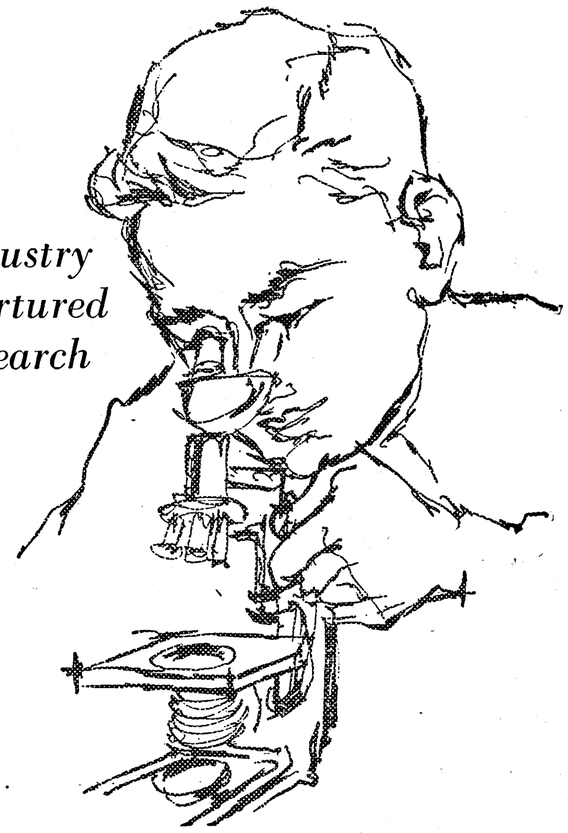
In a developing economy like ours a balance of payments deficit is inevitable. It was expected that India would face an increasing deficit in her balance of payments as the outlay on the Plan increases, with an inevitable increase in its foreign exchange counterpart. Efforts should undoubtedly be made to economise the available foreign exchange resources by a judicious import policy and still more vigorous efforts should be made to earn more foreign exchange by increasing our exports. But there is no justification whatsoever to increase the exports of rice, pulses and other consumer's goods, of which there is already an acute shortage in India. Every increase in the exports of such commodities is bound to increase the internal price level. In order, therefore, to stabilise the price level in India, there will have to be a greater readjustment in Government's economic policy than appears at first sight and than is appreciated by the Planning Commission and the Government.

There is, of course, no doubt that, from the long-range point of view, efforts have to be made to increase production and productivity in Indian industry and agriculture, to reduce the level of deficit financing as much as possible and to operate credit control in such a way that, while there is no shortage of finance for increasing production, there is no misuse of credit facilities for speculative purposes. But some people seem to argue as if there is no connection between the short-period and long-period methods for stabilising the price level. In fact, all the immediately applicable methods—reducing the level of taxation and rationalising the tax structure, improving the means of transport for a better distribution of the available supplies, reducing the exports of consumer's goods (including foodgrains) in short supply in India and building up of adequate reserves of foodgrains in the country—have a direct bearing on long-period methods aiming at increasing production and productivity of goods in the country. In other words, it means that it would be futile to hope that methods to increase production alone would succeed in stabilising the price level even if the other more immediate problems are ignored.

The World Bank has arranged its first borrowings in Austria. They aggregate $10 million, all denominated in U.S. dollars, and consist of a public offering of $5 million 4½ per cent 15-year bonds, and of placement of $5 million 4 per cent 5-year Notes, due on 15th November 1967, with the Oesterreichische Nationalbank, the central bank of Austria. The new bonds are the first non-schilling issue to be publicly offered in the Austrian Market since 1930. The public offering of the 4½ per cent bonds will be made from 12th to 14th November 1962, through a syndicate of twelve Austrian banks headed by Oesterreichische Kontrollbank Aktiengesellschaft. The new issue will be offered at 102 per cent to yield about 4.33 per cent to final maturity. The bonds will be dated 15th November 1962 and mature on 15th November 1977. Interest will be payable semi-annually on 15th May and 15th November with the first payment due on 15th May 1963. The issue will be listed on the Vienna Stock Exchange. A sinking fund has been provided for the bonds and begins operation on 15th November 1973 and is scheduled to retire the entire issue by maturity. The sinking fund redemption price is 100 per cent. The Bank may redeem in advance of maturity all or part of the issue on 15th November of each year on three months' notice at a price of 105 per cent of principal amount in the event of redemption on 15th November 1963 and at decreasing premiums thereafter. Giving effect to the new bond issue and the borrowing from the Oesterreichische Nationalbank, the outstanding funded debt of the World Bank will be about $2,550 million, of which $1,910 million will be denominated in U.S. dollars and the balance in seven currencies.

An Industry Nurtured by Research



'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has' been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

JENKINS COMMITTEE REPORT VIEWED AGAINST INDIAN BACKGROUND—IV

ANNUAL ACCOUNTS—EXEMPTIONS—AUDIT

By A Special Correspondent

NOTWITHSTANDING the fact that company balance-sheet and profit and loss account in the U.K. have started giving many more details after the coming into force of the 1948 Act, they are still far too conservative when compared with the contents of company accounts required to be disclosed by corporations in the U.S.A. under the regulations prescribed by the Securities and Exchange Commission and by companies in India under the provisions of the Companies Act, 1956. Generally speaking, the development of Indian company law has been guided by the various Committee Reports, company law and company traditions in the U.K., but it is interesting to note that the provisions relating to company accounts had all along been ahead of the requirements prescribed under the English Companies Acts in force at different times. For instance, the Act of 1862 in the U.K. contained no compulsory provisions with regard to audit or accounts though Table A to that Act did include certain clauses dealing with both matters. In 1879, provision was made for the audit of the accounts of banking companies but it was not until 1900 that any such provision was made generally applicable. It was only in 1908, when the Companies Act 1907 came into force, that a provision was made for including a statement in the form of a balance-sheet in the annual return to the Registrar of Companies and that provision exempted private companies from this requirement. Then, before the Act of 1948 came into force, the law required directors to produce a balance-sheet and a profit and loss account in every calendar year and laid down some requirements as to the contents of the balance-sheet (Sections 123 and 124 of the Act then in force) but there were no requirements as to the form and contents of the profit and loss or income and expenditure account.

The Cohen Committee (1945) recommended that "the law should lay down minimum requirements as to the contents of the profit and loss or income and expenditure account calculated to ensure that it gives a fair indication of the earnings of the period covered by the account" and should also disclose extraneous or non-current transactions or those of an exceptional nature. As regard balance-sheet, the Committee recommended that it should give a true and fair view of the state of affairs of the company and for this purpose it should classify under headings appropriate to the business of the company the share capital, reserves, provisions, liabilities and assets of the company and distinguish between the amounts respectively of the fixed and current assets and state how the amounts of the fixed assets have been arrived at. The Cohen Committee made specific recommendations for disclosure of certain details in the two accounts. The accounting provisions of the English Companies Act, 1948, were fashioned after the suggestions made by the Cohen Committee and these were no doubt a great advance on previous requirements. The Jenkins Committee found these to be working "remarkably well" but felt at the same time that "there is still a certain amount of dissatisfaction with the amount and kind of information given in the accounts of some companies." The Committee, after studying the proposals of the most varied character for amending the present accounting provisions put before it by the witnesses, has made some sixty recommendations many of which bring the requirements of the English Law close to those in the Companies Act in our country.

As for the evolution of provisions relating to company accounts in our Companies Act, the Bhabha Committee stated that "the provisions of the Indian Companies Act relating to accounts and audit have been always in advance of the corresponding provisions in the Companies Act of other countries and particularly of the provisions in the English Companies Act." The recommendations of the Bhabha Committee sought further improvement in the accounting provisions, so as to keep the advance over those in the English Companies Act. The Bhabha Committee stated:

"While, therefore, we have not hesitated to recommend the adoption of some of the provisions contained in Sections 147 to 163 of the English Companies Act, 1948, relating to accounts and audit and, in particular, of the provisions contained in the Eighth and Ninth Schedules to that Act, we have taken care to retain those provisions in the Indian Companies Act which were in advance of the then existing legislation when the Indian Companies (Amendment) Act of 1936 was passed and which still retained their usefulness. We have also recommended adoption of several other provisions which we consider to be a further advance upon the provisions of the English Companies Act of 1948."

Looking back to the very early days of company legislation in our country, the Indian Companies Act of 1882 (modelled on the U.K. Act of 1862 which, as stated above, did not contain any provisions about accounts and audit and contained only optional regulations 78 to 94 in Table A to be adopted by companies in the Articles of Association) contained specific provisions about the balance-sheet to be made and filed with the Registrar of Companies by every company within a specific time and such balance-sheet under the aforesaid Indian Act had to contain a summary of the property and liabilities of the company prepared in a form annexed to Table A in the First Schedule to the Act. Later, a very material departure from the English practice made was the provision contained in Section 132 of the Indian Companies Act, 1913 which required that the balance-sheet should contain a summary of the property and assets and of the capital and liabilities of the company, giving such particulars as would disclose the general nature of those liabilities and assets and how the value of the fixed assets has been arrived at. The Indian Act made a clear stipulation that the balance-sheet should be in the form marked F in the Third Schedule, and this position was certainly an advance upon that obtaining in the English Companies Act of 1908. Thus, until 1936, the emphasis was statutorily laid on the preparation of balance-sheet, but, after that, it shifted to the profit and loss account, the main reason for this change being that the investing public came to be more interested in the profit-earning ability of the investment than in the safety of its capital.

By the Companies Amendment Act, 1936 in our country, it was made compulsory for every company to have a profit and loss account and regulation 107 in Table A, which enumerated the contents of the profit and loss account, was made compulsory. This regulation, together with sub-section (3) of Section 132, requiring disclosure of the total amounts paid to the managing agents and the directors for their services, laid down the form in which the profit and loss account was to be cast. Also, at the same time, Form F, containing a proforma balance-sheet was completely remodelled, so that every company disclosed more details than it did before. Another important change introduced by the 1936 Amendment Act was that it made it obligatory for a holding company to annex to its own balance-sheet the accounts of its subsidiary company or companies, and the shareholders of the holding company were also empowered to call for the inspection of accounts of the subsidiary companies as if they were the shareholders of the subsidiary companies. The provisions of the English Act, 1929, however, did not provide for all these things. Later, the Bhabha Committee recommended a lot more disclosures to be made in the accounts. In this connection, the Committee observed:

"We consider that the disclosure of particulars which we have recommended will reduce the chances of adverse criticism and inspire greater confidence in the minds of shareholders and the general public. If the statutory provisions with regard to accounts are not clearly expressed or required disclosure of only the minimum particulars, the management of companies would generally provide only the minimum possible information and the auditors, in spite of their best efforts, would be unable to convince the former of the desirability of disclosing fuller information. If, on the other hand, a standard form of balance-sheet and the schedule of contents of profit and loss accounts are prescribed, the auditors of the companies will have the right to insist on the relevant information being given and will thus be in a better position to safeguard the interests of investors."

And this, the Companies Act, 1956 has prescribed in Parts I and II of its Sixth Schedule.

Balance-sheet

Now, coming back to the Jenkins Committee Report, some of the principal recommendations of the Committee as regards balance-sheets are:

(i) In order to check the possibility of abuse resulting from the revaluation of fixed assets by the directors, the Committee has recommended that, if any fixed assets are shown at a value in the balance-sheet, it should be stated as to what assets were revalued and when they were revalued and in the case of balance-sheet in which the revalued figure appears, by whom and on what basis. Where, however, a large number of assets were revalued on different bases, and the directors consider that the above statement would be unduly cumbersome the balance-sheet should contain an intelligible summary. Further, the depreciation charges should be based on the revalued figures and any amount set aside for replacement over and above the amount of depreciation so computed should be shown separately.

(ii) The present distinction between trade and other investments in the balance-sheet should be abandoned but the distinction between the investments held as fixed assets and those held as current assets should be maintained.

(iii) The aggregate market value should be stated of all investments other than investments in subsidiaries in respect of which quotation has been granted on a recognised stock exchange in Great Britain or any stock exchange of repute elsewhere.

(iv) Further, where the investments are not quoted, the balance-sheet should either (*a*) show the directors' estimate of their aggregate value or (*b*) in respect of equity share capital, give such additional information as the aggregate dividends and other income brought into the account from the investments during the company's financial year, amount of the company's share in the aggregate profits, both before and after taxation, of the companies in which the shares are held for the financial periods for which the company's accounts are made up and the amount of the company's shares of the aggregated undistributed profits after taxation charged in their account, of the companies in which shares are held since the date of acquisition.

(v) The balance-sheet should be required to show the amount of long and medium-term indebtedness separately from other liabilities, together with the dates and terms of repayment and the rates of interest. For this purpose, a long or medium-term loan should be defined to mean one which the company is not bound to repay within five years from the date to which the balance-sheet is made up.

(vi) The balance-sheet should show, in addition to capital expenditure for which contracts have been placed, the estimated amount of any capital expenditure where material which has been authorised by the board of directors but for which contracts have not yet been placed.

(vii) The balance-sheet should show separately the amounts of additions to and deductions from fixed assets during the year.

(viii) Where a company uses many different bases for computing the value of stocks and, in the opinion of the directors, a statement of all the bases used would be of little value to shareholders, the directors should be required to give an intelligible summary.

(ix) The requirement to show separately capital and revenue reserves should be abolished as it is not practicable to formulate statutory provisions for determining what profits are available for distribution and could be called revenue reserves.

Regulations in India

In respect of each of the foregoing recommendations of the Jenkins Committee, the position in our country is as follows:

(i) *Disclosure about revaluation of fixed assets:* Part I of Schedule VI to the Indian Companies Act, 1956 provides that, in case of revaluation, every balance-sheet subsequent to revaluation should show the figure arrived at after revaluation together with the date of revaluation and that each of the balance-sheets for the five years subsequent to revaluation should show the amount of revaluation made. Thus, the fact of revaluation and its financial consequences are to be disclosed, but our Act does not provide that "by whom and on what basis the revaluation was made" should be stated. It will, therefore, be seen that the Committee's recommendations are partly covered under the provisions of law in our country.

(ii) *Distinction between trade and other investments:* While the distinction between trade and other investments in the balance-sheet is to be observed and depicted in the balance-sheet under the Indian Companies Act in the same manner as in the U.K., the requirements of our law for giving information about investments are rather more elaborate and go far beyond the purposes underlying the Jenkins Committee's recommendations on the point. The nature of investments and the mode of valuation have to be given. Furthermore, distinction has to be made between (*a*) investments in Government or Trust securities, (*b*) investments in shares, debentures or bonds, and (*c*) immovable properties. As regards shares, debentures and bonds, a distinction is to be drawn between fully paid and partly paid shares, and shares of different classes. Also, a distinction is to be drawn between quoted and unquoted investments. As regards the former, the aggregate market value is required to be stated.

In fact, the position of investment is very lucidly set out in note L to the form of balance-sheet given in Schedule VI of the Act. It runs as follows:

"A statement of investments (whether shown under investments or under current assets as stock-in-trade) separately classifying trade investments and other investments should be annexed to the balance-sheet showing the names of the bodies corporate, indicating separately the names of the bodies corporate in the same group (with the names of the managing agents or secretaries and treasurers, if any, of every body corporate) in whose shares or debentures investments have been made (including all investments whether existing or not, made subsequent to the date as at which the previous balance-sheet was

INDIAN IRON AND STEEL COMPANY LIMITED

CHAIRMAN, SIR BIREN MOOKERJEE'S STATEMENT

STEEL PRICE DECISION OF GOVERNMENT TOTALLY UNREASONABLE AND UNREALISTIC

THE following statement by Sir Biren Mookerjee, Chairman of the Indian Iron and Steel Company Ltd., dealing with the Company's working for the year ended 31st March 1962, has been issued to shareholders. The Annual General Meeting of the Company will be held on Tuesday, 11th December 1962 at 3 p.m. at the Royal Exchange Hall of the Bengal Chamber of Commerce and Industry, 6, Netaji Subhas Road, Calcutta-1.

The production of iron for the year at 1,187,397 tonnes and of steel ingots at 934,498 tonnes shows a small increase over the previous year. Yet in fact the rate of production remained more or less the same in the two years.

This apparent anomaly is due to the fact that there was a railway strike last year during which period there was a stoppage of all raw material coming into the works. As stocks of coal had run down to only four days' requirements, it left no alternative other than to carefully damp down all the four blast furnaces one by one as well as to reduce the input of coal into the coke ovens just to maintain sufficient heat to prevent damage to those plants. This calculated shut down last year, carried out under careful scientific observations by Works' executive experts, resulted in a computed total loss in production of some 27,000 tonnes of ingot steel. It will be seen, therefore, that while this year's production shows an increase over last year of 20,339 tonnes, it is in fact on the basis of actual rate of production less by some 6,000 tonnes.

In this connection I would like to emphasise, that ever since the new blast furnace and melting shop expansions were completed some time round about the middle of 1959, every effort has been made to go all out to reach the rated capacity of iron and steel production. But we failed each year to achieve this owing to the poor quality of raw material and particularly in the case of coal, a quality almost unusable. Added to these difficulties there was the ever persistent irregularity of transport. How then in the face of these insurmountable difficulties can Government insist that 100 per cent production is to be maintained? They have merely to look at the production of their own steel plants, where in the case of one plant the quality of raw material can be termed excellent compared to ours, with little or no transport difficulties. In the case of the other two Government plants, raw material and transport problems do arise, but it is nothing compared to that of your Company. Steel *qua* steel may be made at the cost of quality. Is that then what the Government desire, a sacrifice in quality and a mass rolling of unrequired sections of steel for the sake of production records? I shall refer to this and many other points later on in my statement.

Accounts

In my statement last year, I made reference to the Tariff Commission's enquiry in connection with the fixation of the retention price of steel effective from 1st of April 1960. After conducting the usual careful investigations, visits to the works and discussions with the representatives of the Steel Companies, the Tariff Commission submitted its report to the Government in April 1962, having made such deductions and adjustments in costs as it thought fit. It was not until the 7th September 1962, that Government's decision on this important matter was announced in Parliament according to which steel retention prices were increased by Rs. 10.50 per tonne on an assumed product mix basis commencing from the 1st of April 1960, as against the Tariff Commission's recommendations of an increase of Rs. 38 per tonne over the provisional increase announced by Government in February 1961, a reference to which was made in my statement to you last year.

Curiously enough Government apparently did not consider the retention prices of individual categories of steel as important, as these details were only made available on the 12th October 1962. This delay in announcement on Government's part of the category-wise retention prices of steel prevented the Company from closing its annual accounts and presenting them to you along with the auditors' report within the prescribed period; hence two appeals had to be made to the Company Law authorities to extend the permissible date of the annual general meeting to the maximum limit of 3 months, namely, the 31st December 1962.

The most surprising part of Government's decision was the drastic and unconventional manner in which the Tariff Commission's carefully considered recommendation and mature judgment were turned down flatly in respect of the normal retention prices for the past two years, ending on 31st March 1962, as well as a special element that should have been allowed in the retention price in addition, for payment by the Tata Iron and Steel Company and your Company, of interest on and towards repayment of special advance of Rs. 10 crores each made to these companies by Government. I will deal with this in greater detail later on.

The salient points of the accounts for the year have been fully dealt with in the report of the Board of Directors, but there is one point, a very important point indeed, on which I would like to make some observations.

Tariff Commission's Recommendations and Government's Decision

On the recommendation of the Tariff Commission in 1959, the Government of India in terms of their Resolution No. PS45 (112)/57 dated the 25th November 1959 decided that the interest on the special advance should be charged to the Company as from 1st July 1958 at 5 per cent per annum and the calculation of a special element in the normal retention price for steel for meeting this interest charge was postponed until after 31st March 1960, when it was necessary to work out the fair retention price of steel produced by the main producers. As the interest accrued from the 1st of July 1958, your Company has to, under the Indian Companies Act, make provision for this accrued liability in the past years' accounts and as in terms of an Agreement with the Government of India dated the 15th July 1953, it was expected that in fixing the retention prices of steel for the two years ended 31st March 1962, a special element should be included in such prices to fully cover interest upto the end of this period, a corresponding amount was included in sales retention prices in those years as the anticipated earnings from such special element. This expectation has, however, been belied. Although a special element to cover interest and repayment of special advance was recommended by the Tariff Commission, the Government of India has, in reversal of their earlier decision, rejected this recommendation. This has put your Company in a very awkward situation. The interest on special advance charged in the previous two years' accounts has to remain as such but the anticipated compensatory element in steel retention prices amounting to Rs. 1,40,01,141 included in the accounts of those two years had to be written back from the current year's "sales"; besides, whether interest is actually paid in cash or not, your Company has to go on charging such accrued interest from year to year without a corresponding compensating element in "sales". Repeated representations have been made to the Government, but it does not seem to realise this difficulty of your Company; it appears to be under the impression that so long as the Company has not to make actual cash payment to Government, it is immaterial whether any special element is included in the prices or not. Government just cannot realise that your Company does not keep its accounts, as Government departments do, on a cash basis but on the normal commercial basis where any liability accrued, whether paid or not has to be duly provided in the accounts.

Little or No Hope

At long last, that is, after two and a half years, retention prices of steel were announced by Government on the 7th of September 1962 on an estimated product mix basis on which, as I have already stated, your Company's accounts could not be closed. Apart from the fact of Government's rejection of the Tariff Commission's deliberations and conclusions it has come to an *ad hoc* decision totally divorced from the conditions specially laid down in 1953 for the calculation of retention prices of steel, after taking into consideration repayment of loans to Government and the World Bank (International Bank for Reconstruction and Development), maintenance of regular dividend and putting into reserve statutorily or otherwise sufficient sums in order to enable the Company to remain healthy and to continue to increase production and achieve expansion out of its own resources as and when the country needed extra steel. It now appears from Government's latest announcement in the papers that the Tariff Commission's sins are that it arrived at its conclusions according to these formulæ and conditions laid down by Government earlier and according to which your Board of Directors agreed to accept loans on your behalf for the expansion schemes. If now these conditions and formulæ for calculating retention prices are changed for the worse, as has been announced recently, there is little or no hope of further expansions to your plant.

Government's decision regarding cutting down the retention prices recommended by the Tariff Commission has, as announced on 7th September 1962, been arrived at by:

(*a*) Reducing the value of the block considered fair, after careful study by the Tariff Commission, from Rs. 1,300 to Rs. 1,176 per tonne.

(*b*) Reducing the working capital provision to four months' cost of production as against eight months' claimed by us in our representation and six months allowed by the Tariff Commission.

(*c*) Disallowing the inclusion of Rs. 8 per tonne as recommended by the Tariff Commission towards interest on special advance and its repayment.

The reasons stated for making a reduction in block are:

(1) The operational efficiency of the plant should be taken at 100 per cent, as against 90 per cent optimum considered by the Tariff Commission.

(2) The capital block of Rs. 10 crores received as special advance from the Government should be excluded.

Apart from reduction of Rs. 8 per tonne on account of the special element towards payment of interest and repayment of special advance, the total reduction effected by Government per tonne of steel from what was recommended by the Tariff Commission comes to Rs. 19.50 per tonne as shown below:—

(1) Reduction in capital block due to deduction of special advance ...	Rs. 10.30	per tonne
(2) Reduction of block by taking operational efficiency at 100 per cent	Rs. 6.20	,,
(3) Reduction in working capital	Rs. 3.00	,,
Total ...	Rs. 19.50	per tonne

As a result of this, your Company has been deprived of approximately Rs. 2.8 crores on despatches of 1.4 million tonnes of saleable steel during the two years and will also suffer in future as, we fear, this will also apply to the provisional price to be fixed from 1st April 1962 onwards.

But the story is actually different. The new prices fixed by Government for individual categories of steel will only enable the Company to earn an increase of Rs. 8.53 per tonne, as against Rs. 10.50 per tonne announced by Government on the despatch of steel made during the last two years.

Capacity Utilisation

The target of operational efficiency as contemplated by Government recently should have been based on an approach inspired by lessons of realism and past experience rather than dogmas. Nowhere in the world have steel plants been rated to operate at 100 per cent of their rated capacities. It can only be expected over short spells. The Tariff Commission very rightly adopted 90 per cent efficiency as a factor of normal operation. I quote below some interesting figures of capacity utilisation as publish-

ed by the U.K. Iron and Steel Board (*vide* para 65—Annual Report—1961):—

Year	% capacity utilisation assumed by the Board	Actual operation
1954	90	98.0
1955	90	98.0
1956	90	97.0
1957	90	96.4
1958	90	87.1
1959	90	78.9
1960	90	93.9
1961	90	88.5
Average over 8 years ..		92.2

Although the average of actual operation works out to 92.2 per cent the Board for calculation purposes maintains 90 per cent as the target of capacity utilisation.

Matter Must be Reconsidered

It may not be difficult to attain 100 per cent efficiency occasionally, but provision must be made for bad weather and unfavourable circumstances which do arise more often than not and over which no management control can be exercised; in our case the transport and raw material difficulties are well known. The fixation of block value at 100 per cent utilisation of capacity in the steel industry is unrealistic and I am afraid, will be of no help to the industry. It is my sincere suggestion that the matter should be reconsidered and given a second thought by Government. It must also be remembered that when vital issues of this nature are referred by Government to an independent semi-judicial and expert body like the Tariff Commission, its recommendations should not be flouted in the manner in which it has been done in this case, as it is bound to undermine confidence in the private sector and definitely make foreign aid participation very doubtful.

As regards the disallowance of the special advance of Rs. 10 crores from the block a great deal has been said, both in Parliament and outside it, about this interest-free loan to your Company by the Government. I have so far refrained from answering queries from stockholders, financial journals and papers, as I thought it to be Government's duty to explain the reasons and motive behind such a loan first to Parliament. Since 1958 Government's ideas on the repayment of the interest-free loan have been undergoing many changes, some even contradictory. It is only fair to stockholders that I should now take them into confidence and explain how this interest-free loan of Rs. 10 crores came into being.

At the request of the Government of India, Mr. Eugene R. Black, the World Bank President, paid a visit to India in February 1952 to acquaint himself of the broad aspects of the country's development programme in the light of the Five-year Plan. On the 17th February he, accompanied by Mrs. Black, Messrs. Joseph Rucinski, Chief Economist of the Loan Department, Leonard B. Rist, Director of Economic Department and Harold N. Graves, Director of Public Relations, arrived at Burnpur on a two-day visit to have a first-hand study of your Company's expansion programme.

World Bank Mission

Being satisfied with the merit of your expansion scheme, he was kind enough to send to India in June 1952, a Fact Finding and Feasibility Probing Mission of four members headed by Mr. George D. Woods, one of India's best friends outside the World Bank and the President of the First Boston Corporation of New York. The Commission consisted of Mr. Woods, Mr. Maccurda, his personal adviser, Mr. Joseph Rucinski of the World Bank and Mr. Carl Fiesher, Technical Consultant to the Bank. They visited your Works and went into the details of the First Expansion Scheme with the Company's Consulting Engineers and the Works' senior executives. On being satisfied with our scheme generally in every respect, discussions with Government were started in Delhi directly afterwards. At these discussions, the then Finance and Commerce and Industries Ministers were present along with their respective secretaries and advisers. You were represented by my colleague, Mr. F. G. Liversedge and myself. At the conclusion of these discussions, the World Bank's representatives agreed to put the matter up to the World Bank Directors, subject to a detailed scheme of the plant proposed, its costs broken up into foreign exchange and local currency, the legal aspects of mortgage of all lands and property of the Company etc., considered. The foreign exchange requirement to be met by the World Bank was approximately estimated to be Rupees 15 crores or 31½ million dollars. Government's loan to the Company on the same terms and conditions, but ranking second to the World Bank and the then debenture holders, was set up approximately to be Rs. 7.9 crores. The Company was to find an equal amount, namely, Rs. 7.9 crores from its own resources. It was then found, a further Rs. 10 crores was needed for financing the entire scheme, as well as to meet the working expenses. The question then arose how to bridge this gulf. The Woods Commission came to the conclusion that the then Tariff Board's function as directed by Government in the case of the steel industry, was not so much as to find ways and means of protecting the indigenous industry from foreign invasion, but to prevent it from claiming a higher world price for its commodities, obviously for Government's own benefit; Government, therefore, in all fairness could hardly refuse to find for the industry the needed amount, and they said, if I remember correctly, "Whose money are you giving away and to whom; in the case of jute, tea, sugar, copper and other such commodities, the industries are allowed to claim or sell at the highest prices the World market was willing to pay, but in the case of steel, the industry was beaten down by the Tariff Board on a framed up formula fixed by Government. All Government has to do is to remove it and the steel industry would no longer need financial aid from Government, other than a guarantee of the repayment of foreign exchange loan." After a couple of days' thinking Government agreed to find the money as a loan which the World Bank's representatives thought should be "rent free," meaning interest free. The Ministers agreed to the loan to be termed as a special advance and interest free, but thought in order to avoid questions being asked in Parliament, the whole or part of the corpus should be repaid sometime, i.e., when the Company was opulent enough to do so and no further expansions were contemplated. The World Bank representatives were of the opinion that so long as it was agreed that the amount would only be paid, both interest, if any, and the corpus out of a special element to be included over and above the normal retention price, they would have no objection. The Government agreed to it, but later thought they should also include the clause wherein they would reserve the right to ask the Company to raise additional share capital for the repayment of whole or part of the corpus as and when the Company was in a position to do so. The World Bank's representatives were of the opinion that this should only be done subject to mutual agreement between the Government and the Company.

Previous Commitments Resiled

The World Bank's representatives then went on to explain that the primary function of the I.B.R.D., whose capital was subscribed by a number of nations, was to rehabilitate and/or expand industry in the private sector only and in doing so to enable such industry to remain in a healthy financial position in order that it could expand on its own, and further, the Tariff Board must be instructed by Government that it must not, as in the past, take away incentives from the Company in the way of any operational efficiency or savings in the cost of production or by increased production, and a normal depreciation and a reasonable return on capital etc., should be maintained. Both Government and your Company agreed to these principles and Government issued new directions to the Tariff Board which later on was converted into the Tariff Commission with statutory powers. It appears Government now wishes to resile from its previous commitments and undertakings it had then made.

The recommendation by the Tariff Commission of Rs. 8 per tonne relating to the repayment of Special Advance and interest thereon has not been accepted by Government. The reason, in their own words, being "Finally, in revision of their earlier decision taken in 1959, Government now consider that it is not necessary to provide an element in the retention price for the payment of interest on and repayment of special advance. The agreement with the Companies provided for an alternative method of repayment of a part of the special advance with interest, namely, issue of share capital by the companies at such time or times as the Government of India may, in agreement with the companies, decide."

Agreement with Government

For the benefit of the stock-holders I give below the relevant extract from the agreement between the President of India and your Company dated the 15th of July, 1953:—

Clause 1 (iv) (c): "The Government of India shall decide, on the advice of the Tariff Commission, whether after the 30th June 1958 (or such later date as aforesaid), the Company should be charged any interest on the said advance and at what rate the Company should repay the advance. PROVIDED that the interest and repayment of the advance shall to the extent to which the same is not paid out of the share capital to be raised by the Company in accordance with Clause 3(c) be payable by the Company out of its earnings arising from a special element in the prices of iron and/or steel over and above the normal retention prices, after deducting from earnings all taxes payable by the Company to the Government of India on such earnings at the rate or rates applicable to the Company's total income during the period ending the 31st March 1969."

It is further amplified later in Clause 3(c) which reads as follows:—

"Notwithstanding the provisions in paragraphs (c) and (d) of sub-clause (iv) of Clause 1 laying down the manner of payment of special advance to make an issue of share capital at such time or times as the Government of India may call upon the Company to do and to repay out of the proceeds of such issue a portion of the special advance. The proposals for any such issue (including the timing, the amount of the share capital to be so raised and the portion of the special advance to be repaid out of the proceeds of the issue of shares and other particulars relating thereto) shall be as may be agreed between the Government and the Company."

It will be seen, therefore, the intention of Government in 1953 in regard to expansion of the steel industry in the private sector has undergone a very great change, for if your Company has to raise capital to repay the advance of Rs. 10 crores, and this contention is upheld by Government, it virtually means saying good-bye to any future expansion, even if it be for merely balancing of your plant and thereby effecting a fully economic unit.

Government's Stand Unrealistic

Apart from all that I have said in this connection I utterly fail to see any logic or justification in the Government's action in deducting the corpus of the special advance of Rs. 10 crores to arrive at the standard block on which overheads are to be allowed. If Government has now changed its mind and treats this money as a free gift, i.e. neither interest nor repayment of the corpus being required, then there may be something in the Government's contention. But in its recent statement made on the 19th September, Government has reiterated its stand regarding the repayment of the advance and indicated that it could ask the Company to repay this special advance out of an issue of fresh capital. Therefore, it is not a gift and if that be so, then on what ground can Government take this totally unreasonable and unrealistic stand?

It can be safely vouched and nobody will deny the special position and importance of the steel industry in our country, particularly in an era of expanding economy based on rapid industrialisation. Contribution made by this industry in the past, specially in the field of saving foreign exchange is very considerable, and this is explained clearly in the appended two charts (A and B) showing—

A. The net price per tonne of steel given to the producers, the price paid by the public and what it would have cost the country if imported from overseas.

B. Saving of foreign exchange effected due to indigenous production over the past ten years, in other words, the cost of a new one million ton capacity integrated steel plant.

Healthy Climate Denied

That then has virtually been the contribution of the two steel plants in the private sector. Does it therefore behove Government to accord to this industry the perfunctory and niggardly manner of treatment it has been subjected to? Is it not a matter of elementary economics that the benefit of maximum possible incentive should be extended to the industry to allow it not only to exist, but to function and produce on as high and efficient a level as is possible? Why then this ire as if the industry has done something terrible, and deny it a healthy climate all round to earn a reasonable return on the capital employed, which is largely being ploughed back from profits and maintain an increasing output, thereby enhancing the growth of national wealth?

When Government's decision on the retention price of steel was released there was widespread criticism and Government made a statement on the 19th of September 1962 in an attempt to justify its official action for reducing substantially the prices recommended by the Tariff Commission. I will now deal with the arguments advanced by Government item by item and prove to you how futile these are.

No Favour at All

It was stated that Government had accepted the works costs as calculated by the Tariff Commission and this constituted 70 per cent of the total retention prices. This statement seems to imply that a great favour has been done to the steel industry by Government, by its acceptance of this major element of the retention price. This is no favour at all. Government could not help but accept as correct, calculations of Works costs by the Tariff Commission, as these were not estimates of future works costs, but facts based on historical costs on the actual performances of the producers during the period of price fixation, namely, from 1st of April 1960 to 31st of March 1962.

In regard to reduction by Government of the working capital of your Company to four months' cost of production as against eight months' claimed by the Company in its representation and six months' allowed by the Tariff Commission, the reasons given by Government to justify its stand are based on two grounds:—

(*a*) That every indentor of steel has to pay in advance 25 per cent of the total value of his order in cash to the steel producer before it can be booked, and therefore, the companies invariably had a fairly large sum of money at their disposal.

(*b*) That at any given time the companies had large sums of money belonging to the Government in their possession and these were not actually paid into Government account.

Security Deposits

In regard to (*a*) the statement made by Government that every indentor had to pay 25 per cent security deposit against order is absolutely baseless. This could easily have been verified from any Government Accounts Officer and it would have been found that no Government department gives any security deposit whatsoever, whereas on the other hand Government takes months to pay your bills. It is a fact that producers dare not ask for any security deposit from Government, including the railways, and large well-established customers which constitute more than 80 per cent of their sales. It is only in the case of small bazaar parties that the producers take a security deposit and this too with the Iron and Steel Controller's-acquiescence, as no order can be booked without his approval. Some years ago it was found that some of these small bazaar parties having booked orders (for reasons best known to them) were found to be non-existent, or refused to accept bills when the railway wagons arrived at the destination. What then could your Sales Organisation do other than to run to the Iron and Steel Controller for his approval to divert the railway wagons to some other party—in the meantime demurrage accrued as well as the extra freight for diverting the wagons. Who then was responsible for the extra cost of freight and demurrage as your sales organisation was in no way responsible for the order? The then Iron and Steel Controller thereupon decided that for these unknown and unreliable parties the producers were entitled to demand 25 per cent with the order, in order to reimburse them in such cases of default. These advances are mostly in G.P. notes and fixed deposits in banks. The interest accruing is payable to the customers and the Company has no access whatsoever to these funds. To make my point clear, I append below a statement for the three years, 1959-60, 1960-61 and 1961-62 showing the gross steel sales from Burnpur and the security deposits and advance payments in cash received by your Company:—

	1959-60 Rs.	1960-61 Rs.	1961-62 Rs.
Gross steel sales ..	39 crores	46 crores	50 crores
Security deposit and advance payments in cash	26 lakhs	30 lakhs	29 lakhs
Percentage	0.67	0.65	0.58

In view of these actual figures from the Company's audited accounts the statement made by Government seems to be most irresponsible, as during the three years under reference the maximum amount lying with the Company was between 0.67 per cent to 0.58 per cent which is nowhere near 25 per cent stated by Government.

In regard to (*b*) the statement that at any time the producers owe large sums of money to Government is again just a myth. Both Mr. Bhoothalingam and Mr. N. N. Wanchoo, Secretaries to the Ministry of Iron and Steel have written to me complaining about the large outstandings from the Company to Government and every time we have written back in reply to prove that Government's statements were incorrect. Moreover, Government seems conveniently to forget that it is your Company that do it a favour by collecting surcharge moneys on its behalf and further all collection expenses including cash discount allowed by us on the amount of the surcharge are being borne by the Company. Besides, whether the Company receives payment of a bill or not, it is required to pay the surcharge portion of the bill immediately to the Iron and Steel Controller. How can Government then quibble over a few lakhs of rupees worth of surcharge money that necessarily must remain outstanding at any time with the Company as claims cannot be finalised within the period.

On the other side of the picture, apart from outstanding bills for materials supplied by the Company, it has to wait years to get reimbursement from the Equalisation Fund in respect of any increases in the retention prices. These increases are due to the Company as costs and overheads have gone up in the meantime and which are beyond the control of the Company. Although it has already been out of pocket to these extents it cannot claim any reimbursement from Government unless Government so deigns, at its leisurely pace to decide on the revised retention price. As an example, in the case of the recent increase in steel prices which are really due from the 1st of April, 1960, the notification by Government of such increase in the retention prices is dated 7th of September 1962, and the category-wise retention prices were made available to the Company only on the 12th of October 1962, i.e., a time lag of about two and half years. This, in other words, means that crores of rupees due to your Company has been lying with the Equalisation Fund for this period, whilst your Company had to borrow money from banks and pay interest on it to meet its day to day obligations.

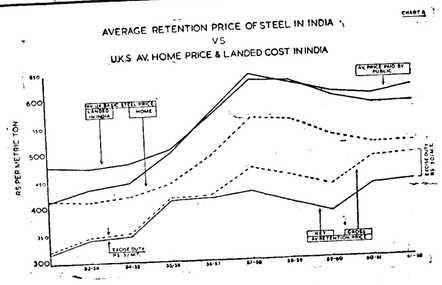
Financing Expansion

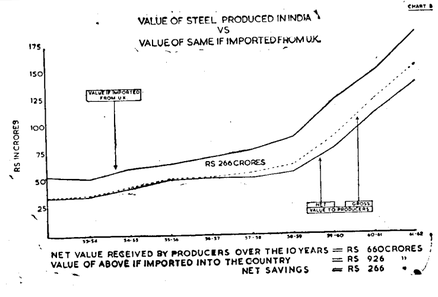
For the reduction in the return on capital it has been stated by Government that your Company, like Tata Iron and Steel Company, had no more than one-fourth of the total capital of the Company in the form of equity capital and that this ratio may have still fallen further. The Government's contention is that the rest of the capital has been borrowed and therefore should be treated differently as it was not the stock-holders' money. For your information I append below a statement showing that during the 10 years, i.e. from the date of the Expansion Scheme until 31st of March this year your Company has contributed out of its own resources—and which really is your money—to the extent of Rs. 34.69 crores, a sum which cannot be sneered at on any account:—

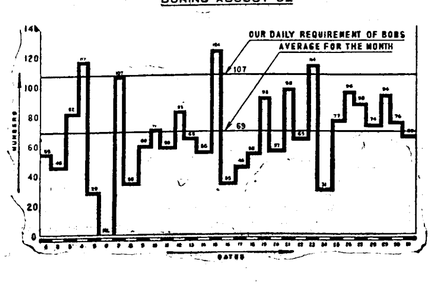
Capital Expenditure and Sources of Funds during the ten years 1952-53 to 1961-62

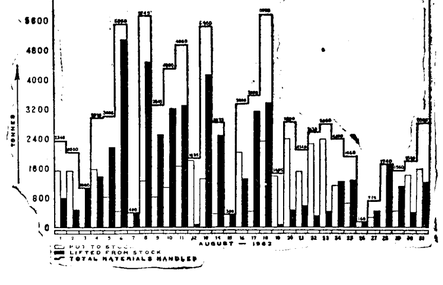
(Rs. crores)

Expenditure on Extensions :			
Burnpur—			
1950 Extensions ..	4.97		
1953 ,, ..	37.64		
1955 ,, ..	18.46		
General	5.97		
		67.04	
Kulti		3.76	
			70.80
Less : Outside sources of funds for extensions :			
World Bank loans.. ..	21.28		
Government of India loans.	7.35		
Special advance	10.00		
New shares issued ..	7.00		
			45.63
Extensions financed out of own resources			25.17









Capital Expenditure Financed out of Own Resources upto 31-3-1962

For extension as above	.. ..	Rs. 25.17 crores
World Bank loans repayment	.. ..	,, 5.80 ,,
Government of India loan repayment	..	,, 2.13 ,,
Sterling Debenture repayment	.. ..	,, 1.59 ,,
		Rs. 34.69 crores

This, in other words, means that in addition to a sum of Rs. 7 crores contributed by you as a rights issue in July 1957 a sum of Rs. 34.69 crores has already been ploughed back from your profits during these years, making a total contribution from you of Rs. 41.69 crores, and this process will continue until all loans, past and future, are repaid.

In my previous statements to you as well as in the annual general meetings in the past, I have made it known that these large sums of money, which you are investing in the Company from year to year will one day be partly converted into equities. But your Board of Directors were precluded even from thinking about it owing to the penal tax of 30 per cent, now reduced to 12½ per cent levied by Government on bonus issue. From these figures it will be seen that your Company has made contributions towards the expansion scheme in no mean measure. No integrated modern steel plant, no matter what part of the free world it is situated in, can be expanded or modernised with stockholders' money only. It has to take recourse to borrowing funds from banks and the most enterprising and sensible Governments come forward to give them such help as needed in order to reap the benefit of extra production of iron and steel, thereby creating extra expansion in the country's heavy industries etc., as well as finding an outlet for foreign exchange by exporting goods.

A Strange Way of Thinking

Government also seems to argue that if a part of the gross block is financed by loan capital the structure of the Company's finance should be different and the return on such capital should accordingly be calculated on different lines. To say the least, this is a strange way of thinking on the principles of economics, as it is both unorthodox and unheard of. If Government had these ideas in mind it should have, in all fairness and to all concerned, declared them in unequivocal terms when these very loans were being negotiated. It would then have been for the Board of Directors and the stock-holders either to accept or reject the terms and conditions at the time and not to have a surprise suddenly sprung on them as at present.

As already stated, Government's latest contention has been that on account of the special capital structure of the Company and on account of not achieving 100 per cent production, the return on capital should be correspondingly reduced, and for this purpose Government has decided to cut a slice into the block which is standing up proudly at your works. But as depreciation is calculated on block, this has also resulted in a reduction in the total quantum of depreciation allowed by the Tariff Commission. Are we not justified in enquiring, why this unwarrantable reduction in depreciation? I can only term this action as adding insult to injury.

It has also been openly said in Parliament the other day that your Company has earned huge profits during the year under review. I do not know, in the case of a company like yours, what the yardstick for this "hugeness" is. All I can say is that your Company has earned only a reasonable profit, commensurate with its requirements and obligations. Besides, uniform retention prices were fixed for all producers, and if any one company has earned a little extra due to efficient working, that I should have said, would have been a matter for congratulation and not resentment. I am sure it is not Government's desire to discard all cardinal principles of economic aid to penalise efficiency.

The quality of raw materials, if anything, has deteriorated from what it was last year, and added to this, irregularity of transport as well as wrong type of wagons for transporting the materials do not help to make the Works Executive's life a happy one.

I append a few charts (No. 1 to No. 6) which will show the difficulties that have to be surmounted in order to utilise the raw materials. The object is to bring out some of the obstacles which prevent the Company from achieving a production rating of 100 per cent of its installed capacity. Apart from these obstacles, there is also the question of the quality of the raw materials, particularly coking coal. The average ash content of our coke has now reached 24 per cent but the average figure does not indicate the true picture, as the quality of the coal fluctuates widely, and the manner in which the railway authorities deliver the coal prohibits blending which would neutralise to some extent the wide fluctuations.

Chart No. 1 showing daily receipts of BOBS wagons (specially designed side discharge for handling ore and limestone) during August 1962: It will be observed that against the normal daily requirements of 107 BOBS wagons, the number fell very much below this figure on most days. The railway authorities substituted BOX type wagons in place of BOBS wagons in spite of the fact that the works are unable to off-load BOX wagons except by manual means.

Chart No. 2 showing manual handling of iron ore—in and out stocking per day during August 1962: Here it will be observed that apart from ore handling in our normal mechanical stock handling ore gantry, we had to handle in and out of stock as much as 5,775 tonnes in one day.

Chart No. 3 showing the iron ore programme and receipt position against the production of iron of various steel plants: This chart brings out clearly that whereas Durgapur Steel plant was never intended to be supplied with BOBS wagons but rather BOX wagons, it is, in fact, now being given BOBS wagons at the expense of your works and that your works are being forced to accept a greater and greater number of BOX wagons in consequence. It will also be observed from this chart that Bhilai remains unaffected as far as BOBS wagons are concerned.

Company's Objection

The Company has always objected to being forced to accept BOX wagons in lieu of BOBS wagons as with the full knowledge and approval of the Railway Board our mechanical off-loading equipment was designed and installed to handle only BOBS wagons.

Chart No. 4 showing daily receipts of BFRs (bogie flat rail trucks) during August 1962: Burnpur Works require an average of 40 BFRs per day but, as can be seen from the chart, this figure is rarely supplied.

Chart No. 5 showing Eastern Railway destinations and route restriction details.

Chart No. 6 showing South Eastern Railway destinations and route restriction details: Charts Nos. 5 and 6 have been prepared to show that practically every day the railway authorities impose restrictions on the despatch of finished materials on numerous routes and to numerous destinations. The practical result of this is that wagons already loaded with materials are not accepted by the railway authorities at the last moment, thus causing detention and demurrage liabilities, and also in many cases, your works are unable to load wagons because they have no material available for the destinations which are free of restrictions. Again, there is wagons detention and demurrage liability.

In effect, the railway authorities supply wagons for despatch of finished material and at the same time dictate to us where these materials shall be sent and in many cases against the Iron and Steel Controller's orders. This is an absurd situation and would require a considerable tonnage of finished goods to be held in stock to cover such a wide field of variation of free destinations.

The object of our Colliery Expansion Scheme is to provide the bulk, if not the entire needs of our coking coal, approximately 85 per cent of which will be crushed, washed and

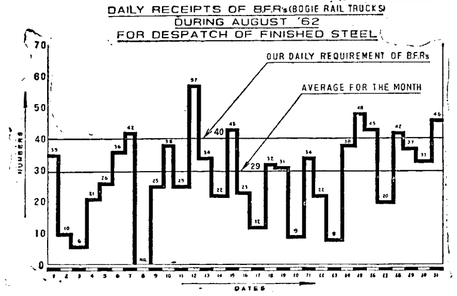
CHART No. 4

DAILY RECEIPTS OF BFRs (BOGIE RAIL TRUCKS) DURING AUGUST '62 FOR DESPATCH OF FINISHED STEEL



blended to produce a consistent grade of coking coal of approximately 17.5 per cent ash.

The major development will take place at your Chasnalla Colliery where the coal will be extracted:—

(1) from open cast quarries, and

(2) underground mines.

The run-of-mine coal will be crushed and washed in a coal preparation plant and the resultant blend product transported to the Burnpur Works by two aerial ropeways costing approximately Rs. 4.5 crores over a distance of approximately 32 miles. This development will take place over a period of approximately five years, the production progressively increasing to the target of 4,200 tonnes of washed coal per working day.

Coal Reserves

The coal reserves in your Jitpur Colliery at the present working levels are almost exhausted making it necessary to sink the existing shafts to proven lower levels and also to make provision for sand stowing to permit maximum extraction. The production will thus be raised from the present 800 tonnes per day to 1,500 tonnes per working day over a period of five years. This coal will be conveyed by aerial ropeway about six miles to the Chasnalla coal preparation plant for blending and washing, yielding approximately 1,200 tonnes of washed coal per working day.

The Company's Ramnagore Colliery is being modernised to increase the production of coal from the present 400 tonnes per day to 1,000 tonnes per working day. The modernising includes the new sand gathering plant and a sand transportation system. A new ventilation shaft and a ventilating fan have already been installed. Ramnagore coal will be transported by rail car to Burnpur via the Company's own Kulti/Burnpur track. This coal does not need to be washed as it will readily blend with the Chasnalla/Jitpur blend.

Experiments carried out at your works over a period have shown that if we are to achieve greater productivity from our blast furnaces, our iron ore must be subjected to treatment to obtain a smaller and more uniform size and to remove the deleterious gangue. The smaller fractions of our ores cannot be used without further processing. This problem is being closely studied and practical tests made in order to obtain sufficient basic information to enable us to select the most suitable process of agglomeration. In the meantime, it is proposed to install the appropriate plant at your Gua Ore Mines to enable us to wash the ore and screen to the desired size fractions.

Increase of Steel Production Under Fourth Five-year Plan

The assessment of the future demand for steel in India is a futile exercise of mind and brain as the quantum is so large as to outstrip the ability to achieve it by any specified period of time.

The maximum achievement can only be accomplished by first concentrating on making available predetermined and realistic quantities of the necessary raw materials, its transport and the power required by predetermined dates and planning the simultaneous completion of matching steel capacity.

To erect iron and steel plants first, with the pious hope that the raw materials, power and transport will 'turn-up' is the mistake of the past and would be a criminal waste of money and energy if blindly followed in future.

Although the type of product required in the future has to be estimated, the estimate must be subjected to continual review as the pattern of product will inevitably change as time goes on. In adopting long-term planning for the development of new capacity, the development potential of the existing capacity must not be lost sight of as it is cheaper and quicker to achieve this than putting down a new plant of the same capacity. Development of capacity should be a continual process and to obtain maximum production with utmost efficiency from existing units, it is imperative that they be kept up-to-date technologically. In these days of advancement in new steelmaking, long before the building of a new steel plant is complete, it is more often than not out of date, making it necessary to adopt newer techniques and equipment to maintain an efficient economic and technological balance.

The location of new steel plants is of vital importance, the principal influencing factors in the past have been the proximity of raw materials, power, water and adequate rail transport. It is thus very tempting to proceed to locate new steel plants along the traditional iron ore/coal rail route. Unfortunately, in our country this route is grossly overloaded now, and in the absence of large-scale railroad development and modern techniques of handling it, the addition of one or more steel plants is bound to have a detrimental effect on the units already in existence. Throughout the world the trend is for bigger and bigger steel plant capacity until new plants of 3/5 million tonnes are not uncommon. Therefore, any designing of plants should take into account the probable ultimate size. If the intention is to develop larger plants for export purpose, then the ideal place for them is on a navigable river or seaboard.

The reserves of the basic iron and steelmaking raw materials in India have been variously quoted, some of the figures are such that if accepted, would discourage long-term planning of steelmaking capacity. One such item is limestone, but it is difficult to believe that a country the size of India is relatively short of good quality limestone. To establish the truth of the matter large-scale prospecting must be carried out, uninhibited by thoughts of distance from the consumer. Transport facilities must be developed to match the sources of supply and this would be a much better proposition than spending large sums of money beneficiating local inferior limestones and run into the vexed transport problem.

Coking Coal

It has to be accepted that the quality of coking coal in India has never been and never will be 'good' and that it is worse today than ever before. Here again the calculated reserves are based on inadequate knowledge of the possible existence of coal lying below the normal working depth of Indian coal mines. It has not been conclusively proved that coking coal does not exist as valuable reserves below a depth of 2,000 ft. In the meantime, the existing coking coal quality must be improved by washing to produce a product of consistent ash level even if the ash is still not as low as desirable. Conservation of the existing reserves is imperative even to the extent of prohibiting the use of any grade of metallurgical coal for purposes other than metallurgical. Every effort has to be made to reduce the consumption of coke per tonne of pig iron by resorting to modern technology in regard to preparation of blast furnace raw materials and the use of fuel injection coupled with refractory materials to withstand the maximum blast heat attainable.

Of all the raw materials, iron ore is the most plentiful in India and is of high Fe content. Unfortunately, most, if not all, of the ores also contain a high Al_2O_3 content, a factor which contributes to a greater coke consumption (an expensive item) than would otherwise be the case, particularly where pig iron is manufactured specifically for steelmaking.

The beneficiation of ore in the form of uniform and smaller sizing together with washing should greatly improve blast furnace operation and the quality of pig iron obtained.

The measures taken to obtain a smaller and regular ore size will result in a substantial quantity of under-size ore at the mines. Many processes have been developed to agglomerate under-size ore for use in blast furnaces, each of them having their own merit for a particular set of conditions. None of them has universal application which makes the selection of one or the other a matter of the greatest importance. It is suggested that in view of the vast iron ore reserves in this country compared with the reserves of the other raw materials there is plenty of time to study all methods of agglomeration in an effort to find the best possible solution to India's particular problem; which may or may not be the popular method of sintering.

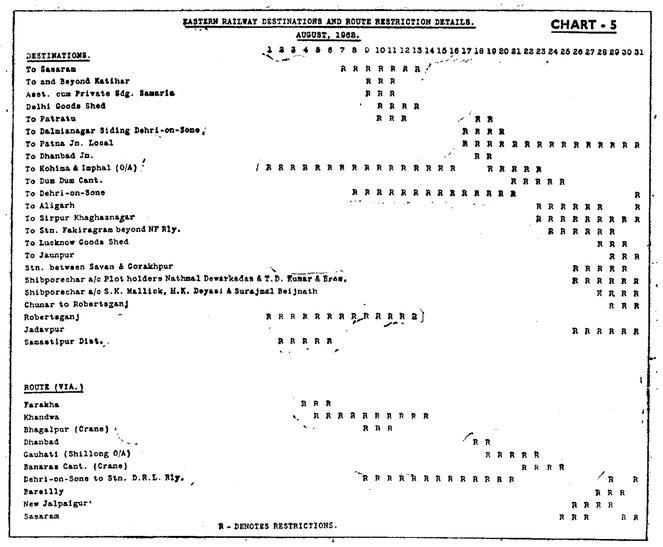
Washing of Coking Coal

The washing of coking coal will simultaneously produce a discard fraction of middlings, the disposal of which will not be a problem if used for the generation of electrical power. Here is opportunity to alleviate the chronic shortage of electric power. Such power generating stations should be erected in conjunction with or adjacent to several coal preparation plants.

Due to the rapid industrial development of India there is a great dearth of experienced technicians. Training programmes have been organised to create an army of trained personnel required to man the new steel plants.

EASTERN RAILWAY DESTINATIONS AND ROUTE RESTRICTION DETAILS. AUGUST, 1962.

CHART - 5

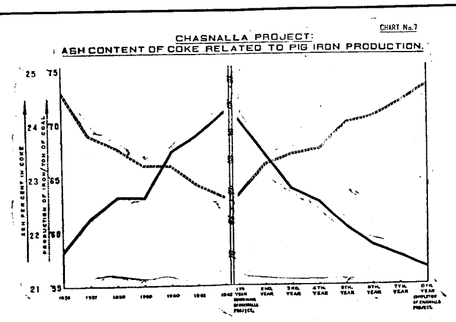


This is a gigantic task in itself, unfortunately it cannot be said to have been wisely handled. Far too many trainees without previous works experience have been sent abroad for a training of doubtful value when instead they should have been employed in the construction of the plant they would eventually have to operate. Thus a valuable opportunity was lost in which a large number of selected men destined to be supervisors or managers would have matured with the experience of working with their own hands. It is suggested that in future, training programmes should be designed in such a manner that all trainees, irrespective of their ultimate destiny, are required to 'work on the job' for an extended period of time before final selection. Training abroad should be limited to those who are already mature to some extent and who can profit most from specialised training. General overseas training is useless. Until such time, and in my humble opinion of some thirty-two years' experience, the country has to bring out highly experienced overseas staff to train our men to man our plants—a matter of ten to twelve years.

Ujjain Project

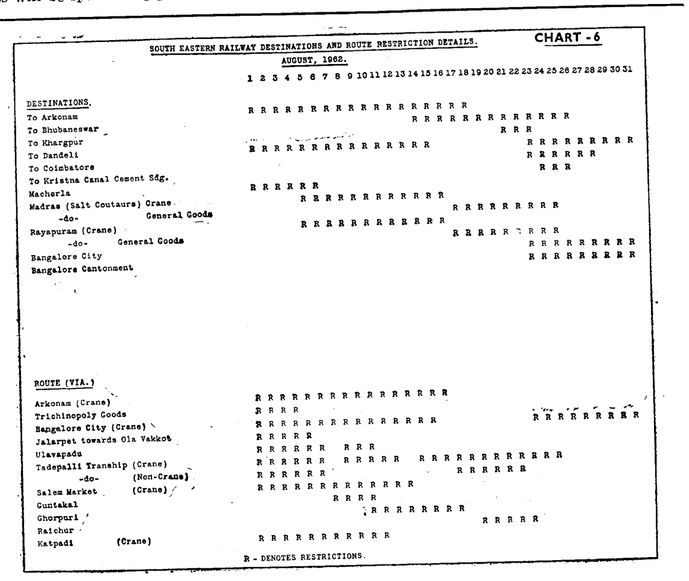
At the last annual general meeting I mentioned to members present that your Company in conjunction with our old friends, Stanton and Stavely Ltd., were contemplating on starting a new works as a subsidiary of this Company at some suitable place in Madhya Pradesh which would be convenient from its transport point of view to cover Kashmir, Punjab, Rajasthan, Delhi, Himachal Pradesh, parts of Uttar Pradesh, Gujarat and Maharashtra, etc., in other words, areas where freight costs made sale of your spun iron pipe products from your Kulti Works unremunerative. I am happy to report to you that an agreement has been concluded with Stanton and Stavely Ltd. of U.K. whereby they will contribute towards all plant and spares which cannot be made in India, this being about one-third of the actual cost of the project, the other two-thirds of the cost to be met by your Company; this agreement has had Government's blessing and the necessary licences, etc. have already been issued. The position of the new works will be situated about five miles west of Ujjain, a city famous from the time of the epic of the Ramayana and of Meghaduta, where all necessary requirements such as land, power, water and transport, both broad and metre-gauge railway, plus roads are available. All work in this connection is proceeding satisfactorily except that of the railway siding into the works, which, although it is almost alongside the main track, is taking a little time—a matter that must be expedited without delay as otherwise nothing can be installed at the site. The range of products will be spun iron pipes—the same as that produced at your Kulti Works No. 1 Pipe Foundry since 1942, viz. from 3" to 12" dia. and 18 ft. in length and for the necessary specials and bends, etc. for which there will be a specials foundry. The approximate total cost of the completed plant will be about Rs. 3 crores. In view of the tremendous demands for these pipes to complete some of the second and all of the third Five-year Plans set up by Government and the private sector, one would have thought the railways would have made a special attempt to put in hand and make available these sidings, a matter of a few hundred yards only.

The total production of pipes and specials will be in the neighbourhood of some 65,000 tonnes per annum and the plant is capable of being doubled without much trouble, should demand for its products remain. The quantities of special grade iron and coke will be met from your Burnpur Works. Stockholders would be invited to subscribe towards building of this plant in the way of a rights issue, and the nomenclature and time will be notified in due course after consulting the Capital Issue Department of the Government.



Future Expansion

Another matter, which I am sure, will be of great interest to you is the balancing of the Burnpur plant and its future expansion to make it an economic unit. This came up for discussion at Washington while my advisers and I were engaged in concluding our loan arrangement of $19.5 millions with the World Bank for the Colliery Expansion Scheme. A day before we left for Washington, Mr. E. De'alba of the World Bank requested us to make a chart on the historical performances of the blast furnaces as from the time the quality of coal started deteriorating upto the present, and projecting the same to show the effective improvement in iron production as a result of the use of increased quantities of washed coal from the Colliery Expansion Scheme. When this chart arrived at Washington it was found from historical past records of your blast furnace practice that performance and production once we reverted back to the 1955 quality of coal, when free purchase of coal in regard to quality and price was permitted, your blast furnaces would produce more iron than they are doing at present, and what is more, the right quality of iron suitable for steel making. It will be seen from Chart No. 7 that as we proceed with the Colliery Expansion Schemes, the quality of coal after washing will improve yearly till work is completed, when it will be better than what we had in 1955. It was then confirmed by our Consulting Engineers that with the right quality of steelmaking iron being available, the present steel melting capacity could, with inclusion of a few ancillary plants of the latest technique, be almost doubled. This was indeed an intriguing situation! What then were the missing links? Your Consulting Engineers were of the opinion that with the help of oil injection in blast furnaces and oxygen injection in the steel furnaces coupled with continuous casting, electric furnaces, a rolling mill and an additional blast furnace to take care of the foundry, requirements of your Kulti and Ujjain plants could be installed at a figure not exceeding one-fifth or one-fourth of the cost of a new integrated steel plant of a million ton capacity installed in a new place. All these figures were, of course, approximate and needed further careful looking into. The World Bank authorities were, however, appreciative of these findings and expressed a genuine desire to help the Company with the necessary foreign exchange requirements (for the fourth time) subject to Government's blessings and agreement to guarantee the repayment of the foreign exchange. On the 17th of January this year the matter was discussed with Government when it was explained to them that apart from the increased production, the beauty of the scheme was not only the low cost and the quickness with which the plant could be installed, but also that no further coal would be required other than what we shall mine ourselves and transport by our own ropeway system, thereby relieving the railways of their responsibility of transporting some 6,400 tonnes of coal a day, a not too insignificant problem and headache, effecting at the same time a considerable financial saving to Government.



Two Phases of the Scheme

Government at first was not responsive, but later suggested that the scheme be phased out into two parts, the first phase merely to embrace the balancing of the existing plant due to improvement of coal and the second to cover the full scheme. The Company submitted to Government the two phases of the scheme on 9th June this year and stated that phase I would cost the Company Rs. 12.2 crores, increasing the ingot production by approximately 3,10,000 tonnes and finished steel by 2,48,000 tonnes, and further suggested that final details regarding phase II would be submitted at a

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

A SIMPLE PHRASE...
...VITALLY IMPORTANT!

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

BRD/2

later date about the time when phase I would be nearing completion, depending on the then market demand of the type and quality of steel to be made, as well as incorporating the latest improvement in plant design. In this connection your Board of Directors have invariably accepted your Managing Agents' advice on the principle of consolidation and experience gained thereby first before further expansions are undertaken, ever since 1950, 1953, 1955 and the present 1961 colliery expansions were taken on hand as well as this latest one now under consideration of Government.

Phase I would increase steel production in terms of ingots or its equivalent by about 3,10,000 tonnes and finished steel by about 2,48,000 tonnes.

Phase II may bring the total production of your Company to anything up to a total of 2 million tonnes of ingot equivalent and 1.6 million tonnes of finished steel. My personal views are, however, that we must not rush where angels fear to tread. By that I mean, whilst the transport and raw material situation is as it is, it would be foolhardy on our part to even think of a larger expansion at Burnpur than 2 million or thereabout tonnes of equivalent ingot steel. I have been dealing with your Company's affairs in one way or another for 32 years as Managing Agents' representative, Director and Chairman. I can assure you that our conservative views have so far paid you well. Your new plants have been brought into commission well ahead of the scheduled time and as for results, you are the best judge.

Appearance of War Clouds

The Steel Corporation of Bengal tapped its first cast of steel ingot on the 10th November 1939 when the Second World War had just started. I distinctly remember, that at the request of the then Munitions Board and the Roger Mission, which had come out to investigate the possibilities of manufacturing in India the latest types of ballistic missiles and other requirements, as well as augmenting the production of the existing ordnance factories, this infant was called upon from that early stage to produce special quality steel. As the war proceeded, more and more such steel was produced and at times almost at a moment's notice.

The Steel Corporation of Bengal was amalgamated with your Company by an Ordinance promulgated by the Government of India on the 29th October 1952 to make it effective from the 1st January 1953. Since then your Company has been making both, different qualities as well as categories of steel to suit the country's requirements, and I am sure, the country can rely on your Company to bring forth its best efforts to meet all emergency requirements needed by the Defence Ministry and thereby help to enable them to throw out this naked aggression committed on a peace-loving nation like ours by the barbarous communist-minded Chinese.

Acknowledgments

I would again this year express on behalf of your Directors our appreciation of the services rendered by your General Manager, Mr. J. McCracken, and his able team of executives at the Burnpur and Kulti Works, as well as at the Ore Mines and Collieries. Production has been achieved in the face of constant operational difficulties and I would like to make special mention of the blast furnace and the steel melting shop supervisory staff who have so ably faced up to the ever-changing problems with which they have been, and continue to be, confronted in the maintenance of production under existing conditions. I should also mention about the supervisory staff at your Kulti Works, due to whose untiring efforts the Kulti Foundries have once again created a record by achieving a production of 2,30,423 tonnes.

In concluding my statement to you I would add that I have not had any difficulty in endeavouring to state facts and include figures and charts as they stand, as I have not indulged in the luxury of painting a picture by letting my imagination run riot, nor in one of the modern trends of impressionism, thereby obscuring matters. I have given a photostat of facts and figures as they exist so that you may view them in their true perspective with the vision God has given you. May He bless us all!

The above statement is not a document purporting to be a report of the proceedings of the annual general meeting.

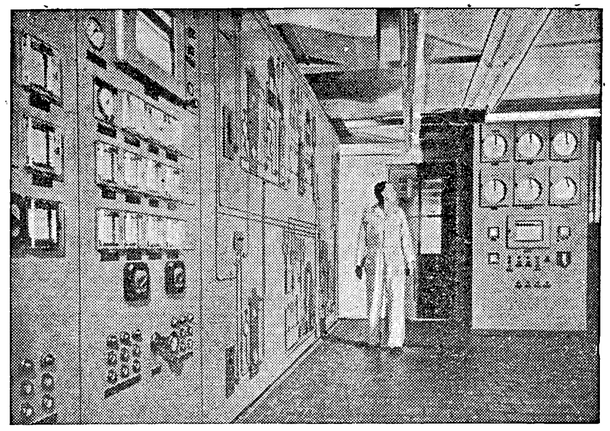
SURVEY

(*Concluded from page 845*)

lakhs, as compared with Rs. 323 lakhs a year ago, despite an increase in expenditure by Rs. 69 lakhs to Rs. 9.83 crores. This was the result of an increase in revenues by Rs. 1.35 crore to Rs. 13.81 crores. On pilotage account, revenues rose by just Rs. 9,000 to Rs. 27.69 lakhs and expenditure by about 5,100 to Rs. 14.60 lakhs. As a result, there was a surplus of Rs. 13.08 lakhs, as compared with Rs. 13.50 lakhs in 1960-61. The total actual expenditure on capital account was Rs. 204 lakhs in 1961-62. The withdrawals for capital expenditure from general reserve fund was about Rs. 78 lakhs, from renewals and replacement funds Rs. 19 lakhs and from pilotage depreciation fund Rs. 15,000.

The Port Trust has commenced preliminary work on the ambitious expansion programme envisaged for the port. The International Development Association (I.D.A.), it may be noted, has already granted a loan amounting about Rs. 9 crores for financing the foreign exchange component of the Rs. 27-crore programme. The principal features of this programme are the construction of four additional deepwater berths at Alexandra Docks, a new ferry wharf adjacent to Prince's Dock, an extension to Ballard Pier to provide an additional berth. The programme also covers the dredging of the main harbour channel to arrest siltation, acquisition of new floating crafts like dredges, tugs and harbour launches and also improved port equipments, etc. A Dutch firm, which has won the contract for dredging the main channel, has already taken the job on hand. The work on the hydrographic survey of the entire harbour and collection of statistical data on siltation has also commenced. In view of the strategic and commercial significance of the expansion project, the Port Trust authorities will do well to expedite the implementation of the programme and complete it ahead of the target date.



Look what you get with
HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your Instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise Instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

made out) and the nature and extent of the investments so made in each such body corporate; provided that, in the case of an investment company, that is to say, a company whose principal business is the acquisition of shares, stock, debentures or other securities, it shall be sufficient if the statement shows only the investments existing on the date as at which the balance-sheet has been made out; provided further that it shall not be necessary to give any particulars in respect of investments made by a managing agency or secretaries and treasurers company in the managed companies' shares or debentures."

(iii) *Market value of quoted investments:* Our Companies Act, as already stated above, prescribes that market value of quoted investments should be shown.

(iv) *Unquoted investments:* In our Act, instructions for the preparation of balance-sheet say that aggregate amount of company's unquoted investments be shown. It is, however, not obligatory for the directors in our country to give their estimate of the aggregate value of unquoted investments.

(v) *Long and medium-term loans:* In regard to these heads in the balance-sheet, our Act goes a step further, as it provides that the secured and unsecured loans should be shown separately. The nature of security has also to be mentioned in respect of the secured loans. Loans from banks, loans from subsidiaries and other sources have to be shown separately and similarly the short-term loans and advances also. With regard to the short-term loans, however, it may be mentioned here that, under our law, a short-term loan is one which is payable before one year and not within five years as recommended by the Jenkins Committee.

(vi) *Contracts:* According to footnote 4 to the prescribed form of balance-sheet in our Companies Act, estimated amount of contracts remaining to be executed on capital account and not provided for has to be shown. Our Act, however, does not make it necessary to show the estimated amount of any capital expenditure which has been authorised by the board of directors but for which contracts have not yet been placed.

(vii) *Additions to and deductions from fixed assets:* The Indian Companies Act already provides for this disclosure.

(viii) *Valuation of stocks*: In our country, Schedule VI to the Companies Act already provides that the mode of valuation of stocks should be stated. It further provides that the amount in respect of raw material should also be stated separately where practicable. Furthermore, works-in-progress with its mode of valuation has also to be stated separately.

(ix) *Capital and revenue reserves*: As in the English Companies Act, Part I of Schedule VI to the Indian Companies Act, 1956 provides for the separate mention of capital reserves. The importance of this distinction between capital and revenue reserves is brought out in clause 7(c) of Part III of Schedule VI which says that the capital reserves cannot include amounts regarded as free for distribution through the profit and loss account.

Profit and Loss Account

In regard to profit and loss account, the Jenkins Committee has made the following principal recommendations:

(a) Annual accounts should be required to disclose turnover and the group accounts to show group-turnover. There would be an exemption available for companies whose directors are satisfied that disclosure would be harmful to the companies and make a statement to that effect in the accounts. In the case of banks and discount companies in respect of which such exemption is availed of, the statement by the directors would also be required.

As in the past, there was a strong opposition to the disclosure of turnover figures. But the Jenkins Committee came to the conclusion that "a company's turnover considered in conjunction with other information, can provide investors with a useful guide to the progress of the business. . . . We, therefore believe that the time has now come when the Act should require disclosure of turnover." It further added that "it has been put to us that disclosure might seriously harm some companies, in particular companies which manufacture or sell a single product. Such companies, it is claimed, would in effect be required to disclose the margin of profit per unit, whilst their competitors, if they were manufacturing or selling a variety of products would not disclose the margin of profit on any one of them. The Committee was inclined to make a minor concession in the matter by allowing the exemption to companies whose directors would give a certificate that disclosure of turnover figures would be harmful to the companies' interests.

(b) The directors should be free to choose the method of depreciation. Depreciation should be based on the assets figures shown in the balance-sheet whether at cost or at a valuation and any amount set aside for replacements over and above the amount of depreciation so computed should be shown separately. This recommendation, however, is not to apply when provision is made for renewal of assets instead of depreciation.

(c) A company should be required to distinguish in its profit and loss account between income from quoted and unquoted investments instead of being required to distinguish between from trade and other investments.

(d) The profit and loss account should be required to show as a separate item interest on bank overdrafts and other short-term indebtedness, which is defined as one which the company is bound to repay within five years of the date to which the balance-sheet is made up.

(e) The Eighth Schedule should be amended to require the annual accounts of a company to require the auditors' remuneration to be shown under a separate heading in the accounts whether or not such remuneration is fixed by the company in general meeting.

(f) Further, the Eighth Schedule should require that any exceptional credits or charges, arising from previous years, should be passed through the profit and loss account; and

(g) The annual accounts should be required to include a summary covering the five financial years ending with the date of the balance-sheet of (a) issued share capital and reserves including balance on profit and loss account, (b) the annual profits before and after tax, (c) the amount of the annual dividend, and (d) turnover.

Position in India

In respect of each of the above recommendations relating to the profit and loss account made by the Jenkins Committee, the position under the Indian Companies Act is explained below:

(a) *Disclosure of turnover figures*: In our country, Clause 3(i) (a) of Part II of Schedule VI of the present Companies Act requires a compulsory disclosure of aggregate amount of the turnover by all companies without any exemptions or exceptions to any class of companies.

(b) *Depreciation provision:* Section 350 of our Act provides that depreciation should be calculated with reference to the written down value of the assets and beyond that it does not prescribe any method of depreciation. Clause 3(iv) of Part II of Schedule VI, however, lays down that, if depreciation is not provided for by means of a depreciation charge, the method adopted for the purpose should be stated. As regards the latter part of the recommendation of the Jenkins Committee, Clause 7(2) of Part III of Schedule VI to the Indian Companies Act provides that, where the depreciation set aside is in excess of the amount which in the opinion of the directors is reasonably necessary for the purpose, the excess should be treated as a reserve and not a provision. It will thus be seen that the existing requirements is regard to depreciation in our Act already cover the Committee's recommendations.

(c) *Income from quoted and unquoted investments:* At present Clause 3(x) (a) of Part II of Schedule VI requires distinction to be made between trade investments and other investments and the Act does not call for separate disclosure of incomes from quoted and unquoted investments. That is to say, the same position exists as is in the U.K.

(d) *Interest on loans and advances*: Separate disclosure as recommended by the Committee is at present not required under our Act.

(e) *Auditor's remuneration:* Para 4B of Part II of Schedule VI requires detailed information in regard to the amount paid to the auditor whether as fees, percentages or otherwise for services rendered by him as an auditor or in any other capacity, to be disclosed in the profit and loss account.

(f) *Exceptional credits or charges:* Our Act does not require such disclosure and the position is the same as it is in the U.K. now.

(g) *Summary information for the previous five years:* Schedule VI requires figures of only the previous year to be given and no summary information for the last five years as recommended by the Committee is to be shown.

General Suggestions

Apart from the foregoing recommendations of specific nature, the Jenkins Committee has also made a few recommendations of general nature concerning company accounts. These are:

(i) It should be made illegal for a company to make a distribution in respect of unrealised capital profits.

(ii) The law should be amended so as to require past revenue losses to be made good before any future profits are distributable.

(iii) There should be an express prohibition against distribution of pre-acquisition profits subject to a few exceptions by the acquiring company.

(iv) It should be made obligatory for companies to make depreciation charges for wasting assets with an exception for existing companies which had made it clear by the Memorandum and Articles of Association that they proposed to make no such provision.

(v) All companies should in future file accounts, the only exemption from this obligation being available to companies whose securities have neither been quoted nor offered to the public and which are not subsidiaries of quoted companies. These companies should be required to distribute full accounts to their members but they would be permitted to exclude from the filed accounts available to the public, details of directors' emoluments and details of turnover. Thus, as a result of this recommendation, there would be no category of company exempted from the need to file accounts.

The position under the Indian Companies Act in respect of the foregoing matters is as follows:

(i) *Distribution of unrealised capital profits:* As in the U.K., no bar has specifically been imposed by the Indian Companies Act 1956, against the distribution of realised or unrealised capital profits. But the weight of various judicial decisions, as in the U.K., makes it necessary for the companies to transfer the capital profits to the capital reserves. Further Clause 7(c) of Part III of Schedule VI to the Act prevents the distribution through profit and loss account of the amounts which have been credited to the capital reserve. The only distribution allowed, however, is of the amount of share premiums as bonus shares.

(ii) *Adjustment of past losses before declaration of dividends:* There is no prohibition against the declaration of dividends while the past losses exist and are not adjusted. But under Section 205 of the Companies Act, 1956, the amount of depreciation together with its arrears has to be set off against the company's profits before any dividend is declared.

(iii) *Distribution of pre-acquisition profits:* Like the position existing in the U.K., there is no legal bar to distribution of such profits in this country.

(iv) *Depreciation on wasting assets:* Clause 3(iv) of Part II of Schedule VI to the Indian Companies Act lays down that, if no provision is made for depreciation, the fact that no provision has been made should be stated and the quantum of arrears should be disclosed by way of a note. Furthermore, Section 205 makes it obligatory to provide for depreciation including arrears before dividend is declared. Thus the requirements of our law are more wide and not merely limited to wasting assets as proposed by the Jenkins Committee.

(v) *Filing of Accounts:* Clause 4 of Part II of Schedule VI to the Act requires the companies to show separately by way of a note the remuneration drawn by the various managerial personnel and does not make any exceptions. Similarly, in respect of turnover and rent, Clause 3(1) (a) and Clause 3(ix) (c) respectively of Part II of Schedule VI to the Act do not make any exception. In the case of private companies, however, (who by virtue of Section 3(iii) (c) cannot offer their shares for public subscription) the profit and loss account (which contains particulars concerning remuneration, turnover and rent) is not to be open to inspection by persons other than a member of the company, *vide* proviso to Section 220(1) (a) of the Act.

Banking and Discount Companies

The Jenkins Committee, by a majority vote of nine members to five members, has decided to continue the exemption from full disclosure in banking and discount house accounts. This recommendation has drawn sharp comments from financial quarters. At present, the main exemptions enjoyed by the banks and discount houses in the U.K. are that (a) they may make undisclosed transfers to and from reserves before arriving at published profits, (b) they are not obliged to distinguish between reserves, provisions and liabilities in the balance-sheet, (c) they need not show the tax as a deduction from profits and (d) they need not show the market value of their investments and (e) they are not required to disclose the method adopted to value fixed assets or to show depreciation separately. The net outcome of this is that, from the published accounts of banks and discount companies, it is not possible to assess what the true worth of the company is and so is impossible to assess what the true profits are. The majority of the Committee came to the conclusion that the present exemptions ought to continue, in spite of the fact that the shareholders are admittedly deprived of the opportunity to assess the true worth of their shares and are precluded from exercising intelligent control over the management. But these disadvantages, in the opinion of the majority of the Committee, were counterbalanced by the important considerations that full disclosure in a bad year might weaken the confidence in the banking system. The dissenting members agreed with the majority that confidence in the banking system should be maintained but they were not "convinced that it is necessary for this purpose for banks to withhold information about their operations from the shareholders and from the public generally—still less that is necessary to withhold all the information that is at present held." The minority, therefore, stated that "we are not satisfied that all classes of banks be treated alike and we believe that such exemptions as are found to be necessary should not be granted under the Act but by the Board of Trade exercising their powers in paragraph 25 of the Eighth Schedule which should be widened, if necessary."

As regards insurance companies, the Committee has suggested that they should lose some of their present privileges and should be made to give more information in particular, group accounts. The Committee has recommended that the provisions of the Companies Act were not appropriate and that a prescribed form of accounts should be worked out by the Board of Trade in consultation with interested bodies, so that, in future, insurance companies' accounts can be governed by one set of rules. The accounts of insurance companies would also have to give a true and fair view of the company's situation subject to a few exemptions.

Shipping Companies

In regard to shipping companies, which are at present enjoying exemption from publishing full accounts under the Shipping Companies Exemption Order issued by the Board of Trade,

the Committee has recommended that that exemption was not necessary. This suggestion has been widely welcomed in financial circles in the U.K.

The position in regard to banking and insurance companies under our Companies Act is that the provisos to sub-sections (1) and (2) of Section 211 give exemption to these companies from the general rule of requiring balance-sheet and profit and loss accounts of all companies to give a true and fair view of the state of their affairs as required under Schedule VI prescribed for the purpose. The position about discount companies is that the Companies Act does not recognise them as a separate class. But there is scope for these being given exemption under Section 211(3) which empowers the Central Government to exempt any class of companies from compliance with any of the requirements in Schedule VI concerning balance-sheet and profit and loss accounts. These discretionary powers under this section, however, are exercised in exceptional cases by the Government. Shipping companies in our country do not enjoy any special dispensation.

Auditors

In regard to matters relating to auditors, by far the most significant recommendation of the Jenkins Committee is that the requirements of Schedule IX of the English Companies Act which relate to the framing of the auditors' report should be amended so as to make the report simpler. The Committee pointed out that, since "the essential duty resting upon the auditors is to report whether, in their opinion, the accounts present a true and fair view, it is unnecessary to require the auditors to express statements on a number of other specific matters, as, for example, whether proper books of accounts have been kept by the company." The recommendation of the Committee in this regard is twofold, namely (*a*) the auditors, in their report, should be required to say whether, in their opinion, the balance-sheet and profit and loss accounts of the company (or where group accounts are submitted, the said accounts of the holding company and the group accounts) are properly drawn up in accordance with the provisions of the Act so as to give a true and fair view of the state of the company's affairs on the date of its balance-sheet and of its profit or loss for the financial year ended on that date, and (b) the auditors' report should be required to contain any qualification which they think necessary in relation to the matters mentioned in paras 1, 2 and 3(i) of the Ninth Schedule. That is to say, whether they have obtained all the information and explanations, etc., whether proper books of account have been kept by the company and whether the balance-sheet and the profit and loss accounts dealt with in the report are in agreement with the books of accounts and returns.

In our country, the requirements as regards the form of the auditors' report are prescribed in Section 227 (2) and (3) which casts the same obligations as paras 1, 2, 3(i) of the Ninth Schedule of the English Act, and therefore, the recommendations made by the Jenkins Committee in the matter would be found new in this country also.

(To be continued)

U.S. FOREIGN AID POLICY

SHIFT IN EMPHASIS

(By An American Correspondent)

THE foreign aid programme of the U.S. is undergoing some significant shifts in emphasis. By and large, they concern increasingly vigorous efforts to concentrate on development assistance where its chances of success are greatest. To understand the evolution of this approach, it is important to bear in mind that foreign aid has been a complicated and varied programme, one that has been subject to constant review and change to meet new conditions in the world. Historically, dating back to the days of the Marshall Plan, it has contained many diverse elements, such as relief, rehabilitation, military aid, food for peace, technical co-operation and development assistance.

The U.S. aid programme was launched after World War II and has been continued for several reasons. One is a broad humanitarian interest in the welfare of people. A major part of the programme places stress on eradicating problems of poverty, ignorance and disease. The Point Four programme of technical co-operation, begun under President Truman, represents one important aspect of this endeavour. In aiding other governments to cope with these problems, the U.S. also is helping to overcome the despair which often is the breeding-ground for violence and for Communist subversion. Another reason for the foreign aid programme is the U.S. desire to help meet the aspiration of other nations to advance economically and socially.

Foreign aid thus emerges as a primary support for the foreign policy of the U.S. As world conditions have changed, the U.S. aid effort has shifted in emphasis. President Kennedy, in launching the Decade of Development in 1961, called for a reorganisation and regrouping of the existing U.S. aid programmes which had evolved over the years. Congress responded by establishing the Agency for International Development (A.I.D.), which began its operations in November of last year.

When the A.I.D. was set up, it had to face two basic realisations: One, the resources of the United States, while large, are not limitless; two, as the Decade of Development approach indicates, the U.S. was increasingly committed to the concept of long-term development assistance. To assume the use of the A.I.D. funds effectively and meet the policy objective of the President, the A.I.D. has been engaged in the past year in both administrative and programme changes. Administratively, it has set up procedures to screen its expenditures more efficiently and to correlate them more fully with overall U.S. foreign policy. Significantly, the A.I.D. Administrator, Fowler Hamilton, has the rank of an Under-Secretary of State, and his chief assistants also have high rank in the State Department.

New programming techniques are based on the principle of selectivity and have been pursued increasingly during the past twelve months. This has involved cutting back on some existing programmes while expanding others, as part of the policy to concentrate development assistance on those countries, and in those fields of activity within those countries which appear to offer the best promise of fulfilling development goals rapidly and effectively. In countries which do not meet this priority criterion, large-scale development assistance programmes are not possible at this time. In many cases, these countries have not reached the point where such assistance can be effectively absorbed and used. As Mr. Hamilton has pointed out, "countries can suffer as much from economic indigestion as from economic malnutrition."

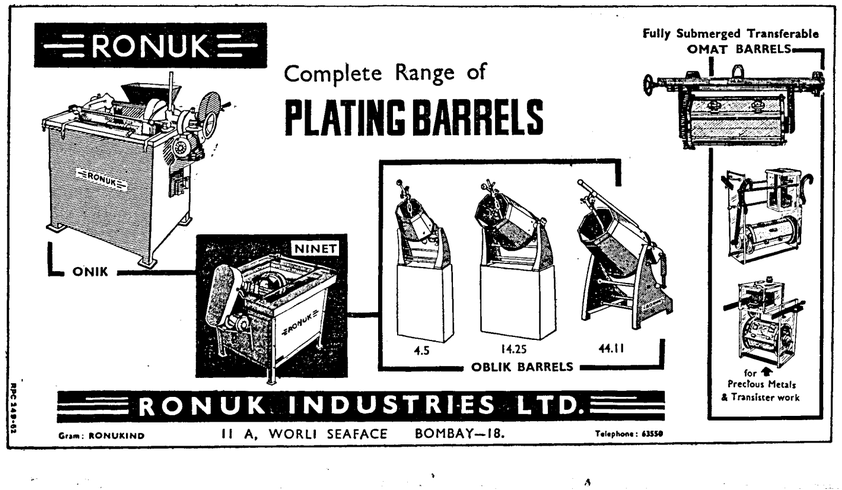
The principle of selectivity does not mean, however, that any countries will be excluded from all U.S. assistance. In such fields as health and education, the U.S. stands ready to help any nation that is ready to help itself. A basic criterion for aid is that a nation make honest and consistent efforts at self-improvement. In the year ahead, the A.I.D. plans to apply its principle of selectivity with increasing vigour, and will adjust its programme and administrative procedures accordingly.

As part of the Decade of Development, it is important that other industrialised countries contribute a fair share of the total aid effort. Many of these countries already are doing a good deal. A recent study shows that, in the calendar year 1961, for instance, the U.S. gave $3,400 million in assistance to developing lands, while other industrialised nations, notably those in the Organisation for Economic Co-operation and Development (O.E.C.D.) and its Development Assistance Committee (D.A.C.), gave an aggregate of $2,500 million. In some cases, other countries devoted a larger proportion of their total resources to the aid effort than did the United States.

A major improvement in these programmes, however, would be an easing of the terms on which assistance is offered—terms generally viewed as being too strict for many developing countries. In the opinion of Mr. Hamilton, these countries could well follow the lead of the United States, which by and large offers development assistance loans on a long-term basis, usually from 30 to 50 years, and at a very low interest rate. In addition to loans, the U.S. still offers assistance grants. About $1,000 million of its aid funds go for this purpose each year. But there has been a conscious shift to loans in recent years and this trend will continue.

The A.I.D. officials recognise that grant assistance is not always an effective way of obtaining results. As countries get used to the idea of repaying low interest long-term loans, they are more likely to become aware of their own responsibilities in putting the aid funds to effective use and gain new incentives to take the often difficult steps that may be involved in instituting the kind of economic, social and financial reforms that will make the best use of human and material resources.

As a practical matter, the U.S. must give priority in extending large-scale development aid to those Governments which are prepared to take at least the minimum steps toward needed internal reforms. The United States, with its traditional respect for other nations, recognises that it has no right to require a Government to do these things. By the same token, however, no Government has an inherent right to U.S. foreign aid. Each party is, in essence, a free agent in this matter. But when they agree and work together co-operatively, there can be an effective and highly useful assistance programme.



NEW CENTRAL JUTE MILLS COMPANY LIMITED

RAPID PROGRESS MADE IN INSTALLATION OF WIDE LOOMS

CHAIRMAN, MR. A. K. JAIN, OPTIMISTIC ABOUT CURRENT YEAR

IN his speech at the Annual General Meeting of the shareholders, which was held at Calcutta on 31st October 1962, Mr. A. K. Jain, Chairman of the New Central Jute Mills Company Ltd., struck an optimistic note about the prospects for the current year. Mr. Jain told the shareholders that the working of the Company during the year ending on 31st March 1963 was encouraging and that the Directors had just decided to pay an interim dividend for the year at 50 nP per ordinary share of Rs. 10, subject to tax, as against nothing in the whole of the previous year, which, incidentally, was the first lapse in the ten-year period for which the Company had been under the present management. Although production in Sahu Chemicals and Fertilisers had not increased as fast as was expected, the Chairman said that the plant was running in a more balanced and stable manner. Mr. Jain mentioned the rapid progress made by the Company in installation of wide looms. Last year, 42 broad looms were added raising the complement from 110 to 152 at the end of March 1962. Since then, 45 broad looms have been added, raising the total complement to 197. The Chairman disclosed that installation of further looms and spinning and ancillary machinery and construction of buildings were proceeding satisfactorily.

The following is the full text of Mr. Jain's speech:

"I welcome you all to this annual general meeting of the shareholders of the Company.

"We are meeting in the wake of a national emergency caused by the naked and unashamed aggression committed by the treacherous Chinese. The aggression has aroused the entire nation as one man. We have been found lacking in adequate preparations to meet the aggression. Our friends, the U.S.A. and Great Britain in particular, have offered us in this crisis speedy and magnanimous help and more is coming and we are extremely grateful to them. The initial setbacks have only served to forge an indomitable spirit throughout the nation and there is no doubt in our ultimate victory.

Rs. 1,00,000 for Defence Fund

"Our Prime Minister has given a call to make all sacrifices to strengthen the defence forces and increase production in fields and factories. Your Directors have decided to contribute a sum of Rs. 1,00,000 to the Prime Minister's National Defence Fund. Your Company's employees have also shown their readiness to contribute a part of their earnings to the Defence Fund. They have offered, in large numbers, to donate blood. We are all standing at the call of the Government for undertaking any task or responsibility that may be entrusted to us. I am sure this will have your wholehearted support.

"The need of the country to earn larger foreign exchange was already acute. Its importance has been further enhanced by the aggression committed by the Chinese. Your Company is making all possible efforts to increase production and earnings of foreign exchange and is confident to achieve the same in an appreciable measure.

Last Year's Review

"The report year has been one of the most difficult in the history of jute industry and your Company has shared in the misfortunes of the industry last year. According to the practice followed by your Company, stock of raw jute is valued at maket rate, whereas most of the jute mills follow the mode of valuation at cost or market rate, whichever is lower. In view of high prices of jute fibre prevailing as on 31st March 1961, the valuation of the year's opening stock of raw jute in case of your Company was higher compared to most of the other jute mill companies. This further affected the financial results of your Company. Your Directors regret that they have been unable to recommend any dividend for the report year on ordinary shares. Your Directors were very unhappy that the record of continuous payment of handsome dividend of over a decade during which the Company has been under the present management had to be broken. The working of the current year is encouraging and your Directors have just decided on payment of an interim dividend for the current year at 50 nP per ordinary share, subject to tax, payable to the registered shareholders as on 30th November 1962.

Sahu Chemicals and Fertilisers

"Although the production in Sahu Chemicals and Fertilisers has not increased as fast as was expected, the plant is running in a more balanced and stable manner. On the advice of the technical collaborators, several modifications have already been made in the plant and the full effects of these modifications already made should be available during the coming winter season. After a full study of the results are obtained, further steps for improvements and/or expansion will be considered. The rigid price structure and other handicaps under which this plant is operating, are already known to you.

"Your Company has been making rapid progress in the installation of wide looms. During the report year, 42 broad looms were added raising the complement from 110 to 152 at the end of March 1962. Since then, 45 broad looms have been further installed raising the total complement to 197. Installation of further looms and spinning and ancillary machinery and construction of buildings is proceeding satisfactorily.

Export Performance

"Your Company, during the last five years, has built up a substantial portfolio of direct exports primarily of jute carpet backing. Export of Rs. 41 lakhs in 1957 rose to Rs. 293 lakhs during 1960-61. Due to decline in the price, the value of direct exports in 1961-62 amounted to Rs. 266 lakhs. The Company's export performance during the current year is expected to be substantially better. You would thus be happy to note that your Company is playing its proper role in the export efforts of the nation as a whole. The capacity of your Company to produce more specialities and earn foreign exchange would have been greater, if it had received prompt permission to import essential spares and machinery which are not locally available. It is heartening to note that Mr. Manubhai Shah, our Minister of International Trade, has acknowledged the importance and needs of the jute industry, and its requirements are receiving quicker attention of the Government.

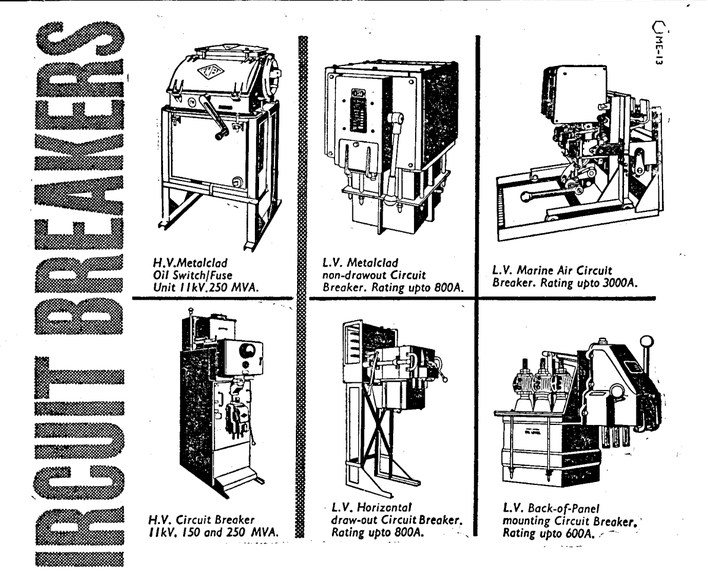
Current Prospects

"It is not clear, whether the profitability in the jute industry will be maintained at the present levels in the coming months. The competitive strength of Pakistan is increasing and their exports are showing increasing trend. The sacking stocks in India are gradually mounting up and the jute goods market had shown some signs of weakness. Your Company has, however, sold substantial proportion of its production for the first quarter of 1963 and has thus booked profits for the current financial year.

"In view of the said position and present trends in the jute industry, the working of your Company should show substantially better results in the current financial year.

"I take this opportunity to thank all members of the staff and workmen."

N.B.: *This does not purport to be a record of the proceedings of the annual general meeting.*



DELHI CLOTH AND GENERAL MILLS COMPANY LIMITED

MORE EXPORTS IMPERATIVE NOW

CHAIRMAN, MR. BHARAT RAM, URGES RELIANCE ON INDIGENOUS SUBSTITUTES

SPEAKING against the background of the Chinese war with this country in Ladakh and N.E.F.A. at the Annual General Meeting of the shareholders, which was held at Delhi on Friday, 9th November 1962, Mr. Bharat Ram, Chairman of the Delhi Cloth and General Mills Company Ltd., stressed the need for earning more foreign exchange through exports, which was greater than ever before, as the country would have to import large quantities of defence equipment and various types of raw materials to increase industrial production. In this context, Mr. Bharat Ram urged the industrial and business communities to export even at a sacrifice which would be an additional contribution to the defence effort. As for D.C.M., the Chairman said that the Company had not only been maintaining its exports of textiles but expected to increase them in the current calendar year. Mr. Bharat Ram recognised the need for boosting industrial output and urged manufacturers not to place an undue strain on the foreign exchange resources by way of import of materials and equipment and to make good instead with whatever indigenous substitutes that were available, without detriment to the overall effort.

The following is the full text of Mr. Bharat Ram's speech:

LADIES AND GENTLEMEN,

I welcome you to this 74th meeting of the general body of the shareholders of the Delhi Cloth and General Mills Company, Ltd.

We are meeting today under the deep shadows of a national crisis. I do not think that in our living memory any one of us can recall that the country has ever had to face such a grave peril inflicted upon us, without the slightest provocation, by a neighbouring country which professed friendship, but has paid goodness by evil. We now face a situation which has taken us almost by surprise, and to face which every fibre of the nation will have to be flexed and no sacrifice will be too great to render at the altar of the freedom, integrity and honour of the country. It is necessary, therefore, that wherever we are and in whichever station of life, we reflect on the responsibilities and duties which have fallen upon all of us. It is gratifying to note that already a great deal of spontaneous enthusiasm has already been generated in the people. In fact, there is an upsurge of purposive emotion and indignation, the like of which never took place in recent history. This enthusiasm and emotional outburst has to be channelled and harnessed to the best advantage of the country and not to be frittered away in pretty directions. What is more, this has to be maintained because the war is bound to be a long-drawn-out affair, and it will be fatal if we allow ourselves to be lulled as a result of some gains here and there into a sense of complacency. The misfortune of the country has been that we had become complacent, and, may I say, even soft? The present crisis has shaken us off this complacency. It is now for the leaders of the country and Government to let the people know clearly and in concrete terms as to what is expected of them, in what manner austerity, if necessary, has to be observed, what the industry and workers have to produce, and how exactly the energy of the scores of voluntary organisations has to be channelised to meet the one objective that we have before us. It is also up to our leaders to inculcate a sense of pride in austere living, which can only be done by example and precept rather than by preaching.

Donation to Defence Fund

Industrialists and businessmen have a great responsibility towards the country today. I am glad that responsible organisations of industry and trade from all the nooks and corners of the country are sending their messages of support to our Prime Minister and Government. However, much more has to be done, and on various fronts. Many leading business houses have donated large sums of money to the National Defence Fund. Your Company will also make, for the time being, a donation of rupees ten lakhs. It is a matter of great pride that the workers of the Delhi Cloth Mills and Swatantra Bharat Mills took a lead in working on a *Diwali* holiday on the 29th October voluntarily and donated the wages for that day. All the staff of D.C.M., S.B.M., H.O. and C.M.O. have also donated a day's salary. The Company also donated the profits of that day. The Managing Agents have also given their commission for that day. The total of these amounted to Rs. 1,18,789. In fact, the workers are keen to work on other holidays and donate the wages to the National Defence Fund, and it is expected that the Delhi Cloth Mill will work on the 11th of this month which was to be a holiday.

While it is good that business people and others are donating large amounts to the National Defence Fund, we must not lose sight of the increasing need for earning more foreign exchange by exports. This need is even greater today than before as the country would have to import large quantities of defence equipment and various types of raw materials in larger quantities to increase production in the country. I would, therefore, urge the industrial and business community that they make every effort to increase the exports even at a sacrifice and consider this sacrifice as their additional contribution to the defence effort.

Business Community's Role

In this hour of national crisis, the business community, as, in fact, the entire nation, will be on trial, and it would be judged by the manner in which it meets the essential civilian and Defence requirements at reasonable prices. We have, therefore, to see that no hoarding or profiteering takes place. This can be done by the producers making arrangements to distribute the products in such a way that they reach the ultimate consumers at prices which they are expected to pay. The wholesalers have similarly to play their part. Such of the commodities which can be price-marked should be stamped with retail prices as is being done in the case of cloth. In respect of other items, large-scale advertisement of price should be resorted to. The retailers, especially in large towns, should display prices in prominent places in their shops so that the consumer knows, even before he buys, as to what he is expected to pay. All these measures will not only help in creating confidence in the minds of the people, but also to put a curb on those who may be tempted to make easy money in the difficult times that lie ahead.

Support to Government

On behalf of the Delhi Cloth and General Mills, I assure the Prime Minister and the Government that we are fully behind them and we will spare no effort to contribute our mite to the cause in every possible direction.

To the consumers also I would like to say a word. Although there is no shortage of cloth at the moment and I am sure that its production will be maintained at levels which will meet the full requirements of the people, even so it is necessary for them to exercise some self-restraint on consumption. In respect of some other items also, it is imperative to apply restraint; for example, all leather goods, particularly shoes and woollen material. Apart from other Defence requirements, these are the two commodities which by consuming less the consumer can directly contribute to the war effort. Even from the point of view of making our contribution to creating the proper psychological atmosphere in the country, some self-restraint on consumption of several commodities has to be imposed.

One more word, and I would have done as far as this subject is concerned. Our industries will have to produce more. They will also have to turn out equipment which is required by the army. In order that we do not place an undue strain on our foreign exchange resources, all of us should be prepared to use whatever substitutes are indigenously available and try to make good with these. Although quality should be our end, in times of emergency it behoves us that we make good with whatever we have, provided that it can be used without detriment to the overall effort.

Coming back now to the Company's affairs, the balance-sheet, profit and loss account and the report of the Board of Directors for 1961-62 have been in your hands and with your permission, I will take them as read.

The net profits of the Company have been marginally lower than last year. These have been due to higher provisions for depreciation and taxation.

Modernisation of Plant

We have been continuously renovating and modernising our textile mills. The old waste plant in the D.C.M. will be replaced by a modern waste plant during the next few months. The spinning capacity at Hissar is being expanded by the addition of another 23,000 spindles. It is expected that the installation of these additional spindles will start soon. Your Company has been a pioneer in the distribution of cloth directly to consumers. This policy has resulted in supplies to consumers at controlled prices by the mills. This service has been appreciated in ample measure by the public at large at all times and particularly in times of shortages. Today the Company has over 300 retail shops scattered all over the country and the Company will continue to increase its retail shops as and when necessary.

Your Company has not only been maintaining its exports of textiles but expects to increase its exports in the current calendar year. This is in spite of the fact that until June this year the exports of textiles have been declining. In the face of this declining trend of textiles, the textile industry undertook to export 12½ per cent of each mill's production voluntarily and it is gratifying to note that in the past few months the exports of textiles from India have increased.

Our plan for the expansion of crushing capacity at Mawana is in progress, and we hope that in 1963-64 we will have increased our crushing capacity from 1,500 tons per day to 3,000 tons per day. During the last season, the quality of cane in our area was extremely poor and the recoveries consequently suffered. The new system of linking the cane prices to sugar content, for which the industry has been pressing for many years, was at long last finalised by the Government and will take effect this year. This will not only help the industry but it will gradually persuade the cultivator to concentrate on high sugar yielding varieties of cane.

Chemical Plants

A recent activity that your Company has undertaken is the designing, construction and erection of chemical plants. We have already designed, manufactured, supplied and erected two sulphuric acid plants. Two more sulphuric acid plants and two superphosphate plants ordered by various parties are nearing completion. Gradually, we hope to extend the activities of this section to cover other types of chemical plants also.

In my speech last year, I had made a reference to two new projects which we had taken in hand. You will be glad to learn that these projects have made good progress. Most of the machinery for the P.V.C. project has been received at site and erection work is in progress. The caustic soda plant, which is a part of the project, will soon be in production. The final product, namely P.V.C. would be on the market some time in the latter part of 1963.

Our negotiations with the U.S.A. Agency for International Development for a dollar loan to meet the foreign exchange requirements of the Rayon Tyre-Cord Project have been successful. The agreements have been signed and orders will be placed soon. It is expected that this factory will be in production by the end of 1963 or early 1964.

Before concluding, I would like to place on record our sincere appreciation of the good work of all our workers and staff whose efforts have enabled us to achieve satisfactory results during the year.

Earlier, Lala Bharat Ram recalled gratefully, the devoted services of Mr. Ahmed Islam Khan, the Managing Agents' working member in Pakistan, who passed away in October.

MUTUAL INSURANCE IN JAPAN

WIDE RANGE OF COVERS FOR FARMERS

BEHIND the high level of productivity and efficiency of Japanese agriculture and the rising standard of living of Japanese farmers lies a story of co-operative endeavour and mutual help which has few parallels in all Asia. A remarkable example of collective action by farmers to promote common interests is the mutual insurance programme, operated by agricultural co-operatives, under which farmers are insured against a variety of risks, including the risk of death, to which they are exposed. It is a measure of the popularity of mutual insurance plans among Japanese farmers that both the number of subscribers and the total sum assured have been continuously expanding. At the end of March 1961, mutual insurance plans had as many as five million subscribers, with an aggregate sum assured of 1,000 billion yen (that is, U.S. $3,000 million or about Rs. 1,500 crores), which is equivalent to 56 per cent of Japan's national budget for the fiscal year 1961.

Mutual insurance plans worked by agricultural co-operatives in Japan date as far back as 1925, when the National Congress of Industrial Associations (predecessor of the present Agricultural Co-operatives' Association) adopted a resolution calling for the offer of life insurance protection and cover against the risks of fire by the Association in response to the growing demand for insurance protection from the members. Initially, the Association had to confine itself only to fire insurance; cover against risks of fire to farmers was provided by the Association in collaboration with private insurance companies.

Under the Agricultural Co-operative Law enacted in 1947, agricultural co-operatives were officially permitted to undertake mutual insurance operations. A mutual insurance federation was organised for the first time in 1948 at Hokkaideo to offer three kinds of cover, namely, mutual life insurance, mutual farmhouse insurance and mutual co-operative building insurance. This was followed by the establishment in 1951 at Tokyo of the National Mutual Insurance Federation which functions as a nation-wide organisation. The formation of this organisation gave a fillip to the mutual insurance and mutual insurance programmes spread swiftly to every corner of the country. By 1958 offices of the Mutual Insurance Federation were opened in all the 46 prefectures in the country. At the end of March 1961, 11,165 out of a total of 12,050 co-operatives in the country were handling mutual insurance plans.

Mutual insurance plans offered to farmers at present are of five kinds. They are (1) mutual endowment life insurance, (2) mutual children's insurance, (3) mutual building rehabilitation insurance, (4) mutual fire insurance and mutual co-operative building fire insurance.

Under the mutual endowment life insurance, a person taking out a policy is paid an indemnity in the event of his death or disablement during the period covered by the insurance or otherwise when the policy matures. The period of insurance varies from five to 30 years and the sum assured from 10,000 yen to 2,000,000 yen. In cases where the insured person dies from an infectious disease designated by law or from an accident, the amount of indemnity is doubled.

Mutual children's insurance provides indemnity in case the insured child dies during the period covered by the policy or otherwise, when the policy matures. Indemnity is also paid when the child is either orphaned or the parents are disabled, in which case, there is exemption from further payment of premium. The period and amount of insurance are the same as for mutual endowment life insurance. This policy is designed to make possible the accumulation of funds for education of children, marriage and self-support of rural children without interruptions caused by contingent developments.

Mutual building rehabilitation insurance gives cover against risk of damage to farm buildings caused by natural disasters such as flood, earthquake, and typhoons. Indemnity is paid either when the insured building or the contents thereof are destroyed and damaged by natural disasters during the life of the policy or otherwise when the policy matures. The duration of the contract is the same as in the case of mutual endowment life insurance but the sum assured ranges from 50,000 yen to two million yen. An outstanding feature of this plan is that the contract is not nullified when the payment of premium is discontinued by the subscriber. But an appropriate payment is made to the subscriber, the amount depending upon the premium paid.

Mutual fire insurance indemnity covers damage to buildings or their contents caused by fire upto a maximum of one million yen during the period covered by insurance, which is usually less than three years. Under the mutual co-operative building fire insurance plan, insurance cover of upto 10 million yen is provided against risks of fire for buildings or movable properties owned by agricultural co-operatives during the period covered, which is usually less than three years.

Each one of the mutual insurance programmes discussed above has been steadily growing in popularity among farmers. But the mutual building rehabilitation insurance scheme has undergone the most remarkable growth. In fact, it is the core of the entire mutual insurance programme operated by the co-operatives. While the growth of mutual insurance in the past has been remarkable it is expected to be even more spectacular in future. A seven-year programme under implementation now aims at increasing the total contract value under the mutual insurance programme to yen 2,000 billion ($6,000 million) by March 1965. Moreover, various risks, which interrupt production and disrupt farm life, still existing in rural communities, are sought to be covered under the mutual insurance programme. For this purpose, continued efforts are being made to develop and offer cover against all type of risks so that the farmer will be fully protected against all kinds of hazards involved in his occupation.

FIRE LOSSES IN W. GERMANY

The steadily deteriorating situation in the industrial fire and consequential fire insurance business in W. Germany has caused much concern in insurance circles in that country.

The losses in this sector of the German business increased between 1958 and 1961 from DM. 143.2-million to DM. 226.2-million, and, what is even more significant and more critical is the successively increasing number and severity of large individual fires. In 1958 the number of individual losses over DM. 1-million was 16 or 19.9 per cent of the total losses. In 1961 their number was 31, or 40.4 per cent of the total fire and consequential fire losses. During the first four months of the present year there were already 17 large industrial fire losses, amounting to 45.9 per cent of the total loss. This alarming development does not seem to be a temporary phenomenon, rather a trend of more permanent nature, due to a number of technical and economic factors on the one hand, and the fall in the rates of premiums on the other. Industrial fire rates in Germany today are much below the corresponding level in other industrial countries and the companies have so far been able to

G.A.T.T. AND THE COMMON MARKET

NO PLACE FOR DISCRIMINATORY PREFERENCES

THE impact of regional groupings on world trade was one of the important problems that came up for consideration at the twentieth session of the G.A.T.T. Contracting Parties recently held at Geneva. In his opening address, Mr. W. P. H. Van Oorschot, the Netherlands delegate who was the Chairman of the session, made a fervent plea to the countries joining regional trade blocs that such arrangements should not lead to discrimination and that they should be based on the most-favoured-nation and non-discrimination principles, the cornerstone of the G.A.T.T. Preferential trade arrangements in industrial areas and protectionist solutions at the expense of trade in agricultural products, he conceded, "might be attractive as a quick solution to immediate difficulties." But, he warned, "haste may be waste." If these arrangements signify the formation of protectionist trade blocs, he emphasised, there would be a decrease in international trade. He added, significantly enough, that this may have "a restrictive effect on international economic expansion and create disorder in the world economy." He, therefore, stressed that the Contracting Parties should resist such preferential trade arrangements as were inconsistent with the G.A.T.T. rules. It is needless to add that such arrangements would only result in "a confusing network of bilateral agreements," which could conceivably cause disorder in international trade.

Although Mr. Van Oorschot emphasised the harmful effects of discriminatory preferential trading arrangements, he did not appear to have mounted an attack on regional groupings as such. He was not quite sure whether all the new developments in economic co-operation would have a detrimental effect on world trade. Most countries were, in fact, agreed that whatever adverse consequences the integration movements might have so far had on the third countries, had been "more than compensated by the favourable effects caused by rapid economic growth, especially of the countries of the European Economic Community." In other words, "trade creation" had gained over possible "trade diversion." Mr. Van Oorschot, however, made an important point when he said that "economic life does not only consist of facts, it is also deeply influenced by expectations." Expectations of third countries as to the effects of the new forms of regional co-operation, he observed, had thus far been dominated by feelings of uncertainty as to the future development of trading relationships.

Tariff Barriers

As the Chairman maintained, it would take a long time before one knew the actual impact of regional trade groupings on world trade. He, therefore, wanted the G.A.T.T. to tackle, in the meantime, certain important problems connected with agricultural and tropical products, the abolition of remaining quantitative and other barriers to trade and reduction of tariffs. The last, and perhaps the ultimate, chance for the Contracting Parties to find a solution to problems of world trade, according to him, consists in agreeing to conduct tariff negotiations and work out international arrangements for trade in agricultural products. He was of the view that the will to find a solution had to come from the two great industrial regions, namely, the U.S. and Western Europe. The U.S. Trade Expansion Act, in this context, has opened up new possibilities for reducing tariffs.

Mr. Van Oorschot laid down two important conditions to be observed in any tariff reductions. In the first place, existing G.A.T.T. principles should be the basis of any solutions for world trade problems, including those relating to agricultural products. Secondly, the industrialised countries should take into consideration the need for rapid expansion of the export-earnings of the developing countries which was vital to their economic growth. Besides, he spelt out four significant factors that should be complied with, in order to make tariff reductions effective. These are:

"It is now commonly assumed that the new round of tariff negotiations will be based on the so-called linear method providing for overall reductions. I strongly believe that there should—as far as the industrial sector is concerned—be none or only a few exemptions from such overall general reductions. The experience of the Benelux economic union and of the European Economic Community has shown that generalised industrial import duty decreases exercise a healthy stimulation on economic expansion. Granting exemptions from the general tariff reduction to individual industrial items might—as a result of unavoidable pressures and claims for similar treatment—have a snow-balling effect. What were meant to be exceptions would then be the rule and the idea of linear overall cuts would have been cut to pieces.

"In the agricultural sector, protectionist measures of various types, including subsidies to farmers, may lead to a limited flow of international trade. I am convinced that imports of agricultural products into the industrialised countries are an indispensable element of trade policy. I believe that we do not deal in this respect only with the interests of the less-developed countries, because it is becoming clear that the interests of the developed nations themselves, namely, in order to maintain the exports of industrial products, require a high level of imports of agricultural commodities into the developed countries. An effort should be made to have support policies to farmers devised in such a way that the existing flow of trade in agricultural products is taken into account.

"As in the recent past, the less-developed countries should not be forced to negotiate on the basis of *quid pro quo*. On the contrary, they should benefit from most-favoured-nation treatment in relation to the reductions which the industrialised countries will grant each other. At the same time, the new countries should conform themselves to the G.A.T.T. rules which permit protection of new industries.

"If all goes well, the result of our endeavours would be a gradually increasing access to markets for both industrial and agricultural products. Such increased access would flow automatically from the sum total of the accomplishments of all these negotiations. In the industrial field, there should then be no need for special "access to market"—arrangements along the lines of the recently concluded long-term Cotton Textiles Arrangement. Laudable as that arrangement is in itself—and I wish to pay tribute to those who negotiated it—a repetition for other industrial items could result in a bewildering multiplicity of arrangements and agreements, each of them difficult to negotiate, probably difficult to implement and creating uncertainty for importers and exporters alike."

Reciprocal Tariff Cut

The conditions prescribed by the G.A.T.T. Chairman as above are unexceptionable. Particularly important from the point of view of less-developed countries like India is the suggestion that industrialised countries should not insist on reciprocal tariff reductions by developing countries. This is exactly what Mr. K. C. Reddy had suggested at a previous meeting of the G.A.T.T. In view of the acute balance of payments difficulties and the need for promoting industrialisation in developing countries, Mr. Van Oorschot's suggestion deserves to be accepted by the industrialised countries. It is only appropriate, in this context, to note that the *International Trade* 1961, published by the G.A.T.T. a few days ago, estimates that the gap between the minimal import needs of the less-developed countries and their likely exports of traditional products may increase by $15 billion in the course of 1960-1975. As Mr. Van Oorschot rightly stated, import and revenue duties and quantitative restrictions, as they affect less-developed countries, therefore, become a part of the greater problem of how to achieve a new and balanced international division of production, enabling the developing nations to achieve an acceptable rate of growth.

E.E.C. Stand

Some of the important points raised by Mr. Van Oorschot were dealt with at some length by the representative of the European Economic Community (European Common Market), Mr. Th. Hijzen. Mr. Hijzen, who is the Director of the External Relations Department of the E.E.C. Commission, pointed out that the Community had never lost sight of the general responsibility devolving on all the industrialised countries in regard to the problem of under-development. Explaining the Community's policy in this respect, he observed as follows:

"This is not merely a matter of a moral duty of plain international justice, but a matter of evident interest which can be summed up in very simple terms: we must contribute to creating on the international level the essential prerequisites for the balanced development of all countries, because we need this balanced development in order to ensure our own progress in the long-term. That is why aid towards development cannot be conceived in terms of 'donors' and 'beneficiaries', but as a joint undertaking between partners whose rights, duties and responsibilities balance each other. That is the philosophy on which the Community bases its development policy, that is the spirit in which it participates in international commodity agreements, as one of the instruments of this solidarity between partners, that is the objective which it cannot and does not wish to dissociate from its action at international level.

"Pending more concrete and more effective development of the principle of this joint and mutual international co-operation, the Community is endeavouring to strengthen within the limits of existing possibilities the value and effectiveness of its contributions to aid towards development of every kind. For this purpose, the member-States concert their national policies for aid towards development, in particular in matters of financing and credit assistance. In 1961, contributions by the member-States to world organisations amounted to $458 million and public financial assistance at the bilateral and regional levels amounted to $1,311 million. For the same year, the private sector within the E.E.C. contributed $1,067 million."

In a strong defence of the overall commercial policies of the Six, Mr. Hijzen observed that though the impetus resulting from the Community's economic expansion was of direct benefit to the member-States, third countries would also benefit through its repercussions on imports into the Community. In support of this claim, he made the following observations:

"This is reflected, in the first instance—and this is perfectly normal—in a particularly rapid growth in intra-Community exchanges. In 1961, this growth was at the rate of 15 per cent, as compared with 1960; for 1962, the first eight months of the year showed a rate of growth of 14 per cent, as compared with the corresponding period in 1961.

"As regards commercial relations between the Community and third countries, the first quarter of 1962 showed a rise in the rate of growth of imports by the Community, and this tendency was confirmed in the second quarter, when the rate of growth, as compared with the corresponding period in 1961, reached 9 per cent in terms of both volume and value. For the first half of 1962, the geographical distribution of the growth was as follows: (a) imports from the United States rose by 7 per cent during the first six months of 1962, as compared with the corresponding period of the previous year; (b) imports from E.F.T.A. countries were 11 per cent above the level reached one year earlier; (c) as regards the developing countries which are essential producers of raw materials, the rate of growth of imports reached 7 per cent, as compared with the same period in 1961.

"Recent results thus continue to follow the steadily rising trend recorded since 1958 in the development of the Community's imports. In terms of value, the increase was as follows between 1958 and 1961: for total imports by the E.E.C. from third countries—from $15,900 million to $20,500 million; for E.F.T.A. countries—from $3,600 million to $4,900 million; for North America—from $3,200 million to $4,500 million; for Latin America—from $1,600 million to $1,800 million; for the African countries not associated with the Community—from $1,200 million to $1,400 million; and for the associated African countries—from $1,500 million to $1,800 million. It is also of interest to note that the trade balance between the E.E.C. and the countries of Africa and Asia, taken together, shows, for 1961, a credit balance of $631 million for the latter countries and a credit balance of $75 million for Latin American countries."

In conclusion, Mr. Th. Hijzen reiterated that the E.C.M. was "convinced" that its endeavours to strengthen the economy of the European Continent would be "beneficial to all," that the problem of underdevelopment was basically a problem of disequilibrium and that the entire world community would benefit from any effort aimed at reducing that disequilibrium. These are helpful observations indeed; only it remains to be seen to what extent they will be translated into actual practice. The treatment that will be extended to India, Pakistan and Ceylon on Britain's entry into the Common Market will show to what extent the E.C.M. spokesmen's remarks are solid.

A BAD YEAR FOR DECCAN SUGAR

FURTHER CUT IN DIVIDEND

IT was a particularly bad year, the year ended 31st May 1962, for the Deccan Sugar and Abkhari Company Ltd. (Managing Agents: Messrs. Parry and Company Ltd., Madras). For, barring a spurt in net sales realisation (that is, excluding excise duty paid) to a record level of Rs. 283.04 lakhs from Rs. 214.05 lakhs, to which level they had fallen in 1960-61 from Rs. 270.44 lakhs in 1959-60, the results for the year were marked by some disappointing features such as, a further decline in gross profit from Rs. 30.03 lakhs to Rs. 28.30 lakhs—the lowest level for the past seven years—and a sharp break of four points in profit-margin (ratio of gross profit to net sales) to 10 per cent on top of a nearly one-point setback in 1960-61. After making the essential provisions, which have been practically maintained around the previous year's levels and are indicated in the table which follows, the net profit amounts to a mere Rs. 8.89 lakhs, as against Rs. 10.65 lakhs for the previous year. While the interim dividend on the Rs. 5 ordinary shares was maintained at 7.5 per cent per annum, taxable, per share, the Directors have been obliged, because of insufficiency of profit, to cut the final dividend further by three points to 10.5 per cent per annum, taxable, as against by 4.75 per cent to 13.5 per cent per annum, taxable, in 1960-61. The total dividend amounts to 18 per cent per annum, as against 21 per cent for the previous year and 25.75 per cent for 1959-60 and 1958-59.

The table below gives a fair idea of how the Company fared in the past four years:

(In lakhs of rupees)

	For the year ended 31st May			
	1962	1961	1960	1959
Sale proceeds, less excise duty paid	283.04	214.05	270.44	270.14
Other income	4.26	2.44	2.94	3.96
Closing stocks of finished goods and work-in-progress	162.42	176.23	83.90	90.66
Excise duty paid	74.63	67.86	90.79	93.50
Raw materials and stores consumed	173.18	207.60	160.92	141.92
Staff expenses	34.22	32.63	29.53	28.18
Other expenses	37.60	38.73	36.21	41.19
Gross profit	28.30	30.03	40.26	36.02

Low	9.75	11.10	12.60	9.05

* Subject to deduction of tax.

In 1960-61, sale proceeds of the Company had dropped due to restricted sales quota releases by the Government. During the year under report, however, sale proceeds soared because of heavy releases of sugar under bulk quotas announced by the Government, which, at the same time, brought down prices, especially from December 1961 onwards, and reduced the profit-margin. Larger exports during the year also boosted the sales but they fetched a lower average price. Total production in the 1961-62 season from the Samalkot and Pugalur factories amounted to 14,710 tonnes out of 134,654 tonnes of cane crushed at an average recovery of 10.92 per cent, the relative figures for the previous season being 19,268 tonnes, 195,851 tonnes and 9.84 per cent, respectively. Thus production during the season was lower because of the 10 per cent cut in the fixed quota for each factory announced by the Government in October 1961. But, thanks to the previous season's record outturn and the consequent heavy carryover, the Company succeeded in selling more sugar in 1961-62.

Mr. H. V. R. Iengar, Chairman of the Company, has referred, in his statement to the shareholders, to the heavy carryover of sugar stocks in the country at the beginning of the 1961-62 sugar year, amounting to 11.80 lakh tons as against the normal figure of 5 lakh tons, and envisaged that production in the sugar year ending 31st October 1962 would again be in excess of domestic requirements. To get over the problem of sizable surplus stocks, Mr. Iengar feels that increasing internal consumption is a more desirable solution than pressing on with export with its attendant heavy losses. Last year, internal offtake increased because sugar was available at lower prices than during the period of control. Mr. Iengar feels that there is scope for increasing internal consumption further. He believes that, in the present circumstances of overproduction, there will appear to be no justification for maintaining the high rate of excise duty on sugar.

According to the Chairman, the extension and rehabilitation programme at Pugalur and Samalkot is proceeding satisfactorily and, though costs have risen and there have been delays in machinery deliveries, the work is expected to be completed in good time to enable the Company to take advantage of the increased capacities and better conditions during the 1963-64 crushing season. Outstanding capital commitment of Rs. 23 lakhs was made last year. Further capital expenditure of Rs. 13 lakhs is proposed to be made shortly to complete the programme. The whole programme is to be financed entirely from internal resources. Under an agreement negotiated with the Seshasayee Paper and Boards Ltd. in 1960-61, the Company will commence during the latter part of 1963 deliveries of bagasse to that company in exchange for oil and the equipment for burning oil from it. Increased production of spirit in Andhra Pradesh and difficulty of transport led to a short working of 91 days of the distillery at Samalkot. During the current year, however, the situation has somewhat improved and, in addition to a shipment of denatured spirit to Ceylon, the Company has secured a rate contract from the Government of India which is expected to enable the distillery to work at optimum capacity. The same is not the case with Co2 and, in spite of increased competition, manufacturers of the product in Andhra Pradesh have not been able to reach an agreement on prices.

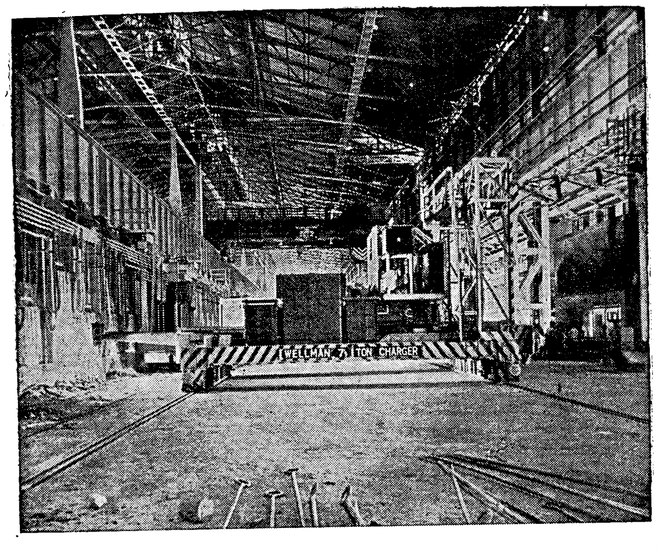
While the short-range prospects for sugar industry as a whole cannot be regarded as bright, the Chairman feels that, with the benefit of the expanded capacity at Pugalur and modernisation at Samalkot, the Company will do as well, or better than others.

Financially, the Company is in a sound position. Its paid-up capital of Rs. 46.84 lakhs (of which Rs. 39.84 lakhs are in ordinary shares and the rest in preference shares) is supplemented by reserves and surplus aggregating Rs. 46.01 lakhs, excluding taxation equalisation reserve of Rs. 9.45 lakhs. Current liabilities and provisions aggregate Rs. 203.40 lakhs, as against which current assets, loans and advances total Rs. 229.56 lakhs. Besides, there are investments amounting to Rs. 3.73 lakhs of which Rs. 3.26 lakhs are quoted and command a market value of Rs. 3.31 lakhs. The gross block of Rs. 146.20 lakhs, as against Rs. 148.93 lakhs in the previous year, has been written down to Rs. 65.63 lakhs and inclusive of capital expenditure at Rs. 6.78 lakhs, the net block appears at Rs. 72.41 lakhs.

The Rs. 5 fully paid ordinary shares of the Company are currently quoted at Rs. 9.90, *cum* final dividend of 10.5 per cent per annum. On an *ex-div.* basis, they offer a net yield of 6.6 per cent per annum which is, indeed, satisfactory even for a sugar scrip.

HINDUSTHAN-PILKINGTON TO SET UP PLATE GLASS PLANT

Mr. P. N. Talukdar, Managing Director of the Hindusthan-Pilkington Glass Works Ltd., announced in Calcutta on Tuesday, 30th October, that the Company had decided to set up a new plant for the manufacture of plate glass. The plant, which is said to be the first of its kind in India so far, will be put up at Asansol, in addition to the Company's sheet glass works, at a capital outlay of approximately Rs. 4 crores, half of which will be contributed by the parent company, Messrs. Pilkington Brothers Ltd., of Lancashire, U.K. The contribution of the British firm to the capital outlay will, therefore, cover the foreign exchange component of the project. Production will be through the float process which has been invented by Pilkington Brothers and will be a new thing in India. At present, for plate glass, India relies solely on imports. Much foreign exchange will, therefore, be saved, when the Company's plant goes into production. It will have an initial target of 2,750 tons a month and employment potential of about 1,000. Plate glass finds use in automobiles, trucks, buses, railways, 'pulpit' windows for steel industry, perfect mirrors, control rooms at aerodromes and other strategic devices, such as bullet-proof glass for armoured vehicles.



View from the charging platform of Durgapur's Open Hearth Steel Melting Shop designed and constructed by Wellman

WELLMAN

INCANDESCENT OFFER COMPLETE SERVICE IN INDUSTRIAL HEAT ENGINEERING

Wellman Incandescent Furnaces range from the smallest Heat Treatment Ovens to the largest Steel Melting Furnaces and Metal Mixers for modern Steel Plants. The Wellman Incandescent Group have over half a century of experience in this field of engineering during which they have designed and erected industrial furnaces in many parts of the world. Lately, as a member of the ISCON Consortium, Wellman Smith Owen were responsible for designing and erecting the entire Steel Melting Shop at the Durgapur Steelworks, including seven Open Hearth Melting Furnaces, Waste Heat Boilers and two 800-ton Metal Mixers.

Wellman Incandescent are also specialists in Mechanical Handling Equipment. They design and erect a wide range of cranes including Ladle Cranes and Ingot Stripping Cranes for use in the steel industry and are now in a position to manufacture progressively in India many products, which hitherto, have had to be imported.

WELLMAN INCANDESCENT INDIA LTD.

8, HARINGTON STREET, CALCUTTA-16

GOOD PROGRESS BY INDIAN HUME PIPE

DIVIDEND RAISED—MORE PROFIT CONSERVED

FURTHER smart progress has been reported by the Indian Hume Pipe Company Ltd. (Managing Agents: Messrs. Walchand and Company (Private) Ltd., Bombay) during the year ended 30th June 1962 on top of a very satisfactory recovery in the previous year from the 1959-60 setback. All the three progress indicators, namely, sales, profit and profit-margin (ratio of profit to sales) have been higher during the year. Sales realisation, which had recovered in the previous year from Rs. 232.24 lakhs to Rs. 259.71 lakhs, have expanded further by Rs. 34.12 lakhs to Rs. 293.83 lakhs. Gross profit, at Rs. 66.56 lakhs, shows an increase of Rs. 9.44 lakhs over the year, after it had improved pretty smartly by Rs. 19.24 lakhs to Rs. 57.12 lakhs in 1960-61. Profit margin, which had picked up in the previous year from 16.3 per cent to 21.9 per cent, has gone up to 22.6 per cent during the year under report. Apart from increased operations and better market conditions during the year, what has contributed materially to the improvement in profit is a welcome drop in other manufacturing expenses from Rs. 43.79 lakhs to Rs. 28.10 lakhs. Costs of materials and stores consumed have gone up considerably from Rs. 105.05 lakhs to Rs. 139.11 lakhs, indicating higher production during the year. Staff expenses have also increased from Rs. 68.46 lakhs to Rs. 76.20 lakhs.

Provision for depreciation has been reduced from Rs. 13.95 lakhs to Rs. 11.93 lakhs, but that for taxation has been raised by Rs. 7 lakhs to Rs. 28.75 lakhs. Managing Agents' remuneration has amounted to Rs. 4.18 lakhs, as against Rs. 3.85 lakhs in the previous year. After making these allocations, net profit works out to Rs. 21.70 lakhs, as against Rs. 17.57 lakhs in 1960-61. With this higher net profit, the Directors have been able to propose an increase of one point in the dividend on ordinary shares, from 13 per cent per annum, subject to tax, at which it was maintained for the preceding three years, to 14 per cent per annum, taxable. At the same time, they have stepped up the transfers to reserves and provisions by Rs. 2.70 lakhs to Rs. 11.05 lakhs.

The synopses of the Company's working in the past four years are brought out in the comparative table below:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sale of products	293.83	259.71	232.24	245.63

* Inclusive of the net difference between expenses on and receipts from pipe-laying contracts. † Subject to deduction of tax.

The number of the Company's factories, including two in Ceylon, remained unchanged at 60 over the year. The factory at Pophali was, however, closed at the beginning of the current year, and so the number of factories now stands at 59. The newly put up prestressed pipe factory at Patancheru, which could not go into production during the year under report for want of power as also paucity of raw materials, has recently commenced production and is said to be making satisfactory progress. Good progress has been reported also in regard to the working of the Company's steel penstock division, and the regular production at the Hadaspar works has exceeded licensed capacity which is proposed to be raised from 3,000 to 7,000 tons a year and the Government has been approached in this connection. The Company has secured an industrial licence for expansion of its manufacturing capacity of welding flux for submerged arc welding process from 30 to 300 tons a year. It has also started exploring the export markets for its products under the Engineering Export Promotion Scheme and has received the first order for export of hume pipes to Qutar.

Stocks for the year are valued at below selling price, as against at selling price as before, which was not strictly correct. Income-tax assessments have been completed up to the year ended 30th June 1959, that is, the assessment year 1960-61. Donations during the year amounted to Rs. 72,500, including Rs. 25,000 to the Maharashtra Pradesh Congress Committee and Rs. 17,500 to the Swatantra Party.

In 1960-61, the Company had sought the approval of the Controller of Capital Issues to issue debentures worth Rs. 50 lakhs carrying interest at the rate of 7 per cent per annum. On the receipt of the sanction, however, the Directors considered it advisable to extend the life of the existing (1957-62) debentures of Rs. 29.18 lakhs by another 15 years and increase the rate of interest from 5.5 per cent per annum, as at present, to 7 per cent per annum and make a fresh issue of Rs. 20.82 lakhs only, maturing in 1977 and ranking *pari passu* with the existing debentures. This proposal has been approved by the Controller of Capital Issues as also by the existing debentureholders. Accordingly, the life of the existing debentures has been extended to 15th September 1977. The Directors have agreed with the authorities of the Bombay Stock Exchange to give first preference to the Company's present ordinary shareholders and debentureholders in regard to the new debenture issue of Rs. 20.82 lakhs, when it is offered for subscription.

Restricted long-term borrowings and strong reserves position feature the Company's financial position as at 30th June 1962. As against the paid-up capital of Rs. 110 lakhs, of which Rs. 60 lakhs are in ordinary shares and the balance in preference shares, both of Rs. 100 each, reserves and surplus aggregate Rs. 120.97 lakhs and provide a twofold cover for the equity. Secured loans amount to Rs. 88.46 lakhs, as against Rs. 101.72 lakhs a year before, of which Rs. 29.18 lakhs represent debentures and Rs. 59.28 lakhs Maharashtra Government loan, inclusive of interest accrued. Current liabilities and provisions amount to Rs. 94.67 lakhs and are very well covered by current assets, loans and advances aggregating Rs. 284.65 lakhs and investments of Rs. 13.76 lakhs, of which Rs. 11.39 lakhs are quoted and command a market value of Rs 11.49 lakhs. Gross block expanded during the year from Rs. 246.93 lakhs to Rs. 263.33 lakhs. It has been written down conservatively to Rs. 105.30 lakhs. Expenditure of Rs. 10.40 lakhs made at factories during the year is subject to allocation between capital and revenue account.

Currently, the Rs. 100 fully paid ordinary shares are quoted at Rs. 160.50 *cum-div.* and offer, on *ex-div.* basis, a net yield of 6.5 per cent per annum.

T.E.L.CO.'S RIGHTS AT PREMIUM

The Tata Engineering and Locomotive Company Ltd. has applied to the Controller of Capital Issues for his consent for a new issue of 200,000 ordinary shares of Rs. 100 each at a premium of Rs. 50 per share, or such other amount as may be finally fixed by him. The new ordinary shares will be offered to the existing shareholders of the Company or their nominees in the ratio of one new share for every four ordinary shares held by them. The amount will be called up in two equal instalments, the first instalment being payable on or before 31st March 1963 and the second on or before 30th September 1963. The Company has already issued all its authorised capital of Rs. 10 crores made up of Rs. 8 crores in ordinary shares of Rs. 100 each and Rs. 2 crores in 5 per cent cumulative preference shares of Rs. 100 each. Consent of the shareholders will, therefore, have to be obtained for (i) increasing the authorised capital to permit the new issue of ordinary shares and (ii) issuing 200,000 new ordinary shares as soon as the consent of the Controller of Capital Issues is received.

SEMICONDUCTORS LTD. STARTS PRODUCTION

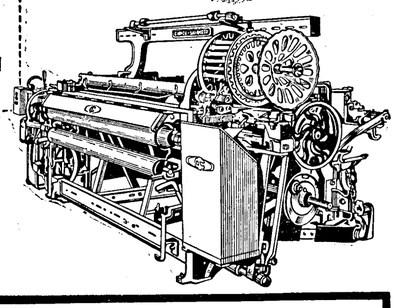
The first batch of germanium transistors were produced by Semiconductors Ltd. of Bombay at its factory at Poona on Thursday, 25th October. Incidentally, Semiconductors is said to be the only company so far in India to have commenced production of germanium transistors. The Company was formed last year in collaboration with Raytheon Company of Lexington, Massachusetts, U.S., the world-famous manufacturers in the field. It is proposed by the Company to manufacture a complete range of semiconductor devices, ranging from the tiny high frequency devices to large diode units for power control purposes.

IN AUTOMATION LIES the future of India's textile Industry

CIMMCO-SAKAMOTO

AUTOMATIC LOOMS

- Robust Design
- Precision Built
- Easily installed and operated



Made in India by Cimmco in close collaboration with Messrs. Enshu of Japan - Manufacturers of world famous Sakamoto looms - Cimmco - Sakamoto Automatic Looms are a vital necessity, for India's textile mills.

CIMMCO-Sakamoto looms are backed by a powerful loom-building tradition combining Cimmco's 18 years of experience with Enshu's 34 years. Sakamoto type looms are used in more than 40 countries of the world, and over 60% of the automatic looms installed in India are of the Sakamoto type.

With a low initial investment Cimmco Sakamoto automatic looms produce a greater volume and variety of quality textiles at lower running costs than any other looms in the same range.

SYNOPSES OF COMPANY REPORTS

Hingir-Rampur Coal Co., Ltd.

(*Managing Agents*: Messrs. Killick Industries Ltd., Bombay.)

Fifty-fourth Annual General Meeting—30th November 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Sales (gross)	38,01	31,43
Closing stock	3	1,01
Gross profit	9,52	5,01
Transfer to Managing Agents' commission	81	27
,, ,, depreciation	1,72	1,50
,, ,, development rebate reserve	13	18
,, ,, provision for taxation	3,80	1,24
Net profit	3,06	1,82
Adjustments	1	6
Appropriations:		
Total available balance	3,07	1,88
To adjustment of loss brought forward from 1960	Nil	1,87
Transfer to general reserve	25	Nil
Proposed dividends (taxable) 4½% R.C. preference	2,81*	Nil
,, ordinary	Nil	Nil
Carry forward	1	1

N.B.—Adjustments represent only the balance brought forward from the previous year.

* Preference dividend is calculated at 5.85 per cent. [being 4½ per cent. plus 30 per cent. thereof] and the amount of Rs. 2.81 lakhs is for the six years ended 30th June 1962.

Extracts from the Directors' report:

Output: Raisings for the year totalled 1,58,612 tonnes compared with 1,57,198 tonnes for the preceding year. Raisings would have been higher had it not been necessary to keep output at a reduced level during the first two months of the year as the wagon shortage continued to be acute and led to accumulation of stocks. Since then, however, the allotment of wagons has been satisfactory.

Sales: The total sales for the year amounted to 1,63,264 tonnes as compared with 1,43,549 tonnes for the preceding year.

Coal Prices: To enable colliery owners to meet the enhanced wage bill and rise in costs of material, etc., the Central Government announced an increase of Re. 0.06 per tonne in the price of the Company's coal with effect from 1st June 1962, and a further increase of Re. 0.74 per tonne with effect from 13th June 1962. Thus the controlled prices of the Company's Steam and Slack Coal (Grade I) are now Rs. 24.20 and Rs. 23.22 per tonne respectively.

Consequent to the upgrading of the Company's coal with effect from 7th September 1961, the Company became eligible to receive a subsidy from the Coal Board under their scheme for assistance as applicable to gassy mines.

Railway Siding: The Assisted Siding serving this Company's Colliery required to be strengthened by the replacement of the old rails by heavier section 90 lbs. rails, so that larger locomotives and BOX type wagons could be handled at the Siding. The Directors have sanctioned the expenditure necessary in this connection and the work has been taken up by the Railway authorities.

Development: Development work continued on 10 Dip Section and raisings to the scale of 4,000/4,100 tonnes per month were obtained.

Expansion Programme: The Directors have decided to re-open the old workings, known as Pit Number 5, which were closed about 30 years ago. The known reserves of coal in that area are ample to warrant the proposed extension, and it is expected that Pit No. 5 can be brought into full production in about 2 years, subject to the granting of Import Licences for Machinery. These workings will then yield a further 10,000 tonnes per month, bringing the total raisings of the Colliery to the level of 25,000 tonnes per month, as compared to the present figure of 15,000 tonnes. Preliminary operations in this connection have already been commenced. The Directors anticipate that the expansion programme will be financed substantially from internal resources.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	45,20,017
Reserves and surplus	2,42,229	—Depreciation	30,34,266
Other liabilities	13,11,281		
		Net block	14,85,752
		Block in progress	73,995
		Current assets	18,82,428
		Investments	20,000
		Cash	91,335
	Rs. 35,53,510		Rs. 35,53,510

* Paid-up capital consists of 24,000 ordinary shares of Rs. 50 each, fully paid and 16,000—4½ per cent. (tax-free) redeemable cumulative preference shares of Rs 50 each, fully paid.

Panchura Estates Ltd.

(*Managing Director*: Mr. K. M. Mehta, Coonoor, Nilgiris.)

Nineteenth Annual General Meeting—22nd December 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Coffee receipts—season 1961-62	64	71
Green tea leaf sales	20	14
Sale of timber	46	42
Closing stock	77	79
Gross profit	51	29
Transfer to depreciation	6	7
,, ,, provision for taxation	25	Nil
Net profit	20	22
Adjustments	52	67
Appropriations:		
Total available balance	72	89
Proposed dividend (taxable) equity	23 (15%)	37 (25%)
Carry forward	49	52

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report:

Crop: *Coffee*: The Company harvested a total quantity of 7,420 bushels only as against an estimate of 11,000 bushels. Weather was against us this year also as could be seen from the figures, the actual crop fell very much below the estimate. On a conservative estimate the coffee crop for this season has been valued at Rs. 19 per bushel.

Tea: The total quantity harvested is 77,716 kgs. and this has bettered the estimate by 14,156 kgs. The tea bushes are in good condition and the directors expect to get a better crop in the current year.

The Company was able to realise a fairly good amount by selling standing timber as in the previous year. The estate has some valuable timber and it is the policy of the board of Directors to sell them at periodic intervals to augment the resources of the Company. The Coffee money is coming after a lapse of 18 months from the date of delivery to the Coffee Pool and being only one crop in a year, the Company is feeling some strain on the financial resources to keep the estate going. Hence the Directors have decided to reduce the dividend in this year. Otherwise the Company's property are in very good condition.

As shareholders might be aware, Coffee industry as a whole is passing through critical times and it is the Directors' wish that the Company should diversify the activities. Every effort is made to intensify the cultivation and if possible try to plant new strains of Coffee but the shareholders will not get any immediate benefit out of these methods. So in order to expand the activities the Directors have thought it best to go in for the manufacture of High Tensile Steel Wires and rods, and necessary application for the licence have been submitted to the Government of India. The Directors are awaiting the same. To finance this project, the Directors have thought it best to increase the share capital of the Company to Rs. 10 lakhs. So much so new shares will be issued to the existing members at the ratio of 5 shares for 1 share held by the member at par. The new share will rank for dividend and in all other respects *pari passu* with the existing fully paid shares. In the event of the Government of India refusing licence for the High Tensile Steel project or any delay in obtaining foreign collaboration, the Directors have decided on an alternative project of expanding in the Estate line, by cultivating essential oil plants viz., Geranium, lemon grass oil, and spices like nutmegs and cloves which have very good demand both in the internal and external markets. The Directors are arranging to get the services of a qualified person (B.Sc. Ag.) to advice the company about the suitability of land and to acquire it and in the cultivation etc.

Estimate: for 1962-63—Coffee—9,000 Bushels
Tea—80,000 Kgs.
Others—Rs. 12,000

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,50,000	Gross block	3,15,407
Reserves and surplus	2,00,274	—Depreciation	39,797
Other liabilities	2,43,873		
		Net block	2,75,610
		Current assets	1,70,697
		Investments	1,45,113
		Cash	2,727
	Rs. 5,94,147		Rs. 5,94,147

* Paid-up capital consists of 1,50,000 ordinary (equity) shares of Re. 1 each.

Cooper Engineering Ltd.

(*Managing Agents*: Messrs. Walchand and Co., Private Ltd., Bombay.)

Twenty-second Annual General Meeting—21st November 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Sales	1,93,90	2,09,67
Closing stock—		
Finished products	19,76	20,90
Goods-in-process	24,67	11,08
Gross profit (+) or loss (—)	—9,09*	+32,63
Transfer to Managing Agents' remuneration	25	2,18
,, ,, depreciation	15,49	9,35
,, ,, development rebate	4,40	5,92
,, ,, provision for taxation	Nil	7,50
Net profit (+) or loss (—)	—9,09	+7,68
Adjustments	15,38†	1,42
Appropriations:		
Total available balance	15,38	9,10
To adjustment of loss for the year	9,09	Nil
Transfer to contingency reserve	Nil	1,47
,, ,, general reserve	Nil	1,00
Proposed dividend	6,28 (7%)‡	6,88 (13%)
Carry forward	1	75

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

* Loss after providing for Managing Agents' remuneration; depreciation and development rebate.

† This includes Rs. 11,89,855 transferred from general reserve and provisions no longer required of Rs. 2,73,474.

‡ The dividend of 7 per cent. for 1962 is on the increased capital of Rs. 89,72,850. The dividend of 13 per cent. for 1961 was on a paid-up capital of Rs. 45,20,000.

Extracts from the Directors' report: The loss for the year has been caused by a sharp decline in the demand of *Diesel Engines* which reduced the sales considerably and called for a severe curtailment of production. The machine tools factory at Chinchwad, although showed a marked rise in production and sales over the previous year, has still not achieved its full productivity due to the fact that majority of the workers employed in that factory are apprentices with less than two years' experience and have not yet been able to achieve the degree of skill required for optimum output. Unfortunately, this Company has been unable to recruit skilled workers owing to the severe paucity of the same caused by a very rapid industrialisation of the Poona-Chinchwad region.

The demand for *Diesel Engines* is now showing very encouraging signs of increasing during the current year and this coupled with the increasing productivity of the machine tool factory, the Directors feel hopeful that the overall picture of the Company's business during the current year will be much improved. The Company has introduced a new, high speed, vertical, 5 h.p. engine (type CVR-5) into the market which has been very well received. This will also add towards improving the business of the Company and all efforts are being made to produce these engines in large numbers.

The demand for machine tools has been continuously rising and here also the Company is making strong efforts to meet it.

The Company has been granted an industrial licence to manufacture *Automatic Looms* and a collaboration agreement has been finalised with Draper Corporation of U.S.A. Similarly, in the machine tool line, the Company has concluded a collaboration agreement with Messrs. Hermann Pfauter of Germany to manufacture "*Pfauter.*" *Gear Hobbing and Thread and Worm* milling machines. The agreement is now awaiting the necessary approval of the Government of India. In addition, the Company is now getting ready to implement the industrial licence (which was received during the last year) for the manufacture of *Vertical Turret Lathes* under collaboration with Messrs. Schiess Aktiengesellschaft of Germany and the import licences to import machinery is expected to be received soon.

The addition of these new lines together with the increase in the production of the present lines and the inevitable enlargement of the present foundry and pattern shop will call for a substantial expansion programme entailing a considerable amount of further capital expenditure. The Directors, having envisaged a need for additional finance, have decided to raise equity capital of Rs. 45,20,000 and have already applied to the Controller of Capital Issues for the same. The necessary consent is awaited.

The Company's export business has improved considerably over that of the previous year and during the year under consideration, the Company exported *Diesel Engines* worth Rs. 7,23,768. Moreover, the Company was also able to extend the export activity from heretofore restricted field of *Diesel Engines* to include *Power Looms* worth Rs. 98,306. It is gratifying to note that the Company's products are becoming increasingly popular in the foreign markets and soon the Company will also export machine tools. The first one (a heavy duty shaping machine) has been exported to the United Kingdom in September 1962 and the second one will go to Thailand in November 1962.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	89,72,850	Gross block	1,89,58,626
Reserves and surplus	56,57,718	—Depreciation	70,63,699
Other liabilities	1,89,25,518		
		Net block	1,18,94,927
		Block-in-progress	8,95,242
		Current assets	2,00,98,302
		Investments	1,38,203
		Cash	5,29,412
	Rs. 3,35,56,086		Rs. 3,35,56,086

* Paid-up capital consists of 89,736 equity shares of Rs. 100 each. Calls in arrears amount to Rs. 750. Of the above 4,200 equity shares were issued as fully paid-up bonus shares by capitalisation of share premium.

INSURANCE

(*Concluded from page 868*)

absorb the losses only because up to 90 per cent of the risks are being reinsured within and without the country. Taking 35 per cent of the gross premiums to cover the external and internal costs and taxes, the technical loss in the gross business was 8.8 per cent in 1959, 4.2 per cent in 1960 and 7.5 per cent in 1961.

However, the placing of large industrial fire risks in the way of cessions or retrocessions on the world markets is encountering increasing difficulties, because of the increasing accumulation of single risks and the inadequacy of the rates.

INDUSTRIAL ASSURANCE IN BRITAIN

Although there were 1.2 million fewer policies in force last year in Britain, as compared with 1960, the premium income from industrial assurance business rose by £8.1 million to £203.6 million, according to the latest annual report of the Industrial Assurance Commissioner, Britain. Summarising the business transacted by 14 companies and 91 collecting societies last year, the report points out that the total amount assured by new business, £420.7 million, was the highest recorded and exceeded the previous year's figure by £19 million. The average amount assured by each new policy went up by £4 10s. to £73 13s. New industrial assurance policies effected in 1961 numbered 5.7 million of which 4.5 million were issued by companies and 1.2 million by societies. The corresponding figures for 1960 were 5.8 million, 4.5 and 1.2 million respectively.

The number of policies in force at the end of last year was 116.8 million, some 1.2 million less than 1960. Assurances converted to free policies totalled 1.6 million, there were 2.5 million surrendered for cash: and 997,000 policies were forfeited without grant of a free policy, or cash surrender value. Premium income continued to increase and the £203.5 million collected during 1961 represented a £8.1 million rise over the previous period. Claims on death amounted to £46.7 million and claims on maturity £69 million.

The total industrial assurance funds of companies amounted to £1,227 million at the end of 1961, and total assets of collecting societies were £359 million with industrial assurance funds at £275 million.

INSURANCE IN COMMON MARKET

A new Working Group, composed of specialists in fiscal questions of the six members of the existing Common Market, has been established by the European Economic Community to study the question of harmonisation of taxes on insurance contracts. The initial preoccupation of the Group will be with the problems of double taxation since certain risks taken on by a foreign organisation in any one country could actually be taxed in both countries but the end will be harmonisation of the bases of taxation with the hope of proceeding as far as actual harmonisation and finally the level of taxes on insurance contracts.

NEWS IN BRIEF

A JAPANESE team is expected to visit India shortly for detailed discussions with the Central Government and the Government of Orissa on exports of iron ore from Paradip Port of Orissa.

The India-Pakistan/U.K. and Continent Conference has reduced the freight rate for tamarind seeds, gum, splits, chips, powder and flour by 20*s.* to 180*s.* per 1,000 kilos.

The National Coal Development Corporation has launched a mechanised open-cast project for mining coal at Singrauli in Madhya Pradesh. Production on a small scale is expected to commence by the end of 1963.

A Swiss firm proposes to set up in India a large unit for the extraction of "bankakri," a drug plant useful in the treatment of certain forms of cancer, according to Mr. Nityanand Kanungo, Union Minister for Industry. The firm is currently ascertaining the availability of this plant in Jammu and Kashmir.

Licences have been granted to three more parties for the establishment of factories to produce scooters, in addition to the existing two units. One of the three factories is expected to put its scooters in the market within a few weeks, while the other two will commence production in the next few months.

The U.S. firm, Phillips Petroleum Company, has offered to develop a refinery project in the South as a minority partner with the Government of India. The E.N.I. of Italy has also made an offer for technical and financial collaboration for setting up refinery in the public sector.

The Standing Finance Sub-Committee of the Indian Central Oilseeds Committee has decided to invest Rs. 60 lakhs in the 12-year National Defence Certificates. It has recommended to the State Governments to execute all the oilseeds schemes and package programmes on priority basis so that the supply of much needed oilseeds is stepped up with a view to contributing to the intensive production drive of the country.

The Bombay Productivity Council has sponsored a productivity study team for examining the methods of manufacture in the instruments industry in the various parts of India. The team, led by Mr. N. M. Athavale, Chairman of the Development Council for Instruments, Bicycles and Sewing Machines, will tour the different parts of the country to study the various production techniques, and matters relating to standardisation of products, tools and equipments.

The Government of India has set up a committee, with Prof. M. S. Thacker, member, Planning Commission, as Chairman, to review the existing plans and programmes for training technical personnel in the context of the present emergency. The Committee has been asked to initiate necessary proposals to augment the existing programmes, introduce accelerated training courses and, where necessary, modify the curriculum for technical education.

Measures to increase production of essential materials and commodities required for both defence and civilian purposes will be suggested by a special committee which the Union Government has just constituted under the chairmanship of Mr. S. Ranganathan, Secretary, Commerce and Industry Ministry. The Committee will devote particular attention to increase the output of cloth, fuel (including petroleum products), cement and steel.

Two trawlers *Shivaneri* and *Savitri*, were formally put into commission by Mr. Homi J. H. Taleyarkhan, Minister for Fisheries, Government of Maharashtra, last week-end. The two trawlers have been employed for deep-sea fishing operations in the Konkan area. With a capacity of 48 tons each, they have been built at Satpati by the local co-operative society of fishermen at a cost of Rs. 1.25 lakh each. Two other trawlers, *Janjira* and *Kundlika*, have been provided for the Kolaba district.

The Union Government has issued licences worth Rs. 4.12 crores for the import of coal mining equipment by private coal companies against the World Bank loan of Rs. 17 crores. The value of the total applications received so far is about Rs. 5.74 crores. The Government has received 180 applications for import of machinery and equipment of which 116 have been approved by the World Bank. The licensing authorities have been asked to expedite the grant of licences in the remaining cases. The World Bank loan, granted to meet the foreign exchange requirements of private coal companies, will expire on 31st July next, so far as schemes for expansion and maintenance of existing mines were concerned and on 20th September 1965, in the case of new coal mine projects.

Diplomatic letters on the amendments to the India-U.S.S.R. air services agreement were exchanged at New Delhi on the 13th inst. between Mr. I. A. Benediktov, Soviet Ambassador, and Mr. M. M. Philip, Secretary of the Communication Department, Government of India. The amendments to the agreement were agreed earlier during discussions between the delegations of the Governments of India and Soviet Russia. The amendments provide a satisfactory arrangement for the extension of Aerofloat's services on the Moscow-Tashkent-Delhi route to Rangoon and Djakarta and that of Air-India on the Delhi-Tashkent-Moscow route to points beyond. At present, Air-India operates one service per week between Delhi and Moscow, while Aerofloat operates two services every week between Moscow and Delhi, one of which goes to Djakarta *via* Rangoon.

The new oil gasification plant for the production of ammonia installed in the Fertilisers and Chemicals Ltd., Travancore (F.A.C.T.), has been commissioned. This plant is capable of producing about 30,000 tons of ammonia per annum. The Company has, in addition, an electrolytic hydrogen plant, capable of producing another 13,000 tons of ammonia. With the commissioning of the new oil gasification plant, F.A.C.T. has completed its second stage of expansion, raising its production capacity to 100,000 tons of ammonium sulphate and 33,500 tons of ammonium phosphate in addition to their existing capacities of 44,000 tons of superphosphate and 8,000 tons of ammonium chloride.

* * * *

From Abroad

Gold and foreign currency reserves of France at the end of last month stood at the record level of $3,611 million, representing an increase of $96 million in October.

The number of television sets licensed for operation in West Germany and West Berlin is approaching the seven-million mark. Now almost every third household is equipped with television set.

Hong Kong and Norway have reached a bilateral agreement outside the International Textile Convention of Geneva under which Hong Kong will restrict exports to Norway of certain types of cotton shirts and cotton nightwear for five years.

The Japanese Government proposes to discontinue the system of tax remission on export income, when the present legislation on the subject lapses on 31st March 1964. By that date, Japan will have signed the G.A.T.T. declaration about export subsidies.

The U.S. Senate Sub-committee on stockpiling has started an inquiry to find out as to how the stockpiles of strategic materials have accumulated far beyond the nation's needs. The Committee will also consider the methods for disposing of surplus materials valued at about $4,600 million.

The British Industrial Court has awarded a three per cent wage increase to over 150,000 cotton spinning and weaving operatives in Manchester. The decision follows negotiations, lasting over fifteen months, over the trade union's demand for a 10 per cent wage increase.

The rate of growth of investment activity in West Germany is slowing down, according to the I.F.O. Economic Research Institute of Munich. The gross fixed investments in West Germany rose by only 10.7 per cent in the first half of this year, as compared with 15.1 per cent in the same period of 1961. The increase from 1959 to 1960 was still higher at 16.3 per cent.

China and Japan have signed a tentative trade agreement which provides for an annual total trade (both ways) amounting to £36 million. Under the agreement, which will be valid for the next five years, China will export to Japan coal, soyabeans, iron ore and salt in exchange for steel, chemicals, fertilisers and farm machinery and implements.

Crude steel production in Western Europe declined in the first three quarters of this year. It amounted to 54.6 million tons in the European Coal and Steel Pool, 1.8 per cent less than in the corresponding period in 1961. The decline in West Germany alone was 3.7 per cent and that of France 3.4 per cent. Britain's crude steel production fell by 12.6 per cent to 15.1 million tons. Crude steel production in the United States at the same time, however, rose by 5.8 per cent to 67.7 million tons.

France is likely to finance and equip a new steel plant at Quebec in Canada, according to M. Baumgartner, a former Minister of Finance, who recently led a French economic mission to Canada. France has already taken steps to promote collaboration with Mexico and Brazil in the American continent. A loan of NF750 million was granted recently for the development of petrochemical industry in Mexico. France has also entered into agreement with Brazil for financial and technical collaboration for some development projects.

Industrial production in the Common Market countries rose by 6 per cent during the first half of 1962, as compared with the corresponding period last year. Taking the whole of Western Europe, the increase in production was 4 per cent. The upward trend, according to the latest *Bulletin* for Industry published by the British Treasury, is likely to continue throughout the rest of the year and, more slowly, in 1963. It is admitted that the expansionary influence of rapidly rising exports and private investment is waning now, but it is pointed out that this is being replaced by a continuing rise in consumer and Government expenditure together with some stockbuilding.

Hong Kong has completed preparations for the renewed voluntary textile pact with Lancashire (1963-65) at an annual quota level of 185 million square yards. This level is provided for an 11-month stop-gap period. The Hong Kong Government has announced the distribution of the 1963 quota as follows: cotton piecegoods 80 million square yards; finished piecegoods 20 million square yards and cotton made-up goods 65 million square yards. The reserve quota which will be applied to cotton made-up goods will, in the first instance, be 20 million square yards. Under new arrangements for 1963, this reserve quota should be used initially for the export of high cost Hong Kong manufactures. A sub-committee has been formed to examine how this objective can be achieved and a further announcement will be made in this connection.

A universal system of counting cotton and other yarns used in the textile industry as a whole has long been the aim of spinners, in view of the many complications which can arise when transactions take place, particularly when producers in different countries are involved. The position has become even more confused as more mixtures of different fibres and composite yarn constructions have come into regular use. The introduction of the TEX system advocated by the International Cotton Federation has only slowly gained recognition in this country, but an effort is now being made by the British Spinners' and Doublers' Association to stimulate its adoption as quickly as possible. A booklet giving details of how the scheme works has been circulated to members of the Association, and it is proposed that, from the beginning of 1963, all contracts should be based on TEX values, although the traditional counts system would still be shown for a limited period in the yarn description.

The World Bank has announced a loan equivalent to $3.7 million to the National Power Corporation of the Philippines for financing the 50,000-kilowatt expansion of the Corporation's Maria Cristina Falls hydro-electric power plant, which will double the capacity of the plant, increasing power supplies on the island of Mindanao. The Bank of America National Trust and Savings Association, San Francisco, and The Chase Manhattan Bank, New York, are participating in the loan, without the World Bank's guarantee, for a total amount of $390,000, representing the first five maturities which fall due between June 1965 and June 1967. The total estimated cost of the Maria Cristina expansion is equivalent to $7.1 million. The Bank loan will cover the foreign exchange requirements. Imported equipment will be purchased on the basis of international competition. The expansion is scheduled for completion by the end of 1964. This is the third Bank loan to the National Power Corporation, bringing the total lending to the Corporation to $56.2 million. The earlier loans were for the Binga hydro-electric project in northern Luzon and the Angat power project near Manila. The Bank loan is for a term of 18 years and bears interest at the rate of 5¼ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in June 1965. The loan is guaranteed by the Government of the Philippines.

PERSONAL

MR. Harold Allen of Australia has been elected Chairman of the International Tin Council. The Council wi l hold its next meeting at Bangkok on the 27th of this month.

Mr. A. A. Trivedi and Mr. H. B. Vasudeo have been elected President and Vice-President, respectively, of the All-India Insurance Agents' Association for 1962-63.

Mr. C. S. Divekar, an Executive Director of the Reserve Bank of India, has been appointed Deputy Governor of the Bank. He will continue to be in charge of the Department of Banking Operations.

Mr. George Varsamy has been appointed Ambassador of Greece in India. He was formerly Vice-Consul in Istanbul and Jerusalem, Secretary of the Greek Embassy at Washington and Consul General of Greece at Marseilles.

Mr. H. D. Shourie, Executive Director of the National Productivity Council, has been appointed Director of Production in the Ministry of Commerce and Industry in the International Trade Wing.

Mr. Teja Singh Sahni has taken over charge as the Chief Labour Commissioner to the Government of India in place of Mr. S. P. Mukerjee who has been appointed Chief Commissioner of Tripura.

Mr. Joginder Singh, a former Member of Parliament from Uttar Pradesh, has been appointed Chairman of the State-owned Indian Refineries Ltd. in place of Mr. D. K. Barua who has joined the Assam Cabinet.

Mr. M. Ramabrahman, Deputy General Manger, Gauhati Refineries, has assumed charge as the General Manager of the Refinery *vice* Major General Sardanand Singh who has taken up his new assignment as the Controller General of Civil Defence.

Mr. L. C. Jain, I.C.S., until recently Chief Secretary of Uttar Pradesh, has assumed charge as the Director-General of Posts and Telegraphs *vice* Mr. V. Nanjappa, I.C.S., who has taken over as the Secretary to the Union Ministry of Defence Production.

Mr. Thomas M. Hill, visiting professor from the Massachusetts Institute of Technology (U.S.A.), will direct the four-week course in financial planning and control that will be conducted by the Indian Institute of Management, Calcutta, from 20th January next. The other specialists on the staff are Mr. James C. Emery (also of M.I.T.), Mr. Shiv K. Gupta and Mr. M. Krishnamoorthy.

PERSPECTIVES ON SINO-SOVIET FOREIGN TRADE AND AID—II

PROGRAMMES AIM AT ADVANCING POLITICAL GOALS

By Leonard Lalo

AROUND the world, particularly in the developing nations, there is a growing awareness of the methods used by the Sino-Soviet bloc countries in advancing their political objectives through foreign aid and trade programmes. The fact that politics rather than economic need guides the programmes no longer comes as a surprise in many areas. Premier Khrushchev himself candidly told a visiting group of non-Communist parliamentarians a few years ago that the U.S.S.R. "values trade least for economic reasons and most for political purposes." However, many observers remain disturbed about the techniques which the Communist nations employ in trying to reach their political ends. Deceptive trade and aid agreements, the dumping of goods and the sudden cancellation of contracts are included in the methods which have caused hardships for a number of the recipients of assistance.

The United Arab Republic and Ghana are among the countries which have had bitter experiences with the trade and aid agreements. These agreements, made to sound profitable and signed with great fanfare by the Communist nations, often lose their lustre when they are being carried out. The U.A.R., one of the early recipients of bloc assistance, concluded an apparently attractive agreement to exchange its cotton for arms and industrial equipment from the Soviet Union and Czechoslovakia. It soon discovered, however, that the Communist countries were reselling the cotton to Egypt's traditional West European customers at a price lower than the Egyptians themselves could afford to offer. Chastened by this experience, which had a depressing effect upon the Egyptian economy, the U.A.R. now requires bloc officials to certify that any cotton received will not be resold.

Ghana's Experience

Ghana had a similar experience with the Soviet resale of its cocoa. As a result, it found itself in competition with its own chief export product in traditional West European markets. In another instance, Ghana discovered, after signing a generous-sounding but vague technical assistance agreement with the U.S.S.R., that it would have to pay not only the housing and travel expenses but also the full salaries of Soviet experts despatched under the accord. This unexpected proviso greatly reduced the value of the assistance programme.

Economists who have compared actual deliveries with announced bloc credits and loans to non-Communist nations between 1954 and 1961 have concluded that only 21 per cent of the publicised offers were finally fulfilled. While it is difficult to prove this conclusion, Arab oil experts increasingly believe that the U.S.S.R., in an effort to counteract the growing European Common Market, is out to undercut Middle Eastern oil exports to Western Europe. This belief underlies the Arab League's decision to place the question of Soviet "dumping prices" on the agenda of the Fourth Arab Petroleum Congress, scheduled to meet this month. Emil Bustani, head of Lebanon's preparatory committee for the congress, stated last July that the Soviet competition seriously jeopardises Arab oil interests.

What has concerned Mr. Bustani and other Arab oil experts is the Soviet practice of offering crude oil in non-Communist countries at prices far below the world price and much lower than the prevailing domestic price within the bloc itself. East Germans, for example, pay $2.69 for a barrel of Soviet oil, while the same quantity is available to West Germans at a little more than half the price—$1.38 a barrel.

Politics, it is believed, was also involved when the U.S.S.R. attempted to pressure Uruguay into entering a long-term oil contract. The Soviet Union offered a three-year deal which would have committed $75 million worth of Uruguay's wool crop in exchange for Soviet crude oil. When Uruguay declined to commit so much of its crop, the U.S.S.R. refused to purchase a single kilogram of Uruguayan wool.

Iran, a close neighbour of the U.S.S.R., has found that its local border trade with the Soviet Union is highly sensitive to political pressures. In 1959, when Soviet-Iranian relations reached a critical stage, the U.S.S.R. coupled a propaganda offensive against the Shah with the suspension of the border trade. Many local residents who depended on the trade for their livelihood were seriously hurt by the move.

Neutral Finland, which also depends heavily on trade with the neighbouring U.S.S.R., was subjected to particularly strong pressure late in 1958. By the simple expedient of cancelling its imports from Finland and refusing to renew a vital trade agreement, the Soviet Union threatened the Finnish economy with disaster. The threat was not removed until the Finnish Government of Premier Fagerholm was replaced by one more to the liking of the Soviet Union.

Yugoslavia

Dissident bloc members, as well as non-Communist nations, have suffered as a result of the Communist politics-through-trade policy. When Yugoslavia refused to follow Stalin's dictates in 1948, the Soviet Union and its satellites in Eastern Europe broke all commercial relations with it. At the time, more than half of Yugoslavia's trade flowed to the bloc. The stoppage almost ruined the Yugoslav economy. After the breach was partly patched up in 1956, Soviet credits were extended to Yugoslavia again—only to be suspended once more in 1958, when relations worsened a second time.

A similar situation has occurred more recently in connection with the intra-bloc dispute between Communist China, supported by Albania, and the Soviet Union and its East European allies. As the dispute became more bitter in the second half of 1960, thousands of Soviet technicians were withdrawn *en masse* from Communist China. They left behind them half-finished projects, some of which are still incomplete. At the same time, promised deliveries of equipment were suspended and overall trade was sharply reduced. By 1961, Sino-Soviet commerce had dropped from the $2,000 million of 1959 to $900 million—a decline of 55 per cent. Chinese internal difficulties combined with the Sino-Soviet tensions to cause the downward trend.

Albania, a small and even more vulnerable country economically, also felt the results of Soviet displeasure. Beginning in 1960, Soviet assistance programmes, including food shipments, were summarily cancelled. Technicians and advisers were withdrawn without warning. Despite Albanian protest, the country was excluded from active membership in the bloc's Council of Economic Mutual Assistance, an organisation led by the U.S.S.R.

(Concluded)

Notices

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Forty-fifth Ordinary General Meeting) of the Company will be held at the Royal Exchange Hall of the Bengal Chamber of Commerce and Industry, Calcutta-1, at 3 p.m. on Tuesday, the 11th December, 1962, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1962, and the Directors' and Auditors' Reports thereon.
2. To declare a final dividend for the year ended 31st March, 1962, on the Ordinary Share Capital. The dividend if sanctioned will be paid on or after the 12th December, 1962.
3. To appoint a Director in place of Mr. Gokul Chand Bangur, who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Mr. Sachindra Chaudhuri who retires by rotation and is eligible for re-appointment.
5. To appoint a Director in place of Mr. H. A. Fowler who retires by rotation and is eligible for re-appointment.
6. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

7. To appoint a Director in the vacancy caused by the death of the Maharajadhiraja Sir Kameshwara Singh of Darbhanga and to consider, and if thought fit, to pass the following resolution as a Special Resolution, of which a Special Notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company.

RESOLVED: "That pursuant to the provisions of Sections 261 and 314 and other relevant provisions of the Companies Act, 1956, Mr. John McCracken, General Manager of the Company's Works, be and he is hereby appointed a Director of the Company in the vacancy caused by the death of the Maharajadhiraja Sir Kameshwara Singh of Darbhanga and that consent be and is hereby accorded to his continuing to hold an office of profit as General Manager of the Company's Works."

The reasons which make the above Resolution necessary are that although according to the Articles of Association of the Company and Section 262 of the Companies Act 1956, the Directors have power to fill any casual vacancy among themselves, they cannot appoint Mr. McCracken as a Director in the casual vacancy because he holds an office and place of profit under the Company and because Martin Burn Limited, the Managing Agents of the Company, have power under the Articles to appoint two Directors to the Board. The appointment of Mr. McCracken in the vacancy can only be made by a Special Resolution.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,

MARTIN BURN LIMITED,
S. GUPTA,
Managing Director,
Managing Agents.

Registered Office,
12, MISSION ROW,
CALCUTTA-1,
12th November, 1962.

Note:—An Explanatory Statement is annexed to the convening notice issued to Members of the Company.

THE CENTRAL INDIA SPINNING WEAVING AND MANUFACTURING COMPANY LIMITED

NOTICE

THE TRANSFER BOOKS OF THE CENTRAL India Spinning, Weaving and Manufacturing Company Limited will be closed from Wednesday, the 28th November to Thursday, the 20th December 1962, both days inclusive.

CALCUTTA.
6th November, 1962.

MONEY SLIGHTLY EASY

(From Our Own Correspondent)

BOMBAY, *14th November*

Conditions in the short-term money market were tight during the major part of the week under review, with inter-bank call rate standing at 4 per cent per annum. Today, however, there was a slight improvement, as some supplies were reported to have come from upcountry. Since floating funds were larger than demand, the call rate for renewals dropped ¼ per cent to 3¾ per cent. Fresh money was available even at 3¾ per cent. At Calcutta, however, the rate was unchanged at 4¼ per cent.

The sale of National Defence Bonds and Defence Deposit Certificates, which commenced on Saturday the 10th inst., does not appear to have affected the money market in any way so far. The details of the issues were given in this column last week. The initial response to these issues is said to have been quite encouraging. The Life Insurance Corporation alone has bought Bonds worth Rs. 5 crores. Its subsidiary, the Oriental Fire and General Insurance Company, has invested Rs. 15 lakhs.

The amount offered against the Government of India's 91-day Treasury Bills sold under the tender system on Tuesday this week was equal to that invited and accepted, namely, Rs. 2 crores. The average rate of tenders accepted was unchanged at Rs. 2.360 per cent per annum. The Intermediate Treasury Bills, which were on tap from the 7th to 10th inst., fetched a slightly larger sum—Rs. 16.50 lakhs, as against Rs. 13.00 lakhs a week before. The sales of both types of Bills are continuing, the Intermediate from today to the 17th inst.

A further small rise of Rs. 38 lakhs to Rs. 94 crores in India's foreign assets was recorded during the week ended 9th November 1962. The whole of this rise was accounted for by balances held abroad which aggregated Rs. 5.92 crores, while foreign securities held in the Issue Department remained unaltered at Rs. 88.08 crores. Loans and advances to scheduled banks receded by nearly Rs. 2 crores to Rs. 3.98 crores, those against usance bills alone declining by Rs. 1.87 crore to Rs. 2.32 crores. The total notes issued exceeded the Rs. 2,100-crore mark to touch Rs. 2,104.46 crores, a rise of Rs. 19.18 crores as compared with the previous week.

There was a further rise of Rs. 5.48 crores in the quantum of credit made available by scheduled banks to their clients during the week ended 2nd November 1962; the total outstanding advances on that date stood at Rs. 1,394.24 crores. The aggregate deposits of banks as well as inter-bank borrowings, however, declined, the former by Rs. 2.03 crores to Rs. 2,180.19 crores and the latter by Rs. 1.56 crore to Rs. 34.71 crores. Investments, too, declined by Rs. 17.51 crores to Rs. 693.65 crores and so also balances with the Reserve Bank by Rs. 5.03 crores to Rs. 72.73 crores.

A notable event of the week in so far as the Gilt-edged market is concerned was the support extended by the Reserve Bank to the 3 per cent 1986 conversion loan. The Bank announced on Monday that it would buy this loan outright at Rs. 63 in lots of Rs. 2 lakhs. The support is a sequel to the need to arrest a further drop in the quotation for the loan which, it will be recalled, has declined sharply in recent weeks. Just before the announcement, the loan was quoted at as low as Rs. 62.50, as against Rs. 71 prior to the issue of Central and State Government loans in the monsoon months. Simultaneously with the offer to buy the conversion loan, the Reserve Bank reduced its buying rate for five Central loans by 5 nP to Rs. 98.90 for 3 per cent 1964 and Rs. 96.85 for 1966-68 and to Rs. 99.90, Rs. 99.75 and Rs. 99.66 for 3½ per cent 1964, 1965 and 1966, respectively. It also reduced the selling rate for three securities: 3½ per cent 1969 by 25 nP to Rs. 97.55; 3½ per cent 1974 by 20 nP to Rs. 98.30 and 4 per cent 1972 by 5 nP to Rs. 99.30.

In the foreign exchange market, the banks' selling rate for U.S. dollars is unchanged, the actual T.T. and D.D. rate being Rs. 477.75 per $100. Their buying rate for O.D., however, was higher by 25 nP at Rs. 473.75. In New York, the pound sterling has eased slightly in terms of the dollar, the latest available spot and three months forward rates being 280.100-280.140 cents and 279.820-279.860 cents per £, respectively, the corresponding rates last week were 280.120-280.150 cents and 279.840-279.870 cents.

KIPS ARRIVALS RESTRICTED

(From Our Own Correspondent)

MADRAS, *12th November*

Arrivals of kips this week in the local hides and skins market were restricted. Stockists quoted high prices which importers of FAQ types were not prepared to pay. There were many inquiries for the dependable top marks in cow hides lightweights at slightly higher prices. A few sales of cow hides medium fifths were made to the U.K. There was moderate call for lower selections for inland trade. Despite attractive prices offered for cow calf, sellers disinclined to book orders in view of limited stock position. The buffcalf market ruled firmer following increased prices paid by the U.K. buyers. American interest might revive, if prices decline by 5 per cent.

In the skins section, East European countries lifted moderate quantities of superior goat skins at higher prices, and this firmed up the market further. American inquiries were negligible. As regards sheep skins, primes and semi-primes remained steady at last levels, while middle class lightweights were in good demand and heavy averages were a drag on the market. The following were the prices per lb. ruling in the local market for all-round parcels:—

Tanned cowhides 8/8½ lbs. average Rs. 2.05 to Rs. 2.15, tanned cowcalf 1½/2 lbs. average Rs. 3.75 to Rs. 4, tanned buffhides 12/14 lbs. average Rs. 1.67 to Rs. 1.75 and tanned buffcalf 1½/2 lbs. average Rs. 3 to Rs. 3.30.

GOLD FUTURES CLOSED

(From Our Own Correspondent)

BOMBAY, *14th November*

It was a memorable week for the bullion market, as the inevitable, namely, ban on forward trading in gold, was at last enforced. On Tuesday, the 13th inst., the Government of India announced its decision to ban, with immediate effect, forward trading in gold throughout the country. Accordingly, the Government issued a notification, under Section 17 of the Forward Contracts Regulation Act, 1952, and ordered the closure, under Section 16 of the same Act, of all outstanding contracts and business in them at the closing prices on Tuesday, the 13th inst. The Government also rescinded the notification under Section 16 of the said Act, granting official permission to the Bombay Bullion Association Ltd., to conduct futures trading in gold within the limits of Greater Bombay. It may be noted here that under the Act, only the Bombay market had been granted official recognition. Of course, forward trading in gold was being done in other centres, too, particularly Delhi and Calcutta, but this was under voluntary regulations.

The aforesaid decision of the Government did not come as a surprise to marketmen in Bombay, for they had expected it any moment and for quite long. It is true that the authorities of the Bombay Bullion Exchange had submitted a memorandum to the Government a month ago in which they had contended that a ban on forward trading in gold would be ill-advised. But there is good reason to believe that they knew that their advice would fall on deaf ears. It must, therefore, have been a pleasant surprise to them when the Government decided to let futures trading in silver continue as hitherto.

Addressing the members of the Association in the trading ring today about 10 minutes before the official session closed at 4-30 p.m., Mr. Chandulal Kasturchand, President of the Association, formally expressed his regret that the Government should have thought it fit to ban forward trading in gold, but heaved a sigh of relief that such trading in silver at least was left untouched. He urged members to refrain from any unhealthy speculation in silver, now that trading in gold was no more there at least until the national emergency was over. He complimented the members on having carried out trading in gold without any hitch even in the face of the Chinese war, in contrast to the upcountry markets which had plunged into a crisis.

Mr. Kasturchand's counsel to members in regard to trading in silver assumes particular significance, because the feeling in market circles is that, in the absence of futures trading in gold, speculation in silver will tend to rise. It is, however, to be hoped the Association's members will realise that, in their own self-interest, they should not indulge in unhealthy speculation, lest it should precipitate Government action in forward trading in silver too.

As feared and expressly indicated by the market authorities to the Government in their memorandum, trading in spot gold was immediately affected with the announcement of ban on futures trading in the yellow metal. Spot dealers were reluctant to quote any sensible prices and, as against the normal difference of 10 nP between their purchase bid and sales offer, they quoted today anything from Re. 1.50 to Rs. 2. Although today's official closing price for spot gold was mentioned at Rs. 104, the unofficial market price was between Rs. 105.25 and Rs. 107.

The net outstanding business in gold futures was estimated at 550,000 grams and was adjusted at yesterday's closing price of Rs. 106.75 per 10 grams.

Earlier during the week, that is, before the closure of futures trading, gold *Margashir* declined from Rs. 109.25 on Thursday, the 8th inst., to Rs. 103.75 on Saturday, the 10th inst. This was due to the report that the Reserve Bank had asked the banks, informally, to call back the advances against bullion. Subsequently, however, it rallied to Rs. 107.25 by yesterday before closing unchanged over the week at Rs. 106.75. Spot gold fluctuated between Rs. 109.50 and Rs. 104 and closed at the lower level, as against Rs. 105.75 a week ago. Arrivals approximated daily at 5,000 tolas and offtake was unchanged at 3,000 tolas.

Silver *Margashir* receded sharply initially during the week from Rs. 218.25 on Thursday, the 8th inst., to Rs. 213.50 on Saturday the 10th inst., on heavy upcountry liquidation and local selling pressure. Subsequently, however, the contract staged a rally and improved to Rs. 217.50 today, before closing at Rs. 217.05, as against Rs. 219.75 a week ago. Ready silver moved widely between Rs. 217.50 and Rs. 211.80 to finish at Rs. 214.05, that is, Rs. 4.70 lower over the week. Daily arrivals were quite heavy at about 50 bars, while offtake was limited at seven bars.

The dollar price of gold moved within a narrow range of two cents and finished at $35.08⅜ per fine ounce, as against $35.08½ a week ago.

The following table shows the trend of prices during the week under review:

	14-11-62 (closing)	High	Low	7-11-62 (closing)
GOLD				
Ready (.99 fine)	Rs. 104.00	Rs. 109.50	Rs. 104.00	Rs. 105.75
Margashir *	106.75‡	109.25	103.75	106.75
Sovereign	83.00	86.00	83.00	82.00
SILVER				
Ready (.996 fine)	214.05	217.50	211.80	218.75
Margashir †	217.05	218.25	213.50	219.75
London—				
Gold	250s.5¾d.	250s.7¼d.	250s.5¼d.	250s.6¾d.
Spot Ready	103d.	103d.	102½d.	102½d.

* 11th December settlement. † 12th December settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce. ‡ As on 13-12-62.

COTTON FUTURES RECOVER

(From Our Own Correspondent)

BOMBAY, *14th November*

The cotton futures market ruled distinctly easy during the week under review. Prices crashed on heavy selling by local and upcountry operators. Although lower levels met with resistance, buying support was feeble and insufficient to induce a sustained recovery. Over the week, the Jarilla march contract suffered a net loss of Rs. 6.25.

The weakness of the market was the result of a combination of factors. The closure of the stock exchange, since reopened on Monday, the 12th inst., fears of restriction on bank advances against commodities, prohibition of movement of cotton in Bombay City and other areas and fall in spot prices, following increased arrival of new crop, unnerved operators who rushed to liquidate. Jarilla March contract declined on persistent selling from Rs. 734 last week-end to Rs. 719.50 on Saturday. The low level attracted some buying and the contract improved to Rs. 727.75 today. Apprehension about the availability of U.S. cotton also helped the recovery.

Activity in the spot market was restricted. The sealing of some upcountry zones and the ban on the movement of cotton from godowns at Bombay, except with the permission of the Textile Commissioner, made mill buyers cautious. Spot prices tended to recede, thanks to larger arrival and new crop. Mills were reluctant to buy in a declining market.

The demand for Bengal *Deshi* from Japan noticed last week dried up. Obviously, overseas buyers are anticipating a further fall in prices. Reflecting the mounting volume of new crop arrival, *Deshi* prices eased. Demand for foreign cotton was moderate. Ready lots of East African, Sudan and Egyptian cottons attracted the attention of mills. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 607; Ganganagar 741; Co2 (new) 1670; L. 147 1,175; Giza 47 1,300.

The easy trend noted in the Karachi cotton futures market during the past two weeks gathered further momentum during the week. Sellers continued to predominate the market. Reports of China's entry into the market failed to have any bullish impact on futures prices. The January contract declined further to Rs. 65.35, as against Rs. 66.40 last week-end. The March contract eased from Rs. 67.10 to Rs. 66.55.

Quiet conditions prevailed in the Liverpool cotton futures market. Values remained practically unchanged in featureless trading. A small volume of trade selling was absorbed by commission houses. Switchover of mill hedges from the near months to more forward positions accounted for most of the turnover. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December 23.85; March 23.05, May 23.60.

American cotton mixed growth contract: December 24.20.

Sudan: November, January, March 29.50.

Cotton futures in New York recorded handsome gains during the week. Commission house buying and trade support prompted by reports of increasing entry into the loan programme and the steady decline in certified cotton stocks led to a rally in prices. The December contract firmed up from 33.65 cents last week-end to 33.91 cents per lb., the March contract from 34.12 cents to 34.29 and the May contract from 34.24 cents to 34.31. Ready prices were, however, steady, with New York spot quoting at 34.85 cents per lb. and New Orleans spot at 32.65 cents per lb., same as last week.

FURTHER SETBACK IN YARNS

(From Our Own Correspondent)

BOMBAY, *14th November*

Yarn prices in the local market declined further this week in the absence of both local and upcountry demand, discouraging performance of the cloth trade here and withdrawal of surplus funds in the market in view of the Chinese war. Weakness was more pronounced in the art silk yarn and staple fibre yarn sections, especially because the premia commanded by import licences were said to be not particularly encouraging. It was reported that demand for yarns in Amritsar and Ludhiana had contracted, while indigenous supplies had continued to be satisfactory. Consequently, some of the factories were said to have curtailed production.

In the light of the above developments, therefore, buying enthusiasm was conspicuously lacking in the local market. The 40/2 staple fibre December contract declined during the week from Rs. 703 to Rs. 677 on bull liquidation and selling pressure. The February contract fell from Rs. 720 to Rs. 699. In the spot section, 40/2 Centurys receded further from Rs. 7.63 to Rs. 7.41, so did Kohinoors from Rs. 8.87 to Rs. 8.18 and Citys from Rs. 8.38 to Rs. 8.12. In the art silk yarn section, National Rayon 150D moved down from Rs. 12.65 to Rs. 11.23 and 120D from Rs. 15.95 to Rs. 14.56. The South India Viscose 150D eased by 20 nP to Rs. 12.65. 120D slumped by Rs. 2 to Rs. 14.98. Bright Centurys 'A' 100D came down from Rs. 17.60 to Rs. 17.12 and 75D lost 16 nP to Rs. 21.16. Cotton yarns continued to be listless.

It was reported that the Textile Commissioner had called a meeting of the representatives of the Bombay Yarn Merchants Association and Exchange Ltd. on Saturday, the 17th inst., to review the situation in the market.

The recommendations of the Rayon Yarn Distribution Committee for raising the prices of art silk yarn are understood to have been accepted by the Government and an official announcement is

expected shortly. The increase in prices will be made effective in respect of allotments for the October-December 1962 quarter and the subsequent allotments. The price of 100D yarn will be raised from Rs. 8.26 to Rs. 8.84 and that of 120D yarn from Rs. 7.64 to Rs. 7.89, the price of 150D yarn will be left unchanged at Rs. 6.94, and the price of 300D yarn will be reduced from Rs. 6.94 to Rs. 6.80.

Exports of art silk and nylon fabrics recorded a big increase in October as compared with those in the previous month. Shipments in October aggregated 6.71 million metres, valued at Rs. 62.66 lakhs, as against 5.25 million metres, valued at Rs. 50.65 lakhs, in September. The aggregate exports for the seven-month period from April to October this year amounted to 39.9 million metres, valued at Rs. 4.03 crores. The average price realisation in October was lower at 92 nP per metre of cloth, as compared with 96 nP in the previous month because of the tendency on the part of the exporters to ship goods at any prices in order to earn the corresponding import entitlements.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	14-11-1962	7-11-1962
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	14.56	15.95
Century 75D	21.16	21.32
S. I. Viscose 150D	12.65	12.85
Staple fibre yarn (40×2)—		
December (,,)	677.00	703.00
February	699.00	720.00
Kohinoor (per kg.)	8.18	8.87
Century	7.41	7.63
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.62	18.50
22s Century	24.50	24.50
30s Bradbury	27.00	27.00
40s T.T. Conn	—	37.25
60s Finlay	71.12	71.12

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 13*th November*

Following good business done for both internal consumption and export, jute goods were fully steady during the week under review. Although a mid-week decline occurred owing to resistance by buyers, recovery soon set in and the closing levels for the week were very much the same as the opening rates. The recent gains were thus maintained. Conditions in the fibre market also became steadier on increased support by mills, following the Jute Commissioner's order compelling mills to buy about 10 lakh bales during the weeks ending 10th, 17th and 24th November and 1st December in equal quantities, so that minimum stock levels would be maintained. There were reports that prices in the *mofussil* had arisen by a rupee per maund from the lowest levels. The Indian Jute Mills Association urged the withdrawal of this order, on the score that the present situation did not call for such a drastic step.

On behalf of the Government, it has been pointed out that fibre purchases by mills in the first three weeks of last month were proportionately less than in the previous month and considerably less than the October 1961 level and that, as a result, prices last month declined to rock bottom levels in Bihar and Tripura; the Calcutta price was Rs. 2 to Rs. 3 lower than the minimum level of Rs. 30 a maund basis Assam bottoms. The low price-trend caused anxiety to the Government, inasmuch as even in the interests of mills minimum prices should be ensured to farmers; otherwise, it is apprehended, the next crop would be lower than requirements. The difficulty experienced in the movement of jute is conveniently ignored, as also the Buffer stock purchases which are stored in mills' godowns. It is further pointed out on behalf of the Government that the Commissioner's order is nothing unusual; it patiently waited for three weeks in October to enable the price to rise to the minimum level. It is also stated that the quota of one million bales has been arrived at on the basis of the mills' purchases in November 1961 and the stocks held in transit in agencies would be taken into account, the quota being inclusive of imported jute and cuttings according to a subsequent clarification. From the Commissioner's order, it is clear that the Government desires the mills to continue to work up to their maximum capacity. But it should be emphasised that at present what is mostly available is lower grade fibre and to increase the proportion of the output of sacking as against hessian would be palpably inadvisable, as demand for sacking goods has not yet shown a healthy revival. The mills would, of course, like to increase the output of hessian, as there is ready demand for all that mills can produce under this construction. This, however, is not possible due to paucity of good fibre.

It is good news that the stocks of goods with mills as at the end of October 1962 fell by 3,200 tons to 90,700 tons. Hessian at 24,600 tons declined by 100 tons, sacking at 54,000 tons by 1,500 tons and miscellaneous goods at 12,100 tons by 1,600 tons. The decline in stocks was due not to an increase in demand but to the fall in output as October was a shorter working month in view of several holidays. The actual output in October was lower by 9,600 tons at 90,900 tons. The fall in stocks was a factor for this week's steadier price trend. During the week, the U.S.A. continued to buy hessian substantially and the U.S.S.R. also turned a large buyer for the same construction. As a result, it was apprehended, a shortage in ready goods was in the offing. Much forward business was also done. Besides, there was much speculative demand for ready goods anticipating demand for November due dates. In sacking also, there was good business done. The Assam Government's order for sandbags, too, was a factor for the rise in prices. What is more, internal buying for commercial consumption was reported to be good.

During the week, the I.J.M.A.'s decision to continue the present high rate of output for one more month more, that is up to 10th December, was announced. This has not come as a surprise, for, with the high stocks of fibre and the Jute Commissioner's order to mills to purchase at least 10 lakh bales this month, the mills must continue to produce as much as possible. Also, in view of the emergency in the country and higher purchases of hessian by the U.S. and the U.S.S.R., demand has also improved. However, the lack of adequate transport for movement of fibre from agencies to mills' stations is causing anxiety. The I.J.M.A. has duly represented the need for better transport facilities for movement of the crop, and the Government in turn has sought the close co-operation of mills in order that prices would pick up to the minimum levels.

Reports received from Dundee indicated good demand for goods on mills there. In fact, Dundee mills have little to sell against ready delivery, and orders are being booked for forward delivery. Lack of adequate labour and absenteeism on the onset of winter are preventing these mills from raising output. These reports were noted here, as they signified that British demand for goods on Calcutta woud increase in the coming few weeks.

On Tuesday last, prices for ready goods eased here on account of selling pressure in the futures market. Ready hessian 40" 10 oz. fell from Rs. 59.10 to Rs. 58.50 and B. twills from Rs. 120.70 to Rs. 119.50. The details of stock with mills as at the end of October arrested the falling tendency on Wednesday, but the recovery proved to be a temporary phase on account of the continued selling pressure in the futures market. As a result, hessian 40" 10 oz. fell to Rs. 57.75 but B. twills closed slightly higher on balance at Rs. 119.60. On Thursday, rumours of a Government tender boosted prices of both hessian and sacking goods, but the decision of mills to continue the extended phase of production by a month more checked the rising trend. B. twills were firm at Rs. 120 and hessian 40" 10 oz. at Rs. 57.75. On Friday, the news of a Burmese tender for sacking made conditions steadier. B. twills spurted to Rs. 121 and, in sympathy, hessian 40" 10 oz. hardened to Rs. 58.10. Conditions were steadier during the week-end, with B. twills quoting at Rs. 122.00 and hessian 40" 10 oz. at Rs. 58.20. Overseas buyers were disinclined to support the higher rates, and yesterday's business was limited to some covering demand. B. twills eased to Rs. 119.90 and hessian 40" 10 oz. to Rs. 57.00.

The fibre market was also steady, and prices were rising from the earlier levels, which were below the I.J.M.A. minimum prices. Mills concentrated more attention on the higher-grade jute. White jute on offer was plentiful, but sellers in upcountry reported embarrassment in fulfilling commitments, in view of the transport situation. Prices in Calcutta for Nov.-Dec. delivery were: Assam bottoms Rs. 30.00, northern bottoms Rs. 29.50, and daissee bottoms Rs. 32.00. Firmer conditions were also in evidence in the Pakistani markets following increased interest shown by overseas buyers. All the same, transactions in *pucca* bales could be put through only below the minimum rates. Recently, the E.P.C. rates for mills lightnings and higher grades were raised by £2 and £4 a ton, respectively.

NILGIRI BROKEN TEA EASIER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *8th November*

A total of 698,000 kgs. was offered in sale No. 44 held on Tuesday the 6th inst. Quality generally showed a seasonal decline. There was strong demand for all descriptions except for highgrowns which eased with quality. Nilgiri brokens were irregular and easier. Their fannings, however, were readily taken up at lower levels. Good mediums sold well at enhanced rates, particularly their brokens. Medium and low medium brokens encountered keen competition and advanced considerably in price, but their fannings did not appreciate to the same extent. Plainest types followed the upward trend of the market. Black leaf descriptions were keenly competed for and were generally dearer. Whole leaf grades were well supported and registered advances in price. Unorthodox descriptions were irregular and sometimes lower. Tippy teas sold well.

The quotations (per kg.) were:

	1962 Rs.	1961 Rs.
Low mediums	3.90-4.50	3.80-4.15
Mediums	4.50-5.00	4.15-4.40
Good mediums	5.00-6.00	4.50-5.35
Nilgiri B.O.P.	5.50-7.90	5.20-8.00

The average price realised in sale No. 44 was Rs. 4.83 per kilo, as against Rs. 4.59 a week ago and Rs. 4.69 in the corresponding sale last year.

In sale No. 44 held today, a total of 311,000 kgs. was offered. There was strong and active demand. Low mediums and mediums met with keen competition and generally sold up to 30/40 nP above last rates. Good mediums shared in the upward trend of the market but not to quite the same extent. Highgrown descriptions may generally be quoted at firm to dearer. Teas of unorthodox manufacture were irregular but also appreciated in price.

The average price realised in dust sale No. 44 was Rs. 4.32 per kilo as compared with Rs. 4.07 a week ago and Rs. 4.26 in the corresponding sale last year.

Colombo: Approximately 5¾ million lbs. were offered. There was very strong demand. Best dimbulas were dearer, but the lesser kinds were irregular and easier. Fannings in this category were unchanged. Uvas were lower following quality and whilst the best mediums sold at irregularly easier rates, others were very strong and dearer. Lowgrowns and plainest descriptions advanced by 15/20 cents.

London: North Indian and other growths: In Monday's auction offerings met with strong demand with any price changes in sellers' favour. The strongest feature of the sale were Plain descriptions which were up to 3*d.* dearer.

Ceylon and South Indians: Offerings in Tuesday's sale amounted to 21,389 packages, of which 7,332 packages were South Indian teas. There was strong demand for all types with the lowest tending dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 45: 732,000 kgs. offered. Strong demand. Low mediums and mediums 40 to 50 nP dearer, sometimes more. Good mediums fully firm. Highgrowns easier with quality. Unorthodox much dearer."

TEA HARDENS

(From Our Own Correspondent)

CALCUTTA, 13*th November*

A steady flow of demand was once again discernible in the tea export sale held here yesterday as well as at the internal auctions held last week. Movement of Assam tea continued to be affected, but prospects of early resumption of Calcutta-Assam river services, which have remained suspended for the last five weeks as a result of strike by some Pakistan crew, appeared brighter. The West Bengal Labour Commissioner, Mr. D. Chatterjee's discussions with the parties concerned led to the proposal to convene at Calcutta a conference of the representatives of Companies and employees as well as those of the East Pakistan and West Bengal Governments. The Commissioner was hopeful of positive results at this conference.

In the dusts sale held last week, offerings aggregated 29,104 packages which met with strong general demand at hardening rates. There was keen competition in plain and medium orthodox teas which rose by 50 nP. Legg-cuts added liberal gains on strong demand. Among C.T.C. teas, the good descriptions were fully firm at last levels. The medium kinds were also steady, and the more fibrous kinds attracted particular attention which led to an impressive advance in prices. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.30 to Rs. 6.70; medium Assam C.T.C. dust Rs. 5.80 to Rs. 6.10; legg-cut dust Rs. 5.40 to Rs. 5.65; medium Assam dust Rs. 4.80 to Rs. 5.40; and plain orthodox dust Rs. 4.60 to Rs. 5.00.

With the state of emergency in the country and the need to earn as much foreign exchange as possible, the question of reserving exports generally and to the U.S.A. and Canada in particular has received added importance and significance. However, while the quantity of tea exports is generally satisfactory and exports have received a decided boost as a result of the recent export duty concession, exports to the U.S. and Canada in the four months of the current season ended October 1962 amounted to only 6.8 million lbs., representing a fall of 500,000 lbs. over the corresponding previous period. The prices of common and low medium teas in the current season, it may be noted, have declined and the output has also declined. In the circumstances, both industry and trade emphasise that the time for the total abolition of the export duty has come. Such a step would lead not only to increased exports but also to rise in production. Prices of good quality teas are better this year than in last year, though it must be said that the improvement has been due more to decline in production. And it is stressed that, if only the industry is enabled to reduce the price, it can create much goodwill abroad.

Strong demand for all descriptions of tea on offer yesterday's export sale, amounting to 71,698 packages, was the outstanding feature. C.T.C. teas elicited keen attention and were fully firm. The plainer teas were dearer, B.Ps receiving greater attention than fannings. Best liquoring teas were steady. Legg-cut teas added 20 to 30 nP. Plain orthodox teas advanced rapidly, and fannings were much favoured. Keen competition was offered to the brighter B.O.Ps and liquoring P.Fs advanced impressively. Darjeelings were on good demand. The poorer grades were steady, but the higher grades in an irregular trend were subjected to withdrawal occasionally. Plain whole leaf grades were about firm to slightly dearer, but the better descriptions recorded an irregular trend. Despite keen competition, tippy teas were irregular. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 6.70 to Rs. 7.20; best Assam C.T.C. B.P. Rs. 6.70 to Rs. 6.90; medium Assam C.T.C. fannings Rs. 5.90 to Rs. 6.60; medium Assam C.T.C. B.P. Rs. 6.00 to Rs. 6.60; plain fannings Rs. 4.60 to Rs. 5.20; plain B.P. Rs. 4.30 to Rs. 4.60; and clean plain pekoe Rs. 4.70 to Rs. 4.90.

CEILINGS IN OILSEEDS

(From Our Own Correspondent)

BOMBAY, 14*th November*

Ceiling prices for all hedge contracts in oilseeds and oils have been fixed by the Forward Markets Commission, the actual ceilings being those which the Bombay Oilseeds and Oils Exchange has suggested last week except in the case of groundnut oil. The ceiling rate for groundnut January delivery is Rs. 236 and that for castorseed March Rs. 181 (per 250 kgs.). A penalty of Rs. 5 will be payable by the seller in castor as well as groundnut deliveries for non-delivery of goods. The ceiling rates of cottonseed is Rs. 111 (per 250 kgs.) and linseed Rs. 42 (per 50 kgs.), while in regard to groundnut oil January contract, the ceiling is 50 nP lower at Rs. 32 per 50 kgs. The penalty for non-delivery is Rs. 2, Re. 1 and 75 nP, respectively.

The ceiling prices, which came into force on Thursday last, initially unnerved the bulls and so

the values of seeds and oils declined. Towards the close of the week, however, futures staged a recovery. The recovery was so marked that today's closing prices of futures contracts were well above those prevailing a week ago. The rise in the quotation for groundnut January 1963 contract was particularly notable today, thanks to persistent short-covering by some operators. The spot section, however, depicted a different trend. Groundnuts and groundnut oils ruled easy due to larger arrivals of new crop from the South and absence of encouraging support. Castorseeds, linseeds and cottonseeds, too, were easy.

Among groundnuts, January 1963 contract fell initially from Rs. 226.50 to Rs. 225.25, before rising to close at Rs. 228.37. Groundnut oil January 1963 contract rose by 10 nP to Rs. 31.10. Khandesh quality fell by 38 nP to Rs. 45.62. Nizam bold declined by 25 nP to Rs. 45.25. Oil ex-mill and railway receipts shed 5 nP each to Rs. 19 and Rs. 18.80 respectively.

Castorseed March 1963 contract hardened by 25 nP to Rs. 167.25. Kanpur bold lost 25 nP to Rs. 31.50. Ready Madras eased by 13 nP to Rs. 32.87. Oil B.S.S. was lower by 5 nP at Rs. 13.80. Oil commercial too receded by a like amount to Rs. 12.85.

Linseed March 1963 contract, which moved down from Rs. 39.12 to Rs. 38.50, improved to wind up the week at Rs. 39.12. Bold ready was quiet at Rs. 41.50. But linseed oil rose by 10 nP to Rs. 16.85.

Cottonseeds January 1963 contract rose by a rupee to Rs. 103.50. Berars and non-white were both quiet at Rs. 25.

The following table shows the closing prices of oilseeds and oils on Wednesday 14th November as compared with those of the two previous weeks:

	14-11-1962	7-11-1962	31-10-1962
	Rs.	Rs.	Rs.
Groundnut			
Groundnut January 1963 ..	228.37	226.50	230.87
Nizam bold	45.25	45.50	45.25
Khandesh quality	45.62	46.00	45.87
Oil ex-mill ready*	19.00	19.05	19.35
Railway receipts*	18.80	18.85	19.15
Castorseed			
Castorseed March 1963	167.25	167.00	169.87
Ready Madras	32.87	33.00	33.62
Ready Kanpur	31.50	31.75	32.37
Oil B.S.S.†	13.80	13.85	13.90
Oil commercial†	12.85	12.90	12.90
Linseed			
March 1963	39.12	39.12	40.12
Bold ready	41.50	41.50	42.12
Oil ready†	16.85	16.75	17.10
Cottonseed January 1963 ..	103.50	102.50	105.50
Niger seed	36.12	35.75	36.50
Kardi seed	27.50	28.50	28.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

METALS RECEDE

(From Our Own Correspondent)

CALCUTTA, 13*th November*

Largely due to buyers' resistance to support higher levels, prices in the metal market receded during the week under review. As an immediate reaction to the outbreak of open hostilities by the Chinese nearly three weeks ago, prices began to rise, but the fact that prices were already much above world levels put a check on the rising trend. The trade is eagerly awaiting the announcement of the import policy. It is realised that, in view of the very essential nature of non-ferrous metals for stepping up Defence production, imports are likely to go up. This year's imports have been much below the estimated requirements of principal metals. The Development Council for Non-ferrous Metals Industry has estimated the demand for tin at 7,000 tons, zinc and copper at 85,000 tons each, and lead at 35,000 tons.

Efforts of the Government to restrict copper consumption have been mainly to urge the cable manufacturing plants to switch over to aluminium. These companies have made a beginning in this regard, though this has meant some capital expenditure. The saving in copper in this regard, it is considered, should be substantial, but the same is not reflected in supplies easing, since consumption elsewhere has advanced in keeping with the increased tempo of industrial activity in the country. Against this background and having regard to the increased requirements of metals, the forthcoming import policy is awaited with added significance. World supplies of copper, tin, zinc and lead are plentiful and, as a result, production of these has been cut down. There would be no difficulty for India to get as much supplies from abroad as are necessary. If only imports were increased, prices could be forced down.

On the London Metal Exchange, cash copper was maintained at £234 a ton. The backwardation was as low as 10s. The possibility of other mine workers following the Chilean strike was a factor imparting steadiness. In Calcutta, prices of copper scrap were quiet, despite continued shortage. There was the news during the week that duty drawback was proposed to be allowed on exports of copper conductors and cables. Tin in London opened at £868 a ton and, after easing to £867 on Penang reports of Japanese withdrawal from buying following full satisfaction of demand, recovered to close higher on balance at £873. The International Tin Council was reported as having decided to request the United States once again to modify the latter's policy with regard to both quantity and price. Tin continued to be in acute shortage in India, and the Calcutta quotation was slightly higher at Rs. 2.650 per 100 kgs. Local demand for zinc was poor and the price eased from Rs. 274 to Rs. 266 per 100 kgs. In London, the spot metal closed at £67¼ a ton, representing a gain of £1¼ over the week, following some revival of demand. A small gain was also recorded on the New York Commodity Exchange. Lead was unchanged here at Rs. 141 per 100 kgs. In London, the price receded from £53⅜ a ton to £52¾.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, 12*th November*

The linseed market has been rather lifeless. Reaction appears to have set in and prices have declined following improved offers from upcountry and general decline in other commodities due to the uncertainty of the money market. The banks are not willing to advance money on stocks held by secondhand sellers. The daily turnover has been fair. The oil market is quiet in sympathy with seeds and prices have registered a small decline. Only small local business is passing for ready delivery. Sellers are not interested for forward sales. The oilcake market is dull. Prices have declined, and offtake is small.

The latest quotation for November delivery is Rs. 83.06 per quintal.

FOODGRAINS DEPRESSED

(From Our Own Correspondent)

HAPUR, 12*th November*

Foodgrains continue to rule depressed during the week. Traders have shown determination not to let prices rise in this hour of national emergency. The Government of India is also increasing supplies and sales of wheat through fair price shops. It is reported that the food situation in the country is very good. Apart from previous commitments under P.L. 480 agreements, more wheat and rice supplies have been arranged from the U.S. to meet emergency. *Rabi* sowings here in Northern India have almost been completed and the first reports indicate that germination has been satisfactory.

Wheat average quality was stationary during the week at Rs. 40.19 to Rs. 40.87, while farm quality eased by 67 nP to Rs. 43.54-Rs. 45.55 on selling pressure by stockists and poor demand. Red wheat stood at Rs. 37.51-Rs. 38.18 a quintal. Arrivals were small around 200 maunds daily and stocks declined to 47,000 maunds.

Rice also registered an easy trend due to better arrivals of new produce from east U.P. Prices went down by 67 nP to Re. 1.34. Old stocks were reported to be small, around 4,000 maunds. Week-end prices were: Rice *basmati* superior Rs. 80.38 to Rs. 93.77; *sela basmati* Rs. 75.02 to Rs. 80.38; *mainpuri sela* new Rs. 52.25 to Rs. 52.92; *ramajwayan* new Rs. 58.94; *raimunia* Rs. 61.62; and *gadda* new Rs. 48.23 a quintal.

Easy trend was also witnessed in gram in the absence of support. Prices declined by 67 nP a quintal to be quoted at Rs. 42.87 for Punjab quality and at Rs. 42.51 for local produce. Stocks were about 8,500 maunds. Maize, however, was steadier on brisk seasonal demand. Prices were quoted between Rs. 39.81 to Rs. 39.15 a quintal. Stocks were reported to be only 4,000 maunds and arrivals averaged 200 to 300 maunds daily. Barley and *bejhar* were steady and were quoted between Rs. 26.79 to Rs. 27.46, respectively. *Juwar* and *guwar* were almost stationary. Other grain prices were listless. Week-end prices were: *Juwar* Rs. 45.55 to Rs. 48.23; *guwar* Rs. 36.17 to Rs. 37.51; *methi* Rs. 61.62; *bajra* Rs. 37.51; and oats Rs. 32.15.

Among pulses, peas declined by 67 nP on selling pressure by stockists *dara* quality was quoted at Rs. 31.12 to Rs. 31.48 and farm at Rs. 33.40 to Rs. 34.16. Peas dal was quoted at Rs. 36.17. Arrivals were small. Stocks aggregated about 37,000 maunds. Two wagon-loads despatched to the South during the week. *Arhar* ruled steady, as demand was brisk. New *urd* improved slightly on better demand. *Masoor* also ruled steady. Other grains were almost stationary. Week-end prices were: *Arhar* Rs. 57.60; *arhar dal* Rs. 71; *moong* Rs. 50.91 to Rs. 53.58; *moong dal* Rs. 58.94; *masoor* Rs. 45.55 to Rs. 48.23; *masoor dal* Rs. 59.94; *moth* Rs. 40.19; *moth dal* Rs. 48.23; *gram dal* Rs. 49.57

SUGAR DECLINES AGAIN

(From Our Own Correspondent)

HAPUR, 12*th November*

Sugar prices suffered a further setback during the week under review under pressure of sales by factories. New production has commenced in most factories in the district and the rest will start their crushing in a few days. Demand even at lower rates was not forthcoming and there was selling pressure, as the mills wanted to clear their godowns to provide space for new produce and the validity period for sale of quota was also coming to an end. Spot delivery here was almost stationary at Rs. 106 per quintal, while mill delivery eased by 25 nP to 75 nP per quintal according to varieties.

Sugar declined by 50 nP to Rs. 1 per quintal during the week in the Muzaffarnagar market, as demand was not forthcoming even at lower rates from Gujarat, Madhya Pradesh, and Punjab and prices in some cases were now quoted even lower than the former controlled prices. Offtake in the spot section, however, was better, due to Ganges Fair. Week-end prices were: spot delivery C 29 Deoband and Mansurpur Rs. 106.50; and D 29 at Rs. 106 per quintal.

Khandsari ruled quietly steady, as the stocks of old produce left with the trade were meagre. New produce was reaching the market in small quantity. Rajasthan and Punjab were the main buyers. Production was expected to rise soon. Week-end prices per quintal here were: New *khandsari* Rs. 101.81 to Rs. 104.19; old Rs. 99.43 to Rs. 99.13; crystal *boora* Rs. 107.17 to Rs. 108.51.

Gur pansera quality continued to rule bearish under pressure of arrivals, while *balti* quality stayed steady, thanks to buying support from Gujarat, Saurashtra and other consuming areas of South which have a fancy for this quality. The daily arrivals of *gur* now averaged 7,000 to 8,000 maunds, while in the other mofussil towns of Gulaothi and Siana, they were at an average of 3,000 maunds only. The entire arrivals, however, were being readily lifted, thanks to easy loading facilities. The week's offtake aggregated thirty wagon-loads. The total arrivals of *gur* here during the current season were about 90,000 maunds the corresponding figure last year being much lower at 30,000 maunds. *Shakker* continued to attract good buying support. Arrivals were small, the daily average being 250 maunds. Week-end prices at Hapur were: *pansera* superior Rs. 53.58; inferior Rs. 42.87 to Rs. 50.91; *balti* Rs. 60.28 to Rs. 61.62; *shakker* Rs. 58.94 to Rs. 61.62.

Increased arrivals of *gur* and *shakker* in the wake of slack demand from consuming areas accounted for depressed conditions in *gur* prices in the Muzaffarnagar market. *Chaku* quality eased by Rs. 2 to Rs. 3 per 40 kilos and *pansera* quality by Re. 1 to Re. 1.25. Daily arrivals averaged 14,000 maunds, bringing the total for the current season to 160,000 maunds.

Gur futures ran down sharply during the week on continued bear pressure. They opened at Rs. 21.23 last Monday and, after touching the highest the same day at Rs. 21.26, receded to Rs. 20.71. On Saturday, the rate stood at Rs. 20.84. Futures section was closed today, due to Ganges Fair.

Notice

THE BRITISH BURMAH PETROLEUM COMPANY, LIMITED

(Incorporated in England)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-first Annual General Meeting of the Company will be held at Noble Chambers, Parsi Bazar Street, Fort, Bombay, on Wednesday, the 19th December 1962, at 4.00 p.m. (S.T.), for the following purposes:—

(*a*) To receive the Balance Sheet and Statement of Accounts for the year ended 31st March 1962, together with the Reports of the Directors and Auditors thereon;

(*b*) To declare a Dividend;

(*c*) To elect a Director in place of Mr. A. P. Faickney, who retires by rotation and being eligible offers himself for re-election;

(*d*) To elect a Director in place of Mr. C. R. Jussawalla, who retires by rotation and being eligible offers himself for re-election, and for that purpose to consider, and if thought fit, to pass the following resolution as an Ordinary Resolution, of which Special Notice as required by Section 185 of the English Companies Act, 1948, has been received by the Company:

"RESOLVED THAT Mr. C. R. Jussawalla who has attained the age of 70 years and who retires by rotation, be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 185 of the English Companies Act, 1948, shall not apply to him."

(*e*) To appoint Auditors and fix their remuneration.

A Member of the Company entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,

THE BRITISH BURMAH PETROLEUM COMPANY LTD.

F. S. PANTHAKI,
Acting Secretary.

NOBLE CHAMBERS,
PARSI BAZAR STREET,
FORT, BOMBAY.
5*th November* 1962.

The Transfer Books of the Company will be closed from Saturday the 1st December 1962 to Friday the 21st December 1962, both days inclusive.

If the Dividend as recommended by the Directors will be passed at the Meeting, payment of the same will be made on and after 20th January 1963, to those Members whose names stand on the Company's Register on Saturday the 1st December 1962.

The Shareholders are requested to notify any change in their addresses without delay.

R—Revised. * Estimated.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of these companies which close their accounts yearly dividends shown are for their financial year.

S.—The reserves of Straw Products Ltd. include a non-distributable amount of Rs. 63,40,654 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December 1955. §§ Investment at cost.
H.—Clive Row Investment—Dividend for 1959 includes additional dividends of 9 nP for the year ended 31st March 1955 and 37 nP for the year ended 31st March 1956. * Includes bonus.
M.—Managed by the Board of Directors. *N.B.*—Dividends paid since 31st March 1959 are shown as taxable. (k) Investments.
A.—Associated Battery Makers (Eastern) Ltd. The effective dividend for the year 1960 would work out to 16.36 per cent approximate, as the final dividend of 10 per cent was paid on the increased capital of Rs. 118 lakhs, whereas the interim dividend of 15 per cent was on a paid-up capital of Rs. 50 lakhs only. X.B. Ex-Bonus.

MARKET GOSSIP

(*Concluded from page* 841)

ficant trends. These may be summarised as follows:

The expansionary influences of rapidly rising exports and the boom in private fixed investment are being gradually replaced by the continuing rise in personal consumption and Government expenditure. The rise in consumption expenditure is being fed by higher personal income, which, in turn, are the consequence of the extreme pressure on labour supplies which exists in almost all countries of Western Europe. Wages in these countries have been rising at an annual rate considerably in excess of the rate of increase in productivity. The result is that, in spite of rising prices, again, profit-margins have narrowed, contributing to the slowing down in the rate of new investment.

The rate of growth continues to be rapid in Italy and France. But they too are being affected by the current trend of rising costs and prices. In Britain, output has been expanding, but unemployment has continued to rise and spare capacity still persists. The new measures announced recently by the Chancellor of the Exchequer are expected to give a fresh stimulus to the economy. in W. Germany, two of the main elements which have stimulated production in the past, namely, export surplus and rising fixed investment, are having a diminishing influence. Shortage of labour is also an inhibiting factor. On the other hand, consumer spending remains buoyant and public expenditure on consumption and investment may also continue. In Norway and Denmark, inflationary pressures are expected to be curbed by Government action.

The mildly optimistic impression of European experts about the economic outlook is confirmed by Mr. Walter Heller, Chairman of the Council of Economic Advisers to President Kennedy. Mr. Heller anticipates that as the U.S. economic expansion programme is implemented the U.S. balance of payments position too will improve. The U.S. is also trying to cut down the foreign exchange cost of foreign aid and defence expenditure abroad without reducing the programmes themselves. The U.S. Congressional election results have strengthened President Kennedy's hands to carry through his economic programme in which tax reduction and tax reform occupy an important place. American observers are of the view that Governments of Continental countries, too, will follow the latest British example of giving a push to the economy through tax relief.

U.K.-Japan Trade Treaty

The U.K. has entered into a long-term treaty of trade and navigation with Japan for the first time since World War II. The treaty which will be in force for six years, after ratification by the two Governments, was signed on Wednesday this week at London in the presence of the visiting Japanese Prime Minister, Mr. Hayato Ikeda. This followed protracted negotiations between the two countries over a period of half a decade. The most important aspect of the treaty is the British decision to withdraw the application of Article 35 of the G.A.T.T. under which discriminatory quota restrictions were imposed on imports from Japan. Since the end of the last world war, Anglo-Japanese trade has been conducted on the basis of tightly-controlled annual agreements which set quotas and contained certain discriminatory provisions. Through the new treaty, the U.K. accords to Japanese goods the same status enjoyed there by the goods of all third countries (other than the Commonwealth and E.F.T.A. partners).

The new treaty has been welcomed by a substantial section of business community in both the countries. A section of British manufacturers, however, has not hesitated to express its apprehensions about the possibility of unfair competition from Japan. But this objection has lost much of its validity, in view of the provision of two safeguards in the treaty. The safeguards are meant to give each country the right to take steps to avoid any setback to its own industries in case of disruptive trading practices by the other like large-scale dumping. According to the first safeguard, the Governments of the two countries are entitled to take unilateral action, if domestic producers are threatened by unrestricted imports. The second safeguard provides for a "sensitive list" of goods on which voluntary import control will be maintained for three years, after the treaty comes into force. The list comprises such items as textile goods and transistor radio sets, which both the countries produce in large quantities.

While these safeguards are apparently reasonable, they do not satisfy completely the demand of certain segments of British industry, particularly the woollen textiles industry, which had asked for comprehensive controls on Japanese imports. One, however, feels that it is unjust not to believe in the *bona fides* of Japanese. It may be noted here that some of the countries, like India and Australia, have already refrained from invoking the G.A.T.T. Article 35 in their trade with Japan. Neither country is sorry for doing so. Japan has so far not created any difficulties to make these countries have second thoughts on the issue. Apparently, the U.K. Government, too, has no reason to cast doubts on the intentions of Japanese. It may be of interest to note here that the Japanese Government has already announced its decision to withdraw by 1964 certain tax concessions given to exporters.

Bombay Burmah's Centenary Gift

The Bombay Burmah Trading Corporation Ltd., which is about to enter its hundredth year, proposes to make a centenary gift to its shareholders in the form of a one-for-one bonus share issue by capitalising Rs. 1.33 crore from reserves. The Company also proposes to subdivide its shares, which are expressed at present in different denominations—Rs. 2,500 each fully paid, of Rs. 125 each fully paid and of Rs. 125 each with only Rs. 50 paid—into shares of Rs. 25 each fully paid. Announcing these two proposals of the Company at the annual general meeting of the shareholders which was held at Bombay on Monday the 12th inst., Mr. Pratapsinh Mathuradas, Chairman of the Company, added that the proposed subdivision of the shares would take place after the bonus issue was made on the receipt of the sanction of the Controller of Capital Issues.

While one bonus share of Rs. 2,500 fully paid is to be issued for every share of Rs. 2,500 held and one bonus share of Rs. 125 each fully paid is to be issued for every Rs. 125 fully paid share held, it is proposed, in the case of the holders of the partly paid shares, to apply the bonus amount of Rs. 50 per share to each of such shares and bring up the part payment to a total of Rs. 100 per share, as against the nominal value of Rs. 125. The Rs. 2,500 fully paid shares will be subdivided into 100 shares of Rs. 25 each and likewise the Rs. 125 fully paid shares into five shares of Rs. 25 each, while the partly paid up Rs. 125 shares will be subdivided into five shares of Rs. 25 each, with the paid-up value of Rs. 20 per share. The bonus issue will double the Company's paid-up capital from Rs. 1.34 crore to Rs. 2.68 crores, composed of 734,000 shares of Rs. 25 each fully paid up and 420,000 shares of Rs. 25 each partly paid to the extent of Rs. 20. According to the Chairman of the Company, the bonus issue will attract tax of about Rs. 16 lakhs.

On the news of the proposed bonus share issue, which the Company had succeeded in keeping a well guarded secret till the last minute, the Rs. 125 fully paid shares have spurted from Rs. 596 to Rs. 635. In greeting the announcement of the centenary gift, the market has drawn comfort also from the Chairman's confidence about the outlook for the Company in the near future, which Mr. Pratapsinh Mathuradas summed up thus: "As the Company moves into its hundredth year, its business is soundly based, with ample resources and good prospects for further development."

BANKING

(*Concluded from page* 849)

was being attempted on a broader front which would include budgetary policy and, in a really serious situation, direct controls of the economy. The C.M.C. evaluates monetary policy from this angle and hence the bill of health and efficiency that monetary measures receive at their hands.

It is not difficult to point out in the case of both inquiries how the initial point of view could blur vision itself. For instance, even as the Radcliffe Committee was engaged in its inquiry, the restrictive measures that culminated in a 7 per cent Bank rate in September 1957 were being generally held to be the main cause of the recession of 1957-58 in the U.K. The Committee could not accept this view, because to do so would go against the grain of its report, nor does it offer an alternative explanation of the phenomenon. Mr. Cameron (now Lord) Cobbold, who was Governor of the Bank of England from 1949 to 1961, admitted, at the annual Mansion House dinner in October 1960, that monetary policy exercised greater influence then than in earlier post-war years and suggested that, if the Radcliffe Committee had sat two years later than it did, it might have reached conclusions less unfavourable to monetary policy.

Inter-bank Institutions

In the other case, take the way the C.M.C. considers the problem posed by the existence of non-bank financial institutions whose growth, more rapid than that of the commercial banks, could present a serious obstacle to the effectiveness of Federal Reserve policy, because their operations do not come within the scope of direct control by the monetary authorities. On the basis of what it admits to be fragmentary evidence, the Commission recommends "that there be no extension of direct Federal Reserve controls over non-bank financial institutions." This is in spite of the fact that the share of non-bank financial institutions in the provision of financial assets in the U.S. economy has risen from 35 per cent in 1900 to 55 per cent in 1958!

Finally, both assessments of monetary policy suffer from an inadequacy of statistical data on the response of the different variables in the economy to monetary measures. The Radcliffe Committee is keenly aware of this handicap, though it had before it the results of two questionnaires of some usefulness. One is not told what factual inquiries underlie the American Commission's review of monetary policy. Without a firm base of factual data, judgment tends to be loaded by mere impressions. If it were not presumption for an ignorant outsider to pronounce on these matters, one might perhaps venture a guess that an evaluation based on factual studies might reveal that monetary policy has had a limited but still useful role to play in both the countries during the ten years since its revival.

WEEK'S STOCK EXCHANGE TREND

EXTRA GRANTS FOR DEFENCE

IT is not surprising that the Union Government could give no precise idea of the defence expenditure which this country will have to incur on throwing out the Chinese invaders. Even the cost of pushing them out of the Indian territories seized by them so far (as of Wednesday the 21st inst.) is incalculable, for much will depend on the nature of the war. The Chinese offer of unilateral cease-fire and withdrawal from 1st December, announced on Wednesday, is hedged in with so many unacceptable conditions that it looks as though the fight will have to be continued until China accepts India's terms. Even if it were to perform the honourable task of voluntarily vacating the aggression, it would be necessary for India to step up its expenditure on defence so that it could be strong enough to deter aggression in future. India is thus in for heavy expenditure on defence and the people must be prepared to meet it. How heavy the burden will be is, however, a question for which a specific answer is not possible at this stage. Much will depend on the course of war unleashed by China and the extent of aid that will be forthcoming from friends. When Mr. B. R. Bhagat, Union Deputy Minister for Finance, said in the Lok Sabha, in reply to the debate on the supplementary demand for grants, that, in the fast changing situation, it was not possible to frame firm estimates, he was neither shirking his duty nor exaggerating either the present state of affairs or future possibilities.

The supplementary demand for grants to cover the additional defence expenditure caused by Communist China was Rs. 95 crores. Besides, the Government presented a supplementary demand for Rs. 5.40 crores for other miscellaneous expenditure, so that the total amount for which the sanction of the House was sought was Rs. 100.40 crores. The Lok Sabha readily gave its consent after a brief debate, in the course of which some members made a few practical, though by no means novel, suggestions. Of the addition of Rs. 95 crores to defence expenditure, Rs. 75 crores will be under "revenue" and Rs. 20 crores under "capital," raising the sub-totals for the current fiscal year to Rs. 418.37 crores and Rs. 52.63 crores, respectively, and bringing the total defence expenditure to Rs. 471 crores. The overall budget deficit for 1962-63 which was placed at Rs. 88.84 crores in the final budget presented in April last now stands raised at Rs. 189.24 crores. This is only a rough estimate and one cannot rule out the possibility of defence expenditure in the current year exceeding the present assumptions. The fact that the Government did not come forward with any new taxation proposals is clearly indicative of its desire to avoid hasty steps and to prevent a further slump on stock exchanges, which are already in a demoralised state. It also reflects its anxiety not to give cause for a further increase in price levels.

It is, of course, a matter of opinion whether or not the Government should have come forward with measures for raising additional resources simultaneously with the presentation of the demand for supplementary grants. It can also be argued that a heavy deficit of the order of Rs. 190 crores will itself generate inflationary pressures and undermine the stability of prices. But it must be remembered that the Government has already taken certain steps for mobilising resources to meet the war expenditure. As readers are aware, it has issued a new series of small savings certificates and just enhanced the amount which a person can invest in them, introduced a new scheme of premium prize bonds, floated a national defence bond which is available on tap and offered gold bonds to attract gold, as well as hoarded money. The deficit will be reduced to the extent these securities bring funds into the Exchequer. Some are of the view that underestimation of revenue in the budget for the current year, a usual feature of budgets in this country, will also help reduce the gap, but it is unwise to count on this factor, as the growth of revenue this year may be less buoyant than last year due to lower profit-margins and slackness in business. One may, however, reasonably hope that the slowing down of the outlay on some of the Plan projects and economy in non-Plan expenditure of Central and State Governments will lead to a reduction in the deficit. According to Mr. Morarji Desai, the various Central Ministries have been asked to effect a cut of 5 per cent in expenditure on staff in the current year and of 10 to 20 per cent next year. A similar decision should be taken by all State Governments too. The Centre and the States alike should set an example to the people as a whole by reducing the size of their inflated ministries. They are larger than they need be, mainly because the party in power has had to appease group, communal and caste interests. Now that the people have united and risen as one man to fight the aggressor, there is no need for following this policy.

The concerted efforts that are being made by the Government and the business community to hold the price levels should serve to assuage the fear that deficit financing of the order indicated earlier would push up prices. Besides, the Reserve Bank of India also is exercising a close watch on the credit situation and can be depended upon to take timely measures to see that credit creation by commercial banks for speculative and hoarding purposes is greatly minimised. If the people too co-operate with the authorities by keeping down non-essential expenditure and subscribing to defence savings certificates and bonds, no great harm to the economy will follow as a result of leaving the large deficit uncovered.

The need for additional taxation has been met to some extent by the commendable initiative taken by Mr. Shriyans Prasad Jain also this week, in his capacity as the Chairman of the Federation of Indian Chambers of Commerce and Industry. He has proposed that, so long as the emergency lasts, all companies should contribute a specified percentage of their profit to the National Defence Fund. Briefly stated, his formula is this: (1) Industrial units should contribute 5 per cent of their assessable income; the rate for those which have no assessable income is 3 per cent of their gross profits. (2) Banks should pay 5 per cent of profits after tax and insurance, as well as investment, companies a lump sum of Rs. 10 lakhs each. And (3) trading concerns should subscribe to the fund at the rate of 3 per cent of their profits after tax. In effect, this proposal means that corporations have voluntarily accepted a five per cent increase in the tax payable by them. To the extent that even companies which have no assessable income, thanks to the operation of tax benefits for encouraging capital investment, are required to subscribe to the National Defence Fund, this proposal of the Federation is an improvement over a straight increase in corporate tax. All available indications suggest that there is no opposition from any section of trade and industry to this proposal. It is true that, ordinarily, business concerns too will be making some contribution to the Defence Fund, but the outcome will not yield as much as Rs. 15 crores per annum, the amount expected to accrue to the Fund under the Federation's collective imposition. It is a pity that not a single Member of Parliament or Government spokesman had a word of praise for the business community, in general, or the Federation, in particular, for having volunteered to carry this specific burden. On the contrary, some of them advocated the introduction of Excess Profits Tax, which is now recognised all over the world as a crude fiscal weapon. A communist member harped on his party's familiar theme of nationalisation of banks for finding all the resources necessary for financing the war and the Plan. That he should do so is quite natural, for the Indian communists' goal is to destroy democracy, so that, automatically, this country can become a member of the Soviet-China communist bloc.

Abolition of prohibition and re-introduction of salt tax were advocated by this journal (and, no doubt, by others, too) in the past as a source of finance for economic development. When we realised that the party in power had turned a deaf ear to this advice and that no useful purpose would be served by reiterating it, we ceased harping on it with the consolation that they would serve as fiscal reserves to be drawn upon in future when all other sources had been exhausted. Well, the time has now come for using these reserve weapons. Quite a few members belonging to the Congress and Opposition parties in the Lok Sabha who spoke on the demand for supplementary grants favoured this course. Undoubtedly, prohibition has done some good, especially to the middle and working classes. In advocating good-bye to this dubious and very expensive social reform, one does not say that the pre-prohibition *status quo* should be restored. All that one suggests is that, while retaining the good features of prohibition through a temperance movement, the physically irksome and financially expensive controls could be given up. As a result, one can count on a revenue of Rs. 50 crores per annum, even on a modest basis. The reincorporation of excise duty on salt in the fiscal armoury—a duty considered as an ideal form of indirect taxation all over the world—will yield anything between Rs. 20 crores and Rs. 25 crores. Thus, both together can be expected to net in Rs. 70-75 crores, a handsome amount indeed. In accepting this advice, the powers-that-be can soothe their injured conscience with the satisfaction that they are doing so for protecting the independence and territorial integrity of the motherland. What more noble cause do they need for surrendering their ideological fads?

NON-FERROUS METALS

INDIA'S first decade (1951-61) of industrialisation has witnessed, as statistics show, a spectacular growth in demand for non-ferrous metals, of which the most important are aluminium, copper, lead, zinc and tin. But the indigenous production of these vital industrial raw materials has been very much below the country's requirements. Even large-scale imports, which in the fiscal year 1960-61 were valued at Rs. 47 crores on account of all non-ferrous metals, have not been sufficient to close the gap between domestic production and demand except in the case of zinc, as will be seen from Table I in this article. The third Plan period, too, is not going to reduce the country's dependence on imports, for, while domestic production is expected to increase, total requirements will also have increased a great deal more. Table II, in this connection, brings out the likely position by 1965-66. It will be seen from this table, read along with Table I, that the gap between total requirements and domestic production (assuming that all the planned schemes will fructify—a big assumption, indeed) by the end of the third Plan will be as much as it was in 1961 in case of aluminium and much wider in the case of copper, lead, zinc and tin. On a reading of these figures, the conclusion is inescapable that, unless imports on the required scale are effected, the supply situation will become even more critical than at the end of the second Plan. Whether the country will be able to find something like Rs. 100 crores in foreign exchange for financing the projected imports in 1965-66 is, on present indications, open to doubt.

Quite a few energetic steps are, therefore, called for not only to implement, according to schedule, the development programmes covering aluminium, copper, lead and zinc but also to bring about, where possible, greater expansion in the private sector of metal mining and smelting industries. In the case of aluminium industry, the latter objective, namely, greater expansion, may well be achieved, if the licensed capacity of each plant, old or new, can be expanded to a bigger and more economic size. If the Government's efforts are concentrated on the supply of cheap power, the industry's expansion plans involving a capital outlay of more than Rs. 65 crores in all will have every

TABLE I: *Production and Demand*
(In tons)

Metal	Total requirements (1961)	Domestic production (1961)	Imports (1961)	Total of domestic production and imports
Aluminium ..	55,000	18,384	17,473	35,857
Copper ..	85,000	8,725	65,087	73,812
Lead	35,000	3,664	28,883	32,547
Zinc	85,000	9,253	76,981	86,234
Tin	7,000	Negligible	4,998	4,998

chance of being implemented on time, assuming that the Koyna aluminium project, the fate of which is in doubt now, will be carried out without default. It may be noted here that electricity accounts for 20 per cent of the cost of producing aluminium. But electricity is not all, for bauxite supplies of high quality will also have to be ensured by giving preference to aluminium producers in the matter of prospecting licences. Any licensed unit which may be lagging behind for lack of foreign collaboration or for any other reason should be encouraged by the Government in appropriate ways to go forward with its plans. Given such encouragement, it is just possible that the industry will find it easier to reach a level of 117,500 tons in terms of the aggregate licensed capacity of existing and new plants and to attain a level of production of at least 100,000 tons by 1965-66, as compared with the provisional target of 80,000 tons.

The implementation of the development programme in respect of copper would have to be speeded up and, if possible, enlarged. The public sector copper project at Khetri, which is expected to produce about 12,000 tons of electrolytic copper, is very slow in coming up. It should not be too difficult for the Government to stick to its revised schedule at least and establish the plant by the middle of 1964. The Indian Copper Corporation's project for the manufacture of 8,400 tons of electrolytic copper per annum, besides its normal production of about 9,000 tons of fire-refined copper, has just been completed. Despite all this expansion, the industry will be able to produce only a fourth of the country's requirements of copper by 1965-66. It is in the field of copper ore mining, therefore, that more active steps are called for so that both prospecting and development may proceed at an accelerated pace. Special incentives of the kind advocated later in this article are particularly required for mining development in the field of copper. At the same time, the development of proved ores by the private sector should not be ruled out on considerations of ideology, for most of the copper producers of the world are in the private sector and practically none of them can be expected to take interest in the development of India's "proved ores" if it is going to be entirely in the public sector.

As for lead and zinc, the present plans call for only modest increases in production by 1965-66. The lead expansion project of the Metal Corporation of India, which is to be completed by 1964, will just add 5,000 tons per annum to the current output of 4,000 tons of this metal. If, however, the scheme of Binanis for the manufacture of 12,000 tons of lead per year from imported concentrates is implemented, the gap between demand and supply will be considerably narrowed. Both the Government and the licensed concern should, therefore, remove the uncertainty about this project in good time. In the same way, Binani's project for manufacturing 12,000 tons of zinc per annum from imported concentrates also deserves to be pursued energetically. As far as the Metal Corporation's 18,000-ton zinc smelter project is concerned, the indications are that it will be completed on time, thanks to French collaboration. Even after all this expansion takes place, the supply position in respect of lead and zinc will be more critical than in the case of copper. If further capacity for the production of these non-ferrous metals is to be created, the Geological Survey of India and the Indian Bureau of Mines must expedite their intensive exploration of the known deposits of non-ferrous metals. When this is done and if special incentives for metal mining and smelting are provided, the scope for bringing about the desired development will improve.

This brings us to the question of special incentives. These may be categorised as under:

(*a*) Prospecting and development expenditure to be treated as revenue expenditure and to be charged off against profit during the year or against future profits.

(*b*) Depletion allowance for the wasting assets.

(*c*) Liberal depreciation allowances on mining and smelting plant and machinery.

(*d*) Complete tax holiday in the initial years.

(*e*) Additional incentives.

It is noteworthy that some or all of these types of incentives are available in countries like Canada, Japan, Australia and the United States in more generous measure than in India. A comparative picture covering these five countries has been provided, in this connection, in Dr. D. P. Antia's presidential address at the thirteenth annual general meeting of the Indian Non-ferrous Metals Manufacturers' Association held at Calcutta on the 18th instant. The facts emerging from this comparison are highlighted below under the respective heads of incentive already categorised:

(i) In Canada, prospecting and development expenditure in producing mine or properties remote but limited to Canada are deductible from the profit for the year or deferred to future year or years. In Japan, small and medium-scale miners are subsidised by payment of half the expenditure incurred on prospecting, and expenditure on prospecting can be appropriated in profit and loss account. In Australia, exploration or prospecting expenses within limits and capital expenditure on plants are deductible from profit for tax purposes; in lieu of these deductions annual depreciation allowance is also allowed. In the United States, cost of exploration and development of mineral deposits are permitted to be written off currently or on deferred basis, as the deposit is exhausted. None of these facilities is available in India.

(ii) Canada provides a depletion allowance of 33⅓ per cent of the profits from a mine, which is continuous as long as production is secured, with the exception of the period of 36 months during which the income of a qualifying mine is exempt. In the United States, the depletion allowance is 23 per cent of gross income for bauxite, lead, zinc, nickel and 27 other minerals. No such depletion allowance is being given in India.

(iii) Depreciation allowances in Canada are at 4 per cent on roads, runways, etc., 30 per cent on buildings situated on mine property, 30 per cent on mining machinery and equipment, and 100 per cent on mine shaft or other underground work. In Japan, mines are allowed to redeem upto 90 per cent of the expenditure incurred on purchase of machinery and equipment in the first year of operation. In India, the rate of depreciation allowance on surface and underground machinery in mines and quarries is only 15 per cent; in addition to this, an outright development rebate equal to 20 per cent of cost is granted to all new plant and machinery installed in a year.

(iv) As for tax holiday, Canada provides 36 months' exemption from tax, commencing with the day on which the mine came into production in reasonable commercial quantities. In Australia, 20 per cent of net income from sale of prescribed mineral is exempt. India provides tax holiday to new industrial undertakings for each of the five successive assessment years immediately following the year in which the undertaking began production; profits of such undertakings are exempt from both income-tax and super-tax upto 6 per cent of capital employed.

(v) Additional incentives are provided, more especially in Canada and Australia. In the former country, shareholders may deduct an allowance in respect of dividends in computing their income, if 25 per cent of the corporate income is derived from mineral profits; goods required for prospecting, mining and smelting are exempt from consumption or sales tax; and machinery, raw materials, etc., are admitted free of customs duty. In Australia, capital expenditure qualifies for exemp-

TABLE II: *Future Requirements*
(In tonnes)

Metal	Estimate of demand (1965-66)	Planned domestic production (1965-66)	Imports required (1965-66)
Aluminium	115,000	80,000	35,000
Copper	145,000	35,000*	110,000
Lead	59,000	9,000	50,000
Zinc	185,000	18,000	167,000
Tin	15,000	..	15,000

* This figure includes scrap.

tion and shareholders in mining business are entitled to a one-third deduction from calls paid by them on these shares; income from the sale of rights to mine and 20 per cent of the profits from mining are exempt; and special exemption is available for income from sale of mining rights by the prospectors. In the United States, recipients of loans or grants from Government for the encouragement of exploration, development or mining of strategic minerals may exclude such loans or grants from income; this is also applicable to corporate income-tax. India, on the other hand, provides no such additional incentives for mineral development.

It will be seen from the foregoing account that Canada and the United States, in particular, provide a number of special incentives for metal mining and smelting and that such special incentives are conspicuous by their absence in India. Whatever fiscal incentives are available for mineral development in this country are about the same as those available for other industries. This is a highly unrealistic policy, for it is a well-known fact that investments in wasting industries such as mining deserve a more favourable tax treatment than the rest. The Indian Non-Ferrous Metals Manufacturers' Association does not ask for any special favours when it pleads with the authorities for special incentives to the metal mining industries. The non-ferrous metal industry's plea that excise duties should be levied on primary metals only, instead of, as at present, on both primary metals and their semi-manufactures also deserves to be heard with sympathy, more especially because some of the protected items of semi-manufactures of non-ferrous metals and alloys will be deprotected from January next in pursuance of the Tariff Commission's latest recommendations. It is clear that, unless the Government responds favourably to the Association's representations, most entrepreneurs would not find it worthwhile to enter the field. The recommendations of the Taxation Enquiry Commission (1953-54) pertaining to special incentives for mineral and metal mining industries, if implemented at least now, will go a long way towards encouraging their development and thereby narrowing the yawning gap between the supply of and demand for non-ferrous metals in the next three or four years.

MARKET GOSSIP

Gold Slumps

IN less than 48 hours, the price of gold has slumped by Rs. 12 per 10 grams, that is, from Rs. 106 on Tuesday this week to Rs. 94 by the afternoon of Thursday. At the end of October, it may be interesting to note here, the price of gold was Rs. 123.43 per 10 grams, so that, in a short span of three weeks, there has been a capital depreciation of no less than 24 per cent in this precious metal. The credit for depressing the price of gold thus goes to the Government. The first sharp break was induced by Mr. Morarji Desai's appeal to the people not to make any fresh purchases of gold, by his threat that the Government was considering measures to restrict the quantum of gold and jewellery that one could hold and by his invitation to people to buy gold bonds. A low level of Rs. 102.50 was touched on 6th November. Good offtake at this level pushed up the price again to Rs. 106. The second break, sharper and swifter than the first, followed the reiteration by the Finance Minister at New Delhi on Tuesday evening that the Government would take some more measures in a month's time to bring down the price of gold very considerably. Everyone has now been left guessing as to what he would do. All sorts of unintelligible rumours are current and no useful purpose will be served by retailing them. Suffice it to say that market circles feel that Mr. Morarji Desai means what he says. Those who have been frightened by his renewed threat are said to be unloading their stocks in a market bereft of buyers. There is, however, no reliable information about the turnover, so that one does not know to what extent the fall in prices reflects the quantum of gold that has changed hands.

The Government has two objectives in view in depressing the price of gold, first to encourage the hoarders of gold to switch over to gold bonds and, secondly, to discourage smuggling of gold drastically, so that the heavy leakage of foreign exchange can be substantially reduced. In the present national emergency, both are desirable goals and the Government must resolutely endeavour to reach them. It has done well to clarify the doubts prevailing in certain circles by giving appropriate instructions to the Income-tax authorities and by promising to amend the Income-tax and Wealth Tax Acts suitably. This should induce those who have invested their black money in the yellow metal to change over to gold bonds.

The Finance Minister has also made it clear that repayment of gold bonds will only be in rupees and not in gold. He has actually rejected the suggestion of some, including the All-India Manufacturers Organisation, that repayment should be in gold specie, in which case the rate of interest on the bonds could be substantially reduced. He gave three good reasons why this proposition was not practicable. In essence they are: (1) An undertaking to repay the bonds in gold will encourage smuggling, as people will buy gold in the open market and invest it with the Government. (2) Reacquiring gold in future from the world markets to repay the loans might prove a heavy burden on the external resources of the country and it would not be desirable to bequeath this liability to posterity. And (3) it would not serve the objective of weaning away people from the habit of investing in gold, an unproductive way of storing one's savings.

Importance of Assam

Assam has attracted world-wide attention ever since the Chinese launched their massive attack all along the McMahon Line. This State, standing foremost among the States of India, is now fully exposed to Chinese invaders. As briefly mentioned in an earlier issue of *Commerce*, it would be a calamity for India if they succeed in occupying this State, for it occupies a pivotal place in our economy. It is the chief supplier of three very important commodities, namely, tea, a principal earner of foreign exchange, oil, an item of strategic and industrial importance, and timber which is widely used for a variety of purposes. If the Chinese threat is not effectively eliminated, the whole economy of Assam will be greatly jeopardised, not to speak of the agony and suffering that will be caused to the twelve million people inhabiting this 84,899-square mile State. As it is, there is not much distance between the areas now occupied by the Chinese forces in N.E.F.A. and Assam's tea gardens, oil wells, refineries and oil pipelines. At the time of writing, it is reported that there is some enemy breakthrough towards the Foothills which is just 33 miles north of Tezpore and that the employees of tea plantations on the north bank of the Brahmaputra have already started evacuating their families.

At this crucial juncture of India's destiny, a brief economic picture of Assam may be of interest to those who are not fully aware of its importance to the country as a whole. This State is the most important tea growing region in India. The 744 tea estates in the State together employ about 502,000 workers (daily average) and produce as much as 400 million lbs. of tea annually, representing more than half of India's aggregate production amounting to approximately 780 million lbs.; the actual area under tea is 162,330 hectares (1960-61), out of the total area of 331,090 hectares in the whole country. The Assam gardens grow some of the world's highest quality (black) teas which are not produced anywhere else either in India or in other countries. The Assam tea is of particularly high quality required by blenders to mix with the plain teas from South India and Ceylon. The tea so blended is widely favoured, especially in Britain which is the biggest customer for Indian tea. But for the Assam tea gardens, India would not have been able to hold so dominant a position in the world tea trade as it does now. Out of the total foreign exchange (amounting to Rs. 125 crores) earned by tea during 1961, the share of Assam tea alone is said to be of the order of Rs. 60 crores.

Next to tea, oil is the most important and indispensable commodity produced by Assam. About 347 oil wells are in production. Most of these wells are poor producers now, because they have been in production for a number of years feeding India's oldest refinery (400,000 tons capacity) at Digboi belonging to the Assam Oil Company. But the drilling operations in Nahorkatiya, Moran and Hoogrijan adjoining Digboi and belonging to Oil India Ltd., a joint venture of the Government of India and the Burmah Oil Company, Ltd., have already yielded valuable results. Of the 137 wells drilled, as many as 104 have proved to be successful for commercial production of oil and gas. These wells are now in a position to produce three million tons of crude per annum. Further drilling is going on. The proved and indicated reserves of oil are estimated at 46 million tons and those of gas at 756 million cubic feet. Side by side with drilling operations, installations to collect oil from wells, pumping stations, workshops, power stations, stores, godowns, etc., are being set up. Work is also going on in connection with the construction of the second stage of the 720-mile-long pipeline to transport crude oil from Nahorkatiya and Moran fields to the refineries in the public sector at Nunmati (near Gauhati) in Assam and Barauni in Bihar. Also under erection is the crude conditioning plant to make the crude oil suitable for pumping through the pipeline. All these projects entailing a heavy capital expenditure of over Rs. 100 crores will be thrown out of gear, unless the territorial integrity of Assam State is fully protected from the onslaught of Chinese aggressors. If China gets the oilfields and the refineries now in operation, it will be nearly independent of Russian supplies and, further, saved the botheration of transporting it over long dis-

NATIONAL DEFENCE FUND

tances to Tibet and N.E.F.A. Besides oil, Assam has India's first and most modern gas-fired power station. Further, the Fertiliser Corporation of India is putting up a factory at Namrup near Nahorkatiya to manufacture 50,000 tons of urea and an equal quantity of ammonium phosphate by utilising nine million cubic feet of petroleum gas a day. The estimated cost of the project is Rs. 12 crores. Other gas-based industrial projects, such as carbon black, are also in the offing.

The European Gold Pool

Russia sold on the Continent about 656,800 oz. of gold (valued at $22.99 million at the international price of $35 per oz.) during the Cuban crisis four weeks ago. The exact motives that prompted Russia to sell such a large parcel of gold are not known. Whatever they were, the offerings did help the European gold pool to replenish a part of the huge outflow of as much as 1.36 million oz. valued at $47.60 million that followed large-scale private buying of gold in London on 30th and 31st October 1962. The gold pool, it will be recalled, was established towards the close of last year by the leading central banks of the West European countries, including the U.K. The object of the pool is to see that the dollar price of gold does not go far beyond the dollar parity, namely, $35 per ounce. It is a co-operative enterprise which enjoys the support of the U.S. Federal Reserve System in that it periodically supplies the pool with gold in exchange for dollars. The members of the pool were allotted quotas equal to the value of gold put by them into the pool against dollars, the aggregate of quotas being $250 million. On the basis of these quotas, the deficit or surplus in the pool is divided among the members after the net balance of the pool (between sales and purchases) is assessed at the end of every month. The Bank of England has been managing the pool which purchases gold in the market normally from Russia and other private sellers. No gold is bought from South Africa which directly sells all the newly mined gold to the Bank of England.

The gold pool of $250 million has successively been run down to less than $170 million at

DELHI LETTER

SPEEDING GOODS ON RAILWAYS

From Our Special Correspondent

NEW DELHI, 20*th November*

IN the efforts to gear railway transport for meeting the increasing needs of defence and industrial development reoriented to fight the Chinese invaders, the Indian Railways are pursuing a two-pronged approach, namely, speedier utilisation of modern traction equipment on the way from abroad and further steps to increase the self-sufficiency from indigenous units producing railway hardware. The progress towards self-sufficiency can be summed up thus: All steam locomotives, rolling stock and wagons can be manufactured in India; there is total self-sufficiency in mechanical signalling equipment; a factory has started producing (with Japanese collaboration) electrical signalling equipment; enough capacity is being established for the manufacture of track materials; a beginning has been made in manufacturing electric locomotives at Chittaranjan; a factory to make diesel locomotives is expected to be in production towards the end of 1963. In pursuance of the long-term plans for more indigenous production, the Railway Ministry has approved in the past few days two collaboration agreements. One of them, with the American firm of A.L.C.O., will help the production of diesel locos at Banares. Initial annual production will be 150 locos and the capacity will be increased later to 250 locos a year. The second agreement, with a consortium of European manufacturers, will permit the manufacture of 25 kV. A.C. locomotives. The electrical components will be made at the Bhopal factory of Heavy Electricals Limited which is being expanded with the help of a new British loan. The mechanical components will be made at the Chittaranjan factory which has been making steam locomotives since 1950 and electric locomotives since 1961.

Original estimates in the third Plan were to add more than 500 diesel locomotives. At the beginning of the second Plan, the Indian Railways had fewer than seventy diesel locos out of the total of 9,000 locomotives in service. About one hundred were added during the second Plan period. The additions of diesel locos from indigenous production and imports will be larger and quicker than originally planned. In 1961-62, the Railways ordered about 600 locomotives, more than 2,300 carriages and 20,577 wagons. The acquisitions planned in 1962-63 are nearly 400 locomotives and 27,000 wagons on the basis of four-wheelers. Some of the orders placed in the last financial year are being delivered in the current financial year. Of the additional acquisitions in the current year will be 112 broad-gauge diesel locomotives. 19 metre-gauge diesels and 18 electric locomotives.

The Railways are in the current financial year launched on the biggest expansion programme in recent years costing about Rs. 300 crores. Apart from rolling stock and loco acquisitions, this allocation covers 850 kilometres of track doubling and 350 route kilometres of electrification. This is on top of nearly 750 kilometres energised on 25 kV. single-phase A.C. traction in 1961-62. The Railways admit that the congestion in the eastern region will continue, but the plan is to carry all the materials for the steel plants on electric trains. To the original third Plan outlay of Rs. 1,325 crores on Railways, the Planning Commission recently added Rs. 145 crores. Of this amount, Rs. 120 crores are for ensuring additional facilities for coal movement, Rs. 15 crores for line capacity works required early in the fourth Plan period for coal carriage, and Rs. 10 crores for general works. The increase in the freight carriage target to 254 million tons from the original target of 245 million tons means that the Railways will have to increase their carrying capacity by about 94 million tons in the four years 1962 to 1966. If the Railways are able to increase freight handling capacity by about 15 million tons as they plan to in the current financial year, even then it leaves the mammoth task of adding nearly 80 million tons of capacity in three years.

The Railway wagon manufacturing capacity had risen to a rate of 16,000 by 1956, but there were setbacks in 1958, 1959, 1960 and 1961. In the first half of this year the production had risen to an annual rate of 24,000.

Helicopters from France

The French have started deliveries of Alouette III helicopters, about the only type capable of operating on the Himalayan heights. France has been a traditional supplier of hardware for the Indian Air Force. India bought the French Ouragans in 1952, the Mysteres in 1956, and Alizes for the Navy in 1960. The present supplies of Alouette III helicopters are under an agreement signed by the Indian Government with Sud Aviation in July 1962 but under easier payment arrangements. Apart from these supplies, the French had also agreed to set up a helicopter factory in India. The immediate emphasis will be on helicopter supplies; manufacture will be taken up later.

The Indian Airlines Corporation is to receive Caravelle jet planes and, on the ground too, the French are offering a variety of technical co-operation in transport. The more important of the deals concern the electrification of railways, particularly in the eastern region around Calcutta and the steel plants. Since 1956, the French Railways had had a permanent mission in India, following a contract on electrification. Apart from the permanent mission, several French teams have been periodically visiting India and numerous Indian railwaymen have been receiving training in France. The Indian Railways have begun using the alternate current method for traction, an innovation of the French. The French have also started helping India with uptodate signalling systems, and in laying extra-long rails—as long as one kilometre.

TREND OF SHARES

LACK OF CONFIDENCE

(From Our Own Correspondent)

BOMBAY, *22nd November*

LACK of confidence for reasons well known accounted for yet another week of dull and dispirited trading on the stock exchanges. Investors were still not on the scene at a time when they were very much wanted in a market overshadowed by the China war which has also blurred economic progress. And, as pointed out in these columns last week, not until investment demand revives, stock markets can scarcely present a look different from what has been seen during the past fortnight.

Some selective inquiry was discernible in cash shares during the week under review. Further, thanks to fairly heavy margins imposed on outstanding short sales as at the turn of the settlement in both Bombay and Calcutta and the Chinese offer to cease-fire from the midnight of Wednesday the 21st inst., some leading Bombay shares like T.E.L.Co., Voltas, Svadeshi, Kohinoor and Bombay Burmah staged a modest recovery from their minimum price levels on short-covering. The rally in these shares was also aided by the reported renewed buying by the L.I.C. in some of them.

The intermittent buying by the L.I.C., stringent measures imposed by the market authorities and the stiff attitude adopted by the Finance Ministry (which followed up its previous announcements by another firm note this week) against excessive fall in share values induced bears to cover a part of their short sales. Yet, outstanding sales in some of the popular counters were believed to be still heavy, as the big bears were said to be disinclined, despite the heavy penalty on their positions, to square up their sales. The unilateral cease-fire by the Chinese prompted marketmen to hope for some unexpected turn for the better in the border war situation. But this seemed to be only the immediate reaction. At any rate, the tendency among the operators was not to read much in the Chinese offer but to share the views expressed by members of the Opposition in the Lok Sabha, pending the official assessment and ultimate attitude.

With sellers showing a marked reluctance to square up their outstanding positions at or above the minimum prices, the authorities of the Calcutta and Bombay Stock Exchanges were obliged to impose a stiff margin of 20 per cent on total outstanding sales in cleared securities to be carried forward at the turn of the pending settlement. The settlement expired in Calcutta on Wednesday the 21st inst. In Bombay, it will be over on Friday the 23rd inst. The decision to impose the margin was taken by the Committee of the Calcutta Stock Exchange on Monday the 19th inst. and by the Governing Board of the Bombay Stock Exchange on the following day. The Board of the Bombay Stock Exchange further announced that the rate of margin would increase to 30 per cent on carry-over of business exceeding Rs. 40 lakhs. In Calcutta, the margin was determined on the basis of the minimum prices. In Bombay, the margin is payable on the basis of the making-up prices that would be fixed on Friday the 23rd inst. At the same time, the current level of margin on purchases to be carried forward has also been maintained in Bombay, so that no new buying by bulls is encouraged. The Board has also left the minimum prices unchanged. The Governing Board of the Ahmedabad Stock Exchange decided on Saturday the 17th inst. to impose a penal margin of 50 per cent of the market price on sales outstanding in cleared shares after Friday the 23rd inst. which is the settlement day. The margin will be on total, and not on net, sales.

The market authorities have imposed stringent margins in order to force sellers to square up their positions. They are disappointed to find that sellers have not availed themselves of the opportunity given to them for squaring up their positions at the minimum prices. This view has been echoed by the Stock Exchange Directorate in its circular issued to all the stock exchanges in the country on Tuesday the 20th inst. In the circular, the Director of Stock Exchanges observes that the Government has, under the Defence of India Rules, 1962, full powers not only to fix minimum prices for all securities but also to give any directions to any individual or body of individuals to regulate contracts in securities or to any other parties connected therewith. He has asked the stock exchange authorities to submit names of members and names and addresses of their clients and detailed information about their commitments (either purchases or sales) exceeding Rs. 1 lakh per member in each of the most active speculative shares. These particulars are sought to enable the Government to take necessary action.

* * * *

Dalal Street displayed a slightly better tone towards the close of the week, followed the Chinese offer of cease-fire, L.I.C. buying and the measures adopted by the market authorities. But generally, improvement in prices was slow and very small. Closing prices in a large number of cases were either at or slightly above the minimum prices. However, some scrips showed a modest rise. For instance, Bombay Burmah improved to close with a gain of 17 points at Rs. 640, Standard showed a recovery of 35 points at Rs. 820, Bombay Dyeing rallied by Re. 1.30 to Rs. 61.20, Kohinoor were up by 10 points at Rs. 286 and Svadeshi by 13 points at Rs. 257. T.E.L.Co. finished 12 points higher over the week at Rs. 279 and Voltas showed a gain of Rs. 14.50 at Rs. 251. Cash scrips were devoid of much activity. Permanent Magnets fell by Rs. 20 to Rs. 200 and Synthetics showed a loss of Rs. 9 at Rs. 147.

* * * *

In Calcutta, the market was stagnant around the minimum levels, and changes, wherever occurred, were small either way. In the forward section, Birla Jute eased from Rs. 30.37 to Rs. 30 and Indian Aluminium from Rs. 32.50 to Rs. 32.12, while Jaipur Udyog recovered 13 nP at Rs. 11.25. In the cash section, Bowreah Cotton moved down by Re. 1.06 to Rs. 24, Central India Coal by 31 nP to Rs. 9.81, Metal Box by Rs. 2 to Rs. 53.50, Union Carbide by Re. 1.50 to Rs. 43.50 and Hasimara Tea by 31 nP to Rs. 14.

* * * *

In Madras, activity was reported in some leading counters which alone showed some changes over the week. Thus, Bangalore Woollen edged forward by 80 nP to Rs. 242.80 and Ashok Leyland by 30 nP to Rs. 7.90, while Mysore Chemical and Fertilisers fell by Rs. 2.10 to Rs. 18.25, Madras Rubber showed a small loss of 13 nP at Rs. 21.75. Similarly, Blue Mountains, Periakaramalai and Outcherlony Valley closed fractionally lower.

THREE RIGHT ISSUES

The debacle on the stock market and the causes responsible for it, namely, the Chinese aggression and all sorts of political and economic uncertainties stemming from it, have not only restrained investors in shares and securities but also cautioned even some of the big companies in making further capital issues, especially when the amount involved is pretty large, and put promoters of new ventures temporarily out of the map. According to market circles, at least three big companies, namely, the Central Bank of India Ltd., the Central India Spinning, Weaving and Manufacturing Company Ltd. and the Tata Engineering and Locomotive Company Ltd., have dropped temporarily their proposed capital issues, though they have been sanctioned by the Controller of Capital Issues.

Of the three companies, T.E.L.Co. is the most talked about in market circles for the simple reason that its shares have that special fancy with speculators and investors alike. The news of Controller's permission to the Company to issue additional ordinary share capital of Rs. 2 crores in shares of Rs. 100 each at a premium of Rs. 50 per share and offer them as right shares in the proportion of one for four to the existing shareholders came only on Monday the 19th inst. But, since then, word has gone round the market that, for the time being, the Company may not go in for additional capital because of the disturbed conditions noted at the outset. But inquiries with the Company do not confirm this rumour. We are told that nothing is definite about the proposal to issue rights shares. Mr. J. R. D. Tata, Chairman of the Company, is abroad at present and the Director-in-charge, Mr. S. Moolgaokar, is at Jamshedpur. In the absence of the two, the Board has not given its mind to the proposed right issue, although the Directors may have individually considered the proposal. It is gathered that the proposal will come up before the Board only at its next routine monthly meeting which is to be held some time in the second week of next month, by when Mr. Tata will have arrived here, especially as the annual general meeting of the T.I.S.Co. is on 13th December.

Meanwhile, the other two companies, namely, the Central Bank and Central India, have deferred their proposals to issue rights shares to a future date. The Central Bank, which has a paid-up capital of Rs. 315 lakhs has been authorised by the Controller of Capital Issues to raise further capital of Rs. 315 lakhs by the issue of 630,000 new ordinary shares of Rs. 50 each (Rs. 25 paid-up) at a premium of Rs. 10 per share as right shares in the proportion of one new share for every two shares held. The Central India was granted consent by the Controller to increase its ordinary share capital by Rs. 46.87 lakhs and offer the new capital to the existing shareholders by way of right shares of Rs. 100 each at par in the proportion of one share for every share held.

While the Central Bank and Central India have thus definitely shelved their right issues, and T.E.L.Co. may also follow suit, it may be pointed out that the consent of the Controller of Capital Issues is valid usually only for a year from the date it is granted. It remains to be seen whether political, economic and market conditions will change sufficiently for the better so as to permit the three companies to raise additional capital within the time limit.

DEBENTURES FROM MADURA MILLS

The Madura Mills Company Ltd., has offered for public subscription Rs. 125 lakhs of debentures, carrying interest at the rate of 7 per cent per annum and redeemable in 1974-76. The issue price is at par in units of Rs. 1,000 each. The subscription lists will open on the 26th inst. and close on the 30th inst. or earlier, but not before the 28th. The entire issue has been underwritten in parts by the I.C.I.C.I., the Great Eastern Shipping Company Ltd., the Pandyan Insurance Company Ltd. and three stock-brokers. The Company has agreed to make, out of the issue of Rs. 125 lakhs, firm allotment of an aggregate amount of Rs. 63.75 lakhs to the six underwriters. This means that only the balance of Rs. 61.25 lakhs is freely available to the public.

The proceeds of the debenture issue will go to finance an ambitious programme of expansion and diversification. The Company has installed an additional tyre cord plant at Serampore, near Calcutta, which has gone into production from June 1962. It has been licensed to install 450 modern automatic looms. This project is well under way and will be followed by installation of a dyeing, bleaching and finishing plant and of 500 additional automatic looms.

VANASPATI

Symbol of Food Purity in India

MILLIONS of people in India depend every day on the purity of Vanaspati. To protect the health of the people, the Government and the Vanaspati industry have laid down strict regulations, insisting on the absolute purity of Vanaspati. Thus Vanaspati is manufactured only to these exact specifications... is tested at every stage of processing to ensure that is it pure vegetable fat in its best form!

Vanaspati is made from the finest vegetable oils which are refined, hydrogenated, deodorised and vitaminised. Every gram is fortified with 25 I.U. of vitamin A and 2 I.U. of vitamin D. Therefore Vanaspati is as nutritious as the best semi-solid fat, and certainly more nutritious than ordinary vegetable oils. What's more, it's hygienically packed in sealed containers to guarantee that its purity and food value are intact. Thus Vanaspati offers purity, quality, nourishment, good cooking, economy and convenience—all the essentials of a good cooking medium.

For all these advantages, Vanaspati has become the popular cooking medium in thousands of Indian homes. In fact, the consumption has increased from 30,000 tons to over 338,000 tons in the last 30 years!

A product of the combined resources of agriculture, science and technology, Vanaspati is the ideal everyday cooking fat for India... for your family... for *you!*

VANASPATI AND VANASPATI-LIKE FATS ARE USED THROUGHOUT THE WORLD'

Blood, Toil, Tears and Sweat

"We shall defend our island, whatever the cost may be, we shall fight on the beaches, we shall fight on the landing grounds, we shall fight in the fields and in the streets, we shall fight in the hills; we shall never surrender."—WINSTON CHURCHILL (*4th June* 1940).

THE Prime Minister's broadcast to the nation on Monday announcing grievous reverses, affirming confidence in the ultimate victory and warning against the potential danger to the rest of the world, was quite different in its tone from his earlier reply to the debate in the Lok Sabha on the emergency. Danger has moved nearer; it is no longer a question of retreating to better defensive positions. More aid in arms is needed, and this time there are fewer inhibitions in asking for it.

The people have received the news in a more subdued mood than they manifested earlier. That is not a bad thing, since it is essential that they should have a mature approach to the implications of the present war instead of getting excited over noisy demonstrations. Naturally, they will look abroad for signs of encouragement and understanding; while American and British sympathies have been taken for granted, day-to-day developments within the Iron Curtain, especially over Sino-Soviet relations are being scanned with increasing anxiety for evidence of possible Soviet support for India. There is a certain amount of impatience with Pakistan and its tendency to strike up attitudes, but certainly no great animosity.

Assam is fully exposed, sooner than our calculations had indicated. Oilfields and tea gardens are immediately concerned for their safety, but, unless we get some idea of where the Chinese intend to halt their offensive, if at all, it is difficult to say what the coming weeks have in store. In this grim hour, there is great need of a spirit of dedication and austerity everywhere; as the pace-setter for the rest of the country, the Government can offer more concrete gestures than the slightly extended working hours and restriction on new recruitment and other minor economy measures. The size of the Union and State Cabinets is for many still an eyesore. The lack of sufficient response for the Gold Bonds issue from the larger holders of hoarded and concealed gold, for whom a generous amnesty was offered, is also regrettable, because it offers a melancholy contrast to the ready offerings of all their possessions from some very poor persons.

There is a risk of the tempo slackening or relaxation of efforts for mobilising our resources in the event of a lull in fighting or peace feelers, such as the Chinese cease-fire offer at the time of writing. More than any territorial claims, the Chinese aggression, it must be remembered, is aimed at crushing the spirit of a free people. Mr. Nehru's assurance that there would be no discussion of terms has partly helped to allay doubts both here and abroad; but the determination to resist the invader must be shown more clearly in the plains of Assam, if the Chinese continue their penetration. Civil defence and even distribution of arms for civilians have to be organised; the machinery of Government must learn to move faster than it now does.

* * * *

Tools for the Job

Even during the days in which Mr. T. T. Krishnamachari was described as a Minister without portfolio, he was not actually without one. To the economic co-ordination, which he was then expected to achieve, defence has been added; he has acquired the nucleus of a Secretariat by the transfer of the Ministry of Supply and its Directorate. But the nature of his job has radically changed in the present context and it is natural that those who cannot grasp the significance of the new role he has to play should complain that his duties are still imprecisely defined. True, co-ordination may mean anything from post office functions to constant interference with other people's work; the latter is mostly feared by those who know, or at least think they know, T.T.K.'s temperament. But it is quite evident that the President's Order of allocation of business to the new Ministry is more or less final for the present and that it leaves ample scope for flexibility. Obviously, T.T.K. is not being asked to do what others are doing well enough (or can be prodded to improve upon) but to ensure that their activities are properly dovetailed. This is not capable of statutory definition. To attempt any such clear-cut demarcation of responsibility or function will be most unwise. If the Minister should make a success of his present job, he would need such a wide range of authority that their enumeration would not only be impossible but also create the impression that he is being clothed with dictatorial powers; to err on the other side, of giving too little authority in order not to offend others' susceptibilities, might make the change altogether meaningless.

The point to be kept in mind is that it is not right to apply standards appropriate in peace-time for the definition of constitutional jurisdiction, functions and responsibility. There is a parallel in British constitutional practice for the present situation here. When Lord Beaverbrook was appointed Minister of Production in February 1942, a White Paper was issued laying down in detail his responsibilities; but, within a fortnight, he had resigned due to strong personal antagonisms between him and Mr. Ernest Bevin. When Mr. Oliver Lyttelton was appointed in his place, his functions were less precisely laid down than in Lord Beaverbrook's case. This was largely an office of a personal nature; what happened was that co-ordinating functions, which, in normal times, are performed through the leisurely methods of standing committees, study and working groups or Royal Commissions were entrusted to a single Minister. In effect, it was a delegation of some of the Prime Minister's powers of co-ordination, though he always remained the final arbiter if and when an irreconcilable difference arose. While such disputed questions may be many during peace-time, the common danger and a sense of patriotism should help to soften attitudes all round. There is nothing to suggest that T.T.K. will not secure the required co-operation on his own.

It is certainly not possible to bring the entire range of defence production, which is now distributed among many Ministries besides Defence (C. & I., Heavy Industries, Food, Communications), under one Ministry; nor does it seem necessary to do so. At the same time, these Ministries cannot be expected to pursue their individual ways or trust to the old slow methods of securing correlation of their activities. As Minister of Production, Mr. Oliver Lyttelton achieved a predominant position not by crossing others' paths but by taking on residual functions; his membership of the War Cabinet, chairmanship of vital committees, liaison with American supply organisation and not least his power over allocation of materials helped to strengthen his position. It took him nearly a year to stabilise the administrative organisation and reach a peak in war production (1943) but thereafter he had little need to worry. His Ministry, however, did not survive the war, as its role had come to an end in 1945.

In India, all Ministries, excepting perhaps Defence, External Affairs and Home, are already subject to the co-ordinating authority of the Planning Commission. Even though the Minister in charge is directly responsible to Parliament, he can always say in his defence that a particular act was done in pursuance of the Plan or the Commission's (or the N.D.C's) directive, though neither of the two is a constitutional authority. So there is no harm, if, in another case like the present one, a Minister has to cite the requirements of the Co-ordination Minister as his guiding line, and if the latter also owns responsibility; there is less ambiguity in this arrangement than, for example, in the relations between a Minister and a so-called autonomous State undertaking.

After having shown only recently that the Defence portfolio can be easily separated from defence production hitherto linked to it, there was, perhaps, a case for tacking it on to the new Ministry at least for the period of the emergency. The Development Wing, now renamed the Department of Technical Development, is a very useful appendage; it has at its disposal a store of information on materials and resources which can help the formation of a Materials section within the new Ministry. This, together with the functions of purchase, inspection and shipment of stores allotted to the Department of Supply should be sufficient for achieving co-ordination. The process of adaptation within the machinery of the Government is almost continuous and officials who will have to be seconded from other Ministries to the Co-ordination Department will themselves be able to smooth out difficulties by working together. But the enemy at the gate will probably do more than all the others towards the elimination of petty ideas of personal prestige and in this hope we may all give the new Ministry a cordial welcome. To the extent to which it is successful in its methods, it can offer lessons for the future when a quicker pace of economic progress has to be attempted through concentrated efforts.

War in the Air

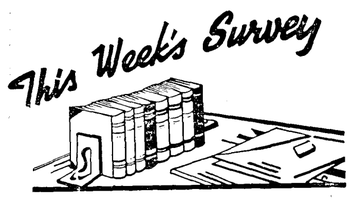
Called suddenly like many others from its daily round of innocuous pursuits to contribute to the war efforts, the All India Radio has been heroically doing its best to counter Chinese propaganda, expose its lies and strip Peking Radio of its pretences. A voice from the AIR reminds the citizen of his duty to produce more; music from military bands as background may not make us all war-like but it is at least a reminder of marching troops. It may be that I am reading too much into what I hear but I get the feeling that artistes, being human, have been greatly affected by the gravity of the crisis facing the country and have revealed it in their tune and tone. But that apart, the broadcasting authorities do not seem to have clearly thought out the appropriate kind of programmes to be put out for the various audiences they have in view.

"Topic for Today" aimed at exposing Chinese frauds is all sarcasm, but it seems too sophisticated to achieve its object. The person who can appreciate its style or the nuances of its rhetoric is likely to know the Chinese and their ways fairly well. It is unlikely to convince the ardent Sinophile, if indeed there is any creature of that description outside China at this moment. Assuming that the broadcasts are directed to inform the average Indian and the people in the uncommitted parts of the world where the Government is still wavering in its attitude or cool towards India, the style and content of the broadcasts should be different. The pleading and the persuasive tone which should come naturally to the injured party, the shock of being betrayed and anger over treachery, are all imperfectly communicated by the sarcasm adopted by AIR. Sometimes, it even borders on absurd counter-propaganda against Peking Radio; it would be unfortunate if this impression is created in the minds of people in other Asian countries.

It may be a mistake to assume that English as understood by the elite in Delhi or other Indian cities will be appreciated by, say, the ordinary Japanese or Burman, let alone the Indonesian, Arab and African. Much thought has been devoted to the effect of the spoken word on the listener, as distinguished from the written on the reader; but, in the use of English as a medium by us, it is necessary to bear in mind that a simple turn of phrase, which may be expressive in the country of its origin may evoke little understanding here and much less in other countries where Anglo-Saxon is not the mother tongue.

I think some description of the terrain in which Indian troops have to fight the Chinese hordes against heavy odds and the nature of the historical and traditional links these areas have with this country will get a better listener response since it will satisfy the keen urge abroad to know the facts. The inflexions of tone should be suitably modulated to convince the friendly listener of the rightness of the Indian cause. All India Radio needs a large team of non-official advisers, script writers and readers to vary the style of the text and intonation of speech so that they do not tire the listener.

A six-member team of experts from the biggest shipbuilder in Japan, Mitsubishi Shogi Kaisha, has arrived in India to make an assessment of the needs in foreign exchange and technical know-how in setting up the second shipyard at Cochin. The firm's offer to take minority share in the project and also to collaborate in the construction of the shipyard was secured by Mr. Raj Bahadur, Minister for Shipping, when he visited Japan in October. It has agreed to approach the Japanese Government to give it outside the yen credit foreign exchange required for the project.



A COMMENDABLE DECISION

KERALA has given a lead to other States in the matter of ensuring industrial peace during the present emergency. The State Industrial Relations Board, which is an *ad hoc*, tripartite body, has accepted the suggestion made by Mr. V. V. Giri, the State's Governor, that a conciliation-*cum*-arbitration board should be set up in the State as a war-time measure to settle industrial disputes quickly. It has urged the Government to implement this decision immediately and to hold in abeyance the operation of the various statutes which might hamper war-time production or adversely affect industrial relations.

The board is to have seven members, three representing employers and three representing workers, with an independent chairman. In the event of an industrial dispute, the board would first try out conciliation, failing which it would automatically become an arbitration body whose majority decision would be binding on both labour and management. The board is not intended to replace the existing machinery. It would operate only when the normal machinery fail to settle disputes quickly.

Kerala is thus the first State to take prompt action to translate into practice the spirit of the resolution on industrial truce passed unanimously at the joint meeting of the central organisations of workers and employers held at New Delhi on the 3rd inst. It may be recalled that the resolution laid utmost emphasis on voluntary arbitration for settling disputes and urged prompt settlement of disputes by streamlining the procedures. The credit for the commendable decision of the Kerala Industrial Relations Board obviously goes to Mr. Giri who, with his unrivalled knowledge and experience of labour problems, seems to have played a significant role in improving industrial relations in the State which was at one time full of strife and strikes.

COAL PRODUCTION AND MOVEMENT

The private sector in coal industry, according to the testimony of Mr. K. D. Malaviya, Union Minister for Mines and Fuel, who addressed the Joint Working Committee of the Mining Associations at Calcutta on the 16th instant, is currently producing at a faster rate to reach its target for the year than the public sector is able to do. At the moment the National Coal Development Corporation's collieries in West Bengal and Bihar are lagging behind, but the Corporation is expected to make up its deficiency in the next two months. Nevertheless, the combined output of both the sectors in the current year is not likely to exceed 60-61 million tonnes. On this basis, the annual increase has been of the order of four million tonnes only since 1959. Mr. Malaviya's hope that, if this trend were maintained, the third Plan target (97 million tonnes) would definitely be achieved seems to be exaggerated. For the present rate of annual growth in output is patently insufficient to reach the third Plan target. If anything, the rate will have to be trebled in the next three years. How is this going to be done? One looks vainly for an answer from the Minister's speech, for he has not thrown any light on the progress of the expansion projects in either sector. His recognition that some of the industry's difficulties still continue does, of course, mean something. But that is not enough in the absence of some indication as to the remedial steps under contemplation. For the present we have only Mr. Malaviya's word that the industry's difficulties would be solved "easily and swiftly."

As far as coal movement is concerned, in spite of some marginal improvement in rail transport, the situation has continued to be difficult for all consuming industries. For instance, as against the assessed requirements of 8,127 wagons per day in respect of all the coalfields in the first half of this year, the railways could actually load only 6,049 wagons per day. The daily number of wagons actually loaded has fallen short of the railways' own target of 6,925 wagons per day. No wonder, therefore, that coal supplies to industries have not *substantially* increased. The latest available figures show, for instance, that the 36 priority classes of industries had an aggregate stock of 2.4 million tonnes of coal on 1st buly 1962, as against 2.1 million tonnes on 1st July 1961. The aggregate consumption of these industries was 3.7 million tonnes in June 1962, as against 3.4 million tonnes in June 1961. It will be seen from these figures that the increase that had taken place over the year in coal consumption and stocks was only marginal and thus inadequate. The fact that industry after industry has been complaining about inadequate coal supplies and uncertain and delayed deliveries proves that coal movement and supplies have not greatly improved in the current year.

The Government is, of course, aware of the need for improving coal movement. Its scheme to set up coal dumps in different parts of the country for catering to strategic industries and power houses is stated to be ready for implementation. But there is a snag here inasmuch as this scheme of distribution will involve, according to Mr. Malaviya's own admission, a lower profit margin for the industry. In seeking the industry's co-operation for making the scheme a success, the Minister has failed to consider that the industry, which has been granted only a modest increase in prices, can hardly be expected to incur any loss through its participation in that scheme. As the question of creating coal dumps in different parts of the country has been a controversial one all along, with the coal industry, coal merchants and consuming industries criticising it on some ground or other, the Government should either remove its objectionable features and make it really workable or get the railways to accelerate the tempo of wagon loading on the usual lines and also increase wagon availability in the light of requirements as assessed by the Coal Controller.

WOOLLEN AND COTTON TEXTILES

Exercising the powers conferred by Section 3 of the Essential Commodities Act 1955, the Government of India has issued the Woollen Textiles (Production and Distribution Control) Order. The Order authorises the Textile Commissioner to co-ordinate production of woollen cloth, yarn and wool tops in accordance with the needs of the general public, as well as to fix maximum ex-factory, wholesale and retail prices of cloth or yarn. The ex-officio Joint Textile Commissioner has been appointed Controller of Woollen Textiles. There is no need for any elaborate justification of the Government's decision to regulate the production, supply and prices of woollen textiles. Suffice it to say that the decision is well-conceived, for, with a war on India's Northern and North Eastern borders, the defence requirements of woollen goods are pretty high and will be higher still in future, at any rate until the Chinese vacate the territories they have forcibly occupied in this country. So long as the war persists, the woollen industry will necessarily have to be switched over to defence production, all the mills in all sectors being geared for meeting defence needs. While the aforesaid Order of the Government seeks to ensure such a switch-over, a successful fulfilment of the objective will depend on the co-operation and support extended by the woollen goods producers and traders. It is gratifying to hear that the interests concerned have held out the "full" assurance of strictly adhering to whatever directives that are issued under the Order by the Controller of Woollen Textiles.

No less urgent is the need for ensuring supplies of cotton textiles at reasonable prices. A seven-point programme of action has been announced by the Central Government, details of which were given in our last issue (*vide* page 850). Briefly stated, the programme envisages not only an increase in production, especially of coarse, lower and middle medium varieties of fabrics by an annual rate of 250 to 300 million yards, but also proper distribution (by the Indian Cotton Mills Federation through its regional associations), and stamping of prices on cloth. Besides, the decision of the Board of Trade on voluntary system of price display is proposed to be implemented with effect from 1st January next. What is more, the Government has given a stern warning that it will take "drastic action" against those responsible, if any specific instances of rise in cloth prices are brought to its notice.

On its part, the Committee of the Indian Cotton Mills Federation has assured the Government that the industry would be ready and willing to give its maximum co-operation in supplying the defence needs. The Committee, at its meeting held in Bombay on Monday this week, offered its full support to the Government in taking the necessary steps to hold the price line and was confident that, with the co-operation of Government and the trade, it would be able to do so. An important decision taken at the meeting was in respect of yarn distribution. Regional committees, we are told, will be constituted to ensure yarn supply direct from mills to the apex handloom weavers' societies and other approved channels.

The whole issue pertaining to the production and prices of textiles is bound to figure prominently at the ensuing meeting of the Cotton Textiles Consultative Board due to be held at New Delhi on Sunday the 25th inst. The outcome of the meeting is awaited with much interest by both millowners and traders. Meanwhile, the Cotton Mills Federation has advocated a co-ordinated all-India scheme for augmenting textile output, with a view to avoiding dislocation of production. Details of the scheme, now being drawn up in consultation with the Central Government, are not available at the time of writing. It is, however, presumed that the scheme will envisage (a) reduction in the number of holidays, (b) working of mills on all the seven days in a week (the workers being given weekly holidays in rotation), and (c) three-shift working in all mills. The adoption of these measures is expected to raise the production of yarn and cloth by at least 20 per cent. This is, of course, a move in the right direction. Only it is doubtful whether enough cotton will be available to spin yarn sufficient to weave an additional 1,000 million yards of cloth per annum, that is, the quantity equal to 20 per cent of existing annual production. There is also the question that a more intensive utilisation of mills' capacity may result in speedier wear and tear of machinery and equipment, necessitating quicker replacement of capital assets. By wearing out existing capacity earlier than expected, an opportunity can, of course, be provided for modernising the industry. But it will cost a lot of money. Further, the requisite modern plant and machinery will have to be made in the country. Appropriate arrangements for securing the necessary finance and producing the capital goods must be made sufficiently in advance.

FOOD SITUATION

The food situation is well under control, despite the crisis created by the Chinese aggression on India's northern borders. This confident assessment has been made by no less a person than Mr. S. K. Patil, Union Minister for Food and Agriculture. In his speech at the meeting of the Zonal Food Council in Bombay on Monday, he sought to dispel apprehensions about rising prices of foodgrains in the context of emergency conditions. In fact, he asserted that, on the food front, the position was now distinctly satisfactory. Mr. Patil's assessment does not seem to be wishful thinking. For the Government has adequate stocks on hand to prevent any undue increase in food prices. The total stocks of foodgrains with the Government at present are as much as 2.5 million tons. Besides, stocks at the godowns of traders aggregate about two million tons. Further, there will be massive imports next year from the U.S. which has so far supplied 5.8 million tons under the P.L. 480 agreement for 17 million tons covering the period 1960-64. In addition to the quantity of foodgrains yet to be supplied under the agreement, the U.S. has just agreed to supply more foodgrains to replenish stocks during the emergency. It will accordingly send 50,000 tons of wheat and about 20,000 tons of rice every month over the next six months. This food aid offered by the U.S. is no less valuable than its prompt military assistance to this country, for stability on the food front is of basic importance in sustaining the war effort.

Although the present and prospective stocks position of foodgrains is satisfactory, it is necessary to ensure that private traders do not attempt to hoard stocks and create artificial scarcity conditions in any part of the country. Happily, there seems to be no cause for concern on this account. For traders themselves in several places have offered to impose voluntary controls. Following a recent meeting of the representatives of foodgrains trade at New Delhi, they have drawn up a blueprint for self-regulation and agreed to take only a very small margin of profit, a part of which will be donated to the National Defence Fund. Likewise, at another meeting in Bombay last week-end, trade representatives of Maharashtra, Gujarat and Madhya Pradesh assured the Government that they would keep a vigil on the distribution and sale of foodgrains with a view to holding the price line as demanded by the national emergency. These are certainly commendable steps. But traders' organisations should concentrate their efforts on measures to eliminate the black sheep among them. The Government, for its part, has decided to take no chance. As pointed out in our editorial last week, several measures, such as opening of fair price shops and licensing of wholesale traders, are already being taken.

These measures are expected to be supplemented by strengthening the machinery for the regulation and control of trade. A hint was dropped to this effect by Mr. Patil at the zonal meeting. He suggested that commodity boards should be set up for wheat, rice and sugar, on the lines of similar technical bodies in foreign countries, to deal with licensing of wholesale dealers, regulation of marketing practices, etc. He did not explain the precise role of such boards and the nature of their functions. Such boards are welcome, if it is found that the existing machinery for control is inadequate and that new boards will not merely duplicate the work already being done departmentally.

Neither the self-restraint of traders nor imports alone can ensure stability in food prices on a long-term basis, unless domestic production itself is stepped up. Much, however, remains to be done in the field of domestic production. The Zonal Council, of course, did attach much significance to this aspect. Outlining schemes for increasing the production of foodgrains and other agricultural products, Mr. Patil stressed that intensive and concentrated efforts should be made in the areas under irrigation and assured rainfall. He also pointed out the need for undertaking such schemes as contour bunding, dry farming, etc., in order to promote retention of moisture in soil. He was also in favour of giving more subsidies and incentives to small farmers to help increase output. His advice to States to draw up long-range and short-term plans for both food and commercial crops is wholesome. The representatives of the Governments of Maharashtra, Gujarat and Madhya Pradesh and also Goa, realising the urgency of the problem, assured Mr. Patil that effective steps would be taken to promote production. The State authorities should lose no time in making an all-out effort to fulfil their assurances.

U.K.-E.E.C NEGOTIATIONS

The negotiations between the U.K. and European Economic Community (Common Market) have no doubt been a highly protracted affair. But slowly, and perhaps steadily, the area of agreement has become wider on the question of the U.K.'s entry into the Common Market. There is, therefore, nothing surprising in the statement of Mr. Van Houten of the Netherlands, who presided over the ministerial meeting last week at Brussels, that "we (the Six) have assumed that the entry of Great Britain will be a fact by 1st January 1964." At last week's meeting, provisional agreement was reached on two issues, one on "associated status" to Commonwealth territories in Africa and the other on tariff concessions to Australian and New Zealand mutton and lamb in the event of Britain joining the Six.

The U.K. and the Six have agreed that such African Commonwealth countries as Ghana, Nigeria and Tanganyika, which have so far refused association, could become associate members even at a later stage, if they changed their mind. At any rate, the Common Market has agreed to open negotiations for trade with these countries soon after Britain's entry into the Common Market. Besides, the U.K. will be permitted to impose gradual application of common tariff on tropical goods from African Commonwealth countries. These points show that neither the U.K. nor the Six intend to inconvenience those who do not wish to become associate members. There has also been no objection to the British proposal that Aden should be associated with the Six. But its oil exports will be the subject of a special protocol to be signed after the Six themselves have worked out a common oil policy. Similarly, both parties have agreed in principle to grant associate status to Malta. But the question remains to be settled whether Malta would be associated as a British dependency or as an independent State.

On the question of imports of mutton and lamb into the enlarged Common Market, the Six have provisionally agreed that the U.K. may suspend the common external tariff on these products. The idea, it would appear, is to ensure a phased application of the common tariff of 20 per cent by 1970. This is subject to the condition that such imports from New Zealand and Australia would not disrupt the market for other meat within the Common Market. The Deputies will continue the study on this subject and determine whether tariff suspension or duty-free quota is the better solution.

Those who advocate Britain's entry into the Common Market have cause for satisfaction at the spirit of accommodation shown by the Six in arriving at the aforesaid agreements. All the same, it should not be forgotten that several crucial issues still remain to be solved. For instance, the parties concerned have failed to reach an agreement on the financing of Community expenditure after 1970. The French view is that all the levies on food imports after 1970 should go to the Community and should be used to cover not only expenditures through the agricultural fund (for agricultural modernisation and subsidising the export of surplus) but also for other expenditures of the Community. The U.K., being a large importer of food, is concerned over the

LET US TAKE A WALK

Now let's take a deep breath, and go forth into the open air. Now for the open road, the world out of doors, source of all health and pleasure. Surely there's no more healthy and enjoyable pastime than walking. And to keep on walking, two feet deep in comfort, in a pair of Bata shoes.

Ava 12.95

LL Oxford 16.50

Comfort 24.95

Bata

disproportionately larger contribution it will have to make under this arrangement. In this matter, the U.K. is likely to get some support from West Germany, which is opposed to the French proposal. West Germany, it may be noted, is the largest importer of food among the Six. The other outstanding matters, on which the Six and the U.K. have not yet seen eye to eye, are: transitional arrangements for British agriculture, safeguards for New Zealand's dairy produce, for other processed foods and for aluminium and newsprint, etc. These problems are once again expected to come up during the next ministerial meeting scheduled to take place at Brussels in the second week of next month.

EXPORTS FAIL TO IMPROVE

Despite the introduction of several export promotion measures, India's shipments have failed to make any headway. The only consolation perhaps is that, but for these measures, exports would have registered a more pronounced setback. This conclusion may not be wide of the mark, considering the persistent decline in world commodity prices during this year, particularly for jute and tea, and the growing competition from other more industrialised countries for processed and manufactured goods. During the first six months of the financial year 1962-63 (April to September), exports aggregated only Rs. 324.54 crores, which represents a decline of Rs. 33 lakhs, as compared with the corresponding period of 1961-62, according to provisional official figures. In other words, exports are running at an annual average level of no more than Rs. 650 crores. This compares very unfavourably with the target for exports laid down by the Board of Trade for the year at Rs. 720 crores. Even assuming that exports during the second half of 1962-63 would show some seasonal improvement, the performance during the whole of the year is still likely to fall much short of the Board's anticipations.

Exports for the April-September period would have been better, but for a setback suffered during the April-June quarter. In the month of June, they touched the lowest level of the year at about Rs. 46 crores. But since then, there has been a steady rise in shipments, having gone up to Rs. 61 crores by September. This only shows that exports have, of late, tended to regain the tempo it had developed during the first quarter of the calendar year 1962. If one takes the first nine-month period of the calendar year 1962 (January to September), one finds a marginal improvement in exports (by Rs. 3 crores to Rs. 490 crores) over the corresponding period in 1961. The increase, however, is too small to be of any particular significance. But as imports, during January-September, fell by about Rs. 10 crores to Rs. 762 crores, the adverse balance of trade narrowed down by about Rs. 13 crores to Rs. 272 crores.

An important feature of India's foreign trade during the first nine months of 1962 was the decline in both exports to, and imports from, the U.K., the major trading partner. According to figures released in London, India's exports to that country (c.i.f. Britain) fell by about £10 million to £95.77 million. In particular, shipments of tea and cotton yarn and cloth were adversely affected. The value of Britain's offtake of Indian tea fell by about £5 million to £36 million, and cotton yarn and textiles by about £3 million to about £8 million. Besides, there was a fall in exports of other items, too, such as leather and leather manufactures, ores, metal scrap and tobacco. At the same time, India's imports from Britain (f.o.b. Britain) declined sharply by about £37 million to £86 million. Imports of such essential goods as electric machinery, iron and steel, road vehicles and aircraft accounted for the major part of the decline. Here is a typical instance to show how shortage of external resources with the developing countries is having an adverse effect on the export trade of the developed countries. India would have surely taken more British-made capital goods, transport equipment and other items necessary to sustain its economic growth, if only it had more foreign exchange.

DEFENCE LABOUR BANKS

Shorn of its high-sounding name, the proposed Defence Labour Banks represent the simple concept of using voluntary labour to build community assets yielding quick results that directly help defence effort. The Ministry of Community Development, *Panchayat Raj* and Co-operation, which put forward the suggestion, estimates that, if the 150 million adult persons in the rural areas contribute one day's free labour or its money equivalent in lieu thereof, the country would get Rs. 200 to 300 crores worth of free labour per annum. This could be utilised for building productive community assets.

The proposal, which is reported to have received a wide measure of support at the meeting of the Informal Consultative Committee on Community Development and allied subjects, held this week in Delhi, is sound in principle. But there are bound to be many difficulties in its practical application, difficulties which considerably detract from its usefulness as an instrument for economic mobilisation for defence. The first difficulty is that such a programme can succeed only if it is properly organised and implemented. This calls for leadership of a high order which is lacking in the countrysides at present. It is also not easy to identify community assets that yield quick results. Construction of roads, wells, compost pits, etc., are all useful activities. But they call for sizable investment in equipment immediately, while taking time to bear fruit. This will put a strain on the country's limited resources.

Another difficulty is that voluntary free labour could be obtained only during the off-season after the cultivation and harvesting operations are over. It is, however, possible to utilise the services of the large number of unemployed and underemployed in rural areas, provided some form of incentive, say, free food or a nominal remuneration is paid. Even this will involve sizable expense, if the programme is to be organised on a countrywide scale as it is proposed to do. But by far the most important limiting factor will be, as already noted, the lack of proper leadership. If this handicap can be overcome, the resources may be found even through a measure of deficit financing, if need be. Anyway, the scheme is worth a cautious trial, at least in areas where appropriate leadership is forthcoming. Surely, doing something is better than merely recounting the difficulties involved as an excuse for doing nothing.

The suggestion to draw up an agricultural programme for every village and to prepare the blue-print of a scheme for introducing dry farming in 50 million acres, mooted at the meeting, will prove to be much more productive of tangible results than the defence labour banks. Under this programme, it is proposed (1) to step up production of compost manure from the present level of 90 million tons to 132 million tons by ensuring that every farmer, owning more than one acre of land, has at least two compost pits, each producing one ton of compost, (2) to intensify the use of green manure and (3) to increase the production of subsidiary foods like fruits, vegetables, milk and poultry. The success of this programme too will depend, to a large extent, on the quality and effectiveness of help and guidance provided to farmers.

(*Concluded from next column*)

domestic investment involving continued pressure to import more. The Chancellor's recent measures reducing purchase tax on motor cars and giving more allowances on capital expenditure as well as his stepping up of public investment may all do more to increase imports in the short run than to increase exports. Whether U.K. exports can be counted upon to increase themselves without special measures of planning remains to be seen.

LONDON LETTER

U.K.'S TRADE EXPANDING

FIGURES FOR JAN.-OCT. 1962 ANALYSED

From Our Own Correspondent

LONDON, *17th November*

THE October export figures have given everyone a pleasant shock; they jumped from the low point of £285 million in September to £347 million in October. But, as ever, one must look behind the figures and not be too easily led by them, because, if allowance is made for seasonal factors, then the September figure is £235 million and the October figure £336 million. Even so, these October figures are more than a twelve-month record.

The other side of this picture is an equally surprising jump in imports: these have moved from £343 million in September to £413 million in October and, even allowing for seasonal factors, the increase is of the order of £17 million. As both sides of the trade account have gone up, the gap is in fact slightly wider than in September, since exports and re-exports in October total £361 million and imports, converted back from the c.i.f. figures given above to a comparative f.o.b. basis, are £368 million, an adverse difference on visible trade of £7 million. In September the balance was fractionally favourable.

Nevertheless, if we take a longer period of three months, Britain's export performance still looks good; for August-October exports averaged about the same as in the same three preceding months May-July and for the first ten months of the year they were 3 per cent higher than for 1961.

Imports

On the same basis, August-October imports were 2 per cent more than in May-July and for the first ten months of the year were 2 per cent over the 1961 average. But, even on these longer-term comparisons, it is possible to select figures giving a somewhat different picture. For instance, if, instead of comparing the most recent three months with the three months previous, one compares the third quarter *plus* October with the second quarter, we get on a seasonally adjusted basis c.i.f. average imports for the four months of £387 million and for the second quarter of the year £369 million average. This shows a rise in average monthly imports between the two periods of £18 million or nearly 5 per cent, twice as big a deterioration as when one makes the comparison between the two three-monthly periods. All this shows with how much caution one should handle short-term statistics.

The ten-monthly figures are really more instructive. The monthly average for the period January-October of exports was £316 million to which one should add £13 million of exports, totalling £329 million. Imports c.i.f. averaged £377 million over this period and, if one corrects to f.o.b. basis, the figure is about £335 million. So, on visible trade account for the ten months to-date, Britain has had an adverse balance of about £6 million per month, say £60 million overall.

Against this we have official figures for invisible income for the first six months of the year which total £112 million and, even if the second half of the year turns out to be nothing like as good, it is clear that there is a reasonable surplus on the current balance of payments account.

If one compares the growth in Britain's trade this year (by growth one means a rise in both the export and import figures) with other countries, one finds that this country is holding her own and probably gaining something. Exports to the Common Market countries are running, according to the Board of Trade, over 20 per cent higher than they were a year ago. And to the other O.E.E.C. countries and other European countries the improvement is comparable. The U.K. has also held her share of the American market and, although exports to India have dropped, they have risen to most of the other big Commonwealth markets. The terms of trade are also remaining consistently favourable to the U.K.

Although it has been shown above that Britain is running a healthy trade balance, the size of the figure shows that this is not yet adequate if the country wishes either to increase investment overseas or to expand

L&T service to industry—complete jobs from blueprint to production *...all you do is turn the key*

Procurement of plant and machinery is only one step in setting up factories. From blueprint to production, many more services are required.

L&T have been leading suppliers of industrial plant and machinery in India for 24 years, gradually extending their services to planning, design, erection, civil engineering and construction and manufacture, and spreading 20 Regional Branch offices and Representatives all over India.

Rapid industrialisation needs rational co-ordination. **L&T Turnkey Jobs** combine the services and products of many associated companies. Collaborations were entered into with foresight and services perfected through experience, to make L&T the Co-ordinator, who now places tailor-made factories ready for operation on the industrial scene.

Design, Erection, Service and Civil Engineering Departments, together with L&T's own manufacturing lines—welding alloys for gas and arc welding, electrical equipment and switchgear, drills and bits, industrial appliances, instruments, cooling towers, stainless steel, copper, aluminium and mild steel vessels, cast iron and steel lubricated taper plug valves, etc.—fully illustrate L&T's competence to serve Indian industries from blueprint to production.

At Kansbahal, Orissa, three leading German firms—Gutehoffnungshuette Sterkrade AG., J.M. Voith G.m.b.H. and Heinrich Koppers G.m.b.H.—and Larsen & Toubro Limited, have pooled their vast resources and experience to set up UTMAL, a major undertaking for manufacturing heavy machinery. UTMAL will play a significant role in the rapid industrialisation of our country, by supplying a wide range of industrial machinery.

FOREIGN INVESTMENTS IN INDIA

INFLOW OF FRESH CAPITAL SLOWS DOWN

THE rate of inflow of foreign investment into the private sector (other than banking) in India tended to slow down somewhat during the calendar year 1961. The total net inflow (including official capital) in that year was Rs. 70 crores, as against Rs. 78.40 crores in 1960, according to the preliminary data furnished in the latest annual census of foreign investments published in the October 1962 issue of the *Reserve Bank of India Bulletin*. Although the amount of Rs. 70 crores is well above the inflow of just Rs. 37.9 crores recorded in 1959, it is rather insignificant considering what the country actually needs for accelerating the pace of economic development. The decline of Rs. 8.4 crores during 1961 was in distinct contrast to the marked rise of Rs. 40.5 crores in the year preceding it. The decline was accounted for entirely by the net inflow of private capital which receded from Rs. 53.30 crores in 1960 to about Rs. 35 crores in 1961, whereas the inflow of official capital into the private sector in the form of loans increased from Rs. 25.10 crores to Rs. 35 crores. The reverse was the case in 1960. Thus, the net inflow of private capital had gone up significantly to Rs. 53.30 crores from a bare Rs. 11 crores in 1959, while that of official capital had declined, albeit slightly to Rs. 25.10 crores from Rs. 26.90 crores. Including the net addition of Rs. 70 crores in 1961, the aggregate outstanding foreign investments in the private sector at the end of the year stood at Rs. 760.50 crores (as against Rs. 690.50 crores a year before), of which the share of private sources alone was Rs. 601.4 crores (Rs. 566.4 crores a year before), official sources accounting for Rs. 159.1 crores (Rs. 124.1 crores a year before).

The term "foreign investments" above refers to investment of long-term foreign capital in the private sector (other than banking). These are measured by the aggregate of (*a*) net foreign liabilities of branches of foreign companies operating in India, (*b*) foreign-held shares, including proportionate free reserves and foreign-held debentures of Indian joint-stock companies, and (*c*) long-term loans obtained by these companies from foreign official institutions.

Petroleum continues to be the single largest industry in which foreign private capital has the pride of place. In 1961, however, the flow of fresh capital into this industry was well below that witnessed in 1960, apparently because the Government of India did not allow the foreign oil companies to expand their activities and brought about a substantial fall in their profits, leaving very little scope for the companies to plough back a part of the profits in their business instead of remitting them abroad. Indications for investments in sectors other than petroleum, however, are for a further increase in 1961. Consents given by the Controller of Capital Issues for issue of shares to non-residents rose to Rs. 34 crores in 1961 from Rs. 19 crores in the previous year. Besides, there were sizable amounts of consents outstanding from the earlier approvals. Retained earnings were maintained around 1960 levels with the continuation, in general, of factors favourable for high levels of earnings. Capital repatriation in these sectors during 1960 was around Rs. 3 crores and it is unlikely to have increased to any significant extent in 1961.

While the year 1961 witnessed a net inflow of foreign capital for investment in the private sector, there was a net outflow of banking funds to the tune of Rs. 4.5 crores, after successive net inflows in the preceding three years. The net inflow in 1960, for instance, had amounted to Rs. 13.7 crores. The net outflow in 1961 reflected mainly the prevalence of dearer money conditions in the U.K., particularly after the steep rise (from 5 to 7 per cent) in the Bank rate towards the close of July 1961. It also reflected perhaps the satisfactory liquidity position of banks in India, assisted by the contraction of demand for bank credit during the slack season of 1961. The net outflow of banking capital was accounted for entirely by the sharp fall in the banks' foreign liabilities, especially currency liabilities.

With the progress of the development programme, the foreign liabilities of the official sector registered a further steep rise of Rs. 264.4 crores in 1961, on top of the increase of Rs. 261.7 crores in 1960, while its foreign assets declined again by Rs. 19.4 crores, though the actual decline was substantially less than that (Rs. 60.80 crores) in 1960. The aggregate outstanding foreign liabilities and assets of the official sector as at the end of 1961 amounted to Rs. 1,469.60 crores and Rs. 565.1 crores, respectively. Liabilities to the U.S. increased by Rs. 102.74 crores to Rs. 722.4 crores, to the U.K. by Rs. 26.3 crores to Rs 163.1 crores, and to West Germany by Rs. 33.2 crores to Rs. 143.3 crores. Liabilities to the international institutions also rose by Rs. 85.4 crores to Rs. 298.2 crores, of which Rs. 58 crores represented drawings from the I.M.F., the balance being the share of World Bank loans. India's official assets in the U.K. declined by Rs. 28 crores. As this decline was offset to some extent by improvement in assets in the U.S. and other countries, the total of foreign assets fell by only Rs. 19.4 crores, as against the drop of Rs. 60.8 crores in 1960.

The table below indicates the overall position of foreign investments in the country at the end of 1961, as compared with that in the three preceding years, as well as in 1956 (end of second Plan):

TABLE A: *Overall Investment Position*

(In crores of rupees)

	1961	1960	1959	1958	1957	1956
Private :						
Liabilities ..	761	691	611	573	543	493
Assets ..	— 761	— 691	— 611	— 573	— 543	— 493
Net position ..						
Banking :						
Liabilities ..	61	73	60	52	48	61
Assets ..	51	59	59	54	62	52
Net position ..	— 10	— 14	— 1	2	14	— 9
Official :

Assets ..	616	644	704	646	788	1,008
Net position ..	—1,676	—1,325	— 911	— 672	— 266	229

Note :—For the private non-banking sector, no estimates are made of foreign liabilities other than business investments, nor has it been possible to indicate the level of foreign assets.

It will be seen from the above table that, during 1961, the net foreign indebtedness of India spurted by Rs. 351 crores to Rs. 1,676 crores, as compared with the increase of Rs. 414 crores in 1960. More than three-fourths of the rise occurred in the official sector, the net foreign indebtedness of which moved up by Rs. 285 crores, as a result of the rise of Rs. 265 crores in official borrowings and drawing down of foreign assets to the tune of Rs. 20 crores.

Full details regarding the flow of foreign investments into India during the year 1961 are not available. The latest period for which the Reserve Bank study has provided detailed information is the year 1960. The data in respect of this year reveal the following broad trends:

TABLE B: *Inflow of Foreign Investments*

(In crores of rupees)

	1960	1959	1958	1957	1956
Private sources :					
Gross inflow	62.4	25.8	26.8	26.9	31.2
Of which :					
Retained earnings ..	14.5	15.3	9.7	9.5	10.5
Cash inflow ..	6.2	3.3	4.8	5.9	3.2
Non-cash inflow	41.7	7.2	12.3	11.4	8.5
Outflow	9.1	14.8	24.4	9.0	6.3
Net inflow ..	53.3	11.0	2.4	17.9	24.9
Official sources :					
Gross inflow	32.8	29.5	25.3	32.1	12.1
Outflow	7.7	2.6	..	..	..
Net inflow ..	25.1	26.9	25.3	32.1	12.1
Total gross inflow into private sector	95.2	55.3	52.1	59.0	43.3
Gross outflow	16.8	17.4	24.4	9.0	6.3
Net inflow into private sector..	78.4	37.9	27.7	50.0	37.0

Note.—Figures exclude foreign investments in the banking system.

The bulk of the increase of Rs. 42.3 crores in the net inflow of foreign capital from private sources during 1960 as compared with 1959 was accounted for by the petroleum sector, its actual share in 1960 being Rs. 31.5 crores, as against less than Rs. 3 crores in 1959 and net disinvestment of Rs. 15.7 crores in 1958. This substantial improvement was due mainly to the larger inflow of fresh capital and partly to a further reduction in capital repatriation. Incidentally, it reflects, to some extent, the oil exploratory and development activities in the country. Consequent upon the Government of India's decision to invite foreign oil companies to participate in oil exploration activities, specific detailed proposals were received from several companies. The manufacturing and plantations groups also participated in the rise in inflow. The net inflow from official sources during 1960 was Rs. 25.1 crores, that in 1959 being Rs. 26.9 crores. The total outstanding foreign investments in the private sector (other than banking) at the end of 1960 stood at Rs. 690.5 crores, of which foreign private sources accounted for Rs. 566.4 crores and official sources (as for instance Development Loan Fund of the U.S.) for the balance, namely, Rs. 124.1 crores. The industry-wise breakdown of outstanding investments is given in the big Table C at the end of the article.

Of the total net inflow of official capital (Rs. 25.1 crores), as much as Rs. 23.5 crores were on account of the U.S. Development Loan Fund and Eximbank. There was a net outflow of World Bank capital during the year of about Rs. 2 crores, an inflow of about Rs. 4 crores having been more than offset by an outflow of about Rs. 6 crores. There were further drawings from the U.K. loan for the Nahorkatiya oilfields pipeline project (Rs. 1.7 crore) and the Japanese yen credit (Rs. 2.1 crores). Industry-wise, the net inflow of D.L.F. and Eximbank loans was mainly to textile products (Rs. 4.1 crores), transport equipment (Rs. 7.1 crores) and metals and metal products (Rs. 8.3 crores). As regards World Bank loans, there was a net repayment by the iron and steel industry of the order of Rs. 3.8 crores. Drawings by the Industrial Credit and Investment Corporation of India amounted to Rs. 1.3 crore. It will be seen that the World Bank continues to be the largest single source. Of the total outstanding official capital of Rs. 124.1 crores as at the end of 1960, World Bank accounted for Rs. 78.1 crores or nearly 63 per cent. However, its importance declined relatively to 1959, when its share had been around 80 per cent.

Gross capital inflow from private sources was Rs. 62.4 crores in 1960, as against Rs. 25.8 crores in 1959. Gross inflow comprises fresh capital receipts and retained earnings. A feature of the capital inflow in 1960 was that the entire increase was accounted for by fresh capital receipts. Retained earnings, on the other hand, were somewhat lower in 1960 as compared with 1959.

The actual fresh capital receipts in 1960 registered a steep rise to Rs. 48 crores from Rs. 10.5 crores in 1959. Branches of foreign companies as well as Indian joint-stock companies shared, more or less equally, in the increased flow of fresh capital. A sizable part of the fresh investments in branches occurred in the petroleum sector. The increase in fresh capital receipts in the case of the Indian joint-stock companies reflected the speedier utilisation of approvals for allotment of shares to non-residents during the year. Allotments of shares during 1960 amounted to as much as Rs. 18 crores, as against only Rs. 6.3 crores in 1959, to which it had fallen from Rs. 7.9 crores in 1958.

Fresh investments in branches are usually investments in kind, by way of supply by head offices of plant, machinery and other goods and services. In the case of rupee companies also, trends in recent years have shown that increasing amounts of shares have been allotted to non-residents against considerations other than cash, namely, provision of plant and machinery, etc. These explain the predominance of non-cash investments in fresh capital receipts during 1960.

Retained earnings were somewhat lower at Rs. 14.5 crores, as against Rs. 15.3 crores in 1959. This did not, however, indicate a decline in earnings. In fact, total earnings of foreign-controlled companies accruing to non-residents registered a further rise to Rs. 41 crores during 1960, as compared with Rs. 38.6 crores in the preceding year and around Rs. 35 crores in each of the two years 1957 and 1958. The rise in earnings during the year was largely because of higher earnings in the "manufacturing" and to some extent, in the "plantations" groups. Profits earned in the petroleum industry were somewhat lower.

There was a fall in the amount of private foreign capital repatriation from Rs. 14.8 crores in 1959 to Rs. 9.1 crores in 1960; in 1958, it was as high as Rs. 24.4 crores.

The U.K. re-emerged as the principal supplier of capital to India during the year 1960. Its actual share in the total net inflow of Rs. 78.4 crores was more than half, Rs. 44.5 crores, to be precise, which was substantially higher as compared with the meagre total of Rs. 1.5 crore in 1959. Almost the whole of it was private capital, official capital being just Rs. 1.8 crore. Of the net private capital inflow of Rs. 42.7 crores from the U.K., the petroleum industry alone accounted for nearly three-fourths or Rs. 30 crores. Manufacturing industries benefited to the extent of Rs. 10.5 crores. The U.S., which was the leading country in 1959, came second. The net inflow of capital from this country was Rs. 28.5 crores, as against Rs. 24.2 crores in 1959. Excluding official capital (loans from the D.L.F. and Eximbank) of the order of Rs. 23.5 crores, private capital inflow was actually lower at Rs. 5.0 crores, as against Rs. 7.6 crores in 1959. On a gross basis, however, the inflow was somewhat larger at Rs. 8.8 crores, the figure for 1959 being Rs. 7.6 crores. In other words, there was repatriation of U.S. capital to the extent of Rs. 3.8 crores during 1960 which was higher than in any of the preceding years since 1956. The major portion of the amount repatriated occurred in the petroleum industry (Rs. 3 crores). Among the other countries, the net inflow from West Germany was maintained at the previous year's level of Rs. 1.5 crore. The outstanding foreign business investments—in crores of rupees—at the end of 1960, 1959 and 1955, respectively, were:

U.K.: 446.4, 400.3 and 376.8; U.S.: 112.7, 84.2 and 39.8; Switzerland: 8.9, 7.6 and 6.6; West Germany: 6.8, 5.4 and 2.5; Canada: 5.2, 4.7 and 2.9; Japan: 3.4. 1.4 and 0.2; Pakistan: 4.2, 4.2 and 4.4; Malaya: 1.3, 1.2 and 2.1; World Bank: 78.1, 80.4 and 2.7; others: 23.5, 21.2 and 18.1.

The share of "direct investments" in the total foreign investments which had declined from 76 per cent in 1958 to 73 per cent in 1959 was maintained around this level in 1960. Of the total outstanding of Rs. 690.5 crores as on 31st December 1960, direct investments amounted to Rs. 501.7 crores, the balance of Rs. 188.8 crores representing "portfolio investments."

TABLE C: *Outstanding Foreign Investments—End of Period*

(In crores of rupees)

*Represents World Bank capital.

49 years ... not even a scratch

The rate of industrial accidents in India has increased from about 24 per thousand workers in 1938 to about 44 in 1959. Every year, over 93,000 workers are involved in accidents and 250 lives are lost. Also wasted annually are a million man-hours—enough to produce 170 broad guage locomotives or 700 coaches for the Indian Railways.

Safety has always been Tata Steel's watchword as efficiency is hardly possible without it. 'No-accident month' as an annual feature, safety exhibitions, training in safety, safety awards, safer working conditions, a continuing campaign under the direction of joint councils to turn safety into a habit ... these are some of the means adopted in Jamshedpur to prevent accidents in the Plant.

Safety, however, depends largely on the worker himself because about 75 per cent of industrial accidents are found to be caused by human negligence. This is where men like Jamuna Dube, the oldest employee in Tata Steel, come in. He has worked for 49 years without ever sustaining an injury, not even a scratch.

The importance of safety was one of the first things that Jamshedpur taught Dube when he arrived in the Steel City half-a-century ago ... a city where industry is not merely a source of livelihood but a way of life.

MONTHLY ECONOMIC REVIEW

MARKETS RALLY AFTER CUBAN CRISIS

IS AN ECONOMIC RECESSION AHEAD?

By W. T. C. King

EDITOR, *THE BANKER*, LONDON

FOR a nerve-wracking week or more during the second-half of last month (October 1962), developments on the economic front were wholly overshadowed, in most financial centres of the world, by the possibilities conjured up by the crisis over Cuba. Only in the past few days, since it became possible to breathe more freely, have businessmen returned to the assessment of the economic and financial prospect.

The financial markets, inevitably have suffered a severe jolt, but, on the whole, their behaviour has certainly not been out of proportion to the extent of the fears generally current. On the contrary, there can be no doubt that the equity share markets, in particular, would have reacted much more violently had they not come through the salutary shake-out that started with the crack on Wall Street at the end of May. Not surprisingly, Wall Street reacted a good deal more violently than did London, but, in both centres, the rebound of the past few days has more than made good the crisis losses. On Wall Street, the Dow Jones average of industrial common stocks, which at mid-September had been over 590, dipped at one time to 558 (still, however, 23 points above the low point reached last June), but has now rallied to over 597, or fully 18 points higher than at the end of September. In London, the ordinary share index compiled by the *Financial Times*, which at the end of September was around 270, dropped at the worst point to 263.7 (on 24th October), but had at the beginning of October rallied to 276.2.

Gilt-edged Market

The Gilt-edged market in London has, however, suffered more severely, if allowance is made for its inherently less volatile character. The Government securities index, which had reached a peak of 86.9 on 18th October, tumbled to 83.2 in the ensuing week, and has since recovered only to just over 85. The sharpness of the response here is partly a consequence of the extraordinary strength that had been shown by this market during the preceding four or five months. At the beginning of this year, the index had stood at only 75—and, at the time of the emergency measures to defend sterling in mid-1961, it had reached an all-time low of 72. But more and more people had grown convinced that long-term interest rates would trend downwards, at least during the medium-run, from the exceptionally high levels that had ruled in the past few years when a very strong demand had been built up for Gilt-edged stocks. The Government broker has been able to make "funding" sales of stock on what has probably been an unprecedented scale—but, in spite of the large releases of stock, the pace of advance in prices, up to the middle of last month, was very fast. A part of this demand has certainly been of a speculative character, which explains the comparative vulnerability of the market to the international political scare; the shake-out should leave it rather healthier.

Foreign Exchange and Gold

In the foreign exchange markets, the major strain was naturally felt on the U.S. dollar, but the D-mark also came under heavy fire because of fears of renewed tension over Berlin. The nervous sellers of these two currencies were principally seeking to exchange into Swiss francs or gold, but the operations conducted through London had, as usual, the effect of putting some strain on sterling. The new arrangements for co-operation between the leading central banks for smoothing operations in the gold and foreign exchange markets were thus put to their first major test; they undoubtedly provided a substantial cushion, so that the extent of the shift of funds set in motion by the crisis cannot be gauged either from the changes shown in official gold holdings or from the movements in exchange rates.

Over the month as a whole, however, the central gold and exchange reserves of the sterling area substantially reversed September's movement, rising by £11,000,000 to £1,008 million. At the peak of the crisis, the turnover in the London gold market was understood to have been the highest volume since the post-war reopening of the market eight years ago. Prompt and substantial releases of gold by the authorities prevented any breakaway of the gold price such as happened during the dollar scare of two years ago. The quotation did, however, rise to its highest for roughly a year—from 35.14 dollars a fine ounce to 35.20 dollars, but it has since come back to 35.12 dollars.

Business Activity

Aside from these immediate consequences of the Cuba crisis, the most important new tendency discernible on the economic horizon has been an extension of the uneasiness about the trend of world trade. The month has been marked by a crop of rather pessimistic forecasts about the trend of business in the United States. Business activity there appears to have levelled out during the third quarter of this year; the seasonally-adjusted index of industrial production was stable at 119 from July to September (1957=100), while provisional estimates of gross national product for the third quarter suggest that the rate of growth slowed down to little over one-half of one per cent. Disappointment over this performance has led a number of unofficial commentators to predict a slipping into actual recession early in 1963, or at least a continuance on the plateau; and some observers have also detected signs of a slackening of activity in Western Europe.

With the aid of this inconclusive evidence, a number of writers have already been conjuring up the bogey of world deflation, and much play has been made with some important public utterances on this theme from Dr. Per Jacobsson, Managing Director of the International Monetary Fund. Dr. Jacobsson proclaimed some years ago that the great post-war boom was over; and now, in the second of two public speeches touching on this subject last month, he has given his reasoning in some detail; we have really to ask ourselves whether there is not now a more general slackening in the rate of economic expansion—a slackening which may also be beginning to affect countries on the continent of Europe and which, if it continues, could lead to another recession and perhaps even set off deflationary tendencies, which would then have to be counteracted by, among other things, an expansion of credit. For three years, wholesale prices both here in the United States and on the world markets have been remarkably stable, evidencing the end of the post-war inflation. Supply was caught up with demand; and, as productive capacity continues to increase, a downward pressure on prices may well be intensified in a wide range of products—raw materials, semi-manufactured, as well as finished manufactured products . . . deflation can undoubtedly be brought about by mistaken monetary policies, but . . . it can also result from the effects of continuous cost increases. . . .

For these reasons, Dr. Jacobsson has been emphasising the need for the leading nations to act in concert to frame expansionary policies to avert any danger of recession.

It is not certain, however, that he himself is as pessimistic as these utterances have led some people to suppose. In the same speech as that just quoted, he affirmed that he "certainly saw no sign" of any immediate dip in business activity in the United States—though he equally could find "no clear indication" of any fresh stimulus that might lift the American economy from its plateau. On the other hand, he emphasised the impressive way in which business on both sides of the Atlantic has taken the fall in the stock exchanges in its stride. It has also gone "steadily on its way, unperturbed by politics." Finally, Dr. Jacobsson evidently hopes that the alerting of the nations to the now unfamiliar danger of deflation will ensure that the condition itself will never materialise.

If these dangers are indeed already presenting themselves—and I, for one, would still reserve judgment about that—there is certainly no doubt that from Britain's point of view, in particular, any corrective action must be duly concerted international action. There have been some signs in the past month that the unused resources in Britain's economy have widened a little further: in the five weeks to mid-October, the rise in unemployment, having previously been only a little more than seasonal, suddenly jumped to almost double the rate normal for this time of the year. In the early stages of recovery from a phase in which output has been stable, or rising only slowly, an expansion in unemployment is not necessarily inconsistent with continued recovery.

But this latest movement nonetheless led to a revival of demands from certain sections of opinion for a further dose of reflationary action. Yet if it is true that the prospects for world trade are becoming less bright, then in contemplating any substantial reflation Britain would need to proceed very warily unless and until other countries joined in the expansionary action. This principle was doubtless well in mind in the additional measures announced by Mr. Maudling just as this article was being prepared for despatch. The measures chosen were deliberately selective ones—first to create new incentives for capital investment by industry by liberalising and extending the various capital allowances for taxation purposes; and, secondly, to stimulate by tax reductions the motor industry (at present working at less than full capacity) which has a large part to play in Britain's export drive.

The U.K.'s contribution to the E.E.C.'s agricultural fund "could well be £250 million a year" for cereals, milk products, beef, eggs and poultry and pigmeat alone, according to the chief economist of the National Farmers' Union, Mr. A. Winegarten. This is the fund to which member-countries contribute according to the scale of their food imports. "A chaotic and unpleasant situation for us all" would result from any sudden abandonment of Britain's agricultural and food arrangements through this country joining the Common Market. Food prices would rise sharply and that butter "could easily reach 6s. a pound." It is, therefore, necessary for the Common Market countries to recognise that the U.K.'s national circumstances are "significantly different from their own."

THREE PER CENT RISE FOR MILL LABOUR

ANNUAL MEETING OF COTTON FEDERATION

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 13*th November*

AFTER negotiations lasting for over 15 months, the Lancashire cotton trade unions have received notification from the Industrial Court that a wage advance of three per cent had been awarded to the industry's 150,000 spinning and weaving workers, back-dated to the beginning of October. The decision caused widespread disappointment, as the original claim had been for a ten per cent increase, and an offer of a flat rate rise of 5s. 9d. per week by the employers had been turned down.

Union officials compared the three per cent award with the six per cent rise granted to British railway workers and indicated the possibility of a fresh approach to the employers. Mr. Lewis Wright, Weavers Amalgamation Secretary, said: "We shall have to consider the whole position before deciding what to do." Cotton workers received a 7½ per cent increase in March 1960 and, subsequently in January last year, working hours were reduced from 45 to 42½ hours weekly.

Settlement—for the Time Being?

The Industrial Court's decision can scarcely be said to have roused enthusiasm anywhere in the Lancashire trade. After fifteen months' campaigning for ten per cent, the unions are certainly disgruntled, especially as they had rejected a flat rate advance of 5s. 9d. weekly and the award will in some cases mean less than that for the lower paid operatives.

There may be more justification for the employers to take a less prejudiced view of the arrangement. Part of the recent broadening in demand has been directly due to the hardening of prices, as sellers put up their quotations to allow for a possible increase in the wage bill.

Odious Comparisons

Attempts may yet be made to stretch margins slightly in an effort to gain ground, as order lists show some improvement, but the limited advance may well encourage customers to suggest that producers can afford to absorb the higher costs without passing on the increase. Perhaps the most vital factor—duly stressed in the unions' case—is the effect of the wage level on recruitment. Already adverse comparisons have been drawn between the six per cent pay advance granted during the same week to the railwaymen. Cotton's award will do nothing to stimulate a rush of young workers to the mills.

Nor does the decision completely dispose of the uncertainty surrounding the future of wages and prices. Within a few hours of the receipt of the document from the Industrial Court, hints were already being thrown out about the possibility of a fresh approach to the employers on the subject.

More Leave Mills

Output and employment figures issued by the Cotton Board show that, in twelve months, more than 21,000 workers have left the cotton industry, bringing the total number of workers on the books down to 153,280—the lowest figure on record. In four weeks ended 29th September, another 1,470 workers left the industry.

Average weekly yarn output during the period rose from 10,530,000 lbs. in the previous month to 11,490,000 lbs. while cloth output per week rose from 28,060,000 yards to 29,640,000 yards. Strict comparisons between the months of September and August are not possible owing to holidays in mill towns during August.

A Centre of Activity

Even the constant critics of the industry rarely have adverse comments to make about the Cotton Board's Productivity Centre, whose efforts to promote efficiency in Lancashire's mills have received due commendation over the years. Just a glance at the current syllabus of the Centre, illustrated in the notes issued periodically by its organisers, shows the extent of the activities covered and the detailed work involved in keeping the trade on its toes.

Probably the most stimulating of the Centre's recent ventures has been in the realm of inter-firm comparison, about which a good deal has already been written and its value assessed. The initial pilot scheme was successful enough to encourage a much wider application of the system and meetings are being held in the mill towns during the next few weeks to explain how more companies can benefit from such an exchange of information. One major aspect of the scheme is that the data obtained can be presented, after analysis, in such a way that no firm taking part is identifiable and yet the individual company can quickly observe how its standard compares with similar concerns.

Continental Organisation

The European textile scene must obviously be a key point in looking ahead to the future of the trade in Lancashire and the Centre's project of holding seminars every other month to hear the views of a number of Continental experts deserves widespread support. Dealing in turn with the respective European countries, papers will be given on organisational development, technical progress, and the latest managerial techniques employed in each area.

A revival of decision-making exercises is also planned in the Centre's winter programme, aided by a newly-installed computer made available by courtesy of the Cheshire County Council. Those attending these courses compress into a week-end the business experience of up to five years in a particular firm. By this means practical experience is gained of dealing with policy problems and taking action in the light of simulated conditions which might arise in a hypothetical set of circumstances.

In addition to these highly technical schemes provided for the benefit of the industry as a whole, officials of the Centre are engaged in long-term research into the use of computers, machines which are widely adopted even by some of the smaller units on the Continent. A course of linear programming has just taken place and a training programme is now in progress on management methods for foremen. The versatility of the organisation can scarcely be doubted when its wide range of facilities is thus displayed.

I.C.F.'s New President Speaks

It is good to think that there are still, amongst the many hundreds of thousands of people working in textiles all over the world, some who still believe that it has a glowing future. The glamour associated with more modern industries can, of course, be detrimental to recruitment in some of the traditional trades but it should not so dazzle the entrant into business or commercial life to such an extent that the older ways of earning a living are bypassed.

The new President of the International Cotton Federation, Mr. Alfredo Sedo of Spain, is clearly a firm believer in taking advantage of every aspect of propaganda to promote a better image of textiles as a form of employment throughout the world. His opening statement on taking office is well worthy of repetition. "It is sometimes said," he declared, "that the textile industry is an old industry with no growth potential. Nothing could be further from the truth. New and revolutionary developments in textile technology are taking place at this very moment after a long period of relatively little innovation. Fully automated textile mills are already a reality and the prospects for increasing *per capita* consumption of textiles all over the world are considerable."

Ahead in Policy

What is not perhaps widely recognised was emphasised by Mr. Sedo, that the textile trades are in the forefront in getting together to discuss policy on an international basis, as witnessed by the G.A.T.T. arrangements which provide an interim attempt to solve some of the problems entailed by economic development in the industrially emerging nations. These policies, indeed, he added, may well be followed by other industries when the need arises. Textiles have, therefore, been the first to adapt

NUTRITION AND WORKING EFFICIENCY

INVESTMENT IN BALANCED DIET FOR WORKERS IS MONEY WELL-SPENT

IN spite of all the spectacular scientific advancement and industrial progress made during the past fifty years, the world is still unable to feed adequately almost half its population. Millions still suffer from serious undernutrition and malnutrition and this situation presents a continuing challenge to the entire world. In many countries, food consumption is still limited by the capacity to produce foodstuffs and by the low purchasing power of the people. In fact, in vast areas of the world, especially the thickly populated, underdeveloped countries, development of agriculture and industry is perhaps the only way of ensuring a regular and adequate food supply. While the inadequacy of suitable equipment, funds and trained personnel is recognised as the main factors hampering production, what is not so readily recognised as an inhibiting factor is the poor quality of the human material. This is the result of undernutrition and malnutrition which impair the working efficiency of the people. In fact, here is a vicious circle that has to be broken somehow, the vicious circle being lack of suitable food—undernutrition—low working efficiency—low production of food.

The effect of the quantity and quality of food on the capacity for work is not often clearly recognised because of the difficulty of measuring this effect under normal working conditions. A study of the relation between nutrition and working efficiency, as well as of the importance of education and training in nutrition, has been made by the Food and Agriculture Organisation (F.A.O.) of the United Nations. Its findings are published in two volumes* in the Basic Study Series in support of the "Freedom From Hunger Campaign." The objective of the study is twofold: (1) to bring to the attention of interested people available information, obtained through experimental activity in the laboratories and in large working communities and through surveys and experts' reports, about the influence of the diet on working efficiency, and (2) to suggest practical measures for the improvement of food consumption of the working population.

Although every person—the housewife, the farmer, the factory worker, the child at school—is a "worker," the emphasis in the F.A.O. study is on those workers who can be easily reached through their employers and on the measures which are likely to bring about improvements in nutrition, physical fitness and working efficiency in a relatively short period.

Poor Food—Low Vitality

While accurate data regarding the actual quantity of foodstuff consumed per day by workers employed in various industries in different countries are not available, all authorities are agreed, according to the F.A.O. study, that, in most countries in Africa, Asia and Latin America today, the average food consumption falls short of the optimum desirable from the point of view of the health and efficiency of the worker. An unfortunate aspect of this problem is that workers in these countries adapt themselves to insufficient ration, scarcely realising that they are underfed and that, as a result, their vitality is low. While the exact extent to which inadequate food consumption reduces working efficiency has not been measured, almost all the official commissions, as well as individual experts who have studied the subject, agree that a poor diet is an important cause of reduced capacity for work for the following reasons: (1) The body tends to protect itself from the lack of proper food by avoiding effort, the final result being lethargy, lack of initiative and drive. (2) Poor diet lowers the worker's resistence to disease. (3) It leads to a considerable amount of absenteeism on account of sickness. And (4) when the workers are undernourished and tend to tire quickly, the accident rates tend to be higher. It is significant in this context that the countries which have the lowest *per capita* food consumption in terms of calories and protein intake per day are also those where the efficiency of the workers is the lowest.

It is common knowledge that good meals fortify energy, while lack of it weakens people. This implies an interrelation between nutrition and working efficiency. Dietary requirements vary according to different occupations. The F.A.O. Committee on Caloric Requirements, in its 1957 report, indicated three levels of caloric requirements according to different degrees of activity taking the Reference Man as the standard. The Reference Man is defined as a person 25 years of age, healthy, weighing 65 kilograms, living in the temperate zone at a mean annual temperature of 10°C. According to the Committee, 2,800 calories per day are required for sedentary jobs, 3,200 calories for jobs involving moderate activity and 4,400 calories for jobs involving heavy activity. General figures of this kind, however, are not of much value in assessing precisely the caloric requirements of individual occupations.

Caloric Intake

The study points out that, for the efficient development of the production programme of an industrial or agricultural establishment, it is not enough just to consider the number of workers necessary for operating machines and for other work processes. Planning should include an estimate of the effort expected to those workers and eventually the calculation of their daily food requirements. On the basis of such data, and taking into consideration the other information concerning salaries, available foods, cost of foods, etc., it is possible to evaluate whether the workers are in a position, economically and otherwise, to obtain from their daily diet the amount of energy they require. In considering the dietary requirements of workers, evidence has been provided of the fact that caloric intake is the most important factor influencing work output. The requirements for calories rise with the increase in physical activity. Workers' requirements for protein, vitamins and minerals do not vary as much as caloric requirements. However, more than the average requirement of proteins would be needed under certain circumstances to improve and increase the workers' physical strength, while, in some cases, more vitamins, especially of the B. group, may be beneficial in improving working efficiency.

A balance between caloric requirements and caloric intake is the first requisite for satisfactory working efficiency, but it is not the only one. Protein, which is one of the main components of the body structure, must be supplied by the diet in quantities sufficient to build up and maintain muscular tissue. An adequate daily allowance for the normal, adult man is one gram of protein per kilogram of body weight.

Diet and Production

The adverse effect upon working efficiency of inadequate food consumption, in general, and deficiency of single nutrients, in particular, have been demonstrated in several field observations as well as under experimental conditions. The favourable effect of dietary improvement on production is a demonstrable fact. The following extract from the F.A.O. publication illustrates this point:

"The influence of dietary supplements on the work output of a group of coal miners in the Ruhr district was investigated with the aim of finding whether the low production could be raised by increasing the food rations. A first supplement of 400 calories increased the coal output to almost 10 tons per person, which was what the workers knew was expected of them. The resulting fall in body weight indicated that energy expenditure was slightly in excess of caloric intake. A further increase in calories resulted in a small further increase in output, but body weights rose again. Evidently, 177 calories were required per ton of coal, and for the desired increase in output, 600 extra calories were necessary.

"A controlled group of 30 workers engaged in building railway tracks moved about 1¼ tons of earth per hour on a food ration supplying a total of 2,300 calories. After ten weeks, additional food was given which brought the calories up to 3,000 and raised the output to 2½ tons per hour. Output per 1,000 calories increased almost 30 per cent. In the course of a year, the work output rose and fell with the inevitable minor fluctuation of food rations while body weights remained constant or even increased slightly. It may be of interest in this context to note that a further increase of work output was achieved by a bonus of cigarettes for each additional ton, which was temporarily given for reasons of comparison, but as there was no increase in food intake, the increased output proved to be at the expense of body weight.

"An especially impressive example is the experience gained in the Central American Public Road Programme in Costa Rica. For the road work which was done by United States contractors, local labour was employed and proved to be extremely inefficient at work. After some time, the organisation of the construction camps was changed, sanitation was improved and the management began to supply substantial meals, including large portions of meat, to the workers who had formerly been subsisting on a poor and mainly vegetable diet. The resulting improvement in working efficiency was striking. ...

"The benefits to be gained from the supply of a balanced cooked meal to the workers have long been recognised in the mining industry in South Africa. A survey carried out in 1956 revealed that the average caloric value of the rations supplied to each worker in the mines in South Africa was approximately 4,500 calories per day. It was claimed that the balanced cooked meals led to a marked improvement in physical condition after a spell of mining employment. Hard work was performed and weight in most cases increased.

"Similarly, in Ruanda Urundi, an employer estimated that, by providing a balanced cooked meal to his workers, he raised the productivity by 30 per cent. In Madagascar, a sugar refinery is reported to have reduced the turnover rate of migrant labour from 60 to 6 per cent by the introduction of a balanced cooked meal.

"In Zanzibar, it was reported in 1937 that, after well-balanced meals were introduced on an experimental basis by the Clove Growers' Associations, the employee's capacity for work was greatly increased, provided the worker remained in regular employment for some weeks; also, the increased efficiency more than compensated for an addition of a little over 50 per cent in the average individual cost of a labourer.

"Experience gained during the last war in a rubber plantation in South Viet-Nam showed an increase of 50 per cent in work output after the opening of canteen facilities providing a liberal diet to the workers."

Such surprisingly high rates of increases in production are largely due, according to the F.A.O. study, to the fact that the workers' diet had been grossly inadequate before the introduction of feeding facilities on the work site. It is obvious that the resulting increase in output is greatest where the work-intensity depends mainly upon the activity of the worker and may be almost absent where the worker himself has no influence on the speed of the work process. It is needless to add that a marked increase in output will not occur where the diet is already perfectly adequate. Nevertheless, the F.A.O. study claims that beneficial results can be expected even in rich countries, where nutritional standards are high, from the establishment of such facilities as well-organised lunch rooms where cooked foods are served hot and fresh. A survey carried out by the U.S. Department of Agriculture in 1956, for instance, showed that about half of the manufacturing plants in the U.S. employing 250 or more workers had facilities for serving hot food to the employees and approximately nine out of ten plants had at least one kind of vending machine dispensing food or beverages. These facilities were considered beneficial to employee morale, labour-management relations, employee health and labour productivity.

Feeding Facilities

The F.A.O., of course, recognises that a permanent improvement in food consumption can be brought about only by long-term measures, aiming at the general economic development of a country. But it contends that there are other measures, applicable in large working communities, which can often bring about prompt improvements in physical conditions, health, morale and productivity. Among them the most important, and by far the most effective, are establishment of non-profit food stores and canteen facilities for workers at the working site. Mere provision of food should not be seen as the only goal, however important, of these feeding programmes. In order to cultivate better nutritional habits in workers and their families, it is important, stresses the F.A.O. study, to use these feeding facilities as centres for education in nutrition. This is important, because centres where good food at low price are made available will attract workers in large numbers. The money spent on giving food to employees through canteens is one of the soundest and most productive investments. The following comment of the British Committee on Nutrition in the Colonial Empire in respect of nutrition in Africa is as valid today as it was 23 years ago, and is true of most countries in Asia and Latin America. "We regard it as almost certain that in Africa, quite apart from humanitarian considerations, any money spent on bringing the food consumed by the labourer upto an adequate well-balanced ration will be money well spent from the immediate point of view of an employer."

Education in Nutrition

No programme for improving nutritional standards can succeed, unless equal attention is devoted to education and training in nutrition. In more than twenty countries, experience has demonstrated that programmes of education in nutrition, combined with teaching improved methods of preparing food and feeding programmes to encourage better habits of diet can lead to more efficient use of present food supplies. Education in nutrition also facilitates the optimum use of additional food supplies made available through increased agricultural production or international aid programmes. Programmes of education may be carried out most effectively through established channels—the school teacher, agricultural extension worker, health visitors, community leaders, etc.—if they are provided with adequate training and supervision. It is necessary to emphasise the need for training in nutrition for workers at professional, technical and field levels. Such training must be closely related to the food supplies of the country and the food policy of the Government and also to the educational level of the trainee and his function within the overall programme.

THE ROAD TO BURNPUR

A detour at 200 km. on the trunk route from Calcutta. Less than forty years ago it would have led to a cluster of sleepy hamlets, named severally—Hirapur, Santa, Narsinghband, Napuria and Dharampur. The same road today takes you instead to a purposeful steeltown—Burnpur.

There, at the million-ton integrated steelworks, production records are quietly being set and excelled and production efficiency is currently the highest among all steel units in India. For us it is all in the day's work and we seldom talk about it. Where there is a challenge to be met, IISCO takes it naturally, in its stride.

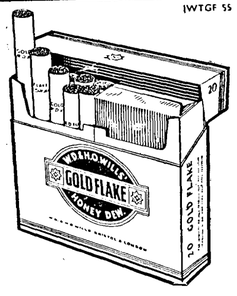
Having fun—wish you were here

Ajanta and Ellora. At last—an old dream realised. Everything is epic. Incredible blending of architecture, sculpture, painting. Unique, says our professor-guide. Certainly awe-inspiring. Somewhat exhausting. (And Wills Gold Flake? As fine as ever—superbly satisfying—wherever you go they're good.)



INDIA AND WORLD COFFEE AGREEMENT

GOVERNMENT'S DECISION EXPECTED SOON

IT now seems almost certain that India will join the new five-year World Coffee Agreement; an official anouncement of the Government's decision is expected by the end of this month. Both the Indian Coffee Board and the spokesmen of coffee growers have favoured India's membership of the Agreement. The draft of the Agreement, it may be recalled, was finalised at the United Nations Coffee Conference, held at New York from 9th July to 25th August last, and the formal approval of the draft took place at a one-day meeting on 28th September. The salient features of the Agreement have already been dealt with in our earlier issues, so that it is unnecessary to refer to them again. Briefly stated, the main objectives of the Agreement are threefold:

To assist in increasing the purchasing power of the coffee-exporting countries by keeping prices at fair levels and by augmenting consumption;

to prevent the general level of coffee prices from falling below that in 1962; and

to secure prices which are equitable to consumers.

The objectives are sought to be achieved primarily through the mechanism of export quotas. Basic quotas for the five seasons commencing from October 1962 have been fixed for each country and these are subject to review in the third year. An actual quota is to be fixed each year as a percentage after taking into account probable world demand; for the first year, the quota fixed equals 99 per cent of the basic tonnages. Even this can be varied in the course of the year in the light of prevailing market conditions. The International Coffee Council has full freedom to fix quotas at any level, but, in general, its decisions are subject to confirmation by a two-thirds majority of both importers and exporters voting separateiy. The aggregate basic export quotas amount to 45.57 million bags (of 60 kilos each), of which 32.65 million bags have been assigned to Latin American countries and 12.92 million bags to producers in Africa and Asia; India's quota is fixed at 360,000 bags (or roughly 21,000 metric tons).

Reliance on Quota Mechanism

The reliance on export quota mechanism to stabilise world coffee prices is only as it should be, inasmuch as it is, as the latest quarterly *Review* of the National and Grindlays Bank, London, says, much easier to approach the problem of prices and surpluses at the point of export. For it is difficult to regulate coffee output, because of the high proportion of smallholders in estate production; it is estimated that one-third of world output comes from farms of less than ten hectares. The *Review* has analysed the implications of the Agreement and assessed the prospects of its working.

The *Review* states that the quota mechanism envisaged in the World Coffee Agreement sounds a little complicated, but observes that, in point of fact, the formula incorporates a principle which is a familiar feature of many agreements which seek to equate supply to demand. It no doubt admits that the satisfactory operation of the Agreement depends almost entirely on the *bona fides* of the participating countries, but hastens to say: "This is true of practically all international pacts and, as it is so clearly to the advantage of all coffee producers to have a stable market at this moment of changing patterns of world trade, there is good reason to hope that the new Agreement will be largely self-enforcing." In its opinion, there will be general agreement that it is all to the good that the coffee industry should be able to plan ahead on a fairly long-term basis, but there will be less unanimity on a few details of the charter. To some of the smaller producers—India is one of them—the *Review* points out, the Agreement will doubtless appear that one of the main effects of the Agreement is to confirm and further entrench the position of major producers, without making any real impact on world stocks which now amount to about 1½ years' normal shipments. In this connection, attention is drawn to the fact that the African countries have come to look upon coffee cultivation as a valuable earner of foreign exchange and other revenues and that the Governments of these countries encouraged new plantings under the stimulus of high prices prevailing during the major part of the 1950's.

How exactly will the Coffee Agreement work? This is a difficult question to answer, especially in the context of the possibility of an enlarged Common Market taking the initiative to secure world-wide agreements to protect the producers of primary and agricultural products as some compensation for possible loss of traditional markets. Alluding to this aspect, the *Review* makes the following observations:

"Such agreements would regulate the price and production policies of importers and exporters, prescribe maximum and minimum quantities to enter international trade, deal with stockpiling and the special problems of the developing countries. In their proper context, these are wholly worthy objectives and not to be despised. But world-wide agreements are not easy of achievement, as has been shown by the long and tortuous negotiations leading to the final draft of the new International Coffee Agreement. An agreement having been achieved, there remains the problem of securing the strict compliance of the signatories. In the case of the Coffee Agreement, seventy countries were involved in the negotiations, though not all of them will necessarily ratify the Agreement; if we ever reach the point where the world is ready to negotiate a whole series of commodity agreements, the numbers involved will be even larger and much patience will be needed to resolve the many conflicting claims. Meanwhile, the working of the 1962 coffee pact will be watched with a sympathetic, but critical, eye.

"Obviously, a great deal will depend on the attitude of mind in the many countries involved and the good (or not so good) intentions of their Governments. Much can happen in five years, which is the term of the new Agreement, and, for the small producers who, unlike Brazil or Colombia, are not yet encumbered by the deadweight of chronic surpluses, the temptation to cut loose from the Agreement may sometimes be strong. On the whole, the total area under coffee continues to increase and it is a wry commentary on man's capacity to control the affairs of this particular industry that probably the most effective curb on production has so far been found to be the severity and frequency of frosts in the coffee areas of Brazil which, as we have seen, is the world's major producer."

Huge Surplus

Nevertheless, the *Review* considers it imprudent to rely too much on the vagaries of climate to equate the supply of and demand for the coffee bean. It recalls the F.A.O. forecast of the persistence of a substantial surplus until 1965 and probably for some years thereafter. The total world imports in 1965 are expected to account for no more than 60 per cent of world production. There may, of course, be an increase in consumption in producing countries and some industrial uses of coffee (such as fertilisers and oil) may be found. Even so, total consumption three years hence may be no more than 80 per cent of total production. The *Review*, therefore, welcomes the Coffee Agreement at least "as a brake in a situation that could soon get out of hand."

India's Participation

Commenting on India's participation in the Agreement, the *Review* says:

"It is not yet clear whether India will accept the new International Agreement, but, if she does, it is understood she has been given a not ungenerous export quota of which, in her present endeavour to augment her export earnings, she will doubtless wish to make full use. India is capable of producing a high quality arabica coffee. Her exports rose from 321,000 cwts. in 1960 to 629,000 cwts. in 1961, but there is some evidence to suggest that they have fallen away in the current year. The decline is, in fact, in sales to India's customers in the E.E.C., the U.S.A. and the U.K. which greatly exceeds the rise in her coffee exports to the U.S.S.R. and in Eastern Europe."

Would it be in India's interest to join the world coffee agreement? A categorical answer to this question is rendered difficult by the absence of any provision in the Agreement for an appropriate revision of the export quotas for small producers as and when their production expands to a level permitted by the suitability of its soil and climate. Generally speaking, it may appear injudicious for India to keep out of the Agreement when 36 producing countries and 22 importing countries together accounting for 95 per cent of the world's coffee trade are parties to the Agreement. One of the arguments put forward against India joining the Agreement stems from the fear of encroachment on the country's freedom to regulate output. But it would appear from the details of the Agreement that there is no provision which seeks to place a direct limit on India's freedom to step up output. But what is the use of this freedom if India cannot use a part of its increased production for earning more foreign exchange which it badly needs? One may, of course, argue that, ultimately, India may be able to persuade the Council to allot a bigger quota, but this is only a hope.

Quarterly Regulation

Besides, there are some articles in the Agreement which might create some problems for India. Mention, for instance, may be made of Article 13 which provides for quarterly regulation of coffee exports. It is stipulated that the actual shipment of coffee from any member-country should not exceed 30 per cent of its total quota in the first quarter (October-December), 60 per cent in the first two quarters and 80 per cent in the first three quarters. Such a regulation, it is said, will cause some difficulty, because, with the cropping patterns prevalent in India, the country may not have coffee ready for export in the first quarter and it may have to export 80 per cent of its surplus before the monsoon. Similarly, Article 55 is likely to affect the consumption of chicory-mixed coffee, besides restricting the addition of chicory in internal supply within a specified quantity. Article 40 is not of much benefit to India, though it states that exports may be freely made to non-traditional markets, listed in Annex B, over and above the quota allotted to each country. For there is the restriction on the total quantity that any exporting country may make to the whole of the countries listed in Annex B.

No precise information is yet available on two important aspects of the Agreement. One, why should certain countries be given special consideration in the matter of quotas? Two, how is it that the actual shipment of coffee from India during the calendar year 1961 was not accepted as the basis for determining its export quota? Nor is it clear as to how the export quota can be varied (in future) to reflect programmes of production increases undertaken prior to a member joining the Coffee Agreement. It remains to be seen to what extent the Government of India will be safeguarding the country's interests in all these respects before giving its consent to the Agreement.

COFFEE SALES

The total coffee receipts into the 1961-62 pool upto the end of October 1962 amounted to 45,534 tonnes, as against 67,386 tonnes in the corresponding period of 1960-61. The receipts comprised 22,434 tonnes of plantation coffee, 6,614 tonnes of Arabica cherry and 16,486 tonnes of Robusta. The corresponding figures in respect of the 1960-61 pool were 28,968 tonnes, 10,218 tonnes and 28,200 tonnes, respectively.

During the month of October 1962, 2,791 tonnes (3,213 tonnes in the same month last year) of coffee, comprising of 1,019 tonnes of plantation, 269 tonnes of Arabica cherry and 1,503 tonnes of Robusta, were released in the internal market, bringing the total releases for the ten months of the year to 28,072 tonnes (28,308 tonnes a year before), made up of 10,133 tonnes of plantation 3,404 tonnes of Arabica cherry and 14,535 tonnes of Robusta.

Including the sale on 8th November 1962, the total quantity of coffee sold for export from the 1961-62 crop amounted to 17,018 tonnes of Arabica cherry and 3,579 tonnes of Robusta. A quantity of 1,877 tonnes of coffee, comprising of 271 tonnes of Plantation, 856 tonnes of Arabica cherry and 750 tonnes of Robusta, will be put up at the export open auction on the 28th inst.

TOURISM IN WESTERN EUROPE
FINDINGS OF O.E.C.D. COMMITTEE

THE growth of international tourism in Europe continued in 1961, though the rate of growth was slower than in the previous year. The Tourism Committee of the Organisation for Economic Co-operation and Development (O.E.C.D.) estimates, in its latest report, that international tourist traffic as a whole increased on an average by about 8 per cent in 1961, as compared with 15 per cent in 1960. The reasons for this general slowing down, in the Committee's opinion, are partly political and partly economic. Events such as the Berlin crisis, the situation in France and economic and financial difficulties in the U.S. had, in particular, caused American tourists to refrain from visiting Europe. Moreover, some sectors of tourist industry appear to be nearly at saturation point. In many countries, hotel capacity is fully utilised during the height of the season and the rather slow progress in staggering of holidays means that it is not always possible to meet demand. Further, unlike in the previous year, no exceptional cultural or sporting events took place in 1961 and no special measures of general scope were taken to promote tourism.

On the other hand, intra-European traffic expanded at a higher rate in 1961, showing an increase of 11 per cent over the previous year. The rate of growth was approximately 12 per cent in 1960, as compared with 1959. Last year's overall growth rate of 11 per cent was, however, not uniformly spread over the countries. The growth rate was 28 per cent in Yugoslavia, 27 per cent in Spain, 25 per cent in Turkey and 18 per cent in Belgium. All other countries showed smaller increases, except the Federal Republic of Germany where a decrease of 3 per cent was recorded.

Most European tourists still travel to other European countries. A large proportion of tourists is from the industrialised countries, their chief destination being the neighbouring countries. This reflects two things: one, the rising living standards and two, short spells of holidays which do not permit long-distance travelling. Another factor favouring the expansion of intra-European tourist travel and one that should steadily gain is strength is the constantly growing number of holiday-goers, especially young people, who are particularly sensitive to the attractions of travel.

According to the statistics of the U.S. Department of Commerce, the number of Americans who visited Europe and the Mediterranean countries in 1961 was 826,000, a drop of less than one per cent, as compared with 1960. The reasons for the reduced flow of American tourists to Europe last year, which contrasts with the steady growth recorded over the past ten years, are, as already noted, many. They are (1) anxiety over the political situation in Europe, (2) the consequences of the recession in the U.S. in the second half of 1960, (3) the American public's awareness of the U.S. balance of payments difficulties, (4) the psychological effect of the reduced duty-free allowance for returning American tourists, (5) the absence of any major sporting or cultural events in Europe and (6) increased competition from other tourist areas such as the Caribbean and the Pacific.

Earnings from Tourism

Available data indicate that receipt and expenditure on account of tourism in the member countries of the O.E.C.D. amounting to $4.6 billion and $4.8 billion respectively, were practically in equilibrium in 1961. The countries in which receipts exceeded expenditure were Austria, Denmark, France, Ireland, Italy, the Netherlands, Spain, Switzerland, and Turkey. In Austria, Italy, Spain and Switzerland, the net surplus was substantially higher than in 1960. In Canada, West Germany, the U.K. and U.S., on the other hand, the expenditure was higher than receipts. In Norway and Sweden receipts and expenditure roughly balanced.

Income from tourism is an increasingly important factor in the balance of payments of many countries. In Italy, the tourist trade is one of the economy's most important resources and net tourist receipts in 1961 covered 69 per cent of the trade deficit. In Belgium, tourist receipts in 1961, as in 1960, were as big an item as exports of electric machines, coal products, or metal manufactures. In Denmark, tourism ranks fifth among the export industries. The expansion of tourism in Spain during 1961 largely contributed to the improvement in its economic situation. Its trade deficit of $300 million was more than covered by tourist receipts which amounted to $385 million. In France, the financial performance of the tourist industry places it second among the export industries, after iron and steel products but ahead of chemical and allied products, motor vehicles, machinery and instruments which are France's biggest export items. In Italy, net tourist receipts take pride of place among invisible earnings, being roughly equivalent to the Italian balance of payments surplus which in 1961 amounted to $643 million. In the U.K., tourist receipts in 1961 represented nearly one per cent of the Gross National Product while the amount spent by British tourists abroad aggregated $638 million, representing 1.3 per cent of consumer expenditure and 5.7 per cent of total imports.

U.S.—Most Travel-minded Nation

Of the $1.7 billion spent by U.S residents abroad in 1961, expenditure in Europe and in the Mediterranean countries, which is the largest item, aggregated $630 million, about $74 million, or 11 per cent less than the amount spent in 1960. This reflects an equivalent decrease in average individual expenditure, since the number of visitors declined by less than one per cent. The reasons for this fall include shorter stays, fewer countries visited and smaller purchases. The average estimated expenditure per American visitor in Europe was $760. Tourists arriving by air spent, on an average, $700 and those arriving by sea $900.

The O.E.C.D. Committee points out that there is growing need to focus attention on the problem of staggering holidays since hotel accommodation is already fully occupied at the height of the season. Although the usefulness of such staggering is acknowledged and progress towards it is not impeded by laws and regulations concerning holidays with pay, conflicting interests join with acquired habits to hamper improvement in the situation. However, it is estimated that 25 to 35 per cent of the tourists could be persuaded to take advantage of the favourable terms offered for off-season visits.

The Tourism Committee mentions, in its report, the steps taken by it to get the various obstacles to international tourist trade, still remaining in the European countries, removed. One of the significant decisions taken by the Council of the O.E.C.D. on 31st July 1962, is the raising of the minimum foreign currency allowance to be granted to tourists from $275 per year to the equivalent of $500 per journey. Member countries may grant additional sums for which good reasons can be shown, particularly for travel to distant countries. In effect, this decision amounts to total liberalisation of tourist allowances leaving, at the same time, scope for preventing illicit transfers of capital. Progress has also been made in a number of countries in abolishing entry visas for tourists, in replacing passports by identity cards or tourist cards for purposes of identification at frontiers and in granting customs franchise for tourists.

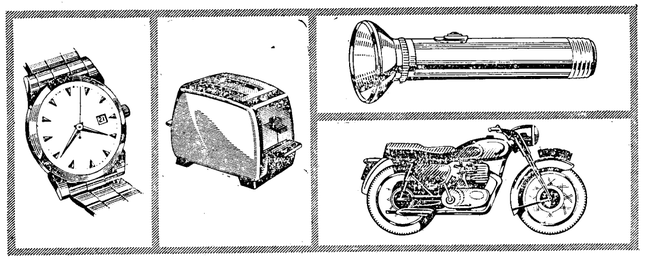
Transport Facility

The availability and cost of transport facilities have a direct bearing on international tourist traffic. Passenger traffic on the North Atlantic increased by 3 per cent in 1961, as compared with 1960. As much as 71 per cent of the crossings were by air, as against 67 per cent in 1960. The considerable increase in the number of aircraft, however, resulted in a decline in the percentage of seats occupied from 61 to 49 per cent for east-bound traffic and from 67 to 53 per cent for west-bound traffic. Although shipping capacity was reduced, the percentage of available accommodation occupied declined from 67 to 63 per cent for east-bound traffic and from 68 to 64 per cent for west-bound traffic. Only a reduction in regular fares, in the Committee's view, can result in any substantial increase in demand.

A new trend is emerging in Western Europe in respect of provision of hotel accommodation and tourist facilities. This is the growing popularity of "motels," "camping sites" and "holiday camps" as substitutes for hotels. There are two reasons for this. First, the high cost of hotel accommodation and the appeal of open-air life have turned a part of the tourist clientele away from hotels. Second,

(Continued on page 917)

Do you make Nickel/Chromium Plated articles?



If so, these facts will help you to improve quality of finish and so increase your business

DURABILITY — Buyers of your goods are no doubt strongly attracted by the bright shiny finish that nickel/chromium plating alone can give, but they also expect that finish to last the lifetime of the article, or at any rate, for a good many years. Should the plated surface start rusting or get discoloured within a short time, the customer will not care to buy from you again, no matter how good your product may be otherwise.

NICKEL THICKNESS — No chromium plating can be satisfactory without an adequate thickness of nickel underneath. Hence, quality and durability of plating essentially mean depositing sufficient nickel on the basis metal to protect it from corrosion. An undercoat of copper cannot provide this protection.

PLATING SPECIFICATION — In order to ensure durability of nickel plating on your goods, *insist* on the plater working to standard specifications such as IS 1068:1958. This lays down *minimum* thicknesses of 0.0012", 0.0008" and 0.0004" nickel on steel for severe outdoor, normal outdoor and indoor conditions of service, respectively. You can obtain a copy of this specification (costing Rs. 2/-) from Indian Standards Institution, Manak Bhavan, 9 Mathura Road, New Delhi 1.

TESTING — It may be advisable for you to test the thickness of coating to see if it conforms to specification. Equip yourself with a modern instrument such as the "B.N.F. Thermo-Electric Tester" which when properly calibrated, can measure thickness accurately without damaging the plating or the article.

THE TATA IRON AND STEEL COMPANY, LIMITED

STATEMENT OF MR. J. R. D. TATA, CHAIRMAN

GOVERNMENT'S POLICY ON STEEL PRICES CRITICALLY EXAMINED

THE following statement by Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company, Limited, dealing with the Company's working for the year ended 31st March, 1962, has been issued to shareholders. The Annual General Meeting of the Company will be held on Thursday, the 13th December 1962 at 4-30 p. m. at the Birla Matushri Sabhagar, 19 Marine Lines, Bombay-1.

TO THE MEMBERS,

This statement comes to you at a time of national emergency created by the Chinese invasion of India, when our own problems and difficulties must be viewed against this background of war and peril to our country. Whatever our differences with Government may be in regard to their attitude towards our industry and although we may disagree with some of their economic policies, I am sure we are all agreed that, as in previous emergencies involving the country's security, the Company should offer unstinted co-operation and assistance to Government in the prosecution of the war effort.

Tariff Commission's Recommendations

The year under review was dominated by the Tariff Commission's Inquiry and Report and Government's orders thereon. The main features of both have been explained in the Directors' report. We are mainly concerned here with the reduction which Government have effected, unjustifiably in our view, in the retention prices recommended by the Commission. In this context, it is important to bear in mind that the Commission's inquiry and recommendations related exclusively to a two-year period which had already elapsed by the time the Commission reported. One would have therefore expected that here, if ever, was an occasion when Government could hardly disagree with the Tariff Commission since the Commission's recommendations were based not on estimates, theories and assumptions relating to a period still in the future, but on actual known figures, facts and conditions about the truth and reality of which there could be no argument.

After nearly five months of cogitation, Government not only disagreed with some of the Commission's principal findings but even reversed their own previous decision and instructions to the Commission on the important question of the repayment of the special advance.

Depreciation and Return on Investment

The changes made by Government resulting in a total reduction of Rs. 27.50 per ton in the average retention price recommended by the Commission for the two years 1960-61 and 1961-62, are explained in paras 12 and 13 of the Directors' report. The most serious change has been in regard to the provision for depreciation and return on gross block. Government rejected the Tariff Commission's view that, for purposes of calculating the incidence per ton of depreciation and return, an output of saleable steel at a rate of 90 per cent of capacity was reasonable. Apart from the fact that it normally takes several years to overcome "teething" troubles and train staff in the use of new equipment and techniques, before so complex a unit as a new steel plant can be made to operate smoothly, the additional handicaps imposed on the steel companies by the conditions prevailing in the country were so serious that, if anything, the Commission was unduly severe in adopting a rate as high as 90 per cent as a basis for their calculations. Yet Government, although well aware that the inability of the steel plants to make more steel was largely due to the appalling quality of unwashed market coal allocated by the Coal Controller and the deficiencies in transport, for both of which they were themselves mainly responsible, decided that the steel plants should have worked at 100 per cent of capacity during these two years and deserved to be penalised for not having done so. Government accordingly reduced the retention prices on that account by Rs. 16.5 per ton which cost our Company Rs. 4 crores over the two-year period, and thus unfairly deprived both the steel companies of the full depreciation and return prescribed by the Commission. This action, coupled with the Minister of Steel's subsequent speeches or statements at Press conferences in which he equated with inefficiency the industry's failure to achieve 100 per cent performance, was particularly hard on our Company which has had to struggle against heavy odds during and after the last world war, and which undertook, at considerable risk, a crash programme of expansion at the express request of Government.

Reality Ignored

Government, according to their resolution dated 7th September 1962, also excluded from the capital block the special advance made to the Company between 1954 and 1956. This must mean that in Government's view Rs. 10 crores worth of physical assets should earn no depreciation, let alone a return, on the ground that their cost was initially met from a Government advance. Apart from its unfairness, such a view ignores the obvious reality that plant and machinery are subject to wear and obsolescence, irrespective of the manner in which they were originally financed, and that failure to provide depreciation would clearly be contrary to sound principles of accounting and financial management.

In justifying the reduction in the provision for interest on working capital, Government, according to a statement by the Minister as reported in the papers, based their decision on the assumption that the Steel Companies enjoyed the benefit of large interest-free deposits from customers and of large arrears of surcharge not paid into the Iron and Steel Controller's Equalisation Fund. This assumption is totally incorrect in both respects. Advance deposits which are taken only against so-called "bazaar" indents have at no time exceeded a crore, while our dues to the Equalisation Fund were at the end of July 1962 only about Rs. 2½ crores and not Rs. 12 crores as the Minister is reported to have stated in Parliament.

Government's reversal of their previous decision that the retention price should include an element for the repayment, with interest, of their special advances in terms of their agreements with the two Companies is disturbing although it may not immediately affect our financial position. However, their announcement that, as an alternative, they are considering the possibility of a part of the special advances being repaid out of fresh capital, raises fundamental issues of grave concern to the Companies and their shareholders. This is not the occasion for me to discuss the legal aspects of the matter, but I am sure shareholders will be relieved to learn that the Company has informed Government that an issue of fresh capital would be unthinkable in the present circumstances and, for a number of cogent reasons, would be unacceptable to the shareholders whose consent would be required for the purpose.

An Imperative Need

In our representation to Government we have pointed out that the low retention prices fixed by them, if maintained in the future, will seriously affect our ability to finance the heavy commitment which Government themselves have asked us to undertake to double our coal output in the Jharia field. The whole of the cost of this project, if it ultimately materialises, will have to be financed from borrowings, including a further loan from the World Bank to meet the foreign exchange cost. Our capacity to service and repay such fresh borrowings in addition to our existing loans must obviously depend on the resources we are able to raise over the years from retained earnings.

If the steel industry of the country in both public and private sectors is to remain healthy and to make its full potential contribution to the security of the country, it is imperative that it be ensured the wherewithal to finance the continuous process of replacement and development essential to maximum production and efficiency.

We do not ask for favours at the expense of the consumer or the tax-payer, nor do we expect that prices fixed by Government should reward inefficiency, but we do ask that a more realistic account be taken of the conditions under which the steel industry is compelled to operate in India and, particularly, of the shortages and deficiencies in raw materials, transport and other factors over which it has no control.

Cause for Concern

I regard with dismay Government's growing propensity to brush aside the carefully calculated and reasoned recommendations of the Tariff Commission, which consists of "men of ability and standing who have shown capacity in dealing with problems relating to commerce or industry or in administration"—to quote the relevant section of the Tariff Commission Act, 1951. I do not suggest of course that Government should automatically accept every recommendation of the Commission, but I do urge that their advice should be set aside only in the most exceptional circumstances and for the most convincing reasons. From a speech made by the Minister for Steel to the Committee of the Indian Merchants' Chamber in Bombay, it would seem that Government consider the Tariff Commission and their approach as completely outdated and that some other method of fixing prices should be evolved. As the only practical alternative I can see would be for the Ministry concerned to determine prices at its sole discretion and thus become the exclusive arbiter of an industry's destinies, one cannot but view with alarm this indication of Government's intention to scrap the longstanding and salutary practice of seeking independent and impartial advice in fixing prices in major controlled industries. In a planned and controlled economy such as ours, it is only by exercising restraint in the use of their enormous economic powers that Government can retain the confidence of the people in the fairness and impartiality of their policies and actions.

Facts Ignored

Before I close, I cannot, in fairness to the Company, leave unanswered the criticism voiced by the Minister for Steel, that the Company's expansion programme was originally estimated to cost Rs. 66 crores but had actually cost Rs. 120 crores. In my statement to the shareholders two years ago, in answer to a similar criticism, I gave the true facts, of which Government should therefore be well aware. The estimated cost of the two-million-ton programme, as accepted by the World Bank in 1956, was Rs. 95 crores. The actual cost including subsequent additions and modifications was about Rs. 110 crores. Excluding about Rs. 6 crores of expenditure arising from subsequent increases in import duties and manufacturers' escalations, over both of which the Company had obviously no control, and additional purchases of spare parts decided upon for the sake of added safety, the total excess came to about Rs. 9 crores, equivalent to only 10 per cent, over the estimates, a remarkably low figure of excess for a project of such magnitude and complexity. It is somewhat disheartening to find that the Steel Minister should have been provided with such incorrect data despite the fact that correct information was available to Government.

The tenor of this statement may sound out of tune with my opening remarks but its main purpose is to clear the air and set the record straight. Having done so, I can assure Government of the Company's unstinted support and co-operation in the Defence effort. We fully realise the importance of steel production to a country at war. In the grievous and complex tasks ahead, we place ourselves, our staff, our technical and human resources and our long experience of the steel industry at the disposal of Government in the furtherance of the country's total war effort.

J. R. D. TATA,
Chairman.

BOMBAY, *8th November*, 1962.

The above statement is not a document purporting to be a report of the proceedings of the annual general meeting.

Announcement Regarding the Issue of

Rs. 1,25,00,000 7% Debenture Stock 1974/76 in Units of Rs. 1,000/- each at Par

By

MADURA MILLS COMPANY LIMITED

REGISTERED OFFICE: NEW JAIL ROAD, MADURAI-10

MANAGING AGENTS:

A. & F. HARVEY LTD.

PANDYAN BUILDING, WEST VELI STREET, MADURAI-1

EXISTING AND PROPOSED ACTIVITIES

History and Business

Founded on 27th September, 1889 under the Indian Companies Act, No. VI of 1882 the Company started with an initial share capital of Rs. 10,00,000. Partly by amalgamation with the Coral Mills Co., Ltd., The Tinnevelly Mills Co., Ltd., and The Pandyan Mills Co., Ltd., and partly by expanding its own business, the Company now has an issued capital of Rs. 1,75,02,480 and has grown during the last 73 years to be one of the largest Textile organisations.

The Company has progressively developed and varied its range of products. Its present business chiefly consists in the manufacture of:

1. Warp Yarns, Combed Yarns, Hosiery Yarns, Fancy Yarns, Single and Folded in hanks or cones, Cheeses, Cross-ball warps in counts ranging from 1s to 100s.

2. Yarns for the manufacture of ropes, healds, canvas, tape, fishnets, belting duck, tyre cord, sewing thread, braided hose and fan belts.

3. Industrial products—Tyre Cord Warp Sheet, Canvasses and hard and soft ducks.

Development

With an installed capacity of approximately 5 lacs Spindles the Company stands foremost among the spinning units of the East. Its products are famous for their quality and variety throughout Europe, Great Britain and the East and are in great demand in other markets throughout the world. The Company has always endeavoured to play a part commensurate with its position in the industry in meeting the requirements of the country.

As the textile industry developed, the Company began to diversify its activities. The first step was to equip to produce industrial fabrics and to this end special power looms were installed to supply Tyre Cord and Duck fabrics which are mainly used in conveyor and transmission belting. This aspect of the Company's business progressed well, and justified the purchase of additional plant, which has been sited at Serampore near Calcutta, to supply the steadily increasing needs of a prominent consumer.

Further expansion and diversification is now planned, and sanction has been obtained to install 450 modern automatic looms partly to augment production of Industrial fabrics and partly to produce other medium weight fabrics: both varieties will be offered to customers in India and in particular Overseas. It is intended that this project will be closely followed by a Dyeing, Bleaching and Finishing Plant and by further expansion of an additional 500 automatic looms.

LOCATION OF THE INDUSTRY

The Company's Mills are situated at Madurai, Ambasamudram and Tuticorin, in South India and at Serampore (West Bengal).

BOARD OF DIRECTORS

Dr. RAJAH SIR MUTHIAH ANNAMALAI MUTHIAH CHETTIAR (*Chairman*), Merchant. Chettinad House, Rajah Annamalaipuram P. O., Madras-28.

PETER VANSITTART MACKAY, Merchant. Pasumalai Bungalow, Pasumalai, Madurai District.

PERUMAL NAIDU RANGASWAMI NAIDU, Advocate. 6, Goods Shed Street, Madurai-1.

ANDREW ERIC COOPER, Merchant. 2, Racecourse, Madurai-2.

MAIN OBJECTS OF THE COMPANY

The main objects specified in the Company's Memorandum of Association are:

To acquire, purchase, or take on lease any land or buildings, or both, anywhere in India, and to erect and construct on such land all buildings, houses, and sheds, necessary and adapted to the working of a spinning and weaving mill, to provide engines, machinery and apparatus requisite for the construction, and the due and efficient working of such a mill.

To purchase, prepare, spin, weave, dye, work, manufacture and deal in cotton, wool, silk and other products and materials and to carry on in the district of Madurai or elsewhere in India, the business of spinning, weaving, dyeing and finishing cotton and other goods, to sell the same, and to sell the materials so maunfactured.

SHARE CAPITAL

Authorised, Issued, Subscribed and Paid up:

Rs. 1,75,02,480 in 11,66,832 Equity Shares of Rs. 15 each.

PROPOSED ISSUE

Rs. 1,25,00,000 7% Debenture Stock 1974/76 in units of Rs. 1,000 each at Par.

The entire amount of the above issue has been underwritten as follows:

		Rs.
1.	The Industrial Credit and Investment Corporation of India Ltd., 163, Backbay Reclamation, Bombay-1	50,00,000
2.	The Great Eastern Shipping Co., Ltd., Mercantile Bank Building, Bombay-1	20,00,000
3.	Pandyan Insurance Co., Ltd., Madurai*	10,00,000
4.	Paterson & Co., 22, Errabalu Chetty Street, Madras-1 ..	15,00,000
5.	Chitra & Co., 322/323, Linghi Chetty Street, Madras-1 ..	15,00,000
6.	Harkisondass Lukhmidass, 5, Hamam Street, Bombay ..	15,00,000
		Rs. 1,25,00,000

In the opinion of the Directors the resources of the underwriters are sufficient to discharge their obligations.

Out of the Rs. 1,25,00,000 Debenture Stock offered for public subscription and underwritten as above, the Company has agreed to the firm allotment of Rs. 63,75,000 Debenture Stock to the following underwriters against underwriting arrangements with them:—

		Rs.
1.	The Industrial Credit and Investment Corporation of India Ltd.	16,00,000
2.	The Great Eastern Shipping Co., Ltd.	20,00,000
3.	Pandyan Insurance Co., Ltd.*	1,25,000
4.	Paterson & Co.	7,50,000
5.	Chitra & Co.	11,50,000
6.	Harkisondass Lukhmidass	7,50,000
		Rs. 63,75,000

* An associate of the Managing Agents.

Applications must be for multiples of Rs. 1,000 with a minimum of Rs. 1,000.

OPENING/CLOSING OF SUBSCRIPTION

The Subscription List will open at the commencement of banking hours on Monday, the 26th day of November 1962 and will remain open until the close of banking hours on Friday, the 30th day of November 1962 or earlier at the discretion of the Directors, but not earlier than the close of banking hours on Wednesday, the 28th day of November 1962.

The application forms along with copies of the Prospectus can be obtained from the registered office of the Company at Madurai and from the Company's underwriters, bankers and brokers mentioned herein.

All application forms, properly completed, must be lodged together with the full amount with the principal office of the State Bank of India or the National and Grindlays Bank Ltd. in Madurai, Tuticorin, Madras, Bombay, Calcutta or New Delhi. Payment should be made by cheque or draft drawn on a scheduled bank located at the particular city where the application is tendered, in favour of "State Bank of India A/c. Madura Mills Co. Ltd.—Debenture Issue" or "National and Grindlays Bank Ltd. A/c. Madura Mills Co. Ltd.—Debenture Issue" and crossed "Not Negotiable."

BANKERS

State Bank of India, Madurai, Tuticorin, Madras, Bombay, Calcutta and New Delhi.

National and Grindlays Bank Ltd., Tuticorin, Madras, Bombay, Calcutta and New Delhi.

Pandyan Bank Ltd., Madurai.

BROKERS

Madras:
Paterson & Co., 22, Errabalu Chetty Street, Madras-1.
Chitra & Co., 322-323, Linghi Chetty Street, Madras-1.
Kothari & Sons, Oriental Buildings, Armenian Street, Madras-1.
Dalal & Co., National Insurance Building, Esplanade, Madras-1.

MISCELLANEOUS MATTERS—WINDING UP OF COMPANIES—UNIT TRUSTS

By A Special Correspondent

ON the issue of better and effective enforcement of Company Law the Jenkins Committee was of the view that prosecution or threat of warning was not the only method and that certain duties imposed upon a company might be enforced by an order of the court. In this connection, the Committee was informed by the Board of Trade that "their recent experience of the method of direct enforcement provided by Section 428 indicates that an order of the High Court, backed by the sanction of committal for contempt of court, has proved effective where a long series of warnings and even prosecutions has not." The Committee, therefore, has recommended the widening of the present limited scope of this section, which "relates only to defaults by the company and to those only which require it to furnish information to the Registrar" and to cover such cases as "a failure by directors to lay accounts before a company in general meeting, failure of a company to hold an annual general meeting within the prescribed time," etc., would not be covered. The Committee has suggested a few new things such as (*a*) Section 428 should be extended to cover defaults by officers of the company and to cover defaults either by the company or by its officers in complying with any of their statutory duties; (*b*) the Court should be empowered, on the application of the Registrar of Companies, to order a company which is in persistent breach of its statutory duties to be wound up, in particular where a company has failed to appoint a secretary or the statutory minimum of directors or has failed to pay the annual registration fee which has been suggested for reducing the number of irresponsible flotations; (*c*) the Court should be empowered to wind up a company on being approached by the Registrar of Companies, if it is satisfied that a company is being carried on for an unlawful purpose; and (*d*) the Court should be empowered, on the application of the Registrar of Companies, to order a company to be struck off the register and dissolved without being wound up, if in the circumstances, winding up would not be appropriate, for being a relatively elaborate and expensive process not justified by the size of the assets of a company.

In the Indian Companies Act, the section corresponding to Section 428 of the English Companies Act is Section 614 which says that, if a company has defaulted in complying with any provisions of the Act which require it to file or register any return, account, document within 14 days of service of a notice on it, the Court may, upon an application by any member or creditor of a company or the Registrar of Companies, direct the company or any officer of that company to make good the default within the time prescribed by it. The original section did not provide for any punishment for disobedience of the Court's order which was later done in Section 614A.

Availability of Names

In the U.K., under the Registration of Business Names Act of 1916, the Registrar of Business Names maintains a register of business names based on the information furnished to him under Section 12 of the aforesaid Act by firms and persons including companies which trade in names other than their own. The use of the register is made for (*a*) discovering the names and private addresses of the owners of business for purposes of debt collection or for establishing their credit status or for taking legal proceedings against them and (*b*) to consult at the time of making available new business name so as to avoid its identity or close resemblance with any business name already on the register. The Committee found that the existing register suffered from serious imperfections and the proper use of the same was not made by the Registrar of Business Names. The Committee, therefore, made a number of recommendations of which one was that the index of business names should be cleared as far as possible of the deadwood and be arranged in a form in which it might be directly accessible to the public, and that the Board of Trade might give publicity to the statutory requirements imposed by the aforesaid Act. Further, the registration under the Business Names Act should also apply to all bodies corporate incorporated outside the U.K. having a place of business in the U.K.

As regards the company names, the Committee suggested that the Registrar of Companies should be given powers, which he should exercise on request, to reserve the approved company name for a period of, say, thirty days on payment of a fee. Secondly, the Board of Trade should be empowered to control the names of companies incorporated abroad and having an established place of business in Great Britain. Thirdly, Section 18(2) of the Companies Act should be amended to empower the Board of Trade to direct a company to change its name within six months of the registration if the Board considers the name undesirable on any grounds and further the Board of Trade should have power to direct a company to change its name at any time if the name has become misleading and is likely to harm the public. The Company concerned may, however, be given the right to appeal to the Court.

In India, we do not have any Act analogous to the Registration of Business Names Act. As a result, non-corporate businesses can adopt any name they choose subject only to the Patents and Designs Act under which names bearing patents and trade marks cannot be used by parties other than those which have registered them under the aforesaid Act.

The register of business names of the type maintained in the U.K. at present cannot be drawn up in this country, as the non-corporate bodies, namely, partnership firms, etc., are governed or regulated by the State Governments.

As regards the practice of reserving names for companies as recommended by the Jenkins Committee in the U.K., there is no provision at present in the Indian Companies Act to make such reservations. In practice, however, outside the Act, under instructions from the Central Government, the Registrars of Companies are empowered to reserve names for three months without charging any reservation fee. The only other fee charged in connection with availability of names is the application fee of Rs. 10. Further, Section 20 does not extend to the names of the bodies corporate incorporated abroad and as such the recommendations of the Committee would be found new in this country. Power to direct a company to change its name if it is found to be identical with or closely resembling the name of an existing company is vested in the Government under Section 22(1) to be exercised within a period of 12 months of the registration of the name. But, as in the U.K., it does not extend to the names found undesirable "on any ground." Similarly, it does not cover the names which may be found to be misleading in such a manner as is likely to cause harm to the public.

Annual General Meeting

The provisions of Section 131 of the English Companies Act require the holding of a general meeting once in every calendar year with the gap between two such meetings not exceeding 15 months and, since no relaxation is possible, a company which does not hold so, except for very genuine reasons beyond its control such as lack of quorum, is in default. The Committee has recommended that the Board of Trade should have power to extend the time for holding annual general meetings so as to be able to exonerate a company which is doing the best it can in possibly difficult circumstances from being technically in default in such circumstances.

As regards the requisitioning of extraordinary general meeting, the Committee has pointed out the anomaly existing in Section 132 of the English Act under which if a meeting is requisitioned the only duty of the directors is to issue notice for convening such meeting within 21 days of the receipt of the request, but the date for which it is convened is a different matter and may be months ahead. The Committee has suggested that that section should be amended to enable the requisitionists to exercise their power of convening a meeting if a meeting has not been convened by the directors from a date within, say, 28 days of the notice.

The position regarding the calling of annual general meetings under the Indian Companies Act is the same as in the English Companies Act and, therefore, the suggestions of the Committee in that regard deserve consideration in our country too. As regards extraordinary general meetings, the provisions of Section 169(6) of the Indian Companies Act specifically mention the period within which the meeting asked for by the requisitionists has to be called, the period being 45 days from the date of the presentation of the requisition.

Resolutions

The Committee has recommended the abolition of extraordinary resolutions and their replacement wherever these occur in the Act by special resolutions as the difference between the two merely lies in the length of notice of the meeting required. In the Indian Companies Act, Section 189 mentions only two types of resolutions, namely, ordinary and special. The category of extraordinary resolutions is, therefore, non-existent in our country.

Proxies

As at present under Section 136(1) of the English Companies Act, a proxy is allowed to speak only at a meeting of a private company. The Committee has recommended that a proxy should be entitled to speak at a meeting of any company, private or public. Further, the Committee has recommended that a member should be entitled to appoint two separate proxies to attend a meeting and not, as at present, only alternate proxies.

In India, under Section 176 of the Companies Act, a proxy has no right to speak whether the company is private or public and a member can appoint only one proxy. The recommendations of the Committee could, therefore, be usefully examined in our country as well.

Notice of Meetings

In regard to notices and circulars relating to meetings, the Committee has suggested that the Act should contain a general provision prescribing the duties of directors in respect of notices and other circulars relating to meetings. The provision should require directors who issue a notice or circular to state with reasonable precision the nature of the business to be transacted, giving such explanations and additional information as may be necessary and in particular disclosing any interests of the directors in the proposed transactions and the effect thereon of those transactions so far as it is different from their effect on the like interests of other members. This suggested improvement in law has, to some extent, already been given effect to in Section 173 of the Indian Companies Act.

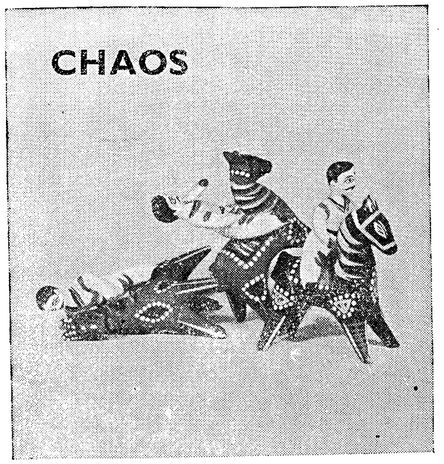
Share Transfers

Regarding share transfers, the Jenkins Committee received criticism that the registration of a transfer of shares is at times deliberately delayed by the transferee (sometimes by arrangement with the transferor) in order to conceal from the directors the concentrated purchase of a company's shares, or by the directors of a company in order to prevent the transferee from exercising his voting rights at a company meeting. The first type of abuse is proposed to be checked by the Committee's recommendation that share transactions by beneficial owners of 10 per cent or more of the equity capital of quoted companies should be registered within seven days of the transaction coming to their knowledge. As for the second type of abuse, the Committee has proposed that the present maximum period of two months available to the company to register share transfers should be cut down to five weeks and, if the company does not register the transfer within that period, the transferee would be entitled to apply to the court for rectification of the register.

The relevant provisions relating to share transfers are contained in Sections 111 and 113 in the Indian Companies Act which run on parallel lines to Sections 78 and 80 of the English Companies Act. The suggestions of the Committee, therefore, would improve the position under the Indian Law also, if implemented.

Political Donations

The question of prohibiting political donations by the companies—a subject which crops up again and again in our country in public and parliamentary discussions—was also brought up before the Jenkins Committee. But the Committee has refrained from offering any comments on the subject as it is not primarily a mat-



'Running a race? Running a business? The keynote is CONTROL.

But control is a complicated problem in a business organisation, for it means consultation and assessment of records. It also means arrangement of all kinds of records and information in such a manner that they can be consulted easily and quickly.

We have gone a step further in the Systems Division of Remington Rand.

We have devised Systems which not only arrange all your records for easy consultation, they even provide the *Control*. They convert your piles of files and notes and lists and ledgers into a *Working Force*.

Remington Systems can be arranged to tell you when to act, how to act. They can quickly and easily give you all the data you need to do the one thing they *cannot* do, use your judgement.

You do not have to be a big businessman to use a Remington System. You just have to be a good businessman.

MAKE YOUR RECORDS WORK FOR YOU

ter of company law and involved constitutional issues "which would affect other organisations besides companies." On a relative suggestion that the donations should be shown in aggregate form in company accounts, the Committee's views are equally circumspect. It says that "we recognise that, in some circumstances, this information may be of interest to shareholders and indeed that if donations are relatively large the obligation (in Section 149(1)) to give in the accounts a true and fair view of the profit or loss of the company may now require their disclosure. But we do not think donations are a sufficiently important item in most company accounts to justify an express, general requirement to disclose them."

In our country, on the general question of imposing a prohibition on the companies to make political contributions within the ambit of the Companies Act, the Sastri Committee reached almost the same conclusion as the Jenkins Committee has done. The Sastri Committee said that "whether lobbying and financing of political parties or candidates for elections should be prohibited in the interests of the public, is a broad question of public policy. It has been the subject of special legislation in America. The case of companies could not be considered in isolation and contribution from other sources, such as bodies corporate, partnerships, societies, trusts, trade unions and even from individuals might have to be regulated or prohibited by a comprehensive enactment. This, however, is a matter which falls outside the scope of the Companies Act." But, on the limited issue of disclosure of such contributions in the annual accounts, the Sastri Committee appreciated the suggestions made by the High Courts of Bombay and Calcutta and recommended that a provision reading as "every company shall disclose in its profit and loss account every donation made by it during the year of account to any political party, giving particulars of the amounts given and the name of the person or persons, association or party to whom or to which, such donation is made" may be added to Section 293 of the Indian Companies Act. Accordingly, Section 293A was inserted in the substantive Act in 1960. By this new section, restrictions on the power of a company and its Board of Directors to make political contributions exceeding Rs. 25,000 or 5 per cent of the company's net profits as determined by the provisions of Sections 349 and 350 during the three financial years immediately preceding, whichever is greater, were imposed. Sub-section (3) of Section 293A provides for punishment with fine which may extend to Rs. 5,000 for non-disclosure in the accounts. From this, therefore, it will be seen that the law in India is more progressive and keeps under check the influence of corporate bodies over the political life of the country.

Winding Up

The Committee's study of the winding up provisions of the Act revealed that there was widespread criticism that the Companies Act "as a whole does not at present deal adequately with the situation arising from fraud and incompetence on the part of directors—particularly directors of insolvent companies." Further, the provisions of the Act do not provide a sufficient deterrent to dissuade directors from continuing the business of a company which they know to be hopelessly insolvent. Covering these shortcomings and others in the Act, the Committee has made 22 recommendations on winding up, and, in regard to the newly suggested powers, the Committee has further observed that "these powers will only serve a useful purpose if the Board of Trade is prepared to invoke them by applying in proper cases for Court action against fraudulent, reckless and incompetent company directors." Some of the recommendations made by the Jenkins Committee on winding up which would be new to us and are not already incorporated in the various provisions relating to winding up in the Indian Companies Act are the following:

Section 270 which empowers the Courts in England to order public examination of promoters and officers, should be extended to empower the Courts to order the public examination of all or any of the directors or other officers of an insolvent company where there is some *prima facie* case of culpability or of such impropriety, recklessness or competence as might lead to disqualification of the person or persons concerned under Section 188 which is to have wider coverage. Further, the Committee has recommended that the Act be so amended as to cover persons convicted of any offence involving fraud or dishonesty whether in connection with a company or not, persons who have been persistently in default in complying with the provisions of the Companies Act and persons who have been shown to have acted recklessly or incompetently in relation to the affairs of any company of which they are, or have been, directors. The section corresponding to Section 270 of the English Companies Act in the Indian Companies Act is Section 478 and, since it is framed on the lines of the former section, the Committee's proposals apply with equal force to the position existing in this country.

In the same way, the recommendation of the Committee in regard to Section 332(1) of the English Companies Act would be new to us in this country. The Jenkins Committee has recommended that Section 332(1) should be extended to make directors and others, who have carried on the business of the company in a reckless manner, personally responsible without limitation of liability, for all or any of the debts or other liabilities of the company, if the Court so declares on the application of the official receiver or the liquidator or any creditor or contributory of the company. It has further recommended that it should be made clear that Section 332(3) provides a penalty for fraudulent trading where the facts are discovered in other circumstances than in the course of winding up. The Committee has also suggested the amendment of Section 333(1) of the English Act by substituting for "breach of trust" in relation to the company" a reference to any breach of duty in relation to the company which would involve civil liability at the suit of the company. The effect of this change would be to bring actionable negligence of directors and others within the scope of the section. Also the receiver of any property of the company is to be brought under the scope of Section 333(1).

Another important suggestion made by the Jenkins Committee is that the Court should be completely free in the exercise of its discretion to wind up a company on the ground that it would be just and equitable to do so and, for this purpose, Section 225(2) should accordingly be amended to remove the existing limitations on the Court's power to exercise its discretion in this respect. In our country as at present, the provisions of Section 443 of the Companies Act run on the lines of Section 225(2) of the English Act, and therefore this suggestion should require due examination in our country.

Further, the Committee has suggested that a simple and inexpensive means of formally dissolving companies wound up by order of the Court, on the lines of Sections 290 and 300, should be provided for in addition to the mode of dissolution laid down in Section 274 which, because of the expenses involved, is rarely used. The same position exists in our country also and so the suggestion made by the Committee would be of practical utility in this country also.

Lastly, the Committee has recommended that the provisions in the Companies Act for winding up subject to the supervision of the Court, namely, Sections 311 to 315, serve no useful purpose and should be repealed. In our country, too, there have been far too small number of cases of such type and therefore this suggestion might profitably be examined.

Foreign Companies

In regard to foreign companies incorporated outside the U.K. but having a place of business in that country, the Jenkins Committee has made three important suggestions. First, the Registration of Business Names Act should apply to foreign incorporations having a place of business in the U.K. and the Board of Trade should be empowered to control the use by an oversea company of a name which is undesirable for any reason other than similarity to the name of a company already registered in the U.K. Secondly, there should be inserted in the Act a provision expressly empowering the Court to wind up a company incorporated out of Great Britain if there are assets of that company in Great Britain. Thirdly, Section 410 should be amended so that oversea companies would in future be required to file accounts in the form prescribed in their country of incorporation unless the Board of Trade required otherwise. In actual, practice the Board of Trade does accept the accounts from foreign companies as drawn per requirements of their 'home' corporation laws, unless they were considered "to be inadequate" by the Board of Trade.

For us, the first recommendation regarding the use of identical name, etc. by a foreign company is quite new. Sections 20 to 23 relating to the names of companies do not apply to foreign companies. Similarly, the second recommendation is also new. As regards the third, the foreign companies having a place of business in India who are required to file the annual accounts under the provisions of Section 594 have been granted suitable exemptions and relaxations which go a long way to mitigate the hardship caused by the requirements of the aforesaid section which require the filing of world and Indian business accounts in the same form and with the same details as are required in the case of Indian companies.

Unit Trusts

The Jenkins Committee has made a large number of recommendations concerning the working and regulation of unit trusts—an institution which is as yet quite unknown in our country. Unit trusts, which started in 1930 in the U.K., have become a popular institution there. Notwithstanding the "record of fair and honest dealing over the whole of its life," the Committee felt that, as the unit trust movement after about 30 years of its existence had attained maturity, there should be, to quote it, "an entirely new system of control over unit trusts. The present control exercised by the Prevention of Fraud (Investments) Act, 1958, which is primarily designed to prevent fraudulent share pushing, seems hardly appropriate." Apart from this general reason, the Committee found that there were grounds of real substance on which the existing system of control could be criticised. The Prevention of Fraud (Investments) Act first provides that it is illegal to offer unit trust units for sale by circular including offers contained in the newspapers unless the unit trust is one "authorised" by the Board of Trade as per provisions of Section 17 of that Act which gives discretionary powers to the Board of Trade. The Jenkins Committee has found this discretionary power to be unsatisfactory as the Board of Trade concerns itself too much with detailed arrangements resulting in embarrassment to the unit trust managers. The Committee has, therefore, recommended that, instead of the Board exercising discretionary powers, the Unit trust should claim registration as a matter of right upon satisfying certain recommended conditions such as that the trust company would have to be incorporated with a paid-up capital and net assets of at least £ one million, that is, four times the present level and that the unit trusts would be narrowly defined to have underlying assets entirely in the form of securities and cash. Registered trusts would be governed by a new code specially written for them in the Companies Act whereas the unregistered ones would continue to be subject to the provisions of the Prevention of Fraud (Investments) Act with the practical effect that units could not be sold, on an extensive scale at any rate, to members of the public.

The Committee has further recommended that the Companies Act itself should contain a few basic requirements about the operation of unit trusts. It should empower the Board of Trade to impose requirements in respect of a large number of important matters including the calculation of the manager's bid and offer prices and the yield, the rights of the unit holders to require the repurchase of their units at the bid price, prohibition of managers from making profits for themselves out of transactions in the underlying assets of the trust, block offers, etc. If all the controls exhaustively stated in the Act and the statutory instruments are imposed on unit trusts, each unit trust would then only have to keep itself within the defined limits. Another recommendation of singular importance is that the applications from new investors should only be accepted if they were on forms issued with prospectuses, the terms of which would be duly approved by the trustees and would contain information laid down by Statutory Instrument. One of the details to be contained in the prospectus would be the scale of charges. Further, the Committee has recommended that door-to-door hawking of units of the unit trust should be prohibited. The Committee has come to the conclusion that, with all these safeguards, there would be "little point in introducing the rather complex legislation necessary to provide for and control the open ended investment company" in Britain.

NIGHT SHIFT

In the oil refinery, the night shift has taken over. Flame-proof lamps shine from the towering columns where the hydrocarbons in crude oil are being separated, reassembled and rearranged. Inside the plant, chemists and control room staffs check the temperatures, pressures and flows of the complex processes which give the market not only petrol, kerosine and lubricants but hundreds of other useful products as well, from paraffin wax to insecticides—all of which must measure up to rigid standards of quality.

Like drilling for new sources of oil, refining goes on day and night. Such a continuous effort calls, for trained operators, varied skills, scientific techniques and highly specialised equipment—essential factors in all branches of the petroleum industry's operations.

COAL MINING MACHINERY

RECOMMENDATIONS OF BRITISH MISSION

UNDER the third Plan, the private sector of India's coal industry is expected to reach a production level of 62 million tons per annum by 1966, as against 45 million tons in the last year of the second Plan. The major portion (11 million tons) of the additional output of 17 million tons (62 million tons *minus* 45 million tons) is to come from established mines, while the balance is expected from new sinkings in existing leasehold areas. Of the capital investment of Rs. 60 crores needed to achieve the additional production target, imported equipment would account for Rs. 28 crores (about $60 million). The World Bank, it will be recalled, has sanctioned a loan of $35 million for the exclusive use of the private sector to cover orders for coal mining machinery and equipment to be placed during 1962-63. The Bank has also indicated that a further $25 million will later be made available for the private sector's requirements during the remaining three years of the third Plan period.

The technical and financial screening committees, which have been scrutinising and approving applications from individual collieries for imports of equipment within the framework of the first loan of $35 million, have already passed 184 projects. The pattern of the foreign exchange expenditure is: Expansion of existing mines, $14 million; replacement for existing mines, $14 million; spares for existing equipment, $2 million; and development of new mines, $5 million. The larger part of this amount ($35 million) might be spent in the U.K. which has been the traditional supplier of coal mining equipment to this country. This inference is drawn from the relevant observations of the privately-sponsored but officially-blessed British Mining Machinery Mission (Leader: Mr. James Anderson, Chairman and Managing Director of Anderson, Boyes & Co., Ltd. Motherwell, U.K.) which submitted its report to the U.K. Board of Trade last July after studying the requirements of India's coal industry. The report, a summary of which has been published in *Steel and Coal* (London) dated 19th October 1962, observes in this connection:

"How much of this sum ($35 million) can be spent in the U.K.? To some extent, the answer to this is to be found in the figures outlining the pattern of expenditure. The major portion earmarked for 'replacement' and for 'spares' may well be spent in Great Britain, since this country has supplied the bulk of the private sector's needs in years gone by.

"It was made clear to the Mission that, other things being equal, British equipment would be favoured for the 'expansion' component also, although the members were informed that the $5 million allocated for new mines development must be put out to world tender. Thus, although the channelling of orders to the U.K. will by no means be an automatic procedure, it is reasonable to assume that good salesmanship, backed by the right service and equipment, should result in the British mining machinery industry obtaining the major portion of the business made possible by the World Bank loan.

"The Mission expresses the view that the amount of the loan fund allocated to the purchase of spare parts seems insufficient, as members were told that 20 per cent of the equipment owned by the private mines is at present idle through lack of spares."

Three Important Recommendations

In the light of the above findings the Mission has made three important recommendations. One is that the U.K. Board of Trade should make representations to the appropriate Indian Government authority, suggesting that agents and stockists be allowed an import licence quota for spare parts, which would enable proper utilisation of funds and consequently make spare parts available. Another recommendation is that British mining machinery manufacturers, where not already committed, should give serious consideration to setting up manufacturing facilities in India. And a third recommendation is to the effect that British mining machinery manufacturers should pay special attention to the supply of the equipment most suitable for Indian conditions, provide full servicing facilities, and pay due regard to the prices of both capital equipment and spare parts.

The Mission has laid particular emphasis on the first recommendation pertaining to spare parts because difficulty is caused by the fact that spares are at present only imported on users' licences. Consequently, one user may have the spare part in stock while another user is suffering loss of output due to not having this particular component. The second recommendation has been made against the background of the Mission's finding that the U.K. manufacturers enjoy a very high degree of confidence from the people concerned with the Indian mining industry. Respect for the U.K. engineering ability, according to the Mission, has been enhanced to a considerable degree by the difficulties which have been experienced in certain excursions into continental and Russian equipment. The Mission has appreciated the Indian Government's policy of favouring indigenous manufacture of mining machinery in view of foreign exchange difficulties. But it has added that it is for the Government to provide conditions which will attract private investment to joint India and U.K. ventures. The third recommendation has taken into account the point of view of the Joint Working Committee of the Mining Associations in India. That Committee's stand is to the effect that after-sales service had been found wanting in the past and that, for new business, those machinery manufacturers offering complete service would receive special consideration, even against lower price offers from other manufacturers.

The Mission has also dealt with the shortage of trained engineers in the Indian coal industry. The private sector, it notes, is very short of trained engineers with "know-how" which cannot be provided by any kind of financial loan in terms of money only. While the private sector collieries are prepared to pay a price for technical services, they are unable to provide for themselves engineers from Britain. It would, therefore, appear to be essential, in the opinion of the Mission, that the necessary engineers be seconded from Britain. The Mission is strongly in favour of providing "short-term technicians" from and through Britain, for, otherwise, its business with India would decline and the East Europeans might step in with their machines from the new mining machinery works at Durgapur.

Market Potential

The Mission has examined, in the context of its study of the market potential for British equipment, the programme of the Heavy Engineering Corporation which is constructing its works at Durgapur to produce, in the first stage, 45,000 tons of mining equipment, to be increased to 80,000 tons in the second stage. This project, which is being set up with the technical collaboration of the U.S.S.R., is scheduled for completion at the end of 1964. This deadline, in the opinion of the Mission, does not look like a feasible proposition. The estimated annual capacity of the completed plant, in terms of numbers of items, is:

Coal cutters: longwall	50
Coal cutters: shortwall	550
Gathering arm loaders	245
Scraper chain conveyors	1,600
Belt conveyors	600
Trolley and battery locomotives:	
12-ton trolleys	50
7-ton batteries	100
Haulages	700
Electric winders	50
Main axial fans	100
Booster fans	50
Pumps	500
Ball mills	100
Sand pumps	50
Core drills	25

Besides the above, miscellaneous equipment for shaft and surface installations will account for 2,500 tons. The above figures, in terms of numbers of items, are interesting, for uptill now the plant's estimated capacity has been quoted on a tons-per-annum basis.

The Mission has observed that, before the Durgapur plant can commence production, a tremendous amount of mining machinery will be required. British companies already manufacturing in India or about to manufacture within, say, the next 12 to 18 months, should stand a good chance of success. If action can be taken immediately to enable the National Coal Development Corporation to buy British mining machinery for its third Plan, the Mission continues, British companies which have supplied considerable quantities to the N.C.D.C. in the past will continue to hold the market, and if they succeed in producing before the Russian plant comes into operation, there is no apparent reason why they should not continue thereafter to obtain considerable business from the N.C.D.C., in addition to business from the private sector. The Mission has, incidentally, noted the readiness of the Heavy Engineering Corporation to consider collaborating with foreign mining machinery manufacturers by producing their equipment under licence.

Aid Recommended

While dealing with the market potential of the N.C.D.C. for mining machinery and equipment, the Mission has noted that the Corporation is at present the largest buyer of such equipment and that probably the majority of its requirements for underground mining (upto and including the year 1961) has come from Britain. In the last 12 months or so, however, the East European countries have taken preference, due to their readiness to accept payment in rupees. The capital investment required by the public sector as a whole (that is, including Singareni) during the third Plan period is about £77 million for reaching its additional production target of about 20 million tons by 1965-66. No internationally available funds have so far been allocated for this development, which, as things stand at present, is therefore likely to be financed from tied purchases to the extent that free foreign exchange is not available. As the N.C.D.C. has practically no sterling available for importing British equipment in the next six to 12 months, the Mission has strongly pleaded for sterling aid from the U.K. Government in the following words:

"British mining companies cannot compete with State trading (from East Europe) such as we are competing with in India today. This situation is all the more exasperating, because the Indian coal industry wants British equipment in preference to that of other countries.

"We think it would be correct to state that there will be no exports of British mining machinery to the public sector of the Indian coal-mining industry for the next 12 months, unless sterling aid is made available in the next six months."

The Mission has thus recommended that, in view of the loans freely granted by the Russian, Polish and Czechoslovak Governments, the U.K. Government should give favourable consideration to the request for the inclusion in British loans of a provision for purchases by the N.C.D.C., to enable the Corporation to purchase (i) the British capital equipment it wants and (ii) the spares it requires to keep in operation the British equipment presently installed. Another related recommendation is to the effect that the U.K. Government should issue, through the Indian Government, an invitation to the N.C.D.C. to send a delegation of mining engineers to study British mining methods.

It is said that the Mission's report has not only dealt with the aspects covered in the foregoing paragraphs but also with several technical matters pertaining to electrical equipment, coal cutters and conveyors, core drilling and drilling for blasting, and so on. By all accounts, this seems to be a very valuable report.

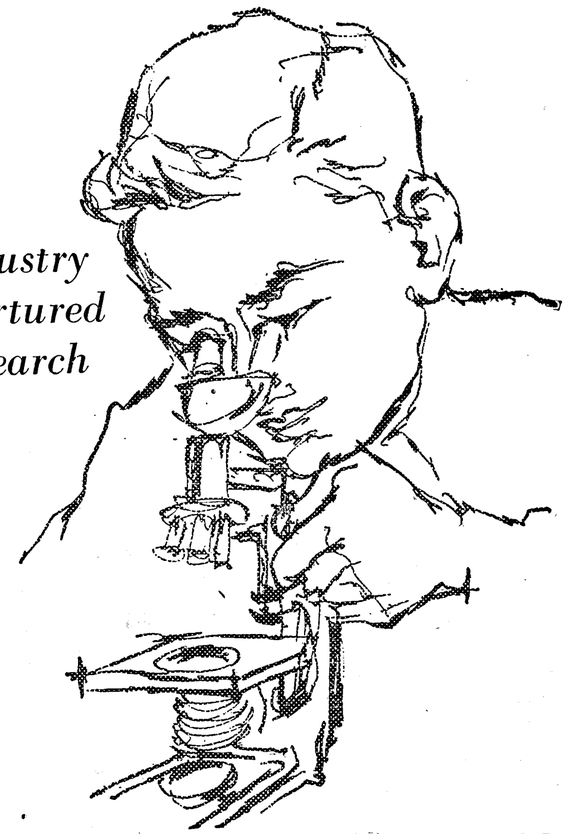
CHANGE OF NAME

The East India Distilleries & Sugar Factories Limited have pleasure in announcing that the name of the Company has been changed to:

E.I.D. - PARRY LIMITED

The constitution, management and policies of the Company remain unchanged.

An Industry Nurtured by Research



'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has' been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

AMAR DYE-CHEM LIMITED

NEW PRODUCTS AND PROCESSES

New Uses for Magnets

MAGNETS have been known and used by man for many centuries, and, even now, there is apparently no end to the number and variety of new applications to which magnets, and electro-magnets, in particular, can be applied.

A specialist in this field, Jones and Rickard Pty. Ltd., of Sydney, Australia, is currently producing four special types. One is a standard 4 kilowatt, 36-in. diameter, circular magnet for separating tramp iron from a coal conveyor; the other three, for the Physics Department of the Australian National University in Canberra, will form part of the University's new particle accelerator for the study of atomic structures. Electro-magnets for the separation of ferrous impurities take many different forms depending on the nature of the material from which the impurities have to be removed. In the coal mining and power generation industries it has become essential, before feeding the coal to the crushers and pulverisers, to remove pieces of iron and steel.

The magnetic separators most commonly designed for this purpose are circular, high intensity, multi-core, fan cooled type, usually suspended at the head pulley of the conveyor system. The presence of iron or steel fragments in foundry sand also can be a great problem to the founder.

Jones and Rickard solve the problem by supplying electro magnet pulleys in a wide range up to 30 in. in diameter and for belt widths up to 3 ft.

Another type of magnetic separator in which the company specialises is the cascade separator. This is used to separate ferrous impurities from lighter and more finely granulated materials, and is comprised of a vibrating tray with a series of magnetic steps under which are the magnet poles.

Other types of magnet designed and manufactured by the firm include the slip separator for liquid or slurry materials such as paint and ceramic ingredients, and the overband moving-finger separator for meals and powders.

Welding Metals and Glass

The Financial Times, London, reports the development of a method of welding together materials which have widely differing coefficients of thermal expansion such as metals and glass. If it is correctly applied, the welds can repeatedly be heated to as much as 1,000 degrees C. without disrupting them. The parts to be joined should be circular or tubular in shape. In the method, the part with the lower coefficient—a rod or disc of glass—is fused into a sleeve or tube of the component with the higher coefficient. Around the exterior of the latter are wound several layers of a thread such as silica glass, which has a much lower coefficient of thermal expansion than the metal but also has good elasticity. The thread is kept very taut so that it tends to restrain the outer casing as the latter tries to expand. This restraining influence is not enough to prevent elastic deformation of the outer sleeve but, at high temperatures especially, it does prevent plastic deformation so that the casing always shrinks back to its original diameter when cooled. At each re-heating, the amount of expansion is always the same provided the temperature limits are the same. The technique is expected to have many applications in electronics.

Plastic Insulation

A subsidiary of Australia's largest manufacturer of plastic goods—Moulded Products (Australasia) Ltd.—has developed a full range of "Nylex" brand cables which are claimed to be considerably more resistant to damp and corrosion than conventional rubber insulated cables. Plastic covered "Nylex" cables are manufactured by A.P.I. Cables and Insulation Pty. Ltd., in a comprehensive range from low voltages to 11,000 volts. Custom-made "Nylex" PVC insulated and sheathed cables have revolutionised wiring methods in a wide variety of Australian industries. Any "Nylex" single core protected cables have sharply reduced the cost of underground electrical reticulation. The cables are widely used for underground, aerial, control and industrial purposes. Some of the variety of uses to which these cables have been put in Australia include the wiring of hospitals and schools, traffic signals, airport control towers, lighting buoys in harbours, factories, sports arenas, ocean-going yachts and commercial buildings. The cables are resistant to fungus and capable of withstanding exposure to all kinds of tropical conditions. All "Nylex" cables conform strictly to S.A.A. standard specifications and, where nominated, also to British standard specifications.

Refrigeration Units for Road Trucks

Refrigeration units for road trucks, which are claimed to have resulted in increased efficiency in the transport of perishable goods over long distances, are now being made for export by an Australian firm. Major Industries Private Ltd., Sydney. The firm makes three models of mobile refrigeration units and three types of automotive air-conditioners, including what is claimed to be the "first really practical air-conditioner for taxi-cabs." The refrigeration units, which use the force draught principle, are compact, light, economical and require little or no maintenance. Thermostatically controlled compressors enable humidity to be decreased from 90 to 15 per cent.

Heat Treatment for Synthetic Yarns

Important developments in the heat treatment and dyeing of synthetic and cellulosic materials in fluid beds were announced in the recent annual report of the Cotton, Silk and Man-Made Fibres Research Association, London. The Director of the Association, Dr. D. W. Hill, says that developments on fluid beds have taken place in several directions. Their use for the hot-stretching of nylon tyre cord has resulted in a greatly improved product leading to a considerable reduction in the amount of nylon needed in tyres. Applied to synthetic sewing threads, the technique is claimed to improve and stabilise their elastic characteristics, and also allows them to be hot-stretched before instead of after dyeing, which is sometimes more convenient for manufacturers. The principle is also being used at the Institute for the narrow fabric field, particularly for the dyeing and setting up of synthetic fibre webbings of the type used in car safety harness. The Institute has developed a prototype machine for the continuous processing of narrow fabrics. It is claimed that compared with conventional batch dyeing, the process reduces the contact time of fabric to dye from hours to less than a minute; takes up less floor space; and produces a higher quality finish.

New Device to Detect Aircraft Engine Failures

Impending aircraft engine failure can be predicted by data recording equipment, according to Mr. C. T. Thum, Manager, Special Devices Division, Lockheed Aircraft Service Company. Mr. Thum described to the 51st Air Force-Industry Safety Conference in America a flight-tested aircraft maintenance recording system that simultaneously measures more than three hundred aircraft engine or flight system parameters, storing the data for rapid readout and analysis. The system makes it possible to retain a life history of an aircraft and its engines and components, thereby permitting maintenance or overhaul to be performed on a basis of actual equipment condition. The data recording equipment permits significant reductions in aircraft maintenance and operational costs in addition to increasing flight safety by signalling the need for maintenance before failures occur.

New Weedkiller

A new weedkiller developed in Britain by Plant Protection Ltd., Kent, is claimed to be effective against coarse grass and water weeds, but harmless to crops. One of the main advantages, claim the makers, is its effectiveness in areas liable to soil erosion. The Company claims that farmers, instead of ploughing in weeds and risking erosion, can kill them off quickly with the new chemical and, within a few weeks, the soil can be resown with crops.

Spraying Device

Drift hazards common to crop spraying are almost eliminated in a technique developed by two British companies, E. Allman and Co. Ltd. and Dependable Relay Co. Ltd. Weedkillers are sprayed by machines which use a new type of spray bar. Holes drolled in the bar issue droplets too large to be carried as drift on the wind. This means that crops can be sprayed in conditions which would preclude the use of conventional sprayers. Rooms of different lengths are available—for example, 6 ft. (1.828 m.) for inter-row fruit plantations and 18 ft. (5.486 m.) for cereal or grassland spraying. Containers of different capacities are available for use with the various spray bars. One boom is designed for the removal at tractor speed, of grass and weeds round the base of fruit trees—a rubber-tyred "bicycle wheel" guides the spray mechanism round tree trunks.

Device to Investigate Fossil

A grinding machine which will enable geologists to take a closer look at ancient history has been developed by the Department of Geology at Nottingham University, England. The machine developed from a standard lathe, is used to grind successive surfaces through fossil specimens at intervals between 10 and 50 microns. From records of these surfaces, scientists are able to study the variations of the internal structure of the fossil and the history of the development of the fossilised creature. Essential requirements of the machine are that the successive surfaces must be parallel, and the interval between them must be known and capable of being controlled. The Nottingham machine is claimed to be a great improvement on the equipment previously used. The specimen to be sectioned is embedded in polyester resin and then attached with tough wax to a mild steel mounting block which is in turn attached to a permanent magnetic positioner on the toolpost block of the lathe.

Horizontal Forging Machine

An advanced type of horizontal forging and upsetting machine is now being produced by a British engineering firm, David Etchells (Machinery) Ltd., Staffordshire. Taking up to 3 in. diameter (7.6 cm.) metal, it gives greater productivity than former models, longer life of dies and makes work easier for the operator. A collapsing device operates should anything go wrong when the machine is being fed. The die life is lengthened because the increased operational speed results in shortening the period of contact of the hot metal with the die.

Plastic Moulds for Man-hole Covers

Plastics moulds made by a British firm, Moto Plastics Ltd., are being used in the production of concrete man-hole covers. Formed of polythene and glass fibre, the new mould replaces the traditional steel variety. It is much lighter, corrosion-proof and dimensionally stable in all conditions. It produces a high surface finish and stands up to the vigorous handling experienced in cast concrete production.

INVESTMENT ELEMENT IN LIFE INSURANCE

LET NOT LAYMEN BE MISLED

By O. S. Gupta

DEPARTMENT OF COMMERCE, UNIVERSITY OF ALLAHABAD

A LIFE insurance policy is usually said to be a combination of two elements: (*a*) the element of protection, and (*b*) the element of investment. The investment element increases each year as premium payments are made, while the protection element decreases to the same extent. At the beginning of the policy period, the investment element is negligible but it becomes equal to policy amount at the time of maturity, when protection element falls down to zero. This is said to apply to those life insurance policies, under which the insurer always pays the policy amount, either at the death of the insured or on his attaining a specified age or after passage of a specified period, as the case may be. A term policy is said to have no investment element, perhaps, because the policy may or may not become payable depending upon whether or not the insured dies within the term of the policy. Pure endowment policies and survivorship policies should also be placed in the same category as term policies for the purpose, for a pure endowment policy may not become a claim if the insured dies within the endowment period and a survivorship policy may not become a claim if the insured survives the named person.

Investment element is believed to arise on account of creation of reserve on a policy. When the policyholder pays more by way of premium than the cost of insuring his life, the difference is kept in reserve for future. And this can happen only when premium is paid as a single premium or as level premium. But, if it is paid as a natural premium or if the policy is for just a year, no reserve can be created and there would be no investment element even in whole-life or endowment policies. On the other hand, even a term policy, a pure endowment policy or a survivorship policy may have the "investment element" if the policy is for a period more than one year and if single premium or level premium is paid.[1] Only, the "investment element" cannot go on rising throughout the term; it will start declining after some time till it equals zero at the end of the term or on death of the named person.

Types of Policies

There is a feeling that investment element is the greatest in case of a level premium policy. The policyholder pays the same amount of premium year after year, although the cost of insurance goes on increasing. In the beginning for a few years, therefore, the net premium is more than the cost of claims. Assuming that the "loading" is able to take care of administrative expenses every year, it is said that this difference goes on accumulating year after year into a fund, on which compound interest at a presumed rate is also earned. As more and more of premiums are paid on a policy, the "investment element" increases, whereas the protection element decreases.

In case of a single premium policy the net premium collected in the first year is many times more than the cost of claims. Out of the remaining premium costs are met in future years, but interest earned on the balance is much more than cost of claims and, hence, the balance may be carried forward as a fund. This fund goes on expanding. It belongs to the policyholder and thus investment element in a life policy goes on increasing till it becomes a claim by maturity. If the policy becomes a claim by death, a part of the policy amount is paid as return of investment and the balance as protection.

On some reflection such a view will lead us to believe that under level premium plan the policyholder pays by way of net premium more in total than the discounted cost of claims per policy to the insurer. Only then can be say that there has been a net investment by the policyholder during the currency of the policy. But is that really so? The question can be answered only after considering how the net premium in life insurance is calculated under various plans of premium payment.

For calculating the natural net premium for a single life policy[2] each year separately, we estimate the total amount of claims for the generation with the help of a mortality table. This amount is then discounted at an assumed rate of return for the average duration between collection of premiums and payment of claims. The discounted value is then divided by the number of persons (belonging to that generation) living at the beginning. Thus every year the insurer receives an amount, which, together with interest on it for a year at the assumed rate, equals the amount required at the end of the year for meeting all claims. Thus what a policyholder pays year after year is only his contribution to the cost of protection and the question of investment simply does not arise.

Single Premium Plan

The net single premium, which is paid by each policyholder in a lump sum at the very beginning when the policies are issued, is calculated by finding out the values of the total claims every year, discounted for one or more years, according as the claims are to be paid at the end of one or more years, respectively, and then dividing the total of all such values by the number of persons, who take such policies. Thus, policyholders pay such an amount as premium, which would just enable the insurer to meet all claims year after year on that generation after earning compound interest at the assumed rate on the balance left with him in the beginning of every year.

For calculating net level premium, we have first to calculate the net premium for the given type of policy. Then, we divide this by the present value of a life annuity due of 1.00 purchased for the premium paying period at the age attained at the time of the issue of the policy. Actuarially, on all policies issued to particular generation, the net level premium is the same as the net single premium, which again is actuarially the same as the net natural premium. Hence what the insurer receives is utilised to meet the cost of protection only.

Under the single premium plan, every policyholder pays quite a substantial amount on taking the policy. Every year something is left out of it after earning interest and meeting the cost of protection per policy; but that does not *belong* to the policyholder. It is required for meeting the cost in future. Under the level premium plan, no doubt, the insurer receives in the beginning for some years premium on all policies far in excess of its requirements, the difference accumulating into a fund, which increases, and on which interest is also earned. But, after some years, the current premiums received fall short of its requirements, the difference being met out of the funds accumulated in the beginning. Thus, towards the end of the life of the generation, the fund gradually exhausts itself. So, whatever premiums are paid by a policyholder are just his part of the cost of protection and the question of investment does not arise. It is not denied that the fund at any time represents balance of an excess amount paid in the beginning by the policyholders, but what is emphasised is that this amount does belong to the policyholders and that they do not have any vested interest in the fund nor can they apportion it among themselves.[3] The fund is, no doubt, a liability of the insurer, but only in the sense that its amount cannot be considered as profit of the insurer; it has to be held in trust for all the policyholders to be utilised in a particular way, namely, meeting the difference between the future claims to be paid to them and the future premiums (if any) to be received from them. The policyholders in the generation can have a claim to the total of all such differences, only if all of them, without any single exception, agree to discontinue their policies. And yet it will not be correct to say that each policyholder has an equal share in the reserve.[4] Premium is calculated not on the basis of risk for an individual policy, for every policyholder belonging to the same generation pays the same premium rate, although some may die soon after taking the policy, while others die many years after. As deaths of individuals cannot be exactly, or even approximately, predicted, we have to depend on averages and so premium has to be collected for meeting cost on the generation as a whole, not on each insured individually. Life insurance, like other branches of insurance, is a co-operative device and so if a policyholder has paid premium in excess of his part of the cost of protection in the beginning, the balance is not purely for his own part of the future cost, but also for others' part. Consider, for example, how much total net premium will be received from a non-participating policyholder, who survives the policy-term and how much from one who dies soon after taking the policy. From the former will be received much more than the policy amount, from the latter only a part of it. The excess receipts from the former will help the insurer in making up the losses arising from deficit in receipts from the latter. Thus excess payments made by a policyholder cannot be said to belong to him. The question of investment, therefore, does not arise even here.

This applies to all types of life policies. In case of a whole-life policy, the policy amount is paid only at death of the insured. Premiums paid on this policy, under whatever plan, therefore, are mathematically just sufficient to pay cost of protection, and, as such, obviously, there is no element of investment in such a policy.

Endowment Policy

In the case of an ordinary endowment policy, since policies may also mature by survival, it may appear that the policyholder is getting back his premiums with interest thereon and hence the investment element is there. But these premiums are paid for nothing but the cost of protection, for living beyond a particular age or time is also a risk in life. Living beyond the earning age is as good a financial misery to oneself[5] as is his death in young age to the dependents. Anyway, the insurer incurs the cost of these payments for which he is charging a premium from the policyholders.

An endowment policy is, in fact, a combination of an ordinary term policy and a pure endowment policy without return for the same period, the protection being sought from the twin risks of living too short and of living too long respectively. This is known as the mathematical explanation of endowment policy. There is also an economic explanation of endowment policy, according to which, "it is a combination of decreasing term insurance with an accumulating investment, the former decreasing at exactly the same rate as the latter increases."[6] But this explanation is rather misleading, for it is based on a wrong foundation, namely, that the fund of policies in any generation, which an insurance company carried at any time, is divisible *pro rata* into each individual policy. It is wrong, because "The reserve is a liability representing THAT AMOUNT of assets (not "those amounts"), which . . . will be required to meet ALL policy obligations, . . ."[7] "The assets held to meet the reserve liability are held *in the aggregate* and for the benefit of *all* policyholders."[8] "Actuarially there is no such thing as a reserve for an individual policy."[9]

No doubt, in respect of all life insurance policies, except when premium is paid on the natural plan or when policy is to be in force for one year only, the insurer is at any time during the currency of policies in possession of some reserve belonging to ALL policyholders of a generation taken TOGETHER and invests it on their behalf. It is only in this sense that we can say that there is an element of investment in life insurance. But in that sense there is an element of insurance in property insurance also, though to a very limited extent, for even here some reserves for unexpired risks are maintained and their amounts may be invested, though for a short period only.

Life insurance may be partly considered as investment in the sense of earning bonus on participating policies. From the total amount received including reversionary bonus on a participating policy, is deducted the total gross premium paid thereon. The balance may be considered a return on total gross premium. But this ignores altogether the payments for protection element in the policy. In fact, the amount invested by participating policyholders is the bonus loading, in return for which they receive bonus. The difference between the total amount of reversionary bonuses declared on the policy and the total amount of bonus loading charged from the policyholder should be considered as return on bonus loading.

To say that there is some reserve on every policy and to call it an element of investment will be to mislead the layman to believe that an increasing portion of his total premium payments always belongs to him, which he can get back as surrender value on surrendering his policy.

---

[1] "Some investment element is present in every kind of level premium policy. . . ."—Maclean, J.B.: *Introduction to Life Insurance*, Vol. II.

[2] A single life policy is taken here to avoid complicated calculations of probability and to explain the idea in as simple and as non-actuarial words as possible.

[3] "There is, in a strict sense, no such thing as an individual reserve applicable to a specific policy. The reserve, as it has been built up, takes into consideration the probability that certain members of the group will die each year.

"The members of the group were, at entry, on equal terms. As they grow older, the terms become far from equal. For two individuals who become insured at the age of twenty it does not follow that the interest of each in the reserve at the age of forty is identical. If one is in sound health and without impairment and the other is suffering from an incurable ailment that will end his life within a few months, the latter unquestionably has a greater equitable interest in the reserve than the former. The sick man will die, and his beneficiary will receive the proceeds of his insurance within a short time; while the man of unimpaired health will continue premium payments and the proceeds of his insurance will not be paid until years hence."—Magee, John H.: *Life Insurance.*

[4] *Ibid.*

[5] It may be so either because one has to maintain himself and his dependents or because he has to bear heavy expenditure on some special occasions, like marriage of a daughter, educating the son and so on.

Firestone

World's Leading Producer of Rubber

Nobody builds tyres like Firestone, world's leading producer of rubber. Nobody tests tyres like Firestone — and millions of punishing tyre miles each year prove it. In fact, no part of a car is more thoroughly proved than its Firestone tyres. Motorists everywhere in the world, trust the tyre that's built, tested and backed by the Firestone name. It's their surest sign of value. They know what they are getting when they buy Firestone.

Firestone

Your Symbol of Quality and Service

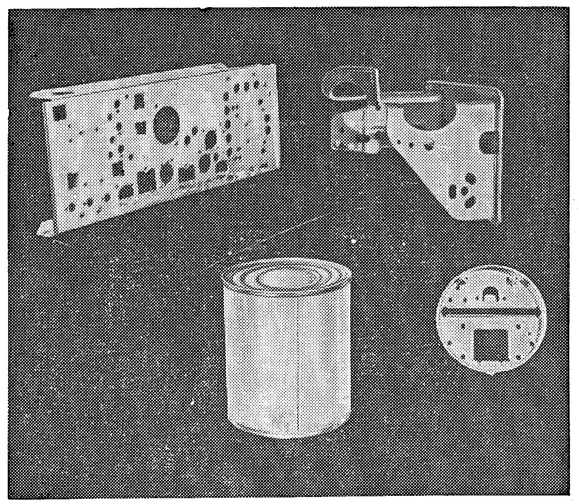
P 15 (a)

TOURISM IN WESTERN EUROPE

(*Concluded from page 904*)

the high cost and low profitability of investment in the building of new hotels are deterring private entrepreneurs from taking an interest in hotel industry, while the comparative lower investment called for has made motels and holiday camps attractive investment outlets. Apart from investment in accommodation for travellers, more and more money is being spent on developing and improving the amenities in tourist areas and holiday resorts, particularly sporting facilities.

Commenting on the prospects for the current year, the Committee points out that even the data available for the early months of the year encourage the hope that international tourist traffic in Europe will expand further this year. The number of American tourists visiting Europe during the first quarter of 1962 was 17 per cent higher than in the corresponding quarter of 1961, while the number of European visitors to the U.S. increased by 21 per cent. Although market research shows that tourist potential is still very large, particularly in North America, and that tourist facilities in Europe have greatly improved both in quality and quantity, tourism, emphasises the Committee, in conclusion, depends very much on general economic prosperity and tourist promotion. Further efforts in the field of advertising, information, market studies and travel organisation are required for fully exploiting the tourist potential. A significant aspect of international tourism, to which the Tourism Committee has drawn attention, is the special problems of tourism in certain developing countries. These countries see in their tourist trade a way of improving their economic position. The experience of countries traditionally regarded as tourist countries might be useful to nations wishing to develop their tourist traffic. Technical assistance for development of tourism is, therefore, important. Some steps have already been taken in this direction and the Committee has done well to recommend that these should be extended and co-ordinated.



What have components to do with a can?

What has a radio or bicycle component to do with a can?

Plenty! It has to do with what engineers term "press tool know-how". Engineering experience in precision drawing and forming of sheet metal for packaging has been extended by Metal Box to the production of vital industrial components.

From clutch-covers to extruded transformer cans, Metal Box serves the radio, automotive and electrical industries with a wide range of precision-made components, all of which were previously imported. These—and the essential can-closing and bottle-sealing machinery manufactured in India by Metal Box—help save over Rs 60 lakhs of valuable foreign exchange every year. And Metal Box machines are exported too.

PROTECTION FOR SHEET GLASS TO STAY

NEED FOR REDUCING COST OF PRODUCTION

THE sheet glass industry, which has been enjoying protection for the last twelve years, will not be removed from the protected list for another three years. The Government of India has decided to extend the period of protection (due to expire at the close of 1962) for a further period of three years ending 31st December 1965 at the prevailing duty of 70 per cent *ad valorem*. In coming to this decision, the Government has accepted the recommendation of the Tariff Commission, without any alterations. The sheet glass being a comparatively new industry, nobody will grudge the extension of the duration of protection to this industry. Some may wonder whether tariff protection is of any significance in view of the total ban on imports of specific sizes of glass manufactured by the domestic industry. Further, there is no prospect of relaxation of import controls in the foreseeable future. But the Commission has correctly taken the view that it would not be advisable to discontinue tariff protection even in principle, to an industry which has embarked upon ambitious schemes for expansion and modernisation.

Of the expansion schemes of the four existing units, mention may be made of the plan of one of the major units, the Hindustan-Pilkington Glass Works Ltd., Asansol, West Bengal, for the introduction of a new process of manufacture. Under the plan, the plant will replace the old "fourcault" system by what is called the P.P.G. process. A new bigger furnace has also been recently installed at the factory, fitted with oil-fired burners having automatic controlling arrangements. Another major unit, the Indo-Asahi Glass Company Ltd., West Bengal, is also engaged in large-scale renovation of a defective plant. The Seraikella Glass Works has just started production of coloured sheet glass, in a bid for diversifying the line of its products. New units are also coming up, details of which will be given presently.

Fair Ex-works Price

It is essential to give adequate encouragement to these plans for development and diversification. For, unless production is stepped up, there will be shortage of sheet glass, resulting in their high prices. Even if one glances through the estimates of the Tariff Commission, one will see that prices of domestic products compare very unfavourably with those of imported products. The average fair ex-works price of indigenous sheet glass is thus higher by as much as about 114 per cent (in the case of 4.8 mm. variety), as compared with the landed cost (ex-duty) of imported products. In regard to the popular variety of glass in India, namely, 2 mm. variety, the fair ex-works price of domestic product is Rs. 42.16 per 10 sq. metres, as against the landed cost (ex-duty) of Rs. 20.73 for the imported product. The disadvantage of the Indian product in this case is thus 104.43 per cent.

It may not be out of place in this context to examine briefly the basis on which the Commission has arrived at the fair ex-works prices. Of the four existing units, the Commission selected two units, namely, the Hindustan-Pilkington and the Indo-Asahi as representative units for the examination of cost of production. In estimating the future cost of production, it has provided for possible increases in raw material costs and also that on labour by way of wage increments, provident fund, incentive bonus, technical consultants' fees, etc. Provision for depreciation has been made at a yearly rate equivalent to the average for the next five years, calculated at normal income-tax rates, including second-shift allowance. This, it is said, will even out the heavy incidence for Hindustan-Pilkington on this account. An allowance for contingencies to cover unforeseen increases in costs has been given at 5 per cent on the cost of production, excluding depreciation and technical consultants' remuneration. What is more important, the return on capital employed has been allowed at 12 per cent, the working element of the total capital employed has been computed at an amount equivalent to four months' cost of production, excluding depreciation. It is on this basis that the Commission has worked out the fair prices, which are Rs. 42.16 per 10 sq. metres for 2 mm. variety, Rs. 59.63 for 3 mm. variety, Rs. 85.96 for 4 mm. variety, Rs. 115.94 for 4.8 mm. variety and Rs. 123.37 for 5.5 mm. variety.

As already pointed out, domestic prices are generally higher by over 100 per cent, as compared with imported products. The Commission's explanation for this is that the costs of raw materials, coal, oil, power and labour are substantially high and that the managements of glass factories have no control over this factor. But the Commission has not found it necessary to raise the existing duty to this level. One of the reasons adduced for this is that, by raising protective duty, the burden on industrial consumers on thinner glasses of less than 2 mm. and thicker glasses of 5.5 mm. would become "heavy and unwarranted," particularly as such gauges are not being manufactured in the country. Further, it is also contended that export prices of foreign manufacturers are not generally based on cost parity with domestic prices and are fixed lower. It may be noted here that, in the absence of imports (of most gauges) into India, the Commission has not taken the c.i.f. prices of actual imports. The landed cost has been worked out mainly on the basis of f.o.b. prices in Japan and the U.K.

It cannot be denied that the manufacturers must make all possible efforts to reduce the prices. This they should be able to do by expanding their production for which there is ample scope and by modernising their works. The annual installed capacity of the four units, now under operation, is 141 million sq. ft. (13.1 million sq. metres), which compares favourably with 113.80 million square ft. (10.57 million metres) in 1960. The increase is mainly due to expansion of the capacity of the Hindustan-Pilkington Ltd. (by 24 million sq. ft. to 54 million sq. ft.) and that of U.P. Glass Works Ltd. (by 3.2 million sq. ft. to 15 million sq. ft.). The capacity of the other two units, namely, the Indo-Asahi Glass Company Ltd. and Seraikella Glass Works Ltd., has been unchanged at 36 million sq. ft. each. All the units, except perhaps the Seraikella Glass Works, have plans for expansion. Besides, a few new units are expected to be commissioned in the course of the next few years. In fact, five units had been licensed as early as in 1960, but none of them has been able to complete installation of their machinery owing to various difficulties. The licensees are the Madras Sheet Glass Works Private Ltd., the Indo-Belgian Glass Works Private Ltd., Madras, Messrs. R. G. Ganerivala (Window Glass) Ltd., Shree Vallabh Glass Works, Anand, Gujarat, and the Cotton Agents Private Ltd., Bombay. If these factories are commissioned according to schedule, the aggregate capacity is expected to increase from 141 million sq. ft. at present to 193.7 million sq. ft. by 1965.

Output and Demand

The total production of sheet glass in 1961 was 8.3 million sq. metres, as against 8.2 million sq. metres in 1960. The bulk of the output, that is, over 50 per cent, continues to be of 2 mm. thickness, its production last year being 4.17 million sq. metres.

The demand for sheet glass is estimated at 10 million sq. metres (in terms of 2 mm. thickness) as in 1961 and is expected to go up by 15 per cent every year. This estimate is based on anticipated demand from building and other constructional activity, automobile industry, railways, mirror-making, picture frames and furniture manufactures. The Commission believes that it is not necessary to license additional capacity to meet the requirements of sheet glasses, ranging between 2 mm. and 5 mm. in thickness, during the next three years. As regards other sizes of plain sheet glass, coloured glass (other than blue and green) which are not likely to be domestically produced in the near future, the country may have to depend on imports.

Raw Materials

The raw materials commonly used in the manufacture of sheet glass are sand, soda ash, salt cake (anhydrous sodium sulphate), limestone, dolomite, felspar, borax and arsenic trioxide. Most of these are available indigenously. In addition, coal and furnace oil are used as fuel and refractories for lining the furnace. The major difficulty in this field has been the shortage of transport.

The Commission observes that the quality of indigenous products has steadily improved in recent years. There is, however, still room for improvement, because some of the consumers have complained of the presence of air bubbles, water marks, foreign materials, surface blemishes, waviness and uneven thickness. Most of the units have launched programmes of modernisation and have secured the services of expert technical personnel. Thus, the prospect of further improvement in quality is bright.

An important point made by the Commission in its report relates to the location and optimum size of sheet glass units. While selecting the site for a sheet glass unit, proximity to sources of supply of coal (or port towns where fuel oil may be cheaper) or sand or quartz should, the Commission has stressed, receive due consideration. For a tonne of sheet glass requires for its manufacture as much as an equal amount of coal (or 0.5 tonne of furnace oil) and 0.74 tonne of sand. The present transport shortage only strengthens the validity of this stand. Further, since conversion charges account for about 50 per cent of the cost of manufacture, the Commission feels that their incidence will diminish as units grow bigger and bigger. It is stated that a unit having a cross-flame regenerative tank furnace of 1,000 tonnes deadweight capacity with fourcault (or three Pittsburgh) machines should be regarded as an economic unit. By this yardstick, only three existing units can be considered to be of economic size. These are the Indo-Asahi Company (914 tonnes deadweight capacity), the Hindustan-Pilkington (884 tonnes) and Seraikella unit (813 tonnes). In view of the urgent need for reducing the cost of production of sheet glass, the licensing authorities will have to take these factors into account while permitting the establishment of new units.

Fuel Efficiency

Fuel efficiency of sheet glass plants is of no less importance in bringing down the cost of production. The Commission reveals, in this connection, that the fuel efficiency of all the furnaces in India is low. According to the technical advisers of the Commission and the Central Glass and Ceramic Research Institute, consumption of coal should not exceed 1.25 tonnes per every tonne of glass melt. None of the four existing units comes upto this standard. In fact, the consumption of coal (per tonne of glass melt) was unusually higher at 2.90 tonnes in the case of the U.P. Glass Works as in 1961, though it has been brought down slightly to 2.00 tonnes early this year. The Seraikella Glass Works consumed 1.72 tonne of coal, the Hindustan-Pilkington 1.52 tonne and the Indo-Asahi 1.40 tonne for every tonne of glass produced. In view of this unsatisfactory state of fuel efficiency in glass factories, the Commission has advised that the Chief Combustion Engineer should inspect the furnace operation of all these works at an early date and suggest suitable measures to improve the situation.

The price factor cannot be the sole concern of the producers alone. It is necessary that dealers also should resist the temptation of arbitrarily increasing selling prices, taking advantage of the scarcity of glasses due to stringent import restrictions. On the basis of a study of the recent trends in the selling prices of glasses in Bombay and Calcutta, the Commission observes that the prevailing prices are disproportionately high, as compared with the ex-factory prices. The evidences are clear, says the Commission, that wholesalers and dealers have been exploiting the helpless consumers The Commission concedes that, as supplies increase, prices may come down. But this is a long-term solution. In the meantime, there is need for curbing any undue increase in prices. For this purpose, the Commission suggests two measures. In the first place, the industry should publish periodically in the Press their ex-factory process and retail prices and ensure that authorised dealers display prominently in their premises the retail prices of the different gauges of glasses. Secondly, manufacturers should open a few fair price shops for sheet glasses at important consuming centres like Bombay, Ahmedabad, Calcutta and Madras. These suggestions are quite practical and deserve the urgent attention of producers. Consumers have surely a right to expect such services from a protected industry.

STEARIC AND OLEIC ACIDS

PROTECTION WITHDRAWN

THE stearic and oleic acids industry will cease to enjoy tariff protection from the beginning of next year. The Government of India has taken a decision to this effect endorsing the recommendations of the Tariff Commission. This does not mean that the industry will be faced with stiff competition from foreign manufacturers. For only the principle of protection has been given up. Owing to scarcity of foreign exchange, imports are strictly restricted. What is more, the existing protective duty of 35 per cent *ad valorem* will be replaced by a revenue duty of 50 per cent *ad valorem* in respect of both stearic and oleic acids.

It may be noted here that stearic acid is consumed mainly by such industries as rubber, textiles and cosmetics, and oleic acid by lubricants and carbon paper, etc. The demand for the two acids and their derivatives has been going up steadily on account of the growth of these consuming industries. The domestic industry has risen to the occasion and has made good progres not only in expanding production but also in improving the quality of its products. This has been made possible to a large extent by the protection which the industry has been enjoying since 1948.

There are now eight units engaged in the manufacture of stearic and oleic acids. During the previous inquiry in 1959, there were only seven units. The new unit is the Gandhi Parikh Investment Corporation Private Ltd., Bombay. The following table shows the trend in the expansion of installed capacity of each of the units.

(In tonnes)

	Stearic acid		Oleic acid	
	1959	1962	1959	1962
Navsari Oil Products Pvt. Ltd., Navsari	3,170	2,865	488	1,158
Godrej Soaps Pvt. Ltd., Bombay	1,829	1,829	254	254
The Calcutta Chemical Co., Ltd., Calcutta	427	518	305	256
Modi Vanaspati Mfg. Co., Modinagar	762	914	..	..
Swaika Oil Mills, Calcutta	254	762	51	..
Swastik Oil Mills Ltd., Bombay.	152	152	51	51
Techno Chemical Industries, Ltd., Kozhikode	4	..	12	..
Gandhi Parekh Investment Corporation Pvt. Ltd., Bombay..	..	..	..	90
Total ..	6,598	7,040	1,161	1,809

Four units, namely Navsari Oil Products, Godrej Soaps, Swaik Oil Mills and Swastik Oil Mills, have applied for expansion of capacity. But, according to the Commission, no increase in capacity is likely to arise during the next three years. The Commission's view is apparently based on the premise that the present capacity for both the acids is adequate to meet any foreseeable increase in demand in the immediate future. The increase in capacity, however, is only a matter of negligible significance considering the large unutilised capacity in the industry. The utilisation of capacity is only 40 per cent of the total capacity in the case of stearic acid and 22 per cent in the case of oleic acid. The actual output of stearic acid was 2,838 tonnes in 1961 (as against 1,931 tonnes in 1959) and of oleic acid 392 tonnes (as against 300 tonnes).

Demand

The demand for stearic acid has gone up from about 1,900 tonnes in 1959 to an estimated 3,250 tonnes during 1962. The demand for oleic acid is estimated at 425 tonnes in 1962, as against only 250 tonnes in 1959. The following table shows the trend of demand from various industries anticipated for the year 1965:

(In tonnes)

	1962	1965
Stearic acid		
Rubber	1,800	2,800
Textiles	300	450
Cosmetics	400	550
Miscellaneous (grease, metal polishing, stearates, etc.) ...	750	975
Total ...	3,250	4,775
Oleic acid		
Lubricants	150	250
Carbon paper	100	175
Miscellaneous	175	250
Total ...	425	675

Besides the two acids, the demand for the derivative, stearates, is estimated at 200 tonnes for the current year and is expected to go up to 320 tonnes by 1965. There are already six units manufacturing stearates, the aggregate annual capacity of which comes to 594 tonnes at present, as against 431 tonnes in 1959. But

Chemicals help Industry to bring a better future closer

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Antioxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON
is a Registered Trade Mark

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay-1. Also at : Calcutta, Delhi and Madras.

T.I.S.CO.'S RESULTS UNIMPRESSIVE

PRODUCTION COSTS MOUNT UP

CONTRARY to expectations of some noticeable improvement, especially in profit following the maintenance of the dividend on the Rs. 75 fully paid ordinary shares at Rs. 7.25 net, or Rs. 10.36 gross, per share, notwithstanding the fixation of the steel retention prices for 1960-61 and 1961-62 by the Government at Rs. 522.50 per ton, as against the Tariff Commission's recommendation of Rs. 550 per ton, the Tata Iron and Steel Company Ltd. (Managing Agents: Messrs. Tata Industries (Private) Ltd., Bombay) has produced unimpressive results for the year ended 31st March 1962. Gross profit, at Rs. 19.50 crores, is, in fact, slightly lower as compared with Rs. 19.60 crores in 1960-61, despite further improvement of some Rs. 7.30 crores in net sale proceeds at Rs. 79.85 crores, excluding excise duty paid and rebate allowed. However, the ratio of net profit (of Rs. 608.87 lakhs, as against Rs. 508.87 lakhs in the previous year, as shown in the Directors' report) to net sales has moved up during the year from 7.01 per cent to 7.62 per cent. The ratio of net profit to capital employed (of Rs. 132.34 crores, as against Rs. 135.68 crores in 1960-61) has also improved further from 4.18 per cent to 4.60 per cent.

Depreciation, as will be seen from the table below, has claimed slightly less at Rs. 13.15 crores, as against Rs. 13.92 crores a year before. As the element for depreciation included in the revised retention prices has been reduced from 6.25 per cent to 5 per cent, the Company has provided for normal depreciation only at Rs. 7.6 crores, as against Rs. 9.5 crores which would have been provided at the former rate of 6.25 per cent. In order, however, to safeguard the Company's claims for tax relief, an additional provision of Rs. 5.5 crores has been made, as in the past year, to bring up the total allocation to the level allowed for income-tax purposes. For the same reason, we are told, the statutory allocation to the development rebate reserve has been made for the full amount of Rs. 678 lakhs, as against Rs. 644 lakhs a year before.

After allowing for depreciation and Managing Agents' commission for the first time after a lapse of three years, the net profit amounts to Rs. 608.87 lakhs, as against Rs. 567.16 lakhs in 1960-61. According to the Directors' report, the previous year's net profit is Rs. 508.87 lakhs, as allowance has been made for the loss of Rs. 58.29 lakhs arising from the devaluation of D. Mark last year. Readers are aware that both preference and ordinary dividends, absorbing together Rs. 465.04 lakhs, are to be paid, as in the previous year, from reserves, representing taxed profits of previous years. Since the amount drawn for this purpose is less than that credited to development rebate reserve, there has been no net depletion of reserves.

Full details of the Company's financial results for the past four years are contained in the comparative table in the first column.

The retention price episode as reviewed by Chairman, Mr. J. R. D. Tata, and the Directors in their report for the year was editorially dealt with in this journal last week (*vide* page 840). In that article, it was also explained how capacity production of two million tons in the T.I.S.Co. would be an elusive ideal for some years to come.

The Directors have, however, thrown no light on why the gross profit for 1961-62 failed to expand along with sale proceeds. From the year's results, however, it appears that the chief reason was further substantial increases in costs. The cost of raw materials consumed rose from Rs. 16.14 crores to Rs. 17.07 crores, staff expenses from Rs. 17.98 crores to Rs. 18.24 crores and other expenses from Rs. 26.83 crores to as much as Rs. 31.09 crores. As against these sharp increases in costs, production of saleable steel improved by only 55,000 tons to 1,318,000 tons. Perhaps the anticipated further increase in production this year may enable the Company to reduce per unit costs. At steel melting shop No. 3, it is proposed to add an eighth furnace to raise output appreciably and provide greater flexibility. As the foundations for this additional furnace were provided when the shop was built and as most of the furnace, if built, will be fabricated locally from Indian materials, the cost of the furnace will be relatively small.

Financially, the Company is in good shape. It has a paid-up capital of Rs. 38.97 crores, comprising Rs. 27.56 crores in ordinary shares and the rest in preference shares. As against this, reserves and surplus aggregate Rs. 29.29 crores. The Company's total net worth, therefore, amounts to Rs. 68.26 crores, as against Rs. 66.64 crores a year before. In accordance with the provisions of the loan agreements with the World Bank, Rs. 5.4 crores were repaid to the Bank during the year, bringing the outstanding loan balance from the I.B.R.D. to Rs. 40.27 crores. Other bank deposits amounted to Rs. 1.3 crore were also paid off during the year. The total borrowings of the Company from banks, including the I.B.R.D. loan, at the close of the year stood at Rs. 54.08 crores, as against Rs. 59.04 crores a year before, of which short-term liability amounted to Rs. 13.81 crores, as against Rs. 13.40 crores. Besides, a special advance of Rs. 10 crores from the Government of India for capital expenditure is outstanding. Current liabilities and provisions aggregate Rs. 25.08 crores. The total short-term indebtedness to outsiders, therefore, amounts to Rs. 38.89 crores, against which are available current assets, loans and advances aggregating Rs. 39.49 crores and investments of Rs. 8.87 crores, of which Rs. 1.79 crore are quoted and command a market value of Rs. 5.89 crores. The gross block expanded during the year from Rs. 185.52 crores to Rs. 190.23 crores. It has been written down to Rs. 109.06 crores.

Currently quoted at Rs. 121 *ex-div.*, the Rs. 75 fully paid ordinary shares offer a fairly attractive return of 6 per cent per annum, free of tax.

(In lakhs of rupees)

* Subject to deduction of tax.

† Proportionate dividend for three months on the new ordinary shares from 1st January 1960.

‡ Includes interest at 4 per cent. per annum paid out of capital.

§ Worked out on the basis of net profit indicated in Directors' report and sale proceeds as shown in the table above.

(*Concluded from next column*)

Rs. 100 each at an extraordinary general meeting of the shareholders held on 15th December 1961. In June 1961, 10,000 such classified shares were issued and hence the issued capital has increased to Rs. 30 lakhs. The paid-up capital, however, remains unchanged at Rs. 20 lakhs as the new issue was offered to shareholders only a fortnight before the close of the accounting year under review. Reserves and surplus aggregate Rs. 6.98 lakhs only. Borrowings have increased during the year from Rs. 13.08 lakhs to Rs. 15.03 lakhs. Current liabilities and provisions total Rs. 16.03 lakhs. Thus, the total indebtedness to outsiders amounts to Rs. 31.06 lakhs, as against which are available current assets, loans and advances aggregating Rs. 37.75 lakhs. Gross block, which expanded during the year from Rs. 25.86 lakhs to Rs. 30.58 lakhs, has been written down to Rs. 20.32 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 210 *cum-div.* On the *ex-div.* basis, they offer a net yield of 2.7 per cent per annum, which, notwithstanding the growth prospects for the Company, is quite low, considering that share values in general have, over the past three months shown wide cracks.

BHARAT BIJLEE SPARKLES

APPROPRIATIONS CONSERVATIVE

AFTER having staged a thoroughly reassuring recovery in 1960-61 from a rather disturbing setback suffered in the immediately preceding year, Bharat Bijlee Ltd. (Chairman: Mr. Prahlad C. Mehta, Bombay) has sparkled during the year ended 30th June 1962. The year's results show further improvement on all fronts. Sales realisation have shot up from Rs. 56.67 lakhs to Rs. 81.36 lakhs and gross profit has gone up by 73.8 per cent from Rs. 5.60 lakhs to Rs. 9.73 lakhs. Indicative of a rise in production are higher sale proceeds and increase in the cost of materials, stores and spares consumed from Rs. 33 lakhs to Rs. 49.90 lakhs, though the latter can be attributed partly to inflationary pressures in the economy. The ratio of gross profit to sales, which had dipped from 8.4 per cent to 7.6 per cent in 1959-60, but had recovered to nearly 10 points in 1960-61, has expanded further to 11.9 per cent during the year under report. Essential provisions have been raised once again. Thus, depreciation has claimed Rs. 2.60 lakhs as against Rs. 1.85 lakh in the previous year, and taxation Rs. 3.50 lakhs as against Rs. 1.55 lakh. Because of these higher allocations, net profit has shown an improvement of only 51.3 per cent from Rs. 2.20 lakhs to Rs. 3.63 lakhs. More than two-thirds of this net profit (72 per cent or Rs. 2.63 lakhs, to be precise) has been ploughed back to reserves. Despite these conservative appropriations, the Directors have been able to propose a half point increase to 8 per cent per annum in the taxable dividend on the Rs. 100 fully paid ordinary shares, which, indeed, is fully justified by the year's impressive results.

A fair idea of how the Company fared in the past four years can be had from the comparative table below:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sales realisation	81.36	56.67	44.61	52.42
Other income	0.18	0.30	0.05	0.29

Note.—Preference dividends for 1959 and 1960 include past arrears. From July 1960, preference shares were converted into ordinary shares.

The impressive rise in sale proceeds and therefore in gross profit during the year is attributed by the Directors to the introduction of a production incentive scheme from April 1961 on lines recommended by a firm of industrial consultants. Naturally, the scheme did boost production and earned the Company rich returns, while, at the same time, benefiting the staff to the extent of Rs. 88,000 by way of incentive bonus. The management deserves to be complemented on successfully implementing the bright idea. The scheme will, of course, bring more benefits during the current year and in future. Besides, the order book for 1962-63 is reasonably satisfactory. But the Directors have warned about rising costs which tend to negate benefits accruing to the transformer industry from improved prices. Then there are the stringent restrictions on import of materials and components which may hamper the Company's production.

The Company has recently been licensed to raise its capacity from 36,000 h.p. per annum to 150,000 h.p. per annum in motor department. Permission to increase capacity in the transformer department from 72,000 kVA. to a little over 200,000 kVA. per annum was obtained in 1960-61. To make use of this expanded capacity, it was found necessary to purchase 95,000 square yards of industrial land near Trombay. But this could not be done during the year under report on account of difficulties raised by the State Government in regard to the vendor's title.

Out of a total of 30,000 unclassified shares, 20,000 shares were classified as equity shares of

(*Continued in previous column*)

KIRLOSKAR ELECTRIC DOES VERY WELL

PEAK LEVEL OF TURNOVER—DIVIDEND RAISED AGAIN

THE bold decision of the Directors of Kirloskar Electric Company Ltd. (Managing Agents: Messrs. Kirloskar Associates, Harihar), taken during 1960 in the face of a setback in sales and profits, to proceed with the plans for expansion and diversification of the Company's activities appears to have been amply rewarded. During the year 1960-61, for example, gross realisation from the sales of products expanded, in comparison with the previous year, by as much as Rs. 95.77 lakhs, or 52.6 per cent, to Rs. 277.83 lakhs, and the gross profit, as a consequence, increased from Rs. 25.24 lakhs to Rs. 40.79 lakhs. Although a much larger amount, of Rs. 23.61 lakhs, as against Rs. 15.10 lakhs, had to be set aside to meet essential provisions for Managing Agents' commission, depreciation and taxation, enough balance was left to effect an improvement of about 70 per cent in the net profit from Rs. 10.14 lakhs to Rs. 17.18 lakhs. This improvement had a most salutary effect on dividend which was raised by two per cent to 11 per cent, subject to deduction of tax. What was more heartening, however, was that the rise in the rate of distribution could be achieved even after crediting Rs. 12.38 lakhs to reserves, as against only Rs. 6.22 lakhs previously. The working results of the Company for the year ended 30th June 1962 show a further notable improvement. The turnover has gone up again by Rs. 71.46 lakhs to stand at the impressive all-time high level of Rs. 349.29 lakhs and there has been a more than proportionate increase in gross profit from Rs. 40.79 lakhs to Rs. 57.52 lakhs. The story does not end there. Not only has the profit increased in consonance with better turnover but the profit margin (ratio to sales of the gross profit) itself has actually risen from 14.7 to 16.5 per cent.

With a higher profit, a bigger depreciable block, and an increase in the rate of corporate taxation, it is but natural that there should have been a larger allocation to essential provisions than that made in the preceding year. Accordingly, the provision for Managing Agents' commission has been stepped up to Rs. 4.84 lakhs (Rs. 3.37 lakhs), for depreciation to Rs. 9.43 lakhs (Rs. 7.36 lakhs) and for taxation to Rs 24.00 lakhs (Rs. 12.88 lakhs). With this all-round increase in prior appropriations, the net profit has risen but nominally by Rs. 2.07 lakhs to Rs. 19.25 lakhs. Despite the rise in profits, the Directors have found no need to modify their cautious dividend pay-out policy, probably because of the need to conserve resources to finance further expansion and diversification. The rate of ordinary dividend has, therefore, been proposed to be raised by one point only to 12 per cent, subject to deduction of tax, and this claims Rs. 5.25 lakhs. The balance, amounting to no less than Rs. 14.53 lakhs, including provisions no longer required, has been transferred to various reserves.

The following table presents the working results of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959

Low	17.00	12.50	12.00	10.00

* Subject to deduction of tax.

The financial position of the Company continues to be strong. A paid-up share capital of Rs. 44.39 lakhs, all in equity shares of Rs. 10 each, derives support from reserves and surplus amounting to Rs. 54.98 lakhs. Secured and unsecured loans aggregate Rs. 40.73 lakhs, besides outstanding current liabilities of Rs. 79.16 lakhs. But these are fully covered by current assets and loans and advances altogether amounting to Rs. 141.67 lakhs. With the inclusion of new assets worth Rs. 20.69 lakhs acquired during the year and the capital work in progress amounting to no more than Rs. 0.65 lakh, the gross block has increased to Rs. 133.09 lakhs which, on deducting the accumulated amount of depreciation of Rs. 55.49 lakhs therefrom, yields a net block of Rs. 77.60 lakhs.

It will be recalled that, in their report to shareholders for the year 1960-61, the Directors had stated that the technical collaboration agreement of the Company with the Brush Electrical Engineering Company, Ltd., had terminated by efflux of time and that the Company was negotiating a further agreement with it for continuing the collaboration. The Directors now state, in their latest report, that the agreement has since been signed and that two new agreements have also been signed, one with the Lincon Electric Company of the U.K. for the manufacture of welding generators and the other with the U.S. Electric Motors Incorporated of the U.S.A. for the manufacture of variable speed and geared motors. Besides taking up the manufacture of these two new lines of production, the Company is also to increase, under a licence from the Government, the capacity for the manufacture of transformers of capacities upto 20 MVA and voltage upto 132 KV and steps in this direction have already been taken.

Although the attainment of these objectives would definitely put the Company on a strong competitive basis and lead to a further expansion in sales, the Directors have uttered a word of caution against any undue optimism about the immediate future. They state that, while every effort is being made to maintain the improvement in sales, it is difficult to forecast the level of sales that may be attained during the current year on account of the handicap experienced in getting adequate import licences and procuring necessary raw materials.

At present, the Rs. 10 paid ordinary shares of the Company quoted on the Madras Stock Exchange are available at Rs. 22.80 *cum-div.* On *ex-div.* basis, the net yield on investment works out to about 3.4 per cent per annum.

SHAH CONSTRUCTION PAYS SAME

The Directors of the Shah Construction Company Ltd. have recommended a dividend of 9 per cent. per annum on the Rs. 100 paid ordinary shares for the year ended 30th June 1962, which is the same as in the previous year. The Company's gross profit for the year shows a slight improvement from Rs. 10.89 lakhs to Rs. 12.07 lakhs. After providing Rs. 2.63 lakhs (Rs. 2.67 lakhs in the previous year) for depreciation, Rs. 5.30 lakhs (Rs. 3.95 lakhs) for taxation and Rs. 22,000 (Rs. 17,000) for development rebate reserve, the distributable surplus is lower at Rs. 3.92 lakhs as compared with Rs. 4.10 lakhs a year before. The dividend will absorb Rs. 3.60 lakhs, leaving a balance of Rs. 1.33 lakh to be carried forward, as against Rs. 1.01 lakh brought in.

(*Concluded from next column*)

produce the basic raw material for acetate yarn. Production will start next summer. An uptodate, air-conditioned knitting factory was set up during the year for manufacturing superior knitted fabrics comparable to the imported ones. On modernisation and renovation of and additions to plant and machinery and buildings, the Company spent during the year Rs. 71.12 lakhs. One set of eight American combers and 6,400 spindles were installed during the year. Orders for more machinery and equipment have been placed.

During the year, loan capital of the Company shot up from Rs. 196.01 lakhs to Rs. 243.56 lakhs, presumably because of the modernisation and expansion programme. Out of Rs. 243.56 lakhs, the short-term liability amounted to Rs. 162.62 lakhs. Current liabilities and provisions at the year-end aggregated Rs. 93.74 lakhs, as against Rs. 77.18 lakhs a year before. Thus, the short-term indebtedness to outsiders totalled Rs. 256.36 lakhs which, however, was fully met by the total of current assets, loans and advances at Rs. 264.60 lakhs. The paid-up share capital was unchanged at Rs. 115.76 lakhs and was supplemented by reserves and surplus aggregating Rs. 58.91 lakhs. The gross block, which increased during the year from Rs. 383.55 lakhs to Rs. 419.07 lakhs, has been written down to Rs. 241.85 lakhs. Capital expenditure on new units under erection is shown at Rs. 4.57 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 17 *cum-div.*, final of 8 per cent per annum. On the *ex-div.* basis, they offer a net yield of 6.8 per cent per annum.

STEADY PROGRESS OF MODI SPG. AND WVG.

NEW MILL BEING SET UP

THE Modi Spinning and Weaving Mills Company Ltd. (Managing Agents: Messrs. R. B. Gujarmal Modi and Bros. [Private] Ltd., Modinagar, U.P.), which had shown substantial all-round improvement in its working during 1960-61, has more or less maintained that progress during the year ended 30th April 1962. Sales proceeds, excluding excise duty paid, have beat a small retreat to Rs. 613.65 lakhs, after having jumped up from Rs. 552.16 lakhs to Rs. 618.17 lakhs in the previous year. But gross profit, at Rs. 71.80 lakhs, is slightly higher as compared with Rs. 71.41 lakhs to which level it had improved in the previous year from Rs. 38.77 lakhs in 1959-60. The ratio of gross profit to net sales has crept up to 11.7 per cent, after having expanded sharply from 7 points to 11.5 per cent in 1960-61. There was a further increase in expenses of all sorts, the extent of which can be gauged from the comparative table which follows. But, despite this and the minor setback in sales, profit-margin was well maintained. Among the essential provisions, only depreciation has claimed more at Rs. 26.30 lakhs as compared with Rs. 24.73 lakhs a year before, while Managing Agents' commission and taxation have taken away slightly lower amounts. At Rs. 24.77 lakhs, net profit is almost the same as in the previous year. All the same, the return on the Rs. 10 fully paid ordinary shares has been pruned to 16 per cent per annum from 17 per cent to which level it was raised by four points in 1960-61. The one-point cut in the dividend has come entirely in the final distribution, as the interim dividend was maintained earlier at 8 per cent per annum. The Company has however, retained out of the year's profit Rs. 1.35 lakh more in business by a transfer of Rs. 6.50 lakhs to reserves.

The comparative table below gives a clear idea of the Company's progress in the past three years:

(In lakhs of rupees)

	For the year ended 30th April		
	1962	1961	1960
Sale proceeds, less excise duty paid	613.65	618.17	552.16

* Subject to deduction of tax.

The Directors regret that, notwithstanding the management's desire to supply better quality cloth at cheaper rates to consumers, prices of Modi cloth have been higher because of increases in costs of raw materials, stores and higher wages. However, the Company's exports during the year under report rose from Rs. 15.01 lakhs to Rs. 18.11 lakhs. The Company is sending its representatives abroad to arrange for direct exports and raise their quantity following the adoption of the scheme of compulsory export of 12.5 per cent of production of cotton cloth and 3 per cent of cotton yarn by every cotton mill.

An important development for the Company in its scheme of expansion is the setting up of a new mill with 25,000 spindles and 500 automatic looms. An industrial licence for 18,800 spindles has already been granted to the Company, and another licence to cover the balance of spindleage and the proposed loomage is expected shortly. Building construction work is in hand and orders for the necessary plant and machinery have been finalised. The scheme will be financed partly from internal resources and partly from loan from the Industrial Finance Corporation of India. The mill is expected to go into production by January 1964. The Company is also setting up a saw ginning plant and a cotton seed-delinting plant, the latter for producing second-cut linters required for the manufacture of acetate yarns. The plants are to go into production during the current cotton season. A distillery plant is being set up in the Punjab to tap the entire production of molasses in that State and to

(*Continued in previous column*)

SYNOPSES OF COMPANY REPORTS

Rajagiri Rubber and Produce Co., Ltd.

(*Managing Agents*: Messrs. A. V. Thomas & Co., Ltd., Alleppey, Kerala.)

Twenty-fifth Annual General Meeting—6th December 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Sales of rubber	26,60	25,70
Income from sundry produce	9	15
Closing stock of rubber	3,71	3,17

Transfer to Managing Agents' remuneration ..	1,17	1,03
,, ,, depreciation	32	30
,, ,, provision for taxation	6,60	6,54
Net profit	4,10	3,29
Adjustments	2	84
Appropriations:		
Total available balance	4,12	4,13
To dividends (taxable) preference ..	1,37	1,41*
,, ,, ,, equity—interim ..	1,35	1,35
	(10%)	(10%)
,, ,, ,, equity—final ..	1,35	1,35
	(10%)	(10%)
Total equity dividend ..	[20%]	[20%]
Carry forward	5	2

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* Includes additional preference dividend of Rs. 3,616 for the years 1958-59 and 1959-60.

Extracts from the Directors' report:

Crop	Year ended 30-6-1962		Year ended 30-6-1961	
Estate	*Estimate*	*Crop secured*	*Estimate*	*Crop secured*
	Kg.	Kg.	Kg.	Kg.
Rajagiri ..	3,62,874	3,74,710	2,94,834	3,58,200
Shallacary ..	4,53,592	4,70,000	3,85,553	4,40,633
Total ..	8,16,466	8,44,710	6,80,387	7,98,833

The average Estate cost of production for the year was Re. 1.68 per kg. against an estimate of Re. 1.71 per kg. while the corresponding figures for the previous year were Re. 1.78 and Re. 1.79 per kg. respectively.

The average sale price realised was Rs. 3.23 per kg. as against Rs. 3.30 per kg. for the previous year. The Government decided to collect cess from April 1961 from the manufacturers instead of from the producers, and this naturally reduced the price to the producer to the extent of the cess previously paid by him which was 13.8 nP per kg. Actually, therefore, there is a slight improvement in the prices realised for the current year as compared to the previous year.

Estimate for 1962-63: It is estimated that for 1962-63 season, the Estate cost will be at Re. 1.83 per kg. and the production will be as under:

	Kgs.
Rajagiri	3,75,000
Shaliacary	4,60,000
Total ...	8,35,000

The capital expenditure is estimated at Rs. 1,39,906.

The Estates have been regularly visited and are reported to be in good condition. During the year under report it was found necessary to acquire about 16 acres of land owned by other persons forming enclaves within the Estate boundaries, so as to make the boundaries effective. Of this, about 9 acres were already planted up in rubber.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	36,10,000	Gross block	51,25,740
Reserves and surplus..	10,95,482	—Depreciation ..	5,35,858

	(18%)	(2½%)
Carry forward	7	1

N.B.—Adjustments represent balance brought forward from the previous year and other credit items if any.

* This represents Rs. 22,500 transferred from general reserve and Rs. 13,500 transferred from capital reserve.

Extracts from the Directors' report: The working results of the Company, during the year have not been very satisfactory due to short supply of billets during the year, which hampered production.

The Company's indebtedness to the Bank of Tokyo Ltd. has been further reduced by Rs. 45,000 during the Current year.

The Company had received a licence from the Government of India for putting up a *Wire Rod* Mill; but unfortunately, licences for import of some of the essential equipments could not be obtained. In view of this the Company has taken up a programme for the re-modelling and re-adjustments of the plant including alterations to other furnace and realignment of the mills so as to enable the production of wire rods in the near future. The Company is, however, pursuing vigorously its efforts to obtain import licences for some *reduction gears, motors* and *coilers* etc. which will improve the efficiency of the Company's plant.

Accounts in brief as at 30th April 1962 are as under:—

Extracts from the Directors' report:

Crops:	1961-62 *Production* Estimated Kg.	Actual Kg.	*Cost per kg.* Actual Rs. nP.	1960-61 *Production* Estimated Kg.	Actual Kg.	*Cost per kg.* Actual Rs. nP.
Tea ..	4,30,000	4,69,185	2.69	4,08,231	4,27,456	2.75
Cardamom ..	20,412	47,323	5.52	6,804	16,522	10.00
Coffee (cured wt.)	50,802	41,513	2.06	55,883	39,407	3.20

Prices:	*Tea* per kg.	*Cardamom* per kg.
1961-62	Rs. 4.22	Rs. 15.88
1960-61	Rs. 4.63	Rs. 17.61

The production of tea and cardamom has been good. The cost of production of all the three commodities has been kept below the estimate and particularly in the case of cardamom the extra production has enabled the Company to keep down the cost of production at as low a level as Rs. 5.52 per kg. This has enabled the Company to offset to some extent the effects of the heavy fall in tea prices during the year. The Company has been making all efforts to secure the maximum prices possible by keeping up a high quality and prices in recent auctions have been satisfactory. A portion of the tea crop has been shipped to U.K. and U.S.A. as usual.

The production of tea during the current year also has been satisfactory. In respect of cardamom which has just started coming in, the indication is that the estimate for the year is likely to be exceeded and with reasonable prices, the current year should prove to be as good as last year.

In respect of coffee, the returns are more satisfactory, but the poor average prices realised from the pool make it difficult to have any large profit from this crop. The Directors have decided to cultivate intensively about 150 acres only from which the bulk of the crop is actually obtained.

Estimate for 1962/63	*Crop* Kg.	*Cost of Production* Rs. nP.
Tea	4,60,000	2 80 per kg.
Cardamom	45,000	6 04 ,,
Coffee	50,000	2 22 ,,

* Dividend for 1962 is on the increased ordinary capital of Rs. 57,50 lakhs.

† The dividend for 1961 was on a paid-up capital of Rs. 50.00 lakhs.

Extracts from the Directors' report: The Company has continued to make good progress in the manufacture of its existing lines. But the Company's progress in the manufacture of *Capstan* and *Turret Lathes* is not according to the plan as there was considerable delay in receiving the imported components. Therefore, it has been extremely difficult to maintain a regular flow of production of these lathes. Further, development of *Capstan* and *Turret Lathes* is also going to be slow on account of the difficulties in procuring the licences for import of components as hereafter it is the Government's intention to see that absolutely minimum components are imported. This means a much slower progress than the directors had anticipated.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	70,00,000	Gross block	1,52,54,361
Reserves and surplus..	40,05,368	—Depreciation ..	72,64,106

		Cash	16,68,547
		Other accounts ..	1,83,331
Rs.	2,08,55,294	Rs.	2,08,55,294

* Paid-up capital consists of 50,000 equity shares of Rs. 100 each fully called up: 15,000 equity shares of Rs. 100 each—Rs. 50 called up and 25,000 8 to 10 per cent. redeemable cumulative participating preference shares of Rs. 100 each—Rs. 50 called up. Out of the 50,000 equity shares of Rs. 100 each, 10,000 shares are fully paid up by way of bonus shares by capitalisation of reserves.

A NEW CEMENT PLANT IN ORISSA

The State-owned Industrial Development Corporation of Orissa Ltd. has placed an order with Messrs. Fives Lille-Cail of Paris and the K.C.P. Ltd. of Madras for the supply and erection of a cement plant in the State with a capacity of 1,200 tonnes per day. Messrs. Fives Lille-Cail have built three largest cement plants in the world. The K.C.P. is engaged in the manufacture of cement and sugar machinery and boilers in collaboration with the French firm. The proposed cement factory will be erected near Hirakud Dam and is expected to go into production early in 1965.

NEWS IN BRIEF

THE State Trading Corporation has been granted a licence to import about 12,000 metric tons of caustic soda solid, worth Rs. 40 lakhs, from the U.S. by inviting tenders.

Purchasers of gold bonds need not pay income-tax on the value of such bonds. A directive to this effect has been issued by the Central Board of Revenue to income-tax officers.

It is proposed to set up a separate export promotion council for heavy chemicals and pharmaceuticals. At present, exports of these items are looked after by the Chemicals and Allied Products Export Promotion Council.

The U.S. Steel techno-economic survey team for the proposed steel plant at Bokaro has completed its five-month survey. The team is expected to submit its report to the U.S. Agency for International Development early next year.

The Government of India has raised the maximum limit of investment in Defence Deposit Certificates and National Defence Certificates by Rs. 10,000 to Rs. 35,000 in the case of individuals and by Rs. 20,000 to Rs. 70,000 in respect of two persons jointly.

A Burmese trade delegation is scheduled to visit New Delhi shortly to explore the possibilities of expanding trade between the two countries. Burma is interested in buying from this country cotton textiles, sewing machines and electric fans and sell rice in exchange.

The Government of India proposes to constitute a steering committee, consisting of a nominee of the World Bank and a representative of the Government, to prepare specific schemes to speed up coal transport. A World Bank consultant team is arriving in India shortly to study the situation.

The Government of India has agreed to give Rs. 3.5 crores as compensation to the Government of Mysore for handing over the Kolar Gold Mines to the Centre. The State Government will also get royalty and charges for supply of electricity. The transfer of ownership is expected to take place shortly.

A handloom factory, with a capacity of 100 looms, was inaugurated at Taherpur, near Calcutta, last week. Sponsored by the Rehabilitation Industries Corporation, a Government of India undertaking, the factory will provide employment for about 300 displaced persons settled round about the area.

The U.S. Government has granted a loan of $25.1 million (about Rs. 11.95 crores) to India for meeting the foreign exchange cost of a 300-m.w. thermal power plant and accompanying facilities at Satpura station in Madhya Pradesh. The rupee cost of the project is estimated at Rs. 14.8 crores.

Licences have been granted to two parties in Andhra Pradesh for the installation of two pig iron plants, each with a capacity of 100,000 tons. Another plant is also likely to be installed by the State-owned Andhra Pradesh Development Corporation. These units are expected to use locally available iron ore and coal.

Poland will extend a credit of Rs. 15.5 crores for the establishment of deep coal mines and other projects in India under an agreement signed at Warsaw last week. The loan, bearing an interest rate of 2.5 per cent, will be repaid by way of exports of Indian goods. A trade protocol between the two countries for 1963 has also been signed.

Two schemes for the manufacture of stainless steel in the private sector have been approved in principle by the Government. One unit, with an annual capacity of 10,000 tons, will be put up at Vatva, near Ahmedabad. The other unit, which will have a capacity of 7,000 tons, will be set up at Madras.

The Governments of India and Soviet Russia signed on Tuesday this week an agreement, under which the total number of ships plying between the two countries will be increased from 14 to 20. Both the Governments have agreed to make efforts to reach parity in cargo liftings and freight earnings. The freight rates governing the service have also been reviewed and revised where necessary.

Two engineers of the Overseas Communications Services have been sent to the U.K. to participate in the satellite communication tests conducted at the British ground station at Cornwall. On their return after a period of eight months, they are expected to participate in the Telstar project which is developing a system of communication via satellites.

The Government of India has decided to empower itself with authority to prohibit, restrict or regulate imports and exports under Section 3 of the Defence of India Bill. Although exports and imports are regulated through a licensing procedure at present, the emergency calls for greater regulation in order to conserve foreign exchange and to ensure sufficient supplies of certain essential items required for the defence effort.

The Indo-Japanese prototype production and training centre at Calcutta was inaugurated last week by Mr. K. C. Reddy, Union Minister for Commerce and Industry. The unit, which will cater to the needs of small-scale industries, has been set up with assistance from the Japanese Government and has supplied machinery worth Rs. 35.35 lakhs which has also made available services of 20 technicians for three years.

The Deccan Co-operative Spinning Mills in Ichalkaranji, the first of the five co-operative spinning units to be opened in Maharashtra during the third Plan period, was inaugurated by President Dr. Radhakrishnan last week. The mill is equipped with 12,000 spindles capable of producing yarn worth Rs. 50 lakhs annually. It has been set up by local powerloom and handloom weavers with the assistance of the State Government and the Industrial Finance Corporation.

As a measure of export promotion, the Government of India has decided to allow drawback of customs and/or Central excise duty on export of fifteen more items. They are: steel barbed wire, disintegrators of all types, printing inks, silver nitrate, tooth brush, gas cylinders, sanitaryware, *aggarbathies*, post-type insulators, clocks of all kinds, storage batteries, articles made of acrylic sheets, finished leather and leather manufactures and jute manufactures. Changes have been made in items relating to pistons, gudgeon pins, cylinder liners, etc., staple fibre yarn, bicycle spokes, polythene lined jute goods and paper products.

The Overseas Communications Service has established a direct radio telephone service between Madras and London with effect from the 21st inst. The service will initially operate between 4.30 p.m. and 7.30 p.m. (I.S.T.) on week days which Outside this period, the radio telephone service with is normally the busiest period for overseas calls. Britain and other countries will continue to remain available via the other O.C.S. stations as before. With the inauguration of this service, long-distance telephone calls with Britain and other countries in the West will be further facilitated for users in Southern India.

Four different agreements between the trade representatives of Russia and the Orissa Government were signed last week at Bhubaneswar, in respect of supply of machinery and equipment worth Rs. 3.8 crores for the Balimela hydel project, a joint venture of the Orissa and Andhra Pradesh Governments. The *machineries* to be supplied by different organisations in the Soviet Union include excavators with shovels, dumpers, tractor-trailers, cranes, etc., payment for which will be made in convertible rupees. The Government of India has already given clearance for the foreign exchange required for the purchase.

About 100,000 workers employed in the four public-sector and two private-sector steel plants will get increased wages as a result of the acceptance of the interim relief recommendations made by the Central Wage Board for Iron and Steel Industry. The interim relief will take effect from next month. The Board has said that excluding Tata Iron and Steel Company, all other steel plants should pay Rs. 95 for the lowest paid unskilled worker. This wage should consist of the basic wage, the dearness allowance and, where it exists, uniformly for all workers the coke subsidy and house rent allowance. The pay scales should be adjusted on the basis of the lowest paid worker up to the maximum of Rs. 500.

The Government of India has accepted the Tariff Commission's recommendation to discontinue protection to the plastics (phenol formaldehyde moulding powder) industry beyond 31st December 1962. It has taken note of the recommendation of the Commission that applications for import licences from producers of p.f. moulding powder for testing equipments should be given sympathetic consideration and steps will be taken to implement it as far as possible. The attention of the manufacturers of p.f. moulding powder has been invited in the resolution to the Commission's recommendation that, since there are some complaints from the manufacturers of electrical accessories, producers of GX grade should take steps for improvement of the moulding powder for which there is scope.

India has entered into a collaboration agreement with a European consortium of eight manufacturers of electrical equipment in Belgium, West Germany, France and Switzerland, for setting up a plant to manufacture electrical equipment for the 25 kV AC freight-type locomotives. The consortium, called the "Group," has agreed to grant to the Union Government the right to manufacture in India all electrical parts for these locomotives except high voltage tap-changers and air-blast circuit breakers, rectifiers, pantographs and non-specified traction materials and standard products like cables and batteries as well as equipment being bought by the Group from sub-suppliers, like measuring instruments and small relays. The Group will supply technical know-how, design calculations and manufacturing drawings. The remuneration payable to the Group includes a consultation fee of three per cent of the total annual net sales value, as invoiced, of the electrical equipment, reduced by the cost of components imported or purchased in India, subject to a minimum on account payment of DM 7,50,000.

From Abroad

A trade team from the United Arab Republic has arrived in Pakistan to study the prospect of increasing trade between the two countries. The U.A.R. is said to be interested in Pakistan jute fibre, yarn, etc. and wants to sell its steel billets, rayon yarn and fertilisers, etc. to Pakistan.

World consumption of natural rubber in 1962 will be about 2.19 million long tons and that of synthetic rubber 2.14 million tons, according to the International Rubber Study Group. Production of natural rubber is estimated at 2.11 million tons and synthetic rubber about 2.23 million tons.

The United Arab Republic will export 55,000 tons of rice to Ceylon next year and use the proceeds to purchase Ceylonese tea. These are the main features of a trade agreement signed between Ceylon and the United Arab Republic on Tuesday this week. It has also been agreed that measures will be taken by both the countries for the development of trade in new commodities produced in both countries.

PERSONAL

MRS. Vijayalakshmi Pandit has been appointed Governor of Maharashtra.

Mr. M. S. Kannamwar was sworn in as the Chief Minister of Maharashtra *vice* Mr. Y. B. Chavan who has joined the Central Cabinet as Minister for Defence.

Mr. M. S. Warty has been appointed Labour Officer of the Millowners' Association, Bombay, in place of Mr. R. G. Gokhale who has retired.

Mr. Lalchand Hirachand has been re-elected President of the Maharashtra Chamber of Commerce for the year 1963-64. Dr. J. M. Rane, Mr. S. M. Dahanukar and Mr. D. B. Sarda have been elected Vice-Presidents.

Mr. Christian Herter, a former U.S. Secretary of State, has been appointed Special Representative for American Trade Negotiations, a new post created by President Kennedy to formulate policies for trade expansion and tariff reductions.

Mr. Ramprasad Khandelwal, a well-known industrialist, has been appointed Sheriff of Bombay for the next year. He will take over charge from the present Sheriff, Mr. Frank Moraes, on 20th December 1962.

Mr. S. Bhoothalingam, Secretary to the Department of Expenditure in the Finance Ministry, has been appointed Secretary in the new Ministry of Economic and Defence Co-ordination, under Mr. T. T. Krishnamachari, Mr. V. T. Deheija, Secretary to the Department of Revenue, in addition to his present duties, will look after the Department of Expenditure.

Mr. P. V. R. Rao, until recently the Secretary to the Department of Economic Co-ordination in the Cabinet Secretariat, has been appointed Defence Secretary in place of Mr. O. Pulla Reddy, who retired from the I.C.S. on Tuesday this week. Mr. Reddy has been appointed special adviser to the new Ministry of Economic and Defence Co-ordination.

Pakistan's first oil refinery near Karachi was inaugurated last week. The refinery has an initial capacity of about 1.5 million tons of crude oil, with provision for expansion to 3.5 million tons later. The total cost is Rs. 9.8 crores. The refinery has been established jointly by four companies, the Burmah Oil Company, Esso, Caltex and Shell. The Pakistan Government has also contributed a certain percentage of capital.

The first semi-electronic telephone exchange in Europe is being set up in Munich in West Germany. The new exchange will enable the subscribers to dial much faster and to eliminate wrong dialling to a considerable extent. In all existing telephone exchanges the connections are effected by mechanical means. The semi-electronic system will replace the traditional dial by push buttons on all installations connected to the new exchange.

A resolution seeking to organise a world trade conference in September 1963 has been adopted by the 110-member Economic Committee of the U.N. General Assembly, by 73 in favour to 10 against, with 23 abstentions. The U.K., France and the U.S. have expressed dissatisfaction at the deadline of September 1963 in the resolution, on the score that more time is required for thorough preparation essential for the success of the conference. The resolution was sponsored by Afro-Asian and Latin American countries.

Under a 15-year contract, Milk Industries *Inc., of* the Philippines, will buy £A2½ million worth of dairy produce annually from Australia. In return, the Australian Dairy Produce Board will help the Company establish a milk processing plant—the first of four the Board will help set up in South-East Asia. The plant will produce full-cream evaporated milk and sweetened condensed milk. When the plant's full capacity is reached, Australia will supply 4,000 tons of butter oil and 8,000 tons of skimmed milk powder each year.

The first factory for the production of polyisoprene synthetic rubber outside the United States has commenced operation in Holland at the Rotterdam refinery site of Shell Nederland Chemie, a member of the Royal Dutch Shell Group. Its output capacity is 25,000 tons per annum. The product, which is a general-purpose synthetic rubber, will be marketed under the trade name Cariflex. The raw material for the new plant is being supplied by the Shell Refinery on the adjoining site. Two variations of the product are being made, one containing a certain amount of oil.

The outflow of long-term capital and official donations from the non-communist countries to underdeveloped countries rose from $5.2 billion in 1959 to a peak of $7.2 billion in 1961. This is disclosed in a U.N. Report entitled *The International Flow of Long-term Capital and Official Donations* 1959-61. The U.S. was the largest contributor, followed by France, West Germany and the U.K. The report points out that the flow of long-term funds to the underdeveloped countries is estimated to have risen from the equivalent of 0.6 per cent of the combined gross product of the developed private enterprise countries in 1960 to 0.7 per cent in 1961. During the period 1959-61, the average annual aid commitments by the centrally-planned economies to underdeveloped countries amounted to over $1 billion. These were substantially higher than those of earlier years. Although commitments in 1961 were somewhat smaller than in 1959 and 1960, the actual flow of funds to underdeveloped countries, under existing agreements, can be expected to remain substantial for some years to come.

Notices

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

ISSUE OF EQUITY CAPITAL

THE BOARD OF DIRECTORS OF THE Company has decided to convene a general meeting of the members of the abovenamed Company to be held at its Registered Office at Chartered Bank Buildings, Calcutta-1, on Thursday, the 20th December, 1962, at 11 o'clock in the forenoon, for the purpose of considering resolutions regarding an issue of 5,60,240 new 'A' ordinary (Equity) shares of Rs. 10 each to be allotted as Bonus shares and 11,20,480 'A' ordinary (Equity) shares of Rs. 10 each to be offered for subscription at a premium of Rs. 5 per share as Rights shares.

Subject to the necessary resolutions, the Bonus shares are to be allotted to those members who, on the 20th day of December, 1962 are registered in the Register of Members of the Company in respect of the existing 5,60,000 'A' ordinary shares of Rs. 10 each and 5,60,480 'B' ordinary shares of Rs. 10 each in the proportion of one Bonus share for every two existing 'A' ordinary and/or 'B' ordinary shares held.

Subject to the necessary resolutions, the Rights shares are to be offered in the first instance to the members of the Company whose names, on the 20th day of December, 1962, are registered in the Register of Members in respect of the then existing 'A' ordinary and/or 'B' ordinary shares (including the aforesaid Bonus shares and taking into account the fraction, if any, of a Bonus share to which such a member may be entitled) in the proportion of two such Rights shares for every three such existing shares then held. The amount payable thereon is subscribable as to Rs. 7.50 on application and Rs. 7.50 on allotment. The Letter of Rights, accompanied by the appropriate application forms, etc., will be issued to the members entitled thereto on or shortly after the 20th December, 1962, and will include a right to renounce all or any of the Rights shares offered in favour of any other person and to apply for additional shares which may be available.

The Register of Members of the Company in respect of A' and 'B' ordinary shares will, for the purposes aforesaid, be closed from 1st December, 1962 to 20th December, 1962, both days inclusive.

A notice convening the general meeting of the Company is being issued to the members.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,

VOL. 562A EVEREST

MONEY CHEAPER

(*From Our Own Correspondent*)

BOMBAY, 21*st November*

The short-term money market ruled easy during the week under review. The supply of floating funds was quite large. And since demand for credit was low, inter-bank call rate moved down from 3⅜ per cent to 2½ per cent. Stray transactions were reported to have been put through even at 2 per cent today, albeit after clearing hours. Conditions at Calcutta too were very comfortable, with call rate receding from 4½ per cent a week ago to as low as 2 per cent. Fresh money was available at 1½ per cent.

A notable development of import to the money market during the week was the Reserve Bank's announcement regarding the relaxation of restriction on accommodation to scheduled banks. As a result of the restriction, each scheduled bank is permitted to obtain from the Reserve Bank, in addition to the basic quota under the three-tier system, an additional quota, at 6.5 per cent per annum, for a period of six weeks beginning from the 10th of this month. The additional quota that may be obtained is, however, limited to the amount equal to the difference between a bank's quota based on its statutory balance and the maximum amount actually borrowed by it during the 1961-62 busy season. Besides, the Reserve Bank has assured the banks that it will sanction appropriate excess quotas for the remaining period of the busy season on the basis of estimates of requirements to be submitted by them before 8th December 1962. The banks have been asked (*a*) to refuse advances for hoarding and speculation, (b) to refuse and recall unsecured advances as well as advances against gold and shares, and (*c*) to channelise credit for promotion of essential productive effort, that is, for defence, civil consumption and export.

The relaxation of ceiling on the Reserve Bank's advances to banks is the result of representations made by banks to the Reserve Bank a fortnight ago on its original proposal of 31st October. Although it has not fully satisfied banks, it has nevertheless been welcomed. It remains to be seen to what extent the banks will use the additional facility at the top rate of 6½ per cent in the coming months.

Tenders for Rs. 2 crores of Government of India's 91-day Treasury Bills were invited on Tuesday this week. The amount offered and accepted was unchanged at Rs. 2 crores. The average rate of tenders accepted, however, was slightly lower at 2.350 per cent per annum, as against 2.360 per cent in the previous week. The Intermediate Treasury Bills, which were on tap from the 14th to 17th inst., fetched quite a substantial amount: Rs. 162.50 lakhs, as against a mere Rs. 16.50 lakhs a week before.

India's foreign assets declined by Rs. 78 lakhs to Rs. 93.22 crores during the week ended 16th November 1962. The decline was accounted for entirely by balances held abroad which aggregated Rs. 5.14 crores. Foreign securities held in the Issue Department continued unchanged at Rs. 88.08 crores. Loans and advances made available by the Reserve Bank to scheduled banks were lower by Rs. 1.50 crore at Rs. 2.48 crores.

There was practically no change in the amount of credit granted by the scheduled banks to their clients during the week ended 9th November 1962, the aggregate outstanding at the close of the week being Rs. 1,389.99 crores, as against Rs. 1,390.24 crores a week before. The total deposits of the banks rose by Rs. 3.92 crores to Rs. 2,184.11 crores. Inter-bank borrowings also increased by Rs. 2.73 crores to Rs. 37.44 crores. Investments, however, fell by Rs. 10.04 crores to Rs. 683.61 crores.

The Gilt-edged market ruled dull. Business put through was restricted, with values moving narrowly. On Monday the 19th inst., the Reserve Bank announced a reduction of 5 nP in its buying rates in respect of two Central Government loans. The revised rates are Rs. 99.85 for 3½ per cent 1964 loan and Rs. 96.80 for 3 per cent 1966-68 loan. These were the rates at which some banks were sellers in the open market earlier.

In the foreign exchange market, the banks' selling rate for U.S. dollars was unaltered again, the actual rate for T.T. and O.D. being Rs. 477.75 per $100. Their buying rate for T.T. and O.D. 60-day bills and 120-day bills, however, declined by 25 nP each to Rs. 473.50, Rs. 470.75 and Rs. 468, respectively. In New York, the pound sterling firmed up *vis-a-vis* the dollar. The latest available spot and three months' forward rates are 280.220-280.240 cents and 279.830-279.850 cents per £, respectively, the corresponding rates last week being 280.100-280.140 cents and 279.820-279.860 cents.

GOOD CLEARANCE IN KIPS

(*From Our Own Correspondent*)

MADRAS, 19*th November*

Kips prices ruled firm in the Madras hides and skins market this week. Arrivals were moderate and clearance was fairly good. Tanners were holding firm to their price ideas, and the U.K. importers paid higher prices for the lightweight cowhides. There was good demand for the heavyweight cowhides and buffhides probably for military requirements. Importers were offering attractive prices for cowcalf, especially the 2/2½ lbs. average, but sellers were not willing to book orders, as arrivals were small. Buffhides ruled firm. Higher prices were paid for buffcalf for shipment to the U.K. and the Continent.

The tanned goat market hardened following several inquiries from the U.K. and the Continent. Tanners were not prepared to sell lightweights, as they were in a well sold forward position. Prices for 8/9 and 11/12 lbs. advanced further, and trading was difficult, as importers were hesitating to follow Madras prices. Inquiries for the lightweight middle class sheep were persistent, but buyers were disinclined to improve their price ideas. Other lines remained unchanged.

COTTON FUTURES RECOVER AFTER EARLIER SLUMP

(*From Our Own Correspondent*)

BOMBAY, 21*st November*

A heavy slump on Monday the 19th inst., which resulted in a overnight decline of the Jarilla March contract by as much as Rs. 11, was the most notable feature of trading in the cotton futures market during the week. The decline followed an avalanche of selling by local and upcountry operators. The immediate provocation was the news of the unexpected major reverse suffered by India in N.E.F.A. This caused considerable nervousness among operators who rushed to liquidate. The weakness of the share market, bearish crop news, lower advices from the ready section and the easiness of other commodity markets accelerated the downward trend of futures. Buying was conspicuous by its absence even at lower levels. The Jarilla March contract, which declined from last week's closing price of Rs. 727.50 (per three quintals) to Rs. 721.50 on Saturday, reacted sharply to Rs. 710.50 on Monday. It receded further to Rs. 703 yesterday, the lowest level touched by the contract so far. A recovery was in evidence and the contract finished the session higher at Rs. 706.50. The recovery gathered momentum today, thanks to fresh buying and some short-covering, and the contract improved to Rs. 716 at close today. The net loss over the week is Rs. 11.

In the spot market at Sewri, activity was restricted. Mills seemed to be marking time in anticipation of a further decline in prices. Arrivals in Khandesh, Berar, and Moglai areas were increasing daily. Reflecting this, prices of all varieties, except 197/3, ruled below the ceiling rates. Some of the popular varieties which attracted the attention of needy mills were Co2, Khandesh 197/3, and L. 147. Towards the close of the week, a revival of demand was noted following the entry of the Indian Cotton Mills' Federation into the market. The Federation is reported to have purchased 6,500 bales of Khandesh cotton. Traders in general showed readiness to sell cotton to the Federation rather than allow their stocks to be requisitioned.

The Committee of the Indian Cotton Mills Federation, at its meeting held on Monday the 19th inst., emphasised that it considered it very important that no mill purchased cotton above the ceiling prices even if this involved closure of mills for a short period. It decided to issue an appeal to all mills accordingly and to be very strict in complying with the provisions of the Cotton Control Order. The Committee feels that the present difficulties in respect of cotton supply would disappear very soon as, with the expectation of a good crop and adequate imports, the supply position was comfortable. The Committee also decided to reduce the rate of levy on Indian cotton by 50 per cent with effect from 1st January 1963. The levy at present works out to Rs. 5 per bale on an average and this will be halved to Rs. 2.50 per bale.

Bengal *Deshi* prices showed some firmness early in the week, thanks to short-covering by shippers against export commitments and fears of the possibility of certain areas in the Punjab being sealed off. But follow-up support was lacking. Foreign demand continued to be slack. Export sales registered against the current quota aggregated 21,000 bales as on 13th November.

Mill demand for foreign cotton was good. East African and American cotton accounted for the bulk of the turnover. A prominent Bombay mill group is reported to have bought, on a subject-to-licence basis, 6,000 bales of American Good Middling 1-5/32" staple at Rs. 1,225 per candy for February/March shipment. East African cotton found ready buyers and prices tended to harden. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal Fine 672; Berar 197/3, Valuation plus 3¼ per cent Ganganagar 802, D.P. (UNUG) 1,230; Busoga (UNUG) 1,195; Guiza 47 1,420; Sudan XG5S 1,400.

In contrast to the easiness witnessed in the past three weeks, the Karachi cotton futures market futures ruled firm during the week under review. Fresh mill buying and renewed export demand induced a smart recovery in prices. N.T.R.G. January contract advanced from Rs. 65.35 last week-end to Rs. 67.05. The March contract firmed up from Rs. 66.55 to Rs. 68.20.

After a long spell of dullness, the Liverpool cotton futures market sprung into activity during the week. Keen bidding by Commission Houses in new crop months led to a hardening of values, while trade buying strengthened current crop deliveries. Sudan cotton contracts firmed up on good mill support. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch Staple contract: December 23.90; March 23.70; May 23.65; July 23.50.

American cotton mixed growth contracts: December 24.25.

Sudan cotton contract: November, January and March 29.75.

Cotton futures in New York suffered a setback during the week. Selling prompted by renewed talks of lower support prices for the new crop resulted in a decline in values. Lower spot advices also imparted weakness to futures. The nearby December contract declined from 33.91 cents per lb. last week-end to 33.85 cents, the March contract from 34.29 cents to 34.08 cents and the May contract from 34.31 cents to 34.12 cents. New York spot was quoted at 34.75 cents per lb., as against 34.85 cents last week.

FURTHER FALL IN BULLION

(*From Our Own Correspondent*)

BOMBAY, 21*st November*

A staggering further fall of Rs. 8.75 in spot gold at Rs. 97.25, of more than Rs. 13 in silver *Margashir* at Rs. 204.10 and of about Rs. 15 in ready silver at Rs. 200.60 featured the trading in the bullion market this week. Sovereign, too, showed a big drop of seven points at Rs. 77.

Weakness continued to persist in the market which closed today at the week's lowest levels, when sentiment was upset by the reported statement of the Union Finance Minister, Mr. Morarji Desai, yesterday before the Consultative Committee of Parliament for his Ministry that the Government would take further steps in a month's time to bring down the price of gold very considerably. Mr. Desai is reported to have stated, significantly enough, that, in regard to purchases of gold by the people the ultimate aim of the Government was to fall in line with other countries where private possession of gold in large quantities was not allowed. Mr. Desai is said to have told the Committee that he expected the price of gold to fall below Rs. 70 per tola at which rate it would become unprofitable for smugglers to bring gold into this country, and gold bonds would become attractive. This statement of the Finance Minister caused considerable concern among operators, especially as it brought in its trail concealed threats of curbs on buying ready gold. Gold began the week at Rs. 105.50, touched a low of Rs. 103.25 on Saturday following the abolition of trading in non-transferable specific delivery contracts but improved to a high of Rs. 106 on Tuesday, thanks to good offtake and low arrivals. It was only today that the price slumped to Rs. 97.25 as mentioned at the outset following the Finance Minister's statement. Arrivals of gold during the week were of the order of 5,000 tolas per day which were met by offtake of a like quantity.

Arrivals in silver were, however, large, approximating about 45 bars a day, as against which offtake was poor around seven bars. It was because of this large inflow that ready silver showed a bigger fall than forward and closed at a discount of Rs. 3.50 over the futures contract. Weak spot advices, heavy upcountry selling and local bull liquidation produced a sharp setback in silver futures. In the process, the *Margashir* contract, which had begun the week at Rs. 217.30, continuously declined to touch Rs. 207.75 on Tuesday. Today, it plunged as low as Rs. 204.10, at which level it finished the week. A special clearing was imposed on Monday the 19th inst. and a margin of Rs. 150 per bar against sellers on all outstanding sales today, when it declined by more than Rs. 7 from the last margin determining rate of Rs. 213.95.

The Government's announcement of 13th November banning forward trading in gold was followed apparently as an afterthought by another on the 15th inst. stopping trading in non-transferable specific delivery contracts as well, under the provisions of Section 18(3) of the Forward Contracts (Regulation) Act, 1952. Another official Press note of interest to the bullion market was the one dated the 19th inst. which said that for purposes of subscribing for gold bonds, 1977, the money value of gold in the hands of the original purchasers of the bonds would not be subject to income-tax assessment. Further, the note added, there would be no inquiry about the source of the money with which such gold was purchased.

During the week, bullion prices in the overseas markets suffered a moderate setback on profit-taking and lack of demand. In London, spot gold eased from 250*s.* 7*d.* to 250*s.* 4¾*d.*, with the dollar price of gold turning lower from $35.08⅜ to $35.08¼. Ready silver declined rather sharply from 102¾*d.* to 101*d.* as did silver futures from 103¼*d.* to 101⅛*d.* The price of silver in New York fell during the week from 119.75 cents to 118 cents.

The following table shows the trend of prices during the week under review:

	21-11-62 (closing)	High	Low	14-11-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	97.25	106.00	97.25	104.00
Sovereign	77.00	84.00	77.00	83.00
SILVER				
Ready (.996 fine) ..	200.60	215.40	200.60	214.05
Margashir † ..	204.10	217.85	204.10	217.05
London—				
Gold	250*s.*4¾*d.*	250*s.*7*d.*	250*s.*4¾*d.*	250*s.*5¼*d.*
Silver Ready	101¼*d.*	102¾*d.*	101*d.*	103*d.*
Silver Forward	102¼*d.*	103⅛*d.*	101⅛*d.*	103⅛*d.*
New York—				
Silver	118.00 cents	119.75 cents	118.00 cents	120.25 cents

* 11th December settlement. † 12th December settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

EMERGENCY IN YARN MARKET

(*From Our Own Correspondent*)

BOMBAY, 21*st November*

The persistent decline in the prices of yarn, especially of staple fibre yarn and art silk yarn, created an emergency this week and provoked the Board of the Bombay Yarn Merchants Association and Exchange Ltd. to suspend trading in staple fibre futures yesterday and to fix a floor price of Rs. 650 for the 40/2 December contract and of Rs. 670 for the February. Trading in these two futures contracts was allowed from today only above the minimum prices. The Board also reduced the margin-free limit from 100 packages to 50 packages, trading above which is subject to a margin of Rs. 100 per package. Further it decided to fix a special clearing, whenever the contracts moved up or down by Rs. 100 from the preceding clearing rate. The emergency created in the market was indeed serious. For the December contract had declined in stages to Rs. 661 on Monday from the closing level of Rs. 715 on 27th October last. The February contract, trading in which commenced on the 5th inst., had declined from that day's clos-

ing level of Rs. 730 to Rs. 682 on Monday. Sentiment in the market had been affected by the fast deteriorating situation in the Northern and North Eastern borders of the country following large-scale Chinese aggression. Financial difficulties due to the war and absence of demand were also the influencing factors. However, following the measures adopted by the Board of the Association yesterday and in the light of the Chinese offer of cease fire, the two futures contracts staged a brisk rally today. The December contract was bid up today to Rs. 690, before finishing at Rs. 679, as against Rs. 677 a week ago, and the February contract to Rs. 714, before closing at Rs. 704, as against Rs. 699. The 40/2 spot staple fibre prices were easy, Century by 6 nP at Rs. 7.35 and Kohinoor by 6 nP to Rs. 8.12.

The Association conducts trading only in staple fibre futures. But its members and brokers carry on business among themselves in the indigenous art silk yarn delivery contracts, which had, however, been jeopardised for past some time because of the factors noted above. The members and brokers of the Association, therefore, urged the Board to fix, as an emergency and special measure, minimum prices for such delivery contracts. The Board agreed to its constituents' request and fixed today a minimum price for the November and December contract of Rs. 5.25 and Rs. 5.31, respectively, for 150D NRC cones, of Rs. 6 and Rs. 6.06, for 120D NRC cones, of Rs. 5.75 and Rs. 5.81, for 120D Century cones and of Rs. 7.25 and Rs. 7.37, for 100D Century. The prices are per pound. The Board has decided that delivery and payment against the two contracts will be arranged by the constituents at the end of the respective month. It has also restricted trading to only the November and December contracts. The constituents trading either below the minimum prices or beyond December will be suspended until such time at the discretion of the Board.

From 27th October last to the 20th inst., the 150D NRC spot had declined from Rs. 5.97 to Rs. 4.94 per lb., the 120D NRC from Rs. 7.84 to Rs. 5.50, the 120D Century from Rs. 7.60 to Rs. 5.31 and the 100D Century from Rs. 8.06 to Rs. 6.87 per lb.

Following the adoption of special measures by the Board, spot art silk yarn prices showed some gradual improvement today. However, over the week, prices closed lower as can be seen from the table which follows. With the exception of 60s Finlay which receded from Rs. 71.12 to Rs. 70.62, cotton yarns continued to be listless.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	21-11-1962	14-11-1962
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.91	14.56
Century 75D	19.80	21.16
S. I. Viscose 150D	11.81	12.65
Staple fibre yarn (40×2)—		
December (,,)	679.00	677.00
February	704.00	699.00
Kohinoor (per kg.	8.12	8.18
Century	7.35	7.41
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.62	18.62
22s Century	24.50	24.50
30s Bradbury	27.00	27.00
40s Hind	34.75	34.75
60s Finlay	70.62	71.12
80s Kasturi	77.50	77.50

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

BLACK LEAF TEA STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 15*th November*

A total quantity of 732,000 kgs. was offered in sale No. 45 held on 13th inst. Quality of teas from the Nilgiri District showed a further seasonal decline, whilst others were barely maintained. The market opened to a strong demand which continued throughout the sale. Plain and low mediums met with competition and advanced by 40 to 50 nP and in some cases more. Mediums were also well supported and registered considerable advances. Brighter good mediums were fully firm, while others in this category were generally dearer. Highgrowns were again irregular and sold at lower rates, particularly fannings, buyers following quality. Clean black leaf descriptions were strong and shared in the upward trend of the market. Unorthodox descriptions were strongly supported and were considerably dearer, particularly fannings. Whole leaf grades elicited good inquiry and sold at rates above last. Tippy teas continued strong and inclined dearer.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	4.30-5.00	3.75-4.00
Mediums	4.90-5.25	4.10-4.35
Good mediums	5.30-6.00	4.50-5.25
Nilgiri B.O.P.	5.60-7.80	5.15-8.50

The average price realised in sale No. 45 was Rs. 5.03 per kilo, as against Rs. 4.83 a week ago and Rs. 4.61 in the corresponding sale last year.

Offerings in dust sale No. 45 held today amounted to 320,000 kgs. The market was strong and active throughout the sale. There was good competition for low mediums, mediums and good mediums which irregularly advanced by 30 to 40 nP. The cleaner types under this category sometimes registered further advances. There was useful support for highgrowns which were fully firm and in some cases sold at rates above last. Unorthodox descriptions also evoked strong inquiry and were dearer by 20 to 30 nP. Clean black grainy descriptions were also well supported and shared in the general trend of the market and so did residuals.

The average price realised in dust sale No. 45 was Rs. 4.58 per kilo as compared with Rs. 4.32 a week ago and Rs. 4.13 in the corresponding sale last year.

Colombo: Offerings this week attracted good general demand. Highgrown brokens were a little easier with quality. Best mediums sold at slightly lower rates. Plainer and small leaf lowgrowns advanced by 5 to 15 cents. All fannings were strong and dearer.

London: North Indian and other growths: Monday's sale met with strong demand. Plain teas advanced by 3*d.* to 4*d.* Best Assams were firm, whilst Dooars were irregular and in some cases lower.

Ceylon and South Indians: In Tuesday's sale, 26,902 packages were offered of which 9,598 packages came from South India. The market met with a strong demand. Low mediums from Ceylon were dearer by 1*d.* to 2*d.* South Indians met with good support and were generally dearer.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 46: 666,000 kgs. offered. Strong general demand. Low mediums and mediums 10 to 20 nP dearer. Good mediums fully firm. Highgrowns irregular, but tending dearer. Unorthodox steady."

SPECIAL CLEARANCE IN SEEDS

(*From Our Own Correspondent*)

BOMBAY, 21*st November*

There was a special clearing in oilseeds yesterday, following panicky and persistent liquidation in groundnuts by some operators on reports of army reverses in the N.E.F.A. region. No such clearing it may be noted here had been ordered at any time in the past two years. Under the by-laws of the Oilseeds Exchange, if the quotation for futures contract falls by more than Rs. 10 per 250 kgs. over the previous clearing rate (fixed every week on Thursdays), a special clearing has to be enforced. Groundnut futures ruled distinctly bearish though some recovery was in evidence today, thanks to reports from Peking that China had ordered a ceasefire. The spot section was also distinctly weak, partly on account of improvement in arrivals. All other seeds and oils moved in sympathy with groundnuts. Castorseeds suffered a distinct setback during the week. A small part of the loss, however, was made good today, perhaps due to rumours that the Government of India might link import of spices with exports of castor oil. Linseeds and cottonseeds were depressed.

The Groundnut January 1963 contract, which wound up last week at Rs. 228.37, fell sharply to Rs. 213.50 by yesterday, but improved to Rs. 218.87 today. Nizam bold declined by Rs. 2.50 to Rs. 42.75. Khandesh quality dropped a like amount to Rs. 43.12. Oil ex-mill eased by 65 nP to Rs. 18.35. Groundnut oil January 1963 contract closed lower at Rs. 30.30, as against Rs. 31.10.

Castorseed March 1963 contract receded from Rs. 167.25 to Rs. 162.25, before closing at Rs. 164.25. Madras small softened by 37 nP to Rs. 32.50. Oil B.S.S. shed 15 nP to Rs. 13.65 and Oil commercial 10 nP to Rs. 12.75.

Linseed March 1963 moved down from Rs. 39.12 to Rs. 37.50 by yesterday, but improved towards the close to Rs. 38.12. Bold ready fell by 25 nP to Rs. 41.25. Linseed oil was lower by 70 nP at Rs. 16.15.

Cottonseed suffered a loss of Rs. 5 to Rs. 98.50 by Tuesday, before closing at Rs. 100 today. Both non-white and Berar lost Rs. 2.25 to Rs. 22.75.

The following table shows the closing prices of oilseeds and oils on Wednesday 21st November as compared with those of the two previous weeks:

	21-11-1962	14-11-1962	7-11-1962
	Rs.	Rs.	Rs.
Groundnut			
Groundnut January 1963 ..	218.87	228.37	226.50
Nizam bold	42.75	45.25	45.50
Khandesh quality	43.12	45.62	46.00
Oil ex-mill ready*	18.35	19.00	19.05
Railway receipts*	18.00	18.80	18.85
Castorseed			
Castorseed March 1963	164.25	167.25	167.00
Ready Madras	32.50	32.87	33.00
Ready Kanpur	31.12	31.50	31.75
Oil B.S.S.†	13.65	13.80	13.85
Oil commercial†	12.75	12.85	12.90
Linseed			
March 1963	38.12	39.12	39.12
Bold ready	41.25	41.50	41.50
Oil ready†	16.15	16.85	16.75
Cottonseed January 1963 ..	100.00	103.50	102.50
Niger seed	35.50	36.12	35.75
Kardi seed	27.50	27.50	28.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FOODGRAINS BEARISH

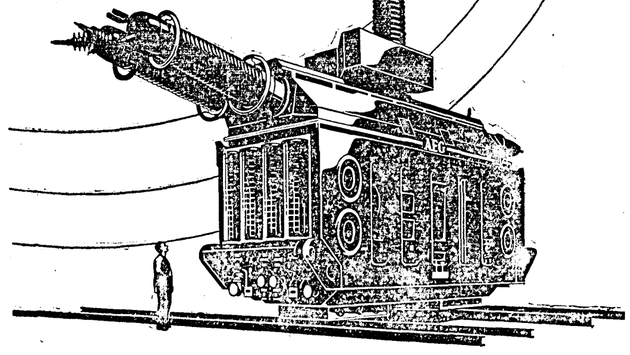
(*From Our Own Correspondent*)

HAPUR, 19*th November*

Despite the Chinese war, foodgrain prices here continued to be bearish during the week under review. Traders refrained from building stocks; in fact, they were reported as anxious sellers. Heavy stocks of foodgrains with the Centre and

AEG

AEG have a long and extensive experience in the manufacture of transformers of all sizes and up to the highest voltages. Three-phase generator transformers rated for 220.000V, 200.000kVA, with tap changing facilities and line transformers 220.000kVA, 400.000V with a total bank capacity of 660.000kVA are amongst the world's largest. The units are also built with attached radiators as mobile railway types.



Dodsal PRIVATE LIMITED

BOMBAY P.O. Box 10102
CALCUTTA P.O. Box 2073
NEW DELHI P.O. Box 353
BANGALORE P.O. Box 14

DL 46

reports that fresh arrivals would continue from the U.S.A. were the main influencing factors.

There was no change in wheat dara prices which stood at Rs. 40.19 at the week-end, but the farm quality lost 67 nP at Rs. 43.54 to Rs. 45.55 a quintal. Demand continued to be poor. Arrivals were small around 200 to 300 maunds a day, and stocks were put at 45,000 maunds. Basmati rice and other varieties declined Re. 1.34 to Rs. 2 a quintal according to quality, as new produce arrivals from east U.P. were pretty large. The superior quality was sold between Rs. 80.38 and Rs. 91.09, *sela* between Rs. 75.02 and Rs. 77.70, *mainpuri sela* new between Rs. 52.25 and Rs. 52.92, *ramajwayan* new at Rs. 57.60, *raimunia* new at Rs. 60.28, and *gadda* new at Rs. 47.56 a quintal.

Gram prices also moved down on lack of support and easy advices from Punjab. Prices declined by 67 nP to Re. 1.34 per quintal, with the Punjab quality quoted at Rs. 42.20 and the local produce at Rs. 41.53 a quintal at the week-end. Local gram stocks were estimated around 10,000 maunds. Maize ruled steady between Rs. 29.47 and Rs. 32.15 due to good demand. Arrivals, mostly from East U.P., averaged 400 maunds a day. *Barley* and *bejhar* prices sought lower levels on slack demand and were quoted at Rs. 25.46 to Rs. 26.79 and Rs. 26.79 a quintal, respectively. However, *jowar* ruled steady on better demand. *Guwar* prices eased slightly due to poor trading. Other grains were almost unchanged. Week-end prices were: *Jowar* Rs. 45.55 to Rs. 48.23, *guwar* Rs. 34.83 to Rs. 35.50, *bajra* Rs. 37.51, *methi* Rs. 61.62 and oats Rs. 32.15 a quintal.

Lack of buying support in the face of selling pressure from stockists led to a fall in peas. The farm quality was unchanged at Rs. 33.49, but *dara* lost 67 nP to 99 nP a quintal at Rs. 30.96. Arrivals were small and stocks were put around 32,000 maunds. Despatches were four wagons. *Arhar* prices were stationary at Rs. 57.60. *Urd* prices declined sharply on heavy arrivals locally and from producing areas. Local *arhar* stocks were reported very poor. *Moong*, *masoor* and *dal* prices were quiet. Week-end prices were: *Arhar dal* Rs. 71, *urd* Rs. 71, *desi* Rs. 61.62, *urd dal* Rs. 83.06, *moong* Rs. 50.91 to Rs. 53.58, *moong dal* Rs. 58.94, *masoor* Rs. 52.25 to Rs. 54.22, *masoor dal* Rs. 58.94, *moth* Rs. 40.19, *moth dal* Rs. 48.23 and *gram dal* Rs. 49.57 a quintal.

GOOD DEMAND FOR TEA

(*From Our Own Correspondent*)

CALCUTTA, 20*th November*

Keen bidding, against the background of the absence of river transport to bring Assam tea to Calcutta, was in progress during yesterday's export sales here. Last week's internal sales also met with strong demand. With the continuance of strike by the Pakistani crew of the Joint Steamer Companies, fresh arrivals were restricted to Dooars and Darjeeling teas. As a result, fresh booking of space on export liners declined, and this led to withdrawal from Calcutta of several advertised vessels for the United Kingdom. Thanks to existing stocks in Calcutta, the auctions have not yet begun to reflect the fall in arrivals in recent weeks as a result of non-arrival of Assam teas in the usual quantity. However, it is understood that export offerings of leaf from the forthcoming sales would show a progressive reduction. There would be no diminution in quantity in dusts sales, as existing stocks are believed to be sufficient to maintain sales in their present tempo up to the end of December.

At present, moves are afoot to end the strike of Pakistani crew. It is to be hoped that these would be successful, but for a few weeks after resumption of normal Calcutta-Assam river services, the existing shortage would only accentuate. The trade has noted with much relief the Government plan to inaugurate a fleet of fast moving trucks so that West Bengal-Bihar-Assam commerce is soon revived, assuming that river services are not resumed in the near future. It is to be hoped that the proposal is not abandoned even if river services are resumed. Evidently, cost of surface transport would be greater than movement by river. However, trade with Assam from the rest of the country is on the increase, and such being the case, the extra transport facilities would be fully utilised. By utilising surface transport, albeit at extra cost, trade can be increased. When he was in Calcutta in the last week, the Union Shipping Minister, Mr. Raj Bahadur, stated that 200 trucks had already been mobilised for transport services in Assam and that more would be available if goods were forthcoming.

The trade at once realises, as implored by the Union Shipping Minister, that road transport would be an economic proposition in the long run. However, the point is that trade would have to find extra money for road haulage. Evidently, at least a part of increased burden on trade would be shifted on to the consumer. Although the internal consumer may not grudge the increase, in the present context of keen competition in the export markets abroad it is not desirable that prices in export offerings should go up. Viewed thus, the plea of industry and trade for abolition of the export duty on tea gets even a stronger base than hitherto.

The prospect of reduced export offerings from the forthcoming sale onwards is very unfortunate, as exports have hitherto been satisfactory. Overseas countries, especially the United Kingdom, have yet to buy considerable quantities. As such, if offerings in Calcutta are reduced, other producing countries stand to benefit. The accumulation of stocks in Assam has meant financial strain on gardens. This is particularly unfortunate at this time of the year, when plucking has almost come to a close.

That foreign buyers are very eager to buy is only too evident from auction reports received from London and other centres. In last week's London auctions, buyers paid keen attention to plainer descriptions in view of the prospect of reduced shipment of such teas of Assam origin from Calcutta port. As a result, teas of other origin benefited. Prices of C.T.C. teas advanced by 3*d.* per lb. Keen attention was also paid to the Vietnamese and East African teas. It was reported that London stockists were increasing their holdings in view of the Sino-Indian war nearer the growing areas of North India. Strong demand was also in evidence in the sales held last week in Colombo. Prices for low growns, B.O.P. fannings, and plainer sorts added gains varying from five cents to 15 cents a lb.

Note has been taken here that offerings in last week's sale at Mincing Lane included a quantity of 636 packages from Pakistan. At present, in view of the lower crop, Pakistan is facing an acute tea shortage. Prices are, therefore, fast moving up. Last year's internal consumption in Pakistan totalled 43 million lbs., but this year it is estimated to go up to 47 million lbs. This year's crop is not expected to exceed 47 million lbs., and with little carry-over stocks from last year, it can be seen that Pakistan's exports will not be higher than 5 million lbs., as against an export quota of 10 million lbs.

The suggestion offered by Mr. S. M. Mohta, President of the Tea Association of India, to discontinue tea offerings by India at the London auctions has been noted. This suggestion has been made in order to save the handling charges in London, and Mr. Mohta would much welcome Indian producers to sell tea to the U.K. by more personal contacts. The present system of disposing tea in auctions in Calcutta, and Cochin as well as by direct shipment for participation in U.K. auctions has worked well, and it is thought that handling charges in London are unavoidable in any case. Even if direct sales take place, it is not seen how handling charges in the U.K. can be avoided. If the present system of sale through London auction is abandoned, there is every chance that other producing areas will ship more tea to London auctions, while time would be required for Indian tea producers and traders to make more personal contacts with distributors in Great Britain. In addition, such contacts will also entail expenditure.

Estimates of tea crop for 1962 from producing countries show that the total world output will be almost the same as in 1961. At the same time, the earlier estimate of an increase in world consumption is believed to be coming true. For instance, the U.K. is importing more tea from India than last year, and in the four months ended October, North India alone has exported to the U.K. 6 million kgs. more than in the previous figure. The U.K. is the largest consumer of tea, and hence the estimate of increased consumption for the world is aided. Viewed thus, the outlook for tea in the coming few months is encouraging. A world shortage is not altogether ruled out, and it is not surprising that the London bidders have been unusually active in auctions here.

Dusts on offer during last week's internal sale here totalled 28,654 packages which met with a strong general demand. Plain orthodox teas opened easy, but gained liberally as sales progressed. Medium orthodox descriptions were steady, but a few lines lost fractionally. Legg-cut teas met with ready demand. Keen competition was offered to medium C.T.Cs, prices of which advanced. Grainy descriptions were particularly favoured. Fibrous teas were also in good demand. The good C.T.Cs were much in sellers' favour, and grainy descriptions advanced liberally. The quotations per one kg. (in rupees) inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 6.80, medium Assam C.T.C. dust 5.80 to 6.20, legg-cut dust 5.40 to 5.70, medium Assam dust 4.80 to 5.40, and plain orthodox dust 4.80 to 5.10.

Leaf on offer during yesterday's sale amounted to 70,334 packages, which met with good general demand. Medium C.T.Cs were fully firm, while the better liquoring teas and the best Assam fannings rose impressively. The more fibrous teas also advanced, with legg-cut teas forging ahead. Plain orthodox teas were absorbed at fully firm levels, and brokens and exportable fannings recorded a dearer trend. Medium O.Fs also were better. However, the better liquoring Assam B.O.Ps were subjected to heavy withdrawals after prices had fallen. Among Darjeelings, the stylish grades eased, while the poorer kinds met with better support to push the prices. On useful inquiry, whole-leaf grades hardened, but tippy

teas were eased leading to withdrawals. The quotations per one kg. (in rupees) inclusive of excise duty, were: Best Assam C.T.C. fannings 7.00 to 7.50, best Assam C.T.C. B.P. 6.70 to 7.00, medium Assam C.T.C. fannings 6.10 to 6.80, medium Assam C.T.C. B.P. 6.00 to 6.60, plain fannings 4.80 to 5.20, clean plain pekoe 4.80 to 5.00, and plain B.P. 4.40 to 4.80.

DULL TRADING IN SUGAR

(*From Our Own Correspondent*)

HAPUR, 19*th November*

Trading this week here in sugar continued to be dull, as demand from the consuming areas of Gujarat, Punjab and M.P. was slack. Factories were anxious to dispose of stocks, but buyers were few. The release of another monthly quota of two lakh tons, has eased the supply position further. As a result, the mill delivery prices of some factories were being quoted below the former controlled prices. New production has commenced in all the factories on this side and cane supplies to factories is reported adequate. Mill delivery prices eased during the week by 25 nP to 50 nP, per quintal.

A bearish trend continued in sugar prices in the Muzaffarnagar market this week also on selling pressure from factories and slack demand. Week-end prices were:—Spot delivery C 29 Mansurpur Rs. 106, D 29 Deoband Rs. 105.50, D 29 Sakoti Rs. 103.50 per quintal, mill delivery (per quintal) AA 29 Shamli Rs. 106.50, Mansurpur Rs. 106.85, Khatauli Rs. 105.60, B 29 Deoband Rs. 105.50, Daurala Rs. 104.50, D 29 Amroha Rs. 101.46, Meerut Rs. 103.50, Dhampur Rs. 101.46, E 29 Simbhauli Rs. 103.50 and Bijnore Rs. 101.14.

New *khandsari* prices also suffered a sharp setback of Rs. 4 to Rs. 5.50 per quintal, as arrivals were fast improving and demand was slack. Cane crushers were getting adequate supplies at rates ranging between Re. 1.19 to Re. 1.37 per maund. Although most of the crushers have begun *khandsari* manufacture, some of them still find it profitable to manufacture *gur*. Week-end prices of *khandsari* here were:—Crystal Rs. 96.45 to Rs. 100.47, crystal Boora Rs. 106.50 to Rs. 107.84 per quintal.

Gur prices registered a further setback of over Rs. 3 per quintal under pressure of arrivals which aggregated about 40,000 maunds. An equal quantity arrived in mofussil markets of Gulaothi and Siana. Demand from the South was only at lower rates, while Gujarat met its demand from Punjab. Arrivals of *gur* will now fall, as cane is being diverted to mills. Week-end prices of *gur* here were:—*Gur* pansera Rs. 46.89, average Rs. 45.55 dara Rs. 42.87, balti superior Rs. 48.23 inferior Rs. 42.87 to Rs. 45.55 and shakker Rs. 54 per quintal.

JUTE GOODS FIRM

(*From Our Own Correspondent*)

CALCUTTA, 20*th November*

Under the impetus of good demand, jute goods ruled firm during the week under review. Although there were occasional fluctuations, prices did not rise further, as there was a realisation among all concerned that, in order to maintain the tempo of foreign demand at the existing level, any upward tendency should be arrested. Fibre prices were quiet, and offers of inferior varieties at below the minimum levels were large. This tendency was all the greater in mofussil areas, where stockists and others were anxious to reduce inventories in view of transport difficulties. Reports that Dundee mills were unable to cope with the demand for yarn as well as goods continued, and these had their effect on the price trend here. These mills could accept orders for delivery only beyond March next. At the same time, there were also reports of firm conditions in the New York burlap market. Thanks to continued support of the Calcutta market by buyers on behalf of the U.S., Soviet Russia and other foreign countries and the prospect of increased internal needs as a result of the emergency.

The disclosure in the Lok Sabha by the Union Minister for International Trade, Mr. Manubhai Shah, that this year's foreign exchange earnings from jute goods and raw jute were likely to touch the record figure of Rs. 150 crores did not cause any surprise here. For, with the increased availability of raw jute, mills are working up to their maximum loom capacity, limited only by their spinning capacity. This has been possible only because sustained demand for both hessian and sacking constructions has resulted in a healthy statistical position. This is the period of peak arrivals, and any change in outlook for the worse would weigh with the farmer in deciding the size of his crop for the next season. Happily, in recent weeks, demand for sacking goods has picked up and mills have naturally decided to continue the higher rate of production for the time being.

While mills have found no difficulty in disposing of their hessian output, demand for sacking goods could be sustained only by their low prices, although by doing so, mills had incurred manufacturing losses. At present, prices of sacking goods have reached about cost of production level. Mills reporting to the I.J.M.A. produced in the last month 90,900 tonnes of goods consisting of 39,600 tonnes hessian, 42,900 tonnes of sacking, and 8,400 tonnes of miscellaneous constructions, representing a total decline of 9,600 tonnes, as compared with September 1962, but still an increase of 13,200 tonnes, as compared with October 1961. Adding stocks of 93,900 tonnes at the beginning of the month, the total goods available in October 1962 was 184,800 tonnes. Stocks at the end of October being 90,700 tonnes, demand in the month was of the order of 94,100 tonnes. Despite sustained activity in the goods market, it should be noted that there has been no tendency for fibre prices to improve. This has been due to the daily arrivals maintaining the high rate of 150,000 bales and to the anxiety of sellers to find buyers. The I.J.M.A. has now asked member-mills to report any difficulties which they may face in fulfilling the Jute Commissioner's order to purchase the quota fixed by him for this month. The I.J.M.A. would continue to press the case of mills against the Jute Commissioner's order, and although the initial attempts have failed, some relief is still anticipated.

The goods market was quiet on Tuesday last, and ready B. twills eased from Rs. 119.90 to Rs. 119.85, and hessian 40" 10 oz. from Rs. 57 to Rs. 56.80. On the following day, after a spell of dullness prices recovered following news of availability of shipping space to Black Sea ports. Hessian 40" 10 oz. gained to Rs. 57.25 and B. twills to Rs. 120.00. There was also some covering business done. At this time, a good number of inquiries was received by shippers and, consequently, B. twills improved to Rs. 120.25 and hessian 40" 10 oz. to Rs. 58.10. On Friday, prices were firm at Rs. 120.15 and Rs. 58.15, respectively. During Saturday, conditions eased, following the fixation by the East India Jute and Hessian Exchange Ltd. of differences in favour of the bears, who are being allowed to deliver C group goods and 7½ oz. hessian against 10 oz. contracts and cornsacks against B. twills. Ready B. twills eased to Rs. 119.65 and hessian 40" 10 oz. to Rs. 57.85. The futures encountered selling pressure yesterday, and as a result, prices dropped markedly. Ready B. twills declined to Rs. 116.00 and ready hessian 40" 10 oz. to Rs. 56.25.

METALS FIRM

(*From Our Own Correspondent*)

CALCUTTA, 20*th November*

Activity in the metal market here this week was modest, but the tone was firm. The import policy has been further delayed to about the middle of next month. In view of the importance of metals for defence production, it is anticipated that there would be no further restriction in the import of non-ferrous metals. Addressing a meeting of the Indian Non-ferrous Metals Association here a couple of days ago, the Union Commerce Minister, Mr. Nityanand Kanungo, said that non-priority industries, such as, copper and brass sheet-rolling mills, should not expect any increase in the import quota. Noting this, the trade thought that generally the Government proposed to increase the quota of non-ferrous metals needed for priority industries like machinery-making and semi-manufactures. The importance which Government, accords to copper and zinc can be imagined from Mr. Kanungo's emphasis on the need for replacing brass by other metals in utensils.

On the London Metal Exchange, conditions were fully firm and prices hardened. A feature in London was the rise spot tin from the opening level of £878 a ton to £884, which is the highest level since June last. The rise followed a hardening trend in Singapore, and the existence of good demand on European account. In Calcutta, tin gained from Rs. 2,630 per 100 kgs. to Rs. 2,640. Although consumers were cautious in entering into commitments, the hardening trend was the result of further tightness in the stock position. In London, spot copper was maintained at £234 a ton. Continental demand was reported fair, while there was expectation of good demand from Germany for increasing year-end inventories.

Of interest to the metals industry and trade is the imminent opening of an Indian Lead-Zinc Information Centre in Calcutta, under the auspices of the Zinc and Lead Development Association of London. The Centre will collect and disseminate technical and scientific information on zinc and lead. During the week, zinc in London opened at £68⅜ a ton and closed with a gain at £69½, while in Calcutta the price was quiet at Rs. 267.00 per 100 kgs. Lead, in London, hardened from £52⅞ a ton to £54¼ following the steadiness in zinc. Lead was unchanged at Rs. 141 per 100 kgs.

Notice

THE WEST COAST ELECTRIC SUPPLY CORPORATION, LIMITED

AN EXTRAORDINARY GENERAL MEETING of the Members of the West Coast Electric Supply Corporation, Ltd., will be held at the Registered Office of the Company at No. 20, Second Line Beach, Madras-1, on Friday, the 7th December, 1962, at 1 p.m., to transact the business referred to in the Notice with the Explanatory Statements sent to the Members individually.

For CHANDRIE & Co., PRIVATE LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

20, SECOND LINE BEACH,
MADRAS-1.
9*th November,* 1962.

Note: Any Member entitled to attend and vote at the Meeting may appoint a Proxy to attend and vote instead of himself and a proxy need not be a Member.

MARKET GOSSIP

(*Concluded from page 889*)

present. Even so, it may not be correct to say that the pool will soon get exhausted, in view of the periodic replenishment from the U.S., in addition to occasional sales by Russia and ordinary market sources. Indeed, the $170 million worth of gold still lying in the pool is not insignificant and the pool is unlikely to be subjected to undue pressure resulting from any possible distress buying of gold in exchange for the dollar.

Engineering Association on Bonus

The need for replacing, wherever possible, profit-bonus by a system of bonus related to productivity or efficiency is emphasised by the Engineering Association of India, in its memorandum to the Bonus Commission. Bonus related to profits, the Association submits, does not in any way improve industrial relations or act as an incentive to efficiency and higher production. On the other hand, it has been the general experience, says the Association, that payment of profit-sharing bonus, that is, bonus based on trading profits, has been a constant source of industrial disputes. In fact, it is the most important single cause of strikes and work stoppages which continue long after the profits have been earned and accounts closed. The Association, therefore, contends that, in the interests of industrial peace and economic progress, the practice of annual payment of bonus based on profits should be dispensed with and an incentive bonus based on productivity should be introduced. It is suggested that, since such bonus is designed to achieve maximum incentive effect, it should be paid immediately after the effort, which is being rewarded, has been made. The exact manner in which bonus is to be linked to production or productivity should be worked out on the basis of the facts and circumstances of each industrial unit.

It is stressed by the Association that the country's greatest need at present is to boost exports for which a rational and competitive cost structure for the export industries is imperative. Unfortunately, the cost structure has been rendered rigid by the awards of wage boards and tribunals. Higher production and productivity and lower costs can result only from a suitable system of payment by results and a vigorous productivity drive.

Stressing the special features of the engineering industry, the Association points out that the industry is capital-intensive, heterogeneous in nature and a major foreign exchange earner. It has to compete in world markets. Any scheme which may be introduced for payment of bonus should, therefore, aim at improving efficiency and lowering costs.

As it might not be possible to effect a change in the existing system of bonus payment forthwith, the Association suggests in its memorandum that, for the interim period, the Full Bench Formula of the Labour Appellate Tribunal, as modified by the Supreme Court, should generally hold good. Only it should be improved and simplified. The Association categorically declares that there can be no question of a bonus irrespective of profits. Even where there are adequate profits, it is suggested that a ceiling should be put on bonus at 25 per cent of the basic wages. The Association is also of the opinion that whatever bonus formula or arrangements are ultimately decided upon in respect of the private sector undertakings should be made applicable to the public sector.

It is evident from the foregoing account that, on the general principles of bonus payment, the Association is in agreement with the views expressed by the Council of Indian Employers in its memorandum to the Bonus Commission. A common thread of argument that runs through the different memoranda submitted by the various employers' associations so far is that the present bonus system, far from helping better industrial relations, has been a source of recurring strife, that it does not encourage higher production and productivity, and that it should be replaced by a system of incentive payment which relates rewards more directly to effort. Employers are also agreed that the interests of the community in general and the need for increasing exports are paramount considerations which should be borne in mind when evolving the system of wage payment. It is to be hoped that these sound principles would not be ignored or their importance belittled by the Bonus Commission.

Tariff Curbs Under Fire

The three-week session of the G.A.T.T., which came to an end on the 16th inst. at Geneva, was notable for the impatience with which the representatives of developing countries viewed the problem of continuing import curbs in developed countries. Their chagrin was all the more acute, because of the fact that none of the industrialised countries had made any worthwhile progress towards implementing the G.A.T.T. Ministerial declaration of November 1961. It may be recalled that the declaration, which was unanimously adopted by the Contracting Parties, sought to ensure that industrialised countries offered better opportunities for products of developing countries by reducing tariffs and liberalising other restrictions like quotas and internal levies. The declaration, it would appear, has remained a virtual dead letter. Meanwhile, terms of trade in world trade have continued to move adversely against the developing countries, which are predominantly exporters of primary commodities. It is only natural then that, at the G.A.T.T. session, these countries should have urged the industrialised nations to take concrete action to give effect to their assurances for trade liberalisation "within a definite period of time." With this object in mind, 21 G.A.T.T. members, representing the less-developed countries, including India, submitted to the G.A.T.T. a seven-point programme of action seeking to specify the possible lines of help expected from the developed countries.

The programme seeks to ensure, *inter alia*, that developed countries will not raise discriminatory tariff and other barriers to trade, remove quantitative restrictions within the next one year and provide duty-free entry for tropical products by the end of 1963. It also urges removal of customs tariffs on primary products and phased elimination of tariffs on processed and semi-processed products over the next three years and of internal charges and revenue duties on primary products by the end of 1965. The actual text of the programme is as follows: 1. No new tariff or non-tariff barriers, particularly of a discriminating nature, should be erected by industrialised countries against the export trade of any less-developed country in the products identified as of particular interest to the less-developed countries. 2. Quantitative restrictions on imports from less-developed countries, which are inconsistent with the provisions of the G.A.T.T., should be eliminated within a period of one year. 3. Duty-free entry into the industrialised countries should be granted to tropical products by 31st December 1963. 4. Industrialised countries should agree to the elimination of customs tariffs on the primary products important in the trade of less-developed countries. 5. Industrialised countries should also prepare urgently a schedule for the reduction and elimination of tariff barriers to exports of semi-processed and processed products from less-developed countries, providing for a reduction of at least 50 per cent of the present duties over the next three years. 6. Industrialised countries should progressively reduce internal charges and revenue duties on products wholly or mainly produced in less-developed countries with a view to their elimination by 31st December 1965. 7. Industrialised countries maintaining the above-mentioned barriers should report to the G.A.T.T. Secretariat in July of each year on the steps taken by them during the preceding year to implement these decisions and on the measures which they propose to take next year.

There is nothing new in the provisions of the programme as such, except the deadline set for some of the measures. Thus, they are only a natural corollary of the 1961 declaration. One does not, however, understand why no specific mention has been made in the programme about the trade relations of less-developed countries with the regional trading blocs, such as the Common Market. Further, the unilateral fixation of deadlines may not help much. It would be meaningful only if both developed and underdeveloped countries come to some agreed dates for measures for trade liberalisation. The futility of fixing deadlines has been illustrated by the fate of a resolution for holding a world trade conference in September 1963, adopted by the majority in the Economic Committee of the General Assembly last week. The U.S., the U.K., France and some other leading industrialised countries have not favoured this resolution, so that it is not going to be of much practical use. On the contrary, it will be used by Soviet Russia and other communist countries as a propaganda weapon against the Western countries. If agreed deadlines are worked out before their public announcements, there may be a better response from developed countries. It is needless to add that, without their co-operation, mere resolutions will not make any material difference.

The precise reaction of the developed countries to the seven-point programme of action is not known. But a G.A.T.T. Committee, consisting of representatives of both developed and underdeveloped countries, seem to have expressed considerable sympathy for the motives which had led to the submission of the programme. Much more will be heard about the programme when it comes up for detailed consideration at the next G.A.T.T. Ministerial meeting due to take place in the first half of next year.

Reflections of A Central Banker

The relationship between central banks and Governments is not only a subject of perennial interest to students of banking but also one which has a direct bearing on economic policies, in general, and monetary policy, in particular. But it is rarely, if ever, that a central bank Governor frankly speaks out his thoughts in public on this delicate subject. It is customary for central bank Governors to wait discreetly to air their views till they have laid down the reins of monetary management. And when an ex-Governor of the Bank of England like Lord Cobbold, who had worked with seven Chancellors of the Exchequer and with Governments of both the Labour and Conservative parties, looks back and makes pronouncements on operational and policy matters pertaining to central banking, they are worth listening to. Lord Cobbold, no longer bound by the code of secrecy of the high office he held, boldly expressed himself on the place and task of a central bank in his Stamp Memorial Lecture delivered recently at the University of London. He maintained that, in a "free democracy," where Government control and influence are combined with private enterprise and capitalism, the division of responsibility between the Treasury and the central bank was justified. Elucidating this point, he observed:

"Treasury and central bank are not and should not be the same sort of animal. Treasury Ministers must always have their ears to the political ground. ... The central bank, though it must be aware and conscious of developments in the political field, should not concern itself with them over much; it should concern itself with the general economic facts of life and, above all, it should be in and out of the market, able to approach its problems in full knowledge and understanding of market actions and market thinking.

"I believe that this rather curious position of the central bank, outside politics, half in and half out of Government, inside markets both as operator and as watch-dog can be made to work to the great advantage of the public, both nationally and internationally."

Such an approach on the part of a central bank, Lord Cobbold emphasised, would enable the central bank to form its judgment from a market and economic point of view, independently of politics, judgment which would often have a slant different from those formed by the Government and the two could be argued out at the top as a useful and rewarding double check on policy.

Lord Cobbold, far from being a stickler for secrecy in high finance, regarded the "traditional secrecy which used to bind some of the older central banks" and even more "the atmosphere of mystery and mumbo-jumbo which used to surround the so-called high finance" as clearly out of date. He noted that, especially in the past twenty-five years, attempts have been made everywhere to make central banking better understood and to dispel "the very silly air of mystery" surrounding it. More recently, central banks had, rightly in his view, adopted a generally more forthcoming approach. Lord Cobbold conceded that there would naturally and properly be variations in different countries, reflecting the different formal responsibilities imposed on Government and central banks, respectively, by statutes or by usage. More often than not, decisions about when to speak out and when to keep silent will involve a judgment between desirable objectives that conflict with one another. Policy in this field, according to him, should not be static; it must evolve often by trial and error.

Another important point emphasised by Lord Cobbold was the need for closer contacts between central bankers and leaders of business. It was important, he averred, that leaders of business opinion in main provincial centres should have frequent opportunities of seeing, hearing and talking to top people in the central bank. This might be a complicated task in countries where traditions were less firmly rooted, but everywhere conscious and continuous effort was needed. On his list of hints to budding central bank Governors he would put very high the following: "Get to know your bankers and financial leaders and do not just sit in your office and expect them to come to you."

COMMERCE AND INDUSTRY

(*Concluded from page 919*)

output is at a very low level, being only 197 tonnes in 1961, as compared with 133 tonnes in 1959.

The reason for the underutilisation of capacity in the industry is shortage of raw materials. Tallow, palm oil and groundnut oil are the important raw materials for the manufacture of stearic and oleic acids. Tallow and palm oil continue to be imported. In this context, we are told that an experimental scheme for the cultivation of oil-bearing red palms has been undertaken in Kerala. It is to be hoped that this scheme will be expanded and the cultivation of palms encouraged in Kerala and other suitable areas. Some tallow also is indigenously available, but its price is exorbitant. In view of this, the Commission has suggested that the existing facilities for the import of palm oil and tallow should be continued. The price of indigenously available groundnut oil is also high.

Despite these difficulties, the industry has been able to improve the quality of its products. The cost of production has also been brought more in line with that of foreign products. The average fair ex-works price of domestic stearic acid is placed at Rs. 2.35 per kg. and that of oleic acid Rs. 2.11. These are higher by about 25-27 per cent, as compared with the landed cost (without duty) of imported product. According to the Commission, the industry has now reached a stage when it can stand competition and maintain its production without specific tariff protection, provided adequate imports of raw materials are allowed to enable it to use its capacity to the maximum extent possible.

MANCHESTER LETTER

(*Concluded from page 899*)

themselves to the structural changes necessitated by the evolution of modern history since the last war.

Such statements, completely founded on fact, need to be given wide publicity if only to stimulate the recognition at home and abroad that, for all the talk of "dark satanic mills," the basic policies being pursued by the international leaders of the trade are sound. Unfortunately, within the local sphere, there are sometimes signs that individuals and sections may have a tendency towards "rocking the boat." This applies particularly to the tentative steps now being taken to change the structure of the Cotton Board. Lord Rochdale has already expressed his personal views on the direction in which this revision should be moving, opinions reflected by a substantial majority of the trade. Sir William Palmer, Chairman of the British Man-made Fibres Federation, however, has objected to some aspects of this project. At the annual meeting of the Federation, he said that a claim by the Board to speak on behalf of users of man-made fibres was likely to create confusion and might impede the progress being made to secure closer collaboration between all sections of the textile industry. To substantiate his case, he took up arms on behalf of worsted weavers and the hosiery, jersey and carpet manufacturers, who, he declared, would not wish to be administered by the Cotton Board.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2694 BOMBAY, 1st DECEMBER 1962 PRICE Rs. 2

HEARTENING RESPONSE FROM U.S. AND U.K. TO INDIA'S CALL

THE people and the Governments of the U.S. and the U.K. deserve the grateful thanks of the people and the Government of India for their generous and tangible help for the purpose of defending India against Chinese aggression. But for their prompt and timely offer of help, backed by airlifting initial supplies of badly needed small arms and the quick despatch of high-powered political-cum-military missions to talk things over with the Government of India, it is a moot question whether the Chinese army would have halted its successful and swift advance in N.E.F.A. and Ladakh and decided to pull back to positions close to the border. Both the Governments have agreed to provide arms and equipment necessary for strengthening India's defence forces on terms that will not strain the economy of the country, the resources of which are already fully stretched on account of its plans for economic development. Western statesmen are agreed that India must be enabled to defend itself against aggression without jeopardising its efforts to raise the living standards of its people. They realise that no country of India's continental size and massive population can be militarily strong, unless its economy is sound and the masses get two square meals a day. They further realise that one of the objectives of China is to disrupt India's economic progress, create discontentment among the people and to show to the rest of Asia, as well as Africa, that India's plans and democratic way of life have failed. The willingness of the U.K. and the U.S. Governments not to insist on cash payment for supplying defence wares fully reflects this realisation. While the U.K. Government has agreed to assist this country on lend-lease basis, the U.S. Government has decided to accept payment in rupees; the details of settling the account will be decided later. In either case no pressure is involved on the meagre external resources of this country.

The scale of military aid which the two countries have agreed to render is not known. There is said to be a specified limit for Britain's aid under lend-lease, but the limit has not been disclosed, wisely of course. The U.S. delegation is still examining the short-term needs; a discussion on long-range requirements has taken place, but from what Mr. Averell Harriman, U.S. Under-Secretary of State for Far Eastern Affairs, said at New Delhi on Wednesday this week, it looks as though the Government of India itself is not yet in a position to present any firm estimates. Public curiosity to know more on all these matters is understandable, because of the anxiety caused by the humiliating reverses suffered by the Indian army at the hands of China, thanks to the deplorable neglect and unpreparedness on the part of the Government all these years. But the public will have to restrain its desire for reasons of security. It will readily do so, if it is reassured by Prime Minister Nehru that the help of the U.S., the U.K., Canada and the like-minded democratic countries will be fully availed of to assemble, train and equip, as well as sustain, an army, navy and air force of a size large enough to deter any communist aggressor. It will also be necessary for him to allay the misgivings of the people stemming from his dependence on Russia, whose way of life is different from ours, for strengthening India's armed forces and for producing goods of strategic importance. It is commonsense that building up a modern army is not like putting up steel plants, one from Russia, another from Britain, a third from W. Germany and a fourth from the U.S. There has to be uniformity in regard to defence equipment and stores and this cannot be ensured if they are obtained from diverse sources, especially when such sources are opposed to one another in the international sphere.

Fortunately, the economic situation in the Western world is favourable for giving sizable arms assistance to India. There is surplus industrial capacity; man-power supply has increased (unemployment in the U.K. at 545,000 persons now is the highest for the past 22 years and, in the U.S., too, it is high at 3.3 million workers or about 6 per cent of the labour force); the supply position of raw materials is easy; inflation has yielded place to signs of a slight recession; and there is closer understanding, as well as active co-operation, among the Western powers in solving their balance of payments problem. Even politically, too, the climate is advantageous to India. Cold war tension has eased, following the firm stand taken by President Kennedy and the dawn of good sense on Premier Khrushchev on Cuba. The settlement over Algeria and President de Gaulle's overwhelming success in both the referendum and the general election have imparted a large measure of stability to France. If only the Government of this country makes up its mind firmly to give military backing to its democratic way of life, so that it can be the bastion of democracy in Asia, it will not find it difficult to get all the help it needs for reaching this worthy goal.

As Mr. Nehru has rightly said, ours will be a worthless country, if it relies on its friends abroad for everything it requires for defence. A large portion of arms and equipment will, therefore, have to be manufactured domestically. This will mean establishing a number of new industries, especially in the field of electronics, engineering and chemicals, expanding the existing ones and introducing new lines of manufacture in them. Everything cannot be done by the public sector. The private sector will, therefore, have to be given more scope and encouragement. It may even be necessary to allow foreign private capital and entrepreneurs to make the goods which the domestic private sector is unable to take up either alone or in partnership with foreign firms. This approach is important from the point of view of both short-term and long-term defence needs. There are lots of manufactures that are required for both civilian and defence purposes. Their production is being held up or curtailed for want of foreign exchange. Road vehicles, for instance, are a typical example. Special and alloy steels constitute another. Aluminium and synthetic chemicals are a third. The programmes for manufacturing these and similar items must be expedited and the bottlenecks that stand in their way should be eliminated with the help of the U.S., the U.K., and other Western powers. These countries should treat such assistance as part of their effort for strengthening the defence of India. It is not known whether this aspect was discussed with the British and American missions and, if so, with what results. If it was not discussed, it must be done expeditiously. Meanwhile, policy decisions that are obstructing the progress of industrial schemes already submitted to the Government for approval, as, for instance, the petro-chemical plans of Mafatlals, Wadias and Esso, must be promptly set aside and the entrepreneurs concerned asked to go ahead at full speed.

KOLAR GOLD MINES

THE Government of India has come to be the sole owner of the Kolar gold mines in Mysore with effect from today, after full six years of continued ownership by the State Government. It was on 30th November 1956, it will be recalled, that the Government of Mysore took over the Kolar Gold Mining Undertakings from Messrs. John Taylor and Co., Ltd., by paying a compensation of Rs. 164 lakhs, excluding sterling assets held by the Companies amounting to some Rs. 50 lakhs. As against this amount of Rs. 164 lakhs, the State Government is now getting from the Centre a compensation of Rs. 3.5 crores. Besides, it will receive annually a royalty on the ore mined and tax on electricity supplied to the mines. The Mysore Government has thus made a handsome profit on its investment. It is true that the quantum of compensation which the Centre has agreed to pay falls considerably short of its inflated demand for Rs. 6 crores. But the State Government has received a more generous treatment in this respect than it gave to the previous owners of the mining rights. It can also be contended that, from the long-term point of view, the State Government is a great loser, because the transfer of mining rights from its hands has dried up one source of continuous revenue to the exchequer. Incidentally, an official survey recently conducted in the mines revealed the occurrence of sizable gold reserves in one of them. But there is another side to this picture, in that the State Government will have to invest large sums of money on exploitation and development of the mines, and on refining the ore. Since it has no resources of its own, it will have to borrow from the Centre and pay interest at the rate of at least 4½ per cent per annum.

Left to itself, the Government of Mysore might not have willingly surrendered the ownership of mines to the Centre, as it carries a lot of prestige and parochial pride. The Centre is, however, said to have persuaded the State Government to part with the mines, on the ground that it was unable to pay the price Mysore wanted for its gold because of I.M.F. regulations. These regulations, as readers are aware, preclude member-countries from buying gold at a price higher than the parity price of Rs. 62.50 per tola, or $35 per fine ounce. As the State Government was naturally not prepared to sell gold at such a price which was much lower than the internal market price, as well as cost of production, the Centre was paying a high subsidy to make up the difference. But

it is said that the I.M.F. objected to the continued payment of this subsidy and that the Government of India had, therefore, no option but to take over the mines from the State Government. This explanation, however, does not sound very convincing. Did the I.M.F. really object to the payment of subsidy to the Mysore Government? So far there is no official statement on this subject; it is only the version given in the daily newspapers that says so. The I.M.F., of course, can object to payment of gold subsidy by the Centre to the Government of Mysore in accordance with the statement of principles laid down as far back as December 1947, but this statement of principles is not inflexible and there is no reason why the Fund could not have given exemption to India as it has done to a number of other countries.

The Governments of some countries such as Australia, Canada and Colombia, it may be noted, have all along been rendering financial assistance to domestic gold producers by means of tax reductions or direct subsidy schemes to make up for the loss arising from high cost of production, especially in the older marginal mines. In October 1961, Australia consulted the Fund with regard to a modification of its system of gold subsidies, designed to remove inequities which had arisen because of the previous sharp distinction between "small" and "large" producers. The modification makes it possible for those "large producers" whose annual output is more than 500 ounces but not more than 1,075 ounces to become eligible, if they so elect, for payment of a flat-rate subsidy irrespective of costs and profits. The rate of subsidy that is payable to such producers diminishes from £A2 8s. 0d. an ounce at an annual output of 500 ounces to *nil* at an annual output of 1,076 ounces. The amendment involves no change in the basic structure of the subsidy scheme which has been extended upto 30th June 1965. Even more interesting is the fact that the Philippines Republic has reintroduced, with the permission of the Fund, direct subsidies to gold producers with effect from June 1961. All producers in that country have been classified into two categories—marginal and overmarginal—depending on whether or not their net profits fall short of "base profits," which are calculated separately for each mine. In order to be eligible for the subsidy, gold producers are required to sell their entire output to the Central Bank at the official price, which is defined as the peso equivalent of U.S. $35 an ounce or other price set by the Government. The maximum subsidy, in addition to the official price, is P 65 an ounce for marginal producers and P 50 an ounce for overmarginal producers. However, the total amount received is not to exceed P 170 an ounce for marginal producers and P 155 an ounce for overmarginal producers. These arrangements have replaced others by which subsidies were given to gold producers through the exchange system. The Fund has deemed the modified system of Australia and the new arrangements adopted by the Philippines to be consistent with the objectives of its statement of 11th December 1947 on gold subsidies.

When the I.M.F. has thus permitted a number of Governments to pay subsidies to their domestic gold producers, it is hard to understand why the Government of India alone was denied this privilege. Indeed, the latter's case for subsidy is pretty strong. As in the case of some marginal mines in Australia, Canada, Colombia and the Philippines so also in respect of the Kolar gold mines, which are one of the deepest in the world, production costs have gone up considerably in recent years not merely on account of increased depths but also due to the all-round increases in wage bill, etc. There is, besides, paucity of finance and equipment to develop the new deposits of gold discovered lately. What is more, the plea for continued subsidy could have been justified on the ground that there was the urgent need to augment gold production in the country in order to find the wherewithal for its development programmes. If such rich countries as Australia and Canada can be given exemption from the Fund's rule, why not a poor country like India? Surely, by continuing the subsidy on a small production of about 175,000 ounces a year, India would have posed no threat to exchange stability. Besides, does a mere change in ownership of mines from the State Government to the Central Government satisfy the underlying principles of the Fund's rules? Surely the Centre will be meeting the "loss" on gold mining from its tax revenue. So what difference does it make to the I.M.F. if the loss is met through the accounts of the Mysore Government or through those of the Centre? One does not know whether the Government of India brought all these points to the notice of the I.M.F. and whether the I.M.F. was even then not convinced of the same. Since the whole picture is hazy, the Government will do well to make public the correspondence it has had on this issue with the I.M.F. It will enable one to find out the extent to which the Indian Government had ably argued the case.

The real reason for the Centre wanting to take control and ownership of the Kolar mines could be the failure of the State Government to work the mines efficiently and economically and to find the resources for their development. Ever since the mines passed into the hands of the State Government, gold production in Mysore has been falling. From 211,000 ounces in 1955 (the year before nationalisation), it declined to 209,000 ounces in 1956, 199,000 ounces in 1957, 170,100 ounces in 1958 and 163,500 ounces in 1959. It was slightly better at 175,800 ounces in 1960, but dropped again to 171,400 ounces in 1961. It remains to be seen whether the performance of the mines will distinctly improve under the ownership of the Central Government. They are to be managed as a departmental undertaking under the Finance Ministry and not under the Ministry of Mines and Fuel, as one would have expected, though the latter is represented on the board of management in the same way as the Ministry of Labour. The people of Mysore need not regret the changeover; on the contrary, they should heave sigh of relief, for they have exchanged a low-yielding investment for something better. If the compensation money is wisely invested by their Government, they can get a better return and also save a lot of botheration for their administrators. If more gold is found as a result of further capital expenditure on exploration, they will automatically get a larger revenue by way of royalty which is by no means an insignificant amount.

RURAL CREDIT: SAMPLE SURVEY

THE changing, in some ways unchanging, pattern of demand for and supply of rural credit over a period of time has been the subject of intensive study in successive annual sample enquiries, otherwise called "follow-up surveys," which the Reserve Bank of India has been conducting since 1956-57 in pursuance of an operative recommendation of the All-India Rural Credit Survey, 1951-52. The latest survey—the fourth in the series—had for its reference period the year ended 30th June 1960, and covered nine districts, namely, Midnapore in West Bengal, Bhagalpur in Bihar, Kanpur in Uttar Pradesh, Mohindergarh in the Punjab, Barmer in Rajasthan, Bilaspur in Madhya Pradesh, Bijapur in Mysore, Krishna in Andhra Pradesh and Tanjore in Madras. As the first seven of these districts were among those selected for the original survey in 1951-52, the general review report on the 1959-60 survey, published this week by the Reserve Bank of India, has also attempted a broad comparison of the rural credit scene between the two years in the said seven districts. The relevant comparative data on some important aspects are brought together in a table at the bottom of this page.

The district-wise figures given in that table cannot be stretched to have any significant all-India validity, for purposive selection and smallness of sample have made the derivation of all-India averages not feasible. A comparison on an all-India basis has not been possible even otherwise, for the relevant seven districts are mostly situated in North India. The authors have also not attempted a direct comparison of the different indicators in real terms during the span of eight years when substantial changes had taken place in the price levels. Moreover, seasonal conditions might have been different in the two years, in which case the changes as observed might have been largely due to the operation of this factor. Perhaps, the most serious limitation of the comparative data pertains to information on outstanding debt—information relating to 30th June 1960 in the follow-up survey and to the day of visit during the period of investigation, extending from November 1951 to March 1952 in the original survey. This limitation, the authors admit, would have an important bearing on the level of the outstanding debt, which might differ widely before and after the harvest. As the survey data suffer from so many limitations, the authors have rightly emphasised "that the results of comparison should be viewed with a certain degree of caution."

Whether a meaningful comparative interpretation is still possible is the question. Our own view is that it is, provided the study of figures is confined to the "broad" or "general" trends they reveal. There are, in our view, several such trends—some signifying *virtually* no change over the eight-year period and some others signifying substantial change for the better or for the worse. To take the former category of trends first. The cultivated area per average family, for instance, has not significantly fallen in size except in two districts, namely, Bhagalpur and Bilaspur. But it is in these two districts that the proportion of indebted families has also fallen from 93 per cent in 1951-52 to 60 per cent in 1959-60 and from 51 per cent to 27 per cent, respectively. In the other five districts, the proportion of indebted families has not significantly changed over the period except to some extent in Bijapur. The relevant figures for the two years are given below:

	1951-52 (per cent)	1959-60 (per cent)
Midnapore	62	59
Kanpur	57	62
Mohindergarh	66	68
Barmer	58	59
Bijapur	62	78

Another broad trend, which is more or less uniform for the seven districts, pertains to the proportion of outstanding debt to the value of recorded assets. This proportion, it will be seen from the following figures, has not widely fluctuated over the period in most districts:

	1951-52 (per cent)	1959-60 (per cent)
Midnapore	2	2
Bhagalpur	4	4
Kanpur	5	4
Mohindergarh	20	13
Barmer	20	20
Bilaspur	3	1
Bijapur	6	9

In the second category of trends signifying substantial change for the better or for the worse, there are at least three indicators which lend themselves to some meaningful interpretation. The most important of these pertains to the proportion of borrowings from co-operatives during the year to that year's total borrowings. The figures, in this connection, reveal a general, though relatively modest, increase in the availability of co-operative credit. Another noteworthy trend relates to the substantial increase in average family expenditure over the period in districts other than Mohindergarh and Barmer. The increase might have been due partly to higher cost of living and partly to better standard of living. Perhaps, the most disquieting trend is revealed by the figures of capital expenditure in agriculture, that is, in land, livestock, irrigation, etc. Such expenditure per average cultivating family has either come down or not increased significantly over the period, despite the increased agricultural incomes resulting from higher prices, and the increased availability of co-operative credit. When the per-family capital expenditure figures are related to the figures of cultivated area per family, the position that emerges is as follows:

	Capital Expenditure per acre (in Rs.) 1951-52	1959-60
Midnapore	70	62
Bhagalpur	28	14
Kanpur	24	25
Mohindergarh	20	24
Barmer	2	3
Bilaspur	9	15
Bijapur	8	8
Krishna (average family holding 5.2 acres) ...	—	84
Tanjore (average family holding 3.7 acres) ...	—	54

It may be broadly inferred from the above figures that intensive cultivation aimed at higher productivity had not become more widespread during the period, for otherwise the level of capital outlay per acre would have substantially increased in 1959-60 as compared with 1951-52. Moreover, the 1959-60 figures, which reflect a palpably low level of annual investment by the cultivators themselves, seem to suggest that subsistence agriculture cannot permit of a higher level of capital formation. Perhaps, the situation may not look that bad, if account is taken of the public investment, over the same period, in agriculture and irrigation. It may also be noted here that the capital expenditure mentioned above does not reflect the current expenditure which the farmers may have incurred on fertilisers, improved seeds, etc.

The felt need for financing capital expenditure by borrowings would have to be met increasingly by co-operatives. Here, unfortunately, the four follow-up surveys (covering 37 districts in all throughout the country) have revealed that the performance of co-operatives has been "very good" only in four districts, "good" in nine districts, "fairly satisfactory" in 11 districts, "unsatisfactory" in five districts and "very unsatisfactory" in eight districts. The latest follow-up survey has spotlighted, in this connection, some of the serious weaknesses of credit co-operatives and the structural and procedural impediments in marketing co-operatives. The main factors responsible for the uneven development of co-operatives, as emerging from the report, are:

1. Inadequacy of efforts at reorganisation and reorientation of the co-operative structure.

2. Weakness of the primary credit structure.

3. The weak financial position and inability of the central banks to play a pivotal role in the matter of supervision and power of scrutiny of credit limits.

4. Lack of adequate efforts at re-orientation of the loan policy of central banks.

5. Unsatisfactory performance of marketing co-operatives.

6. Absence of adequate efforts at setting up processing units in the co-operative sector.

7. Weakness of the land mortgage banks.

8. Domination of co-operatives by vested interests.

9. Inadequacy of efforts at introducing State participation in the co-operative structure.

As the arrangements for interlinking credit with marketing continue to be relatively unsatisfactory and the poor performance of marketing co-operatives themselves is largely due to the absence of processing co-operatives and the consequent dependence on the processing units owned by private traders or parties, the authors of the follow-up survey have suggested, by implication, that the domination of the co-operative structure by that combination of "vested interest" represented by traders, money-lenders and big cultivators be ended. Otherwise, the progressively increasing amounts channelled through co-operatives and land mortgage banks may get diverted to non-agricultural pursuits and thus fail to raise the level of productive investment in agriculture during the third Plan period. From this point of view, the relevant findings of the follow-up survey call for immediate consideration by the Reserve Bank and the Central and State Governments alike.

Comparative Data on Rural Credit from 1951-52 and 1959-60 Surveys

Item—per family	Midnapore		Bhagalpur		Kanpur		Mohindergarh		Barmer		Bilaspur		Bijapur	
	1951-52	1959-60	1951-52	1959-60	1951-52	1959-60	1951-52	1959-60	1951-52	1959-60	1951-52	1959-60	1951-52	1959-60

MARKET GOSSIP

Ban on Forward Trading in Kapas

THE Government of India has banned, with immediate effect, forward trading in *kapas* (unginned cotton). All outstanding contracts have been ordered to settle at rates prevailing at the close of business on Monday, 26th November. It may be noted that there has been no regulated forward market in *kapas*. Unofficial trading, however, has been going on in certain centres, especially in the Punjab, Rajasthan, Gujarat and Maharashtra and it is these unauthorised transactions that have come under prohibition.

In the absence of any official explanation, it must be presumed that the object of this action is to prevent a possible rise in the price of cotton resulting from excessive speculation in *kapas*. The Government appears to have been guided by the experience of the past seasons, when an excessive rise in the price of *kapas*, which is not controlled, had tended to defeat the price control on cotton. The tight supply position, the uncertainty of imports and the total failure of the hedge contract as a hedging medium had prompted traders as well as mills to resort to forward trading in *kapas*. This did give a push to cotton prices. The ban on forward trading in *kapas* is to prevent such a development in the current season.

Two main criticisms have been advanced against the ban. First, cotton farmers in certain areas are used to selling *kapas* very much in advance of the actual movement of the crop and that, to them, forward trading provides a convenient means of hedging. Its prohibition might, it is argued, adversely effect the marketing of the crop. The second criticism is that the ban is quite unnecessary, in view of the prospects of a good crop this season, which is currently estimated at 5.4 million bales, as against 4.7 million bales last season and the downward trend in the price of *kapas* noted of late. Although *kapas* prices are not controlled, the prevailing rates in many producing areas, it is pointed out, are such that they work out to Rs. 50 to Rs. 150 per candy less than the equivalent of the ceiling prices fixed for lint cotton.

The Government obviously thinks that, if forward trading in *kapas* were allowed to continue

Ornaments
for
Armaments
Give Generously to the
NATIONAL DEFENCE FUND

unfettered, it would attract speculators to take advantage of any setback to the crop, which is not yet completely out of danger, and rig up price. Apparently, it is not prepared to take a chance in the present emergency, the more so because the possibility of importing foreign cotton, from sources other than the U.S., is limited by the availability of foreign exchange. It is true that, under the Indo-U.S. agreement, signed on the 26th inst. at New Delhi, India will get 375,000 bales of P.L. 480 cotton. This is in addition to the 180,000 bales which it is getting as per the agreement signed in May. But imports of cotton from other countries are strictly limited. It is noteworthy that, in order to reduce the commitment in this regard, the Government effected a cut this week in the global import quotas announced in July last. The cut is as much as 25 per cent for cotton 1.1/16" and above but below 1.3/16" and 45 per cent for cotton of 1.3/16" and above. While the Government's anxiety to prevent prices from piercing the ceiling is understandable, one wonders as to how exactly the Government will enforce this ban.

While the trade has thus been agitated over the ban on forward trading in *kapas*, the writ petition, challenging the constitutional validity of the appointment of cotton supervisors by the Textile Commissioner, reported to have been filed at the Bombay High Court by a prominent cotton merchant of Tirupur in Madras State has aroused considerable interest.

The petitioner has submitted that the scheme has the effect of eventually bringing about a monopoly in favour of a number of business houses whose names have been approved as supervisors. The supervisors have been armed with wide powers, which are likely to be utilised to the detriment of the petitioner. In particular, the power to issue certificates may inevitably result in unhealthy practices.

The panel of supervisors comprises rival traders, interested muccadums and agents in the cotton trade. The supervisors are empowered to prefer an appeal under Clause 1(b) (i) at their discretion, although neither the buyer nor the seller appeals, thereby causing harassment. The traders are also required to intimate to supervisors the amount of sale price received and to be received by them, and furnish the supervisors with copies of invoices—or in other words, they are compelled to make a total disclosure of trade arrangements.

The petitioner has also submitted that the Textile Commissioner has not even the power to appoint independent supervisors himself but is bound to select supervisors only from the names jointly recommended by the presidents of the Indian Cotton Mills' Federation and the East India Cotton Association. This amounts to "virtual abdication of the function of the Textile Commissioner."

The notification, it is further contended, unlawfully deprives the petitioner of valuable rights and is an unreasonable restriction on his right to carry on trade and business guaranteed under Articles 19(1)(*g*) and 31 of the Constitution. The restrictions have created a special privileged class of traders, namely, supervisors, and have denied the petitioner equal protection of the law.

Pointing out the various hardships that the trade has been put to, in respect of delivery of Indian cotton to manufacturers, by the introduction of a scheme which was universally opposed by the trade, the petitioner has submitted that the appointment of supervisors has no reasonable relation to the provisions of the Cotton Control Order and is "arbitrary, unreasonable and palpably discriminatory."

The outcome of this petition, which is scheduled for hearing on 3rd December, is awaited with considerable interest. It is noteworthy that the Textile Commissioner's scheme was announced and brought into force long before the state of emergency was proclaimed by the President and the Defence of India Ordinance was issued.

A Century of Enterprise

Peirce Leslie and Company Ltd., the well-known British firm operating in South India with its headquarters at Calicut, Kerala, is celebrating its centenary this year. A well-edited, attractively produced history of the Company (*Century in Malabar. History of Peirce Leslie and Company Ltd.*, 1862-1962. Editor: W. K. M. Langley, C.B.E.), brought out to commemorate the occasion, unfolds the story of a century of British enterprise in a remote corner of India. From humble and uncertain beginnings, as is almost invariably the case with great institutions, Peirce Leslie has grown in the past hundred years into one of the leading commercial firms in Southern India. Beginning with coffee curing, the Company took in its stride myriad activities, of which planting, export-import business, shipping, and managing agency business are only a few. Guided by a galaxy of British planters and businessmen, Peirce Leslie has played a significant role in the commercial life of South India. An idea of its contribution to the well-being of the people of the South in particular and its importance to the Indian economy as a whole can be had from the following significant facts: The Company employs at present 10,500 people. Its exports earn £3 million in foreign exchange. In addition, it acts as managers or agents for sixteen rupee planting companies which employ 19,000 workers and produce crops worth over £2½ million. The Company and the concerns managed by it pay to Government, in Central and State taxes, over £700,000. In addition, there are various ancillary industries, in and around the area where the Company operates, which are a direct result of and entirely dependent upon it. The European staff of the Company has also made significant contributions to the cultural and social life of Kerala.

The prejudice against foreign enterprises, harboured by subject people everywhere, is based on the theory, not altogether wrong, that firms belonging to the ruling country are out to exploit the people of the ruled country. What is generally forgotten, however, is that it takes more than exploitation to convert, as Peirce Leslie has done, impenetrable and inhospitable jungles into pleasant gardens of inexhaustible wealth. As Mr. C. Rajagopalachari, who played a big role in bringing the British rule over this country to an early end, aptly points out, in his preface to the book, "what a foreign Government or commercial organisation did mostly for its own benefit is what a people's own leaders must do when the opportunity arrives and the way to do it is learnt. Authentic works of history of foreign companies are, therefore, very instructive and deserve more than a casual reading by patriots as well as calumniators. Business is best learnt by experience, from the experience of others as well as one's own, the former being the cheaper way."

One impression that takes firm root in the reader's mind as he comes to the end of this 150-page book is that Peirce Leslie is an adaptable firm and that the note of confident optimism on which the story ends is justified by the history of the firm.

Commodity Prices Fall

Prices of most of the essential commodities, particularly foodgrains, oilseeds and fibres, have tumbled down considerably in recent weeks. This must be a pleasant surprise to the Government no less than to consumers who only a month ago had entertained grave fears of shortage and boom in commodity prices in the context of Chinese aggression. Traders appear to have scrupulously avoided cornering of stocks, thanks to the voluntary control exercised by them, prompted by appeals of leaders of businessmen and key trade bodies in the country. But due credit deserves to be given to Governments, both at the Centre and in States, for the vigilance with which they have endeavoured to hold the price line, particularly in respect of foodgrains. One need not, however, take the fall in prices to raise the cry that farmers' interests are in danger. The decline has not been that sharp and the prices are still substantially high.

The concerted efforts of Governments and traders, although welcome, have been designed not

(*Continued on page* 977)

TREND OF SHARES

FEATURELESS TRADING

(From Our Own Correspondent)

BOMBAY, 29*th November*

TRADING in shares continued to be featureless this week also for want of buying interest. Activity was scattered, patchy and sporadic. Judged from the sagging tendency in some of the popular shares from the earlier higher levels recorded due to the recent L.I.C. buying and short-covering, the undertone was still distinctly weak. At close, prices were generally around the minimum levels and showed small variations over those prevailing a week ago.

In order to allow more business on cash basis (and thereby to revive activity and reduce floating stocks in the market) and to induce shorts to cover their sales at a faster pace, the authorities of the Bombay and Calcutta Stock Exchanges relaxed the restrictions on trading in cleared shares on cash against delivery and lowered the minimum prices in the case of some active shares. Thus, on Friday 23rd November, the Committee of the Calcutta Stock Exchange decided that, following the improvement in buying inquiry in Dunlop Rubber, Indian Cable and Burrakur Coal, there would be no compulsory carry-over of business from clearing No. 376 to clearing No. 377 in respect of those shares. The Committee also decided on that day to reduce the minimum price for Indian Iron from Rs. 22.18 to Rs. 22, for Hindustan Motors from Rs. 16.50 to Rs. 16.25 and for Indian Copper from Rs. 4.28 to Rs. 4.22. On Monday 26th November, the Committee reduced the minimum price for Birla Jute from Rs. 30 to Rs. 29.50, for Burrakur Coal from Rs. 16.12 to Rs. 16, for Kesoram from Rs. 22.25 to Rs. 22, for Texmaco from Rs. 20 to Rs. 19.25 and for Jaipur Udyog from Rs. 11.12 to Rs. 11.

The Governing Board of the Bombay Stock Exchange met this week first on Friday, 23rd November and later on Wednesday, 28th November. At its meeting on Friday, the Board fixed the *havala* rates for the last settlement which ended on that day. Changes in the rates were made only in those cases where the rates fixed for the previous settlement happened to be higher than the minimum prices for the shares concerned and had, therefore, to be brought down to the minimum levels. For instance, the *havala* rate for National Rayon was brought down from Rs. 427 to Rs. 422, for T.E.L.Co. from Rs. 268 to Rs. 262, for Indian Iron from Rs. 22.20 *ex-div.* to Rs. 21.84 *ex-div.*, for Tata Steel Ordinary from Rs. 122.25 to Rs. 121 and for Alcock from Rs. 292 to Rs. 288. However, in those shares, for example, Voltas, Svadeshi, Finlay, Morarjee and Tata Hydro group of companies, where the *havala* rates were lower than the minimum prices, no change was made. Had the *havala* rates been upgraded in these cases, bears would have been yet more affected. Because of the changes made in the making-up prices, the special deposit making-up prices for Century, Kohinoor, National Rayon and T.E.L.Co. were adjusted slightly to maintain the same difference as before between the special rates and the normal *havala* rates for these shares. *Badli* rates were left unchanged at 9 per cent per annum.

On Wednesday, the Board decided to relax the restrictions on trading further by permitting transactions with immediate effect in all cleared shares, except four (Century, National Rayon, Tata Steel Ordinary and Indian Iron) on a spot delivery basis without prior permission of the President of the Exchange. It may be noted that the Board had permitted on 16th November last dealings on spot delivery basis in 20 cleared and all non-cleared shares. Last Wednesday's decision of the Board to allow trading on spot basis in all but four cleared shares is thus an extension of its earlier order. Business in the four exceptions can also be made on spot basis but with permission of the President of the Exchange. No trading is to be allowed below the minimum prices. The latest decision of the Board is said to have followed some improvement in prices and reduction in the volume of outstanding business.

* * * *

Dalal Street continued to be dull again. With virtually no buying interest in the market, even those shares which had recorded some improvement early in the week shed their gains at close. For instance, Bombay Dyeing slipped back from Rs. 62.60 to close unchanged over the week at Rs. 61.20. Likewise, Bombay Burmah, which were quoted *ex-div.*, receded from Rs. 628 to Rs. 615 and closed the week with a loss of Rs. 2.53 at Rs. 617. Hindustan Motors moved down from Rs. 16.40 to Rs. 16.08 at which level they showed a loss of 20 nP over the week and so did T.E.L.Co. from Rs. 280 to Rs. 270, before closing with a loss of Rs. 8 at Rs. 271. Standard receded from Rs. 820 to Rs. 790 and closed at Rs. 795. However, Svadeshi showed a gain of six points at Rs. 263, Polychem of Rs 8.75 at Rs. 145 and Belapur of Rs. 5 at Rs. 219. Other cleared shares showed minor changes. In the cash section, Associated Bearing Corporation were in demand and improved by six points to Rs. 138. Likewise, Modella Woollen gained Rs. 3.72 at Rs. 15.88. Colour Chem looked up by Rs. 6.25 to Rs. 340. Other scrips showed small changes.

* * * *

Values, wherever changed, showed generally small losses in Calcutta. Thus, among cleared shares, Birla Jute eased by 50 nP to Rs. 29.50, Jaipur Udyog by 25 nP to Rs. 11 and Kesoram and Texmaco also by 25 nP each to Rs. 22 and Rs. 19.75, respectively. Other shares showed small changes, but Dunlop improved by Re. 1.25 to Rs. 37.75 and Indian Aluminium by 44 nP to Rs. 32.56. Trading in cash section was confined to a few selected counters. Thus, in Textiles, Bowreah and Dunbar both edged forward by 50 nP to Rs. 24.50 and Rs. 27.50, respectively, and among Jutes, Reliance looked up by 25 nP to Rs. 6.69 and India showed a small gain of 6 nP at Rs. 17.12. In the Engineering section, Braithwaite slipped back from Rs. 35.12 to Rs. 33.50 and Binani were 19 nP lower at Rs. 9.87. Among Miscellaneous issues, Union Carbide rallied from Rs. 43.50 to Rs. 45 and Usha Martin tacked on a gain of 31 nP at Rs. 15.12. Bengal Paper were up by 19 nP at Rs. 32.19 and Titaghur by 13 nP at Rs. 36.25. Among Tea shares, C. Cachar eased from Rs. 73 to Rs. 72.50.

* * * *

The Madras Stock Exchange was steadier this week, and the popular shares showed small gains. Thus, Travancore Rayon gained 15 nP at Rs. 28.75. Ashok Leyland 5 nP at Rs. 7.85, India Cements 20 nP at Rs. 6.30, Orissa Cement 12 nP at Rs. 15.37, Deccan Sugar 5 nP at Rs. 9.95, Blue Mountains 5 nP at Rs. 2.40, Periakaramalai 8 nP at Rs. 3.01, Peermades 65 nP at Rs. 20 and Coffee Lands 16 nP at Rs. 4.06. However, Indian Steel Rolling eased by 13 nP to Rs. 11.37.

DHARAMSI MORARJI TO BRANCH OUT

The Dharamsi Morarji Chemical Company Ltd. of Bombay, which is engaged in the manufacture of various acids, heavy chemicals, superphosphate and fertiliser mixtures at Ambernath in Maharashtra and Kumbari in Madhya Pradesh, has drawn up some big, ambitious plans of further diversification. Immediately on hand are a proposal to produce boron products, such as borax and boric acids, and a Rs. 7-crore gigantic project for the manufacture of explosives, fuses and detonators. The two projects are sufficiently big to warrant the floatation of two separate new companies in the near future, in keeping with the Government's policy of spreading share-ownership. But Dharamsi Morarji will naturally have a big stake in the new ventures. The Directors' attention is, therefore, engaged in finding out ways and means of raising additional resources. And, we are told, they are considering the question of timing the proposed rights issue of Rs. 10 lakhs in ordinary shares of Rs. 50 each at par, which the Controller of Capital Issues has already sanctioned.

Borax-Morarji Ltd. is the name of a new company proposed to be formed to operate the project for the manufacture of boron products in collaboration with the well-known British firm of Borax (Holdings) Ltd., said to be the world's biggest borax producer, controlling 70 to 80 per cent of the world's borax deposits and having a business network spread over the U.K., France, Spain, Australia, the U.S. and Latin America. Dharamsi Morarji has put up, jointly with the foreign collaborator, an application for producing 17,000 tons of borax and 3,000 tons of boric acid per annum at a capital outlay of about Rs. 60 lakhs. The plant will be at Ambernath and will go into production in about 15 months from the date when the Government will approve the project.

The scheme envisages an annual turnover of roughly Rs. 2 crores and a yearly saving of 30 per cent in foreign exchange for the country which imported last year 9,000 tons of boron products at Rs. 65 lakhs. India's requirements of borax, which is a vital raw material for a number of industries such as glass, enamels, porcelain, etc., and which provides the micronutrient requirements of agriculture in the form of boron, are at present met entirely through imports. The foreign collaborator will supply the plant and equipment and also subscribe to the ordinary share capital of the new company. The British firm has agreed not to charge any fee or royalty for the supply of technical know-how. In addition to subscribing to the share capital, Dharamsi Morarji will meet the bulk of the requirements of sulphuric acid and steam for the new project.

The project for the manufacture of explosives, fuses and detonators is sponsored by the Company together with Khataus and in collaboration with the famous Montecatini of Milan, Italy. The project envisages the manufacture of 6,000 tons of nitro cellulose 10 million coils of safety fuses and 50 million detonators. A new company, with a capital of Rs. 3 crores, is proposed to be floated for undertaking the project. Dharamsi Morarji and Khataus will provide, between them, 33 per cent of the capital and a like amount will be subscribed for by Montecatini. The balance of 34 per cent will be offered for public subscription.

Besides the above two new projects, the Company has launched a big expansion programme. A new sulphuric acid plant at Ambernath, with a capacity of 300 tons per day, is expected to go into production by the end of the next year. It is expected that the output of sulphuric acid will rise this year to 40,500 tons from 33,000 tons in the previous year. The Company has secured a licence for expanding its production of aluminium sulphate at Raipur to 50 tons per day. The increased capacity will be achieved by the end of 1962. It will be in addition to the 100 tons of the product manufactured per day at the Ambernath works. Thus, Dharamsi Morarji will be the largest manufacturer of aluminium sulphate in the country. A part of the production at Ambernath is exported: This year, about 1,500 tons have been shipped and orders for 4,000 tons secured. Production of superphosphate fertilisers at Ambernath and at Raipur (where the factory was commissioned last year) is expected to rise this year to 90,000 tons from 65,000 tons last year.

ASIAN REFRACTORIES SHARE ALLOTMENT

The Directors of the Asian Refractories Ltd. of Calcutta have finalised allotment of the 185,000 ordinary shares of Rs. 10 each, which were issued from 27th September 1962 to 4th October and were oversubscribed by more than five times. Every applicant for 50 shares has been allotted 10 shares and for every additional 50 shares 10 shares more. Thus, an applicant for 100 shares has been given 20 shares, for 200 shares 40 shares, for 400 shares 80 shares and for 900 shares 180 shares. This has been the basis of allotment for applications upto 900 shares. Those who had sought 1,000 to 1,500 shares have been given 200 shares. Applicants for 2,000 shares are to get 275 shares, for 3,000 shares 375 shares and for 5,000 shares 550 shares.

DELHI LETTER

RISE IN EXPORTS SMALL

TRADE TALKS WITH BURMA AND IRAQ

From Our Special Correspondent

NEW DELHI, 27*th November*

THE official delegation touring Eastern European Communist countries has been able to report smooth progress in discussions, and arrangements for increased trade and the full picture of these arrangements is expected to be known in a fortnight. Total value of trade with East Europe may increase by 20-25 per cent in 1963 as a result of plans discussed in the past few weeks. Mr. K. B. Lall is again in New Delhi on one of his periodic visits to report on the Brussels scene. Reports from Brussels show that there is no chance of India getting a guest card for entry into the European club with even a limited range of goods. It is pointed out that Japan has secured some sort of a guest card, following the conclusion of a trade treaty with Britain. The treaty, which is the fruit of long and patient negotiations, will later set the pattern for French treatment of Japanese exports as well.

The Government of India has asked West European countries to take remedial measures to rectify the growing disadvantage to India in trading with them. But for the increased East European purchases, exports this year would have been much lower than in the last year. Exports to Asian and African countries have also fallen appreciably. About Rs. 59 crores worth of exports in October brought the total for the ten months to about Rs. 549 crores, about Rs. 7 crores more than in the period January-October 1961, and comparison of the performance during the first seven months of the financial year shows that, in the current year, exports aggregated Rs. 383.5 crores, as against about Rs. 379 crores during April-October 1961.

Talks with Burma and Iraq

Two delegations currently in India for trade talks are from Burma and Iraq. In the past season, Burma sold only 143,000 tons of rice to India, as compared with 366,000 tons to China, 327,000 tons to Indonesia and 158,000 tons to Pakistan. It may be recalled that in 1958-59, Burma had sold as much as 432,000 tons to India. The decline of India's interest in Burma's rice has displeased Burmese officials whose Government's policy is not for an all-out drive for trading with the communist world, but for diversification. They want a long-term Indian commitment to purchase Burmese rice so that Burma can reclaim her lost rice lands on the basis of an assured market. Unlike Thailand, Burma is not averse to barter deals and the efforts of the current Burmese purchase mission will be to find out products of interest. Iraq has an adverse balance in its trade with India and is said to be seeking to reduce the deficit, partly through sale of petroleum.

Japanese Team

The importance the Japanese attach to iron ore prospecting in India is indicated by the fact that the Japanese delegation now in India is the biggest high-level team Japan has sent abroad. The delegation is led by the chief of the Overseas Technical Co-operation Agency. For the first time in such discussions, the Governor of an Indian State led the Indian experts' team. That was because of the background and experience of Dr. A. N. Khosla, Orissa Governor.

The initial discussions in Delhi concerned two phases for the development of the Paradip project so dear to the heart of Mr. B. Patnaik, Chief Minister of Orissa. The first phase will cover the development of the Diatari ore mines, building of a 100-mile express highway to Paradip and the first stage construction of the port to enable it to receive bulk carriers and handle between two and three million tons of ore a year. The transport plan continues to be on the basis of carriage on road in 25-ton trucks. The second phase of the project relates to the development of Nayagarh mines and connecting Nayagarh with Paradip by a broad-gauge line covering a length of 200 miles. The second stage of port development will increase Paradip capacity up to ten million tons by 1970.

COMPANIES' CONTRIBUTION TO DEFENCE FUND

In our editorial entitled "Extra Grants for Defence" last week, we alluded to the F.I.C.C.I.'s formula governing contributions by companies to the National Defence Fund. The brief details of the formula given in the editorial were based on reports in the daily Press which were incorrect in some respects. The President of the Federation has since conveyed to us the correct formula. The formula is as follows:

1. In case of industrial companies, 5 per cent of the assessable income;

2. In case of companies which have no assessable income, 3 per cent on the gross profit; and

3. In case of non-industrial companies like banking, insurance, trading and investment companies, 5 per cent after making provision for taxation.

The public issue of Rs. 11 lakhs in ordinary shares of Rs. 10 each made by the Wellman Incandescent India Ltd. of Calcutta between 19th November and 24th November 1962 is said to have been oversubscribed. The Company has immediately taken up the tabulation and allotment work and has already applied to the Calcutta Stock Exchange for listing its shares.

PERSPECTIVES & PROJECTIONS

By Mercator

"All the business of war, and indeed all the business of life, is to endeavour to find out what you don't know from what you do; that's what I called 'guessing what was at the other side of the hill'."—WELLESLEY, DUKE OF WELLINGTON.

ALL the world and New Delhi keep guessing what is behind the Chinese cease-fire proposal and what the line of actual control at any point of time (let alone November 1959) might mean. And judging, rightly, from what we know, the conclusion is that there is too much hanky-panky on the other side of the Himalayan hills. The heroic will of a nation dedicating itself afresh to a struggle to defend its liberty has, meanwhile, been fortified by the presence in New Delhi of two high-level missions from the U.S.A. and Britain and the assurance they offer of the intimate interest of the Western powers in India's defence. It is obvious that it cannot stop with supply of arms and equipment asked for by the Indian Government. Their interest in making our defence effective will extend to advice on the right strategy, choice of time, place and instruments and the organisation of intelligence on all of which several shortcomings have been apparent. The Prime Minister's declaration in Parliament that aid would be taken without any inhibition has cleared the air of many doubts; the visits of the military advisers of the two missions to the forward areas in N.E.F.A. and Ladakh is bound to assist discussion of a proper military strategy and the supplies best suited for it.

This lack of inhibition has undoubtedly been encouraged by Russian understanding of India's plight, for which Mr. Khrushchev has been promptly rebuked by China's ventriloquist's dummy, Albania. But even Albania's postures are less interesting than Pakistan's in recent days; the Pakistani Press is apparently not alone in its strange attitude to India, and even more curiously, towards the United States. When the bluff about a secret pact between India and the U.S.A. was called by prompt American and Indian publication of a clarification of the old open agreements, Pakistani politicians went to the extreme of denying any connection between Kashmir and the proposed non-aggression pact with China and have declared that their friendship with China is unconditional. For both Mr. Duncan Sandys and Mr. Harriman who are due to visit Rawalpindi on their way back, the task of making Pakistan see the present problem in its proper perspective is not going to be easy. Those who in the past worked with steadfast determination for establishing S.E.A.T.O. and C.E.N.T.O. will have food for thought; and even in this hour of crisis when India's policy of non-alignment has been mocked by events, there may be some consolation in the thought that the Western policy of military alignments has itself crumbled in this area at least on the rocks of opportunism of their allies.

It was Mr. B. K. Nehru who made the profound observation at Washington that world politics will not in future be the same as before the Sino-Indian conflict. The non-aligned have been shown up as not belonging to any bloc or group having common interests; that cracks can appear even among the aligned has also been showned by Sino-Russian differences, Cuba's disappointment and Pakistani let-down of its benefactors when there was a real test of the value of the anti-Communist front.

* * * *

Aligned or Not

It is natural that, with the understanding shown by the Soviet Union, the Indian Government should be anxious to make it clear that this was not an anti-Communist but an anti-Chinese war which many in this country also regard as an anti-Fascist war against a totalitarian Imperialism. But Russia cannot overlook the logic of her own history and the help liberally provided by the United States when the integrity of the Soviet Union was threatened by Hitler's hordes, without being accompanied by any subsequent ill-effects on its independence.

Non-alignment, as much as alignment, is shown to be without positive content and not quite reliable in an emergency, while similarity in ways of life and thinking have forged bonds much more quickly and purposefully than formal alliances contracted for distant unknown contingencies. Pakistan's alliances have not prevented China wooing its Government very warmly nor the latter from ostensibly reciprocating it regardless of former commitments to the contrary. On the other hand, non-alignment has never meant being non-committal at all times; Mr. Nehru's famous exposition in the U.S.A. on his first visit that India will not be neutral where freedom is involved, has now been substantiated, though, when danger was remote, the reaction was often less decisive. Many old words have lost their significance in a situation in which Russia's own alignments are in great doubt. On the whole, there is a better appreciation of India's policy which avoided till now seriously adverse impressions in Moscow.

The public has reason to expect that, in the course of explaining to the American and British missions the nature of our strategy and requirements for a prolonged war if necessary, the minds of men in New Delhi would also have been cleared of the mist which confused thinking and action created. Till now there was little opportunity for direct confrontation on possible military tactics to be adopted in certain situations.

* * * *

Tezpur Episode

The news that has appeared in the responsible newspapers about the state of demoralisation of the public services in Tezpur is unlikely to create a very good opinion in the minds of foreign observers who do not know that the Assam administration has always been inept in its handling, of any difficult situation—as those who followed events during the language disturbances know. It is not quite surprising that even when the people were brave, officials of every description should have prematurely put into effect measures presumably intended for conditions in which enemy occupation was imminent. The Centre should have known better. There were enough powers available to it under the Emergency for making State officials work under the directions of Union officials or Army authorities who should have been deputed for these purposes to threatened areas. The Congress Party fared no better, though it has an equal responsibility for boosting the morale of the population through non-official channels, which generally enjoy greater influence on such occasions than Government agencies.

* * * *

Precept or Example?

The Congress Working Committee's statement on total economic mobilisation issued last week is an excellent example of its readiness to lay down precepts for others to follow, on Oscar Wilde's excellent maxim that the only thing to do with good advice is to pass it on. The Committee has re-stated all that the Government has done or intends to do; in effect it sets its seal of approval on them as if that was essential for their validity. This may be an excusable vanity, but, in the long list of do's (and some dont's) for the administration, there is only one cryptic reference to the need for public servants and voluntary workers functioning as a single team, whatever that may mean. No one denies, of course, that non-official work should supplement and aid the administration in all its activities during these critical days, particularly because officials cannot overnight change their procedures or ways of working and quickly adapt themselves to a situation in which popular participation is an integral part of the defence effort. But the administration will be steadily overburdened with a variety of responsibilities and while it should do nothing that would come in the way of the widest participation of the public, it is certainly extravagant to expect it to function at every point in the closest harmony and co-operation with the people.

That task of harmonising should properly belong to the party cadres. At one stage, when setting up village co-operatives was high on the agenda under the Plan, there was a rumour that Congressmen who helped it substantially might be preferred for nomination at the elections. Now there is a much wider field in which non-official efforts are desirable. To improve the prospects for collection of savings and gold, to organise civil defence measures, to set up consumer co-operatives for controlling prices and to persuade agriculturists to grow more food, the Congress, as the largest party entrusted with the defence of the nation against aggression, has a great responsibility as well as an excellent opportunity to show its capacity. The Working Committee's directive could more appropriately have been addressed to its party membership than to the administration which Parliament and the Government can well take care of. In a simple matter like austerity, for example, will Congress workers go to places where weddings or other social functions are celebrated on a lavish scale to appeal for restraint? There is very little mention in the Working Committee's statement of possible economy in Government spending for getting the resources needed for development and defence. In the light of Mr. Nehru's summary dismissal of suggestions for reduction of the size of the Cabinet, it is easy to infer that there was no inclination to say anything which might create problems for the Party, if it were required to show by deed as in words the realisation of a sense of urgency. Reasons can be found for not doing things which one does not wish to do but they will not convince those who think that some gestures should be possible even if they take the form of converting non-essential departments or Ministers into agencies for the efficient prosecution of the war. This illustrates once again the need to overcome some of the inherent drawbacks of a democracy in waging war and in showing an overwhelming strength of purpose.

DR. ERHARD ON PLANNING

DR. Ludwig Erhard, West German Economics Minister, has never been a planning enthusiast; and the trend towards planning, which is gathering momentum in West European countries and elsewhere, has not influenced him either. It looks as though the father of the "German miracle" prefers to remain in the shadow with the proponents of free enterprise rather than shine in the company of planners. His denouncement, at the annual symposium of the European Parliament, held last week at Strasbourg, of the Common Market Commission's recently published action programme is in the best Erhardian tradition. Dr. Erhard thought that the programme would lead to centralised State planning and would tend to replace the variety of social and economic life in the E.E.C. with standardised practices. He was certainly in favour of European integration, but he wanted integration to be of a federal type, similar to the one prevailing in his own country. Dr. Erhard, however, did not argue that the action programme should be rejected. His objection was to its emphasis on planning, for, in his opinion, successful economic policies would never be achieved through long-term planning.

The action programme of the Common Market Commission, it may be recalled, envisages economic planning on a Community, not national, basis, within two years and also a monetary union which may, perhaps, lead to a common currency. Although detailed proposals for economic planning have not been incorporated in the programme, the Commission believes that, without planning on a supra-national basis, it would be impossible to implement the E.E.C.'s common policies pertaining to agriculture, transport and energy. It, therefore, plans to submit next year detailed proposals for economic planning. It is this aspect of the programme that has provoked Dr. Erhard who is a firm believer in free enterprise and its ability to deliver the goods as evidenced by W. German economy's spectacular post-war recovery. On the other hand, the West German Minister not only approved of the measures proposed in the action programme to ensure freedom of competition but praised them when he said: "I could have written this (the chapter dealing with measures to ensure freedom of competition) myself."

Dr. Erhard's views, however, did not go unchallenged. Prof. Hallstein, President of the Commission, for instance, vigorously defended the action programme and allayed the misgivings of Dr. Erhard. He pointed out that the action programme looked forward to liberalisation of economic life by the elimination of national restrictions and that, in certain spheres, the Common Market would be less interventionist than the separate States. Prof. Hallstein too wanted a federal type of Europe. What the action programme envisaged was, he emphasised, common policies and not centralised control for which, in any case, the Commission had absolutely no legal powers.

TRENDS IN INVESTMENT MARKET

The world-wide boom in share prices of the late fifties was largely due to the "extraordinary fascination" of the investing public for "growth" equity stocks. In India, for instance, almost every new issue of equity shares, particularly of new enterprises, was looked upon as a "growth" stock and sought after as such, often at an extravagant premium without regard to the companies' current profitability and future prospects. The shares of existing companies were keenly sought after and their values pushed up to very high levels. The yields on such overpriced stocks naturally dropped to absurdly and unsustainably low levels. This was more particularly true of the United States where yields of less than one per cent became common on favourite "growth" stocks. This situation of overpriced stocks and low yields could not last for ever. A downward trend in stock prices, therefore, set in last year all over the world, and this became a debacle on the American and European Stock Exchanges in June of this year. The stock markets in India were no exception to this world-wide trend.

While providing the above diagnosis of the world-wide depression in investment markets—a depression which has had its repercussions on the Indian market too—Mr. J. R. D. Tata, in his statement dated 13th November 1962 to the shareholders of the Investment Corporation of India Ltd., which was released this week, has not ignored the other aggravating factors peculiar to this country. These factors, as listed by him, were the deepening foreign exchange crisis, anxiety over the Sino-Indian border, the slower tempo of industrial growth, shortages in raw materials, power and transport, Government controls and regulations, and the country's poor export performance. The cumulative effect of these factors has been reflected in a further collapse of stock prices in the last few weeks. In a way, according to Mr. Tata, this is good, for share prices are now in better relationship with existing yields and future prospects. But this, in his opinion, is poor compensation for the fact that the resulting disillusionment and loss of confidence have largely dried up the sources of funds for fresh investment.

Is there no remedy for a situation such as this, in which it is extremely difficult to place on the market new capital issues of even sound companies with promising prospects? Mr. Tata, of course, is in no position to suggest any specific remedy or combination of measures for dealing with the situation, for he recognises that these are "times of crises and uncertainties." But there is certainly much to ponder in the following general observations he has made on the country's economic prospects:

"Much will depend on the magnitude of the war effort required from the country, the period over which it will be spread, on the extent to which the burden may be shared by other countries through supplies of military equipment provided free, on lease-lend, or against long-term credits, the extent by which the Five-year Plan will be pruned so as to release finance, energies, goods and services for the war effort and, of course, the extent of deficit financing. We can only hope that, in these difficult and critical times, when so much has to be done so quickly with such limited resources, Government will display that difficult combination of wisdom, boldness and conservatism which, while harnessing to the maximum extent the resources necessary for the nation's development and security, will avoid the pitfalls and delusions of easy solutions which in the end can only lead to galloping inflation, the erosion of our currency and untold sufferings to our people."

Mr. Tata wants the Government to "display that difficult combination of wisdom, boldness and conservatism." Surely, this cannot be mere rhetoric, for Mr. Tata must have already given some thought to the specific contents and practical details of "that difficult combination." He has made at least one concrete suggestion in the statement under review and this provides a clue to the practical lines on which he might be thinking. This suggestion is to the effect that, in view of the urgent need for more work and more production, the Government should help instil greater confidence in the industrial and business world by relaxing or abolishing such of those restrictions and controls as merely burden the management of almost every private-sector enterprise with time-consuming formalities, procedures and red-tape. Mr. Tata's plea, in short, is that every management should be given the freedom and time to concentrate on the main and essential tasks of raising production, increasing exports, expanding capacity and the like. If greater freedom of working is deemed necessary, as, indeed, it has been lately, in the case of public-sector enterprises which are being geared to the war effort, vexatious restrictions and time-consuming procedures can have still less justification in the case of private-sector enterprises. Speed is the essence of the matter in a situation of emergency and it is almost synonymous with efficiency.

INDO-WEST GERMAN CO-OPERATION

The ten-day State visit of Dr. Heinrich Luebke, President of the Federal Republic of Germany, to India is bound to strengthen the bonds of friendship and goodwill that already exist between the two countries. India will long remember the helping hand which West Germany has extended for its economic development. West Germany has been one of India's major sources of foreign economic and technical aid. The aggregate value of its assistance has touched DM 5,038 million (about Rs. 600 crores) so far, including loans of DM 1,700 million provided for the first two years of the third Plan and DM 420 million for the whole of the second Plan. Also included in this figure is DM 2,100 million which the Government of W. Germany has made available in terms of security and guarantees for sales to India. Among the other items covered are credit for Rourkela amounting to DM 660 million, besides DM 32 million for technical assistance programmes and the contribution of DM 126 million (through the World Bank) for the Indus water project. It is noteworthy that West Germany ranks second only to the U.S. among the Aid-India consortium countries which have offered long-term credit for financing the third Plan during the first two years of the Plan.

Among the development projects put up with West German assistance, the Rourkela steel project stands out as the most important. It is, therefore, significant that President Luebke is paying a visit to this plant, which is now making a determined bid to provide some of the sinews of India's war effort. The Rourkela plant in the public sector, which has been put up in collaboration with West German companies, including Demag-Krupps, is designed to produce one million tons of ingot steel annually, pending its expansion to 1.8 million tons capacity. The plant is also able to process L.D. steel produced there into flat products. The total contract for the project included the coal by-product plant and a fertiliser plant. It was only a fortnight ago that Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, inaugurated the commissioning operations for the trial production of the fertiliser plant, which will be one of the biggest plants in the world when completed; it will produce 600,000 tons of fertilisers annually.

Besides the Rourkela plant, West Germany has offered its assistance for several other steel plants. Thus, for the Durgapur steel plant, West German firms have erected coke-oven, by-product recovery and tar distillation plants and a steam generating station. The Mysore Iron and Steel Works plant, it may be recalled, was built by Demag in 1937. Besides, steel and rolling mill equipments have been supplied by West Germany for T.I.S.Co. and Indian Iron and Steel Works, Burnpur. In the field of power, too, West German firms have helped built up power stations and barrages, for instance, at Hirakud, Mayurakshi and Koyna, to mention only a few. Among investments in the private sector, a notable instance is the collaboration of Daimler-Benz with T.E.L.Co. for the manufacture of vehicles. There are several other major projects, in the fields of mechanical and electrical engineering and chemicals, which have received West German help.

As a result of increasing economic and technical aid, imports from West Germany have gone up considerably. India's total imports from West Germany rose from Rs. 60 crores in 1955-56 to Rs. 124 crores by 1960-61, but they declined slightly to Rs. 118 crores in 1961-62. India's exports have also gone up, but only to a limited extent. Exports amounted to about Rs. 21 crores in 1961-62, as compared with about Rs. 15 crores in 1955-56. India, therefore, continues to have a large adverse balance in its trade with West Germany. But for high tariffs on manufactured goods like textiles, as well as heavy internal levies, as, for instance, on coffee and tea, India would have been able to sell more in West Germany. The formation of the European Common Market and the U.K.'s proposal to join it have also led to further uncertainties for India's exports. In view of India's growing needs of development, not to speak of war efforts, it is to be hoped that Dr. Luebke's visit will pave the way for better trade opportunities for India in West Germany.

ALTERNATIVE ROUTE TO ASSAM

The role played by inland navigation in Assam's economy was vividly highlighted last week when more than 25,000 persons were evacuated across the Brahmaputra in less than three days from Tezpur, then believed to be under imminent threat from the advancing Chinese hordes in N.E.F.A., to the south bank of the river. The round-the-clock evacuation was carried out by three steamers belonging to the Joint Steamer Companies which have been operating for more than a century now. These British-incorporated companies, namely, the River Steam Navigation Company and the Indian General Navigation and Railways Company, which terminated their services on the Ganga upto Patna with effect from 1st January 1958, are now operating between Calcutta and Jorhat in north-eastern Assam. They have 76 steamers in all, with a predominantly Pakistani crew. But a large part of this fleet is at present tied up in Gauhati in Assam and Barisal in East Pakistan on account of a strike which was begun on 7th October last by the Pakistani employees. The dispute has already hurt British and Indian commercial interests in Assam and West Bengal inasmuch as transport of tea and jute from Assam to Calcutta and of machinery, cement, structurals and general stores from Calcutta to Assam has been adversely affected in the last six or seven weeks. It is said that the Pakistani employees have made the unreasonable demand that there should be no recruitment of Indians to the crew of the Joint Steamer Companies. The Pakistani Government, which has refused thus far to intervene in the dispute, presumably for political reasons, has thereby lent powerful support to the demands of the Pakistani employees of the Companies.

It is not only this element of non-co-operation by the Pakistani employees and authorities alike but also the circumstance of the Joint Steamer Companies having to operate between West Bengal and Assam *through* East Pakistan that seems to be currently weighing with the authorities in India in their consideration of an alternative route to Assam, in addition to the Assam Rail Link. It may be of interest to the public, as well as the Government authorities in this country, to recall that, in an article entitled "Transport Needs of Assam" in *Commerce* of 16th December 1950, Mr. U. Shanker Rao, who is currently connected with Haldia Anchorage (Marine Side), had suggested some such alternative route. The author's proposal had envisaged use of the existing rail facilities from Calcutta to Colgong (Bihar) on the Ganga river, ferrying across the Ganga to Karagola Ghat, road transport from Karagola to Siliguri involving ferry-crossing of the Mahananda river at two points and, finally, transhipment at Siliguri into metre-gauge wagons of the North-East Railway catering to Assam. This rail-*cum*-river-*cum*-road route, it was claimed by Mr. Rao, would bring in permanent relief to the Assam Rail Link with its relatively small haulage capacity. But its success, he continued, would depend upon efficient ferry crossings (with larger and newer types of vessels) and upon the widening of the road from Kalagola to Siliguri via Kishenganj and Sonarpur on the Mahananda river. The greatest advantage of this route would be the direct link it could provide between Assam and the Bihar-West Bengal area, thereby by-passing East Pakistan. If this alternative route or something similar to it is now under serious official consideration, it will be a very promising development indeed.

COST REDUCTION

Reduction in the per unit cost of production, irrespective of how it is achieved, holds the key to the success of India's export drive. In a buyers market such as India has for its exports only competitive price and quality can win new customers and retain the old. But lower price can only result from lower cost. Hence cost reduction is essential for improving the competitive capacity of Indian industries in foreign markets. That lower cost is a function of lower wages and reduced raw material prices is a commonly held view. It is not as widely realised as it should be that costs could be effectively cut even without a fall in raw material prices or wages. It is fallacious to think that a cost reduction programme is called for only when a firm is facing foul weather and not when the going is good. In fact, cost improvement is a lot like new product research. If one wants to reduce cost one must plan for it, invest time and money in ways and means of bringing down costs.

The "cost reduction" programme organised by the Bombay Management Association recently in the City served to highlight the need for and identify the techniques of lowering costs of production. About fifty senior executives from leading commercial and industrial firms in the City participated in the programme which was inaugurated by Mr. R. R. Hattiangadi, Managing Director of the Associated Cement Companies. Prof. K. J. Shone, Adviser, speaking on "organisation for cost reduction," pointed out that cost reduction was a process of organisation. It required the ability to detect an area of action, to visualise the total picture, to use an effective method, to pursue with thoroughness and to evaluate with sensitivity. Mr. T. M. Jacob, pinpointed the importance of inventory control in cost reduction. Better control over inventory of raw materials, work-in-progress and finished goods was an effective means of cost reduction. In his opinion, it is always possible to effect an improvement in output and turnover for a given inventory through analysis of processes and simplification of the product range. The role of materials purchase and value analysis was outlined by Dr. P. N. Vakil. Value analysis technique, he pointed out, was useful in making purchases of cheaper substitutes, without detriment to quality.

Budgetary control is by common consent a powerful tool of cost reduction. Emphasising its importance in cost control, Mr. M. R. Shroff called for setting correct targets of production. The effective role quality control can play in reducing cost by better selection of raw material, reducing process rejections and building reliable quality into the product with minimum inspection was outlined by Dr. (Miss) S. P. Vaswani.

Cost consciousness is a vital discipline, the importance of which is widely recognised in the advanced countries of the West and cost reduction programmes form part of the relentless drive for higher efficiency in industry and business. In India their importance is being driven home to industrialists and exporters, thanks to increasing competition in export markets. Programmes of the kind held by the B.M.A. have considerable educative value.

PERFORMANCE OF WORLD AIRLINES

Fairly up-to-date figures are just available in respect of the comparative performance of major airlines of the world. These figures are brought together in the following table:

Name of airline	Profit/loss (—) in terms of Rs. lakhs		Capacity		
	1960 or 1960-61	1961 or 1961-62	Available tonne-kilometres in 1960 or 1960-61 ('000s)	Available tonne-kilometres in 1961 or 1961-62 ('000s)	Percentage increase in available tonne-kilometres
B.O.A.C. ..	— 63	—1,464	974,018	1,295,395	33.0
Pan-American.	338	424	1,760,689	2,322,995	31.2
T.W.A. ..	308	— 702	1,779,994	1,967,855	10.6
K.L.M. ..	133	—1,010	641,700	762,700	18.9
Swissair ..	52	1	243,003	304,203	25.1
Sabena ..	— 124	— 371	279,600	305,973	9.4
Air-France ..	20	— 46	772,561	1,027,076	32.9
Alitalia ..	N.A.	127	271,593	417,790	54.2
Lufthansa ..	— 504	—1,273	304,500	454,800	49.3
Air-India ..	68	39	161,447	216,640	34.2

N.A.—Not available.

In the above table, the figures in respect of B.O.A.C. and Air-India are for the fiscal years 1960-61 and 1961-62, while those in respect of other airlines are for calendar years 1960 and 1961. The figures in terms of available tonne-kilometres indicate the tremendous capacity increase that has taken place in one year in the case of almost every major airline. Because of this very heavy increase in capacity without a corresponding increase in traffic, the results of most airlines have been far from encouraging in the year just ended, as compared with the previous year. It is noteworthy that Air-India and Pan-American are the only two exceptions in this respect. How well or ill Alitalia had performed in 1961, as compared with 1960, is not known, for the profit/loss figure for the latter year is not available.

THE BIG HURRY IN THE WORLD OF ASTRONOMY

Suddenly, a star exploded. ■ Turning within its spiderwork of iron and steel, the 200 ft. wide saucer-shaped 'eye' of the radio telescope at Jodrell Bank looked deep into black space and recorded: the star had exploded FIVE MILLION YEARS AGO! ■ Peering so deep into space as to question time itself such radio telescopes are revealing to us the breathtaking, even frightening, dimensions of space and time, gathering astronomical data that are making space travel a fast nearing reality. ■ Into the fashioning of the 2000 ton Jodrell giant went the most advanced technique and knowledge of welding and gas cutting. ■ It is this precise knowledge of industrial gas and its diverse applications that Indian Oxygen affords Indian industry.

INDIAN OXYGEN LIMITED

REGIONAL IMBALANCE

FACT AND FICTION

By Shivaji

THERE is much ill-informed talk about regional imbalance in the matter of industrial development of the country and the subject is both important and big enough to merit a thoroughgoing study. It is not known whether such a study has already been made. One will have to devote considerable attention even to the preliminaries of correctly understanding the subject before a satisfactory attempt could be made to come to grips with it. The expression "regional imbalance" is often used with insinuations to suit political whims and to make political capital. A few points need to be made clear before the study is undertaken. The most perceptible fact that grates against the heart of any partisan agitator is the relative prosperity of certain regions endowed with richer natural resources while the other regions, not so fortunately endowed, are supposed to languish. It is now a little late to labour the point that the right attitude to the abundance of natural resources in any region is to regard it as nothing more than an accident of geography and in a politically unified country they should be equitably shared among all the regions, provided such sharing is economically feasible. The other aspect of the problem of regional imbalance is the question of planning the country's industrial development, taking into account the regional availabilities of resources and raw materials. One would arrive at a pattern of industries from such a premise of "regionalised" resources which should forcibly demonstrate the stupidity of any regional clamour for the putting up of industries on non-economic grounds. Having thus mapped out his field, the student of regional imbalance would be able to decide whether the pattern of industrialisation achieved so far has been rational, spot the real imbalances, examine how well they could be rectified and lay the framework for further industrial progress.

It is hardly necessary to stress the value of such an exhaustive study of regional imbalances outlined above. Apart from the light it could throw on a very important subject, it should be able to promote economic sanity which seems to be conspicuous by its absence today—a deplorable situation in the context of planned development.

Some glimpses at the statistics that are available would be helpful to induce thinking on this subject. The loudest complaints of neglect in the matter of economic development have come from the Southern States, particularly Madras, which has bred a political party, drawing nourishment from grievances more imaginary than real. Even industrialists of the State, who should know better, share these grievances. A good deal of exasperation exists in the matter of steel supplies to the industrial units. The familiar complaint that used to be made was that steel consumers in West Bengal and Bihar were able to secure not merely the lion's share of the steel deliveries from the producers but also the diversion of supplies intended for the units in the Southern States whenever there was transport bottleneck. While block rakes of wagons for the movement of steel sections to the South were made available at Tatanagar and Burnpur after persistent representations, the distressing experience was that there was always considerable congestion at stations like Waltair and Bezwada and this led to the inevitable diversion of supplies to destinations nearer the producers. It is quite possible that advantage was taken of this situation by steel users in the West Bengal and Bihar areas to draw more than their fair share of supplies. A Chief Operating Superintendent of a regional railway once complained that, even when sufficient numbers of wagons were made available for movement of steel to the Southern areas, the consignments that arrived consisted mostly of chickens and egg and little steel! The situation, however, appears to have improved as might be seen from the movements of steel to the various States during August 1961 to March 1962. The total supply of finished steel to a few States, together with the supply made to industries, is given below; the balance of the steel went to Government indents, controlled and registered stockists:

(In tonnes)

	Total supply	Industries
West Bengal	3,51,043	76,051
Maharashtra	3,18,854	74,477
Madras	1,05,254	9,575
Mysore	60,007	12,244
Andhra Pradesh	61,830	8,335
Assam	10,336	1,542
Kerala	10,148	6,121

Source: Monthly Steel Bulletin, issued by the Ministry of Steel and Heavy Industries.

Among the Southern States, Madras got the biggest share of finished steel, though the share going to industries was a little higher in the case of Mysore. Kerala got the smallest share. In the matter of pig iron distribution during the same period, the position was as follows:

(Supply in tonnes)

West Bengal	3,14,395
Maharashtra	19,575
Madras	11,258
Mysore	9,624
Andhra Pradesh	3,860
Kerala	1,337
Assam	188

It is unnecessary to read too much significance in the disparities between shares of West Bengal and those of the other States which should be explained by the concentration of industries that account for so much offtake of pig iron. Madras retains its third place here also.

Madras thus accounts for the biggest despatch of finished steel among the Southern States and its share is certainly higher than those of some Northern States like Assam and Orissa. This fact alone should dispose the charges of planned impoverishment of the South. This point requires to be emphasised not only to dispel notions spread by political agitators but also to educate many people in the State. This, as well as other facts, come into focus as we wade through more statistics and they might be useful to place the problem of regional imbalance in a clearer setting.

*According to recently published statistics, the distribution of industrial establishments and their capital structure, State-wise, was as follows:

	No. of factories	Capital (fixed and working) (Crores of Rs.)
Maharashtra	1,732	336.62
West Bengal	1,596	243.10
Andhra Pradesh	967	43.20
Madras	840	90.14
Uttar Pradesh	590	97.58
Punjab	559	31.23
Bihar	364	209.10
Madhya Pradesh	310	26.12
Mysore	190	57.45
Kerala	159	24.34
Assam	146	4.22
Orissa	138	18.12
Rajasthan	88	16.23

Note: *These and the figures that have been subsequently given, have been taken from *The Thirteenth Census of Indian Manufacturers* 1958, published in 1961, and released in 1962, by the Department of Statistics, Central Statistical Organisation, Government of India. This is the latest 'Census' available, and the statistics for the subsequent years are presumably being compiled. We shall, in all probability, know the figures for 1962, in 1966! The possibilities are, however, that the figures would have recorded further increases.

The relative sizes of capital structure, which do not correspond exactly with the number of establishments, also deserve some attention. Uttar Pradesh and Bihar have a higher degree of capital investment than Madras with a larger number of industrial units while Madhya Pradesh has a smaller capital base for its still greater number of industrial units. This may not have a great bearing on the problem of regional imbalance but could assume importance when questions of policy relating to the ideal industrial structure for the respective regions are considered.

A consolidated grouping of industries into general engineering and electrical engineering gives the following State-wise distribution: Maharashtra 613; West Bengal 544; Punjab 271; Delhi 228; Uttar Pradesh 150; Madras 143; Bihar 87; Andhra Pradesh 63; Kerala and Himachal Pradesh 62; Mysore 46; Rajasthan 22; Madhya Pradesh 18 and Assam 18.

While it would be difficult to make any valid observations or arrive at conclusions on the basis of the above distribution, nevertheless, it demolishes notions of a depraved Southern region. Rajasthan, Madhya Pradesh and Assam are among the last three, while Madras, coming fifth, is most well placed among the Southern States. The only Southern State, with a legitimate grievance in this regard, is Kerala. The picture that emerges from the consumption statistics in respect of iron and steel is still clearer.

	Quantity Tons	Value Rs.
West Bengal	4,63,766	23,70,42,718
Maharashtra	1,99,588	16,42,70,533
Punjab	62,042	2,91,18,024
Uttar Pradesh	40,598	1,98,75,008
Madras	38,623	2,42,25,654
Delhi	32,516	2,21,11,050
Bihar	30,782	1,51,52,722
Mysore	19,087	1,14,72,709
Madhya Pradesh	9,360	53,02,677
Kerala and Himachal Pradesh ..	9,208	43,98,678
Rajasthan	8,622	66,49,541
Andhra Pradesh	8,177	51,54,257
Assam	1,767	14,72,072
Orissa	1,044	7,85,825

The States that seem to require special pleading in respect of industrial development, if we regard it as being reflected through the size of steel consumption, would be Rajasthan, Andhra Pradesh, Assam and Orissa which come at the botton of the list; but they hardly conform to any geographically contiguous pattern.

The pattern of distribution of pig iron, castings and forgings consumption is just as interesting. (The numbers in brackets alongside castings and forgings indicate their place in a descending order.)

	Pig iron		Castings		Forgings	
	(Lakh tons)	(Lakhs of Rs.)	(Lakh tons)	(Lakhs of Rs.)	(Lakh tons)	(Lakhs of Rs.)
W. Bengal ..	1.07	191.43	0.81	278.01	(1) 698	10.98(2)
Maharashtra ..	0.22	53.33	0.10	118.23	(2) 1,030	18.56(1)
Punjab ..	0.21	50.30	0.08	25.07	(3) 177	1.96(4)
Uttar Pradesh ..	0.15	33.48	0.01	5.29	(8) 120	1.60(5)
Mysore ..	0.08	20.43	0.02	25.82	(6) 56	1.97(6)
Delhi ..	0.05	10.60	0.008	5.02	(9) 48	0.71(8)
Bihar ..	0.05	11.07	0.02	7.49	(5) 482	2.70(3)
Madras ..	0.041	11.30	0.04	26.75	(4) 54	0.56(7)
Kerala and Himachal Pradesh ..	0.03	7.83	0.01	4.01	(7) 30	0.56(9)
Andhra ..	0.02	4.34	0.005	2.25	(10) ..	..
Rajasthan ..	0.004	1.01	0.002	0.59	(11) ..	..
Orissa ..	0.0005	0.11	..	0.02	(14) ..	..
Assam ..	0.0004	0.14	..	0.02	(13) ..	..

A more rigorous and penetrating study would be needed to grasp the exact significance of the State-wise industrial situation that has dictated their respective consumptions of pig iron, castings and forgings. It is reasonable to suppose that some rational pattern already exists. There would certainly be a readiness to concede that the lead maintained by West Bengal and Maharashtra stems from the historical circumstances that enabled them to gain such a lead. The net work of small and medium-sized industrial units in the Punjab, noted for its mechanical aptitudes, has made possible a larger diversion of these items than the other States. However, it should be equally clear that, despite the recent origins of industrial growth in Madras and Mysore, they had also successfully won for themselves quite a sizable share of them and are doing as well or better than Bihar, despite the latter's nearness to the sources of supply. The industrially depressed regions in this regard are flung over States as far apart as Assam, Kerala and Orissa.

Finally, we may also have a look at the State-wise pattern of coal and electricity consumption.

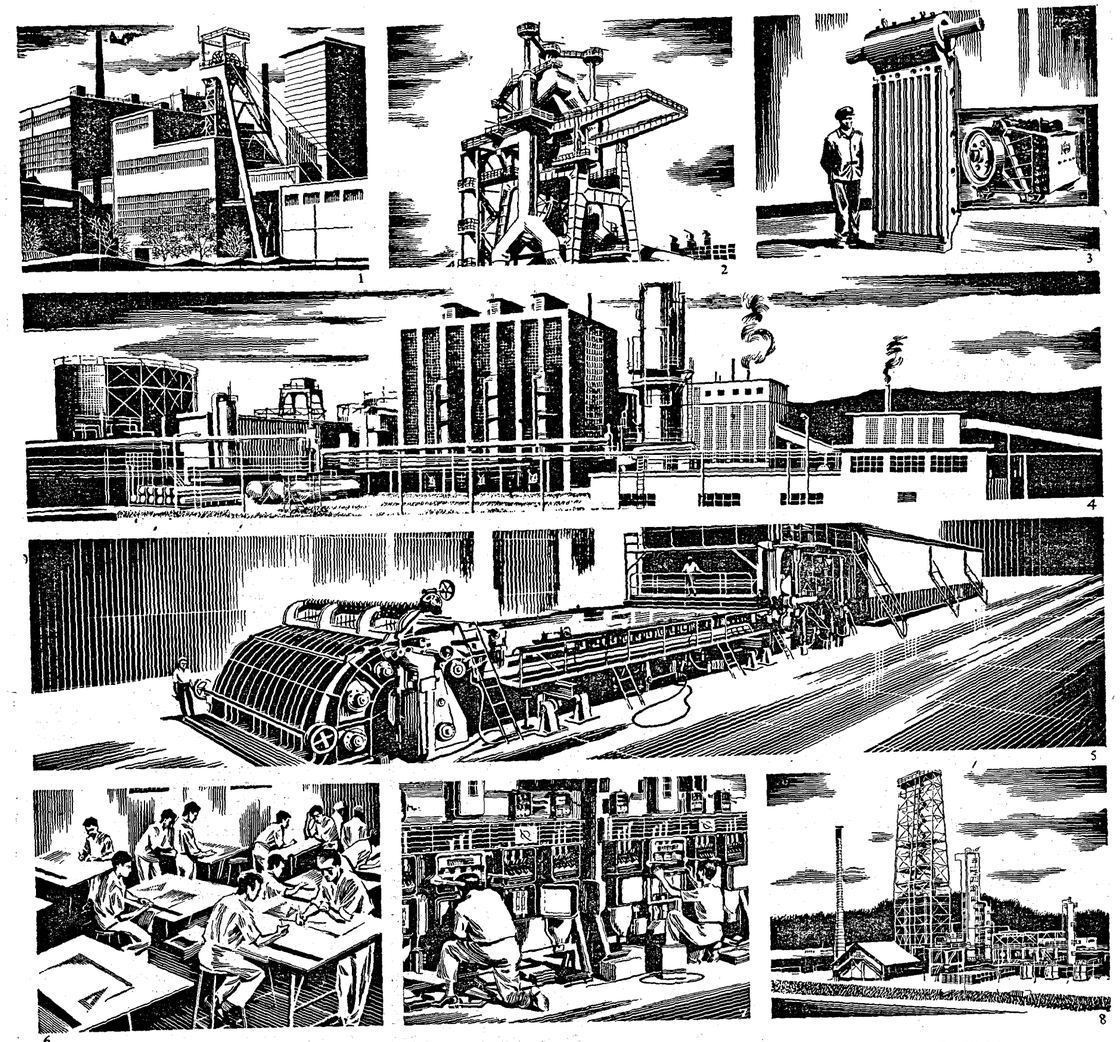
(In thousands)

	Coal consumption		Electricity	
	Tons	Value	kw. h.	Value
Bihar	3,308	98,452	382,448	21,290
Maharashtra	1,449	66,002	1,382,741	83,353
West Bengal	1,374	38,983	9,61,028	53,130
Uttar Pradesh	507	19,753	2,10,271	17,283
Rajasthan	390	14,363	5,819	597
Mysore	343	17,657	3,77,476	10,504
Punjab	318	13,093	94,804	6,004
Madhya Pradesh	317	10,384	97,378	5,514
Andhra Pradesh	297	10,697	89,118	6,371
Orissa	257	6,203	55,567	3,477
Madras	246	13,818	3,488,09	17,231
Delhi	113	5,041	77,904	6,258
Kerala	27	1,560	2,39,604	4,904
Assam	13	460	1,463	127
Himachal Pradesh	3	148	207	31

It might be worthwhile to investigate how far, in the past, rational considerations influenced the location of industries in the different regions in the country and the availability, supply and movement of coal had been reckoned with when decisions were taken. Had there been any semblance of planning, it is reasonable to suppose that the country might have steered clear of the bottlenecks in the transport of coal to the far-flung regions. The foregoing statistics indicate that, while the supplies of coal to regions far away from the coal-producing centres were much less than to those nearby, the closeness of the respective figures to each other suggests that the claims of the respective States hardly went by default. It should be possible, on the basis of these figures, to make out some convincing case for certain areas suffering from industrial backwardness (Orissa, for example), despite their proximity to the coal-producing centres. A comprehensive study of this subject is bound to generate some ideas on reducing the present abject dependance on coal as a fuel. *The Hindu*, Madras, published a letter sometime ago suggesting a planned switch-over to and location of oil-based industries in regions that suffered most from non-availability of coal due to transport bottlenecks. The writer pointed out that, in countries of the European Economic Community, as well as in the United States, coal production was now progressively taking a secondary place while oil came to be a predominant fuel. Further thoughts on this subject would facilitate an intelligent approach to the problem of regional imbalance.

In the matter of electrical power, the lead is still maintained by West Bengal and Maharashtra, but the overall pattern is quite variegated. Bihar takes the third place, followed by Mysore, Madras and Kerala, leaving Uttar Pradesh and Punjab to trail behind, though the latter are among the more industrially advanced

(*Continued on page 977*)



UTMAL: VITAL MACHINERY FOR HEAVY INDUSTRIES

UTKAL Machinery Limited (Utmal), now getting ready to swing into full operation, is one of India's largest machinery-manufacturing enterprises. ■ UTMAL combines the resources and experience of three of the best-known German firms—GHH, Koppers and Voith—and a well-established Indian company: Larsen & Toubro Limited. Each is a leader in its own field, associated with pioneering ventures that have revolutionised many industrial techniques. ■ UTMAL will fully utilise indigenous technical skill, labour and raw materials. Through a special training programme, Indian engineers and administrative staff will play an increasingly important role in its development.

■ UTMAL has a multi-phased programme of manufacturing essential equipment for India's developing industries: Blast furnaces, steel works plant, pig casting machines, sintering plant, coke ovens and by-products recovery plant, plant and equipment for the cement, fertiliser, petro-chemical, paper and hydraulic industries, etc.

GHH One of the foremost manufacturers of heavy machinery in Germany. They are acknowledged pioneers in many fields—particularly in steel production. GHH export machinery to many parts of the world. Their products include plant and equipment for the iron and steel, mining, cement, sugar and chemical industries, floating docks, aerial ropeways, etc.

KOPPERS Experts in the field of fuel refining, Koppers design and construct coking plants and low temperature carbonisation plants with all by-product plants; plants for synthesis gas production from fuels of all kinds; mineral oil refineries, plants for water treatment and waste water purification, industrial furnaces of all types and plants for the chemical industry.

VOITH The largest manufacturers in Europe of pulp and paper machinery. Since their inception almost a century ago, Voith have made many important contributions to the development of this industry. With their extensive experience VOITH offer their services as project engineers for the design of complete plants.

L&T Larsen & Toubro Limited are one of the leading engineering concerns in India. They have wide experience in the manufacture, supply and installation of different types of machinery and industrial plants.

They specialise in the manufacture of chemical plants in stainless steel, aluminium and copper, switchgear, petrol pumps, dairies and ancillary equipment, cooling towers, general fabrication etc. They have undertaken the complete installation of many major industrial projects in the country.

1,2,3: GHH Winding Tower ■ Blast Furnace ■ Stone Crusher
4: KOPPERS Synthesis Gas Plant (Lignite)
5: VOITH Paper Machine
6,7,8: L & T Planning & Design section ■ Manufacture of switchgear ■ Erection of oil refinery

AMERICAN LETTER

STOCK MARKET STRONG

PRESIDENT PRESSING FOR TAX CUT

From Our Special Correspondent

NEW YORK, 23rd *November*

ECONOMIC data continue to present a mixed pattern. The most encouraging aspect, perhaps, has been the strength of the stock market. This is contrary to developments elsewhere. It is also contrary to the diversity of opinions being expressed.

If any overall opinion can be expressed, it should be said that the strength of stock prices and the Chinese invasion of India are the prime areas of attention in this country. It would not be too farfetched to presume that there is an inter-relationship between these two developments. Stock prices seem to take into consideration the real rift between China and Russia.

This involves considerably more than would appear on the surface. Inside opinion here is that the Communist Chinese regime because of its disagreements with Moscow has been afraid of losing one-third of its petroleum supply which normally comes from Russia. In other words, it is the considered interpretation here that the Chinese invasion of territories of India is aimed chiefly at oil and securing a reservoir which may be tapped in the event Russian supplies should cease for one reason or another.

It is also of interest to note that a spokesman of the U.S. Government has been permitted for the first time to take cognisance of the Sino-Soviet dispute. He was Roger Hilsman, Director of the State Department's Bureau of Intelligence and Research, speaking before the World Affairs Council at Dallas, Texas. Said Mr. Hilsman: "So deep-seated are the antagonisms between Moscow and Peking that we cannot foresee any genuine reconciliation of the dispute, at least while Mao and Khrushchev hold power." Also imposed on this picture are the severe economic difficulties encountered by the Chinese regime and a war is a proven method of distracting attention from internal troubles.

The speech was without a conclusion, because the world crisis was not resolved and it probably will not be for a long time to come. In the meantime, United States aid to India in its struggle with China has widespread support here. Hence, what the stock market in New York seems to say, in effect, is that this country may be on the brink of another expansionary cycle prompted by wars or war-like conditions throughout the world.

International-mindedness

People here are becoming more and more international-minded and that seems to apply in most countries. There are now more than 58,000 foreign students from 149 countries enrolled at American colleges and universities. At the latest count, students from India numbered 5,621, or 9.7 per cent of the total. It was the second largest contingent superseded only by Canada. The four most favoured subjects of study are engineering, humanities, natural and physical sciences and the social sciences. International-mindedness has been also emphasised by Telstar, the communications satellite developed by American Telephone and Telegraph Company. It will be followed before the end of the year by a second one, named "Relay" which will receive, amplify and send television and voice. A second Relay is scheduled to be orbited early in 1963.

International-mindedness is also pointed up by the fact that foreign investments in U.S. firms have more than trebled since 1941. They amounted to more than $7,400 million at the end of last year. Most of the foreign investments here come from Canada and Europe. United Kingdom investors hold the biggest slice of about $2,500 million mostly in the form of finance and insurance organisations. In reverse, U.S. firms and individuals now hold a record of nearly $35,000 million in direct investments abroad, three times as much as in 1950. Figures compiled by the National Industrial Conference Board indicate that last year's increase was $2,000 million despite the fact that last year the U.S. erased from its books $956 million direct investments in Cuba which were expropriated by the regime of Premier Fidel Castro. U.S. foreign investments in petroleum have outpaced those in other industries in the last 12 years. They now account for 35 per cent of all foreign investments. Manufacturing accounts for about 34 per cent and mining and smelting for 9 per cent.

U.S. Fiscal Policy

There seems to have emerged a radical change in U.S. Budget policy thinking. It marks a dramatic turning point in American economic history. President Kennedy is now pressing for a tax cut despite a Budget deficit and also at a time when some business activities are rising. The Kennedy theory—a bold one—is that a reduction in taxes is required to make the "sluggish" U.S. economy grow more rapidly. The general assumption is, of course, that greater business activity will produce more revenue even though this may not take place in the first year. This theory is thoroughly rational and has been defied to exist by Government economists who could see tax reductions merely in terms of theoretical lower revenues.

If any proof were needed how the tax structure affects economic growth, Puerto Rico is a glaring example. This free Commonwealth with its own constitution, which is associated with the U.S., attained a rate of economic growth of 9 per cent in the first two quarters of the 1961-62 fiscal year. Largely responsible for this growth is a tax holiday for new businesses which decide to move to the island Manufacturing income in plants established under the decade-old development programme rose 13.6 per cent last year and the Puerto Rico Planning Board expects a gain of 22 per cent for fiscal 1961-62. Corporate tax exemption for a period of from 10 to 13 years remains the most important factor. Farsighted planning in many other directions is also responsible for the success but lower taxes remain the keystone, as I indicated in previous despatches. By the end of this fiscal year, Puerto Rico will have attracted more than 800 U.S. and foreign plants under its development programme. The goal for 1975 is 2,500.

A similar policy, it seems, is now being envisaged for the U.S., where the growth rate has been pretty stubbornly at the rate of somewhere between 2 and 3 per cent for the last few decades, instead of 6 or 9 per cent which the optimists hoped for. At any rate, it is definitely a new try and a courageous approach to an old problem. Barring unforeseen circumstances, the experiment is apt to succeed, particularly because politically it cannot possibly become a party issue since everybody, essentially, is for lower rather than higher taxes. Old-time dissenters, naturally, disagree with this approach, but the majority of Congress seems to regard a tax cut as a step in the right direction especially because voters will be delighted rather than annoyed by it.—*All Rights Reserved.*

(*Concluded from next column*)

Britain's exports are moving reasonably and sterling is strong. There is accordingly no immediate inflation bogey to inhibit further credit liberalisation, but what form can this take? Can the Chancellor act quite so politically as to cap unpleasant Election results for his Government with presents for everybody? He will have to move cautiously and perhaps save most of his ammunition to the next Budget.

But it is suggested that, meanwhile, the Bank rate might come down another half per cent (it is at present at 4½ per cent) and that the remaining 1 per cent of special deposits which the banks have to lodge with the Bank of England can be refunded to them. This second move would be an act of liberalisation but could have little effect, since the banks are not able to lend as much as they would like to, even now. On the other hand, the reduction in interest rates would help. The Chancellor is also being urged to make further cuts in purchase taxes—it is such cuts, if made now, which would be looked at with most suspicion as bribes to the electorate. On the other hand, just as in the case of the cut in the motor car tax, it could be very effective in stimulating the market. But another one of Mr. Maudling's problems is that unemployment is worse in the heavy industry areas and it is these that benefit least by purchase tax reductions. Something more deeply based, some plan (not produced in a hurry) with long-term implications will be necessary here.

LONDON LETTER

PRODUCTION UP, BUT UNEMPLOYMENT HIGH

FURTHER CUT IN BANK RATE LIKELY

From Our Own Correspondent

LONDON, 23rd *November*

POLITICS and economics are being married this week in this country with a vengeance. As the economic statistics roll out, on the one hand, so do the results of five by-elections in seats all previously held by the Government, on the other—and it will be up to the Chancellor of the Exchequer to make the equation between the two. On the economic side, there was good news in the recording of the highest index of industrial production for the year. The September figure of 118 was two points up on the figure for July, although only one point up on the figure for June; but it was four points up on the figure for September a year ago, allowing for seasonal factors.

For the first nine months of 1962, the index for all industries (seasonally adjusted) averaged 115, as compared with 114 in the corresponding period of last year. The improvement between the two years is insignificant, but the improvement in this last quarter is more noteworthy. In manufacturing industries, the rise has not been quite so marked, since the September figure does not bring the index any higher than it was in June; even so, it shows a two point rise over July which was a month of sharp setback.

But, while increased efficiency is pushing up the index of industrial production, the employment figures continue to deteriorate; in other words, production is not expanding sufficiently to utilise both technological improvements and the available labour force. Thus, the number out of work in November has jumped up to 8½ per cent and there are more unemployed this month than there have been for 22 years, that is, since before the war. The November total is nearly 550,000 and it is confidently feared that it will rise to 600,000 over the year-end. Nor is much improvement looked for until next spring.

The stock markets have this week remained in reasonably good form; the trend has been slightly upwards and industrial equities stand at just about the level of a year ago.

On the political front, the Government were on the defensive against not only the Labour attack but, of course, strong Liberal opposition. Of the five seats which were contested this week, two were lost to the Labour Party and the other three were secured by very small margins. It has been calculated that, to win a General Election, there would have to be a swing of votes of 3½ per cent of the total poll from the Conservatives to Labour—regardless of what support was being given to the Liberal Party. In the seats contested this week, the smallest swing has been 5½ per cent and the largest 8½ per cent. So, if this sort of form were to be repeated at a General Election, it would provide the Labour Party with about twice as much margin as they need to get a majority. But having said this one must also point out that it does not follow that the Liberal momentum which is still strongly upward (one of the Government-held seats was nearly gained by the Liberal and not the Labour candidate) will operate in quite the same way in a General Election. On the other hand, the old argument that a lot of people will vote Liberal to show their discontent with the Government when the fate of the Government is not at stake but will return to their old allegience in a General Election, no longer holds good; it is clear that, as a result of by-elections through this year, the Liberal gains are made at the expense of both parties and when the point is reached at which Liberal candidates have a real chance of getting in, then their adherents are going to remain faithful. Nevertheless, the Chairman of the Conservative Party does not think that the results in the recent by-elections are as bad as those of the late summer, though he admits that much hard work has to be done if the day is to be saved when a General Election comes up!

But, if the day is to be saved politically, then the Government must be given time to present a better economic picture to the country. So this week's results make a General Election likely at the latest possible date, that is, possibly in the autumn of 1964. And the City is already—as the latest election results come out—turning to the Chancellor and asking him what he is going to do about it.

(*Continued in previous column*)

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial resurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

INTEREST RATES STRUCTURE OF BANKS

DEPOSITORS GET LESS, WHILE BORROWERS PAY MORE

THE main trends in interest rates allowed and charged by commercial banks in India during the five years from 1957 to 1961, roughly corresponding to the second Plan period, have been analysed in the October 1962 issue of the *Reserve Bank of India Bulletin*. The analysis reveals that the average rate of interest charged by scheduled banks on loans and advances granted to their clients went up from less than 5.59 per cent per annum in 1958 (it stood at 5.44 per cent in 1957) to a little over 6.32 per cent, whereas the rate of interest paid by them on deposits declined from 2.52 per cent (1.94 per cent in 1957) to 2.12 per cent. The spread between the two rates, therefore, widened in favour of banks from 3.34 per cent (3.50 per cent in 1957) to 4.20 per cent. The decline in the average deposit rate from 2.3 per cent in 1958 to 2 per cent in 1960 reflected the impact of the All-India Inter-Bank Agreement on rates of interest payable on deposits. Under this Agreement, which came into effect from 1st October 1961, ceilings were fixed at levels well below those prevailing before under competitive conditions. Besides, the position was rendered more favourable for banks by the Reserve Bank which intervened in 1960 to fix a low ceiling of no more than 2 per cent below the Bank rate. The ceiling was, however, withdrawn with effect from 1st March 1961 when the maximum rates of interest on fixed and saving deposits were revised slightly upward under the All-India Inter-Bank Agreement. The average deposit rate in 1961 was, as a consequence, a shade higher at 2.12 per cent.

The Reserve Bank's analysis shows that, between 1957 and 1961, there was a sizable accretion of as much as Rs. 708 crores to the deposit portfolio of scheduled banks (excluding P.L. 480 and 665 deposits), or an average of Rs. 142 crores annually. The rate of growth was the highest in 1961, amounting to Rs. 180 crores, the largest expansion recorded in bank deposits in any year so far. As against the rise of Rs. 780 crores in deposits, the volume of credit extended by scheduled banks expanded by only Rs. 389 crores or an annual average of Rs. 78 crores. The expansion of credit was particularly sharp in the years 1960 and 1961 when it amounted to Rs. 145 crores and Rs. 156 crores, respectively. Both in 1957 and in 1960, credit rise had outpaced deposit growth, unlike in 1958, 1959 and 1961. Consequently, there was greater dependence by scheduled banks on the Reserve Bank in these years. Thanks to the prevalent stringency in the money market, interest rates firmed up. The introduction of the three-tier system of lending rates by the Reserve Bank from October 1960 and the simultaneous issue of directive to the schedule banks to step up their average lending rates by ½ per cent also contributed to a hardening of the lending rates of banks.

The following table depicts the overall trend of interest rates in respect of the scheduled as well as non-scheduled banks during the five-year period 1957-61:

(Amount in crores of Rs. and rate in per cent.)

	1961	1960	1959	1958	1957
SCHEDULED BANKS					
Interest paid on deposits					
Amount	39.12	37.10	36.68	32.92	23.35
Average rate	2.121	2.012	2.187	2.252	1.933
Interest paid on borrowings from R.B.I.:					
Amount	1.43	1.56	0.12*	..	..
Average rate	5.1	4.2	4.0*	..	..
Interest earned on loans and advances:					
Amount	69.70	56.43	47.61	43.82	40.35
Average rate	6.325	5.890	5.641	5.589	5.438
Interest earned on bills:					
Inland bills:					
Amount	8.56	6.76	6.19	5.55	5.05
Average rate	6.704	6.467	6.455	6.366	5.654
Foreign bills:					
Amount	4.80	4.77	3.87	4.29	5.74
Average rate	9.893	9.242	9.063	9.854	10.365
NON-SCHEDULED BANKS					
Interest paid on deposits:					
Amount	1.33	1.58	1.52	1.44	1.51
Average rate	4.027	3.851	3.660	3.600	3.302
Interest earned on loans and advances:					
Amount	1.92	2.26	2.23	2.21	2.39
Average rate	9.038	9.055	9.053	8.875	8.369
Interest earned on bills:					
Amount	0.09	0.12	0.14	0.15	0.17
Average rate	10.190	8.206	9.313	9.186	8.964

* July-December.

It will be seen from the above table that the increase in the total amount of interest paid by scheduled banks on deposits was rather sharp in 1958. Such an increase is attributed to two factors: one, large accrual of the rupee counterpart of P.L. 480 and 665 funds to the State Bank and, two, some competitive bidding for deposits by banks which forced up deposit rates and led finally to a voluntary agreement on deposit rates among the larger scheduled banks with effect from 1st October 1958. Between 1957 and 1958, the total of interest paid by scheduled banks rose appreciably from Rs. 13.45 crores to Rs. 27.14 crores in respect of fixed deposits and from Rs. 3.42 crores to Rs. 6.61 crores in respect of savings deposits. Reverse was the case in regard to current deposits and other deposits, the total interest paid declining from Rs. 70.95 lakhs (Rs. 85.98 lakhs in 1958) and Rs. 577.44 lakhs to Rs. 65.07 lakhs and Rs. 471.75 lakhs, respectively. It must, however, be noted here that a part of the time deposits include such extremely short-term deposits as three to thirty days' money on which the rate of interest has been three per cent per annum, if not a little more during some parts of the years covered by the study. In view of the readiness of banks to pay such a high rate of interest for call deposits, which in turn reflected the keen demand for funds, depositors were maintaining only minimum amounts on current account. Besides, there was a general tendency among banks to restrict the terms governing the payment of interest on current account balances.

Borrowings of scheduled banks from the Reserve Bank and the State Bank of India were much lower in 1961 than in 1960, while inter-bank borrowings and borrowing from the Refinance Corporation of India were much higher in 1961 than in 1960. The introduction of a three-tier system of rates for borrowings from the Reserve Bank and the stepping up of the lending rates by the State Bank in October 1960, as well as the large accrual of deposits to banks in 1961, contributed to a reduction of the dependence of the banking system on borrowings from the Reserve Bank and the State Bank and a larger utilisation of funds available in the inter-bank call money market. The sharp rise in average borrowings from the Refinance Corporation in 1961 (Rs. 2.2 crores) reflects in part the expansion in medium-term lending to industry by banks. While the average rate of interest on borrowings from the Refinance Corporation remained unchanged at 5.0 per cent, the average rate on borrowings from the Reserve Bank moved up from 4.2 per cent in 1960 to 5.1 per cent in 1961, the average rate on borrowings from the State Bank from 4.2 per cent to 5.2 per cent, and the average rate on inter-bank borrowings from 4.1 per cent to 4.6 per cent.

Following (*a*) greater demand for bank finance by industry and trade and (*b*) enhanced average lending rates, the total earnings of scheduled banks from loans and advances rose steadily from Rs. 40.35 crores in 1957 to Rs. 69.70 crores in 1961. The rise was more pronounced in 1960 and 1961, being of the order of Rs. 8.82 crores and Rs. 13.27 crores, respectively. In line with the upward trend of advances rate, the average rate on inland bills purchased and discounted also recorded a steady increase during the five-year period under review, the former (advances) rising from 5.4 to 6.3 per cent and the latter (inland bills) from 5.6 to 6.7 per cent. The average rates earned on export and import bills were much higher than those earned on loans and advances and inland bills. Of the two types of foreign bills, the import bills were more remunerative than export bills. Thus, taking the five years as a whole, the average rate of interest charged declined from 8.91 to 8.55 per cent in the case of export bills but rose from 11.94 to 12.71 per cent in respect of import bills. The higher average rate earned on foreign bills was due partly to the fixation of minimum rates by authorised dealers in India and partly to the inclusion of such items as commission on exchange transactions and interest on overdue import bills.

The total amounts of both inland bills negotiated and accepted for collection during the year 1961 were much higher than in 1957: Rs. 3.752.36 crores and Rs. 2,883.75 crores, respectively, as against Rs. 1,896.49 crores and Rs. 1.626.13 crores. In the case of export bills, the amount of bills negotiated was higher at Rs. 493.31 crores, as against Rs. 459.90 crores, while that of bills accepted for collection was lower at Rs. 131.62 crores, as against Rs. 144.59 crores. The reverse was the case in regard to import bills. Thus, the amount of bills negotiated was lower at Rs. 290.86 crores (Rs. 304.05 crores in 1957), whereas the amount of bills accepted for collection was higher at Rs. 279.25 crores (Rs. 265.70 crores).

Non-scheduled Banks

The structure of interest rates in so far as the non-scheduled banks are concerned differs from that pertaining to scheduled banks. In view of their location in semi-urban and rural areas, their limited turnover, and concentration of dealings with small businessmen and persons of small means, these banks offer higher rates than scheduled banks to attract deposits and charge correspondingly higher rates on loans and advances, as well as on discounting of bills. Unlike in the case of scheduled banks, the average rate of interest paid by non-scheduled banks on deposits advanced steadily from 3.3 per cent in 1957 to 4.0 per cent in 1961. Their average lending rate also moved up from 8.4 to 9.0 per cent. The spread between the average deposit and advance rates remained more or less steady at about 5.0 per cent, as against the increase from 3.5 to 4.2 per cent in the case of scheduled banks. Although the average rate charged by non-scheduled banks on inland bills rose from 9 per cent in 1957 to 10.2 per cent in 1961, the total interest earned declined from Rs. 17.21 lakhs to Rs. 9.08 lakhs. The total outstanding deposits, loans (and advances), and inland bills discounted at the end of 1961 amounted to Rs. 33.03 crores, Rs. 21.19 crores and Rs. 89,000, respectively. The corresponding figures four years before (end-1957) were Rs. 45.61 crores, Rs. 28.60 crores and Rs. 1.92 lakh. These figures suggest that the non-scheduled banks have steadily lost ground. As readers are aware, during the seven-year period, several of them went into liquidation, while a number of them was absorbed by the scheduled banks.

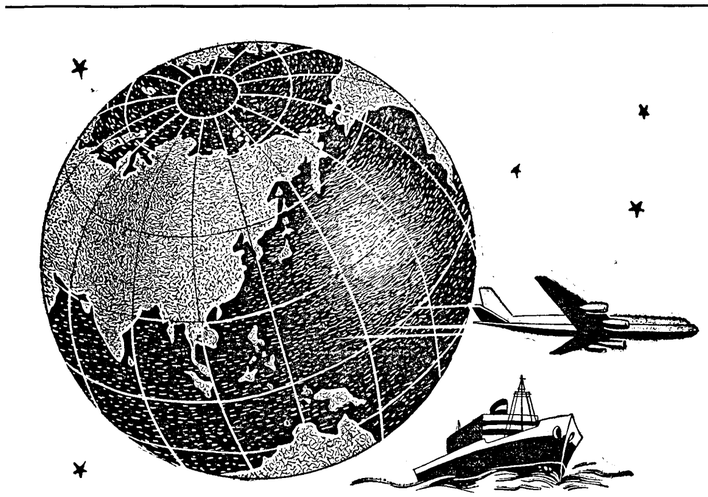
I.M.F.'S DISCUSSIONS WITH SWITZERLAND

An I.M.F. mission, headed by the Managing Director, Mr. Per Jacobsson, held discussions at Berne in Switzerland on 21st and 22nd November with a delegation of senior Swiss officials headed by Ambassador E. Stopper. These discussions were a continuation of earlier talks on the question of Swiss association, in some form, with the I.M.F.'s general arrangements to borrow. Under these arrangements, it will be recalled, ten industrial member countries of the Fund will make available to the Fund, in case of need, a total amount equivalent to $6 billion and the arrangements now ratified by eight countries became effective following the official notification of the adherence of the U.S. on 24th October. Switzerland, which is not a member of the Fund, was invited by the Fund to become associated with these borrowing arrangements. The present discussions, as the earlier contacts, were aimed in particular at clarifying the technical possibilities for such an association. Positive results have been achieved, but, before final decisions are taken, there will be further contact between the Swiss authorities and the Fund and possibly also with certain individual countries which are participants in the borrowing arrangements.

ESTABLISHMENT OF AN AFRICAN DEVELOPMENT BANK

An important stage in the preparations for the establishment of an African Development Bank was completed at Geneva on the 15th inst. by the delegates from nine African countries. Tentative conclusions were reached by the delegates regarding the basic principles which could most effectively be adopted to govern the Bank's capital structure, management and operations. The countries concerned are Cameroun, Ethiopia, Guinea, Liberia, Mali, Nigeria, Sudan, Tanganyika and Tunisia. They are members of a Committee of Nine, set up by the United Nations Economic Commission for Africa last spring to study the proposal for setting up an African Development Bank. The Chairman of the Group is Mr. A. Romeo Horton, of Liberia. The proposed Bank would seek to obtain funds from its African member Governments and, it is hoped, from non-African Governments and private financial institutions, for the financing of economic and social development projects in Africa.

The Canara Industrial and Banking Syndicate Ltd. has just brought out an interesting booklet entitled *A Bank Account*. The booklet stresses the value of a bank account and explains many of the important banking terms to the layman such as drawing, endorsing and crossing a cheque. Incidentally, it seeks to educate public opinion on banking transactions in general.



** Import Letters of Credit * Imports under Deferred Payment Guarantees * Exports * Remittances * Travellers' Cheques * Purchase and Sale of various Foreign Currencies both 'Spot' and 'Forward' at Competitive rates * Purchase and Sale of Foreign Securities * Credit information on parties abroad * Letters of Introduction.*

Foreign Trade is becoming more and more complex every day—Exchange Control Regulations of the various countries need careful attention—details of foreign collaboration of any nature require careful study of the various apects.

Whether it is information that you require or consultation upon any problem, or just efficient service, **THE BANK OF INDIA LTD.,** with its foreign branches and correspondents in almost all parts of the world, can help you expand your overseas business.

Charminar roofs add elegance to country bungalows

Light and durable Charminar A.C. Sheets make elegant roofs for country bungalows. They are economical to instal and their supreme quality of resistance to fire and water make them relatively permanent. Order Charminar Sheets for your new country bungalow and be envied by all your friends.

Charminar corrugated and semi-corrugated sheets are available in all important cities and towns.

HYDERABAD ASBESTOS CEMENT PRODUCTS LTD.

SANATNAGAR - HYDERABAD 18

WHAT'S YOUR CHEQUE FOR ?

Rs. 25,000 — Rs. 1,000 or only Rs. 10 ?

Whether you're withdrawing money to buy a flat or only to buy a shirt..... the same courteous and extra-prompt service awaits you at the counters of the State Bank of Jaipur.

Your State Bank of Jaipur specialises in offering you every type of banking service including Foreign Exchange. No investor is too small...none too big!

Branches in important cities and towns in India.

STATE BANK OF JAIPUR,

(Subsidiary of the State Bank of India),

Head office : JAIPUR.

THE CONCEPT OF BONUS

PROFIT-SHARING?—GAP-FILLER?—EX-GRATIA PAYMENT?

THERE is a large measure of agreement, nay, unanimity, among the various sections of employers on the general issues confronting all industries (and businesses) in regard to the question of bonus. But each industry and business has different characteristics and hence its particular problems are bound to vary. The apex organisations of employers have, therefore, wisely decided to leave it to each industry to submit separately its views to the Bonus Commission. The latter's questionnaire consists of two parts. The first part deals with general aspects of bonus, while the second pertains to statistical and other information required from individual concerns. The general aspects of bonus are divided into three broad heads: (1) the concept of bonus, (2) the basis of computation and (3) miscellaneous questions, such as the method of payment, conditions of eligibility and machinery for settlement of bonus disputes. It is proposed to deal in this article with the first item, namely, the concept of bonus. The following questions have been framed by the Commission to elicit replies covering the concept of bonus:

1. (*a*) How would you define the concept of bonus?

(*b*) In what circumstances should bonus become payable?

(*c*) Should bonus be determined unit-wise, industry-wise or industry-*cum*-region-wise in the industry to which your answers have reference?

2. Have you any comments to offer on the following ideas which are said to form part of the basic concept of bonus:

(*a*) That bonus represents additional remuneration payable to workmen out of the available surplus so as to bridge the gap between the workmen's actual earnings and the living wage;

(*b*) That bonus in the case of workmen drawing a living wage acts as an incentive to further efficiency;

(*c*) That bonus gives labour a sense of partnership in the industry.

Definition of Bonus

The Council of Indian Employers constituted by the Employers Federation of India and the All-India Organisation of Industrial Employers, in its joint memorandum to the Bonus Commission (to which a reference was made on page 758 of *Commerce* dated 3rd November 1962), defined bonus "as a payment made in addition to normal wages or salary to employees for their direct contribution to the efficiency or prosperity of the undertakings, such payment depending upon the different circumstances prevailing in different industries." This concept, according to the Council, is a practical one and permits a flexible approach to the task of evolving formulæ, with even different bases, after taking into account the practices and preferences of employers and workers in each industry. Under this concept of bonus, the Council contends, payment of bonus related to profits is not completely eliminated. The present system, under which bonus is related to profits, the Council points out, has in most cases failed to improve industrial relations. On the contrary, it has become a source of industrial strife. The aim should, therefore, be to replace, wherever possible, the present system by one related to productivity or efficiency within a specified time period of between two and five years. The Council thus recognises that bonus is not just an *ex-gratia* payment, but a reward to workers for their direct contribution to the efficiency or prosperity of an undertaking.

A slightly different definition is given to bonus by the All-India Manufacturers Organisation, Bombay. The A.I.M.O. defines bonus as "payment made by an employer in addition to wages as a stimulus to extra work and efficiency." It should, therefore, be related to production and productivity, so that, for any additional production over a certain amount, workers should be rewarded for the extra effort put in for increasing production and thereby the profitability of the enterprise. The A.I.M.O. wants that, ultimately, the present system of bonus based on profits should be done away with and that, in its place, a system of payment by results should be introduced. For the interim period, however, it suggests that bonus should be payable only if and when there are adequate profits after meeting prior charges.

The Millowners' Association, Bombay, the Bombay Chamber of Commerce and the Engineering Association of India, Calcutta, differ from the aforesaid view of bonus. According to the Millowners' Association, bonus is not deferred wage. Nor is it a payment for contribution of workers to profits because such contribution, apart from being a misleading concept, can never be precisely measured. Profits depend upon various factors and it is impossible to isolate one and ascribe to it a part of the profit. It is, therefore, better and safer, the Association submits, to divest the concept of bonus of the wool it has gathered in the past and to affirm categorically that bonus is profit-sharing. It should be payable only if there is a surplus after meeting prior charges and the surplus should be shared in agreed proportion among the industry, workers and the shareholders.

'Ex-Gratia' Payment

Both the Engineering Association of India, Calcutta (to the memorandum of which a brief reference was made on page 930 of our last issue) and the Bombay Chamber of Commerce and Industry view bonus as an *ex-gratia* payment. According to the Bombay Chamber, the concept of bonus should be the plain and popular meaning of the term bonus, namely, extra payment made as a gesture by employers. The quantum of this bonus should be decided primarily by the employer, subject to the availability of profits. The circumstances under which it should be paid should also be left to be determined by the employers and should not be a matter on which an industrial dispute can be raised. It maintains that bonus payment should be gradually stopped and the question of wage increases (in lieu of bonus) should be left to be decided by appropriate authorities in the light of the financial capacity and stability of each industry.

The Engineering Association maintains that bonus based on profit is essentially an *ex-gratia* payment. As labour already receives its contractual due in the form of wages (including production bonus) in return for its contribution as a prior charge, irrespective of profits or losses, it follows that, if any reward or remuneration over and above this were to be given, such shall be related to production and productivity. Since additional payment of remuneration is designed to achieve the maximum incentive effect, it cannot, obviously, be paid annually but should be paid immediately after the extra effort, which is being rewarded, has been made. In the view of the Engineering Association, bonus becomes a legitimate claim of labour for extra effort or performance and should not therefore be tied up with the profit or loss of an undertaking. The present system of bonus based on profit does not in any way tend to improve industrial relations or act as an incentive to efficiency and higher production. It is therefore desirable, in the interests of industrial peace and economic progress, suggests the Association, to replace this, wherever possible, by a system of bonus related to productivity/efficiency in a period of two years but not exceeding five years.

"Living Wage"

The present judicially interpreted concept of bonus is that it is not an *ex-gratia* payment and that the claim for bonus is an industrial claim when the employer had made profits to the earning of which workmen have contributed and a gap exists between the actual wage and the living wage. In this connection, all the employers' associations referred to above have taken objection to importing the living wage concept into the question of bonus. According to the Council of Indian Employers, the term "living wage" has remained undefined and undefinable in the context of the wide disparities existing between the industrial and non-industrial worker. The Bombay Chamber of Commerce is more critical of the concept of living wage. In its view, bonus should have no bearing on the nebulous concept of a "so-called living wage." The Supreme Court itself, points out the Bombay Chamber, has held that living wage is ambulatory and difficult to define precisely. In the result, the existence of this pre-condition for the making of an industrial claim for bonus is always presumed and attempts on the part of oil companies to establish before the Supreme Court that they were paying living wages had failed. On a review of several important bonus awards, points out the Bombay Chamber, the naivety of putting forward such a pre-condition is clearly exposed. These awards proceed on the assumption that a gap does exist, but without indicating the extent of that gap and the extent to which it is being filled.

The Millowners' Association, Bombay, submits that living wage is a fluctuating concept, and it varies with the industry, the locality, the stage of economic development, the social ideas, etc. The living wage, according to the Association, will never be a reality, however much the present earnings of the workers rise for the simple reason that the living wage, not being a static one, will rise too, thus leaving a gap between actual and living wages.

The Engineering Association submits that the argument that bonus payable to workmen out of the available surplus tends to bridge the gap between the workmen's actual earnings and the living wage is not acceptable to it. In a country like ours, the Association goes on to point out, where *per capita* income is low and where the bulk of the society has to subsist on a level much below the minimum wage, it would not be desirable to import considerations of living wage standards into the basic concept of bonus. Further, the expression "living wage" is an indefinite and fluid expression and as such linking bonus to living wage would, it contends, perpetuate the system of bonus.

The A.I.M.O. categorically affirms that bonus at no time can be stated to represent the additional remuneration payable to workmen out of the available surplus so as to bridge the gap between the workmen's actual earnings and the living wage. For this, there is a different system of payment accepted which is based on the cost of living index and is being paid to workers through D.A. Moreover, submits the A.I.M.O., living wage is too nebulous a term to define and is variable from year to year, depending upon changes in the standard of living of the people in different parts of the country and the value of money. All that can be said about bonus payment, according to the A.I.M.O., is that (this concept has been upheld by the Supreme Court), "although bonus under the Industrial Disputes Act is not a payment of wages, it has now attained the status of a legal right, and when it is allowed it adds to the remuneration payable to the employers." The Indian Merchants' Chamber also rejects the concept of bonus as a payment to bridge the gap between the living wage and the actual wage. In its opinion, bonus has no relation to any kind of wages.

Incentive Effect of Bonus

All employers' organisations reject the proposition that bonus, in the case of workmen drawing a living wage, acts as an incentive to further efficiency and that bonus gives workers a sense of partnership in industry. The Bombay Chamber of Commerce and the Millowners' Association contend that, if it is accepted that the concept of living wage is ambulatory and incapable of precise definition, it is futile to consider any proposition on the basis that a living wage is being paid. As to the argument that bonus gives labour a sense of partnership, the Bombay Chamber asserts that there is absolutely no substance in this contention. It is against the very concept of partnership, the Chamber points out, that one of the partners should be entitled to make an industrial claim for more remuneration than contracted for. However, apart from the legal concept of partnership and using that term as in popular parlance, the theory has no basis in fact. It should be obvious that the workmen can have no sense of partnership in an industry, if they have to secure, if at all, some payment after acrimonious litigation or negotiation, years after the financial year to which the payment is deemed to be related. The only relation to a partnership, in the Chamber's view, is in the use of the word 'shares,' when considering distribution of any available surplus under the present bonus formula.

The Millowners' Association is equally emphatic in denying that bonus is an incentive for production and that it engenders a sense of partnership among workers. Apart from the fact that a reward for efficiency, paid long after the effort, would not act as an incentive to workmen, bonus, the Association avers, is not related to the contribution of labour and depends on several other factors which affect the financial working of the Company. Considering the fact that most organised industries have been making bonus payment for the last twenty years or so, it cannot be said, the Association points out, that a sense of partnership has been generated. The A.I.M.O. also feels that payment of bonus based on profits cannot act as an incentive for further efficiency as it is not linked to production. Neither does bonus based on profit give a sense of partnership. Partnership,

OFFTAKE OF COTTON TEXTILES RISING

NEED TO ENCOURAGE GREATER INTEGRATION

From Our Special Correspondent

MANCHESTER, 20*th November*

MANCHESTER LETTER

CONFIRMATION—inevitably back-dated—of the swing towards more enterprise among buyers of cotton textile products is now forthcoming from official sources. Board of Trade statistics for September covering conditions in the textile and cloth industries show the volume of net new orders received during that month at 15 per cent higher than in September 1961. Although the contracts on hand were then fractionally lower than at the end of August and deliveries in September were one per cent down on the previous year, the impetus was clearly beginning to show itself. Subsequent operations have continued the trend, but everyone connected with the industry would agree that there is as yet no cause for self-satisfaction.

While supporting every effort to create favourable trading circumstances, including stimulating influences to encourage buyers in maintaining a steady stream of orders for the mills, it is possible to go from one extreme to the other. Creeping into the feature columns of some of the popular newspapers are special articles suggesting that textiles are on the verge of another boom—the very word is calculated to make people in the trade shudder, however pleasant it may be to participate in such conditions at the time.

Certainly the tone of the market at present is a great deal better than it was three months ago, and the long lean time through which the industry has been passing seems to have run its course. There are, however, so many imponderables still to be tackled, from structural changes to the threat of reviving imports, that to present too enthusiastic a front when the buying movement is steadily gathering momentum only adds to the complications which may arise in the future. Steady purchasing on an annual basis, affected perhaps by seasonal influences, is the aim of most traders. The wide fluctuations, from virtual absence of demand to frantic overbuying and duplication of orders, are a disturbing factor which the industry could well do without in exchange for a regular flow of business.

A Drastic Policy

Whatever arguments can be raised against the holding of public conferences such as that organised by the Cotton Board each year at Harrogate, there can be no denying that many of the contributions stimulate thought, and occasionally action, as they are meant to do. The predominating feature of this year's gathering was the widely held belief that something should be done to encourage greater integration in the industry, with a definite move towards closer links between production and distribution. The main question constantly posed was: "How is it to be done?"

Developments behind the scenes have been taking place for some time past and they have not been diminished by the opinions expressed at Harrogate and since. Efforts to "set the ball rolling" are continuing and can be expected to persist. Several lines of approach are available, involving, on the one hand, voluntary collaboration through financial amalgamation or, alternatively, a compulsory scheme to force the issue, however drastic this may be considered. Leaning towards the second proposal is Mr. W. H. Morley, a Director of Barber Textile Corporation, who has lately set forth his independent views at a meeting of the Blackburn Textile Institute.

Mr. Morley suggested three possible approaches to the basic problem of the industry, which was the fundamentally uneconomic structure of the horizontal sectional units. The first envisaged a closer trading relationship throughout the production chain, with a reduction in costs by linking spinners, weavers and finishers. Progress, he admitted, must inevitably be at the speed with which a transition from horizontal to vertical organisation could take place. If financial integration can be achieved by merging of ownership, a concentration of plant and resources, as well as management, can also be secured.

The second method centres on an individual enlargement movement by the existing vertically integrated firms. Mr. Morley said that these groups were compelled, by virtue of the widely distributed use of their assets, to operate on a fairly small scale, by national standards, in a number of market outlets selected to give a certain stability.

The third alternative, admittedly drastic in principle, but the one he advocated as a desirable and positive development, was a planned concentration of the remaining industry to reshape the whole of Lancashire's productive efficiency and simultaneously re-align the trading structure. "Surely planned action of a semi-aggressive nature is far better than the present apathetic *laissez faire* approach which achieves little but dissipation of our assets," he declared.

This positive approach, according to Mr. Morley, could be adopted either by the Cotton Board, with its constitution amended, or preferably by a combination of the employers' trade associations by forming a Textile Trade Concentration Company. In the present climate of the trade, he suggested, companies could be found willing at once to sell out to such an organisation if the terms were sufficiently attractive. He would prefer to see the operation carried out strictly as a business operation, units being purchased on their merits and with their assets valued on a strictly commercial basis.

Japan Back in the Picture

In the midst of so many complex and diverse arguments about the importation of cotton goods from Commonwealth countries and their impact on the accompanying negotiations with Europe, the originators of the system—the Japanese mills—sometimes tend to be forgotten. Their importance to the cotton world at large has been forcibly brought to the fore this week by the signing of the Anglo-Japanese trade agreement covering business relations between the two countries for the next six years.

Not only were the Japanese the first large-scale rivals to Lancashire when they usurped this country's position as an exporter of cotton goods in the years between the wars, but Japan was the first source from which supplies of grey cloth were obtained in the post-war arrangement for an "improvement" trade. From relatively small beginnings, in the shape of imports for processing and re-export to Colonial territories have grown the enormous supplies which overseas countries now thrust at Britain's domestic market. During this time, while Hong Kong, India and Pakistan have thrived on the "open door" principle, goods arriving from Japan have not only been subject to quotas but have been almost exclusively for processing and re-export, with restrictions on those areas to which the finished products could be shipped.

Yet Another Threat

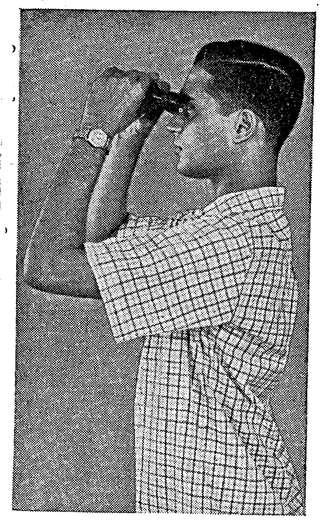
Under the terms of the new pact a little expansion is offered to Japanese exporters to send cotton textiles to the United Kingdom for distribution at home, but, in relation to the quantities lately absorbed from Commonwealth countries, the volume of the new quotas is small indeed. At the same time, any further inroads, however small, must be regarded as yet another threat to Lancashire producers, particularly as the element of growth in the trade agreement foreshadows a gradual widening of facilities for Japan to enter the British market.

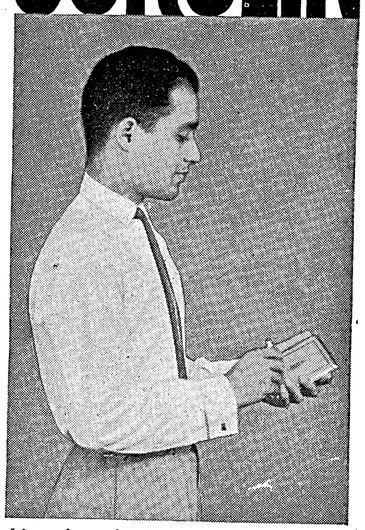
Bilateral agreements between individual countries are permitted under the terms of the G.A.T.T. arrangement on cotton textiles, but the basic considerations of that scheme will still apply, in that any sign of disruption at home will bring a claim for a halt to be called to the inroads being made. This at least is the intention of the Government, as already affirmed by the President of the Board of Trade to the Chairman of the Cotton Board.

A NEW POPLIN SHIRTING BY BINNY

For informal or formal wear

COROLIN





QUALITY FABRICS
BINNY & CO. (MADRAS) LTD.

Buy your requirements of BINNY fabrics at controlled rates from authorised BINNY Stockists who display this sign board

* *SANFORIZED — Registered Trade Mark of Messrs. Cluett, Peabody & Co. Inc. U.S.A.*

It's cool, comfortable, and truly distinctive. Woven from imported long staple cotton in the famous BINNY tradition for smartness and durability, COROLIN* keeps fresh through the tiring day. COROLIN comes to you in a delightful selection of pastels and checks, and in white too. Why not try a couple of shirts and see for yourself?

The Buckingham & Carnatic Company Limited • *A Subsidiary of* Binny & Co. (Madras) Ltd.

JWT/BC/CR-2024

WORLD COTTON TEXTILE CAPACITY

UNDERDEVELOPED COUNTRIES' SHARE RISING

A STRIKING feature of development in the sphere of international cotton textiles in recent years has been the remarkable growth of the industry in underdeveloped countries, side by side with the shrinkage in size elsewhere. Thus, between 1958 and 1961, the combined share of countries other than Japan, Australia, North America and Europe in the aggregate world active cotton spinning capacity has gone up from 25.7 per cent to 29.2 per cent, whereas that of the industrially advanced countries has receded from 74.3 per cent to 70.8 per cent. Similarly, the underdeveloped countries have acquired a steadily increasing share of the world's weaving capacity, the actual share in 1961 being 27.0 per cent, as against 24.1 per cent in 1958, whereas the proportion of developed nations was lower at 73.0 per cent, as against 75.9 per cent. The change in the distribution of active spindles and looms as well as those in place in the two regions over the four years from 1958 to 1961 is indicated below:

	No. in place		No. active	
	1961	1958	1961	1958
*Spindles** (in thousands)				
Underdeveloped countries ..	38,530	33,843	34,580	30,722
Developed countries ..	87,725	100,528	83,611	88,494
World total ..	126,255	134,371	118,141	119,216
Looms†		(In actual numbers)		
Underdeveloped countries ..	707,957	886,048	653,121	571,702
Developed countries ..	1,832,277	1,703,869	1,763,483	1,800,708
World total ..	2,540,234	2,589,917	2,416,604	2,372,140

* Include three and four-cylinder cotton system spinning spindles and rayon spindles.

† Include operable looms, 18" or more wide, and rayon looms.

There was very little change in the world total of cotton spinning spindles during 1961 as compared with 1960. There was a rise of 216,000 to 123.18 million in the number of ring spindles in place, but this was more than offset by the fall of 198,000 mule spindles to 3.08 million, so that the total number in place was practically unaltered at 126.26 million, as against 126.24 million. The number of active spindles, however, fell by 1.08 million to 118.14 million, as the 393.000 additional ring spindles in action were outnumbered by a decline of over 1.46 million to 2.82 million in active mule spindles. Relatively large increases took place during 1961 in Venezuela, Hong Kong, Indonesia, Israel and the Philippines. In India, both the spindles in place and the spindles active increased, the former from 13,864,000 to 13,985,000 and the latter from 11,831,000 to 12,129,000.

The pattern of geographical distribution of spindles continued to change. The percentage share of the world's aggregate cotton spindles rose further from 1.36 in 1960 to 1.54 in 1961 in Africa, from 4.84 to 4.97 in South America and from 32.02 to 32.91 in Asia (and Oceania), but receded from 18.26 to 18.16 in North America and from 43.52 to 42.42 in Europe.

While the number of active spindles (world total) declined by 1.08 million to 118.14 million during the year 1961, the spindles were more intensively utilised than in the previous year. This is indicated by the persistent increase in the average number of hours worked per active spindle which in 1961 was 4,903, as against 4,866 spindle-hours in 1960 and 4,513 spindle-hours in 1959. Variations among the countries remained wide, though they were somewhat reduced as compared with 1960. The average for the European countries was again the lowest, but, for the second year, the extent by which the average fell short of the world average was slightly low. The actual average spindle-hours worked during the year 1961 was 3,673 (3,535 in 1960) in Europe, 5,035 (5,250) in South America, 5,433 (5,509) in Asia and Oceania, 6,079 (6,138) in North America and 6,559 (6,803) in Africa. On an average, a spindle in India worked 8,400 hours during 1961.

That the spinning capacity of the world cotton industry was utilised to a greater extent during 1961 than in 1960 is also evident from the expansion in raw material consumption. The total quantity of raw cotton actually consumed amounted to more than 10.40 million metric tons, as against 10.17 million metric tons in 1960 representing a rise of two per cent. The consumption of artificial (cellulosic) and synthetic (non-cellulosic) fibres, too, rose by three per cent, from 1.11 million tons to 1.14 million tons. The mill industry in India consumed last year 950,850 tons of raw cotton and 10,000 tons of man-made fibres, the corresponding figures for 1960 being 908,000 tons and 10,400 tons, respectively.

The number of cotton looms in place in the world as on 31st December 1961 was lower at 2,540,234, as against 2,553,334 a year before, the decline being only marginal. This was so because the further increase in the number of looms from 872,789 to 902,531 in Asia (and Oceania), from 155,498 to 155,951 in South America and from 35,045 to 36,906 in Africa was offset by the fall from 377,720 to 371,298 looms in North America and from 1,112,282 to 1,073,548 in Europe. The number of active looms (world total), however, was higher in 1961 than in 1960, being 2,416,604, as against 2,415,384. The improvement was accounted for only by Asia (and Oceania) and Africa, where the number rose from 804,052 and 33,938 looms to 832,702 and 35,226 looms, respectively, whereas the number declined from 361,713 to 361,134 in North America, from 143.692 to 143.601 in South America and from 1,071,989 to 1,043,941 in Europe. In India, the number of looms in place went up from 205,564 to 206.525 and that of active looms from 182,203 to 184,562.

In step with the rise in spindle-hours, the loom-hours worked increased, the world average for 1961 being 4,575, as against 4,529 in 1960 and 4,282 in 1959. The Continental breakdown of the average loom-hours worked in 1961 is as follows, the figures in brackets relating to 1960: Africa 5,635 (5.589); South America 4,916 (4,889); Asia and Oceania 5,464 (5,213); North America 6,149 (6,351); Europe 3,403 (3,243). The average loom-hours worked in India during 1961 was 5,290, as against 5,348 in 1960 and 5,195 in 1959.

Modernisation of cotton mills continued to make progress during the year 1961. Thus, the total number of automatic looms and looms with automatic attachments in place as on 31st December 1961 was higher at 1,119,285, as against 1,101,220 a year before. The increase was at the expense of ordinary looms which declined from 1,452,114 to 1,420,949. In India, the number of automatic looms in place rose from 14,500 in 1960 to 17,500 in 1961 and the active looms from 14,000 to 17,000. Nevertheless, the proportion of automatic looms to the total looms installed is negligible, being no more than 8.5 per cent, as against 100 per cent in the U.S., 74 per cent in Hong Kong, 63 per cent in W. Germany, 29 per cent in the U.K., 26 per cent in China and 14 per cent in Japan. Unless more and more of ordinary looms are replaced by automatic looms in India, the cotton mill industry will not be able successfully to cater to the continuously expanding cloth ing requirements of its people in the coming years at a reasonable price, as well as to compete effectively in world markets.

RUSSIA'S TRADE IN WOOL

Imports of raw wool, excluding goat and camel hair, into the Soviet Union during 1961, at 121 million lbs. (clean basis), were 10 per cent lower than in 1960. As in previous years, the greater part of imports consisted of semi-coarse and coarse wool (medium cross-bred and lower), supplied chiefly by Mongolia, China, India and Afghanistan. Receipts from Mongolia and India were higher, while those from New Zealand increased from 900,000 lbs. to 6.2 million lbs., but imports from China were nearly halved. Total receipts of coarse wool fell by 12 per cent to 77 million lbs. Imports of fine wool (*merino type*) fell by 5 per cent to 43¼ million lbs. The chief supplier was Australia, although receipts from that country, at 30½ million lbs., were 6 per cent less than in the previous year. Imports from Argentina were also lower, while nothing was imported from South Africa; in 1960 imports had been of the order of 6.4 million lbs. These reductions were nearly offset by higher imports from New Zealand and Uruguay at 5.1 million lbs. and 4.2 million lbs., respectively.

Total exports of raw wool, including goat and camel hair, from the Soviet Union in 1961 amounted to 62 million lbs. (clean basis), or 56 per cent higher than a year earlier. The rise was shared by both fine and coarse wool, the former more than doubling to 27 million lbs. and the latter increasing by 30 per cent to 35 million lbs.

Imports of woollen fabrics in 1961, at 26 million linear yards, were 11 per cent lower than in the previous year and were chiefly supplied by other Communist countries, particularly China and Poland. Exports of wool fabrics, at approximately 437,000 linear yards, fell by 20 per cent between 1960 and 1961.

LABOUR

(*Concluded from page 944*)

one is told by the A.I.M.O., calls for a wider feeling of responsibility for the efficient and economic working of an enterprise but this attribute is not generally noticeable among workmen receiving bonus.

All the employers' Associations referred to above want that bonus should be determined unit-wise. The following reason given by the Millowners' Association, Bombay for unit-wise fixation of bonus, seems to represent the consensus of opinion among employers:

"Since bonus is essentially a share in the profits, it has necessarily to be unit-wise. Not all the units in an industry in a centre will make profits and, where profits are made, they will not be on the same scale. It would be highly unjust to lay down the same rate of bonus to the workers of all the units. Moreover, the propagation of any such idea is likely to promote inefficiency both on the part of management and the workmen as the bonus distributed will have no relation to their own contribution to the profits. In other words, workmen will gain or lose in the matter of bonus, because of the performance of other units and sooner or later such a system will dampen incentive on the part of the workmen to contribute to the profit-earning capacity of the industry. Both from the point of view of the management and the workmen, the concept of a uniform bonus to workmen of all units in an industry in a centre is not welcome."

There is also unanimity of opinion that bonus should become payable only when there is a surplus after meeting the prior charges and that there can be no question of bonus payment when there is no such surplus.

NEW PUBLICATIONS

Company Administration under the New Company Law. By Tanubhai D. Desai and Indulal H. Shah. Published by N. M. Tripathi (P) Ltd., Princess Street, Bombay 2. Pages : 105. Price : Rs. 6.00.

WITH the advent and growth of the corporate sector as an integral part of business organisation to meet the increasing needs of large-scale finance, control over joint-stock companies was tightened by the introduction, from time to time, of gripping provisions in the company law to make it practical and more effective. The main object is to ensure a minimum standard of good behaviour in the promotion and management of enterprises and to restore and encourage the confidence and protect the interests as well of the investors at large in the existing major instrument of economic activity, namely, joint-stock enterprises.

The first edition of this book was published as early as in 1956 on the coming into force of the Companies Act of 1956. It served well the need for a compact but comprehensive reference book on the extensive provisions of the Law. Consequent on the many important changes effected in the Act by the amendment Act of 1960, the authors, Messrs. Tanubhai Desai and Indulal Shah, have fittingly rewritten the book incorporating the various changes made and presented in a short compass a useful and compact reference guide to the comprehensive Act with the amendments alone running to over 200 sections. At the outset, the authors spotlight the effect of the new Act (after amendments in 1960) on the existing companies from management aspect, on the responsibilities and restrictions on the powers of Board, managing agents etc., and on matters relating to meetings, audit and maintaining of accounts. In the succeeding chapters, the various provisions of the Law for the efficient management and effective control of joint-stock companies are discussed in a brief, simple and lucid manner. The purpose of the book is to offer company executives a shorter and simpler account of the complex subject of company administration. This small publication which is the result of the combined efforts of the authors, a solicitor and a chartered accountant, is sure to be of much practical utility and guidance to company executives and students of Company Law.

Working of State Enterprises in India. By Tirth Raj Sharma. Published by Vora & Co. Publishers (P) Ltd., 3, Round Building, Kalbadevi Road, Bombay 2. Pages : 232. Price : Rs. 12.

With the growing participation of the State in the rapid industrialisation of India, the utility of public enterprises as a stabilising factor in the economy and as an instrument of counter-cyclical policy has come to be increasingly recognised. The wide incursions of the State in the industrial sphere has raised many organisational and economic problems. Dr. Tirth Raj Sharma has, in an objective manner, studied the various problems in the working of public enterprises and the different aspects of oragnisation, parliamentary and ministerial control, price policy, efficiency factor, etc., and presented his observations in a simple and lucid manner.

This book is an abridged version of the author's thesis for the Doctorate degree of the Agra University (1959). The initial few chapters give a historical background to the advent of State interest in industry and establishment of different types of undertakings. The author discusses the trend over four successive phases of economic growth from early nineteenth century to date. Social and political considerations, rather than strictly economic ones, have motivated the State to engage in business enterprise. In addition, the need for basic economic development and promotion of broad public purposes, setting up of industries of national importance beyond private resources, and augmenting resources for the State and other political and technical considerations have also accelerated this trend. With the declaration of the new industrial policy in 1956, clear-cut reservations have been made out for the public and private sectors to contribute their role in the contemplated mixed type of economy.

The importance of "Governing Boards" for the successful operation of the enterprises can hardly be exaggerated. Discussing the management aspect, the author stresses the need for careful constitution of the Governing Boards on considerations of expert knowledge, specialisation in particular fields and business talent rather than political and other considerations. Wider responsibilities for the Board is quite essential to make it more effective. Whether a Governing Board should be a functional or policy-making one is a matter of choice, depending on the type of organisation and the nature and magnitude of industrial venture. Further, to help flexibility and efficiency in administration, the Board should enjoy fullest autonomy, and control to be constructive should be confined to matters of principle and broad policies and should not interfere with the day-to-day affairs and managerial details. The author cites instances of too much officialdom on the Boards of public corporations and ministerial pressure not only on policy aspects but also extending to day-to-day management of affairs. He observes that in India there is deviation from the principle of maintaining balance between ministerial control and the Boards' autonomy and too wide an interpretation is not unusually placed on public interest with the result that some of the directives issued even affect the smooth internal administration and functioning of industrial undertakings. A central co-ordinating agency to be in close touch with all public corporations, pool knowledge and experience, and determine economic priorities, is essential to unify the administration and development of all public enterprises. The Ministry of Commerce and Industry has set up a Co-ordinating Committee for the industrial projects to review from time to time their progress.

The concluding chapters deal, at length, with the special problems of State enterprises like price policy, scientific research, efficiency, labour problems and consumers' interest etc. Observing non-uniformity in pricing methods as between the different State undertakings, the author suggests a central body on the lines of the Price Tribunal recommended by Mr. A. D. Gorwala to cater to the needs of co-ordination and act as a precaution against undue charges, inferior quality, and invidious preferences. Scientific research is an essential means, if the large investments in the public sector are to produce better results by efficient use of resources.

With the growing accent on industrialisation in the process of post-independence reconstruction and planning in the country, the role and responsibilities of public sector are all too obvious. Dr. Sharma has made a deep analytical study of the various aspects of its working and has made a useful contribution to this important subject.

Business Consortia. By A. Harding Boulton. Published in India by N. M. Tripathi (P) Ltd., Princess Street, Bombay 2. Pages : 124. Price : 30s.

In the process of economic reconstruction and development, the recent years have witnessed a successful growth of multi-projects, be it in industry, agriculture or in other developmental spheres. These gigantic ventures call for pooling resources from all directions—manpower, talent, technical know-how and, above all, the vital needs of finance on which the magnitude and progress of the venture eventually rests. That an increasing sector in the economic field is passing into the control of other forms of economic organisation is substantiated by the rapid pace of nationalised industry and the successful working of large collaboration programmes.

Fitting well with the growing needs of economic development in the changing pattern of economic growth, the idea of "Consortium" has come to emerge, gaining momentum with the passage of time. Presenting this useful subject in a small book which comes at the right time of developmental era all over, the author Mr. Harding Boulton analyses in a lucid manner, with all crispness, the various aspects of consortium connected with the formation and effective functioning of the organisation. Very little has been written on the nature and organisation of consortium and its place in modern Industry. As the author observes, this book does not rigidly fall under any recognisable category, being neither a legal work nor a book on economics, although legal and economic problems connected with the management and operational sides have been dealt with for interesting and effective reading. Particularly the three chapters on "Documenting" detail the various stages involved in the formation and setting up of the organisation.

At the outset, the author gives three underlying reasons behind the emergence of the idea of consortium, namely, the magnitude and integral complexity of major projects in the contemporary world; (ii) the advent of government as buyers and sellers in the economic field; and (iii) the growing habit of co-operation outgrowing unhealthy competition. In its transference to new field, consortium may be defined as "the organisation brought into being to enable two or more units to operate as a single entity for a common, prescribed and limited purpose." The advent of joint-stock trading was itself an answer to the acute needs of the eighteenth and nineteenth centuries like the magnitude of projects and need for large-scale finance, their management problem, and the necessity of capital mobility to render investment less irrevocable. The different types of consortium organisation include the common project, common agency, partnership and limited company. The choice of organisation would necessarily depend on the extent of activity and the objective behind forming into a consortium. It is here that "a single purpose" consortium, with its limited purpose, differs from "continuing consortium."

The chapters on "finance" and "management" throw much light on and reflect the practical issues involved in the effective organisation and successful functioning of the consortium. The measure of capital needs of consortium on the basis of adequate capitalisation will be the maximum gap which is likely to develop between the payments which it will be necessary to make to the constituents in the ordinary course of business and the instalments expected to be received from the customer. The emergence of management as a recognisable function has been one of the features of the recent developments in industry and commerce. The discussions on the management aspects clearly bring out the distinction between the functioning and constitution of the Boards in a normal company which has a bearing on voting representation, and the one in a consortium which is based on considerations of technical, commercial, financial, managing and advisory services and specialisation.

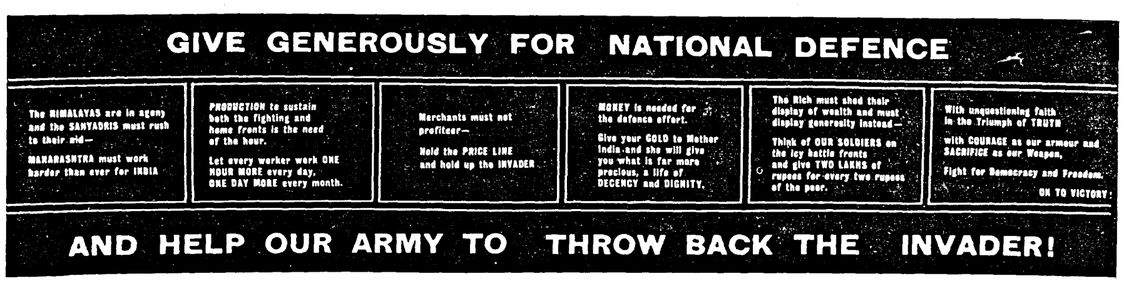
For the most part, this book has been concerned with the problems of "single purpose" consortium. In a separate chapter on "continuing" consortium, the author brings to light the differences in approach as between these two types. While the former is established with the limited object of undertaking a single project going out of existence on its completion, the purpose of a continuing consortium is a long-range one, and it is organised as a means for continued business activity which, in the interests of all constituents, is likely to be better served by joint activity than by unilateral individual efforts. The author foresees the future of consortiums to be determined by the interplay of two trends. First is the increasing need for technical co-operation because of the increasing complexity of projects. The other is the trend to coalescence and the increasing size of industrial units. By whatever name it may be called, it would seem inevitable that the kind of co-operation which in a capitalistic society emerges as a consortium would be equally necessary in a socialistic economy.

Accountants' Study on the Income-tax Act 1961. By B. Chhawchharia, K. Kumar, H. S. Jain, B. S. Gupta. Sponsored by Bharat Chamber of Commerce, Calcutta. Available from B. Chhawchharia, c/o K. N. Gutgutia & Co. 33, Netaji Subhas Road, Calcutta 1. Pages: 301. Price: Rs. 14.50.

The Indian Income-tax Act, 1961 was recently enacted and brought into force on 1st April, 1962. The Income-tax Act, 1922 has been repealed. The new Act is a re-codification of the old, incorporating the suggestions of the Law Commission and the Direct Taxes Administration / Enquiry Committee. The Act has been simplified to a very great extent without altering the basic structure. However, it does not mean that a layman can claim to attend to his own assessment proceedings by himself without the help of an expert.

The new enactment, like the Indian Companies Act, consists of numerous sections, about 298, as compared with the 68 sections of the 1922 enactment. This, of course, does not include the sub-sections, provisos and the explanations. Since the new Act is a re-codification of the old one, it must be necessary for those concerned with this branch of the law to know the changes made in the old law and the effects of such changes. A careful study of the new enactment is, therefore, called for for the benefit of every one concerned, including the Revenue Authorities.

The Bharat Chamber of Commerce, Calcutta, must be congratulated on its initiative in this respect. It had in the past published a study of the Indian Companies Act by a group of experienced Chartered Accountants. It has now published a study of the Indian Income-tax Act, 1961 by four experienced Chartered Accountants. One who is interested in finding out how the old Act has been modified in the new enactment has only to open the pages dealing with the particulars of changes introduced by the new Act. The particulars are given with reference to the new sections and the corresponding old sections. At various places one finds the provisions of the new enactment explained by illustrations from the point of view of both law and accountancy. In addition to the above important details, the book also provides commentary on the computation of income under different heads, rebates and reliefs, deemed incomes, the rate structure, the interest and time schedules, etc., a chapter on appeals and revisions with a detailed note on appealable orders, depreciation, income assessable on the basis of residence and miscellaneous matters. The Appendices contain, amongst others, a table of corresponding sections of the new Act *vis-a-vis* the old enactment, income-tax rules, table of fees and stamp duty etc. The addendum contains a discussion on further changes made in the new Act by the Finance Act No. 2 of 1962 and the rates and charges under the said Act. None can afford to miss such a useful book.



SUGARCANE FARMS IN MAHARASHTRA

NO POSTPONEMENT OF CEILING APPLICATION

A FORTNIGHT ago, it was reported in a section of the daily Press that the Government of Maharashtra had decided to postpone the date (1st April 1963) for applying the land ceiling legislation to the cane farms attached to the joint-stock sugar mills in the State, in view of the national emergency. The report was unbelievable, for any such decision might lead to the inference that the successor to Mr. Y. B. Chavan, the father of the land ceiling legislation of Maharashtra, was reversing a fundamental feature of the Maharashtra Congress Party's land reform policy and that no one would be prepared to accept the odium. From the economic point of view, however, such a decision would have been perfectly correct, for it would have avoided unnecessary complications that would hinder the sugar mills' efforts to produce more at a time when the domestic demand for this essential item of consumption is expanding and when there is the exigency of earning as much foreign exchange as possible through exports. But what is economically desirable is not always politically feasible. It is, therefore, not surprising to find that the report mentioned at the outset has proved to be mere wishful thinking on the part of some. Perhaps, it was a clever feeler by the interests adversely affected to test the real intentions of the Maharashtra Government and to find out whether the new situation in the country would not engender second thoughts among the powers-that-be. Mr. V. P. Naik, Revenue Minister of Maharashtra, declared at a Press interview towards the close of last week that the Government had no intention whatever of postponing the implementation of the Land Ceiling Act. The Government's decision to proceed with the implementation, Mr. Naik said, was irrevocable. In this connection, the Minister gave the following additional information:

For facilitating the smooth take-over of the surplus land under cane, talks have been initiated with the sugar companies. Discussions relate to the valuation of farm implements, buildings and trolley lines for cane transport. The other items under discussion pertain to dairies, hospitals and schools and the ways of ensuring their unhampered continuance. Arrangements for cultivation of the surplus land during the transitional period would be finalised soon.

Cane Supplies to Mills

While the Maharashtra Government is thus determined to take over the sugar mills' cane farms on 1st April next, it is to be hoped that it will, in accordance with its repeated assurances, make satisfactory arrangements to ensure that the supplies of cane to the mills will not in any way be disturbed. One such arrangement, as we had pointed out on an earlier occasion, would be to allow the sugar mills to have control on the cane crops that remain unharvested at the time of application of the Act and use them for their crushing. This means that the ceiling legislation should be applied in the first instance only to the farms that have no standing crop. Later, after this crop has been harvested, the farms concerned could be taken over. Such an arrangement would eliminate a lot of botheration to both the Government and the managements of sugar mills.

To revert to Mr. Naik's statement. Justifying the decision of the Government to apply the ceiling legislation to the sugar mills' cane farms, Mr. Naik is reported to have observed:

"The Government has taken up the challenge of increasing agricultural production. Once the Government has decided to apply the principle of ceiling in rural sector, it is not possible on grounds of equity to give any exemption to the owners of sugar farms. It is not true to say that the farms attached to sugar factories are necessary for their efficient functioning. Nearly 75 per cent of the country's sugar production is accounted for by factories which do not have lands of their own."

The contention of Mr. Naik is, to say the least, misleading. Is it not because of the cane farms attached to mills that the sugar industry in the Deccan is much more efficiently run than in other parts of the country? Logically speaking, Mr. Naik's defence implies that sugar economy in Maharashtra, which is now the most efficient in the whole of India, would deteriorate to the level in the rest of India. The joint-stock sugar mills have spent huge amounts of money on scientific methods of cane cultivation. It is this investment that has made the Maharashtra State the most efficient sugar producer in the whole of India. It may be true that the sugar mills elsewhere do not have their own cane farms. But that is the reason why both the per-acre yield and the recovery per cent of cane grown in other areas are well below those of cane produced in the Deccan. Since this issue has been dealt with at length on a number of occasions in the past, it is unnecessary to refer to it again in detail. Who, after all, can help those who refuse to see?

The Government of Maharashtra has taken steps not to disturb the integrity of the sugarcane farms. Under the Agricultural Lands Ceiling on Holdings (Second Amendment) Bill 1962, adopted by the State Legislative Assembly on Wednesday last week, all those who have leased out cane lands (amounting to a total of about 60,000 acres) to the sugar factories will be entitled to get lands within ceiling limits subject to the condition that they will lease the same to a farm or corporation to be set by the Government for managing the farms; they can become members of the joint-farming society later. Such persons will continue to get rents for the lands so leased and also compensation for the surplus lands surrendered either to the Government or to the proposed corporation. It is further laid down that, where the tenancy is not terminable on the expiration of the period for which it was granted or by reason of usage under the relevant tenancy law, a compensation equal to three times the assessment leviable on the land shall be payable to the tenant and the balance to the landlord. In effect, what this arrangement means is State capitalism in all its nakedness. The Government of Maharashtra simply usurps the farms of sugar companies and there is no certainty that the farms will be as efficiently managed as hitherto. If it fails to do so, there is no one from whom the taxpayer can claim compensation.

Agricultural Income-tax Act

After deciding to break up large agricultural land holdings under the ceiling legislation, the Maharashtra Government has come out with a proposal to levy an agricultural income-tax with a view to augmenting State revenues in the context of the situation created by national emergency. The rate of tax, to be levied with effect from 1st April 1962, is 50 nP on every rupee of agricultural income in excess of Rs. 36,000 per annum. This means that only those who have an average monthly income of Rs. 3,000 will be liable to this new levy. How many individuals can there be with so much income from agriculture? Hardly any. Why then this tax? In a statement appended to the official Bill gazetted, the Finance Minister says that the proposed levy is designed mainly to make good the loss of revenue following the repeal of the sugarcane cess which was found *ultra vires* the Constitution by the Supreme Court last year. The State Government did impose subsequently a purchase tax of Rs. 5 per ton on sugarcane. Since, however, the tax could not be imposed on the portion of the cane grown in the mills' own farms that is utilised by themselves for making sugar, the Government, it is said, has been losing a revenue of Rs. 55-60 lakhs every year. As against this loss, the Government is expected to get a total yield of as much as Rs. 1 crore annually by way of the new agricultural income-tax from the joint-stock sugar mills.

Considering that the tax will be assessed for the year commencing on 1st April 1962 in respect of the agricultural income derived during the preceding year, that is 1961-62, the sugar industry will together have to pay a total of over Rs. 2 crores for the two years 1961-62 and 1962-63. The incidence that will fall on the joint-stock sugar mills after their farms are taken over by the State on 1st April 1963 will, however, be lower, being equal to the aggregate purchase tax on the quantity of cane crushed by the mills, besides the tax payable on the farm (area exempted from ceiling) income of mills in excess of Rs. 36,000 per annum. It will thus be seen that this new tax is chiefly a device for circumventing the Supreme Court's decision and for squeezing out a little more money from the sugar companies the cane farms of which are being nationalised, nay, virtually expropriated, for the compensation payable is a mere pittance.

Kumardhubi the largest single refractory manufacturing unit in the East offers

EARLY DELIVERIES OF SILLIMANITE REFRACTORIES

PIONEERS in the manufacture of Firebricks and Silica bricks, Kumardhubi's venture in the field of Sillimanite has met with unrivalled success. Recent large-scale expansions, harnessed to the most up-to-date equipment and rigid quality control, ensure prompt, early deliveries of Sillimanite Refractories... Refractories indispensible to the Glass, Enamel and Ceramic industries.

KUMARDHUBI SILLIMANITE bricks are ideal for glass furnaces, oil and gas-fired furnaces, roofs of electric furnaces, soaking pits and wherever ability to support heavy loads under extreme temperature variations is essential.

KUMARDHUBI'S MODERNISATION PROGRAMME to meet increasing demands during the Third Five Year Plan assures the nation of a consistent supply of Kumardhubi Sillimanite Refractories—in regular shapes and sizes, or to specification.

"Here are five ways

BOAC Air Cargo can help your business!"

and give your Exchange-earning goods speedy, safe delivery!

★ *Fast* BOAC jetliners slash transit time by *hours*.

★ *Direct* BOAC city-to-city freighting cuts out time-wasting journeys to and from docks.

★ *Simple* (cheap) packaging is all that's needed with careful BOAC handling.

★ *Safe*, efficient BOAC freighting means lower insurance costs, wider coverage.

★ *Experienced* BOAC staff give all goods *individual* attention all the way.

We deliver your goods in hours, instead of days or weeks! And that's only one of the things you gain. Speed alone may not be enough for you—but BOAC Air Cargo gives more and more successful businessmen these extra advantages...advantages that can help and benefit *your* business—and speed up consignments that earn valuable foreign exchange!

ASSAM SILLIMANITE LIMITED

PRODUCTION TO BE ON WAR FOOTING

SPEECH OF MR. S. M. WAHI AT ANNUAL MEETING

ADDRESSING the shareholders, against the backdrop of Chinese aggression, at their Eleventh Annual General Meeting held at Gauhati on 20th November 1962, Mr. S. M. Wahi, Chairman of Assam Sillimanite Ltd., stated that, despite extreme limitations placed on transport, etc., the Company was proposing to organise production on a war-footing both at its mines and its factories at Ramgarh and Paharpur. Mr. Wahi laid special emphasis on the Company's expansion scheme in the form of a refractory project at Ramgarh, which, he said, was well timed in the context of the needs of the country. The Chairman noted steady growth in the Company's exports of sillimanite since the present management took over in 1957. In 1962-63, export demand is expected to approximate 10,000 tons, as against 4,477 tons in 1961-62. Despite increase in production costs, transportation charges and freight, the Chairman said, the Company had maintained its selling prices at the 1958 level. But from 1963, prices would be raised in proportion to the increase in costs during the past two or three years.

Given below are extracts from Mr. Wahi's speech:

"FRIENDS,

"This eleventh annual general meeting of the Company is meeting under a grim situation due to the events that have developed in the proximity of our mines in Assam. Your Directors met immediately after the Chinese aggression in October to take stock of the crisis and its effect on our operations and transportation. The requisitioning of some of our transport vehicles, the continued strike of the Joint Steamer Company in the Pakistan region and the cutting off of transportation of sillimanite from Assam engaged their constant attention. It became imperative to decide if at all this meeting could be held as planned in view of the cancellation of flights and the declaration of emergency on 27th October 1962. The flights having been resumed meantime, the notices were issued and the meeting was decided to be held as scheduled. The situation today, however, after the fall of Walong and Bomdila during last 24 hours to the Chinese invaders, is grim in Assam.

"I would like to welcome our new shareholders who are attending this meeting for the first time and hope to benefit by their advice and goodwill.

"The Directors' report, the profit and loss account and the balance-sheet of the Company for the year ended 31st of March 1962 have been circulated to all of you and have been in your hands for some time and, with your permission, I shall take them as read. From the profit of Rs. 4,52,914, after payment of tax, Rs. 1,80,000 has been set aside for dividend. The Directors had recommended a dividend of 5 per cent per annum, with tax, to the shareholders.

Dividend for Defence Fund

"As I have submitted to you earlier, the country is passing through a critical period, Assam is one of the worst hit States. Our courageous Jawans, at great personal sacrifice and against all odds, have been holding back the enemy, as a result of which we are in a position to hold our meeting today. Many Indian nationals have already donated all their life savings in cash and gold. Is it not, therefore, essential and proper that we, the shareholders, should sacrifice the profit we are to earn this year for the defence and protection of the country? **The Directors have already donated their modest fees for the Board meeting. I make bold to say that the shareholders would approve wholeheartedly and without any reservation that the dividend of 5 per cent declared be presented to the Prime Minister for the National Defence.** I sincerely hope that our new shareholders and collaborators, including International Finance Corporation, Washington, will appreciate the imperative need to make this donation for the National Defence. As we are in the midst of an all-round border conflict, I will earnestly hope that after the dividend has been passed, you all would authorise me, on behalf of the shareholders, to present the amount of dividend to the National Defence Fund. We hope and wish that very many more industries in India will be forthcoming with similar and perhaps with better gesture.

"The production and sale of sillimanite as well as profits during the year have been slightly higher than last year, despite the rise in the cost of production. The balance-sheet would show that, year after year, this industry has had to carry an increase in expenses on mining due to the need to remove overburden, higher costs of transportation, sea freight and handling at Boko, Gauhati and Calcutta. There are limitations in passing the share of the enhanced cost of production to the buyers as sillimanite is a raw material and the price charged both to the internal and overseas buyers is conditioned by world price for competitive refractory material.

Export of Sillimanite

"Export of sillimanite has been providing the bulk of the sales revenue since the past few years. With the taking over of the business operations of the Company by the present Managing Agents in 1957, an extensive and concerted drive was made for creating interest and enthusiasm in this mineral with refractory manufacturers in Europe, Japan, Australia, etc. It is of interest to note that up to 1957-58 the demand in the home market did not exceed 400 tons and from 1958-59 to 1961-62 it rose up to 2,900 tons; whereas requirements from the export market during the same period were more steadily growing. In 1962-63, demand is approximately 10,000 tons. Despite increase in production costs, transportation, freight, etc., prices were maintained at the 1958 level. It has, however, been decided that from 1963 the prices should be increased in proportion to the increased cost during the past two to three years.

"It is thus clear that sillimanite has become an established foreign exchange earner and the potentialities of continuous, also increased earnings are dependent on maintaining supplies to the export market. It is with this background that we have been requesting the Government to give priority in allocation for the export market and justified incentive.

"Some of our foreign buyers have now been advised that in future they should expect to get both the raw sillimanite as well as finished products. On an equal tonnage basis, it would mean an increased earning in foreign exchange by 300 to 400 per cent in finished goods as compared to raw material.

Capital Issue

"In June this year, the Company floated a new issue of Rs. 29.00 lakhs equity shares, of which the Life Insurance Corporation of India subscribed for Rs. 5.00 lakhs and the balance was oversubscribed by the public. In consultation with the Calcutta Stock Exchange, the Directors have since allotted these equity shares and the scrips are under issue to the new shareholders, whom we thank very much. Rs. 4.00 lakhs worth shares have also been allotted to our technical collaborators, Messrs. Vereinigte Grossalmeroder Thonwerke of West Germany for their technical know-how and services for stage I of the refractory project. A further sum of Rs. 6.00 lakhs was taken up by the existing shareholders as rights issue, making our total paid-up capital now as Rs. 69.00 lakhs out of the total authorised capital of Rs. 1.00 crore. Shares worth Rs. 29.00 lakhs have been set aside for International Finance Corporation of Washington, and the balance of Rs. 2.00 lakhs for Messrs. Vereinigte Grossalmeroder Thonwerke, Grossalmerode, West Germany, as per our agreements with them.

New Project

"The work on the new project at Ramgarh has commenced and this should be in full swing by the end of this year. As your Directors have indicated in their report, the initial plant's products have been well received by the major and specialised consumers. The Directors had hoped that the first phase of the expansion programme would proceed as scheduled but now with the invasion, the production may be delayed by some time.

"I may recall that India has to depend on imports of refractories to the tune of Rs. 3 crores annually and your Company's expansion scheme has been well timed, in the context of the needs of the country. With the present Chinese aggression, the drain on foreign exchange has increased and your Company has to make its contribution in filling the gap by making the quality refractory products available as quickly as possible as well as for defence and civil industrial requirements. Even with the extreme limitations placed on transport, etc., the Company is proposing to get itself on a war footing and organise to produce more, both the raw material at the mines and finished products at Ramgarh and Paharpur. The ingenuity of the Company's staff is at test and they, I expect, shall rise up to the occasion to meet the threat to the country and to their own existence. In view of the setback that we might have in the working results of the Company due to reasons beyond our control and foresight and with the likely delay in the implementation of the Ramgarh project, it has been considered advisable to undertake and diversify our activities in the field of export of minerals and other products to bring additional revenue to the Company in the following year.

"I would like to thank, on your behalf, our workers and staff for their sincere services and would appeal to them to increase our production to the maximum. I have also to express my gratefulness to the International Finance Corporation, Washington, and the shareholders who have made available the finance for the expansion of the industry. Thanks are also due to the Managing Agents, the United Provinces Commercial Corporation, for the careful way in which they have been looking after the affairs and the growth of the Company all these years, despite hurdles and setbacks here and there."

Note.—*This does not purport to be a record of the proceedings of the annual general meeting.*

Notice

AIR INDIA INTERNATIONAL LIMITED

(In Voluntary Liquidation)

THE ANNUAL GENERAL MEETING OF this Company will be held in the Board Room, 4th Floor, Bombay House, Bruce Street, Fort, Bombay, on Friday, 21st December 1962, at 5 p.m., and not on 6th December 1962 as previously notified, when in accordance with the provisions of Section 496 of the Companies Act, an account of the acts and dealings of the Liquidators and of the conduct of the winding up for the year ended 30th September 1962 will be laid before the Meeting together with the prescribed form of statement with respect to the proceedings in and the position of the Liquidation.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

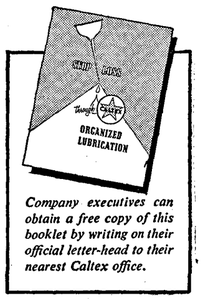
The CALTEX "Stop-loss" Programme helps cut plant-wide maintenance costs as much as 15%



"Stop-loss" organises lubrication throughout the plant—from purchasing on through actual application. By specifying multi-purpose lubricants and by eliminating duplication, a "Stop-loss" Programme can reduce the number of lubricants needed by as much as 50%. By streamlining purchasing procedures the programme can cut the number of purchase orders.

Best of all—by assuring proper lubrication to every piece of equipment in the plant, a "Stop-loss" Programme helps extend equipment life. Result—plant-wide maintenance savings upto 15%. *Ask your Caltex Sales Engineer for information.*

Company executives can obtain a free copy of this booklet by writing on their official letter-head to their nearest Caltex office.

GROWING DEMAND FOR BALL BEARINGS

PROTECTION TO CONTINUE FOR THREE MORE YEARS

IT is well known that ball bearings constitute a crucial type of component in any machine or mechanical contrivance. Electric fans, electric motors, pumps, machine tools, ring frames, carding engines, heavy machine-building plant, automobiles, cycles, cycle rickshaws, sugar machinery, chaff cutters, flour mills, jute machinery, tractors, and diesel engines, to mention some examples, are the most important engineering products in which ball bearings are used as necessary components. The demand for ball bearings is, therefore, related to the production targets of consuming industries. Taking these production targets as the basis, the Development Wing of the Union Commerce and Industry Ministry has estimated the demand for bearings in the protected category at about 11.7 million pieces by 1965-66. It will be seen from the following table, which provides industry-wise figures of demand for ball bearings, that the electric fan and automobile industries will be the largest consumers, for these two industries, between them, will require as much as 5.9 million pieces, representing a little more than 50 per cent of the estimated aggregate demand for bearings. For replacement purposes alone, it will be further seen, 2.2 million pieces of bearings will be required by 1965-66.

Items	Targets of production in Third Plan (1965-66)	Development Wing's estimate of requirements of ball bearings (1965-66) (In Nos.)
Electric Fans	2.5 million	4,000,000
Electric motors	2.5 million H.P. @ 6 H.P. per motor = 417,000 Nos.	705,000
Pumps	150,000 to 200,000	247,700
Machine tools	Rs. 30 crores	Included under Miscellaneous 675,000
Ring frames, Carding engines	N.A.	
Heavy machine building plant	N.A.	821,700
Automobiles	109,000 to 130,000 (higher figure taken into account)	1,926,000 (inclusive of 576,000 bearings for motor cycles and scooters)
Cycle rickshaws	N.A.	N.A.
Defence equipment	N.A.	43,944
Sugar machinery	Rs. 10 crores	75,000
Steel projects	6.9 million tons	22,500
Chaff cutters	N.A.	75,000
Flour mills	N.A.	
Jute machinery	Rs. 233 lakhs	30,000
Tractors	N.A.	52,000
Diesel Engines	100,000	5,500
Miscellaneous including adapter bearings		849,150 (Misc. industrial machine tools, oil and H.E.P.) and 2,151,506 (for replacement)
Total		11,675,000

Footnote : N.A. means not available

But the Development Wing's estimate of future demand for ball bearings has not been accepted by the Tariff Commission in its report, just released, on the continuance of protection to the industry. Since the Commission has been given to understand that the production targets of consuming industries are themselves likely to be revised upwards and since the 1962 demand itself, according to the Commission's estimate, is of the other of 8.0 million pieces, a higher estimate for future has become necessary. The Commission's finding that the demand for ball bearings of protected categories is likely to increase at the rate of 20 per cent every year over the demand of 8.0 million for 1962 means that the demand in 1965 will be 12.8 million and that in 1966 will be 14.4 million.

The present (1962) capacity of the industry is 4,320,500 bearings—3,200,000 in the National Engineering Industries Ltd. (Jaipur), 70,500 in the Anti-friction Bearings Corporation Ltd. (Lonavla, Maharashtra), and 1,050,000 in 36 small-scale units. The output of the two large-scale units and the small-scale sector in 1961 was 3,198,179 pieces, 29,499 pieces, and 468,481 pieces, respectively, adding up to a total of about 3.7 million. In the first half of the current year, that is, 1962, the combined production of the two large-scale units was 1.9 million. In the first quarter of the current year, the output of the small-scale sector was 108,016 pieces. Estimating on the basis of these trends, one may broadly take the 1962 output at not less than 4.3 million and, perhaps, not more than 4.5 million. Even that much domestic production, it will be seen, will have fallen very much short of the estimated demand for 8.0 million pieces in the current year. It is not possible to infer from the figures of imports of ball bearings whether the balance of demand will have been fully met, for these figures are available only in terms of weight. However, import figures for 1961 and 1962 (January-May) are given here for what they are worth. In 1961, for instance, imports of all types of bearings were to the tune of 803,124 kg. valued at Rs. 105 lakhs. For the first five months of 1962, the respective figures were 400,369 kg. and Rs. 48 lakhs.

In view of the current and prospective gap between demand and domestic production the Government has already licensed the National Engineering Industries and the Anti-friction Bearings Corporation for substantial expansion. Nine new units have also been licensed for the manufacture of ball bearings. The entire expansion programme covers an aggregate licensed capacity of as much as 11.2 million ball bearings per annum on double shift basis. But all this additional capacity is not likely to fructify, if some of the new parties are unable to secure foreign collaboration. As of today, the indications are that the National Engineering Industries (existing concern) will complete its expansion project, with British collaboration, by the middle of 1964. It will then mean an additional capacity of 1.8 million pieces on double shift basis. The Anti-friction Bearings Corporation, which is yet to establish fully its licensed capacity of 116,000 pieces (on double shift basis), may also be expected to complete its project. Among the newly-licensed units, Bharat Ball Bearing Co., Ltd., (Calcutta), with an installed capacity of 2.2 million pieces, is expected to complete its project early next year with American collaboration. Associated Bearing Co., Ltd. (Bombay), with an installed capacity of 1.5 million pieces, is likely to complete its project, with Swedish collaboration, during the latter half of next year. M. P. Bearings India (Pvt.) Ltd. (Bombay), with an installed capacity of 0.9 million pieces, is also likely to commence production in the latter half of 1963. Precision Bearings India Ltd. (Bombay), with an installed capacity of 0.6 million pieces, hopes to complete its project, with American collaboration, early in 1964. As regards the five other newly-licensed units (namely, Pioneer Bearings of Coimbatore, Indian Bearings Ltd. of Ahmedabad, Hindustan Ball Bearing Co. of Agra, New Commercial Bearing Corporation of Ahmedabad, and M. Ct. Muthiah of Madras), which are to have an aggregate capacity of 3.7 million pieces, and which are still to secure foreign collaboration, the position, according to the Tariff Commission, is obscure. If these five new units do not come up before 1965, the existing capacity *plus* the additional or new capacity of 7.1 million pieces of the other certain projects will not be quite sufficient to meet the estimated demand of 12.8 million pieces in 1965.

There is a long way to go before even those projects which are most likely to come up can be actually completed. An assurance of continued protection to the industry is certainly called for in the circumstances, and the Tariff Commission has made out a good case in the following passage:

"Despite the divergence noticed between the quantum of duty required for different categories and the existing rate of duty, we consider that, in view of the present restrictions on imports, it is unnecessary to revise the present rate. Reduction in duty would have no material effect on the consumer or the industry; on the other hand, it would give a larger margin of profit to established importers and dealers. We have also to take note of the fact that, in spite of three units having been licensed even before the last inquiry, they have not yet started production. A lowering of protective duty at this stage might prove to be a disincentive to those units which have yet to establish their production and which are endeavouring to bring in a more diversified pattern of production than that of the existing producer. These units will not be able to reach their scheduled production for another three years at least. We have also to take note of the wide gap between the Plan target and the present available indigenous production. We, therefore, recommend that the existing rate of protective duty on ball bearings and adapter ball bearings and parts thereof should be continued for a period of three years to 31st December 1965."

The existing rate of duty is 95 per cent *ad valorem* on ball bearings and adapter bearings upto 2" bore diameter, as well as on their parts. The Tariff Commission's recommendation that protection to the industry be continued for a further period of three years at the existing rate of duty has just been accepted by the Government in its Resolution of 16th November 1962. The Commission has also made some ancillary recommendations. These are:

(i) Greater flexibility should be allowed to producers to switch over from use of H.C.I. bars to H.C.I. tubes for manufacture of bearings. This will make for economy in costs of production and less wastage of material.

(ii) Encouragement should be given to producers by ensuring supply of deep drawing quality M.S. strips for manufacture of cages as this will be more efficient and economical than use of brass.

(iii) The Indian Standards Institution should expedite formulation of standard specifications for ball bearings.

(iv) Imports of ball bearings should be recorded separately in value and numbers, instead of value and weight as at present, in the Monthly Statistics of the Foreign Trade of India.

The Government has taken note of these recommendations and undertaken to implement them to the extent possible. It has also drawn the attention of the National Engineering Industries to the Commission's finding that the Company's records of production and process costs stand in need of improvement.

INLAND WATERWAYS IN E.C.A.F.E. REGION

The sixth session of E.C.A.F.E.'s Inland Waterway Sub-committee concluded its deliberations at Bangkok on 13th November, a report on which has just been received. The discussions at the session related to such subjects as navigation on Asia's rivers, lakes and canals, the most suitable type of passenger craft, and methods of improving the efficiency of national inland waterway transport and that of international traffic. In the light of these discussions the Sub-committee approved of a report to its parent body, The Inland Transport and Communications Committee. The deliberations reflected the keen desire of the countries of Asia to improve their techniques of inland navigation and take further steps to conserve and develop their rivers and canals.

The Sub-committee also adopted detailed specifications for prototype coasting vessels suitable for use throughout the region. Complete plans, including body-line drawings, had been prepared on the basis of exhaustive model tests, and these were approved of by the Sub-committee. In addition, detailed contract specifications were also studied and adopted. It is stated that inquiries concerning the model plans have already been received from various agencies interested in building these modern vessels which are claimed to be not only the most suitable and efficient for the purpose for which they have been designed but also, because of standardisation, considerable savings are envisaged in their construction.

As regards the economic and technical feasibility of using hydrofoil craft for passenger transport, the view of the Sub-committee was that the cost per passenger-kilometre was still far too high to suit the common people of Asia and that, at present, such craft could only be used for fast high-class passenger transport. Hydrofoil craft could, however, be considered as an interesting alternative to aircraft, as it had the advantage of being able to operate without expensive terminal facilities, and could make more intermediate stops. Hydrofoil craft had also, it was noted, been found more economical than land transport for services across large bays or lakes, and for fast ferry services, because it could follow a direct route instead of a circuitous one. It was felt, however, that many questions still remained to be answered before any conclusions could be reached concerning the usefulness of hydrofoil craft. These questions related to its performance in the face of tropical storms, water hyacinths clogging the waterways, and the presence of small fishing vessels.

The Sub-committee stressed the importance of classifying inland waterways. In the past, it was pointed out, craft had been developed to suit the waterways; but henceforth waterways were to be developed to suit the craft and the methods of towage. Special attention, it was felt, should be given to waterways that were navigable only during the rainy season. The techniques of dredging in navigable waterways and inland ports were also reviewed by the Sub-committee.

WORLD'S LARGEST ELECTRONIC VALVE

A thermionic (electronic) valve 18 ft. long, 7 ft. high and weighing four-and-half tons—said to be the world's largest—is being made in Britain for research into the upper atmosphere. The valve, which is being built at the Admiralty's microwave electronics division of the Services Electronic Research Laboratory, Harlow, near London, is a travelling wave tube. It will provide 100 megawats pulses of energy at a frequency of 430 megacycles per second. Power is obtained by interaction between a radio wave travelling along inside the valve and a beam of electronics travelling at about the same speed.

Russian-built trucks working in the Rumanian oilfields are now being powered by three of the world-famous diesel engines produced by Leyland Motors Ltd. of Britain. The Russian vehicles are huge three-axled J.A.Z. tractors designed to work with special semi-trailers at a gross laden weight of 35 tons. Although newly-installed, the Leyland engines are spare 125 h.p. 0.600 units supplied to Rumania in 1947 with a fleet of 50 Leyland Super Hippo oilfield trucks. Many of these vehicles, which are still working, have recently been joined by another 57 similar Leyland vehicles.

In factories, railyards or docks, wherever trolleys are used, Dunlop cushion tyre equipment will smooth the way for your loads. These tyres are specially designed to reduce vibration so as to give greater protection to your products. They reduce tractive effort and so permit speedier work. They are silent and help to eliminate costly repairs in the maintenance of flooring and pathways.

DEFENCE AND DEVELOPMENT

PREREQUISITES FOR SUCCESS

By Prof. C. N. Vakil

THE Chinese invasion of the country has created an unprecedented situation for a developing country like ours, which is still in the early stages of the process of economic development. While the requirements of defence are immediate, the requirements of development are no less urgent, with large masses of the people having a low standard of life. The first two Plans laid the foundations of economic progress and it was expected that the third Plan would be the beginning of a period during which the country would reach the self-generating stage. It is known that the success of democratic planning and the peaceful progress that we are making since independence, have not been to the liking of the Chinese, who seem to be anxious to establish their superiority as the dominant nation in Asia in both the military and economic fields. They wish to establish the position that the communist way of life is the best and are anxious to impress upon the less developed countries of Asia a sense of fear, on the one hand, and a feeling of respect for their greatness, on the other. Under the guise of friendship, they went on preparing for aggression. Our failure to understand their intentions in time has put us to a great disadvantage, and is likely to prove costly in men and material; it may also create serious difficulties in the process of economic development.

Development in War-time

The Government of India have rightly taken the view that development should proceed along with defence, though in view of the urgency of defence requirements, some adjustments in development plans are inevitable. Arrangements to switch over to war-time production is bound to affect the priorities as laid down in the third Plan. The States have been informed that, as far as the current year is concerned for which they must have made commitments, they should adjust to some extent and reduce their expenditure on the Plan. A total cut of Rs. 50 crores in the Central contribution to the States has been made for the current year. So far as the Plans of the States for the coming year 1963-64 are concerned, the adjustment will have to be from the point of view of war production, and therefore these plans and their priorities will have to undergo more fundamental changes. The same applies to those schemes under the Plan which are under the Central Government. These revised plans will obviously take some time to emerge.

Resources for Defence and Development

It is obvious that our resources are not adequate both for defence and development. We have, therefore, to take a fresh stock of our resources from the point of view of the new situation and make suitable changes in our policy. It is hoped that all classes of people who have shown such unanimous desire to work together in the common cause will rise to the occasion and co-operate with the Government in meeting the twin needs of defence and development.

We have the estimates of the third Plan regarding the requirements of resources for development. It is not possible, however, to make any reasonable estimates for the requirements of resources for defence, which depends on the nature, the dimensions and the length of the conflict with the Chinese. We may at the most review broadly the possible additional sources that we can tap in order to have a general idea of the availability of possible new resources for the joint requirements of defence and development.

Foreign Help

Fortunately, some of the friendly countries have agreed to give us help for defence in kind. Timely help has already started to arrive from the U.S. and the U.K. To the extent to which such assistance is available, it will help us in making up the necessary total of resources for the joint requirements of defence and development. The Government of India have also succeeded in obtaining some voluntary resources from the people in the form of contributions to the National Defence Fund. As this cannot make up the total, other sources have also to be found. The Government has issued loans in the form of Defence Bonds and also in the form of Gold Bonds on attractive terms. Along with this, if effective steps can be taken to prevent the smuggling of gold which has been a feature of our economy for some years past, we shall have taken an important step in the direction of saving a substantial amount of foreign exchange.

Reduction in Consumption

In order to divert material resources for the purposes of the war, it is essential that all classes of people should reduce their consumption as far as possible. For this purpose, voluntary reduction in consumption by the adoption of austerity methods by the avoidance of festivities and wasteful expenditure and by practising other economies are suggested. Voluntary reduction in consumption may also be done by contributions to Defence Funds or Loans. As these will not suffice, compulsory reduction in consumption will have to be resorted to in the form of additional taxes and deficit financing. Deficit financing places artificial purchasing power in the hands of Government with the help of which it is able to obtain goods and services for use in the war effort. To that extent goods and services will not be available for consumption for the civil population. The scarcity thus created will lead to higher prices. To prevent the effects of higher prices on the people, steps are being taken to maintain the prices of essential articles.

Economy in Administration

Before such compulsory methods for the purposes of the war are adopted, the public would like to be satisfied that the Government themselves have undertaken adequate steps to introduce economy in administration. It is well known that a democracy is a costly form of government and that, in recent times, we have, in various ways, added substantially to the administrative expenditure, some of which is essential for economic progress, but a good deal of it is superfluous, intended merely to satisfy the various democratic pulls which are on the increase in the country. We are certainly not in a position to afford such luxury at the time of crisis. It is satisfactory to find that some persons in high position both in politics and in administration have shown some gestures of contributions to the Defence Fund. These are welcome, but these are not enough. For example, at a time when we should be able to take quick decisions and have administrative efficiency, we do not require the ever-multiplying numbers of Ministers and Deputy Ministers with which both the Centre and the States are run. These may have their place in appeasing the various democratic pulls in the country, but are in no way conducive to efficiency in the Administration. In fact, the existence of a large number of ill-equipped Ministers in some of the States, with inflated ideas of their importance, must be a source of considerable hindrance to the administrative machinery, involving waste and delay, sometimes leading to corruption. It would be a generous gesture on the part of such superfluous Ministers themselves voluntarily to hand over their charge to the Chief Ministers and thus relieve them of the embarrassment involved in the present situation. The prestige of the ruling party will certainly be enhanced and the response of the public to the war effort encouraged several times over by such a gesture.

Additional Taxation

So far as additional taxation is concerned, as the rates of existing taxes are fairly heavy, there will be obvious limits to the increase in the rates of some of the existing taxes, though it may be possible to make minor changes in some cases. If the war situation makes it possible for some to have excess profits, an excess profits tax may be considered. It is well known that taxes on land have not been raised since independence, though incomes from the land have increased considerably in recent years. The Government has taken a variety of important steps to develop agricultural conditions and improve the return from the land. In view of this, it is not easy to understand the opposition to the levy of tax on land in some of the States which has been found in recent times. It is hoped that, in view of the emergency, those parties who opposed the proposal to tax land for political purposes, will co-operate in seeing that the States are able to raise more revenue in this way.

Among other sources of revenue, references have been made in public discussions about (*a*) the scrapping of the policy of prohibition and (*b*) the imposition of the salt duty. In States where the prohibition policy is in operation, considerable amounts are being spent on the enforcement of prohibition. The success of the policy, however, is in no way commensurate with the expenditure thus incurred and the loss of excise revenue that has been sacrificed. In fact, it is widely believed that illicit production of liquor goes on, on a large scale and that this has led to many evils both among certain classes of people as well as the police. Whatever the merits of the question, this is not the time to enter into a controversy over the subject. If we confine ourselves merely to the point of view of resources, it would be in the fitness of things under the present conditions to obtain the revenue from excise on liquor, and at the same time to release the police utilised in prohibition duties to more urgent needs connected with defence. If it is not easy to change the Directive Principles of the Constitution in such cases in peace-time, it should compel us to do so in war-time.

In the same manner, a duty on salt would be an effective way of making everyone realise that he is making a contribution to the national cause. The incidence of salt duty cannot be heavy, because it is not possible to consume large quantities of salt. The sentiments associated with the salt duty connected with Gandhiji's technique of Civil Disobedience need not stand in our way at a time when the independence that he achieved for the country is in danger.

Black Market Operations

There are some other resources difficult to estimate but substantial in amount which could be mobilised, if the patriotic sentiments which have been expressed throughout the country are genuine. If those members of the business community who indulge in black market operations or in evasion of taxes or in otherwise obtaining unrecorded gains are really sincere in their profession of patriotism, it should be possible for them to give up these practices in the interests of the national cause. It would be a test of their sincerity if this desirable step is taken, which will involve no sacrifice on their part, inasmuch as they will give up only undeserved gains. The resources which may thus be available to the Government directly or indirectly may be large "windfalls." Besides giving up such practices, it should be possible for such persons to disgorge their accumulated gains of this nature by handing over the same to the Government as "conscience money." In England, there is a well-known practice by which certain persons who feel that they have somehow evaded taxes, contribute certain amounts to the Treasury as "conscience money" without any explanation.

Apart from the financial advantage to the country, there will be a great moral advantage in this effort. It is well known that such operations lead to the demoralisation of society by putting an undue premium on those who have money which results in an undesirable shift in values. If in the present emergency we succeed in impressing upon such persons the need for giving up these practices, they will also contribute to the moral uplift of the people and a better sense of values in our society. Women's organisations can play an effective role in this connection. The women folk can persuade those concerned in these operations to abandon the same and even start a campaign to deal with those who do not behave.

Corruption in Administration

This tendency has spread in another form to Government departments. It is known that some officers utilise the opportunity created by the power vested in them to grant licences and permits for various things or to administer Government-controlled facilities to others for personal gain. Various methods are adopted by them to obtain such gains. In this process, the black market operators are willing to participate. How far the inefficiency of, or corruption in, the administration is responsible in abetting the formation of the black market and in sharing in its gains or *vice versa* is a question which requires careful consideration. In war-time, various things have to be done by Government at short notice; its dependence on the efficiency and integrity of its staff as well as the active and unselfish co-operation of the people is great. In spite of the universal spontaneous enthusiasm to help the war effort, we must beware of those unscrupulous persons who may take advantage of the situation and try to obtain personal gains. The Defence of India Act gives large powers to Government to deal with such persons; the difficulty, however, is that the collusion between officers and black marketeers is the basis of such transactions, which therefore cannot be easily detected. In rare cases, when they are detected, political pressures are known to weaken the desire of those in authority to take firm action. It is to be hoped that we shall be rid of all such weakness by the compelling necessities of national defence.

Anti-control Psychology

Black market operations are closely associated with the anti-control psychology that we have developed in the country. Though there are always a few black sheep in every country, who make it their business to defeat the law and indulge in anti-social activities with personal advantage to themselves, it will not be inappropriate to say that we have developed a large variety of methods and techniques to obtain undesirable gains, which may be called black market operations, evasion of taxes, premiums, 'on payments' or the *pugree* system, secret commissions, etc. This unfortunate situation has a historical background. During the long period of British rule, we developed an attitude of differentiating between the interests of the rulers and the ruled. We had a feeling that the British Government ruled over this country in their own interests and it was not proper to co-operate with them unless absolutely necessary. In fact, this negative attitude gradually turned into a positive method of obstructing the British administration whenever opportunity arose in the belief that it was an act of patriotism to do so. Gandhiji's technique of Civil Disobedience symbolised in the breach of salt laws, was intended to convey to the British authorities that they had lost the confidence of the people. This innocent but significant method of defiance of authority had its ultimate effect. The wave of resentment which spread in the country far and wide manifested itself into many other acts of defiance of authority not consistent with Gandhiji's non-violent technique. He had often to do penance, therefore, by undertaking fasts. One particular sphere in which the defiance of authority was manifested was in connection with anti-inflationary measures of the Government which started from May 1943.

When the inflationary situation during the Second World War took a serious turn in the beginning of 1943 and when inflation and its implications were not understood in the country, it fell to my lot to explain in simple terms the phenomenon of continuously rising prices by the publication of a pamphlet entitled *The Falling Rupee* in January 1943. Though this publication received wide publicity, it was not to the liking of some leaders of the business community as well as of the then Government of India. Some members of the business community felt that I was not correct in my interpretation and that, at any rate, I was wrong in advocating anti-inflationary measures, which involved more taxes and the institution of controls of essential articles. A well-known leading industrialist tried to persuade me to agree to his view about the need for more currency by asking me as to "why should people be starved of currency." His propaganda in this behalf had to be followed by suitable replies in the form of speeches, discussions, articles, etc., in justification of my thesis which was supported by other well-known economists. Some of the leading economists came together and issued an Economists' Manifesto in which they advocated anti-inflationary measures.

The Government of India was unhappy about this, because, as the authors of inflation, they were anxious to hide the fact, lest they became more unpopular at a time when they were busy with the war as well as with the political tension in the country. When at last the Government of India realised the truth of the economists' viewpoint, they came out with anti-inflationary ordinances, which involved more taxes as well as controls and ultimately rationing of food, cloth, etc.

Defiance of Authority

The taxes were intended to take away the additional undeserved purchasing power which the richer classes obtained because of inflation and thus reduce the demand for the scarce goods in the country so that the poorer classes may not suffer. Rationing of essential articles was also necessary in the interests of the poorer classes, so that each person may have at least the minimum of cereals and cloth. Unfortunately, the psychology of defiance of authority as an act of patriotism, which was developed at the time for a definite objective, was deliberately and consciously misused by certain classes of people. They assumed that defiance of authority of the British administration by evading taxes and defeating controls by black market operations was an act of patriotism. It was certainly an act of obtaining undeserved gains, anti-social in character, likely to create more trouble for our poor countrymen and not so much for the British administration. In fact, I remember, how certain well-known businessmen in Bombay tried to prevail upon me in 1943 not to advocate anti-inflationary measures or more taxes. Their plea was that they would willingly pay more taxes and co-operate with the Government under independence which was then in sight. But, according to them, this was not possible so long as the British Government continued in power.

Habits die hard. Mass habits become a fashion. The habits formed during the last few years of the British administration of evading taxes and defeating controls were not given up on the advent of independence. They continued with obvious embarrassment to the National Government, which, ultimately, decided to give up controls, not because they were wrong in principle, but because of the non-co-operation of the people with the same. If the present emergency makes us realise that this attitude was wrong even under the British administration and that the anti-inflationary measures were intended to help the poor, that, under independence, the interests of the rulers and the ruled are one, and that practices of the type of black market operations or evasion of taxes are not only anti-social, but also both immoral and unpatriotic, we shall have gained a good deal. If, unfortunately, the war with the Chinese is prolonged and the inflationary situation develops in the country, physical controls such as rationing of food and cloth may become necessary. Such controls can succeed, only if those who administer the same are honest and efficient and if, at the same time, the public co-operates with the same fully.

The limited controls on foodgrains, cloth and drugs recently announced by the Government of India will require an elaborate machinery to enforce the same. The observations made above regarding the essential conditions for the success of physical controls apply in an equal measure to these controls. In other words, unless the officers and staff in charge of these limited controls are honest and efficient and unless the people co-operate with them, the success of these measures will be doubtful. The general desire to sacrifice for the war to which reference has been made above will be on trial; it is to be hoped that the anti-control mentality will undergo a radical change in favour of the new controls and all concerned will co-operate with them fully. It should be realised by all that, if the rise in prices of essential goods is not checked, both defence and development may become difficult.

A simple inexpensive instrument has been designed at the Central Mining Research Station, Dhanbad, which enables direct measurement of the cross-sectional area of a mine airway or that of any other similar section and at the same time records a scaled drawing of the perimeter. The instrument can measure area within the range of 4-20 ft. diameter. A knowledge of the cross-sectional area of mine airways is needed to estimate the quantity of air flowing in a mine airway which is given by the product of the average linear velocity of air and the area of the cross-section of the airway. Mine airways are generally of irregular shape and uneven profile. The ordinary method of measuring the area of cross-section by means of a measuring tape is tedious and may lead to large errors. The currently known methods like the photographic methods and the one using a profilograph designed at the National Coal Board, England, record a scaled drawing of the perimeter of the cross-section of the airway, but do not indicate directly the value of the cross-sectional area necessitating further measurements and calculations to obtain the area. The new instrument is claimed to be an improvement over the profilograph achieved by incorporating a measuring wheel with the marking point of the profilograph.

NEW PRODUCTS AND PROCESSES

Road-rollers

ROAD rollers with hydrostatic drive, which allows clutch, gear-shift and service brake controls to be replaced by a single hand lever, were shown in public for the first time at the recent Public Works and Municipal Services Exhibition in London. The drive is fitted to four rollers in a 6-ton (6.096 tonnes) to 12-ton range (12.192 tonnes) and it means there are now four alternative transmissions—conventional four-speed mechanical, conventional four-speed with hydraulic coupling, torque conventer, and hydrostatic.

Surface Coatings from Assam Ekra Reed

A lignin-furfural-based resin has been prepared at the Regional Research Laboratory, Jorhat, from the lignin fraction of Ekra reed, which is abundantly available in Assam. An alcoholic solution of the resin can be applied as a surface coat on wood, metal and glass surfaces. The surface films have been found to be tough and resistant to dilute acids and alkalis. Furfural, an industrial raw material for plastics, can be obtained from the reeds in yields of about ten per cent by weight.

Epoxy Resin-based Flooring

An industrial flooring material in a range of colours, which the maker claims is almost indestructible has been developed by Rowan and Boden, of 131, Renfrew Road, Paisley. The epoxy resin-based flooring is normally laid on concrete to a depth of ¼ inch and sets in 24 hours. It is stated to be stronger than concrete and resistant to every known chemical used in industry. Jointless and non-skid, the flooring can withstand temperatures up to 200 degrees Centigrade and is called R.B.731.

Petroleum Resins Boost Agricultural Production

A three-year research programme has shown that a petroleum mulch technique, developed by Esso Research and Engineering Co., can, under responsive climatic conditions, vastly increase agricultural output and crop values in many parts of the world, including those where food supplies are low. Field tests, still under way and being expanded, resulted in yield increase ranging from 10 to 111 per cent on a broad variety of crops. Mulching also proved effective in establishing stands of range grass in tests conducted on deteriorated grass lands in the Great Plains of the U.S.A. The method utilises a petroleum mulch formulation sprayed over seeded areas to achieve both moisture retention and higher soil temperatures. Inexpensive standard attachments used with regular farm tractors were developed to smooth the soil, plant the seed and apply the mulch in one continuous operation. Also, in less highly mechanised agricultural areas, the mulch can be applied easily by simple knapsack sprayers. The product is a specially formulated water emulsion of petroleum resins. It is sprayed directly over seed rows and forms a continuous film in thin bands three to eight inches wide. Patent applications have been filed. The material retains moisture in the soil because it reduces evaporation. It raises soil temperature as much as 20°F. and thus stimulates growth because it absorbs more of the sun's radiation than the uncoated soil. All seedlings studied have shown the ability to emerge through the film with no difficulty. The amount of mulch required ranges from some 60 to 150 gal./acre depending upon conditions. According to Mr. F. W. Lawson, of the Marketing Co-ordination Department of Standard Oil Co., U.S.A. who is on a visit to India, it possesses several other attributes which make it a preferred product over other types of mulch such as black plastic films. It can, for example, be ploughed directly into the soil when it has served its purpose, thereby building up the structure of the soil. Pesticides can be incorporated into mulch to give positive pest control. Besides the many tests sponsored within the United States, plans for research projects outside the country are also being developed. One programme already under way in co-operation with agricultural authorities in Libya and Tunisia has shown that the petroleum mulch technique reduces the amount of irrigation water required for grass by about 50 per cent.

Anti-corrosion Treatment for Steel Structures

Large steel structures—such as bridges—can be adequately protected against corrosion at the time of construction. That is the claim of four British companies, each specialist in its own field of anti-corrosive treatment. Preventing corrosion—and the heavy and continuous maintenance charges it involves—has long been one of the big problems facing engineers responsible for steel construction. The four companies have combined to show that the job can be done successfully—and the structure they are tackling is the new Forth Road Bridge in Scotland, the longest single-span bridge to be built in Europe. The protective system applied in this case should mean that it will not need the constant attention of an army of painters. Twenty thousand tons (20,320 tonnes) of steelwork for the bridge are being delivered in pre-fabricated sections to a treatment plant in Scotland. They arrive already covered with millscale and affected by surface corrosion. Work starts when a specially designed shot blast plant removes scale and rust from the fabrications and simultaneously prepares the steel surface for subsequent protective coating. The sections then receive a coat of pure metallic zinc. The nozzles of the spraying units deliver a high velocity jet of molten zinc droplets, which on impact with the prepared surface, bond together to form a coating which is resistant to atmospheric corrosion. The plant used follows exhaustive testing of various paint combinations which have proved their effectiveness under laboratory conditions, and also in practical use on steel structures in many climates. The sections arrive at the site, protected and ready for use. The protective system chosen for this major British engineering project can, say the firms, be adapted for use on steel structures, large and small, in any part of the world.

Oil-burner Control

A new oil-burner control fitted with an automatic re-start in the event of flame failure has been introduced by a British firm, Elcontrol, Ltd., Hertfordshire, England. This device, known as the FSC1, has a motordriven three-cam pro-gramming unit. On the thermostat calling for heat, this unit starts and the fan is caused to operate. After a 25-second pre-purge, the ignition circuit is energised and after a further 10 seconds the oil valve opened. If the flame is detected by a built-in photo-electric viewing head, the valve remains open until the thermostate ceases to call for heat. Should no flame be detected, the valve is closed after 15 seconds. The cam unit will then repeat a lighting-up sequence, but if no flame is established will lock out after allowing a post-purge of 75 seconds. If the flame fails after being established, the cam unit will go through a lighting-up sequence, locking-out if it does not re-ignite. After locking-out, the control requires manual re-setting. Audible indication of need for re-setting is given.

Abrasion Characteristics of Clays

A simple and rapid method for testing the abrasion characteristics of clays has been developed at the National Physical Laboratory in New Delhi. Certain clays used in pencil manufacture are found to wear out the dies very fast which is due to the abrasive nature of the clay. As it is very difficult to find a single clay having all the desirable properties for use in pencil manufacture, a knowledge of the abrasive power and its increase on calcination is necessary in the proper selection of clays for blending. Though primarily intended for comparing the abrasiveness of pencil clays the method can be used for testing other materials also.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

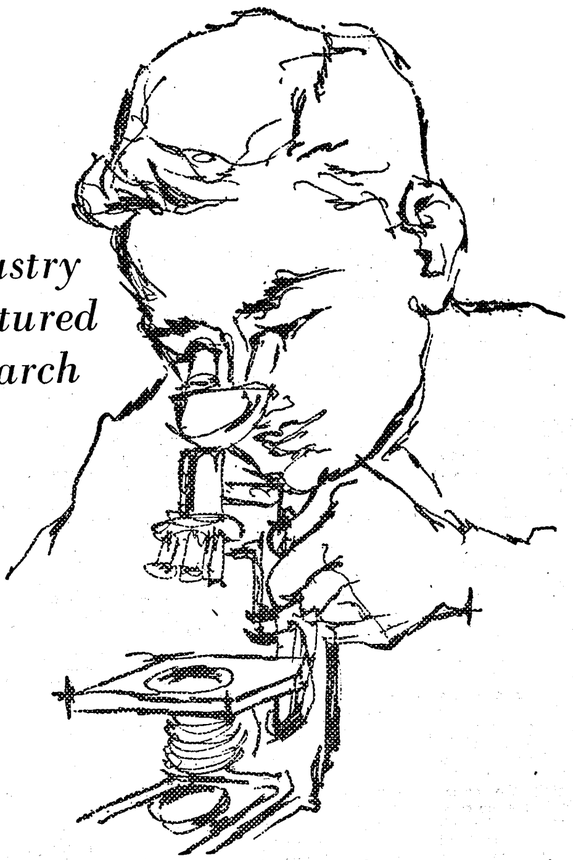
An Industry Nurtured by Research



'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

SURRENDER VALUE OF LIFE POLICIES

A SCIENTIFIC BASIS SUGGESTED

By O. S. Gupta

DEPARTMENT OF COMMERCE, UNIVERSITY OF ALLAHABAD

THE surrender value of a life policy is the amount allowable by the insurer to the insured if the latter fails to pay premium within the days of grace and surrenders the policy. It may be allowed in various ways, namely, cash surrender value, reduced paid-up insurance, extended term insurance and automatic premium loan. If, *however, the failure occurs* within two years, no surrender value is usually allowed. A surrender value is allowed, because it is thought that, after two or three years, every policy acquires some reserve-value, the surrender value being always equal to the reserve-value *minus* some surrender charge. Here, again, it is assumed that life insurance includes an element of investment, for only then can a life policy have some reserve-value, which may be considered as belonging to the policyholder in the sense that he can get it on terminating the contract. But, as we have already seen, there is, properly speaking, nothing like reserve on individual policies.[1] "The premium payments above those required by the natural premium method made by those who die young are used," according to Mehr and Osler, "to level the premiums and pay the death claims of those who live a long time." It is therefore, unscientific to base surrender value on reserve-value of the policy. Of course, when surrender value is paid, other policyholders in that generation are not required to pay a higher rate from that time onwards and so nobody feels it. But, since it is paid out of what properly belongs to those who continue the policy, the question arises: "How then is it possible for the insurance companies to pay it and yet be in a position to pay all claims as and when made?" For an answer, one may turn to Mr. S. S. Huebner. In his book on *Life Insurance* he says: "Experience has shown that it is not necessary for the protection of the company or the other policyholders to insist that the insured upon failing to continue his premium payments shall forfeit the entire reserve value of his policy. In fact, some companies allowed cash value equal to the full reserve at the end of the second or third year. ... With the great majorities of companies, however, the non-forfeiture provisions of the policy became operative only after the payment of premiums for two or three years, and then provided for the surrender charge which was greater during the early years of the policy and which diminished year by year until the tenth, fifteenth or twentieth policy year, the surrender value thereafter equalling the full reserve on the policy."

This practice is possible on account of two devices. First, the companies charge gross premiums calculated on the basis of (i) old mortality tables, which give higher mortality rates than are to be experienced, (ii) a very conservative rate of return on investments, and (iii) a more than necessary amount of loading. These premium rates are actuarially higher than those necessary for meeting claims, thus resulting in some surplus even for non-participating policies, out of which surrender value may be paid. So long as the lapse-ratio of the insurer is very small, the surplus may be used to pay off the surrender-value without injury to the interest of the continuing policyholders. Surrender-value in that case would be paid out of the company's profits. But, if the lapse-ratio is high, the profits thus reduced would fall substantially, may be, even to the zero point. The surrender value may even have to be paid out of capital or out of reserves on the current policies. Such a situation may not arise, if the company manages its affairs prudently. But, even in that case, the premium rates have to be kept high, if the insurer wants to have a minimum margin for profit and yet allows surrender value on life policies. High premium rates would keep business at a low level. Alternatively, if the insurer wants to keep *premium rates at the lowest level* and his assumptions as to the future mortality experience, rate of return and management expenses allow him nothing more than the minimum margin for profit, out of which he does not pay any surrender-value, the same can be paid only out of the reserve meant for holders of current policies. This point is well illustrated by S. S. Huebner and Black in a concrete example cited on pages 230-231 of the fifth edition of their well-known book *Life Insurance*.

Another device enabling the insurer to pay surrender-value equalling the full reserve-value without any financial difficulty is to pay it out of surplus that would otherwise go to the participating policyholders as bonus. Every payment of the surrender value reduces the Life Insurance Fund actually available with the insurer. When this reduced Life Insurance Fund is compared with the net liability on current policies, we get a reduced value of surplus which results in reducing the rate of bonus to policyholders. Whether the insurance company adopts one or the other device or both, ultimately the surrender-value is paid at the cost of those who continue the policy.

It may be said that insurers may without difficulty pay surrender value on a policy, provided this value is always less than the full reserve-value of the policy, that is, by making a surrender charge even when the policy is very much near the maturity time. But, if this is the scientific basis for paying surrender value, it follows that should apply to term policies and pure endowment policies as well as to ordinary life insurance, for, in these two cases also, the net level premium charged per policy in the beginning is more than the cost of insurance per policy and the difference with interest thereon should be considered the reserve-value of the policy. Here also the insurer should be able to pay surrender value by deducting the surrender-charge from the reserve-value of the policy. But can an insurer dare pay anything on surrendered policies in these two cases? A study of some concrete instances leads to the finding that, in case of both term policy and pure endowment policy, the insurer may be unable to pay any surrender value at all. No deduction from reserve value by way of surrender-charge will help the insurer, even though this device enables him to pay surrender-value in ordinary life policies as also ordinary endowment policies.

The justification for paying surrender value is not that every policy acquires some reserve value after the first 2 or 3 years—and it has already been shown in my first article published on pages 916 and 917 of *Commerce* dated 24th November that it is wrong to think of reserve-value allocable to any particular policy. Nor is it proper to base surrender value on the reserve-value of the policy, though this has been the practice with insurers for a long time. "The Standard Non-forfeiture Valuation Laws ('Guertin Laws')" completed in all States in the U.S. about 1948 "take recognition of the fact that there is no *pro rata* relationship between the reserve and individual policies. The laws do recognise, however, the fact that a surrendering policyholder has made an 'advance' premium contribution and should be entitled to a refund."[2] "With the exception of the direct introduction of these (initial) expense items in the formula, the method of calculating values for non-forfeiture purposes is identical with that already noticed for the calculation of the reserve. Actuarial assumptions parallel to those used in computing the reserve determine the amount of non-forfeiture benefits."[3].

What then is the explanation for the fact that, whereas in the case of a whole life policy and an ordinary endowment policy surrender-value, howsoever small, may be safely paid after the initial 2 or 3 years, in the case of a term policy and a pure endowment policy it is not always possible? The difference lies in the fact that, whereas in the case of a whole-life or an ordinary endowment policy every withdrawal means one less claim for the insurer, in the case of the term policy or pure endowment policy it may or may not mean so. If a whole-life or an ordinary endowment policy is surrendered, the insurer need not carry as much total reserve for the survivors as he would do if no policy was surrendered, and is thus able to pay something by way of surrender-value. But this cannot be said of a term policy or a pure endowment policy.

The scientific basis for allowing surrender value, in my opinion, is not the 'advance' premium contributions paid by the policyholder, but the savings arising to the insurer out of withdrawals. Let us now see how, under this new basis, surrender value will be calculated and allowed. Where surrender of a policy results in a saving of a policy claim, which would otherwise have been payable on maturity, the total amount saved is the amount of policy claim *plus* the amount of expenditure on the policy for various items, like renewal commission, premium notices, receipts, etc., which would not be incurred in future. On the other hand, the insurer has lost the annual net premiums, which he would have received from the policyholder till the maturity of the policy, *plus* the compound interest thereon at the average rate, which it would have earned. The insurer should wait till the actual death of the policyholder or till the end of the endowment period, whichever event takes place earlier, to know as to when the policy amount would have been payable and for what period more the expenses on the policy would have been incurred, if the policy were not surrendered. By deducting what the insurer would have received in total from what he would have paid and incurred in total, we get the net saving to the insurer, on account of the surrender, calculated at the time when the policy would have otherwise matured. At this time, the net saving so made may be paid as surrender value to the beneficiaries of the policyholder or the policyholder himself, as the case may be. In order to distinguish this from the present 'surrender value,' this may be called the 'surrender allowance.'

Thus, the insurer will pay less in respect of those surrendered policies whose holders live long after surrender and more in respect of those whose holders die soon after surrender. Thus, there would be a check on the more healthy persons from surrendering their policies. It is, of course, assumed here that the insurer will continue the practice of not allowing any further bonus additions after the surrender of the policy. This will be a healthy development in life insurance.

(*Continued on page 967*)

"In liquidation of a life insurance company, at any one point of time, an equitable distribution of the reserve could probably be made only on the basis of the condition of health of each member of the group. This is an actual impossibility. But the equitable nature of such distribution illustrates that any effort to allocate a part of the aggregate reserve to individuals on a *pro rata* basis is neither equitable nor logical. The reserve from its inception is designed to guarantee a group undertaking and it is computed on that basis. Allocating the reserve to the individual policyholders would be a fallacious procedure. ... So far as there is any ownership of the reserve it is a group ownership. It is a group fund set up to guarantee the performance of individual contracts. It has no other purpose."

P.F. MOULDING POWDER DEPROTECTED

MARKED INCREASE IN CAPACITY AND OUTPUT

THE phenol formaldehyde moulding powder sector of plastics industry will cease to enjoy tariff protection from next year. The Government of India has taken this decision in pursuance of the recommendation made by the Tariff Commission, following an enquiry into the progress of, and prospects for, the industry in August last. According to the Commission, there is no case for continuance of protection to the industry as it has come of age and has stabilised its position. The industry has made rapid strides in improving its position by expansion of capacity and output, and diversification of the product. Further, the cost of production of the moulding powder compares more or less favourably with imported products. Besides, the quality of domestic products has also improved considerably. What is more, indigenous sources of essential raw materials, such as phenol, formaldehyde and hexamine are being developed fast; this is bound to remove the major difficulty of the industry, that is, the dependence on imports for essential raw materials.

The p.f. moulding powder, it may be noted, has been in the protected list for the last twelve years. Besides the latest enquiry, it had been the subject of four previous tariff enquiries, that is, in 1949, 1953, 1956 and 1959. The industry was granted protection, for the first time, in 1950 by the levy of protective duty at 30 per cent *ad valorem* on p.f. moulding powder and electrical accessories. Buttons (made of dum nut, mother-of-pearl, metals and plastics) were brought within the scheme of protection in 1951. But protection on buttons made of dum nut, mother of pearl and metals was withdrawn in 1954. Electrical accessories were also deprotected in 1957. Following an enquiry in 1959, plastics buttons were also removed from the protected list, with p.f. moulding powder alone in the field, for which protection was granted for three years ending 31st December 1962 at the rate of duty of 35 per cent. *ad valorem*. By the Finance Act 1961, an excise duty of 20 per cent *ad valorem* was levied on plastics moulding powders, granules and flakes, with an equivalent countervailing duty on imports.

Capacity and Production

There are six units engaged in the manufacture of p.f. moulding powder at present, with an aggregate annual capacity of 2,195 tonnes on a single shift basis. It may be recalled here that, at the time of the previous enquiry in 1959, the number of units was only four, with a total capacity of 1,524 tonnes. It is now six. The following table shows the unit-wise annual rated capacity of the industry on a single-shift basis.

	(In tonnes) 1959	1962
The Industrial Plastics Corporation Ltd., Bombay ...	762	825
Indian Plastics Ltd., Bombay	305	300
Rawji Amarsi, Satara ...	152	480
Saurashtra Electrical and Metal Industries Private Ltd., Sihor	305	300
Plastic Powders Private Ltd.	—	90
Hyderabad Laminated Products Ltd.	—	200
Total ...	1,524	2,195

The actual production of moulding powder in India rose from 1,880 tonnes in 1959 to 2,244 tonnes in 1961. During the first six months of 1962, production aggregated 1,154 tonnes, representing an annual rate of 2,300 tonnes. As much as about 65 per cent of the output is in the G.P. grade. Next in importance is the G.X. grade. The production of other grades, such as telephones, radio cabinets, etc., has also gone up recently, but still forms only a small proportion of the total output. The following table shows the grade-wise production of p.f. moulding powders since 1959:

(In tonnes)

Grades	1959	1960	1961	1962 Jan.-June
G.P.	1,236	1,452	1,450	714
G.X.	539	559	525	241
Telephone	59	88	83	29
Radio Cabinet	25	85	143	129
Others	30	35	43	41
Total ...	1,880	2,219	2,247	1,154

Production was supplemented by small amounts of imports, which amounted to 385 tonnes in 1961, as compared 482 tonnes in 1960 and 331 tonnes in 1959. On the basis of domestic output and imports, the Commission places the total demand for p.f. moulding powders at 3,000 tonnes and expects it to go up to 3,500 tonnes next year, 4,000 tonnes in 1964 and 5,000 tonnes in 1965. The demand for p.f. moulding powder from chemicals, rayon and textile industries is expected to increase considerably. Account has also been taken of the possibility of substitution of p.f. moulding powder by other plastics like urea formaldehyde moulding powder, polythene, polystyrene, etc. The Commission is of the opinion that the present capacity of the industry (2,195 tonnes on single-shift basis) is adequate to meet the demand, in the foreseeable future, provided the industry is enabled to work multiple shifts. Viewed against this background, the plea made by the All-India Plastics Manufacturers' Association that no new unit should be licensed in this sector, (unless the existing factories are able to work to their full capacity) is quite pertinent. It may be noted here that the Indian Plastics Ltd. has already a plan to double its capacity during the next five years. The Plastics Powders Private Ltd. also proposes to double its capacity.

Raw Materials

Most of the units will be able to work more than one shift, if adequate raw materials are made available. The three main raw materials for the manufacture of p.f. moulding powder, namely, phenol, formaldehyde and hexamine, continue to be imported. In respect of formaldehyde, however, the Atul Drug House Private Ltd., Bombay, has put up a plant at Kandla, with a capacity of 7,200 tonnes annually. This plant commenced production in July last and has already supplied formaldehyde to consumers. It is said to be capable of providing 10,000 to 12,000 tonnes of formaldehyde from next year, if only the Government gives import licence for sufficient methanol, an important raw material. The Allied Resins and Chemicals Private Ltd., Calcutta, has also been licensed for a formaldehyde unit with a capacity of 6,000 tonnes. This unit is scheduled to go into production next month and will make available annually about 1,500 tonnes of formaldehyde during the next three years.

Schemes for the manufacture of phenol are also under way. Licences for the production of phenol have been issued to three firms, namely, Durgapur Projects Ltd., Durgapur (a West Bengal Government undertaking), Herdillia Chemicals Ltd., Bombay, and Hindustan Organic Chemicals Ltd., Bombay (a Government of India undertaking), for capacities of 6,600 tonnes, 10,000 tonnes and 3,000 tonnes, respectively, aggregating to 19,600 tonnes per annum. The last among these is expected to commence production in March 1964 and the quantity estimated to be available for sale is 1,000 tonnes in 1964 and 1,250 tonnes in 1965, but all this quantity will not be available to manufacturers of p.f. moulding powder. The second (Herdillia Chemicals) proposes to commence production in January 1965 when it expects to make about 2,000 tonnes of phenol available for the p.f. moulding powder industry. The other unit (Durgapur Projects Ltd.) is likely to come into operation by the end of 1964.

The manufacture of hexamine has also been undertaken by the Atul Drug House Private Ltd., from September last. Its plant has a capacity of 300 tonnes per year and proposes to make available to the p.f. moulding industry 60 tonnes before the end of this year and subsequently 200 tonnes annually for the next three years. The Calcutta firm, the Allied Resins, has also been licensed for a hexamine plant, with a capacity of 300 tonnes each year.

'BEHAR' the dependable name in FIRECLAY & SILICA Refractories

For over 35 years "BEHAR" REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other industries in the country.

Phone: 22-5952
22-3101
Gram: "BANCO"

The BEHAR FIREBRICKS & POTTERIES LTD
22, STRAND ROAD, CALCUTTA-1.

This plant is expected to be commissioned in August or September next. When all these schemes are implemented, the industry will have no difficulty in securing raw materials from indigenous sources.

Apart from the aforesaid three chemicals, certain other materials like carbon black, meta cresol, dyes, small quantity of wood pulp and pigments which are used in the manufacture of p.f. moulding powder are also imported. Some dyes and pigments, such as lake red 'C,' phthalocyanine blue and toluidine, which were previously imported, are now indigenously available. Most of the other raw materials, namely, mineral acids stearates, mica, wood flour, are also available in the country. There are no complaints about these raw materials, except in the case of wood flour used as the filling material. Manufacturers of p.f. moulding powder have been founding it difficult to get wood flour of proper consistency, grade and colour. The problem, however, is being investigated jointly by the manufacturers and the Forest Research Institute.

Quality

Despite the difficulties in securing raw materials, the industry has been able to show considerable improvement the quality of its products. The Indian Standards Institution has published specifications for the G.P. grade of p.f. moulding powder. Most of the units appear to have installed necessary testing equipments for quality control and secured (or applied for) the I.S.I. certification marks. The I.S.I. is said to be engaged in the preparation of specifications for the G.X. grade also, which, according to producers, are made now to conform to British Standard Specifications.

Manufacturers of electrical accessories, however, have complained that the quality of G.X. grade powder has not been uniform. The Commission has drawn the attention of producers to this complaint and urged them improve the quality of the G.X. grade to suit the requirements of consumers.

Fair Ex-works Price

Apart from the general improvement in quality, the cost of production has also been maintained at a level more or less comparable to that of imported products. The Commission has worked out the ex-factory prices of domestic products, on the basis of cost studies of two representative units, namely, the Indian Plastics Corporation Ltd. and the Indian Plastics Ltd. While estimating the fair ex-works costs, the Commission has worked out the prices of raw materials on the basis of latest purchases, and, in the case of imported products, on the basis of landed costs at which they have been obtained by the companies. It has also taken into account the possibility of higher prices for domestic formaldehyde, as compared with the imported product. As regards conversion charges, suitable adjustments have been made for prices of stores items, increase in wages and salaries due to normal annual increments. Provisions have also been made for expenses on account of staff and equipments for quality control and payment of royalty or technical fees to foreign associates in terms of collaboration agreements. Depreciation has been calculated at normal income-tax rates on the written-down values of the assets. A return of 10 per cent has been allowed on the employed capital. The element of working capital has been assessed as equivalent to five months' cost of production.

On the aforesaid basis, the fair ex-works price of the G.P. grade is Rs. 1.935 per kg. in the case of the Indian Plastics Corporation and Rs. 2.093 in the case of Indian Plastics. The corresponding prices for the G.X. grade are Rs. 2.031 and Rs. 2.644, respectively. As against this, the landed cost (without duty) of the imported product G.P. grade is Rs. 2.009 and of the G.X. grade Rs. 2.050. On an average, therefore, the duty required to equate fair ex-works price of indigenous moulding powder to landed cost (ex-duty) is no more than 0.25 per cent *ad valorem* for G.P. grade and 14.2 per cent *ad valorem* for G.X. grade. In fact, if one takes the Industrial Plastics Corporation alone, one finds that the ex-works price of G.P. grade is lower by 3.7 per cent and G.X. grade by 0.9 per cent, as compared with the imported products. The satisfactory cost structure of the industry and the good progress it has made in recent years, surely support the Commission's decision to deprotect the industry.

MORE PROFIT FOR MORARJEE GOCULDAS

RUNNING MILL TAKEN OVER

A FURTHER rise in gross profit from Rs. 61.35 lakhs to Rs. 73.43 lakhs, despite a small setback in net sale proceeds (that is, excluding claims permitted and excise duty paid) from Rs. 497.63 lakhs to Rs. 461.28 lakhs, has been reported by the Morarjee Goculdas Spinning and Weaving Company Ltd. [Managing Agents: Messrs. Piramal Sons (Private) Ltd., Bombay] for the year ended 30th June 1962. The year under report is the fifth successive year of higher profit for the Company, as way back in 1956-57 profit had declined to Rs. 21.91 lakhs from Rs. 39.72 lakhs in the immediately preceding year. One will have to await the annual statement of Mr. Gopikisan Piramal, Chairman of the Company, to know exactly what contributed to a further rise in profit for the year under report, especially when sales as such were lower. For the Directors have, as usual, been silent on the issue and only expressed the hope that the results for the year would be found satisfactory. Apparently, the management has been successful in improving the efficiency of the Company's mills. It may be noted here that, over the past few years, the Company has been systematically modernising and expanding the works and is still keenly proceeding with it.

The year under report, for instance, saw further additions to plant and machinery of an aggregate value of Rs. 51.25 lakhs. Further orders for new machinery worth Rs. 60 lakhs were also placed last year. The Company had received in 1960-61 sanction for installation of 22,800 spindles for balancing purposes, out of which 3,392 were received and installed last year and the balance were on order. Besides, the Company has recently been sanctioned additional spindleage of 12,817 and has placed necessary orders for the same. Out of the 384 automatic looms the Company has been permitted to install, 54 have been received and installed, 262 are under erection and the balance of 68 will be received and erected during the current year. All these additions will bring the Company's spindleage to 156,581 and loomage to 2,982 units. There is nothing to wonder, therefore, about the recent period of prosperity for the Company which has legitimately enough been characterised by increasing popularity of the Morarjee fabrics.

Although sales declined, production during the year must have been higher, as costs rose further and the closing stocks were larger by nearly 100 per cent. The prime allocations have been stepped up further, and the provision for taxation has been raised by almost Rs. 10 lakhs to Rs. 26 lakhs. In fact, the increase in essential provisions has wiped off all the improvement in gross profit. For the net profit, at Rs. 24.67 lakhs, is almost the same as in the previous year. Out of this, a sum of Rs. 11.60 lakhs, as against Rs. 10 lakhs a year before, has been ploughed back to reserves. The dividend on the Rs. 100 fully paid ordinary shares has been maintained at 24 per cent per annum, subject to tax. The carry forward is Rs. 1.09 lakh, as against Rs. 1.55 lakh brought in.

A clear idea of the Company's progress in the past four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sale proceeds, less excise ..	461.28	497.63	394.00	372.48

Low	388.00	309.00	250.00	217.00

* Subject to deduction of tax.

An important development for the Company occurred after the close of last year, when it took over the running textile unit of the B.R. Cotton Mills Ltd. in Bombay for Rs. 98 lakhs. The Company acquired both fixed and current assets. Since the acquisition on 22nd October last, the unit, which is equipped with 49,312 spindles and 1,021 looms and also has a dye-house, is being run by the Company as its Mill No. 2.

Perhaps the shareholders had all the justification in expecting yet another modest increase in the dividend close in succession to the 2.5 per cent rise granted in 1960-61. But then, they are about to get one bonus share for every three shares held by them by capitalisation of Rs. 17.25 lakhs from the reserve fund, if only the Controller of Capital Issues sanctions the proposal. Further, the Company proposes to issue 34,500 new equity shares at par or at premium, whichever way the Government may prescribe, and offer them as right shares to the existing shareholders in the proportion of two new shares for every three shares held by them. Had there been any increase in dividend for the year under report, it is very likely that it would not have been maintained in future, at least in full, on the proposed higher capital following the bonus and right issues. The additional capital is being raised to correct the already unbalanced capital structure of the Company, especially when it is estimated that the gross block will rise to over Rs. 600 lakhs by 30th June 1964.

The authorised capital of the Company is proposed to be raised from Rs. 69 lakhs, divided into 51,750 ordinary shares of Rs. 100 each and 17,250 4.5 per cent cumulative preference shares, also of Rs. 100 each, to Rs. 120.75 lakhs by creating 51,750 new ordinary shares of Rs. 100 each. As noted above, all the 51,750 new ordinary shares are proposed to be issued immediately, once the Government's sanction is obtained. The present paid-up capital of Rs. 69 lakhs, of which Rs. 51.75 lakhs are in ordinary shares, is more than fully covered by reserves and surplus aggregating Rs. 73.21 lakhs as at 30th June 1962. During the year, borrowings rose sharply from a mere Rs. 2.50 lakhs to as much as Rs. 77.01 lakhs, the bulk of which represented bank loans. Inclusive of current liabilities and provisions which aggregate Rs. 115.78 lakhs (Rs. 75.16 lakhs a year before), the total indebtedness to outsiders increased over the year by Rs. 115.13 lakhs to Rs. 192.79 lakhs. But it is fully met by current assets, loans and advances, as also investments, standing at Rs. 203.70 lakhs. The gross block expanded during 1961-62 from Rs. 325.39 lakhs to Rs. 377.87 lakhs. It has been written down adequately to Rs. 131.30 lakhs.

Currently quoted at Rs. 468 *cum-div.*, the Rs. 100 fully paid ordinary shares of the Company offer a net yield of 3.7 per cent per annum.

HINDUSTAN SHIPYARD

The Central-Government-owned Hindustan Shipyard (Chairman: Dr. Nagendra Singh, New Delhi) just scraped through during the year ended 31st March 1962 largely because of a 24-day labour strike in the Shipyard during August-September 1961. Because of the strike, total production of the Shipyard, inclusive of ship construction, ship repairs and capital and other works executed departmentally, declined from Rs. 465.80 lakhs to Rs. 461.43 lakhs. Sales realisation showed, however, an improvement from Rs. 182.03 lakhs to Rs. 297.70 lakhs. But the gross profit suffered a small setback from Rs. 24.26 lakhs to Rs. 23.01 lakhs even after taking into account a higher estimated subsidy from the Government of Rs. 86.57 lakhs, as against Rs. 53.64 lakhs a year before. Cost of materials consumed came down from Rs. 313.98 lakhs to Rs. 295.96 lakhs and staff expenses at Rs. 96.80 lakhs were also slightly lower as compared with Rs. 97.07 lakhs in 1960-61, but other manufacturing expenses increased from Rs. 30.45 lakhs to Rs. 42.31 lakhs. After providing Rs. 22.77 lakhs (Rs. 23.62 lakhs a year before) for depreciation, net profit amounts to a mere Rs. 24,418, as against Rs. 63,783 in 1960-61. The profit is adjusted against the carried forward debit balance of Rs. 8.49 lakhs, and the remainder of the debit balance amounting to Rs. 8.25 lakhs has been carried forward.

Apart from the mild setback in production owing to the strike, the material-labour ratio also shrank during the year from 7.90 : 1 to 7.84 : 1. The Chairman of the Company, Dr. Nagendra Singh, observes, in his statement, that, but for the unfortunate general strike, there would have been a significant improvement in the progress of the Shipyard during the year. The tonnage of steel fabricated in the hull shop in June 1962 touched a record figure of 1,025. Provided balanced production is possible by ensuring a full order book and the steel requirements of the Shipyard are fully met, the Chairman hopes, the Shipyard can soon reach a target of 1,500 tons a month of fabricated steel.

Production of steel hull during 1961-62 amounted to 8,587 tons fabricated and 7,575 tons erected, as against 8,745 tons fabricated and 6,898 tons erected in 1960-61 and 7,606 tons and 8,770 tons respectively in 1959-60. The supply position of steel for the new Mitsubishi vessels from indigenous sources was not satisfactory during the year under report. Consequently, steps were taken to import directly 4,600 tons of steel. Such imports will be necessary, until the indigenous plants are in a position to meet the Shipyard's requirements in full. However, during the year, greater reliance was placed on indigenous substitutes. Thus, the amount of steel secured indigenously increased over the year from Rs. 26.84 lakhs to Rs. 67.02 lakhs and so did that of machinery from Rs. 0.27 lakh to Rs. 3 lakhs, of stores from Rs. 49.02 lakhs to Rs. 51.70 lakhs and of timber from Rs. 1.75 lakh to Rs. 10.94 lakhs. At the same time, however, decline in imports was noted only in steel from Rs. 147.98 lakhs to Rs. 34.75 lakhs, for imports of machinery increased from Rs. 57.10 lakhs to Rs. 145.48 lakhs as did those of stores from Rs. 27.39 lakhs to Rs. 50.70 lakhs and of timber from nil to Rs. 0.55 lakh.

During the year under report, the Shipyard launched four vessels, namely, VC 147 m.v. *State of Punjab*, VC 149 m.v. *Vishva Shanti*, VC 150 m.v. *Vishva Prem* and VGC 11 Steel Hopper barge and completed and delivered to the owners VC 148 m.v. *State of Rajasthan*, VC 146 m.v. *Vishva Nidhi* and VGC 11 Steel Hopper barge. In the previous year, four vessels were launched and six vessels were completed and delivered to the owners. During 1961-62, keels were laid for three vessels, as against seven in 1960-61.

According to Dr. Nagendra Singh, the Shipyard's present orders amounting to 1.15 lakh G.R.T. constitute a record. The order book is thus satisfactory, but further orders will be necessary from the second half of 1964, when the first vacancy of berth after launching the last ship on order is expected to occur. The Chairman is optimistic of obtaining more orders in the intervening period itself, especially from the Government Shipping Corporation which has continued to feed the Shipyard with orders. Of the three Lubeck series of ships which were launched during the year, two, we are told, have since been delivered and the third is expected to be delivered by the end of this year. Since the close of the year, two ships have been launched and keels laid for two more ships. Construction of repeat vessels has facilitated economic execution of work achieved by improved planning and organisation and to the satisfaction of the owners. In this conection, it may be noted that the Shipyard has won the Presidential award of Certificate of Honour for satisfactory performance during 1960-61.

With the commissioning of the galvanising plant and extension of the outfit jetty, the first two phases of the Shipyard's development programme are said to have been fully implemented. However, the travelling crane which is on order for the extended portion of the jetty, is expected to be installed and commissioned in the near future. As regards future development works, out of the provision of Rs. 244 lakhs made in the third Plan, only a part programme, consisting of a few essential items of machinery and equipment for the shops and some items of welfare amenities like housing, etc., has been approved by the Government at an estimated cost of Rs. 73.44 lakhs. The rest of the programme to be taken up during the third Plan is still under examination. The Government's approval has been obtained for the revival of the graving dock project, although foreign exchange for it yet remains to be found.

The Government advanced to the Shipyard during the year Rs. 8.73 lakhs (Rs. 19.55 lakhs in 1960-61) for financing the approved programme of yard development. This sum has been converted, as in the previous year, into share capital by the issue and allotment of 873 ordinary shares of Rs. 1,000 each in favour of the President of India. During the year, shares worth Rs. 1.04 crore held by Scindia Steam Navigation Company Ltd. were repatriated. The paid-up capital at the year-end of Rs. 578.50 lakhs is thus owned wholly by the Government. The Company has yet to build up any reserves. Over the year, secured loans have gone up from Rs. 529.18 lakhs to Rs. 615.90 lakhs, while unsecured loans have come down from Rs. 254.43 lakhs to Rs. 159.83 lakhs. Current liabilities and provisions aggregate Rs. 107.01 lakhs. As against all this, current assets, loans and advances total Rs. 11.21 crores. The gross block, which expanded during the year from Rs. 481.61 lakhs to Rs. 493.85 lakhs, has been written down to Rs. 329.33 lakhs.

Notice

THE INDO-BURMA PETROLEUM COMPANY, LIMITED

Registered Office:
Gillander House, Netaji Subhas Road, Calcutta-1

NOTICE IS HEREBY GIVEN THAT THE Preference Register of Members of the Company will be closed from the 17th December 1962 to 2nd January 1963, both days inclusive, for payment of the dividend for the half-year ending 31st December 1962, on the 2nd January 1963, at the rate of Rs. 2.914 per share (being the stipulated dividend of Rs. 3.50 per share increased by 11 per cent to Rs. 3.885 less Rs. 0.971 being Income Tax at the present Company's rate of 25 per cent) subject to tax being deducted therefrom in accordance with the provision of Section 194 of the Income Tax Act 1961.

By Order of the Board,
STEEL BROTHERS AND COMPANY LIMITED,
Managing Agents.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA-1.
22nd November, 1962.

I.I.S.CO.'S RESULTS

PRODUCTION IN 1961-62 SLIGHTLY HIGHER

"DURING the year, an increase in the sales retention prices of pig iron was notified by Government, having effect retrospectively as from 1st April 1958. The trading results shown for the year under review are accordingly exceptional and unrepeatable inasmuch as they include not only this latter increase in respect of the period 1st April 1958 to 31st March 1960 but also the additional retrospective income arising from the higher retention prices for both steel and iron in respect of the year ended 31st March 1961, the income relating to previous years amounting in total to Rs. 2,28,51,875." It is against this frank and forthright background presented by the Directors of the Indian Iron and Steel Company, Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) that one should view the Company's performance during the year ended 31st March 1962. In other words, the Company's results for 1961-62 are not comparable with those for the previous years or for the coming years. This important qualification should be borne in mind while reading the analysis of the Company's statement of accounts for 1961-62 in the paragraphs that follow. If nevertheless a comparison has been made it is for the purposes of record and reference for the reader.

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959

Note:—One long ton = 1.016 metric tonne.

The Company has no doubt fared well during the year under review. There has been a further sizable increase in sale proceeds (excluding surcharge, rebates and excise duty) of Rs. 245.70 lakhs to Rs. 60.41 crores, as also in gross profit of Rs. 256.80 lakhs to Rs. 12.84 crores. The profit-margin (ratio of gross profit to net sales), which had just crept up from 17.4 per cent to 17.7 per cent in the previous year, has bulged out to 21.2 per cent during the year under report.

Provision for depreciation, at Rs. 333.25 lakhs (Rs. 296.47 lakhs a year before), has been computed again on the 'straight line' basis. The virtual completion of the 1953 and 1955 extensions is reflected in the large reduction in the amount set aside for development rebate reserves from Rs. 166.57 lakhs to Rs. 21.57 lakhs. And, with the reduction in the rebate available, the rise in profit and the enhancement of the rate of corporate taxation by five points to 50 per cent, the provision for taxation has gone up substantially from Rs. 166 lakhs to Rs. 395.50 lakhs. At Rs. 30 lakhs, the Managing Agents' commission is more or less the same as in the previous year.

Net profit, before making the allocation to development rebate reserve, is, however, slightly lower at Rs. 523.28 lakhs as compared with Rs. 533.81 lakhs a year before because of the higher provisions for depreciation and taxation. Out of this, apart from the transfer to development rebate reserve, a sum of Rs. 300 lakhs (Rs. 326.15 lakhs a year before) has been ploughed back to reserves. It is already known that the dividend on the Rs. 10 fully paid ordinary shares has been maintained at 16 per cent per annum, subject to tax, and that half of it was declared earlier as interim because of the delay on the part of the Government in announcing the revised retention prices for steel and pig iron. The carry forward is Rs. 24.72 lakhs as against Rs. 16.42 lakhs brought in.

Production showed an all-round small improvement last year. Despatches of pig iron and saleable steel also showed some further improvement. The actual figures of output and despatches for the past four years are given in the table in column 1 which also compares the progress made by the Company in that period on the financial side.

We are told that considerable progress has been made in the acquisition of the extensive areas of surface lands required for the development of the Company's coal-bearing property at Chasnalla, which is being undertaken under financial assistance from the World Bank by way of a further loan to the extent of $19.5 million to cover the foreign exchange element of the total development cost. Tenders have been called for all major works so that on clearance of the land position it will be possible to place contracts and to proceed with the programme without delay. The project for the manufacture of spun iron pipes and specials in collaboration with Messrs. Stanton and Staveley Ltd. of England is proceeding satisfactorily. Pending the Government approval of the project, it is proposed to incorporate in the near future the operating company, namely, the I.I.S.Co. Stanton Pipe and Foundry Company Ltd., which will be a subsidiary of the I.I.S.Co. The factory will be at Ujjain, Madhya Pradesh.

The financial position of the Company as at the end of the year under report is satisfactory. The Company has a paid-up capital of Rs. 15.14 crores, of which Rs. 12.44 crores (including Rs. 5.74 crores for a consideration other than cash) are in ordinary shares and the rest in preference shares of Rs. 100 each. As against this, reserves and surplus aggregate Rs. 27.50 crores and cover twice the equity capital. Secured loans from the I.B.R.D. and the Central Government were reduced during the year from Rs. 26.33 crores to Rs. 23.32 crores. Then there is an unsecured loan of Rs. 10.18 crores, representing a special advance from the Government, which is unchanged over the year. Current liabilities and provisions aggregate Rs. 21.79 crores, as against Rs. 19.39 crores a year before, and are fully met by current assets, loans and advances standing at Rs. 31.77 crores. Investments and instruments deposited by customers amount to Rs. 90.67 lakhs. A sum of Rs. 111.65 lakhs is shown by way of investment realisation account, representing the book value of the Company's former holding of 11 lakh ordinary shares in the Steel Corporation of Bengal Ltd., suspended pending the ascertainment of the net sale price in terms of the relative sale agreement. The gross value of the block account increased during the year from Rs. 81.17 crores to Rs. 83.45 crores. The net block, excluding capital work-in-progress of Rs. 117.82 lakhs but including live stock and vehicles of Rs. 25.34 lakhs, is shown at Rs. 62.67 crores.

Currently, the Rs. 10 fully paid ordinary shares of the Company are quoted at Rs. 22.96 *cum-div.*, both interim and final. On the *ex-div.* basis, they offer a net yield of 5.1 per cent per annum.

T. MANEKLAL'S PERFORMANCE ENCOURAGING

Ever since they started their official career on the Bombay Stock Exchange, the ordinary shares of T. Maneklal Manufacturing Company Ltd. (Managing Agents: Messrs. T. Maneklal & Co., Bombay) have been drawing persistent investment inquiries. The popularity of the scrip is well reflected in its price which has, during the past three years, fluctuated within a very wide range depicting thereby the keen interest evinced in it by investors and speculators alike. The reasons for this continued attention to the scrips have been two, the growth potential of the Company itself and the possibility of getting right issues to finance expansions.

The results achieved by the Company during the year ended 31st May 1962, fully reflect its growth character. Thanks to an all-round improvement in the working, total sales for the year have expanded from Rs. 82.61 lakhs to Rs. 112.10 lakhs, registering a rise of no less than Rs. 29.49 lakhs over the preceding year. It is, however, in respect of the gross profit that the Company has reported the most encouraging improvement. For, notwithstanding an increase of Rs. 4.65 lakhs to Rs. 17.32 lakhs in salaries, wages and employee benefits and a rise of Rs. 5.70 lakhs to Rs. 17.31 lakhs in other expenses, the gross profit has gone up by Rs. 9.44 lakhs to Rs. 27.33 lakhs. The rate of improvement thus works out to 52.8 per cent which compares favourably with the rise of 35.7 per cent in turnover. A higher gross profit has naturally meant an increase in the provision for the Managing Agents' commission and taxation. The former has accordingly been stepped up from Rs. 1.45 lakh to Rs. 2.16 lakhs and the latter has been nearly doubled from Rs. 5.96 lakhs to Rs. 11.33 lakhs. The steady increase in the depreciable block has also necessitated a higher provision for depreciation of Rs. 3.60 lakhs in place of Rs. 2.74 lakhs a year ago. A large portion of the gross profit has thus been neutralised by the very much bigger essential provisions, leaving a sum of Rs. 10.24 lakhs as the net profit for the year under review which, nevertheless compares favourably with the level of Rs. 7.74 lakhs recorded during the preceding year. Of the net profit for the year under review, Rs. 4.45 lakhs as against Rs. 4.11 lakhs have been credited to various reserves and the balance has been utilised for covering the ordinary dividend at 27 per cent per annum, subject to deduction of tax, the same as for the previous year. Although the rate of dividend has remained unchanged, a full year's dividend has become payable on the new equity shares issued during the preceding year on which only a *pro-rata* dividend was paid in respect of that year. The actual distribution has, therefore, gone up from Rs. 3.76 lakhs to Rs. 5.37 lakhs, leaving Rs. 0.46 lakh to be carried forward as against Rs. 0.04 lakh brought in.

The rapid strides made by the Company during the past four years are well revealed by the following comparative figures:

(In lakhs of rupees)

	For the year ended 31st May			
	1962	1961	1960	1959

Low	575.00	300.00	140.00	N.A.

Note:—All dividends are subject to deduction of tax.
N.A.—Not available.

No change took place during the year under review in the paid-up share capital of the Company which stands at Rs. 19.88 lakhs in 19,883 ordinary shares of Rs. 100 each fully paid, but a sum of Rs. 3.88 lakhs is standing to the credit of equity shares application account. Reserves and surplus aggregate Rs. 13.20 lakhs. Current liabilities and provisions total Rs. 89.04 lakhs, while the outstanding amount of loans, has dwindled to Rs. 7.347 only. During the year, the Company acquired new assets worth Rs. 11.84 lakhs bringing the block account up to Rs. 41.07 lakhs. On deducting therefrom Rs. 14.21 lakhs being depreciation provided so far, the net block works out to Rs. 26.86 lakhs. Besides this, capital work-in-progress as at the end of the year is valued at Rs. 9.90 lakhs. Investments at book value, current assets and loans and advances all amount to Rs. 88.82 lakhs, that is, a few thousands below the total of short-term liabilities.

During the earlier years, the Company had entered into three collaboration agreements with the Swiss Locomotive and Machine Works of Switzerland for the manufacture of diesel engines, water ring pumps and Roots blowers, and compressors, vacuum pumps and exhausters. At the time these agreements were entered into, it was the intention of the foreign collaborators to participate in the equity capital of the Company. But, as the Company could not issue additional shares at par to them, and the collaborators did not wish to pay any premium on the new shares, the collaborators suggested the formation of a new company with the main object to manufacture the aforesaid products. Accordingly, a company named SLM-Maneklal Industries Ltd. was formed during the year under review. Thanks to the efforts made by the Directors almost all the shareholders of the Company were able to get shares of the new Company proportionate to their holdings in the Company and the Company itself has been able to get 4,000 equity shares of Rs. 100 each.

Prior to signing the technical collaboration agreement with the Swiss firm, the Company had obtained three licences for the manufacture of products referred to earlier. One of these, the one for the manufacture of diesel engines, has not so far been utilised at all and has, therefore, been transferred to SLM-Maneklal Industries Ltd. Of the other two licences, one covering the manufacture of water ring pumps and Roots blowers and partly utilised by the Company, has also been transferred to the new company, while the third will also be similarly transferred, since SLM-Maneklal would be in a better position to combine the business of water ring pumps with that of manufacturing vacuum pumps, etc., in view of the capital resources at its command and the technical know-how it will be receiving from the foreign collaborators. Since both these licences are already being utilised by the Company to some extent and as the proposed transfer, though in the interests of the shareholders, may be regarded as a disposal of the Company's undertakings in respect of the manufacture of the items above referred to, it is considered desirable by the Directors to seek the consent of the shareholders for the proposed arrangement at the forthcoming annual general meeting. They, however, report that till such time as SLM-Maneklal make their own arrangements for the production of the items involved, the Company would continue their manufacture in its existing factory as has been done hitherto. As these licences apply to the State of Maharashtra, sanction for their transfer to Gujarat is being sought from the authorities concerned.

At present the Rs. 100 fully paid ordinary shares of the Company are being quoted, on a *cum-div.* basis, at Rs. 605. The net return on an *ex-div.* basis works out to over 3.2 per cent per annum.

PREMIER AUTOMOBILES

PROFIT-MARGIN SHRINKS

DUE to a fall in the demand for trucks and further restricted output of passenger cars caused by foreign exchange difficulties, the Premier Automobiles Ltd. (Managing Agents: Messrs. Aero-Auto Ltd., Bombay) has suffered a moderate set-back during the year ended 30th June, 1962 and has accordingly reported a lower realisation of Rs. 21.48 crores from the sale of cars, trucks, spare parts, etc. as compared with Rs. 22.74 crores during the preceding year. Unfortunately, the decline in turnover has been followed, on the expenses side by a sudden rise in overhead charges, particularly in the wage bill, which has risen by as much as Rs. 43.85 lakhs to Rs. 286.49 lakhs partly owing to the annual increments given to employees and partly to the inclusion of an amount of Rs. 15.08 lakhs paid as bonus for the year 1959-60. Other expenses, which had considerably expanded during the previous year owing to a larger trading activity, have also increased further by Rs. 27.35 lakhs as a result of the rise in the technical fees payable to Fiat S.P.A. in accordance with the new agreement which came into force on 1st July 1961, a higher incidence of expenditure on advertising and the payment of a sum of Rs. 3.00 lakhs to a local manufacturer of Meadows diesel engines in terms of the agreement reached with them. Thus caught between a declining turnover on the one side and rising expenses on the other, the profit-margin has been badly squeezed and the Company has realised a much reduced gross profit of Rs. 163.68 lakhs, as against Rs. 193.86 lakhs for 1960-61.

In view of the lower gross profit, the provision for Managing Agents' commission has been brought down from Rs. 8.83 lakhs to Rs. 6.76 lakhs, but the saving has been more than fully neutralised by the increase of Rs. 4.23 lakhs to Rs. 60.37 lakhs in the provision for depreciation. Moreover, owing to the rise in the rate of corporate taxation, the provision for taxation has gone down quite disproportionately to the fall in profit, the exact decline being only Rs. 6.00 lakhs and the actual provision Rs. 49.00 lakhs. The net profit has, therefore, fallen by Rs. 26.05 lakhs or 36 per cent to Rs. 47.54 lakhs, the lowest level to be reached since 1958-59. Out of this, Rs. 5.07 lakhs have been utilised towards writing off the expenses relating to prior years and Rs. 8.00 lakhs, as against Rs. 23.00 lakhs last year, have been credited to the reserves. Despite this drastic cut in the ploughback of profit, the Directors have found the resulting balance too inadequate to warrant the maintenance of the dividend paid in respect of the previous three years. As a result, they have been compelled to recommend a dividend of only 7 per cent, subject to deduction of tax, as against 9 per cent, subject to deduction of tax, the rate for the preceding three years. This absorbs Rs. 39.32 lakhs, leaving Rs. 1.84 lakh as a carry forward as against Rs. 4.76 lakhs brought in.

The working results of the Company for the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sale proceeds	21,47.62	22,73.87	20,94.88	17,42.80

Market price of ordinary shares (In rupees):	1962	1961	1960	1959
High	160.00	185.00	191.50	116.50
Low	92.00	151.00	136.00	79.50

All dividends are subject to deduction of tax.

During the year under review, the Company issued a further 47,000 "A" equity shares of Rs. 100 each with Rs. 20 on it paid up. Moreover 1,59,803 shares of Rs. 100 each were allotted to the holders of debenture bonds on conversion. As a result, the issued and paid-up share capital of the Company as at 30th June 1962 has increased to Rs. 574.17 lakhs from Rs. 557.51 lakhs a year before. This is reported by Rs. 140.99 lakhs in reserves and surplus. A sum of Rs. 25.61 lakhs had been received by the end of June 1962 on account of 1,87,237 new equity shares issued during April last at a premium of Rs. 10 per share. With full conversion into equities, the debenture loan account has been completely liquidated but other loans have expanded from Rs. 386.39 lakhs to Rs. 523.46 lakhs. Besides, current liabilities and provisions aggregate Rs. 340.78 lakhs, as against Rs. 346.07 lakhs a year before.

Additions to the block account during the year was of the order of Rs. 95.23 lakhs of which Rs. 53.80 lakhs represent the cost of new plant and machinery, Rs. 16.41 lakhs the cost of buildings newly erected and Rs. 16.00 lakhs the value of dies and jigs purchased during the course of the year. As a result, the gross block has gone up to Rs. 746.73 lakhs and on deducting therefrom Rs. 379.14 lakhs being the depreciation provided todate, there is a net block of Rs. 367.59 lakhs. Book value of investments, mainly in subsidiary companies, stand unchanged at Rs. 3.42 lakhs. Current assets, loans and advances all amount to Rs. 12.34 crores.

Satisfactory progress was maintained by the Company in the manufacture of parts and components. This will be evident from the following extracts from the Directors' report to the shareholders:

"Premier manufactured transmissions are now being used in Fiat cars since October 1961. As for the axles for Fiat cars, the manufacture of major items like rear hubs, ring gears, pinions, axle shafts, axle casings has been taken in hand. Machining has also been started of further items like front hubs, carriers and caps. The assembly of rear axles for Fiat cars has commenced from March 1962. As for trucks, with the commencement of the production of the front and rear axles, the proportion of indigenous content has gone up to 17.84 per cent. . . . The production of Meadows diesel engines has begun. As the Company could not procure from the Automobile Products of India all the machine tools required for the production of these engines, an application for the required licences was made to the Government. These have now been received and orders for machinery have been placed. The full production capacity will be achieved as soon as new machines are received and installed. An agreement between the Company and Henry Meadows Ltd., England, has now been finalised. Under this agreement, the Company is granted exclusive right and licence to manufacture and sell within India Meadows diesel engines and the components thereof. The agreement is for a period of five years and will continue for a further period of five years, unless terminated by either party by giving six months' prior notice."

As regards the Company's sheet metal component project, the Directors report that the acquisition of land admeasuring about 300 acres by the Government for the Company could not be completed owing to technical and legal difficulties. Negotiations are, however, in progress for the purchase of another suitable site and 251 acres of land has already been possessed of. Of these, 99 acres have been taken possession of. As for the required machinery, orders for the value of 6.5 million dollars have been placed in the U.S. The necessary import licences have been procured and the machinery is expected to arrive shortly.

Consequent on the materialisation of a right issue as anticipated, the sharp drop in profits and the pruning of dividend, not to say anything of the deterioration in the market sentiment, the price of Rs. 100 fully paid share of the Company has slumped heavily and currently stands at Rs. 101.00 *cum-div.* On an *ex-div.* basis, the net yield works out to about 5.2 per cent per annum.

Notice

AIR INDIA LIMITED

(In Voluntary Liquidation)

THE ANNUAL GENERAL MEETING OF this Company will be held in the Board Room, 4th Floor, Bombay House, Bruce Street, Fort, Bombay, on Friday, 21st December 1962, at 4.30 p.m., and not on 6th December 1962 as previously notified, when in accordance with the provisions of Section 496 of the Companies Act, an account of the acts and dealings of the Liquidators and of the conduct of the winding-up for the year ended 30th September 1962 will be laid before the Meeting together with the prescribed form of statement with respect to the proceedings in and the position of the Liquidation.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

AIR INDIA LIMTED,
(In Voluntary Liquidation)

By Order of the Liquidators,

K. C. BAKHLE,
A Liquidator.

ESPLANADE MANSION,
FULLER ROAD,

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 15,000 transferred from general reserve and Rs. 12,500 from reserve for additional dividend on preference shares.

Extracts from the Directors' report: *Sales*: It is encouraging to report that the ethical preparations for which the Company launched sales promotion drives only about three years back have received tremendous support of the medical profession and the Company's 'Speciality' sales increased about 25 per cent over the last year. The sales force is now being increased to ensure that the production capacity is fully absorbed. The Company's distribution services have been further improved for better coverage and two branches have been opened at Raipur and Bombay.

Production and Research: Production was handicapped through the non-availability of raw materials and at times idle capacity occurred. Planning arrangements have now been developed to overcome these problems.

During the year a number of the Company's products were improved and new products were introduced. Other new products proposals are awaiting Government approval.

Diversification in the field of chemicals has so far resulted in the establishing of a *Caffeine* plant and production is expected to commence from December 1962. Eight other projects are lying with the Government of India for licence to manufacture and it is hoped to commence production within six months of receipt of the licences.

Excise Duty: Central Excise duty was introduced in March 1961. Immediately thereafter there were heavy sales of stocks manufactured prior thereto with a corresponding decline in sales in July and August, 1961—the first two months of the financial year under review. A reduction in the rate but the application of duty to all pharmaceuticals savs certain "life saving" drugs e.g. Anti-Tubercular, Anti-Leprosy further hampered business. Whilst it is certain that Government Revenues have been increased by this duty far more than was ever anticipated it is hoped that the levy will be transferred to less essential items as the rising costs of materials plus this duty are placing prices at too high a level.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	25,00,000	Gross block	29,10,632
Reserves and surplus	17,00,052	—Depreciation	17,39,548

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items like provisions no longer required, etc.

* This includes Rs. 2,00,000 transferred from general reserve.

† Includes Rs. 1,00,000 being provision for taxation no longer required and Rs. 14,000 being development rebate reserve in respect of machinery sold written back.

‡ Preference dividend is calculated at 9 1 per cent. according ot Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: During the year hours of work and the number of looms sealed varied from time to time in accordance with the recommendations of the Indian Jute Mills Association under terms of the working time agreement. By utilisation of accumulated loom hours at credit of, and purchase of current and accumulated loom hours by the Company an average of 320 looms were worked per week double shift upto 9th September, 1961, and from then onwards an average of 350 looms per week double shift.

Power cuts upset the working arrangements from February to 28th May, 1962, a ter which date a revised working schedule was introduced, whereby power was available for six working days, and in the case of the Company's Mills Wednesday was declared the weekly non-working day as from 30th May, 1962.

Since the last report, modernisation of the preparing/spinning and weaving sections have been partially completed. A broad loom division commenced partial operation during January, 1962. This Company was in a position to hire 60 looms and ancillary equipment from Mills within the McLeod Group and also hire premises for their installation from Waverley Jute Mills Co. Ltd. This arrangement is suitable to all the Companies concerned. It is intended to increase this installation to approximately 200 looms. During the present financial year, it is expected that approximately 120 looms will be in operation and at the date of this report. 72 Looms are at present working on treble shift basis. Further modernisation and additional machinery is required for this project and in order to finance the installation a short-term loan of Rs. 100 lakhs is being negotiated with the State Bank of India. The directors consider that this division will add considerably to the Company's profit potential.

Although as indicated in the last report, the Mill worked profitably during the latter part of the year it was not possible to completely offset the losses incurred earlier, and it has been necessary to transfer from reserves to meet a reduced ordinary dividend. Present prospects are favourable.

The raw jute crop has suffered considerable damage due to flooding and quality fibre is likely to be in short supply at the end of the season although with the carryover of 25 lakh bales from the previous season there will be ample raw material supply for the current season, it is essential that the quality outturn and increased yields are obtained throughout the jute growing areas in order that India is in a competitive position with other jute growing countries.

Accounts in brief as at 31st May 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	38,00,000	Gross block	3,67,55,274

Extracts from the Directors' report: The Mills remained closed during the period covered by this Report and the loom hours were again sold to other Mills within the McLeod Group.

Godowns and part of the main mill building have remained under lease to the Food Department, Government of India, for storage of Foodgrains, and the sale of loom hours and rent of storage space have been a profitable source of revenue.

Towards the end of 1961, the remaining part of the main mill building was leased to Kelvin Jute Co., Ltd. for the installation of broad looms and some ancillary machinery and this will be a further source of income once the terms of the lease, etc. have been finalised.

Accounts in brief as at 31st May 1962 are as under:—

Interim dividend paid (taxable) ordinary	41	41
	(10%)	(10%)
Proposed final dividend (taxable) ordinary	41	61
	(10%)	(15%)
Total dividend % for the year	[20%]	[25%]
Carry forward	40	35

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: In view of the possible imposition of super-tax under the Mysore Agricultural Income-tax Act on the profits of the Company for the year ended 30th June 1961 the Company may be required to pay additional tax the liability for which will be Rs. 24,253. As no provision has been made in the accounts for such a payment the Directors propose to meet this possible liability from the balance of Rs. 40,202 to be carried forward to next year's account.

Crop and Costs:—A total crop of 114.586 metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Rs. 2.30 (Rs. 2.00) per point or Rs. 3.295 (Rs. 2.772) per metric tonne. A comparative statement of production and costs for the previous 2 years is given below:

Year	Crop (metric tonnes)	Estate expenditure per metric tonne	All-in-cost per metric tonne
		Rs.	Rs.
1959-60	99.155	2.395	2.883
1960-61	169.852	1.590	1.874
1961-62	114.586	2.277	2.657

The 1960-61 season's crop has been revalued at Rs. 2 per point being the final figure declared by the Coffee Board for that season and this is equivalent to Rs. 2.948 per metric tonne when compared with the valuation of Rs. 1.90 per point or Rs. 2.772 per metric tonne adopted last year. The 1962-63 crop has been estimated at 127 metric tonnes and all-in-cost of production at Rs. 2,452 per metric tonne.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs
Capital*	4,08,560	Gross block	3,62,452
Reserves and surplus	2,65,202	—Depreciation	1,10,429

	(10%)	
Carry forward	12	72

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

* This dividend is on a paid-up capital of Rs.16,47,350.

Extracts from the Directors' report: The sales during the year amounted to Rs. 85,98.255 (including Rs. 8,98,952 representing income from repairs and services) against Rs. 61,76.180 in the previous year, that is, an increase of 39.2 per cent over the previous year.

Accounts in brief as at 30th April 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	16,47,350	Gross block	10,78,716
Reserves and surplus	1,80,046	—Depreciation	99,668
Other liabilities	59,04,878	Net block	9,79,048
		Current assets	64,46,583
		Investments	81,848
		Cash	1,43,657
		Miscellaneous expenditure	90,138
	Rs. 77,41,274		Rs. 77,41,274

* Paid-up capital consists of:—(*a*) 79,470 equity shares of Rs. 10 each fully paid up and (*b*) 1,70,530 equity shares of Rs. 10 each—of which Rs. 5 per share has been called and paid up. After the date of this report a further amount of Rs. 2.50 per share, has been called up, making the above shares Rs. 7.50 paid up.

Kothari Sugars and Chemicals Ltd., Madras

(*Chairman*: Mr. A. D. Shroff; *Managing Agents*: Kothari & Sons, Madras.)

Annual General Meeting—14th December, 1962.

Extracts from the Directors' report: The accounts for the year ended 30th June 1962 show a loss of Rs. 1,01,520 (loss of Rs. 8,756 for 1961) after providing Rs. 30,417 (Rs. 13,000 for last year) for Managing Agents' remuneration and Rs. 22,933 (Rs. 3,739 for 1961) for depreciation. This loss is carried forward to next year.

Capital Expenditure: The total expenses incurred on various items such as lands, buildings, machinery and plant up-to-date amount to Rs. 110 lakhs approximately.

Factory Buildings: The following have been completed: (1) Mill house, boiling house, (2) stores and workshop building, (3) sugar godown and (4) sulphur and lime stores.

Machinery: 95 per cent of the machinery and plant has been received so far. The boilers for the factory, which were expected from Texmaco in November 1961, actually were received in May 1962 and hence it was not possible to complete the erection of the machinery as expected by May 1962.

Supply of Sugarcane: From January 1963, the Company shall be receiving regular supplies of sugarcane, which has been registered by it. It is expected to crush not less than a lakh of tonnes during the period January-May, 1963.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	79,01,500	Gross block	1,09,09,807

	(8%)	(10%)
Carry forward	3,762	12,832

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes £16,602 being profit on realisation of investments.

Extracts from the Directors' report: In respect of 21,422 shares of B.O.C. (1954) Ltd. of 100 Kyats each held by the Company a final dividend for 1961 amounting to K. 34,725 (£2,604) after deduction of Burmese Tax was received after 31st March 1962.

The situation in Burma is static. There is an apprehension that the Burmese Government who hold 51 per cent of the shares, may nationalise the Company. There is also an apprehension that the Oil lines available to the Company may run dry, and the Burmese Government has under consideration a scheme of expansion.

In May 1961 South Africa became a Republic and its currency was changed from Pound Sterling to Rands. Strict Exchange Control was also enforced in that country. In these circumstances the Directors became apprehensive regarding the outstanding unsecured loan stock of £328,500 and the redeemable participating preference shares of £420 of British Burma Petroleum Co. (South Africa) (Proprietary) Ltd. and negotiations were carried on through Mr. A. P. Faickney to explore the possibility of realising the said securities.

In response to Mr. Faickney's invitation Mr. Tricumdas went to London in May 1962 and on 14th May 1962 an agreement was arrived at that the Company should receive in London £312,495 (equivalent to Rs. 41,66.600) in exchange for and in full settlement and satisfaction of the said unsecured loan stock and the redeemable participating preference shares.

The Company then applied to the Reserve Bank of India, Exchange Control Department, Bombay, for permission to send the relative certificates to London for being exchanged with the said sum of £312,495. Such permission having been granted the Certificates were sent and handed over to the Company's Trustees Philip Hill Higginson Erlangers Ltd. and they acknowledged that they held the sum of £312.495 at the disposal of the Company. The Company has since £2,580 from the British Burmah Petroleum Co. (South Africa) (Proprietary) Ltd., as preference dividend for the period 1st April to 13th May 1962 on which the Company is liable to pay South African Tax at the rate of 7½ per cent amounting to £193-10-0.

Accounts in brief as at 31st March 1962 are as under:—

NEWS IN BRIEF

THE total effective arrears of income-tax outstanding as on 1st April 1962 amounted to Rs. 149.42 crores.

Soviet Russia has placed an order for the purchase of 1.8 million metres of printed cotton textiles, worth about Rs. 25 lakhs, from India.

The Tariff Commission has completed its report on the price structure of cotton textiles and is expected to submit it to the Government of India shortly.

The international telex service with Japan and Philippines is now available between 10.30 a.m. and 2.30 p.m. (I.S.T.) during week-days instead of 10.30 a.m. and 1.30 p.m. as hitherto.

Prices of woollen cloth produced in India have gone up by 15 to 25 per cent in recent months, as compared with the last season, according to Mr. Manubhai Shah, Union Minister for International Trade.

The General Tyres Ltd., Calcutta, has been granted a licence for the establishment of a motor tyre manufacturing plant, with an annual capacity of 180,000 tyres and tubes. The Company has secured the collaboration of Techno-export of Czechoslovakia for the project.

A corporation is proposed to be set up by the Government of India to look after the development of fisheries and exports of marine products. It will devote its attention to improve the technique of processing and canning of fish and its products. By improving quality, India, it is said, will be able to step up its exports of frozen and canned prawns to the U.S., Canada and Western Europe.

The Government of Orissa has cancelled its order, announced earlier this month, under the Defence of India rules fixing wholesale prices of rice and paddy in the State. It is said that, after the original order was announced, cultivators have been offered very low prices for paddy by traders. The cancellation of the order is, therefore, intended to help farmers get due benefits, without which the production drive may be dampened.

India's exports aggregated Rs. 59.23 crores in October, which compare favourably with Rs. 54.91 crores in the previous month. Imports, however, declined by Rs. 20.91 crores to Rs. 67.74 crores. During the first seven months of the financial year 1962-63, exports were higher by just Rs. 5.63 crores at Rs. 385.43 crores, as compared with the corresponding period in 1961-62. Imports were lower by Rs. 31.01 crores to Rs. 59.56 crores. Consequently, the adverse balance of trade narrowed down by Rs. 36.64 crores to Rs. 205.13 crores during April-October 1962.

Four Price Vigilance Zonal Committees have been constituted by the Federation of Indian Chambers of Commerce and Industry to keep a watch on the price line, suggest ways and means to hold the price line, improve retail sale methods wherever necessary, and guide production to meet both the defence needs and civil requirements of essential commodities. These committees will function from Bombay, Calcutta, Delhi and Madras and will cover the States concerned in the respective regions. Similar committees at the State and District levels are also being set up. The Federation has already advised its constituents and the industries and business houses about the necessity of price-stamping and price-tagging in respect of as many essential commodities as possible. They have also been advised that the advertisement of prices should be resorted to in appropriate cases.

The Union Government has accepted the recommendations of the Central Wage Board for Coffee Plantations regarding interim increase in wages. The interim award, which comes into force with retrospective effect from 10th August 1962, covers about 82,000 workers in the coffee plantations in the South—61,000 in Mysore, 14,000 in Madras and 7,000 in Kerala. In Mysore, male workers will get an increase of 3 nP per day and women, adolescents and children 2 nP each. The rise in wages varies from 3 nP to 13 nP in Madras State and from 4 nP to 10 nP in Kerala, depending on the size of plantation and category of workers (male, female and child). The clerical employees (office, medical, education and field staff) will get an increase of Rs. 9 per month in gardens of 300 acres and above and Rs. 7.50 per month in gardens of less than 300 acres.

The Union Home Ministry has proposed to the Union Public Service Commission to undertake bulk recruitment to posts requiring qualifications in metallurgy, chemistry, medicine, and mechanical, electrical and civil engineering. All Ministries have been requested to communicate to the Commission immediately their one-year requirement under specified categories. The Directorate of Manpower of the Home Ministry will also consolidate the needs of various Ministries and pass them on to the Commission. Meanwhile, the Manpower Directorate is forwarding lists of engineers and technologists in the National Register of the Council of Scientific and Industrial Research to the Commission to meet emergent needs. The lists are of those persons who are looking for employment, who are abroad or who are under consideration for selection to the Scientists' Pool as well as retired persons below the age of 60.

From Abroad

Japan and Soviet Russia have signed an agreement under which 75 Japanese firms will stage an exhibition at Moscow in July next.

Kenya has decided to sign the International Coffee Agreement (drafted in August last) under which export quotas would be set up for coffee-growing countries.

A Canadian wheat mission is currently negotiating in Hongkong with representatives of the Chinese foreign trade organisation, China Resources, for a new wheat deal. It proposes to sell about 40 million bushels of Canadian wheat, at a cost of about $60 million, to Communist China.

West Germany and South Korea have initialled an agreement on the mutual protection of investments in Bonn. The agreement is to be signed in Seoul soon. South Korea will receive also a West German Government credit of DM 35 million for the expansion of Korean telephones.

West Germany produced 1,957,495 motor vehicles in the first ten months of this year, or 8.9 per cent more than in the same period in 1961. A total of 901,655 automobiles were exported in the period under review, which shows an increase of about 6 per cent over January-October 1962.

The nineteenth session of the International Chamber of Commerce will be held in Mexico from 20th to 27th April 1963. The session, which will be attended by about 2,000 delegates, will consider problems relating to "economic growth through world inter-dependence."

The Canadian Government has agreed to grant a fifteen-year loan of about $6.35 million to Pakistan to finance the expansion of a newsprint mill at Khulna in East Pakistan. This is the first loan which Canada has given to any Asian country under the scheme for the Federal financing of capital goods, introduced two years ago.

An Israeli trade mission has started negotiations with Common Market countries for some trade agreement which will safeguard Israel's exports to the Six. About half of Israel's exports goes to the Common Market and the U.K., Lebanon, Iran and Syria are also expected to approach the Common Market countries for safeguarding their trade interests in the Community.

The U.K. will pay £46 10d. per long ton of sugar to be bought, under the terms of the Commonwealth Sugar Agreement, in 1963. The price was agreed at a series of meetings between the parties to the Agreement this month. It is 5s. 7d. above the 1962 negotiated price of £45 15s. 3d. The parties also fixed negotiated price quotas for 1963 at 5 per cent above basic quotas, compared with 4½ per cent last year.

Soviet Russia has decided to establish a new central body for economic planning called the Council of the National Economy of the U.S.S.R. (Super Sovnarkhoz). This body will assume most of the tasks of "Gosplan," the former planning body, and will have wide powers to implement its decisions. Gosplan, however, will continue to exist, but will now deal with only long-term planning.

The U.N. General Assembly has authorised an expenditure of $6.4 million from the U.N. regular budget for technical assistance in 1963. The regular budget programme, which is in effect a compulsory levy on member-States, is exclusive of the expanded programme of technical assistance for which voluntary pledges for 1963 amount to $50 million. Both schemes provide technicians and study fellowships.

PERSONAL

ADMIRAL Ramdass Katari, a former Chief of Naval Staff, has been appointed Chairman of the Andhra Pradesh Road Transport Corporation.

Mr. Jagannath Rao, Union Deputy Minister for Works and Housing, has been appointed Deputy Minister in the Ministry of Economic and Defence Co-ordination.

Mr. K. B. Lall, India's Ambassador to the European Economic Community, has arrived in New Delhi for consultations with officials on policy matters relating to the E.C.M.

Mr. Luther H. Hodges, Secretary of Commerce of the U.S., arrived in New Delhi on Wednesday this week to hold talks with representatives of the Government of India on trade matters of mutual interest.

Mr. Alfred Krupp Von Bohlen, head of the Krupps industrial combine in West Germany, has arrived in India to attend the visit of President Luebke to the Rourkela steel plant, as well as to explore the possibilities of further expanding Krupp's interests in India. Dr. Hans Reuter and Mr. Joseph Schueller, Chairman and Vice-President, respectively, of the Demag group of companies, have also arrived in Rourkela.

COMMERCE, 1ST DECEMBER 1962

CALL RATE 2 PER CENT

(From Our Own Correspondent)

BOMBAY, *28th November*

The short-term money market continues to be easy, although nearly a month has passed since the usual busy season began. The demand for funds from trade and industry has been slack, as crop movements have been slow and merchants are not anxious to hold stocks owing to uncertain political conditions. Further, following the Reserve Bank's exhortation, the banks have had to reduce their clean loans and advances against bullion, besides being cautious in lending against foodgrains and other necessaries of life in order to discourage hoarding by speculators. As a result, the banks have been experiencing an increase in their lendable resources. Even at the beginning of the week, there was a surfeit of surplus funds and the inter-bank call money rate declined further by ¼ per cent to 2 per cent and stayed at that level almost throughout the week. But today, though the rate was unchanged at 2 per cent, the demand-supply position was well balanced with practically no money left. This was due to conservation and collection of funds today for subscription to the 4½ per cent Bombay Municipal loan for an aggregate sum of Rs. 5.15 crores, the list for which is due to open tomorrow (Thursday the 29th November). The loan is being offered at par and is repayable twelve years later, that is, on 29th November 1974. The subscription list will be closed on 1st December or earlier.

The money market at Calcutta too continued to rule easy during the week under review. The call rate fell further to as low as 1½ per cent on Saturday last and remained at that level during the rest of the week. Today, however, some lenders were reported to be trying to secure 1¾ per cent.

There was no change in the amount (Rs. 2 crores) invited against tenders for Government of India's 91-day Treasury Bills sold on Tuesday this week. The amount offered and accepted was also unchanged at Rs. 2 crores. The average rate of tenders accepted, however, was lower again at 2.345 per cent, as against 2.350 per cent a week before and 2.360 per cent two weeks before. The Intermediate Treasury Bills, which were on tap from the 21st to 24th inst., fetched a significantly large sum of Rs. 577.50 lakhs, the corresponding amounts a week and two weeks before being Rs. 162.50 lakhs and Rs. 16.50 lakhs, respectively.

The foreign assets of India improved slightly by Rs. 92 lakhs to Rs. 94.14 crores during the week ended 23rd November 1962. The whole of this improvement was accounted for by balances held abroad aggregating Rs. 6.06 crores, while foreign securities held in the Issue Department continued unaltered at Rs. 88.08 crores. There was no change in gold coin and bullion which together amounted to Rs. 117.76 crores, although the subscription list for the 6½ per cent gold bonds opened eleven days earlier, that is, on 12th November. Notes in circulation were lower by Rs. 9.35 crores at Rs. 2,067.90 crores. Loans and advances by the Reserve Bank to scheduled banks receded by Rs. 80 lakhs to Rs. 1.68 crore.

The volume of credit made available by the scheduled banks to their clients receded by Rs. 22.15 crores during the week ended 16th November 1962, the total outstanding amount standing at Rs. 1,367.84 crores. The deposits of banks also declined by Rs. 1.16 crore to Rs. 2,182.95 crores and inter-bank borrowings were lower by Rs. 1.91 crore at Rs. 35.53 crores.

The Gilt-edged market was devoid of any development. Activity was on a small scale and values moved within narrow limits.

The banks' selling rate for spot U.S. dollars continued to remain unchanged at Rs. 477.75 per $100, but their buying rate was lower by 25 nP at Rs. 474.25. In New York, the pound sterling was distinctly firm *vis-a-vis* the dollar throughout the week, though the actual rates today were lower than those during the major part of the week. The latest available spot and three months' forward rates are 280.250-280.280 cents and 279.950-279.980 cents respectively, the corresponding rates last week being 280.220-280.240 cents and 279.830-279.850 cents.

ACTIVE TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *26th November*

The Madras kips market was active this week on several U.K. inquiries and good inland demand. Towards the close of the week, however, importers were disinclined to follow the Madras quotations. Buffcalf and cowcalf remained firm. Trading was patchy. But the tone was firm.

In the skins section, there was good demand for run selection in all weights, except lights, and prices recorded an advance of 3d. per pound. Tanned sheep skins of middle class ruled firm, but the better classes remained unchanged. The tanned skins public sales in Germany commenced today. In all, 93,200 goat skins and 33,700 sheep skins were to be available for sale. For the London public auctions next week, 40,000 goat skins and 100,000 sheep skins have been catalogued for sale.

LINSEEDS DECLINE

(Messrs. A. Bradley and Co.)

CALCUTTA, *26th November*

The linseeds market here was easy this week. Prices declined further and the undertone was quiet. Owing to the war situation, millers were cautious and operated on a very small scale. The oil market was quiet in sympathy with seeds. Prices declined in the absence of buyers. Only small business was reported during the week for ready goods. The oilcake market was dull and prices declined a bit, although stocks were low. The latest quotation for the November delivery was Rs. 79 per quintal.

SMALL RALLY IN BULLION

(From Our Own Correspondent)

BOMBAY, *28th November*

After a further perceptible fall in values till Saturday last, a small but brisk rally developed in the bullion market this week. The market opened on Thursday last on a distinctly weak note with sizable overnight losses and continued to sag further to touch yet new low levels in the current downward trend on Saturday 24th November, on persistent selling and virtual lack of support. Lowsr spot advices, especially in silver due to a marked increase in arrivals against poor offtake, and fears of curbs on dealings in ready gold influenced the sentiment in the first half of the week. But Monday saw a definite change in the market sentiment following the emergence of two favourable factors, namely, the F.M.C.'s agreeing on that day to permit trading in silver *Fagun* (the next three-monthly futures contract after the current *Margashir*) from Wednesday the 28th inst., under the existing *ex-parte* special margin at the rate of Rs. 300 per bar on long positions above Rs. 215, with a free limit of 650 bars, and the conspicuous revival of demand for spot gold mainly from middle-class people.

The F.M.C.'s sanction for trading in the new silver futures contract, with *status quo* in regard to the terms of margin, was interpreted by marketmen to mean that there was no threat, at least for the time being, to the continuance of forward trading in the white metal. It may be noted here that following the ban on futures trading in gold, market circles had begun to suspect that forward trading in silver might also be suspended by the Government.

Spot dealers reported a fairly good demand for ready gold, the bulk of which, according to them, was from a large number of people with limited resources. The demand from this class of people was said to have picked up in view of the sharp fall in the price of gold. Traders contend that such demand is likely to be prolonged and, in the process, will push up the price. If the Government means business, therefore, it should lose no time in announcing the proposed fresh series of curbs which, as the Finance Minister pointed out last week, is expected to bring down the price to around Rs. 70 and restrict any large-scale purchases.

Ready gold, which had closed a week ago at Rs. 97.25, opened on Thursday last at Rs. 95 and fell in the next two days to Rs. 86. Thereafter, it recovered in stages to Rs. 94.50 today, before closing at Rs. 93.75. Against the average daily arrivals of about 4,000 tolas, offtake was estimated at 3,500 tolas.

As noted before, silver rallied under the influence of the F.M.C.'s sanction for trading in the new contracts which induced considerable short-covering and even some fresh buying. However, the rally was irregular, as higher levels continued to encounter scattered selling. Nonetheless, till the close, a greater part of the improvement was retained, though the prices still disclosed moderate losses over the week and underlined that the undertone was only quietly steady.

Silver *Margashir* commenced at Rs. 199.25 against last Wednesday's close of Rs. 204.10 and, after looking up to Rs. 202.10, slumped to Rs. 193.10 on Friday 22nd November, and attracted a special margin for having declined by more than Rs. 5 from the previous clearing rate. On Saturday, the contract fell further to Rs. 191.80, and again a special clearing rate was ordered. On Monday 26th November, however, it opened higher at Rs. 193.40 and improved to Rs. 197.90. On the subsequent two days, it fluctuated between Rs. 194.60 and Rs. 196.80 and finished at Rs. 196.25. Silver *Fagun* commenced today with a contango of Rs. 2.20 at Rs. 198.45 and in narrow movements closed at Rs. 199. Ready silver commenced at Rs. 195.25, against last Wednesday's close of Rs. 200.60, slumped heavily to Rs. 187.80 by Saturday, 24th November, rallied to Rs. 193.90 on Monday and to Rs. 194 today, before closing at Rs. 193.75. Against the daily average arrivals of 50 bars, offtake measured up only to 10 bars.

Speaking to pressmen at Bangalore on Monday 26th November, Mr. S. Nijalingappa, Mysore's Chief Minister, announced that the State Government-owned Kolar gold mines would be taken over by the Union Government on 1st December 1962.

Trading in the London and New York markets was dull this week. Prices moved in a narrow range and showed minor changes over the week. The movements and the net changes over the week can be made out from the table which follows. The dollar price of gold closed today in London at $35.08, as against $35.08¼ a week ago.

The following table shows the trend of prices during the week under review:

	28-11-62 (closing)	High	Low	21-11-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	93.75	96.00	86.00	97.25
Sovereign	75.00	78.00	72.00	77.00
SILVER				
Ready (.996 fine) ..	193.75	198.10	187.80	200.60
Margashir † ..	196 25	202.10	191.80	204.10
Fagun	199.00	199.20	197.90	
London—				
Gold	250s.3½d.	250s.5d.	250s.3½d.	250s.4½d.
Silver Ready	102d.	102d.	102d.	101½d.
Silver Forward ..	102½d.	102½d.	102½d.	102½d.
New York—				
Silver	118.00 cents	118.00 cents	118.00 cents	118.00 cents

* 11th December settlement. † 12th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *28th November*

The cotton futures market ruled distinctly easy during the week under review. The easiness was due mainly to two factors: first, the ban on forward trading in *kapas* (unginned cotton) announced on the 26th inst. Second, the signing on the same day of an agreement between India and the U.S. under which India will receive 375,000 bales (of 400 lbs. each) of cotton. Although both these developments were not altogether unexpected, they brought about a distinct change in market sentiment. The ban of forward trading in *kapas*, which is done only at certain places and that too on a limited scale, was interpreted as a clear indication of the Government's determination to hold the price in cotton. It was feared that, should there be any undue rise in price of cotton, the authorities would not hesitate even to prohibit futures trading in cotton. Operators were therefore extremely reluctant to go 'long.' The certainty of getting more U.S. cotton and expectation of a good crop of 5.4 million bales, as compared with 4.7 million bales last season, gave a bearish twist to the market. Cotton futures sharply receded on heavy speculative selling and lack of support. The Jarilia March 1963 contract slumped from the last week-end rate of Rs. 716.75 to Rs. 694.75 today, the lowest level touched so far. Short-covering and some fresh buying attracted by the low rates induced a recovery and the contract closed higher at Rs. 696.75. The net loss over the week is Rs. 20.

In the spot section, activity was limited. The ban on forward trading in *kapas* caused considerable nervousness among traders. Heavy arrival of new crop and the accumulation of unsold stocks with mills also prompted mill buyers to defer purchases. Nevertheless, needy mills bought popular varieties such as 197/3, L.147, Khandesh, Berar, etc. Prices of all varieties, except 197/3, were ruling below the ceiling.

The Textile Commissioner has relaxed the restrictions on the movement of L.147 and Co2 cotton grown in the districts of Nasik, Jalgaon and Dhulia. These cottons could be moved out of these areas provided the cotton sought to be moved is certified as such by the Textile Commissioner.

There was a revival in export demand for Bengal *Deshi*. Japan showed considerably interest in choice quality Bengal *Deshi*. Consequently, prices of Bengal *Deshi* rose. Export sales registered against the last quota aggregated 25,541 bales, as on 15th November 1962.

Spinners' interest in foreign cotton was centred round Egyptian, Sudan, American and Pakistan cotton. According to the latest agreement, India will get 375,000 bales (400 lbs. gross each) of long-staple cotton from the United States. The cotton, valued at Rs. 22.19 crores, will reach India in a month's time so that mills in this country can accelerate production to meet the immediate defence needs. The agreement, which was signed by Mr. L. K. Jha, Secretary of the Union Finance Ministry and Prof. John Galbraith, American Ambassador, is in addition to the one concluded by these two countries in May this year. Under the earlier agreement, U.S. supplied India 180,000 bales of cotton.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal (Fine) 679; Khamgaon 1,025; Co2 1,600; Pakistan N.T. 940; American on sample 1,260; Sudan G4S 1,480.

Firm conditions prevailed in the Karachi cotton futures market during the week. The reduction, with effect from 23rd November, of the export duty on staple cotton from Rs. 75 per bale to Rs. 25 per bale (the rate of duty on *Deshi* cotton remains unchanged at Rs. 25 per bale) and renewed export demand induced large-scale buying which resulted in a rally in prices, N.T.R.G. January firmed up from Rs. 67.05 to Rs. 71.20 and the March contract from Rs. 68.20 to Rs. 71.80. The 1962-63 Pakistan cotton crop is estimated at 1,475,000 bales (of 500 lbs. gross), an increase of about 25,000 bales over last year's crop. Growing conditions have been satisfactory with adequate moisture and relatively light insect and disease damage.

Conditions in the Liverpool cotton futures market remained practically unchanged from last week. Values of both the American and American type contracts ruled steady in featureless trading. Sudan contracts were neglected. The spot section reported better activity. Fairly good spinner demand was noted for a wide selection of cotton, notably American, South Brazilian, Brazilian, Mexican, Argentine and Peruvian.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December 23.90; March 23.70; May 23.05.

American cotton mixed growth contract: December 24.25.

Sudan: November, January, March 29.75.

Cotton futures in New York recorded modest gains during the week. Scattered commission house buying and some short-covering led to a small improvement in prices. Turnover was, however, limited as operators were evidently inclined the await developments in connection with the proposed new cotton legislation. The December contract was quoted at 33.93 cents per lb., as against 33.83 cents last week-end, the March contract at 34.12 cents, as against 34.08 cents and the May contract at 34.20 cents as against 34.12 cents last week-end.

STAPLE FIBRE YARN WEAK

(From Our Own Correspondent)

BOMBAY, *28th November*

Staple fibre yarn continued to rule weak for want of buying support. After moving irregularly, the 40/2 December contract closed Rs. 22 lower at Rs. 657 and the February contract finished at Rs. 679, as against Rs. 704 a week ago. Spot staple fibre yarn prices drifted downward, with Centurys declining from Rs. 7.35 to Rs. 7.26 and Kohinoors from Rs. 8.12 to Rs. 7.83 a kilo.

However, art silk yarn, on the other hand, generally showed a modest recovery induced by short-covering following the special measures adopted by the Board of the Bombay Yarn Merchants Association and Exchange Ltd. last week to avert a serious crisis faced by the Exchange members and brokers. Thus, S.I. Viscose 150D improved from Rs. 11.81 to Rs. 12.10 and so did 120D from Rs. 13.46 to Rs. 14.52. Century 75D staged a brisk recovery from Rs. 19.80 to Rs. 21.78. However, N.R.C. 150D slipped down from Rs. 11.55 to Rs. 10.87.

Among cotton yarns, 10s Podar eased from Rs. 18.62 to Rs. 18.44 and 60s Finlay from Rs. 70.62 to Rs. 70.37. Otherwise, trading in this section was dull and featureless.

In his memorandum to the Forward Markets Commission, Mr. Kantilal Nahalchand, President of the Exchange, has warned that any discontinuance of forward trading in staple fibre yarn would have severe repurcussions on the yarn market. According to him, ban on futures at this juncture, when there is panic in all other markets, will shatter the morale of the yarn market. Reiterating that futures trading in yarn endangered the interests of no one associated with it, Mr. Nahalchand has given the assurance of immediate steps to check any alarming situation in the trade.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	28-11-1962	21-11-1962
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12 91	12 91
Century 75D	21 78	19 80
S. I. Viscose 150D	12.10	11.81
Staple fibre yarn (40 × 2)—		
December (,,)	657.00	679.00
February	679.00	704.00
Kohinoor (per kg.)	7.26	8 12
Century	7.83	7.35
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.44	18.62
22s Century	24.50	24.50
30s Bradbury	27.00	27.00
40s Hind	34.75	34 75
60s Finlay	70 37	70.62
80s Kasturi	77.50	77.50

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

PLAINEST TEA ADVANCES

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *22nd November*

About 666,000 kgs. were offered in sale No. 46 held on Tuesday the 20th inst. Quality was about maintained. There was good general demand. The better Nilgiri brokens met more support than in recent weeks but were generally barely steady, although a few selected lines were dearer. The lesser kinds sold well and were fully firm to dearer. Fannings in this category also showed a firm to dearer trend. Good medium descriptions were well supported, selling at fully firm and sometimes dearer rates. Medium and low medium types appreciated by 10 to 20 nP. Plainest kinds met keen competition and advanced considerably in price. Black leaf descriptions also shared in the upward trend of the market. Whole leaf grades were keenly sought after and were quoted dearer. Unorthodox sorts showed no changes in price.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	4.45-5.00	3.20-3.90
Mediums	5.00-5.30	3.90-4.20
Good mediums	5.35-6.10	4.30-5.30
Nilgiri B.O.P.	5.75-7.90	5.00-7.70

The average price realised in sale No. 46 was Rs. 5.13 per kilo, as against Rs. 5.03 a week ago and Rs. 4.14 in the corresponding sale last year.

A total of 284,000 kgs. was offered in dust sale No. 46 held today. There was good general demand. All mediums were well supported and sold at about last rates, whilst Wynaad descriptions met keen competition and were often dearer.

Nilgiri dusts were irregular but generally steady. Teas of unorthodox manufacture sold well but were often easier. Residuals were a strong feature and advanced in price.

The average price realised in dust sale No. 46 was Rs. 4.64 per kilo as compared with Rs. 4.58 a week ago and Rs. 3.78 in the corresponding sale last year.

Colombo: The market opened with highgrown and Uva medium brokens 5 to 10 cents dearer up to about 2.20 cents a lb.—over this level prices were irregular but a dearer tendency prevailed. All B.O.P. fannings were strong and low growns were 3/5 cents dearer.

London: North Indian and other growths: In Monday's auction there was strong demand and prices for most descriptions advanced irregularly 1*d.* to 4*d.* Plain broken pekoes is now quoted at 3*s.* 6*d.*

Ceylon and South Indians: In Tuesday's auction, there was very good demand and prices advanced for all descriptions.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 47: 681,000 kgs. offered. Strong demand. Plain and low mediums steady. Mediums and good mediums dearer, where quality improved. Highgrowns irregular. Unorthodox fully firm."

OILSEEDS DEPRESSED

(From Our Own Correspondent)

BOMBAY, *28th November*

Oilseeds continued to rule depressed during the week under review. There was persistent unloading by bulls, while buying support was lacking. Groundnuts, in particular, suffered a sharp setback, following larger arrivals of seeds and oils from the Nizam region. The seasonal offtake for stock purposes was also absent. It was no wonder, therefore, that the export quota of 26,500 metric tons of groundnut oilcake (expeller variety) released by the Government on Monday failed to have any effect on the market. Exports under the quota, valid upto the end of March next, will be allowed by all shippers against registration of contracts in the form of cable offer and cable acceptance on first-come-first-served basis, subject to a maximum of 500 tons per shipper. Although the quota for expeller cake is not linked to exports of groundnut oil as in previous occasions, the shippers were not much enthused, as the domestic prices are currently out of parity with world prices.

Groundnut January 1963 contract, which moved up initially from Rs. 218.87 to Rs. 220, drifted downward later and closed at Rs. 213.37. The net loss over the week was Rs. 5.50. Nizam bold eased by a rupee to Rs. 41.75. Oil railway receipts declined by 55 nP to Rs. 17.45 and ex-mill by 45 nP to Rs. 17.90.

Castorseed encountered selling, in view of poor overseas enquiries for castor oil. The March 1963 contract fell by Rs. 2.88 to Rs. 161.37. Madras small shed 50 nP at Rs. 32. Kanpur bold dropped a like amount to Rs. 30.62. Oil B.S.S. shed 20 nP to Rs. 13.45 and commercial at 15 nP to Rs. 12.60.

Linseed drifted lower in sympathy with groundnuts and castorseed. The March 1963 contract receded by 87 nP to Rs. 37.25. Bold ready suffered a setback of 75 nP to Rs. 40.50. Linseed oil eased by 25 nP to Rs. 15.90.

Cottonseed January 1963 contract was marked down by Rs. 4 to Rs. 96. Both non-white and Berar moved down by Re. 1.75 to Rs. 21.

The following table shows the closing prices of oilseeds and oils on Wednesday 28th November as compared with those of the two previous weeks:

	28-11-1962	21-11-1962	14-11-1962
Groundnut	Rs.	Rs.	Rs.
Groundnut January 1963 ..	213.37	218 87	228.37
Nizam bold	41 75	42 75	45.25
Khandesh quality	42.75	43 12	45.62
Oil ex-mill ready*	17.90	18.35	19.00
Railway receipts*	17.45	18.00	18.80
Castorseed			
Castorseed March 1963	161.37	164 25	167.25
Ready Madras	32.00	32 50	32.87
Ready Kanpur	30.62	31 12	31.50
Oil B.S.S.†	13.45	13.65	13.80
Oil commercial†	12.60	12.75	12.85
Linseed			
March 1963	37.25	38.12	39.12
Bold ready	40.50	41 25	41.50
Oil ready†	15.90	16.15	16.85
Cottonseed January 1963 ..	96.00	100.00	103.50
Niger seed	33.00	35.50	36.12
Kardi seed	26.50	27.50	27.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 60 kilograms and oil per 10 kilograms.

BRISK ACTIVITY AT TEA SALES

(From Our Own Correspondent)

CALCUTTA, *27th November*

The impact of lower tea arrivals from Assam as a result of the continuing strike by Pakistani crew of the joint steamer companies was not felt at the export auctions held here yesterday, when the quantity on offer was normal. Sales were not hitherto affected because stocks in warehouses were adequate. However it is apprehended that the quantity will decline from the next sales Against such a background, it is heartening to note that a fresh move by the East Pakistan Government for settlement of the strike was reported on its stride.

As a result of the strike, about 45 million lbs. of tea in 450,000 packages are held up in Pakistani waters, and for the last seven weeks, gardens in Assam have been accumulating most of their production. An earnest attempt has been made by the authorities in India to provide alternate transport by road and rail, but the problem being stupendous, arrivals have been only very small in relation to the accumulation in gardens. As a result, vessels destined for the United Kingdom are being hard put to find cargo. Liners for other destinations have not yet been affected, and demand for all available tea is very keen.

The decline in interest for tea shares in both London and Calcutta stock markets is an index of the belief that the industry has not done very well this year. North Indian production up to the end of October was short of 25 million lbs. as compared to the corresponding previous figure, and with the plucking season having come almost to an end, there is no possibility at all of making good such a large decline. Further, the hold-up of tea on Calcutta-bound steamers from Assam and the accumulation in gardens coupled with the abnormal conditions in border areas have all meant financial worries for the gardens.

Despite the lower crop, it is encouraging to note that North India has been able to increase exports by about 10 million lbs. so far as compared to the figure in the corresponding period of the previous season. Internal sales have also been brisk. While cost of production has increased, the increase in the average price of leaf as compared to 1961 has been only 37 nP, i.e. from Rs. 5.21 per kg. to Rs. 5.58. On the other hand, the average price of dust has fallen from Rs. 4.92 to Rs. 4.82 per kg.

As a result of the break in supplies from Calcutta to London, prices in the Mincing Lane's sales have remarkably improved, and existing stocks in London are being bid at prices far higher than earlier expectations. In last week's auctions there, strong demand pushed up prices of plain tea by 2*d.* per lb. Offers of North Indian packages totalled 40,862 packages, and the quantity from Pakistan 400 packages. In view of poor quantity that is being shipped to the U.K., it follows that the benefit of strong demand and higher prices will mainly go to the other producing areas.

Dusts on offer during last week's internal sales totalled 29,074 packages, which met with a strong demand. A strong feature was provided by plain orthodox teas, which were readily absorbed at hardening rates. Medium orthodox teas also gained in prices. Legg-cut teas were firm at last levels. Medium C.T.C. teas met with keen competition but prices eased towards the close of the sales. The good C.T.Cs met with support only at last week's levels. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.40 to 6.80, medium Assam C.T.C. dust 5.90 to 6.20, legg-cut dust 5.50 to 5.70, medium Assam dust 5.00 to 5.50 and plain orthodox dust 5.00 to 5.20.

Leaf offerings totalled 67,597 packages and met with a fair general demand at yesterday's export sales. Although support was fair, prices were generally lower than the last levels. A strong feature was C.T.C. teas and medium grades were sold at higher rates. The best liquoring teas were firm. Substantial gains were recorded in legg-cut teas. Plain orthodox teas were firm on useful inquiries. Fannings were taken at higher rates, while medium and the better liquoring B.O.Ps eased in restricted support, leading to withdrawals. However, the selected lines in the last category were about firm. In an irregular trend in Darjeelings, the stylish grades eased. At lower rates, whole leaf grades and tippy teas met with good support. The quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings 7.00 to 7.50, best Assam C.T.C. B.P. 6.70 to 7.00, medium Assam C.T.C. fannings 6.20 to 6.80, medium Assam C.T.C. B.P. 6.10 to 6.60, plain fannings 4.80 to 5.20, clean plain pekoe 4.80 to 5.00 and plain B.P. 4.40 to 4.70.

JUTE GOODS RECOVER

(From Our Own Correspondent)

CALCUTTA, *27th November*

After an early setback on disturbing news regarding border fighting, jute goods recovered impressively, as support from foreign and internal buyers, as well as speculative holders, revived at lower levels. Indeed, the recovery was so marked that today's closing levels were well above those before the early break. The fibre market also received a good measure of support from mills, and it was reported that purchases by mills exceeded the compulsory quota fixed by the Jute Commissioner. The U.S.A. was again in the market for sizable quantities of hessian. This caused no surprise, as it is usually at this time of the year that U.S. stockists buy for replenishment. The fact that there have been swift changes in the international situation in recent weeks and that the U.S. buyers consider the present rates to be fair and reasonable also explain the continued activity on behalf of them. Further, U.S. interest has been stimulated because there has been buying on behalf of the U.S.S.R., the U.K., and the Argentina. In fact, reports from the New York burlap market cited this factor as an additional reason for the firm trend there. U.S. buyers also think that India's own consumption would go up to meet De'ence needs, though it cannot now be said whether there would be any dimunition in these requirements in view of the Chinese cease-fire.

The very satisfactory increase in U.S. burlap consumption during October, that is, by 3½ million yards to 74.5 million yards, has been significant, but this should be noted against the background of the rise of 12 million yards to 248 million yards in stocks as at the end of October. In recent weeks, U.S. purchases have been substantial, and the increase in stocks should thus have been discounted. There was, however, the apprehension that, in view of heavy stocks and improved outlook in international situation, U.S. buyers would continue to build up their stocks. It may be noted that October consumption in the U.S. was the highest for any month in the past four years and that, with total consumption up to the end of October at 726 million yards, the monthly average has been pushed up to 72.6 million yards, the highest since 1959. With the increase in foreign demand for hessian, mills have been straining all their efforts to increase the proportion of output of hessian to that of heavy goods, and this is only restricted by the inadequate availability of jute fit for hessian manufacture, thanks to this year's remarkable increase in the proportion of inferior crop as compared with the better qualities. Even so, the mills were able to transfer more looms to hessian in October, with the result the proportion of hessian output increased by 2 per cent. It is expected that, in the current month also, the transfer process would be continued.

Against this background, it is unfortunate that there are suggestions, rightly rejected by the authorities, for permission to export a small portion of the higher grade fibre in order to raise the prices of the inferior fibre. If an export quota is granted, the premium for the higher grade fibre will definitely increase to the disadvantage of mills which will then be forced to shift the burden on to consumer, having regard to the fact that present prices are about the cost-of-production level. Such a development will be resisted by foreign buyers. At the same time, it is very unlikely that a rise in the price of higher grade fibre will be accompanied by a similar rise in inferior fibre. For the increased measure of support shown by foreign buyers for the recognition that current prices are fair and reasonable. Considering the huge size of the crop of inferior quality, it is very unlikely that prices would rise to minimum levels. When arrivals continue as large as at present and supply exceed demand, it would be a blessing in disguise if current levels were maintained. As already stated, this week's purchases by mills exceeded the minimum quota, but low-grade fibre continued to be offered at about Rs. 2 a maund below the minimum levels. Even the week's early disturbing news from border areas and the possibility of complete disruption of supplies from Assam failed to push up prices. Daily arrivals on an all-India basis continue to be at the rate of 1.5 million maunds. Arrivals in October reached the all-time peak of 750,450 bales, including the small quantity of 18,300 bales from Pakistan.

As compared with October last year, the October 1962 arrivals increased by 81,050 bales, those from India being higher by 123,250 bales at 732,150 bales, while arrivals from Pakistan showed a marked fall of 42,200 bales to 18,300 bales. In the current jute season ended October 1962, total arrivals were 1,960,095 bales, showing a rise of 251,095 bales as compared will the corresponding period last year. The diminishing dependence on Pakistan is demonstrated in that arrivals from that source dropped from 137,400 bales to 45,045 bales, while the increased nature of the domestic crop is exhibited, inasmuch as Indian arrivals increased by 196,050 bales to 1,915,050 bales. The fact that only a small portion of this year's export quota of 200,000 bales has been used so far clearly indicates that there is little overseas demand for such fibre, as India is capable of exporting at the present juncture. Also present levels of prices are a deterrant. Considering this aspect, as also the fact that prices of inferior fibres have failed to reach the minimum levels despite a good measure of support by mills, it is time that the mills' plea for revising the minimum prices was heeded. Cost of production is probably lower than the minimum prices, and that is the one reason why offers at discounted rates are continuing. With the huge increase in production, it is unfortunate that attempts have been made to maintain minimum prices at the same level as last year.

The quotations of daisee and white bottoms were quoted this week as follows: northern bottoms Rs. 29.50, Assam bottoms Rs. 30, and daissee bottoms Rs. 32. Tossa and daissee prices were fully firm.

The jute mills have been requested not to open letters of credit for the unutilised portion of their import licences for Pakistan cuttings. For an attempt is being made by the Government to convert the remaining portion to rupee licences, if possible. A cancellation of the unutilised portion is not attempted at this stage, it is learnt. Conditions in Pakistan markets are about firm. With the strict vigilance of the authorities E.P.C. levels are being maintained. With indications that most of the remaining crop awaiting marketing is of inferior quality, it will not be surprising if prices harden in the next few weeks and a shortage develops in Pakistan markets.

In Calcutta, the goods market opened on Tuesday last on an extremely dull note against the background of the border setback. At this time, hessian 40″ 10 oz. had declined to Rs. 55.30 from Rs. 56.25, which was Monday's closing. B. twills were as low as Rs. 113.90, as against the overnight closing of Rs. 116.00. However, as the day progressed, demand at lower levels developed, and the U.S.A. was the main buyers of hessian. The ready hessian 40″ 10 oz. spurted to Rs. 57.15 and in sympathy B. twills picked up to Rs. 118. On Wednesday, some business in woolpacks with Australia was reported. Continuing the recovery, B. twills rose to Rs. 118.90, while hessian 40″ 10 oz. was lower at Rs. 56.75. There was some covering business in B. twills on Thursday, but, since excepting this there was no other business, B. twills eased to Rs. 118.35. Hessian 40″ 10 oz. was quoted at Rs. 56.50. On Friday, there was again business in woolpacks for near and forward deliveries. The report that mills were contemplating to transfer more looms from sacking to hessian also stimulated activity in heavy goods and B. twills scored to Rs. 118.90. Hessian 40″ 10 oz. was firm at Rs. 56.50. Over the week-end, there was good covering business done, although genuine interest was insignificant. Ready B. twills rose to Rs. 120.90 and hessian 40″ 10 oz. to Rs. 57.50. With little passing during yesterday, prices were quiet. Hessian 40″ 10 oz. eased to Rs. 56.90, and B. twills to Rs. 120.50.

METALS EASY

(From Our Own Correspondent)

CALCUTTA, *27th November*

The metal market here was dull this week and, with the desire of all concerned to reduce inventories as much as possible, prices eased, thus reducing slightly the disparity with world market quotations. However, as the week progressed, there was a slight change for the better in the undertone in view of the lull in the border situation. London advices showed a steady trend. Prices were also maintained at last levels in the New York market.

The need to avoid ambiguities in the matter of levy of excise duties causing undue hardship to the industry formed one of the important subjects in the presidential address of Dr. P. Antia to the annual general meeting of the Indian Non-ferrous Metals Manufacturers' Association held here recently. At present, a duty at the rate of Rs. 100 per metric ton is being raised on receipts of copper ingots, while there is also a duty at the specific rate of Rs. 300 per tonne on semi-manufactures of copper and copper alloys such as brass and copper strips, flats, circles, sheets, etc. If it can be proved that production of these has been from duty-paid copper ingots, the counter-veiling duty of Rs. 100 per tonne can be reduced from Rs. 300. To avail this benefit proof of duty payment should be produced, but for production from copper ingots received on and after 1st October 1962 it is not necessary to submit proof of payment, inasmuch as no copper ingots can be received without payment of the initial duty of Rs. 100.

Dr. Antia urged reconsideration of the excise rules as an attempt to remove ambiguities. Either the duty should be imposed on primary metals or only on semi-manufacturers or on end-use products. The imposition of a duty at both ends and even in the middle creates confusion and causes much avoidable accounting work and blocking of funds. In this connection, trade circles are very much concerned that considerable delays are occurring with the excise authorities in regard to the disposal of their claims for refunds. While the excise authorities can recover from the manufacturer any short payment at any time after the clearance of the finished products in the first instance, manufacturers' claim for refund of duty of any excess paid should be made within three months of the clearance. This rule is also causing considerable inconvenience to the industry and trade. The industry has been urging earnestly the conversion of the *ad valorem* duty on tubes and pipes into a specific duty, but this plea is not invoking any sympathy with the authorities. Considerable processes of formalities are necessary with regard to verification of selling price market price, wholesale price, contract price, etc., and duty determination. If only this duty is converted into a specific duty, the industry would save much time and clearances would be accelerated.

Accepting the Tariff Commission's recommendation, the Government of India has extended protection to copper pipes and tubes, brass pipes and tubes, extruded copper rods other than electrolytic copper rods and extruded brass rods at existing rate of duty for a period of three years. Extruded copper sections, extruded brass sections and highly polished zinc sheets for making process blocks receive protection at enhanced rates for a period of three years. At the same time, protection granted to lead sheets other than sheets for tea-chests, zinc sheets not otherwise specified and zinc strips is being discontinued. Protection to copper rods produced by rolling process and rolled brass rods is also being terminated.

In Calcutta, copper utensil scrap eased from Rs. 522 per 100 kgs. to Rs. 508.50, but recovered to Rs. 522.50. Tin eased from Rs. 2,650 to Rs. 2,580. On the London Metal Exchange, spot tin eased from £884 a ton to £868. The fall in London re-echoed a similar fall in New York as well as in Singapore. In Calcutta, zinc eased to Rs. 262 per 100 kgs. from Rs. 268, and in London from £69¾ a ton to £68¾. Lead here hardened from Rs. 141 to Rs. 143 per 100 kgs.

BEARISH TONE IN FOODGRAINS

(From Our Own Correspondent)

HAPUR, *26th November*

The local foodgrains market continued to be easy this week on selling by stockists. The Government's determination not to let foodgrain prices rise, especially in view of the national emergency, and the traders' wholehearted support to the authorities towards that end led to a distinctly bearish tone in the market, sentiment wherein was influenced also by prospects of a good crop. Official measures to pile up huge stocks continued.

Wheat eased slightly to be quoted on Monday at Rs. 40.20 to Rs. 45.56 per quintal according to quality. Daily arrivals averaged 200 maunds and local stock declined to 43,000 maunds. The standing crop was reported to be satisfactory. Rice prices were depressed, as new crop arrivals increased. The U.P. Government has increased the levy on rice by 50 per cent in order to build sizable stocks.

Gram was easy at Rs. 40.80 to Rs. 41.53 per quintal owing to slack demand and quiet advices from Punjab. However, maize attracted good support at Rs. 29.47 to Rs. 31.12 per quintal. Seasonal consumer demand continued to be brisk. Arrivals, mostly from east U.P., averaged about 400 maunds daily, as against local stocks of 4,000 maunds only. New *bajra* reached the market in small quantity and was lifted by consumers at Rs. 37.51 per quintal. Other coarse grains, including barley and *bejhar*, were listless.

Among pulses, peas recorded a fractional fall on selling pressure by stockists. Offtake was four wagon-loads which went to east U.P. The standing peas crop was reported to be satisfactory. Local stock was put at 29,000 maunds. New *urd* also drifted lower, as the new crop produce started arriving in a larger quantity. Other pulses were depressed. Week-end prices (in rupees per quintal) were: Peas *dara* green 29.13, white farm 32.15, peas *dal* 34.83, *arhar* 57.60, *arhar dal* 71, *urd* 53.58 to 67, *urd dal* 80.38, *moong* 48.23 to 50.91, *moong dal* 58.94, *massor* 52.25 to 54.22, *massor dal* 58.94, gram *dal* 49.57 and moth *dal* 48.23.

SELLING PRESSURE IN SUGAR

(From Our Own Correspondent)

HAPUR, *26th November*

Sugar prices here eased further this week on selling by factories. The release of another monthly quota of two lakh tons made the supply position yet more comfortable. On the other hand, traders were still following a wait and watch policy in view of the uncertain political situation in the country following the Chinese invasion. All the factories here (in West U.P.) were crushing cane to the maximum capacity. Prices in the spot delivery section eased by 50 nP per quintal and the mill delivery section showed a fall of 25 to 44 nP per quintal. Week-end prices here were:—Sugar spot delivery Rs. 104 per bag of one quintal, mill delivery (D 29) Amroha Rs. 101.14, Dhampur Rs. 101.46, Seohara Rs. 101.14, Meerut Rs. 103.37, (E 29) Simbhauli Rs. 103, Bijnore Rs. 100.79 and Dhampur Rs. 101.14.

Trading continued dull and featureless in the Muzaffarnagar market and only stray transactions were done for Punjab, Gujarat and M.P. Prices drifted lower by 37 nP to 67 nP per quintal. Dealers were buying only their immediate requirements due to political uncertainties. Week-end prices were:—AA 29 Mansurpur Rs. 106.75, Khatauli Rs. 106.50, Shamli Rs. 106.50, A 29 Rohana Rs. 105.50, Daurala Rs. 105.25, Saharanpur Rs. 104, C 29 Lhaksar Rs. 104, Khatauli Rs. 103.25 and and Shamli Rs. 103.25.

Khandsari prices ruled quietly steady, as demand was fairly brisk from Punjab and Rajasthan. *Khandsari* crystal improved to Rs. 99.13 to Rs. 100.47 per quintal and the noncrystal quality fetched Rs. 100.47 to Rs. 102.48 and wet Rs. 91.10 to Rs. 95.11 per quintal. Daily arrivals of *Khandsari* in the Muzaffarnagar market were about 750 maunds and at Hapur about 100 maunds.

Gur prices continued to fall during the week, as demand from Gujarat and Saurashtra was only at lower price levels. Daily arrivals declined, however, to an average of 4,000 to 5,000 maunds and, as loading facilities continued fairly easy, were lifted mostly by Gujarat. Total arrivals of *gur* here during the current season were put at 1.55 lakh maunds, the corresponding figure last year being much lower around 90,000 maunds. Week-end prices of *gur* here were:—*Gur pansera* superior Rs. 43.24, average Rs. 42.87, *dara* Rs. 40.19, *balti* Rs. 40.19 to Rs. 43.54 and *shakker* Rs. 56.26 to Rs. 58.94 per quintal.

Gur and *shakker* prices declined considerably in the Muzaffarnagar market. Average daily arrivals of both *gur* and *shakker* were reported to be 11,000 to 13,000 maunds. *Chaku* prices declined by Re. 1.25 per 40 kilograms to Rs. 17.25 to Rs. 18.75 and *pansera* lost 75 nP to Rs. 1 at Rs. 17.25 to Rs. 19 per 40 kilograms. *Shakker* also lacked support and prices were marked down to Rs. 18.22 per 40 kilograms.

Gur futures continued bearish in poor trading. *Gur fagun*, having opened at Rs. 20.93 last Monday, continued to fall in subsequent sessions and touched the lowest of the week at Rs. 20.15. Later, on short-covering, the contract rallied to Rs. 20.50.

INSURANCE

(Concluded from page 958)

The surrender allowance as described above, would be different from the present surrender value in two respects: First, this is not based on the so-called policy-reserve (as is done in surrender value) but on the amount of net future saving to the company on account of the surrender of the policy. Secondly, this is not to be calculated when the policy is surrendered (as is done in surrender value) but when the endowment period is over or when the holder dies, whichever event takes place earlier.

Even in the suggested new scheme there would be a place for options, like extended term insurance, automatic non-forfeiture or the reduced paid-up insurance. Loans on policies—whether in force or surrender—can also be allowed by the insurer. The basis of these options and loans on policy would be a minimum surrender allowance that is to be allowed on a policy *plus* present value of bonuses (if any) already attached to it. For calculating this minimum surrender value on a whole-life policy, the life insured will be assumed to live up to the last age given in the mortality table, and then the total present value of the amounts of premiums, which would otherwise have been payable from the time of surrender of policy or grant of loan till the end of the premium paying period or the last mortality table age, as the case may be, *plus* the total present value of interests on these premiums till the end of the last mortality table year should be deducted from the total of the present values of the policy amount and of the saved amounts of expenditure on the policy. The minimum allowance on a policy in force would increase year after year, for the number of premiums to be received would go on decreasing. It would be possible for the insured to get more loans as he pays more premiums. If the policy is an ordinary endowment one, the minimum allowance would be calculated as above, except that various calculations will go up to the end of endowment period and not upto the last mortality table age. If a surrendering policyholder does not want any of these options, he, or his successors, will get the full surrender allowance at the time when the policy would have matured but for this surrender.

In case the policyholder wants to receive surrender allowance in cash immediately on surrender, he can be paid the minimum surrender allowance provisionally. Later, when it is time to calculate the full surrender allowance, an adjustment may be made and he or his successors may be paid the full surrender value *minus* the accumulated value of the minimum surrender allowance.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 23rd Nov., 1962

BANKING DEPARTMENT

Liabilities	Rs.
Capital paid-up	5,00,00,000
Reserve Fund	80,00,00,000
National Agricultural Credit (Long Term Operations) Fund	61,00,00,000
National Agricultural Credit (Stabilisation) Fund	7,00,00,000
Deposits—

ABBREVIATIONS. N—Nominal. (*f* Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935.
f Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice.
T—Liability taken over by Madhya Pradesh.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(*Concluded from page* 933)

so much to reduce prices as to restrain any increase in prices and artificial scarcity. Therefore, these factors do not adequately explain why prices of several commodities have actually gone down. Some attribute this to the sharp setback in gold. This seems to be too academic an explanation to be convincing. The relation, if any, between the price of gold and commodity prices is more apparent than real under Indian conditions. It should not be forgotten that, even before the abolition of forward trading in gold (13th November), commodities were depicting a downward trend.

One has, therefore, to look elsewhere for the major factors that have brought down the commodity prices. Among agricultural commodities, the supply position has generally improved in recent weeks, as the new crops have started coming into terminal markets. On top of this, there has been a marked shrinkage in the demand from the trade for stocking purposes. In fact, even the existing stocks are being unloaded, in view of the tightening of credit control with a view to preventing hoarding by speculators. In respect of foodgrains, apart from the pressure of new arrivals, large stocks are lying with the trade as well as with the Central and State Governments. It is said that stocks of foodgrains with the private trade alone are about 2 million tons, besides 2.5 million tons lying with Government. The official stocks of wheat and rice will be augmented further by larger imports from the U.S. What is more, the latest trade estimates of foodgrains crops in 1962-63 are on the high side.

Apart from foodgrains, oilseeds have turned distinctly easy. Groundnuts, which had been ruling high in recent years, have suffered a substantial setback, following larger arrivals of new crop from producing centres, and the prospect of some imports of soyabean oil from the U.S. Sugar and *gur* have also encountered selling as the new season's output has started coming to the market. More or less the same situation applies to raw jute and raw cotton as well. In respect of cotton almost all staples can be had at the ceiling level, while some are quoted even below the ceilings. The futures contract has moved down considerably. In the field of non-ferrous metals, there was, of course, some panicky buying immediately after the commencement of Chinese invasion, but the situation has changed since then and prices have declined. This is due at least to some extent to the hope of operators' that, in view of the strategic importance of non-ferrous metals, import quotas for certain varieties will not be curtailed any further, if not actually increased.

The following table shows the latest available quotations for select commodities, as compared with those a fortnight ago (that is, just before the abolition of forward trading in gold) and five weeks ago (that is, just before Chinese invasion started on 20th October):

Commodity Prices Fall

(In Rs. per quintal unless otherwise stated)

	Latest available quotations	A fortnight ago	Five weeks ago	A year ago
Foodgrains :				
Rice *basmati*	87.00	87.00	91.19	90.00

Non-ferrous metals :				
Copper wire bars	736.00	746.00	740.00	590.00
Zinc	242.00	268.00	254.00	275.00
Lead	164.00	162.00	156.00	137.00

* Per maund. † For three quintals.

Despite the decline in commodity prices, neither the Government nor the trade should feel complacent. There are still uncertainties on the political front, for no one knows the real intentions of Communist China, despite the so-called cease-fire. There is thus need for unimpaired vigilance on the part of all concerned. It is, however, necessary to ensure that prices of agricultural commodities do not fall to levels which are uneconomic from the producers' point of view. If they do, the tempo of production will be adversely affected. Price policies should be so designed as to eliminate wide fluctuations either way.

REGIONAL IMBALANCE

(*Concluded from page* 938)

States. The least benefited States are Orissa, Rajasthan, Assam and Himachal Pradesh. The point that merits some investigation is the differing rates of electricity consumption. Madras, Delhi, Andhra Pradesh and Punjab pay higher rates per kw.h. than the other States and, while the reasons are not far to seek, the case for a unified and rationalised electricity tariff deserves scrutiny.

A study of regional imbalance should quickly reveal the folly of any approach other than rational and the need for rigorous exclusion of political considerations. One might even discover that those regions, which have not been as vocal or clamant as the others, suffer more from regional imbalances.

A LEAD TO BUSINESS OPINION

As the traumatic impact on the Indian nation of the sudden Chinese thrust into NEFA in October last is gradually wearing off, there is increasing evidence of a certain crystallisation of sound forward-looking opinion at the higher levels of the body-economic, if not the body-politic. This week is particularly notable from the point of view of this steady evolution of business opinion in relation to the emergency, what with the fortright and confident lead given by the Associated Chambers of Commerce of India and by Mr. G. D. Birla. The presidential speech of Mr. H. Mackay Tallack at the latest annual meeting of the Chambers and the resolutions passed at that meeting and Mr. Birla's article published elsewhere in this issue are thus of more than ordinary significance. Mr. Tallack says that "it is precisely by pursuing the third Plan's aims that we are most likely to promote the defence effort" and that this country has the outstanding advantage of being in a position to mobilise all the manpower required for military or industrial duties without depleting the existing cadres in industry or commerce. The same idea is conveyed by Mr. Birla when he says that the expected massive *defence build-up* will not be beyond the economic capacity of the country, if the production increases envisaged under the third Plan are achieved. Their identical view thus constitutes a powerful lead to business opinion at a time when some Cassandras continue to say that India's economy cannot take it. The former's optimism is the right antidote to the latter's pessimism. But theirs is not some unqualified optimism, and it is here that the practical preconditions proposed by them will be seen to be supremely important.

Of these preconditions, a little extra effort to increase agricultural production is absolutely necessary not only to feed and clothe the armies and the additional manpower engaged in ordnance production but also to ensure price stability. This will be even more basic and crucial to the total defence effort than the removal of shortages in coal, power, transport and industrial raw materials. Mr. Morarji Desai's view, expressed at the meeting of the Associated Chambers, that there is "no magic formula by which the rate of growth of production in the country can be stepped up suddenly" seems to ignore the undoubted possibilities of a short-term, say, two-year, crash programme in agriculture. Such a programme can be based on the utilisation of surplus rural manpower for a variety of short-term purposes, such as renovation or construction of minor irrigation works, construction of pending field channels under major and medium irrigation projects, and work connected with soil and moisture conservation on dry lands. Even if the more able-bodied persons among the rural unemployed and underemployed happen to be recruited to the Army, there will still be large numbers of men and women who could be organised into a labour corps for the kind of physical work which the aforesaid crash programme will involve. If a part of the P.L. 480 foodgrains can be diverted for paying wages partly in kind under this programme and if some of the textile mills can be persuaded to manufacture and supply cheap utility cloth for the use of the labour corps concerned, quite a lot can be achieved in the next two years. As the Community Development ageny, which is already being orientated to work principally in the agricultural field, will find it easier to execute the suggested crash programme, there will be need for increasing the budgets of C. D. Blocks rather than for decreasing them as suggested by Mr. Birla. No penny-pinching in the name of the emergency would be advisable in a field such as this where there will be practically no foreign exchange expenditure.

There will be need, at the same time, for stepping up production, if not capacity as such, in some industries catering to the *agricultural* sector—the ones manufacturing fertilisers, pesticides, agricultural implements and pumpsets. If this is not done, Mr. Tallack's plea for urgent additional attention to the production of vital commercial crops like tea, jute, cotton and oilseeds will have gone in vain. Any widespread shortages in the physical aids and resources required for intensified cultivation of commercial crops on the *existing* extents of land sown to such crops are bound to affect their production adversely. It is this aspect, not the question of ensuring a "fair return" to the farmer as highlighted by Mr. Morarji Desai, that is most relevant at the present time. When Mr. Desai says that a "fair return" can be assured more smoothly in the case of cash crops in particular by the co-operation of industry than by elaborate intervention by the Government, he almost seems to imply that the farmer is not having economic prices now. If that is the implication, there is no warrant for it, for the prices of most commercial crops have been ruling higher in the last two or three years than in the previous period. As even these high prices do not seem to have stimulated any spectacular increase in the production of most commercial crops, the relevancy of the price factor in the present context is open to question.

As far as industrial production is concerned, a substantial amount of potential is certainly there, as evidenced by the recent official survey of underutilisation of installed capacities. The scope for expanding production is indeed very great, for, in as many as 75 industries, the capacity at present utilised ranges from just 2 per cent to 61 per cent and in 30 industries from 65 per cent to 75 per cent only. These industries represent a wide range of manufactures, many of which are relevant to strategic development, that is, development for meeting defence requirements as well as for earning, in some cases, vital foreign exchange. Their crucial requirements of coal, power, transport facilities and raw materials would obviously have to be met as a matter of high priority. As far as coal, power and transport are concerned, the practical ways in which their supplies can be increased in the short-term have been repeatedly dealt with by this journal. The resolutions on power and transport, passed at the meeting of the Associated Chambers, have also come in for fuller comment in this week's "Survey" on pages 984 and 985. They hardly need further elaboration here. Suffice it to say that both Mr. Tallack and Mr. Birla have attached particular importance to the possible early removal of the bottlenecks concerned. The former's view that there is a good case for examining the possibilities of economies in power consumption by the adoption of daylight saving to the extent possible is noteworthy in this connection.

But his plea for a rapid expansion of road transport would call for a commensurate expansion of the automobile and ancillary industries. As the automobile industry will have to meet defence needs to a greater extent than several other industries, road transport expansion will suffer as a consequence. If both defence and civilian requirements are to be met adequately, further expansion of the automobile industry would have to be speeded up with possible foreign aid for imports of equipment, spares and components. There is practically no room for adjustment here, for, as Mr. Tallack has said, most import requirements have already been considerably cut down. Further untied credits for maintenance imports, such as those of the automobile and road transport industries, can alone save the situation. This Mr. Morarji Desai himself has emphasised while pleading for larger foreign assistance, besides military aid, for financing maintenance imports to the vast network of engineering and chemical industries catering to the needs of defence. Mr. Tallack's plea that "even more intensive efforts must be made to locate suitable indigenous production of spares and components" is, of course, a practical one, though its applicability to the situation of emergency production may be open to doubt.

While thus more maintenance imports will be necessary to utilise existing capacities in a wide range of industries more fully, there will be an equal need for the import of capital equipment and technical know-how wherever essential industries have to be expanded or modernised and some new industries, such as petro-chemicals and non-ferrous metals, have to be established in the private sector. To what extent the latter need can be met by an appropriate fiscal policy for enabling existing industries to retain more earnings for financing their own expansion and for attracting foreign capital participation is a matter deserving prompt consideration. Mr. Tallack has driven home the point, in this connection, that "measures of taxation which impinge on the capacity of industry to maintain and increase production would be self-stultifying." His related plea that industry should not be called upon to transfer funds that are required to maintain essential economic activity or to finance development is unexceptionable. While broadly agreeing with this view, Mr. Morarji Desai has, however, sought to make a distinction between essential and non-essential investment. It is difficult to foresee how fiscal policy is going to be shaped for encouraging essential investment and discouraging non-essential investment. The Finance Minister, it is to be hoped, will not spring any harsh surprises on industry which may be willing, in pursuance of Mr. Tallack's offer, to transfer surplus funds to the Government on condition that they could be released quickly and easily when required for expansion.

EUGENE BLACK

SALUTE TO AN INTERNATIONAL FIGURE

By G. L. Mehta

WHEN the Bretton Woods Conference decided to set up the International Bank for Reconstruction and Development (popularly called "The World Bank") and the International Monetary Fund, many financial *pundits* and economic experts were sceptical and distrustful. "Bankers of the world unite," American bankers seemed to say, "You have nothing to lose but your Keynes." But it was the World Bank which eventually had a world to gain. The world, too, has gained by it and its sister institutions—the International Monetary Fund, the International Finance Corporation and, more recently, the International Development Association. What is more, the bankers have united to support and strengthen the World Bank. It has borrowed 2 billion dollars (about 1,000 crores of rupees) from private investors in the United States, Switzerland, the Netherlands and Italy, which have been used to advance to developing countries. The Bank has been steadily built up over these years by the devoted services of an efficient staff. But, if credit could be given to one individual more than any other for providing the leadership, it is to Eugene R. Black who has been the President of the Bank for 13 out of its 17 years of existence. Indeed, the World Bank is known in many financial circles as "Gene Black's" Bank.

Mr. Black, a tall, lanky figure, is impressive in any gathering with his elegant bearing and relaxed manners. He hails from the State of Georgia in the South of the country and has been a banker by profession, working first in Harris Forbes and Company and then in the Chase Manhattan Bank from where he went to the I.B.R.D., succeeding Mr. John McCloy in 1949. During these years, he has not only developed the Bank but has also raised his own stature in the world community. He has enhanced the status of international civil service and has become one of the eminent international statesmen of the development decade. A couple of years ago, the London *Times* in an editorial asked: "Where is Black." For, today he is in London, tomorrow in Cairo, and the next day may be in Rio de Janeiro. The paper summed up: "The man, no less than the institution of which he is the head, is one of the phenomena of the post-war world."

Tangible Evidence of Service Rendered

Mr. Black faced a stupendous task. The Bank itself was a novel experiment in international life and particularly difficult in the complex and delicate sphere of finance. European economies had been shattered by war and conditions were chaotic. Above all, the underdeveloped parts of the world which constitute its major portion demanded massive financial aid. Economic disparities between the prosperous and the poor nations needed urgent attention and effective action. Mr. Black had sensed "the revolution of rising expectations" in the developing countries and recognised the social obligation of the "affluent societies" to help these forces into constructive channels. He desired to create a sense of partnership between the rich and the poor countries through international institutions and well-conceived plans. In this task of international co-operation, the World Bank has played, under Mr. Black's guidance and direction, a vital part. The total assistance rendered by the Bank since its inception is 6.5 billion dollars (about 3,200 crores of rupees), out of which 2.2 billion dollars (about 1,070 crores of rupees), that is, nearly 34 per cent has been allocated to Asia. India has been the largest constituent of the Bank, having obtained 817 million dollars (about 390 crores of rupees), which is nearly 12.4 per cent of the total assistance given by the Bank. Although the International Development Association is only two years old, it has already rendered considerable assistance to India during this brief period. Out of the total amount of 235 million dollars sanctioned by it up to 30th June 1962, Asia has obtained 160 million dollars and India 122 million dollars, that is, over 50 per cent of the total amount. Tangible evidence of the service rendered by the Bank is embodied in fertile lands, irrigation canals, railways, ports, roads, industrial plants and power houses in all parts of the world. Such development is proceeding despite differences in cultures, varying social institutions, and political conflicts.

Mr. Black, unlike many American financiers and businessmen, is not afraid of the word "planning." On the contrary. He insists on the right kind of planning. In his *Diplomacy of Economic Development* which was a course of lectures delivered at the Fletcher School of Law and Diplomacy, Mr. Black has said:

> "Planning, simply defined, should be the place where the political leader is faced with an awareness of the consequences of his decisions before he makes them, instead of afterwards. Taking the definition one step further, it should be the means by which the lines of communication are kept open between those who make decisions, those who 'illuminate' them, and those who carry them out."

Deeper Purpose of World Bank

The Bank has not been content with advancing money for specific projects of development. It offers *technical services* of various kinds on the preparation of development projects. Its surveys have been of considerable value to Governments or industrial firms in assessing their resources and projecting their economic activities. It has assisted the establishment of development banks or financial institutions in several countries. It has sponsored the Economic Development Institute where senior officials have a course of training in economic planning and related problems. Recently, it has set up a Development Advisory Service, comprising specially trained persons who would serve as economic and financial advisers, particularly in the preparation and execution of economic development programmes. Finance alone, though

TALK LESS

WORK MORE

important, cannot ensure economic development. Social attitudes, technical knowledge, resourceful management and skilled labour are all necessary. Mr. Black, in his valedictory address at the last meeting of the World Bank in September, emphasised this in eloquent terms:

> "The Bank's work is not to be assessed in terms of the building of cold monuments of stone and steel and concrete; it has had a deeper purpose—to enlarge the riches of the earth, to give men light and warmth, to lift them out of drudgery and despair, to interest them in the stirring of ideas and in the grasp of organisation and techniques toward the realisation of a day in which plenty will be a real possibility and not a distant dream."

But Mr. Black's services to the international community do not end here. He and the Bank have functioned as mediators in more than one instance. The World Bank helped to solve financial problems arising out of the Suez crisis of 1956 and to bring about a settlement over the Indus River basin as well as between the city of Tokyo and the French bond-holders. The principle of settlement of international disputes by peaceful means is enshrined in the Charter of the United Nations. It is not an abstraction but has to be patiently and constructively achieved. Moreover, it was at Mr. Black's initiative that a consortium of several countries was formed to formulate a programme of concerted aid to India and Pakistan. This was a form of multilateral aid to underwrite the five-year plans of these countries. In the economic sphere, such work has been done by the World Bank without noise; but it has been more valuable than the "diplomacy of the loudspeaker."

For his remarkable achievements and manifold services to international co-operation, Mr. Black was the recipient, in 1960, of three honorary degrees from three leading universities—Princeton, Yale and Harvard—a unique honour which no other individual has probably got. In their citations, Princeton described him as "a native Georgian still engaged in reconstruction"; Yale called him one who has "circled the globe to develop industry and agriculture for less fortunate people"; and Harvard referred to him as one under whose "guidance a new venture in bank brings dams and dynamos for less fortunate people." These tributes were richly deserved.

A Banker with a Social Purpose

For Mr. Black has been that rare person—a banker with a social purpose. He has brought creative imagination in the realm of economic development. He has sought to translate ideals in terms of a positive economic policy and to canalise economic forces for the attainment of social objectives. We all want development with stability, but it takes a farsighted statesman to recognise that the maintenance of stability itself needs development. And not only recognise in words but achieve it by methodical action. Year after year, in his addresses at the annual meetings of the Bank-Fund which reflect a highly civilised outlook and are a model of lucid exposition, Mr. Black has shown how a sense of realism can be harnessed to creativeness. With his wide knowledge and sympathies, he realises the predicament of the underdeveloped countries which will have to bear the intolerable burden of repayment while confronted with unfavourable terms of trade. In his parting message to the Bank meeting last September, he, therefore, forcefully pleaded for multilateral aid free from political influences and based on an appropriate order of economic priorities. Such aid, he said, could be most effective if channelled through an international agency which could spread its net more widely than any single country and would exert a healthier influence than bilateral lending upon international relations. Consequently, it is to the International Development Association rather than to the Bank that developing countries would have to look in the coming years for help. The I.D.A. provides what are called "soft" loans —loans bearing nominal service charges and repayable over 40 to 50 years for projects which, although essential to a national economy, do not stand the strict return criteria of the World Bank. This is the challenge that faces Mr. Black's successor—incidentally, chosen by Mr. Black himself—Mr. George D. Woods: the task, namely, to provide long-term capital on easy terms for developing the infra-structures of economically backward countries whose problems of repayment will be increasingly serious and which have to suffer a depression in commodity prices. In other words, the emphasis will have to be more on well-directed aid rather than on conventional banking. This is not a matter of philanthropy or benevolence. In a world where poverty anywhere threatens prosperity everywhere, economic altruism is the reverse side of enlightened self-interest.

Three Favourite B's

But Mr. Black is not a banker all over and all the time. He has many other interests. His three favourite B's are said to be Banking, Baseball and the Bard. He is a passionate baseball fan. Immediately the Bank-Fund meetings are over, he rushes to New York or flies to Los Angeles to watch the World Series (where he once took Mr. Morarji Desai) of matches between Yankees and Dodgers. While Mr. Black is widely read, he is a keen student of the Bard of Stratford-on-Avon. I remember his once telling me that he had read Sir Walter Scott's novels during the previous vacation which somewhat surprised me; because I thought no one read Scott nowadays! He is also intensely interested in the theatre and has, I believe, done some dramatic criticism in the past. But above all, he is a Shakespearian and has been connected with Stratford-on-Avon which he visits regularly at the time of the annual festival. It is rumoured also that there is a fourth "B"— Bourbon which he carries with him but this should only be whispered in a prohibition area!

As Mr. Black lays down the reins of his office, he has the supreme satisfaction of having created a great international institution but even more, of having kindled a ray of hope among the peoples of the world in many countries striving to raise their standards of living and eradicate poverty, ill-health, illiteracy, unemployment. No more enduring monument can be raised for one who has truly been a citizen of the world.

MARKET GOSSIP

Cloth Stocks

CRIES of heavy accumulations of cloth stocks with cotton mills are being heard again. What exactly is the position? The total of these stocks is put at over 646 million yards—the official estimate is only 568 million yards—as against the 571 million yards held at this time last year. Stocks have been rising since the end of April when they stood at less than 446 million yards. Although the stock of 646 million yards represents just six weeks' offtake for domestic consumption and exports, its impact on the mills has been very severe, especially at present when the mills are finding it difficult to get the requisite credit facilities from commercial banks. The inability of banks to meet the credit requirements of their cotton mill clients in full is attributed to the Reserve Bank's restriction on accommodation to scheduled banks. There is, as readers are aware, an overall limit to the volume of credit that any bank can avail of from the Reserve Bank. It is true that a bank can exceed this limit, but it has to pay the penal rate of 6.5 per cent per annum. Besides, the scope for doing so is not unlimited, for there is a quota for each bank even for this costly facility. It is also true that the Reserve Bank has asked the scheduled banks to extend credit under the usual conditions to the cotton mill industry to tide over the temporary crisis caused by heavy stock accumulations and seek accommodation from it whenever necessary. But many banks do not consider it worthwhile to borrow at such a heavy rate of interest from the Reserve Bank and then lend to the cotton mills. Further, the banks normally give credit to cotton mills against their stocks only to the extent of 60-65 per cent (average) of total stocks. Since the persistent heavy accumulations of cloth stocks entail much financial burden, several mills may, as was the case during the year 1960, curtail their production operations. Inasmuch as the country can ill-afford such an eventuality in view of the present national emergency, the Reserve Bank will do well to relax the overall accommodation limit prescribed for the banking system, so that the latter will liberalise their credit policies. It may tighten the screw again when stocks fall or if it finds that the banks are misusing the facility by encouraging speculation. It is necessary to underline that, in the present juncture, the banks in the country have to exercise great care in seeing that their capacity to create credit is used only for productive purposes.

The need for helping the cotton mills out of financial stringency is urgent all the more because they are today badly caught between lower output on inflated cost base, on the one side, and lower sales realisations, on the other. The actual cloth output in the first ten months of 1962 was no more than 4,158 million yards, a decline of 132 million yards as compared with the production in the corresponding period of 1961. The quantity of yarn spun was also lower at 1,566 million lbs., as against 1,572 million lbs. Sales realisations have tended to decline following reduced offtake and voluntary price regulation scheme. Data relating to the first ten months of this year as compared with the same period last year reveal that the actual despatches of cloth from mills for domestic consumption were lower by 160 million yards at 3,696 million yards and those for export by 70 million yards at 410 million yards.

Groundnut Declines

Ever since the Chinese aggression took a violent turn and assumed massive proportions on 20th October last, commodity markets have been ruling weak. The setback in oilseeds and oils in particular has been marked. The Groundnut January 1963 hedge contract, for instance, has fallen by as much as about Rs. 30 to just over Rs. 204 per 250 kgs. during the last six weeks. Spot groundnut (Khandesh quality) has also lost a like amount to stand at about Rs. 202. The price of groundnut oil at the same time has tumbled down from just less than Rs. 2,000 per tonne during the third week of October to less than Rs. 1,700 now, the net decline being about Rs. 300. The latest quotations are much lower, as compared with even those a year ago, when the groundnut futures contract stood at Rs. 215, spot groundnut at Rs. 243 (per 250 kgs.) and oil at Rs. 2,015 (per tonne). The decline in prices of groundnuts and other seeds and oils have come as a pleasant surprise to consumers (of both edible and industrial oils) no less than to shippers.

The major factor behind the fall in prices has been psychological. The predicament in which China has placed India has engendered a bearish trend, for reasons which are inexplicable. Admittedly, the ban on forward trading in gold, *kanas* and non-ferrous metals, besides shares, has been more responsible for this trend than the Chinese aggression. Speculators do not rule out the possibility of a ban on futures trading in oilseeds also. No wonder then that professional operators have refused to extend any support even at lower levels. Scarcity of bank credit may have been another cause, for it is not conducive to hoarding. The reported decision of the Government of India to allow the *vanaspati* industry to import about 50,000 tons of soyabean oil from the U.S., under P.L. 480, has also acted as a damper.

The aforesaid factors alone would not have been successful in pushing down the oilseeds prices to the extent they have done, but for the commencement of arrivals of new crop groundnuts into terminal markets. In Andhra Pradesh, Maharashtra and Kathiawad, crop movements have begun in a big way.

The consensus of opinion among operators is that, contrary to earlier fears of a decline, the current crop of groundnut is larger than the 1961-62 output. Some private estimates place the increase in output at about 100,000 tons. In 1961-62, the output of groundnuts amounted to 4.68 million tons, or an increase of 6.6 per cent over the previous year, according to final official estimates just made available.

A clear idea of the current crop position of other seeds will not be available for a couple of months more. But a brief mention may be made here of the final crop estimates for other oilseeds for the last season. In 1961-62, the production of castorseed was higher by just 12,000 tons at 101,000 tons, as compared with the previous year. The output of sesamum also rose by 50,000 tons to 366,000 tons and that of linseed by 2,000 tons to 391,000 tons. But the output of rapeseed and mustard fell by 50,000 tons to 1.29 million tons. The aggregate production of these five major oilseeds taken together was 6.83 million tons in 1961-62, as against 6.52 million tons in 1960-61. This represents a small increase of just about 5 per cent over a year.

World production of oilseeds has been going up at a much faster rate than that in India. For instance, the output of soyabean rose by about 3.7 million tons to 18.5 million tons in 1961-62, as compared with the previous year. A further rise of about one per cent is expected in the U.S. during the current crop year. The position of world groundnut crop has also been generally good. The total world output of groundnuts rose by about 600,000 tons to 11.1 million tons in 1961-62, as compared with the previous year. The output of world cottonseed and sunflowerseed too continued to go up in 1961-62. World supply of oils of these two seeds are now said to be quite plentiful. In view of the comfortable supply position, values of world oilseeds and oils have moved down considerably. In the London market, groundnut oil (B.W.A.) is currently quoted at £96 per ton, as compared with £109 a year ago and groundnut at £58 per ton, as against £65 a year ago. The fall in world prices have been quite substantial during the last one year and, therefore, even the latest sharp fall in the prices of Indian oils has not brought them in parity with world prices. There is, however, no denying the fact that the gap between Indian and world prices of oils and oilseeds has narrowed down in the last few weeks. Consequently, the export prospects are now a little better than before.

A word of caution at this stage will, however, be in order. In the first place, the weakness of the oilseeds market has been induced largely by the operators' fear that Government may impose restrictions on forward trading in oilseeds. If these fears turn out to be without substance, the present trend may be revised. Secondly, it will take some more time to get a clear picture of the crop prospects for castorseed, linseed, etc. If their output happens to be smaller, the supply position of oilseeds and oils as a whole will turn in favour of bulls. There is, therefore, no room for complacency on the part of officials. Nor is there any basis for consumers to think that the worst is over.

L.I.C. Bonus Disappointing

Caution may be a virtue in business, but ultra-conservatism is not. This is true of the basis adopted by the Life Insurance Corporation for its third valuation, the results of which were published this week. It is an extremely stringent one and cannot be defended on actuarial or any other rational grounds. For there has been improvement in almost every aspect of business having a bearing on valuation during the two years, 1960 and 1961, covered by the present valuation. And still the Corporation has retained the basis adopted for the second valuation which itself was stringent. There has been a substantial increase in the yield on the Corporation's investment, a marked decline in the renewal expense ratio and a distinct improvement in mortality during the *biennium* covered by the valuation, as compared with the preceding *biennium*. These surely warrant a less niggardly distribution to policyholders than before. Instead, the Corporation has thought it fit to keep the bonus for participating policies at the same level as in the previous valuation, namely, Rs. 16 per thousand sum assured per annum for whole life assurances and Rs. 12.80 per thousand sum assured per annum for endownment assurances. As in the previous valuation, proportionate bonuses have been declared for participating policies of the erstwhile insurers in accordance with the Classification of Policies (for Differential Bonuses) Regulations, 1961. Under this classification, it may be noted, the participating policies of the erstwhile insurers and the Corporation are classified into 25 groups. Each group has been allotted an index number which varies from 49 to *nil*, with the Corporation having a key index of 10.

The net rate of interest earned on the Corporation's investment in the *biennium* was 3.55 per cent in 1960 and 4.68 per cent in 1961, as compared with 3.52 per cent in 1958 and 4.08 per cent in 1959. The average net rate of interest earned during the two-year period works out to 4.14 per cent, as against 3.81 per cent in the preceding *biennium*. In spite of this improvement in yield, the rate of interest assumed for the purpose of the current valuation is the same as that in the previous *biennium*, namely, 2.875 per cent. The reason given by the actuaries for not taking into account a higher rate of interest, which they themselves admit could have been done, is that it is not advisable to do so at present, in view of the likely effect on the national economy of the Sino-Indian war. They have, however, not explained these likely effects. Apparently, they feel that the volume of new business may go down, in view of the mobilisation of savings in various ways for financing the war effort. But this pessimistic inference is not borne out by the experience of the country in the last World War. They may also be feeling that costs would go up and that interest rates would go down. But these misgivings could easily be exaggerated to the detriment of existing policyholders who have contributed to the present surplus. In fine, the actuaries' assessment of the yield prospects of the Corporation's investments reflects either undue pessimism or a reluctance to give policyholders their legitimate due or both. With the major portion of the Corporation's funds pouring into Government securities and the era of high interest rates having come to stay, there is no reason to suppose that the yield on the Corporation's investment would go down. There may be a slight fall in interest rates in the years to come, but there is going to be no return to cheap money. There is every reason to believe that interest rates will stay at levels which will belie the assumptions of the L.I.C.'s actuaries (Mr. V. H. Vora and Mr. D. D. Markan) at least for some, if not many, years to come.

The over-cautiousness displayed by the L.I.C. actuaries could have been justified had the mortality experience and expense ratio been showing an unfavourable trend. But that has not been the case. Mortality experience has been very favourable; in fact, it has been better than the mortality basis used in the premium tables and that assumed for the last valuation. This is confirmed by an analysis of the mortality experience during 1961 of fifteen selected Divisional offices of the L.I.C. and of major Integrated Head Office Units of nine of the companies taken over by the Corporation. The mortality table used for the present and the previous valuation is the same, namely, Modified Oriental (1925-35) Ultimate Mortality Table. This is, of course, a lighter table as compared with the Oriental (1952-53) Ultimate Mortality Table used in the 1957 valuation, for the modified table reflected the progressive improvement in mortality experience. But it does not reflect the improvement to the full extent. We are told that a detailed investigation into the mortality experience during 1961-64 of the lives assured with the Corporation has been taken in hand by the Corporation. When the results of this investigation are available, it would show the extent of the margin between the actual mortality experience and the assumption made in the valuation.

There has also not been any relaxation in the provision made by the actuaries in regard to expenses, in spite of the fall in renewal expense ratio from 15.46 per cent in 1958 to 12.90 per cent in 1960 and still further to 12.42 per cent in 1961. They have assumed that 20 per cent of premium for participating policies and 15 per cent for non-participating policies would be required for covering expenses. These are more or less the same ratios adopted in the 1957 valuation, since when the renewal expense ratio has declined by nearly 25 per cent.

The stringent basis adopted for valuation has greatly deflated the surplus available for distribution. Thus, in spite of the fact that the total business in force, excluding annuities, at the time of valuation stood at Rs. 2,737 crores, the distributable surplus is only Rs. 34.45 crores, as against Rs. 25.57 crores in the last valuation when total business in force aggregated Rs. 1,997 crores. Of this, Rs. 32.73 crores have been allocated to policyholders and Rs. 1.72 crore to the Government. The total number of participating policies is 6.5 million, of which 300,000 are whole-life policies and 6.2 million endownment policies.

The Corporation has been repeatedly countering the plea for a reduction in the premium rates in the light of the improvement in mortality experience, on the ground that it is unwise to make such downward adjustments periodically and that the best way of passing on to policyholders the benefit of the surplus resulting from lower death rate, etc., would be to declare higher bonuses. But the two valuations show that, when the time comes, the L.I.C. is extremely reluctant to increase the policyholders' share of the surplus, even if it could be done without in any way weakening the financial position of the Corporation. Answering the criticism of Pressmen that the Corporation was needlessly conservative in its valuation, Mr. B. K. Kaul, Chairman of the Corporation, stated that the undistributed portion of the surplus, if any, would only go to strengthen the life fund. Policyholders, however, cannot derive much comfort from this explanation, for excessive accumulation of surpluses is of no direct benefit to them. Besides, it might be an indirect inducement for extravagance.

To sum up, the L.I.C. enjoys the total monopoly of all life business in this country. It has, therefore, a special obligation to policyholders, the obligation being to be fair in declaring bonuses. In this respect, it has to be more liberal than were the private insurers many of whom denied the policyholders their due under various pretexts, until competition from more enterprising insurers such as New India and Norwich forced them to behave. The policy of ultra-conservatism adopted by some of them in the name of financial prudence and foresight, so that they could declare fantastically high dividends, is by no means an ideal model for a public sector undertaking which has been set up not for minting profits by squeezing the policyholders, most of whom are hard-working middle classes hard hit by the fall in the purchasing power of money, but for making life insurance attractive, safe and cheap. There is no sign of socialism at all in the bonus policy of L.I.C. On the contrary, it is in the best traditions of a tight-fisted capitalist organisation. By following such a policy, the L.I.C. is only substantiating the common criticism that State capitalism is worse than the capitalism in a private enterprise economy. One has only to compare the bonuses declared by the life insurance companies in the U.K. and the U.S., for instance, to realise the merit of this complaint.

To deny policyholders, in the name of stability, a fair share in the years when surpluses are

(*Continued on page 1017*)

CAN INDIA'S ECONOMY TAKE IT?

YES, IF SOME PRE-CONDITIONS FULFILLED

By G. D. Birla

[The massive defence effort required to throw back the Chinese invaders and ensure the long-term security of India's borders will not be beyond the economic capacity of the country, if the production increases envisaged under the third Plan are achieved. In giving expression to this confident view in an article in The Hindustan Times *of the 4th instant, Mr. G. D. Birla has cleared the air for a pragmatic and positive approach to the urgent task of economic mobilisation. We are reproducing the article here in the hope that the Cassandras who think that India's economy cannot take it will read and re-read his thesis and that the powers-that-be will pay heed to his suggestions for achieving success. They must, in particular, take note of the* sine qua non *for his premise.—*ED.]

COMMENTATORS in India and abroad are almost unanimous that war with China—and it is bound to be a prolonged war—must greatly strain the Indian economy and come in the way of its development. This conclusion looks so obvious that no man, on first thought, will venture to question its accuracy. Yet, one can demand a little more investigation to find out whether this conclusion had good foundation or is just a hackneyed assumption associated with the mental habit of taking things for granted too readily.

The Last War

In the last world war, there was a great strain on the economies of all participating countries. But in the end, it hardly left any permanent scar on the economic conditions of any of the countries that were involved. Thanks to the gigantic help from the United States, even the vanquished countries like Germany, Italy and Japan, starting from absolute scratch, rebuilt their position at a fantastic speed and raised their prosperity to levels much higher than those which existed before the war.

Russia fared no worse. If anything, it is far stronger and richer than before. Britain has ceased to be a major power politically, but not economically. The standard of living of the common man there has sharply gone up and is now much higher than the pre-war standard. The United States, too, has expanded its economy. The progress made by her during and after the war in industrial production is astounding. It sounds queer, but it is a fact that the sense of urgency created by war is a great tonic for activity in every field, not excluding science and education. Is there any reason, therefore, to conclude that India alone must suffer economically due to the war or that the Plan should be suspended during the war period?

Bigger Targets

The Prime Minister has rightly said that the Plan should not be pruned or suspended. The Finance Minister in his speech in Calcutta last week expressed an identical view. I entirely agree and go a step further: if the war has to be fought successfully, not only the third Plan should be fulfilled, but all sorts of encouragement should be given to production to achieve much bigger targets than those envisaged in the Plan. Modern wars are not fought with *lathis* or fists. They are fought on the strength of production, industrial specially, but agricultural no less. Therefore, to win the war we will have to work towards greater production with greater vigour than in ordinary times.

The Plan cannot, therefore, be suspended. It may be necessary to make adjustments—cut down programmes with low priority such as community projects and raise other targets of development with higher priority. In the ultimate analysis, we must aim at larger production and a larger national income than envisaged in the Plan.

Clear Appreciation

There is thus no reason to believe that, during the period of war, the economy of the country as a whole will suffer, provided of course we can achieve the production increases. If we have a clear appreciation of this position, then we should plan to exploit the enthusiasm created by the war to short-circuit the hurdles of red-tapism, provide an efficient administration and strive to reach all Plan targets.

How much more do we need to spend on military expenditure due to war? Let us assume that the Defence Budget which is now about Rs. 380 crores will be raised eventually to Rs. 1,000 crores a year. Having regard to the strength of China, which need not be exaggerated, it is neither necessary nor, having regard to our own resources, is it possible to go beyond this sum over the next few years.

If, therefore, we have to find another Rs. 620 crores a year for fighting a war, we may safely assume that about Rs. 300 crores out of this should come from equipment imported from abroad for which countries friendly to us will take up the responsibility. We ourselves will, therefore, have to find only about Rs. 320 crores. This latter, of course, has to come out of the national income through taxation and loans.

Vital Targets

The whole question is: Can the country's economy bear a new annual burden of Rs. 350 crores? The answer certainly is "yes" if we can achieve the targets of production envisaged in the third Plan. This "if", however, is very important. It is the *sine qua non* of the whole premise. The emphasis on this "if" is fundamental because very often lip sympathy is paid to production, while, when fiscal and other economic policies are planned, the needs of expansion are thrown to the winds.

The present national income of India is about Rs. 14,000 crores. The target for the third Plan is Rs. 19,000 crores. Assuming that we can push it up to beyond Rs. 20,000 crores by the end of 1965, what is this burden of another Rs. 350 crores a year to our economy? But we must achieve this target. Supplies cannot come out of scarcity. This is a simple proposition which because it is so obvious is often ignored.

Apart from war expenses, many other welfare expenses on subjects such as education will

Hear No Rumour

Spread No Rumour

continue to receive our attention as provided for in the Plan. They should not at all be cut since welfare expenses are as important for the war effort as armaments. We will need more education, more technicians and greater comforts for the masses who provide the fighting forces.

Therefore, the whole question boils down to a new intelligent orientation of our economic policies so as to promote a vigorous rise in production all round.

Burden Not Too Big

If we do all this, we may be sure that the burden is not too big for us to bear. What is therefore needed is thinking in a new and bold way and the determination to implement policies and programmes which have been agreed upon.

On what services and goods are we likely to disburse this extra provision of Rs. 350 crores a year in the Defence Budget? A substantial portion will be spent on salaries and wages. We may have to raise many more divisions in order to increase the strength of our Armed Forces. The first item out of this extra Budget would be spent on the salaries of troops, officers, the administrative staff, medical, nursing and other ancillary personnel. This obviously will create extra purchasing power leading to a rise in demand for all sorts of essential commodities.

These we must produce unless we are ready to face scarcity which we dare not. Then we have to spend a lot of money on armaments, transport, rail and road, expansion of ordnance factories, etc. All these stem from steel, whether raw or fabricated. For this we have to expand steel production and set up more capital goods plants and fabrication plants to convert steel into all sorts of war goods, armaments, railway equipment, bridges, trucks and even capital goods.

We will need ammunition, which means expanding the manufacture of explosives which in turn means increased production of fertilisers which we also need for more food production. Thus, chemical plants come into the picture. We need more roads for which we need more cement. For making more roads we require earth-moving equipment, which again means steel and its fabrication. We require parachute cloth, warm and cotton, tents, and so on—that is, more production from the textile industry. We need more engineers and scientists, thus calling for greater educational facilities. In this way when we begin to make a long list of all our requirements, we suddenly discover that we are only reciting the targets already provided in the third Plan except those with low priority. Thus there is close affinity between the targets of the Plan and the targets for war production.

Hurdles in Way

There are no doubt hurdles in the way of achieving Plan targets and pursuing at the same time a total war effort. They must be negotiated briskly. The following are some of the more important problems:

Lack of adequate foreign finance: Exports, loans, aid and investments are the main sources of earning foreign exchange. Export promotion is a long-term business and it can be achieved only by the reduction of costs through modern methods of production. Loans and aid we are already getting. The war has created great sympathy for us in all the friendly countries of the West so that we can expect to get much more assistance in the future. Not the slightest attention has, however, been paid to foreign investments. This requires a proper atmosphere. A good fiscal policy is the main stimulant, entirely absent now. The Finance Minister, in his speech to the Associated Chambers of Commerce, has rightly emphasised the importance of foreign investments. But the Finance Ministry has not paid much attention to this point so far. Mr. Morarji Desai no doubt realises that it is not enough to appeal to foreign investors already here not to go away. It is also necessary to attract fresh investors by creating a favourable climate for new investments. Simplification of procedures for foreign collaboration is equally important. The attitudes adopted by the Secretariat in Delhi have so far been a great disappointment to investors abroad.

Adequate supply of equipments and know-how: We cannot for ever continue to import equipment from abroad. For the production of capital goods, know-how is necessary and this we have to import from abroad. A liberal policy in this connection is necessary. The establishment of capital goods industries should be given the highest priority and stimulation.

Red Tape

Inefficiency in administration: One need not elaborate on this. Everybody knows how much of it there is. It has been brought out strikingly at this early stage of the war. Inefficiency in administration was the root cause of our reverses on the frontier. The Planning Commission is the greatest hurdle in the way of short-circuiting red-tapism. All procedures should be simplified. With the creation of the Ministry of Co-ordination, with Mr. T. T. Krishnamachari as its head, one expects much better results.

Shortage of coal, power and transport: All these could be remedied provided there is a realistic approach to the problem. An appreciation of the harm that this inefficiency and the out-of-date policy of Government have done is essential. To rectify the present deficiencies, Ministers with knowledge, drive and realism are needed to preside over these ministries.

Industrial policy: This will require some modification to suit the new demands. As it is, there are too many "don'ts" in it. A more positive approach is needed.

May one expect that the war exigencies have created a new psychology in the Government in favour of realism and efficiency?

PERSPECTIVES & PROJECTIONS

By Mercator

Hard Choice

"And so while the great ones depart to their dinner,
The secretary stays, growing thinner and thinner,
Racking his brain to record and report
What he thinks that they think that they ought to have thought."

—SIR ARTHUR BRYANT,
In *The Turn of the Tide.*

THE above quotation sums up the predicament not only of the secretaries who have to act as *rapporteurs* at the various meetings of co-ordinating bodies set up by the Union Government during the present crisis but also of the journalist who has to do his duty by the public by his report or comment. The agonising re-appraisals are yet incomplete but the impression one gets is of a general inability on the part of the Government to get through measures required for the long period of defence preparations ahead. Men who can take decisions quickly are wanted more than ever, but even if found they should have strong political backing. The clumsy ways in which the Government is going about relatively non-controversial measures like those for control of stock and commodity markets and essential supplies shows no abundance of capacity for taking decisions. But, in the field of defence and economic mobilisation, some of the choices are very hard at the moment. It is easy for writers of letters to the editors to say that we must have an absolutely thorough system of civil defence, with A.R.P. shelters, fire-fighting equipment, home guards and all the rest but that will cost money which may be needed more urgently for ammunition or automatic weapons; and, if the Chinese are only keen on keeping up the border war indefinitely, some waste of resources will be inevitable on measures which may never be needed. On the other hand, unpreparedness may make Cassandras later on to say how right they were. The *via media* between an excess and a lack of enthusiasm cannot be laid down by law but only by the discretion of those in charge.

In spite of a Ministry of Co-ordination, some matters are still pending action. A beginning has been made in special arrangements for transport of jute and tea from Assam; airlift has also been suggested since transport planes carrying supplies for the Army will be mostly returning empty. Some special arrangements for financing jute and tea crops are probably needed now, since, with the threat of an invasion, normal credit sources may dry up, unless, of course, a scheme of insurance of war risks is put into effect at once to assure investors and creditors that they will be safe. The delay in working out a scheme is indeed intriguing; with a skeleton legislation merely giving powers to to the executive, a quick actuarial assessment of the risks in the areas immediately exposed—Assam and some parts of West Bengal—should be possible. The Reserve Bank must be ready with alternative supplies of credit facilities. An insurance scheme was operated during the last war but the problem now is more limited in area and the nature of risks to be covered though as time goes on these will become clearer. While foreign exchange may be a difficulty in reinsuring such risks with foreign companies, confidence can be immediately restored by a summary proposal covering war risks for a small premium, of about ½ per cent of capital cost of goods and industrial or agricultural installations.

Parley with Pakistan

If China wished to wreck all chances of an Indo-Pakistan *rapprochement* at this time, she cannot find a better method than persistence in the present peace offensive, which will weaken the will on both sides to compromise. It was, however, unfortunate that the first obstacle should have come from the Indian side, through Mr. Nehru's statement ostensibly intended to contradict a B.B.C. report, suggesting partition as a possible solution. Such proposals have been made quite often before and some partition is involved even if the present line of control is sought to be stabilised, Mr. Nehru had not ruled out such proposals in the past and the present abrupt reaction to the B.B.C. not only upset much of the patient work of the British and American missions but also created for Mr. Nehru himself a problem of reconciling his later statement (made after Mr. Sandys' mid-night dash to New Delhi from Karachi) with the one made earlier. This may be one of the handicaps of having a Parliament in session when high policies are in a fluid state and there is little patience for finding diplomatic answers.

High hopes of a solution may be unwarranted on this occasion also, as they were before. President Ayub may not be in as strong a position to make large concessions as he was two years ago when he signed the Indus Waters Treaty and one of the questions on this side will be whether, even if he does make them, will he be in a position to ensure that they will be honoured? Unity in this sub-continent is essential to meet the enemy who is a danger to both countries, though in Pakistan widespread myopia may obscure it from the eyes of politicians. On the other hand, both the West and some responsible sections in Pakistan (unrecognisable perhaps to the naked eye) should be able to see that communal passions are not inflamed at this moment by a revival of the two-nation theory, which in the end will only weaken both Kashmir and India and not strengthen their defence preparations. So a plebiscite, which India has never wanted for these and other reasons, seems to be ruled out in any case.

If Pakistan cannot agree to border adjustments which may give her *de jure* control over what she holds (or more), she may in fact be faced with a proposal for revival of the idea of independent Kashmir for which Sheikh Abdulla had worked and which he might still want if free. In such an event, Pakistan's loss will be greater though she may derive satisfaction from the fact that it will still be smaller than India's. But Western supporters of this scheme may have also to consider whether this new arrangement will in actual practice strengthen this area against Chinese designs on Kashmir's frontiers, unless there are joint guarantees for safeguarding them in which both India and Pakistan participate along with the major powers and perhaps the U.N. also. Thus the condominium idea may crop up in some form or other. Once the question is reopened, a Pandora's box of troubles will be let loose, diverting attention from the main and immediate problem of defending against aggression.

In these circumstances, an agreement that Indian forces can be taken away without risks from the frontiers of Pakistan, in exchange for an assurance that a certain procedure will be followed for settlement of the problem at the end of the emergency, is all that one can hope and work for; further improvement on this understanding will be possible only if the Chinese threat definitely recedes for the time being at least and there is clear proof to that effect. If indeed by some process of equivocation China reaches a position which satisfies the Indian demand for restoration of the line on 8th September 1962. India will be involved in long-drawn-out negotiations with China, which are bound to be equally exhausting, considering the amount of confusion it can create about places, names, history and geography. With the outcome of such negotiations in uncertainty, it is a *moot* point whether simultaneously strenuous negotiations will be possible with Pakistan. Western opinion has always underestimated the complexity of the Kashmir problem, though now it is, perhaps, dimly aware of the difficulty of dealing with a party like Pakistan, which has shown not only unreasonable animosity towards India but also struck up unwise attitudes about its own alliances on which the West has greatly relied.

Focus on Language

The Rajya Sabha found sufficient time to debate what must appear to many a minor issue during the emergency, namely, the position of the linguistic minorities in the States. There were the usual complaints of omission and commission, but the present mood of overlooking these in the face of the national danger prevailed on all sides. The debate was important only for two points made by Mr. Lal Bahadur Shastri in his reply. The first was the warning to the States against a hasty switchover to regional languages as the medium of higher education, which he said would lead to "compartmentalisation" in the country. His colleague, Dr. Shrimali, should be educated on this matter even more systematically than the State Governments. Dr. Shrimali's tactics are simple, almost naively so; once English is wholly subordinated (if not banished altogether), there will be a compulsion on those who study in non-Hindi

"ASSOCHAM" ON AGRICULTURE

THE need for urgent measures to improve agricultural productivity was stressed in a resolution adopted by the Associated Chambers of Commerce of India at its latest annual meeting held at Calcutta. The resolution rightly points out that increase in productivity should be considered the fundamental basis for expanding output and for maintaining price stability, which are both essential for the successful mobilisation of resources to meet the Sino-Indian war emergency. Mr. F. E. H. Goddard, who proposed the resolution, conceded that the food situation at present was satisfactory. But he cautioned that the present happy situation, which was to some extent, the result of larger imports, should not breed a sense of false optimism. This is certainly a timely warning, considering the slow progress on the agricultural front in relation to the third Plan target of foodgrains and the "inexorable increase" in population.

In the 1961-62 crop year, roughly corresponding to the first year of the third Plan, it may be noted in this connection, there was actually a decline in the production of both cereals and pulses, as compared with the previous year. According to official final estimates, the output of cereals fell from 68.32 million tonnes in 1960-61 to 68.17 million tonnes (despite an increase in wheat output from 10.99 million tonnes to 11.81 million tonnes). Production of pulses went down from 12.65 million tonnes to 11.66 million tonnes. Thus, the aggregate foodgrains output was lower by 1.14 million tonnes at 79.83 million tonnes in 1961-62, as compared with the previous year. The third Plan target of 100 million tons (to be attained by 1965-66) thus remains a far cry. The production of commercial crops, particularly cotton, has also not been satisfactory. Although jute output in 1961-62 was higher, this was not due to any increase in productivity, but was largely because of diversion of land from paddy cultivation, induced by the high prices for jute.

In order to step up productivity, Mr. Goddard suggested several measures of intensive farming. As he himself observed, there are many excellent schemes for improving agricultural output, but "they are not getting across to all the farmers." This is a matter of inadequate administrative machinery and inept organisational arrangements. The resolution therefore urges that the authorities should deal with the question of intensified cultivation of crops, particularly jute, cotton and oilseeds where the final manufactured products are among the country's staple exports, as one of urgent national importance. Equal attention deserves to be given to the possibility of implementing crop insurance schemes, which was suggested by Mr. J. R. Clarke, the spokesman of the Punjab and Delhi Chamber of Commerce. According to him, the farmers should be protected against natural calamities, without which they would not have sufficient confidence in going about the business of cultivation in a more determined and scientific manner. Another important point stressed by Mr. Clarke is the need for exempting mechanised farms run by companies from the land ceiling legislation. This stand of Mr. Clarke is based on rational economic grounds, for, on farms run by companies, productivity is much better than on individual farms in the country.

POWER SHORTAGE

Utilisation of installed capacity, according to a recent official study, is well below 65 per cent in as many as 75 industries. No wonder, therefore, the tempo of industrial production has slowed down in the last one year. This state of affairs has been largely due to the crucial shortages of coal, power, transport and raw materials. Among these shortages, the first three have claimed attention in the deliberations of the Associated Chambers of Commerce, Calcutta, since December 1960. The factor of power shortage, in particular, has repeatedly come in for anxious treatment at the meetings of the Chambers in recent years. But the power crisis has not abated in the least, and so the Associated Chambers, at their latest annual meeting held early this week, returned to the theme with renewed vigour and passed the following resolution:

"The nation-wide shortage of electric power is one of the most inhibiting factors in the present emergency and threatens to cripple industrial production and prevent the expansion of industries necessary to meet urgent national requirements and the Associated Chambers, therefore, urge with all the emphasis at their command that there should be a concerted effort (i) to make the most efficient use of existing generating capacity and to increase it as rapidly as possible, the immediate and short-term emphasis being on the installation of thermal units; (ii) to remove obstacles which prevent industrial units installing their own generating equipment, where necessary; and (iii) to amend the financial provisions of the Electricity (Supply) Act, 1948, so as to remove those factors which at present discourage the development of supply undertakings."

The first emphasis in the above resolution, which was proposed by Mr. H. P. Nanda of the Punjab and Delhi Chamber of Commerce and seconded by Mr. A. D. Ogilvie of the Bengal Chamber of Commerce and Industry, is appropriately on power generation and the need for increasing it. Power demand is known to double itself every four or five years. But generation has not kept pace with demand in the last five years, as will be seen from the *monthly average* of 1,031 million kw.h. of electricity generated in 1958 and of 1,753 million kw.h. in 1962 (first seven months). Since, thus, generation of power has not been commensurate with the needs of industrialisation, the latter's tempo itself has slowed down as a consequence. The remedy would appear to lie in immediate and short-term emphasis on additional thermal units, particularly in and near the coal belts, without prejudice to long-term planning of hydro and atomic power units. The immediate or short-term programme should also cover fuller and more efficient utilisation of existing generating capacity. The authorities could usefully carry out, in this connection, a survey of the installed capacity of generating plants and the extent of possible deration, so that, whenever a particular unit generates lower than the maximum possible, immediate remedial action can be taken. Equally relevant in this context is the suggested technical examination of the maintenance schedules of power generating units for the purpose of ensuring proper maintenance of plant and equipment as a safeguard against breakdowns. This would involve, as a corollary, the immediate issue of import licences for spares for repair and replacement purposes. Above all, there is a case for upgrading coal supplies to power stations in cases where the current policy of downgrading such supplies has reduced energy output.

As for the suggested removal of obstacles in the way of installation of generating plants by industrial units themselves, the mover of the resolution at the meeting of the Associated Chambers has urged the Government to clarify its thinking on the matter. In his view, generation of power, wherever possible, by industrial units for their own requirements is a "must not only today but in future years also." Wherever a group of industries offers to establish jointly a power plant, the authorities should encourage such effort and not thwart it as they did in the case of the joint proposal of a group of Madras industrialists for establishing a thermal unit. It stands to reason that where some industries may individually find it too uneconomic to have their own generating units, they could more usefully pool their resources and jointly run an economic power plant for their common purposes.

The question of amending the Electricity (Supply) Act so as to provide greater incentives to the private-sector electricity undertakings for development continues to be undecided even after years of representation by the industry. If these undertakings are to play their full part, as they very well can, in meeting the ever-increasing demand for power, the standard rate of return would have to be suitably increased. Only such a higher rate of return will enable the electricity undertakings to raise further equity capital for development. Unless this basic and vital demand of the undertakings is conceded without further loss of time, it is difficult to see how this industry will acquire that measure of stability and growth so very essential in the context of otherwise unrelieved power scarcity.

TRANSPORT NEEDS

Serious shortages in the supplies of coal and industrial raw materials in the last two years have been due as much to shortfalls in their production as to bottlenecks in transporting them to consuming centres. The transport crisis, in so far as it has slowed down the tempo of industrial production, has driven home the lesson that the infrastructure, covering power and transport, should always command the highest order of priority in planning for development and defence alike. But the mistakes and deficiencies of the past cannot be remedied overnight. That, however, can be no excuse for not making an earnest beginning, here and now, in the direction of improving transport facilities of all types to an extent greater than has been visualised so far. It is in this context that the Associated Chambers' resolution on transport, passed at their annual meeting at Calcutta early this week, has an immediate relevance. The merit of this resolution lies as much in its plea for a substantial increase in the physical carrying capacity of the railways by various means as in its cogent advocacy of an expanded programme covering alternative means of transport.

It has been suggested that, in order to increase the carrying capacity of railways, large sections of single track should be doubled and that more wagons and locomotives should be built. This, however, would call for heavier capital expenditure. As such additional expenditure may not be wholly feasible in the next few years, the practical suggestions advanced by the seconder of the resolution, Mr. G. N. Noel-Tod of the Cochin Chamber of Commerce, deserve to be pursued more immediately. These suggestions, incidentally, are that mishandling of wagons at various points should cease, that delays caused by insufficient shunting engines, congestion in the yards and waterlogging of sidings after heavy rains be minimised and that the handling and timing of wagons from one centre to another be improved and speeded up.

Basic to the development of other forms of transport would be a clear recognition by the railways that, though they themselves have to develop further, such of their practices as have the effect of discouraging alternative modes of transport are so many anachronisms in a developing economy. That the railways should seek to eliminate such practices has thus been emphasised in the resolution. But this, by itself, will not be sufficient for encouraging alternative means of transport. A more positive approach is also called for, if transport by road, river and sea is to receive a further impetus. The key elements of this approach, as suggested in the resolution, may be summed up as under:

(i) Proper maintenance and expansion of the road system; streamlining of the regulations which govern the licensing of vehicles and inter-State movements; removal of the threat of nationalisation of road transport undertakings.

(ii) Improving the capacity and efficiency of seaports and coastal shipping by the installation of the most advanced cargo handling equipment, by an expansion of weather-proof storage accommodation and by an improvement of rail facilities serving the dock areas.

(iii) Extensive dredging and river training operations and other works that provide scope for improved inland water transport.

(iv) Such other means of transport as pipelines and ropeways to be fully investigated and encouraged.

The aforesaid programme outlined by the Associated Chambers derives its justification from the consideration that, out of the 360 million tons of likely traffic in the last year of the third Plan, only 250 million tons are expected to be lifted by the railways. The gap of 110 million tons will have to be met, as Mr. K. M. Wilcox of the Upper India Chamber of Commerce emphasised while proposing the resolution, by other forms of transport, chiefly road and water. That road transport deserves a higher priority and more urgent consideration than it has received so far is his considered view. It is also his emphatic view that the third Plan provision of Rs. 7 crores for the development of inland water transport, as against the Rs. 50 crores recommended by the Gokhale Committee, is grossly inadequate even for the actual traffic carried at present, let alone for future development. No question of competition between railways, roads and rivers will arise, if, in an integrated transport system, these three modes are made to feed each other's traffic.

PRODUCTIVITY

The pivotal role of higher productivity in economic mobilisation for defence and the need for a national campaign to improve productivity were stressed by the resolution on productivity adopted at the annual meeting of the Associated Chambers of Commerce of India held at Calcutta this week. The resolution reads as follows:

"In view of the national emergency, higher standards of productivity, which will add to the national output and make the maximum use of existing resources of capital, equipment and skilled manpower, are vital for the mobilisation of resources. Productivity can be most effectively increased and true economic costs lowered, first, by the full and efficient utilisation of the plant and machinery already installed in the country and, secondly, by the adoption of realistic schemes of incentive payments based on expert study of the work concerned and the replacement, wherever possible, of bonus payments, which are unrelated to effort, by scientifically designed incentive schemes. The Chambers, therefore, advocate a national campaign to improve productivity and to adopt systems of incentive payments in all circumstances where these are feasible."

Moving the resolution on behalf of the Bengal Chamber of Commerce and Industry, Mr. A. R. Foster said that, though incentive schemes such as special import licences, subsidies, tax rebates and railway freight concessions were helpful in increasing exports, ultimately, a nation could export successfully and profitably only if its costs of production were competitive. In order to keep costs at the lowest possible level, maximum efficiency in production was essential. At present, thanks to shortage of power, raw materials and components and inefficient plant layout, there was considerable underutilisation of capacity. In this connection, Mr. Foster quoted the findings of a C.S.O. study to indicate the extent of underutilisation. According to the study, out of 215 selected industries, only in 110 did the degree of utilisation exceed 75 per cent of the installed capacity. Among the remaining 105, utilisation ranged from 65 to 75 per cent in 33 industries and below 33 per cent in 72 industries.

Since labour costs accounted for a substantial part of the total cost of production, a decline in labour cost was essential to bring down the cost per unit of production. This could be brought about only if the output per head was high and herein lay the crux of the problem. In the U.S., Mr. Foster went on to say, productivity had trebled during the last fifty years and it continued to expand at the rate of 3 to 4 per cent per annum. In Japan, productivity improvement was even more spectacular, with a threefold increase in just ten years. At present, the U.S., Canada and Sweden had the highest productivity in the world. The *per capita* incomes in these countries were also correspondingly higher.

The scope for productivity improvement in industries was great, averred Mr. Foster. There were, he conceded, some engineering and textile units in India, the per-worker-output of which was comparable to that in advanced countries. But he felt that, for the most part, productivity in Indian industry was generally low and that the scope for increasing productivity was "tremendous." He gave some telling illustrations to prove this point. Thus, at the T.E.L.Co. factory in Jamshedpur, it took six workers in 1954 to equal the output of one German worker doing similar work at the Mercedes plant at Stuttgart. Today the ratio was 6 : 5. When the Integral Coach Factory at Perambur, Madras, began to produce railway coaches in 1955, it took over 19,600 man-hours to finish one coach, as compared with 8,500 man-hours in Switzerland. But today it takes only 8,519 man-hours at Perambur to turn out one coach. These instances show the scope for improvement in productivity through patient endeavour.

Having argued that productivity could be increased substantially, Mr. Foster set out to suggest ways and means of bringing it about. According to him, financial incentives could be used to great advantage at the present stage of India's development to increase production and productivity. There was, he observed, much to be said for a partial replacement of the customary annual profit-sharing bonus, which had no relation to effort and output, by a monthly incentive bonus based on production. Mr. Foster referred to the fact that Britain was observing a productivity year and suggested that something similar could be done in India too to impress upon industry, workers and the public the importance of higher productivity.

Seconding the resolution on behalf of the Upper India Chamber of Commerce, Mr. P. K. Sahgal referred to certain commonly-held misconceptions about productivity. It is thought by some, for instance, that a productivity drive meant increased workload for workers and increased profit for employers. It is necessary, as he rightly pointed out, to dispel such misconceptions. This point needs to be emphasised because the drive for productivity cannot succeed, unless everybody connected with industry realise the ramifications of productivity. It must be brought home to workers, employers and the public in general, that an increase in productivity would benefit everybody—the community by way of more national wealth and higher standard of living, the industry through reduced cost, larger sales, higher volume of production and more profit, and workers by way of higher wages, more employment, improved working conditions and shorter hours of work.

EMERGENCY AND EXPORTS

The Board of Trade met once again on Sunday at New Delhi and, as usual, talked over a wide range of problems pertaining to export trade. One of the important subjects on the agenda was the consideration of the impact of Sino-Indian war emergency on the prospects for exports. One had hoped that the high-power body would give specific directions to policy-makers, on the one hand, and the industry and trade, on the other, to meet the needs of emergency without at the same time upsetting the existing export programmes. Nothing of this sort actually happened. The Board, however, seemed to have been satisfied with the expression of platitudes and vague references to the demands of emergency conditions. The Board, of course, commended redoubling of efforts for export promotion in the context of the emergency. In its view, defence demands should be met out of additional production, without entailing any reduction in exports. In case there was any decline in shipments owing to offtake for defence purposes, the Board urged the imposition of restraint on internal consumption.

As generalisations, the Board's views are beyond reproach. But once these principles are sought to be put into practice, difficulties arise. It would have been enlightening had the Board suggested precise measures for successfully restricting consumption. The Board should have also considered the possible impact of emergency on exports of such specific products as woollen goods or engineerings, and suggested ways and means to safeguard their exports, in the event of additional demand from the Defence Ministry. The Board's advice that industry should diversify itself to meet the demands for exports as well as for defence is motivated by good intentions. But exports cannot be stepped up unless the cost structure of industries is brought down to lower levels. It is only natural, then, that the Associated Chambers of Commerce of India, Calcutta, should have drawn particular attention to this aspect of export drive, in its resolution adopted at the annual meeting held early this week. The resolution called upon the Government to reorient the economic policies affecting export industries to strengthen and improve the competitive capacity of export goods. Special efforts, according to it, should be made to reduce cost of production and eliminate those factors which inflated costs, including, in particular, the heavy burden of local and State taxation. The Association's plea assumes a special significance in view of the emergency.

The question of export promotion needs to be looked at from the demand side as much as from the supply side. It was appropriate, therefore, that the Board of Trade should have devoted some thought to the measures for enlisting the closer co-operation of importers in Western Europe, whose offtake of Indian goods has, of late, tended to decline. The Board called upon industry and trade to develop the manufacture of goods for meeting the specific requirements of European countries. Besides, selected competent export firms were asked to contact the important importers in West European markets for the purpose of devising long-term arrangements for the export of Indian goods. This is a very reasonable suggestion. Already, industrialists of several developed countries have established close connections with the European Common Market countries on an unofficial level, without waiting for the Governments concerned to secure tariff concessions, etc. The earlier Indian businessmen establish direct contacts with their confreres in Europe, the better. Meanwhile, the Board of Trade has done well to initiate a study designed to find out the possibility of increasing exports of processed and manufactured goods to those markets instead of in the form of primary products as at present. It should not be forgotten, in this context, that processed and manufactured goods are subject to heavier tariff and other restrictions than those on primary products. There is thus need for a cautious approach to this problem.

The Government, of course, should spare no efforts in the matter of bargaining for tariff concessions from the West. One of the important

Firestone

Your Symbol of Quality and Service

To millions of motorists and truck operators throughout the world, Firestone means value—and with good reasons: Firestone leads the world in tyre and rubber research, constantly meeting the challenge to make the *best tyres today still better tomorrow*. And for 22 years, this has been the Firestone way of manufacturing tyres in India. In fact, no part of your car is more thoroughly proved than its Firestone tyres. *You know what you're getting when you buy Firestone!*

means of securing such concessions is to remove the impression in the West that processing and manufacture in this country are based on low labour costs. The Board, we are told, proposed to institute specific studies on the cost of production of selected commodities to remove this unfounded impression. It has also set up a committee, under the chairmanship of Mr. L. K. Jha, Secretary in the Ministry of Finance, to prepare a comprehensive report to be submitted to the proposed world trade conference next year. Another committee of experts has been set up to study and recommend the steps to be taken for increasing Indian ships' capacity for bulk cargoes and ensuring that at least 50 per cent of such cargoes are handled by Indian ships. The Board has also approved in principle the suggestion of one of its committees that a few selected free trade zones should be established. But the implementation of such a programme has been deferred on account of the national emergency. None of the aforesaid decisions of the Board, however, is immediately relevant to the question of accelerated export promotion.

INDIAN OVERSEAS BANK

The Indian Overseas Bank Ltd. (Chairman: Mr. M. Ct. Muthiah) has just completed full twenty-five years of much useful service to the industrial and business community. It was in 1936 that the late M. Ct. M. Chidambaram Chettiar, the founder-Chairman of the Bank, conceived the idea of starting an Indian bank on the lines of Exchange banks. The Bank began functioning early in 1937 with the twin objectives of developing overseas banking and of handling foreign exchange business. The first Indian institution of this kind, the Bank opened overseas branches in Malaya and Burma during 1937 and in Singapore during 1941. It was among the first few Indian banks authorised to deal in foreign exchange on the introduction of foreign exchange control in India. With the outbreak of war in the Far East, the infant Bank was cut off from its overseas branches in 1941. The Directors decided on a policy of caution till reoccupation in 1945 when the Bank opened a new branch in Ceylon in 1945, followed by branches in Thailand (1947) and Hong Kong (1955). The following table of progress between the years 1945 and 1961 shows the measure of the Bank's achievements since the cessation of the war:

(In lakhs of rupees)

	As at 31st December	
	1961	1945
Paid-up capital and reserves ...	1,53	33
Deposits	31,22	3,22
Working funds	34,00	3,92
Emoluments paid to staff ...	71	3
Number of branches ...	73	29

In its history of two and a half decades, the Bank has set high standards in regard to quality of banking service and soundness of banking methods. Within India, the Bank has extended the facility of exchange banking even to the smaller ports, putting them on a par with the metropolitan ones. Also, from the outset, this Bank set to deal directly with banks in each country abroad as against the conventional channels of routing business through established centres like London, and today the Bank has a wide network of foreign correspondents in all the important cities of the world.

The Bank's policy in India has been one of studied expansion. Apart from a large number of branches in South India proximate to the Bank's central office, it has extensive business in Bombay, Ahmedabad, Amritsar, Ludhiana, Delhi, Calcutta and Cuttack. The Bank's 2,000 staff members symbolise its spirit of service in some 80 places of its operation.

On the occasion of its silver jubilee—the Bank is not holding any celebrations to mark the jubilee in view of national emergency—the Bank can certainly look back upon its career with legitimate pride at its progress and satisfaction at its service.

RESEARCH IN TEXTILES

In a market economy, where the consumer enjoys the freedom of choice, ideas on clothing materials change frequently. What is considered as a fashion fabric today may cease to be so tomorrow, what with the invention of newer and newer synthetic fibres and modern marketing methods under which buyers are influenced in a variety of ways. Naturally, the future of the cotton textile industry will depend on the technical progress in the sphere of production. There is, therefore, no exaggeration whatever in the note of warning uttered by Lala Bharat Ram, President of the Indian Cotton Mills Federation, that the industry is bound to stagnate in the absence of qualitative improvement which can be brought about by constant research. Underlining the importance of research in his inaugural speech read out at the fourth technological conference held at Ahmedabad early this week under the joint auspices of the three Textile Research Associations of Ahmedabad, Bombay and Coimbatore, Lala Bharat Ram called upon all progressive mills to have research facilities at the unit level. Such facilities, he said, would enable the mills not only to solve many of their problems in a more scientific and analytical manner but also to make better use of research and development that took place in central research institutions.

In the present context of the growing competition in world cotton textile markets, the need for the Indian industry to remain vigilant about the quality and keeping down prices cannot be stressed too strongly. Indeed, the keys to successful export promotion lie in quality and prices. Lala Bharat Ram pertinently remarked that the research associations must maintain close links with both the mill sector and the machinery manufacturers. In particular, he emphasised the importance of designing modern machinery and equipment, development of textile chemistry, and provision of post-graduate research facilities. Evidently, he was prompted by the fact that the textile industry in India has lagged far behind in the field of processing from the point of view of domestic requirements consistent with changing consumer tastes, as well as from the export point of view of India's need to compete with other countries in the world markets. The Chairman of the Ahmedabad Millowners' Association, Mr. Rasiklal Nagri, wanted the research institutes to sponsor projects to study the difficult problems facing the textile export trade and Mr. Kasturbhai Lalbhai, Chairman of the Ahmedabad Textile Industry Research Institute, declared that the time had come for the universities and research institutions to launch on a more vigorous programme to deal with technical and management problems of textile industry. For research work both in the individual mills and in the research organisations, it is necessary to provide the means in terms of men and equipment. All this is, of course, expensive, but there is no doubt that it constitutes a productive investment.

Perspectives & Projections

(*Concluded from page 983*)

regional languages to learn Hindi either to get jobs or keep their contacts with those in the north who would have learnt the same subjects only in Hindi and may not care to talk any other language. That should ensure its becoming a national language quickly. It is this insidious approach that is dangerous, since it will wreck something which exists in the hope of forging a link which may emerge only very slowly, if at all, creating a vacuum in the interval. The Prime Minister has been prompt in condemning this antipathy to English, but Hindi lobbyists, with their one-track mind, do not seem to have heeded it.

That they have succeeded now in getting a postponement of the Bill for continuance of English as an associate language after 1965 is clear. Announcing this, Mr. Shastri, strangely enough, argued that, in the abnormal conditions created by the present emergency, the Government had decided to wait. But those, especially in the South, who have been looking forward to this measure will be greatly disappointed by a second postponement. The Government was committed to it in every way and there seemed to be no pressure of other more important legislative business before Parliament after the Defence of India Bill was passed. The critics of the measure will not, perhaps, be persuaded to soften their opposition even now, though they have had ample proof of the spontaneous response to the call for national unity in the face of external aggression; but have they no obligation to recognise other's views and make the necessary compromises? Instead of the Government trying to use this opportunity to win over their support also for its firmly accepted policy, the Home Minister has taken the line of least resistance by agreeing to abet delaying tactics.

GOLD for GUNS

Where to give

You can hand over your donations of GOLD, ORNAMENTS and MONEY to the National Defence Fund to the following receiving agencies :

- the Reserve Bank of India, Bombay, Madras, Bangalore, Calcutta, New Delhi, Nagpur and Kanpur ;
- any office of the State Bank of India or its Subsidiary Banks — State Banks of Hyderabad, Bikaner, Indore, Jaipur, Mysore, Travancore, Saurashtra and Patiala.

Donations in CASH or by CHEQUES may be handed over to

- all State Co-operative Banks
- any of the branches of the Central Bank of India, Punjab National Bank, Bank of India, Bank of Baroda, United Bank of India, National and Grindlays Bank, United Commercial Bank, Indian Bank, Indian Overseas Bank, Devkaran Nanjee Banking Co. and Jammu & Kashmir Bank.

There are no bank charges. Contributions are accepted at par in cash or by cheque.

MONEY ORDERS for Rupee one or above can be sent from any Post Office.

No Money Order Commission will be charged.

You can also send Money Orders and cheques to the Secretary, National Defence Fund, Prime Minister's Secretariat, New Delhi.

DELHI LETTER

SPECIAL STEEL TO PRODUCE TANKS

W. GERMANY OFFERS ASSISTANCE FOR PROJECT

From Our Special Correspondent

NEW DELHI, *4th December*

THE sophisticated nature of steel mills in the West-German-aided Rourkela project makes it the most suitable for rapid switching over to production to meet military needs. One programme under discussion between West German experts and Mr. Alfred Krupp and Hindustan Steel is the manufacture of special armour steel at Rourkela. The West Germans are said to have agreed to install at Rourkela ovens for hardening steel needed for armour plates. These plates are to be used in the manufacture of tanks at the defence installation at Avadi, with the help of a British firm which is collaborating in the plant to build army tanks. Some other military specialities will also be made at Rourkela's wide strip mill and West Germany will offer easy credit terms for the Rourkela conversion and expansion.

There is still some amount of confusion in the allocation of materials needed for industries allied to the defence effort and there has been criticism in the capital of the piecemeal methods adopted by the various ministries concerned. While fresh doses of taxation are unavoidable in the emergency, the Finance Minister, Mr. Morarji Desai, is expected to hold his hand until a clearer assessment is made of the needs for the military effort. Although the annual defence bill may have to be doubled or increased even further from the levels prevailing before the massive Chinese attacks, a considerable part of the expenditure will be in foreign exchange and such expenditure is beyond the country's capacity. If Mr. Desai had wanted to exploit the wave of national anger over the Chinese aggression for prescribing a heavy dose of taxation, he could have done it as soon as Parliament session opened. But he was then content to ask for supplementary grants.

A detailed assessment of the Western military commitment and the terms of the assistance will be known after the reports of the British and United States military missions are studied by Washington and London. The long-term pattern is expected to be charted by Mr. Macmillan and President Kennedy when they meet in the Bahamas on the 19th and 20th inst.

World Trade Talks

The Government of India has decided to mount a campaign on behalf of the interests of the exports of underdeveloped countries. India had joined twenty other countries at the G.A.T.T. session in Geneva last month in formulating a seven-point programme of action for implementation of earlier assurances by the industrialised countries. For the world trade conference under the auspices of the United Nations, India will prepare a comprehensive report on the trading problems of underdeveloped countries. The Board of Trade, at its fifth meeting last week-end, appointed a committee with Mr. L. K. Jha, Secretary in the Finance Ministry, as Chairman, to draft this report which will form the nucleus of India's analysis of backward nations' problems when the world trade conference opens. The Western countries have frowned on the idea of the conference which has the solid support of the Soviet Union. India, Indonesia and Egypt are the major countries among the Afro-Asians who have campaigned for the world conference.

The Board of Trade glossed over the short-term problems on the export front, partly because, in view of the emergency coming on top of the transport and industrial and agricultural production problems, many of the paper plans drafted earlier for export promotion are as good as scrapped. The Board of Trade, however, expressed the view that "the requirements of exports were more vital and of greater urgency for earning foreign exchange (during the emergency); the resilience of the economy and the increased production anticipated during the emergency period could adequately take care of the defence requirements and leave surpluses for export." The Board also mentioned that the urgency of exports was so great that even some restraint on internal consumption of some commodities might have to be considered.

The Board admitted that commodity-wise the exports had not kept pace with the targets for the current financial year and the emergency would make the export tasks more difficult. The major decline in exports has been in steel and steel scrap, coffee, cotton textiles, hides and skins, ferro-manganese, cotton waste and fish and fish products. (There is a proposal to form a separate corporation to promote fish exports.) The Minister for International Trade, Mr. Manubhai Shah, told Parliament of plans to set up a separate State trading unit to handle iron ore and other metallic ore exports. The increase in Indian iron ore despatches has been described by the Board as "steady," but the pace of increase in Indian ore exports has been slow as compared with the performance of other ore-producing countries. One major hurdle before iron ore exports continues to be railway transport and it is to be seen how far the establishment of a separate State trading unit will help meet the dissatisfaction with the S.T.C. behaviour expressed by Japanese importers.

Mr. K. B. Lall, Ambassador to the European Economic Community, was present at the Board of Trade meeting which again reviewed the position of exports to West European countries which have been falling precipitously in the current year. There is the small traditional flow of goods from India to Western Europe and industry and trade were asked to try develop the manufacture of items for meeting specifically the European requirements. Under this plan, selected export firms are to contact important importers in West Europe with a view to securing long-term trading arrangements. This problem is being studied by the Council for Trade with Western Europe. A study is also to be undertaken to find out the pattern of utilisation of primary products in Europe to discover to what extent India can despatch semi-processed materials instead of primary products. The Director of Foreign Trade in charge of West Europe will undertake commodity studies to assist Indian manufacturers and exporters to make arrangements with leading European importers. In this context, Mr. Lall emphasised the need to maintain steady and competitive prices.

Allied with the problem of prices is the impression in West Europe that processing and manufacture in underdeveloped countries are based on low labour costs. The Anglo-Japanese Treaty signed last month is based on the assumption that Japanese wage levels have risen to be on par with at least those prevailing in some comparatively less developed European countries. For some time, India has been telling industrialised countries and the G.A.T.T. that it is fallacious to assume that most developing countries have low-cost and low-wage economies. The tragedy of the situation has been that, while wages in absolute terms in India are no doubt low, in relation to productivity of labour, Indian industries are suffering from a high-cost factor. This in turn has resulted in Indian manufactures being outpriced in several world markets. The task of cost reduction and quality maintenance is a long-term process, and Mr. Lall has an unenviable assignment in trying to convince the Europeans that their tariff and quota restrictions on exports from underdeveloped countries are not justifiable on assumptions made on the basis of use of exploited labour or "sweated labour."

(*Concluded from next column*)

along with selective stimuli to depressed industries. In this selectivity approach his advice seems to be the same as the new Chancellor's action. But there is a great deal more caution in his advice than the Chancellor is likely to get from other directions, in particular the Trade Unions—and the Trade Unions speak for ten million employed workers. The Unions want home consumption stimulated and they want exports stimulated although they still do not advocate preferential taxation for exporting companies—but their approach does go a little further than these broad indications of policy. They believe in a further reduction of the Bank Rate, further reduction in indirect taxation, in the pumping of Government money by way of capital into selected heavy industries and an increase in financial assistance to the nationalised industries where necessary. But the Trade Unions are not trying to do more than put out ideas and the onus remains on the Government to devise practical measures that will both stimulate the economy and not upset the balance of payments.

LONDON LETTER

WHICH WAY EXPANSION?

SOUTHWARD DRIFT OF INDUSTRY

(From Our Own Correspondent)

LONDON, *30th November*

A WEEK ago the country learned that unemployment in November had almost reached 550,000—a record post-war figure. Now come the later details of the numbers in *employment* for which we can only get the total as at the end of October, and we learn there was a drop of 37,000 over the previous month. Compared with a year ago, employment is 64,000 less, the heaviest falls taking place in manufacturing industry where the total reduction in employment was much greater than the total reduction in the country as a whole but offset by increases in employment in financial, professional, scientific services, etc.

We also learn that the number of hours of overtime have dropped and the number of men on short-time increased. All this adds up to a greater reduction in the man-hours worked than the mere drop in the employment total. At this point the committee nature of governance in Britain is revealed by the report of a meeting which the Trades Union Congress has just held on the economic situation. The Trade Unions, which are not only not part of the Government machine but are not even wedded in these practical matters to one Party or the other, have studied the employment and unemployment figures and want to meet the Chancellor of the Exchequer. Theoretically, the meeting which is about to take place at the National Economic Development Council on which employers, trade unions, and Government are all represented, should suffice but the Unions have not yet got enough faith in NEDDY to accept that it will. They want to make their representations to Mr. Maudling, the Chancellor, directly and to say to him that he has got, here and now and without waiting for the next Budget, to take drastic steps to do something about expanding the British economy. Nor, in their view, is it enough to take general steps to stimulate consumer demand; steps must be taken which will have an immediate impact on the areas of heavy unemployment in the basic industries such as iron and steel, ship-building and coal in the North. The Trade Unions have long been bothered about this question of the shift of employment southwards and, at the other end of the social scale, they have been joined this week by the House of Lords.

North *Versus* South

This high-class debating society is quite convinced that, if nobody does anything, the drift of industry southwards will continue and one of the pictures which crystallised out of this debate was that of a London which might be one hundred miles across, a vast sprawling mass of office centres and dormitory towns attracting to itself more than half the population of the whole country. The North, the traditional industrial heart of England, would slowly degenerate into an area of desolation inhabited only by the old and those too indolent to stir to where the work was.

The House of Lords has the advantage of becoming the repository for ex-Ministers and the former President of the Board of Trade, in office until less than three months ago, was able to put forward forthright views on the action he would take without now embarrassing the Government or the Chancellor. His view was that nothing less than an investment programme of £200 million per annum for ten years ahead would suffice to bring back industrial recovery to the North of England; this sum would be but a fraction of what the country would otherwise lose in social capital if the southward drift continued.

It is at least refreshing to find unanimity on the question that something more than the encouragement of minor development in these formerly active industrial areas is necessary if the southward trend is to be halved.

These days the former Chancellor, Mr. Selwyn Lloyd, has also been giving his opinion on what ought to be done about British industry. It is quite clear that Mr. Lloyd's views have not changed out of office. He is all in favour of *caution*. He points out that the present favourable balance of payments is the result of a steady expansion in exports due to a pruning of costs but, unless restraint on personal incomes continues, costs will rise and the work of the past eighteen months will have been in vain.

Mr. Selwyn Lloyd still believes that more financial measures of stimulation could be taken

(*Continued in previous column*)

ADVANTAGES OF FREE MARKET ECONOMY

RUSSIAN PLANNERS UNDERLINE ROLE OF PROFITS

[It looks as though Soviet Russia has now recognised some of the distinct advantages of a free market economy. This at any rate is the impression conveyed in an interesting study published in the December issue of the Monthly Letter *of the First National City Bank, New York. The study, reproduced on this page, is based on the latest statements of Mr. Khrushchev and two Russian economists, as well as two British experts on Russia. It reveals that, in many of the plans for reform advanced by Soviet economists, expansion of the role of profit has been highlighted. This finding should be of considerable interest to the socialist and communist minded planners in this country. In this connection, the readers' attention is invited to page 802 of* Commerce *dated 10th November 1962 wherein we have published a short editorial note entitled "Profit in Soviet Planning."—*ED.]

IMITATION, it has been said, is the sincerest form of flattery. Most Americans, attuned to the crisis atmosphere of the Cuban episode, were unprepared for the kind of flattery implied in Premier Khrushchev's speech to the Central Committee of the Communist Party on 19th November, when he urged that Russia should copy what is successful in the "bourgeois capitalist" countries. The Premier even had a good word to say about profits. According to a summary of the speech released by the Soviet news agency *Tass*, the Premier urged communists to take a thoughtful look at what makes profits for the capitalist of the West:

> We should remember Lenin's injunction to be able, if necessary, to learn from the capitalists—to immitate whatever they have that is good and profitable.

In view of the totalitarian nature of the Soviet system, Americans would not find much to imitate directly in Khrushchev's Russia. But we may refresh our knowledge of the superiorities of our economic system from what the Russians find worth copying. Indeed, at a time when we are considering reconstruction of the federal income-tax to give greater incentive to individual effort and enterprise, the Premier's comments on both the Russian and Western economic systems provide valuable food for thought.

Trouble in Russia

Soviet scientific achievements and industrial growth rates have encouraged the assumption that things are going relatively well in the Soviet economy. The Russians, however, express grave misgivings when talking among themselves. Thus, a notable feature of Premier Khrushchev's speech was his frank admission of a host of problems now besetting the economy, ranging from serious planning errors to industrial mismanagement and excessive labour turnover. Though the Premier maintained that goals of the current seven-year plan (1959-65) were being met, official statistics show that output gains have been slackening.

But unit production figures hide the real problems. The Soviet press has been filled with innumerable complaints of poor quality, misdirected investment, shortages of desired items, excessive inventories of unwanted goods and dissatisfaction among workers and peasants. Russian industry operates on the basis of detailed output plans handed down from above. Plants are spurred to fulfill production goals by means of complex bonus-incentive plans based on a variety of quantitative and qualitative indicators. These plans inevitably go awry, and Soviet planners have found it impossible to jigger these indicators to bring forth the right assortment and quality of goods. People are kept busy, but, for lack of a market economy, they lack power to determine what shall be produced.

The Capitalist Model

The shortcomings of the system have made it abundantly clear that drastic changes are needed. Economists have been in the forefront in criticising the present system and in suggesting changes. Increasingly, they take the capitalist system as a guide for reform. A striking example is found in an article published last spring in the official newspaper *Izvestia* by Mr. O. K. Antonov, a leading aircraft designer and writer on economics. As reported by *The New York Times*, Mr. Antonov observed that Soviet industry was "riddled with waste and inefficiency because it lacked what engineers term 'feedback,' a factor provided under capitalism by market forces and competition":

> The heart of the problem, Mr. Antonov declares, is that the figures of Soviet industrial gains do not reflect any really corresponding increase in economically useful goods. Much Soviet production is of poor quality and short durability ... and much of it tends to be technologically obsolete.
>
> He writes of the production of tires and ball bearings that last only a short time, of production-line installations that are far slower and less productive than they might be, of textile factories producing cloth no one wants to buy, and of paper mills producing cardboard and paper far thicker and heavier than required.
>
> Under capitalism ... this does not happen because there is feedback to the producer. The manufacturer of poor-quality goods soon learns from the market place that his goods are not selling because they are inferior to those of his competitors.
>
> This, Mr. Antonov writes, "forces the capitalists to make things better, sturdier, and cheaper."

In their observation of the market economies of the West, the Russians have become increasingly impressed with the neat way the competitive profit-and-loss system works to increase production—by the most efficient producers—of things that are in demand, and to reduce production—by the least efficient producers—of things that are not in demand. In many of the reform plans advanced by Soviet economists, expansion of the role of profits has been highlighted.

One plan, by Professor Yevsey G. Liberman of the Kharkov Economic-Engineering Institute, had received wide publicity in the official Soviet press and radio prior to the Central Committee meeting last month. Under the Liberman plan, Russian enterprises would be placed on a largely profit-and-loss basis with greater autonomy in matters of investment, production planning, wages, manpower, and materials supply. Professor Liberman has maintained that only under a profit-incentive system would prices find their proper level through the forces of supply and demand.

Decision Postponed

Premier Khrushchev postponed decision on the plan at the meeting last month, but he praised the profit-index idea as having "great importance as an economic indicator" of plant efficiency. At the same time, he frankly admitted the failures of the present incentive system, which he said was inadequate for spurring enterprises "in the more efficient utilisation of capital investments and production facilities, in producing the required range of goods, reducing their production costs, raising labour productivity, and improving the quality of output."

While putting off decisions in this area, Premier Khrushchev announced a far-reaching reorganisation of the economic system to bring it under more direct control of the Communist Party. All productive activity will be split up into two main sectors, industrial and agricultural, and party branches to run these sectors are to be set up at all levels of government. This reform appears to have been motivated, among other things, by revelations of "corruption, extravagance and embezzlement." At the same time, the Premier announced that planning functions would be decentralised.

Premier Khrushchev, in an earlier Central Committee meeting last March, had initiated a revamping of farm production along similar lines, but output thus far has failed to show improvement. Western observers are doubtful that the new shakeup will accomplish much more.

Creeping Capitalism?

On the other hand, the Premier's criticism of the present incentive system and his approving words about profits are taken as signs that additional reforms are coming. Opinion was already running strongly in this direction. In his book *The Soviet Economy* published last year, Mr. Alec Nove, a leading British expert on Russia, assessed the situation as follows:

> "The logic of all this demands that a growing importance be attached to profits, or, as many Soviet economists put it, a greater role for 'value' categories and *khozraschyot* [profit-and-loss accounting]. The fact that this calls for a major revision of the price system is understood.... However, there remain major disagreements about a proper basis for prices, both practical and theoretical, and it remains problematical whether the solution chosen will be a satisfactory guide for enterprise decisions. Yet this is a key aspect of any reform."

The ironies in this situation are endless and require no particular emphasis. The crowning irony, of course, is the fact that Russian communists, who 45 years ago launched a revolution to destroy capitalism and all its

NEED FOR WAR RISKS INSURANCE

LAST WAR SCHEME RECALLED—PRAGMATISM ADVOCATED

WE had suggested in an earlier issue (*vide* page 799 of *Commerce* dated 10th November) that the Government should take immediate steps to introduce compulsory war risks insurance on a country-wide basis. It is heartening to hear that the idea has appealed to the Government and that the latter is contemplating the introduction of legislation for compulsory war risks insurance in the current session of Parliament. The primary object of war risks insurance is to provide protection against risk of damage to property, personal as well as industrial, likely to be caused by enemy attack. It is a must for any country which is at war with another and is one of the first steps that should be taken as soon as hostilities break out. War damages are generally of four kinds, namely, (1) personal injuries, (2) requisition of property for war purposes, (3) injury to property by war damage, and (4) loss of profits. It is the third risk which lends itself easily to insurance and is usually covered against. As the damage to property under modern warfare is so stupendous that it is beyond the capacity of any or all insurance companies put together to indemnify, war risks insurance has perforce to be provided by the State. Moreover, protection of life and property of citizens is one of the primary responsibilities of the State.

British Experience

In Britain, during the First World War, the Government shared with marine underwriters, by way of reinsurance from the latter, the war risks on hulls to the extent of 80 per cent. A more comprehensive scheme of insurance was introduced during the Second World War. A special legislation, War Risks Insurance Act, 1939, was passed to enforce the scheme. Under the first part of the War Risks Insurance Act, provision was made for reinsurance of war risks, known as King's Enemy Risks, in respect of ships and cargo whether carried by sea or air. The second part of the Act envisaged a "commodity insurance scheme," under which policies were to be issued by agents on behalf of the Board of Trade giving cover against war risks for a small premium. The agents, who included companies and Lloyds underwriters, issued policies in standard form and collected the premiums on behalf of the Board of Trade. This scheme was soon found inadequate, as it left out properties and personal goods on land. A separate legislation, known as the War Damage Act 1941, was enacted. This Act provided insurance cover against war risks on real immovable property and private chattels which were not included in the commodity scheme. Private insurance companies issued policies in respect of the latter while a Government Department dealt with the former.

In the U.S., a War Damage Corporation, with a capital of $100 million was set up in 1941 to provide insurance cover against war damage. The Corporation insured individuals against direct physical loss or damage to property resulting from war. Private insurance companies acting as agents of the Corporation issued policies, collected premium and assisted in the settlement of claims on the basis of a ten per cent underwriting participation.

Goods and Factories Insurance

In India, too, during the last war, following representation from leading industrial and commercial organisations, the Government introduced a scheme of war risks insurance under which both goods and factories were provided insurance protection. The "Goods" scheme, which came into force in August 1940, applied compulsorily to a seller of specified goods in British India, if the value of his insurable goods in any one presidency town or district exceeded Rs. 20,000 and voluntarily if below that amount. Policies were issued quarterly and the premium payable was determined each quarter. The rate, which was first fixed at one-eighth per cent per annum varied from time to time, depending upon India's position in relation to war risks. Thus, with the cessation of hostilities in the West and the recession of the war from India's frontiers in the East, the rate of premium charged was steadily lowered and, in June 1945, the Government decided to grant free cover for the quarter July-September 1945 to persons who had already insured in the previous quarter and to reduce the rate of premium to three pies per month to those taking out new or additional insurances. With the surrender of Japan and the complete cessation of hostilities, the "Goods" scheme came to an end with effect from 1st October 1945.

The primary object of the scheme was to facilitate the free movement of goods to places where they were most needed. To extend the scope of the scheme the Government classified a list of goods which could be insured voluntarily at double the existing rate of premium payable in respect of goods compulsorily insurable. Although the scheme was originally intended to cover only to British India, many Indian States and the French establishments in India joined the scheme at a later date.

Objects

The object of the "Factories" scheme, which came into force on 1st April 1942, in the wake of Japanese advance in South-East Asia, was to prevent the removal of vital industries from where they were most needed to safer places and to ensure the even flow of war supplies. The scheme was made applicable in the first instance to buildings, plant and machinery of all factories defined as such under the Factories Act. In contrast to the "Goods" scheme, insurance had to be taken out for a period of two years ended 31st March 1944, the rate of premium being four per cent of the insurable value and payable in eight equal instalments. The period of insurance was extended twice, for one year on each occasion, the last extension ended on 31st March 1946. The premium for the extended periods was one per cent and one-half per cent of the insurable value, respectively. The scheme, which originally covered only factories, was extended later to cover boundary walls and materials appropriated for the purpose of a factory, whether in or outside the precincts of the factory. Certain electric and gas undertakings and the above-ground machinery of mines were also brought within the ambit of the scheme. Inland vessels, the value of which exceeded Rs. 1,000 and which belonged to shipping companies and trading corporations specifically notified by the Government, were also made insurable under the scheme.

Premiums were collected under both the schemes by insurance companies acting as the agents of the Government for a small commission to cover expenses. Regional Claims Committees were appointed at Bombay, Calcutta and Madras and a Central Committee at New Delhi, to handle any claims that might rise. In order to ensure that there was a minimum of evasion and generally to assist in the administration of the schemes, special officers were appointed in nearly all principal provinces. These officers were also required to ascertain whether under-insurance, deliberate or otherwise, was taking place, and many such cases were detected. Both the schemes came to an end with the cessation of hostilities. By that time, a sum of Rs. 20.73 crores had been collected by way of premium under the "Goods" scheme and Rs. 21.26 crores under the "Factories" scheme. The following table summarises the working of the scheme, showing the premia collected, claims paid and expenses incurred:

(Rs. in lakhs)

Scheme	No. of policies	Premium collected, less refunds	Claims paid	Expenses (excluding claims)
"Goods" Scheme ..	354,415	20,73	4.91	39.65
"Factories" Scheme ..	23,624	21,26	3.74	20.65

Note:—Ratio of "expenses" to "premiums" for war risks (goods) and (factory) insurance schemes combined=1.198 per cent.

Considering the rapid growth of industries and trade in the post-independence period, the scope and need for war risks insurance are much greater now than they were during the Second World War. The proposed scheme is still nebulous and has not outgrown the discussion stage. One can, therefore, only speculate as to its exact nature and scope. Official thinking in this regard, however, reflects lack of realism and, unless it is revised, it might prejudice the successful functioning of a sound scheme. It is said, for instance, that a premium of 5 per cent per annum of the insurable value of goods, properties and machinery has been suggested. Insurance circles are of the opinion that, if this is true, it is a fantastically high rate. According to them, a premium of one per cent will be a reasonable rate. This rate compares with 4 per cent charged in the last war on the immovable property and fixed assets for two years in the first instance, one per cent for the third year and ½ per cent for the fourth year, by which time the end of the war was in sight. The question as to what would be a proper rate would depend on the view of the risk involved.

Changed Set Up

One point that is relevant to the administration of a scheme of war risks insurance is the changed institutional set up of insurance in India under which a public sector in insurance exists alongside a private sector. Reports in the daily Press indicate that the Government is thinking of entrusting the task of administering the entire scheme, if and when it is finalised, to the public sector. In fact, reports have it that the Oriental Fire and General Insurance, which is a subsidiary of the Life Insurance Corporation of India, is to be the sole agency for collecting premium, issuing policies and settling claims in respect of war risks insurance. If this is true, it is a very unwise decision. For, apart from other considerations, it is physically impossible for any one company, however big, to handle efficiently and expeditiously the task of issuing policies and collecting premium on the scale called for under a scheme of war risks insurance. The Indian Insurance Companies' Association, Bombay, has, in a telegram addressed to Mr. Morarji Desai, Union Minister for Finance, suggested that the Government should authorise all insurers to administer the scheme as the agents of the Government on a non-profit basis as was done during the Second World War. It has further submitted that, since war risks insurance will embrace millions of insured, it will be impossible for any one insurer to serve such a large clientele. It has urged the Government to take advantage of the experience and services of all insurers in a national emergency of this character.

The aforesaid stand of the private insurance companies is perfectly correct and we find no reason why those companies, which are willing to act as the agent of the Government on a non-profit basis, should be denied an opportunity to participate in the scheme. The small commission allowed for private insurers acting as the agent during the last war was to cover the barest expenses. It is a price worth paying, as it will ensure the efficient and smooth working of the scheme, which has to be on a nation-wide scale.

"PERILS OF GIVING A LIFT"

The practice, popular among motorists of giving free lifts to friends is fraught with many risks. It is easy to offer and accept a lift; its insurance implications, some of which are not always obvious, deserve to be more widely understood by both the giver and the acceptor. The Insurance Correspondent of the *Financial Times*, London, lists the following as "perils of giving a lift."

"If one gives a lift to any relation, friend, hitch-hiker, or other non-fare paying passenger, and it can be proved that he was injured as a result of one's negligent driving, he can sue for damages in exactly the same way as a pedestrian whom one may have run down.

"In England, the past, husbands and wives could not sue each other for negligence, but this has been altered by the Law Reform (Husband and Wife) Act, 1962, which applies in England, Wales and Scotland.

"Besides negligent driving, one can be liable if it can be proved that a patent (but not a latent) defect in the vehicle was the cause of injury. A good example is the wheel coming off because one forgot to tighten the nut.

"Although a friend who is being given a lift may agree not to sue if one is uninsured, there are occasions when this cover may be needed. Some insurers will, therefore, reinstate it for a limited indemnity on payment of a fairly substantial premium. Or it may be possible to arrange this cover separately elsewhere.

"Although it may seem quite clear from the policy wording that all liability for injury to passengers is covered, difficulties can arise if one's passengers make a contribution towards the running expenses of the car. This is simply because *the normal certificate of insurance excludes 'Hiring.'* Exactly what is meant by hiring is difficult to determine. The best plan, therefore, where any money is offered for a lift, is either not to accept it or to explain fully, and in advance, the whole situation to one's insurers.

"In the past few years, passengers have been held liable as individuals for the result of some negligence. An obvious example is opening a car door in the face of a passing vehicle. As a result, it has become the general practice of insurers to provide cover for claims made against passengers. Usually such an indemnity is incorporated in the third party section of the policy, or an endorsement is issued. This cover does not, however, normally extend to cover the passenger for his liability in respect of the death of or injury to the policyholder or anyone driving the car (or in charge of the car for the purpose of driving).

"A motor-cycle policy does not include passenger liability, nor is it usually possible to obtain this cover. As a result, a pillion passenger rides at his or her own risk unless the owner is rich

OFFICIAL SURVEY OF TEXTILE TRADE

VIGOROUS GROWTH IN MAN-MADE FIBRES STRESSED

From Our Special Correspondent

MANCHESTER, *27th November*

MANCHESTER LETTER

EFFORTS to promote a more favourable picture of the British textile scene seem doomed to suffer from the uncomplimentary attentions given to the industry in certain quarters. One would have thought that a Government department such as the Board of Trade, presumably entrusted with the task of encouraging the country's industries, would have "played down" the adverse factors and tried to make the best of circumstances over which its constituents have little if any control. Yet the Board of Trade Journal, in its current issue, devotes its main article to a survey of the past decade in the British textile industries.

In the cotton sector, the journal admits that comparison between 1951, which was a boom year, and 1961, when the industry was in recession, is distorted. Over textiles as a whole, the labour force in mid-1962 numbered approximately 804,000, equivalent to about 9 per cent of manufacturing industry generally. Net output of the textile industries in 1961 was approaching £700 million, or over 7½ per cent of total manufacturing industry, and, in recent years, the sector has had an average annual investment of around £57 million, or 7 per cent of all manufacturing industry.

Lack of Growth

The survey, in its opening sentence, makes the damaging statement that, in the decade concerned, output of textiles fell by 7 per cent, although output in productive industry as a whole increased by 33 per cent. Much later on, some reasons for the lack of growth are given, reasons which are only too well known in Lancashire. In the home market between 1951 and 1961, for example, consumers' expenditure on clothing other than footwear increased more slowly than national spending. At the same time, increases occurred in imports of textiles, particularly in cotton textiles in the second half of the decade.

In the export field, the report adds, some traditional British markets were reduced by the starting-up of local textile industries in the newly developing countries, while the imposition from time to time of import restrictions for balance of payments or other reasons in certain major Commonwealth markets and high tariffs "have not been without adverse effects." The major factor, it suggests, has probably been the rapid expansion of the textile industries in Italy and certain low cost countries, notably Japan and Hong Kong. "These expanded industries made severe inroads in a number of overseas markets, to the disadvantage of the British exporter."

Distorted Comparisons

Wide variations in growth in individual textile industries are noted in the survey, and again it is admitted that, in making comparisons, a great deal depends on the base periods selected. The vigorous growth in man-made fibre production is particularly stressed. The journal re-emphasises that many of the changes in the rates of activity in the textile industry have their origin in variations in the stock position of distributors and manufacturers. "The magnification of changes in the rate of ordering is transmitted back to the earliest manufacturing processes, with the accumulated stock changes becoming progressively more marked as the distance from the final consumer increases."

Over the decade annual production of hosiery and other knitted goods increased by an average of 3.1 per cent, with a marked rise in the use of synthetic fibres—from 5,500,000 lbs. in 1951 to 44,500,000 lbs. in 1961. In 1961, the man-made fibres industry accounted for 11 per cent of the net output of all textile industries and, in the previous decade, production increased at a rate over twice that of United Kingdom productive industry as a whole. Man-made fibre deliveries to the home trade in 1961 amounted to 464 million lbs., as against home consumption of raw cotton at 551 million lbs. and raw wool at 491 million lbs.

Carpets, described as one of the more buoyant of the textile industries, accounted for about 5 per cent of the net output of the textile section in 1961 and production during the ten-year period increased on average by 2.3 per cent per annum. A feature of the second half of the decade was the rapid growth in output of tufted carpets. By 1961, following an average annual increase in production of 30 per cent since 1958, tufted carpets represented about a quarter of total sales by quantity and perhaps a seventh of sales by value.

Finally, twisting the knife in the wound, the survey bluntly gives figures of international trade in textiles, excluding wool tops. Between 1954 and 1961, it observes, world trade in textiles increased by 25 per cent, but United Kingdom exports fell by 24 per cent. Within the totals, world exports of cotton fabrics fell by 2 per cent and British exports by 50 per cent. During this period, United Kingdom imports of textiles more than doubled. "The increase in cotton fabric imports was even more marked," says the article. "Can this be regarded as the understatement of the year from the British industry's point of view?"

Imports Going Up?

Some significance may be read into the fact that, for the second month in succession, imports of cotton goods in October exceeded in volume the quantity of comparative arrivals in the same month last year. Last month's imports at 52,793,000 yards were, in fact, the highest since August 1961, with the exception of May this year. The rate of arrivals remains distinctly lower than the level reached in 1960 and the early months of last year, but it accentuates the fears widely expressed by local traders that any resumption of buying might well be reflected in larger purchases from abroad.

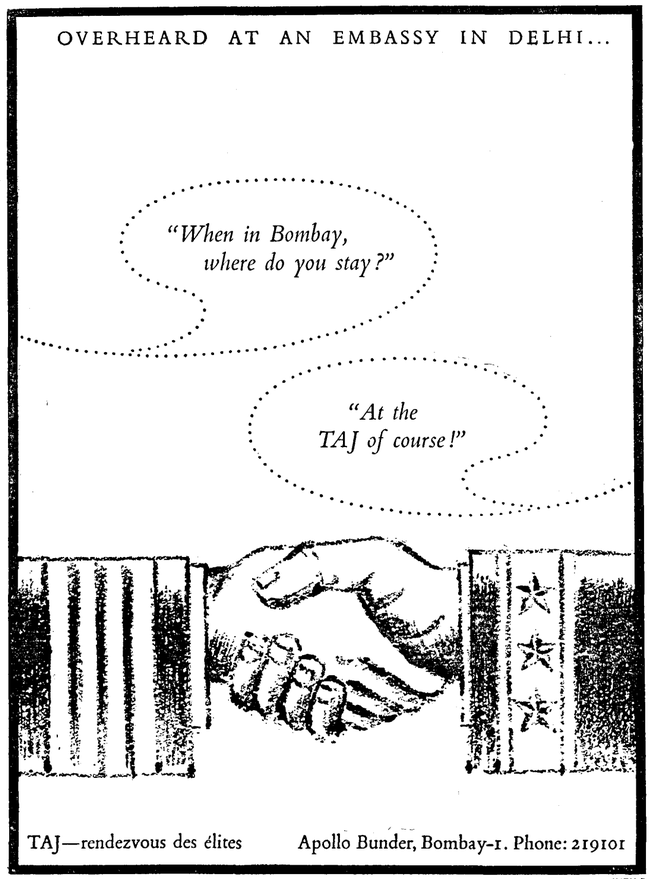
Total arrivals for the first ten months of the year of all types of cotton cloth amounted to 479,974,000 yards, as against 637,827,000 yards, the cost of these purchases being £42,480,651, as against £54,580,540. The major decline in imports continues in grey cloth, although arrivals in October this year exceeded those of the same month in 1961 by nearly 2 million yards. Over the 10-month period, shipments into British ports aggregated 362,272,000 yards, as against 507,527,000 yards in 1961. Finished cloth arrivals amounted to 117,702,000 yards, as against 130,300,000 yards.

A big rise in shipments from Hong Kong was noted last month, the total being 12,826,000 yards; to the end of October, the Colony had sent 82,563,000 yards, as against 76,653,000 yards in the same period last year. Pakistan's share of these grey cloth imports had increased from 17,557,000 yards to 32,162,000 yards. Of the three Commonwealth countries, only India had supplied smaller quantities, the total being 124,278,000 yards, as against 157,687,000 yards. In view of the recent trade pact with Japan, the sharp reduction in arrivals of Japanese grey cloth this year is noteworthy, the total being 22,390,000 yards, as against 55,405,000 yards.

A Slight Gain

A slight improvement occurred in Lancashire's own export trade, cloth shipments last month being 19,869,000 yards. The 10-month total, however, is only 197,071,000 yards, as against 244,272,000 yards a year back. Apart from May, the October shipments of cotton yarn at 1,409,572 lbs. were the highest in any month since May 1961.

As a result of this rather better trend, cotton yarn exports so far this year have now just edged above the 1961 rate, the latest figure being 12,634,194 lbs., as against 12,582,309 lbs. at the end of October 1961. The average price of these exports, however, has fallen from 95.07*d.* per lb. to 85.52*d.* and earnings from this source are £4,502,000, as against £4,983,867 a year ago.—*All Rights Reserved.*



RAISING EXPORTS OF JUTE GOODS

EFFECT OF PAKISTAN'S BONUS SCHEME

NO other industry in India earns so much foreign exchange as the jute industry. Almost one-fourth of the aggregate export earnings of the country is accounted for by jute goods, the estimated value of their shipments in the current calendar year being more than Rs. 150 crores. In terms of quantity, the shipments are expected to exceed the third Plan export target of 900,000 tons fixed to be achieved by 1965-66 three years ahead. This performance is very creditable, and the jute industry and trade can certainly feel proud of it. But there is absolutely no room for complacency. Indeed, exports may not be maintained at the current level in the coming years, what with the keen competition from Pakistan and the growing popularity of substitute packing materials such as paper and plastic bags, not to speak of bulk handling methods. Dr. B. P. Kedia, President of the Gunny Trades Association, Calcutta, did well to urge, in the course of his speech at the thirty-seventh annual general meeting of the Association last week, all the interests connected with the jute industry—he did not exclude the raw jute growers and the Government—to make a united effort and work in close collaboration for the achievement of the common goal, namely, maximum production and exports of jute manufactures. Jute goods being primarily a commodity meant for exports, it was, he declared, imperative that the industry should, as a measure to help defence efforts, make an all-out bid to export as much goods as could possibly be produced in terms of its maximum installed capacity.

Low Sacking Exports

Dr. Kedia drew pointed attention to the deplorable trend of sacking exports. His analysis reveals that the quantity of sacking actually exported has gone down from 248,000 tons in January-September 1958 to less than 230,000 tons in the same period this year, whereas the exports of hessian have risen from 303,000 tons to 403,000 tons. While the world demand for sacking goods has been maintained at a steady level since 1957-58, the share of India has fallen appreciably in favour of Pakistan, as will be seen from the figures below.

Sacking Exports

(In tons)

Destination	From India		From Pakistan	
	1961-62	1957-58	1961-62	1957-58
Australia	36,400 (53.7)	69,500 (100.0)	31,400 (46.3)	Nil
South America	49,300 (56.4)	77,900 (95.2)	38,100 (43.6)	3,900 (4.8)
Africa	90,700 (59.9)	107,600 (70.2)	60,500 (41.1)	45,600 (29.8)
Far East	55,000 (77.0)	67,400 (84.8)	16,400 (23.0)	12,100 (15.2)
Other areas	65,900 (79.1)	64,200 (84.2)	17,400 (20.9)	12,200 (15.8)
Total exports of sacking —all destinations	297,300 (65.9)	386,600 (84.0)	153,800 (34.1)	73,800 (160.0)
Aggregate exports of jute goods—all destinations	847,600 (79.3)	863,500 (88.9)	221,100 (20.7)	107,900 (11.1)

Note:—The years correspond to the jute season July-June.
Figures in brackets relate to percentage share of the combined total for India and Pakistan.

The serious inroads made by Pakistan into the markets for Indian sacking goods pose a serious problem. Dr. Kedia minced no words when he said that, if India did not shake off its complacency and failed to meet this challenge before it was too late, the country would have to be prepared to lose most of its markets. In this connection, he recalled that Pakistan, with the present loomage strength of 8,500, was sharing 34 per cent of the combined exports of sacking, as against only 16 per cent in 1957-58, and asked: What would be the position after it has installed another 5,000 looms for sacking by 1965 as is reported to have been decided by the authorities there? Making the important point that production of sacking was more than double that of hessian per loom, Dr. Kedia asked again: Can our industry, therefore, afford to depend upon exports of hessian only? And he added: "This is a situation which has to be faced squarely. I regret that the Government is not yet fully alive to this problem. The situation brooks no delay."

Although Dr. Kedia has repeated what has been stressed by many others ere now, the warning is nevertheless pertinent and timely, especially now when defence considerations have brought to the fore the supreme urgency of augmenting our foreign exchange earnings through exports of goods like jute manufactures. He called upon the Government immediately to find out ways and means to counteract the effect of the export bonus scheme in Pakistan and introduce, if necessary, a similar scheme for the Indian industry as well. "This," to quote him, "is the prime need of the hour and any move short of this will be inadequate for achieving the desired objective." The export bonus system alone, we are told, gives the Pakistan jute industry a cost advantage of about Rs. 150 per ton of sacking and hessian.

Effective Solution

It will be pertinent to recall here that the Indian industry had paid in the early fifties several crores of rupees by way of export duty and that, by subjecting it to heavy export levies, the Government of India had held out a protective umbrella to the jute industry in Pakistan during its infancy. This action is now recoiling on the Indian jute goods industry. Now that Pakistan is indulging in unfair trading practices, it is only the Government of India that can take suitable counteraction. Even so, an export subsidy, we repeat, cannot be an effective, permanent solution to the problems of jute industry; at best it is only a palliative. There are other ways by which the competitive capacity of Indian sacking goods *vis-a-vis* Pakistan's can be improved. The primary need is, as Dr. Kedia himself aptly remarked, a regular and adequate supply of raw jute at reasonably cheap and stable prices. He struck a note of realism when he said that the only scientific way of increasing production of raw jute and at the same time making it cheap for the industry without hitting the interest of growers was to effect a substantial improvement in the acreage yield of the fibre by means of intensive cultivation. Incidentally, it was also essential, he averred, that the jute growers were assured an economic floor price, so that they might not be tempted to change from one crop to the other. Dr. Kedia did not define the fair floor price. All that he said was this:

"Opinion differs as to what this figure should be. Naturally, it will depend on the actual cost of cultivation. It is gratifying to note that the Indian Central Jute Committee has adopted a comprehensive scheme for determining the cost of jute production. The findings of this investigation will be helpful in determining the floor price."

Two other important suggestions designed to ensure a larger volume of jute goods exports were put forward by Dr. Kedia. One, the mills must take up diversification of jute manufactures. It is encouraging to hear that the mills have already begun producing carpet backing cloth which is expected to raise exports by 50,000 tons annually and earn a substantial amount of foreign exchange. The mills must take up manufacture of other specialities and new lines of production for industrial uses such as woollenised jute fabrics. Two, while effecting a reduction in the production cost of jute goods, a fair standard of quality must be maintained.

In view of the recent fall in raw jute prices, particularly the price of low grade fibre, the Committee of the Jute Buffer Stock Association has decided that another 250,000 bales of jute should be purchased for the buffer stock. Members are being instructed to contract for this jute within 15 days from the receipt of their allocations and to relieve the present congestion at Cossipore Road. The mills in a position to do so are being requested to purchase some of their allocation from Cossipore. These purchases, which are by far the largest made by the J.B.S.A. at any one time, will increase the size of the buffer stock to 575,000 bales.

The decisive element

Modern technology and machine production have obliterated surface differences in many products. In paints, more than in most products, you have to look beneath the apparent, look beyond the colours and the shades to discover why some paints are better than others...*and why one paint is better than the rest.*

Know-how In paintmaking, as in everything else, know-how comes from a combination of theoretical knowledge and practical skill. At Shalimar Paint trained experts and talented technicians—guided by the rich experience of sixty years of paintmaking for the homes and industries of India—help produce the widest, most versatile range of superior quality paints. In every Shalimar paint you are offered the sum of four decisive elements—resources, research, know-how, quality-control.

SUGARCANE GROWERS TO GET STILL MORE

NEW PRICE FORMULA MODIFIED

EVEN Mr. S. K. Patil, Union Minister for Food and Agriculture, lacks political courage to tackle the problem of sugarcane prices in a realistic way. How else can one explain the rationale behind the three modifications in the new formula linking cane price to sugar recovery which he announced in the Lok Sabha last week in the course of his speech during the debate on a motion by an independent member for consideration of the formula? The modifications are as follows:

1. For calculating the average recovery per cent in cane for purposes of making payment by factories to growers, only the recovery actually obtained during the four months from December to March will be taken into account, and not the recovery for the whole crushing season.

2. A concession will be granted in working out recovery percentage up to 9.8 per cent, that is the standard percentage to which prices are to be linked. Thus, recovery percentages ranging from 9.61 to 9.69 is to be treated as 9.7 and those from 9.71 to 9.79 as 9.8, but there will be no such concession for percentage above 9.8, since the cane with higher sucrose-content will be paid a price higher than the standard price.

3. A farm or a co-operative or two or three individual farmers can get together and bring to the notice of the authorities that they are growing cane with a higher sucrose-content than prevalent in their area, and the Government will ask the mill concerned to pay a higher price for such cane. This concession is, however, subject to the condition that such farmers should bring at least two or two and a half tons of cane to the mill, giving it a minimum of five minutes of crushing time to enable the mill to determine the exact sucrose-content.

Wooing the Cultivators

By making these modifications, Mr. Patil has once again demonstrated his anxiety to avoid political unpopularity. Indeed, he has continued to woo the cane growers and their spokesmen in Parliament and outside. Here is the relevant extracts from his speech as reported in the daily Press:

"The interests of the farmer are as much in my mind as of any other member in the House. The new formula has been so devised that almost every grower of sugarcane will get more money than now. Out of the 71 factories in U.P., 15 will pay more than Re. 1.62 per maund of cane and, out of 28 mills in Bihar, seven will pay a higher price. The average price will be Re. 1.59 in U.P. and Re. 1.57 in Bihar. Under the old system, cultivators did not get Re. 1.62 throughout the season and, in fact, distress sales in April and May hardly fetched one rupee a maund."

That Mr. Patil, too, has fallen a victim to political pressures will be clearly evident from a brief reference to the trend of cane prices since he took over the Food and Agriculture portfolio on 24th August 1959. Within two months after he assumed charge of his new office, Mr. Patil raised the minimum price of cane by a straight 12½ per cent, to Re. 1.62 per maund delivered at the gate of a factory, from the level of Re. 1.44 which itself was too high in relation to the prices of other agricultural commodities. This price, it must be noted, was exclusive of the compulsory (deferred) payment of additional price to cane growers under the formula linking the cane price to the price of sugar realised by factories. Although he had then categorically stated that the enhanced price of Re. 1.62 was for the 1959-60 season only, he continued this price (together with the additional price) during the 1960-61 and 1961-62 seasons also. It was this policy that was responsible for the glut of sugarcane supplies and the problem of sugar surplus, so that the Government had to enforce a compulsory cut of 10 per cent in the output of white sugar in 1961-62.

A few months ago, Mr. Patil no doubt announced the bold decision to link, with effect from the 1962-63 season, the price of cane to both recovery per cent and quantity, instead of quantity alone as hitherto, but, in doing so, he perpetuated the defects in the old system. Under the formula announced early in July last, the enhanced price of Re. 1.62 per maund is to be paid for cane with a recovery of just 9.8 per cent and not the usual basis of 10 per cent that had been regarded as the norm all these years. In effect, therefore, the minimum price for cane with 10 per cent recovery is higher than before —Re. 1.64.2/5 per maund, a rise of 2.4 nP. This has since been raised further. In accordance with the latest modifications announced by Mr. Patil last week, the sugar mills are made to pay to cane growers a uniform price on the basis of the average recovery obtained in only four months from December to March (and not on the average obtained during the whole of the crushing season). Such average, as is well known, is much higher than that of cane supplied prior to December of every year or after the base period is over. In other words, this means that the cane growers will get the enhanced price even for the cane the recovery of which is well below the standard recovery of 9.8 per cent. The rounding off of the percentages in the schedule of adding or deducting at the rate of 1.5 nP for every rise or fall of 0.1 per cent in recovery will also give the cane grower more money than under the original formula. A sucrose-content of 9.71 to 9.79 per cent will be counted as 9.8 per cent, the minimum which entitles a farmer to get a cane price of Re. 1.62 per maund. Similarly, a recovery of 9.61 per cent is to be counted as 9.7 per cent, entitling the farmer to get more money than he would normally get under the original formula.

Minimum as Maximum

Mr. S. K. Patil would have certainly served the cause of both the cane growers and the sugar industry, as well as the consumers at large, if only he had fixed the minimum price of Re. 1.62 per maund as the maximum to be paid for cane with the highest sucrose-content, say, 11 per cent, if not 12 per cent. Alternatively, the Government should have at least continued the premium for an increase in sucrose-content upto 12 per cent, instead of stopping it as he has done at 10.14 per cent. There are areas and farmers with records well in excess of the ceiling. Should not such good lands and efficient growers receive a better reward than those whose performance is below the mark? It is only through such a reward that one can expect an improvement in the productivity of cane lands both quantitatively and qualitatively. This is necessary for two reasons: (*a*) to bring down substantially the area currently being devoted to sugarcane so that more lands can be released to foodgrain and other cash crops; and (*b*) to reduce the cost of sugar production which is high in all conscience because of the heavy incidence of cane cost, accounting as it does for three-fourths of the cost of making sugar.

It is indeed a pity that this important aspect was completely forgotten by practically every one who participated in the Lok Sabha debate last week. A criticism made by several members was that the new formula was to the disadvantage of the cane growers, inasmuch as it had no relation whatever to the cost of cane cultivation or the efforts put in by the farmers, apart from denying incentives. Some urged a statutory minimum of Rs. 2 per maund. Mr. Prakash Vir Shastri went to the length of saying that sugarcane was cheaper than firewood in India. But how many years does it take to raise the trees that yield firewood? Did this learned Pandit ever think of the economies of the two products? But this rhetoric apart, his contention is absolutely baseless. If cane prices had not been very profitable, would the agriculturists have devoted an increasingly larger area to the cultivation of sugarcane? The area of 4.80 million acres in 1958-59, when the minimum price of cane was Re. 1.44 per maund, was itself pretty large, as compared with the area sown in previous years, say, 3.50 million acres in 1953-54. The cane price paid in India, as Mr. D. D. Puri, a former President of the Indian Sugar Mills Association, stated, is among the highest in the world.

Besides the so-called high minimum price, the cane growers were getting a share in the profits of sugar mills. Both the efficient and inefficient farmers were getting the same reward all these years. The old system of a uniform price linked only to quantity was inequitous and the intention behind the new formula is no doubt to provide, as Mr. Patil claimed, an incentive to cultivators to improve the quality and yield of cane. But, in actual practice, the intention has been watered down by Mr. Patil's excessive enthusiasm to protect the interests of inefficient

BANKING ADVICE FROM

MANU THE LAW GIVER

Deposit banking in some form or the other existed in India in the second century A.D.

Manu, the law-giver, enjoined people to make deposits with bankers of good repute. "A sensible person should make a deposit only with a person of family, of good conduct, well acquainted with the law, veracious, having many relatives, wealthy and honourable."

The Union Bank of India, established in 1919, has enjoyed the highest reputation in reliability, strength and friendly transactions. The Union Bank prides itself on its unique *personalised service*, under which every depositor is treated as a Very Important Person.

The Union Bank Helps People

SERVICES OFFERED: Current, Savings Bank and Cumulative Deposit Accounts; Fixed Deposits and Three-year Cash Certificates; Inland Bills, Demand Drafts and Telegraphic Transfers; Letters of Credit and Guarantees; Foreign Bills and Remittances; Loans, Overdrafts and Cash Credits; Sale and Purchase of Government Securities and Shares and Safe Custody, Standing Instructions accepted; Credit Reports and Trade Information, Safe Deposit Vaults, TELEX contact with countries all over the world.

THE UNION BANK OF INDIA LIMITED

NEW

FORTLOK CONSTRUCTION GIVES DUNLOP CONVEYOR BELTS AN EDGE OVER OTHERS

Conveyor belts are most vulnerable at the edges. The new Dunlop **FORTLOK** construction more than doubles the life of the belt edge by providing double edge cushioning capacity.

Compare Fortlok edge thickness (Under magnifying glass) with that of conventional belt

A common cause of belts wearing out prematurely is edge wear due to rubbing against the side of the structure, against the chute, against jammed abrasive loads, or by the excessive use of guide idlers. When the edge has been worn or torn away, further wearing of the edge and consequent belt deterioration is usually comparatively rapid.

Dunlop **FORTLOK** overcomes this problem. Note its construction as shown under the magnifying glass in this illustration of a conveyor belt section.

- The thickness of the edge protection rubber has been doubled as compared with the conventional conveyor belt edge.
- Note, too, that the edge rubber has been keyed into the carcass of the belt which produces an anchorage infinitely greater than in conventional belt edges. This permits the use of thicker edge protection of assured stability — especially important where guide idlers or trippers are used.
- The thicker, stronger edge protects the belt carcass from attack by moisture, grip, acids, alkalis or oils.

FORTLOK is a registered Trade Mark.

NEW PUBLICATIONS

Small Industry Advisory Services—An International Study. By Joseph E. Stepanek, International Industrial Development Centre, Stanford Research Institute, Menlo Park, California, U.S.A. Published by Asia Publishing House, Contractor Building, Nicol Road, Ballard Estate, Bombay-1. Pages: 223. Price: Rs. 13.00.

THERE are few men who are entitled to speak with greater authority on the subject of small industries than Dr. Stepanek who, since December 1959, has been in our country as a Ford Foundation consultant on small industries. During this period, he has spent short periods as a consultant in Malaya, Pakistan, Ceylon and Iran. Such diversified experience is, indeed, rarely to be found.

The author says, with apparent modesty, that the writing of this book did not come easily to one "with far more experience in the construction of factories than of sentences." But the work is quite clear-headed and masterly in its presentation, though the style is quite direct and simple. Dr. Stepanek has deep knowledge of his subject for, apart from being a consultant in various countries, he served in that capacity on the staff of the United Nations Bureau of Economic Affairs in New York and, for an additional year, worked with the small industries research group of Stanford Research Institute.

The genesis of this book rests on solid foundations. Early in 1958, the International Industrial Development Centre of Stanford Research Institute undertook a programme of research and dissemination of methods of small industry development assisted by a grant from the Ford Foundation. The programme has for its main emphasis international comparative studies which help one to reveal the role that small industries can play in general economic development, while giving practical methods to stimulate growth and efficiency in the small sector.

The book has made a clear-cut definition of small industry by underlining its functional aspect. For statistical purposes, therefore, small industry has been defined as manufacturing units having fewer than a hundred employees. That makes the scope of small industry distinctly demarcated. It is said with justification that in newly developing countries large industrial enterprises can look after themselves but that it is the small sector that needs most "to catch up." The study, as contained in the book, examines all the processes and instruments by which industrial knowledge is being collected, adapted and transmitted to entrepreneurs of small industrial undertakings. In this case, the study gains immensely from the firsthand and practical experience which the author has gained in small industry development work in Shanghai, Indonesia, Burma and India.

In the chapter on India, the author deals with specialised Government agencies like the All-India Handloom Board, the All-India Khadi and Village Industries Commission, the Small-Scale Industries Board and the Central Small Industries Organisation. All this information is quite familiar to us, but the organisational set-up should prove of great value to those who are not conversant with rudimentary practices in small industries.

Advisory services, their subject matter, organisational methods, information sources and evolution are exhaustively studied by the author in different chapters. The book covers the best part of the world including Japan, the European countries (particularly Germany, Denmark, France and Poland), Latin America, Canada and the United States.

The book is as exhaustive a treatise as is possible in such studies. If it is studied with care and diligence in our country, it should greatly help promote the cause of the small sector which occupies a key position in rural industrialisation. People who particularly stand to benefit from the publication are Government departments of industries, leaders of productivity centres, technical assistance experts and all those concerned with the problem of promoting industrial growth and efficiency.

The Maharashtra Co-operative Societies Act, 1960. By M. D. Vidwans. Published by Co-operators Book Depot, 5-32, Ahmed Sailor Building, Bombay 14. Pages: 372 Price: Rs. 16.

The Bombay Co-operative Societies Act 1925 gave the lead by its novel features in the matter of State legislation relating to co-operatives. Perhaps this leadership is also maintained in the new Maharashtra Co-operative Societies Act 1961 and Rules 1962 which came into operation on 25th January, 1962. Mr. Vidwans has attempted a useful commentary on the Act and Rules. He has illustrated, wherever necessary with case decisions, whether in this State or elsewhere. Gujarat was till recently part of the Bombay State and a new Act has been passed in that State also in 1962. Since both the Maharashtra and Gujarat States had largely drawn on the parent Act, the author has indicated the principal points of variation.

"KHADI GRAMODYOG"

The ninth anniversary number of *Khadi Gramodyog* (Editor: Mr. S. C. Sarker) focusses attention on the various aspects of rural industrialisation and brings into bold relief the multifarious facets of rural economy and the decentralised sector of production. Published by the *Khadi* and Village Industries Commission (Price Rs. 2), *Khadi Gramodyog* is the only journal of its kind which serves as a forum for discussions of the various problems pertaining to rural regeneration from different angles. The annual number presents thoughtful articles on *khadi*, village industries and different aspects of rural industrialisation in general by eminent thinkers and experts.

L.I.C. 3rd VALUATION RESULTS

BONUS

WHOLE LIFE ASSURANCES
Rs. 16.00
per thousand per annum

ENDOWMENT ASSURANCES
Rs. 12.80
per thousand per annum

The Life Insurance Corporation has pleasure in declaring the above rates of bonus as a result of the third Valuation of its liabilities and assets as at 31st December 1961. These bonus rates are applicable to with-profits policies issued by the Corporation and which were in force for full sum assured as at the date of Valuation.

The total sums assured and bonuses under 85,81,367 policies in force on the date of the Valuation amounted to Rs. 2738 crores, and the total amount payable under 10,297 Life Annuities was Rs. 1,09,50,470 per annum. Out of the total profits available for distribution amounting to Rs. 34.45 crores, a sum of Rs. 32.73 crores has been utilised for allotting bonuses at the above rates to the policyholders. Government's share of surplus amounted to Rs. 1.72 crores.

The rates of bonuses on with-profits policies of the erstwhile insurers also remain the same as those declared under the Differential Bonus Scheme on the occasion of the first and second Valuations.

Bonus intimations in respect of the third Valuation will be sent out to the policyholders as soon as possible.

Life Insurance Corporation of India

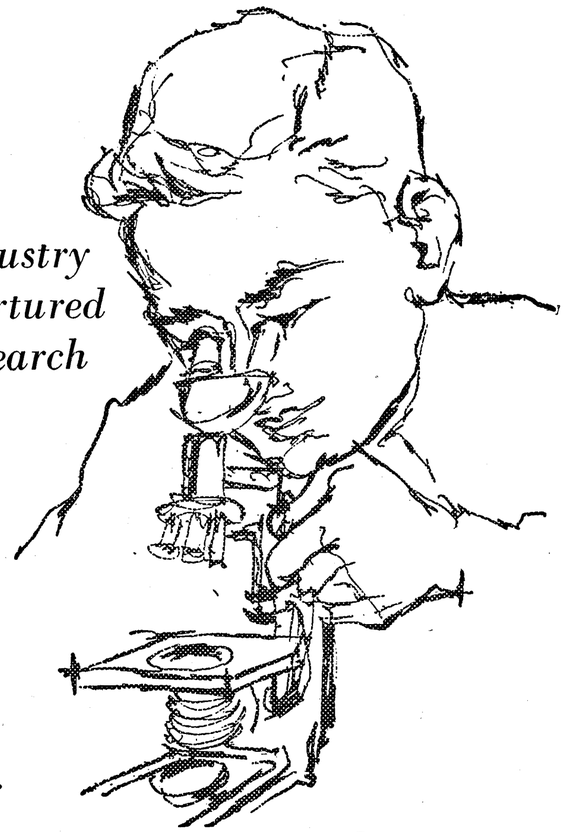
An Industry Nurtured by Research



'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

PATTERN OF COMPANY DIRECTORSHIPS

INTERLOCKING WIDELY PREVALENT

By Dr. Raj K. Nigam and N. D. Joshi

[In July 1961, the authors of this article published a small brochure, entitled "Pattern of Company Directorships in India—a Pilot Study" based on their findings of 117 big-sized companies, having a paid-up capital of Rs. 50 lakhs and over, in the western region comprising Gujarat, Maharashtra and Madhya Pradesh. They have now followed up this pioneering effort by publishing a more comprehensive study covering the whole of India. The main features of their study are published on these pages. Those who wish to look up the authors' first study may consult Commerce *issues dated 8th July and 15th July 1961. The views expressed by the authors are their personal opinions and the Department of Company Law Administration, to which they belong as Director of Research and Statistics and Research Officer, respectively, is in no way committed to them.—*Ed.]

THE present all-India study covers 331 big and giant-size companies having a paid-up capital of Rs. 50 lakhs or above each, out of a total of 345 companies of such size reported to be in existence in the year 1956-57 to which the present study relates. Apart from 127 big-sized companies belonging to the western region (of which 117 companies belonged to the erstwhile bilingual State of Bombay), another 117 companies covered in the study were registered in the eastern region (107 of which pertained to West Bengal), 37 companies were from the northern region (16 and 12 companies of which were registered in the States of U.P. and Delhi respectively) and 50 companies belonged to the southern region (31 of which were registered in the State of Madras). In terms of paid-up capital, the 331 companies included in our study accounted for 60 per cent of the total paid-up capital of all companies at work in the country in 1956-57. Similar figures of paid-up capital coverage worked out to 59.4 per cent, 54.3 per cent, 54.1 per cent and 67.3 per cent for the western region, the eastern region, the southern region and the northern region, respectively.

The total number of directorships in the 331 companies selected by us for our study comes to 2,419 held by 1,502 persons acting as directors. That is to say, on an average, a person is found to be holding 1.6 directorships in the aforesaid companies. Further, these 1,502 persons have been found to be holding 9,785 directorships on the all-India basis including the 2,419 directorships held in the 331 companies covered here. The average number of directorships held by a person thus comes to 6.5 or in rounded terms 7 directorships. As against the average of 7 directorships held by a person, derived from the all-India data relating to the 331 companies, the average number of directorships held by a person acting as director in the companies registered in the western region worked out as 8. Further, in contrast to this average number of directorships held by a director on the boards of companies in the western region, those held by the directors in companies outside that region worked out to 6. This analysis thus shows that the western region directors, or in other words, the Bombay directors, carried heavier managerial responsibilities than did their counterparts in companies registered in the other States.

Size of Board of Directors

The size of boards of directors of the big and giant-sized companies studied by us ranges from 2 directors to 20 directors, the minimum of two having been prescribed by Section 252 of the Companies Act, 1956 for a private company. The average size of the board works out to be seven directors. This average has been arrived at on the basis of the total directorial strength of the 331 companies, which came to 2,419 directors. Out of the 331 companies, 50 companies had a board of 6 directors each and another 50 had a board of 7 directors each. The number of companies having a board of directors comprising 8 directors was 41: 9 directors, 31 companies; 10 directors, 27 companies; 11 directors, 12 companies; and 12 directors, 16 companies. One company was found to be having 19 directors and two companies had 20 directors each. Out of the total of 331 companies, only 4 big and giant-sized companies had boards comprising 2 directors each, whereas 22 companies had a board of three directors each, 27 companies a board of 4 directors each and 38 companies a board of 5 directors each. As against the all-India average size of the board of 7 directors, the average size of the board of the big and giant-sized companies registered in the State of Bombay and Madras works out to 8 directors whereas in the State of West Bengal, it is 6 directors. It is thus seen that the West Bengal companies have a smaller and more compact board of directors than the companies registered in the other States.

A comparison of the average size of the board of directors in this country with that in Great Britain and the U.S.A. reveals that the size of the board of directors in India is bigger than that in Great Britain and smaller than that in the U.S. According to the study made by Prof. Florence for the British companies, the average size of the board in the large-sized industrial and commercial undertakings in Britain works out to 5 directors, whereas similar investigations in the U.S. for the big-sized American corporations give the average size of the board as 9 directors.

Nominee Directorships

Prior to the coming into force of the Companies Act, 1956 there were no statutory restrictions on the practice of nomination of directors on the board by the managing agents. Accordingly, it was quite common in the pre-1956 Act period for the companies to have boards of directors almost wholly manned by the representatives of the managing agents, and even the few people who were not the nominees of the managing agency firms or companies, were in some way or other either connected with the managing agents or enjoyed their confidence. The result of all this was that the boards of directors of the managing agency-managed companies, whose number was also very large, were the managing agency-directed boards, which were hardly composed on the principle of giving representation to a variety of interests and experience required for efficient management of the enterprise. It was also noticed in the past that the managing agency agreements used to drastically curtail the powers of the directors who virtually became figureheads. The passing of the Companies Act, 1956, brought about a revolutionary change in this direction. Sub-section (1) of Section 377 of the Companies Act restricts the appointment of the nominees of the managing agents. This provision lays down that the "managing agents of a company may, if so authorised by its articles, appoint not more than 2 directors where the total number of directors exceeds five and one director where the total number does not exceed five." Some more limitations on the powers of the managing agents have been laid down by Section 261 of the Act, as pointed out in the first round of our study.

According to our present survey, out of the 331 companies, 90 companies were managed by managing agents and the number of their directorships came to 681. Out of these 681 directors, 157 were nominated directors. It is seen that, on an average-size board of 8 directors of these companies, two were the nominees of the managing agents. This reveals that the managing agents exercised to the full extent the discretion of nominating directors granted to them by the law which, as stated above, prescribes that, in a board comprising more than 5 directors, the maximum number of directors nominated by the managing agent could be two.

Nationality of Directors

Our study of the directorships reveals that, out of the 1,502 directors, 345 directors or 23 per cent of the total were of non-Indian nationality. These foreign directors held 2,184 directorships. This meant that 22.3 per cent of the total directorships were held by the 345 directors of foreign nationality. Out of the 331 companies, 139 companies had boards which included foreign directors. It is seen that, out of these 139 companies, in 65 companies foreign directors were in majority, in 14 companies they were in equal strength with the Indian directors and in 60 companies, they were in minority. It is also seen that, in the 139 companies where foreign element was present on the boards of directors, the ratio of Indian directors to foreign directors worked out as 1 : 1. As against this overall ratio, in the companies with foreign directors' predominance, the ratio of Indian to foreign directors worked out as 1 : 3, whereas in the companies with Indian predominance on the boards, the ratio was reversed, i.e., 3 : 1.

Out of 331 companies, only 12 companies were found to have lady directors.

Multiple Directorships

Multiple directorships have been a characteristic feature of the growth of the corporate sector and industrial development of our country. A very significant degree of accentuation of multiple directorships, however, came to be witnessed only during World War II and the post-war period, when, a large number of new companies were promoted by the prominent business houses and others who had already started some companies in the early war years. The question of plural directorships in the corporate sector attracted the attention of the economists in this country as early as in 1935. But "pluralism" in directorships at that time was not as prominent as it became in the subsequent years. Dr. P. S. Lokanathan, for instance, in one of his early books, *Industrial Organisation in India*, pointed out that "the system of multiple directorships necessarily leads to a certain weakening of responsibility, as no director, however able, will be in a position to look after the interests of more than a few concerns at a time." In that study, by way of example, it was pointed out that, in the cotton mills in Bombay in 1927, one person was director in 30 companies, one in 14 companies, one in 13, 3 in 12, 1 in 10, 1 in 8, 1 in 6 and 1 in 5 companies. Further, in the State of Bombay, one person was a director of 65 industrial concerns, another of 42, a third of 34, a fourth of 12, a fifth of 14, a sixth of 29 and a seventh of 26 and another of 29 companies.

An unofficial study* of the multiple directorships made for the year 1949-50 which took into account the developments that had taken place during the war and post-World War II period revealed that about 100 persons held as many as 1,700 directorships of important concerns and, of these, 30 persons among themselves held as many as 860 directorships, that is to say, on an average, 29 directorships by every person. The same study further revealed that 10 top industrialists held about 400 directorships and of these two persons held as many as 50 directorships each. Commenting on this question of multiple directorships, the Bhabha Committee later stated that, "in the course of our enquiry, it has been brought to our notice that, even now, the holding of 15 to 20 directorships is common while the holding of 30 or more directorships is by no means unusual."

Realising the unhealthy effects of the concentration of directorships with an individual or a small group of persons, which were later brought out in the course of discussions on the Companies Bill in Parliament in 1953-55, the Bhabha Committee suggested and recommended that a special provision be made in the Companies Act that "no person should hold more than 20 directorships at a time." From this, the directorships of private companies, unlimited companies and of associations not for profit and alternative directorships were, however, to be excluded. The Committee also added that, "in view of the paucity of high grade business ability in this country, we do not consider any further reduction in the maximum number of directorships which we have recommended desirable at this stage in the development of the country's economy." In suggesting this statutory reform in the Company Law in this country, the Committee had before it the examples of the German Law of 1939 which introduced a legal maximum of 10 boards on which a director could serve, although it was open to Government to grant exemptions in particular cases and that of a war-time legislation in France (Law of 16th November 1940) which reduced the number of directorships a person could hold to 12, subject to the condition that no person may serve on the boards of more than eight companies registered in France. Thus, it was on the basis of the aforesaid recommendation of the Bhabha Committee that the provisions of Section 275 of the present Companies Act, 1956, were framed and with this, the process of defreezing of the concentration of multiple directorships in the hands of a few important business elites in the country could be said to have begun. The impact of these provisions so far as the maximum limit of 20 directors was concerned was felt during the first two months of the coming into force of the Act, within which time the directors were asked to comply with the provisions of Section 275. The present study gives the factual position of the multiple directorships in the year 1956-57, but it does not, it may be admitted, throw light as to how the downward readjustment of directorships has been effected by the prominent businessmen belonging to the various industrial houses, particularly where they have been successful in

Structure of Indian Industries by Dr. M. M. Mehta.

retaining their control over the boards of companies while complying with this provision.

Our present study of company directorships reveals that, of the 1,502 directors, 26.6 per cent held single directorship, 53.2 per cent held two to ten directorships, 14.4 per cent 11 to 20 directorships and 5.8 per cent held more than 20 directorships. In absolute terms, out of 1,502 directors, 399 held one directorship each, 799 between two to ten directorships, 217 between 11 to 20 directorships and 87 more than 20 directorships. It may be mentioned here that the 87 persons who were found to be having more than 20 directorships and who might seem, therefore, to violate the provisions of Section 275 of the Act actually held the excess directorships by virtue of the exemptions granted by the provisions of Section 278 of the Companies Act which excludes the directorships held in the following categories of companies from the maximum limit of 20 directorships: (a) a private company which is neither a subsidiary nor a holding company of a public company; (b) an association not carrying on business for profit or which prohibits payment of a dividend; (c) an unlimited company; (d) a company in which such person is only an alternate director, that is, a director who is only qualified to act as such during the absence or incapacity of some other director. Table I below gives the frequency distribution of directorships held by the 1,502 persons serving on the boards of the 331 companies covered by us in this study. It will be seen from the table that 73.4 per cent of the persons acting as directors held multiple directorships and that the total number of directorships held by the directors holding single directorships accounted for about 4 per cent of the total of 9,783 directorships held by the 1,502 persons.

TABLE 1: *Frequency Distribution of Directorships*

No. of directorships	No. of persons holding director-ships	Percent-age	Total director-ships held	Percent-age
1	399	26.6	399	4.0
2–10	799	53.2	3,963	40.5
11–20	217	14.4	3,196	32.7
21 and above	87	5.8	2,227	22.8
	1,502	100.0	9,785	100.0

The foregoing table showing the frequency distribution of directorships gives the combined figures in respect of the foreign and Indian directors. A separate study of the frequency distribution of directorships held by the foreigners and Indians discloses that the prevalence of plural directorships is less marked among the former than among the latter. Out of the 345 foreign directors, 63 per cent held more than one directorship and the proportion of foreigners holding more than 10 directorships worked out to 21 per cent. As against this, 77 per cent of the Indian directors were found to be holding more than one directorship. The proportion of Indian directors holding more than 10 directorships came to 20 per cent. The proportion of Indian directors holding between two and ten directorships came to 57 per cent, as against the corresponding figure of 42 per cent in respect of the foreign directors. Indian directors holding single directorships accounted for 3.6 per cent of the total directorships, whereas the corresponding figure for foreign directors holding single directorships was 5.9 per cent.

The comparative position of multiple directorships held by the directors in Indian, U.K. and U.S.A. companies is given in the following Table 2. The data for directors in the U.K. and U.S.A. companies have been taken from Prof. Sargeant Florence's book, *Logic of British Industry*.

TABLE 2: *Multiple Directorships in India, U.K. and U.S.*

(Percentages)

No. of companies in which director-ships are held	Indian directors in Indian com-panies	Foreign directors in Indian com-panies	All directors in Indian com-panies	Directors in large British com-panies	Directors in large American corpora-tions
1–5	57.0	67.8	59.5	70.0	72.5
6–10	22.9	11.6	20.3	17.0	17.5
Over 10	20.1	20.6	20.2	13.0	10.0

The above table unmistakably brings out the fact that directors in Indian companies are having more directorships than their counterparts in the U.K. and the U.S. Further, amongst directors in Indian companies, Indian directors holding six to ten directorships are proportionately more (22.9 per cent) than the foreign directors holding same number of directorships in Indian companies. As against this, the proportion of Indian directors holding more than ten directorships is less than that of foreign directors holding directorships exceeding ten in Indian companies. This shows that foreign businessmen at the top in India are holding more multiple interests than their Indian counterparts as also than those abroad.

Inter-State Directorships

A surprising finding from the study of the inter-State interests of the directors is that, in the case of the big and giant-sized companies which might be expected to be having on their boards men of inter-State stature, only 117 out of the 1,502 directors serve on the boards of companies registered in two or more States of the country. Out of the remaining 1,385 directors, 986 directors serve on more than one company registered in a single State only. Of the 117 directors having inter-State interests, 102 directors serve on companies registered in 2 States, 9 directors in companies registered in 3 States, 4 directors in companies registered in 4 States and 2 directors in companies registered in 5 States.

Age Pattern

Statistical information on the age of directors is available in respect of 1,320 directors (out of whom 1,110 are Indian directors and 210 are foreign directors). The average age of these 1,320 directors taken together works out to 48 years 4 months. Separately, the average age of the Indian directors works out to 48 years and 2 months and that of the foreign directors, to 47 years and 1 month. This thus reveals the Indian directors to be older by a very small margin than the foreign directors. As against the average age of 48 years and 2 months of Indian directors in our country, the average age of the British and American directors, according to the studies made for them, was found to be 55.2 and 65 years respectively. The following Table 3 below shows the comparative position of the age pattern of directors in the Indian, American and British companies:

TABLE 3: *Age Pattern of Directors in Indian, American and British Companies*

(Percentages)

Age group	Indian directors in Indian companies	Foreign directors in Indian companies	British directors	American directors
Under 40	26.1	21.4	9.0	1.0
41–49	24.2	35.2	30.0	9.5
50–59	26.8	31.9	31.0	26.5
60 and above	22.9	11.5	30.0	63.0
	100.0	100.0	100.0	100.0

As explained in the previous study on the subject, "the higher average age in the case of the American directors is mainly accounted for by the fact that the administrative structure in American corporations is very different from that of the Indian or British companies. The board of directors of American corporations tends, more often, to be a supervisory body of elderly statesmen of industries including bankers with representatives of leading stockholding families while the boards of directors in the U.K. and India tend to be more often an active policy-making body." As for the lower average age of the directors in this country, the reason given in our previous study was that it could be "partly ascribed to the hereditary nature of the Indian directors and partly to their lesser longevity." Apart from these reasons, one other reason for the comparatively younger average age of Indian directors is that the present Company Law in the country has made the appointment of people of advanced age as directors less easy, for, if people who exceed the age of 65 years are to be appointed as directors on the boards of companies, a special resolution has to be passed in the general meeting of the company as per provisions of Section 281 of the Companies Act, 1956. The spirit underlying the provisions of the section, as explained during the course of the debates on the Companies Bill in Parliament in 1953-55 by the Government, is that only people below 65 should be appointed as directors and the appointment of people exceeding that age should be an exception rather than the rule. The aforesaid intention of Parliament has been realised in the business community and a smaller number of people of the age of 65 years or more have been appointed on the boards of companies after the coming into force of the Companies Act, 1956. It may be mentioned here that the provisions of the new Act have, in a way, brought down the average age of the directors.

A detailed study of the age pattern of the 1,320 directors belonging to 331 companies in India reveals that 113 directors were of 30 years or less of age, accounting for nearly 8.5 per cent of the total. The number of directors of the age group between 31-45 years and that of the directors of the age group of 46-55 years is 333 and 466 or in terms of percentage 25.2 per cent and 35.3 per cent respectively. The number of directors in the age group between 56-65 years was 262, that is, 20 per cent of the total and the number of superannuated directors, namely, those over the age of 65 years was 146 or 11 per cent of the total. Dividing the directors in two categories, namely, 'young' directors who were of 45 years of age or less and 'mature and seasoned' directors whose age was over 45 years, it is seen that the former accounted for nearly one-third of the total directors, whereas two-thirds were of the latter group. The following Table 4 gives the age pattern of the 1,320 directors studied by us in this survey:

TABLE 4: *Age Pattern of Company Directors*

Age groups (as on 31st March 1957)	Number of directors	Percentage to total
Upto 30 years	113	8.5
31–45 years	333	25.2
46–55 years	466	35.3
56–65 years	262	20.0
Over 65 years	146	11.0
	1,320	100.0

For the study of the composition of boards of directors as between young and old directors, information is available for 289 companies out of the 331 companies covered in this study. Our study of the percentage representation of the young directors (of 45 years or less) discloses that, in 49 companies out of the 289 companies, there was no representation of such directors, whereas the 'young' directors were represented to the extent of 25 per cent in the overall strength of the board in 89 companies. More than 25 per cent and upto 33⅓ per cent representation was secured by the 'young' directors in 22 companies, whereas between 33⅓ per cent and 49 per cent of representation on the boards was secured by them in 55 companies. In other words, in 17 per cent cases, 'young' directors had no representation, in 31 per cent cases they had upto 25 per cent representation, in 8 per cent cases between 25 per cent and 33⅓ per cent and in 19 per cent cases, between 33⅓ per cent and 49 per cent of the strength on the boards. It is further seen that, in 25 companies, the boards were equally balanced between the young and old directors, the dividing line being drawn at the age of 45 years. In terms of percentage, 8 per cent of the 289 companies had boards that were equally balanced between young and old directors. The young directors had between 50 per cent and 66⅔ per cent representation in 22 companies, between 67 per cent and 75 per cent representation in 16 companies, and between 76 per cent and 99 per cent in 7 companies. Cent per cent representation to the young directors was observed on the boards of four companies only accounting for one per cent of the total number of companies covered in our study. Thus it is seen that in 75 per cent of the companies, the young directors were found to be in minority as against which they were in majority only in 17 per cent cases.

These data also shows that the corporate management in this country still continues to rest overwhelmingly on older shoulders. It is true that the seasoned and mature experience of the older directors is necessary to prevent corporate affairs from running into the risks and hazards that the younger directors might be tempted to discount heavily, but in order to accelerate the tempo of corporate growth, the initiative, drive and daring generally associated with young age are equally necessary. Therefore, if the corporate management in this country is to acquit itself creditably in the development of Indian economy, it needs readjustment with more representation to young directors.

Directors' Holdings

Information on directors' holdings in the share capital of the companies is available for 883 directors belonging to 121 companies, out of the 2,419 directors (inclusive of duplication) serving in the 331 companies covered in our survey. Our investigations reveal that 883 directors of the 121 companies held among themselves, directly in their own names, 6 per cent of the total paid-up capital of the companies of which they were directors. The percentage holdings of the directors in the managing-agency-managed companies further work out to around 3 per cent, whereas those of the directors of the companies which are managed directly by boards of directors work out to around 9 per cent. The financial stake of the directors in the case of the managing-agency-managed companies is low, because control in such companies is retained by the managing agency firm and not by the board of directors. As against this, it is quite understandable that the holdings of the directors in the companies managed by boards of directors should be higher, as in their case, the control and management of the companies are retained by the directors by virtue of the control over majority of the share capital of the company. From the point of view of control, the present figure of 9 per cent appears

to be very low and indicates that the directors, directly or indirectly, control a fairly high proportion of the capital of the companies through their *benamdars*, relatives, friends, financial institutions and companies. Here it must also be mentioned that, due to the dispersal of shareholdings over a large number of persons, majority of which is not taking active interest in corporate decisions, it is not necessary to have majority of the voting rights to get or retain the control of the company. Sometimes, even a block of 10 per cent to 20 per cent of the voting rights is enough to take over the control of the company. Apart from dispersed holdings, there are substantial holdings of share capital by disinterested financial institutions.

A separate enquiry made by us into the financial stake of the foreign and Indian directors in the companies on whose boards of directors, both were represented, reveals that the holdings of the foreign directors amounted to less than those of the Indian directors. In the 52 companies, where foreign directors were on the boards of directors, the average holdings per foreign director worked out to Rs. 48,000, whereas those of the Indian directors came to Rs. 64,000. If the 21 companies where foreign directors predominated in number on the boards were alone taken into account, the average holdings of the foreign directors were observed to be Rs. 77,000, whereas those of their Indian counterparts were Rs. 1,05,000. In the 7 companies where foreign directors were equal in number to the Indian directors, the average holdings of the foreign directors came to Rs. 23,000 as against Rs. 83,000 of the Indian directors. Further, in the 24 companies on whose boards foreigners were in minority, the average holdings of the foreign directors came to Rs. 20,000 as against Rs. 37,000 of the Indian directors.

Thus it is seen from the above figures that, in all cases where foreign directors were on the boards—whether they were in majority, in equal number or in minority—their average holdings were significantly less than those of the Indian directors. The main reason for the comparatively smaller average holdings of the foreign directors in the companies is that a majority of the 52 companies happened to be either the companies under the management of foreign managing agency houses or the subsidiaries of the foreign companies and as such the foreign directors were in reality "service directors" The reason for the larger average holding of capital by the Indian directors appears to be that they have been taken on the board only by virtue of their significant participation in the share capital of the companies concerned apart from their usefulness in connection with the business of the companies. These broad generalisations however require to be verified by detailed case studies which have not been attempted by the authors in this study.

Occupational Pattern

As mentioned in the first round of our investigations, information relating to the profession and occupation of the company directors is not quite accurate, the main reason for the deficiency being the fact that very broad categories of occupations were set out for collecting the information; and the decision for having broad categories was taken because the returns filed by the companies on Form No. 32 under Section 303 of Indian Companies Act, 1956 contain rather generalised entries on the occupation and profession of company directors. The only way to have more accurate information on the occupational pattern of the directors was to send out a questionnaire to the individual directors of the companies covered in the survey and, while making an enquiry in this regard, one could have as well enquired about the general and technical qualifications of the directors the educational institutions attended by them in this country and abroad and other details of such nature as have been collected in certain investigations in the U.K. This method, however, was not adopted and as such, the authors had recourse only to the official documents.

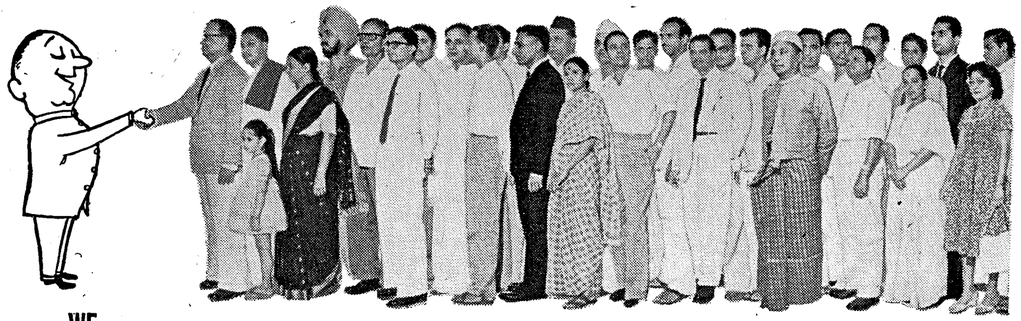
However, notwithstanding the lack of precision in the information collected by us, the broad picture that has become available to us reveals that, out of the 1,502 directors, 103 directors were professionally qualified as accountants, solicitors, lawyers, etc., 116 directors possessed specialised and technical qualifications and 113 had been selected on the boards of directors for their administrative and executive qualifications. These three broad groups of occupation among themselves accounted for 392 directors, that is, about 26 per cent of the total and the remaining 1,110 directors were there by virtue of their belonging to business families and communities. The higher proportion of directors whose occupation has been given as 'business' is, however, not surprising, as it is well known that business management in this country has not yet become professionalised and still shows overwhelming signs of family inheritance, etc. The following Table No. 5 gives the breakdown of the company directors belonging to the 331 companies as well as for those belonging to the 117 companies registered in the Western region:

TABLE 5: *Occupational Distribution of Company Directors*

Name of occupation disclosed	No. of persons acting as directors	
	All India	Western region
Business	1,110	441
Established professions like accountancy, legal practice, etc.	103	33
Services of specialised and technical nature	116	23
Services of administrative and executive nature	173	49
	1,502	546

Interlocking of Directorships

For the purpose of illustrating the extent of interlocking of company directorships in the big-sized companies, we have selected seven typical companies belonging to seven leading Indian and foreign business groups. The Andhra Valley Power Company Ltd. has been selected from the Tata group, Century Spinning and Weaving Company Ltd. from the Birla group, Standard Mills Ltd. from the Mafatlal group, Greaves Cotton and Company Ltd. from the Karamchand Thapar group, McLeod and Company Ltd. from the Surajmull Nagarmull group, Kamarhatti Ltd. from the Jardine Henderson group and the Bengal Coal Company Ltd. from the Andrew Yule group. While the selected companies belonging to the aforesaid seven groups would not reveal the entire corpus of inter-company relationships forged through the directors, they—being important corporate units within the respective business groups—would still throw some light on the extent of inter-company relationships in the respective houses. It must be stated here that we are not in a position, due to lack of adequate data, to say much on the broad patterns of interlocking secured through company directorships such as (*a*) interlockings between competing companies, (*b*) interlocking between companies in the same



WE WISH TO SHAKE HANDS WITH A MILLION PEOPLE

THIS YEAR, the Indian Overseas Bank completes twentyfive years of its service to the people. We feel so proud about it that we wish we could shake hands with everyone of our customers and well-wishers, here in India and abroad, whose understanding and support made it possible for us to grow.

The success of a Bank depends essentially on the confidence of the people—confidence in its stability and in its efficiency. The growth of the I.O.B. is a measure of the confidence it has been able to create in the minds of the people. Founded in 1937 by the late Mr. M. Ct. M. Chidambaram Chettyar, the Bank has today grown into a mighty institution and is known throughout India, Burma, Ceylon, Hong Kong, Malaya, Singapore, Thailand and the rest of the world for its friendly service.

It was our earlier intention to celebrate this happy occasion in a fitting manner at each of our major branches in India and South-east Asia. Since then, India has had to face one of the greatest challenges in its recent history. We have, therefore, decided to cancel the formal celebration of this event, however important it be, and instead extend our fullest support to the mobilisation of the country's resources in this hour of emergency.

On this occasion of our Silver Jubilee we wish to say how deeply we appreciate the co-operation and support that we have throughout received from our clients and correspondents everywhere. We owe them a deep debt of gratitude and we rededicate ourselves to the ideal of greater service.

IN STEP WITH TOMORROW

New processed foods, new pharmaceuticals, and many more new products are coming on the Indian market, every day. They create new packaging problems ■ At Poysha, one of the leading tin container makers in the country, they are always geared to meet the requirements of their customers. In 1961 they pioneered the manufacture of 5½ oz juice cans. Soon they will be lithographed too. Next on the agenda is a much wider expansion of the range of packaging material. What is more, plans are ready for the setting up of subsidiary factories in the heart of the fruit and vegetable growing areas to help the canners with quick and economical canning facilities. Poysha are indeed always in step with tomorrow.

or closely related industries but not in competition with one another, (c) interlocking between companies that face similar problems, (d) vertical interlocks among companies engaged in distribution of materials in short supply, (e) vertical interlocks among companies that sell or distribute the products of another and thus create preferential access to market outlets, (f) interlocks between manufacturing corporations and financial institutions such as banks and insurance companies that may assure adequate credit to favoured companies, and (g) interlocking relationship to protect an investment. An attempt, however, has been made in the following paras with the limited data available with us to offer some general comments on interlocking between competing companies and the inter-connection between manufacturing companies and financial companies:

Andhra Valley Power Company Ltd.: The Andhra Valley Power Company is a giant-sized company with a total paid-up capital of Rs. 3.52 crores and the total capital employed by it (i.e. total assets minus depreciation and intangible assets) is Rs. 7.64 crores. It has a board of directors of 9 directors of which 3 belong to the house of Tatas and 6 are outside directors. It is linked with 113 companies including 1 non-profit making Association and 9 Government companies through its nine directors. Out of this total, it is connected with 87 companies through one director, with 18 companies through 2 directors, with 7 companies through 3 directors and with 1 company through 4 directors. Further, it is observed that of the 113 companies with which it is connected, 13 companies are connected through internal directors, that is, through the directors belonging to the house of Tatas or persons in whole-time employment in the Tata group. The remaining 100 companies are connected with this company through the outside directors. Four of the 113 companies are engaged in the same business as that of the Andhra Valley Power Company and all of them belong to the Tata group. As regards the interlocking with financial companies, it is observed that the Andhra Valley Power Company is connected with 13 banking and financial companies of which 2 are banks, 6 investment companies and 5 other financial institutions.

Century Spinning and Weaving Mills: This textile company which belongs to the Birla group has nine directors on its board. Its paid-up capital and capital employed amount respectively to Rs. 1.09 crore and Rs. 8.82 crores. Out of the total nine directors of this company, only two can be presumed to be the inside directors. These two inside directors have forged interlocks with 31 companies out of a total of 117 companies connected with the Century Spinning and Weaving Mills through common directors. The breakdown of these 117 companies according to 1, 2 and 3 common directors is 101, 13 and 3 respectively; this shows that, as compared with the Tata group, the interconnections through two and more directors are less in the Birla group. This interlocking of directorships forge links between Century Spinning and Weaving Mills and other 30 textile companies out of which two are inter-connected through three directors, one with two directors and the remaining, with only one director. Besides textile companies, 16 financial companies—out of which two are banks, seven are investment companies and the rest are miscellaneous financial companies—are interlocked through common directors, to Century Spinning and Weaving Mills Ltd.

Standard Mills Ltd.: The Standard Mills is another textile company whose interlocking of directorships has been studied here. It is connected through one common director with 78 companies, through two common directors with 14 companies and through three common directors with 11 companies. Further, through 4 common directors, it is connected with 5 companies. Out of these 100 companies connected through common directors to this company, one is an association not for profit, 28 are textile companies and 16 are financial companies. Further, out of these 16 financial companies, 3 are banking companies, 7 are investment companies and 6 are miscellaneous companies. The paid-up capital and capital employed of this company amount to Rs. 99.80 lakhs and Rs. 4.62 crores respectively. Out of its nine directors, five can be categorised as inside directors who themselves have forged interlocks with 51 companies out of the 108 companies connected to the Standard Mills through common directorships.

Kamarhatty Company Ltd.: This company which belongs to Jardine Henderson group is connected to 66 companies through common directors. Out of these 66 companies, 58 have one common director, five have two common directors, two have three common directors and the remaining one has four common directors with Kamarhatty Company Ltd. The industrial breakdown of these 66 companies shows that there are 15 jute companies and seven financial companies. Out of the latter, six are investment companies and one is a miscellaneous financial company. The paid-up capital and capital employed of this company amount to Rs. 59.20 lakhs and Rs. 2.21 crores respectively. Out of its four directors, only one is an inside director connecting 17 companies to Kamarhatty Company Ltd. through his directorship in them. The remaining three outside directors are holding directorships in 49 companies.

Greaves Cotton and Company Ltd.: This company which is in the Karamchand Thapar group has a paid-up capital of Rs. 1.38 crore and total capital employed of Rs. 3.77 crores. It is connected with only 58 companies 40 of which are through one director, 17 through two directors and one through three directors, common with Greaves Cotton and Company Ltd. This engineering company has interlocking of directorships with 9 other engineering companies while its connection by virtue of common directorships extends to 6 financial companies out of which one is a banking company and two are investment companies.

McLeod and Company Ltd.: In the seven case studies given here on interlocking of directorships, McLeod and Company Ltd. is the only managing agency company, having a paid-up capital of Rs. 95 lakhs and capital employed of Rs. 5.11 crores. Its connections with companies through common directorships extend to 92 companies, 88 of which are through one common director and the remaining 4 through two directors. The industrywise composition of these 92 companies shows that McLeod & Co. and two other managing agency companies have common directors. Out of the 6 directors on its board, three are inside directors belonging to the Surajmull Nagarmull group. These inside directors are also serving on the boards of 35 other companies.

Bengal Coal Company Ltd.: This company which belongs to Andrew Yule group of companies has a paid-up capital of Rs. 1.20 crore and capital employed of Rs. 5.39 crores. The connections through the directorships of its directors extend over 32 companies, of which only 6 are coal companies and 7 financial companies. Out of the 7 financial companies, 6 are investment companies. Out of its six directors only one can be considered as the inside director belonging to Andrew Yule group. This inside director is also serving on the boards of 23 other companies. The remaining 59 companies are connected to Bengal Coal Company Ltd. through the five outside directors.

The foregoing case studies of interlinking of seven companies through common directorships bring out the wide prevalence of interlocking of directorships in companies belonging to long-established and reputed houses. It must, however, be mentioned that the existence of common director or directors on the boards of two companies does not necessarily mean that the policies of the two companies are completely integrated. Much will depend upon the personality of such common directors and the influence they wield on the strength of their associations with business houses, etc. Subject to the limitation mentioned above, it is seen that there is association of the seven companies studied here with financial companies particularly banks and investment, etc., through common directors. Further, the interlocking of directorships of these seven companies with companies carrying on similar trade or manufacturing activity connote horizontal integration which often results in common price and distribution and related policies which are of mutual benefit. The exact extent of such uniformity in business policy, however, has not been studied here.

SUGAR

(*Concluded from page 994*)

cane growers. It is no exaggeration to say that there is nothing in the new scheme that discourages in efficient sugarcane farming.

Duration of Season

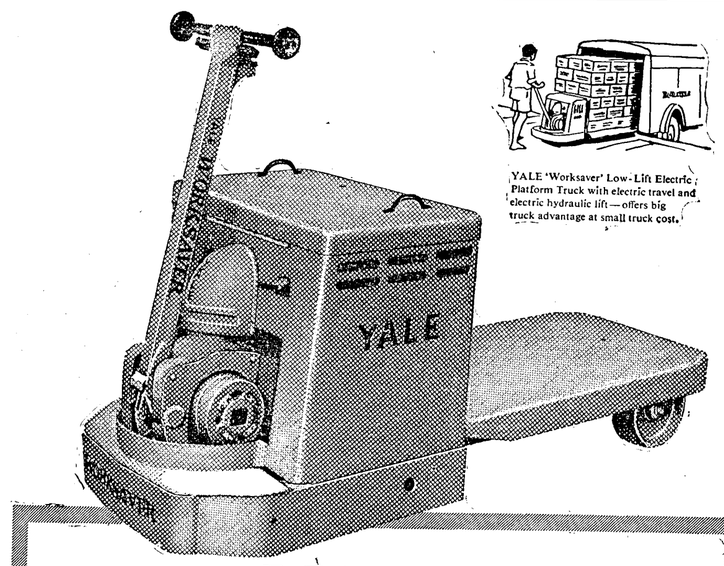
The calculations made by sugar millowners reveal that the cane prices would be higher than what they would be if they had been worked out on the basis of the actual duration. The factor of duration has a close bearing on the recovery of sugar. The cost schedule prepared by the Tariff Commission for the Northern region, it may be noted here, operates between 90 days and 180 days' duration. For determining the cane price, the recovery for the season as a whole ought to have been taken into account.

Besides making the sugar mills pay a much higher price for cane with lower recovery per cent, the Government has also reduced the rebate on cane transported by road. The maximum rebate now allowed is 19.125 nP per maund, as against 18 nP allowed in the 1961-62 season. How the new cane price formula will affect some sugar mills will be evident from the following three instances:

(In rupees per maund)

	Cane prices payable	
	Now 1962-63	*In* 1961-62
Factory with recovery as on 30th April 1962	1.575	1.545
Factory with 9.70% recovery	1.650	1.605
Factory with 8.97% recovery	1.500	1.515

The aforesaid variation in the calculation of cane prices is considered to be somewhat intriguing and the sugar industry fears that the production cost of several mills will increase further. The only consolation, however, is that the sugar mills are no longer liable to pay to cane growers a share in the prices of sugar realised by them in excess of what the Government regards as fair ex-mill prices.



YALE 'Worksaver' Low-Lift Electric Platform Truck with electric travel and electric hydraulic lift—offers big truck advantage at small truck cost.

YALE

Worksavers speed handling in narrow aisles

Compact and of robust construction, YALE Worksavers handle loads up to 3 tons, even in narrow aisles and cramped surroundings. Extraordinary manoeuvrability combined with high travel speed and lift power, make YALE Worksavers ideal for use in factories, workshops, railways, warehouses, etc.

VOLTAS, Sole Distributors for the *complete* line of YALE Industrial Lift Trucks and Hoists, will be glad to offer expert advice on your materials handling problems.

VOL. 561 A EVEREST

NEW PRODUCTS AND PROCESSES

Extracting Pure Silicon

AN inexpensive and simple technique for obtaining the very pure silion used in transistors and other sensitive equipment is reported in France. Raw silicon is treated under vacuum with the fluoride of zinc or lead at a temperature of about 1,300 degrees Centigrade. The pure silicon is then separated from the metallic alloy formed in the course of the treatment and from the boron, iron, copper, titanium and other impurities originally in it. The resulting product is said to be at least 99.95 per cent pure silicon.

Tape for Repairing Wornout Bearings

Fluorocarbon plastic is now available in America in tape form to build up worn metallic parts or to face bearings. The tape, made of a reinforced form of the plastic, has a very low coefficient of friction and can be used in temperatures up to 500 degrees Fahrenheit. The tape is .008 inch thick with .0015 inch of silicon polymer adhesive, and comes in widths up to 1 inch. The manufacturer says that, in addition to building up worn bearing parts, it can be used to line chutes carrying abrasive materials.

New Method of Joining Pieces of Leather

What is claimed to be an improved method of joining pieces of leather, particularly shoe soles and uppers, has been patented by a Czechoslovakian concern. A strip of pvc is formed to the required shape in a cutting machine and is placed between the bevelled-back edges of the leather components. The plastic fills the gap made by the bevelling and forms a butt-joint extending over the full thickness of the leather. The joint is then heat softened so that the plastic adheres. The pvc forms a continuous visible strip, which projects beyond the connected pieces and is claimed to make a more waterproof and more flexible joint.

Cold-welding in Vacuum

A method of cold-welding metals, without high heat or brazing materials, is under study in the United States. It has been found that extremely pure metals, when pressed together in a vacuum, diffuse into each other to form a welded joint. Copper has been welded at 200 degrees Centigrade, compared to the usual 1,083 degrees needed for heat welding.

Plastic-coated Foils

Metallic foils embedded in plastic are said to give a long-lasting metallic appearance to lightweight sheets. In an American process reported by the Scientific Staff of the *Financial Times*, London, butyrate plastic is extruded over the foil. The resultant sheet is said to be flexible enough to go around sharp corners, while the plastic protects the foil from tarnishing. Either clear or coloured plastic can be used to vary the tint of the underlying metal. Since the plastic is said to be proof against weathering, the metallic appearance can be maintained outdoors. Suggested uses for the sheets are in the manufacture of boats, cars, lighting fixtures and outdoor advertising signs.

Anti-corrosive Paper

What is claimed to be an anti-corrosive wrapping paper is now being produced at the Kryukovo Paper Mill in the Urals in U.S.S.R. Dozens of tons of this paper, which is impregnated with chemicals to prevent the metal from being oxidised, are being despatched to plants manufacturing farm machines and their spare parts.

Ferro-concrete Canal Locks

The Soviet engineers, who are engaged in the reconstruction of the Moskva-Oka waterway, ventured a pioneer technique of assembling canal locks from structural ferro-concrete components. They regard this technique as time-saving and economical. For the first time in world practice, it is said, lock chambers are assembled on the spot from prefabricated ferro-concrete elements, weighing up to 10 tons each. By the opening of the 1963 navigation season ferro-concrete elements will have replaced timber at five dilapidated locks along the Moskva-Oka canal.

Light-sensitive Textile Material

A new process for the manufacture of a fabric sensitive to light has been developed by a Munich manufacturer of photographic articles and equipment. This new linen-based material is claimed to have the same properties as silver-bromide paper, and may be employed in the same manner as the latter. The sturdy texture may be cut from the bulk reels, may be exposed and subsequently developed, fixed, watered and afterwards dried on the clothing line. The photographic fabric will even withstand washing, laundering and ironing. It is above all admirably suited for decoration purposes, such as for large photographs, draperies and wall tapestry.

Solar Heat Water Collector

A simple apparatus using solar energy to collect drinking water from the soil has been developed by the Nippon (Japan) Electric Company for use in areas inaccessible to regular water pipelines. A series of low, specially-processed plastic "greenhouses" trap the heat of the sun to distill water from the soil through evaporation. The moisture is collected in a system of pipes and stored in a reservoir vessel. Official laboratory tests show that water is immediately drinkable and can be used as distilled water for pharmaceutical purposes or for batteries. One experiment simulating conditions of radioactive rainfall showed that the water collected by the N.E.C. water collector was completely safe to drink. N.E.C. calls the apparatus "Necaquarius". Under normal conditions it collects up to one liter of water daily per square meter of soil. Any amount of water desired can be obtained by adding more units of "Necaquarius."

Shock-treated Milk Keeps Longer

A new type of sterilized milk for prolonged storage, which has been developed by scientists of the Swedish University College of Dairy Engineers at Alnarp in collaboration with AB Separator, the Swedish Alfa-Laval Company, will be test-produced in Sweden next summer. Mjölkcentralen, the central dairy of the Stockholm area, will process and distribute the milk to the summer residents of the Stockholm archipelago. The new method of sterilizing milk implies that the milk is subjected to a shock treatment of up to 140°C (284°F). The method is said to have several advantages over previously applied techniques for prolonged milk storage, particularly with reference to nutritional value, taste and colour.

Automatic Surveyor's Level

A low-cost automatic level for general purpose use by surveyors, builders and construction engineers has been devised in Britain. It has a novel method of mounting and levelling off on its tripod. Footscrews are not needed. Instead the head of the tripod is domed and provided with three bearing pads. The instrument is mounted on this domed head and is secured by a captive bolt. To level, this bolt is tightened a little and the position of the instrument on the domed head adjusted until a circular bubble is central. Because an optical compensator embodied in the telescope automatically levels the line of sight, the instrument is then ready for use.

Plastic Road Block

An almost indestructible road obstruction cone made of translucent plastics, is now being manufactured by a British firm. Approximately 18 in. (45.72 cm.) high with a heavy black rubber base, it does not need painting and is abrasion resisting.

Car Tester

Improved quality and savings in time and manpower are promised by a new British "car tester" machine now installed at the Coventry factory of Standard Triumph. A roller test rig, it allows exhaustive tests on wheel alignment, transmission noise and efficiency, brake balancing and over-run conditions, to be made in the factory as the car comes off the assembly. Previously extensive tests involved road trials. The "tester booths" at the end of each vehicle assembly track in the factory takes 15 cars an hour, giving each one a four-minute "run." The actual road test of the type carried out before the test booths were installed took about 15 minutes over several miles (kilometres) of ordinary road. Apart from the obvious savings in time there have been savings in other directions. Risks of minor accidents, scratches and bumps, have been eliminated, as has the need for washing and polishing after test.

Centrally-placed Driving Cab

A centrally placed driving cab is a notable feature of diesel-electric locomotives of an entirely new design being built for British Railways. The new design, incorporating a central full-width driving cab, has been adopted by the British Transport Commission as standard for main-line diesel-electric locomotives in the British Railway's Type 1 (800 — 1,000 h.p.) power class. Raised above and set between low bonnets of equal length which house the engines and equipment, the cab has separate and identical positions for each direction of travel. Type 1 locomotives are employed mainly on short-distance freight or local passenger trains. One-man operation was considered in planning the layout of the new locomotive and a centrally sited cab was chosen both to give maximum visibility when travelling in either direction on main lines, and a good view of the vehicles ahead when engaged in shunting operations.

Leather Protection

A new silicone preparation for protecting leather garments against water and stains has been produced by a British firm, Silicone Treatments Ltd. for manufacturers and cleaners. To give a high degree of water repellancy and stain resistance, it can be applied also to suede sheepskin coats, shoes and handbags.

Starter Battery

A combined starter battery and charger for starting engine-driven generators in the event of power failure is being produced in England by Nife Batteries, Redditch, Worcestershire. The equipment has been designed to provide a compact and safe alternative to the makeshift arrangements for starting emergency stand-by sets in office blocks, factories, hospitals, and stores. The equipment housed in a steel cubicle measuring 30 x 18 x 45 in. (.762 x .152 x 1.143 m.) is specially suitable for small to medium standby plants. It can be placed close to the engine thus eliminating the need for long leads and ensuring peak power from the battery. The nickel cadmium long life battery has a low rate charger to maintain instant readiness. The cost of the unit, says the firm, is little more than that of buying battery and charger separately.

You'll be
Distinctive
in BINNY'S
dazzling white
CONSUL
which has stood
the test of time

A fine soft satin drill, CONSUL* combines good looks with durability—it has the strength and sheen of the long-staple cotton from which it is woven.

With Consul trousers, wear shirts made from BINNY'S CONQUEROR poplin —an equally handsome fabric.

THE BATTLE AGAINST CORROSION

PROTECTIVE MEASURES BEING IMPROVED IN THE WEST

MOST metals are subject to the chemical reaction known as "corrosion"—a change which takes place when oxygen or water in the environment acts on the metal surface. It is essentially a process of oxidation. The most familiar form of corrosion is the conversion of steel to rust, involving a general loss of strength. It is well known that the consequences of corrosion are not limited to the replacement of the affected metal, for production is lost while repairs are made. Broad estimates of the costs of such corrosion and of preventive measures have been made, for instance, in the United States and the United Kingdom. These costs are stated to be of the order of thousands of millions of dollars in the former country and hundreds of millions of pounds in the latter. Comparable sums for other countries may be broadly assumed.

There are generally three basic methods of controlling erosion—one pertaining to the choice of the metal, the second involving the separation of the metal from the environment, and the third involving a change in the environment itself. These methods, which have been described by three British experts in *The Financial Times* (London) of 27th November 1962, are being continuously improved and perfected by scientific research. One of the experts—Mr. J. C. Hudson, Consultant, Corrosion Advice Bureau, British Iron and Steel Research Association—has concentrated his attention on remedial treatment for iron and steel. As steel meets many requirements and costs less than some other metals which are more corrosion-resistant, it is most widely used. But, since it is most susceptible to corrosion, several remedial measures like coating with another metal (such as aluminium, cadmium, nickel, tin or zinc), providing cathodic protection, painting with enamels, paints, tars and greases, alloying with another metal and treating the corrosive medium itself are being adopted.

To take these anti-corrosion measures one by one. First, metal coatings on steel are sprayed, or hot-dipped, or electro-deposited. Although increasing use is made of sprayed metal coatings of aluminium or zinc beneath paint, it is recognised that all such coatings have limited life or are liable to become damaged, exposing the metal below. Further progress, however, is expected in the development of processes for the application of hot-dipped aluminium coatings to heavier material than the comparatively narrow strip to which it is confined at present. Hot-dipped galvanised coatings are already being tried on the structures needed for the electrification of British Railways.

Cathodic Protection

Secondly, increasing use is being made of cathodic protection to prevent the corrosion of buried pipelines, harbour installations, ships and other buried or immersed structures. The principle here is that corrosion in soil or water is associated with the flow of electric current between different parts of the metal and can, therefore, be stopped by imposing a counter-current of the same strength. Magnesium anode, for instance, is placed in position for cathodic protection of a ship's hull. But this type of protection cannot be applied universally.

As for the third anti-corrosion measure of painting which is most commonly adopted, it is noteworthy that important developments in paint materials and painting techniques are constantly taking place. The underlying principle for success here is surface preparation before painting. Blast-cleaning and pickling are stated to be the best methods in this connection. Phosphating processes, in conjunction with stowing paints, are also widely used in the sheet metal and automobile industries, and these give excellent results. The introduction of plastic-coated steel strip and sheet is another important recent development; here difficulties in securing a good bond between metal and plastic are claimed to have been overcome. This type of material can be used for roofing and cladding and many other purposes. In the opinion of the author (Mr. Hudson), it may not be long before similar plastic coatings can be successfully applied to heavy steel plates and sections on which plastic wrapping tapes are already in use. Another noteworthy development is that improved techniques have widened the field of application of vitreous enamel. Its high resistance to atmospheric corrosion and attractive appearance render it suitable for building work, and it also shows considerable promise as a protective coating for the exhausts of internal combustion engines.

Fourthly, alloying steel with some other metal is intended to increase the former's corrosion resistance. The addition of about 14 per cent chromium to steel, it may be recalled, was the basis of the original stainless cutlery. The range of stainless steels is now wider, for, according to the properties required, they may contain appreciable quantities of other metals such as nickel, molybdenum and tungsten, besides chromium. These steels are virtually incorrodible. For instance, a stainless steel variety with 18 per cent chromium, 10 per cent nickel and 2 per cent molybdenum, it is claimed, is almost unaffected by many years' exposure in industrial atmospheres. Stainless steels are particularly valuable in the chemical industry where many processes would be impracticable without them. But their high alloy content renders them very costly and thus restricts their general use in the structural field. So certain low-alloy steels like the one containing about 0.6 per cent copper and one per cent chromium have come into vogue. These are useful in reducing the corrosion rate to a third or less of the rate for unalloyed steel. But in most atmospheres they need further protection by painting. Even where it is difficult to keep paint intact, as in the case of mineral wagons and coke oven cars, such equipments made of low-alloy steels retain their corrosion-resistance properties. Cast-iron alloys, too, have similar properties.

Corrosive Medium

Lastly, there is the treatment of the corrosive medium, namely, natural or industrial water. As the oxygen dissolved in water is responsible for the formation of red rust, that is, hydrated iron oxide, the corrosiveness of such water can often be counter-acted by removing the dissolved oxygen by physical or chemical means. Many natural waters, it is claimed, can also be induced by chemical treatment to deposit a thin film of calcium carbonate on a corroding iron or steel surface so as to stifle further attack. As for corrosion in enclosed spaces, such as workshops producing polished parts, it can be prevented by air-conditioning so as to reduce the relative humidity to below 50 per cent.

These, then, are the most important anti-corrosion measures, as applied to iron and steel in their multifarious ordinary uses. But steel may not be suitable for such specialised requirements as storage of some chemicals or extra-ordinary heat exchange involved in certain chemical reactions. Use of zirconium and titanium alloys in chemical plant has, therefore, been increasing of late. Nickel base alloys containing chromium and cobalt have the very useful qualities of adequate tensile strength and resistance to oxidation at temperatures of 600°C. to 900°C.

On the research side, the fundamental processes of corrosion and protection continue to be studied in Britain and other advanced countries. Since most corrosion is an electro-chemical process, depending for its speed on the polarisation of the small cells, the most important research techniques happen to be electro-chemical. Further improvement of alloys is stated to be possible, for the electro-microscope is now available to detect such imperfections of metal structure as may be responsible for pitting and cracking. Above all, current research, it is expected, will help reduce costs by improving the methods of application of protective measures against corrosion.

INDIAN SHIPPING CROSSES ONE-MILLION-TON MARK

It is seen from Lloyd's Register of Shipping Statistical Tables, just published, that Indian tonnage had crossed the one-million-ton mark in the middle of 1962 and stood at 1,012,866 g.r.t., representing 0.72 per cent of the aggregate world tonnage of 139,979,813 g.r.t. Lloyd's Register figure of Indian tonnage is, however, higher than the tonnage figure given by the Government of India, for, while the former takes into account all steamships and motor ships of 100 g.r.t. and above, including non-commercial vessels, the latter pertains only to commercial vessels. According to the Government's latest statistics, Indian shipping will cross the one-million-ton mark as soon as all the 14 vessels aggregating 88,139 g.r.t., purchased by Indian shipping companies during the months, have come on the Indian Register. two this will take place very soon, it may be taken that, even according to the Government's statistics, the one-million-ton mark is as good as attained. By crossing the million-ton mark, the Indian Merchant Marine has acquired a special status. This status comes from the fact that for international shipping conventions to come into force, a certain minimum number of countries owning one million g.r.t. of shipping or over should have ratified them. Thus, for instance, the Safety of Life at Sea Convention of 1960 will come into force only after ratification has been deposited by 15 countries, of which seven should own not less than one million gross tons of shipping. Now, there are only 18 countries which possess over one million tons of shipping, and India has just become, or is becoming, the nineteenth. The other 18 countries are the United States (with 23.3 million g.r.t.), the United Kingdom (21.7), Norway (12.5), Liberia (10.6), Japan (8.9), Greece (6.5), Italy (5.4), Netherlands (5.2), France (5.2), West Germany (4.9) Russia (4.7), Sweden (4.2), Panama (3.9), Denmark (2.4), Spain (2.0), Canada (1.7), Argentina (1.3) and Brazil (1.2).

TELE-COMMUNICATIONS IN CENTRAL AMERICA

An important international agreement, providing for a study of tele-communications needs in five countries of Central America and Panama and of the region as a whole, has been signed recently at the offices of the World Bank in Washington. The U.N. Special Fund and the Bank, along with the Governments of El Salvador, Guatemala, Honduras, Nicaragua and Panama, signed the agreement providing for the study on 16th November 1962. Costa Rica is expected to sign the agreement in the near future.

The United Nations Special Fund, it will be recalled, agreed to finance the study in May 1962 and has allocated $770,000 toward its cost, which includes a total of $75,200 to be paid in local currencies into a Special Fund Account by the six governments concerned. The World Bank will act as Executing Agency for the project. In addition to the $75,200 being paid to the Special Fund Account, the six countries will contribute a total equivalent to $125,125 to meet the cost of local personnel, services and other facilities.

The study, which is expected to last from December 1962 until November 1963, will include recommendations for each country of the scope, character, estimated cost, and phasing of a tele-communications development programme for the internal needs of that country for the next five years, with a general outline for development for ten years thereafter. The regional study will be of added value for each country since regional requirements will affect in important ways the planning of adequate national networks.

NEW CARGO RATES OF WORLD AIRLINES

At the recent traffic conference of the International Air Transport Association, a new air cargo rate structure was evolved. This structure, according to Mr. Harold Graham, Director, Cargo Sales, Pan American Airways, enhances the ability of the world airlines to attract freight in large volume, for it has provided reductions for a broad spectrum of shippers and also improved margins for agents. The new transatlantic commodity rates involve, in many cases such as leather, textiles, automotive machine parts, shoes, business machines and household electrical appliances, reductions ranging from 10 per cent to 30 per cent. In broad terms, the new scale of rates, for New York-London service, is: 7,000 kilos, 65 cents per kilo; 9,000 kilos, 63 cents; 13,500 kilos, 59 cents; 18,000 kilos, 56 cents; 22,500 kilos, 52 cents; 27,500 kilos, 49 cents. These revised weightbreaks, it is claimed, make the cargo rate structure more effective and orderly. The more recent extension of the new rates to the Middle East is also noteworthy in this connection.

TAPE RECORDER USED AS SCARECROW IN FRANKFURT

In the vineyards of Oppenheim covering an area of about 100 acres, the Bird Protection Station of Frankfurt for the past three years has been trying out a "new method to fight the disastrous greediness of voracious birds." The new method consists of a phono-acoustic scarecrow. Several inter-connected loudspeakers hooked on to a central tape recorder station by cable will play back cries of terror and warning of sterlings, putting the whole hungry flock to flight. In this manner one guard equipped with a pair of binoculars can easily watch over the entire large area. A switch of a button of the tape recorder will give the delicious grapes a chance to remain unmolested by hungry starlings. The difficulty in developing this scarecrow, it is said, was not in designing the technical system but rather in finding the most suitable "cries of terror."

JAPANESE ETHYLENE OXIDE PLANTS

It is reported by Scientific Design Company, Inc., New York, that three Japanese chemical concerns—Mitsui Petrochemical Industries Ltd., Mitsubishi Petrochemical Company, Ltd. and Nippon Soda Company Ltd.—have selected the Scientific Design ethylene oxide process for their new plants. The latest version of the S.D. air-oxidation process employs a new catalyst developed by Catalyst Development Corporation, a member of the S.D. Group and was made more efficient by Scientific Design's continuous research and new engineering developments. S.D.-designed plants, incidentally, account for over one-third of the world's direct oxidation ethylene oxide capacity.

The three new Japanese plants raise the total of S.D.-designed direct oxidation ethylene oxide plants to 26, licensed by S.D. to 15 companies in 8 countries—a positive indication of the process superiority achieved by Scientific Design.

WAREHOUSING CORPORATION BILL

BETTER ADMINISTRATIVE CONTROL ENVISAGED

THE Central Warehousing Corporation Bill, 1962, passed by the Lok Sabha last week, marks an important milestone in the development of organised warehousing in this country. The main object of the Bill is to bifurcate the functions of the National Co-operative Development and Warehousing Board in such a way as to ensure independent status to the Central Warehousing Corporation. The Central Government will take over 40 per cent of the shares of the Corporation, which have so far been held by the Board. The separation of the Corporation from the Board is to be welcomed, since this will put a stop to several uncertainties involved so far in the administrative control of the Corporation. It may be recalled that the Board came into existence in September 1956 and the Corporation in March 1957, in pursuance of the recommendation of the Committee of Direction, All-India Rural Credit Survey. The Board was vested with certain directing and administrative powers pertaining to the functioning of the Central Warehousing Corporation.

Both the Board and the Corporation had been constituted originally under the administrative control of the Union Ministry of Food and Agriculture. But, in 1958-59, an important administrative change took place, following the Government decision to undertake State trading in foodgrains. The work relating to the Corporation, accordingly, was transferred from the Department of Agriculture to the Department of Food in the Ministry of Food and Agriculture. Then, again, in December 1958, when the work relating to co-operation was transferred from the Department of Agriculture to the Ministry of Community Development and Co-operation, the Board came within the purview of the latter Ministry. Consequent on the reallocation of work, the two bodies came under the administrative control of two separate ministries, namely, the Ministry of Community Development and that of Food and Agriculture. In order to avoid overlapping and duplication of work, this anomaly is sought to be removed under the new legislation. Thus the Board will no longer have any control over the Corporation and will devote itself exclusively to matters relating to the subject of co-operative development alone. This is a sound arrangement, because of the fact that Central and State Warehousing Corporations are not co-operative bodies, but are actually in the nature of joint-stock bodies, with guaranteed dividends. The necessity for such a step had been suggested by the Estimates Committee as early as in March 1961. The Committee had called upon the Government to remove the uncertainty in regard to administrative control under the then existing set up "in order that the progress of implementation of the programmes is not in any way hampered on this account." It is, however, necessary to keep in mind the note of caution sounded by the Committee to the effect that such a step should not exclude the possibility of liaison between the two bodies "since their objectives are in a large measure complementary."

Progress of the Corporation

The new Bill is designed primarily to streamline the machinery for administrative control of the Corporation and, therefore, does not envisage any change in its structure or pattern of working. Mr. A. M. Thomas, Union Deputy Minister for Food and Agriculture, made it clear in Parliament that the Corporation would continue to perform the same functions as at present. The Corporation has made, according to the claim made by Mr. Thomas, remarkable progress during the last few years. In 1961-62, the turnover of the Corporation almost doubled from that of the previous year to Rs. 14 lakhs. During the first six months of 1962-63, the tempo of business increased, the turnover having gone up to Rs. 10 lakhs, representing an annual average of Rs. 20 lakhs.

The total storage capacity provided by the Corporation (including State Corporations) is now 600,000 tons. It is now handling about 87 agricultural commodities. The scope of the Corporation's functions is bound to widen considerably, when it commences the warehousing of jute and tea, which was referred to by Mr. Thomas. The Corporation will provide warehousing facilities for 500,000 bales of raw jute at Calcutta in order to implement the Jute Price Support Scheme. It will also ensure storage facilities for two million lbs. of tea. In both these commodities, it is said that the Corporation will have a monopoly of warehousing in Calcutta. Besides these agricultural products, the Corporation has been rendering some service to farmers by offering facilities for storage of fertilisers in some places. Mr. Thomas stated that this facility would be extended to other areas, when more and more space becomes available. It is also proposed to set up ten warehouses for cold storage in various parts of the country. Efforts are also being made by the State Corporations to set up storage facilities in as many towns as possible.

Third Plan Schemes

It is anticipated that the Central and State Warehousing Corporations will have storage capacity of 1.6 million tons by the end of the third Plan, as compared with only 350,000 tons at the end of the second Plan. The Central Corporation alone is scheduled to extend its activities to 55 centres during the third Plan period. It may be noted that it had set up forty warehouses by the end of the second Plan. Besides, the State Corporations had by that time established 300 warehouses. The total number of warehouses will be doubled during the third Plan period. In passing, it may be noted that the aggregate storage facilities will be much more than those provided by the Corporations. For the Central Government plans to increase its storage capacity (from about 2.5 million tons at the end of the second Plan—of which about a third is owned by Government) to five million tons by the end of the third Plan, of which 3.5 million tons will be owned by Government. Besides, the total capacity of godowns of co-operative marketing societies and primary societies is expected to touch two million tons by 1965-66, as compared with only 800,000 tons in 1960-61. The third Plan has allotted Rs. 25 crores for the construction of new godowns by the Government for storage of foodgrains, in addition to Rs. 8 crores set apart for the development of warehousing. All these are plans on paper. It remains to be seen how much of this will be fulfilled.

The expansion of warehousing facilities is aimed mainly at helping the farmer to secure a reasonable return for his produce, besides subserving the cause of overall price control. Several of the speakers in the Lok Sabha were of the opinion that warehousing facilities were taken advantage of largely by traders rather than by farmers. Mr. Thomas conceded that more than farmers, traders were taking advantage of the facilities. Probably the solution for this, as he said, is to popularise warehousing among farmers still further. Mr. Thomas, however, did not indicate any specific measures for this purpose. Some of the M.Ps suggested that warehousing charges should be reduced and that farmers should be given special concessions. Mr. Thomas rejected the plea for reduction of charges on the score that the Corporation was working at a loss during the last five years and lower charges would adversely affect its financial position. He also rejected the demand for concessions to farmers, as the Government did not consider it proper to make a distinction between individuals. Some concessions, however, are already being given to co-operative societies. Mr. Thomas was equally opposed to the demand for giving more representation for co-operative societies and public on the Board of Directors of the Corporation, because most of the investment in the Corporation was made by the Government itself. This is a relatively minor point; what is more important is efficient working of the Corporation and speedy implementation of its expansion programme.

Why Monopoly?

It is, however, not clear as to why the Corporation should seek to have the monopoly of warehouses in Calcutta for storing jute and tea. In neither case are the producers going to store the produce. In both the cases, what is needed is more storage space and not nationalisation of existing warehouses. Accordingly, the Warehousing Corporation should build new ones on a scientific scale and set an example to the owners of the present godowns. It need not be afraid of competition for two reasons: one, there will be more supplies, especially of tea, thanks to the plan for increasing its output. And, secondly, a certain amount of competition will ensure efficient and economic working of the Corporation. Another important point to be noted here is that storing tea is a complicated job and requires a lot of experience. Any defects in storage will affect the quality of tea and, therefore, the price realised in both foreign and domestic markets.

Reports from Calcutta suggest that the Calcutta Port Commissioners have been building a new up-to-date warehouse for tea, with mechanical handling facilities, in close collaboration with the Union Ministry of Commerce and Industry and Tea Board. If this is the accommodation Mr. A. M. Thomas had in mind when he said that his Corporation would have a monopoly in Calcutta, as already stated, it is only a question of transfer of control from one wing of the public sector to another. Even so, care must be taken to see that the country would be the gainer as a result of this change. It is to be hoped that, on an important issue like this, the Government will not allow itself to be influenced by doctrinaire considerations.

"AGRICULTURAL SITUATION IN INDIA" —ANNUAL NUMBER

The annual number of the *Agricultural Situation in India* (Editor: S. Ramaswami), the monthly publication of the Union Ministry of Food and Agriculture, provides a rich fare of articles on the various facets of rural development and agricultural planning. In a thought-provoking study, Prof. E. S. Nasset of the Rochester University, New York, who is now the Nutrition Adviser to the Government of India, urges the evolution of an integrated nutrition programme for India. Against the background of a detailed statistical account of net supplies of various types of food during the last few years, he expresses the view that sufficient attention has not been given in this country to ensure appropriate nutrient content in diet, although the need for increasing the caloric content has been recognised. He feels that, in order to bring the Indian diet to an acceptable standard, supply of protective foods, such as pulses, vegetables, fruits, milk, meat, fish, eggs, oilseeds and nuts, should be expanded. Prof. Nasset also suggests the establishment of mobile extension units to disseminate information among villagers on applied nutrition and the promotion of research and collection of data on food consumption, as part of the integrated programme.

In an article on "Target-setting in Agriculture," Dr. S. R. Sen warns that econometric models of the Harrod-Domar or Feldman-Mahalanobis types are only of limited help in determining investment patterns in developing countries like India and are, therefore, to be supplemented and modified by many other appropriate conditions which are not amenable to econometric analysis. The setting of agricultural targets and their implementation, according to him, should be conceived as a flexible strategy, embracing the pattern of investment, policies and even general organisation. In another study, Dr. V. M. Jakhade examines the implications of land reform legislation to the supply of long-term finance by land mortgage banks. The problems of, and prospects for, agricultural exports from the subject matter of an article by Dr. P. K. Mukherjee. Drawing attention to regional trade groupings and the possibility of the U.K. entering the European Common Market, Dr. Mukherjee emphasises the need for raising agricultural productivity and reducing the unit cost of export commodities. The other notable contributions include "World Agricultural Census" by V. G. Panse, "Producer Price Policy" by S. C. Chaudhri and "Investment Potential in the Indian Agrarian Sector" by S. A. Shah.

There is a large number of statistical tables on production and prices of various agricultural commodities in the annual number. It is, however, regrettable that, while giving final estimates of foodgrains for the 1961-62 crop year (the latest period from which estimates are given), data on pulses are omitted, in contravention of the usual practice. One wonders if this has been done to cover up the setback in the output of these commodities in 1961-62? In spite of this omission, the annual number serves the purpose of an authentic reference work on the agricultural situation in India.

Large dairies, one each in Lahore and Karachi in Pakistan, are being built with the assistance of UNICEF. The Lahore plant is to produce initially 44,000 lbs. of milk with a fat content of two per cent. Production of butter and other dairy products is also envisaged. The capacity is to be extended to 300,000 lbs. a day later. The initial processing capacity of the Karachi dairy will also be 55,000 lbs. of milk. UNICEF has authorised 500,000 dollars for both projects.

Malaya proposes to build a factory for the production of canned pineapple at Jenjarom near Klang. The maximum processing capacity is to amount to 400,000 tons of pineapples a year. Another plant is being set up in the Malayan State of Johore. It will employ 200 workers.

TUBE INVESTMENTS OF INDIA LIMITED

LICENCE FOR MANUFACTURE OF "BUNDY TUBING" SECURED

DR. A. RAMASWAMI MUDALIAR'S SPEECH AT ANNUAL MEETING

THE Tube Investments of India Limited has received the industrial licence for the manufacture of "Bundy Tubing," a double-walled steel tubing produced from copper-coated steel strips by what is known as the Bundy process. This was disclosed by Dr. A. Ramaswami Mudaliar, Chairman of the Company, when he addressed the Thirteenth Annual General Meeting of the shareholders held at Madras on Monday, 3rd December 1962. The Directors, Dr. Mudaliar said, were now finalising details with the Bundy Tubing of America and hoped to have a subsidiary company registered soon. The raw material required for the purpose, he observed, was mainly copper-coated and tin-coated steel strips which would be indigenously available before long when the increased demand for such strip would make domestic production economical. Until then, he pointed out, the strip would have to be imported.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

GENTLEMEN,

I extend to you a cordial welcome to the thirteenth annual general meeting of the shareholders of the Tube Investments of India Ltd. The Directors' report, the audited balance-sheet and profit and loss account for the year ended 31st July 1962 have been in your hands for some time and, with your permission, I shall take them as read.

National Emergency

Before dealing with the work of the Company during the year, I feel I must refer to the emergency that has been declared in the country following the aggression by China on India's borders. The whole country has been shaken out of its complacency. The country has realised that every effort must be made by all sections of the people and by every interest concerned to preserve the independence and safeguard the integrity of the country. The enthusiastic response that the country has witnessed, the solid and massive support that has been given to the Government enjoining on themselves to fight till the finish, till the enemy is cleared out of Indian soil, has been a manifestation of the great unity of purpose in the country and of the determination of the people. Your Company has already contributed its mite to the National Defence Fund and I am sure, with your full approval, it will continue to do whatever is necessary in this direction. Our officers and staff and our workers in the factories have shown an equal determination to help in this emergency. Above all, realising that the demands of war, while requiring sacrifices from everyone, cast a special obligation on industrial units and factories, your Directors, anticipating your desire in the matter, have placed the resources of your factories fully at the disposal of whatever the Government chooses to demand from them. The cycle factory and, in particular, the tube factory may be called upon and will be most readily anxious to produce such industrial products as may supplement the defence requirements of India. I am certain I am voicing the wishes of all shareholders and the sentiments that they hold in this regard.

The report of the Directors gives a fairly comprehensive view of the progress in manufacture that has been made during the year and refers to the setbacks we had in reaching our target—setbacks due to want of power, want of adequate water supply during certain months of the year and to the inadequacy of certain raw materials due to import restrictions. Taking all these factors into account, the financial results are fairly satisfactory.

Cold Roll Mill

It will be heartening to you, if I state that the production of the cold roll mill which has been installed at a cost of about Rs. 1.25 crore was started satisfactorily in March 1962 and that we have had no teething troubles and no serious difficulty in regard to the technique of the production. However, the supply of indigenous hot rolled strip has not been adequate and promises made by the Indian suppliers have not been kept up. The products of this mill may particularly be useful at this present emergency period, and I look forward to better co-ordination in the supply of such strip as may be required for the variegated production which one may expect may be asked for by the Government.

The Directors' report refers to the industrial licence for the manufacture of copper-coated tubing, called "bundy tubing" and push rods used for the automobile industry and refrigeration industries. Since the Directors' report was issued to you, the industrial licence for the manufacture of "bundy tubing" has been received. I may explain that the "bundy tubing" is double walled steel tubing manufactured from copper-coated steel strips by what is known as the "bundy process." The raw material required for this purpose is mainly copper-coated and tin-coated steel strips which, it is hoped, will be indigenously available before long, when the increased demand for such strip will make indigenous production economical. Until then the strip will have to be imported. Your Directors are now finalising details with Bundy Tubing of America and soon hope to have a subsidiary company registered.

The progress made in the two subsidiary companies, T.I. Diamond Chain Ltd., and T.I. Miller Ltd., has been adequately described in the Directors' report and I need not add anything further to this.

Operating Results

As I have already stated, the operating results of the Company have proved to be fairly satisfactory and the Directors, following their cautious policy, have decided that the same rate of dividend may be paid to the shareholders, transferring certain amounts to the various reserves.

You will notice from the agenda that Sir Ivan Arthur Rice Stedeford, G.B.E., who is one of the founders of this Company, is due to be re-elected this year. Sir Ivan has expressed a desire that he may retire as he will shortly cease to be the Chairman of Tube Investments Ltd., of Birmingham, but will hold the position of President of all the group of Companies. The Rt. Hon. The Lord Plowden, K.C.B., K.B.E., who will succeed him as Chairman, will naturally be elected as one of your Directors representing Tube Investments Ltd., of Birmingham. I have no doubt he, with his wide experience both as an administrator and an industrialist, will be an invaluable asset to the Company. The Indian Directors were reluctant to part with Sir I. A. R. Stedeford on the Board. His sympathy, advice and guidance have been, in an exceptional measure, of help and value to the Company and to the Indian Directors. The Lord Plowden has been to India recently and the Indian Directors are glad to have him on the Board. We, however, hoped that both Sir I. A. R. Stedeford and The Rt. Hon. The Lord Plowden would continue as Directors though the former would not be as closely associated as before. I am glad to inform you that our request has been acceded to by Sir I. A. R. Stedeford and you will, therefore, be requested to elect both Sir Ivan Arthur Rice Stedeford and The Rt. Hon. The Lord Plowden to the Board of Directors. This would necessitate an increase in the Indian Directorate and you are being requested to elect Mr. D. K. V. Raghava Varma, as one of the Indian Directors. Mr. Varma has been the Secretary of the Company for several years now. His integrity, his personal character and his devotion to duty have shown themselves in several ways in the management of the Company's affairs and your Directors have, therefore, come to the conclusion that it would be most appropriate if he were elected as a Director of the Company. Mr. Raghava Varma, whom I have personally known for over forty years, has, I am glad to say, consented to be a Director of the Company.

British Associates

I should like to record my deep thanks and appreciation for the ready help and valuable advice that the Company has continued to receive from our associates, Messrs. Tube Investments Ltd. of the United Kingdom and other companies in their group. The new foreign collaborators of our subsidiary Companies have given us their best advice and placed their technical know-how at the disposal of our factory without reserve. We are grateful to the Government of India and to the State Government of Madras, for the interest they have shown in the development of the Company, the facilities they have extended and the advice that they have given in its expansion programme.

Our relations with all our employees including factory workers have been cordial and I have great pleasure in acknowledging with thanks the co-operation that they have extended and the enthusiasm they have shown in the successful working of the factories. The officers and staff both in the head office and in the factories and the workers in all our factories have been exceptionally enthusiastic in placing their full co-operation and support in this emergency and we are deeply grateful to them for their patriotic response.

I hope and pray that by the time we next meet at an annual meeting, the war clouds would have disappeared and the cunning of a treacherous and unscrupulous enemy would not only be exposed but equally frustrated and punished and India will once again be in a position to enjoy peace and happiness.

Note: This does not purport to be a record of the proceedings of the annual general meeting.

Notice

GOBIND SUGAR MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Tenth Annual General Meeting of Gobind Sugar Mills Limited will be held at 15, India Exchange Place, Calcutta, on Saturday, the 29th December, 1962, at 2 p.m. for the following purposes:

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1962.
2. To declare Dividends.
3. To appoint a director in place of Shri P. R. Bagri who retires by rotation and is eligible for re-election.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and if thought fit, to pass with or without modification the following resolution as special resolution.

Resolved that the following be substituted in place of Article 184 of the Articles of Association of the Company:—

184. All dividends unclaimed for six years after having been declared may be forfeited by the Directors for the benefit of the Company but the Directors may annul the forfeiture whenever they may think proper.

By Order of the Board,
S. N. GUPTA,
Secretary.

14, RADHA BAZAR LANE,
CALCUTTA, *the* 1st *December*, 1962.

Notes:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(2) Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the Company.

(3) The Register of Members of the Company will remain closed from the 19th December, 1962 to 29th December, 1962 both days inclusive.

Explanatory Statement As Regards Item 5

In connection with the application of the Company for enlisting the ordinary shares on the Calcutta Stock Exchange, the Stock Exchange wants Article 184 of the Articles of Association of the Company to be amended in the manner stated above. The practice of forfeiting the unclaimed dividends only if unclaimed for six years is being followed by the Board. Even so, the Article is being amended as above as desired by the Stock Exchange.

WEST COAST PAPER SUFFERS SMALL SETBACK

BUT DIVIDEND RAISED SLIGHTLY

A THREE-WEEK strike by workers in November and December 1961 caused an all-round small setback in the working of the West Coast Paper Mills Ltd. (Chairman: Mr. Gobindlall Bangur, Bombay) during the year to 30th June 1962. Production declined from 25,771 tonnes to 25,604 tonnes, sale proceeds (excluding excise duty paid) retreated from the previous year's peak level of Rs. 383.93 lakhs to Rs. 360.87 lakhs and gross profit, which had already sagged in the previous year by about Rs. 7 lakhs to Rs. 105.77 lakhs, has moved down further to Rs. 92.27 lakhs. Profit-margin (ratio of profit to sales) has drifted lower to 25.5 per cent from Rs. 27.5 per cent to which level it had dipped in the previous year from 31.3 per cent in 1959-60. Apart from the lower production and, therefore, lower sales, gross profit has declined also because of further increases in practically all items of costs and a higher burden of excise duty. The extent to which costs and the excise burden have risen can be known from the table which follows. The drop of about Rs. 13 lakhs in gross profit is minimised to only Rs. 5 lakhs at the level of net profit, amounting to Rs. 53.15 lakhs as against Rs. 58.44 lakhs a year before, by a lower provision for depreciation of Rs. 39.12 lakhs as against Rs. 47.33 lakhs in the previous year. The taxable return on the Rs. 100 fully paid ordinary shares has been raised again, but slightly, to 8 per cent per annum from 7.5 per cent to which level it was raised by 1.5 per cent in 1960-61. In so doing, however, the Directors have been able to plough back to reserves only Rs. 32 lakhs, as against Rs. 40 lakhs in the previous year and Rs. 45 lakhs in 1959-60.

The following table gives a clear idea of the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sale proceeds, less excise duty	360.87	383.93	358.45	51.05
Other income	1.60	2.17	1.31	0.69
Closing stock of paper	16.70	14.60	18.49	13.07
Excise duty	75.03	66.82	55.53	6.74
Materials, chemicals, stores and spares consumed	121.05	126.43	127.69	28.95
Staff expenses	41.50	39.23	30.41	9.04
Other expenses	109.74	110.78	103.14	22.12
Gross profit	92.27	105.77	113.34	4.70
Depreciation	39.12	47.33	43.26	..
Taxation	..	..	0.04	..
Net profit	53.15	58.44	69.04	4.70
Transfer from reserves	..	..	4.70	..
Transfer to reserves	32.00	40.00	45.00	4.70
Arrears of preference dividends	..	..	12.70*	..

Low	135.00	168.50	149.50	..

* Subject to deduction of tax.

The Directors have touched the subject of rising costs in their report for the year and observed that the *ad hoc* increase in paper prices of Rs. 60 per ton, which has been granted with effect from 21st June last, is inadequate, as it will set off only a part of the increase in the cost of production subsequent to the findings of the Tariff Commission. So far as the Company is concerned, in addition to the general increases in costs of raw materials, stores, spares and higher freight, it has also to pay a higher charge for the self-generated electricity as also for the one purchased from the Mysore State Electricity Board. The industry has urged the Government for a further adequate increase in paper prices, but has resigned, we are told, to the view that the same may not be immediately granted in view of the national emergency.

The Company's efforts to secure additional areas of forest ranges for the raw material, bamboo, are expected to bear fruit soon. Negotiations in this regard with the Government of Mysore (the Company's works are situated at Dandeli in North Kanara District) have been protracted over more than a year following insistence by the State Government on a substantial increase in the royalty on the ranges. Efforts to augment resources of raw materials like lops and tops of hardwoods, bagasse and rags have continued. It is already known that the Company has started a plantation programme of eucalyptus, paper mulberry and other quick-growing species of hardwoods, in addition to species of bamboos not usually grown in Dandeli forests. The integrated plan for expansion, including the manufacture of rayon grade pulp and caustic soda and chlorine, continues to be under consideration. However, orders for the caustic soda and chlorine plant and machinery have been placed with Messrs. Kerbs and Cie of Paris, subject to receipt of import licences which are expected to be issued shortly. Charity and donations made by the Company during the year amounted to Rs. 81,906 (Rs. 1.33 lakh a year before), of which Rs. 56,001 went to the Congress Party. The bonus dispute with the labour has been settled for the accounting years 1960-61 and 1961-62, and the bonus for the year 1960-61 was paid during October last and accounted for the accounts under review.

On 15th July 1962, the Company repaid the first instalment of Rs. 6 lakhs towards a Rs. 150-lakh loan from the Industrial Finance Corporation of India. Since the instalment was paid after the close of the year under review, it is not reflected in the balance-sheet. The loan forms a part of secured borrowings which went up during the year from Rs. 240.16 lakhs to Rs. 251.16 lakhs following an increase in bank borrowings from Rs. 90.16 lakhs to Rs. 101.16 lakhs. Unsecured loans declined, however, from Rs. 33.63 lakhs to Rs. 5.46 lakhs. Current liabilities and provisions, at the year-end, aggregated Rs. 49.38 lakhs, that is, Rs. 20 lakhs less than a year ago. The total indebtedness to outsiders amounted to Rs. 156 lakhs, as against which current assets, loans and advances stood at Rs. 170.15 lakhs. The Company has a paid-up capital of Rs. 2,39.99 lakhs of which Rs. 149.99 lakhs are in ordinary shares and the rest in preference shares. The capital is supplemented by reserves and surplus amounting to Rs. 119.84 lakhs. The gross block, which expanded during the year from Rs. 586.69 lakhs to Rs. 616.64 lakhs, has been written down to Rs. 488.31 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 137.50 *cum-div.* On the *ex-div.* basis, they offer a net yield of 4.2 per cent per annum.

WORLD COFFEE SITUATION

Coffee growers in India must have noted with great satisfaction the distinct improvement in world coffee prices of late. The unwashed robusta grade 10 produced in Uganda is now quoted in the London market at 163*s.* per cwt. (about Rs. 109), a rise of as much as 17*s.* (Rs. 11) in just four weeks. Such a marked rise in prices should not, however, rush the Indian coffee interests to conclude that the outlook for exports has brightened considerably. For the rise is only temporary, in that it is the result of France buying from sources other than Ivory Coast and Madagaskar, in view of the delay in the arrival of their crops. The upward trend may not, therefore, be sustained in future. On the contrary, available indications point to the possibility of a declining tendency. The U.S. Agriculture Department's latest estimate of the 1962-63 world coffee crop no doubt places the total output lower by 8 per cent of 66 million bags, but the estimated output is still well above the anticipated requirements aggregating no more than 60 million bags. There is also the huge carryover of the previous season's crop amounting to 28 million bags. In other words, the excess of available supply over demand is as big as 34 million bags. It, therefore, remains to be seen as to how the export cuts ranging from 12 to 18 per cent in respect of several large producers provided for under the new International Coffee Agreement will impart stability to the export prices of this beverage.

(*Concluded from next column*)

finance the project, the Company may issue additional capital. The scheme is expected to enable it to undertake production of vitally needed articles which are not produced now in Mysore State and the market for which is likely to expand. The scheme has been decided upon in the light of the installation of giant fertiliser factories in the country.

The financial position of the Company is sound. The paid-up capital of Rs. 24.81 lakhs is supplemented by reserves and surplus aggregating Rs. 10.13 lakhs. During the year, the Company raised secured bank borrowings of the order of Rs. 6.42 lakhs. These loans and current liabilities and provisions aggregating Rs. 19.02 lakhs bring the total indebtedness to outsiders to Rs. 25.44 lakhs, as against which current assets, loans and advances stand at Rs. 43.25 lakhs and investments are shown at Rs. 4.30 lakhs. Thus, the short-term liability is more than fully covered. The gross block, which increased during the year from Rs. 56.15 lakhs to Rs. 58.38 lakhs, has been well written down to as low as Rs. 12.83 lakhs.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 10.10 *cum-div.* On the *ex-div.* basis, they offer a net return of roughly 3.6 per cent per annum.

MYSORE CHEMICALS AND FERTILISERS

1961-62 RESULTS DISAPPOINTING

A VERY poor show. This in brief is the comment on the financial results of the Mysore Chemicals and Fertilisers Ltd. (Chairman: Mr. T. Shamanna, I.A.S., Mysore) for the year ended 31st March 1962. For, while the previous year saw only a drop in gross profit, a further decline in profit-margin (ratio of profit to sales), a small rise in sale proceeds and the maintenance of dividend, the year under report has witnessed an all-round setback. According to the Directors, production during the year was normal. However, the figures of sale proceeds and closing stock, as also of the cost of raw materials and stores consumed, go to suggest that it must have been lower than in 1960-61. For the first time in the past four years, sale proceeds beat a retreat and that too by as much as Rs. 13 lakhs to Rs. 37.32 lakhs. The setback has been attributed by the Directors to poorer offtake of superphosphate. Gross profit, which had come down from Rs. 10.85 lakhs to Rs. 8.67 lakhs, slumped to Rs. 3.46 lakhs during the year under report. Profit-margin fell to 9.3 per cent from 17.1 per cent to which level it had progressively declined in the previous year from 22.8 per cent in 1959-60 and 27.5 per cent in 1958-59.

Provision for depreciation has been slightly reduced from Rs. 2.81 lakhs to Rs. 2.43 lakhs and that for taxation, at Rs. 0.66 lakh, is substantially lower as compared with Rs. 2.64 lakhs in the previous year. After making these allocations, the net profit amounts to about a mere Rs. 37,000, as against Rs. 3.22 lakhs for 1960-61. The disposable profit, after setting apart some Rs. 20,000 (about Rs. 77,000 in the previous year) for reserves and provisions, is insufficient to maintain the taxable return on the Rs. 10 fully paid ordinary shares at 10 per cent per annum. The dividend has, therefore, been halved to 5 per cent. Even to pay this lower dividend, a sum of Rs. 40,000 has had to be transferred from the dividend equalisation reserve, besides the credit of Rs. 62,056 by way of writing back excess provisions made in the past. As compared with the 5 per cent, tax-free, dividend paid by the Company from 1953-54 to 1958-59 and 10 per cent, taxable, for 1959-60 and 1960-61, the dividend for the year, giving a net return of 3.5 per cent per annum, is the lowest for the past several years.

The following is the progress table of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	37.32	50.52	47.55	31.73
Stock of finished goods	12.66	3.95	4.53	5.73
Other income	0.60	0.75	0.43	0.29
Materials and stores consumed	22.72	23.28	18.47	12.99
Staff expenses	5.74	5.93	5.71	4.90
Other expenses	14.72	12.85	11.89	9.33
Gross profit	3.46	8.67	10.85	8.74
Depreciation	2.43	2.81	3.62	3.04
Taxation	0.66	2.64	3.61	2.17
Net profit	0.37	3.22	3.62	3.53
Provisions written back	0.62	0.03	..	0.11
Transfer from reserves	0.40	..	..	..
To reserves and provisions	0.20	0.77	1.14	2.47
Dividend	1.24	2.48	2.48	1.24
	(5%)*	(10%)*	(10%)*	(5%)
Carry forward	0.03	0.08	0.11	0.11
Market value of equity shares (In rupees):	1962	1961	1960	1959
High	10.70	11.85	11.90	10.55
Low	10.10	10.70	9.80	7.75

* Subject to deduction of tax.

The Directors have expressed their concern again about the high incidence of power charges the Company has to pay. Such expenses increased during the year from Rs. 10.22 lakhs to Rs. 12.03 lakhs and considerably pulled down profit. In 1957-58, we are told, power charges amounted to only Rs. 4.02 lakhs.

The Company has taken up the following schemes as part of a long-term development and expansion programme:

Orders for a 50-ton-a-day capacity sulphuric acid plant have been placed and all the imported equipments have been received. The indigenous machinery has been delayed due to transport difficulties. The plant is expected to be commissioned at the earliest. The superphosphate plant, designed to raise production to 33,000 tons per year, is expected to be ready for delivery during May next and to be commissioned by March 1964. These two schemes will cost about Rs. 38 lakhs which will be raised by taking a medium-term loan of Rs. 25 lakhs from the State Bank of Mysore, after finding the balance of Rs. 13 lakhs from the internal resources of the Company. Pending the finalisation of the formalities, the Bank has made available Rs. 10 lakhs to the Company.

A major, Rs. 200-lakh, expansion scheme for a 40-ton-a-day caustic soda-cum-chlorine plant is being actively considered by the management. To

UPPER GANGES SUGAR MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirtieth Annual General Meeting of the Upper Ganges Sugar Mills Ltd. will be held at 15, India Exchange Place, Calcutta, on Saturday the 29th December, 1962, at 2-15 p.m., for the following purposes:—

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June 1962.
2. To declare Dividends.
3. To appoint a Director in place of Shri B. P. Khaitan who retires by rotation and is eligible for re-election.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and if thought fit to pass with or without modification the following resolution as special resolution:—

"Resolved that the consent of the Company be and is hereby accorded to the Directors for mortgaging, hypothecating and/or otherwise creating a charge on the assets appertaining to the undertakings of the Company or any portion or part thereof in favour of any person, bank, body, institution, or debenture trustees as may be necessary and the mortgage, hypothecation and/or charges created before the date of this resolution, be and the same are hereby approved and confirmed."

By Order of the Board,
S. N. GUPTA,
Secretary.

14, RADHA BAZAR LANE,
CALCUTTA-1, *the 3rd December*, 1962.

Notes:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(2) Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the Company.

(3) The Register of Members of the Company will remain closed from the 19th December, 1962 to the 29th December, 1962, both days inclusive.

Explanatory Statement to Item 5

Under Section 293(1)(*a*) of the Companies Act, 1956 consent of the shareholders is necessary for sale, lease or otherwise disposing of the whole or substantially the whole of the undertakings of the Company. The Company took a medium-term loan of Rs. 20 lacs from the State Bank of India on mortgage of part of fixed assets. In future also the Company may take loans for business purposes from banks and other agencies. For the purpose of securing such loans, occasion may arise for the Company to mortgage, hypothecate and/or otherwise create charge on the assets and/or undertakings of the Company. In view of the wide language of the said sub-section it is considered advisable to secure the confirmation and sanction of the shareholders as mentioned in the resolution.

BHARAT SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-first Annual General Meeting of the Bharat Sugar Mills Ltd. will be held at 15, India Exchange Place, Calcutta, on Friday, the 28th December, 1962 at 2-30 p.m., for the following purposes:—

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1962.
2. To declare Dividends.
3. To appoint a Director in place of Shri B. P. Khaitan who retires by rotation and is eligible for re-appointment.

Shri B. P. Khaitan is a co-sharer in the Managing Agency Commission received by The Cotton Agents Private Ltd., the Managing Agents, from the Company. Shri B. P. Khaitan has been on the Board of Directors for a considerable period and has rendered valuable services to the Company as a Director. It is, therefore, in the interest of the Company that he should continue as a Director of the Company. The Company has received the requisite special notice from a shareholder and accordingly special notice is hereby given to the shareholders for passing the following Special Resolution for re-appointment of Shri B. P. Kaitan as a Director of the Company.

"Resolved that Shri B. P. Kaitan who retires by rotation and is a co-sharer in the Managing Agency Commission received by The Cotton Agents Private Ltd., the Managing Agents, from the Company, be and is hereby re-appointed as a Director of the Company."

4. To appoint Auditors and fix their remuneration.

By Order of the Board,
S. N. GUPTA,
Secretary.

14, RADHA BAZAR LANE,
CALCUTTA-1, *the 1st December* 1962.

Notes:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(2) Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the Company.

(3) The Register of Members of the Company will remain closed from the 19th December, 1962 to 28th December, 1962, both days inclusive.

NEW INDIA SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-eighth Annual General Meeting of the New India Sugar Mills Ltd., will be held on Friday, the 28th December 1962 at 2-45 p.m. at 15, India Exchange Place, Calcutta, for the following purposes:

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1962.
2. To declare Dividends.
3. To elect a Director in place of Shri P. D. Himatsingka who retires by rotation as well as under Section 280 of the Companies Act, 1956.

In this connection the Company has received a special notice pursuant to Section 281 read with Section 190 of the Companies Act, 1956 from a shareholder of the Company and special notice is hereby given that the following resolution will be moved at the meeting:—

"Resolved that Shri P. D. Himatsingka who retires by rotation and who has attained the age of 73 years be and is hereby re-appointed as a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Shri P. D. Himatsingka has been on the Board since the inception of the Company and has rendered valuable services to the Company as a Director. It is, therefore, in the interest of the Company that he should continue as a Director of the Company.

4. To appoint Auditors and fix their remuneration.

By Order of the Board,
S. N. GUPTA,
Secretary.

14, RADHA BAZAR LANE,
CALCUTTA-1, *the 1st December*, 1962.

Notes:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(2) Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the Company.

(3) The Register of Members of the Company will remain closed from the 19th December, 1962 to the 28th December, 1962, both days inclusive.

THE BURRAKUR COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE BURRAKUR COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 27th December, 1962, at 10-30 a.m., for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 30th June, 1962, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.
4. To appoint Directors in place of the retiring directors and in this connection to consider, as special business, the re-appointment of Mr. P. C. Mukherjee, one of the Directors who retires by rotation at this meeting, who being over 65 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in general meeting specifically declaring that the age limit shall not apply to him. In this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required under Section 281(2) of the Companies Act, 1956 has been received by the Company from a member, stating Mr. Mukherjee has attained the age of 71 years and of intention to propose that:

"Mr. P. C. Mukherjee be and is hereby appointed a Director of the Company, whose period of office as such Director is liable to determination by retirement of Directors by rotation and it is hereby specifically declared that the age limit prescribed by Section 280 shall not apply to him."

The share transfer registers of the Company will be closed from 14th December, 1962, to the 27th December, 1962, both days inclusive.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LTD.,
Managing Agents.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *27th November*, 1962.

Notes: (*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 15th January, 1963, to those members so entitled, whose names appear in the Company's books on the 27th December, 1962, or to their mandatees. No application for Dividend Warrants will be necessary.

(*c*) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business set out above is being sent to the Shareholders.

THE ASSOCIATED CEMENT COMPANIES, LIMITED

Registered Office:
Cement House, 121, Queen's Road, BOMBAY-1

NOTICE

THE MANAGING AGENTS ARE AUTHORISED to announce that the Board of Directors of the above Company have resolved to recommend payment of a Dividend at the rate of Rs. 12 per share (subject to deduction of tax) for the year ended 31st July, 1962.

The said Dividend, when sanctioned at the Annual General Meeting of the Shareholders of the Company to be held on 18th January, 1963, will be made payable on and from 1st February, 1963, to those Shareholders whose names stood on the Register of Members on 30th November, 1962, to whom or to whose Mandatees dividend warrants will be posted at their registered addresses.

INTIMATION OF ANY CHANGE IN ADDRESS SHOULD BE GIVEN TO THE COMPANY IMMEDIATELY.

For CEMENT AGENCIES LTD.,
R. R. HATTIANGADI,
Managing Director.

30th November, 1962.

SYNOPSES OF COMPANY REPORTS

Neelamalai Tea and Coffee Estates, Ltd.

[*Managing Agents*: Messrs. A. V. Thomas & Co. (India) Ltd., Madras.]

Nineteenth Annual General Meeting—15th December 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Sales of tea, coffee and other produce	54,12	51,40

,, ,, dividend equalisation reserve ..	Nil	1,48
,, ,, general reserve	Nil	1,25
Proposed dividend (taxable) preference ..	99	99
,, ,, ,, equity	2,70 (7½%)	2,70 (7½%)
Carry forward	18	16

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report:

Tea—Crop and cost of production: The tea crop harvested during the season, together with the costs, is given below:

	Estimates 1961-62	*Crop secured* 1961-62	*Crop secured* 1960-61	*Yield (1961-62) per acre*	
	Kgs.	Kgs.	Kgs.	Kgs.	Lbs.
Sutton ..	2,17,700	2,65,380	2,51,946	623	1,385
Bhawani ..	1,31,500	1,38,920	1,45,194	457	1,009
Katary ..	3,18,000	4,18,285	3,50,632	532	1,173
Total ..	6,67,200	8,22,585	7,47,772	544	1,199

Owing to favourable weather conditions, the estates have been able to harvest satisfactory crops, exceeding the estimate by 1,55,385 Kgs. The total cost of production per Kg. was Rs. 3.25. With the higher yield per hectare, it has been possible to bring about a reduction in the cost of production. There has, however, been a general increase in the cost of materials, wages, etc.

Tea Sales: The prices for high grown teas were irregular during the season and there was also less inquiry from the export markets. The average sale price realised was Rs. 5.15 per Kg. against Rs. 5.55 last season.

Coffee: Crop and Cost of Production: After the heavy crop of 259 tonnes during the previous season, the coffee bushes were rather tired. Besides, the blossom showers and subsequent weather conditions were also extremely unfavourable and against an anticipated crop of 102 tonnes, the actual harvest amounted to 44 tonnes only, and the entire crop was delivered to the Coffee Pool as usual. The average coffee payment for 1960-61 amounted to Rs. 2 per point as estimated in last season's account. For the current season, the payment may be around Rs. 2.25 per point and the coffee has been valued on this basis.

A sum of Rs. 4,71,079, being the net sale proceeds of trees in Wooligooly Estate, is deducted from the value of land. The Directors are advised that there may not be any liability to tax on this amount.

Estimates for the season 1962-63:

	Tea		*Coffee*	
	Crop	*Cost per Kg.*	*Crop*	*Cost per 50 Kg.*
	Kgs.	Rs. nP.	Kgs.	Rs. nP.
Sutton and Bhawani	3,60,000	349.66	..	..
Katary ..	4,75,000	308.64	..	..
Wooligooly ..	..	..	1,20,000	155.64
Total ..	8,35,000	323.30	1,20,000	155.64

Accounts in brief as at 30th June 1962 are as under:—

Carry forward	6	9

* Provision for taxation for 1962 includes Rs. 1,15,000 for the preceding years.

Extracts from the Directors' report: *Factory Working*: The Company has concentrated on production of industrial sheets, strips and coils during the year under review. The turnover (including conversion charges) has increased from Rs. 2,14,40,252 in the previous year to Rs. 2,31,50,455 in the year under review. Production of industrial strips and coils has almost kept pace with the demand. The import of such strips has been very small during the year 1961, thereby appreciable amount of foreign exchange was saved. The raw material position has remained unchanged as the question of allocating increased raw material to the Company on the basis of actual production is still under the consideration of the Government.

Development: Items like *nickel-silver strips, spring brass* etc. are still being imported. The Company's development department has done considerable research and experiments and the results are very encouraging. The samples have been duly approved by the consumers. The Company is, therefore, confident of manufacturing both nickel-silver strips and spring brass in the near future.

The introduction of copper plates for photo-engraving during the previous year has earned a good name in the market but due to shortage of raw materials, it is impossible to meet the entire demand.

Export: During the year under review, new markets have been developed. Besides, *hot rolled sheets/circles*, new items like *cold rolled brass and copper strips* have also been supplied in the foreign markets for which the Company is now getting repeat orders from the buyers. With the introduction of items like *nickel-silver strip, phosphor-bronze strip* etc., initial supplies of which have been duly approved by the overseas customers, it is hoped to book more orders for these items very soon.

Accounts in brief as at 30th June 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	40,00,000	Gross block	99,17,578
5½ per cent. debentures	5,92,000	—Depreciation ..	56,07,339

Appropriations :		
Total available balance	8,97	6,56
Proposed dividend (taxable) equity	8,40 (10%)	5,78 (10%)
Carry forward	57	78

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: *Cost and Crop—Tea*: During the year a crop of 7,16,244 kilos was harvested as against an estimate of 7,50,000 kilos.

Coffee: The coffee crop harvested during the year was 6,12,417 kilos as against the estimate of 6,22,000 kilos of coffee. A bonus payment of 1.9 nP per point was received during the year for 1956-57 coffee. A final payment of 9 nP per point was received for 1959-60 crop, making a total payment of Rs. 2.24 nP per point for the year. For 1960-61 coffee crop, the Company has realised the estimated amount of Rs. 1.95 nP per point during this year. A final payment of 5 nP per point for 1960-61 was announced by the Coffee Board, making a total payment of Rs. 2 per point. This receipt will appear in the Company's accounts for the next year.

Tea	1959-60	1960-61	1961-62
Tea crop in kilos	7,35,126	6,38,558	7,16,244
All-in-cost per kilo	Rs. 3.59	Rs. 3.84	Rs. 4.12
Yield per hectare in kilo	1,343	1,281	1,340
Net price realised per kilo ex-estate ..	Rs. 5.15	Rs. 4.61	Rs. 4.84

(Net price is calculated after deducting brokerage, excise duty, cess, sales-tax and shipping expenses.)

Coffee	1959-60	1960-61	1961-62
Coffee crop in kilos	9,87,381	5,84,094	6,12,417
All-in-cost per kilo	Rs. 2.12	Rs. 2.96	Rs. 2.66

Estimate for 1962-63 *Tea*: The crop has been estimated at 7,60,000 kilos to be manufactured at an all-in-cost of Rs. 3.90 nP per kilo. *Coffee*: A crop of 7,41,800 kilos at an all-in-cost of Rs. 2.73 nP per kilo is estimated.

Capital Expenditure: Machinery: The Glendale and Guernsey Tea Factories have changed to C.T.C. Manufacture from 1st April 1962. The Company purchased C.T.C. Machines and other necessary equipments for both the factories at a cost of Rs. 3,45,172 and Rs. 1,49,984 respectively. *Artificial Irrigation*: Artificial irrigation equipment was purchased for a value of Rs. 27,038 for the Company's Glendale and Colacumbie Estates for New Clearings. *New Clearings*: A total of 35.60 acres were cleared and planted with tea in Nilgiris Estates while 25 acres were cleared for coffee planting in Santawerry Estates in Mysore State. Replanting of 115 acres of old coffee with new coffee was also done in Nilgiri and Coorg Estates. Citrus seedlings and pepper cuttings planted last year in coffee area in Santawerry and Santagherry Estates in Mysore State are coming up well.

Adderley Estate: As 99.30 acres of land was very rocky, steep, and not easily accessible for regular cultivation, the same was sold for Rs. 90,000. The above 99.30 acres represent 76.64 acres of coffee and 22.66 acres of rocky and jungle lands.

Fertiliser Project: The Company has so far spent a sum of about Rs. 48,01,000 for plant, machinery, factory buildings and lands for this project. This includes a sum of about Rs. 33,72,000 spent during the year under review. The Fertiliser Factory went into full production from July this year. The working of this factory will be reflected in the coming year's account.

Accounts in brief as at 30th June 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	84,00,000	Gross block ..	1,30,18,630

Appropriations :		
Total available balance	6,18	5,18
Proposed dividends (taxable) preference ..	32	32
,, ,, ,, equity ..	4,73 (10%)	3,94 (10%)
Carry forward	1,13	92

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: *Crop and Cost*: *Tea Crop* harvested during the year amounted to 7,05,063 kilos as against 5,76,969 kilos last year.

	1959-60	1960-61	1961-62
Tea crop in kilos	5,50,298	5,76,969	7,05,063
All-in-cost per kilo	Rs. 3.17	Rs. 3.63	Rs. 3.18
Net price realised per kilo ex-estate ..	Rs. 4.07	Rs. 4.30	Rs. 3.98
Yield per hectare in kilos	1,467	1,539	1,880

(Net price is calculated after deducting excise duty cess, sales-tax and shipping charges.)

Coffee: As compared to a harvest of 6,06,458 kilos last year, the crop this year amounted to 5,90,076 kilos.

	1959-60	1960-61	1961-62
Crop in kilos	6,51,740	6,06,458	5,90,076
All-in-cost per kilo	Rs. 2.48	Rs. 2.66	Rs. 2.62

Estimate of 1962-63: A crop of 7,50,000 kilos of tea at an all-in-cost of Rs. 3.37 per kilo and 7,10,000 kilos of coffee at Rs. 2.40 per kilo are estimated.

Machinery: In order to handle the increased crop of tea, additional machinery was purchased during the year at a cost of about Rs. 1.48 lakhs.

As the *Rollers* of C.T.C. machines require constant sharpening, a pucca workshop was found to be a necessity. Accordingly a lathe and welding set and other equipments were purchased at a total cost of Rs. 20,974. As mentioned in the last report, artificial irrigation equipments were purchased for Rs. 78,336. As there is perennial supply of water at the Estate, this equipment is able to irrigate about 80 to 100 acres.

Citrus, Areca, and Pepper: 3,700 orange plants and 4,000 pepper cuttings were planted in Coovercolly and Kesinvurthy Estates during this year. Areca planted in Kesinvurthy Estate in 2 acres is coming up satisfactorily.

Kothari Coffee Curing Works: A further sum of Rs. 5,70,712 was spent for the construction of the second phase programme, namely for the raw coffee and clean coffee godowns, garbling room, office, drying grounds, estate supply store room and twin staff quarters.

The Company's works cured during this year 1,400 tonnes of coffee. Some of the coffee cured in the works have fetched high prices in the open auctions. It is expected to cure about 3,000 tonnes in the year 1962-63.

Accounts in brief as at 30th June 1962 are as under:—

* Paid-up capital consists of 50,000 six per cent. tax-free cumulative preference shares of Rs. 10 each fully paid up and 23,62,500 equity shares of Rs. 2 each fully paid up. Of the above 16,62,500 equity shares of Rs. 2 each were issued as fully paid up bonus shares.

NEWS IN BRIEF

THE Hindustan Motors Ltd. has secured a loan of $15.8 million from the U.S. for undertaking the manufacture of lorries.

India has signed the International Coffee Agreement. Denmark, Nigeria, New Zealand and Portugal have also signed the Agreement. The total number of signatories so far is 47.

The Planning Commission has drawn up an operational plan designed to speed up digging of field channels as part of the proposal to focus more attention on minor irrigation projects. The Commission has already decided to raise the target and financial outlay on minor irrigation projects.

Cement is now declared as an essential commodity, under the Essential Commodities Act, 1955 in order to prevent its adulteration. Further, the manufacture or storage for sale or distribution of cement which does not conform to standards already laid down by the Indian Standards Institution has been prohibited.

Burma will supply to India 225,000 tons of rice next year, according to an understanding reached between the representatives of the Governments of the two countries. India has been buying about 200,000 tons annually for the last two years. An Indian delegation will visit Burma shortly to negotiate a long-term trade agreement with that country.

India's third atomic power plant is proposed to be located at Kalpakkam near Mahabalipuram in the Madras State. Kalpakkam is considered by the expert committee to be more suitable than Billigundulu (Madras), Somasila (Andhra) and Sangham (Mysore). The first power station is being built at Tarapore near Bombay and the second one is to be located at Ranapratap Sagar near Kotah in Rajasthan.

The Tea Board is examining a proposal for the supply of natural gas from Naharkotia in Assam for the tea industry. The proposal has been made by the industry which had represented about its difficulties because of the inadequate supply of coal. Meanwhile, the Government has approved the Board's proposal for the import of irrigation equipment worth Rs. 2 crores. To step up exports, the Board's propaganda efforts are also being intensified.

The Government of India has sanctioned Rs. 1.6 crore for the purchase of two new pilot vessels for the Calcutta Port Commissioners. These vessels will replace pilot vessels, *Bengal* and *Hooghly*. The pilot vessels are alternately located at sandheads at the mouth of the Hooghly. The contract for construction of these vessels has been awarded to a British firm, Blith Dry Docks and Shipping Building Co.

The Indian Institute of Technology, Madras, was formally inaugurated by the West German President Dr. Heinrich Leubke the other day. The institute, one of the four all-India advanced technological institutes, sponsored by the Government of India, was started in July 1959 with West German collaboration. West Germany has undertaken to give the Institute technological equipment worth Rs. 180 lakhs, besides making available services of 20 German professors and five foremen.

A proposal to set up an agricultural trading corporation is being considered by the Central Government. The proposed Corporation is expected to ensure more effective control over the distribution and prices of foodstuffs in both internal and export markets. Disclosing this in the Rajya Sabha, Mr. Manubhai Shah, Union Minister for International Trade, pointed out that the Government was also considering the possibility of establishing a mineral and metal corporation to look after the import and/or export of such goods as iron ore some non-ferrous metals, ferro-manganese and bauxite, which were now being handled by the State Trading Corporation.

The Japanese delegation for the second shipyard, now on a visit to this country, held discussions with the Chairman, Rear Admiral T. B. Bose and members of the Ship Ancillary Industries Committee in Bombay last week. The discussions were held with a view to ascertaining the state of development of ancillary industries connected with shipbuilding and ship repairing in India and the manufacture of various main and ancillary machinery and equipment which are fitted on board ships. The discussions were based on a questionnaire received from the delegation by the Ancillary Committee regarding various machinery and equipments. The delegation has already had talks with the Union Minister of Transport and Communications and the Minister of State for Shipping, besides visiting the Hindustan Shipyard at Visakhapatnam and also Cochin Harbour before coming to Bombay.

From Abroad

World production of cocoa beans in 1962-63 is estimated at 1,139,000 tons, as compared with 1,126,000 tons in 1961-62.

Pakistan and China propose to sign their first trade agreement shortly, according to the Pakistan Commerce Minister, Mr. Wahiduzzaman. A Chinese trade delegation is expected to visit Rawalpindi in this connection.

The Government of Malaya has decided to spend £1.8 million over the next five years on improving and replanting coconut small holdings which contribute about 80 per cent of the country's copra and palm oil output. In these smallholdings, output is said to have fallen by one-third since the 1956 peak production.

The French Government has agreed to grant Syria a loan of $50 million for development projects, including a new international airport at Damascus, irrigation and power schemes and road construction. It has also agreed to participate with West Germany in financing the Euphrates dam project.

Two more factories for the manufacture of instant tea are proposed to be established in Ceylon, besides the one just commissioned at Agrapatna. The Agrapatna unit, put up in collaboration with the West German firm, Haelssen and Lyon of Hamburg, claims to have developed instant tea direct from green leaf for the first time. Its produce, to be named "Ceytea," will be marketed shortly.

The Government of Pakistan has exempted foreign banks in the country from the provision in the Banking Companies Ordinance requiring them to maintain with the State Bank of Pakistan 5 per cent of their total demand and time liabilities or Rs. 20 lakhs, whichever is higher, in foreign exchange. The exemption is for a period of one year from the 7th inst. The Indian as well as other foreign banks in Pakistan had made representations to the Government for modification of this provision.

The Bank of Japan has reduced the Bank Rate from 6.93 per cent to 6.57 per cent with effect from 27th November 1962. This was the second cut in Bank Rate in two months and brought the rate back to the level ruling in July 1961, that is, before a series of credit squeeze measures began to be introduced for balance of payments reasons. The Bank of Japan has also begun repayment of loans amounting to $200 million which it secured a year ago from three U.S. commercial banks.

The aggregate world fish catch touched a record level of 41.2 million tonnes in 1961, representing an increase of 8 per cent over the previous year, according to the *Yearbook on Fishery Statistics*, published by the F.A.O. Japan continued to be the largest producer of fish, with its catches of 6.7 million tonnes, or 500,000 tonnes more than in the previous year. Peru was second with 5.2 million tonnes, and China (according to F.A.O.'s own estimates) third with 5 million tonnes, followed by Soviet Russia (3.2 million tonnes) and the U.S. (2.9 million tonnes).

PERSONAL

U. THANT has been elected the Secretary-General of the United Nations for a five-year term.

Mr. M. K. Vellodi, I.C.S. (Retd.), has been appointed a Director of the Hindustan Motors Ltd., Calcutta, subject to the consent of shareholders.

Dr. S. K. Muranjan, a former Member of the Tariff Commission, has been appointed Adviser to the Union Ministry of Commerce and Industry on problems of productivity.

Mr. R. K. Malaviya, Parliamentary Secretary to the Union Minister for Labour, Employment and Planning, has been appointed Union Deputy Minister for Labour and Employment.

Mr. R. K. Birla, leader of the wool purchasing mission left for Melbourne (Australia) to arrange for sufficient supply of wool tops required by the woollen industry in the country.

Mr. David E. Bell, Director of the U.S Bureau of Budget and a former Harvard Professor, has been appointed Director of the U.S. Agency for International Development (A.I.D.) *vice* Mr. Fowler Hamilton, who resigned recently.

Mr. Ambrose Congreve, Chairman of Humphreys and Glasgow Ltd. in the U.K. has arrived in India on a short tour to study the possibility of expanding the Company's business interests in India.

World steel output reached the peak of 284.3 million tons in the first nine months of 1962, with the U.S. and the Soviet Union accounting for most of the gain according to the U.S. Department of Commerce. This compares with the production of 276 million tons in the corresponding period of 1961. During the first three quarters of this year, U.S. produced 74.6 million tons, as compared with 70.6 million tons. Output in Russia amounted to 82.2 million tons, as against 57.8 million tons. But the output in West Germany fell from 28.3 million to 27.3 million tons. France from 14.6 million to 14.1 million tons and the U.K. from 19.1 million to 17.2 million tons. Italian production increased from 7.5 million to 7.7 million tons. Output in the Benelux countries rose from 10.9 million to 11.1 million tons. Japanese output also increased from 22.6 million to 22.8 million tons.

HOW YOU CAN HELP

KEEP PRICES DOWN

PRODUCE MORE

Work more. Increase production. Cut out all slow methops. Be regular and punctual. It is that extra effort that produces more and adds strength to our fighting power.

GROW MORE

Get bigger yields from your fields. Sell your produce at fair prices. Food for all and none to waste.

SPEND LESS

Buy only when you must. Avoid all wasteful expense. No feasts or festivities.

SAVE MORE

Save all you can and invest in the new Defence Savings Schemes. The more you save, the bigger the build-up of the country's defence power and quicker the victory.

HOLD THE PRICE LINE
HELP THE FRONT LINE

DA 62/595

GREAT EASTERN SHIPPING RECOVERS

DIVIDEND CUT RESTORED

DESPITE the unsatisfactory trading conditions which continued to prevail both in the overseas and coastal trades throughout the year ended 30th June 1962, the Great Eastern Shipping Company Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwala and Co., Bombay) has been successful enough to report a substantial improvement in earnings and profits for that year. Operating earnings, which had slumped to Rs. 285.87 lakhs during 1960-61, have staged a remarkable recovery to Rs. 326.48 lakhs, a level within striking distance of the all-time high level of Rs. 336.52 lakhs reached during 1959-60. There has also been a further modest improvement, from Rs. 11.75 lakhs to Rs. 12.05 lakhs, in other income. Besides, a profit of Rs. 4.81 lakhs was earned on the sale of fixed assets. As a result, gross income from all sources have expanded by Rs. 37.22 lakhs to Rs. 343.34 lakhs and compare fairly well with Rs. 351.44 lakhs realised in 1959-60 which was a relatively better year for shipping.

The higher income has, of course, come as a result of handling a larger tonnage of cargo—910,097 metric tonnes as against 761,821 long tons—but this has also led to an increase of Rs. 27.67 lakhs to Rs. 238.49 lakhs in operating expenses. Nearly half of this rise is claimed by stevedoring and other cargo expenses which have expanded from Rs. 34.95 lakhs to Rs. 46.84 lakhs. This was so, because, in a number of fixtures, the Company undertook the responsibility for carrying out stevedoring work at its own cost, instead of transferring the same to the charterers or the cargo interests, as it found this arrangement more beneficial than the usual F.I.O. fixtures. Besides, administrative expenses have also registered a small rise of Rs. 4.61 lakhs to Rs. 29.93 lakhs, chiefly because of the increase in interest charges. Despite these higher expenses, the gross profit stands substantially improved at Rs. 74.92 lakhs, as against Rs. 56.08 lakhs for 1960-61.

As regards prior charges on the gross profit, the Managing Agents' commission has naturally moved up to Rs. 1.05 lakh from the minimum amount of Rs. 50,000 provided for in the previous year. The provision for depreciation has been raised by Rs. 2.78 lakhs to Rs. 61.55 lakhs, due, of course, to the additions to block account, but, as during the previous year, no provision for taxation has been found necessary. After these essential provisions, the net profit works out to Rs. 12.32 lakhs, in refreshing contrast to the loss of Rs. 3.19 lakhs suffered in the previous year. This has enabled the Directors to restore the cut in dividend effected last year. The dividend for 1961-62 is thus 10 per cent per annum, as against 7½ per cent for 1960-61. The amount required for this purpose is Rs. 9 lakhs, leaving Rs. 1.05 lakh to be carried forward, as against Rs. 1.86 lakh brought in.

The Company's working results for the past four years are presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959

* Fully subject to deduction of tax.
† Of this only 2 per cent was subject to deduction of tax.

During the past years, there was an over-provision for development rebate reserve and, therefore, it was decided to transfer this year the unrequired excess of Rs. 12.00 lakhs to the profit and loss account. But against this a sum of Rs. 16.00 lakhs has been charged to the profit for the year under review as a credit to the statutory development rebate reserve. The following explanation for these contradictory entries is given by the Directors in their statement to the shareholders which, incidentally, provides also a clue as to why no provision for taxation has been made, despite a substantial rise in the taxable profit:

"In the past years, accelerated depreciation on ships was claimed for income-tax purposes. As a result, the depreciation for income-tax purposes during the year under report would be lower than the depreciation as per books of account. The assessable profit would, therefore, be higher than the profit as per our books of account On the same basis, in view of accelerated depreciation claimed for income-tax puposes in the past, the profit on sale of s.s. *Jag Shanti* for income-tax assessment would be higher than the profit as per our books of account. The Directors, therefore, consider that the profit and loss account for the financial year must be debited with the development rebate reserve of Rs. 16.00 lakhs for the purpose of securing the benefit of development rebate allowed for income-tax purposes in respect of profits of the year under report. In view of the development rebate to which the Company is eligible, there will be no tax liability in the year under report."

The balance-sheet of the Company, as at 30th June 1962, reveals a fairly strong financial position. The share capital has remained stationary at Rs. 90.00 lakhs, all in equity shares of Rs. 10 each, but the reserves have gone up, for reasons already explained, by Rs. 4.20 lakhs to Rs. 214.68 lakhs. Secured loans have, however, expanded quite substantially from Rs. 347.46 lakhs to Rs 626.94 lakhs but the major portion of this is reflected in the block account which has gone up by about Rs. 2 crores to Rs. 10.33 crores. The amount of depreciation set apart so far is Rs. 300.12 lakhs and on deducting this from the gross block the net block works out to Rs. 733.16 lakhs. Current liabilities are a shade lower at Rs. 110.34 lakhs but current assets have risen from Rs. 194.27 lakhs to Rs. 311.17 lakhs.

As a result of the recommendations of the one-man commission, the Government of India granted an increase of 15 per cent in the coastal freight rates, excepting on the shipments of coal from Calcutta to destinations upto Cochin in which case the increase allowed was 10 per cent. As these enhanced rates came into force on and from 1st June 1962 they are only fractionally reflected in the freight earnings for the year under review. Since these will be reflected fully in the accounts for the current year, some improvement in earnings can be anticipated, provided other things remain the same. The Directors have, however, done well to utter a word of caution in this respect. They state:

"After the announcement of the increase in freight rates, there is a complacency all round and there is not the same alertness in regard to the turn-round of ships at loading and discharging ports. If this complacent attitude persists, the increase in freight rates would be more than offset by the higher cost incurred due to slower turn-round of ships. It is, therefore, essential that the Government, the railways, the shipowners and the port administrations must exercise continuous vigilance and ensure better turn-round of ships at ports."

The average dead-weight tonnage under operation during the year increased from 115,294 to 116,663. During the year the old s.s. *Jag Shanti*, built in 1941, was sold to breakers for Rs. 8.75 lakhs. Two new cargo ships ordered from Japan, m.v. *Jag Vijay* and m.v. *Jag Shanti*, were delivered in February and March 1962, respectively, as scheduled and the actual price of these was reduced from the estimated Rs. 2.27 crores to Rs. 2.23 crores. The Directors have decided to discard and break up s.s. *Jag Mata*, a 22-year-old ship which has become uneconomical in operation.

In the present subdued share market, the Rs. 10 fully paid ordinary shares of the Company are being quoted at Rs. 12.12 *cum-div.* to fetch a net return of 6.1 per cent per annum on the *ex-div.* price.

Notice

THE BENGAL FLOUR MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has today declared an Interim Dividend of 10 per cent (subject to deduction of Income Tax) on the shares of the Company, in respect of the year ending 31st December, 1962. The dividend will be payable on or after 27th December, 1962 to those members whose names are entered in the Register of Members of the Company on that date. Dividend Warrants will be despatched to members and no application to the Company is necessary.

NOTICE is also hereby given that the Register of Members of the Company will be closed from 15th December, 1962 to 27th December, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Managing Director,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *30th November,* 1962.

ASSAM SILLIMANITE LTD.

Steady progress has been reported by the Assam Sillimanite Ltd. (Managing Agents: The United Provinces Commercial Corporation, Gauhati, Assam) for the year ended 31st March 1962. Sale proceeds have improved by about Rs. 2 lakhs to Rs. 27.75 lakhs. But, due to further all-round increase in production costs, gross profit, at Rs. 7.78 lakhs, has shown only a small increase over Rs. 7.61 lakhs earned in 1960-61. And net profit has moved down slightly from Rs. 1.59 lakh to Rs. 1.53 lakh owing to a provision of Rs. 2.70 lakhs for taxation, which is twice as much as in the previous year and includes Rs. 50,000 by way of additional liability for past years. Provision for depreciation has, however, been reduced from Rs. 4.31 lakhs to Rs. 3.06 lakhs, and the Managing Agents' remuneration is once again unchanged at Rs. 36,000. Development rebate reserve gets Rs. 12,715, as against *nil* in the previous year. The taxable return on the Rs. 10 fully paid ordinary shares has been reduced by one point to 5 per cent per annum following the increase in the paid-up capital from Rs. 30 lakhs to Rs. 36 lakhs by the issue of right shares after the close of the financial year. The dividend absorbs Rs. 1.80 lakh, leaving some Rs. 3,000 to be carried forward, which means there is again no surplus left to be ploughed back to reserves.

The following is the progress table for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1962	1961	1960	1959
Sale proceeds	27.75	25.26	22.71	20.03

Low	9.31	9.62	11.19	10.62

* Subject to deduction of tax. † Tons.

In order to finance its refractory project at Ramgarh, the Company made a public issue of Rs. 29 lakhs in June last, which was oversubscribed. It has received a dollar loan, equivalent to Rs. 41.30 lakhs, from the I.F.C., Washington, to cover the foreign exchange requirements for plant and machinery for the first stage of the project. Plant and machinery ordered from Germany will be shipped within a couple of months, and production is expected to start as scheduled.

Because of insufficient profits for a long period, the Company has not been able to build up any significant reserves. The paid-up capital of Rs. 30.08 lakhs, as at the year-end, is poorly backed by reserves and surplus aggregating only Rs. 16,025. Secured loans of Rs. 14.35 lakhs comprise bank borrowings of Rs. 7.88 lakhs and a loan of Rs. 6.47 lakhs from the Assam Financial Corporation. Unsecured loans amount to Rs. 20.88 lakhs and current liabilities and provisions aggregate Rs. 11.74 lakhs. The total short-term indebtedness to outsiders amounts to Rs. 40.47 lakhs and exceeds the total of current assets, loans and advances by as much as Rs. 20.78 lakhs. The gross block, which increased during the year from Rs. 47.23 lakhs to Rs. 67.06 lakhs, has been written down to Rs. 38.41 lakhs, and inclusive of goodwill shown at Rs. 1.14 lakh and development expenditure of Rs. 17.74 lakhs, stands at Rs. 57.28 lakhs.

Currently quoted at Rs. 14.44 *ex-div.*, the Rs. 10 fully paid ordinary shares give a net yield of 2.4 per cent per annum. When the Company's expansion programme is completed, its earnings are bound to improve and so also its ability to step up the dividend.

MONEY EXTREMELY TIGHT

(From Our Own Correspondent)

BOMBAY, *5th December*

Conditions in the short-term money market are extremely tight and the inter-bank call rate has jumped up from 2 per cent a week ago to 4½ to 5 per cent per annum. Demand for funds is very large, while the supply actually available is much less. Quite a bit of the floating funds seems to have been diverted to Calcutta, where, it is said, there is acute scarcity of money supply, with borrowers willing to offer 5¼ to 5½ per cent. Thanks to stringency of money, some scheduled banks are said to have taken recourse to borrowings from the Reserve Bank at the penal Bank rate of 6 per cent per annum under the three-tier system. The stringency is also due partly to the delay in the return of funds, subscribed to the Bombay Municipal loan, to the market. Usually, the Municipality places the money thus received with several banks in the form of deposits within a couple of days of the closure of the list. This year the redistribution had not started till late today, that is, even after five full working days. Even today, only a small portion of the loan subscriptions amounting to Rs. 5.15 crores was redistributed from the State Bank of India, which had received the subscription moneys, to other city banks. It is possible that, when more banks receive the Municipal deposits, the position may ease a little, but there cannot be any sustained appreciable change in favour of buyers, as in the next few days, the usual seasonal trade demand for funds and the year-end requirements will begin to assert themselves on the trend of the market. Accordingly, a number of banks may find it necessary to seek from the Reserve Bank the additional quota of accommodation at 6.5 per cent. This quota, it will be recalled, is limited to the amount equal to the difference between a bank's quota based on its statutory balance and the maximum amount actually borrowed by it during the 1961-62 busy season.

The Treasury Bill results for this week reflect the prevailing stringency in the money market. Although the amount invited against tenders for Government of India's 91-day Treasury Bills sold on Tuesday this week was unchanged at Rs. 2 crores and so also the amount offered and accepted, the average accepted tenders was slightly higher at Rs. 2.350 per cent per annum, as against Rs. 2.345 a week before. What was more, no Intermediate Treasury Bills could be sold during the period from 28th November to 1st December, even though they were on offer. In the previous week, the market was able to absorb as much as Rs. 5.77 crores of these Bills. Undaunted by the lack of response this week, the authorities have made no change in the Treasury Bills programme for the coming week. They have announced that Intermediate Bills would be on sale from 5th to 8th December, both days inclusive.

India's foreign assets declined by Rs. 62 lakhs to Rs. 93.53 crores during the week ended 30th November 1962. The decline was accounted for entirely by balances held abroad which aggregated Rs. 5.45 crores, while foreign securities continued unaltered at Rs. 88.08 crores. Loans and advances to scheduled banks increased by Rs. 3.52 crores to Rs. 5.20 crores, of which the amount given against usance bills was Rs. 1.43 crore.

There was a further drop of Rs. 4.82 crores in the volume of credit made available by scheduled banks during the week ended 23rd November 1962; the total outstanding amount stood at Rs. 1,363.02 crores. The deposits of banks rose by Rs. 2.39 crores to Rs. 2,185.34 crores. Investments were markedly higher by Rs. 20.08 crores at Rs. 704.82 crores.

The Gilt-edged market ruled quiet. It was reported that the Reserve Bank bought yesterday Rs. 125 lakhs worth of 3½ per cent 1963 at Rs. 99.90 and 3 per cent 1963-65 at Rs. 99 offered by two big banks apparently for increasing their lendable resources. This is understandable, for why should a bank borrow from the Reserve Bank at 6 per cent per annum while earning less than 4 per cent on Government securities in its portfolio? The Life Insurance Corporation was also said to have bought some 4½ per cent 1974 State loans at as low a rate as Rs. 96.55 from some institutional investors badly in need of cash.

In the foreign exchange market, the rupee strengthened slightly *vis-a-vis* the U.S. dollar. The bank's selling rate today stood at Rs. 477.50 per $100, as against Rs. 477.75 on Wednesday last week. Their buying rate was also lower by 25 nP at Rs. 474.25. In New York, the pound sterling continued to be firm *vis-a-vis* the dollar throughout the week. The latest available spot and three months forward rates are: 280.280-280.310 cents and 280.000-280.030 cents, respectively, the corresponding rates last week being 280.250-280.280 cents and 279.950-279.980 cents.

KIPS DISTINCTLY EASIER

(From Our Own Correspondent)

MADRAS, *3rd December*

Due to stiff resistance by overseas buyers to higher prices quoted, the undertone of the kips market was distinctly easier. However, prices nearly maintained last week's levels. Overall trading was considerably small. Cow calf arrivals continued to be restricted with shippers oversold. U.K. enquiries for all weights and selections were easier despite uneconomical prices at raw centres and small raw arrivals.

Tanned goat skins continued firm due to excited raw markets and, despite overseas buyers' resistance, shippers have put up prices by 3*d.* to 6*d.* In sheep skins, primes were steady and semi-primes remained unchanged with fairly good U.K.-Continental inquiries.

SPURT IN BULLION

(From Our Own Correspondent)

BOMBAY, *5th December*

Both gold and silver forged ahead during the week under review, though a sagging tendency developed again today. Reports of excellent offtake in upcountry centres and reduced arrivals were the main contributory factors. Even the Union Finance Minister's reiteration that the price of gold would be brought down to around international level failed to deter buyers. On the contrary, this statement was followed by a substantial rise in the price of gold. Silver, too, moved up in sympathy. In the forward section of this metal, those who had sold short earlier rushed to cover after seeing the failure of the Finance Minister's statement to produce any adverse effect on ready gold, in which there is, as readers are aware, no forward trading now. Today, however, profit-taking set in and the two metals drifted lower. Even so, the closing rates were well above those prevailing on Wednesday last week, ready gold being higher by Rs. 9 at Rs. 102.75 per 10 grams and ready silver by Re. 1.85 at Rs. 195.60 per kg.

The daily average offtake of gold was higher at 4,000 tolas, as against 3,500 tolas in the previous week, while arrivals were less, being 3,400 tolas, as against 4,000 tolas. In silver, the daily average offtake and arrivals were 11 bars and 32 bars, as against 10 bars and 50 bars, respectively.

The Union Finance Minister declared in Bombay on Sunday this week that the Government would continue its efforts to force gold prices down and warned that the high interest rate and tax exemptions now allowed to buyers of gold bonds would be withdrawn after the gold prices touched the international level. Admitting that the response to gold bonds had not been as good as anticipated, the Finance Minister said:

"People are apparently waiting for something. If they are waiting for the prices to go down further before they hand in gold, they are in for some disappointment. Once the prices go down, there may not be a chance for them to get 6.5 per cent interest and enjoy exemption from wealth tax and capital gains tax. I hope there will be a better response soon."

Mr. Desai assured gold-holders that no inquiry would be made as to the source of their holdings. "No questions would be asked now or later," he said, and added that he had given strict instructions to income-tax officials not to pursue investigations against persons whose names became known because of their investments in gold bonds. "These instructions," he averred, "will be fully observed." Proceeding, he observed that the price of Rs. 62.50 offered by the Government should not deter people from investing in gold bonds, since, because of steps taken by the Government, the market price of gold was steadily falling. Although there had been a spurt in gold prices during the last few days, the trend was bound to be reversed because of further steps to be taken by the Government. . . . He cautioned people against buying gold for investing in gold bonds. In fact, he felt that "nobody should buy gold as long as the present condition of emergency lasts."

With effect from the 1st of this month, the Central Government has taken over the Kolar gold mines from the Government of Mysore. The Centre has also decided to take over the Hatti gold mines in the Raichur district of Mysore State, according to the Chief Minister of Mysore.

Ready gold began the week at Rs. 95.50, as against the previous close of Rs. 93.70, and moved up to touch a high of Rs. 107 yesterday (Tuesday the 4th inst.). After declining to Rs. 103.25 on the same day, the metal improved to Rs. 104.50 but finished lower at Rs. 102.75.

The *Margashir* (12th December) settlement in silver, which advanced from Rs. 196.25 to Rs. 198.20 on Thursday, 29th November, declined subsequently to Rs. 195.10 on Monday. The settlement recovered to Rs. 199.20 yesterday but fell back to Rs. 195.70 today. The *Fagun* (March) settlement fluctuated between Rs. 201.10 and Rs. 197.50 before winding up the week at Rs. 198.60. The rate for transferring commitments from the *Margashir* to *Fagun* settlement was against bulls throughout the week, though the actual rate receded from Rs. 2.75 last week-end to Rs. 2.20 today.

Ready silver continued to be quoted at a discount under the forward (*Margashir*), but the actual discount today was just 10 nP, as against Rs. 2.50 on Wednesday last week. The closing spot rate was Rs. 195.60, that a week ago being Rs. 193.75. The highest level for the week, namely Rs. 198.75, was touched yesterday.

The dollar price of gold in the London bullion market eased slightly from $35.08 to $35.07¾ during the week. Ready gold, however, improved by ¼*d.* to 250s. 3¾*d.* Ready and forward silver moved up, the former from 102*d.* to 103¼*d.* and the latter from 102⅝*d.* to 104¼*d.* The rise followed firm advices from New York where silver advanced by 1.75 cent to 119.75 cents.

The following table shows the trend of prices during the week under review:

	5-12-62 (closing)	High	Low	28-11-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	102.75	107.00	95.00	93.75
Sovereign	77.00	79.00	75.00	75.00
SILVER				
Ready (.996 fine)	195.60	198.75	193.60	193.75
*Margashir**	195.70	199.25	195.10	196.25
Fagun	198.60	201.95	197.50	199.00
London—	250s.3¾*d.*	250s.4*d.*	250s.3¼*d.*	250s.3¾*d.*
Gold	103¼*d.*	103¼*d.*	102*d.*	102*d.*
Silver Ready	104¼*d.*	104¼*d.*	102¼*d.*	102¼*d.*
Silver Forward				
New York—	119.75 cents	119.75 cents	118.25 cents	118.00 cents
Silver				

* 11th December settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES SLUMP

(From Our Own Correspondent)

BOMBAY, *5th December*

After having ruled distinctly easy during the first half of the week under review, cotton futures staged a remarkable recovery on Monday. The recovery gathered momentum yesterday but was reversed. Two reasons can be attributed to the earlier easiness. First, the banning of forward trading in shares gave rise to fears that forward trading in commodities would also be prohibited. Secondly, the slackness of mill demand in the wake of heavy arrival of new crop led to a decline in ready prices which affected the futures market also. The Jarilla March contract succumbed to heavy selling by both local and upcountry operators and slumped to Rs. 680.75 on Monday, as compared with the last week-end quotation of Rs. 696.75. Reports of unwanted rains in Berar and Moglai tracts induced fears of damage and further delay in the movement of the crop. This prompted renewed buying support. The Jarilla March recovered to Rs. 697 yesterday. The fear of damage to the crop, however, would appear to have been exaggerated as the contract shed a part of the gain to close at Rs. 693.75. It was even thought that the rains would help picking and hence the decline in prices. Today, the trend of the market was easy. The Jarilla March contract finished at Rs. 685, as against the last week-end rate of Rs. 696.75.

In the spot section, following larger arrival of new crop, prices tended to recede. Most of the varieties were quoted below the ceiling rates. Turnover was, however, limited because most mills were reluctant to make purchases, pending a further fall in prices. The accumulation of unsold stock of cloth with them was also a limiting factor.

Export demand for Bengal *Deshi* continued to be small. Prices consequently eased further. Business in foreign cotton was at a virtual stand still, following the Government's decision to cancel a percentage of the global import quota.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal Fine (December delivery) 665; L. 147 1,245; Co2 1,500; Sudan X5S 1,410; B.P. 52 1,180.

Cotton futures in Karachi recorded further gains during the week. Renewed export inquiries and domestic mill demand led to a rally in prices. N.T.R.G. January firmed up from Rs. 71.20 last week-end to Rs. 72.40. The March contract improved from Rs. 71.80 to Rs. 72.90.

Quiet conditions prevailed in the Liverpool cotton futures market. Both the American and American type contracts closed practically unchanged. Trading was inactive due to the absence of any fresh developments. Ready demand was fairly good for selected foreign growths. Pakistan cotton attracted some attention, thanks to the reduction in export duty on staple varieties from Rs. 75 per bale to Rs. 25 per bale. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December 23.90; March 23.70; May 23.65.

American cotton mixed growth contract: December 24.25.

Sudan: January, March, May 29.75.

Barring the near December position, which ruled quietly steady, cotton futures in New York hardened during the week. Commission House support and higher spot advices were responsible for the rise in prices. Uncertainty about the new cotton legislation for the 1963 crop, however, continued to restrict trading.

The December contract was quoted unchanged at 33.93 cents per lb., while the March contract firmed up from 34.12 cents per lb. last week to 34.31 cents and the May contract from 34.20 cents to 34.38 cents. New York spot was quoted 5 points higher at 34.80 cents per lb., as compared with 34.75 cents last week.

Ready prices remained generally steady. Trading was fairly active. A sizable volume of cotton continued to move into the loan programme.

The U.S. Under Secretary for Agriculture, Mr. Charles Murphy, has denied that there would be any reduction in the export price of U.S. cotton. Speaking at the annual general meeting of the Arkansas Agricultural Council, Mr. Murphy said, "I have heard reports that potential foreign buyers have been holding back on purchase of American cotton in anticipation that there might soon be substantial reductions in the price at which our cotton would be available in foreign markets. I see no basis whatever in fact for any such anticipation. The Commodity Credit Corporation has no intention of increasing the present eight and half per cent export payment rate prior to the end of the current marketing year on 31st July 1963. Neither is it anticipated that there will be any other change in the cotton export programme which will result in any appreciable decrease in the export price of U.S. cotton prior to 1st August 1963."

Mr. Murphy added that if the U.S. Congress adopted new legislation on cotton, eliminating the "double price" system as the Administration had asked for next year, there was no reason to think the new legislation would lead to significant lowering of export prices.

LANDSLIDE IN GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, *5th December*

There was a landslide in values of oilseeds during the week under review on persistent heavy liquidation. Political uncertainties besides, fears of a possible ban on forward trading in oilseeds unnerved operators. Groundnuts suffered a distinct setback, following new crop arrivals from major producing centres, while support from stockists and dealers was lacking, except for

modest enquiries by some *vanaspati* manufacturers. Moreover, operators were rather intrigued at reports that the Forward Markets Commission might not permit trading in new contracts unless prices came down further. The F.M.C. was said to have suggested a lower ceiling for the new April contract, probably around Rs. 226 per 250 kg., as against Rs. 236 for the January 1963 contract. In sympathy with groundnuts, castorseeds moved down. Linseeds ruled easy on reports of weakness in mustardseeds in North Indian markets. Cottonseeds, too, encountered heavy selling.

Groundnut January 1963 contract was marked down by Rs. 8.62 to Rs. 204.75. Khandesh quality fell by Rs. 2.25 to Rs. 40.50. Nizam bold lost Re. 1.75 to Rs. 40. Oil ex-mill declined by 80 nP to Rs. 17.10 and railway receipts by 65 nP to Rs. 16.80.

Castorseed March 1963 contract was subdued today at Rs. 157.50, as against Rs. 161.37 last weekend. Madras small and Kanpur bold eased by 25 nP each to Rs. 31.75 and Rs. 30.37, respectively. Oil B.S.S. shed 15 nP to Rs. 13.30 and oil commercial 10 nP to Rs. 12.50.

Linseed March 1963 contract declined by 63 nP to Rs. 36.37. Bold ready lost Re. 1.50 to Rs. 39. Linseed oil receded by 40 nP to Rs. 15.50.

Cottonseed January 1963 contract gave way from Rs. 96 to Rs. 94. Both nonwhite and berar, however, picked up 75 nP to Rs. 21.75.

The following table shows the closing prices of oilseeds and oils on Wednesday 5th December, as compared with those of the two previous weeks:

	5-12-1962	28-11-1962	21-11-1962
Groundnut	Rs.	Rs.	Rs.
Groundnut January 1963 ..	204.75	213.37	218.87
Nizam bold	40.00	41.75	42.75
Khandesh quality	40.50	42.75	43.12
Oil ex-mill ready*	17.10	17.90	18.35
Railway receipts*	16.80	17.45	18.00
Castorseed			
Castorseed March 1963	157.50	161.37	164.25
Ready Madras	31.75	32.00	32.50
Ready Kanpur	30.37	30.62	31.12
Oil B.S.S.†	13.30	13.45	13.65
Oil commercial†	12.50	12.60	12.75
Linseed			
March 1963	36.37	37.25	38.12
Bold ready	39.00	40.50	41.25
Oil ready†	15.00	15.90	16.15
Cottonseed January 1963 ..	92.00	96.00	100.00
Niger seed	33.50	35.00	35.50
Kardi seed	25.00	26.50	27.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK TEA STRONG

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *29th November*

Offerings in sale No. 47 held on the 27th inst. amounted to 681,000 kgs. Quality in general was about maintained. The market met with strong demand. Low medium brokens attracted useful support at firm rates, but occasional invoices were slightly easier. Fannings under this category were in better demand at firm to dearer rates. Medium and good medium brokens were firm, but improved liquoring teas were dearer. Similar fannings were generally dearer. Plainest kinds received good support and were firm to dearer. Highgrowns were irregular with quality. Clean black leaf descriptions evoked strong demand and registered slight advances. There was useful enquiry for unorthodox descriptions which were fully firm on last rates. Orange pekoes were strong whilst flowery pekoes and pekoes were a little irregular.

The quotations (per kg.) were:

	1962	1961
	Rs.	Rs.
Low mediums	4.50-5.00	3.00-3.30
Mediums	5.00-5.40	3.25-3.80
Good mediums	5.40-6.10	4.00-4.50
Nilgiri B.O.P.	5.75-7.50	5.00-7.60

The average price realised in sale No. 47 was Rs. 5.13 per kg. as against Rs. 5.13 a week ago and Rs. 4.05 in the corresponding sale last year.

In dust sale No. 47 held today, 278.000 kgs. were offered. The market met with a fair general demand, but prices were generally easier for most descriptions. Low mediums sold readily but these were easier by 10 to 20 nP. Mediums also declined by 10 to 20 nP but the brighter kinds under this category were better supported and were firm.

Good mediums also shared in the general downward trend of the market and were irregularly lower by 10 to 20 nP. Highgrowns were irregular and inclined a little easier. C.T.Cs were also generally lower but C.T.C. types met with better demand and these may be quoted fully firm. Clean black grainy descriptions sold at around last rates.

The average price realised in dust sale No. 47 was Rs. 4.55 per kilo, as compared with Rs. 4.64 a week ago and Rs. 3.68 in the corresponding sale last year.

Colombo: The market met with an active demand. Best highgrowns were irregularly dearer, whilst below best advanced by 10 to 20 cents. Brighter uvas were dearer by 20 to 40 cents, whereas mediums were 10 to 15 cents dearer. Lowgrowns were also well supported at dearer rates.

London: *North Indian and other growths*: In Monday's sale, the market met with good demand and prices were 1d. to 3d. dearer all round.

Ceylon and South Indians: 27,684 packages were offered in Tuesday's sale, of which 7,559 were from South India. Ceylons met with fair support. Low medium and plainer descriptions were often 1d. to 2d. dearer. Any teas above 5s. were slightly easier. Teas from South India were fully firm, particularly those below 4s. 3d. which tended dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 48: 544.000 kgs. offered. Fair demand. Low mediums and mediums 10 to 20 nP easier. Good mediums barely steady. Highgrowns easier, particularly fannings. Unorthodox lower."

TEA EASY

(From Our Own Correspondent)

CALCUTTA, *4th December*

While offerings of tea in auctions have begun to fall as a result of the stoppage of Assam-West Bengal river services following the eight-week old strike by the Pakistani crew employed in these steamers, the quick measures taken by Government for providing alternate transport are yielding commendable results. The twenty-five wagons which the railways are allotting daily for bringing tea from Assam to Siliguri are carrying about 2,500 chests a day. The trade is also using the facilities afforded by air and steamer chartering companies up to the maximum extent possible, and road transport has also visibly improved. With the result, the average daily arrivals in Calcutta are now in the order of 17,500 chests, which is about half of the normal arrivals for this time of the season. The result has been that there was a visible improvement in booking of tea during the week from the Calcutta port, although the normal quantity cannot be resumed until river services again commence operations. It is wellnigh an impossible task to transport all Assam tea by road and air. Against this background, the news of the possibility of the appointment of a committee, on which both the Governments of India and Pakistan would be represented and which would go into the demands of the Pakistani crew, is noted with hope.

As stated, Government measures for accelerating the movement of Assam tea have been very rapid and have yielded good results. The Union Transport Ministry has asked the railways to increase the allotment of wagons for the tea industry, and its new road transport organisation has already started working in Dhubri and Siliguri. The Government has also allotted one hundred trucks which would soon be on the roads. As a result of these arrangements, it is expected that the setback to auctions in this month would not be as bad as earlier apprehended.

In the meanwhile, tea gardens are faced with financial problems as a result of the hold-up of tea in Pakistani waters and accumulation of production in the last two months. With uncertainty as to movement, banks are naturally unwilling to make further advances to gardens on fresh production. Accumulation of tea has also meant that gardens have not been able to repay advances already granted, leading to shrinkage of loanable funds for the trade. The poor arrivals in Calcutta during recent weeks and the hold-up of tea gardens have been reflected in prices in Calcutta having risen between 15 nP to 40 nP per kg. according to quality. Although in the interests of the country's foreign trade, the rising trend should be arrested, it is a consolation to know that prices of the varieties which have risen are not available in other producing countries. At the same time, it should also be pointed out that bringing tea by air and road has increased the cost of transportation, and it is only natural that an attempt should be made to recover at least a part of this increase from buyers. It is not only in Calcutta auctions that prices have risen, but also in the auctions in other world centres, notably in Cochin, Colombo and London. Placing reliance on earlier expectations of a good crop, overseas buyers had been only operating sparingly since the beginning of the present season.

In the past two months it has become only too clear that the North Indian crop would be lower than that of last year. It was at this time that movement of Assam tea received a setback, and this was soon followed by the naked Chinese aggression on the Himalayas. This was immediately followed in the last month by the threat to normal working of gardens in Assam. The evacuation of civilians from Tezpur and other areas which followed as the enemy descended from Bomdi La meant a serious disturbance to the working of gardens. All these explain the anxiety of stockists overseas for early replenishment. In last week's auctions in London, strong demand was in evidence. North Indian offerings totalled 32,000 packages in two days, and Pakistani offerings were once again a small parcel consisting of 120 packages. Prices registered gains varying from 1d. to 3d. a lb. Tea stocks for the week ended 23rd November at 136 million lbs. registered an advance of 4 million lbs., as compared with the previous week. In the last week's auctions, Cochin also reported strong conditions, and prices, where not changed, were fully firm.

Since the return to Tezpur and adjoining areas of all evacuated personnel, tea gardens have resumed normal working. Managers of at least fourteen gardens from both sides of the Brahmaputra river had been evacuated to Calcutta, and it is stated that the evacuation of personnel from the south bank of the river was done due to a misunderstanding. As the Assam Labour Minister stated, labourers in these gardens formed committees to ensure normal working. Mr. A. S. Bam and I. F. Morris, Chairman and Vice-Chairman of the Tea Board, have visited Tezpur and Gauhati to find that work in gardens is being carried on smoothly. They have, however, found that rail movement of tea from Tezpur is being hampered due to the delay in unloading of incoming wagons. Tea gardens have offered the services of their men for quicker unloading, so that the tea industry can load these wagons with tea.

Prices during the last week's internal sales, when offerings totalled 29,631 chests, eased despite the existence of good general demand. Bidders were prepared to pay lower prices. Plain orthodox teas eased by 30 nP, and Assam orthodox teas eased in an irregular trend. However, good support was accorded to bright liquorings, which were taken at lower rates. Medium and good C.T.Cs gave way by 20 nP. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.30 to Rs. 6.80, medium Assam C.T.C. dust Rs. 5.90 to Rs. 6.10, legg-cut dust Rs. 5.50 to Rs. 5.70, medium Assam dust Rs. 4.90 to Rs. 5.50, and plain orthodox dust Rs. 4.80 to Rs. 5.10.

Prices eased during yesterday's export offerings which totalled 51,880 packages. The quantity was much lower than usually in view of poor stocks in warehouses. Despite this, if bidders had shown less interet, the cause was that arrivals of fresh tea from Assam by alternative routes were progressing satisfactorily. As a result, the shortage was not expected to continue. Plan orthodox teas eased up to 40 nP, but fannings grades were firmer than similar brokens. Prices for the better liquoring Dooars and medium Assams eased leading to liberal withdrawals of both. Similarly, the better liquoring Assam B.O.Ps had to be withdrawn. Both whole leaf grades and Darjeelings eased. Medium Assam C.T.Cs gave way by 20 to 40 nP. At the same time, the best varieties commanded keen attention and prices were dearer. Legg-cut teas were pushed down by 20 to 30 nP. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 6.90 to Rs. 7.50, best Assam C.T.C. B.P. Rs. 6.70 to Rs. 6.90, medium Assam C.T.C. fannings Rs. 6.00 to Rs. 6.40, medium Assam C.T.C B.P. Rs. 5.90 to Rs. 6.40, clean plain pekoe Rs. 4.60 to Rs. 4.80, plain fannings Rs. 4.50 to Rs. 4.90, and plain B.P. Rs. 4.20 to Rs. 4.40.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, *4th December*

Under the impetus of sustained support, jute goods were steady during the week under review, while, despite a series of price support measures taken during the week by both the Government and the mill industry offers of fibre at discounted prices continued. The Indian Jute Mills Association has announced that it will shortly issue compulsory purchase quotas to mills. Mills, having exceeded the minimum quotas issued by the Jute Commissioner for the month of November, were cautious in entering into fresh commitments. Stockists continued to be anxious to lessen their holdings and, in a bid to secure as large a business as possible, made offers at discounted rates. At the same time, there was difficulty for mills to secure the correct quality of fibre which they urgently require to manufacture hessian and specialities. Since there is good demand for specialities, which admit of more profits than other constructions, mills have installed broadlooms. Their production schedule, however, has been hampered by the non-availability of the requisite standard fibre. As a result, prices of the good quality fibre are higher than the minimum. With mounting stocks of heavy goods, mills are naturally eager to restrict the output of these by transfer of more looms to hessian.

It is necessary that, if mills are to maintain ouput of hessian at the present level, more higher grade fibre should be made available to them. Chances of the authorities permitting more imports from Pakistan being slender, the mills would have to rely on the internal crop only. Demand for hessian from the U.S.A. and other countries being large, any tendency of a fall in production of this construction would be reflected on prices. However, U.S. buyers have often indicated that their continued support would be withdrawn, if prices moved up and that shortage of the fabric should not be put forward as an excuse for raising prices. Mills have been placed in a difficult situation, inasmuch as they should maintain the present high rate of output; otherwise, prices of goods would rise. There is also the danger of a further fall in fibre prices. If fibre prices are affected, it is apprehended that cultivators may prefer to transfer land from jute to paddy. Arrivals continue at a high rate, and this is indicative that much more of the crop awaits marketing.

In an attempt to arrest the fall in prices, the State Trading Corporation has moved into the scene and has already purchased about 40,000 maunds from different areas of Tripura, Bihar and Assam. In West Bengal, the National Agricultural Co-operative Marketing Federation Ltd. has been asked to buy on behalf of the S.T.C. in areas where prices have fallen. The price paid by the Corporation is stated to be Rs. 30 a maund basis Assam bottoms. The Corporation is keeping a close watch in an attempt to ensure that growers get reasonable prices. The S.T.C. aims to buy as much as 500,000 bales within the next two months and has already secured storage facilities for this quantity. It was announced in the Lok Sabha that a Central Warehousing Corporation for tea and jute would shortly be formed and, the Union Deputy Food Minister, Mr. A. M. Thomas, declared that such a Corporation would revolutionise the marketing of these commodities. Meanwhile, the existing central warehousing corporation would store the purchases of the S.T.C. in the industrial area of Calcutta. In view of the national emergency and the continued strike of the Pakistani crew employed in river transport vessels from Assam to Calcutta, transport has been considerably affected, and cultivators in mofussil areas are eager to dispose of their holdings as quickly as possible. This explains the present fall in prices, despite large purchases by mills. It should also be emphasised that the quality of the crop remaining to be marketed is very poor, judging from the fact that recent arrivals continue to reveal a deplorable fall in quality.

The Jute Buffer Stock Association is also doing all it can to arrest the present falling trend in fibre prices. It has, therefore, released a fresh quota of 250,000 bales which should be bought by its members within a fortnight of the receipt of allocation letters. As far as possible, it has been stipulated that this quota should be lifted from the existing stocks in Cossipore, where congestion as a result of accumulation of fresh arrivals has posed a stupendous problem. With this purchase, the buffer stocks would stand at 575,000 bales. The Secretary of the Bihar Jute Growers Association, Mr. P. D. Khaitan, stated at Calcutta that, on account of an artificial slump in fibre prices, about a crore of people were on the verge of starvation. Although it is considered that this is a very exaggerated study of the present situation, the fall has not been due to lack of earnestness by mills to purchase as much as they can hold in their godowns and their finances permit. Mills have already exceeded the Jute Commissioner's quota, and both the finances and godowns of mills have been put to severe strain. Most of the fibre, which the S.T.C. is buying, and the buffer stocks are of the inferior quality and fit for production of sacking goods only. The demand for sacking goods has been considerably affected by keen Pakistan competition. Hitherto, Red China had been a large buyer of this construction, but, for obvious reasons, trade with that country has been at a standstill. In days to come, it is felt that the disposal of the buffer stocks and the S.T.C's purchases would present a difficult problem if next year's crop does not show an improvement in quality.

With sowing time so near on hand, the time has come to devise means by which next crop would show an increase in the proportion of quality fibre. With the need to increase outturn, quality has been paid very little attention, and it has been pointed out that the tendency for the use of seeds aimed at giving a higher crop at the sacrifice of quality should be checked. With various price support measures, if cultivators succeed in dispcsing their crop at good prices, there would be little incentive for them to improve the strains and pay more attention at the time of retting. That this problem is capable of solution is indicated, inasmuch as, in the not distant past, the problem for cultivators was the disposal of the higher grade fibre and there had been an acute shortage of the lower grades.

Fair activity was in evidence in the goods markets during the week under review. With the need of mills to transfer more looms to hessian from sacking, there was a tendency for speculators to increase their holdings of heavy goods. On Tuesday last, there was the report of a fresh tender for hessian bags for Government. There was also some business done with the U.S.A. Ready hessian 40" 10 oz. was steady at Rs. 57 as against Rs. 56.90 on the previous day. B. twills were unchanged but firm at Rs. 120.50. Follow-up support from overseas buyers was lacking and, excepting for some business in B. twills with Government, there was no other activity to sustain prices on Wednesday. As a result, B. twills fell to Rs. 119.50 and in sympathy hessian 40" 10 oz. eased to Rs. 56.70. On Thursday, there was good covering business in woolpacks and hessian bags, and mills were interested sellers. As a result, hessian 40" 10 oz. recovered to Rs. 56.90 and B. twills to Rs. 119.75. Reports from the New York burlap market indicated that consumers there were in no mood to support a rising market, and they thought that the purchases by the U.S.S.R. in the Calcutta market were not as large as earlier expected. On Friday, these reports had an impact on prices here, and hessian 40" 10 oz. was quiet at Rs. 56.50. In sympathy, B. twills declined to Rs. 119.15. There were some overseas inquiries leading to some business with overseas consumers. Over the week-end, with B. twills at Rs. 118.25 and hessian 40" 10 oz. at Rs. 56 prices were quiet as covering business passing was limited. Mills refrained from offers at the reduced rates. Although the market reopened during yesterday after the week-end holiday on a dull note, conditions steadied as the day progressed following Government interest in hessian and business with overseas buyers involving woolpacks and B. twills. B. twills hardened to Rs. 119 and hessian 40" 10 oz. to Rs. 56.

WEAKER TREND IN METALS

(From Our Own Correspondent)

CALCUTTA, *4th December*

Prices in the Calcutta metal market eased during the week under review and this is encouraging, first because prices are gradually declining to reduce the disparity with world quotations and, secondly because, despite the national emergency and doubts about the Chinese cease-fire, it is a good sign that prices are prevented to be pushed upward.

News of importance during the week to the metal market was the ban on forward trading in copper, tin, lead and zinc, which came into effect from 29th November. This ban does not include non-transferable specific delivery contracts for the sale or purchase of these four metals. The announcement by the Government of India directed that outstanding contracts in these metals entered into on or before 29th November and remaining to be performed after that date should be closed out at the rate prevailing on that date. This decision is aimed at lowering the volume of transactions and to minimise the chances of prices rising in the national emergency. This week's weaker trend in prices reflects such a reading. The announcement also exhibits the determination of Government to stem any tendency for an upward trend. It was in December 1956 that the Government, accepting the recommendations of the Forward Markets Commission, permitted the Bombay Metal Exchange to conduct forward trading. The B.M.E. was the only organisation in the country which was recognised and permitted to conduct forward trading in metals.

Referring to the announcement in the Lok Sabha by the International Trade Minister, Mr. Manubhai Shah, that a second State Trading Corporation would shortly be set up to handle exports of iron ore, manganese ore, non-ferrous metals, ilmenite and other metals, trade circles thought that such a Corporation would handle only exports. Since non-ferrous metals figure only in imports, a Corporation, if set up to handle exports, cannot be expected to step into imports. Possibly, the Minister had in mind principally iron ore and manganese ore. In view of expansion of India's markets abroad for these two minerals, it is natural that Government should contemplate different agencies for conducting the S.T.C's activities. That the Minister had in mind the export of minerals is clear inasmuch as he said in Parliament that he expected exports of iron ore and other minerals to increase in the coming years. He estimated exports by 1970 to rise to 30 million tons as against 11 million tons at present.

On the London Metal Exchange, spot copper was firm at £234 a ton. Support was mainly on producer account. In New York, the quotation was steady at 28.71 cents a lb., and it was reported that demand for the slender month of December was unusually satisfactory. In Calcutta, utensil copper scrap touched a low of Rs. 482 per 100 kgs. after opening at Rs. 522, and towards the closure, recovered to Rs. 496. The declining tendency did not mean that copper scrap supplies were plentiful. In line with copper scrap, zinc also eased, the price closing at Rs. 255 per 100 kgs. as against the opening of Rs. 265. In London, spot zinc closed at £68¼ a ton after opening at £68¾, and the respective quotations for lead were £55¾ and £56¼. In Calcutta, lead and zinc were quiet at Rs. 141 and Rs. 255 respectively. Tin also eased, the closing rate being Rs. 2,550 per 100 kgs. against the opening of Rs. 2,600. In London, tin at one time hardened from £864 a ton to £867½ but eased to £866 as no indications were available as to the policy the International Tin Council would adopt in persuading the U.S.A. to accept a floor price below which no bids for stockpile tin would be considered.

WHEAT DECLINES, RICE STEADY

(From Our Own Correspondent)

HAPUR, *3rd December*

An easy trend continued in foodgrain prices during the past week on selling pressure by stockists and good crop prospects. *Kharif* grains were reaching the market in increased quantity and the Government is also determined not to let grain prices rise in this period of national emergency. The number of fair price shops is being increased and the quantity to be sold in each shop has also been increased.

Wheat prices here declined between 67 nP to Rs. 1.34 per quintal to be quoted between Rs. 39.52 to Rs. 40.19 for average quality and Rs. 42.87 to Rs. 44.21 for farm produce. Arrivals were small around 200 maunds daily and stocks at the week-end were quoted around 80,000 maunds. Rice prices ruled steady due to better demand. Stocks were quoted around 8,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 80.38 to Rs. 93.77, *mainpuri* Rs. 52.92, *ramajwayan* Rs. 58.94, *raimunia* Rs. 61.62, *gadda* Rs. 46.89 and *basmati sela* Rs. 75.02 to Rs. 77.70 a quintal.

Gram prices eased 67 nP to 99 nP a quintal according to quality on slack demand and easy advices from Punjab. The Punjab quality was quoted at Rs. 40.19 and local produce at Rs. 39.81. Stocks were reported around 8,000 maunds. Maize, too, declined by 67 nP to Rs. 1.34 due to better arrivals. Arrivals averaged around 400 maunds a day and local stocks were placed around 30,000 maunds. Barley and *bejhar* declined Rs. 1.34 per quintal each on poor buying support. *Jowar* and *guwar* prices also sought lower levels as new crops reached the market in large quantity. Prices were quoted *jowar* Rs. 35.85 to Rs. 37.51 and *guwar* Rs. 34.83 a quintal. *Bajra* and other grains prices were quiet in absence of demand. Week-end prices were:—Maize Rs. 28.80 to Rs. 30.14, barley Rs. 24.12, *bejhar* Rs. 24.12, *methi* Rs. 61.62, *bajra* Rs. 36.17 and oats Rs. 29.47 a quintal.

Among pulses peas lost between 67 nP and Rs. 1.34 on selling pressure by stockists while demand was reported poor. Peas *desi* was quoted at Rs. 29.47 and farm produce quoted at Rs. 32.15 a quintal. Peas *dal* was quoted at Rs. 33.49 a quintal. Arrivals were negligible and local stocks quoted around 52,000 maunds. During the week six wagons of peas and peas *dal* were despatched to the south. *Arhar* prices also eased Rs. 2.67 to Rs. 5.34 a quintal on lack of support. Prices were quoted at Rs. 50.91 a quintal. *Urd* and *moong* prices also ran down appreciably as new crop arrivals considerably increased. *Masoor* prices also drifted to lower levels in sympathy with *urd* and *moong* prices. Week-end prices were:—*Arhar dal* Rs. 66.98, *urd* Rs. 50.91 to Rs. 58.94, *urd dal* Rs. 69.66, *moong* Rs. 45.55, *moong dal* Rs. 56.26, *masoor* Rs. 50.91 to Rs. 53.58, *masoor dal* Rs. 58.94, *moth* Rs. 40.19, *moth dal* Rs. 48.23 and gram *dal* Rs. 45.55 a quintal.

SUGAR WEAK

(From Our Own Correspondent)

HAPUR, *3rd December*

Sugar prices eased further during the week due to selling pressure by factories following easy supply position and poor buying support from consuming areas. All the factories here in west U.P. were going in for sugar production but cane supplies to factories is reported inadequate. Sugar production in October 1962 was 30,000 metric tons against 47,000 metric tons during the corresponding period last season. The total closing stocks of sugar with factories on 31st October, 1962 was 10,34,000 metric tons as against 12,02,000 metric tons on the same date last season. Mill delivery prices here drifted lower by 37 nP to 67 nP per quintal for different grades.

Khandsari prices suffered heavy losses as demand from Punjab and Rajasthan was slack. Increased arrivals also depressed the sentiment. Crushers manufacturing *khandsari* were feeling shortage of cane supplies even at Rs. 1.40 per maund. Week-end prices were:—Inferior Rs. 80.38 to Rs. 88.41, superior Rs. 93.47 to Rs. 99.13, crystal Rs. 93.47 to Rs. 97.79, *Boora* Rs. 99.13 to Rs. 107.17 per quintal.

After slight improvement in mid-session, *gur* prices drifted lower in week-end due to demand reported at lower rates. Daily arrivals have gone down to an average of 4,000 maunds as most of the crushers were manufacturing *khandsari*. Demand was reported from Gujarat and M.P. at lower prices and, thanks to easy loading facilities, arrivals were lifted to those centres. Week's offtake was about twenty wagon loads. Week-end prices of *gur* here were:—*Gur* superior Rs. 41.53, average Rs. 40.19, *dara* Rs. 39.52, *balti* Rs. 39.52 to Rs. 40.87, *shakker* Rs. 45.55 per quintal.

Notices

BHARAT COLLIERIES LIMITED

Registered Office:
11, CLIVE ROW, CALCUTTA-1

NOTICE

THE EIGHTEENTH ANNUAL GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 11, Clive Row, Calcutta-1, on Saturday, the 29th December, 1962, at 11-30 a.m. to transact the following business:—

MARKET GOSSIP

(*Concluded from page 981*)

large is to indulge in sophistry and to make a fetish of a basically sound argument. Policyholders are not such muffs as to fail to understand that, if, in a good period, they received big bonuses, they should be prepared for smaller bonuses in lean years. Further, as life policies are not like shares, the market value of which fluctuate in keeping with the dividends declared by a company, there is no scope for encouraging speculation in this form of investment. (A with-profit endowment policy, it may be noted, is sold on the ground that it has an investment value in addition to providing cover against the risk of death.) The L.I.C. officials, as well as the officials of the Finance Ministry in charge of L.I.C., may be afraid that, if they raise the bonus for some years in keeping with larger surpluses and have to reduce them later when the surpluses shrink for reasons beyond their control, they would become the target of country-wide criticism. This fear is not wholly unwarranted, but must the policyholders suffer for this reason? Surely, the officials should be prepared to take both the blame and credit in the stride. When they declare bigger bonuses, they are bound to be complimented. But a method can be found whereby the prospect of unpopularity when bonuses have to be reduced can be minimised. One way would be to declare special bonuses, on the distinct understanding that they might either be reduced or abolished when surpluses shrink. The desire to play for safety on the part of officials should not be carried to an extent where it hurts the interests of policyholders. Since this is the second time that the L.I.C. has disappointed the policyholders, there is every justification for the latter to get together and form a representative and active association of policyholders to champion their legitimate cause. This is the only alternative for protecting their interests against the evils of a State-owned, monopolistic and monolithic organisation in a democratic society which does not enjoy the benefits of an effective opposition party.

War Risks Insurance

Two Bills seeking to empower the Government to enforce insurance of factories and goods on a compulsory basis against the risks of loss or damage arising from enemy action were introduced in the Lok Sabha by the Finance Minister, Mr. Morarji Desai, on the 5th inst. The Bills are entitled the Emergency Risks (Factories) Insurance Bill and Emergency Risks (Goods) Insurance Bill.

Elsewhere in this issue is published an article on war risks insurance, tracing the background to the present legislation and reviewing the scheme in force in India at the time of the last world war. We did not expect, at the time of preparing the article, that the Government would act so swiftly as it has done. The Finance Ministry deserves to be congratulated on the speed with which it has gone about the job.

From the details published in the daily Press it is apparent that both the Bills are patterned on the scheme in force during the last war. Thus, there are two schemes running concurrently, one covering "goods" and the other covering "factories." Properties insurable under the factories scheme will include factory buildings, plant and machinery and materials used in or by a factory. Coverage can also be extended by the Government to plant and machinery and similar equipment of mines, including oil-mines, properties of gas and electric supply undertakings, standing tea crops and inland vessels. Works under construction, which, when completed, will become factories, and plants and machinery pertaining to such works are also insurable. Similarly, the Government can also exempt such factories as it deems fit. Under the goods scheme, insurable goods are defined as materials, commodities, or articles including those used in the construction of a ship before it is launched. Goods insurable under the goods scheme are goods held in India for purposes of sale in the course of business, goods in transit from any place in India to any other place within the country, goods which are in the process of being exported from or imported into India. Goods belonging to or supplied by the Government will not be insurable. So also goods which are not normally insurable or which were not insured for similar risks during the last war may be excluded from the list of insurable goods.

The Bills do not prescribe the premium rates, as these will be varied, within certain limits, according to the actual nature and extent of the risks from time to time. But the financial memoranda to the Bills indicate that the premium rate for factories may not exceed 4 per cent of the insurable value of the factories in two years or two per cent per annum payable in suitable, quarterly instalments. For goods, to begin with, the premium rates may not exceed ¾ of one per cent of the insurable value of goods per quarter. Different forms of policies will be issued for different classes of factories and also for different description of goods. The duration of policies covering both factories and goods will be determined by the Government and the periods of duration of the policies are subject to extension by the Government. Insurance is not compulsory for goods of the value of Rs. 50,000 or less owned by one person in one district. Both in the case of factories and goods, the Government's liability, as an insurer, will be limited to 80 per cent and it will be discharged either by payment in cash or by reimbursement of the cost of reinstatement of the factory or property insured to the same condition as it existed before the damage. In the event of a factory being rebuilt, the Government may provide for the factory to be removed to some other locality.

The definition of emergency and risks in both the Bills is based on the last war legislation. It is comprehensive and includes any risks of loss or damage through explosion, "scorched earth" or denial measures.

Persons who are not actual owners but interested in any insurable property may, to the extent of their interest, insure that property on their own initiative. Where the owner of a factory is not himself the occupier of the factory, the occupier will, unless the owner has taken out a policy himself, have to take out a policy. In such a case, the occupier will be deemed to act as the agent of the owner and will be entitled to receive from the owner all sums paid as premia. In the event of a change in the ownership of factory during the currency of a policy, the policy, along with the rights and liabilities thereunder, will be transferred to the new owner.

Compensation within the prescribed limit of 80 per cent will be determined on the basis of values and prices ruling at the time of taking out a policy or the time at which the loss occurs whichever is less, after making due allowance for depreciation during the period of the insurance cover.

Two separate funds will be constituted to provide for the obligations to policyholders. These are intended to be self-sufficient but temporary deficits would be made good by the Government, if required. If there is a surplus after meeting all obligations, the Government will decide how best to utilise them.

As regards enforcement of the scheme, there is no mention as to what machinery will be used to administer it. But provision is made in the Bills for prohibiting private insurers from competing with the Government in regard to the coverage of emergency risks. The Bills also seek to empower the Government to employ any person to act as its agent for the purpose of insuring emergency risks. Penalties have been prescribed for those contravening the provision prohibiting private insurers from insuring against the emergency risks. Punishment has also been fixed for failure to take out a policy.

It is not clear from what has appeared in the daily Press at the time of writing whether private, non-industrial, immovable properties such as residential buildings and houses, which were not included in the war risks insurance scheme during the Second World War, could be insured if not compulsorily at least on a voluntary basis. Since it is specifically stated in the Bill that goods, which were not insurable for similar risks during the last war, may be excluded from the list of insurance goods, it must be presumed that the coverage of the schemes has not been extended to private, immovable properties other than factories. This omission is highly regrettable. Precedent cannot be cited as an excuse for excluding real property. The object of the goods scheme during the last war was to ensure the free movement of goods to places where they were most needed and of the factories scheme to prevent the removal of vital industries from where they were most needed to safer places. Both these schemes were introduced not so much to give protection to private property as to help the war effort. But now the position is different. The present war against China is a people's war and every one is entitled to get cover for his property. It may be noted here that, under the war risks insurance introduced in Britain, insurance protection was given to private, real properties and even chattels. It is not understandable why a similar provision has not been made in the Bills now before Parliament. It is to be hoped that the House will rectify this serious omission before it adopts them.

Silver: The Problem For The U. S.

Full twelve months have elapsed since President Kennedy announced suspension of sales of silver by the U.S. Treasury and stoppage of use of silver for coinage purposes in a bid to halt the impending exhaustion of "free" stocks, that is, stocks not required for purposes of currency backing. This period has witnessed distinct changes in world silver production, consumption and trade. So profound are these changes that a review of them certainly opens, as the *Monthly Letter* (December 1962 issue) of the First National City Bank very aptly describes, a new chapter in the chequered history of the white metal. Highlighting the main trends in world silver, the *Letter* says:

"The industrial uses of silver have greatly expanded during the past decade. The metal continues to be used extensively in the arts. And it is needed in coinage here (in the U.S.) as well as in a number of foreign countries, including France and Italy. For years, silver production in the free world has fallen short of consumption. This year, the gap is apparently bigger than ever before. . . . In the last two years, supplies in the free world outside the United States have been supplemented by offerings from Red China, for balance-of-payments reasons. This year, however, such sales apparently have been smaller than in 1961. British statistics show silver imports from China at 17 million ounces during the first nine months of 1962, as compared with 46 million in 1961 as a whole."

In view of the growing imbalance in world silver position, it is no wonder that prices have shot up to dizzy heights. Silver in New York is currently quoted at 119½ cents per fine ounce, a rise of over 28 cents since Kennedy's announcement on 29th November 1961. In October this year, it was quoted higher still at 122 cents, the highest level since November 1919 when the rate stood at 138½ cents.

The upward trend of silver price, according to the *Letter*, has so far had little measurable effect on production. The bulk of the world's silver is produced from ores bearing copper, lead, zinc and gold. It is the prices of these metals that always influence silver production. The higher silver price has, however, brought on to the world markets silver coins of old vintage held as a store of value and worth more for their silver content than as money.

While silver production in the U.S. has suffered a setback—the estimated output in 1962 is no more than 32.5 million oz., as against 34.9 million oz. in 1961 and 36.8 million oz. in 1960—actual consumption has gone up to a significant extent. The total requirements of U.S. industry and arts are estimated at 110.0 million oz., as against the actual of 105.5 million oz. and 102.0 million oz., respectively, in the previous two years. Use for coinage purposes is also put higher at 80.0 million oz., as against 55.9 million oz. and 46.0 million oz. The deficit has, therefore, considerably widened, from 111.2 million oz. in 1960 and 126.5 million oz. in 1961 to as much as 157.5 million oz. in 1962.

In the opinion of the *Monthly Letter*, so long as the present silver imbalance in the U.S. persists, there will be an overhanging threat of a run-up in silver price to or beyond 129.29 cents per oz., the point at which redemption of silver certificates in standard silver dollars or silver bullion will become the cheapest way of getting the metal in large quantities. Halves, quarters and dimes will not, however, be worth their silver content, unless the price of the metal rises above 138.24 cents.

The U.S. Administration wants to replace the silver certificates gradually with Federal Reserve notes, using the bullion so released to meet the increasing coinage requirements. But the *Monthly Letter* observes that, "whatever could be said for these programmes in generations past, they are assuredly inappropriate in a world that wants price stability rather than price inflation." So far as the U.S. Congress is concerned, it is reluctant to give the green light to the Administration's silver proposals.

HINDUSTAN LEVER'S RIGHT ISSUE

In our issue of 20th October 1962, *vide* page 667, we made certain comments on the terms of the new equity capital announced by Hindustan Lever Ltd. Mr. P. L. Tandon, Chairman of the Company, has the following clarification and correction to make on our remarks:

"You mention that the proposed premium on the shares is too high and quote 2½ times the face value. However, the shares will still be issued well below the market price and strictly speaking the nominal value of the share has no relationship to the *true value* to the shareholder. For instance, at the time the announcement was made, our shares were quoted around Rs. 46; so the way we look at it is—and this is international thinking and practice—the Company would sell its shares at a price as close as possible to the market value. In the U.K., the issues are made within a shilling or two of the market price. In our case, the issue will be made at Rs. 35 which was still at that time Rs. 11 below the market price. In fact, the market reacted favourably and the price jumped by another Rs. 2.

"The market price is internationally considered the only and fairest guide to the rate at which a company should sell its shares. After all, if the Company gives an unnecessarily wide premium, let us say it issues its shares not at Rs. 35 but at Rs. 25, it is merely giving the benefit to a small number of shareholders at the expense of the welfare and future of the Company. The practice in other countries would not permit a company's directors to issue them at these premiums and thus deprive the Company of the financial strength that would accrue to it from the proper premium. In India, the markets seem to look at the thing in the opposite way. However, insofar as our own shareholders are concerned, our rate of expansion, dividends, bonus issue at the beginning of this year, and now the opportunity to take up a valuable rights issue which raises the Indian shareholders' proportion from 10 to 15 per cent, should reasonably satisfy any shareholder. One can hardly say that the Company has not done well by them.

"In the fifth paragraph of your article you suggest that, if the premium had been lower, 'Unilever might have been induced to go in for full subscription.' This is not the correct position. There were two separate exercises. One was that Unilever should bring in Rs. 100 lakhs in foreign exchange for our expansion. This would be converted into equity at the rate of Rs. 35 per share and offered to Unilever as rights shares. On this basis, the rights shares, to which the rest of the shareholders would have been entitled, would have been only one-tenth, i.e. Rs. 10 lakhs worth of shares. The Government, however, felt that the opportunity should be utilised to increase Indian shareholders' participation from 10 per cent to 15 per cent. This was done by the second exercise, namely, of keeping the Unilever participation limited to the Rs. 100 lakhs of foreign exchange which we need and offering to the Indian shareholders a sufficient number of shares to increase their participation to 15 per cent of the revised capital.

"If we needed more foreign exchange from Unilever, I have no doubt we could have persuaded them to subscribe for more shares. They certainly were not deterred by the share price of Rs. 35. In fact, in consonance with international practice, they felt that this should have been higher and closer to the market price."

[*Unfortunately in India, the fiscal policy, especially that pertaining to issue of bonus shares, is not in keeping with international thinking and practice. Market value of shares, especially in times of boom or depression, do not constitute a fair basis for determining the premium as investors' ideas are influenced by extraneous considerations. The price which Indian investors are now being asked to pay in order to raise their holding in the Company's capital is disproportionately higher than when they were first offered 10 per cent holding. It must be remembered, in this connection, that 85 per cent of the premium which Indian shareholders will pay on the new issue will pass under the ownership of Unilever. In the current context of India's foreign exchange situation, it would have been preferable to let Unilever hold 90 per cent of capital of Hindustan Lever rather than reduce it fractionally to 85 per cent (of even the increased capital) at such a heavy cost to Indian investors.*—Ed.]

TREND OF SHARES

A PRECAUTIONARY MEASURE

(From Our Own Correspondent)

BOMBAY, *6th December*

LAST Thursday's decision of the Government of India to ban with immediate effect (that is, from 30th November 1962) forward trading in shares on all the stock exchanges in the country is to be construed as a basically sound and precautionary measure in times of totally unpredictable political situation in the country following the Chinese aggression. In a sense, the measure is ethical, as it has cut the very roots of a 'crisis' in stock exchanges. It is true that the Government has acted belatedly and after the various stiff measures of self-discipline adopted by the authorities of all the stock exchanges in the country, as a result of which trading in cleared shares had ceased to be on the forward account for the past few weeks and would have continued to be so until further notice.

One would have expected the Government to act at the time when share values were declining fast, especially when the President of India declared a state of national emergency. It is, however, futile to cry over spilt milk. Further, the ban on forward trading is but a natural corollary to the present restrictions which leave scope for business only on spot basis. Thus, there is nothing unnatural about the ban. It is never too late to make amends. The ban may be continued until such time as the emergency lasts. No forward trading will mean no hedge facilities for those who feel that the economic outlook for the country is dismal.

However, one major shortcoming of the official ban on forward trading in shares is that it was not accompanied by the usual order directing squaring up of all outstanding business at prices at the close of the day it was announced. In fact, the Finance Ministry's notification on the ban said that the existing contracts entered into up to 29th November (the day the notification was issued) and remaining to be performed would, however, be permitted to be liquidated in accordance with the rules, by-laws and regulations of the stock exchange concerned. Had the Government made it obligatory for members of the stock exchanges to square up the unadjusted business once the ban on forward trading was announced, it would have killed two birds with one stone.

In its present form, the trading in shares has left one problem for the market authorities of how to get the outstanding business adjusted. Notwithstanding the stiff margins on both buyers and sellers and the fairly long period for which they have lasted, there is still a considerable volume of business to be adjusted in the markets. One major difficulty in settling out business arises from the positions of the *badla* financiers who insist on squaring them up only by giving physical delivery of shares. The market authorities cannot obviously give a free hand to such financiers to sell their shares and thereby withdraw their funds because that would only disturb the stability of the market, especially when genuine investors have been far and few between.

To take off this big load on the market, however, the Governing Board of the Bombay Stock Exchange seems to have found a sensible way out. On Tuesday, it notified to its constituents that those among them, who carry large purchases in Tata Steel Ordinary and Indian Iron and desire to liquidate the same, should submit their offers for sale in those scrips by 12 noon on Wednesday the 5th inst. It is believed that the Board would offer such shares to institutional investors like the L.I.C., which might, however, take them up only at rates slightly lower than the minimum levels. The L.I.C. is said to be interested in taking up a big parcel of Tata Steel and Indian Iron.

How could shares be sold at lower than minimum prices? This is indeed a ticklish question. At any rate, the Board's move is clever, as it will bring to the fore those holders of these two scrips who really want to part with their holdings and distinguish them from those who only seem to be threatening to do so. It is likely that once the two principal counters are cleared, the Board will extend the scheme to other market leaders. Thus, it is hoped that the load on the market would be reduced, though, of course, very slowly.

The announcement of ban on forward trading and the Finance Minister, Mr. Morarji Desai's stress on further inevitable heavy taxes in future to finance the war effort in his speech at Calcutta on Saturday the 1st inst. at the annual general meeting of the Associated Chambers of Commerce of India aggravated the bearish sentiment in the markets. The unexpected delay in the announcement of the current half-year's import policy and the uncertainties about the adjustments in the third Plan and industrial production in the light of the war effort also influenced the sentiment. Sellers continued to be many and buyers few. Consequently, values shed their recent gains further. Trading was extremely restricted and the tone remained weak.

* * * *

On Dalal Street, practically all the market leaders closed with small losses. Bombay Burmah, for instance, slipped back from Rs. 611 to Rs. 600, but rallied to close at Rs. 607, as against Rs. 617 a week ago. Standard were easy and showed a loss of 13 points over the week at Rs. 782. T.E.L.Co. and Voltas were both down by two points at Rs. 269 and Rs. 240, respectively. Belapur disclosed a loss of Rs. 4 at Rs. 215. Poly Chem were Rs. 2.50 lower at Rs. 142.50 and Tata Chemicals 32 nP lower at Rs. 12.80. On the other hand, Svadeshi edged forward by four points to Rs. 267. Bombay Dyeing by 30 nP to Rs. 61.50 and Tata Oil by Rs. 2 to Rs. 59. Cash scrips were featureless. However, following the news about the expansion programme, Dharamsi Morarji looked up by Rs. 8.75 to Rs. 155. But Colour Chem showed a loss of Rs. 6.25 at Rs. 323.75. Permanent Magnets closed Rs. 11.25 lower at Rs. 195 and Chemicoat 11 points lower at Rs. 147. Ceat Tyres were five points down at Rs. 145 and Bombay Oxygen Rs. 5.50 at Rs. 86.50.

* * * *

Trading on the Calcutta Stock Exchange continued to be restricted and the tone was easy. Dunlop Rubber declined further by Rs. 1.75 to Rs. 36 and Indian Aluminium by 56 nP to Rs. 32. Other shares in the forward list were almost unchanged over the last closing levels. Cash shares were devoid of much activity and generally held around the minimum levels. However, Dunbar Cotton drifted lower from Rs. 27.50 to Rs. 27 and so did Central India Coal from Rs. 9.81 to Rs. 9, British Paints from Rs. 20.50 to Rs. 20.25, Goodyear from Rs. 40 to Rs. 39.50, Hindustan Aluminium from Rs. 13.69 to Rs. 13.50, Union Carbide from Rs. 45 to Rs. 43 and Titaghur Paper from Rs. 36.25 to Rs. 36. On the other hand, Alkali Chemical rose smartly from Rs. 33.75 to Rs. 37.50.

* * * *

The Madras Stock Exchange presented a mixed show. While Deccan Sugar slipped back by 37 nP to Rs. 9.58, E.I.D. tacked on a small gain of 15 nP at Rs. 40.15. Among Plantings, Blue Mountains were 2 nP better at Rs. 2.42, but Periakaramalai were 3 nP lower at Rs. 2.98. Trading in Plantings was, however, featured by a rise of Rs. 1.28 to Rs. 22.90 in Parkside. Textiles were dull, and Travancore Rayon disclosed a loss of 15 nP at Rs. 28.60. In the Miscellaneous section, Ashok Leyland and India Cement were both lower by 5 nP each at Rs. 7.80 and Rs. 6.25, respectively.

BELAPUR TO PAY LESS

The Directors of the Belapur Company Ltd. have decided to prune further the dividend on the Rs. 50 fully paid ordinary shares by Rs. 5 to Rs. 20 per share, subject to tax, for the year ended 30th September 1962. It will be recalled that in the previous year, there was a cut of four points in the dividend at Rs. 25 per share, taxable, which followed an increase of eight points to Rs. 29 per share, taxable, for 1959-60. The further reduction of 20 per cent in the dividend for 1961-62 has been necessitated by a rather sharp fall of as much as 40.7 per cent in the profit from Rs. 52.27 lakhs to Rs. 31 lakhs, after meeting all expenses and providing for depreciation, taxation, Managing Agents' remuneration and development rebate reserve. The decline in profit is understandable in view of higher costs and a setback to production. It must have been accentuated by a larger allocation to taxation following the recent passage of the Maharashtra State Agricultural Income-tax Bill.

ADVANTAGES OF FREE MARKET ECONOMY

(Concluded from page 989)

works, now find that they must imitate its most characteristic institution—the system of profit and loss. The Russians of the present day are beginning to see the light. But what can be said of those in the United States who assert that capitalism has been outmoded by modern technology, that the market economy is doomed, and that we must resort to over-all state planning to turn out what government administrators think people *should* want instead of what they *do* want? In the magazine section of *The New York Times* for 25th November, the British economist Mr. George Schwartz observes:

"It is remarkable how many people can see no sense in the existing order of Western society, the easiest criticism of which is that it is not order but disorder. With the milk on the doorstep every morning, the free economy is denounced as unplanned, unco-ordinated, and chaotic. It is the first task of the economist to explain that the system does work—in particular nowadays, to young people who come to the subject already persuaded that only some other system will work."

From harsh, practical experience, the Russians have learned that the free market economy has undeniable advantages. We should learn from their experience—not to imitate them in state planning and suppressions of freedoms, but to strengthen our system of profit and loss and individual enterprise.

INSURANCE

(Concluded from page 990)

enough to pay damages. On the other hand, insurers may agree to provide cover for passengers in sidecars.

"A normal commercial vehicle policy does not cover passenger liability. Where arrangements are not made for this cover to be included, drivers should not pick up passengers unless there is a prominent notice stating 'Passengers travel at their own risk.'

"Passengers can, however, share the blame for an accident. For instance, a passenger in a car which obviously is in a dangerous condition may find himself sharing the liability with the driver if there is an accident due to the condition of the vehicle. And there is a case on record of a passenger in a sidecar being held 25 per cent to blame because he knew there were no lights."

Although the position explained above refers only to Britain, in so far as Indian motor vehicles insurance law is patterned on the British model, it is largely true here also. To be on the safe side, owners of vehicles, whether private cars or commercial vehicles, should always ensure that passenger liability is covered in their policy.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CV. No. 2696 BOMBAY, 15th DECEMBER 1962 PRICE Rs. 2

LONG-TERM CREDIT FOR AGRICULTURE

THE present annual credit requirements of the agricultural sector in India for short, medium and long-term purposes are probably of the order of Rs. 1,000-1,100 crores. This is a very broad estimate made in the light of the All-India Rural Credit Survey's estimate for 1951-52 and the increase in agricultural production since then. This estimate and the estimates that follow, it may be noted, do not cover the needs of large-scale plantations such as tea, coffee and rubber. The aggregate credit requirements may go up to Rs. 1,300-1,400 crores in 1965-66, if the third Plan's agricultural production targets are to be achieved. Co-operative credit may be expected to meet anything from 40 to 50 per cent of these estimated credit requirements, judging by the third Plan's two targets in respect of such (co-operative) credit. Incidentally, the first target, which pertains to short and medium-term credit through primary agricultural credit societies, envisages aggregate loan advances to the tune of Rs. 530 crores in 1965-66, as compared with Rs. 203 crores in 1960-61. And the other target, which is in respect of long-term credit through land mortgage banks, estimates outstanding loans in the end-year of the third Plan at an aggregate of Rs. 150 crores, as against Rs. 35 crores in the last year of the second Plan.

While the target for short and medium-term co-operative credit, besides the credit that will be available from private sources, may go a long way towards financing current agricultural operations, it is doubtful whether the target for long-term co-operative credit will be that sufficient. Long-term agricultural credit, which has never been available on an adequate scale in India, is necessary for financing a large part of such operations as purchase of land and livestock, land reclamation, bunding and other land improvements, digging and repair of wells, development of other irrigation sources, laying of new orchards and plantations, purchase of implements, machinery and transport equipment, construction of farm buildings and cattle sheds, and miscellaneous items. It may be recalled, in this connection, that the Rural Credit Survey had estimated such capital expenditure, after excluding purchase of land and livestock, at a net figure of Rs. 250 crores, as of 1951-52. On this basis, a very much higher figure may be postulated for 1965-66. It will be much more if one takes into account the long-term credit needs of plantation agriculture.

In any case, private investment in agriculture and irrigation will have to be at a higher level than the annual average of Rs. 170 crores estimated by the Planning Commission for the third Plan period. Why this should be so is explained by the point that the third Plan's high level of public investment in agriculture and irrigation at an annual average of about Rs. 350 crores will involve, as a consequence, a correspondingly high level of investment by the agriculturists themselves on land reclamation and improvement, conversion of dry land into wet land, construction of field channels, improved implements and equipment, and so on. Unless private investment is so stepped up, the facilities created by public investment will not be fully utilised and the benefits expected to flow from such investment will not also materialise fully. It is this aspect that underlines the need for providing, on an increased and adequate scale, long-term credit for agriculture.

The final report of the third Plan has, of course, recognised that the achievement of even the relatively modest target of Rs. 150 crores (loans outstanding) in respect of long-term co-operative credit would not be easy unless some conditions are fulfilled. The conditions are that (i) institutional investors like the Reserve Bank of India, the State Bank of India and the Life Insurance Corporation would support the debentures of central land mortgage banks and (ii) an agricultural development finance corporation would be set up not only to purchase debentures floated by central land mortgage banks but also to channel loans through such land mortgage banks for financing certain schemes which are remunerative in character but which involve considerable investment or long periods of waiting. Typical instances of such schemes are rubber, coffee, cashewnut, coconut and arecanut plantations, irrigation, contour-bunding and soil conservation, and development of orchards and fruit gardens. It is the second condition mentioned here that is now sought to be fulfilled, through the Agricultural Refinance Corporation Bill just introduced in the Lok Sabha, in more or less the same form as has been visualised by the Planning Commission.

The Corporation proposed under the Bill is intended to assist agricultural projects (of individuals, co-operatives or joint-stock companies) which could not ordinarily be financed by established agencies such as the apex co-operative, commercial and land mortgage banks, either because the amount involved in each individual scheme or project is very large or because the period for which credit is necessary is very long, or because of both reasons. The proposed Corporation, judging from its name, would predominantly be a re-financing agency, providing the necessary resources to the primary lenders for facilitating the provision of long-term credit for agricultural development which, as defined in the Bill, covers a wide field including development of animal husbandry, dairy farming (stock breeding), poultry farming and pisciculture. But it is also empowered to provide credit otherwise than by re-finance.

The provisions of the Bill pertaining to the structure of the Corporation may be briefly noted here. First, the proposed Corporation would have its headquarters in Bombay and may establish offices or agencies in other places in India with the consent of the Reserve Bank. Secondly, it would have an authorised capital of Rs. 25 crores, divided into 25,000 fully paid-up shares of Rs. 10,000 each, of which 5,000 shares of the total value of Rs. 5 crores are to be issued in the first instance. Of the 5,000 shares to be first issued, the Reserve Bank of India would hold 2,500, the central land mortgage banks and State co-operative banks 1,500, and the scheduled banks, L.I.C., insurance and investment companies and such other financial institutions as may be notified by the Government 1,000. The shares would be in the nature of approved trustee securities, carrying a guarantee by the Central Government as to the repayment of the principal and commanding a guaranteed minimum dividend at such rate as may be fixed by the Government at the time of issuing the shares. And, thirdly, the Corporation would have a Board of Directors consisting of a Deputy Governor of the Reserve Bank who would be Chairman, a Director nominated by the Reserve Bank, three officers of the Central Government, one representative of central land mortgage banks, one representative of State co-operative banks, one representative of the L.I.C., scheduled banks and others, and a Managing Director to be appointed by the Reserve Bank.

Besides the share capital, the Corporation would be able to raise funds from a variety of sources. One of these sources is the Central Government itself which would initially provide an interest-free loan of Rs. 5 crores, repayable in 15 equal annual instalments after the expiry of a period of 15 years from the date of receipt of the loan—a period which can be extended at the option of the Government. Another source is the issue and sale of bonds and debentures by the Corporation itself. Borrowings from the Reserve Bank for periods not exceeding 18 months and acceptance of deposits from the Central and State Governments, local authorities, State co-operative banks and scheduled banks for one year or more are two other sources from which the Corporation could augment its funds. The Corporation can also take foreign currency loans. A further provision in the Bill is to the effect that the Reserve Bank shall place on deposit with the Corporation itself the dividends on its shareholding in the Corporation, without interest and for a period of 15 years. The total obligations of the Corporation, under all the aforesaid heads, should not exceed 20 times its paid-up capital and reserves.

As for the dispersal of credit, the Corporation is authorised to lend by way of loans and advances to eligible institutions—namely, central land mortgage banks, State co-operative banks, such scheduled banks as are shareholders of the Corporation and co-operative societies approved by the Reserve Bank—for a period not exceeding 25 years. This is on the re-financing side. The Corporation will also be free to subscribe to debentures of long periods (upto 25 years) guaranteed by the Government.

It will be seen from the aforesaid provisions of the Bill that the proposed Corporation will start under excellent auspices and with substantial initial funds. The Corporation is modelled on the pattern of the Industrial Finance Corporation and the State Financial Corporations in that it takes commercial banks into association, and this is a salutary feature. Its loans channelled through eligible institutions will finance the development projects of not only individual agriculturists but also co-operative societies and plantation companies. The maximum limit of such financing may go up to Rs. 50 lakhs for an individual project. If and when the entire authorised capital of Rs. 25 crores is issued and the Corporation is able to command aggregate funds representing 20 times the paid-up capital and reserves, its maximum lending capacity would be of the order of Rs. 500 crores or more. Of course, this is only a theoretical optimum which might be actually attained only by stages. But considering the flying start the Corporation will have, it is just likely that, by the end of third Plan, this new institution will be in a position to provide at least Rs. 200 crores, if not more, by way of long-term credit for agricultural development. Much of this credit may bear fruit, in terms of greater production, only after five or ten years where plantations and orchards, in particular, are involved. But much of it may also bring about greater productivity and production in agriculture well before five years wherever reclama-

tion, improvement or conservation of land, irrigation and agricultural mechanisation are involved. The proposed Corporation will thus have a crucial role to play in agricultural development. It will be a great boon to the countryside, provided those at the helm of its affairs have the necessary imagination, vision, and drive to fulfil the purpose for which it is designed.

THE CHALLENGE OF PRODUCTIVITY

THE present emergency calls for utmost effort in every field of economic endeavour. In order to strengthen the sinews of defence, the economy has to operate at maximum efficiency. From the standpoint of meeting the immediate defence requirements or the long-term objective of raising the standard of living of the people, higher productivity is, perhaps, the most important need of the hour. Higher productivity is a function not merely of increased effort by workers but also of better management and plant layout, more scientific organisation of work, and full utilisation of existing capacity. This needs a reorientation of the attitudes of workers, employers, the Government and the community, in general, to increasing productivity and a readiness to adapt quickly to new techniques of production. Productivity improvement calls for a twofold approach, involving promotion of productivity consciousness and dissemination of information about productivity techniques, on the one hand, and participation in "operational" tasks such as organising training courses and giving practical demonstration of productivity techniques, on the other. Both these approaches have been adopted by the National Productivity Council of India which, by its pioneering work, has done much to promote productivity. But much more remains to be done to make productivity consciousness seep down from the board room to the shop floor and to bring about a wider application of productivity techniques at all levels of production.

As readers will have noted from our last issue (*vide* page 984), this subject was raised at the Associated Chambers of Commerce of India annual meeting last week, at which a resolution was adopted calling for a national campaign to improve productivity. Mr. A. R. Foster, who moved the resolution, pointed out that even Britain, where a great deal had already been done to improve productivity, had lately realised that it was lagging behind other countries in regard to productivity and that it was, therefore, making renewed efforts to improve its position. One of them was the launching of a National Productivity Year (N.P.Y.) to focus attention on productivity. He suggested that something should be done along similar lines in India too to bring home to industry and the public the importance of increased productivity at a time when India desperately needed all it was capable of producing and more.

Productivity improvement in India should be a continuing process. The National Productivity Council, which spearheads the productivity movement in this country, seems to be fully conscious of the magnitude of the problem of productivity improvement, but its approach has been rather silent, in that it has not caught the eye of the nation. The economic imperatives of both defence and development calls for more intensified effort in this direction. Everybody must be made to realise the importance of efficient work. This requires popular methods of spreading the idea among the workers in the fields and factories alike. From this point of view, it will be a good thing to follow the example of Britain by observing a productivity year. It will, therefore, be appropriate to draw attention here to some details of the productivity year in that country.

Although India bears no comparison with Britain in respect of productivity and industrial efficiency, the general considerations which prompted that country to observe a productivity year are more or less the same as those that inspired the productivity movement in this country. The rapid advances in productivity in countries like Germany, U.S.A., Sweden and Japan, which directly compete with Britain in export markets, and the relatively slow growth of British economy threaten to relegate Britain to a lower position in the international table of productivity at a time when its future as an industrial nation has come to depend more than ever on its competitive capacity. Higher productivity and better industrial efficiency can alone put Britain in a position to meet the challenge, whether or not it joins the Common Market. This realisation is at the back of the productivity drive, which is only one of the many steps Britain has taken of late to strengthen its economy. H. R. H. Prince Philip, who is the patron of the National Productivity Year organised by the British Productivity Council, sums up the *raison d'etre* of the N.P.Y. thus: "No amount of economic juggling can alter the fact that, in the long run, our solvency depends upon the efficiency of our industries and upon our national productivity." The N.P.Y. of Britain, which was launched last month, has six principal objectives. These are:

1. to strengthen the determination of all organisations, concerned directly or indirectly with industry, to take a more active part in improving the country's efficiency and in maintaining its place among the leading industrial nations of the world;

2. to foster a more favourable climate of opinion to better methods and their proper use in industry and in the community;

3. to bring clearly before every one in industry the nature and value of the *services* (not the least among these being training, whether for management or shop floor) that exist to help;

4. to promote discussion and research into the needs of industry in respect of such services and the way in which such needs can be more adequately met;

5. to introduce into the activities of the bodies providing such services such mutually agreed co-ordination as they think appropriate. Developments here, of course, will mean that such bodies can make, and will be seen to be making, an even more concentrated and purposeful contribution to the solution of industry's problems;

6. to bring into being a means of regular consultation and discussion which would allow such joint action, whenever desirable, *to continue after* N.P.Y.

It is an indication of the nation-wide nature of the drive that more than a hundred professional organisations, several hundred small and large firms and every university and university college are taking an active part in the observance of the Year. More than 100 N.P.Y. local committees, consisting of representatives of management, professional organisations, trade unions and educational institutions have been formed to carry out the campaign which aims primarily at promoting wider interest in productivity techniques in industry. This is to be achieved through conferences, seminars, and appreciation courses run by industry itself on productivity techniques, supplemented by programmes of inter-firm study visits, inter-firm comparison between groups of companies and study tours in foreign countries.

The N.P.Y. does not seek to limit the productivity drive to one year. It will be a continuing effort. In the words of Mr. Harry Douglass, Chairman of the British Productivity Council, "N.P.Y. is to be the rocket which will put the drive for increased productivity into orbit." He considers it as "the biggest co-operative effort ever made by British industry in peace-time."

It is common knowledge that productivity drive cannot succeed, unless it has the wholehearted support of workers. It is, therefore, highly significant that the Chairman of the British Productivity Council during the Productivity Year is a leading trade unionist. Mr. Harry Douglass, whom we have quoted above, is the General Secretary of the Iron and Steel Trades Confederation. As a trade unionist, he stands for a better standard of living for workers, shorter working week and improved health and educational services. But he also believes that all these depend on the efficiency of British industry. The worker's stake in productivity is stressed by him thus: "From the trade union point of view, productivity must mean full employment and prosperous employment, lack of productivity will mean exactly the reverse."

The attitude of British trade unions and trade union leadership to productivity is commendable and worthy of emulation by their confreres in India. Here, too, trade union leaders can and should play an effective role in bringing home to workers that they have a vital interest in all the measures required for raising the efficiency of labour and management alike. It is high time trade unionist took a diligent interest in the productivity aspects of men, machines and management. They should realise that industries can pay better wages only if they are run on economically sound lines. Accordingly, they should support the managements in all the steps that are taken to raise productivity. And, if they find managements lagging behind in this respect, they would be perfectly justified in pulling them up and in prodding them to mend their ways.

COAL TRANSPORT SCHEME

THE Union Ministry of Mines and Fuel recently drew up a revised scheme for the movement and distribution of coal for industrial consumption. This scheme, which is proposed to be brought into effect from 1st January 1963, envisages that consumers, with a quota of 1,500 tons and above per month, will have to accept their entire requirements in block rakes of 70 wagons and that those with a smaller quota must either combine suitably to be able to receive block rakes of 70 wagons or obtain coal from stockists maintaining dumps at places where such block rakes can be received. It is noteworthy that the scheme has broadly incorporated two of the three suggestions made to the authorities by the Indian Coal Merchants' Association (Jharia). The two suggestions, incidentally, were to the effect that all consumers holding monthly quotas of 1,500 tons and above might be asked to pattern their movements in block rake formations within a period of three months and that, in the second stage covering a further three-month period, all consumers with a monthly quota of 125 tons and above might be asked to pool their requirements and make arrangements to obtain their supplies in the form of block rakes. The Association's third suggestion was to the effect that the remaining demands, which would obviously dwindle to a negligible extent, might be permitted to move in a piecemeal fashion. It will be seen that the Government scheme has not incorporated this third suggestion but has, instead, laid down that smaller consumers could also obtain coal from stockists' dumps.

The scheme, in so far as it relates to movement of coal in block rakes to large consumers or suitable groups of medium or small consumers, is undoubtedly sound, for such movement will make for both economical and reliable supplies. This part of the scheme must be acceptable to large and medium industrial consumers, for it is essentially the same as what the Federation of Indian Chambers of Commerce and Industry, for instance, has urged all along. The fear just expressed by the Indian Chamber of Commerce, Calcutta, that medium or small collieries producing about 10,000 tons a month would be unable to handle block rakes seems to be exaggerated and may, therefore, be ignored. But that part of the scheme relating to coal dumps is not likely to enthuse such of those small consumers as may not be able for practical reasons to group themselves for obtaining supplies in block rakes. The Indian Coal Merchants' Association, which was aware of the impracticability of block rake movement to widely separated small consumers but which was equally aware of the limitations and drawbacks of the dumps scheme, has rightly pleaded for the booking of piecemeal coal wagons to such consumers as in the case of foodgrains, steel and cement. The Association has consistently taken the stand that, as coal supplies from dumps would be costlier, the scheme would affect the economy of small industrial establishments. The Indian Chamber of Commerce (Calcutta) has also taken an identical stand in a Press *communique* issued on the 8th instant, from which the following passage is quoted:

> "The Chamber has pointed out that, so far as the consumers are concerned, if coal is despatched by rail first to the dumps, it means that they will have no remedy if they are supplied with inferior quality coal. Further, the process of despatch of coal to dumps will result in additional cost to the consumer resulting from unloading, stacking, reloading and onward transport to the consumers' site. The Committee has observed that such additional cost to the consumers may work out to anywhere around Rs. 10 per ton in addition to the cost of transport of coal by trucks. Moreover, due to inadequate roadways and insufficient number of trucks available, the procedure of moving coal from the collieries to dumps and from the dumps to the consumers by road will create further difficulties."

Again, both the Coal Merchants' Association and the Indian Chamber of Commerce are critical of the virtual monopoly envisaged for the State Marketing Co-operatives as stockists of coal in dumps. The ground for their criticism is that co-operative stocking and distribution will throw out of employment a large number of middlemen. As this is another drawback of the dumps scheme, by far the best course would be to adopt the Coal Merchants' Association's suggestion pertaining to piecemeal wagon supplies to small consumers wherever necessary.

MARKET GOSSIP

Fall In Price Levels Not Enough

WHEN the price line goes up, politicians raise a hue and cry, in the name of consumers and working class, and heap abuses on the business community. They do the same thing even when the price line declines from the high level to which it had gone up; their explanation for doing so is that producers' interests are adversely affected. Does this show that they are vigilant or that they are using these opportunities to increase their popularity? Whatever be the motive, they seem to be quite an inconsistent lot. The primary objective so far as prices and cost of living are concerned should be to prevent a rise and to keep inflationary pressures under control. It is true that stability is important, but surely that does not mean that prices should be stabilised at peak levels. Even two years ago, people used to criticise the Government for having allowed prices to go up by 30 per cent in the second Plan period. Four months ago, that is, long before the Chinese aggression had commenced, there was country-wide concern over the strong revival of upward trend in prices after a pause for a year. All that has been happening during the past four weeks is a correction of the sharp rise in prices that had taken place between March and August 1962. Prices of most of the commodities today are still well above those a year ago and not all the increase witnessed earlier this year has been offset. Indeed, if the price levels prevailing a year ago were considered uncomfortably high, the current levels are even more so. The cry against the downward trend in prices is, therefore, unjustified and unwarranted. In fact, the downward trend must be allowed, if not encouraged, to continue. This applies almost to all commodities and foodgrains. To content that this course would have an adverse effect on production is tantamount to suggesting that inflation is necessary to induce a higher level of production. When prices decline all round, the terms of exchange do not adversely affect the growers of agricultural commodities. It is to be hoped that the Government will not let itself be carried away by the cry that the producers' interests are in danger and hasten to take steps to arrest the present healthy trend.

This does not mean that appropriate steps need not be taken to protect the interests of farmers. The Government should always be prepared with the necessary machinery for supporting agricultural prices, if they go down to levels at which it would be uneconomic for farmers to sell. But the prevailing prices are far above such a floor. There is a move now for increasing the floor price for raw cotton by Rs. 75 per candy. No harm will follow in doing so. For, even after this increase, the floor will be substantially below the ruling market price which is now at the ceiling which was raised a few months ago by Rs. 125 per candy. In fact, the floor price ought to have been increased at the same time and by the same amount as the ceiling was raised, thereby keeping the spread between the two levels unchanged.

The greatest weakness of the Government's price policy is the absence of an effective price support programme, containing provision for building up buffer stocks. Wherever prices declined, the Government resorted to makeshift arrangements under which it passed on the responsibility to industries, as, for instance, raw jute. It fought shy of operating a buffer stock system on the ground that it had no resources. It would rather ask the Reserve Bank to influence the commercial banks to provide the necessary finance to the industries concerned for holding larger stocks of raw materials than itself enter the market, buy the goods, store them and sell them in times of scarcity. This attempt of the Government to evade its responsibility to agriculturists was inexcusable. At least now it should come forward with a bold scheme for supporting agricultural prices modelled on the U.S. Government's programme. This implies that the Government should frame fair support prices in advance of the agricultural crop year and refrain from intervening with the market forces except when the support levels are reached.

Cloth Position: No Cause For Alarm

Only a few weeks ago, when the Government and the spokesmen of cotton textile industry met, there were suggestions that the mills should embark on the manufacture of standard cloth of coarse and medium varieties to take care of the needs of low-income group and to increase the yardage of cloth produced. In contrast to this move, there are now serious complaints of heavy accumulation of stocks of goods with mills, heavy enough, we are told, to threaten curtailment of production. Even if the exaggerated claims of some millowners were conceded, the stocks might not be more than the equivalent of two months' full production. On the face of it, an accumulation of this magnitude does not appear to be so large as to warrant the alarming reports that have appeared in the daily Press during the last three or four days. Mills have certainly carried much bigger stocks of both cloth and, what many seem to overlook, raw cotton. The cloth traders, too, have been accustomed to hold a larger volume of stocks than they do now. It is true that the cost of production of cloth has now considerably gone up consequent upon higher prices of indigenous cotton, use of more high-priced American cotton than in normal times and increase in wages. Accordingly, a larger amount of credit is required now to finance a bale of cloth than before, say, in 1957-58, when there was very heavy piling up of stocks due to Mr. T. T. Krishnamachari's shock tactics. But the authorities have already recognised this point and taken steps to increase bank credit for the textile industry. Following discussions which the Reserve Bank had with some of the major banks financing cotton mills and cloth trade, the banks have agreed to extend them more credit, provided the borrowers are worthy of the additional risks involved. Apparently, the Reserve Bank must have expressed its readiness to expand the refinance facilities to banks. Nevertheless, the millowners, commission agents and wholesale dealers do not appear to be satisfied. They continue to nurse a feeling of dissatisfaction, complain that goods are not moving and wonder whether production can be sustained at the maximum level.

Their misgivings seem to be due more to what is likely to happen in the coming weeks and months than to the state of stocks as of this week, large though they are. Cloth merchants in Assam, Upper Punjab, northern U.P., northern Bihar and northern Bengal have been unwilling even to take delivery of goods already ordered, let alone place fresh orders. They are prepared to pay the penalties for cancelling their orders rather than fulfil them. Some of them have even told their suppliers in Bombay to take back the goods that have already been railed to their areas and have offered to meet the cost of transporting the goods back. Their reasons for this extraordinary step and for wishing to trade on a hand-to-mouth basis is the fear of war. In other words, it is a crisis of confidence that is basically responsible for the present trouble. It remains to be seen whether the introduction of war risks insurance will revive confidence.

In retrospect, it looks as though there has also been a certain amount of hoarding of cloth by merchants and/or mills. Otherwise, one fails to understand why the millowners did not publicise the fact of a rising trend of cloth stocks, which they now say is traceable to pre-border war, when the Government was pressing them to agree to a scheme for producing standard cloth. Further, it seems that millowners, traders and the Government have underestimated the consumer resistance generated by the high cost of cloth. The prices of good quality cloth have been so prohibitively high that consumers have been buying only their bare requirements. It is common knowledge that one can easily postpone replenishment of one's wardrobe by mending the existing supplies. The present country-wide campaign to spend less and save more will only strengthen this desire.

What is the solution to the difficult situation claimed to be confronting the mills and traders? First, it is quite possible that, now that war risks insurance is being introduced, movement of goods to the north will pick up. It is accordingly too early to jump to pessimistic conclusions. And secondly, sooner or later, the impact of defence needs will make themselves felt on the industry. A tremendous amount of cloth will be required for the armed forces when their size is expanded. When the mills which are suited to manufacture their requirements divert their capacity from the civilian to defence needs, the other mills will have to take care of the domestic and export markets. It will not, therefore, be surprising if, in six months' time, the supply position gets rectified in favour of sellers. In view of this possibility, a certain amount of conservation of cloth stocks will not be injudicious. If additional bank credit is required to enable mills and their authorised dealers to carry stocks, there is no reason why it should not be created. But, before this is done, care must be taken by the authorities to see that prices of cloth and yarn go down to the extent necessary for neutralising the unwarranted rise that has taken place in recent months and further that any encouragement to a holding movement does not discourage exports.

N.-E. Indian Tea

Conditions in the tea economy of North-East India are rather disquieting. The production of tea has suffered a setback, the quantity actually plucked up to the middle of November this year being no more than 248.5 million kilograms (one kg. =2.20 lbs.) which is 10.5 million kg. below the output in the corresponding period of 1961. Prices, of course, have tended to rise, but the extent of the rise does not seem to be adequate enough to make up for the loss in output in several tea estates, especially the marginal estates. There has also been dislocation of operations in tea gardens, especially in Assam, owing to Chinese aggression. Military movements have greatly affected transport of tea from producing to export centres. Fortunately for us, the present emergency began after the bulk of the tea had been harvested. Otherwise, the damage would have been much more. Besides, the two-month strike by Pakistani crews of river steamers, though happily ended now, did entail a severe crisis for the tea trade.

All these factors have imposed a severe strain on the finances of tea estates. The strain has been intensified, according to Mr. K. Ghosh, the retiring Chairman of the Calcutta Tea Traders Association, who spoke at the annual general meeting of the Association held at Calcutta on Friday last week, by the reluctance of the financial institutions to hypothecate the 1962-63 tea crops on a normal basis. Mr. Ghosh did admit that the reluctance was understandable, but warned that, unless the problem was tackled properly, a number of estates would have to close down.

During the 1952 tea slump, it will be recalled, the Reserve Bank had guaranteed the loans made to tea producers by other banks. Some such arrangement needs to be instituted now, in view of "the paramount necessity of keeping the estates going and foreign exchange flowing in." It is, indeed, gratifying that the Tea Board has already initiated discussions with the bankers and we are told that the latter have assured maintenance of bank finance for tea gardens at normal levels. This is only as it should be. The earlier reluctance of banks to advance to tea gardens was due to uncertainty about war risks insurance. Now that legislation for this insurance protection, specifically including tea crop and tea gardens, has been adopted by both Houses of Parliament, there is no cause for any anxiety on their part. Meanwhile, the Government of Assam has asked the Assam Co-operative Apex Bank to undertake tea financing more liberally.

Considering that tea is an important earner of foreign exchange, the need for keeping down costs is imperative, what with growing competition from other tea-producing countries. In the present context of national emergency, the scope for a reduction in tea price through a cut in taxation is somewhat limited, although no one will dispute that the tax structure is weighing heavily on the entire trade. Mr. Ghosh no doubt admitted this fact, but his complaint pertained to the manner in which taxes are levied. Central Government taxation on tea is collected in three separate places: on the garden, at the time of export and at the time of packing for internal consumption. The State Governments add to this complexity by means of sales tax and transit duties in Assam and West Bengal. Surely, the cumbersome tax structure must be done away with. One certainly fails to understand as to why the tea industry's reasonable plea for consolidating some of the most important taxes into a single tax to be levied at one point has still not found favour with the authorities.

It is encouraging to hear from Mr. Ghosh that the average price of North Indian leaf teas upto sale No. 21 shows a rise of 43 nP per kg. (excluding excise duty) as compared with the previous year, though the total quantity sold is lower at 1,021,398 packages, as against 1,050,453 packages. It is equally encouraging to hear that, after a disappointing start, dust teas are enjoying comparatively good prices with increasing internal demand and that this trend is very likely to continue for sometime to come. C.T.C. and legg-cut teas form the major portion of these offerings, a welcome development indeed. Shipments from North India during the period July to October 1962 are said to have been higher by about five million kg. as compared with the same period last year, thanks to larger purchases by the U.K., U.S., Soviet Russia and United Arab Republic. Exports to New Zealand, Canada, Turkey, Iran and the Middle East have, of course, suffered a setback, but it is hoped that the position will improve before the end of the season.

Britain And E.C.M.

The negotiations between the U.K. and the Common Market over the British application to join the latter appear to have reached a stage where neither party is in a mood to give in. One of the crucial points of disagreement, which was brought into sharp relief during the Ministerial meeting last month, relates to the problem of reconciling Britain's agricultural policy with that of the Common Market. The three-day Ministerial meeting held this week has failed to make any perceptible improvement in the position. France refuses to give a second thought to its demand that the U.K. should abolish its present system of deficiency payments to farmers at one stroke on its entry into the Common Market and adhere to the E.C.M. agricultural policy *in toto*. The U.K. Government cannot possibly accept this, as it has already committed itself to continue the deficiency payments system for a few more years. Nor has any agreement been reached on the question of financing the common agricultural fund to be set up under the E.C.M. agricultural policy.

In the absence of any meeting ground on these questions, the U.K. and the Six have agreed at the Ministerial meeting that the agricultural problems should be made the subject of a product-by-product study by a special fact-finding committee. This committee will be composed of the Agricultural Ministers of the U.K. and the Six, besides a representative of the Common Market Commission and a few experts. The product-by-product approach is said to be capable of breaking the present deadlock created by the clash over general principles. According to the Dutch Foreign Minister, who presided over the meeting, the Com-

(*Continued on page 1069*)

OUR NEXT ISSUE

With this issue of "Commerce" we conclude our regular issues for 1962, as, in the next two weeks, we will be preoccupied with our customary Annual Number which will be 220 pages of our usual size. Our next regular issue will, therefore, be the one dated 5th January 1963.

As in previous years, the Annual Number will contain over forty feature articles on a variety of subjects, including economic implications of the present emergency and an exclusive comprehensive feature entitled "The Crisis of the Commonwealth" by Dr. T. Balogh of Oxford. In addition, the Number will carry our customary annual review of all the aspects of Indian economy, major industries and the principal markets.

While the Number will be free to subscribers, a limited number of copies will also be available for sale at Rs. 10 per copy.

We take this opportunity of wishing all our readers a Merry Christmas and a Happy and Prosperous New Year.

EDITOR

RUSSIANS KEEP THEIR WORD ON AID

UTILISATION, HOWEVER, AT A SLOW PACE

From Our Special Correspondent

NEW DELHI, 11*th December*

THE Planning Commission has begun the first round of talks with Central Ministries and States for rephasing the third Five-year Plan with a defence reorientation. One of the efforts of the Indian representatives abroad will be to sound out the larger aid commitments possible from the West and to find out whether friendly countries can be persuaded to make their commitments to cover a longer period than has been the case in the first two years of the third Plan. One thing that has become clear from recent statements by the Prime Minister, the Defence Minister and the Finance Minister is that, despite withering criticism by China, the Soviet Union will not back out of its commitment of supplying MIG fighter aircraft and, despite expressions of displeasure by some Western leaders, India is going ahead with the preparations to take delivery of the Soviet fighter planes. The Minister of State in the Defence Ministry has explained to Parliament the idea of two MIG factories, one in Maharashtra and the other in Orissa, one for making engines and the other for making the air frames. Apart from the Soviet-aided aircraft factories, the Government is also speeding up the plans for making spare parts for aircraft already in service with the Indian Air Force. These plans would include the project already launched for the manufacture of Rolls Royce turbo-jet engines.

DELHI LETTER

Mr. Morarji Desai's Statement

Finance Minister Morarji Desai's statement in Parliament makes it clear that the India-China conflict has had no effect on Soviet economic assistance—Moscow has made public statements giving this assurance—but Mr. Desai's explanation also brings into focus the extraordinarily slow pace of utilisation of announced Soviet assistance. Mr. Desai, however, says that the aid is flowing according to schedule. The blame for the slow utilisation of Soviet and other European Communist bloc aid is largely on the Indian side and stems from the limitations of Indian capacity to launch quickly the projects to which Communist bloc aid is tied. Another reason for the disproportionate backlog in use is that the Russians announced very early their commitments of aid for the third Plan. This early announcement no doubt gave the Indian planners a clearer picture and many of the Soviet-aided projects have been firmly included in the current Plan.

According to Mr. Desai, out of the Rs. 384 crores of Soviet-aid hitherto announced, contracts have been signed to cover Rs. 220 crores and actual utilisation adds up to Rs. 115.2 crores. As on 31st March 1962, the total aid available from all foreign sources for utilisation during the third Plan was Rs. 1,730.7 crores, including authorisations of Rs. 435.6 crores during the first year of the current Plan. Utilisation in 1961-62 was a meagre Rs. 344.4 crores, and this left a balance of Rs. 1,386.3 crores at the end of the first year of the third Plan. The rate of utilisation in the first year of the third Plan was not far higher than the rate of use during the second Plan. In the five-year period 1956-61, total foreign aid absorbed, according to the Reserve Bank of India, was Rs. 1,466.4 crores.

The Soviet Union made its first aid announcement during the first Plan period covering Rs. 64.7 crores for the Bhilai plant. During the second Plan period it made all the other aid announcements it has so far made. These amounted to Rs. 319 crores broken up as follows:

Credit for industrial enterprises Rs. 59.5 crores; credit for manufacture of drugs Rs. 9.5 crores; credit for Barauni oil refinery Rs. 11.9 crores; two credits for the third Plan amounting to Rs. 178.6 crores and Rs. 59.5 crores.

The credit announced for Bhilai in the first Plan period was not utilised during the first Plan. Thus, the total aid announcements by the end of the second Plan were Rs. 383.7 crores. During the second Plan the utilisation was Rs. 74.7 crores, consisting of Rs. 64.5 crores for Bhilai, Rs. 8 crores on other industrial enterprises, Rs. 40 lakhs on the Barauni oil refinery and another Rs. 1.8 crore from the funds specifically set for third Plan schemes. This left a balance of Rs. 309 crores of Soviet-aid available when the third Plan began. In the first year of the third Plan the utilisation of Soviet-aid was Rs. 24.7 crores, leaving a balance of Rs. 284.3 crores when the second year of the third Plan, namely, 1962-63, opened. Since 1st April 1962, about Rs. 15.8 crores of Soviet-aid have been utilised, making a total of Rs. 115.2 crores utilised.

Refinery Projects

The major current commitment of the Soviet Union is the expansion of the Bhilai steel plant from one million tons to a capacity of 2.5 million tons a year. Construction work on this expansion began last August. The second big project with Soviet-aid under way is the two-million-ton petroleum refinery at Barauni where Soviet equipment is being installed. The third big project is the Koyali refinery to use Gujarat crude. The State Government is understood to have taken steps to acquire about 1,300 acres of land for the plant. Samples of the Gujarat crude have been examined in Russia and Moscow has already sent a product pattern for the two-million-ton refinery. The project pattern Koyali refinery will be as follows:

400,000 tons of motor spirit; 385,000 tons of high quality kerosene; 600,000 tons of residual fuel; 150,000 tons of aviation turbine fuel; 400,000 tons of high speed diesel; 25,000 tons of solvents; and 10,000 tons of liquefied gas.

The contract for the Koyali refinery is now expected to be signed by the end of January. Actual installation of equipment is expected to start in June 1963. This is likely to enable the refinery to complete the first stage of construction and go on stream before the end of 1964. The entire refinery may be completed six months later. The cost of imported materials for the Koyali refinery may be less in proportion to the total cost than in the case of Barauni or Nunmati, because some of the steel necessary for tank structures and some other fabrications will be available from Indian steel mills.

Power Projects

During 1962, the Soviet deliveries of plant for power projects had been lagging behind and it was reported that the Russians had promised more than they could deliver. The Russians have promissed to rectify the situation. The first of the big thermal power projects with Soviet collaboration has been at Neyveli where the first lignite-fired power unit was commissioned in August. The total capacity of the Neyveli station may be increased from 400,000 to 600,000 kw. Almost similar in scale to the Neyveli power station is the Patratu station in Bihar for which the Indo-Soviet contract was signed last September. Some Indian engineers have already gone to Moscow and the working drawings for the project have already been received. The Patratu project which will cost more than Rs. 40 crores will have about fifty Soviet experts working on it.

Another project on which the contract with the Russians has been signed is the workshop of the National Coal Development Corporation at Korba. The Russian equipment for the workshop may amount to Rs. 80 lakhs out of the Rs. 200 lakhs total outlay on the project. For Korba, the Russians are also supplying four power units of 50,000 kw. each.

Trade Prospects

The delegation of officials which visited Eastern Europe has returned with agreements and hopes to increase the trade with the European communists by 20 to 25 per cent in 1963 over the levels attained in 1962. In 1962 itself, it was the greater sales to Eastern Europe which stood the country in good stead against the precipitous fall in exports to Britain and West Europe. For the first time rolled steel products, including castings and structurals (to the value of Rs. 4.5 crores) will be exported to East European countries in 1963. Poland is interested in importing textile machinery from India, Yugoslavs and the Czechs want textiles and chemicals. A Rumanian team of experts will suggest to India the type of salted fish they plan to import. Petroleum products will come from Russia and Rumania, but no crude oil import from these sources is envisaged as yet. But India will import more lead and zinc from Russia and Yugoslavia.

INDIAN ALUMINIUM'S DEBENTURE ISSUE

The Indian Aluminium Company Ltd. is entering the capital market with an offer of Rs. 1 crore 7 per cent 1971-76 debentures at par in units of Rs. 500 each payable in full on application. The issue has been fully underwritten in equal instalments by the I.C.I.C.I. and the L.I.C. Out of the total issue, the I.C.I.C.I. will get a firm allotment of Rs. 25 lakhs against its underwriting arrangement. Interest will be payable half-yearly on the 1st of January and July. The lists will open on the 17th inst. and are due to be closed on the 22nd inst. The proceeds of the issue will go towards the Rs. 6-crore expansion programme of the Company, comprising expansion of the ingot capactiy at Alupuram, Kerala, to 10,850 tonnes per annum by setting up a second smelter adjacent to the existing one and the establishment of an aluminium foil rolling and finishing mill with an annual capacity of 2,500 tonnes in Maharashtra.

In order to meet the foreign exchange component of the expansion plans, the Company has made arrangements with the Commonwealth Development Finance Company Ltd. of London (which has now agreed to abide by them) for a loan of £500,000 against the issue at par of sterling debenture stock 1970-74 for that amount. A noteworthy feature of this loan is that interest on it has been linked with net profit of the Company. The interest will be at the rate of 7.75 per cent, with an additional one-half per cent from the beginning of the current financial year of the Company (ending 31st December 1962) in case the net profit exceeds Rs. 38.40 lakhs. In other words, the effective rate of interest will be 8.25 per cent per annum in those years in which the Company's net profit exceeds the specified limit. It may be pointed out here that, in 1961 itself, the Company earned, after providing for depreciation and taxation, a profit of Rs. 100.23 lakhs, as against Rs. 123.71 lakhs a year before. It can be reasonably deduced that the Company's net profit in the current year and the years to follow will continue to be above Rs. 100 lakhs and at any rate far in excess of Rs. 38.40 lakhs. Thus, from the very first year of their issue, the sterling debentures will bear interest at the maximum rate of 8.25 per cent per annum.

The Company has already issued Rs. 3-crore 6.25 per cent 1970-75 first mortgage debentures and has an outstanding liability of Rs. 69.000 under 5 per cent 1971-81 unsecured convertible loan stock. However, in point of security, the proposed Rs. 1-crore debenture issue and the sterling loan will rank *pari passu* with the existing 1970-75 debentures. The Company has a paid-up capital of Rs. 440.22 lakhs, including Rs. 40 lakhs in preference shares. In 1961, its gross block expanded from Rs. 9.8 crores to Rs. 13.7 crores and was written down to Rs. 9.6 crores and, inclusive of capital works-in-progress, stood at Rs. 13.6 crores.

TREND OF SHARES

INCENTIVES OF NO AVAIL

(From Our Own Correspondent)

BOMBAY, 13*th December*

WITH operators worried more about the prospects of a heavy defence budget in February next than the talks among the six non-aligned nations in Colombo to find a way out for a peaceful settlement of China's border issue with India, the decision of the Governing Board of the Bombay Stock Exchange on Saturday the 8th inst. to allow from Monday the 10th inst. restricted fresh purchases in cleared securities and the reported purchase of 50,000 Tata Steel Ordinary shares by the L.I.C. on Wednesday the 12th inst., both coming as incentives to revive the demoralised stock exchanges, failed to have any favourable effect on either the trading pattern or the price trend in shares during the week under review. The volume of business remained extremely small and the price movements continued narrow. With the exception of a few selected and leading counters which edged forward slightly more on stray inquiry than on any important buying, values disclosed either no changes or small losses over the week.

On Dalal Street, Bombay Burmah improved from Rs. 604 on Friday to Rs. 625 on Monday, but turned lower thereafter to close at Rs. 615, as against Rs. 607 a week ago. Telco looked up initially from Rs. 266 to Rs. 278, but sagged later to close at Rs. 273. Over the week, Voltas showed a gain of Rs. 3 at Rs. 243, Maharashtra Sugar of Rs. 2.50 at Rs. 147, A.C.C. of one point at Rs. 150 and Hindustan Motors of 16 nP at Rs. 16.20. On the other hand, Kohinoor closed Rs. 6 lower at Rs. 277, Svadeshi Rs. 4 lower at Rs. 263 and Bombay Dyeing one point lower at Rs. 60.50. Belapur were down by Re. 1.50 at Rs. 213.50 and Mukand Iron by 52 nP at Rs. 18.96. Among cash scrips, while Sandvik showed a gain of 11 points at Rs. 173 and S. L. Manekial of four points at Rs. 103, Colour Chem disclosed a loss of Rs. 8.75 at Rs. 325 and Dharamsi and Permanent Magnets of Rs. 3.75 each at Rs. 151.25 and Rs. 191.25, respectively.

In Calcutta, the only cleared share to close with a change over the week was Dunlop, which gained 44 nP at Rs. 36.44. Central India Coal finished 81 nP higher at Rs. 9.81. Union Carbide also were fractionally better at Rs. 43.12, but New Central Jute eased by 37 nP to Rs. 13.25, Binani Metals by 19 nP to Rs. 9.81, Bengal Paper by 13 nP to Rs. 32.06 and Hantapara Tea by four points to Rs. 102.

In Madras, Travancore Rayon showed a gain of 27 nP at Rs. 28.87, Coimbatore Spinning of 50 nP at Rs. 67.50, Blue Mountains of 13 nP at Rs. 2.55 and Cochin Malabar of 7 nP at Rs. 6.37, while E.I.D. showed a loss of 15 nP at Rs. 40.

The resumption of restricted forward trading in Bombay is not contrary to the Government's recent decision to ban forward trading. For, while imposing the ban, the Government had announced that it might permit revival of trading on a limited scale, if conditions warranted it. The Governing Board of the exchange has laid down that at no time purchases in any one cleared security should exceed Rs. 50,000 in aggregate value. Besides, an overall limit of Rs. 2 lakhs in respect of total purchases in all cleared shares has been fixed. Further, such buying is subject to a margin of 5 per cent. The Board is reported to feel that renewed buying will not raise the market load even by a single scrip. For, as fresh short sales are prohibited, fresh purchases can be made only from members having a net long position. The Board is said to have justified its decision on the ground that it will bring in new buyers in the market and spread the load over a larger number of persons. So far, however, no new buyers seem to have entered the market. If new buyers do enter the market, it is to be hoped that they will not lead to a greater crisis or aggravate the one that is yet to be got over. Although the Board has been cautious in its approach, it appears unlikely that the lead given by Bombay will be followed up by Calcutta and Madras. Ahmedabad, however, may think on similar lines.

The L.I.C. is understood to have purchased Tata Steel Ordinary shares at Rs. 117 per share, that is, Rs. 4 below the minimum price fixed by the Bombay Stock Exchange authorities. No doubt, the Corporation has acted as a shrewd businessman, and there is little scope for argument against its so doing. For, after all, it is investing policyholders' money which it has no business to fritter away in supporting the market. It is a different matter, however, as to how the purchase at lower than the minimum price will be justified by the market authorities. If they say that, unofficially, transactions have taken place at below the minimum prices—some business is reported to have been done at Rs. 118—then it would be an admission on their part that minimum prices are fictitious. Be that as it may, this transaction may itself compel them to lower the minimum prices for at least the leading counters.

Economic Talisman

The Walrus and the Carpenter
Were walking close at hand;
They wept like anything to see
Such quantities of sand:
"If this were only cleared away,"
They said, "it would be grand!"

—LEWIS CARROLL.

SOMETHING like this has been said by the six economists (and more have since joined them) who have called for an immediate supplementary Union Budget to meet the Chinese aggression. It does not matter to them if the Government does not yet know what it should budget for and how it should allocate resources for defence *vis-a-vis* planning; their argument is simple. Additional taxation is inevitable and the tremendous popular enthusiasm for the war effort provides the right psychological atmosphere for taxation; so tax before the mood changes or is relaxed. The economists are also keen on using taxation as an anti-inflationary weapon to prevent a rise in prices; we do not know whether a heavy tax on kerosene, for example, would have prevented its cornering in Delhi and U.P., creating a very awkward situation for the administration and the business community (which was gathering just then in Delhi to take a pledge of mercantile integrity during the emergency); nor can we be certain that cloth stocks, which are said to be accumulating in various centres, can be taxed straightway. Even the bold economists may not advocate taxes on food or fuel. On a number of things like power and transport which may have to be conserved, it is not Mr. Morarji Desai but many local authorities who have to take the initiative. Thus, in Delhi, higher rates for water and power, increased fares in City transport and more civic taxes are now indicated; the U.P. Government is still struggling heroically with its measures for raising more revenue after cutting down its Plan outlay.

Obviously, if Mr. Morarji Desai is going to finance a war, he can't do it out of nothing. The only question is whether his (and the Government's) sense of timing will be woefully wrong if he decides that the three months between now and the usual annual budget will give the time needed to get a clear long-term picture of what should be attempted in matters of defence, development and taxation. It is not enough if, taking advantage of the people's present mood for accepting sacrifices, he raises, say, another Rs. 500 crores a year to pay for both defence and the Plan; whether that will give him command over the physical resources—steel, cement, machinery, arms and equipment and the hundred and odd things needed besides—is more than the six economists will care to guarantee. Mr. Desai has already secured sufficient appropriations from Parliament by way of supplementary demands and he can get even more for the asking. Economics, we have all been taught, is a study of human behaviour. Voluntary contributions on the scale now received, in cash, gold and recurring monthly payments from wages and salaries, are truly remarkable though not altogether surprising in a country were *Bhoodan* could evoke a ready response. Admittedly, this will not pay for a long war with China but the interval before the normal Budget will give time for this generosity to reveal itself fully; it is doubtful if Mr. Desai can manage to find taxes which can give him more during these remaining three months. He is not a loser for his waiting; meanwhile a clearer picture can emerge of the larger political aspects of the future war with China as well as of the financial basis of programmes of defence and development aid to India. I hold no brief for the Finance Ministry which I think has been often too smug and complacent and generally inclined to take many things for granted; instances of sloth, where vigour and speed were essential, are many but I do not count the absence of a supplementary budget at this time as one of those.

* * * *

Press Unmuzzled?

How much of the editorial and other comment by the Indian Press in the last three months can be classified as belonging to the objectionable category which Mr. Lal Bahadur Shastri had in mind when he addressed the Standing Committee of the A.I.N.E.C. early this week? Opinions will differ widely but considering some moves within the Congress Party for stifling criticism of leadership and almost developing a personality cult under which criticism of Mr. Nehru by party members would be actionable, few would be disposed to accept that the Government by itself can act as a safe custodian of the minimum freedom which a democracy must maintain even during a war. There is probably much writing that is not well informed, but, when official reticence is often carried to extremes and the public has to rely on extraneous and foreign sources for information about a war which concerns it intimately, the Government cannot disclaim responsibility for imperfections. There is also much writing which is in bad taste but that does not necessarily offend security regulations or impede the war effort. Criticism of the Government for its failures or shortcomings cannot be dispensed with, since the corrective to wrong policies can come only when, subject to the rules of security, the Executive is put under an obligation to justify and explain its moves.

Far from impeding the war effort, the Indian Press has, by and large, helped it by warning the public and the authorities of the Chinese menace long before the Government woke up to the danger, and by focussing attention on many aspects of the Government's actions which were admittedly taken in an atmosphere of unreality (as the P.M. confessed) or were due to credulity and negligence (as the President observed). When drastic powers were voted with acclamation by Parliament reflecting unanimity of purpose in the whole nation, the Press did nothing to create doubts. But more than all these, I think, the Press came out magnificently in its support of the gold bonds scheme and other contributions to the war effort. Even the financial Press, which normally may have some sympathies for the affected business community, had no qualms about urging sterner measures against gold hoarders and traders, stock market speculators and bad trading in commodity markets. In a situation in which all (but an extreme fanatical wing of the Communists) were united about the country's defence and its major implications, one should have thought that the need for restraining the Press would hardly be felt by the Government, at least to the extent that Mr. Shastri felt impelled to talk of it in the Rajya Sabha and before the Standing Committee.

MEET THE MENACE
WITH
ALL YOUR MIGHT

This is no plea for protecting the lunatic fringe of the Press, which I suppose must learn to behave or pay the price of its irresponsibility. On the other hand, the public will also need assurances that regulation of liberties will not be misused for party purposes. Just as the responsible national newspapers are unlikely to abuse their privilege, the great national leaders may not misuse their powers; but the temptation at lower levels to safeguard personal or party interests may be so strong that only a vigilant Press and a watchful authority can act as correctives to unhealthy trends. But so long as the Government takes action only after consulting the representatives of the Press, unnecessary interference is unlikely to occur.

* * * *

Sharing Accommodation

Of a piece with Mr. Shastri's apparent distrust of the Press were some of his complaints that private owners of big bungalows and other buildings were not fully using up their space and that they should give to the Government all that they do not actually require. The Government will apparently use its powers of requisitioning freely; Mr. Shastri also hinted that billeting may be considered; but there are many things which the authorities can do before resorting to it. In New Delhi (where probably additional accommodation will be most needed by the Government) there are many offices which need never have been established. Efforts to disperse some of these offices have been thwarted by manœuvres with strong party or official backing; the list of such offices should come in handy at this moment so that steps to shift them away from the capital may be implemented on an emergency basis, thus releasing space for new requirements.

Besides this, the Ministry of Works and Housing has discovered many who are ineligible normally for Government accommodation but are in occupation of houses built by the Government for its employees. These include influential party members and others who are supposed to do work for the Government on an honorarium or for non-official organisations favoured by the authorities. To discourage this tendency, the Ministry has proposed not to dislodge them but to charge market rents, a principle which has been known for nearly half a century but was intended to apply only to exceptional cases in which a Government house had to be given to one not directly eligible for it. Under present conditions when market rents for private flats are much higher than those fixed by the Government for its own, especially in the cities, charging market rates for Government houses may impose no serious disability on those occupying them. Many of these may own houses from which they get high rents on company or other equally lucrative leases. Tests of eligibility and of sufficiency of space should, therefore, be applied as relentlessly as to the owners of the big bungalows. There are, moreover, many Government servants who have much more accommodation than they need even after fully allowing for their status; if the Government can encourage sharing of accommodation by officers with small families, some of the present pressure on available space may be lifted. This is a matter in which the private sector is equally blameworthy, since it keeps many offices and public relations officers in the capital, living on expense accounts, though it can plead in extenuation that the Government's regulations for licences and permits left it with no choice but to proliferate such spivs.

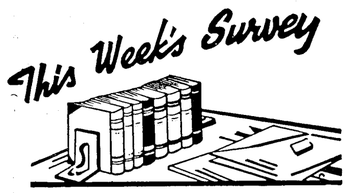
Hell for Leather!

Much has been written about the way Assam officials panicked in Tezpur when the people's morale remained high. This episode recalls to mind a similar incident in the last war when a sudden evacuation of Madras City was ordered, apparently on the initiative of the then British Governor. A correspondent in a leading daily, a refined senior official who should know, has corrected this misapprehension, pointing out that word had then come from New Delhi that two battalions of Japanese might land in Madras and that the entire arrangements for evacuation of important offices and non-essential population was immediately put into effect. Actually, it was premature then to expect a landing; but air raids were expected, as Rangoon had been heavily bombed and some stray planes were flying over the Madras Coast. Even if a landing were to be attempted, it was unlikely that the City would be threatened first or that the places to which the Madras Government proposed to evacuate its offices (like the High Court) could long function in peace in their new location. Many who had heard and read about the brave conduct of the British people during the *blitz* on London and the way in which essential services were kept functioning there with only children moved to safer places had deprecated the panic in Madras. But one very useful lesson it had taught the people was that running away solved no problems but only increased them. Thus, when they came back after a few weeks of aimless wandering and billeting upon their relations and friends, they resolved never again to run for life but take the consequences; the war lasted three years thereafter and subsequent air raid warnings did not affect this determination.

So, it seems, the people of Tezpur also have learnt a very good lesson now. There is little point in discussions or fault-finding. It is no use asking why the white-collared (though not necessarily white-livered) worker is cowardly in the face of such danger; ways of life have perhaps conditioned people variously. The authorities now seem to have to come to the conclusion that civilian evacuation is not normally necessary; the military may sometimes think that civilians come in their way, either physically or through their claim on supplies required by the army. In the latter case, one may hope that clear plans will be made and executed; if administrative arrangements are made using local personnel as far as possible, there may be greater all-round readiness to stick to posts of duty and take the good with the bad.



BUSINESSMEN'S PLEDGE

THE business community has never been slow in responding to the call of the nation, although it has always been suspect in the eyes of some politicians. Both industry and trade have actually confounded their critics by the measure of self-discipline they have been able to cultivate in the context of the emergency created by the Chinese aggression. Instead of creating an atmosphere of artificial scarcity and taking undue advantage of war psychology, the business community has served consumers with a sense of dedication and fairplay, thereby making the Government's task of price control an easy one. Except in the case of a very limited range of goods like kerosene, woollen goods and cement, there has not been any perceptible rise in prices. On the contrary, prices of several essential commodities, particularly foodgrains, fibres and oilseeds, have gone down rather sharply during the last two months. There is, however, need for continued vigilance on the part of businessmen, for there are still uncertainties about Chinese intentions, despite the cease-fire.

It is against this background that one has to view the efforts being made by the Federation of Indian Chambers of Commerce and Industry, the apex body of scores of organisations of business community in this country, to maintain the price level. At a meeting organised under the auspices of the Federation at New Delhi last week, about 500 delegates representing 71 industrial and trade organisations of Northern India, took a solemn pledge to do nothing that would upset the price situation. The meeting, which was arranged by the Price Vigilance Committee for the northern region constituted by the Federation, adopted a series of important resolutions for the general guidance of the business community. In particular, the meeting resolved that (1) everything would be done to increase production of all commodities to meet the defence and civil requirements, (2) at all levels of manufacturing and distribution, every effort would be made to maintain the price level and (3) the normal trade channels would voluntarily undertake to resort to price-marking, price-tagging, display of price lists and wherever necessary advertise prices of commodities to keep the consumers fully informed of the position.

Apart from laying down these general codes of conduct, the Committee has appealed to the various trade associations to take suitable action against defaulters. These are certainly steps which would receive the blessings of the Government no less than those of the consumers. These measures, if strictly adhered to by all concerned, will benefit the industry and trade themselves to a greater extent than consumers. There is thus no exaggeration whatever in the observation of Mr. Bharat Ram that the very existence of normal trade channels would be dependent on the measure of self-restraint and self-discipline of the business community in maintaining the price line. The alternative to voluntary control by the industry and trade would be the imposition of cumbersome and expensive official controls, which, as war-time and post-war experience has shown, would help neither the trade nor consumers. It should not be forgotten, however, that trade's efforts would not be very effective, unless the Government and consumers extend full co-operation, and favourable conditions are created for increasing production, both agricultural and industrial.

AGRICULTURE AND STATES

The Union Ministry of Food and Agriculture has sent a note to State Governments urging them to intensify their efforts to increase agricultural production. It has asked all States to make—within the overall State Plan ceilings—higher allocations for the next financial year, 1963-64, for various agricultural production programmes, including those for minor irrigation and soil conservation, as well as the agricultural component of the Community Development projects. The allocations for 1963-64, it is stressed, should be "substantially higher" than those for the current year. Besides the overall increase in outlay, the State Governments have been asked to make provision for larger allocation for specific programmes for the expansion of individual commodities. Commodities specified include such essential foodstuffs and cash crops as rice, millets, gram and other pulses, cotton, oilseeds (especially groundnut and castorseed), fruits and vegetables, milk, meat and eggs.

The Centre has done well to remind the State Agricultural Ministers that they have a great obligation in the matter of increasing the output of the aforesaid items in order to hold the price line, especially in the context of the present emergency. The development of agricultural production in several States, it is common knowledge, has not received as much attention as it should have. So any Central directive of the kind now given would have been perfectly justified even during normal times. The trend of growth of agricultural production has been quite unsatisfactory during the first two years of the third Plan, namely, 1961-62 and the current crop year (1962-63) which is now well under way. Actual production performance of most of the important commodities has fallen far short of third Plan annual targets and the increasing demand for foodstuffs and raw materials. But for continued imports (both foodgrains and also cotton), the price situation also would have got out of hand. The output of foodgrains has actually fallen by about a million tons to 78.6 million tons in 1961-62, as compared with 1960-61, as a result of setback in cereals, such as rice, *jowar* and small millets, and in pulses such as *tur* and gram. The setback, however, has been partially made good by the increase in production of other cereals like wheat, barley and *bajra*. The general decline in output is a source of great concern, considering the addition of about 8,000,000 people every year to the total population. Nor are there signs of any perceptible improvement in production during the current year, for, as in the last year, floods in some parts of the country and drought in some others have damaged crops in certain areas. The pity is that most of the State Governments have failed to take speedy relief measures to farmers to enable them to recoup themselves.

There is no use blaming the vagaries of weather alone. For even in important production centres which have been free from floods, one does not find any marked improvement in aggregate production or productivity. This is true of both foodgrains and cash crops. It is only appropriate, therefore, that the Union Food Ministry's note should have called upon the States to intensify physical programmes, such as those of minor irrigation and soil conservation, and other supply schemes relating to fertilisers, improved seeds, plant protection measures and credit and extension services in select districts which have assured rainfall or irrigation facilities. There is, of course, nothing new in these suggestions, as they have already been accepted in principle, and implemented within limits, by all States. The National Development Council, at its meeting last month, in fact, suggested that the third Plan targets for minor irrigation and soil conservation should be stepped up by 50 per cent and that the area to be covered under dry farming be raised from 22 million to 50 million acres. While these revised targets are quite necessary, one does not know whether all the State Governments will rise to the occasion and speed up the actual implementation of projects by cutting short delays and red-tapism. According to the present note, higher allocations are expected to be made for agriculture only within the financial ceilings fixed for each State. This reduces the scope for any large increase in actual resources available for agricultural programmes. If, for some of the specific programmes of potential value, financial resources of States are not sufficient, the Centre will be well advised to give more assistance to undertake such schemes.

A BRITISH ECONOMIST ON PLAN PROBLEMS

In a series of two brilliant lectures, entitled "The Plan under pressure—an observer's point of view," delivered this week at Bombay under the auspices of the Council for Economic Education, Miss Barbara Ward, the well-known British economist and financial commentator, made an objective assessment of the current problems of planning in India in the context of the massive defence effort necessitated by the Chinese war. Miss Ward felt that the economic mobilisation for defence, instead of proving inimical to the third Plan, might, in fact, act as a spur to achieving the objectives of planning. Explaining why she thought higher defence effort need not necessarily defeat the Plan, Miss Ward said that defence effort, by speeding up the production of steel, coal, power and transport facilities and creating new types of skills would, in real terms, help the achievement of the long-term objectives of the Plan. But the situation, she took care to add, posed a threat to the Plan in another respect. If the hostilities were resumed and the Chinese made a dash towards Assam, tea exports would be hit hard, she said, and the country would lose 20 per cent of its current foreign exchange earnings.

Dilating on the economic consequences of the war, the British economist estimated that an additional sum of Rs. 350 to 500 crores from domestic resources and Rs. 150 crores in terms of foreign exchange were called for to face the situation in the Northern border. Expenditure of this magnitude would, in the opinion of Miss Ward, widen the capital base of the Indian economy and, to this extent, it would be a net gain. But it would also accelerate the inflationary pressures as the increased expenditure on defence would not result in a corresponding increase in production for civilian consumption.

There were, according to Miss Ward, two ways of easing the pressure. One was by draining out the excess purchasing power of the people by additional taxation. Miss Ward considered the present level of taxation in India "by no means high." It was only 10 per cent of the national income. In a developing economy, according to her, taxation could go up to a limit of 20 per cent of the national income. There was still scope, she thought, for increasing the excise revenue under the present situation. The other method of curbing the inflationary pressures was maximum utilisation of existing production capacity and idle manpower. In this connection, she said she had gathered the impression that, barring machine tools and steel plants, where utilisation was 80 per cent, actual utilisation in most industrial units was much below capacity. Another point made by her was that productivity and production could also be improved by removing the bottlenecks in the transport system.

Miss Ward had two suggestions to make for relieving the strain on foreign exchange resources. They were (1) release of foreign aid tied to various projects and utilising it for financing the import of raw materials and maintenance goods, (2) lend-lease agreements with foreign countries for the supply of arms. She also thought that some form of co-ordination between India and Pakistan in the defence effort of the sub-continent would be beneficial to both.

Miss Ward critically examined the rate of growth of Indian economy and identified the reasons for the recent slowing down of the pace of expansion. She drew attention to the fact that the economy had run into difficulties even before the present emergency had set in. The rate of growth of national income had declined from 5 to 6 per cent during the first and second Plan periods to 3 per cent during the first year of the third Plan. Explaining the reasons for this setback, the British economist pointed out that this was largely due to the unsatisfactory performance on the agricultural front. She argued that adverse weather conditions alone were not responsible for this outcome. Lack of fertilisers, improved seeds and other facilities and appropriate organisational and structural changes were also contributory factors. The failure to ensure an adequate supply of agricultural products to industries in turn resulted in the slowing down of the industrial tempo.

The farmers, she pointed out, were prepared to imbibe the new techniques but it was the entrepreneurial element at the Government level which had failed to impart to them such techniques. There were also other fatal failures and utter lack of co-ordination. There were, for instance, cases of dams having been built without constructing feeder canals.

Another factor which contributed to the lower rate of growth was the "interlocking deadlocks" in the sphere of steel, coal, power, and railway transport. These shortcomings in, what Miss Ward called, the "bedrock of economic development" were attributed by her to lack of co-ordination in policies relating to the different sectors of the economy. The population pressure was also one of the factors which heavily impinged on the rate of expansion. Miss Ward pointed out that no foreign country would extend aid to an underdeveloped country, if the latter's resources were swallowed up by the population growth. She, therefore, suggested that India should adopt birth control on a wider and more effective scale as Japan did after the war.

Stressing the need for encouraging foreign investment to supplement domestic investment, Miss Ward said that foreign investment was futile, unless it either earned foreign exchange for the country where the capital was invested or effected considerable import substitution. Foreign investments would bring in new skills and techniques and expand the capital base of the economy. Apart from these advantages, foreign capital was doubly necessary for underdeveloped countries now because the growth pattern of international trade created unfavourable conditions for the expansion of exports of underdeveloped countries.

Miss Ward had no set pattern of growth model to recommend for India, or, for that matter, to any underdeveloped country. She, however, felt that efficient small enterprises, which could bring in handsome profits in a short period, were ideally suited to conditions in India. By "handsome" she meant a return of 10 to 15 per cent on the capital invested.

While one could agree with much of what Miss Ward said—most of the points made by her have, of course, been put forward before by a number of critics in this country, including this journal—her observations on the scope for raising additional taxation are not convincing. Even at the current level of taxation in the country, the net return on capital invested in the corporate sector is below the level suggested by Miss Ward as necessary for attracting capital and entrepreneurs. How then could it be raised while at the same time doubling the rate of taxation? It is to be hoped that Miss Ward will make a detailed analysis of our rates and kinds of taxation, both direct and indirect, their impact on the rate of savings and cost structure and make specific suggestions for raising the tax burden further along lines which will be consistent with the need for a reasonable rate of return for encouraging savings and attracting risk capital and which will not have an inflationary effect on prices. By doing this, she will be making a valuable contribution to the economic progress of this country so very vital for the preservation of democratic way of life in the world.

AUSTRALIA'S LARGEST COMMERCIAL BANK CAN HELP YOU TO PROMOTE TWO-WAY TRADE WITH AUSTRALIA, NEW ZEALAND, AND FIJI

Want to sell? Want to buy? Want market information? The international Division of the Bank of New South Wales can tell you about the opportunities for trade offering with these countries.

The Bank's complete banking service includes such specialized facilities as trade introductions to buyers and sellers, industrial enquiries, economic and market information, and a complete travel service. The Bank is closely and constantly in touch with industry, business, and agriculture in the areas it serves through more than 1,100 branches and agencies.

● Enquiries may be made through your own bankers or direct to

BANK OF NEW SOUTH WALES
FIRST BANK IN AUSTRALIA
Head Office: SYDNEY, AUSTRALIA
International Division: E. L. Carthew, Chief Manager.

U.S. AID FOR TRUCK MANUFACTURE

India's automobile industry produced 54,215 vehicles (cars, jeeps, trucks and buses) in 1961, as compared with 51,663 in 1960. Although the aggregate number of automobiles manufactured in the country thus rose in 1961, the number of trucks produced had fallen to 19,517 from the figure of 20,961 in the previous year. In a relative sense, too, truck manufacture had declined from about 41 per cent of all automobiles turned out in 1960 to 36 per cent of the relevant total in the next year. As far as the current year, that is, 1962, is concerned, figures available for the first seven months show that 34,302 automobiles, representing a monthly average of 4,900, were produced during the period. If this average is projected for the whole year, the aggregate production will be 58,800 vehicles, of which, judging by trend so far, trucks will account for about 40 per cent—a reassuring figure indeed. Still, in absolute terms, the number of lorries manufactured in the current year will have come to a total of about 24,000 only, a number relatively small, as compared with the third Plan's production target of 60,000 lorries for 1965-66. This level of production will be patently inadequate to meet the rapidly increasing demands from both defence and civilian sides. It is a very heartening development, therefore, that the U.S. Government, which has appreciated the urgency of the situation, has just announced two loans, totalling $29.5 million, to finance the expansion of manufacture of lorries in this country. It may be recalled here that the U.S. Government had previously provided two credits, totalling $10.2 million, for expanding Fargo trucks production by Premier Automobiles Ltd. (Bombay).
