given a contract worth two million pound sterling to a Norwegian firm for the supply of four electric pig iron furnaces ("Elkem") of 26,000 kw. for an integrated iron and steel works currently being built at Skopje in Southern Yugoslavia. The Norwegian Export Credit Guarantee Institute will underwrite the long-term credit given by the firm to Yugoslavia in this connection. Philips phonographic industries of Baarn, Netherlands. The two record companies are to retain their independence and will continue to sell records with their own labels.

A plea for active and sustained co-operation between the Commonwealth and the European Free Trade Association was made by the Forward Britain Movement at a conference in London last week which had been convened to consider the alternatives to Britain's entry into the Common Market. Speaking at the conference, Sir Roy Harrod, the renowned economist, suggested that the device of bulk purchase agreements for industrial and primary products be used to establish new industries in the developing countries. The Earl of Sandwich urged the creation of a Commonwealth Payments Union and a Commonwealth Development Bank, which could also be open to the E.F.T.A. and other like-minded countries.

The Kuwait Airways has decided to buy three British Aircraft Corporation I-11 aircraft and two De Havilland Trident aircraft. Delivery of the aircraft is expected to be made in January 1965. In the interim period, the Company will purchase for delivery in 1963 one Comet and two Viscount aircraft for use in the present routes. The B.A.C. I-11 is a twin-jet short-range passenger airliner claimed by the makers to be the world's first short-haul passenger pure jet. It can carry between 56 and 70 passengers and has a cruising speed of 540 m.p.h. The first aircraft is expected to fly early next year, and already orders for 24 have been placed. The De Havilland Trident is a three-engined short-to-medium-range aircraft with its Rolls-Royce Spey engines mounted at the rear. It cruises at more than 600 m.p.h. and can carry up to 100 passengers.

PERSONAL

MR. Morarji R. Desai, Union Finance Minister, returned to New Delhi on Monday last, after a three-week tour of Western Europe.

Mr. P. R. Kamani has been elected President of the All-India Non-ferrous Metal Industries Association.

Mr. M. K. Vellodi, until recently Indian Ambassador to Switzerland and a former Cabinet Secretary, Government of India, has joined the Board of Directors of Metal Box of India Limited with effect from the 18th inst.

Mr. H. V. Karve, till recently Regional Director of Supplies and Disposals, Calcutta, and also Chief Controller of Purchase and Stores, Heavy Engineering Corporation, has taken over charge as Deputy Director-General in the Directorate-General of Supplies and Disposals, New Delhi.

Dr. D. T. Lakdawala, Professor of Economics in the Department of Economics, University of Bombay, has left for Bangkok at the invitation of the U.N. Economic Commission for Asia and the Far East to work as a consultant expert for a period of three months in connection with the preparation of the annual economic surveys of the E.C.A.F.E.

Mr. A. Ramaswami Mudaliar, Chairman of the India Steamship Company, Mrs. Sumati Morarji, Director of Scindia Steam Navigation Company and Mr. C. P. Srivastava, Managing Director of the State-owned Shipping Corporation of India, left for London last week to participate in the discussions with British shipowners for securing a larger share for Indian shipping lines operating on the India-U.K.-Continent route. The other two members of the delegation, Mr. Dharamsey Khatau, Chairman of Scindias, and Mr. R. E. Kumana, Director of Scindia Steamship (London) Ltd., are already in London.

Mr. Gulzarilal Nanda, Deputy Chairman, Planning Commission and Union Minister of Labour, Employment and Planning, will be the Chairman of the reconstituted Research Programmes Committee of the Planning Commission. The other members of the Committee are:

Prof. D. R. Gadgil, Prof. D. G. Karve, Prof. C. N. Vakil, Dr. V. K. R. V. Rao, Dr. P. S. Lokanathan, Prof. D. R. Wadia, Dr. Radha Kamal Mukerji, Prof. M. L. Dantwala, Dr. B. N. Ganguli, Prof. D. Ghosh, Dr. R. Balakrishna, Dr. A. K. Das Gupta, Prof. S. K. Basu, Dr. A. Appadorai, Dr. M. N. Srinivas, Prof. K. P. Chattopadhyaya, Prof. S. V. Kogekar, Prof. V. R. Pillai, Prof. N. Srinivasan, Dr. I. G. Patel, Dr. D. T. Lakdawala, Dr. B. H. Mehta, Dr. Baljit Singh, Prof. V. V. Ramanadham and Dr. J. P. Bhattacharjee. Dr. D. K. Malhotra, Joint-Secretary, Planning Commission, is member-Secretary.

FOREIGN AID FOR INDIA

IT is rather unfortunate that the U.S. Administration is said to have assured the Congress that it would peg the aid authorisations to India for the current (July 1962-July 1963) fiscal year at the previous year's level of $727 million (Rs. 346 crores), which means a reduction of nearly 11 per cent from the $815 million (Rs. 388 crores) proposed by it earlier. The decision is unfortunate especially because it has been taken despite the fact that the Senate-House Conference Committee had dropped the Senate's previous insistence on limiting aid to India to $727 million and that both the Houses of the Congress have voted the full amount of $815 million. May be, the U.S. Administration wants to carry out "the will of the Senate," to borrow the phrase from Mr. Hubert Humphry, Democratic Whip in the Senate. But, by implication, the Administration's decision gives one the impression that it might have been prompted to some extent by political considerations. Incidentally, the compromise Bill as it emerged from the Senate-House Conference Committee on the 18th inst., which has since been voted by both the Senate and the House of Representatives, preserves the President's discretionary authority to give aid to Communist countries (such as Poland and Yugoslavia), deletes the amendment that would virtually have robbed the President of power to buy up to $100 million worth of United Nations bonds, and empowers the President to make development loans of $600 million to Latin America in 1962-63 and the three succeeding years under the Alliance for Progress Programme. The total aid (of $4,672 million or Rs. 2,224 crores) authorised by the Congress for the current fiscal year is, however, short of the $4,878.5 million (Rs. 2,322 crores) asked for by the Administration to the extent of $206.5 million (Rs. 98 crores), though it is slightly higher than the sums of $4,662.0 million (Rs. 2,219 crores) and $4,668.5 million (Rs. 2,222 crores) previously voted by the Senate and House of Representatives, respectively.

While the U.S. Government's assurance to the Congress about maintaining aid to India at no more than the 1961-62 level of $727 million is disquieting, the latest reports regarding the possibility of India obtaining more liberal assistance from the other countries in the West are somewhat confusing. Some reports hold out high prospects, while others are very doubtful. Even Mr. Morarji Desai, Union Finance Minister, who has just returned from a three-week tour of Britain and other West European nations, has not given a definite idea about the quantum of aid that would be extended by these countries. Talking to Pressmen immediately after his arrival in Bombay on Sunday this week, Mr. Desai is reported to have merely said:

"I am satisfied with my visit and my talks with leaders of different countries in Europe were good, but I cannot say how much aid would be forthcoming from Europe for India's third Plan. I explained the case of India to the Prime Ministers of the countries I visited; I did not ask for anything. The Aid-India Club is meeting by the end of this month and I have high hopes of the outcome of the meeting."

His remark that "I merely explained India's position and did not ask for anything" is evidently meant as a reply to those who had described his visit to Europe as one with a beggar's bowl. This description is, of course, not palatable to sensitive ears, but the truth in it cannot be denied. In telling the Western powers that India needs liberal foreign aid and facilities for selling more to them, are we asking for nothing? There is, therefore, no meaning in trying to split hairs, as Mr. Morarji Desai does. To do so is to indulge in hypocrisy. There is surely nothing to be ashamed about if an underdeveloped country, especially the one which has been the victim of Western powers' colonialism for a long period of 150 years, asks the developed countries for help to implement its development plans. It is surprising that even Mr. Morarji Desai should suffer from a false sense of prestige.

This, however, is only by the way. To return to the prospects for foreign aid. Will the "high hopes" of the Finance Minister prove correct? For the answer, one has to wait till the Aid-India Club meeting, scheduled to commence at Washington on Monday the 30th inst., ends. If this meeting were to reach a final decision in regard to the aid commitments already made for the first two years of the third Plan, let alone offering additional assistance required beyond these commitments, Mr. Morarji Desai's high hopes would have fructified. The U.S. offer of aid for the second year of the third Plan (that is the financial year April 1962-March 1963), it will be recalled, is $500 million (Rs. 238 crores), which, however, is subject to the condition that the other members of the Club together make an equal ("matching") contribution. Although these commitments were made as early as in June 1961, the Club had to postpone its decision twice, first on 30th January 1962 when the combined matching commitment of countries other than the U.S. fell short of the U.S. pledge of $500 million (Rs. 238 crores) by $220 million (Rs. 105 crores) and again on 28th May when there was still a gap of $130 million (Rs. 62 crores). It is reported that Britain and France have since decided to announce a "substantial increase" in their contributions. There are also reports that Holland, Belgium, Italy, Austria, Sweden and Denmark will join the Club and contribute something. Nevertheless, some observers in the West are doubtful of the remaining gap of $130 million being completely filled, though they are inclined to feel that the U.S. Government will go ahead with its commitment of $500 million even if the "full" matching contributions are not available. All this, however, is only speculation. Even though such speculation may be based on reliable information, one must not forget that there is many a slip between the cup and the lip. It is certainly not beyond the means of the free countries of the West to make available to India aid commensurate with its developmental effort and, what is equally important, a part of the aid in the form of untied credits for the import of raw materials and components. What is required is only the "will" to help. May be, Mr. Morarji Desai has strengthened that will, but some of his Cabinet colleagues seem to be undoing his good work.

INDUSTRY'S PROBLEMS IN NORTHERN REGION

Both industry and trade in the northern region of India, comprising Delhi, Punjab, Rajasthan and Uttar Pradesh, suffer from two serious handicaps. The first of these is due to the long distances over which coal has to be transported from the Bihar-Bengal area. Of course, this is not peculiar to the northern region, for the southern and western regions also suffer from the same handicap. But the second handicap, which is due to the distant location of ports, is something peculiar to the northern region. These twin handicaps have undoubtedly been responsible for aggravating the shortages of coal, power and raw materials in the conditions of transport inadequacy. The crucial shortages, in their twin, have pushed up the cost structure of industries in the region and added to the problems of export promotion. The Northern Regional Conference of the Federation of Indian Chambers of Commerce and Industry, held at New Delhi on the 21st instant, has, therefore, urged the need for remedying the difficult situation faced by industry and trade in that part of the country.

The Conference has suggested some general measures for possible adoption by the authorities. Its suggestions pertaining to the fuel problem are that concerted efforts be made to move coal more speedily to the northern region by improving rail transport and that encouragement be given for the use of furnace oil as a substitute fuel. There can be no two opinions on the first suggestion. But the second suggestion may not be quite feasible, unless the Burmah-Shell and Stanvac refineries, which have been recently permitted to refine more imported crude to the full extent of their installed capacities, provide adequate supplies of furnace oil. If indigenous production of this fuel can be stepped up and if, at the same time, the present heavy excise duty on it is reduced, its use by industries in the northern region is bound to increase, thereby providing some relief from the acute coal shortage. But the fulfilment of these conditions is in the hands of a Minister for whom the public sector is more important than progress, tomorrow is more valuable than today and the penny is more precious than the pound.

Among the other suggestions made by the Conference, there is one relating to road transport. While this mode of transport in the northern region is fairly well developed, there is stated to be scope for its further improvement. If free movement by road is not impeded by intra-State and inter-State restrictions, the transport situation will certainly improve, assuming that roadways will be broadened and strengthened, that motor vehicles will be available in sufficient numbers and that the supply of petroleum products will improve. There are, however, already reports that production of trucks and automobiles, as well as import of oil, may suffer on account of foreign exchange shortage. The plea advanced by the Conference for "railway freight concessions on movement of raw materials and finished goods from centres of production to those of consumption and/or onward despatch," however, seems to be rather extravagant. As bulk commodities are already being moved by the railways at relatively low rates and several industrial goods are already enjoying freight concessions for purposes of export promotion, it would be too much to ask for a general reduction in railway freights. Any such reduction, assuming it were possible, would only eat into the freight revenue of the railways, thereby making it still more difficult for them to effect the very improvement in transport capacity urged by the Conference. Perhaps the most interesting suggestion made by the Conference for assisting the up-country trade is the one pertaining to the possible establishment of either two or three dry ports at conveniently located centres or a number of inland bonded warehouses. This is worthy of serious consideration by the authorities.

Some other specific industrial problems of the northern region also call for early solutions. For instance, the innumerable small industries of Delhi and the Punjab, which have developed fast, need an assurance that the raw material quotas allotted to them would be firmly adhered to and promptly made available to them. The sugar industry in the region would prosper further, only if sugarcane cultivation is encouraged on more modern lines so as to improve the sucrose content per acre. As for the jute mills in the region, they have to incur extra freight on raw jute imported from Bihar, Bengal and Assam. The Conference's plea for a suitable rebate in excise duty payable by these jute mills seems to be reasonable, especially in the context of imported Nepal jute goods bearing no such duty. The shifting of factories from Delhi to new sites in areas to be covered by the Master Plan would involve the grant of rehabilitation loans and subsidies. Although this is not an immediate problem, the Conference has done well to emphasise the financial cost of re-establishing existing factories on new sites. These, then, are some of the specific industrial problems of the northern region, on which the Conference has focussed attention in a commendable manner. The idea of organising similar conferences in the other major regions of the country deserves to be pursued by the F.I.C.C.I. in view of the success that has attended the Northern Regional Conference and the earlier conference in Bombay covering the Western region.

STEEL STANDARDISATION

The work of standardising the different varieties of steel and other metallic products is in the interests of both producers and consumers. Producers stand to benefit from standardisation, as it leads to a reduction in the innumerable varieties of products and to their economical manufacture. Industrial consumers of intermediate products find standardisation to be of considerable assistance to them in achieving economies in their own manufacturing programmes. The substantial standardisation work accomplished by the Structural and Metals Division Council of the Indian Standards Institution since 1956 should, therefore, be heartening to both the parties. It should be even more heartening to them to know that the Council's activities in this field are growing all the time, as metals in various forms, shapes and compositions form the basic materials for the development of a large number of engineering and metal working industries. The work that lies ahead, according to Mr. Jehangir Ghandy, Chairman, who addressed the annual meeting of the Council on the 21st instant, would, however, involve detailed and extensive studies in view of increased specialisation.

The Council's achievements in the last one year in particular convey an idea of the diversified character of the work of standardisation. The schedules for wrought steel for general engineering purposes, for instance, have been drawn up with the object of cutting down the large varieties of carbon, alloy and tool steel compositions at present used in the country. This will enable industries to undertake the manufacture of steels included in the schedules which aim at the use of indigenous alloying elements. The Council has also prepared a code relating to the use of structural steel in general building construction which would be of considerable assistance in the efficient and economical construction of buildings and other structures. Revised specifications have been issued for grey iron castings and malleable iron castings, taking into account the requirements of automobile and other engineering industries. In the field of non-ferrous metallurgy, the Council has formulated standards for rosin-cored solder wire, wrought aluminium wires, rolled aluminium rods and copper strip to meet the needs of the electrical industry. Further, work has been taken up on the standardisation of steel castings and steel forgings for the purpose of reducing the existing varieties of these materials, as well as on aluminium bronze ingots and castings for overhead fittings for electrical traction. All in all, the Council has formulated 67 new standards and taken up another 64 standards for preparation.

That the Council's work thus far has been very impressive could also be seen from the request of some Latin American countries for the I.S.I.'s assistance in the development of a project for steel standardisation. The present plans, in this connection, call for seminars on the subject in Argentine, Mexico or Brazil, and Chile, to be organised by an Indian specialist whose advice will also cover the training of technicians and the preparation of recommendations on steel standardisation. This is an instance of the recognition which the Indian Standards Institution has won in some of the developing countries. In fact, India's contribution to standardisation has come in for wider appreciation at the recent annual meeting of the Council of International Standards Organisation (I.S.O.). It is in recognition of this contribution that the General Assembly of the I.S.O., which is held once in three years, will meet in New Delhi in November 1964.

NOVEL COVER FOR EXPORT CREDIT

The Export Risks Insurance Corporation proposes to add two new types of policies to the wide range of covers offered by it to exporters. Under the first, the Corporation will provide cover for advances by exporters to small manufacturers towards meeting expenses of manufacture, while, under the second, guarantees will be given to banks in respect of finance provided to small exporters. The Corporation is awaiting the approval of the Government for this proposal. It may be noted here that the Corporation which started five years ago with issuing shipments and contracts policies, now provides a wide variety of covers. Thus, it covers the risk of increase in freight and insurance charges and issues packing credit policy, manufacturers credit policy, market development policy, etc.

The latest proposal is evidence of the Corporation's anxiety to help the small exporters and manufacturers. That it is the small exporters who increasingly avail themselves of the services of the Corporation is evident from the Corporation's business last year. As many as 126 out of a total of 400 policies issued by the Corporation in 1961 were for Rs. 50,000 or less.

The new policies are designed to meet the special problems of the smaller fry engaged in the manufacture of goods for export or in the export trade. The small manufacturers often find it difficult to start production by acquiring raw materials and other requisites or to complete production already undertaken due to lack of adequate finance. The result is that production is either not undertaken or delayed and this in turn leads to the cancellation of export contracts or delay in shipments, both of which affect exports. Exporters of such goods as hides and skins, rayon, silk, and handicrafts generally advance money to manufacturers on condition that the goods will be delivered to them. But, in the absence of an insurer to cover the risk of default, exporters are generally reluctant to provide finance in a big way. It is this lacuna which the Corporation seeks to eliminate.

The problems faced by the small exporters are identical. They find it difficult to get adequate credit from banks for no other reason than that they are small. Under the second type of policy proposed to be issued by the Corporation, banks will be given a guarantee covering their advances to small exporters against the risk of default arising from non-payment of bills by foreign buyers due to disputes about quality of the product. It is true that, at present, policies issued by the Corporation cover the risk of non-payment of bills by the foreign buyer as an ordinary commercial risk, but they exclude non-payment resulting from dispute over quality. The new policy, together with the normal policies issued by the Corporation covering commercial risks, provides the missing link and will encourage banks to help small exporters. The issue of such policies creates for the Corporation a stake in the quality of the product manufactured. It is not clear how the Corporation proposes to ensure that the product manufactured is of standard quality. It can, perhaps, do so by insisting that it will provide cover only for advances to producers manufacturing goods according to I.S.I. specification. But it remains to be seen whether even this qualification will be adequate.

NON-FERROUS METALS INDUSTRY

The development of non-ferrous metals industry in India has generally been tardy, except in the case of aluminium for which

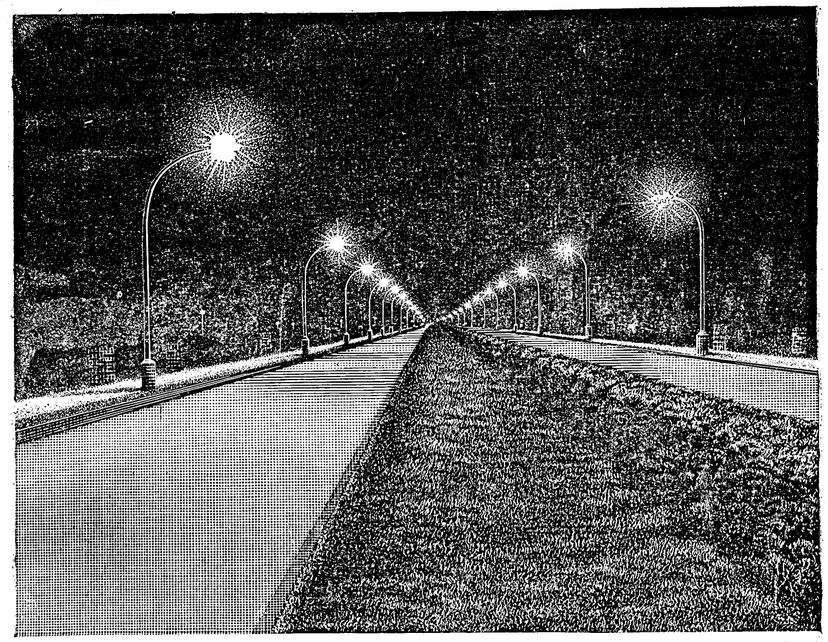
The Ring Road at Rourkela



LIGHTING BY PHILIPS

Girdling the busy, growing steel town of Rourkela, Ring Road is the main arterial link between the township and the plant site. 16 miles long and 100 feet wide, it is flanked by footpaths and is divided into two broad avenues by a green belt. It is further designed to have two cycle tracks separate from the main carriageways.

The lighting for this splendid, vital highway was entrusted to Philips. Philips Lighting Engineers worked in close co-operation with the town planning authorities and the final lighting scheme is a fine example of streetlighting which promotes safety and efficiency.

Philips' exclusive lighting—consisting of lamps, fittings and accessories—ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips international experience and know-how.

PHILIPS quality lighting for ultimate economy

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

INDIA SET ON NUCLEAR ROAD

SEVERAL SNAGS IN POWER PLANT PLANS

From Our Special Correspondent

NEW DELHI, 24*th July*

DELHI LETTER

THE choice of Pratapgarh in Rajasthan for the second nuclear power plant in the country is likely to be officially announced soon as experts are searching for the possible site in the south for a third nuclear power unit. Canadians, French, British, West Germans and Americans are believed to have tendered for the first nuclear plant at Tarapur, but there are several snags still facing the Tarapur project on which civil works have already started. Reports of the U.S. Government's willingness to change its stand and assist India for the Tarapur project could not be officially confirmed, but it is believed that a team of Indian nuclear scientists will soon leave for the U.S. for a study of some American nuclear power plants. Whether this visit and discussions between Indian and American scientists could be a prelude to American assistance to the Tarapur *plant is too early to say.*

The Tarapur project may cost more than Rs. 60 crores, nearly half the amount in foreign exchange. The first snag with the project is that, while the Western countries have been willing to assist India with the construction and operation of experimental reactors, they are still to be convinced of the need for India to tap power from the atom; consequently, there are no offers of loans yet. The second snag is the reported inclination on the part of some Western countries to let Russia pick up the tab, since India has an agreement with the Soviet Union on exchange of atomic know-how. The third snag stems from India's refusal to agree to Western suggestions at the International Atomic Energy Agency meetings on an international statute, including safeguards. These safeguards, in India's opinion, will infringe on national sovereignty. India's repeated assertions of adherence to an atoms-for-peace policy are not enough for the West, since the peaceful atom looks and smells the same as the warring atom. A nuclear power station will yield residual plutonium, the fuel for atomic weapons.

The Planning Commission had in August 1958 approved of the inclusion of an atomic power station in the third Plan and the western region was chosen for the first atomic power plant because of the rapidly rising power demands, inadequacy of conventional sources and long distance from coalfields. It was originally proposed to establish a single reactor with 250,000 kw. capacity. Then, in view of some operational problems in a single huge reactor, it was decided to have two reactors of 150,000 kw. capacity each, making a total of 300,000 kw. If the requisite foreign exchange is available, New Delhi still hopes to get one of the reactors going by the end of 1965.

Experts from Atomic Energy of Canada Limited and the Montreal Engineering Company are helping in the investigations on the choice of the type of reactor for the second nuclear power plant in North India. The second station is likely to be similar to the 200,000 kw. unit at Douglas Point in Canada. The Atomic Energy Department believes that, after the first station is built at Tarapur, it will not be necessary to invite foreign tenders for the construction of the later installations, although it will, of course, be necessary to import equipment. Indian technicians are already said to be capable of building a small atomic station. In Trombay, the A.E.C. expects to commission by the end of next year a pilot plant to recover plutonium from spent fuel elements. The uranium processing plant in Bihar, with capacity to handle 700 tons of ore a day, is likely to be ready by the end of next year.

Western experts remain to be convinced of the Indian need for atomic power, but, according to Dr. Homi Bhaba, a minimum of ten million kw. of atomic power should be provided by the end of the seventh Plan in 1986. After that, Dr. Bhaba believes, the bulk of India's needs will have to be met from the atom. To pave the way for this capacity for a million kilowatts of atomic power by 1966 was suggested by the Commission. But this is now impossible; the second and third atomic power station plans, if pursued, will fructify only in the fourth Plan period.

The desire for getting on with atomic power plants early is hinged to the long-term strategy in the field. The known Indian reserves of uranium are around 30,000 tons, but, in thorium, India has one of the biggest known world reserves, about half a million tons of thorium ore. Thorium sand is mined by the bucketful on the shores of Travancore; the sea washes in more thorium sand. But thorium as such cannot be used as atomic fuel. Thorium will have to be converted in atomic reactors into uranium 233 for use as nuclear fuel. First natural uranium will be used to start the power programme. Uranium reactors also produce plutonium which can be used in plutonium-thorium reactors in which thorium can be converted into uranium 233. The uranium 233 can be used in uranium-thorium reactors. If breeders are installed, the process will give more uranium 233 than is consumed. In the first stage, the need is to put up natural uranium reactors to produce plutonium. In the second stage, plutonium and thorium together will yield uranium 233. Thus, the quantity of uranium 233 which will become available for power plants in later years will directly depend on the first two stages capacity and the time they are in operation.

In some regions like Bombay and Madras, it is argued that the cost of electric power from nuclear stations will be far cheaper than those from conventional thermal plants. Preliminary estimates of the cost of a nuclear power station are around Rs. 2,000 per kw. capacity, as compared with between Rs. 800 and Rs. 1,000 for conventional thermal stations. A nuclear station becomes economic when the power plant is more than 600 miles away from a coalfield. A million-kilowatt station may need up to four million tons of coal per year. To transport four million tons of coal over 750 miles, the capital cost is placed at Rs. 25 crores. Add to this the recurring transport costs for coal; a nuclear station will need only a few hundred tons of fuel. The initial cost of a hydro-electric plant is far higher than a nuclear or conventional thermal station. For example, in the Kundah project in Madras, the first stage cost is around Rs. 3,300 per kw. installation. But the recurring cost in a hydro-electric station is almost negligible.

Rural Industries

Both at the Commerce and Industry Ministry offices at Udyog Bhavan and at the Planning Commission offices at Yojana Bhavan, there are many admirers of the Japanese system of industrial development in which the rural sector supplies a considerable portion of the components or assembling talents. These admirers of Japan have always been eager to explore the prospects of a similar system in India and this set also has had reservations about the high cost to the economy of the traditional village industries like handloom. Behind the decision to promote intensive and integrated small industries development in the rural areas is also the conviction of demographic experts that the rate of migration from rural areas to urban industrial and commercial centres will not be high enough in the foreseeable future to contribute to a substantial improvement in the earning capacity of the people.

The Conference on rural Industries Projects, which met on the 21st and 22nd inst., decided on launching 46 projects, including four in Union territories. There will be a few other projects around the large industrial centres. Only 40 projects were initially contemplated; the increase in the number is due to pressure from States. The programme of action on this new field is as follows:

By the first week of August, the selection of project areas will be finalised by the State Governments. Survey teams will be formed by the State authorities and a member of the team from each State will attend an orientation course so as to ensure uniformity in conducting surveys. This course will last a fortnight and the surveys will begin in October.

The Rural Industries Planning Committee of the Planning Commission will be the top planning body in the field and will be helped by a standing committee. To supervise the implementation of the programme in the States, committees will be formed with the Chief Ministers or Industries Ministers as chairman. Each project will draw funds from the State plans and the all-India statutory boards and through financial and co-operative institutions. For the four years 1962 to 1966, there will be a minimum provision of Rs. 20 lakhs for each project, in addition to provisions already made in the third Plan. Besides, more than Rs. 8 crores under this head, there will be a contingent fund of Rs. 7 crores. The initial allocation in the first year, 1962-63, is one crore of rupees.

SURVEY

(*Concluded from previous page*)

alone basic raw materials are currently available indigenously in large quantities. The domestic requirements of such metals as copper and zinc have been met mostly from imports. It is only in the third Plan that a breakthrough is being attempted in the development of non-ferrous metals. The output of copper, for instance, is proposed to be raised from a little less than 9,000 tons in 1960-61 to 20,000 tons by the end of the third Plan. The increase is to be achieved by the establishment of a 11,500-ton new smelter at Khetri in Rajasthan by the public sector. The new plant was to have gone into production in the early period of the Plan, but no worthwhile progress seems to have been made. It looks as though it may not be started by 1964, as is envisaged in the third Plan report. In view of the current foreign exchange difficulties, it will not be surprising if this and other non-ferrous metal projects do not fructify even by the end of the third Plan.

Whether or not production targets for copper and other metals are fulfilled on time, demand will continue to outstrip supplies. The domestic requirement of copper alone by the end of the third Plan is expected to go up to 150,000 tons, exceeding the targeted output by well over 100,000 tons. It is quite appropriate, therefore, that Mr. Himchand K. Shah, President of the All-India Non-ferrous Metals Industries Association, in his speech at the Association's meeting in Bombay last week, should have urged the industrialists to substitute aluminium in the place of other metals like copper in the fabrication of numerous articles. He was also confident that several such articles, which were being imported, could be manufactured from aluminium.

Mr. Shah's suggestion, although not a new one, deserves urgent and immediate attention of both the industry and the authorities, considering the steadily increasing need for conserving foreign exchange. It must, however, be noted that the substitution of aluminium in place of copper should be preceded by adequate technical studies on the question. The problem is by no means insurmountable. For such substitution has been accomplished with varying degrees of success in some of the industrially advanced countries like the U.S. and France. It would be worthwhile if an expert team is entrusted with the task of studying the techniques employed by these countries in this field and suggest suitable measures to adopt them in domestic industries.

It is obvious that Mr. Shah's suggestion will be practicable only if the aluminium industry itself is encouraged to develop still faster. It is true that aluminium occupies a dominant position in the domestic non-ferrous metals industry. Its output is also proposed to be raised from the present level of about 18,000 tons to as much as 80,000 tons by the end of 1965-66. It is gratifying to note in this context that some of the aluminium projects envisaged in the third Plan are shaping well. A new 20,000-ton plant put up by the House of Birlas at Rihand (U.P.) in collaboration with Kaisers of America, for instance, commenced production of ingots a few weeks back. The growth of the industry, however, is inhibited by the heavy electricity charges and also difficulties in the way of bauxite mining, which are not unknown to the Government. The aluminium produced in India is costlier than in other parts of the world and industries using it are at a handicap in export markets. It is high time that the authorities gave a stimulus to the expansion of the industry by giving it all facilities for unimpeded growth on the most economic lines. Unless this is done on a priority basis, an important source of import substitution will remain unexploited.

TARIFF CHANGE KEY TO GREATER ECONOMIC GROWTH

THREE EXCITING FACTS ABOUT THE WORLD TODAY

NEW YORK, *20th July*

ONE of the key advisers of President Kennedy is his Labour Secretary Arthur Goldberg. Asked to discuss the most important economic problem of the Kennedy Administration, he said:

"One of the longest, liveliest, and most inconclusive debates in American history has been going on for nearly two centuries over the issue of tariffs. Should tariffs be lowered to permit a free flow of goods and services across national boundaries? Or should they be raised to protect American industries from import competition. Although today that controversy is still as vigorous as ever, there is now a strong possibility that it can be brought to a constructive end. Earlier this year President Kennedy proposed a Trade Expansion Act which I believe will meet and satisfy the arguments of both sides. It will satisfy the need for expanded trade by authorising the President to negotiate a reciprocal lowering of tariffs with other nations, thus accelerating the exchange of goods and services between our nation and the rest of the free world. It will satisfy the need for protectionism by offering adjustment assistance to those firms and workers adversely affected by the rising import competition that lower tariffs would surely bring.

"To illustrate just how important expanded trade is to the national economy, I want to dwell briefly on the impact of foreign trade on American jobs. The Bureau of Labour Statistics has recently completed some studies on this subject for the year 1960. It found that over three million workers in this country held jobs supported by exports, while another one million had jobs supported by imports. There are, of course, two sides to the import picture. It is frequently said, and with some justification, that imports do harm to American industries and take away jobs from American workers. But this argument is not as strong as some make it out to be. During the time that the United States Tariff Commission has been investigating complaints from industries about import competition, for example, only about 28,000 workers were found to have been displaced in cases where the escape clause had to be applied. Clearly, this is a small loss when compared with the benefits of foreign trade.

"Over the next five years, if the Trade Expansion Act is passed into law, these benefits will be increased. We have estimated that, for every $ one billion increase in exports, 150,000 American jobs will be created. The tariff-cutting authority granted in the Act would help American producers gain greater access to the fertile and growing consumer markets of Western Europe and Japan, thereby increasing the nation's exports by several billions of dollars. That would put several hundreds of thousands of workers on the payrolls. We estimate, on the other hand, that some 90,000 workers would be adversely affected by rising imports over the five-year period. Not all of this total would be displaced from their jobs; many would be forced to go on part-time, with a resulting loss of income. But we intend to protect all 90,000 workers, and to protect the firms for which they work. This protection takes the form of adjustment assistance to encourage firms to become more efficient and more competitive and to provide opportunities for workers to learn new skills. I believe the Trade Expansion Act is the answer to ancient arguments about tariffs, and that it will open up a bright new avenue of opportunity for greater economic growth of the nation and greater prosperity for the American people."

* * * *

An Interview with P. G. Hoffman

In the course of an interview, Mr. Paul G. Hoffman, Managing Director of the U. N. Special Fund, said:

"Half a century ago I was told that, in facing any situation, it was essential to 'get the facts or the facts will get you.' There are three exciting facts about the world today which should be faced squarely and courageously.

"The first fact is that more than one half of the world's people living in one hundred low-income countries and territories associated with the United Nations are in active revolt against continued acceptance of hunger, poverty, illiteracy and ill-health. We ignore the seething unrest of the people of these poor countries, the intensity of their determination to better their conditions, and their understandable impatience at our own peril. That impatience can lead to more Congos, more Cubas, and perhaps to general chaos as well. But it need not!

"The second fact is that we have no time to lose. Development is historically a long as well as an arduous task. But the pressure of demand today is so great that time is lacking for the slow development which was characteristic of the growth of most of the industrially advanced nations. The processes that took centuries for us must be compressed into decades for the underdeveloped world. The facts of modern communication make the times, and time itself, more pitiless today than ever before.

"By unanimous vote of its more than one hundred member nations, the United Nations General Assembly designated the 1960's as the United Nations Development Decade. It is in this decade that we must build the momentum that will ensure a world without acute want by the year 2000. It is in this decade that development must be speeded—primarily as a result of intensified activity on the part of the poor countries themselves. But we will all have to help. We must prove in this decade that the one enduring way to speedy development is through dynamic evolution—and not through violence.

"The third fact is that the physical and human resources are available in almost all the low-income countries to bring to the peoples of those countries lives of decency and dignity. With every passing day at the United Nations, new evidence comes to light of the enormous potentialities in the form of physical resources, of great rivers whose waters are hardly being used, of tremendous forests that have never been inventoried, of mineral wealth that has never been tapped. Particularly impressive are the little used agricultural resources of these countries.

"Take the case of your country, India. Here is a country that today is importing food in tremendous quantities. Yet a group of agronomists who were in India about four years ago concluded after a study of Indian conditions that India had the soil and water not only to feed well its present population, but twice its present population. With better control of water, and with fertiliser, improved seeds and modernisation of agriculture, India will get that tremendous increase in food. If this sounds unbelievable to you, let me say that the average North American farmer produces ten times as much as a farmer in Asia, and twenty times as much as his counterpart in Africa. There are many factors that enter into this, but it does give you some idea of the potential of the land and water in these countries.

"This leads me to stress that the United Nations is fortunate in having at its headquarters, in its regional commissions and in its specialised agencies the most comprehensive array of knowledge and operational experience that exists anywhere for assisting in speeding development everywhere. All of the United Nations agencies have important contributions to make, but particularly heavy responsibility rests on the International Labour Organisation, U.N.E.S.C.O., the World Bank and the Food and Agriculture Organisation, whose Freedom from Hunger Campaign has been made an integral part of the United Nations Development Decade programme. The international staffs of these organisations of the United Nations family have accumulated rich experience, as, over the past fifteen years, they have carried out vital research and reporting, brought countries together to share knowledge on crucial development problems, and performed—intelligently, economically and tirelessly—field work in all parts of the world. I would urge each of you

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

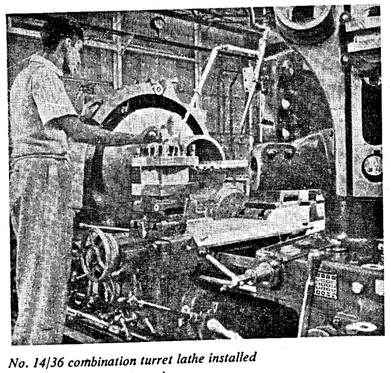
6" spindle ram-type horizontal mill and boring machine

THE REAL POWER OF AVB

Vast Technical Resources... Modern Workshops...



No. 14/36 combination turret lathe installed in the AVB light machine shop

Immensely rich in experience and technical knowledge, with modern workshops equipped with some of the world's most up-to-date machine tools...here is the *real power* of AVB. The essential combination to generate *real industrial power*.

This real power and potential of AVB will give added impetus to the continued and large-scale expansion of industry...by providing the finest facilities for the manufacture of high pressure steam-raising plant and pressure vessels and heavy machinery for the cement-making and mining industries.

Among the modern machine tools in the AVB workshops are

1. **6" ram-type horizontal mill and boring machine.** This machine has a vertical movement of 14' 6" and a horizontal movement of 20' and is the largest of its kind in India.
2. **Numerous capstan and turret lathes** upto 36" diameter swing and central lathes upto 42" diameter.
3. **28/60 vertical model hydrotel milling machine** with 360° profile milling equipment.

AVB ...*a Powerful Partnership for Progress*

REFORM AND DEVELOPMENT OF BANKING

CONCLUSIONS AND RECOMMENDATIONS OF THE SEMINAR

THE Bankers' Seminar organised by the Indian Banks' Association in the City last week, to which a brief reference was made in our issue of 21st July, discussed threadbare a wide range of problems of commercial banking in the country. Some of them were of immediate concern to banks, while others were essentially of long-term importance. The discussions were based on working papers prepared by Committees consisting expert bankers, drawn from a cross-section of banks in the country, including the Reserve Bank of India and the State Bank. The latter two banks were, of course, not active participants in the Seminar, but were interested observers. The Seminar passed a series of resolutions embodying its views on the major issues examined. They are not academic exercises in banking theory but considered views of practical bankers on problems of immediate and future importance not only to banks but also to industry and trade. They therefore deserve to be taken into account by the management of banks, the Reserve Bank and the Government of India in any scheme of banking reform that might be proposed in future. It is said that the Committee of the Indian Banks' Association will carefully examine the suggestions of the Seminar and decide to what extent they are feasible or not. It will then submit a plan for development of banking to the Reserve Bank and member-banks. It may also express its views on the other aspects discussed at the Seminar.

The Seminar was characterised by two unique features. One was the unanimity of the conclusions reached. As the discussions were within closed doors, it is not known to what extent there were differences of opinion and how they were resolved. The other was the absence of publicity to personalities. The public, for instance, does not know who read what paper. Consequently, so far as the public is concerned, the whole affair was impersonal. We are told that the sponsors of the Seminar have no intention of publishing the papers read at, or presented to, the meeting. If this is true, we are not sure whether it is a commendable decision, for it may not be conducive to enthusiasm for banking seminars in the future.

Mobilising Deposits

As the extent to which commercial banks will be able to play the role expected of them in the third Plan depends, to a large extent, on the amount of deposits they can attract, the Seminar did well to consider the question of mobilisation of deposits. The demand for bank finance in the third Plan period and the additional deposits that would be required to meet this demand estimated by Mr. Tulsidas Kilachand, Chairman of the Indian Banks' Association, came in for a critical review. The Seminar felt that Mr. Kilachand's estimates were rather on the liberal side and was inclined to accept the estimate of Mr. P. C. Bhattacharya, Governor of the Reserve Bank, who had placed the demand for additional bank credit from the banking system at Rs. 800-Rs. 900 crores. Accordingly, the estimate of additional deposits that would be required to provide credit of this order was estimated at Rs. 1,200 crores to Rs. 1,300 crores, as against Rs. 1,850 crores estimated by the Chairman of the Indian Banks' Association. The Seminar was also of the opinion that, since the co-relationship, if any, between the increase in bank credit and growth of bank deposits was rather negligible, it could not be asserted that the restrictive monetary policy followed by the Reserve Bank acted as an inhibiting factor on the growth of deposits. The Seminar, having made its view point clear on these significant points, adopted a resolution on growth of deposits containing the following recommendations :

(1) Banks should take steps to finance such activities as are now mostly financed by the unorganised sector.

(2) Issuance of bad cheques should be made a penal offence. This would result in cheques being readily accepted in payment of goods and services and thereby encouraging the banking habit as well as growth of deposits.

(3) Income from interest on bank deposits should be exempt from income-tax in the same manner as in the case of deposits with post offices.

(4) Steps should be taken to popularise payment of salaries and wages by cheques and credit transfers.

(5) To accelerate the pace of deposit growth, it is essential to extend banking facilities to areas not so far covered. In order to achieve this object, the 1,400 small urban areas, now devoid of banking facilities, should be covered during the third Plan period. For this purpose the Indian Banks' Association should set up a Planning Committee, consisting of representatives of banks and the Reserve Bank of India, which should draw up a list of priorities in respect of these 1,400 unbanked places; on the basis of this priority list, banks should be invited to open their offices in the particular areas within their respective spheres of influence.

Planning of Investments

The Seminar discussed at length the investment portfolio of banks and recommended that, in order to enable proper planning of investment of surplus funds during the entire period of the slack season, Treasury Bills of 180 days' duration should be introduced. It also suggested that the Reserve Bank of India should consider the feasibility of organising a money market which would provide a ready market for Government securities. This, it was felt, would enhance their liquidity. The Seminar cited the example of South Africa, Australia and Canada in this respect and suggested that the following broad propositions might be seriously considered :

(i) The possibility of having a class of jobbers as dealers in Government securities.

(ii) The Reserve Bank of India providing adequate re-discounting facilities to these jobbers at low rates of interest.

(iii) The Banks to provide finance to the jobbers by lending to them at call.

(iv) To encourage the jobbers to deal in securities, the practice of deducting income-tax on the accrued interest at the time of purchase and sale of Government securities, may be changed so that they may get gross interest for the period they hold the securities.

Another suggestion of the Seminar was that the Reserve Bank should consider the possibility of taking into account commercial bills and call money in calculating the liquidity ratio. For this purpose, the liquidity ratio should include 5 per cent of the total time and demand liabilities in commercial bills and another 5 per cent in call money other than inter-bank call money.

Term-lending

Since banks are increasingly called upon to provide finance for industry, the Seminar rightly examined the question of term-lending. It resolved that, having regard to the imperative need for rapid industrial growth, commercial banks should, along with the specialised institutions like the Industrial Finance Corporation and State Financial Corporation, make available term-loan facilities to a greater extent than at present. It, however, agreed that the quantum of such lending by individual banks be determined by their resources, the pattern of deposits, quality of assets and capital structure. It further said that, in view of the shortage of trained and technical personnel and the absence of any technical consultant service for this type of business, it would be desirable to pool the knowledge, experience and resources of the specialised institutions and the commercial banks. It was also urged that, pending the development of adequate technical advisory services in the private sector, the Indian Banks' Association should move the Government of India to make available to banks the services of the Development Wing of the Ministry of Commerce and Industry for the purposes of appraisal of technical soundness of projects, whenever required.

While these measures would facilitate term-lending, the Seminar felt that the Government should encourage commercial banks to turn to industrial finance by offering adequate incentives. It listed some of the possible measures that could be taken in this regard. They are :

(i) Government should allow a rebate in the income-tax to the extent of 10 per cent of the total profit arising out of term-lendings each year in accordance with the facilities available to financial institutions.

(ii) The refinance facilities should be made more flexible by the Refinance Corporation agreeing to lend whenever approached by the lending banks, instead of the present time limit of one year from the date of grant of term finance.

(iii) The present Guarantee Scheme for loans to small-scale industries administered by the Reserve Bank of India be extended to cover medium-sized industries as well.

(iv) Whenever the management of an industrial undertaking is taken over under Section 18A of the Industries (Development and Regulation) Act, 1951, a committee should be appointed to manage the undertaking, on which a representative of the financing bank should be included, instead of leaving the management to one representative of the Government.

(v) State Governments, in the interest of rapid industrialisation of their respective areas, should guarantee the losses of commercial banks upto a certain percentage arising out of industrial financing of local projects.

(vi) In respect of their term advances, commercial banks should be given protection similar to that given to the Industrial Finance Corporation under Section 30 of its Act pertaining to breach of agreement or default in repayment of loan.

Finance for Small Industries

The Seminar recognised the importance of bank finance for development of small-scale industries and expressed the view that banks should come forward more freely to lend to small-scale industries. It recommended that banks, on their part, should liberalise the conditions attached to lending to small industries and explore the scope for participation with the State Finance Corporation in providing medium-term finance. The small-scale industries should, on their part, strive to improve the methods of production, quality and marketing so as to render themselves more creditworthy.

The role of commercial banks in providing finance for agriculture was also considered by the Seminar. Generally speaking, farm credit is not provided at present by commercial banks. Provision of direct institutional finance for agriculture is the exclusive concern of the co-operative sector. The Seminar, however, emphasised that, inasmuch as the success of agricultural operations was dependent on the vagaries of monsoon and other unpredictable natural causes, it was absolutely necessary, from the point of view of both the agriculturist and the lending banks, that a scheme of crop insurance should be introduced as in other countries as a precondition for banks supplying finance for agriculture. Banks, however, do provide working finance to large-scale plantations against hypothecation of standing crops. The Seminar suggested that banks should evince greater interest in providing medium-term finance to plantations, although it felt that long-term capital requirements of the industry for rehabilitation, reclamation and replanting should be taken care of only by specialised institutions such as the proposed Agricultural Development Finance Corporation. In this connection, it asked the Refinance Corporation to provide refinance facilities to commercial banks against medium-term loans to plantations.

Advances-Deposit Ratio

A question closely related to the growth of deposits and advances is the advances-deposit ratio. What should be the proper ratio is a controversial questions on which opinion among bankers is sharply divided. The Seminar considered this question and emphasised that the advances-deposit ratio should always be considered in relation to the quality and nature of a bank's loan portfolios and overall liquidity in the banking system. It was of the view that, even though certain countries maintained high advances-deposit ratios sometimes approaching or exceeding 100 per cent, it might not be possible for banks in India to emulate them, unless the circumstances in which these ratios could be safely maintained are developed and/or created in this country. In this connection, the Seminar suggested that it would go a long way towards helping banks to maintain high liquidity in the face of rising advances-deposit ratio, if a proper Bill Market were created.

The legal frame work against which the business is carried on exert a great influence on the trend and growth of banking. The Seminar therefore examined legal changes that were felt necessary and made the following recommendations.

(a) That the principle of nomination as existing in the case of insurance policies under the Indian Insurance Act, 1938, and Provident Fund accounts under the Provident Funds Act, 1925 and 1952 be extended, by suitable legislation, to bank accounts, safe custody articles and lockers.

(b) That minors of the age of 14 and above be legally empowered to open and operate deposit accounts in their own names and suitable section be added in this behalf either in the Negotiable Instruments Act, 1881, or in the Indian Contract Act, 1872.

(c) That in the case of minors under 14 years, the mother as a natural guardian be permitted to open accounts in the name of her minor child even though the father is alive.

(d) That interest on bank deposits be exempted from income-tax in the same manner and to the same extent as in the case of post office savings bank accounts.

(e) That the drawing of cheques without sufficient balance be made an offence and a suitable section be added in the Indian Penal Code.

Certain amendments in the Indian Companies Act, the Banking Companies Act, the Industries (Development and Regulation) Act were also suggested.

WHITHER MONETARY POLICY ?

(From Our Own Correspondent)

LONDON, *20th July*

LONDON LETTER

FOR the outside world, the interest in the recent Cabinet changes lies mainly in the extent to which they are likely to influence British monetary policy, credit and the strength of the pound. A week before the Chancellor of the Exchequer, Sir Selwyn Lloyd, was dismissed along with his senior colleagues there were growing rumours of pressure being put on the Government to relax the relative stringency of its financial policy. The dangers of recession were being pointed out and countered with the thought that the Government could use its "economic regulator." This is a high-sounding title for the Government's right, without reference to Parliament, to raise or lower within 10 per cent the various customs and excise duties. Under this power, the Chancellor could, for instance, cut purchase tax by 10 per cent and so help the economy to reflate. Whether in the face of real recession this sort of tax change would be significant is questionable, but the Treasury, of course, can go much further: they can restore to the banks their special deposits thus broadening the credit basis for lending; they could lower the Bank Rate still further and they could make it known that the time of cautious advance generally was past. If all this was not enough, then the Government would have to take even more positive measures to pump money into the economy. However, at the moment this is an academic consideration.

While pressure from business for more credit ease was strengthening, the reactions from the Treasury were unfavourable. They let it be known that the dangers of recession were not regarded as serious and that quite enough movement had been made already towards liberalising credit. The emphasis should continue to be on exports and if shortage of credit was seen to be holding this back then appropriate measures would be taken.

It is, therefore, no small wonder that immediately the news of the first round of Cabinet changes became known we should see, on the one hand, the Prime Minister assuring Mr. Selwyn Lloyd that the policies with which he was associated would continue, while, on the other, the *Daily Express*, for example, coming out joyfully with the news that this was the end of credit restriction and that we were now all set for reflation.

An Odd Conclusion

Immediately a wave of speculation is set loose of what indeed the changes would mean to the country's credit policy. If all the work of Mr. Selwyn Lloyd must be undone at one go, then it would make nonsense of all that the Government has collectively been trying to do for the past year. On the other hand, if his policy were to continue unchanged, then what was the point of getting rid of the man ? Many commentators were forced to the conclusion that it was not what Mr. Selwyn Lloyd had been trying to do that was wrong, but it was the way in which he had been doing it. More bluntly, Mr. Selwyn Lloyd had been associated with an unpopular policy some of which had been ineffective and, while the policy as amended up to date would continue, it was better that the Government should try to project its image without Mr. Selwyn Lloyd's face being seen in it.

Not unnaturally, a host of supporters of the ex-Chancellor (inside Parliament and out) voiced their discontent of this treatment of him. Yet Mr. Macmillan's dilemma is clear: the Government as a whole had lost face in the country and if the Government was to go on and to recover that face it had somehow got to take action. This does not mean that the Government may not have made a tactical mistake in removing Mr. Selwyn Lloyd entirely from the scene (especially as the two men had been so intimately associated both in foreign and fiscal policy for many years) instead of moving him to another post, but it is an indication of the very serious perplexity into which the Leaders of the Government have been thrown by the turn of public opinion against them.

On balance, the country will not suffer at present from easing of credit restrictions. This has been borne out by the effect of the Cabinet changes on the pound in the foreign exchange markets. Obviously, holders of sterling have not accepted the interpretation of the *Daily Express* that the change is a signal for reflation; they have been more impressed by the rise in the U.K.'s gold stocks and the strength of exports. The pound is strong on its own merits. On the other hand, British industry has a good deal of slack which can be taken up. For the moment, the balance of payments is moving firmly in favour of the U.K. and, although the time must come when expansion at home will lead to re-stocking and a growth of imports, that time is too far ahead for holders of sterling to be concerned about it just now.

It will be the new Chancellor's problem to devise a means by which credit can be eased and industry at home expand without it leading inevitably to a new cycle of rising imports, adverse trade balances and a declining pound.

FIXING FAIR PRICES FOR TEXTILES

TARIFF COMMISSION'S PUBLIC INQUIRY

MORE than nineteen months have elapsed since the Government of India announced the terms of reference to the Tariff Commission about the fixation of fair prices for cotton textiles—the announcement was made early in December 1960—but it was only on Monday this week that a public inquiry into the issue was held by the Commission. Such inordinate delay is deplorable and inexcusable. Of course, explanations can always be found. It can be argued, for instance, that the Commission had already had its hands full with the inquiries relating to a number of other industries referred to it earlier and that it could take up the question of textile prices only when its turn came. It can be further argued that the issues involved were numerous and the number of parties concerned was large, so that the Commission had to spend some time for holding separate discussions with producers, labour unions, exporters, etc. A third explanation could be that the public inquiry could not be held before the Commission's cost accounts officers had completed the examination of the production cost of yarn and cloth in 43 mills selected from the different parts of the country. Nonetheless, one cannot help feeling that the delay has been unduly long and the whole object of referring the subject to the Commission has been defeated. If the Commission takes two years only to complete the preliminaries, how much more time will it take to come to grips with the problem and give its recommendations? After this is over, the Government will take its own time to decide the action it should take. In this long interval, much water will have flown under the bridge and the bases on which the Commission came to its conclusions will have become obsolete. One cannot, therefore, help feeling that all this is waste of time and taxpayers' money.

The Government's decision to refer the question of textile prices to the Tariff Commission, it will be recalled, was sought to be justified on the ground that consumers of mill-made goods as also the large number of persons employed in the handloom sector had been hit hard by the impact of high prices. Now that the whole issue of cotton textile prices has come under the examination of the Commission, it will not be correct to say again that there was no need for such an examination. Only, it is to be hoped that, while making its recommendations, the Commission will bear in mind the interests of both the industry and the consumer. Since cloth is produced in thousands of varieties by units of varying standards of efficiency and equipment, as well as locational advantages and disadvantages, it will surely be interesting to see how the Commission will determine the "fair" prices of cotton textiles. The prices fixed should be such as not to retard modernisation of the industry; instead, they should facilitate its growth along lines suited to consumer preferences.

Scope of Inquiry Wide

It may be noted here that the scope of the present inquiry is pretty wide and extends beyond the fixation of fair ex-mill prices of yarn and cloth and evolving of an escalator formula based on a study of the cost trends in the industry. Thus, the Commission has been asked to study the cotton industry's capital structure, pattern of investment and a fair return therefor in the context of the need for continuous rehabilitation and modernisation, the distribution system and costs, etc., and suggest fair ex-mill prices as well as a basis for determining retail prices.

Opening the public inquiry, Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, highlighted the problems confronting the cotton textile industry, with the forceful plea that it was only by boldly meeting the challenge offered by these problems and by ceaseless efforts to step up output and bring down costs that the industry could help raise the standard of living of the common man. The multi-phased role of the industry in the country's economy, he declared, "is no less significant than the vital part it must play in developing our external resources at the present juncture." The problems facing the cotton mills in India are no doubt well known. Nevertheless, Mr. Aiyangar made a fairly detailed reference to them. Such a reference serves two important purposes: to indicate that the problems continue to remain largely unsolved and to give one an idea of the complexity involved in the Commission's inquiry. Mr. Aiyangar's assessment of the problems may be summarised as follows:

Cotton: Cotton constitutes the largest single element in the cost of yarn and cloth production. The textile industry is unable to meet its entire requirements of cotton from indigenous sources and has necessarily to rely on imports. One of the causes contributing towards this is the low yield per acre—just 110 lbs., as against 600 lbs. in Russia, 542 lbs. in Egypt and 446 lbs. in the U.S. The production of superior varieties of long-staple cotton is negligible. Since December 1959, the mills have been buying cotton in accordance with the allotments made by the Textile Commissioner on the basis of consumption in previous years. Control on prices is exercised under the Indian Cotton Control Order 1955.

Labour: The unit labour costs in the industry are generally on the high side and have now been pushed up further following the implementation of the Wage Board award. The Wage Board was of the view that its recommendations regarding the grant of higher wages and the introduction of minimum standards in workloads should be treated as an integral whole. The Textile Commissioner as well as the Indian Cotton Mills' Federation have observed that, although the entire industry, with the exception of a few units, has granted higher emoluments to labour in pursuance of the Wage Board's recommendations, there has not been much progress in the direction of rationalisation of workloads.

Power and fuel: Inadequacy of coal supplies has been the problem with this industry as with several others, particularly in Western India and the South, where there is a greater concentration of units. The question of use of oil as a substitute for coal has not so far been solved on account of the price factor.

Dyes and chemicals: The industry contends that the import policy is frequently changed, resulting in dislocation of production, that the import duties are rather high, that the prices of indigenous products compare unfavourably with those of imported ones, and that local manufacturers do not pay proper attention to the quality aspect.

Depreciation: The normal practice of the Commission is to allow depreciation at income-tax rates while working out the production costs of different commodities. Very few units have followed the "straight line" method. The Indian Cotton Mills Federation has urged grant of depreciation not on original cost but on replacement basis which is to be spread over the residual useful life of the machinery if the machinery still has economic life left. In respect of machinery which is already obsolete or which has exhausted its economic life, the difference between purchase price and replacement price should be allowed over some *ad hoc* number of years, say, the five years of the third Plan period. If the depreciation calculated on the above basis exceeds the amount allowable under the Income-tax Act, it should be grossed up allowing for income-tax which it will have to bear. The Federation, however, feels that, to avoid practical difficulties in calculating depreciation on the above method due to hundreds of units widely varying from one another in respect of the equipment used, the average remaining life of the entire block of machinery of the industry should be assumed for practical purposes as 12 years and the replacement price of the block calculated and spread over this period, and allowed on a straight line method as an element of cost.

Fair return: Since 1958, the Tariff Commission has been allowing as a more correct basis return on employed capital defined as net assets comprising fixed and current assets used in the business less current liabilities and provisions, whereas the industry wants the inclusion of bonus, gratuity and managing agency commission, as well as the linking of dividends to the current value of shares.

Voluntary Price Regulation

Price control on cotton textiles, as readers are aware, is at present on a voluntary basis, but stamping of prices on mill cloth is compulsory. On an earlier occasion, we had pointed out that a section of mills and traders had been circumventing the scheme by way of price manipulations. Attention had then been drawn to the wide difference between the stamped price and the price actually asked for by the retailers. Indeed, the Price Fixation Committee of the Millowners' Association (Bombay) had been urged to investigate the matter and take steps to ensure the satisfactory working of the scheme. That this plea was quite justified will be evident from the complaints to which Mr. Aiyangar alluded in his speech at the public inquiry. Some dealers' associations, according to him, have alleged that the mills have changed 70 to 90 per cent of the varieties merely in order to get higher prices without materially altering the construction particulars and that non-standard varieties are being put in the lower-priced category of popular ones. A few have also complained that the mills are charging premium for popular varieties and that they are thrusting inferior quality cloth along with popular varieties supplied. It will be interesting to know how the Tariff Commission proposes to tackle this problem and devise methods for effecting suitable adjustments from time to time in the "fair" ex-mill prices of textiles so as to allow for major fluctuations in the price of raw cotton and other elements of production cost.

While considering the question of prices, the Tariff Commission has necessarily to take into account the demand factor. The Planning Commission has calculated the total requirements in 1965-66 at 8,450 million yards for domestic consumption and 800 million yards for exports, the estimate of domestic consumption being based on an annual increase of 2 per cent in population and of 2 per cent in *per capita* consumption, the *per capita* availability aimed at being 17.5 yards. Mr. Aiyangar has given the assurance that the Tariff Commission would discuss the various factors that affect the demand for cloth (and yarn) in India and arrive at reasonable estimates of demand for the future. On the question of exports, Mr. Aiyangar referred to the downward trend in the last two years and said:

"It augurs well for the future that the industry is now alive to these problems. The recent decision to export 12 per cent of the turnover of cloth and 3 per cent of turnover of yarn annually, if backed by proper action on the part of the industry, appears to be a step in the right direction to boost our exports and earn much needed foreign exchange. The scheme of the Federation in this regard merits careful examination."

In this connection, Mr. Aiyangar indicated that the Commission would consider some of the suggestions put forward by the Export Promotion Council and the Federation. The suggestions of the former cover installation of additional capacity and production of adequate exportable surplus, adjustment of printing control orders, reduction of freight and inclusion of cotton textiles as an exportable item in all trade agreements, etc., so as to achieve the export target of 850 million yards by the end of the third Plan period. The Federation has also stated that the procedure for grant of import entitlement under the scheme has been slow and that the mills are not able to take full advantage of the scheme. The Federation has further suggested adoption of certain fiscal measures such as adjustment of income-tax and corporation tax, speedy rationalisation and modernisation of processing capacity, to step up our exports.

Third-shift Working

In the course of his speech, the Tariff Commission Chairman touched on certain recent important trends in textile production. These are given below:

The production of medium-type cloth has been predominantly high. In 1961, it touched the figure of 75 per cent, while the production of coarse cloth remained at almost the same level as in 1958. The production of fine and superfine cloth showed a definite decrease. This may have been due to the impact of high excise duties. Since 1956, a noteworthy feature is the steady increase in the production of processed goods. In 1961, 37 per cent of cloth was bleached, 17 per cent dyed and 13 per cent printed, as against 32 per cent, 13 per cent and 9 per cent, respectively, in 1956. As regards the utilisation of capacity, while first and second shifts are being worked at more or less optimum levels, there is a larger potentiality for more intensive working of capacity during the third shift. The non-utilisation of the third shift is due to operational and other difficulties, such as (i) deterioration in quality of fine and superfine fabrics in the third shift, (ii) higher unit labour cost in third shift, (iii) contingency of more retrenchment compensation to workers discharged in case third shift is stopped, and (iv) unfavourable attitude of labour towards the third-shift working. The Tariff Commission proposes to discuss with the industry and the labour representatives the ways of raising output to capacity production by working on three shifts.

Whatever be the causes for the non-utilisation of the third-shift, the question is whether it is feasible. For the efficiency of third-shift working, as Mr. Bharat Ram, Chairman of the Federation, pointed out during the discussions at the public inquiry, is lower, the actual output being not in proportion to the hours worked. In his considered opinion, the mills can be induced to work the third-shift only if the profit-margin is reasonably higher than the increase in costs estimated at 6 to 8 per cent for cloth and about 5 per cent for yarn. Even so, one wonders whether it is at all desirable to work the third-shift from the human angle and from that of wear and tear of machinery and equipment. Surely, the problem of catering to the expanding requirements of cloth in the coming years cannot be solved through such emergency measures. The solution lies in allowing the mill sector to expand its capacity and modernise its equipment.

PROFITS OF COTTON MILLS DECLINE

GOVERNMENT URGED TO TAKE POSITIVE ACTION TO IMPROVE CONDITIONS

From Our Special Correspondent

MANCHESTER, 17*th July*

LATEST production figures from the Lancashire cotton industry show output per working day at a level 14 per cent below the 1961 peak, according to the figures issued in Manchester by the Cotton Board. Admitting that there were no signs of improvement in the situation, the quarterly review issued by the Board said: "Order books have shrunk further in the last three months, stocks of finished products in the mills have closed down, and the drift of workers from the industry has accelerated."

MANCHESTER LETTER

Despite a substantial running down of stocks beyond the weaving stage, the end of the de-stocking process has been postponed by disappointing spring and early summer weather. Retail sales of clothing, says the review, were appreciably lower in March and April than in the second half of 1961 and the first two months of this year. Knitted goods appear to be gaining ground at the expense of woven goods.

Main features of the pattern of imports in the first quarter of the year were a substantial increase in arrivals from India and a smaller rise in shipments from Hong Kong. In the case of cotton yarn, imports from Hong Kong have expanded notably and are now second in volume to receipts from India. Arrivals of man-made fibre piecegoods remain at a higher level, with the United States and Italy the main suppliers.

Cycle Out of Step

Looking at the situation from a wider angle, the Cotton Board comments on the frequency with which the textile cycle in North America is out of step with that in Europe. "One result is that fluctuations in cotton yarn production in the non-Communist world as a whole are much smaller than fluctuations in individual countries," the report adds. To illustrate these somewhat contrary movements, the latest figures show that cotton yarn output in the United Kingdom and Continental Western Europe was well down in the early part of 1962 as compared with last year, except in Italy and Spain. In contrast, production in India, the United States and Canada continued to register substantial increases.

Last year's setback in world trade in cotton cloth continued in the first quarter of 1962 with marked reductions in exports from the United Kingdom. Japan, India, Germany, the Netherlands and Spain. The only major exception to the general rule was Hong Kong "where massive shipments to the United States helped to boost exports of cotton piecegoods to record levels."

Pressure on Profits

The long lull in demand, the equally long period when machinery was gradually slowing its rate of activity, and the subsequent pause during which distributors have sat back and awaited developments have all combined to make sharp inroads on the earnings of virtually every company in the Lancashire cotton trade. Margins have become so squeezed as to be almost non-existent, and this unfortunate tendency is now being reflected in a series of less satisfactory balance-sheets.

Many companies which make up their books to the end of March have lately issued figures showing a marked deterioration in profitability. Isolated cases have arisen where the returns show losses, and some discouraging interim statements have been issued.

Sharp Reverses

One of the sharpest reverses so far has been provided by John Duckworth and Sons, the Blackburn weaving firm, whose profit of nearly £40,000 a year ago has been transformed into a loss of practically double that sum. Another firm whose results show a distinct reversal of fortunes is the Marland Spinning Co., whose profit of £9,000 last year has been turned into a deficit of over £21,000.

Hollas Textile Holdings, the Bolton weaving group, is also just on the wrong side of the account, with a loss of nearly £1,700, as against the previous year's profit of £30,000. So, too, is Stott and Smith, Ltd., whose profit of £43,000 has turned into a loss of £3,500. Simpson and Godlee, the old-established merchanting firm, has to turn back the records to 1953 to find a year when a comparable deficit, now amounting to £102,666, was sustained.

Another big company to record unfavourable trading is Cyril Lord Ltd., whose activities in the carpet trade have been so widely publicised. For the first nine months of the current financial year, a loss, as yet undisclosed, has been incurred and no change is anticipated in the final quarter.

Interims Passed

In the meantime, guidance as to future financial trends must be taken from the decisions of certain cotton mill companies—Werneth, Coldhurst, A. and A. Crompton, all in the Oldham area—not to pay interim dividends. In the case of Belgrave Mills, the interim has been sharply reduced, while Joshua Hoyle and Sons, the big spinning and weaving combine, has halved its interim payment, announcing at the same time that even this dividend has not been earned.

The major companies in the trade have been equally affected by the long period of restricted offtake. Comment has already been made about the very noticeable decline in the earning capacity of the Lancashire Cotton Corporation during the first half of the current financial year. The Fine Spinners and Doublers group has also suffered severely, with net profits down from £1,095,000 to £511,000.

The predominantly weaving combine of Taylor and Hartley, Ltd., has also reported substantially reduced earnings at £297,000 against £453,000. In the finishing branch, the experience of British Cotton and Wool Dyers has mirrored firms in spinning and weaving, as net profits have declined from £141,000 to £108,000.

Prepared for the Worst

Shareholders who have staked some of their capital in textiles, and particularly cotton mill ventures, must by now be inured to the rapid changes of fortune within the trade. If they know anything about their subject, they will already have been prepared for the worst, but the picture painted by the above figures is not quite as black as it seems. In most cases, tax charges have been reduced, while depreciation allowances have been maintained, and even occasionally increased.

Reserves built up during more prosperous years have been used to avoid a severe erosion of dividends. The cash position over the trade as a whole is essentially sound, and assets are well in excess of current liabilities. Even so, the outlook is far too obscure at the moment for any semblance of complacency, and an improvement in the level of demand and the volume of business is urgently needed.

Government Must Act

Warning of a "flood of textiles from low-cost producers" the General Federation of Trade Unions said in a report: "Clearly, unless some positive action is taken at Government level to stop the present trend, Lancashire will be able to draw only one conclusion—that the cotton industry is expendable." There was no wish to restrict the development of countries with miserable standards of living, but "we must ask ourselves whether or not this country should be alone among the industrial nations to accept what amounts to the free and almost unlimited entry of cheap cotton goods." The report added: "If our cotton industry is to have a future at all, there must be some grounds for confidence to encourage the recruitment of workers and the investment of capital."—*All Rights Reserved.*

Chemicals help Industry to bring a better future closer

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Antioxidants improve resistance, prevent early cracking, give increased flexibility

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON
is a Registered Trade Mark

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay-1. Also at: Calcutta, Delhi and Madras.

MORE ON RAW SUGAR MANUFACTURE

MR. EDWARDS SOUNDS NOTE OF CAUTION

AS was hinted in these columns last week, the Conference of sugar technologists, specially convened at New Delhi on the 18th inst. to consider the proposal to manufacture raw sugar for export, has lent its support to the move. Details regarding the deliberations of the Conference, held under the presidentship of Dr. D. R. Narang, a well-known sugar technologist, are not available at the time of writing. It is, however, gathered that the consensus of opinion among technologists was that there should be no difficulty in producing raw sugar in the case of sulphitation factories equipped with modern defecation and filtration equipment, as well as high-speed centrifugals. Since the methods employed have more or less been standardised in all the raw sugar producing countries, there would be little difficulty, it was felt, in adopting the same methods in many factories in India too. Nevertheless, the Conference underlined the need for working out technical details and production cost. This will be done at a joint meeting of technologists and sugar mill interests at Kanpur next week-end (Saturday, 4th August).

On the day following the Conference of sugar technologists, the Committee of the Indian Sugar Mills Association met at New Delhi and decided that 200,000 tons of raw sugar should be manufactured (for export) in the coming season. Japan alone was expected to buy one half of this quantity. The Committee also decided to request the Central Government to permit the manufacture of 10,000 tons of raw sugar in the current season itself and export it by September-October, that is, before the commencement of the new crushing season. The grain size of raw sugar, according to the Committee, would have to be D and E, as it would not be possible to manufacture raw sugar having 96° Pol. or above with smaller grain. Other countries manufacturing raw sugar, we are told, adopt simple defecation and lining process. Considering this and since it is convenient for the Indian sugar mills to follow the single sulphitation curing process, it remains to be seen if the product would be acceptable to the foreign refiners. The I.S.M.A. Committee says that, ordinarily, there should be no difficulty, though it admits that the factories which have adequate boiling house capacities and make bold grains may not find it attractive to produce raw sugar. The reason adduced is that the premium being paid by the refiners, though it is 1.4 per cent for each unit rise above 96° Pol., is restricted to 98.8° Pol. and is much below what is being realised for bolder grains at present.

Overseas Order

Even as the sugar industry is considering steps to be taken to ensure production of raw sugar for export, a leading international firm of sugar dealers is reported to have submitted a proposal to the Government of India offering to enter into a contract for the purchase of 200,000 tons of raw sugar annually for the next three years. While the proposal has generally been welcomed, it is felt that the specifications for raw sugar laid down by the firm are rather rigid and that they must be made elastic enough to facilitate easy manufacture and export.

From the foregoing account, it looks as though the I.S.M.A. scheme of raw sugar manufacture for export—details of which were given in our last issue—will be implemented. It was but appropriate, therefore, that Mr. F. Edwards, the retiring President of the Deccan Sugar Factories Association, should have made a special reference to this issue in his speech at the twenty-third annual general meeting of the Association held at Bombay on Monday this week. He sounded a note of warning that a wrong decision would only create new problems without solving old ones. Elucidating this point, he observed:

"Since all the sugar factories in the country are equipped to produce only white sugar, a changeover to raw sugar would necessitate alterations and additions to the existing machinery equipment. Again, all the raw sugar produced in the country would have to be exported, since there are no refineries in India. Moreover, since raw sugar deteriorates very quickly, special types of godowns for storing it would have to be constructed and steps taken to ensure its speedy export. It is, therefore, very doubtful whether sugar factories in India would be able to produce raw sugar as cheaply as other countries where factories are equipped to produce raw sugar exclusively."

Mr. Edwards has thus stated briefly but impressively the problems involved in the manufacture of raw sugar for purposes of export. If he has not been more elaborate, it may, perhaps, be due to the feeling that both the North Indian sugar interests and the Government of India are determined to go ahead with the scheme. Incidentally, the net saving that can be achieved in raw sugar production would be negligible in the case of factories having a high recovery per cent of sugar as, for instance, the majority of sugar mills in the Maharashtra State. The average recovery in these mills is as high as 11.50 to 11.75 per cent. It is true that the recovery of raw sugar from a given quantity of cane will be above this average recovery of white sugar, but the saving in the former will be negligible. Some put it at no more than Rs. 10 per metric ton. Only in respect of sugar mills with poor recovery of white sugar, such as the one with a recovery of just 8.7 per cent which Mr. R. C. Aitkin has taken in his article referred to in these columns last week, the saving would be somewhat substantial. Considering that the saving in the cane cost per maund of sugar is reduced with better quality, it would be better if the scheme of raw sugar production were confined only to mills having low recovery of white sugar, instead of being compulsorily enforced on *all* the mills.

Cane Cess Refund

Besides raw sugar manufacture, Mr. Edwards alluded in his speech to other problems of sugar industry also, especially those pertaining to the Deccan mills. It is surprising to hear from him that the Maharashtra Government has still not refunded the cess amounts to the mills on sugar exported during the years 1958-59, 1959-60 and 1960-61. That surely speaks volumes about the efficiency and sense of fairness of the Government of Maharashtra. Prolonged correspondence with the State Government, we are told, has only evoked the response that the Government is seeking clarification on certain points from the Centre and that the refund would be made after the clarification is received. Why has it taken nearly four years for the Government of Maharashtra to seek a clarification, if such were at all needed? The refund of cane cess is, of course, not given statutory enforcement; the Sugar Export Promotion Act 1959 does not contain any provision for such refund. But all State Governments have accepted, at the recommendation of the Centre, the commitment to refund the cane cess levied on sugar delivered to the Export Agency by the factories as per the orders of the Union Food Ministry. What complication is there in granting the refunds immediately after the delivery of the sugar (against export quota) supported by a certificate from the Export Agency? Even assuming that there is some complication, does it require more than three years to be solved? Mr. Edwards was only mildly candid when he remarked that the delay "is a sad commentary on Government administration."

A brief reference to the general trends in India's sugar economy was made by Mr. Edwards. The current season, according to him, would end with a surplus of about the same quantity as that held in stock at the beginning of the season, that is, 1.15 million tons, with production, domestic consumption and exports estimated at 2.7 million tons, 2.4 million tons and 300,000 tons, respectively. Mr. Edwards made it clear that this surplus problem would not be solved quickly, unless steps were taken to stimulate home consumption by bringing down the sugar price. Such a reduction, in his considered opinion, was possible only by lowering the present high excise duty of Rs. 10.70 per maund. Anyone who cares to analyse the different elements that constitute the sugar price will fully appreciate the force of this contention. As Mr. Edwards recalled, the cost structure of sugar is very rigid. The cane price, which accounts for nearly three-fourths of the total production cost, is controlled by Government and the wages of labour are regulated by the Wage Board. Since the scope for effecting a cut in production cost is thus very limited and considering that the position has radically changed since 1957, when the excise on sugar was raised by Rs. 4.12 to Rs. 10.70 per maund with the specific object of restricting internal consumption in order to create an export surplus, there is no justification for continuing the excise duty at the enhanced rate.

Cane Price Formula

The President of the Deccan Sugar Factories Association also touched on the recent decision of the Central Government to fix cane price for the 1962-63 season based on recovery. He welcomed this move as one in the right direction, but did not critically examine whether or not it was adequate to eradicate the chronic ills of our sugar industry. He merely added that the Maharashtra Government had been fixing cane prices on recovery basis for the last few years and hoped that the desired effect of improving the quality of cane grown would be achieved.

A striking feature of Mr. Edwards' speech is provided by the brief reference to the growth of sugar industry in Maharashtra in the past five/six years. He said:

"The number of working sugar factories in the Maharashtra State increased from 15 in 1955-56 to 27 in 1961-62 and the sugar production increased from 195,000 tons to nearly 500,000 tons during the same period. The Maharashtra State has now not only become self-sufficient in sugar but has become a surplus State. Consequently, the freight advantage which the sugar factories in Maharashtra enjoyed in the past no longer exists. Again, with the implementation of the Land Ceilings legislation by the State, the sugar factories will be deprived of their extensive cane farms and they will have to purchase all their cane requirements, like their counterparts in the Northern regions."

The above extract shows how the competitive capacity of sugar mills in this State has changed *vis-a-vis* those in other States. In these circumstances, whatever justification was there when the Wage Board fixed the highest wage scales for workers in Maharashtra will, as Mr. Edwards stated, no longer exist. It is needless to add that, if these scales were allowed to continue, the competitive capacity of the Deccan sugar mills "will be taxed severely." In other words, this means that the advantage of low-cost sugar production which the Maharashtra mills were enjoying hitherto as compared with their counterparts elsewhere has almost ceased. And it may completely cease when the Maharashtra Government takes over the sugarcane farms under the Land Ceiling legislation. It is not known when this takeover, which is nothing short of expropriation, will materialise. The Government having made no move so far, Mr. Edwards could not naturally throw any new light on this development in his speech. Some, however, are hoping that the enormous difficulties in the way of implementing the scheme against the Deccan sugar factories will induce the Government to modify it drastically in favour of the factories, if not drop it altogether. This, however, is sheer wishful thinking and a gross underestimation of Mr. Y. B. Chavan's will-power. At any rate, the continued neglect of sugar shares on the Bombay Stock Exchange even at levels which are a far cry from those that prevailed before the Maharashtra Government went at the Deccan sugar mills suggests that no investor is yet prepared to entertain such a hope.

CO-OPERATIVE SUGAR MILLS

Out of the 56 co-operative sugar factories (with an aggregate daily cane crushing capacity of 55,500 metric tons) so far licensed, 33 units (total crushing capacity amounting to 31,400 tons) were in production during the 1961-62 season, as against 30 units (28,900 tons) in the previous season, according to a recent review of the National Federation of Co-operative Sugar Factories Ltd. There was no quota restriction on the output of six co-operative sugar factories. The other 27 factories were originally allotted a total production quota of 450,000 metric tons for 1961-62. Due to various reasons, the quotas of some of the factories were revised later, giving an additional quota of 10,308 tons.

As on 31st May 1962, only two factories were in production and all the other 31 factories had been closed. The 33 working co-operative sugar units together crushed in the season 4,235,000 metric tons of cane, with an overall sugar recovery of 11.01 per cent (excluding Amadalavalasa, Tuni and Gandevi which had only a trial crush) and produced 466,000 tons of sugar upto 31st May 1962. In the previous season, 30 working co-operatives had crushed 4,152,000 metric tons of cane with a sugar recovery of 10.74 per cent (excluding Madurantakam, Karad and Sankeshwar which had only a trial crush) and produced 442,000 tons of sugar. A notable feature is that the average recovery per cent of co-operative sugar factories in each State was higher this season than in the previous season except in the Punjab. The Malegaon and Karad co-operative factories in Maharashtra have secured the first and second place, respectively, their recoveries being 12.82 per cent and 12.77 per cent.

THE DRIVE TOWARD ECONOMIC DEVELOPMENT

By Dean Rusk

U.S. SECRETARY OF STATE

PART I

WHY THE FREEDOM WAY IS BETTER THAN THE COMMUNIST WAY

THE drive toward economic development is essentially a product of the Western technological revolution. It was this revolution that provided man with the capacity to emerge from centuries of poverty and hunger and ignorance. And it was also this revolution that awakened man's realisation that such capacity was within his grasp.

Suddenly, in the years following World War II, it became apparent that the vast unbridgeable gulf between the rich and poor nations had become a wall of glass. On one side of that wall were the capital, the scientific advances, the technological skills of the industrialised nations; and, on the other, the poverty and hunger and the fierce desire for a better life of the great masses of the underdeveloped continents.

The shattering of that wall, the application of the tools and wealth of the industrialised nations to the needs of the poorer nations became, and still remains, the central issue of our time.

We have confronted this problem with the new tools of economic aid, national planning, and social reform. Yet it is clear that the successful completion of this task will require new breakthroughs of thought and action—the devising of new tools and techniques for the creation of capital and credit, for trade and the spread of technology.

We will have to look afresh at all the institutions and procedures we have developed to speed up growth within each country of wealth and productive capacity. For only new efforts of imagination and intellect will enable us to shatter the glass wall and liberate the undoubted capacity of our society to bring, and bring rapidly, a better life to man.

In the harnessing and encouragement of the drive toward economic development, free societies possess a great advantage. For it is the free societies that first set loose this force; that first developed the technological capacity to improve the material welfare of man; that first illuminated the prospects of a better and more abundant life for the people of the world.

It is our science, our methods of distribution, and our economic techniques that have lifted man into the industrial age. The history of the past 20 years has demonstrated clearly that economic development can best be achieved within the context of a free society unhampered by the ponderous arrangements of a nineteenth century Marxist doctrine framed for another age and another set of conditions.

At the close of World War II, many nations, their economies shattered by the war, began the task of reconstruction and economic growth. Some began this development within the constitutional framework of a free society. Others, subjugated by military conquest or armed revolution, took the communist road to economic progress. Today, 17 years later, the results are becoming clear. They can be seen in the dramatic picture of a free, prosperous Western Europe confronting the drabness of Eastern Europe. They can be seen in the performance of a Japan which has reached new heights of prosperity as the fastest growing nation of the world, over against the hunger and starvation which afflicts the vast population of communist China. And they can be seen in Cuba where the decline in agricultural production, the introduction of food rationing, and the drop in real incomes illustrate the emptiness of communist claims that they hold a magic key to rapid development.

We take no satisfaction from economic distress, under whatever system it exists. But it is relevant to point out that communist techniques have not produced the promised results, despite appalling prices in human values paid for economic development. During the 1950's, after basic war damage had been largely repaired, the Soviet Union's economy grew at a rate of six and one-half per cent; it was a good performance but it was exceeded by many free countries, including West Germany, Austria, Japan, and Venezuela. Even with a slower rate of growth, the United States during the 1950's increased the absolute gap between its economy and that of the Soviet Union. At current projections for 1961-70, the absolute gap will continue to widen, as the United States adds more than $300,000 million to its annual Gross National Product, while the Soviets add a possible $170,000 million to theirs.

All told, over the next nine years, the nations of the Sino-Soviet bloc can expect to add $300,000 million to their Gross National Product, while the nations of the Atlantic community and Japan will add more than $500,000 million. These statistics, even with allowances for the vagaries of statistical analysis, clearly demonstrate that no communist society has found a magic formula for economic growth; and that rapid progress can readily be achieved by a free society.

Even more important than the statistics of economic growth are the uses to which this increased abundance has been put. For our aim is to improve the welfare of people—to relieve human want and misery—not merely to pursue increased output as an end in itself. The economic history of the communist bloc is clear and dramatic proof that the communist route to development, effective as it may be in increasing national power, is the least effective means of raising the living standards of individual men and women. This is most dramatically illustrated in the Soviet Union itself, the focal point and pride of communist development.

Most significant has been the sluggish performance of communist agriculture. Throughout the entire communist world, the doctrines of Marx have been proven incapable of mastering the techniques of modern food production and providing an abundant diet.

Almost half of the Soviet work force is engaged in agriculture, as compared with nine per cent of the American work force. But the average American, according to the Department of Agriculture, has at his disposal three times as much fresh fruit, eggs, and edible fats and twice as much meat and sugar as the average Soviet citizen.

In recognition of this agricultural problem, Chairman Khrushchev recently warned—30 years after collectivisation—that "the entire economy can be wrecked if the lagging of agriculture is not noticed and overcome in time."

Across the communist world the story is the same. Eastern Europe, which in pre-war years was a net exporter of grain, has in recent years had to import five million tons of grain. Production of grain in communist China in 1960 was actually less than in 1957, although the population had meanwhile increased by almost 60 million. In other vital areas, too, the failure of communist economies to meet the basic needs of human welfare has been dramatic.

The real wages of non-agricultural workers in the Soviet Union in 1958 were calculated at 95 per cent of their wages in 1928—a decline of five per cent over a period of 30 years. At the end of 1960 the housing space available to the average Soviet urban dweller was about equal to what he had under the Tsars. Other consumer durables are even scarcer, making it clear that the promised abundance of Soviet communism is still far in the future.

In the rest of the communist bloc, economic growth has not been translated into higher standards of living.

In Czechoslovakia, the most prosperous of the Eastern European countries, it took the average industrial worker in 1957 longer to earn enough to buy a pound of butter than it took him in 1937. Only Czechoslovakia among these countries has an average living space greater than the nine square metres established as a minimum by nineteenth century hygienists.

In communist China and North Viet-Nam, millions are struggling to avoid starvation on subsistence incomes, with other comforts forgotten in the struggle for survival.

Behind these statistics and comparisons, lie two central facts: that communist societies are not capable of more rapid economic growth than free societies; and that they are far less able to translate growth into substantial increases in human welfare.

To those whose desire for development stems from concern for the welfare of the individual, and not solely from desire for national power, it is clear that the path of freedom offers the best and most effective route to progress.

PART II

THREE REQUISITES FOR MODERNISATION

The drive for economic development finds its best model and exemplar in those free societies which gave it birth. However, the free nations are now faced with the problem of evolving a set of policies and tools which will enable us to carry forward the same development in the rest of the world.

Since World War II, the United States has devoted greater resources to the assistance of others than any other nation in the history of the world. These resources have helped to sustain economies in many parts of the world, have met emergency human needs, and assisted nations to launch programmes of development.

Yet we must also admit that some of this money has been ineffective. Some of it has disappeared, vanished without a trace of permanent effect on the lives of the people it was meant to help.

It was this experience that has taught us that solid development is not possible without at least three basic conditions.

First, no nation can develop unless it possesses its own inner determination to progress.

This means the mobilisation of national resources and energies, the use of national institutions, and, above all, an intangible dedication of national spirit and will—a single-mindedness of purpose, and an unrelenting determination which is essential to all great human achievements, and without which development is not possible.

If this condition is present, then external resources can give a vital, if marginal, boost. If they are not present, then no amount of external help will leave a permanent trace on the life of the nation.

No free nation will demand of its people the sacrifices which the communist nations demand —the loss of liberty and the rigorous regimentation of daily life. Such sacrifices destroy the goal of freedom for man; they are unnecessary even in economic terms and do not yield progress.

But neither can we make the assumption that economic development is painless; that it can be achieved without arduous labours and sacrifice; it may require increased taxes, or the yielding up of large estates, curbs on consumption, or the barring of luxury imports.

But such sacrifices are mild, indeed, as compared to the communist alternatives and they will ultimately yield greater abundance for all.

This first condition, under the name of self-help, is an essential component of the Alliance for Progress and of economic development everywhere.

Second, no real economic development, consistent with the goals we have set ourselves, is possible without a social structure which permits the great mass of people to share in the benefits of progress; and which affords each man the fair expectation of social justice. This often means basic, even revolutionary, changes in the structure of society.

Outmoded systems of land tenure which allow a few to hold great estates while most agricultural workers are landless must be swept away. Tax systems which exempt the wealthy from their just share of the burden of development must be revised. And all the institutions of society must be carefully scanned to ensure that they are not instruments for maintaining the privileges of the fortunate few.

Some of these changes are necessary for rational development. But many of them do not find their justification in the calculations of economists or the formulations of planners.

They are vital, because no Government and no nation can carry forward the process of development without the support and help of its people. And people will only give their assistance when they are convinced that the Government is serving their interest, that they are not being exploited on behalf of a minority, and that they and their children will have equal access to land, jobs and education.

People can be called upon for the sacrifices which development demands when they are convinced that everyone is sharing these sacrifices, and that there will be a just distribution of the progress which sacrifice brings.

I am fully aware that these fundamental social reforms are not made without controversy. We are deeply committed to democratic processes and we know from our own experience that economic and social reform involves vigorous debate, time, and adjustment of contending views. The great human forces which have unleashed the drive for development in the last several years also demand social justice as a part of that development.

The *third* requisite for development is also the most obvious; the human and material resources necessary to permit a nation to build the basic economic structure which will produce long-term growth.

In our rush to create new capital, we often neglect the importance of the human resources necessary for economic development. But factories and roads and bridges will not be built without men to plan them, to engineer them, and to manage them.

The programming of economic development itself requires the application of a hundred skills; and the implementation of these plans requires thousands of men to run the factories, teach new methods to the farmer and guide the public administration of the developing society. The history of economic progress in all countries is proof that general education, and the development of skills, are the most productive long-run investment which can be made in the future of any nation.

Let me say a word here about the element of time. It is a truism to say that each nation has consumed centuries in getting to where it is today. But, in development, decades or even centuries can be jumped over, because of the transferability of knowledge and technical skills.

With the fulfilment of these three conditions and with unremitting effort by all of us, we can ensure the success of the Alliance for Progress. And, with these same instruments, we can also help bring a better life to men and women in other parts of the world.

Note: *This article is based on Mr. Rusk's address before the School of Advanced International Studies of John Hopkins University on 25th April, 1962.*

I.M.F. OPERATIONS

The International Monetary Fund has continued to play an active financial role through the first half of 1962, following its record operations of last year. Members' use of the Fund resources has been larger, in fact, during the first six months of this year than was the case in the same period of 1961. Their drawings on the Fund from 1st January 1962 through 30th June 1962 amounted to $475 million, and new stand-by arrangements to $570 million. Last year, the figures for the corresponding period were $418 million and $385 million, respectively.

The drawings during the first six months of 1962 were made chiefly in European currencies and pounds sterling. The Fund's holdings of United States dollars have increased by $280 million since 31st December 1961, as members' repayments in dollars recently have exceeded new drawings in U.S. currency. On 30th June, the Fund's holdings of U.S. dollars were $2,715,687,000, or $378,063,000 less than the U.S. currency subscription to the Fund, which is $3,093,750,000. The rest (25 per cent) of the $4,125,000,000 U.S. quota in the Fund was paid in gold.

The $2.5 billion total of members' drawings during 1961 was swollen by a $1.5 billion transaction in August with the United Kingdom, whose obligation to the Fund has since been reduced by substantial repayments and by drawings of sterling by other members. It was lowered to $531 million on 24th June, when the Government of Canada obtained $100 million in sterling as part of a $300 million drawing in five currencies. The balance of the Canadian drawing was comprised of $80 million in deutsche mark, $80 million in French francs, $20 million in Belgian francs and $20 million in the Netherlands guilders.

IFOC-16

Mr. Al Foil Packs Dairy Products to Perfection

Aluminium Packaging keeps Dairy Products full-flavoured, fresh and uncontaminated right up to the consumer's table.
Al Foil completely seals out light which causes rancidity in butter; retains the moisture balance in butter, cheese and margarine and prevents 'freezer burn' when storage in the frigidaire is necessary. That's why dairy packagers choose Al Foil for product protection.

THE TATA OIL MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FORTY-FOURTH ANNUAL GENERAL MEETING of THE TATA OIL MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, on Thursday, the 16th August 1962, at 4-00 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1962.
2. To declare dividends on Preference and Ordinary Shares.
3. To appoint a Director in place of Sir Chunilal V. Mehta, who has attained the age of 81 years and who retires by rotation and to consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Sir Chunilal V. Mehta, who has attained the age of 81 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To appoint a Director in place of Mr. D. R. D. Tata, who retires by rotation and is eligible for re-appointment, and to consider and, if thought fit, to pass the following resolution as a special resolution in respect of which a special notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. D. R. D. Tata, who retires by rotation and is eligible for re-appointment and who is a director, officer, member and an associate of Tata Industries Private Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an Ex-Officio and a Special Director to the Board) be and is hereby re-appointed a Director of the Company."

The reasons which make the above resolution necessary are as follows:—

The Managing Agents of the Company, Tata Industries Private Limited, are authorised by the Articles of Association and the Managing Agency Agreement to appoint an Ex-Officio and a Special Director to the Board. Since Mr. D. R. D. Tata is a director, member, officer and an associate of the Managing Agents, his appointment as a director of the Company, who retires by rotation, can be made only by a Special Resolution of the Company in terms of Section 261 of the Companies Act, 1956. Mr. D. R. D. Tata joined the Board on 27th December 1949 and has for the last several years been associated, as one of the Directors of the Managing Agents, with the management of the affairs of the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a Member of the Board, it is desirable that he be re-appointed a Director.

5. To consider and, if thought fit, to pass, with or without modification, the following resolutions as Special Resolutions:—

(1) "RESOLVED that 1,25,000 shares out of the 4,00,000 unclassified shares of Rs. 25 each be and are hereby classified as ordinary shares and the Articles of Association of the Company be altered in the manner following:

Substitute the following Article for Article 4:—

'The present capital of the Company is Rs. 2,50,00,000 divided into 30,000 cumulative preference shares of Rs. 100 each, 4,25,000 ordinary shares of Rs. 25 each, 45,000 unclassified shares of Rs. 100 each and 2,75,000 unclassified shares of Rs. 25 each.'"

(2) "RESOLVED FURTHER that out of the 1,25,000 ordinary shares just classified out of 4,00,000 unclassified shares and the existing unissued 19,701 ordinary shares, making a total of 1,44,701 unissued ordinary shares, 1,40,150 ordinary shares be issued upon the following terms and conditions:—

(a) Such further 1,40,150 ordinary shares shall be issued and offered at a premium of Rs. 15 per share to the holders of the existing ordinary shares on the Register of Members of the Company on such date as may be fixed by the Directors (with the right to renounce in favour of a person or persons approved by the Directors) in the ratio as nearly as circumstances admit, of one further ordinary share to two existing ordinary shares held by such holders respectively, fractions, if any, of one further ordinary share, issuable on this basis being disregarded (provided that a holder of only one existing ordinary share shall be entitled to be offered one further ordinary share) with option only to such of the aforesaid holders, as do not renounce their rights in whole or in part, to apply for additional further ordinary shares, the allotment of which shall be made on an equitable basis by the Directors with reference to the shares already held by such applicants and such offer shall be made by notice specifying the number of further ordinary shares which each holder of the existing ordinary shares shall be entitled to apply for and take up wholly or in part and limiting the time within which the offer, if not accepted, shall be deemed to have been declined, with liberty to the Directors from time to time to extend the time for acceptance as aforesaid, either generally or in respect of any particular holder or holders.

(b) The full amount of Rs. 40 per each further ordinary share (made up of Rs. 15 on premium account and Rs. 25 on capital account) shall be payable to the Company on application for such further ordinary shares as aforesaid.

(c) The further ordinary shares shall not confer on the holders thereof the right to the dividend, if any, declared at or prior to the Annual General Meeting to be held in the year 1962, but shall entitle such holders to rank as from the date or dates of allotment thereof to all dividends declared after such meeting in proportion to the capital for the time being and from time to time paid up on such shares during the account year in respect of which the dividend is declared and such further ordinary shares shall, for all other purposes, rank *pari passu* with the existing ordinary shares of the Company.

(d) The Directors be and are hereby authorised and empowered to dispose of and allot any of the said further ordinary shares not taken up by the holders of the existing ordinary shares entitled thereto or remaining undisposed of to the applicants for additional shares on an equitable basis with reference to the shares already held by them provided that the shareholders who renounce their rights in whole or in part to the further ordinary shares, shall not be entitled to any additional shares. Any balance still left unallotted may be disposed of at the ruling market price or at the issue price, viz. Rs. 40 per share whichever is higher.

(e) The certificates in respect of the further ordinary shares shall be completed and ready for delivery within 9 months from the last allotment of such further ordinary shares.

(f) For the purpose of giving effect to this resolution the Directors be and are hereby authorised to prescribe the forms of application and renunciation and other documents in respect of such further ordinary shares and to give such further directions as they may think fit, including directions for settling any question or difficulty that may arise in regard to the issue and allotment of the further ordinary shares."

6. To consider and, if thought fit, to pass the following resolution:—

"RESOLVED, by way of modification of the second part of the Resolution passed at the Extraordinary General Meeting held on the 30th day of November 1959, that the further 5,000 Debentures of Rs. 1,000 each mentioned therein or any part thereof, which the Directors may at any time or times hereafter decide to create and issue for securing such further sum or sums not exceeding the aggregate sum of Rs. 50,00,000 as they may think fit, shall carry interest at the rate of 6½% per annum (subject to income-tax) instead of 6% per annum (subject to income-tax)."

7. To consider and, if thought fit, to pass the following resolution:—

"RESOLVED that, subject to the Consent of the Central Government under the Capital Issues (Control) Act, 1947, in that behalf, the Company hereby consents to the modification of and authorises the Directors to modify, the rights of the holders of the existing 5,000 Debentures of the Company (a) that as from the date on which the further 5,000 Debentures or any part thereof be issued by the Company, the rate of interest payable on the existing 5,000 Debentures be increased from 6% per annum (subject to income-tax) to 6½% per annum (subject to income-tax), and (b) that the date of maturity of the existing 5,000 Debentures be extended from the 30th day of September 1974 to such date later than the 30th day of September 1974 as the Directors may in their absolute discretion decide upon and as may be approved by a resolution of the holders of the 5,000 existing Debentures, with liberty to the Company to redeem the whole or any part of the 5,000 Debentures at any time or times after such later date than the 1st day of October 1969 as the Directors may in their absolute discretion decide upon and which may be approved by a resolution of the holders of the existing 5,000 Debentures, on giving six calendar months' notice in writing to the Trustees of the Trust Deed dated the 24th day of December 1959 whereby the existing 5,000 Debentures are secured, in the manner provided in clause 4 thereof AND that a Supplemental Trust Deed, for effecting the abovenamed purposes, in such form as may be deemed requisite or expedient by the Directors and may be approved by the Trustees of the said Trust Deed, be executed by the Company."

8. To consider and, if thought fit, to approve the provisions contained in the draft of the new Objects Clause III of the Memorandum of Association of the Company to be submitted to the Meeting, and for the purpose of identification subscribed by the Chairman thereof, with such modifications, if any, as may be agreed to at the Meeting and to pass the following Resolution as a Special Resolution:—

"RESOLVED that the provisions contained in the draft of the new Objects Clause III of the Memorandum of Association of the Company submitted to this Meeting and for the purpose of identification subscribed by the Chairman thereof be and is hereby approved and adopted as the new Clause III of the Memorandum of Association relating to the objects of the Company in substitution for and to the exclusion of the existing Clause III thereof relating to the objects of the Company."

9. To consider and, if thought fit, to pass with or without modifications, the following resolution as a Special Resolution:—

"RESOLVED that pursuant to the provisions of Sections 356 and 360 and other applicable provisions (if any) of the Companies Act, 1956, and subject to the approval of the Central Government under Section 360 and other applicable provisions (if any) of the aforesaid Act and to such modifications (if any) as may be required by the Central Government and as may be agreed to by the Board of Directors of the Company which the Board of Directors is hereby authorised to do, the Company hereby approves of and accords its consent to the appointment of Tata A.G. of Zug, Switzerland, which company or corporation is or is deemed to be an associate of Tata Industries Private Limited, the Managing Agents of the Company, as the Sole Selling Agents in Europe of goods produced by the Company and Representatives in Europe of the Company in terms of an Agreement a draft whereof is placed before this meeting and for purposes of identification signed by the Chairman thereof and which Agreement is hereby specifically approved and sanctioned (subject to such modifications if any as aforesaid) and the material terms and conditions whereof (subject as aforesaid) are as under:—

(a) That Tata A.G. shall act as the Company's representatives in Europe.

(b) That Tata A.G. shall act as the Company's Sole Selling Agents in Europe for sale of Vegetable Oils, Oil Cakes and Meal, Glycerine, Hydrogenated Oils, Soap, Detergents and Toilet Preparations manufactured by the Company.

(c) That the prices of the goods sold by Tata A.G. on behalf of the Company to foreign buyers shall be reasonable and shall not be less favourable to the Company than the prevailing export prices for such goods.

(d) That on all orders for sale of goods secured by Tata A.G., and accepted by the Company, Tata A.G. shall be entitled to a commission at such rates as may be mutually agreed upon between the Board of Directors of the Company and Tata A.G. from time to time subject, however, to the following ceilings:—

Products	*Maximum Rate of Commission on the C.I.F. prices of goods*
Vegetable Oils ...	2%
Oil Cake and Meal	2%
Glycerine	5%
Hydrogenated Oil	5%
Soap, Detergents and Toilet Preparations ...	5%

(e) That the Agreement shall be for a period of five years, from the date the approval of the Government shall be received by the Company, and terminable by either party on six months' previous notice in writing.

(f) That any dispute or difference shall be referred to arbitration under the Arbitration Act, 1940.

(g) The appointment of Tata A.G. as Sole Selling Agents under the Agreement, will be subject to the condition that the appointment shall cease to be valid if it is not approved by the Company at the first General Meeting held after the date on which the appointment is made and if the Company in General Meeting disapproves the appointment, it shall cease to be valid with effect from the date of that General Meeting.

(h) That the interpretation of the Agreement is to be in accordance with the law prevailing in India."

10. To consider and, if thought fit, to pass the following resolution:—

"RESOLVED that pursuant to the provisions of Section 359 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby authorises Tata A.G. of Zug, Switzerland, Associates of Tata Industries Private Limited, the Managing Agents of the Company, to retain all commission or other remuneration already earned or to be earned by them as the agent, secretary, or selling or buying agent of any firm, body corporate or other concern in respect of any goods, freight, repairs or other services, for the sale, purchase, supply or rendering of which a contract is to be entered into by such firm, body or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

11. To consider and, if thought fit, to pass with or without modification, the following resolution:—

"RESOLVED that pursuant to subsection (4) of Section 372 and other applicable provisions (if any) of the Companies Act, 1956, and subject to the approval of the Central Government as provided therein, the Company hereby sanctions the investment of a sum not exceeding Rs. 12,50,000 by the purchase of equity shares of a body corporate proposed to be promoted by Tata Sons Private Limited, James Finlay and Company Limited of Glasgow, and this Company and to be registered in India under the name of Tata-Finlay Private Limited, for the purpose (among other objects) of blending, packaging and selling tea, though such investment may exceed all or any of the percentages specified in Section 372(2) and the provisos thereto; and the Board of Directors be and are hereby authorised to determine the actual sum subject as aforesaid to be so invested and all or any matters arising out of and incidental to the said proposed investment."

12. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that the Company hereby approves of and confirms the payments made to Messrs. Ghia Pallonji and Company in consideration of the services rendered by them in respect of sales of chemical products from the 1st January 1960 upto the 30th June 1962 and the payments made to Messrs. Chemical Agency in consideration of the services rendered by them in respect of sales of chemical products from the 1st April 1961 upto the 30th June 1962."

13. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that the Company hereby accords its consent, under Section 314 and other applicable provisions (if any) of the Companies Act, 1956, to Messrs. Ghia Pallonji and Company, a firm in which two partners are relatives of Mr. D. M. Ghia, a proposed Director of the Company, holding and continuing to hold an office or place of profit under the Company as distributors and selling agents of the Company for the City of Bombay, its northern boundary being Mahim on the Western Railway and Sion on the Central Railway (State of Maharashtra), for 3 years upon the terms and conditions and at the remuneration set out in the letter dated 10th July 1962 from the said Messrs. Ghia Pallonji and Company to the Company."

14. To appoint a Director in place of Mr. D. M. Ghia who resigned as Director on 28th June 1962 and who is eligible for appointment. The Company has received a notice in writing proposing his candidature for the office of Director.

15. To consider and if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that Resolution No. 11 passed at the Annual General Meeting of the Company held on 14th August 1956 be and is hereby superseded and cancelled and in its place the following Resolution be and is hereby substituted:—

"RESOLVED that (a) pursuant to subsection (1) of Section 163 of the Companies Act, 1956, the Company hereby approves that the registers of members, the indexes of members and the registers and indexes of debenture-holders, and copies of all annual returns prepared under Sections 159 and 160 of the said Act together with the copies of certificates and documents required to be annexed thereto under Sections 160 and 161 of the said Act, or any or more of them, be kept at the Registered Office of the Company and/or at the Company's record room in the Army and Navy Building at Mahatma Gandhi Road, Fort, Bombay; (b) that such of the registers, books, certificates, returns and documents of the Company required to be maintained under the provisions of the Companies Act, 1956, as are not required by the aforesaid Act to be kept at the Registered Office of the Company, may be kept either at the Registered Office of the Company and/or at the Company's record room in the Army and Navy Building at Mahatma Gandhi Road, Fort, Bombay or at such other place as may be decided by the Directors; and (c) that the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, be kept open for such inspection by the persons entitled thereto, to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid Act between the hours of 10-30 a.m. and 1-00 p.m. on any working day except when the registers and books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company, provided however, that the register required to be maintained under Section 307 of the aforesaid Act shall be open for inspection of the members and of the holders of the debentures of the Company, if any, as aforesaid between the hours abovementioned during the period prescribed by sub-section (5) (a) of Section 307."

16. To appoint Auditors and to fix their remuneration.

17. To authorise the Board of Directors to appoint, in consultation with the Company's Auditors, persons other than the Company's Auditors to audit the accounts of the Sales Offices of the Company, which are its Branch Offices and to fix their remuneration, and, if thought fit, to pass the following resolution with or without modification as an Ordinary Resolution:—

"RESOLVED that the Board of Directors be and is hereby authorised to appoint, in consultation with the Company's Auditors, any person or persons qualified for appointment as auditor or auditors of the Company under Section 226 of the Companies Act, 1956, to audit the accounts for the year 1962-63 of such of the Company's branch offices as are or may be its Sales Offices, and to fix their remuneration and the terms and conditions on which they shall carry out the audits."

Notes:—(a) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items Nos. 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15 and 17 set out above are being posted to the shareholders with the notice.

(b) *A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.*

(c) The Transfer Books of the Company were closed from Monday, the 11th June 1962, to Friday, the 29th June 1962.

(d) If dividends on shares, as recommended by the Directors, are passed at the meeting, payment of such dividends will be made at the State Bank of India on and after Friday, the 17th August 1962, to those members whose names were on the Company's register on 29th June 1962.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
P. A. NARIELWALA,
Director.

Managing Agents.

BOMBAY, *19th July*, 1962.

REGIONAL CO-OPERATION IN ASIA—II

SCOPE FOR PROMOTING INTRA-REGIONAL TRADE

THE prospects for, and economic rationale of, regional co-operation in Asia was broadly examined on page 82 of *Commerce* dated 14th July 1962 based on an E.C.A.F.E. study. Against that background, it is proposed to consider in this article the scope for intra-regional co-operation in the specific fields of trade, agriculture and industry. This is also being done on the basis of the E.C.A.F.E. study. Of prime importance in any scheme of regional oc-operation is the present and prospective volume and pattern of trade between the countries concerned. The E.C.A.F.E. Study seeks to stress that the developing countries in the region have potentially large market in their neighbouring countries, not only for traditional export commodities, but also—and this is more important—for the products of their incipient manufacturing industries. It adds, significantly enough, that "whether they can make full use of these opportunities is a real test of economic statesmanship." In the present circumstances, however, it would appear that Asia's trade with outside the region is becoming more and more important at the expense of intra-regional trade. For the emphasis on development in this region leads to an increasing proportion of imports, mainly of capital and intermediate goods, which must come (apart from Japan) from sources outside the region.

This tendency for increasing reliance on imports from outside the region has apparently been reinforced by the effects of deliberate measures of import substitution which were mainly directed against intra-regional imports and contributed to reduce further the relative importance of intra-regional trade flow. Cotton textiles, for example, offer a good avenue of industrialisation through import substitution. But this form of import substitution, according to the Study, affects mostly exports of other countries of the region that had established cotton textile industries earlier, such as India, Hong Kong and Japan. Another item suitable for import substitution is rice. Intra-regional trade in these two items has been steadily declining as is shown in the table below:

	Cotton piecegoods* (In million sq. yards)	Rice† (In thousand tons)
1938	1,246	4,723
1953	971	3,244
1957	879	3,008
1959	683	2,562

* Exports from Hong Kong, India and Japan to E.C.A.F.E. countries, including Mainland China.

† Exports from Burma, Cambodia, China (Taiwan), Thailand and Southern Viet-Nam to E.C.A.F.E. countries, including Mainland China.

The intra-regional trade in industrial raw materials, however, is likely to increase in future. Taking rubber, for instance, one finds that its exports from the producing countries in the E.C.A.F.E. region to others in the same region have been upward. The following table shows the trend in total exports of rubber from the region and imports of that commodity by Japan and India from the region between 1938 and 1959:

(In metric tons)

	Region*	Imports from E.C.A.F.E. countries	
		Japan	India
1938	175,134	43,601	..
1953	420,604	91,423	1,832
1957	512,415	127,321	10,209
1959	616,391	158,825	14,904

* Exports from Burma, Cambodia, Ceylon, Indonesia, Federation of Malaya and Singapore; North Borneo, Sarawak, Thailand and Southern Viet-Nam to E.C.A.F.E. countries, including Mainland China. (The figures are inflated by Singapore's imports which are largely for re-exports.)

Pattern of Trade

The scope for promoting intra-regional trade in other commodities too does not appear to be small. A close study of the table at the bottom of the page will substantiate this conclusion. The table shows the trends in imports and exports of major commodity groups by select countries of the region, as of 1959. The conclusions derived by the Study from this table are as follows:

"With regard to foodstuffs, fuels and industrial raw materials, the countries mentioned in the table depend for the bulk of their imports and exports upon the underdeveloped areas, among which the E.C.A.F.E. countries loom very large. The only exception is India, with its heavy dependence on industrial countries for food imports and for exports of foodstuffs, animal and vegetable oils, and crude raw materials. Raw material exports from the South-East Asian group are also directed to the industrial areas to a considerable extent. However, it is important to note that the trade structure of these countries in 1959 seems to indicate a limited validity of the classical pattern of international division of labour in the present world economy. According to the nineteenth century pattern, the bulk of the primary exports from the less-developed countries was to be sent to the industrialised areas in exchange for manufactured goods. At the present time, the mutual trade in primary products among the underdeveloped countries, both within and outside the E.C.A.F.E. region, is no less significant, and in many cases more important, than the trade with industrially advanced countries.

"In respect of imports of manufactured goods, it is easily understandable that the countries in the region depend largely on supplies from the industrially advanced countries, particularly those outside the region. In the case of a combined group consisting of Burma, the Federation of Malaya, Singapore and Thailand, as well as Hong Kong, however, a large part of imports of manufactured goods, other than machinery and equipment, originates from within the region. On the export side, although the absolute level is low, the bulk of manufactured exports goes to other underdeveloped countries and most notably to those in the E.C.A.F.E. region. The only case in which the combined share of the markets in the underdeveloped areas is below 50 per cent of total sales abroad is Hong Kong in respect of manufactured goods, other than machinery and equipment. There is reason to believe that, in the initial stages of industrialisation, the less-developed countries will almost certainly not be able to expand their exports of domestically produced manufactured goods to the markets of advanced countries, and will, therefore, be forced to expand their markets among themselves to a greater extent. So far as countries in the E.C.A.F.E. region are concerned, in both the initial and the more advanced stages of industrialisation, the table given below provides rather conclusive confirmation of this statement. A comparison of the trade structure of 1959 with that of an earlier period clearly shows the tendency for intra-regional trade in the exports of these categories of goods to increase in relative importance. This is precisely the basis on which it is expected that the potential benefits of intra-regional trade co-operation will increase as the countries of the region make further progress in industrialisation."

Agriculture

The room for regional co-operation is no less evident in the field of agriculture, too. Says the E.C.A.F.E. Study:

"In the E.C.A.F.E. region countries such as Burma, Thailand and the Republic of Viet-Nam have had a continuing exportable surplus of rice, whereas others, such as Ceylon, the Federation of Malaya, India and Indonesia, have traditionally been rice importers, in spite of substantial domestic production. The agricultural exports of these countries have consisted largely of industrial raw materials such as cotton, jute and rubber and, in the case of Ceylon and India, of tea.

"Since national independence, which in most cases was achieved around 1950, the pattern of the rice trade in these countries, on both the import and export side, has become characterised largely by direct State regulation in the interests of economic development and national welfare. Perhaps, as an inevitable outcome of bilateral bargaining, short supply and high prices in the immediate post-war years, the deficit countries have all shown a tendency to aim at self-sufficiency in rice production. Some of this substitution of rice imports has undoubtedly been at the expense of reduced acreage under cash crops, although the exact extent is difficult to ascertain. Assuming that the plans for self-sufficiency of the deficit countries meet with success, it has been estimated that the total planned exports of the surplus countries in 1966 of about 4.2 million tons will exceed the total planned imports of the deficit countries by about 2 million tons. As a result, these 2 million tons will have to be sold in uncertain extra-regional markets.

"It would be easy, but beside the point, to deplore this situation on the grounds of deviation from the principle of comparative advantage. Import substitution with regard to rice can be defended by each country practising it on the ground that foreign exchange is vital for the import of capital goods necessary to accelerate the rate of growth, or on other non-economic grounds. What might be lost sight of in this argument is that the use of domestic resources to substitute for imports withdraws them from potential uses for exports, and that the gain in foreign exchange resulting from the one activity has to be balanced against the loss from the other.

Illustrating this point, the Study argues: Suppose Indonesia, for instance, were to divert land and other resources from rice production for domestic consumption to sugar production for export, and that the deficiency in rice for consumption were made up by imports from Burma. For the region as a whole, this would mean an increase in extra-regional exports from Indonesia and a decrease in extra-regional exports from Burma. The Study admits, of course, that such co-operation would encounter severe technical and administrative difficulties. It, however, states that the gravity of the problem of foreign exchange to the countries of the region is such that it might nevertheless prove worthwhile.

Complementary Development of Industries

As in agriculture, industry also forms a fruitful avenue for regional co-operation. One of the major obstacles to development in the countries of the region is that the narrowness of the market (in the sense of purchasing power of peoples, and not the geographical size) makes the cost per unit of domestically produced goods prohibitively high, owing to the fact that economies of large-scale production cannot be fully exploited. In these circumstances, the possibility readily suggests itself of a group of these countries combining to undertake some sort of joint industrial venture, perhaps involving a common market in the products of new industries to be set up within their collective territory, on some "agreed basis of distribution of the industries between them." The E.C.A.F.E. Study expresses the opinion that there are potential opportunities for small countries of the region to co-operate with one another in the field of industry, on the basis of a detailed examination of the pattern of development in the region and the need for reaping economies of scale. Opportunities for exploitation of economies of scale, according to it, are not confined to fields of industry alone, but also applicable in the case of economic and social infra-structure as well as shipping. The scope for establishing joint regional financial institutions for financing trade and development and also for channelling foreign aid is also indictated by the E.C.A.F.E. Study.

While the Study has highlighted the need for, and possibilities of, regional co-operation in Asia, it has not fully taken into account the difficulties. The primary force behind the European Common Market has been the desire to stand united against communism and to prevent recurrence of events that led to the first and second world wars. It is this political force that is drawing the members of the E.F.T.A. also into the E.C.M. There is no such binding force in the E.C.A.F.E. region as a whole. And it is a very serious handicap to the evolution of regional economic co-operation of the kind the E.C.A.F.E. Secretariat has in mind. Wide differences in the systems of Government and in the extent of State control on economic activities, as well as the prevalence of excessive nationalist sentiment, constitute further obstacles. It is also a moot point whether economic plans of countries at distinctly varying stages of development can be successfully co-ordinated. These are some of the key issues left unanswered by the E.C.A.F.E. Study. It must, however, be mentioned that some of the countries in the region have taken steps for close co-operation with some of the other neighbouring countries. The formation of the A.S.A. (Association of South-east Asia) by Malaya, Thailand and Philippines designed to promote economic and commercial co-operation among themselves is an outstanding instance. The scheme for Malaysia (Malaya, Singapore, Sarawak, Brunei and North Borneo) also reflects to some extent the growing urge within the like-minded members of the region for getting together and promoting speedy development of their economies.

RALLIS INDIA LIMITED

CLOSURE OF TRANSFER BOOKS

IT IS PROPOSED TO SUBDIVIDE THE Ordinary Shares of Rs. 100 each into 10 Ordinary Shares of Rs. 10 each. For this purpose a meeting of the shareholders of the Company is being called on the 24th August 1962.

Notice is hereby given that the Transfer Books of the Company will be closed from the 4th August 1962 to the 24th August 1962, both days inclusive.

By Order of the Board,
KENNETH SHEPPARD,
Secretary.

16, HARE STREET,
CALCUTTA, 25*th July* 1962.

McLEOD AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of this Company will be closed from 7th to 14th August, 1962, both days inclusive for the purpose of the Annual General Meeting of the Company to be held on 14th August, 1962.

By Order of the Board.
McLEOD & CO. LTD.,
C. HOCKLEY,
Director.

Registered Office:
"McLEOD HOUSE",
3, NETAJI SUBHAS ROAD,
CALCUTTA, 18*th July*, 1962.

LARSEN AND TOUBRO LIMITED

Registered Office:
I.C. House, Dougall Road, Ballard Estate, BOMBAY 1

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Share Transfer Books of the Company will be closed from Monday the 6th August 1962 to Monday the 27th August 1962 both days inclusive for the purpose of payment of dividend.

The dividend when declared for the year ended 31st March 1962 will be made payable to those shareholders whose names would appear in the Register of Members as on 27th August 1962.

By Order of the Board of Directors,
For LARSEN & TOUBRO LIMITED
L. & T. (MANAGEMENT) PRIVATE LIMITED
N. M. DESAI,
Director,
Managing Agents.

Dated 21st July 1962.

THE PUNJAB NATIONAL BANK LIMITED

Registered Office:
Parliament Street, New Delhi

NOTICE OF INTERIM DIVIDEND

THE DIRECTORS OF THE PUNJAB NATIONAL Bank Limited, New Delhi have decided to pay an Interim Divident for the current year at the rate of Re. One gross per share. The dividend will be payable at the Registered Office of the Bank at New Delhi on or after 3rd September, 1962, to the shareholders whose names stand on the Register of Members as on 1st September, 1962.

The Transfer Books and Register of Members of the Company will remain closed from 11th August, 1962 to 1st September, 1962 (both days inclusive).

By Order of the Board of Directors,
R. L. TULI,
General Manager.

Dated: July 16, 1962.

Note: Shareholders are requested to intimate change of addresses, if any, to the Bank immediately.

THE HINDOOSTAN SPINNING AND WEAVING MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE EIGHTY-NINTH ANNUAL GENERAL MEETING of the Company will be held at its Registered Office at "Sir Vithaldas Chambers," 16, Apollo Street, Fort, Bombay, on MONDAY, the 24th SEPTEMBER 1962, at 4-30 p.m. (S.T.), to transact the business, details of which are set out in the notice that will be sent to each member individually in respect of the above Annual General Meeting.

The Register of Members and the Share Transfer Books of the Company will remain closed from SATURDAY, the 1st September, 1962 to MONDAY, the 24th September 1962 (both days inclusive).

For THE HINDOOSTAN SPG. & WVG. MILLS CO. LTD.,
For THACKERSEY MOOLJEE AND CO.,
DWARKADAS H. VORA,
Partner,

THE INDIAN MANUFACTURING COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE EIGHTY-FIRST Annual General Meeting of the Company will be held at its Registered Office at "Sir Vithaldas Chambers," 16, Apollo Street, Fort, Bombay, on Wednesday, the 26th September, 1962, at 4-30 p.m. (S.T.), to transact the business of which details are set out in the notice that will be sent to each member individually in respect of the above Annual General Meeting.

The Register of Members and the Share Transfer Books of the Company will remain closed from Tuesday, the 4th September, 1962, to Wednesday, the 26th September, 1962, both days inclusive.

For THE INDIAN MFG. CO. LTD.,
For DAMODHAR THACKERSEY MOOLJEE & CO.,
V. M. MERCHANT,
Partner,
Managing Agents.

BOMBAY, 19*th July* 1962.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED

Registered Office:
Power House, Tennur High Road, Tiruchirapalli

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Tennur, Tiruchirapalli, on Thursday the 30th August, 1962 at 4 p.m., to transact the usual business and special business as per Notice being individually posted to the shareholders.

The transfer books of the Company and the Register of Members will be closed from 4th August 1962 to 30th August 1962 (both days inclusive).

The Directors at their Meeting held on 29th June 1962 have recommended the following dividends to the members for the year ended 31st March 1962.

5½% less tax final dividend on equity shares which with the 4½% less tax interim dividend already paid makes a total dividend of 10% less tax; and

3.575% less tax final dividend on I and II Preference shares which together with the 3.575% less tax interim dividend already paid makes a total dividend of 7.15% less tax.

The dividend when declared will be made payable on and after 30th August 1962 to those shareholders whose names stands on the Register of Members on 30th August 1962 or to the holders of dividend mandates.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Explanatory Statements as required by Section 173 of the Companies Act 1956 in respect of special business will be forwarded to the members of the Company separately.

(*BY ORDER OF THE BOARD OF DIRECTORS*)
SESHASAYEE BROTHERS PRIVATE LIMITED,
Managing Agents & Chief Engineers.

TIRUCHIRAPALLI, 29*th June* 1962.

PRICES, PRODUCTIVITY AND WAGES

A LETTER FROM UNION LABOUR MINISTRY

APROPOS our comments on Mr. G. L. Nanda's remarks on industrial wages at the last annual meeting of the All-India Organisation of Industrial Employers held at New Delhi, *vide* page 838 *Commerce* dated 12th May 1962, and the subsequent short note in the following issue, Dr. S. B. L. Nigam, Assistant Economic Adviser, Union Ministry of Labour and Employment, writes, in a communication dated 12th July 1962, as follows:

"I have read with interest your two articles on 'Mr. Nanda's Indiscretion' and 'Industrial Wages' published in *Commerce* of 12th and 19th May, 1962. They show, if I may say so, the circumspection with which some people view the problem of wages and it is not surprising that this section should regard the innocuous, and yet very true, remark of the Labour Minister that 'we have not done too well by labour', as indiscreet and unwarranted.

"Shri Nanda compared the position of real earnings of factory workers in 1959 with 1953 and not with 1951 as mentioned in the articles. It is a fact that real earnings of factory workers recorded a decline in 1959 as compared with 1953. The entire argument built up in the articles and so laboriously explained by Dr. N. Das of the Employers' Federation of India, thus falls to the ground. The year 1953 is relevant for comparison purposes as it is in this year that the workers' pre-war standard was restored; the index of real earnings was 100 in 1953 as compared to 1939.

Exploded Myth

"The argument that wages should not be increased lest the 'social surplus' decreases and defeats the very purpose of rise in wages as investment and hence employment will decrease, is entitled at least to the respect due to old age. This argument is closely related to the old theory of a 'Wage Fund,' whose myth has long been exploded. Not many people now argue that low wages help employment by allowing industrialists to invest more. One may also ask what guarantee is there that the extra 'social surplus' is safer with the employers and that it would be utilised in the manner suggested in the article. Economic history does not permit us to place much faith on the assumptions that the social surplus will be invested on right lines or that it will be utilised by employers for reducing selling prices of their products. It can also be argued that an increase in wages will, by increasing efficiency, augment the social surplus; it may, therefore, be suicidal to peg the wages. Experience has shown how futile it is to increase exports by wage cutting or wage freeze; even the anti-planners now admit, after learning the lesson from the experience of many countries since the war, the hopelessness of nibbling at wages as a remedy to solve the foreign exchange problem by increasing exports.

"There is no denying the fact that a lasting increase in the real wages of workers can be achieved only when productivity increases. The Labour Minister has always emphasised this aspect and during the last Budget debate he was at pains to bring home this point. But productivity should not mean only harder work by workers; it also implies re-equipment, better planning and more efficient administration. The contention of Shri Naval Tata that 'wage index in the organised sector of industry rose by 24 points between 1951 and 1957 whereas productivity index rose by 8.6 points only,' can be as right or as wrong as the figures calculated by Prof. B. R. Shenoy according to which productivity of industrial workers rose from 100 in 1949 to about 220 in 1958; the rise in money wages during this period, as estimated by Prof. Shenoy, was about 18 per cent. According to a rough estimate, on the basis of index of production and index of employment, labour productivity in 1960 was 34 per cent higher over 1953. It appears that, broadly speaking, wages in the organised sector of industry have not outstripped productivity.

Wages and Cost

"The argument that the practice of fixation of wages in relation to price level has inflated industrial costs in the country, does not seem correct. According to the data thrown up by the *Census of Indian Manufactures*, wages and salaries of workers as a percentage of cost of production has in fact gone down from 15 per cent in 1947 to 12 per cent in 1958. Wage costs thus do not seem to have been responsible for the rise in the cost of production; they cannot in any case be said to have inhibited economic growth.

"The lamentation about agricultural workers is justified though the figures cited in support are not quite valid. A comparison of wages of agricultural and industrial workers must take into consideration the differences in cost of living, in payment in kind, in continuity of employment, in working and living conditions and several other factors. Moreover, as the average industrial wages include the high wages of skilled workmen, a more meaningful comparison would be between the wages of agricultural workers and those of unskilled industrial workers and when this is done, the disparity is considerably reduced. It would not be correct to suggest that till disparities between the wages of agricultural and industrial workers are moved, the latter should hold up its demands.

"With regard to the level of wages of industrial workers, it is admitted in the article itself that 'it is a well-known fact that industrial workers are not as well paid as they should be, to enable them to maintain a decent standard of living, that the vast majority of them still live in slums and that they deserve more congenial working conditions.' It has further been pleaded that one need not quarrel with the contention that 'wages of industrial workers in India are too low in relation to their needs.' This is precisely what the Labour Minister meant by saying that 'we have not done too well by labour.' Very few people would suggest that the standard of living of workers need not be raised because the vast majority of our people are poor or because they are guilty of having a large family and must practise family planning."

* * * *

[On re-reading our editorial, "Mr. Nanda's Indiscretion," in *Commerce* dated 12th May, together with Dr. Nigam's reply published above, one will find that the claim of Dr. Nigam that the entire argument built up by us and supported by Dr. Das falls to the ground because of some alleged misquotation of Mr. Nanda's figures, is untenable, for the simple reason that the basic point at issue was not whether workers' real earnings had gone up or not but the basis on which wage increases should be granted. (If there was any misquotation of Mr. Nanda's data, it was not deliberate. We depended on reports in the daily papers for the figures given in our article and it took twenty-five days for the Press Information Bureau to come out with a correction!)

Basic Question Unanswered

Even the change in the base year from 1951 to 1953 does not make much difference to the theme of our article. In his speech, Mr. Nanda seemed to suggest that, since real earnings had slightly declined during the period 1953-59, workers were not given a fair deal. Our question is this: Even if a rise in wages has been neutralised by a rise in prices, would that alone be a sufficient ground for granting wage increases? Even Mr. T. T. Krishnamachari, Mr. Nanda's colleague in the Union Cabinet, has been contending that, while industrial workers' interests have been safeguarded by the escalator clause linking wages to cost of living, it is the fixed-income recipients among the middle class that has suffered most in the two Plan periods. We, however, conceded that Mr. Nanda would have made out a strong case for higher wages had he proved that wages were lagging behind productivity, instead of pointing out that wages had not caught up with prices. Dr. Nigam, far from answering this basic question, attributes theories and arguments to us and then goes on demolishing them. Thus, our statement that wage increases should be linked to productivity and that workers are not the sole claimants of industrial profits has been construed as an argument for wage cutting or wage freezing; our plea that family planning should be popularised among workers to prevent a further lowering at their low standard of living has been interpreted as a plea for not improving their living conditions as a punishment for having large families; and our observation that agricultural workers have fared far worse than industrial workers has been dubbed as obstructive tactics to prevent a rise in the living standards of industrial workers. Dr. Nigam does not, of course, say these things in so many words, but they are clearly implied. There is enough evidence in the industrial growth of this country and elsewhere to bear out the contention that the distribution of social surplus on the lines advocated by us has accelerated industrial progress and that restraint on wage increases has helped the export drive. The "pay-pause" policy adopted by Britain is the latest example of what we say.

Vague Conclusion

Only once in his long letter does he come close to answering our main point. But here, too, he is so circumspect and his premises are so uncertain that it turns out to be a timid suggestion rather than an emphatic assertion. Here is the relevant passage: "According to a *rough estimate*, on the basis of index of production and index of employment, labour productivity in 1960 was 34 per cent higher over 1953. It *appears* that, *broadly speaking*, wages in the organised sector of industry have not outstripped productivity." (Italics ours.) Could any firm conclusion be drawn or policy based on such uncertain facts and tentative inferences?

We fully agree with Dr. Nigam that productivity is not a function of hard work by labour alone. It is common knowledge that modernisation of plant and machinery, better planning and more efficient administration can increase productivity. But is he seriously contending that the country has made no progress in this direction and that what little increase there has been in productivity is due purely to the hard work put in by labour? Again, is he not aware that employers have no free hand in re-equipping and modernising the industry? Take, for instance, the textile industry. Quite apart from the fact that the number of automatic looms that could be introduced is limited by a quota, so many conditions are attached to the installation of these looms that it is virtually impossible either to replace old looms or install new ones. Trade union leaders themselves had stood in the way of modernisation of industries in India. And what did the Union Labour Ministry do to prevent this suicidal policy which was very much in vogue until recently? Even now it has been modified only grudgingly.

We do not see eye to eye with Dr. Nigam when he says that fixation of wages in relation to price level or cost of living is not inflationary. He is welcome to hug his economic theories. It may, however, be pointed out here that the British Employers' Confederation has suggested, in a recent study, that this practice should be abolished wherever possible, as it aggravates inflation. We did not suggest that higher wages alone have been responsible for the rise in cost of production but only that higher wages have been a factor in the increased cost, a point few will deny.

Wide Disparity

Dr. Nigam is at pains to explain away the income disparity between agricultural and industrial workers. On this point, one need only draw the reader's attention to the reported finding of the Mahalanobis Committee, which none can accuse of having pro-employer or anti-labour proclivities. According to it, agricultural workers, almost alone among the employed population, have experienced a decline in real earnings of as much as 11.8 per cent during the first and second Plan periods, whereas all other sections, including Government servants, have experienced an improvement in real earnings, the increase having been as much as 76 per cent in the case of coal miners and 20 per cent in the case of factory workers in general. *Comment is superfluous.*

It is not fair to quote our remark that wages of industrial workers in India are low in relation to their needs to substantiate the contention that justice has not been done to labour. For, as was pointed out by us in the said article, there is a lot of difference between what is desirable and what is economically feasible. A need-based wage still remains only a recommendation of the Indian Labour Conference. Even the Government has not been able to accept it. Nor has any Tribunal asked any employer to pay a need-based wage.

Lastly, a word about the trend of real earnings. According to the Labour Bureau's own statistics, the source of the data quoted by Dr. Das in his letter published in our issue of 19th May 1962 (the Labour Ministry's quarrel is that he has taken statistics with a different base and covering a longer period than those cited by Mr. Nanda), real earnings increased if we take either the post-independence period or the two Plan periods. But if real earnings in 1959 are compared with those in 1953 there is a slight decline, because, to quote Mr. Nanda's own words, "whatever increase has taken place in money wages, has been eaten away by price rises." We leave it to readers to draw their own conclusion. Why should one take 1953 as the base year? Why not 1951 or 1947?—ED.]

AUTOMATION AND EMPLOYMENT

The number of workers in the fourteen major industries in West Germany declined by 173,000 between 1956 and 1960, mainly as a result of increasing rationalisation, particularly automation, application of new materials, etc. This is revealed in a survey conducted by the Industrial Union of Metal Workers of the German T.U.C. In spite of the production increases and shorter working hours, eleven industries employed fewer people in 1960 than in 1956. According to the investigations undertaken by the Unions, the number of workers employed declined by 17.9 per cent in mineral oil industry, by 23.3 per cent in tobacco processing and between 2 and 9 per cent in iron-ore and potassium mining, musical instruments, leather and textiles, saw mills, rolling mills and industries processing stones, earths and other quarry products. Far-reaching effects made themselves felt, wherever automation and a decline in production coincided, in the metal-ore and coal-mining industries as well as in the leather industry. Thus, 34.8 per cent of all workers employed in the metal-ore mining industry lost their jobs due to rationalisation and automation and a further 12.4 per cent due to cuts in production. Thanks to the sustained full employment in this country, all redundant workers quickly found new jobs, though partly under unfavourable conditions.

and now at
Alwaye

The Simon-Carves Acid Plant Map is constantly expanding. The latest addition is the LARGEST SULPHURIC ACID PLANT IN INDIA, to be set up at Alwaye in the Kerala state by Fertilisers & Chemicals Travancore Ltd (FACT)

Simon-Carves have been selected for the detailed engineering design and for the supply of specialised components for the plant. Part of FACT's third stage expansion programme, the plant will produce 450 tonnes of acid per day and will be three times the size of the largest plant now operating in India.

FIRST FIVE YEARS OF COMPANIES ACT, 1956—VI

INTER-CORPORATE INVESTMENTS—PROTECTION TO MINORITY INTERESTS

By A Special Correspondent

NEXT in importance to the regulatory provisions relating to managerial matters are the provisions concerning corporate loans and inter-company investments. Sections 295, 369, 370, 372 and 373 of the Act deal with these matters. These sections were "designed to safeguard the funds and financial interests of companies against manipulations by irresponsible management to suit their personal ends." For regulating the inter-corporate financial arrangements, the Central Government alone has been given powers under the Act without the interpolation of the Advisory Commission. Contrary to the expectations of the Administration and the general impression prevailing in the country regarding the possibility of development of bad investment practices in the corporate sector, the number of cases requiring Government approval under Section 295 (for the loans, guarantees, etc., given by the public companies or their subsidiaries to their directors, relatives of directors to firms or private companies in which directors are interested and to other public companies which are controlled by the directors of the lending company) and under Section 372 (for inter-company investments exceeding certain stipulated limits within the 'same group' as defined in Section 370 and even outside the group after the passing of the Amendment Act in 1960) turned out to be very moderate, nay small. During the five-year period ended 1960-61 217 applications involving a total sum of Rs. 16 crores were received under Section 295. Of this 49 per cent applications, covering 66 per cent of the total loans for which approval of the Government was sought, were approved. Similarly Government received, under Section 372, 127 applications, involving Rs. 11 crores of inter-company investments of which 66 per cent applications and 80 per cent of the total investments were approved. It is thus clear from these figures that Government scrutiny has been quite discriminating but not quite strict and rigorous. At the time of extension of the provisions of Section 372 in 1960, the Government carried out a factual survey which showed that "provisions regarding inter-company investments are not likely to cause any practical difficulty in the case of productive inter-company investments or to retard capital formation or hinder the future formation of new companies or expansion of existing companies, as had been apprehended in certain quarters."

Some Typical Cases

In the course of scrutiny of loans and inter-company investments cases, several important trends are reported to have come to the notice of the Government which required further checks and controls. Some of the typical cases reported by the Government in the Statutory Reports are the following:

(i) Upstream loans from subsidiary companies to their holding companies which utilised them very often for acquiring shares of the subsidiary companies and thus enabling the holding companies to exercise control over subsidiary companies without the former having any real stake in the latter;

(ii) loans to financially weaker sister companies by the better placed companies in the same group or in the companies in which directors or management were interested;

(iii) loans at rates of interests much below the market rate and without proper security or against inadequate security and thus being prejudicial to the interests of the shareholders;

(iv) loans made out of borrowed funds which were in some instances obtained at higher rates of interest than that charged from the company to which the lending company had given the loan;

(v) loans made to sister companies at a nominal rate of interest resulting in loss to the shareholders of the lending company;

(vi) loans made without any security or against assets which were already mortgaged against other loans;

(vii) loans made to sister companies whose financial position did not justify any hope of the loan ever being repaid;

(viii) loans made to sister companies to enable them to corner shares of other companies;

Similarly, investments made for cornering shares of other companies enable the directors or managing agents to gain control over those companies;

(ix) loans made by public companies to private companies which in turn gave loans to firms in which directors of the public companies were interested, the device being used to circumvent the provisions of Section 295 of the Act;

(x) investments made to help sister companies, even though the investing company suffered a loss thereby;

(xi) purchase of shares at a price much higher than the intrinsic value of the shares, with a view to benefiting interested directors, etc; and

(xii) manipulative tactics adopted to reconstruct the board of directors of the company seeking funds from the other company in such a say that the investment in the same group was not covered by Section 372 of the Act. Such tactics are now covered by the amendment of that section.

The Government have laid down a number of criteria for considering cases received under Sections 295 and 372. In the case of applications made under Section 295, the Government not only examine the general financial position of the lending company but also the purposes and objects for which loans are required by the borrower and, where the borrower is a company, whether it is fully solvent and has got a good profit record. With regard to the lending company, the important points looked into are whether (*a*) it has surplus funds to lend, (*b*) the loan is secured or not, and, if secured, whether the security is adequate and free from encumbrances, (*c*) the rate of interest offered for the loan is reasonable, and (*d*) the loan is for a definite period.

Guiding Principles

Similarly, some guiding principles have also been formulated in regard to the inter-company investments. These include, *inter alia*, the following:

(i) Although industrial and trading companies are not investment companies and it is not their primary business to give financial accommodation to, or make investments in the shares and debentures of other companies, they may be allowed to make trade investments in other companies, namely, investments which are likely to create conditions conducive to the interests of the investing company as well as to more economic working and betterment of production of other companies;

(ii) a company should be allowed to make the investment only if it has adequate liquid resources for making it and if the depletion of the working capital would not adversely affect the company's own working;

(iii) the company in which investment is proposed should have earned profits and declared dividends in the past or should at least clearly be capable of making profits and declaring dividends within a reasonable period of time;

(iv) the purchase price should be reasonable taking into account the net worth, prevailing market prices and future expectations of profitability;

(v) the proposed investment should provide an expected return on capital at least equal to the return of Gilt-edged securities; and

(vi) except in the case of trade investments, the shares or debentures proposed to be acquired should preferably be readily marketable.

Besides these, the Government have also worked out certain procedures, etc. which are detailed in the Fifth Statutory Report. The Government have also prescribed a detailed form for making applications under Section 372 [Form 34B specified in the Companies (Central Government's) General Rules and Forms (Amendment) Rules 1961]. Among the points of procedures prescribed the following are of general interest:

(*a*) if a company proposes to make investments in the shares of another company which would have the effect of making the latter company its subsidiary after such investment, the Central Government's prior approval would be required in terms of Section 372(4). Only such investments as are made by a holding company in its subsidiary after the date, on which it became a holding company, are saved by the provisions of clause (*d*) of sub-section (14) of Section 372;

(*b*) in calculating the aggregate of the investments made in all other bodies corporate for the purpose of computing the percentages specified in sub-section (2) and the provisos thereto, the investments made by a company in its subsidiary or subsidiaries must also be taken into account; and

(*c*) in view of the specific provisions contained in sub-section (5) of Section 372, the power of the Board of Directors to invest the funds of a company in the shares of another body corporate in pursuance of sub-section (2) of the said section cannot be delegated to any Committee of Directors, the Managing Director, the Managing Agents, Secretaries and Treasurers, the Manager or any other person specified in the first proviso to Section 292(1).

Minority Interests

An important feature of the present Companies Act is that it incorporates some very novel and effective provisions which directly protect the minority interests and prevents manipulations leading to mismanagement of the affairs of the company and to oppression of minority shareholders. The Department of Company Law Administration is also to be given credit for handling the complaints and requests lodged with it in connection with such matters with promptitude and earnestness.

During the quinquennial period 1956-61, no less than 6,000 complaints are reported to have been received in the Department. These complaints fell into two broad categories, namely, (*a*) ordinary and routine complaints regarding the failure of companies to hold general meetings, the non-payment of dividends declared by the companies, the non-publication and non-receipt of annual accounts, the refusal of companies to grant inspection of registers, minute books, etc., the refusal to register transfer of shares, the failure of companies to invest provident fund moneys according to law, and (*b*) allegations of mismanagement, misappropriation of funds, improper interlocking of funds prejudicial to the interests of the companies involved, invalid continuance of director/s, employment of incompetent relatives, appointment of interested persons as selling agents by managing agents, fraudulent dealings and manipulation and/or falsification of accounts by company managements, etc. In the absence of separate figures for different types of complaints relating to the allegations enumerated above, no precise idea of the incidence of particular types of misbehaviour of company managements can be had, but from the overall total it can, to a certain extent, be inferred that all is not well with the corporate sector and that the vigilance at present exercised by the Government should not be relaxed. The Department's attitude in this matter has been to look into all complaints and those involving "important issues of policy or public weal or conflicting interpretation of law" are inquired into at a high level at the headquarters and strong action is taken by ordering investigations. The fact that the complaints are also looked into and reviewed at the time of consideration of applications relating to appointment and fixation of remuneration of managerial personnel by the Advisory Commission and the Government has also had a salutary effect on company managements.

Oppression

Important among the sections protecting minority interests, stopping oppression and mismanagement are Sections 111, 397-402, 408 and 409. It has been observed that the minority interests and aggrieved parties in companies have exercised the privilege and rights conferred on them under these sections very freely and with proper understanding of the situation. But this is not to say that, in every case, they have succeeded in their efforts, as the Government's policy as given out in the Statutory Reports is not to meddle with a company's affairs in a lighthearted and partisan manner. Thus, here it needs to be stressed that protection of minority interests, as the official sources say, "did not imply that minority in a company were entitled to hold up the legitimate day-to-day business of the company; it only means that the majority had to respect the essential rights of a minority."

Under Section 111 of the Act, the shareholders have been accorded an alternative remedy to the one available under Section 155 to be sought in a court of law, they can appeal to the Central Government against the refusal of company management to register the transfer of shares in their names. During the period 1956-61, about 250 appeals involving transfers of about 22½ lakh shares were received by the Central Government of which 49 appeals were allowed by them and the company managements concerned were directed to register the transfers. A great majority of the remaining appeals were time-barred and some appeals were withdrawn by the parties after having reached some compromise with company managements in question. However, until the passing of the Amendment Act of 1960, when the provisions of this section were further strengthened with the prescription of a time limit within which the company managements were required to give effect to the official order directing them to register the transfer of shares and the imposition of penalty for the defiance of the Central Government's directive, some company managements made the Government's orders infructuous even though the cases had been decided on merits and on broad principles of equity and natural justice. Better compliance of the Government's orders is now to be expected after the aforesaid amendment of law in 1960. The trend in Government decisions is that appeals as a rule are allowed where—

(*a*) the company has no good reasons to urge against the transference of shares,

(*b*) the refusal of the company to register the transfer of shares is solely due to the mistaken view of law, and

(*c*) the company's view that the transferee of the shares is an undesirable person is not based on any substantial evidence.

To come to the remedies available under Sections 397-402. Consequent upon the approach made by the aggrieved parties to the courts of law, under Sections 397-99, during the period 1956-61, the Government was served with notices under Section 400 by the different High Courts in the country to make representations in about 140 cases. The Government filed their representations in about 50 cases giving the facts in their possession which might help the courts to decide the cases. The cases in respect of which the Government was asked to forward representations to the courts fell under two broad categories, namely, (*a*) cases which involved the larger interests of the society, complicated issues of social and economic policy, apart from simple adjudication of legal rights between the contending parties, and (*b*) cases which related to small-sized companies, public or private, not involving public interest to any great extent or cases which did not involve any complicated technical points but which arose generally as a result of faction fights between two groups of directors or shareholders. The Government made representations only on the first type of cases. Slowly, the courts in the country are becoming aware of the real importance of these provisions as is clear from the judgment delivered by a Hon'ble Judge of the Calcutta High Court in the Richardson and Cruddas case in which he said: "Now the powers of the court under Section 402 of the Companies Act are wide. In fact, the court may make any order for the regulation of the conduct of the company's affairs upon such terms and conditions as may, in the opinion of the court, be just and equitable in all the circumstances of the case." With such wider realisation of the purposes which the framers of law had in mind the minority interests would feel more secure and safe in the years to come.

Appointment of Directors

Next in importance to the redressal of wrongs of the majority in company management are the provisions to Section 408 which empower the Government to appoint two directors on the board of directors who, after the amendments made in that section in 1960, could now be chosen even from outside the shareholders of the company concerned, if shareholders of certain requisite number or possessing a requisite number of shares were to approach the Central Government for help. The powers "conferred under Section 408 are extraordinary and, since the provisions of this section require the Central Government virtually to step in and to interfere in the day-to-day management of the company through its nominated directors, the Government have exercised these powers only where they were satisfied that the affairs of the company had been grossly mismanaged or where the minority shareholders had been unduly oppressed and where they felt that quick intervention was needed such as could not be ensured under the necessarily protracted proceedings of a court of law." In such cases, the Government acted upon the advice given by the Company Law Advisory Commission which makes all possible inquiries into various allegations made by the applicants and gives personal hearings to all the parties concerned, in order to ascertain their respective points of view and then offer its advice to the Government. The opportunity of utilising the benefits offered by the aforesaid section is increasingly being availed of by the shareholders and directors holding a minority share in the companies. So far, upto the end of 1960-61, 34 cases under this section came before the Government for decision. All the applications, however, were not of a serious type; some of them had been made as a result of friction or disagreement between two groups of shareholders, each trying to accuse the other of mismanagement of the affairs of the company or to create hindrances in the way of its better management. These applications were disposed of with relative ease, as compared with the more controversial cases which are reported to have taken quite considerable time.

Protection to Board of Directors

Then there is Section 409 which gives powers to Government to offer protection to an existing Board of Directors. It aims at shielding the company and its management from being harmed by the unscrupulous elements who through cornering operations might attempt to grab control of the affairs of the company. During the period 1956-61, about 15 cases under this section came before the Government and these were duly disposed of after getting the advice of the Advisory Commission. Like the Section 408 cases, these cases are also gone into in very great detail by the Commission as well as by the Government. In deciding these cases, it is reported that "the Commission strives by hearing the parties and by making enquiries into the antecedents of the parties concerned to obtain as much objective information as possible about the motives of the persons who seek to change the management of the companies" and "the mere fact that the management in power has been a good one does not by itself warrant freezing of the board of directors on an application by it if the Commission is convinced that the new shareholders are in a position to provide equally competent management." In this connection it is to be appreciated that, "even if an order is issued under this section, it can provide at best only an interim remedy, since the majority shareholders cannot always be baulked of their right to elect a board of their own choosing and prevented from having a say in the management in proportion to the voting rights they control." For the disposal of cases of this nature, the Advisory Commission has laid down the following criteria:

(i) Where the existing management is not good and there is nothing specific against the incoming person, no order be issued and the matter be left to the decision of the shareholders of the company.

(ii) Where both the existing management and the incoming management are definitely good, there is no need for interference.

(iii) Where there is nothing unfavourable against the existing management nor against the incoming persons in the records before the Commission, interim protection may be given to the existing management by issuing an interim order and further inquiries instituted immediately thereafter to enable a final decision to be taken.

(iv) Where the existing management is good and nothing is known about the incoming persons, an interim order as under law may be issued and further inquiries instituted immediately.

(v) Even where an interim order is issued under Section 409(1), the Commission would advise Government to confirm that order only if the Commission is satisfied that the existing management proved positively that the incoming persons will not be able to manage the company.

(vi) Where the court is also seized of the matter, the Commission will not advise any action under Section 409.

While the reactions of the business community in regard to the disposal of cases under this section are not easily ascertainable, the Government feel satisfied with the results achieved under this section, as is clear from the observations made in one of the Statutory Reports that "swift action under this section has, in many cases, proved salutary inasmuch as it has prevented abrupt changes in the management of well-run companies irrespective of the voting strength commanded by the different groups of shareholders and has prevented the control and management of well-run companies from passing into the hands of unscrupulous and ambitious financiers whose object has often been to traffic in shares of well-managed companies for their own personal gain.... This helps in maintaining *status quo*, pending examination of the *bona fides* of the newcomers in the field whose antecedents and past performances are unknown."

(To be continued)

More MILK! More VANASPATI!

NUTRITIONISTS recommend a minimum daily consumption of 280 gms. of milk per person for a well-balanced diet. Because milk is a complete food in itself—rich in proteins, minerals, vitamins and fats. For vegetarians, milk is the only source of essential animal proteins. Unfortunately, the total availability of milk for direct consumption, as well as for conversion into milk products is only 140 gms. per head per day. And even by the end of the Third Five Year Plan, it will be just 145 gms.

With improved transport facilities and the establishment of more organised dairies, a greater quantity

of milk will be available for drinking. This will benefit not only the consumer, but also the dairy farmer because the sale of milk as such yields a better price to the dairy farmer than the sale of milk products.

More consumption of milk as such means less ghee. In India, as in the advanced countries of the world, Vanaspati will gradually meet the growing demand for a semi-solid fat like ghee. Even in the butter-rich countries of Denmark and Holland, where the dairy industries are well-organised, the major semi-solid fat consumed is vegetable fat very similar to Vanaspati. Vitaminised Vanaspati is nutritionally on par with the purest milk fat obtainable. Furthermore, Vanaspati is very economical because it is made from readily-available vegetable oils.

VANASPATI AND VANASPATI-LIKE FATS ARE USED THROUGHOUT THE WORLD!

For more information, please write to:

JWT-VMA. 3804

SMALL-SCALE ENGINEERING INDUSTRIES IN PUNJAB

I.L.O. STUDY'S FINDINGS

THE second Plan period witnessed some significant growth of small-scale engineering industries (that is, those with a capital investment of upto Rs. 5 lakhs) in India as a whole. For instance, between 1956 and 1960, the number of small-scale units engaged in the production of bicycles increased from 44 to 150, of sewing machines from 35 to 75, of machine tools from 344 to well over 500, of electric motors from 6 to 74 and of electric fans from 22 to 47. The production of bicycles in the small-scale sector increased from about 25,500 in 1956 to 228,000 in 1960 and of sewing machines from 23,600 to 52,000. The value of ungraded machine tools produced by small units rose from Rs. 1.3 crore in 1956 to Rs. 4.0 crores in 1960. The contribution of small-scale industries, as compared with that of large-scale ones, is illustrated to some extent by the following figures pertaining to four engineering industries:

Industry	Year	Large-scale units	Small-scale units
Cycles	1959	980,000	197,000
Sewing machines	1960	2,962,000	41,662
Electric fans	1959	722,950	62,039
Machine screws (tons) ..	1959	890	736

It will be seen from the above figures that the small-scale sector has registered substantial progress. But this progress has not been uniformly in evidence in all the States. The Punjab, for instance, has claimed a larger share of the development in the small-scale sector than many other States. Specifically, the share of this State in the contribution made by the small-scale sector is about a third in the case of complete cycles, nearly a fourth in the case of electric fans and as much as half in the case of sewing machines—of their respective all-India outputs in that sector. At present, the total number of small-scale and cottage-scale industrial units (both engineering and non-engineering) in that State amounts to roughly 25,000, employing over 1.2 million workers. The varied production pattern which the small-scale sector has developed in the Punjab includes not only consumer articles like bicycles, sewing machines, hosiery and brass utensils but also specialised and precision goods such as machine tools, scientific instruments and components and spares for machinery employed in textile and certain other industries. In view of the leading position occupied by the Punjab in the field of small industries, the International Labour Office, which has recently published a study on the employment potential of small-scale industry and its role in the development of the less industrialised countries, has taken an interest in the State's progress in this field, with particular reference to the development of small-scale engineering industries. The findings of the I.L.O.'s study have been published in the form of an article in the June 1962 issue of *International Labour Review*. The facts and figures contained in the following paragraphs have been gleaned from this survey article.

More Important Ones

The more important small-scale engineering industries in the Punjab are: Cycle and cycle parts, sewing machines and parts, agricultural implements and machine tools, industrial fasteners, electric fans and air coolers, diesel engines, automobile parts, pipe fittings, and utensil-making. To take up these industries one by one. In the *cycle and cycle parts industry* as a whole, there are as many as 500 units with an aggregate capital investment of Rs. 80 lakhs. The industry's output of complete cycles (as of 1959) is 62,100 and its output of cycle parts is valued at Rs. 4.7 crores (as of 1959-60).

The number of units manufacturing complete *sewing machines and components* is nearly 300, of which 56 are assembling complete machines. The aggregate capital investment in this industry is estimated at Rs. 70 lakhs. The output of complete machines is 20,605 (as of 1960) and the value of component parts Rs. 1.4 crore.

In the *agricultural implements and machine tools industries*, there are as many as 700 units. The combined value of output in these two industries is about Rs. 5 crores now. The range of machines being made in the Punjab includes lathes, planers, shapers, drills, grinders, hacksaws, bandsaws, power presses, milling machines and small tools.

The *industrial fasteners industry* covers bolts, nuts, machine screws, rivets and dog-spikes. There are as many as 200 units manufacturing these products in the Punjab now. The aggregate value of their output is more than Rs. 60 lakhs.

The capital investment in the *electric fans industry* is just Rs. 10 lakhs. Its output of fans is 15,631 (as of 1959-60). There are 11 units in the industry now.

Diesel engines are being manufactured by 12 units. Their combined output is comparatively small, being under 300. There is no estimate of the capital investment in this industry.

There are more than 50 units in the *automobile parts industry*. The annual value of output of this industry is Rs. 10 lakhs.

In the *pipe fittings industry*, there are 30 units. Their output of galvanised iron malleable pipe fittings and sanitary fittings is about Rs. 40 lakhs.

The *utensil-making industry* has 80 small-scale units. There is no separate estimate of the value of their output. Only an estimate pertaining to the combined output of large-scale, small-scale and cottage units is available. According to this estimate, the value of output is Rs. 5.4 crores (as of 1959-60).

Employment

The I.L.O. study has also provided an estimate of the total employment provided by small-scale engineering units alone in the Punjab. According to this estimate, the total number of persons employed by these small units is approximately 40,000, whereas the number employed by large-scale engineering industries is hardly 5,000. In other words, for every person employed in the large-scale engineering industries in the Punjab, seven to eight persons are employed in the small-scale sector. The minimum wage rates fixed for some of the industries seem to be fair. For instance, the minimum wages for workers in the agricultural implements industry, the machine tools industry and general engineering, including the cycle industry, are:

	Rs. nP.
Unskilled	2.00 per day.
Semi-skilled (grade II)	2.25 per day.
Semi-skilled (grade I)	2.62 per day.
Skilled	3.50 to Rs. 4.00 per day.
Learners ..	35.00 per month.
Apprentices (holding certificates) ..	56.50 per month.

Not all the small-scale units may be in a position to pay these minimum wages, for many of them consist of poorly organised and weak units, which are unable to stand competition from larger undertakings. Hence, in recent years, the Central and State Governments have been taking active measures to promote the growth of small-scale industries, including the engineering industries. The I.L.O. study has described these measures which are already well known.

The crux of the problem facing small-scale engineering industries is the saleability of their products. Government purchases have been of considerable help in this connection. Industries producing cycles and sewing machines lead in respect of sales organisation. But even they find it difficult to face the competition of large-scale units. Agricultural implements have only a seasonal market. The electric fans industry is able to manage only with the help of Government orders. In the pipe fitting industry, there is no immediate problem of marketing as the demand is expanding. Likewise, the market for domestic utensils is expanding all the time. But both these industries are likely to face increasing competition from large-scale units.

Many of the small-scale engineering units in the Punjab have not been in existence for long. So they are relatively young. Still they have succeeded in preparing the ground for the industrialisation of the State. They are proving to be a training ground for a large number of persons proficient in managerial and technical skills, and are creating an elite of highly qualified technicians who can be expected to provide the skills for expansion and progress. Of course, these industries have their own problems. Competition from large-scale units is only one of them. Haphazard development in some industries is another. And, thirdly, there is currently a dearth of highly skilled persons. Notwithstanding these difficulties, the small-scale industries, according to the I.L.O. study, meet a genuine need in the economy of the State where they have been spontaneously developed largely by the refugees who came from Pakistan. The I.L.O. study has also added, in conclusion, that these industries can play an even more important role in the economy of the State if the good work already done by Government agencies is matched vigorously by associations of managements and workers.

MECHANISATION OF MINES

The third Plan targets for coal, iron ore and other minerals call for improved mining techniques and modern equipment. The progress towards mechanisation of mines has already started. Mechanised opencast mining is now practised in the public sector of the coal industry. In underground mining generally, the trend is towards an intensive type of room-and-pillar mining using shortwall and arc-wall coal cutters, gathering arm loaders, shuttle cars and scraper-chain conveyors. Efforts at mechanisation of the transport system and modernisation of the surface coal-handling plant are being made. Mechanical loading into wagons is also increasing. But wider employment of machinery by itself will not render Indian mines modern. If mechanisation is to produce the best results in India, planning and education at all stages are necessary. The principles underlying the extent and the type of mechanisation in vogue in Western countries would also have to be studied for possible adaptation to Indian conditions. Both these purposes are eminently served by the bumper Special Issue 1962, containing 668 pages, of the *Journal of Mines, Metals and Fuels* (Publishers: Books and Journals Private Ltd., 6/2 Madan Street, Calcutta-13). This issue, priced at Rs. 45, carries all the technical papers which had been contributed to the symposium on mechanisation of mines in India held at the Central Mining Research Station, Dhanbad, in December last. As many as 75 papers, contributed by leading experts from the United States, the U.S.S.R., the United Kingdom, Germany, France, Poland, Hungary, Canada, New Zealand and India are to be found in the special issue which can be aptly described as a mine of information and knowledge on the technical aspects of mechanisation.

I.D.A. CREDIT FOR PURNA IRRIGATION PROJECT

The International Development Association has just sanctioned a development credit of $13 million to help complete a project to irrigate about 152,000 acres in the Purna river valley in Maharashtra, and to provide a 15,000-kilowatt hydro-electric power station in the area. This credit represents the sixth that the I.D.A. has extended to India for irrigation and drainage projects during the past year. The five earlier credits aggregating $43.5 million provided by the I.D.A. cover the development of agriculture in the States of Punjab, Uttar Pradesh, Bihar, Orissa and Gujarat.

The latest credit is for a term of 50 years, free of interest. Repayment of the principal will begin on 1st January 1973. Thereafter, one per cent of the principal will be repayable annually for ten years and three per cent will be repayable annually for the final 30 years. A service charge of ¾ of one per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs.

LONGEST UNDER-WATER TUNNEL IN CANADA

Montreal in Canada is already connected to the south shore of the St. Lawrence river by three excellent bridges. Traffic in this rapidly expanding city is growing so fast that major vehicle jams occur every rush hour. So a vast tunnel-bridge highway project is being planned to connect the city to the south shore of the river. The estimated cost of the project, $50 million, will be shared by the Federal Government and the Province of Quebec. It is expected to be completed in about four years.

The new 5,000-foot tunnel, the longest underwater tunnel in Canada, will have six traffic lanes and will run about 80 feet below the St. Lawrence river to Charron Island. From there, a 1,200-foot bridge, also with six lanes, will span the remaining distance to the south shore.

OUTLOOK FOR U.S. AVIATION-SPACE INDUSTRY

There is an "unquestionably good" outlook for the aviation-space industry in the United States, according to Dr. Karl M. Mayer, senior economist of the Lockheed-Georgia Company. The recent stock market decline and uncertainties about future general business conditions in the United States have "only a remote effect" upon the aerospace industry as a whole. Apart from the current level of military space spending which is about $1,000 million a year, civilian space research in the U.S. accounts for $1,500 million. In fiscal year 1963 the latter spending is expected to rise to $2,500 million. In the context of so much spending in the next few years, the overall prospects for the aerospace industry are stated to be better. The stability of the industry, with its growing markets, is thus assured.

NEW PRODUCTS AND PROCESSES

Dirt-resisting Man-made Fibre

A NEW Swedish dirt-resisting man-made-fibre, Tacryl, developed by Stockholms Superfosfat Fabriks AB, is reported to have aroused the keen interest of the world experts when it was shown at the world congress of man-made-fibres in London in May. The new fibre was introduced by Swedish textile artist Mr. Astrid Sampe, before an assembly of some 3,000 industrial leaders and researchers from 50 countries. The world's man-made-fibre industry has for years tried to solve the problem of the new fibres' tendency to attract all kinds of dirt and dust. The Swedish company, the article says, has achieved to eliminate this dirt-attracting property by means of giving the Tacryl fabrics a dirt-resisting even surface and close texture and letting the fibre undergo a chemical antistatic treatment which gives a lasting effect. Tacryl fabrics have been subjected to thorough laboratory testing with stain-producing substances such as, for example, ink, blueberry jam, juice of red beets and wines, but none of them have resulted in any visible stains, reports Plastvärlden. The fibre also resists grease and oil. The new fibre is particularly suitable for use in upholstering-materials. Should any stain-producing substance be spilled on the upholstery, is it enough to wipe it away with a wet cloth and then brush the remaining stains away when the material is dry again.

New Cutter Designs

New types of tool for lathe turning and face milling that not only last longer but cut metal at higher speeds than existing types, it is claimed, have been designed in the Production and Industrial Administration Department of Britain's College of Aeronautics (Cranfield, Bedfordshire). They have been used for machining steels of 120-ton tensile strength that are difficult to cut with ordinary tools. The basic element of the new tools is a disc of metal, carbide or ceramic which is about the size of a penny but about twice as thick. The surface of the dics is hollowed out by grinding to form a sharp edge. For turning, this disc is attached by a bolt to a thick bar of metal so that the edge of the disc projects beyond the end of the bar and can be brought up to the metal to be turned. This device allows the metal to be removed from the bar smoothly and quickly with freedom from chatter or vibration. For face milling, six of these discs are attached in a star formation to projections on the end of a circular tool so that each disc is vertical but out of alignment with the radius of the tool end. With this tool, cutting speeds twice as great as those attainable with ordinary tools can be achieved and again the freedom from vibration gives long tool life even with hard materials. In both cases, when the tool becomes blunt, a new cutting edge can quickly be obtained by slackening the bolt and turning the wheel to a new position.

Water Bombing Fires

Of all the methods used to fight forest fires in Canada (over 9,000 in 1961) the flying water tanker was undoubtedly the most spectacular. Cruising over the blazing fire at 120 knots, the air tanker makes its water drop at heights ranging from 120 to 250 feet. The drop is most effective from a low altitude. The flying water tanker to be used this year is a Martin Mars—a large, four-engined military flying boat—converted to a water bomber. The water tank in the Mars has four separate compartments, each with a capacity of 1,500 gallons. The water is picked up by two retractable probes while the aircraft is accelerating on the water prior to taking off. Vents are provided to allow the replaced air to escape from the tanks, and spring-loaded doors dispose of the over-flow. Air scoops are also provided so that, when the aircraft is in flight, a slight air pressure is maintained in the air space of the tanks for quick ejection of the water when the drop gates are opened.

Light Diesel Engine

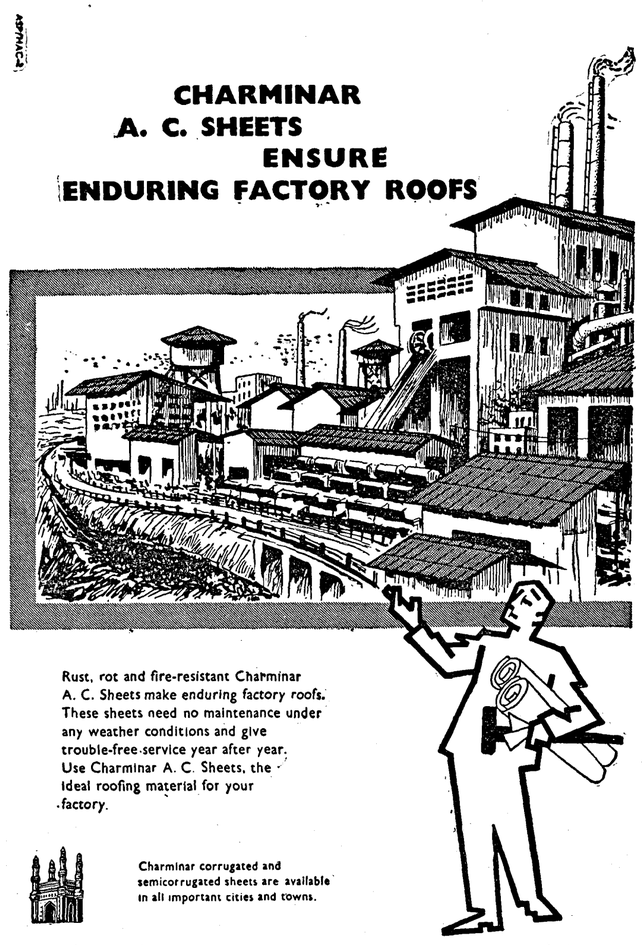
What is claimed to be one of the lightest 7 b.h.p. diesel engines in the world has gone into production at the Wolverhampton factory of The Villiers Engineering Company of Britain. A single-cylinder, air-cooled, four-stroke unit of 415 c.c. capacity, it weighs only 160 lbs. thus giving a weight to power ratio of only 22.88 lbs. per b.h.p. This is said to be less than half the weight of many British-built diesels of comparable capacity and is considerably better than the majority of similar-sized oil engines produced on the Continent. Villiers says it has overcome the weight problem by the extensive use of light alloys in the cylinder, cylinderhead, flywheel housing, sump and base plate.

Better Crease Resistance

In Japan, a new process has been developed for treating cotton and cotton-mix fabrics so that they become more than usually crease-resistant without lowering their strength. Two kilogrammes of polymethyl siloxane emulsion containing 40 per cent solids and 0.2 kilogrammes of a catalyst are stirred and made up to 100 litres with water. The cloth is dipped into this solution, wrung out, dried and immersed in a second solution consisting of 8 kilogrammes of mono- and di-methylol urea, 1.5 kilogrammes of catalysts and water.

Glass-fibre Street-lighting Columns

A new type of street lighting column, made of glass fibre, is claimed to give an entirely new outlook on street lighting equipment. The column is made from polyester—glass-fibre—laminate by a new technique to give homogeneous construction, combining strength with light weight—40 lbs. or 18.1 kilograms—so that it can be erected by one man. It has a glass-smooth surface and the colour is inherent in the resin. There is accommodation for any normal combination of control gear and cable termini. Already in substantial demand in Britain, it is now being introduced to Europe and will later be available in other parts of the world.



NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Limited, Grindlays Bank Limited and the Eastern Branches of Lloyds Bank Limited.)

Incorporated in the United Kingdom. Liability of Members is Limited.

Authorised Capital	...	£ 9,000,000
Issued and Paid-up Capital	...	£ 5,703,000

WORLD TRADE IN AGRICULTURAL PRODUCTS

G.A.T.T. URGES MODERATION OF NON-TARIFF PROTECTIVE DEVICES

A WIDE range of tariff and non-tariff measures have been devised by most, if not all, industrially developed countries against imports of agricultural products chiefly originating from the less-developed countries. In the former group of countries, farmers are heavily subsidised by the rest of the community. The character and the extent of the subsidy, however, are veiled, because it is usually accorded through such measures as import levies and restrictions designed to have the effect of supporting prices above world market levels. Of late, there is some recognition in the developed countries of the fact that the subsidy paid on production or exports on primary products adversely affects the growth of world trade, particularly of countries which depend on these products for the major part of their export earnings. But mere recognition does not mean much, unless it is translated into actual practice. The only way to achieve this goal is to keep on harping at the problem by quoting facts and figures. It is, therefore, gratifying to note that the G.A.T.T. Committee II has devoted considerable thought to this question and brought to light some interesting details. These findings have now been brought together in the form of a book, entitled "*G.A.T.T. Programme for Expansion of International Trade—Trade in Agricultural Products: Second and Third Reports of Committee II.*" (Price: $1.00.) The Committee's first report has not been included in the book, as it was concerned purely with procedural matters.

The G.A.T.T. Programme for International Trade, it may be recalled, was initiated at the thirteenth G.A.T.T. Session in November 1958, as a sequal to the Haberler Report (*Trends in International Trade*—1958). Under this programme, three committees were constituted. The Committee I prepared the ground for the world tariff conference, which began in September 1960 and ended only last week at Geneva. The Committee II is concerned with the investigation of the national agricultural policies, with particular reference to the effects on the flow of world trade of non-tariff agricultural protection. It is this Committee's report that is analysed in this article. The Committee III has been entrusted with the study of the problem of difficulties confronting the less-developed countries in their efforts to promote exports with the rest of the world.

Six Commodities

The Committee II has prepared its report after consultations with thirty-nine member-countries on their agricultural policies, which lasted for three years. It has focused its attention to six groups of commodities, namely dairy products, meat, cereals, sugar, vegetable oils and fish, "which are of importance in international trade and which are produced in a large number of countries." On the basis of available evidence, the Committee concludes that for each of these groups of commodities there has been extensive resort to non-tariff devices, involving protection to an extent, and having consequences "which were probably not fully recognised earlier." It may be noted that high tariffs are not the only or the principal method employed by several countries to support farm income or prices. They resort to non-tariff protective measures also which are mainly quantitative import restrictions, import levies, State trading measures, bilateral agreements, deficiency payments and domestic subsidies and export subsidies.

The Committee makes no bones about the fact that the non-tariff protective devices, which have been widely employed by most importing countries, have had the effects of "both reducing international trade in products concerned and of undermining the concept of balanced rights and obligations under G.A.T.T. as between countries which are predominently agricultural exporters and those which are not." The G.A.T.T. report says that the highest levels of agricultural protection occur in the developed countries in which non-agricultural sectors provide a major share of the national income. This is in contrast to the position in countries where most of the national income is provided by farming and where agriculture cannot secure an effective income support from its own resources. What is worse, it is often taxed to subsidise the development of non-agricultural economic activities. The continuance of the present situation, warns the G.A.T.T. Committee, constitutes a source of great concern as impediments to marketing of products of developing countries have "the effect of discouraging increased production, of intensifying balance-of-payments difficulties and of delaying their process of development."

Adverse Effects

Drawing particular attention to the ill-effects of protective devices on the growth of world trade and production, the Report observes as follows:

"The Committee recognised that the level of protection and resultant increased production in the traditional importing countries, inasmuch as they lead to a decrease in imports, place a heavy burden of adjustment on exporting countries, which renders the abolition of non-tariff measures in exporting countries more difficult, and could be an important factor causing these countries to make use of non-tariff measures.

"To the extent that income or price support has resulted in an expansion of relatively less efficient production and in a limitation of consumption, this has contributed to impairment of trade and to inefficiency in resources utilisation from the point of view of international trade.

"In agreeing to these conclusions, the Committee was not unmindful of the many difficulties with which agriculture is faced in many countries. It is an industry which, with some important exceptions, e.g. animal products, is affected by a situation in which the demand (in volume) for its products becomes increasingly inelastic as levels of real income rise, whereas technological progress makes enormous strides and almost becomes an independent influence for the expansion of production. At the same time, unlike some other industries, special conditions of production and marketing in agriculture lead governments to undertake measures which the producers in general cannot effectively undertake themselves. Some of the measures adopted can quite easily become effective barriers to trade. Adequate and comprehensive commodity arrangements may operate in the international marketing sphere to mitigate some of the restrictive trade effects of these measures.

"The Committee was also aware that an important long-term contribution to the solution of the farm income problem, with its concomitant trade problems, must come through an improvement in the efficiency of resource allocation. Such improvement is tantamount to a further reduction in the resources employed to bring about a given level of output. In many cases, this means a further reduction in the farm population which might be brought about by inducing farmers to move out of agriculture into other sectors of the economy, for example, by establishing industries in rural areas or by emigration. In some countries, the possibilities of transferring agricultural population to other activities are limited by social, demographic, traditional and other reasons. To the extent that the agricultural population can be moved out of agriculture to other regions or other sectors of the economy or to other countries where such population can be more efficiently employed, this would help to bring about changes which would assist in raising farm income to levels approaching those in other sectors of the economy. However, in some countries this movement out of agriculture, although of extraordinary proportions, has not yet had this result."

Viewed against this background, the Committee's plea for moderation of agricultural protection in both importing and exporting countries is quite sound and deserves the support of developed countries. For, as the Committee rightly says, liberalisation, through its effects on production and consumption, will substantially stimulate the flow of trade. Besides, by imposing some restraint on "protected production" in countries where national resources tied in agriculture can be more effectively allocated, it would, to quote the Report, "improve resource utilisation throughout the world." A possible solution to agricultural trade problems, says the Report, lies in fixing reasonable prices both at the national and international levels. This is possible only by ensuring that prices should *not* be such that "(1) production ceased to be remunerative for efficient producers even in regions particularly favourable for such production, (2) producers would be induced to increase production beyond existing outlets, or (3) expansion of consumption would be inhibited."

Supply and Demand

Price stability, of course, depends on the supply and demand position. Stressing the need for ensuring balance between production and consumption needs, the Report observes as follows:

"The outlets available for disposal of aggregate production are, in the main, limited, apart from dietary habits, either (1) by the capacity of the consumer to absorb (and this is particularly relevant to countries with an already high standard of living); or (2) the insufficiency of individual consumer's purchasing power or of currency resources in countries where consumption is below desirable nutritional levels.

"To the extent that governments are able to make available their abundance of food to low-income food deficit countries on a grant basis or on other concessional terms without displacement of normal commercial trade, and to the extent that such food can be directed into additional total consumption, the limitation referred to above can be mitigated.

"The Committee noted that taking these factors into account it was obviously necessary to seek a better balance between world demand and supply. The achievement of such a balance would be notably assisted, if outlets for the exports of efficient producers were extended by moderation in the use of such measures as subsidies on production and exports, quantitative restrictions, certain State-trading operations, excessive tariffs and similar devices, some bilateral agreements and other barriers to trade in agricultural products. The Committee recognised, however, that in the present situation, with the structural imbalance in world production and demand, the establishment of equilibrium between production and demand requires different solutions and adjustments for different commodities with different orders of priority. In some instances, it might be more appropriate to look for progress through measures which would be directed towards price levels. In other cases, it might be more appropriate in the first instance to look for measures directed towards controlling production."

Tariff Bindings

Unless a measure of balance is brought out by removing artificial props on domestic production in the developed countries, existing protective devices will continue to hamper world trade in agricultural products. Another important consequence of non-tariff protection highlighted by the Report is that tariff bindings under the provisions of the G.A.T.T. themselves are being impaired by their use. How the production and export of different agricultural products are adversely affected by various measures of non-tariff protection has been clearly brought out by the Report in the following words:

"Traditional importing countries over the post-war period have increased their production of all of the products under review. Whilst not ignoring the effects of technological progress, this increase is partly the result of the use of non-tariff protective devices associated with or forming part of support price arrangements. For example, recognition of this is implicity in the recent recommendation of the O.E.E.C. calling upon member countries to the extent that an increase in consumption of milk and dairy products would not be possible, to consider limiting milk production, or at least limiting price guarantees to milk producers, so as to bring about a better balance between production and outlets. The Committee had found that policies of price and income support (virtually all operated through non-tariff measures) had contributed significantly to the increase in the production of wheat. The growth in European production of wheat, concurrent with declining consumption, had narrowed the European import market. The growing consumption in many less-developed countries had not been enough to absorb the additional quantities from this source and from the world increase in production now thrown on world markets. This situation had seriously affected the international trade in wheat. Between 1934-38 and 1954-58, the proportion of apparent consumption represented by the combined imports of the four major European importing countries declined from 42 to 39 per cent and their proportion of total world imports fell from 49 to 30 per cent.

"Wheat provides the best example of the effect on international trade of price support measures causing export surpluses leading to pressures for disposal on subsidised or concessional terms; similar examples can be drawn from the international trade in dairy products. In its *Review of the World Wheat Situation* of April 1960, the International Wheat Council found that total wheat and flour exports covered by special governmentally assisted export programmes made up nearly 28 per cent of world wheat and flour exports. Indeed, since about 1953, a fairly important increase in the world trade in wheat and flour has been almost entirely due to non-commercial transactions which have made possible increased consumption.

"Where systems which necessitate restrictions on imports into the market operate, wheat shipped internationally is sold in the country of import at a price higher, and frequently considerably higher, than the price paid to exporters. (This applies also to most surplus disposal transactions where wheat is paid for by consumers at the prevailing price in the recipient country.) This indicates that in many importing countries, there is a capacity to consume wheat at prices generally above those at which wheat is traded internationally. In some cases, the revenue derived from the difference between international prices and prices on the national market have been used for financing support measures of agricultural income. Thus, not only are exporting countries placed in the position of being residual suppliers by the operation of quantitative restrictions, State-trading, etc., but, through the operation of customs duties and certain types of import levies or taxes, they are denied the opportunity of securing the price which consumers are prepared to pay for their product. Such a situation also exists for sugar.

"Deficiency payment systems provide another type of income support. While the Committee recognised that, under such system, it is not essential to apply quantitative restrictions to imports and that consumer prices are unaffected through high producer prices, nevertheless, as with other methods of price support, such a system does not in itself avoid the encouragement of high cost production where returns to farmers are guaranteed at relatively high levels. In addition, it is recognised that such systems, by providing a stimulus to production, can adversely affect import requirements and, from the point of view of the exporter, prices.

"As a general rule, in the case of wheat, the volume of consumption decreases as the standard of living increases, except where the level of consumption is very low, while consumption of butter, cheese and meat tends to increase provided that price increases do not offset the increases in real income. Support price schemes backed by non-tariff measures of protection have raised butter and cheese prices in many traditional importing countries; this did not prevent an increase in consumption in these countries although such consumption increased less rapidly than production."

Apart from this broad picture, the Committee has not so far been able to make any quantitative assessment of the effect of non-tariff protective devices on international trade. It is to be hoped that the expert committee already appointed by the Committee will be able to devise ways and means to fill this gap.

GWALIOR RAYON LEAPS FORWARD

WOOD PULP PRODUCTION THIS YEAR

WITH a sharp rise of Rs. 1.47 crore to Rs. 12.07 crores in sales realisations and a handsome increase of Rs. 58.48 lakhs to Rs. 437.86 lakhs in gross profit, the Gwalior Rayon Silk Manufacturing (Weaving) Company Ltd. (Managing Agents: Messrs. Birla Gwalior (Private) Ltd., Calcutta) has leaped ahead during the year ended 31st March 1962. The year's results have overshadowed the Company's bright performance in the previous year, when the turnover had improved by Rs. 88.83 lakhs to Rs. 10.60 crores and the gross profit had edged forward by Rs. 28.89 lakhs to Rs. 379.38 lakhs. In fact, the rise in sale proceeds during the year under review is a record since the spectacular recovery from Rs. 371 lakhs to Rs. 837 lakhs in 1958-59, after some successive bad years. The same, however, cannot be said of the improvement in profit for the year. For, in 1959-60, profit had increased by Rs. 98.94 lakhs to Rs. 350.49 lakhs on top of its eventful rise of as much as Rs. 251.55 lakhs in the preceding year. The explanation for the failure of profit to keep pace with improvement in sales has to be found in higher production costs over the past few years. During the year under review, costs have shot up all round and the profit-margin (ratio of gross profit to sales), therefore, has only crept up from 35.8 per cent to 36.2 per cent. The rise in costs (which can be seen from the following table) of course, reflects primarily the higher production of roughly 53 million lbs. of staple fibre as compared with 48.7 million lbs. in the previous year.

A synoptical view of the Company's working in the past four years can be had from the comparative table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sales (gross)	12,06.82	10,59.56	970.73	836.63
Other income	27.38	20.31	12.99	6.72
Closing stocks	79.15	56.05	55.76	41.49
Raw materials consumed	561.45	476.53	437.13	371.48

Low	48.75	38.00	24.24	13.52

* Subject to deduction of tax.

† For the period 1st January 1955 to 31st March 1960.

Founded in 1947, the Company paid its maiden dividend of 10 per cent per annum, tax-free, out of the profit for the year ended 31st March 1959 and, since then, has progressively stepped it up to 25 per cent per annum, subject to tax, on the Rs. 10 fully paid equity shares, with the paid-up ordinary capital remaining unchanged at Rs. 250 lakhs during that period. The provision for depreciation for the year under report has been raised from Rs. 41.34 lakhs to Rs. 43.60 lakhs. The Government's appeal against the decision of the High Court of Judicature, Madhya Pradesh, accepting the Company's claim for exemption from income-tax and super-tax for a period of 12 years under the agreement executed by the erstwhile Gwalior Government is still pending before the Supreme Court, and the provision for taxation has, therefore, been held again in abeyance, excepting Rs. 15.15 lakhs provided for the tax liability for the weaving section, the exemption for which expired during the year. The tax liability for the year is estimated at Rs. 170 lakhs and makes an aggregate total, should it ultimately be established, of Rs. 450 lakhs for the profits up to 31st March 1962. To cover the year's tax liability, the amount transferred to general reserve has been increased from Rs. 205 lakhs to Rs. 270 lakhs, raising the balance standing to the credit of this account to Rs. 650 lakhs; as against this, the contingent tax liability is Rs. 450 lakhs. Development rebate reserve has got Rs. 9.56 lakhs as against Rs. 7.33 lakhs in the previous year. The preference shares capital redemption reserve account has received Rs. 15 lakhs, the same as in the preceding year, and the dividend equalisation reserve account has been credited with Rs. 25 lakhs as against *nil*. Excluding the transfer to development rebate reserve, the total credit to reserves at Rs. 310 lakhs is Rs. 90 lakhs more than the sum set apart last year. The substantially large credit to reserves has necessarily meant a lower carry forward of Rs. 7.41 lakhs as compared with Rs. 42.93 lakhs brought in.

The staple fibre division worked satisfactorily during the year. The research work in connection with the manufacture of fibre of high tenacity is continuing and trials thereon are said to be in an advanced stage. Meanwhile, in view of the prevailing shortage of cotton in the country, which could partly be made up by staple fibre, the Company has applied to the Government for permission to further increase the capacity of the plant to 150 tons a day. The weaving division at Gwalior worked well during the year. The popularity of its suitings and other products was on the ascending side in both the home and foreign markets, with exports showing an improvement from 627,279 yards to 898,587 yards. It was possible to export the fabrics even to the U.S and the U.K., wherefrom the Company is having repeat orders. The Company has been licensed to install 48 looms for the manufacture of cotton corduroy and velveteen fabrics against export guarantee and has applied for the necessary import licence. The wood pulp plant at Birlakootam, near Calicut in Kerala, has almost been constructed and erected. Trial production will start in the last quarter of the current fiscal year of the Company and the plant will be commissioned to production before the year is out. The Company's agreement with some foreign collaborators for the manufacture of rayon machinery having an annual productive capacity of one complete staple fibre plant of 15 to 18 tons-a-day capacity, or one complete filament rayon plant of 7.5-ton daily capacity has been approved by the Government. The licence for the import of the necessary machinery and equipment is being awaited. Meanwhile, the workshop is being constructed and the manufacture of the machinery for the viscose and spinning departments has been taken up with the existing facilities.

The financial position of the Company is sound. Its paid-up capital of Rs. 400.77 lakhs comprises Rs. 250 lakhs in equity shares and the balance in redeemable preference shares. Reserves and surplus, on the other hand, aggregate Rs. 793.77 lakhs, and, even after taking into account the contingent tax liability of Rs. 450 lakhs, provide enough cover for the equity capital. The secured loan from the Government under the Subsidised Industrial Housing Scheme for the workers' quarters has been reduced from Rs. 7 lakhs to Rs. 6.77 lakhs. Current liabilities and provisions total Rs. 232.96 lakhs. As against this, current assets and book debts aggregate Rs. 752.95 lakhs, of which Rs. 406.50 lakhs represent cash and bank balances. Investments of Rs. 3.16 lakhs comprise Rs. 0.41 lakh in Government securities commanding nearly the same market value and Rs. 2.50 lakhs in 2,500 fully paid equity shares of Rs. 100 each of the Indian Express Newspapers (Bombay) Ltd., which are unquoted. This investment in a newspaper company was made only in the year under report. The gross block of the Company saw a further sizable increase during the year from Rs. 7.13 crores to Rs. 11.74 crores. The total depreciation provided on it till the year-end amounts to Rs. 4.96 crores. The net block, therefore, stands at Rs. 6.78 crores, as against Rs. 2.60 crores a year before.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 57.50 *cum-div*. The yield on them, on the *ex-div*. basis, works out to 3.1 per cent per annum, free of tax.

KALINGA INDUSTRIES LTD.

The figures of production and despatches of pig iron by the Kalinga Industries Ltd. at its low shaft blast furnace plant at Barbil, Orissa, for the first half of the current year are now available. As compared with the figures for the corresponding period of the previous year, production has declined from 15,733 tons to 14,287 tons, but despatches have improved from 12,538 tons to 18,283 tons.

METTUR INDUSTRIES' DIVIDEND CUT

NET PROFIT DOWN BY A THIRD

DESPITE a marginal increase of Rs. 1.40 lakh to Rs. 177.19 lakhs in sale proceeds, gross profit of the Mettur Industries Ltd. [Managing Agents: Messrs. W. A. Beardsell and Co. (Private) Ltd., Madras] for the year ended 31st March 1962 has slipped down to Rs. 42.75 lakhs from Rs. 47.18 lakhs for the previous year. Reasons for this decrease have been several. First, there has been a rise of Rs. 3.10 lakhs in the cost of cotton consumed and, although a part of this merely reflected a slightly bigger output, the balance was due to the higher cost of both Indian and foreign cotton. Secondly, the wage bill increased by Rs. 2.63 lakhs, owing to the enhancement of dearness allowance to workers and the implementation of the revised pay-scales of the Wage Board. Thirdly, an export cess of Rs. 5 per bale of Indian cotton utilised in production was made effective from 1st January 1962 and this entailed an additional burden of about Rs. 15,500 for the concluding quarter of the year under review. And finally, the change, in March 1961, in the pattern of excise duty cost the Company an additional amount of approximately Rs. 37,000.

Although provisions for Managing Agents' commission and depreciation have been slightly lower, the former by Rs. 0.10 lakh at Rs. 3.49 lakhs and the latter by just Rs. 3,056 at Rs. 2.01 lakhs, the rise in the rate of corporate taxation and the necessity to provide Rs. 2.94 lakhs out of the year's earnings for taxation relating to the previous year have pushed up the provision for taxation by Rs. 4.71 lakhs to Rs. 18.44 lakhs. This has brought down the net profit rather sharply from Rs. 27.82 lakhs to Rs. 18.81 lakhs, a drop of one-third. Out of this, the Directors have set aside Rs. 5.69 lakhs as provision for bonus for workers, Rs. 54,000 for provision for gratuity, and Rs. 16,100 for development rebate reserve. With the balance hardly sufficient to bear a dividend of 30 per cent paid for 1960-61, the Directors have been obliged to propose a much reduced ordinary dividend of 22.5 per cent, subject to deduction of tax. The cut in dividend, it may be noted, works out to a quarter. Even then, the carry forward has fallen from Rs. 1.53 lakh to Rs. 45,412.

The working results of the Company for each of the past four years have been set out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	177.19	175.79	163.75	155.60
Other income	1.71	1.77	2.22	2.00
Closing stocks	1.71	1.40	1.53	1.64
Raw materials and stores consumed	76.32	73.00	57.31	63.16
Salaries, wages and bonus, etc.	43.81	41.18	36.10	33.72
Other expenses	16.33	19.07	24.47	14.81
